> [I] recommend . . . an initial consultation with an orthopedic surgeon specializing in knee pathology and will defer to that surgeon as to the patient's need for [ ] further diagnostic studies or interventions . . . . If that surgeon feels interventional work might be of benefit to her such as injections of any sort, then that would be considered under maintenance care. But if a surgical intervention such as an arthroscopic procedure would be required, then upon the date of that surgery, her case should be reopened until completion of her physical therapy post-operatively."

19. Despite making recommendations for additional evaluation and treatment, Dr. Tyler opined Claimant was at MMI as of December 20, 2018 as determined by Dr. Centi. Confusingly, Dr. Tyler provided no impairment rating in his initial report even though he documented multiple areas of ongoing symptomatology and limitations.

20. The DIME Unit wrote to Dr. Tyler on April 23, 2019 indicating deficiencies in his report, including his analysis of Claimant's spine impairment. Dr. Tyler issued an addendum report on September 17, 2019 assigning a 13% lumbar spine rating. He did not mention the knee or psychological issues.

21. Dr. Allison Fall performed an IME for Respondents on August 22, 2019. Examination of Claimant's right knee was largely normal, showing only pain along the medial patellar tendon. Otherwise, Dr. Fall found normal range of motion, no medial or lateral joint line tenderness, no ligamentous instability, no meniscal signs, and no significant crepitus. Dr. Fall opined, "given her current level of function and benign physical examination it is unlikely that an orthopedic surgeon would recommend interventions such as surgery. In fact, there is no indication for surgery based on her examination. It is also unlikely she would benefit from injections. However, that could be done under maintenance care." Dr. Fall agreed Claimant was at MMI as of December 20, 2018.

22. Dr. Miguel Castrejon performed an IME for Claimant on August 28, 2019. Regarding the right knee, Claimant described constant, dull to sharp and stabbing pain medially that worsens with prolonged standing and walking. She also reported ongoing nightmares, forgetfulness, and anxiety. Dr. Castrejon opined Claimant was not at MMI for her injury-related PTSD, depression, and anxiety. Regarding the right knee, Dr. Castrejon opined it "makes no sense" for Dr. Tyler to state Claimant was at MMI because he also recommended an orthopedic evaluation that might lead to a recommendation for injections or surgery. Dr. Castrejon opined Claimant is not at MMI for her right knee. He recommended a right knee MRI followed by a consultation with an orthopedic specialist. He also recommended a neurological evaluation to address the ongoing PTSD and headaches.

23. Dr. Fall testified at hearing consistent with her report. She noted the right knee osteoarthritis documented in 2014 had progressed by the time of the MVA. Dr. Fall opined an MRI of Claimant's right knee would show significant degenerative findings but would not lead to a change in treatment. Dr. Fall opined no additional treatment would be reasonably expected to improve the condition of Claimant's right knee, and any treatment for pre-existing osteoarthritis would be unrelated to the work accident. Dr. Fall opined Claimant requires no additional psychological treatment, as evidenced by her return to full duties. Dr. Fall reiterated her agreement with the December 20, 2018 MMI date and opined Dr. Castrejon's report reflects a "mere difference of opinion."

24. Claimant has a remote history of symptoms in the right knee. On July 7, 2014, she was seen at the Penrose St. Francis Hospital emergency room with complaints of anterior right knee pain "x3 days." She indicated the onset of symptoms had been "gradual" with no injury. Claimant had a history of DVT in the right leg and went to the ER "to make sure that this was not a DVT." Examination of the right knee showed no significant swelling, effusion, or obvious deformity. The joint was stable with no ligamentous laxity. There was moderate tenderness around the patella. X-rays showed mild medial and patellofemoral compartment osteoarthritis. The ER provider diagnosed "right knee pain" and opined, "the patient does appear to have some osteoarthritis of the right knee which is likely secondary to the patient's body habitus."

25. Claimant credibly attested the knee pain resolved within two weeks of the ER visit. There is no persuasive evidence she had any ongoing issues with her right knee

or required any further evaluation or treatment. The July 2014 ER visit appears to have been an isolated episode that resolved quickly without sequelae.

26. Claimant was a credible witness. Claimant's testimony and statements to Dr. Tyler and Dr. Castrejon that her knee has never returned to its pre-injury state and still causes significant functional limitations are credible and persuasive.

27. Dr. Castrejon's analysis is credible and highly probably correct regarding the errors in Dr. Tyler's determination of MMI.

28. Claimant proved by clear and convincing evidence she was not at MMI on December 20, 2018. Dr. Tyler clearly erred by placing Claimant at MMI despite recommending she "complete" her psychological treatment and recommending additional diagnostic evaluation for the right knee. Claimant had not finished psychological treatment by December 20, 2018. Moreover, she never saw a psychologist or psychiatrist, despite significant ongoing injury-related PTSD and anxiety. She had minimal PT for the knee and should have been afforded an orthopedic evaluation before putting her at MMI.

29. No ATP has recommended a knee MRI, orthopedic evaluation, or other diagnostic testing. The ALJ cannot order Respondents to cover a knee MRI or orthopedic consultation only recommended by IMEs.

CONCLUSIONS OF LAW

A. Claimant overcame the DIME regarding MMI

A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Diagnostic procedures constitute a compensable medical benefit that must be provided before MMI if such procedures have a reasonable prospect of diagnosing the claimant's condition and suggesting further treatment. *E.g*., *Watier-Yerkman v. Da Vita, Inc*., W.C. No. 4-882-517-02 (January 12, 2015); *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012).

As found, Claimant overcame the DIME regarding MMI by clear and convincing evidence. Although Claimant had pre-existing osteoarthritis in her right knee, it was asymptomatic and nondisabling before the April 2018 MVA. Dr. Tyler specifically noted Claimant's right knee pathology was "not fully evaluated," and appropriately recommended additional workup by a knee specialist. Reading Dr. Tyler's report and considering the additional recommendations contained therein, one would have expected him to find Claimant not at MMI. The ALJ agrees with Dr. Castrejon that declaring Claimant to be at MMI while simultaneously recommending she "complete" psychotherapy and undergo an orthopedic evaluation was incongruous and "makes no sense." Claimant should have been offered an evaluation with a knee specialist and allowed to complete psychological treatment before being put at MMI.

B. The ALJ cannot order evaluations or treatment recommended solely by IMEs.

The ALJ can only award treatment recommended by an ATP and lacks jurisdiction to order treatment recommended solely by an IME. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995). IMEs (including DIMEs) are not authorized providers, so their treatment recommendations are not a covered benefit because they were not made during the natural progression of authorized treatment.

The only exception to this rule relates to "essential tests" needed to complete a DIME. *E.g., Tomsha v. Catholic Health Initiatives*, W.C. No. 5-088-642-002 (March 18, 2021) (diagnostic scalene block); *Potter v. Grounds Service Co. Inc*., W.C. No. 4-935-523-04 (August 15, 2018) (EMG/NCV testing); *Omer v. Lonestar Steakhouse*, W.C. No. 4-293-337 (February 15, 2001) (blood tests, spirometry, and CT scan); *Beede v. Allen Mitchek Feed & Grain*, W.C. No. 4-317-785 (April 20, 2000) (exercise stress test and EKG).

Although Dr. Tyler recommended an evaluation by an orthopedic knee specialist, he did not indicate such evaluation was "necessary for a complete IME." Moreover, the Panel has determined that a surgical consultation cannot fairly be considered an "essential test" subject to WCRP 11-4(A). *Potter v. Grounds Service Co. Inc*., W.C. No. 4-935-523-04 (August 15, 2018). As the Panel explained in *Potter*,

> Such a consultation is a request to secure an opinion from another physician. It does not involve special equipment and is not a test at all. . . . Such a consultation constitutes a medical benefit. Pursuant to *Torres*, absent a prior recommendation for the consultation by an authorized physician, the ALJ is without authority to order the respondents liable for [a] neurosurgical consultation.

Admittedly, an MRI can be considered an "essential test" in the context of a DIME. *Brickell v. Overhead Door Co*., W.C. No. 4-586-287 (February 4, 2005). But careful review of the DIME reports shows Dr. Tyler did not request to recommend an MRI. Rather, the MRI was recommended by Dr. Castrejon.

Even though the ALJ has no doubt the MRI and orthopedic evaluation are reasonably needed and causally related to the work accident, there is no basis to acquire Respondents to pay for them at this time.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME's determination of MMI is granted.

2. Insurer shall cover evaluations and treatment from authorized providers reasonably needed to bring Claimant to MMI.

3. Claimant's request for a knee MRI recommended by Dr. Castrejon is denied and dismissed.

4. Claimant's request for an orthopedic consult recommended by Dr. Tyler and Dr. Castrejon is denied and dismissed.

5. This Order does not limit Claimant's right to pursue any additional testing or evaluations that may be recommended by an ATP.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 24, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-150-437

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury on October 7, 2020.

II. Whether Claimant proved by a preponderance of the evidence the medical treatment he received is reasonable, necessary and related to a compensable industrial injury and whether he is entitled to a general award of medical benefits.

III. Whether Claimant proved by a preponderance of the evidence he is entitled to temporary indemnity benefits.

STIPULATIONS

The parties agreed that would later confer and establish Claimant's average weekly wage ("AWW").should the claim be found compensable.

FINDINGS OF FACT

1. Claimant is a 62-year-old male.

2. On June 6, 2006, Claimant sustained a work injury to his left shoulder while working for a different employer. Claimant underwent treatment, including surgery, and was eventually placed at maximum medical improvement ("MMI") on April 13, 2007 by his authorized treating physician ("ATP"), Mark Winslow, D.O. Dr. Winslow assigned Claimant permanent work restrictions of lifting no more than 50 pounds below the shoulder level and 20 pounds above the shoulder level. Claimant testified he was unaware of the permanent restrictions assigned by Dr. Winslow.

3. Claimant began working for Employer as a commercial truck driver in April 2012. Claimant's job duties include transporting and unloading glass at various locations across Colorado. The glass Claimant handles weighs between 5 to 150 pounds. The job description for Claimant's position notes that frequent lifting of more than 50 pounds is required. Claimant was aware of this requirement at the time he began his employment with Employer.

4. Claimant testified that on August 21, 2020, he sustained a lower back injury while delivering glass for Employer. Claimant testified he was able to finish his shift that day without any problems or pain. He subsequently went on a scheduled two-week vacation beginning August 24, 2020, during which time he went RV camping with his family.

Claimant testified he fully recovered from the August 21, 2020 incident. He returned to work after his vacation as scheduled and was able to perform his regular duties without any issues.

5. Claimant alleges he sustained a work injury while working for Employer on Wednesday, October 7, 2020. On October 7, 2020, Claimant began his assigned delivery route from Denver, Colorado to Montrose, Colorado. Claimant testified he did not have any issues until getting to the Rifle, Colorado area. He testified that he began noticing some pain in his low back towards the end of completing his deliveries in Rifle. Claimant experienced gradually worsening pain as he was unloading glass in Grand Junction, Colorado and was in significant pain by the time he reached Montrose, Colorado, such that he experienced difficulties entering and exiting his truck and required the assistance of customers to unload the larger pieces of glass. Claimant spent the night in Montrose as scheduled. Claimant testified he continued to experience pain the following morning. He completed two deliveries in Montrose and began his drive back to Denver. Claimant testified he stopped in Grand Junction and called the Transportation Manager, Billy R[Redacted], to notify Mr. R[Redacted] of his alleged injury and request medical attention. Claimant testified he drove back in pain and arrived in Denver on the afternoon of Thursday, October 8, 2020. Claimant testified he was not sent for medical treatment at that time, so he took personal time off and sought treatment with his primary care physician at UC Health, Lindsey Cassidy, M.D.

6. Claimant presented to Dr. Cassidy on October 9, 2020. Claimant reported having left hip pain for about six weeks, radiating into the bottom of his foot for the last three to four days. The pain and pain radiating down left leg had considerably worsened over the last three to four days. Claimant reported that he would have some pain moving heavy glass, but that his previous pain, which was 4/10, was not as bad as his current pain, which had become 8-9/10 over the last four days. Dr. Cassidy wrote, “[Claimant] states he cannot think of anything that would of made it worse over the last few days. With his job, he always lifts heavy objects.” Claimant denied recent accident or trauma. On examination, Dr. Cassidy noted tenderness to palpation of bilateral paraspinal muscles at the lumbar level, mild tenderness to palpation of the left SI joint, and a positive straight leg raise. Dr. Cassidy assessed Claimant with acute left-sided low back pain with left-sided sciatica. She noted Claimant has a history of degenerative joint disease of the lumbar spine. Dr. Cassidy prescribed Claimant pain medication and referred Claimant for a lumbar spine x-ray and physical therapy.

7. Claimant underwent lumbar spine x-rays on October 9, 2020, which revealed scoliosis and degenerative change and bilateral L5 pars defect with grade 1 anterolisthesis at the L5-S1 level.

8. Employer's First Report of Injury completed October 14, 2020 notes an injury date of August 21, 2020 and that Employer was notified of the alleged injury on October 11, 2020.

9. Claimant filed a Worker's Claim for Compensation on October 14, 2020. In response to question "How did the injury occur?" Claimant wrote, "Pain thru out day worrining (*sic*)." (Exhibit 1, p.1).

10. Claimant subsequently presented to authorized provider Nazia Javed, M.D. on October 12, 2020 with complaints of extreme low back pain radiating down to his left foot. Dr. Javed noted a date of injury of August 21, 2020. Regarding the mechanism of injury, Dr. Javed wrote,

> Patient states he was lifting a heavy glass 48 inches in diameter and weighted maybe 400 lb with the help of 3 other people, was basically unloading it from his truck and felt sharp pull in low back and the next day felt sharp pain in low back. He states that he was off work for 2 weeks and so he rested and did some stretching exercises for his low back. His pain got better and he did not notice andy (*sic*) radicular pains in LE. He resumed his work duties in September and was feeling fine with no LBP. He continued with back exercises on his own. He does mention with certain stretching exercises at times he felt mild pull in back but it resolved. He mentions since last Wednesday his low back pain has gotten worse and has been feeling constant sharp pain more in left lower back and he feels pain is radiating down his LLE. Has felt paresthesias in LLE.
>
> (Exhibit H p. 32-33)

11. A handwritten note included with Dr. Javed's medical record notes "48 inches wide, 400 pounds, lifting off the truck, low back pain with left hip. Last Wednesday at home felt pain was worse. Went to work drove to Grand Junction. Lifting glass & unloading, some glass pieces 100-250." (Exhibit H, p. 35). Claimant testified he does not recall making such statement to Dr. Javed.

12. Dr. Javed provided an assessment of lumbar discogenic pain and lumbar degenerative discs and diagnosed Claimant with lumbar discogenic pain and lower left extremity pain. She instructed Claimant to use ice and heat and prescribed a Medrol Dosepak. Claimant was released to light duty work, with restrictions of no commercial driving or lifting/pushing/pulling from October 12, 2020 to October 19, 2020.

13. Dr. Javed referred Claimant for a lumbar spine MRI, which Claimant underwent on October 23, 2020. The MRI demonstrated moderate to severe bilateral L5-S1 foraminal stenosis with compression of the exiting L5 nerve roots.

14. Dr. Javed subsequently referred Claimant for evaluation with Brian Fuller, M.D. and for physical therapy. She released Claimant to work modified duty from October 27, 2020 to November 12, 2020 with restrictions of no lifting/carrying/pushing/pulling more than five pounds, avoiding bending and prolonged sitting, and alternating sitting/standing every 30 minutes as needed.

15. Respondents filed a Notice of Contest on October 27, 2020, reflecting the August 21, 2020 date of injury. The parties subsequently stipulated to a date of injury of October 7, 2020 for the worker's compensation claim at issue.

16. Claimant presented to Dr. Fuller on November 3, 2020. Dr. Fuller noted Claimant had been experiencing low back pain since August 21, 2020 while performing work duties. Dr. Fuller reviewed Claimant's lumbar MRI and x-rays and performed a physical examination. He recommended a left transforaminal epidural steroid injection and possible left sacroiliac injection, possible medial branch neurotomy, EMG, x-rays and possible spine surgeon consultation.

17. On November 3, 2020, Dr. Fuller requested authorization for a left L5-1, S1-2 transforaminal epidural steroid injection. On November 6, 2020, Insurer denied Dr. Fuller's request for authorization on the basis that compensability of the alleged injury had not been established.

18. On November 19, 2020, Dr. Fall performed an Independent Medical Examination ("IME") at the request of Respondents. Regarding the mechanism of injury, Dr. Fall wrote,

> [Claimant] reports that on 10/07/2020, he was on his route and got to his first stop at Rifle. He does not know if that is where it happened. Nothing stood out. As the day went on, the pain started shooting down the left side, and his back was hurting. When he woke up that morning, he was fine. By the time he got to Montrose, which was his last stop, he could not get up to clean his windshields. It even hurt to stand. He got to the hotel, took Advil, and went to bed. The next day, his pain level was 10/10.
>
> * * *
>
> He states that he called his supervisor on Sunday and told him that he needed to see a comp doctor. He was told to come in on Monday. He believes that the pain began on a Thursday and two days later, he saw his family doctor, and she ordered an x-rays and told him not to lift. He then took paid time off. After he had reported it to his supervisor, he was sent to Dr. Javed who he saw three or four days after the injury. He believes it was the following Monday when he saw her.

(Exhibit E, p. 16)

19. Claimant mentioned to Dr. Fall an incident in August 2021 where he lifted a piece of glass that was heavier than usual and felt a shift or movement in his back and left hip but no pain. He reported to Dr. Fall that he returned to work after that incident with no issues in function. Dr. Fall examined Claimant and reviewed Claimant's medical record, including the lumbar MRI and x-rays. Her assessment was low back pain with differential diagnoses including left L5 radiculopathy versus left sacroiliac dysfunction.

20. Dr. Fall noted that Claimant's mechanism of injury was unclear, noting the medical records indicated some discrepancies in Claimant's reports regarding the August 21, 2020 incident, as well as the onset of pain on October 7, 2020. She pointed to the handwritten note indicating Claimant felt pain at home on Wednesday. Dr. Fall opined that no acute event or incident occurred on October 7, 2020. She concluded that Claimant's MRI did not reveal any acute findings. She noted that the MRI findings were likely longstanding and explained that degenerative changes do not necessarily require a specific acute event to become symptomatic. Dr. Fall was unable to state within a reasonable degree of medical probability that Claimant injured his back at work.

21. Respondents denied further treatment with Dr. Javed and Dr. Fuller. Claimant continued medical treatment on his own with Dr. Cassidy, who referred Claimant to Mara Mindy Isser Sax, D.O. and Nolan Wessell, M.D.

22. On January 11, 2021, Claimant underwent a left L5 transforaminal epidural injection, performed by Dr. Sax. The injection did not provide Claimant sufficient relief.

23. Claimant presented to Dr. Wessell on February 17, 2021. Dr. Wessell noted Claimant had a longstanding history of chronic low back pain that significantly worsened in October 2020 when transporting heavy pieces of glass. Dr. Wessell's assessment was: lumbar degenerative disc disease, degenerative facet arthritis, lumbar radiculopathy, lumbar pars defect and spondylolisthesis at L5-S1 level. Dr. Wessel recommended surgical intervention.

24. On March 11, 2021, Claimant underwent L5-S1 anterior lumbar interbody fusion and L5-S1 minimally invasive posterior spinal fusion, performed by Dr. Wessell. The operative notes document an admission diagnosis of degenerative disk disease L5-S1 and degenerative spondylolisthesis L5-S1.

25. Claimant has not worked since March 5, 2021. Claimant testified at hearing that continues to experience a lot of pain and remains on full restrictions from his back surgeon. Claimant did not have prior back injuries or treatment to his back.

26. Dr. Fall testified at hearing as a Level II accredited expert in physical medicine and rehabilitation. Dr. Fall testified consistent with her IME report and continued to opine Claimant did not sustain a work injury. She explained that Claimant did not identify a specific incident resulting in his symptoms, and again pointed to the handwritten note indicating Claimant felt pain at home the Wednesday of the incident. Dr. Fall explained that a pars defect, noted on Claimant's imaging, is a stress fracture. She further explained that pars defects are not necessarily associated with pain or trauma and can be the result of a degenerative condition.

27. The ALJ finds the testimony of Dr. Fall, as supported by the medical records, more credible and persuasive than Claimant's testimony.

28. Claimant failed to prove it is more probable than not he sustained a compensable industrial injury arising out of and in the scope of his employment on October 7, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl’s Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove it is more likely than not he sustained a compensable industrial injury on October 7, 2020. The preponderant evidence does not establish the requisite causal nexus between Claimant’s work on October 7, 2020 and his symptoms, disability and need for treatment. Claimant contends that, during his work shift on October 7, 2020 he experienced an onset of low back pain that gradually worsened. Claimant did not identify any specific incident or trauma on October 7, 2020 leading to the occurrence of symptoms. Discrepancies in the record regarding Claimant’s condition leading up to the alleged work injury and the onset of pain undermine Claimant’s credibility.

Claimant testified that he was not experiencing any issues after the August 21, 2020 incident. However, Dr. Cassidy’s October 9, 2020 medical note reflects Claimant’s reports of experiencing 4/10 left hip pain for six weeks, which worsened in the last three to four days without specific trauma (the ALJ notes the alleged onset of pain at work on Wednesday, October 7, 2020 would be two days prior to the October 9, 2020 evaluation of Dr. Cassidy). Notably, a handwritten note contained in Dr. Javed’s October 12, 2020 medical records specifically documents Claimant’s reports of experiencing pain at home last Wednesday and then going to work and driving to Grand Junction. The medical note directly contradicts Claimant’s assertion that he was fine prior to work on October 7, 2020 and experienced a gradual onset of pain while at work.

Dr. Fall credibly explained that Claimant likely suffers from degenerative low back changes, as evidenced on MRI and x-ray. Dr. Fall’s opinion is in line with the assessments and diagnoses of other physicians who evaluated Claimant, all noting degenerative diagnoses. The totality of the credible and persuasive evidence establishes that it is more likely Claimant was already experiencing pain at home prior to beginning his work duties on October 7, 2020, and that the occurrence of symptoms at work were the result of a pre-existing condition unrelated to his employment.

As Claimant failed to prove he suffered a compensable industrial injury, the remaining issues are moot.

ORDER

1. Claimant failed to prove by a preponderance of the evidence he sustained a compensable industrial injury on October 7, 2020. Claimant’s claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 25, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment with the employer on July 1, 2019 (WC 5-118-535).

2. If the July 1, 2019 claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment she received from Peak Family Medicine is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. Whether the claimant has demonstrated, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment with the employer on March 28, 2020 (WC 5-149-176).

4. If the March 28, 2020 claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment she received from Cedar Point Health is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

RESERVED ISSUES

At the hearing, the parties stipulated that the endorsed issues of average weekly wage (AWW), temporary total disability (TTD) benefits, and temporary partial disability (TPD) benefits, would be reserved for future determination, if necessary.

FINDINGS OF FACT

1. The claimant has been employed with WalMart for six years. On July 1, 2019, the claimant was working in her position as a self check-out host. During that shift, a customer spilled a two liter bottle of soda. The claimant began cleaning up the spill, utilizing a mop and mop bucket. While attempting to wring out the mop, the mop bucket tipped over, causing the claimant to fall toward the ground. The incident was recorded by store surveillance video.

2. The claimant testified that the front of her right knee struck the mop bucket as she fell. She further testified that she immediately felt extreme pain in the front of her right knee.

3. The claimant reported the incident to the employer. The claimant testified that the employer presented her with a list of medical providers. From that list, the claimant selected Peak Family Medicine.

Medical Treatment Prior to July 1, 2019

4. Prior to the July 1, 2019 incident involving the mop bucket, the claimant sought treatment of her right knee.

5. On April 8, 2014, x-rays were taken of the claimant's right knee. The x-rays showed no fracture or dislocation. However, the radiologist, Dr. Raymond Welsh, noted a "rounded density" in the suprapatellar bursa. Dr. Welsh opined that this was a possible loose body.

6. On April 17, 2014, magnetic resonance imaging (MRI) was taken of the claimant's right knee. The MRI results were also read by Dr. Welsh who noted advanced patellofemoral compartment chondromalacia with areas of full thickness chondral loss. This included high grade chondral loss of the far inferior medial trochlea with cystic changes and spurring. Dr. Welsh also noted a small joint effusion.

7. The claimant testified that she underwent the 2014 MRI of her right knee because she was experiencing mild knee pain that was "uncomfortable". The claimant further testified that these 2014 right knee symptoms did not impact her ability to perform her job duties or activities at home.

8. On December 14, 2016, the claimant was seen by her primary care physician (PCP), Dr. Darrin Green. On that date, the claimant reported a number of issues that included right leg pain that impacted her ability to walk. Dr. Green noted that the claimant had a prior history of right knee pain with chronic osteoarthritis in both knees. The medical record of that date also indicates that the claimant had a prior left total knee replacement.

9. On January 12, 2017, the claimant returned to Dr. Green and reported pain in both knees. The claimant made similar complaints to Dr. Green on April 12, 2017, July 6, 2017, October 5, 2017, and December 28, 2017. At the December 28, 2017 appointment, the claimant specifically reported that her employer was trying to increase her hours, but the claimant was trying to limit them. Dr. Green specifically noted that the claimant "[f]eels like she can't tolerate 40 hours per week."

10. On April 29, 2019, the claimant was seen by Dr. Green to refill her pain medications. At that time, the claimant reported consistent pain in her back and knees.

Medical Treatment After July 1, 2019

11. Following the July 1, 2019 incident, the claimant was first seen at Peak Family Medicine on July 10, 2019. At that time, the claimant was seen by Issac Klostermann, PA. After his exam, PA Klostermann diagnosed a contusion of the right knee. He ordered a right knee x-ray and referred the claimant to physical therapy. In addition, he recommended the use of a knee brace and anti-inflammatories. PA

Klostermann assigned work restrictions of no kneeling, squatting, bending, stooping, climbing stairs or ladders.

12. On July 22, 2019, the claimant returned to PA Klostermann. At that time, PA Klostermann noted that the x-rays did not show any fracture. He also noted that the claimant's "symptoms are difficult to discern as they remain significant and non-focal". He recommended ongoing physical therapy, a home exercise program, a TENS unit, anti-inflammatories, and a knee brace.

13. The claimant returned to PA Klostermann on August 1, 2019, with continuing knee[1] pain. The claimant reported that she experienced knee pain at work and at physical therapy. On that date, PA recommended a right knee MRI. In addition, he added more frequent sitting breaks to the claimant's work restrictions.

14. On August 7, 2019, the claimant reported worsening symptoms. On that date, PA Klostermann limited the claimant to walking two hours per day and standing two hours per day.

15. On August 28, 2019, PA Klosterman ordered the recommended right knee MRI.

16. On September 19, 2019, an MRI of the claimant's right knee showed severe degenerative change in the lateral patellofemoral joint space.

17. On September 26, 2019, the claimant returned to PA Klostermann. At that time, PA Klostermann noted that the MRI showed chronic degenerative joint disease without acute damage. PA Klostermann noted the claimant's report that she did not have knee pain prior to the July 1, 2019 incident. Based upon that information, PA Klostermann opined that the claimant's right knee condition was work related, "despite no additional acute pathology on MRI."

18. On October 4, 2019, the insurer notified the claimant that her claim was denied. The reason provided for the denial was that the claimant's injury was not work related.

19. Following the respondents' denial, the claimant did not pursue further medical treatment because coverage was denied by her personal insurance and she could not afford to pay personally. The claimant also testified that she continued working full time for the employer.

March 28, 2020 Incident

20. The claimant alleges that on March 28, 2020, there was a second incident involving her right knee. The claimant testified that while she was working on March 28, 2020, she stopped to speak with a member of management. At that conclusion of their

[1] The medical record of that date identified the reason for the appointment "wc Right knee". However, the medical report references the claimant's left knee injury and pain. Based upon the ALJ's review of the records, she finds that this was a typographical error and the claimant's right knee was the knee examined by PA Klostermann.

discussion, the claimant turned and twisted her right knee. The claimant testified that she immediately felt pain in her right knee. Specifically, the claimant testified that it felt as though her "knee split two ways". The claimant went to the pharmacy and purchased a knee brace.

21. On June 18, 2020, the claimant was seen by Jeffrey Johnson, DC-FNP with Colorado Injury and Pain Specialists. On that date, the claimant reported pain in her lumbar spine, thoracic spine, left foot and right knee. The claimant's lumbar spine pain was identified as being related to the claimant's scoliosis. With regard to her right knee pain, FNP Johnson noted that the claimant's report that she "was injured July 2019 when she fell, and again in March when she twisted wrong at work." FNP Johnson recommended physical therapy and a psychological evaluation. Thereafter, the claimant continued treatment with Colorado Injury and Pain Specialists. However, the focus of that treatment was related to the claimant's scoliosis symptoms.

22. Following the March 28, 2020 incident, the claimant did not initially seek medical treatment. Subsequently, she sought treatment at Cedar Point Health on September 21, 2020. At that time, the claimant was seen by Barbara Budagher, PA-C. The claimant reported the twisting incident in March. PA Budagher opined that the claimant had possible internal derangement of the right knee. She recommended the claimant continue wearing her knee brace. In addition, PA Budagher referred the claimant for right knee x-rays. Based upon the September 21, 2020 medical record, it does not appear that the July 2019 incident, related treatment, or imaging was discussed with PA Budagher.

23. On September 23, 2020, the claimant was seen by Christopher Polsey, PA-C with Cedar Point Health. PA Polsey noted that the claimant had a right knee MRI in 2019 for a "separate claim". On exam, he noted pain, diffuse swelling and crepitus. PA Polsey ordered a right knee MRI and assigned work restrictions.

24. On October 6, 2020, an MRI of the claimant's right knee showed severe degenerative changes in the patellofemoral joint space.

25. On October 8, 2020, the claimant returned to Cedar Point Health and was seen by Dr. Randal Shelton. At that time, Dr. Shelton reviewed the recent MRI results and noted the claimant's "long-standing history of bilateral knee pain." Dr. Shelton specifically noted that the claimant had prior left knee surgery and:

> [h]er right knee was also hurting at that time, advised knee x-rays, but declined by the [patient], and thought to be secondary to [osteoarthritis]. There are other notes referring to bilateral knee pain since that time. Her MRI shows only [osteoarthritis], end stage, with no acute internal derangement. This is unchanged from her 2019 MRI.

26. Dr. Sheton opined that the condition of the claimant's right knee was not work related. As a result, he recommended that the claimant follow up with her PCP and he closed her case.

27. On February 10, 2021, the claimant attended an independent medical examination (IME) with Dr. John McBride. In connection with the IME, Dr. McBride reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. McBride opined that the claimant has end stage "primary (wear and tear)" patellofemoral osteoarthritis in her right knee. Dr. McBride also opined that the claimant did not suffer an injury to her right knee on July 1, 2019 or on March 28, 2020. In support of his opinions, Dr. McBride noted that there was evidence of end stage osteoarthritis in the claimant's right knee as early as 2014.

28. Dr. McBride's testimony was consistent with his written report. Dr. McBride testified that the September 18, 2019 right knee MRI showed no evidence of trauma. Based upon his review of the video of the September 1, 2019 incident, Dr. McBride testified that he did not see a direct blow to the claimant's knee. Dr. McBride reiterated his opinion that the claimant did not suffer an injury to her right knee on July 1, 2019. In addition, it is Dr. McBride's opinion that the July 1, 2019 incident did not aggravate the pre-existing osteoarthritis in the claimant's right knee. With regard to the March 28, 2020 incident, Dr. McBride restated his opinion that the claimant did not injure her right knee on July 1, 2019 or on March 28, 2020. In support of this opinion, Dr. McBride noted that the more recent MRIs show the same osteoarthritis related condition of the claimant's right knee as the MRI performed in 2014.

29. The claimant testified that her current symptoms include difficulty walking, limited mobility, and limited bending.

30. The ALJ does not find the claimant's testimony regarding the nature and onset of her right knee symptoms to be credible or persuasive. The ALJ credits the medical records and the opinions of Dr. McBride over the contrary opinions of PA Klostermann. The ALJ specifically credits Dr. McBride's opinion that the claimant did not injure her right knee on July 1, 2019 or on March 28, 2020. The ALJ is also persuaded that the July 1, 2019, and March 28, 2020 incidents did not aggravate, accelerate, or combine with the claimant's pre-existing right knee osteoarthritis to necessitate treatment. Therefore, the claimant has failed to demonstrate that it is more likely than not that she suffered a compensable right knee injury on July 1, 2019. The claimant has also failed to demonstrate that it is more likely than not that she suffered a compensable right knee injury on March 28, 2020.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer.

Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

July 1, 2019 incident (WC 5-118-535)

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment with the employer on July 1, 2019. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the July 1, 2019 incident aggravated, accelerated, or combined with her pre-existing right knee arthritis to necessitate medical treatment. As found, the medical records and the opinions of Dr. McBride are credible and persuasive.

March 28, 2020 incident (WC 5-149-176)

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment with the employer on March 28, 2020. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the March 28, 2020 incident aggravated, accelerated, or combined with her pre-existing right knee arthritis to necessitate medical treatment. As found, the medical records and the opinions of Dr. McBride are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant’s claim regarding an alleged July 1, 2019 injury (WC 5-118-535) is denied and dismissed.

2. The claimant’s claim regarding an alleged March 28, 2020 injury (WC 5-149-176) is denied and dismissed.

Dated this 25th day of May 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-971-581-005

ISSUES

1. Whether the respondents have overcome, by clear and convincing evidence, the findings of the Division-sponsored independent medical examination (DIME) physician regarding maximum medical improvement (MMI), and permanent impairment.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that spinal cord stimulator (SCS) replacement is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 17, 2014 work injury.

3. At hearing, the parties agreed that the endorsed issue of overpayment was reserved for future determination.

FINDINGS OF FACT

1. The claimant suffered an admitted injury at work on December 17, 2014. The injury occurred when the claimant was removing a ladder from his work vehicle. While lifting the ladder from the vehicle, the claimant slipped on ice and felt pain in his right shoulder. The claimant reported the December 17, 2014 incident to the employer and he was sent for medical treatment.[1]

2. On December 27, 2014, the claimant was seen at Glenwood Medical Associates by Dr. Brett Hesse. On that date, Dr. Hesse diagnosed the claimant with a shoulder strain. Dr. Hesse also noted that the claimant had a right rotator cuff tear with "possible spontaneously relocated shoulder dislocation." A right shoulder x-ray taken on that day showed no acute injury and no acute degenerative changes.

3. Subsequently, magnetic resonance imaging (MRI) of the claimant's right shoulder showed a full thickness tear of the supraspinatus and a partial tear of the subscapularis. Based upon these MRI findings, Dr. Hesse referred the claimant for an orthopedic consultation.

4. Thereafter, the claimant was seen by surgeon, Dr. Ferdinand Liotta. On January 14, 2015, Dr. Liotta performed a right rotator cuff repair.

[1] Since December 17, 2014, the claimant has undergone extensive medical treatment, including multiple surgeries, injections, and implantation of a spinal cord stimulator (SCS). The ALJ has reviewed the voluminous medical records entered into evidence. However, given the extent of these records and related treatment, the ALJ does not recite every treatment the claimant has received since December 17, 2014.

5. On January 19, 2015, the respondents filed a General Admission of Liability (GAL). In that GAL, the respondents admitted for medical treatment and temporary total disability (TTD) benefits beginning December 18, 2014 and ongoing.

6. When the claimant continued to experience symptoms, Dr. Liotta administered injections to the claimant's right shoulder on April 27, 2015. Subsequently, Dr. Liotta performed a second right shoulder surgery on June 16, 2015. The claimant continued to have symptoms, and on November 16, 2015, Dr. Liotta: performed an examination of the claimant's right shoulder, under anesthesia.

7. On April 12, 2016, the claimant was seen by Dr. Joel Cohen for psychological testing. At that time, Dr. Cohen diagnosed the claimant with somatic symptom disorder and adjustment reaction with mixed features reflective of anger and frustration. Dr. Cohen opined that the claimant would be a good candidate for an SCS trial.

8. Following a series of stellate ganglion blocks, on June 7, 2016, the claimant was seen by Dr. Giora Hahn. Dr. Hahn noted that the claimant had exhibited signs of thoracic outlet syndrome (TOS). Dr. Hahn opined that while the claimant was likely not a good candidate for further surgical treatment, the claimant was a good candidate for a cervical SCS.

9. On June 17, 2016, the claimant was seen by Dr. Richard Sanders. Dr. Sanders opined that the claimant had fairly severe symptoms of right neurogenic TOS and right neurogenic pectoralis minor syndrome. Dr. Sanders noted the claimant had a good response to a right scalene muscle block, and greater improvement with a right pectoralis minor muscle block. Dr. Sanders opined that the claimant was a candidate for surgical decompression of the right thoracic outlet and pectoralis minor areas. As a result, Dr. Sanders referred the claimant to Dr. Stephen Annest for consultation.

10. On June 27, 2016, the claimant was seen by Dr. Annest. On that date, Dr. Annest recommended the claimant undergo TOS surgery on the right. Thereafter, on July 27, 2016, Dr. Annest submitted a request for prior authorization to the respondents for the following: pec minor tenotomy; transaxillary rib resection; dissection of artery; supraclavicular neurolysis peripheral nerve; brachial plexus neurolysis; and tissue graft.

11. At the request of the respondents, Dr. Wallace Larson reviewed the claimant's medical records. On August 1, 2016, Dr. Larson issued a written report in which he opined that the claimant injured his right shoulder at work on December 17, 2014. Dr. Larson further opined that the claimant did not have a clear diagnosis of right-sided TOS. Therefore, he opined that the recommended TOS decompression surgery was not reasonable and necessary treatment for the claimant.

12. Based upon the opinions of Dr. Larson, the respondents denied authorization of all treatment of the claimant's right-sided TOS, including the TOS decompression surgery. Neither Dr. Annest nor the claimant appealed the denial or challenged the denial through the administrative hearing process.

13. Despite the respondents' denial of authorization, the claimant underwent the right-sided TOS decompression surgery on August 23, 2016. This procedure was paid for by the claimant's personal insurance.

14. Thereafter, the claimant began to have left shoulder symptoms. The ALJ finds no persuasive evidence on the record that treatment of the claimant's left shoulder condition was ever covered by the respondents.

15. On March 6, 2017, the claimant was seen by Dr. David Lorah. On that date, Dr. Lorah noted that the claimant would be reviewing a recent left shoulder MRI with Dr. Liotta. Dr. Lorah also noted that it was his understanding that the claimant's left shoulder had "not been authorized for treatment through [workers' compensation]."

16. On June 22, 2018, the claimant attended an independent medical examination (IME) with Dr. Barton Goldman. In connection with the IME, Dr. Goldman reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Goldman opined that the claimant suffered an injury to his right shoulder at work on December 17, 2014, resulting in the need for right shoulder surgery (and subsequent surgical revisions). In that report, Dr. Goldman included the claimant's right-sided TOS diagnosis and subsequent surgery as work related. Dr. Goldman further opined that the condition of the claimant's left shoulder, including treatment of left-sided TOS was not related to the claimant's work injury.

17. Dr. Goldman also stated that the claimant reached maximum medical improvement (MMI). Dr. Goldman recommended against further invasive treatment for the claimant. He recommended maintenance medical treatment of 10 to 15 sessions of physical therapy, and 10 massage therapy sessions over the next year. With regard to permanent impairment, Dr. Goldman assessed 21 percent for the claimant's right upper extremity, with a whole person impairment rating of 13 percent.

18. Subsequently, Dr. Annest referred the claimant to Dr. Giancarlo Barolat. The claimant was seen by Dr. Barolat on August 8, 2018. At that time, Dr. Barolat noted that the majority of the claimant's pain was in the axillary and pectoral areas bilaterally, (left greater than right). In addition, Dr. Barolat noted marked hypoesthesia in the right pectoral area; tenderness to palpation over the supraclavicular fossa bilaterally; and marked allodynia in the left pectoral, axillary, and upper chest wall area. Dr. Barolat opined that the claimant's pain was in a T1-T4 nerve root distribution. Dr. Barolat recommended a staged SCS trial. In addition, he noted that if the SCS trial produced more than 50 percent relief, the claimant would be a candidate for implantation of a permanent SCS.

19. On August 17, 2018, Dr. Goldman issued an addendum to his IME report. In the addendum, Dr. Goldman clarified that the claimant reached MMI as of November 27, 2017. Dr. Goldman noted that after that date, the claimant's treatment was focused on his non-work related left-sided issues.

20. On September 10, 2018, Dr. Barolat implanted two SCS paddle leads for purposes of conducting an SCS trial. Subsequently, the claimant reported to Dr. Barolat that he experienced 70 to 80 percent improvement in his pain. The claimant also reported that he wanted to move forward with full implantation of the SCS. On September 25, 2018, Dr. Barolat surgically implanted the SCS.

21. The claimant has undergone extensive treatment and procedures to address complications and revisions related to the SCS. The claimant testified that he now needs a new SCS implanted because his current device was damaged when he was pinned to his vehicle by a horse.

22. Janine A[Redacted] is a claims adjuster with the insurer. On December 18, 2020, Ms. A[Redacted] executed an affidavit regarding the claimant's workers' compensation claim. In her affidavit, Ms. A[Redacted] confirmed that the insurer did not receive a referral from an authorized provider for the claimant to see Dr. Barolat. In addition, the insurer did not authorize the claimant's treatment with Dr. Barolat. The insurer did not receive a request for authorization for the implantation (and later revisions) of the SCS. The insurer has not paid any medical bills related to the implantation of the SCS and subsequent revisions. The ALJ finds the information contained in Ms. A[Redacted]'s affidavit credible and persuasive.

23. Following a request by the respondents, on December 10, 2018, the claimant attended a 24-month DIME with Dr. Jade Dillon. Prior to completing her DIME report, Dr. Dillon reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her DIME report, Dr. Dillon opined that the claimant's right shoulder and related surgeries were related to the claimant's work injury. Dr. Dillon noted her belief that the SCS was authorized medical treatment under this claim. As a result, Dr. Dillon opined that the claimant was not at MMI because he was recovering from a recent SCS revision surgery. Dr. Dillon assessed a provisional impairment rating of 21 percent for the claimant's right upper extremity (13 percent whole person); and an additional one percent for unilateral phrenic nerve disorder. This resulted in a total whole person impairment rating of 14 percent.

24. On July 1, 2019, the claimant attended a second IME with Dr. Goldman. As with the prior IME, Dr. Goldman reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Goldman again opined that the claimant had reached MMI as of November 27, 2017. He also noted that the claimant never was, (and continued not to be), a good candidate for an SCS. Dr. Goldman also noted that the pain related diagnoses (beyond the claimant's initial right rotator cuff tear) were based primarily on subjective symptomatology that was never verified via diagnostic studies or other objective data, as required by the Colorado Medical Treatment Guidelines (MTG).

25. The claimant attended a second DIME with Dr. Dillon on July 21, 2020. In her DIME report, Dr. Dillon again opined that the claimant had not reached MMI. In support of this opinion, Dr. Dillon noted that the claimant was in need of replacement of his SCS. In that same report, Dr. Dillon referred to Dr. Goldman's opinion in his July 1, 2019, IME report that the SCS was not in compliance with the MTG and expressed her

agreement with Dr. Goldman on that issue. Specifically, Dr. Dillon noted “[w]hile I agree that the placement of the stimulator may not have been in accordance with the medical treatment guidelines, the fact is that this was done as an authorized procedure as part of this case and one cannot, as a DIME physician at a later date, reverse an authorization and exclude complications that have arisen from the specific authorized treatment.”

26. Dr. Dillion testified via deposition. During her testimony, it was clarified that treatment of the claimant’s right sided TOS, and the SCS trial and implantation were not authorized by the respondents. Based upon this clarification, Dr. Dillon testified that the claimant would have been at MMI “a long time ago”. She further testified that she agreed with Dr. Goldman regarding the date that the claimant reached MMI. Dr. Dillon further testified that it is her opinion that the claimant’s mechanism of injury did not cause or exacerbate the TOS. Therefore, it is Dr. Dillon’s opinion that all treatment following the diagnosis of TOS, including the SCS, would be “outside the scope” of the claim.

27. Dr. Dillon testified that she did not relate the claimant’s diagnosis of TOS to his right rotator cuff tear, or the related repair surgery. To the extent that the TOS existed, that condition was not caused, nor exacerbated by the original injury to the claimant’s right shoulder. Dr. Dillon opined that pursuant to the MTG the claimant did not meet the diagnostic criteria for occupational TOS. Dr. Dillon opined that she would have recommended physical therapy for six months when the claimant reached MMI for his right rotator cuff injury. As that period has elapsed, the only maintenance care she would recommend (as related to the right rotator cuff) would be a home exercise and stretching program.

28. Dr. Goldman testified that he was focused on the relatedness of the claimant’s left shoulder and left shoulder procedures in his IME reports. Therefore, Dr. Goldman assumed that the work-relatedness of the claimant’s right-sided had already been addressed. Dr. Goldman testified that he agrees with Dr. Larson’s opinions regarding the right sided TOS surgery.

29. Dr. Barolat testified via deposition. Dr. Barolat testified that the claimant suffered an injury to the right brachial plexus either at the time of the shoulder injury or at the time of the surgery to correct the shoulder injury. Dr. Barolat also testified that the claimant’s neuropathic pain spread to the left side. Dr. Barolat testified that he did not review the claimant’s prior medical records, (including the results of electrodiagnostic testing), before moving forward with the SCS trial and permanent implantation.

30. Dr. Barolat also testified that the claimant’s current SCS has technically failed and needs to be revised. This revision would involve implantation of an entirely new system, because the manufacturer of the original SCS has gone bankrupt. Dr. Barolat based his opinion regarding relatedness of the spinal cord stimulator on the claimant’s subjective history and a theory that the claimant’s TOS was “somehow” related to the initial work injury to his right shoulder.

31. The ALJ credits the medical records, the testimony of Dr. Dillon and the opinions of Drs. Goldman and Larson. The ALJ does not credit the opinions of Dr. Barolat. The ALJ finds that the respondents have overcome the DIME physician’s initial opinions

on MMI and permanent impairment. Dr. Dillon's initial opinion that the claimant was not at MMI was based upon an incorrect belief related to what treatment had and had not been authorized. Furthermore, once Dr. Dillon had an understanding regarding this, she changed her opinion regarding MMI. Specifically, she agreed with Dr. Goldman that the claimant reached MMI on November 27, 2017. Dr. Dillon also agreed with Dr. Goldman's permanent impairment rating of 21 percent for the claimant's right upper extremity. Finally, Dr. Dillon testified that it is her opinion that the claimant would not need additional maintenance treatment.

32. The ALJ further credits the medical records, Dr. Goldman's opinions, and the testimony of Dr. Dillion, and finds that the claimant has failed to demonstrate that it is more likely than not that a replacement SCS is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As noted above, the SCS treatment was not authorized or made part of this claim. Therefore, the ALJ finds that replacing an unauthorized SCS is not reasonable and necessary medical treatment in this case. Nor is the requested replacement SCS related to the claimant's December 17, 2014 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and

free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in her opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in her opinions.

5. When a DIME physician issues conflicting or ambiguous opinions concerning whether or not the claimant has reached MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

6. As found, the respondents have overcome the initial opinions of the DIME physician by clear and convincing evidence. The DIME physician, Dr. Dillon, changed her opinions regarding MMI and permanent impairment once she understood that she based her initial opinions on an incorrect understanding of what was authorized treatment under the claimant's workers' compensation claim. The ALJ finds that Dr. Dillon's current opinions (as expressed in her deposition testimony) are based upon a correct understanding of the claimant's claim. As noted above, the medical records, the opinions of Drs. Goldman and Larson, and the testimony of Dr. Dillon are found to be credible and persuasive.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see Sims v. Industrial Claim Appeals Office, 797 P.2d 777 (Colo. App. 1990).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence that replacement of his SCS is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 17, 2014 work injury. As found, the initial SCS implantation was not authorized by the respondents. Therefore, a replacement the claimant's current SCS is likewise not related to the claimant's work injury. As noted above, the medical records, the opinions of Dr. Goldman, and the testimony of Dr. Dillon are found to be credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents have overcome the opinions of the DIME physician on the issues of MMI and permanent impairment.

2. The claimant reached MMI on November 27, 2017.

3. The claimant shall be assigned a permanent impairment rating of 21 percent for his right upper extremity.

4. The claimant's claim for maintenance medical treatment, including a replacement SCS, is denied and dismissed.

5. All matters not determined here are reserved for future determination.

Dated this 25th day of May 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove his claim should be reopened based on a change of condition?

- Is Claimant entitled to medical benefits, including a right shoulder surgery performed by Dr. FitzPatrick on September 25, 2020?

- Is Claimant entitled to additional TTD benefits commencing September 25, 2020?

- Are Respondents entitled to offset PPD benefits already paid against any additional TTD benefits owed to Claimant?

FINDINGS OF FACT

1. Claimant worked for Employer as a distribution sales manager. He suffered admitted injuries on August 24, 2016 when he stepped backward through an open trapdoor and fell down a flight of approximately 20 wooden stairs.

2. Claimant was referred to CCOM for authorized treatment, where he saw PA-C Steven Byrne. After a brief course of treatment, he was put at MMI on November 14, 2016 with no impairment, no restrictions, and no need for further care related to the work accident. Claimant disagreed he had recovered from his injuries and asked about additional therapy or other treatment options. Mr. Byrne advised Claimant he had finished treatment for the work-related injuries and any ongoing issues were related to pre-existing problems, for which he should see his personal providers.

3. Respondents filed a Final Admission of Liability (FAL) denying further treatment as not reasonable, necessary, or related to the compensable injury. Claimant did not object to the FAL and the claim closed.

4. Claimant's condition steadily worsened during 2017. He sought treatment with his personal physicians, as he had been instructed to do when discharged by CCOM. Eventually, Claimant underwent a left shoulder rotator cuff repair, biceps tenodesis, and subacromial decompression surgery by Dr. Jennifer FitzPatrick on October 20, 2017.

5. On December 29, 2017, Claimant applied for a hearing seeking to reopen his claim based on a worsening of condition.

6. Hearings were held before the undersigned ALJ regarding the petition to reopen on June 7, 2018 and September 17, 2018. The claim was reopened in a final Order dated November 21, 2018.

7. One of the disputed issues in the prior litigation was whether the left shoulder was related to the accident. That issue was resolved and Claimant's favor, and

the left shoulder was deemed a compensable component of the work injury. Additionally, Dr. FitzPatrick was found to be an authorized provider and Insurer was ordered to cover the October 2017 left shoulder surgery.

8. Claimant was placed at MMI on November 12, 2019. He was given a combined 20% whole person rating for the cervical spine and left shoulder.

9. Neither party contested the rating, and Respondents filed an FAL on January 13, 2020. Respondents invoked the $86,697.04 benefit "cap" based on a rating of less than 26%. The FAL admitted for the remaining balance of indemnity benefits payable to the cap, which totaled $61,852.94.

10. The admitted PPD has been paid in full. Claimant has received $86,697.04 in TTD and PPD benefits.

11. On February 8, 2020, Claimant sought treatment at the Parkview Medical Center emergency department after slipping on ice outside his home. Claimant did not fall to the ground, but he squatted quickly and aggravated his left knee and hip. Claimant credibly testified he did not injure or aggravate his left shoulder because of the accident. Claimant's testimony is corroborated by the ER records, which document left knee pain and swelling but contain no mention of any left shoulder issue.

12. Dr. FitzPatrick evaluated Claimant on February 10, 2020 regarding his left knee and hip. Claimant explained he "recently slipped on ice with left hip and left knee pain since that time. Felt a pop at that time. Feels that knee bent more than it normally can." Claimant also told Dr. FitzPatrick he was "still" having pain in his left shoulder from the 2016 work injury. There was no indication he injured the left shoulder when he slipped on the ice or that his shoulder has gotten any worse. X-rays showed a nondisplaced patellar fracture. Dr. FitzPatrick recommended a CT of the left hip. She recommended no treatment for the left shoulder and stated Claimant could follow up for the left shoulder "in the future."

13. Claimant returned to Dr. FitzPatrick on July 27, 2020 regarding his left shoulder. His primary complaint was "progressive pain with time, no fall or injuries since time of surgery." The worsening shoulder pain was limiting Claimant's ability to complete ADLs. Dr. FitzPatrick ordered a left shoulder MRI, which was completed on September 1, 2020.

14. Dr. FitzPatrick reevaluated Claimant on September 3, 2020. She personally reviewed the MRI images. Dr. FitzPatrick noted a full-thickness "re-tear" of the rotator cuff. The supraspinatus was retracted back to the mid-humerus. Dr. FitzPatrick recommended an arthroscopic rotator cuff revision repair and documented, "he would like to undergo revision as he is having increasing pain and disabilities with activities of daily living."

15. Dr. FitzPatrick performed an arthroscopic revision rotator cuff repair on September 25, 2020.

16. The surgery caused additional disability and impact on Claimant's earning capacity commencing September 25, 2020.

17. Dr. William Ciccone II performed an IME for Respondents on December 9, 2020. Dr. Ciccone opined the September 25, 2020 left shoulder surgery was reasonably needed but not causally related to the work accident. Dr. Ciccone stated, "[t]he claimant was placed at MMI on 11/25/2019. According to the records provided, the claimant suffered another injury on 2/8/2020 when he slipped on ice. The claimant had complaints of left shoulder pain on 2/10/2020 in the orthopedic examination. It appears that claimant had increased left shoulder pain following the fall. . . . I believe the fall on 2/8/2020 may have aggravated his pre-existing pathology necessitating revision surgery." Dr. Ciccone reiterated this conclusion in his deposition testimony.

18. Dr. Ciccone's supposition Claimant re-injured or aggravated his left shoulder on February 8, 2020 is inconsistent with the contemporaneous medical records and is refuted by Claimant's credible testimony. Dr. Ciccone's causation opinions are neither credible nor persuasive.

19. The most recent medical record in evidence is Dr. FitzPatrick's February 25, 2021 report. Claimant was recovering well but still had a few PT sessions remaining. Claimant was "very happy" the results of surgery and the shoulder felt better than it had in years. Dr. FitzPatrick opined Claimant was "nearing MMI, but still can make some strength gains."

20. The record contains no formal declaration of MMI or release to full duty from an ATP.

21. Claimant's testimony was credible and persuasive.

22. Claimant proved his claim should be reopened effective September 25, 2020 based on a change of condition. The worsening of Claimant's left shoulder in 2020 reflects the natural progression of his compensable injury. There is no persuasive evidence of any intervening or nonindustrial cause.

23. The left shoulder surgery performed by Dr. FitzPatrick on September 25, 2020 was reasonably needed and causally related to the August 24, 2016 work accident.

24. Claimant proved entitlement to TTD benefits commencing September 25, 2020.

25. Respondents may offset PPD already paid against TTD owed to Claimant under *Donald B. Murphy Contractors, Inc. v. Industrial Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995).

CONCLUSIONS OF LAW

A. This claim should be reopened based on a change of condition.

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The allowance for reopening reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4).

A "change in condition" refers either to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from an intervening cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant proved his claim should be reopened based on a change of condition. Although Claimant's left shoulder remained symptomatic when he was put at MMI, it progressively worsened in 2020. The September 1, 2020 MRI documented a recurrent rotator cuff tear, which was subsequently confirmed intraoperatively. Claimant did not injure or aggravate his left shoulder on February 8, 2020 when he slipped on ice. The worsening of Claimant's left shoulder that ultimately culminated in surgery on September 25, 2020 reflects the natural progression of his industrial injury, without contribution from any nonindustrial factor.

B. Claimant is entitled to TTD benefits commencing September 25, 2020.

A claimant's entitlement to TTD benefits after a reopening is governed by *City of Colorado Springs Disposal v. Industrial Claim Appeals Office*, 954 P.2d 677 (Colo. App. 1997). *City of Colorado Springs* held that a worsening after MMI does not automatically entitle a claimant to additional TTD benefits, unless the worsened condition causes a "greater impact upon [the] claimant's temporary work capability." The dispositive question is whether the claimant proves "increased disability, as measured by [their] capacity to earn wages." *Friesz v. Wal-Mart Stores, Inc*., W.C. No. 4-823-944-01 (July 26, 2012). The ICAO has repeatedly held that *City of Colorado Springs* does not require a claimant to establish an "actual wage loss," and a claimant may recover TTD even if he not working immediately before his condition worsened. *E.g.*, *Hebert v. Blac Frac Tanks, Inc*., W.C. No. 4-919-279-01 (October 19, 2018); *Garcia v. Frontier Airlines*, W.C. No. 4-677-511

(August 17, 2011); *Moss v. Denny's Restaurants*, W.C. No. 4-440-517 (September 27, 2006).

As found, Claimant proved the September 25, 2020 shoulder surgery caused increased disability and greater impact on his earning capacity than existed before surgery. Although Claimant was not given any formal restrictions, a claimant need not present a medical opinion or restrictions to establish TTD. *E.g., Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). After surgery, Claimant reasonably required some period of convalescence during which he could not have worked in any capacity. Claimant is entitled to TTD benefits commencing September 25, 2020 and continuing until the occurrence of a terminating event listed in § 8-42-105(3).

C. Insurer may offset PPD paid against additional TTD owed to Claimant

Section 8-42-107.5 limits the combined total of temporary disability and permanent partial disability benefits a claimant may receive based on their final impairment rating. The cap for a whole person rating less than 26% for Claimant's date of injury is $86,697.04. As found, Claimant's overall final whole person rating is 20% and Insurer has admitted and paid Claimant $86,697.04 in temporary and permanent partial disability benefits.

Where, as here, a claim is reopened after a claimant has been paid up to the applicable benefit cap, the respondents may offset PPD benefits paid against any additional TTD benefits owed. *Donald B. Murphy Contractors, Inc. v. Industrial Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). There is no appreciable difference between Claimant's case and the factual scenario addressed in the *Murphy* case. Accordingly, Insurer may offset PPD benefits previously paid to Claimant against any additional TTD benefits owed as a result of this Order.

ORDER

It is therefore ordered that:

1. This claim is reopened effective September 25, 2020.

2. Insurer shall cover all reasonably necessary medical expenses related to the September 25, 2020 left shoulder surgery performed by Dr. FitzPatrick.

3. Claimant is eligible for TTD benefits at the admitted rate commencing September 25, 2020 and continuing until terminated according to law.

4. Insurer may offset PPD benefits previously paid against any additional TTD benefits owed to Claimant, pursuant to *Donald B. Murphy Contractors, Inc. v. Industrial Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995).

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 25, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Is Claimant's claim for medical benefits after MMI closed such that a petition to reopen would be required before Claimant can pursue additional evaluations or treatment? If so, Claimant is well beyond the time for reopening.

- If the claim remains open for medical benefits after MMI, Insurer will authorize a one-time evaluation with the ATP, Dr. Michael Dallenbach, to determine what, if any, additional injury-related treatment is reasonably needed.

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury to his wrist on June 18, 1992.

2. He underwent surgery and was left with a metal plate and screws in his wrist.

3. Claimant reached MMI on July 27, 1993 with an 18% upper extremity impairment rating.

4. Insurer filed a Final Admission of Liability (FAL) on September 12, 1994 admitting for the impairment rating. The FAL did not state a physician regarding medical benefits after MMI.

5. Claimant was last paid indemnity benefits in this claim as of April 15, 1994.

6. ALJ Barbara Henk conducted a hearing on May 24, 1995 on the sole issue of Claimant's entitlement to medical benefits after MMI.

7. In her Findings of Fact, Conclusions of Law, and Order dated June 6, 1995, Judge Henk found Claimant needed replacement braces and follow-up appointments with his treating surgeon "once or twice per year for the indefinite future." Judge Henk determined "Claimant needs continuing care to relieve the effects or prevent deterioration of this injury" as contemplated by *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

8. Judge Henk's FFCLO also concluded,

> Respondents urge the Administrative Law Judge to place limits on the type of future care that Claimant can obtain. The Administrative Law Judge must decline to limit the future care because such limits would be speculative. Milco Construction, 860 P.2d at 545 requires the entry of "a general order . . . without prejudice to the rights of either party to request reopening in accordance with the statute." Therefore, the Administrative Law Judge will

enter a general order keeping medical benefits open, but will not attempt to limit or specify the type of future care Claimant may obtain. Respondents are protected by the ordinary requirements that the care be reasonable, necessary, related to the injury, and in compliance with the fee schedule.

9. Judge Henk ordered Respondents to "pay . . . Claimant's continuing authorized medical benefits necessary as a result of this work-related injury." The Order also provided "[a]ll other issues shall remain open for future determination."

10. Neither party appealed the Order, and it became final.

11. Insurer did not file an Amended FAL after Judge Henk issued her Order.

12. Insurer covered ongoing "*Grover"* benefits for several years. The last date of service for medical treatment paid by Insurer was January 28, 2013. Respondents have not paid for any further medical benefits since that date.

13. No affirmative action was even taken to close the award of medical benefits after MMI.

14. This claim remains open for medical benefits after MMI despite the lack of activity since 2013.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond maximum medical improvement (MMI) if the claimant requires periodic maintenance care to relieve the effects of the injury or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

A general award of *Grover* benefits is open-ended and can contain no automatic expiration date. *Benedict v. Industrial Claim Appeals Office*, 740 P.2d 541 (Colo. App. 1987). In *Benedict*, the court held that "medical benefits may remain ongoing if they were ordered at the time a final award . . . was entered. . . . [O]nce such an agreement is made, or if a similar award is entered, we conclude that the payment of medical expenses must remain open until the carrier files a petition under § 8-53-113[1] to 'end or diminish' medical benefits." *Id*. at 543-44. The rule in *Benedict* applies whether *Grover* benefits are awarded

[1] The current reopening statute is codified at § 8-43-303. As to the issues involved in the present litigation, there is no material difference between the current version of the reopening statute and the version referenced in *Benedict*.

by a FAL or an ALJ. *E.g., Karathanasis v. Chili's Grill & Ba*r, W.C. No. 4-461-989 (August 8, 2003) (ALJ erred by imposing a 2-year limit on the award of medical benefits after MMI); *Eddy v. Toby's Vacuum Truck Service*, W.C. No. 3-113-338 (October 5, 2001). Accordingly, Claimant's claim remains open for medical benefits after MMI, and reopening is not required.

ORDER

It is therefore ordered that:

1. Claimant's claim for medical benefits after MMI remains open and no petition to reopen is required.

2. Insurer shall cover a one-time evaluation with Dr. Michael Dallenbach to determine what, if any, additional medical care Claimant may require.

3. All issues not decided herein or otherwise closed by operation of law are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 26, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on February 26, 2019.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 27, 2019 until he reached Maximum Medical Improvement (MMI) on September 30, 2020.

3. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively “termination statutes”).

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $699.09.

FINDINGS OF FACT

1. Claimant worked for Employer as a Delivery Driver. On February 25, 2019 Employer's Shipping/Receiving Supervisor Nick A[Redacted] completed an Employee Warning Report because Claimant had been discriminating against a co-employee by calling him a racist. Claimant received a warning because his behavior was "highly offensive” and “must stop immediately.” The Report specified that the “failure to demonstrate immediate and sustained improvement in these areas may result in further disciplinary action, up to and including termination.”

2. Claimant testified that on February 26, 2019 he injured his right elbow while performing his job duties. Claimant was delivering steel plates on a pallet weighing approximately 400 pounds. The person helping Claimant dropped the pallet and the steel began to slide. When Claimant tried to hold the pallet by himself, he felt a snap in his right elbow.

3. On February 27, 2019 Claimant presented to Injury Care Associates and reported a right elbow injury. Authorized Treating Physician (ATP) Christian Updike, M.D. noted that Claimant was lifting a pallet off of a truck and hyper-extended his right elbow “with high force.” Because Claimant exhibited slight, diffuse swelling of the right elbow, Dr. Updike recommended an MRI. Dr. Updike also assigned Claimant work restrictions of no lifting in excess of one pound, no driving and wearing a splint/brace.

4. On March 1, 2019 Claimant returned to Dr. Updike for an evaluation. He reported improved right elbow symptoms with only mild pain. Claimant was working modified duty. Dr. Updike noted that the MRI showed a high grade partial thickness tear

of the common extensor tendon, but Claimant was clinically minimally symptomatic. There was no fracture or loose body. Dr. Updike noted that Claimant's "tennis elbow" was minimally symptomatic and did not require surgery.

5. Claimant returned to Dr. Updike at Employer's request on March 5, 2020 because of his unwillingness to return to work based on pain and stress. Dr. Updike concluded that Claimant's MRI findings did not warrant being taken off of work. He noted that Claimant mentioned mental stress and had sought treatment at the VA Crisis Center. Dr. Updike authored a note taking Claimant off of work due to his personal condition that was unrelated to his Workers' Compensation claim. Claimant did not inform Dr. Updike of his prior history of anxiety.

6. On March 8, 2019 Claimant returned to Dr. Updike for an elbow evaluation and a Department of Transportation (DOT) physical. Claimant reported right elbow aching and intermittent soreness. Claimant was informed that he would not pass his DOT physical due to his high blood pressure.

7. On March 8, 2019 Claimant received an Employee Attendance Warning Report because he was absent from work and failed to contact his supervisor. The Report also noted that Claimant's five absences since the beginning of the year were excessive and would not be tolerated. The document specified that Claimant "needs to call into his supervisor prior to his shift starting if he is going to be absent or late" and "[a]ny future violations of our attendance policy, or any policy, may result in additional disciplinary action up to and including termination."

8. Claimant received another warning on March 11, 2019 regarding public urination. Mr. A[Redacted] testified the area in question was located on Employer's premises. He remarked that Claimant had received verbal warnings about public urination prior to the March 11, 2019 incident. Furthermore, Employer's Assistant Supervisor Sean B[Redacted] testified that Claimant had been warned several times about urinating on the premises. He specified that he saw Claimant out the back doors of Employer's facility urinating in public.

9. On March 11, 2019 Mr. A[Redacted] provided a note that Claimant's DOT physical had expired and his Commercial Driver's License (CDL) was no longer valid. Mr. A[Redacted] explained that it was Employer's policy for drivers to possess valid licenses.

10. On March 11, 2019 Claimant was terminated from employment with Employer. The Termination Report reflects that Claimant was specifically dismissed for violating Employer's policies and procedures. The Report also noted that Claimant's performance had been unsatisfactory in multiple areas. Mr. A[Redacted] summarized that the combination of Claimant's unexcused absences, public urination and unsatisfactory job performance culminated in his termination from employment.

11. On March 29, 2019 Claimant visited his Primary Care Physician (PCP) and reported sleep disturbances. He was assessed with chronic insomnia. Claimant did not report any right elbow pain or dysfunction.

12. Claimant returned to his PCP on March 5, 2020 or about one year later and reported lower back pain. However, he did not mention any ongoing, chronic right elbow or upper extremity pain and dysfunction. Furthermore, on March 23, 2020 Claimant reported to his PCP that he continued to have lower back pain and was no longer working due to Covid-19.

13. On May 27, 2020 Claimant again visited his PCP for pain in multiple joints. He reported symptoms primarily in his hands and elbows but also mentioned his knees and hips. Claimant did not attribute any of his symptoms to the February 26, 2019 work incident.

14. Claimant did not return to Injury Care Associates for his right elbow condition until approximately 15 months after his February 26, 2019 work incident. On June 24, 2020 ATP Ericson B. Tentori, D.O. evaluated Claimant. Claimant reported that he had been terminated by Employer and informed that he would no longer receive treatment for his right elbow injury. He noted that he worked for another employer as a fork lift operator but was "let go" after eight months. On physical examination, Dr. Tentori noted Claimant had diffuse tenderness circumferentially to the right forearm and wrist. He recommended re-opening of Claimant's claim, electrodiagnostic testing and a follow-up evaluation with Sean Griggs, M.D.

15. On July 8, 2020 Claimant returned to Dr. Tentori for an examination. Claimant reported ongoing moderate and occasionally severe pain affecting his right upper extremity from elbow to fingertips with associated paresthesia/weakness. Dr. Tentori determined that Claimant might have Carpal Tunnel Syndrome (CTS) unrelated to his original elbow injury.

16. On August 7, 2020 Claimant underwent EMG testing of his right upper extremity. The testing revealed severe right CTS that affected Claimant's motor and sensory fibers.

17. On August 12, 2020 Claimant returned to Dr. Tentori for an examination. Dr. Tentori remarked that Claimant had been evaluated by Dr. Griggs. However, Dr. Griggs had not addressed Claimant's right elbow. Instead, Dr. Tentori explained that Dr. Griggs "appears to have erroneously addressed/treated body parts which per my review of this claim are unrelated to the original work injury," In fact, Dr. Griggs had assessed Claimant with left finger trigger abnormality and clinical CTS. He administered injections to Claimant's bilateral wrists/carpal tunnel. Although Claimant's electrodiagnostic testing revealed severe CTS on the right side, Dr. Tentori could not connect the condition to Claimant's original right elbow injury.

18. On September 30, 2020 Claimant again visited Dr. Tentori for an evaluation. Dr. Tentori considered Claimant's medical records and performed a physical examination. He reasoned that it was not medically probable that Claimant's ongoing right elbow pain was a consequence of the February 26, 2019 work incident. However, he noted that Claimant "clearly injured his right elbow in February 2019." Dr. Tentori explained that, based on the nature of the original work injury, Claimant had received an appropriate diagnostic workup and course of treatment. He commented that, "[w]hile the claim was

open in 2019, it is my interpretation of the notes generated by Dr. Updike and Dr. Griggs that [Claimant] was without pain or acute findings with regard to the lateral eplcondylar region of his right elbow." Dr. Tentori thus concluded that Claimant reached Maximum Medical Improvement (MMI) with no permanent impairment for his February 26, 2019 right elbow injury and did not require medical maintenance care.

19. On October 1, 2020 Claimant underwent an independent medical examination with Lawrence A. Lesnak, D.O. On March 31, 2021 the parties completed the evidentiary deposition of Dr. Lesnak. Claimant reported to Dr. Lesnak that he and a customer were unloading a pallet weighing approximately 300 pounds on February 26, 2019. The customer was on a truck and lifted the pallet too high. The weight of the pallet thus shifted. The pallet struck Claimant's right forearm in three places. Claimant reported he developed acute right elbow pain. He also told Dr. Lesnak that, after he was terminated by Employer, he obtained full-time employment at Packrat as a delivery driver and worked until he was laid off. Claimant then worked full-time at Spec Building as a warehouse worker/delivery driver until he was again laid off. He did not report to Dr. Lesnak that he was unable to perform his job duties with the preceding employers due to any ongoing right elbow pain.

20. Dr. Lesnak acknowledged that Claimant may have sustained a mild soft tissue injury from being struck by the pallet on February 26, 2019. He noted that, when Claimant was evaluated by Dr. Updike, there was no evidence of any acute injury or trauma related to his right forearm or elbow. Dr. Lesnak commented that Claimant's right elbow MRI showed degenerative changes, but no evidence of any type of acute injury or trauma. He testified that, because Claimant underwent the MRI on the day after the injury, the imaging would have revealed blood in the area. Instead, the MRI only revealed the common degenerative finding of a partial thickness tear that Dr. Lesnak characterized as a "wear and tear abnormality." Dr. Lesnak commented that by March 8, 2019 Claimant reported that his right elbow condition had improved and he only had mild symptom

21. Dr. Lesnak noted that Claimant was terminated from his employment with Employer but then worked full time unrestricted for at least 10 months with other employers. He explained that, by the time Claimant's claim was reopened in June 2020, his symptoms were completely unrelated to any potential injury he may have sustained during the February 26, 2019 work incident. In fact, Dr. Lesnak reasoned that any soft tissue injury would have healed on or around March 8, 2019 and no further medical treatment would have been reasonable, necessary or related to the February 26, 2019 accident. He noted that there was no medical evidence to suggest Claimant required any activity limitations or work restrictions. Dr. Lesnak remarked that Claimant reported an extremely high level of somatic pain complaints that were also documented by other physicians. He concluded that Claimant more likely than not has significant, unrelated psychological issues affecting his subjective complaints.

22. Claimant testified at the hearing in this matter. He explained that after his termination from Employer he worked for a container delivery company called 1-800-PACKRAT. He noted that he worked for approximately six to eight months delivering containers and earned the same amount of money that he had made while working for Employer. Claimant remarked that he then worked for SPEC Building for about seven months. He delivered roofing materials and worked in a warehouse, Claimant noted that he was laid off due to Covid-19 and received unemployment benefits.

23. Claimant has demonstrated that it is more probably true than not that he suffered a compensable injury during the course and scope of his employment with Employer on February 26, 2019. However, the record reveals that his injury is limited to the right elbow. Claimant's CTS and other pre-existing conditions were not aggravated or accelerated by his February 26, 2019 industrial incident.

24. Initially, on February 26, 2019 Claimant injured his right elbow while delivering metal plates on a pallet weighing approximately 400 pounds. The person helping Claimant dropped the pallet and the plates started to slide. Claimant tried to catch the pallet, but developed acute right elbow pain. On February 27, 2019 Dr. Updike assigned Claimant work restrictions of no lifting in excess of one pound, no driving and wearing a splint/brace. A right elbow MRI showed a high grade partial thickness tear of the common extensor tendon, but no fracture or loose body. On March 1, 2019 Dr. Updike noted that Claimant's "tennis elbow" was minimally symptomatic and did not require surgery. Although Dr. Updike concluded that Claimant's MRI findings did not warrant taking him off of work, he nevertheless removed Claimant from work due to his unrelated, personal mental stress condition.

25. Claimant did not return to Injury Care Associates for his right elbow condition until approximately 15 months after his February 26, 2019 work incident. On June 24, 2020 ATP Dr. Tentori noted Claimant had diffuse tenderness circumferentially to the right forearm and wrist. He recommended re-opening Claimant's claim, electrodiagnostic testing and a follow-up evaluation with Dr. Griggs. Electrodiagnostic testing revealed severe CTS on the right side that was unrelated to Claimant's February 26, 2019 right elbow injury. By September 30, 2020 Dr. Tentori concluded that it was not

medically probable that Claimant's ongoing right elbow pain was a consequence of the February 26, 2019 work incident. Nevertheless, he noted that Claimant "clearly injured his right elbow in February 2019." Dr. Tentori explained that, based on the nature of the original work injury, Claimant had received an appropriate diagnostic workup and course of treatment. He explained that, while the claim was open in 2019, Claimant did not exhibit pain or acute findings in the lateral eplcondylar region of his right elbow. Dr. Tentori thus concluded that Claimant had reached MMI with no permanent impairment and did not require medical maintenance care.

26. Similarly, Dr. Lesnak's opinion reflects that Claimant's February 26, 2019 work injury was limited to his right elbow. Dr. Lesnak explained that Claimant likely only sustained a mild soft tissue injury or contusion to his arm or a sprain to his elbow as a result of the February 26, 2019 incident. Furthermore, the MRI taken within days of the incident did not demonstrate any acute injury. The findings on the MRI were merely degenerative and constituted a wear and tear type injury common in people Claimant's age. Dr. Lesnak determined that, when Claimant's claim was reopened in June 2020, his symptoms were completely unrelated to any potential injury he may have sustained during the work incident. In fact, Dr. Lesnak explained that any soft tissue injury would have healed on or around March 8, 2019 and no further medical treatment would have been reasonable, necessary or related to the February 26, 2019 accident. He noted that there was no medical evidence to suggest that Claimant needed any type of activity limitations or work restrictions.

27. The preceding chronology and persuasive medical opinions from Drs. Tentori and Lesnak reflect that Claimant's work-related injury is limited to his right elbow. The medical records establish that Claimant's other complaints and symptoms are unrelated to the February 26, 2019 lifting incident. Claimant's receipt of medical care based on reported symptoms does not establish an injury, but only demonstrates that he claimed an injury. Accordingly, Claimant suffered an industrial injury while working for Employer on February 26, 2019 that was limited to his right elbow.

28. Claimant has failed to prove that it is more probably true than not that he is entitled to receive TPD benefits for the period February 27, 2019 until he reached MMI on September 30, 2020. Claimant contends that he suffered a wage loss as a result of his work injury and should receive TPD benefits until he reached MMI. However, the record reveals that any decrease in Claimant's wages was not likely attributable to his right elbow work injury.

29. The record reflects that Claimant was working modified duty after the February 26, 2019 work incident until he requested Dr. Updike to remove him from work. On March 1, 2019 Dr. Updike noted that Claimant's "tennis elbow" was minimally symptomatic and did not require surgery. Although Dr. Updike concluded that Claimant's MRI findings did not warrant taking him off of work, he nevertheless removed Claimant from work due to his personal, unrelated mental stress condition. Furthermore, Dr. Lesnak determined that by early March 2019 Claimant's right elbow injury would have resolved and he would not have required work restrictions. Claimant was capable of work performing driving and warehouse duties for approximately one year without any issues. In fact, Claimant explained that after his March 11, 2019 termination from Employer he

worked for container delivery company 1-800-PACKRAT. He noted that he worked for approximately six to eight months and earned the same amount of money he had made while working for Employer. Claimant remarked that he then worked for SPEC Building for about seven months but was laid off due to Covid-19 and received unemployment benefits.

30. Furthermore, Claimant returned to modified duty work with Employer after his work-related right elbow injury at his full rate of pay. In fact, wage records reflect that the number of hours Claimant worked each week varied widely both before and after his work injury. Even before Claimant's February 26, 2019 industrial injury, he worked from 24 to 40 hours each week. Notably, after Claimant's work injury he worked 40 regular hours plus 1.50 overtime hours for the period ending March 1, 2019. Based on Claimant's unrelated symptoms and varied work schedule, it is unlikely that any decrease in Claimant's work hours were attributable to his February 26, 2019 work injury. Accordingly, Claimant has not established that the February 26, 2019 incident caused a disability and consequent partial wage loss. Claimant's request for TPD benefits is thus denied and dismissed.

31. Respondents have established that it is more probably true than not that Claimant was responsible for his termination from employment. The record reflects that a combination of Claimant's unexcused absences, public urination and unsatisfactory job performance culminated in his termination from employment. Specifically, on February 25, 2019 Mr. A[Redacted] completed an Employee Warning Report because Claimant had been discriminating against a co-employee. The Report specified that the "failure to demonstrate immediate and sustained improvement in these areas may result in further disciplinary action, up to and including termination." On March 8, 2019 Claimant received an Employee Attendance Warning Report because he was absent from work and failed to contact his supervisor. The Report also noted that Claimant's five absences since the beginning of the year were excessive and would not be tolerated. The document specified that "[a]ny future violations of our attendance policy, or any policy, may result in additional disciplinary action up to and including termination." Claimant received another warning on March 11, 2019 regarding public urination. Mr. A[Redacted] testified the area in question was located on Employer's premises. He remarked that Claimant had received verbal warnings about public urination prior to the March 11, 2019 incident. Furthermore, Mr. B[Redacted] testified that Claimant had been warned several times about urinating on the premises.

32. On March 11, 2019 Claimant was terminated from employment with Employer. Employer's Termination Report reflects that Claimant was specifically dismissed for violating Employer's policies and procedures. The Report also noted that Claimant's performance had been unsatisfactory in multiple areas. Mr. A[Redacted] summarized that the combination of Claimant's unexcused absences, public urination and unsatisfactory job performance culminated in his termination from employment. Through his repeated violations of Employer's policies and procedures Claimant exercised some control over the circumstances surrounding his termination from employment. Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, he was responsible for his termination.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms, it does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable injury during the course and scope of his employment with Employer on February 26, 2019. However, the record reveals that his injury is limited to the right elbow. Claimant's CTS and other pre-existing conditions were not aggravated or accelerated by his February 26, 2019 industrial incident.

9. As found, initially, on February 26, 2019 Claimant injured his right elbow while delivering metal plates on a pallet weighing approximately 400 pounds. The person helping Claimant dropped the pallet and the plates started to slide. Claimant tried to catch the pallet, but developed acute right elbow pain. On February 27, 2019 Dr. Updike assigned Claimant work restrictions of no lifting in excess of one pound, no driving and wearing a splint/brace. A right elbow MRI showed a high grade partial thickness tear of the common extensor tendon, but no fracture or loose body. On March 1, 2019 Dr. Updike noted that Claimant's "tennis elbow" was minimally symptomatic and did not require surgery. Although Dr. Updike concluded that Claimant's MRI findings did not warrant taking him off of work, he nevertheless removed Claimant from work due to his unrelated, personal mental stress condition.

10. As found, Claimant did not return to Injury Care Associates for his right elbow condition until approximately 15 months after his February 26, 2019 work incident. On June 24, 2020 ATP Dr. Tentori noted Claimant had diffuse tenderness circumferentially to the right forearm and wrist. He recommended re-opening Claimant's claim, electrodiagnostic testing and a follow-up evaluation with Dr. Griggs. Electrodiagnostic testing revealed severe CTS on the right side that was unrelated to Claimant's February 26, 2019 right elbow injury. By September 30, 2020 Dr. Tentori concluded that it was not medically probable that Claimant's ongoing right elbow pain was a consequence of the February 26, 2019 work incident. Nevertheless, he noted that Claimant "clearly injured his right elbow in February 2019." Dr. Tentori explained that, based on the nature of the original work injury, Claimant had received an appropriate diagnostic workup and course of treatment. He explained that, while the claim was open in 2019, Claimant did not exhibit pain or acute findings in the lateral eplcondylar region of his right elbow. Dr. Tentori thus concluded that Claimant had reached MMI with no permanent impairment and did not require medical maintenance care.

11. As found, similarly, Dr. Lesnak's opinion reflects that Claimant's February 26, 2019 work injury was limited to his right elbow. Dr. Lesnak explained that Claimant likely only sustained a mild soft tissue injury or contusion to his arm or a sprain to his elbow as a result of the February 26, 2019 incident. Furthermore, the MRI taken within days of the incident did not demonstrate any acute injury. The findings on the MRI were merely degenerative and constituted a wear and tear type injury common in people Claimant's age. Dr. Lesnak determined that, when Claimant's claim was reopened in June 2020, his symptoms were completely unrelated to any potential injury he may have sustained during the work incident. In fact, Dr. Lesnak explained that any soft tissue injury would have healed on or around March 8, 2019 and no further medical treatment would have been reasonable, necessary or related to the February 26, 2019 accident. He noted that there was no medical evidence to suggest that Claimant needed any type of activity limitations or work restrictions.

12. As found, the preceding chronology and persuasive medical opinions from Drs. Tentori and Lesnak reflect that Claimant's work-related injury is limited to his right elbow. The medical records establish that Claimant's other complaints and symptoms are unrelated to the February 26, 2019 lifting incident. Claimant's receipt of medical care based on reported symptoms does not establish an injury, but only demonstrates that he claimed an injury. Accordingly, Claimant suffered an industrial injury while working for Employer on February 26, 2019 that was limited to his right elbow.

Temporary Partial Disability Benefits

13. Section 8-42-106(1), C.R.S. provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and his earnings during the continuance of the temporary partial disability. Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute

for lost wages or impaired earning capacity arising from a compensable injury). Section 8-42-106(2), C.R.S. provides that TPD shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

14. As found, Claimant has failed to prove by a preponderance of the evidence that he is entitled to receive TPD benefits for the period February 27, 2019 until he reached MMI on September 30, 2020. Claimant contends that he suffered a wage loss as a result of his work injury and should receive TPD benefits until he reached MMI. However, the record reveals that any decrease in Claimant's wages was not likely attributable to his right elbow work injury.

15. As found, the record reflects that Claimant was working modified duty after the February 26, 2019 work incident until he requested Dr. Updike to remove him from work. On March 1, 2019 Dr. Updike noted that Claimant's "tennis elbow" was minimally symptomatic and did not require surgery. Although Dr. Updike concluded that Claimant's MRI findings did not warrant taking him off of work, he nevertheless removed Claimant from work due to his personal, unrelated mental stress condition. Furthermore, Dr. Lesnak determined that by early March 2019 Claimant's right elbow injury would have resolved and he would not have required work restrictions. Claimant was capable of work performing driving and warehouse duties for approximately one year without any issues. In fact, Claimant explained that after his March 11, 2019 termination from Employer he worked for container delivery company 1-800-PACKRAT. He noted that he worked for approximately six to eight months and earned the same amount of money he had made while working for Employer. Claimant remarked that he then worked for SPEC Building for about seven months but was laid off due to Covid-19 and received unemployment benefits.

16. As found, furthermore, Claimant returned to modified duty work with Employer after his work-related right elbow injury at his full rate of pay. In fact, wage records reflect that the number of hours Claimant worked each week varied widely both before and after his work injury. Even before Claimant's February 26, 2019 industrial injury, he worked from 24 to 40 hours each week. Notably, after Claimant's work injury he worked 40 regular hours plus 1.50 overtime hours for the period ending March 1, 2019. Based on Claimant's unrelated symptoms and varied work schedule, it is unlikely that any decrease in Claimant's work hours were attributable to his February 26, 2019 work injury. Accordingly, Claimant has not established that the February 26, 2019 incident caused a disability and consequent partial wage loss. Claimant's request for TPD benefits is thus denied and dismissed.

Termination for Cause

17. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore*

v. Industrial Claim Appeals Office, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

18. As found, Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment. The record reflects that a combination of Claimant's unexcused absences, public urination and unsatisfactory job performance culminated in his termination from employment. Specifically, on February 25, 2019 Mr. A[Redacted] completed an Employee Warning Report because Claimant had been discriminating against a co-employee. The Report specified that the "failure to demonstrate immediate and sustained improvement in these areas may result in further disciplinary action, up to and including termination." On March 8, 2019 Claimant received an Employee Attendance Warning Report because he was absent from work and failed to contact his supervisor. The Report also noted that Claimant's five absences since the beginning of the year were excessive and would not be tolerated. The document specified that "[a]ny future violations of our attendance policy, or any policy, may result in additional disciplinary action up to and including termination." Claimant received another warning on March 11, 2019 regarding public urination. Mr. A[Redacted] testified the area in question was located on Employer's premises. He remarked that Claimant had received verbal warnings about public urination prior to the March 11, 2019 incident. Furthermore, Mr. B[Redacted] testified that Claimant had been warned several times about urinating on the premises.

19. As found, on March 11, 2019 Claimant was terminated from employment with Employer. Employer's Termination Report reflects that Claimant was specifically dismissed for violating Employer's policies and procedures. The Report also noted that Claimant's performance had been unsatisfactory in multiple areas. Mr. A[Redacted] summarized that the combination of Claimant's unexcused absences, public urination and unsatisfactory job performance culminated in his termination from employment. Through his repeated violations of Employer's policies and procedures Claimant exercised some control over the circumstances surrounding his termination from employment. Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, he was responsible for his termination.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On February 26, 2019 Claimant suffered an industrial injury to his right elbow.

2. Claimant earned an AWW of $699.09..

3. Claimant's request for TPD benefits for the period February 27, 2019 until he reached MMI on September 30, 2020 is denied and dismissed.

4. Claimant was responsible for his termination from employment.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm*

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he continues to require post-MMI medical maintenance treatment, to prevent further deterioration of his current condition, which is reasonable, necessary, and related to his original work injury?

II. Has Claimant made a proper showing that he is entitled to a change of physician, in this case, from Dr. Kurz to Dr. Hall?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background: The Work Injury, and Subsequent Treatment

1. This is an admitted claim. Claimant was employed as a Medical Training Specialist. He was responsible for ensuring that firefighters, EMT's, and paramedics maintained their certifications by earning the proper continuing medical education and meeting all other requirements to maintain their medical skills. Claimant also worked as a paramedic on a rescue squad on an as-needed basis. He was hired in July, 2002, and he retired in January, 2020.

2. On or about January 14, 2003 Claimant intended to carry an empty box down some stairs so it could be disposed of. He tripped on a floor mat at the top of the stairs, lost his balance and began to "tumble down the stairs" before grabbing onto a hand rail and injuring his low back in the process.

3. Claimant saw Dr. David Richman on January 24, 2003 and the doctor noted, "…Mr. [Claimant] is a 41 year old male who on January 14, 2003 was walking into work and tripped over a mat on the floor. He grabbed the handrail next to a stairwell to stop his fall, and twisted and pulled his back. He did not have the immediate onset of pain, but later in the day his pain was gradually worsening to include left leg pain. He took some Motrin for a couple of days which seemed to help. His symptoms have steadily gotten worse since then with pain as bad as 10/10 in severity, or a low as 4/10 in severity…He describes his back pain as aching, and the buttock and leg pain is burning…" (Ex. 10, p. 305). Dr. Richman assessed "acute low back strain, possible SI sprain, cannot rule out discogenic lesion and radiculitis." Dr. Richman recommended medications, and physical therapy. He imposed no work restrictions. *Id* at 306.

4. On January 28, 2003 Dr. Richman reviewed a lumbar MRI performed the previous day. He reported, "…As I suspected, he does have a herniated disc at L5/S1

with displacement of the S1 nerve root…There is a disc herniation with inferior and left lateral displacement pushing on the S1 nerve root." *Id* at 310. Dr. Richman presented the options of referral to a spine surgeon instead of continued conservative care. Claimant elected conservative care. The doctor recommended starting with epidural steroid injections ("ESI").

5. Dr. Bertram Willman performed ESI's on February 5 and February 21, 2003. *Id* at 322, 323. Dr. Richman met with Claimant on March 3, 2003 and reported, "…Jeff has had a *significant improvement* from the first two epidural steroid injections. He [Claimant] states that his first injection gave him approximately 75% improvement which included his back pain. His leg pain is virtually gone at this point after his second epidural injection and now he feels he is between 80 and 90% improved overall…" *Id* at 312 (emphasis added).

6. Claimant returned to Dr. Willman for a third ESI on March 14, 2003. *Id* at 324. On April 2, 2003, Dr. Richman noted, "…Jeff did not have any further improvement after the third epidural injection. He states overall that he is significantly better, with only intermittent pain now. It actually feels more like tightness. He does however have some residual left foot weakness with plantar flexion. He's working full duty…" (Ex. 10, p 315).

Claimant is placed at MMI

7. Dr. Richman placed Claimant at MMI and noted, "…No specific maintenance is necessary with the exception of occasional ketoprofen and ambien. If he has recurrent symptoms in the next year, he should be allowed to have epidural injections once again…" Dr. Richman issued a 7% whole-person impairment rating, and issued no permanent work restrictions.

8. Respondent filed a FAL on April 11, 2003, admitting to Dr. Richman's 7% impairment rating, and to liability for post-MMI medical maintenance care. (Ex. Q).

Post-MMI Treatment is Ongoing

9. Claimant returned to Dr. Richman's office, and saw Dr. Jason Peragine on July 22, 2003. Dr. Peragine noted, "…The patient is seen today because he experiences intermittent low back pain without any radiating symptoms into the legs about every 2 weeks that lasts 2-3 days at a time. These flares or exacerbations of pain are brought on by increased activity, but not by any particular activity specifically." (Ex. 10, p. 318). Dr. Peragine recommended, "…We would like for the patient to see a manual therapist for deep tissue massage and myofascial release therapy in treatment of the myofascial pain in the left lumbar paraspinal musculature. This will be considered *maintenance care* under the patient's original work related injury as he is still at maximum medical improvement." *Id* at 319 (emphasis added).

10. Claimant presented to Respondent's Occupational Health Clinic on January 12, 2005. Dr. Delos Carrier reported that, since MMI, "…Mr. [Claimant] states that he has had intermittent back pain since that point, but in the last five or six days he states that his back pain has been gradually getting worse. He states that the medication Dr. Richman gave him upon discharge has run out and he is asking for a refill of this medication. In particular, he is asking for Soma, ketoprofen, ibuprofen, and cyclobenzaprine." Dr. Carrier renewed the prescriptions, and recommended Claimant return as needed. (Ex. 3, p. 20-21).

11. Dr. Carrier requested a new MRI on May 11, 2005 and reported Claimant was no longer at MMI. *Id* at 27. On May 16, 2005, Dr. Carrier reviewed the MRI results and referred Claimant to Dr. Steven Benecke for ESI. *Id* at 30. A May 16, 2005 MRI revealed the previously noted disc extrusion at L5-S1, and a new finding of "mild apophyseal [facet] joint degenerative changes at L3-4, L4-5, and L5-S1."

12. Dr. Benecke performed ESI's on May 19 and also May 25, 2006. Ex. 9. Pp. 300, 301). On June 8, 2005, Dr. Carrier reported, "Mr. [Claimant] states that his back pain has *improved tremendously* following the injections that he received in the lower back region. He states that his last physical therapy appointment is today and he feels that he is able to be discharged and is safely able to perform all aspects of his duties as a firefighter. He would like a prescription refill of soma, however, he uses this to help maintain his back pain under control." Dr. Carrier placed Claimant at MMI. (Ex. 3, p. 34) (emphasis added).

13. Claimant returned to Dr. Carrier for a flare-up of his low back pain on August 24, 2005; "…He states he has been doing a lot more patient runs with the Fire Department, and as a result he has had increased lower back pain." Dr. Carrier recommended physical therapy and prescribed cyclobenzaprine. *Id* at 38.

14. Dr. Carrier saw Claimant next on May 10, 2006; "Mr. [Claimant] returns for reevaluation of his lower back pain. He states he has bilateral sciatic pain as well. He states that this has increased recently but he is unsure why. He has had no increase in activity…I believe this lower back pain represents a reexacerbation of the old injury that he had on 01/12/2005. There does not seem to be a precipitating factor for this, therefore there does not appear to be a new injury, and I am keeping the [sic] Mr. [Claimant] at maximum medical improvement though he does need physical therapy and possibly another epidural steroid injection for maintenance of his baseline medical condition with lower back pain." (Ex. 3, p. 42).

15. Claimant returned to Dr. Carrier with a flare-up of low back pain on June 5, 2006. Dr. Carrier recommended a new MRI. Dr. Carrier reviewed the MRI results on June 7, 2006; "…he has stable, moderate broad-based central L5-S1 disc with continuous caudal extrusion; mild mass effect on proximal bilateral S1 nerve roots, left greater than

right; mild L5-S1 acquired central spinal stenosis; mild L3-L4 through L5-S1 bilateral facet osteoarthritis." *Id* at 51.

16. Dr. Carrier refilled Claimant's medications on July 3, 2006. He noted that Claimant "…states that he feels approximately 95 to 100% better than when he first came into the clinic. He has been going to physical therapy as directed and as of today he has been discharged from physical therapy." *Id* at 53.

17. On April 30, 2007, Dr. Carrier reported, "Mr. [Claimant] called today stating that his lower back pain has returned and he is feeling very stiff and pain in the region that he previously had lower back pain. He states that he has been sitting for prolonged periods of time and this has re-exacerbated his old injury." Dr. Carrier referred Claimant to Dr. Meyer for pain management consultation. (Ex. 3, p. 60).

Facet Arthropathy is first Suspected

18. On August 14, 2007, Dr. Meyer assessed "…A 46 year old gentleman with a clinical presentation and history most consistent with *facet arthropathy* symptoms. I think there is a minimal component of radiculitis secondary to the chronic disc herniation at this point and it is predominantly not a clinical issue...I think that if he is able to stay in better core strength status that the facets will not become symptomatic as frequently; however, they may be episodically a problem and under his approach should be nonsteroidals in one to two weeks…" (Ex. 8, p. 297) (emphasis added).

19. On October 24, 2007, Dr. Carrier assessed "Lower back pain with crescendo/decrescendo characteristic to it." He refilled medications and recommended Claimant continue a home exercise program. (Ex. 3, p. 63). On November 6, 2007, Dr. Carrier requested authorization for 6-12 sessions of acupuncture. He confirmed this treatment was necessary to maintain MMI. *Id* at 66.

20. A lumbar MRI on March 5, 2008 revealed "the facet joints are degenerated and somewhat hypertrophied" at L3-4. At L4-5, "there is mild facet degeneration bilaterally." At L5-S1, "Facet joints are degenerated and hypertrophied. At this level there is moderate right and mild left foraminal stenosis." (Ex. 6, p. 269)

21. On September 25, 2008, Dr. Meyer referenced left sided L3-4 fact injections he performed "about five months ago," and which were beneficial. (Ex. 8, p. 298). Dr. Meyer also performed bilateral facet injections at this visit.

22. Dr. Carrier saw Claimant on October 16, 2008 and noted Claimant reported about 75% improvement from the recent facet injection by Dr. Meyer. Dr. Carrier discharged Claimant but added that; "…he will most probably need repeat injections in the future." (Ex. 3, p. 79).

23. Dr. Carrier referred Claimant to Dr. Jenks on November 3, 2009 for evaluation of chronic low back and facet pain. *Id* at 81. Dr. Jenks saw Claimant on November 17, 2009 and noted, "…His low back pain comes and goes. It is always aggravated, however, with standing for about 20 minutes. He does have about a week a month where he has fairly incapacitating low back pain." Dr. Jenks confirmed the previous facet injections provided "marked relief," and that "…he states that it is just recently that the pain started to return." (Ex. 7, p. 277).

24. Dr. Jenks performed bilateral lumbar facet injections on December 23, 2009. On January 12, 2010 he reported, "significantly improved lumbar facet syndrome following facet injections." Dr. Jenks repeated the facet injections on July 15, 2011. On August 4, 2011 he reported "Jeff's low back pain is over 90% better following the bilateral L4-5 and L5-S1 facet injections." Dr. Jenks performed bilateral facet injections on October 24, 2014. On November 11, 2014 he reported Claimant's low back pain was "significantly improved." (Ex. 7).

25. Claimant saw Dr. Miguel Castrejon at the City Clinic on December 4, 2014. Dr. Castrejon confirmed Claimant "…has clinical indications for facet mediated pain. By review of his injection history he meets criteria to consider medial branch blocks ("MBB") followed by rhizotomy. I am requesting authorization for Dr. Jenks to proceed with MBB's and consideration for rhizotomy."

26. Dr. Jenks performed bilateral MBBs on December 19, 2014. (Ex. 7, p. 288). On December 22 he noted, "…it *clearly appears that his low back pain is facet* in origin. Therefore, I have recommended bilateral L2, L3, L4 and L5 medial branch rhizotomies…" (Ex. 7, p. 290). Dr. Jenks performed the rhizotomies on January 12, 2015. *Id* at 291. On February 13, 2015, Dr. Jenks diagnosed "status post lumbar facet rhizotomy with *improved* but ongoing low back pain." *Id* at 294. (emphasis added).

27. An MRI without contrast was taken of Claimant's lumbar spine on February 27, 2015. It showed: "Mild to moderate degenerative changes of the L5-S1 disc space and mild degenerative changes of the L3-4 and L4-5 disc spaces with mild segmental neural canal stenosis without evidence of nerve root impingement or cauda equina compression." The remainder of the exam was unremarkable. (Ex. 6, p. 271)

28. On May 7, 2015, Dr. Castrejon reported, "…He is post rhizotomy with no reported change in terms of his symptoms. He has had a recent flare-up with no leg symptoms and was referred for lumbar MRI. The study revealed DDD L5-S1 with no nerve root compromise. He was referred to chiropractic and has done extremely well." (Ex. 3, p. 131).

29. On October 30, 2015, Paula Homberger, PA-C at the City Clinic confirmed that, "…[Claimant] remains at MMI and *does require continued maintenance care*

including medication management and chiropractic." She refiled Claimant's medications and prescribed additional chiropractic treatment. (Ex. 3, p. 135).

30. Claimant saw Dr. Jay Neubauer at the City Clinic on July 25, 2017. Dr. Neubauer noted Claimant complained of 7/10 right sided low back pain that "has gotten worse over the past few weeks." Dr. Neubauer referred Claimant to pain management specialist Dr. Leggett. *Id* at 144.

31. Claimant saw Dr. Michael Sparr (instead of Dr. Leggett, but also with the same medical group) on August 22, 2017. Dr. Sparr noted, "…He has had a recurrence of pain over the past several months which has been somewhat refractory to chiropractic treatment. It appears he has recurrent facet dysfunction and arthralgias, greatest at L5-S1, to a lesser degree L4-L5, right sided." (Ex. 8, p. 197). Dr. Scheper performed right sided lumbar *facet* injections on September 19, 2017. *Id* at 199.

32. On September 28, 2017, Dr. Sparr reported Claimant "…responded *exceptionally* well" to the recent injections. *Id* at 202 (emphasis added). However, on October 19, 2017, Dr. Sparr reported "…Unfortunately, he is reporting recurrent annoying pain in the right central lumbar region. Overall he has worsened tremendously since my last evaluation. His pain has averaged 7/10 in the past week. He attributes his increased pain to a training session at work a short time ago when he was required to be on his feet the entire day…" *Id* at 203. Dr. Sparr performed a right-sided rhizotomy (a/k/a radiofrequency ablation or "RFA") on November 7, 2017. On November 28, 2017, he noted Claimant had an "excellent response," and he recommended repeating the procedure on the left side. *Id* at 208.

33. On September 20, 2018, Dr. Sparr noted, "…{Claimant] responded exceptionally well to rhizotomies and has been active and able to tolerate normal lordotic activities as a paramedic. He returns today with rather severe central lumbar pain. He does not feel that is related to any specific injury, just began to feel tightness and soreness within the central lumbar region a few inches above the belt line approximately 2 weeks ago…" *Id* at 209. Dr. Sparr recommended trigger point injections in conjunction with chiropractic treatment from Dr. Abercrombie. *Id* at 210.

34. On October 11, 2018, Dr. Sparr reported, "…He is still somewhat tender over the L5-S1 greater than L4-L5 *facets. Facet loading is again quite positive." Id* at 213. Dr. Sparr administered trigger point injections, and noted additional facet injections and rhizotomies may be considered. *Id* at 214. (emphasis added).

35. On October 25, 2018, Dr. Sparr noted, "…He feels the trigger point injections were helpful for perhaps 2 days. Over the ensuing weekend while working a college hockey game he began experiencing severe back pain with radiation to the right lower extremity." (Ex. 4, p. 215). Dr. Sparr explained, "…The patient has had worsening lumbar pain and lower extremity symptoms. The symptoms in the L4 distribution are

worrisome for L4 radiculopathy." *Id* at 216. Dr. Sparr recommended a new MRI and he administered trigger point injections.

36. A MRI on October 26, 2018 was compared to the MRI from December 27, 2015. The radiologist reported, "1. The significant abnormality with right L4 nerve compression is a new finding, not present on the prior study from 2015. 2. Left L5-S1 disc protrusion, bulging and stenosis has progressed since the previous exam, now likely impinging upon the left S1 nerve. 3. No other significant interval change." The MRI also revealed at the L5-S1 level; "probable shallow left-sided disc protrusion *exacerbated by facet arthropathy."* And at the L4-5 level; "there is moderate *bilateral facet arthropathy."* (Ex. 6, p. 272).

37. On November 5, 2018, Dr. Sparr noted, "…Mr. [Claimant] has experienced a disc herniation as noted on MRI. This is a new finding. I will order an epidural steroid injection which should be quite beneficial…" (Ex. 4, p. 219). Dr. Sparr administered the injection on November 8, 2018. On November 15, 2018 he reported, "The patient had a fair response to the recent epidural steroid injection. He may benefit from a 2nd. I will schedule a similar injection…" *Id* at 223.

38. Dr. Michael Rauzzino saw Claimant on November 19, 2018 and concluded, "I recommend that he continue to maximize his injection therapy with Dr. Scheper. I also recommend that Dr. Sparr perform an EMG/NCV. If his symptoms improve, it is hoped that he can avoid surgery; if not, he would likely need a right far lateral MIS decompression." (Ex. 5, p. 256).

39. Dr. Scheper performed right-sided lumbar ESI on December 4, 2018. Dr. Sparr performed EMG/NCV testing on December 13, 2018. He noted, "...This is a moderately abnormal electrodiagnostic study of the right lower extremity. There is evidence of acute to subacute right L4 radiculopathy with moderate denervation. There is evidence of subacute to chronic right L5 radiculopathy which is very mild…His electrodiagnostic findings as well as the combination of numbness and weakness are sufficient to warrant surgical intervention." (Ex. 4, p. 227).

40. On January 8, 2019, Dr. Rauzzino reported, "…His pain is better. He is not sure whether his motor strength is getting better or not. He is interested in pursuing surgical decompression and this is reasonable in the face of the positive EMG." Dr. Rauzzino recommended a repeat MRI. (Ex. 5, p. 259).

41. Findings of a lumbar MRI on January 10, 2019 included; "…There is mild left more pronounced than right L1-2 and moderate L2-3, L3-4, L4-5, and L5-S1 zygapophyseal [facet] joint capsule thickening and osteophytes, most pronounced at the L3-4 through L5-S1 levels." (Ex. 6, p. 274). The MRI also revealed; "There is severe left lateral recess stenosis at L5-S1. This is unchanged." *Id* at 275.

42. On January 16, 2019, Claimant presented to Paula Homberger, PA-C, for a follow-up/maintenance office visit. He reported he was still having increased low back pain, a dull achiness in the back and weakness in the left leg. He had seen Dr. Rauzzino, who recommended an MRI. He was scheduled to see Dr. Rauzzino again in February but was unsure if he wanted to have surgery at that time. He had been taking over-the-counter ibuprofen prn.

43. The treatment plan was for Claimant to continue his home exercise program and regular exercise; OTC ibuprofen prn with food, continue Voltaren gel prn, gabapentin 300 mg advancing from QD to TID; heat prn, with barrier to prevent burning; follow-up with Dr. Rauzzino as scheduled; and follow-up with Dr. Sparr as scheduled. (Ex. B).

44. On January 17, 2019, Claimant followed up with Dr. Sparr. He reported a moderate decrease in pain since he was last seen. He had had an appointment with Dr. Rauzzino and a new MRI was obtained. Dr. Sparr reviewed the repeat MRI with Claimant noting there was a right foraminal disc extrusion at L4-L5 resulting in compression of the exiting right L4 nerve within the foramen but decreased in size slightly from the prior study extrusion itself had a decreased signal of inflammation. There was ongoing severe left lateral recess stenosis at L5-S1.

45. Dr. Sparr noted that Dr. Rauzzino apparently felt that surgical intervention was not absolutely necessary, but could be considered if Claimant's lower extremity symptoms got worse. Dr. Sparr noted that Claimant previously had an abnormal electrodiagnostic study showing right-sided L4 radiculopathy and left L5 findings that were chronic. He noted Claimant took Motrin and naproxen intermittently, did not like opiates, and did not tolerate neural modulatory medications such as gabapentin and Gralise.

46. Claimant reported he still had central lower lumbar pain, but lower extremity symptoms had diminished. He had some numbness and tingling in the medial leg but diminished from previous evaluations. Dr. Sparr recommended Claimant continue anti-inflammatories and prescribed no other medications. He noted Claimant might be a candidate for further facet injections. (Ex. C).

47. Dr. Sparr reviewed the MRI and noted, "…[Claimant] still has central lumbar pain but lower extremity symptoms have diminished. He has some numbness and tingling in the medial leg but diminished from previous evaluations…Right L4 radiculopathy is improving. He has a follow-up with Dr. Rauzzino in February. He would like to avoid surgery if he continues to improve…" (Ex. 4 pp. 229-230).

48. Claimant saw Dr. Rauzzino again on February 26, 2019 and the doctor reported, "…We discussed surgical options today. He would like to try to avoid surgery on his back if at all possible even though he is fairly symptomatic. He thinks he can probably manage the leg pain right now. With regard to the back pain, he has had relief

with Dr. Scheper’s rhizotomies and I think this would be a good place for him to return to try to take care of some of his back pain…” (Ex. 5, p. 261).

49. On March 5, 2019, Dr. Sparr reported, “…His pain has continued to improve. At this time he has no lower extremity symptoms, only a fairly constant right lateral buttock pain. Central low back pain is bilateral but not severe…” (Ex. 4, p. 231).

50. Claimant reported to Dr. Sparr that he had been on his feet for several training courses over the last few weeks, and thought that might have contributed to his symptoms. Dr. Sparr noted Dr. Rauzzino had reviewed the additional MRI study, noted that the herniated disc was shrinking in size, and recommended conservative measures. Dr. Sparr opined right-sided hip pain might be related to radiculitis, but appeared to be more related to trochanteric bursitis. He planned to request authorization for trochanteric bursal injection. (Ex. E).

51. On April 2, 2019, Ms. Homberger refilled Claimant’s Mobic and tizanidine prescriptions. (Ex. F).

Dr. McCranie’s IME

52. Dr. Kathy McCranie performed an IME for Respondents on June 4, 2019. Dr. McCranie opined Claimant sustained a “new injury” while working the college hockey game first referenced in Dr. Sparr’s October 25, 2018 report. But she noted that, “…He has undergone a successful course of treatment for this with complaints of mild residual right lower extremity pain.” (Ex. A, p. 16). Dr. McCranie noted that his prior lumbar facet injections had a reported 75% improvement. She also noted that upon examination, Claimant was noted to have *positive facet compression* tests on the right side, but negative on the left. *Id.*

53. She also recommended Claimant undergo right-sided lumbar medial branch blocks at L3-4 and L4-5 prior to consideration of a repeat rhizotomy procedure, to address his persistent right-sided lumbar pain. Dr. McCranie noted that chiropractic care has allowed Claimant to “…stay functional with full-time and full duty work.” She recommended Claimant continue receiving chiropractic care, within the purview of the MTG’s. Dr. McCranie also recommended Claimant continue using Meloxicam 7.5 mg daily, as well as Voltaren gel once per day.

Post-MMI Treatment Continues

54. Claimant returned to Dr. Sparr on July 16, 2019 and the doctor reported, “…The patient has recurrent lumbosacral pain which appears to be directly related to bilateral L5-S1 and L4-L5 facet dysfunction and arthralgias. In the past he has responded exceptionally well to bilateral facet joint injections at these levels. When I saw him previously he was noted to have a lumbar disc extrusion and radiculopathy. This has fortunately resolved…” (Ex. 4, p. 235). Dr. Sparr recommended lumbar medial branch

blocks bilaterally, and explained his rationale for doing both sides, not just the right side as recommended by Dr. McCranie. On exam, he noted bilateral tenderness over the affected facets. Dr. Scheper performed the bilateral medial branch blocks on September 6, 2019. *Id* at 238.

55. On September 11, 2019, Dr. Sparr reported that after the blocks, "…[Claimant] noted excellent relief with standing, significant relief with walking and sitting. We both agreed this was a very positive diagnostic study." *Id* at 240. Dr. Sparr noted the plan was "…proceed with RFA's L3-L5 branches with the patient very familiar with the procedure and is eager to proceed as he recalls the relief he has experienced in the past."

56. On September 18, 2019, Claimant followed up with PA Homberger. He reported feeling the same, with a dull ache in his low back. He reported 24 hours of relief of his back pain following the MBB. Ms. Homberger noted Dr. Sparr was recommending a repeat RF ablation. Claimant denied numbness or tingling. He had been taking Mobic qam prn, had not been using tizanidine recently, had been using the Voltaren gel with some relief. He denied any new complaints or concerns. His patellar reflexes were 2+ bilaterally. Straight-leg raising was negative bilaterally. The treatment plan was for Claimant to continue his home exercise program and regular exercise; Mobic, tizanidine, and Voltaren gel; heat prn; and follow-up with Dr. Sparr as scheduled and for RF ablation. (Ex. 3, p. 181).

57. Dr. Sparr's request for authorization of RFA's was denied. On October 1, 2019, Dr. Sparr addressed the denial;

> …The disc herniation was more likely related to his daily work for the [Employer] than something that occurred at an October 20 hockey game, particularly since he was treated for severe pain weeks prior to the hockey game. Since that time he has had 2 epidural steroid injections and his discogenic and radicular pain subsequently resolved. Surgical intervention was considered by Dr. Rauzzino, but not felt to be necessary. At this point in time he is continuing to experience central lumbar pain directly related to the facet joints that have been painful since 2003. His current pain is not related to the new disc problem, but even if it was it would still be a work-related injury." (Ex.4, p. 246).

It appears the denial was rescinded, and Dr. Scheper performed a left-sided rhizotomy on October 17, 2019, and a right-sided rhizotomy on November 7, 2019. *Id* at 248, 250.

58. On December 3, 2019 Dr. Sparr noted the rhizotomies had been performed, and; "…[Claimant] reports it was extremely beneficial and he is now 80% improved. He still has some achiness within his back but no longer the sharp pain… The patient had an excellent response to the recent bilateral L4-L5 and L5-S1 facet rhizotomies. At this point he is stable. I have not scheduled a follow-up." *Id* at 253. Dr. Sparr diagnosed "lumbar facet joint arthropathy" and "myofascial pain/myalgia."

59. On March 16, 2020, PA Homberger confirmed, "…He remains at MMI and will continue on his current maintenance plan including medication management and chiropractic visits prn." (Ex. 3, p. 185). She refilled prescriptions for Mobic, Voltaren gel, and Ambien. Under Subjective Complaints, she also noted, among other things: "…He is still having a dull ache in his low back. The pain is worse with prolonged standing, *such as he does when teaching CPR. Id* at 194. However, under Work History, she noted: "He has been working full duty for the City of Colorado Springs *without any difficulty*." *Id*. (emphasis added).

Claimant is Examined by Dr. Kurz

60. Claimant returned to the City Clinic on December 15, 2020 and met with Dr. Nicholas Kurz for the first and only time. There was no associated pain chart with this visit, nor a patient questionnaire. Under the paragraph titled Subjective Complaints, Dr. Kurz' paragraph reads identically to that in PA Homberger's report from 3/16/2020. Dr. Kurz' Work History also reads identically to PA Homberger's from 3/16/2020 – despite Claimant's subjective complaints of *pain while teaching CPR*. (Ex. 3, pp. 189-190).

61. The imaging study narratives from 3/5/2008, 10/26/2018, and 1/10/2019 are referenced, but no other medical histories from the other medical providers are noted in his report. Dr. Kurz makes no mention of Claimant's facet issues at any point in his report.

62. Dr. Kurz noted the previous work-related L5-S1 disc protrusion in 2005 (sic) had improved. He stated the previous area of mild injury had improved, but over the years Claimant's multilevel degenerative disc disease had progressively worsened and now it was, with greater than 51% medical probability, the cause of his complaints and no longer causally related to his remote mechanism of injury. He further stated that the previously recommended prn NSAIDs and Ambien were, to a greater than 51% medical probability, no longer treating his previous L5-S1 disc bulge symptoms, which had objectively improved per imaging and EMG.

63. Dr. Kurz then declared that; "…his current complaints are more likely related to his multilevel advanced DDD, which is causally unrelated to his previous MOI/DOI. Therefore this chronic, degenerative condition should be followed by his PCP, outside of the WC system." *Id* at 190.

Claimant's Hearing Testimony

64. Claimant testified that the facet injections he received, beginning in 2008 (with Dr. Jenks), were "probably the most beneficial" treatment modality he has received. He testified the rhizotomies he has received also provided "significant benefit." Claimant

testified the latest rhizotomies, performed by Dr. Scheper in October and November of 2019, “worked extremely well” and were “very successful.”

65. Claimant testified that he has days that are good, and days that are not so good. He typically awakens with a stiff and sore back, but is able to obtain relief using stretches taught to him by chiropractor Dr. Abercrombie. He has days on which he is more severely impacted, and on such days he tries to take things as easy as possible. Claimant takes medications on an as-needed basis, and still has some anti-inflammatory medicine left from the latest prescription from Ms. Homberger. Claimant testified that his “bad days” occur more frequently now than they did after the rhizotomies in 2019.

66. He testified he is generally never pain-free; some days he can control the pain better than other days. He stated that the type and location of his back pain remains the same as it was shortly after the original accident. He described an 8-inch diameter circle of pain in the lower back. He only occasionally experiences radicular symptoms in the lower extremities. Claimant stated he sustained no other back injuries after the original injury in 2003. He specifically denied any injury at the hockey game in the fall of 2018, but explained did stand a lot during that game, and standing is one of the aggravators of his low back pain.

67. Claimant testified he requested to see PA Homberger in December, 2020, since she is the person he had dealing with at the City Clinic recently, but was told he would need to see Dr. Kurz. After meeting with Dr. Kurz, Claimant testified he felt his concerns were “extremely ignored.” He felt “extremely blown off” and that his complaints were “irrelevant.” He was left with the impression that “because my injury was so long ago there was nothing else they were going to do for me and I was on my own.”

68. Claimant testified that Dr. Kurz performed only a cursory examination, and that the appointment lasted less than 10 minutes. Claimant testified it appeared Dr. Kurz “had his mind made up before he even walked in the door.” It appeared to Claimant that Dr. Kurz was not objective, and that Dr. Kurz was generally unfamiliar with Claimant’s prior treatment.

69. Claimant has no trust or confidence in Dr. Kurz. Claimant requests a change of physician to Dr. Hall because he feels Dr. Hall is objective and will listen to him; that he will perform a complete examination and do what is in the best interests of Claimant’s health while improving his function.

70. Claimant testified the maintenance treatment he received prior to being discharged by Dr. Kurz was beneficial. He testified that Dr. Sparr and Dr. Scheper “did wonderful work;” he holds Dr. Abercrombie in high regard (“he taught me some wonderful stretches to do”) and the treatment Dr. Abercrombie provided was “extremely beneficial.” Claimant testified he wants to continue receiving treatment from the various specialists he has seen.

Dr. Kurz' Hearing Testimony

71. Dr. Nicholas Kurz is Respondent's designated treating physician. He testified as an expert in occupational medicine. Dr. Kurz testified this case features "this ongoing complaint of expanding problems which are causally unrelated to that initial stumble." He feels Claimant's problems are "causally unrelated," because the initial MRI that was performed shortly after the injury showed a "single level acute bulge on chronic degeneration at a 40ish year old male." Then, he explained, over 18 years he sees other issues with the degenerative process. Dr. Kurz again pointed to a "bump" in 2018 with the "weekend new injury, and subjective findings of a new injury at a different site which caused nerve problems and was objectively quantified again with one more step - the nerve conduction study."

72. He noted that the 2018 MRI showed a lot of new findings, but improvement in the original pathology. The L5 nerve roots were normal, and there was no significant right-sided herniation of L4. A nerve conduction study proved that. He noted Dr. Rauzzino's opinion that the L5-S1 disc had improved and shrunk. He testified that the bulk of Claimant's complaints for which Dr. Sparr was treating him were not at the L5 level, which was the injury 18 years ago, but at the new disc herniation.

73. Dr. Kurz maintains Claimant sustained no injury affecting his facet joints, but rather, "this patient is an active guy, he is a hiker and a biker and a golfer, and he does other things over the last 18 years that would more likely cause his facets wear and tear than the twist that he had on the stairs 18 years ago." Dr. Kurz claimed the "serial MRI's showed there were "no facet issues," and the "mild disc issue" was treated conservatively. Dr. Kurz opined that when the neurosurgeon said Claimant was not a surgical candidate and MRI is stable with normal facets, at that point injections at multiple levels for other complaints are not compatible with medical maintenance for a single-level disc bulge.

74. Dr. Kurz testified that Claimant's ongoing symptoms are from "normal wear and tear and aging, and not slipping on the stairs 18 years ago." Dr. Kurz testified that 90% of cases do not require medical maintenance, and that such maintenance is only appropriate if it allows the patient to function. Dr. Kurz would have "pulled the plug" on Claimant's maintenance care in 2015.

Dr. Hall's Hearing Testimony

75. Dr. Timothy Hall has been practicing medicine in Colorado since 1989. He practices at Intermountain Rehabilitation Associates. Dr. Hall treats a variety of chronic and acute pain issues. He treats headaches, as well as neck and back pain, neurological conditions, he administers injections and prescribes medications. Dr. Hall holds Level II accreditation through the D.W.C. and is board certified in physical medicine and

rehabilitation. Dr. Hall testified at hearing as an expert in physical medicine and rehabilitation.

76. Dr. Hall performed an IME of Claimant on January 13, 2021. He reviewed the medical records, examined Claimant, and came to a primary diagnosis of facet syndrome. He noted there had been a history of some discogenic involvement, but most recently the treatment that has helped has been to the facet joints. Dr. Hall explained that facet joints are small joints on either side of the vertebrae, which exist throughout the spine. In the cervical and lumbar spine, they allow for movement to occur. Like other joints, they have synovial surfaces and they can become injured and can degenerate. Dr. Hall testified that a sudden "twisting motion" can cause injury to the facet joints.

77. Dr. Hall explained that injuries can hasten the process of degeneration. He explained that Claimant's current situation is due to a combination of the original injury, and degeneration of the facet joints that has occurred over the years. Dr. Hall clarified that Claimant's low back pain is not solely due to facet issues, but that given Claimant's favorable response to specific facet treatment, the facet issues are responsible for the majority of Claimant's pain.

78. Dr. Hall testified that Claimant's treatment has reasonable, necessary, and related to the effects of his injury, and has been "quite consistent over the years." Dr. Hall allowed that while further intervention may not be required "at this very moment," it remains probable, considering his history, that Claimant will require further interventions. Dr. Hall explained that facet rhizotomies have a "life span or generally a year or so, so it is expected that he would require more treatment." Dr. Hall testified that to maintain MMI, facet rhizotomies should be made available to Claimant periodically.

79. Dr. Hall explained that one cannot be "that certain" of the exact source of all of Claimant's pain. Dr. Hall noted that Claimant's original diagnosis was L5-S1 discogenic pain, and Claimant received benefit from ESI's early on. Dr. Hall explained that those contain a relatively large dose of steroid, and the injections may very well have been providing relief for facet pathology as well as disc pathology. He noted that treatment since 2007 has focused on a "slightly different" diagnosis of facet pathology, versus disc pathology.

80. Dr. Hall explained it can be difficult to determine which diagnosis is correct, as both conditions are in the low back, and both can produce similar symptoms. Dr. Hall noted the facet joint and the discs work in unison with respect to load bearing and allowing movement in the lumbar spine, "so that if there is a breakdown in one entity, there is more likely a breakdown in another." Meaning that if early on, Claimant's problem was primarily discogenic symptomatology, then over the years the facets are then also at greater risk of becoming degenerated more quickly over time. The fact that Claimant's lumbar disc issue improved does not mean he became symptom-free in the facet joints. Dr. Hall pointed out that there is also severe left lateral recess stenosis at L5-S1 which is

unchanged, and that problem can create local pain as well as leg pain. Dr. Hall testified that "medical maintenance has worked wonderfully." It has kept Claimant "not pain free, but in a lot less pain than he'd otherwise be."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Act, Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). In this case, the ALJ finds Claimant to have been sincere and credible in describing his symptoms to the ALJ, and his medical providers. Further, the ALJ finds that Claimant has been appropriately motivated in attending his medical appointments and taking proper ownership of his own ongoing rehabilitation in a sincere effort to maintain his health.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs*

Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968). In this instance, the medical professionals, as is not uncommon, hold contrasting views. The ALJ will determine the merits of their positions based upon the *persuasiveness* of their views, as opposed to *credibility* per se.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Medical Maintenance Benefits, Generally

F. The Court of Appeals has established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission,* 759 P. 2d 705 (Colo. 1988). Citing *Grover,* the Court reaffirmed that "before an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work related injury or occupational disease." Thus, while Claimant does not have to prove the need for a specific medical benefit and respondents remain free to contest the reasonable necessity of any future treatment, Claimant must prove the probable need for some treatment after MMI due to the work injury. If Claimant reaches this threshold, the court stated, then the ALJ should enter "a general order, similar to that described in *Grover",* supra.

Medical Maintenance Benefits, as Applied

G. Here, Claimant's initial injury appeared to be the L5-S1 disc. However, as Dr. Hall explained, it can be difficult to correctly diagnose between injuries to a lumbar disc and to facet joints. He opined that, over time, the facet joints became increasingly symptomatic, while the disc issue improved. Claimant experiences flares of pain, then receives maintenance treatment that brings him back to baseline, and the cycle repeats itself. The facet joint treatment (initially, perhaps as a side effect of treating discogenic pain) Claimant has received has been very effective, not only in reducing his pain but in maintaining his level of function.

H. Claimant testified that prior to retirement he missed no time from work, other than to attend medical appointments. The ALJ notes that as recently as June, 2019, even Dr. McCranie recommended injections for "right-sided lumbar facetogenic pain." She also recommended chiropractic care and use of prescription medications – all to maintain MMI. And on March 16, 2020, PA Homberger at the City Clinic recommend ongoing prescription medications, use of heat, and more treatment with Dr. Abercrombie – all to maintain MMI. The only physician on record who opposes maintenance care is Dr. Kurz. It is duly noted that Dr. Kurz made no mention in his report that Claimant might have even had facet joint issues.

I. Dr. Kurz' notes from Claimant's sole visit appear to have been directly imported from PA Homberger's notes from 3/16/2019. On one hand, the Work History indicated that Claimant had been working full duty "….*without any difficulty*." However, the same report, under Subjective Complaints, notes that Claimant experiences *pain,* which is *worse when he is teaching CPR* [while at work]. It is unclear from the record how much of Claimant's 18-year medical history, beyond the imaging narratives, was actually studied at this single visit. In the final analysis, the ALJ finds the opinions of Dr. Hall, and even Dr. McCranie, to be more persuasive than those of Dr. Kurz. It is worth noting that a great number of other physicians along the way have opined that the treatment to date was certainly *reasonable and necessary* to maintain MMI for Claimant, and the ALJ also finds their opinions to be persuasive as well. And finally, the ALJ finds *substantial evidence* to find that Claimant's ongoing need for care is *related* to his original work injury (now to include his lumbar facet joints), and are thus necessary to maintain him at MMI.

Change of Physician, Generally

J. A claimant may not change the physician without the insurer's permission or "upon the *proper showing* to the division." § 8-43-404(5)(a), C.R.S.; *In Re Tovar*, W.C. No. 4-597- 412 (ICAO, July 24, 2008); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d570 (Colo. App. 1996). Because § 8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances presented warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503- 150 (ICAO, May 5, 2006). The ALJ's decision regarding a change of physician should consider the Claimant's need for reasonable and necessary medical treatment while protecting the Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable. *Id*.

K. Respondents cite *Luke v. Hospital Shared Services*, W.C. 4-788-773-01 in support of their position. In *Luke*, the ALJ found that the Claimant had undergone a comprehensive course of treatment for her injuries and that the ATPs had been providing appropriate maintenance treatment for the claimant's injuries. Relying upon Respondents' expert's opinion, the ALJ concluded that the treatment proposed by the Claimant's expert was *not related* to the compensable injury. The Respondent's expert had testified that, given the Claimant's mechanism of injury he would have expected a quick recovery. Since Claimant had continued pain complaints, however, the expert did not believe they were related to her work-related trip and fall. The ALJ in *Luke* found that the Claimant failed to make a proper showing for a change of physician.

Change of Physician, as Applied

L. The facts in this case are readily distinguishable from *Luke.* In this instance, the ALJ has found that Claimant's need for ongoing post-MMI care is, in fact, *related* to his original work injury. And the need for ongoing care involves Claimant's lumbar *facet arthropathy*, an injury not even acknowledged by Dr. Kurz. To his credit, Dr. Kurz simply laid it all out there, and stated he would have pulled the plug on post-MMI treatment back in 2015. Such blunt honesty is commendable, since it portends a philosophical divide not likely to be reconciled. Claimant will ask for more treatment, and the ATP will not be professionally comfortable in arranging for it. More litigation could well ensue. It will be better for all not to have this uncomfortable relationship continue further. The ALJ hastens to add that such change of physician is not made lightly. Mere discomfort with an ATP on the part of a Claimant will not, of itself, justify such a change. Neither will a mere difference of medical opinion between Claimant and ATP justify such a change, without more in support. *In this case*, Claimant has made a proper showing that his post-MMI care should be transferred to Dr. Hall.

ORDER

It is therefore Ordered that:

1. Claimant is entitled to post-MMI medical maintenance benefits, to be paid by Respondents.

2. Claimant's request for a change of physician to Dr. Hall is granted.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: May 26, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-095-865-003

ISSUE

1. Whether Claimant has established by a preponderance of the evidence that his scheduled impairment rating for his left lower extremity should be converted to a whole person impairment for the purposes of permanent partial disability benefits.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to an additional $308.72 in mileage reimbursement.

FINDINGS OF FACT

1. Claimant is a 49-year-old man who has been employed by Employer for approximately 18 years. On February 1, 2019, was involved in a work-related motor vehicle accident and sustained admitted injuries including, a comminuted left acetabular fracture with multiple displaced fragments in a work-related motor vehicle accident which was the result of Claimant's femur being forced into the acetabulum. Claimant also sustained fractures to his left foot, right calcaneus (heel), right fibula and a left arm laceration.

2. Claimant was initially taken to Good Samaritan Hospital and then transferred to Denver Health. On February 5, 2019, Claimant underwent an ORIF (open reduction internal fixation) surgical repair of the left acetabulum. Claimant's right calcaneus fracture was initially treated non-operatively. Claimant was discharged from Denver Health on February 11, 2019, and entered an in-patient rehabilitation facility. Claimant was discharged from in-patient rehabilitation on or about March 8, 2019. (Ex. A, 8).

3. On March 21, 2019, Claimant saw Eric Tentori, D.O., and Dr. Tentori served as Claimant's authorized treating provider (ATP) for the duration of his claim. Between March 21, 2019, and October 13, 2020, Claimant saw Dr. Tentori regularly for evaluation of his work-related injuries. At the March 21, 2019 appointment, Dr. Tentori recommended that Claimant see physiatrist Yusuke Wakeshima, M.D. for pain management and that William Ciccone, M.D., at Cornerstone Orthopedics assume care for Claimant's left hip injury. Additionally, Claimant was referred to Daniel Ocel, M.D., for treatment of his foot fractures. (Ex. C).

4. As part of his recovery, Claimant underwent extensive outpatient physical therapy, including numerous visits at Injury Care Associates, and A Fox Physical Therapy.

5. Over the course of his care, Claimant progressed using a wheelchair, to a walker and crutches, to eventually unassisted ambulation by August 2019. Additionally, Dr. Tentori periodically modified Claimant's activity restrictions to account for Claimant's improvement in function.

6. Claimant saw Dr. Tentori regularly from April 3, 2019, until October 2020, for a total of approximately 27 visits. (Ex. C, G, K, M. P, R, T, W, X, AA, BB, EE, and FF). At Claimant's October 3, 2019 visit with Dr. Tentori, Claimant reported his left hip had improved and was "without concerns/issues." After October 3, 2019, Claimant's primary issues related to his symptoms in his feet and ankles, although he periodically reported pain in his hip, groin, and gluteal area.

7. Claimant initially saw Dr. Wakeshima on March 21, 2019, on referral from Dr. Tentori for a physiatry consultation. Dr. Wakeshima followed Claimant over the next 18 months for pain management and rehabilitation monitoring. At Claimant's initial evaluation, Claimant's primary left hip complaints included pain in the groin and hip at a level of 2/10. Claimant's most significant pain was a burning sensation in his left foot which was related to a contused sciatic nerve. On March 21, 2019, Dr. Wakeshima noted that Claimant had difficulty sleeping, but the records did not attribute the difficulty to any specific work-related injury. At the time, Claimant was not yet independently ambulatory. (Ex. D).

8. On March 25, 2019, Claimant saw William Ciccone, M.D., for evaluation of his left hip. Between March 25, 2019, and August 21, 2019, Claimant saw Dr. Ciccone on six occasions. At Dr. Ciccone's August 21, 2019, evaluation, Claimant was ambulating with a limp and has some deficits in hip range of motion. Dr. Ciccone's assessment was that Claimant was making good progress and that further orthopedic follow-up was not necessary. He recommended that Claimant limit "high-impact" activities and increase his activity as tolerated. (Ex. E).

9. By August 26, 2020, Claimant reported to Dr. Wakeshima that he experienced occasional left groin/hip region pain. Although Dr. Wakeshima's records document ongoing tenderness in Claimant's left gluteal region, and pain with internal rotation of the left hip, the medical records do not document any correlating functional deficits. (Ex. GG).

10. On September 8, 2020, Dr. Wakeshima evaluated Claimant for the purpose of an impairment rating. Claimant reported pain "about the right hip" registering 2/10. On examination, Dr. Wakeshima found no pain to palpation of Claimant's gluteal region, no pain with lumbar range of motion, normal strength in the lower extremities, and intact sensation in the lower extremity and back. Examination of Claimant's hip demonstrated "[slight] pain with internal rotation and internal rotation of the hip with pain radiating to the groin," with normal strength. Dr. Wakeshima assigned Claimant a 21% left lower extremity permanent impairment rating for range of motion deficits in the left hip. (Ex. H).

11. On October 13, 2020, Dr. Tentori placed Claimant at maximum medical improvement (MMI). Dr, Tentori released from Claimant from care and all activity restrictions were removed. He assigned Claimant a 21% left lower extremity permanent impairment for hip range of motion deficits and a 5% impairment for sciatica neuropathy of the left leg, which combines for a 25% left lower extremity impairment and converts to a 10% whole person impairment. In addition, Claimant was assigned a 6% right lower

extremity impairment, which converts to a 2% whole person impairment. Dr. Tentori's impairment rating was based on measurements taken by Dr. Wakeshima. (Ex. II).

12. On October 30, 2020, Respondents filed a Final Admission of Liability (FAL), admitting for permanent partial disability benefits for a 25% left lower extremity impairment and a 6% right lower extremity impairment, consistent with Dr. Tentori's October 13, 2020 report. (Ex. JJ).

13. Claimant testified that he continues to experience issues with his left hip, including difficulty sleeping when laying on his left side or back, difficulty driving, and difficulty with daily activities such as sleeping, walking, climbing stairs, putting on pants and putting a sock on his left foot. When demonstrating the areas where he experiences ongoing pain, Claimant indicated his left hip/lower back and left upper buttock, near his beltline on his torso. In addition, Claimant walks with a noticeable limp favoring his left leg. Claimant testified that he did not have these issues prior to his work-related injury. Given the severity of Claimant's injury and the nature of the surgery performed, the ALJ finds Claimant's testimony describing his functional limitations credible.

14. By stipulation of the parties, Ronald Swarsen, M.D., was qualified as an expert in occupational medicine and testified at hearing. Dr. Swarsen did not examine Claimant and reviewed some, but not all of Claimant's medical records. Dr. Swarsen testified that Claimant sustained an acetabular fracture with no trauma to Claimant's leg, and with respect to this aspect of Claimant's injuries, all of Claimant's injuries were within the pelvis. Dr. Swarsen testified that the muscles of the hip that control the movement of the leg originate in the in the pelvis and attach to the femur. (See Ex. 12). He testified that the Claimant has deficits in motion of the hip joint that impact Claimant's ability to dress and perform activities of daily living. Dr. Swarsen opined that Claimant's left lower leg impairment should be a whole person impairment. The Claimant' injuries are limited to the pelvis, which does limit Claimant's leg range of motion, but his functional problems are the result of decreased hip range of motion.

15. By stipulation of the parties, Carlos Cebrian, M.D., was qualified as an expert in occupational medicine and testified at hearing. Dr. Cebrian performed an independent medical examination of Claimant at Respondents' request on February 1, 2021. At that time, Claimant reported constant aches and pains in his lateral left hip and into the buttocks, with occasional swelling. Claimant also reported discomfort in the left hip when lying on his left side. On examination of Claimant's left hip, Dr. Cebrian noted mild discomfort to palpation over the greater trochanter, and an otherwise negative examination. Although slightly better, Dr. Cebrian's range of motion measurements of Claimant's left hip were consistent with the measurements taken by Dr. Wakeshima, and Dr. Cebrian noted that Dr. Wakeshima made no errors in performance of the impairment rating. Dr. Cebrian agreed with Dr. Tentori's assessment of MMI as October 13, 2020. (Ex. A).

16. Dr. Cebrian (through both his report and testimony) opined that Claimant's left lower extremity impairment should be a scheduled impairment and not converted to a whole person impairment. Dr. Cebrian reasoned that the AMA Guides, Table 3.4 instructs

that an impairment rating for a fracture of the acetabulum should be determined based on restricted motion of the hip, which provides a lower extremity impairment. In other words, the way to determine an impairment resulting from an acetabular fracture is to measure the range of motion of Claimant's leg. He also opined that there is no functional impairment that extends beyond Claimant's femoroacetabular joint, and that the situs of his impairment is limited to Claimant's left leg, as a result of pathology of the femoroacetabular joint. Finally, Dr. Cebrian opined that Claimant has occasional and mild discomfort that does not impact his ability to meet his personal, social, or occupational demands.

17. The Court took judicial notice of the AMA Guides.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. § 8-42-107(l)(a), C.R.S. The schedule includes the "loss of a leg at the hip joint or so near thereto as to preclude the use of an artificial limb," but does not define "hip" or specifically include an injury limited to the "hip." § 8-42-107(2)(w), C.R.S., When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

In the context of an impairment rating, the term "injury" contained in Section 8-42-107(l)(a), C.R.S. "refers to the situs of the functional impairment, meaning the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390, 1391 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo.App.1996). Depending upon the facts of a particular claim, therefore, damage to the lower extremity may or may not reflect functional impairment enumerated on the schedule of benefits. *See Strauch v. PSL Swedish Healthcare System, supra; see also Abeyta v. Wackenhut Services*, W.C. No. 4-519-399 (September 16, 2004). Although physicians use the AMA Guides in calculating the nature and extent of the medical impairment, the Guides "do not determine the situs of the functional impairment. That question is to be resolved by applying the statutory impairment standards to the facts of the case." *Walker*, *supra*.

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the physical injury or the medical reason for the loss, but the portion of body that sustains the ultimate loss. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015); *Venegas v. Maldonados Services, Inc.*, W.C. No. 5-067-002-001 (ICAO, Jan. 22, 2021). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the leg at the hip and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim*

Appeals Office, 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has established by a preponderance of the evidence that his left lower leg extremity rating related to his left hip should be converted to a whole person impairment rating. The evidence demonstrates that the situs of functional impairment for Claimant includes not only his left leg, but also his left hip into his torso. Claimant credibly testified that he continues to experience difficulty with sitting, sleeping and certain activities of daily living, such as driving and getting dressed. Claimant's pain as described at hearing extends to his upper and lower buttocks on the left side, which is consistent with his reports of gluteal pain throughout his course of treatment. Although Claimant's treating physicians did not detail specific functional impairments in medical records, the ALJ does not find the absence in the records to be dispositive of the issue. Claimant sustained a significant fracture to his left hip with ongoing sequela that extends beyond the leg at the hip into the torso, and which has manifested in limiting Claimant's ability to perform activities that are not limited to the use of his left leg. For example, Claimant testified that he is unable to sleep on his left side or back due and that he has to frequently shift positions while driving due to pain in his hip and buttocks. Neither of these are impaired by Claimant's leg below the hip, but by the hip itself and the buttocks. The ALJ finds and concludes that Claimant's left acetabulum fracture resulted in functional impairments beyond the leg at the hip and that Claimant has established by a preponderance of the evidence that his left lower extremity rating should be converted to a whole person impairment.

MILEAGE

The Act obligates respondents to reimburse claimants for mileage expenses "for travel to and from work-related medical care …." § 8-43-203(3)(a)(IV), C.R.S. Prior to January 1, 2020, the W.C.R.P. did not impose timing requirements upon claimants for the submission of mileage reimbursement to insurers. On January 1, 2020, the Division adopted W.C.R.P. Rule 16-9, which provided: "Injured workers shall submit requests for mileage reimbursement within 120 days of the date of service or reimbursement may be denied unless good cause exists." The identical rule is now contained at W.R.C.P. 16-8-2 (B).

Claimant submitted a request for mileage reimbursement to Insurer on or about October 27, 2020, a portion of which (582 miles) was submitted more than 4 months after the mileage was incurred. Because the miles were incurred more than 120 days prior to submission, Insurer did not reimburse Claimant for those miles. Claimant asserts he has established good cause for entitlement to payment of $308.72 for those miles because insurer did not inform him of the requirement that mileage must be submitted within 120 days of the service.

"A party who acts under a statute is presumed to know all of its terms." *Kowalchik v. Brohl*, 411 P.3d 681, 2012 COA 49, (Colo. App. 2012), *citing*, *Paul v. Inds. Comm'n*, 632 P.2d 638, 639 (Colo. App, 1981). Claimant has cited no authority that would require Respondents to notify Claimant of a change in the regulations or to advise him that mileage must be submitted within 120 days. Claimant lack of knowledge of the applicable regulations does not constitute “good cause” sufficient to evade the requirements of W.C.R.P. 16-9 (now 16-8-2). Claimant request for additional mileage reimbursement is therefore denied.

ORDER

It is therefore ordered that:

1. Claimant’s scheduled impairment rating for his left lower extremity is converted to a whole person impairment.

2. Claimant’s request for reimbursement of mileage expenses submitted more than 120 days after they were incurred is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 27, 2021

Steven R. Kabler
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove the right ulnar nerve decompression surgery performed by Dr. Jennifer Kummer was reasonably needed and causally related to her admitted work accident?

- If Claimant proved the surgery was recently necessary and related, are Respondents relieved of liability for the surgery because it was not pre-authorized?

FINDINGS OF FACT

1. Claimant works as a building secretary at Employer's high school in Woodland Park. She suffered admitted injuries on May 28, 2019 when she slipped and fell on a linoleum floor. Claimant's feet went up in the air and she fell on her right arm, right shoulder, and back.

2. Claimant's most severe pain after the accident was in her right shoulder and back. But her entire right arm also hurt, and she experienced "funny bone pain" in her right elbow.

3. Over the summer, Claimant began to notice numbness and weakness in her right small finger. Claimant noted nerve pain along the right side of her right hand, going into the fourth and fifth digits. She described similar symptoms in her thumb and index finger. Because there were so many other "major things going on" from a physical standpoint, that issue was "not at the forefront of my mind."

4. Claimant received treatment from her personal chiropractor over the summer and did not pursue treatment under the workers' compensation claim until the end of August 2019.

5. Employer referred Claimant to CCOM for authorized treatment. She saw Edith Reichert, FNP at her initial visit on August 28, 2019. Ms. Reichert documented, "Pt was at work on 5/28/19 when she fell on wet linoleum and braced her fall with her right arm. She has seen a chiropractor which is helped her back, but has also seen a massage therapist, she has been seeing her own PCM for her shoulder." Ms. Reichert diagnosed "sprains" of the lumbar spine, right shoulder, right wrist, and right thumb.

6. Claimant saw Dr. Ronald Hollis for her right shoulder on September 30, 2019. Dr. Hollis recommended arthroscopic surgery for a possible rotator cuff repair, biceps tenodesis, distal clavicle resection, and decompression. Insurer denied the surgery as not reasonably needed.

7. Claimant saw Dr. Clark Walker and Dr. Martin Boublik at Steadman Hawkins on November 1, 2019 regarding her shoulder. The report documents that after

her accident, “initially she had mostly right wrist and back pain. However, she subsequently developed worsening right shoulder pain. . . . [P]atient also experiences a burning/tingling type pain over the right side of the neck and into the medial border of the scapula. She also endorses numbness/tingling that will radiate from the neck down to her arm and into her fingers intermittently.” Claimant was diagnosed with rotator cuff tendinosis, traumatic impingement, and adhesive capsulitis. Dr. Walker and Boublik recommended six weeks of PT, with consideration of injections if she did not improve. They also referred Claimant to Dr. Jennifer Kummer, a hand specialist, for evaluation of her right wrist.

8. A treatment note from Well Within Therapeutics dated November 21, 2019 indicates Claimant’s chief complaint as “RUE – wrist to neck.” The accompanying pain diagram reflects symptoms in the entire right upper extremity.

9. A cervical MRI was performed on November 23, 2019 to investigate the source of Claimant’s neck pain and right upper extremity symptoms. The radiologist appreciated a broad-based disc bulge at C5-6 causing “moderate-to-severe right foraminal narrowing, and likely explains this patient’s right-sided radicular symptoms.”

10. Claimant was referred to Dr. Chad Prusmack for evaluation of her neck. She initially saw Dr. Prusmack’s PA-C, Davit Whatmore, on January 9, 2020. The accompanying pain diagram indicates stabbing, burning, and aching pain in her right arm, and tingling in her right hand. Mr. Whatmore noted that after the work accident, “The patient had significant onset of nerve pain radiating into the right arm and additional axial neck pain that has not resolved. . . . At this point the pain is actually unfortunately escalating. The patient is now starting to notice weakness into the arms particularly on the right side and the pain causes her a lot of limitation with sleeping.” He reviewed the MRI images and noted a large disc herniation at C5-6 causing bilateral stenosis, right greater than left. After consulting with Dr. Prusmack, Mr. Whatmore stated, “This is a patient with a slip and fall injury at work now over 7 months out from that original injury failing conservative care and now with progressive weakness in the right upper extremity. Based on a large nature of the disc herniation with severe neural compression, we will recommend the patient undergo a foraminotomy with discectomy at C5-6 with insertion of a disc arthroplasty.”

11. Dr. Prusmack’s office submitted a request for authorization of surgery, which was reviewed by physician advisor Dr. Patrick Curry on February 5, 2020. Dr. Curry opined, “Since [the accident], she has been struggling with right-sided arm pain. An MRI is significant for a right-sided C5-C6 paracentral disc protrusion.” Dr. Curry opined a slip and fall “can result in a disc herniation and intractable radiculopathy.” He recommended the surgery be approved.

12. Dr. Prusmack performed a C5-6 anterior cervical discectomy and artificial disc replacement on February 18, 2020. Claimant eventually received significant benefit from the surgery. She explained her right arm was “completely non-functional” prior to the surgery, but afterwards her nerve pain decreased, as did the symptoms in her index finger and thumb. However, the symptoms in her fourth and fifth fingers remained. She

discussed the ongoing symptoms with Dr. Prusmack, who explained it was "a separate issue, not related to the neck." Dr. Prusmack suspected an ulnar nerve issue.

13. Claimant completed a pain diagram at CCOM on April 24, 2020. She circled her entire right arm and right hand. Claimant credibly testified that she consistently reported to CCOM symptoms including elbow pain and numbness, tingling, and weakness in the fourth and fifth digits of her right hand, from the start of treatment.

14. Claimant followed up with Dr. Prusmack on May 11, 2020. He reported, "The patient is experiencing new numbness in the fourth and fifth digits. The patient notes that it splits the ring finger and that it is mostly at night." He added, "The patient does have tenderness and swelling over the right wrist joint, which is not a neck issue, and I believe she needs and evaluation for joint injury and the wrist with Dr. Jennifer Kummer."

15. Also on May 11, 2020, Claimant's physical therapist documented, "Pt. explains symptoms started after fall in May 2019. Fell on back and head/neck, R UE slapped the ground. . . . Prior to surgery was having pain throughout her entire R UE, R UE felt weak, pain-numbness and tingling in the R hand."

16. Claimant saw Dr. Kummer on June 19, 2020. Dr. Kummer recommended Claimant try splinting, Voltaren gel, and physical therapy.

17. Claimant underwent electrodiagnostic testing on June 23, 2020, which showed bilateral ulnar neuropathy.

18. On July 6, 2020, Mr. Whatmore reported, "The EMG did in fact show the presence of bilateral ulnar neuropathy as Dr. Prusmack had suspected. There were no signs of any cervical radiculopathy or plexopathy. The patient states that with some slight changes in her thyroid medication, the symptoms in the left arm seem to have improved but she is still having a fair amount of discomfort in the right ulnar gutter. . . . [W]e will refer the patient to Dr. Davis Hurley for consideration of additional interventions and optional ulnar nerve transposition surgery."

19. Claimant saw Dr. Hurley on July 28, 2020. He noted the bilateral EMG abnormalities and stated, "The left side is asymptomatic, the right side does show significant tenderness especially along the medial upper condyle and ulnar nerve. She has ulnar nerve symptoms. Possibility of double crush phenomenon from the cervical spine and elbow. She feels the symptoms are worsening in the ring and small finger. She feels there was bruising and swelling at the time of injury last year around the elbow. It is possible that she had bruising of the ulnar nerve at the elbow at that time and she has failed to improve." Dr. Hurley discussed the specific mechanism of injury with Claimant and documented, "the symptoms began as the result of a fall. . . . She states she landed with her arm outstretched and had a direct blow to the inner aspect of the elbow or forearm and wrist. States that she had swelling and bruising on the arm at the time of the injury last year." Dr. Hurley requested authorization for an ulnar decompression surgery. Insurer denied the surgery pending an IME.

20. Dr. Kathy McCranie conducted an IME for Respondents on September 9, 2020. Dr. McCranie saw no evidence of direct injury to the elbow that would cause a traumatic ulnar neuropathy. She noted Claimant had reported "gradual" onset of ulnar symptoms and emphasized Dr. Prusmack's May 11, 2020 reference to "new" numbness and tingling in the 4th and 5th fingers. Dr. McCranie concluded, "it is not medically probable that this condition is related to her work injury and is more likely related to other pre-existing conditions."

21. Claimant followed up with Dr. Kummer on October 13, 2020 regarding the ulnar neuropathy. She described ongoing weakness in the right hand, and numbness and tingling in the 4th and 5th fingers. Claimant told Dr. Kummer, "her symptoms of elbow pain at the medial elbow as well as the numbness and tingling started immediately after her fall that she suffered while at work. She states she noted the symptoms but they were masked by the pain she had [in] her neck and her shoulder after the fall. She states that her neck and shoulder pain have improved. However, the pain at the medial elbow and numbness and tingling have progressively worsened as her neck and shoulder issues have improved." Because of the progressive symptoms and constant numbness and tingling, Dr. Kummer recommended an ulnar nerve decompression and possible transposition.

22. Dr. Kummer submitted a request for authorization of cubital tunnel surgery on November 3, 2020. Insurer denied the request on November 12, 2020. Claimant elected to move forward with surgery under her health insurance rather than wait and risk additional nerve injury while waiting for litigation to play out. Dr. Kummer performed a right ulnar nerve decompression surgery on November 19, 2020.

23. Dr. Kummer is an authorized provider on this claim.

24. Claimant's care was transferred from CCOM to Dr. Elizabeth Bisgard on November 25, 2020. Dr. Bisgard reviewed the history of the case and noted that, "[Claimant] frequently received copies of the [CCOM] reports and disputed what was documented. She recalled repeatedly telling Dr. Centi and Edith about symptoms that were not documented in her file but she noted on her pain diagram. I also noted the reports were in template format and frequently information appeared to be copied and pasted from the prior note with little or no additional information." Regarding the progression of symptoms, Dr. Bisgard wrote, "as [Claimant's] cervical symptoms improved [after neck surgery] she had more difficulty with pain, numbness, tingling, and weakness in her right arm and wrist. She had been having symptoms of numbness and tingling in her right fifth finger after the slip and fall which gradually developed into numbness and tingling [sic]. She specifically reported to Dr. Centi her symptoms but this was not documented in his record. Her symptoms progressed in her right hand. In follow-up visit with Dr. Prusmack on May 11, he documented new numbness in her fourth and fifth fingers. However, she stated the symptoms were always there but just worse."

25. Dr. Bisgard concluded, "After a thorough review of the medical records and history provided by [Claimant], it is my opinion based on a reasonable degree of medical probability that the ulnar neuropathy is directly due to her work injury. . . . [Claimant]

reviewed the [CCOM] records and adamantly disputes the documentation. At this point I give more credibility to [Claimant's] history rather than the medical records for the reasons above. The surgery provided by Dr. Kummer was reasonable and necessary and claim related."

26. Dr. Bisgard testified at hearing to expand on the opinions expressed in her reports. She explained Claimant's symptoms could have been coming from the cervical spine or the elbow because they were consistent with both cervical radiculopathy and ulnar neuropathy. She noted it was appropriate to initially focus on the neck, but if Claimant's symptoms were solely related to the herniated disc, she would have expected them to resolve after neck surgery. The symptoms unfortunately did not resolve after surgery, and it was appropriate to look next to the shoulder and then the elbow is possible pain generators.

27. Dr. Bisgard noted that although the EMG demonstrated bilateral ulnar neuropathies, Claimant was only symptomatic on the right side. Dr. Bisgard opined Claimant likely had asymptomatic ulnar compression and/or ulnar neuropathy before the fall, but the work accident aggravated the right side and caused it to become symptomatic. Dr. Bisgard explained the symptoms had been "masked" and when the symptoms from the neck and shoulder began to improve, the elbow and hand symptoms became more apparent. The Dr. Bisgard testified this is a common occurrence; the most painful or symptomatic body part receives the most attention, and once that issue is relieved, other symptoms and other parts of the body become more noticeable.

28. In support of her conclusion that the right ulnar neuropathy is related to the accident, Dr. Bisgard cited the undisputed fact Claimant fell and landed on her right arm; the mechanism of injury was consistent with her symptoms; the EMG was consistent with ulnar neuropathy; and CCOM's records were unreliable because of their "template" style format. Dr. Bisgard also considered Claimant a credible historian and credited the history she provided. Dr. Bisgard concluded that "but for" the slip and fall at work, Claimant would not have needed the ulnar decompression surgery. She further testified the treatment Claimant received for ulnar neuropathy has been reasonably necessary.

29. Dr. McCranie testified at hearing consistent with her report. Dr. McCranie did not consider Claimant a reliable historian based on perceived inconsistencies in the medical records. Dr. McCranie opined that if Claimant had sustained an acute traumatic right ulnar neuropathy, the pain would have been immediate and severe and would not/could not have been "masked." According to Dr. McCranie, the mechanism of injury as described by Claimant was not a direct blow to the elbow and was not sufficient to cause an acute traumatic right ulnar neuropathy. Dr. McCranie testified Claimant described a gradual onset of symptoms, which was inconsistent with an acute traumatic ulnar neuropathy. Dr. McCranie believes it more likely the ulnar neuropathy is idiopathic or caused by a metabolic condition.

30. Claimant's description of her accident and the onset and progression of her ulnar neuropathy symptoms at hearing and in her discussions with Dr. Bisgard was credible.

31. Dr. Bisgard's causation opinions are credible and more persuasive than the contrary opinions offered by Dr. McCranie.

32. Claimant proved the ulnar nerve decompression surgery performed by Dr. Kummer was reasonably needed and causally related to the work accident.

33. The denial of pre-authorization does not relieve Insurer of liability for a surgery that was reasonably needed, causally related, and performed an authorized provider.

CONCLUSIONS OF LAW

A. The ulnar decompression surgery was reasonably necessary and causally related to the admitted accident

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the ulnar nerve decompression surgery performed by Dr. Kummer was reasonably needed and causally related to the work accident. The accident probably aggravated a pre-existing but asymptomatic neuropathy and proximately caused the need for surgery. The ALJ credits Claimant's description of the accident and the onset and progression of the right ulnar neuropathy. Dr. Hurley's theory of a "double crush" phenomenon is probably correct. Claimant's initial upper extremity symptoms probably reflected a combination of cervical radiculopathy and ulnar neuropathy. As noted by Dr. Bisgard, Claimant's ulnar-related symptoms were to some degree "masked" by the issues with the neck and shoulder. But after the cervical pathology was addressed, the ulnar symptoms became more apparent. Once Dr. Prusmack realized those symptoms were not related to the neck injury, he made the appropriate referral to upper extremity specialist, Dr. Kummer. Dr. Prusmack's reference to the ulnar symptoms as "new" probably reflects a misunderstanding of what Claimant said or meant during the appointment. Claimant probably had some level of symptoms in the right 4th and 5th fingers immediately or shortly after the accident, which gradually became worse over time. The ALJ also considers it significant that Claimant had electrodiagnostic abnormalities in both elbows, but symptoms manifested only in the arm that suffered a trauma. Dr. Bisgard's analysis and opinions are credible and persuasive. Dr. McCranie's conclusions are in large part predicated on discounting and disbelieving Claimant's statements. But the ALJ found Claimant reliable and credible, which undercuts the usefulness of Dr. McCranie's opinions.

B. The denial or prior authorization does not relieve Insurer of liability for the surgery.

Respondents argue they are not liable for the ulnar nerve surgery regardless of reasonable necessity and causation because Dr. Kummer did not obtain prior authorization under WCRP 16. The ALJ disagrees with this proposition. The Rule 16 pre-authorization procedures are intended to protect providers by creating an administrative mechanism to determine whether the carrier will cover or deny recommended treatments. It is not intended to trump the statutory requirement to provide treatment reasonably needed to cure and relieve the effects of any injury, or the ALJ's authority to adjudicate disputed medical benefits. *E.g., Arszman v. Target Corporation*, W.C. No. 4-798-406 (December 15, 2011); *Urtusuastegui v. JBS USA, LLC*, W.C. No. 4-795-733 (November 8, 2018); *Repp v. Prowers Medical Center*, W.C. No. 4-530-649 (September 12, 2005). Because the ALJ has determined the surgery was reasonably necessary, causally related, and performed by an authorized provider, the lack of prior authorization does not vitiate Insurer's liability for the treatment.

ORDER

It is therefore ordered that:

1. Insurer shall cover all reasonably needed treatment from authorized providers to cure and relieve the effects of Claimant's compensable ulnar neuropathy, including but not limited to, the November 19, 2020 ulnar decompression surgery performed by Dr. Jennifer Kummer.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

- Did Claimant prove he suffered a compensable injury to his right ankle on November 18, 2020?

  If Claimant proved a compensable injury, the ALJ will address the following issues:

- Is Claimant entitled to reasonably necessary treatment from authorized providers?

- Is Claimant entitled to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits?

- Average weekly wage.

FINDINGS OF FACT

1. Claimant is a 64-year-old food service director for Aviva at Fitzsimons, a rehabilitation facility.

2. Weekly, Claimant uses a hand truck to bring food and produce into the kitchen that was delivered to the back door.

3. On Wednesday, November 18, 2020, Claimant was bringing the loaded hand truck in from the back door. Claimant alleges he "bumped" the horizontal bar between the wheels of the hand truck with his right foot. When he pushed the bar with his right foot around the area of the anterior ankle joint, he states he felt a "twinge" in the ankle. He experienced ankle discomfort but continued unloading the food and did not report an injury.

4. Later in the day he developed swelling over the dorsum of his foot and ankle. (Id., at 002).

5. The next day Claimant went to work and was limping. He took no medication and assumed it was a sprain that would improve.

6. On Friday, November 20, 2020, Claimant felt ill and his wife recorded his temperature at 102.8.

7. Claimant called his supervisor and let him know he would not be in to work the following day. He explained that he had a history of gout and that he thought he was having a gouty attack. He did not mention "bumping" his ankle on the hand truck or any other work-related incident.

8. On Saturday, November 21, 2020, Claimant had a telehealth visit and was told that he likely had COVID. Claimant continued to experience fever and significant night sweats. Claimant continued to have ankle pain and swelling.

9. That following Monday, Claimant developed redness in his right ankle and foot. He called his primary care physician (PCP) and was prescribed indomethacin for gout.

10. On Wednesday, his PCP diagnosed gout and presumptive positive COVID.

11. On Thursday, November 25, 2020, Claimant experienced cognitive issues described as expressive aphasia. He was transported to St. Anthony ER, where he was evaluated and diagnosed with possible congestive heart failure. A follow-up COVID test was negative.

12. Claimant was admitted to the hospital and received an extensive work-up. He was diagnosed with acute systolic and diastolic heart failure and acute idiopathic gout of the ankle with an unclear cause. He was also evaluated for a possible stroke.

13. The right ankle was x-rayed and showed soft tissue swelling but no fracture, lytic lesions, or sclerotic lesions.

14. Claimant did not report ankle trauma to multiple physicians during his initial days at the hospital.

15. A recommendation was made for an aspiration to assess for gout verses a septic joint. Claimant also continued to experience cognitive symptoms. A brain MRI showed a questionable right temporal lobe subacute infarct, which did not correlate with his symptoms. His symptoms were identified as meningitis.

16. Aspiration of the right ankle revealed no fluid in the joint.

17. Claimant described his ankle as feeling similar to prior episodes of gout in his great toe. Claimant was started on steroids and antibiotics.

18. Claimant was seen by an infectious disease specialist. An echocardiogram showed mild aortic regurgitation and mild pulmonary hypertension. There was concern regarding possible bacterial endocarditis.

19. On November 28, 2020, Claimant reported the incident at work involving his right ankle bumping into the hand truck.

20. An MRI of the right leg on November 28, 2020 showed small effusions at the ankle without synovial proliferation or loose bodies. There was excess fluid along the flexor tendon, possibly indicating tenosynovitis.

21. On December 4, 2020, the lateral ankle and foot became red, and Claimant’s right arm became swollen. He was diagnosed with a blood clot in his right

upper extremity. On December 6, 2020, Claimant underwent a wash out of his right wrist, left shoulder, right great toe, and dorsal foot for infected joints.

22. Claimant was transferred to Clear Creek Rehabilitation where he remained until January 19, 2021. He remained on IV antibiotics for another two weeks, and he began a course of physical and occupational therapy at home.

23. At present Claimant reports he has completed his therapy, is on an independent exercise program, and is doing much better though still having difficulty with prolonged ambulation.

24. On January 4, 2021, Dr. Hattem, M.D., performed a Physician Advisor review on behalf of Insurer. Dr. Hattem opined Claimant’s conditions (Staph aureus bacteria with questionable right ankle septic joint) are not work related. Dr. Hattem based his opinions on the following: Claimant was evaluated by multiple physicians and initially denied having right ankle trauma; he only later reported the alleged incident at work; he reported it felt like a gout attack; Claimant has a pre-existing history of gout that places him at a greater risk for developing a septic joint; that “even if he had bumped his right foot at work, it is unlikely that this would have caused a septic joint because even when he presented to the emergency department there was no evidence of laceration, abrasion, or puncture that would have caused an infection.” Dr. Hattem noted a septic joint would not likely develop absent skin penetration. Dr. Hattem ultimately concluded Claimant’s hospitalization was unrelated to his work activities or any incident at work.

25. Dr. Elizabeth Bisgard performed an IME for Respondents on March 8, 2021. Dr. Bisgard examined Claimant, took a detailed history, and reviewed the available medical records. Dr. Bisgard diagnosed staphylococcus aureus bacteremia resulting in endocarditis and other complications not clearly delineated in the medical records, and history of gout. Dr. Bisgard opined Claimant’s condition and hospitalization was not work-related for essentially the same reasons as Dr. Hattem. Dr. Bisgard emphasized multiple factors, including: Claimant merely described “bumping” his ankle on a horizontal bar of the hand truck at work; there was no break in the skin or open wounds to create an entry point for bacteria; Claimant denied any specific trauma to the ankle on multiple occasions and his symptoms were similar to other episodes of gout he had in his toes, and that any gout flare is unrelated to work; given his underlying history of gout, prior surgery for tophaceous gout, and alcohol use, he is at risk for increased risk of recurrent gout attacks.

26. The opinions of Dr. Hattem and Dr. Bisgard are credible and persuasive.

27. Claimant has failed to prove he suffered a compensable injury on November 18, 2020. Although there may have been an “incident” at work (bumping his ankle), it did not proximately cause any “injury.”

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App.

2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A claimant does not have to provide expert medical opinion evidence and can support a claim by any competent evidence. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Nevertheless, the presence or absence of expert opinion evidence is a valid factor to consider when evaluating the totality of evidence.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

The mere existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove he suffered a compensable injury on November 18, 2020. Dr. Hattem and Dr. Bisgard's opinions and conclusions are credible, and Claimant offered no persuasive contrary evidence to establish a causal connection. The minor "bump" to Claimant's ankle was probably coincidental and was insufficient to cause sepsis or any other condition affecting Claimant's right foot or ankle. Although Claimant clearly had significant medical issues that required treatment, the persuasive evidence fails to show those conditions were proximately caused by his work activities.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-118-426-002

ISSUES

- Did Claimant prove entitlement to medical benefits after MMI?

- Did Claimant prove she suffered functional impairment beyond her right leg?

FINDINGS OF FACT

1. Claimant works as an officer in the maximum-security ward at Employer's Mental Health Institute in Pueblo. She suffered an admitted injury to her right knee on February 22, 2019 while attempting to restrain a combative patient.

2. Dr. Terrence Lakin was Claimant's primary ATP.

3. After participating in several months of conservative care, Claimant was referred to Dr. Roger Davis for a surgical evaluation.

4. At her initial evaluation with Dr. Davis on August 16, 2019, Claimant described right knee pain, stiffness, "catching," "popping," and "locking."

5. On October 15, 2019, Dr. Davis performed an arthroscopic debridement and partial synovectomy for medial shelf plica. Dr. Davis found some superficial fraying and inflammation of the patella, a prominent medial shelf plica engaging in flexion and extension, some evidence of contusion about the medial femoral ridge, and mild cystic change at the base of the ACL. The medial and lateral menisci and articular cartilage were in good condition, and no loose bodies were identified.

6. At a December 23, 2019 follow-up appointment, Dr. Davis documented "she continues to have some popping and catching about the anterior aspect of her right knee but overall feels improved compared to preoperatively. Still has some pain about the anteromedial aspect of her right knee which she rates at 2 out of 10 today." Dr. Davis recommended Claimant continue her rehabilitation exercises and released her to a trial of full duty. He thought she was nearing MMI and would see her back in one month "if needed."

7. There is no persuasive evidence of additional appointments with Dr. Davis after December 23, 2019.

8. Claimant testified she considers the surgery unsuccessful because she continued to experience pain and occasional locking.

9. Claimant suffered a flare in mid-March 2020 because of multiple restraint episodes involving patients. Dr. Lakin was concerned about "a job mismatch" and ordered a functional capacity evaluation (FCE).

10. The FCE was completed on May 8, 2020. It was considered valid based on internal consistency measures. The FCE showed Claimant could perform light-medium lifting, constant standing, walking, and sitting, and occasional crawling, kneeling, and squatting. Claimant's limitations were consistent with most of her preinjury duties.

11. Dr. Lakin put Claimant at MMI on May 11, 2020 and performed an impairment rating. He noted Claimant had difficulty returning to her job and walking on uneven surfaces patrolling along the fence lines. She also had several flareups of knee pain that caused her to call in sick. Claimant reported her pain increased "the more she uses her right knee." She described difficulty with squatting, and descending stairs. Examination of the right knee showed tenderness to palpation medially, and mild crepitus. The knee appeared stable with no McMurray's clicks. Dr. Lakin provided a 5% lower extremity/2% whole person rating. He also assigned permanent restrictions consistent with the FCE. Dr. Lakin recommended no specific maintenance treatment, but recommended Claimant follow up with Dr. Davis "if needed if problems with the right knee related to this injury or surgery."

12. Claimant saw Dr. Timothy Hall for a DIME on September 8, 2020. Claimant indicated she was not working at the time, which she thought was because of her restrictions. She told Dr. Hall, "She has no limitations and activities of daily living as a consequence of her knee." Examination of the knee showed local tenderness medially on the right side, but no inflammation or instability. Meniscal signs were negative and patellar tracking was normal. Claimant had some range of motion loss, which provided the basis for Dr. Hall impairment rating. Dr. Hall agreed with the May 10, 2020 MMI date determined by Dr. Lakin. He assigned a 14% lower extremity/6% whole person rating for the right knee. Dr. Hall agreed with the restrictions set forth by the FCE, except he recommended no permanent lifting restrictions. He opined "as I review with the patient her work requirements, it is my opinion that she is capable of returning to her previous occupation. That was also the opinion of the FCE." Finally, Dr. Hall opined "no maintenance care is required."

13. Respondent filed a Final Admission of Liability (FAL) admitting for the 14% lower extremity rating assigned by Dr. Hall. The FAL denied liability for medical benefits after MMI.

14. Claimant continues to experience pain and occasional "locking" in the right knee, depending on her activity level. She has "intermittent" difficulty with squatting, crouching, and climbing stairs. Claimant estimated she walks 4000 steps per day at work. She "protects" her right knee because it is no longer as strong as before the injury.

15. Claimant has received no additional medical care for her right knee since being put at MMI. Claimant contacted Dr. Lakin's office "a couple of times" on unknown dates but was told he had nothing else to offer. Claimant contacted Dr. Davis' office twice after March 8, 2021 but received no call back.

16. No medical provider has recommended any treatment for the knee. Claimant testified she needs additional medical care for her knee but identified no specific treatment she believes she needs or will need in the future.

17. Claimant failed to prove she requires additional medical treatment to relieve the effects of her injury or prevent deterioration of her condition.

18. Claimant failed to prove she suffered functional impairment beyond her right leg. Neither Dr. Lakin's MMI report nor Dr. Hall's DIME report documented any symptoms or functional impairments proximal to the right leg. Claimant described no proximal symptoms or functional impairments at hearing.

CONCLUSIONS OF LAW

A. Medical benefits after MMI

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997)

Claimant failed to prove she requires additional medical treatment to relieve the effects of her injury or prevent deterioration of her condition. Claimant's current knee symptoms are similar to those she was experiencing in the several months leading up to MMI. Claimants' knee appears stable and there is no persuasive evidence to suggest additional surgery or further conservative care would be of benefit. No medical provider has recommended any treatment for the knee. Claimant testified she needs additional medical care for her knee but identified no specific treatment she believes she needs at present or will need in the future.

B. Whole person "conversion"

The term "injury" as used in the context of permanent partial disability "refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident." *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has sustained a scheduled injury or a whole person impairment is a question of fact for determination by the ALJ. *Id.* In resolving this question, the ALJ must determine "the situs of the functional impairment," which refers to "the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390, 1391 (Colo. App. 1997). The schedule of disabilities refers to the loss of "a leg." Section 8-42-107(2)(a). To establish entitlement to a whole person rating, the claimant must show functional impairment to part(s) of her body other than the "leg." It is the claimant's burden to prove a non-scheduled impairment by a preponderance of the evidence. *Cassius v. Entegris*, W.C. No. 4-732-489 (March 26, 2010).

Functional impairment need not take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may show functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although medical opinions may be relevant to this determination, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant failed to prove she suffered functional impairment beyond her right leg. Claimant has returned to her regular job and appears to be managing her knee issues with minor modifications and precautions. Neither Dr. Lakin's MMI report nor Dr. Hall's DIME report documented any symptoms or functional impairments proximal to the right leg. Claimant described no proximal symptoms or functional impairments at hearing. The preponderance of persuasive evidence shows Claimant's functional impairment is limited to her right leg.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits after MMI is denied and dismissed.

2. Claimant's request for additional PPD benefits based on Dr. Hall's whole person rating is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 1, 2021

WORKERS' COMPENSATION NO. WC 5-125-131-001

ISSUE

1. Whether Respondent has proven by clear and convincing evidence that the DIME physician improperly assigned permanent impairment ratings for Claimant's cervical and lumbar spine.[1]

FINDINGS OF FACT

1. Claimant was involved in motor vehicle accident while working as a code inspector for Employer on June 11, 2019. Claimant was driving her work vehicle when she slowed her vehicle to avoid a dog in the road. Claimant's vehicle was then rear-ended by another driver.

2. Following the collision, Claimant called the "OUCH Line" at Denver Health where she reported pain in her back, neck, right shoulder, left knee and right arm. Denver Health then referred Claimant to Christian Updike, M.D., at Injury Care Associates. (Ex. A).

3. Claimant saw Dr. Updike, on June 11, 2019, and Dr. Updike served as Claimant's authorized treating physician (ATP) for the remainder of her claim. At Claimant's initial visit she reported pain in her low back, neck, right arm, right hand, right elbow, left knee and right ankle. Claimant denied symptoms in her left arm, left ankle and right knee. Claimant reported a history of hip pain and that a previously-scheduled bursal injection in her right hip was to take place within a few days. On examination, Dr. Updike noted bilateral trapezial spasms and limited rotation of the neck, with induration of the right trapezius. On examination of Claimant's lower back, Dr. Updike noted tenderness with some reported limitation of range of motion on forward flexion and mild back tightness on straight leg raise test. He further noted tenderness in the anterior right biceps, and that Claimant's left shoulder was nontender in the glenohumeral region. Dr. Updike diagnosed Claimant with cervicalgia without radiculopathy, low back pain, and right arm soreness (noting that Claimant's right arm symptoms suggested myofascial symptoms). (Ex. C).

4. Between June 13, 2019, and July 24, 2019, Claimant saw Dr. Updike six times. At each visit, Dr. Updike examined Claimant's neck. Dr. Updike routinely found indurations and knots in Claimant's bilateral trapezius muscles, tightness, and limited range of motion of the cervical spine musculature. Examinations of Claimant's lower back were positive for complaints of diffuse soreness only. On June 17, 2019, Dr. Updike opined that Claimant's symptoms were related to her work injury. (Ex. C).

5. On June 16, 2019, Claimant saw Vitaly Domashevich, M.D., at Peak Pain. Claimant had begun treatment at Peak Pain in September 2017 for chronic low back pain

[1] The litany of issues listed in Claimant's position statement were not endorsed by Claimant in her Application for Hearing nor were they endorsed at hearing. Consequently, this Order addresses only the issue endorsed by Respondent.

resulting from a 2013 automobile accident. At the June 16, 2019 visit, Claimant reported that her low back pain had significantly flared up since the June 11, 2019 accident. Dr. Domashevich's documented physical examination and diagnosis of Claimant was identical to his examination of Claimant on May 23, 2019. He indicated that Claimant most likely sustained a whiplash injury in a motor vehicle accident approximately one month earlier, and did not diagnosis Claimant with any new injury to her lower back. Both before and after the accident, diagnosed Claimant with multilevel lumbar spondylosis (DDD/facet OA); low back pain and bilateral hip pain. The diagnosis remained unchanged from September 2017. (Ex. I).

6. At subsequent visits on July 12, 2019, August 30, 2019, September 27, 2019, November 1, 2019, and February 28, 2029, Dr. Domashevich's documented physical examination and diagnosis of Claimant were virtually identical and did not document objective evidence of injury to Claimant's lumbar or cervical spine.(Ex. I).

7. On June 17, 2019, Dr. Updike indicted that an MRI of Claimant's lumbar spine was not medically indicated based on her lack of neurologic findings and the mechanism of injury. Which he indicated could possibly cause a low back strain, but was extremely unlikely to cause any herniation of the low back. Nonetheless, Dr. Updike ordered MRIs of Claimant's neck and low back on June 26, 2019, due to Claimant's continued pain complaints. (Ex. C).

8. Beginning on June 19, 2019, Claimant saw Robyn Smolin, P.T., at Injury Care Associates on referral from Dr. Updike. Claimant attended ten physical therapy visits through August 1, 2019. The physical therapy records document moderate limitations in lumbar range of motion through August 1, 2019. (Ex. C).

9. On July 2, 2019, Claimant had MRIs of her lumbar and cervical spine performed on referral from Dr. Updike. The lumbar MRI was interpreted as showing no acute findings, with similar findings compared to a prior lumbar MRI taken October 31, 2018. The cervical MRI was interpreted as showing a very minimal posterior subluxation of C3 on C4 and C4 on C5; multilevel degenerative changes; moderate foraminal stenosis on the left at C3-4, severe bilaterally at C4-5 and C5-6, and mild on the right at C6-7. (Ex. D).

10. On July 3, 2019, Dr. Updike reviewed Claimant's MRI results and indicated that her lumbar MRI had no significant changes from October 2018 and that there was no structural damage to her low back. He also indicated that Claimant's MRI demonstrated pre-existing foraminal stenosis which might have been aggravated as a result of Claimant's work injury. Dr. Updike referred Claimant for follow up with a pain specialist, and recommended that Claimant see Domashevich, due to his familiarity with Claimant and his presumed knowledge of Claimant's baseline status. Dr. Updike also referred Claimant for chiropractic treatment with Michael Varney, D.C. (Ex. C).

11. On August 5, 2019, Claimant saw Dr. Varnay and that her shoulder pain "shifted" from the right to the left shoulder. In total, Claimant saw Dr. Varnay four times between August 5, 2019, and August 22, 2019. Dr. Varney noted lumbar range of motion with pain

and stiffness on left rotation at the August 5, 2019 visit. At each subsequent visit, Dr. Varnay's physical examination was identical, and incorrectly indicated that Claimant was employed as "CNA." Given the identical nature of each physical examination, the ALJ does not find the physical examinations documented after August 5, 2019, to be credible evidence. (Ex. C).

12. At her August 13, 2019 visit with Dr. Updike, Claimant reported new problems, including left shoulder pain and right knee pain. On examination, Dr. Updike noted reported tenderness over the right IT band in Claimant's hip, and diffuse neck tenderness with induration. He noted that Claimant's neck symptoms appeared to be "merely muscular." No examination of Claimant's lower back was documented. (Ex. C).

13. On August 21, 2019, Dr. Updike identified ongoing induration in Claimant's bilateral neck muscles, and noted that Claimant's left shoulder was primarily tender around the periscapular muscles, with no evidence of rotator cuff pain. Dr. Updike again noted that Claimant's lumbar MRI showed no changes when compared to Claimant's October 2018 MRI. (Ex. C).

14. Dr. Updike examined Claimant's neck and lower back again on August 28, 2019, noting that the low back was slightly less tender, and that Claimant had "continued induration" in the bilateral trapezius muscles. (Ex. C).

15. On September 11, 2019, Dr. Updike noted that Claimant had returned to full duty work with no significant flare ups. Claimant had continuing complaints of neck pain, low back pain, hip pain and left shoulder with "popping" in the left glenohumeral joint. On examination of Claimant's neck, Dr. Updike found good range of motion with end-range tightness. Dr. Updike's diagnosis was cervicalgia without radiculopathy, low back pain and right knee pain. (Ex. C).

16. On September 20, 2019, Claimant reported to Dr. Updike that Dr. Domashevich had recommended a surgical consult for her lumbar spine, although no recommendation is documented in Dr. Domashevich's records. Dr. Updike disagreed with this reported recommendation indicating that Claimant had no anatomical changes to her lumbar spine justifying surgery. He noted that it was possible Claimant was having ongoing inflammation of the lower back and neck. He further noted that Claimant's left shoulder did not warrant surgery. (Ex. C).

17. On September 30, 2019, Claimant began physical therapy with Pro Active Physical Therapy. Claimant attended 30 physical therapy appointments at Pro Active between September 30, 2019, and May 1, 2020. (Records from 15 of these visits were offered and admitted into evidence).Claimant initially reported low back pain worse with bending and twisting, cervical pain worse with sitting, and shoulder pain with lifting. The Pro Active records from September 30, 2019, indicate that Claimant's lumbar active range of motion on flexion was 100%, 50% on extension, 50% on right side bend, and left side bend was within normal limits. Claimant's cervical range of motion was noted to be 80% on right rotation and 100% on left rotation. These assessments of Claimant's range of motion remained unchanged over the course of treatment, and are documented identically at the

May 1, 2020 visit as at the September 30, 2019 visit, with no interval changes documented. Claimant's "Functional Status" documented in the Pro Active physical therapy records indicate that Claimant's "Prior" status was 100% for bending, sitting, and lifting, and her "Current" status was 50%, 60% and 50%, respectively As with Claimant's range of motion assessment, Claimant's "Functional Status" remained unchanged at each visit where it was documented. At each visit, Claimant's reported pain lumbar pain was 7/10, cervical pain was 7/10 and left shoulder pain was 6/10. The ALJ finds the Pro Active Physical Therapy records documentation of Claimant's range of motion, functional status, and pain reports to be unreliable, without credibility and of no evidentiary value. (Ex. 9).

18. On October 17, 2019, Claimant saw Dr. Updike with new complaints of leg cramps. Dr. Updike opined that it was "questionable" whether these symptoms were work-related, but ordered an EMG to evaluate the reported symptoms. Dr. Updike referred Claimant to Bryan Castro, M.D., for review the EMG result and for an opinion on lumbar pain management. (Ex. C).

19. On November 22, 2019, Claimant saw Dr. Castro. Dr. Castro examined Claimant and reviewed her prior imaging studies. He noted that Claimant's x-rays and MRIs showed mild to moderate degenerative changes, no instability patterns, and moderate advanced disc space collapse and degenerative changes, but no severe central or foraminal stenosis. He also indicated that the EMG study did not demonstrate any significant neural dysfunction. Dr. Castro's examination was unremarkable. Dr. Castro opined that Claimant's had ongoing back pain and neck pain secondary to a whiplash-type injury. He indicated that surgical intervention was not required, and that Claimant may benefit from medial branch blocks and rhizotomies, such as those performed previously by Dr. Domashevich. (Ex. G).

20. On March 4, 2020, Dr. Updike determined that Claimant was at maximum medical improvement (MMI) for her neck, lower back, right knee, and left shoulder. He referred Claimant to Samuel Chan, M.D., for the performance of an impairment rating. At his April 16, 2020 visit, Dr. Updike indicated that an radiofrequency ablation (RFA) recommended by Dr. Domashevich would be reasonable maintenance care to be completed within six months. (Ex. C).

21. Claimant saw Dr. Chan on April 27, 2020. Dr. Chan reviewed Claimant's medical records and performed an examination. Dr. Chan noted that Claimant had a history of chronic cervical and lumbar spine pain in the past and that her then-current symptoms were "essentially unchanged, comparing before and after the motor vehicle accident." He noted that with respect to Claimant's cervical and spine pain, her complaints appeared "rather escalated." He opined that the June 11, 2019 motor vehicle accident may have temporarily exacerbated her symptoms, but that there was no additional permanent impairment with respect to Claimant's cervical or lumbar spine. Similarly, with respect to Claimant's hip, Dr. Chan opined that there were no new traumatic lesions and that the degenerative changes were pre-existing. Dr. Chan opined there was no permanent impairment of the Claimant's hip. Dr. Chan did assign Claimant a 9% upper extremity impairment for her left shoulder due to range of motion deficits. (Ex. J).

22. On May 29, 2020, Respondent filed a Final Admission of Liability admitting for maintenance care as recommend by Dr. Updike in his April 16, 2020 report, and admitting for permanent partial disability benefits based on a 9% left upper extremity impairment for Claimant's left shoulder.(Ex. K).

23. On July 27, 2020, Dr. Domashevich authored a letter to Claimant's counsel addressing his assessment of Claimant's injuries. Dr. Domashevich opined that Claimant sustained an exacerbation of pre-existing chronic pain symptoms due to her work-related injury. Dr. Domashevich opined that Claimant's lower back pain was "most likely related to superficial injury during accident," and that Claimant "[n]ever completed returned to baseline by spring of 2020." Dr. Domashevich noted that by the end of February 2020, Claimant continued to complain of worsened subjective symptoms, "most notably her left-sided low back and neck pain symptoms." With respect to Claimant's neck, he opined that Claimant had worsened neck pain most likely related to a whiplash injury in the accident, and Claimant had not returned to baseline. He opined that Claimant reached MMI in March 2020. Dr. Domashevich also opined that Claimant should be assigned an "additional 5% whole person impairment" based on the "severity of her subjective worsening of [] symptoms." Dr. Domashevich's statement that Claimant had chronic neck pain is not supported by treatment records which do not reflect treatment or evaluation of Claimant's neck. (Ex. I).

CLAIMANT'S RELEVANT TREATMENT PRIOR TO JUNE 11, 2019

24. Prior to the June 11, 2019 work accident, Claimant had a significant history of chronic lower back pain and hip pain, with some indication of prior neck pain. Claimant had multiple procedures performed on her lower back between November 2017 and December 2018, and before the accident was scheduled for an injection to take place shortly after June 11, 2019.In addition, Claimant was referred for physical therapy in January 2018, and was continuing to receive physical therapy for her pre-existing lower back pain and hip pain on May 22, 2019 (20 days before the June 11, 2019 accident).

25. On August 18, 2017, Claimant had an MRI of her lumbar spine performed at Health Images. Claimant was referred for the MRI by Hugh McPherson, M.D. (No records from Dr. McPherson were offered into evidence). The MRI report indicates it was compared to a prior MRI from November 17, 2014. The MRI was interpreted as showing a L4-L5 disc protrusion with mild thecal sac stenosis with moderate and minimal right degenerative foraminal narrowing, mild degenerative thecal sac stenosis at L2-3 and moderate degenerative foraminal stenosis at L3-4 (bilateral) and L1-2 (left side). (Ex. 7).

26. In September 2017, Claimant saw Andrew Smolenski, M.D., at Peak Pain (the same clinic as Dr. Domashevich) on referral from Dr. McPherson for chronic low back pain. Claimant reported that her pain began in 2013 following an auto accident in which she was rear-ended. Claimant reported undergoing physical therapy, lumbar facet RFA and had improvement for approximately one year. She reported that over the previous year, her pain had steadily increased and radiated into both hips, pain ranging from 5/10 to 10/10. Claimant denied radiation to her leg or other leg symptoms. Dr. Smolenski

diagnosed claimant with multilevel lumbar spondylosis (DDD/facet OA); low back pain, and bilateral hip pain. (Ex. I).

27. On November 22, 2017, Claimant underwent a medial branch blocks in the lumbar spine for preoperative diagnoses of low back pain, lumbar spondylosis, and lumbar facet arthropathy performed by Dr. Smolenski. (Ex. F).

28. Claimant continued treatment with Peak Pain, under Dr. Domashevich with visits on December 4, 2017, January 3, 2018, January 24, 2018, April 11, 2018, August 25, 2018, September 26, 2018, October 24, 2018, and November 30, 2018, for a chief complaint of low back pain. Claimant's diagnosis remained unchanged throughout this time (i.e., multilevel lumbar spondylosis (DDD/facet OA); low back pain, and bilateral hip pain). On January 18, 2018, Dr. Domashevich referred Claimant for physical therapy for SI joint arthralgia and lumbar spondylosis. (Ex. I).

29. On December 20, 2018, Dr. Domashevich performed bilateral L3, L4 and L5 medial branch nerve radiofrequency ablation (RFA) "to anesthetize L4-L5 and L5-S1 facet joints." (Ex. E).

30. On May 5, 2018, Dr. Domashevich performed a left L4-L5 transforaminal epidural steroid injection (TESI) for a diagnosis of left lumbar radiculopathy. (Ex. E).

31. On September 7, 2018, Dr. Domashevich performed bilateral L4-5 TESIs for lumbar radiculopathy. (Ex. E).

32. On October 10, 2018, Dr. Domashevich performed a left SI joint injection and a left trochanteric bursa injection for diagnoses of left SI joint arthralgia and left trochanteric bursitis. (Ex. E).

33. On November 9, 2018, Dr. Domashevich performed another TESI for left foraminal stenosis at L4-5 and L5-S1. (Ex. E).

34. On November 31, 2018, Claimant had a lumber MRI performed at Health Images, on referral from Dr. Domashevich. The MRI was interpreted as unchanged when compared to the August 18, 2017 lumbar MRI. The radiologist characterized the MRI as showing "unchanged severe degenerative changes including multilevel mild central canal stenosis and moderate-severe bilateral neuro foraminal narrowing." (Ex. 7)

35. On December 28, 2018, Dr. Domashevich performed a right SI L2-3 TESI and right trochanteric bursa injection for diagnoses of right lumbar radiculopathy and right trochanteric bursitis. (Ex. E).

36. On May 6, 2019, Claimant was seen at Pro Active Physical Therapy for diagnoses of pain and stiffness in the right shoulder and low back pain. The physical therapy record identifies the referring provider as James Johnson, M.D and notes that the May 6, 2019 visit was Claimant's 13th visit. (No records from Dr. Johnson and no records from Pro Active Physical Therapy prior to May 6, 2019, were offered into evidence). (Ex. 9).

37. Claimant was seen for her 14th and 15th visits at Pro Active Physical Therapy on May 15, 2019, and May 22, 2019, respectively. At both visits, Claimant reported continued lateral right hip pain and that she was unable to lay on her right side. Claimant was reported to be tender to palpation over her greater trochanter (presumably on the right). The records note that Claimant was to continue physical therapy as prescribed. (Ex. 9).

38. On May 23, 2019 (19 days prior to her June 11, 2019 work accident), Claimant saw Dr. Domashevich, for follow up for continued injection therapy. Dr. Domashevich noted that Claimant had right lower back and right thigh pain and was doing slightly better after massage of the right trochanteric bursa, with no obvious tenderness. He indicated that his plan was to proceed with a R L1-2 TESI. (Ex. I). The ALJ infers that the referenced injection is the bursal injection referenced in Dr. Updike's June 11, 2019 report.) (Ex. I).

CHIROSPORT

39. Beginning on September 28, 2017, Claimant was seen at Chirosport Chiropractic Health Center. Claimant's September 18, 2017, November 9, 2017, and January 9, 2018 records at Chirosport note complaints of frequent aching discomfort in her neck, both hips and lower back, each measuring between 6 and 9 on the VAS pain scale, with modification in the subjective VAS scores at each visit. (Ex. E).

40. On February 26, 2019, Claimant returned to Chirosport for treatment. At that time, Claimant reported pain in the upper back, low back, and left hip, measuring 7, 8 and 9 out of 10 on the VAS scale. (Ex. E).

41. On March 5, 2019, Claimant was seen at Chirosport with reports of pain in the neck, right hip, low back, and upper back measuring 6, 8, 7 and 7 on the VAS scale, respectively. (Ex. E).

42. On April 1, 2019, Claimant reported to Chirosport pain in her right hip, left trapezius, upper back, and low back. Claimant received electric muscle stimulation to the lumbar, sacroiliac, and lumbosacral regions. (Ex. E).

43. On April 29, 2018, Claimant reported to Chirosport pain in her right hip, upper back, low back, and neck measuring 9, 9, 8 and 8 on the VAS scale, respectively. (Ex. E).

44. On August 1, 2019, Claimant reported to Chirosport pain in the back of her neck, low back and right hip, each measuring 8 on the VAS scale. (Ex. E)

45. Claimant testified that she purchased a package from Chirosport for chiropractic and massage because she was on a "health kick." Claimant testified that her insurance would pay for the package if she had existing issues and the chiropractor had to report certain "codes" to obtain payment. The implication of Claimant's testimony was that the complaints and assessments from Chirosport were merely to permit the chiropractor to obtain payment and not an accurate reflection of her complaints or symptoms. At each of Claimant's 8 Chirosport visits between September 18, 2017, and August 1, 2019, the

provider's "objective" findings, "assessment," "plan," and "diagnosis" were identical, with the exception of noting EMS treatment at the three final visits. For example, at every Chirosport visit, the "Objective" findings indicate "[a]n extremity subluxation was discovered and adjusted in the left elbow." In contrast, at each visit, Claimant's subjective findings were updated and varying visual analog scale (VAS) pain ratings were assigned. While the ALJ finds the "objective" findings, "assessments," "plans," and "diagnoses" listed in the Chirosport records to be of no evidentiary value, the ALJ finds the Claimant's areas of reported discomfort to be more likely than not, accurate.

DIME

46. After the Respondent filed an FAL, Claimant underwent a Division Independent Medical Examination (DIME), with Charles Wenzel, D.O., on August 28, 2020. Dr. Wenzel issued a report related to the DIME on September 14, 2020. Dr. Wenzel examined Claimant and reviewed relevant medical records. Claimant denied any prior neck pain, left shoulder pain or right knee injuries, and indicated that she had a radiofrequency ablation on January 10, 2019, and was pain free until her accident on June 11, 2019. On examination of Claimant's cervical spine, Dr. Wenzel noted that cervical palpation was unremarkable with no tenderness noted. His work-related diagnoses were cervical pain, chronic, aggravated; lumbar pain, chronic, aggravated; and left knee contusion, resolved. (Ex. M).

47. Dr. Wenzel agreed with Dr. Chan's assessment that there was no impairment rating. He opined that Claimant had no Table 53 or Table 54 diagnoses, and therefore, no cervical or lumbar range of motion deficits may be used to assign a permanent impairment rating. He further stated that Claimant "has a history of chronic pain in the cervical and lumbar regions, and there is no objective evidence for any functional deficits as a result of [the June 11, 2019 accident]." Nonetheless, Dr. Wenzel went on to assign Claimant 1% whole person impairment for the cervical spine and a 1% whole person impairment for the lumbar spine. Dr. Wenzel also opined that Claimant's complaints of left shoulder and right knee pain were not related to her work injury, and assigned no impairment rating. He did recommend medical maintenance care in the form of follow up with pain management for facet injections if indicated, for up to six months. (Ex. M).

48. Although he found Claimant had no permanent impairment, Dr. Wenzel completed impairment worksheets for Claimant's cervical and lumbar spine. With respect to Claimant's cervical spine, he listed a 6% impairment due to specific disorder of the cervical spine under Table 53 II.C of the AMA Guide. Range of motion of the cervical spine corelated to an additional 4% impairment. Claimant's whole person impairment for the cervical spine, if applicable, was 10%. Similarly, Dr. Wenzel listed a 7% lumbar impairment due to a specific disorder of the lumbar spine under Table 53 II.C., and range of motion measurement correlating to a 2% lumbar impairment. Claimant's whole person impairment for the lumbar spine, if applicable, was 9%. Claimant's whole person impairments for her cervical spine and lumbar spine combine for an 18% impairment rating. (Ex. M).

49. On September 25, 2020, the Division issued a "Incomplete Notice – DIME Report" (the "Notice") to Dr Wenzel, based on his assignment of impairment ratings for Claimant's cervical and lumbar spine based "on her subjective complaints of increased pain." The Notice advised Dr. Wenzel that under the Act, "a physician shall not render a medical impairment based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings." The Notice further instructed Dr. Wenzel to review the following excerpts from the Division's Impairment Rating Tips:

a. "In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating greater than zero under Table 53."

b. "Whenever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiologic findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity."

(Ex. N).

50. On October 7, 2020, Dr. Wenzel issued a revised DIME report. In that report, Dr. Wenzel revised his opinion and assigned Claimant an 18% whole person impairment based on the measurements and specific disorder ratings he declined to assign in his September 14, 2020 DIME Report. In explaining his rationale for assignment of permanent impairment ratings, Dr. Wenzel wrote:

> "Although [Claimant] has a pre-existing history of neck and low back pain, there was no prior impairment rating or available range of motion measurements for which to perform an apportionment or normalization according to the AMA Guides. Additionally, she has had over six months treatment for medically documented pain and rigidity. Accordingly, I assigned the above ratings." (Ex. M)

51. Dr. Wenzel's testimony for hearing was presented through a pre-hearing deposition. Dr. Wenzel was offered and admitted as an expert in occupational medicine without objection.

52. Dr. Wenzel testified that under Table 53 and the Colorado Impairment Rating Tips, he believed he was required to provide the patient with an impairment rating because Claimant had more than six months of treatment with documented pain and rigidity, regardless of whether there was objective pathology at the time of the DIME evaluation. Dr. Wenzel testified that his understanding was that if a claimant received six months of treatment, the claimant would qualify for a Table 53 diagnosis. He testified that other than Claimant receiving six months of treatment, there was no evidence definitively indicating that Claimant sustained an injury to her lumbar spine or neck as a result of her June 11, 2019 accident. Dr. Wenzel testified that in his opinion, loss of range of motion constitutes

“rigidity.” Dr. Wenzel also testified that he considers medically documented pain and rigidity, spasms, indurations, subluxation, nerve encroachment and limited range of motion to be “pathology” under the AMA Guides.

53. Dr. Wenzel testified that he was not aware of any evidence that Claimant’s neck or back were independently disabling prior to June 11, 2019, or that she had any work restrictions prior to June 11, 2019.

RETAINED EXPERTS/NON-DIME IMEs

54. On November 12, 2020, Claimant underwent an independent medical examination (IME) with Lawrence Lesnak, D.O., at Respondent’s request. Dr. Lesnak reviewed Claimant’s records and performed an examination. Dr. Lesnak was admitted to testify as an expert in physiatry, and testified at hearing. Dr. Lesnak opined that there was no objective evidence that Claimant sustained an injury to her lumbar spine as the result of the June 11, 2019 auto accident, including no evidence on MRI. Dr. Lesnak also opined that Claimant had no cervical spine diagnosis attributable to her work accident, but provided no cogent explanation for this opinion. Dr. Lesnak testified that the AMA Guides and Division Rating Tip Sheet requires objective evidence of injury, which he defined as a change on an imaging study or reproducible objective evidence of injury for six months or more. He also opined that “rigidity” is not synonymous with decreased range of motion or stiffness.

55. Dr. Lesnak opined that Claimant’s only probable injury as a result of the June 11, 2019 collision was a mild left anterior knee contusion. He opined that there is “absolutely no evidence the patient sustained any type of injuries to her cervical spine, lumbar spine, right knee, right hip or left shoulder whatsoever.” He also opined that the reported mechanism of injury would be “completely inconsistent” with an injury to Claimant’s lumbar or cervical spine and that Claimant sustained no aggravation of any preexisting condition. As part of his examination, Dr. Lesnak performed range of motion measurements of Claimant’s cervical and lumbar spine which are documented in his report. (Ex. P).

56. On December 24, 2020, Claimant underwent an IME performed by Shimon Blau, M.D., at Claimant’s request. Dr. Blau reviewed Claimant’s medical records and performed a physical examination. Dr. Blau testified at hearing and was qualified as an expert in physical medicine and rehabilitation. Dr. Blau’s documented examination of Claimant’s lumbar spine was positive for trigger points in Claimant’s left trapezius area, but other objective testing of Claimant’s lumbar spine was negative. Dr. Blau opined that Claimant sustained an aggravation of her pre-existing chronic lumbar condition, and therefore qualifies for an impairment rating of the lumbar spine. With respect to Claimant’s cervical spine, Dr. Blau noted that Claimant disputes she had chronic neck pain prior to the June 11, 2019 accident, but regardless of whether Claimant had a chronic neck condition, Claimant qualified for an impairment rating for an acute aggravation of the condition. (Ex. 19).

57. Based on his examination and assessment, Dr. Blau opined that Claimant opined that Claimant has 15% impairment for the cervical spine, 20% for the lumbar spine and 2% impairment for the left shoulder, which combine to yield a 33% whole person impairment. With the exception of cervical rotation, Claimant's cervical and lumbar range of motion as measured by Dr. Blau were significantly lower than those measured by Dr. Wenzel two months earlier, and significantly lower than Dr. Lesnak's measurements six weeks earlier (with the exception of lumbar flexion). (Ex. 19).

58. On March 15, 2020, Claimant was involved in another motor vehicle accident in which she was rear-ended. Claimant had increased neck and lower back pain and she was taken to Parker Adventist Hospital's emergency department, evaluated, and discharged. (Ex. 19). Claimant reported the March accident to Dr. Domashevich at her June 19, 2020 appointment, to Dr. Blau, but does not appear to have reported the March 15, 2020 accident to Dr. Updike; Dr. Chan; Dr. Wenzel despite seeing each physician following the accident.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON IMPAIRMENT

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Cervical Spine

Respondent has failed to establish by clear and convincing evidence that the DIME physician's assignment of a 10% whole person impairment for Claimant's cervical is incorrect. The Division's Desk Aid #11 – Impairment Rating Tips, under the heading "Table 53 and Application of Spinal Range of Motion" provides: "In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established." (Emphasis original).

Under Table 53 (II)(C), of the AMA Guide and Desk Aid #11 "the examiner may assign an impairment value for impairment or a specific disorder of the lumbar or cervical regions of the spine, so long as the medical evidence establishes the presence of a specific diagnosis, objective pathology, and six months of medically documented pain and rigidity." *In re Bryant*, W.C. No. 5-058-044-001 (ICAO, June 5, 2019). "Objective pathology' is in addition to 'six months of medically documented pain and rigidity.'" *Id*. Contrary to Dr. Wenzel's understanding, a claimant must have more than six months of medically documented pain and rigidity to qualify for an impairment rating. Objective pathology must also exist. The term "objective pathology" cited in Desk Aid #11 refers to "the identification of a problem, injury, disorder, condition or disease that can be identified by virtue of objective signs or analysis." *Id*. "Rigidity" is an elusive term without an accepted definition, but, in any event, need not be "objective." *Id*.

With respect to Claimant's cervical spine, the evidence indicates that Claimant was assigned a specific diagnosis of her cervical spine by Dr. Chan – a cervical strain. The ALJ does not find Dr. Lesnak's opinion credible that "objective pathology" refers only to a change in an imaging study or reproducible objective findings for greater than six months. Rather, as noted above, "objective findings" includes objective signs of an injury or problem. As noted throughout Claimant's records, Dr. Updike continually noted indurations and knots in Claimant's cervical musculature which were noted on objective examinations, and not based solely on Claimant's subjective complaints, unlike complaints of tenderness which are subjective. In addition, Claimant had more than six months of complaints of pain, knots, indurations, and decreased range of motion of her lumbar spine, which the ALJ concludes satisfies the requirement for pain and rigidity. Respondent has failed to establish that it is highly probable that Dr. Wenzel's assignment of a permanent impairment rating for Claimant's cervical spine is incorrect.

Lumbar Spine

Respondent has established by clear and convincing evidence that Dr. Wenzel improperly assigned of a permanent impairment rating for Claimant's lumbar spine. Unlike Claimant's cervical spine where objective signs of an injury existed, there was no credible evidence of objective signs of injury to Claimant's lumbar spine or credible evidence of rigidity for more than six months. As found, Claimant had a long history of chronic lower back pain dating to approximately 2013 or 2014, and was involved in active treatment, including ongoing physical therapy for her lower back within weeks of her June 11, 2019 accident.

Claimant saw Dr. Updike approximately 18 times over a period of approximately ten months. With the exception of a report of mild back tightness on straight leg raise testing on the date of injury, Dr. Updike did not document any positive objective findings with respect to Claimant's lumbar spine. For example, Dr. Updike did not find spasms or indurations in Claimant's lumbar spine. Instead, Dr. Updike's records document only subjective lower back pain complaints. The consensus among Claimant's treating providers, and Dr. Wenzel was that Claimant's lumbar MRI showed no objective evidence of injury, which the ALJ finds credible. Dr. Domashevich's July 27, 2020 letter also noted that Claimant's accident resulted in worsened complaints of subjective symptoms, but did not identify any objective pathology indicating Claimant sustained a permanent impairment to her lumbar spine. Similarly, Dr. Blau's examination did not demonstrate any objective signs of lumbar pathology related to the June 11, 2019 accident, other than Claimant's reports of pain. Dr. Blau's opinion that Claimant qualifies for an impairment rating because she likely sustained an aggravation of her pre-existing back condition conflates the standard for compensability with the standard for the assignment of a permanent impairment rating. While the aggravation of a pre-existing condition may have rendered Claimant's claim compensable, and entitle her to medical treatment and temporary disability benefits, the mere fact of an aggravation of pain does not equate to the objective pathology necessary for the assignment of an impairment rating. Claimant must still meet the requirements for impairment under the AMA Guides, which she DOES not.

Although Claimant did report complaints of pain for more than six months, there is no credible evidence that Claimant had more than six months of documented rigidity. While the initial physical therapy records at Injury Care Associates document moderate limitations in range of motion, there is no credible documentation of limited range of motion related to Claimant's June 11, 2019 auto accident after August 5, 2019.

Based on the totality of the evidence, the ALJ concludes that Respondent established by clear an convincing evidence that Dr. Wenzel's assignment of a permanent impairment rating for Claimant's lumbar spine was incorrect.

ORDER

It is therefore ordered that:

1. Claimant is entitled to a 10% whole person impairment rating for her cervical spine as assigned by the DIME physician, Dr. Wenzel.

2. Claimant is not entitled to a permanent impairment rating for her lumbar spine.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 2, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Martin Kalevik, D.O. that Claimant has not reached Maximum Medical Improvement (MMI) as a result of her August 21, 2019 industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Senior Marketer. On August 21, 2019 Claimant slipped on a wet bathroom floor and fell to the ground while at work. Specifically, Claimant struck her right hip, twisted when she hit the floor and rolled onto her left hip.

2. Claimant initially sought medical treatment with Authorized Treating Physician (ATP) Kathryn Bird, D.O. at Concentra Medical Centers on August 21, 2019. Claimant reported that she slipped and fell on a wet bathroom floor at work and was experiencing numbness, tingling and burning pains in her left hip. She noted lower back, right ankle and left hip injuries. Dr. Bird assessed Claimant with a right ankle strain and a lumbosacral strain. She released Claimant to regular duty work with no restrictions.

3. Claimant received chiropractic treatment from Scott Parker, D.C. at Concentra from September 24 through November 14, 2019. She attended a total of 11 chiropractic sessions. Claimant was released from chiropractic treatment on November 14, 2019 with improved symptoms.

4. Claimant underwent physical therapy at Concentra from August 22 through November 18, 2019. She attended a total of 30 physical therapy sessions. Upon discharge, Claimant was advised to continue her home exercise program.

5. On September 30, 2019 Claimant underwent a lumbar spine MRI. The MRI revealed no central foraminal compromise, a very minimal central disc protrusion at L5-S1 with no nerve root contact or displacement and mild facet changes distal to the L3 level.

6. On November 18, 2018 Claimant returned to Dr. Bird for an examination. Claimant reported that she still had back pain at a 4/10 level. Dr. Bird noted that Claimant had suffered a lumbar strain on August 21, 2019. She determined that Claimant had reached her functional goals and was tolerating regular activity. Dr. Bird thus released Claimant to Maximum Medical Improvement (MMI) with no permanent impairment or work restrictions. She also did not recommend any medical maintenance care.

7. On December 2, 2019 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Bird's MMI and impairment determinations. The FAL specifically

acknowledged a 0% permanent impairment rating and noted that the claim was for medical benefits only.

8. On December 5, 2019 Claimant timely filed an Objection to the FAL and requested a Division Independent Medical Examination (DIME). Martin Kalevik, D.O. was selected to perform the DIME.

9. On August 27, 2020 Claimant underwent the DIME with Dr. Kalevik. He recounted that Claimant had slipped and fallen on a wet floor in a bathroom at work. Claimant reported lower back, right ankle and left hip symptoms. After reviewing Claimant's medical records and performing a physical examination Dr. Kalevik diagnosed Claimant with the following: (1) chronic lower back pain; (2) chronic right SI joint dysfunction; (3) bilateral hip pain; (4) left thigh numbness; (5) suspected left meralgia paresthetica; and (6) a history of unrelated thoracic pain. He concluded that Claimant had not reached MMI because she remained "significantly symptomatic" and her injuries affected her activities of daily living. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) Dr. Kalevik assigned Claimant an 11% provisional whole person permanent impairment rating for her lumbar spine. He also assigned 3% provisional scheduled impairment ratings for the left and right lower extremities. Dr. Kalevik recommended additional diagnostic testing and treatment in the form of an EMG/nerve conduction study of Claimant's left lower extremity, an MRI of her right hip with an orthopedic evaluation, a physiatry evaluation, an SI joint injection and possible nerve block after evaluation of the hip and left leg numbness, and a repeat lower back MRI.

10. On December 8, 2020 Claimant underwent an independent medical examination with Lawrence A. Lesnak, D.O. Dr. Lesnak noted that Claimant exhibited subjective complaints without reproducible objective findings. He disagreed with Dr. Kalevik and agreed with ATP Dr. Bird that Claimant has reached MMI. Dr. Lesnak determined that Claimant's pain complaints suggested symptoms of somatic disorder. She also had significant psychosocial issues affecting her symptoms and perceived function. Dr. Lesnak's physical examination did not produce any reproducible objective findings that revealed pathology in the lumbar spine, sacroiliac joint or hip.

11. Dr. Lesnak also testified at the hearing in this matter. He maintained that Claimant was appropriately placed at MMI by Dr. Bird on November 18, 2019. Dr. Lesnak remarked that the further medical treatment and diagnostic examinations recommended by Dr. Kalevik were not reasonable and necessary because Claimant has no objective findings that would warrant ongoing treatment. Dr. Lesnak specifically commented that Claimant's physical examination did not reveal any reproducible objective findings in her right hip. He explained that Dr. Kalevik clearly erred in removing Claimant from MMI and assigning provisional impairment ratings for her lumbar spine and bilateral hips.

12. Claimant testified at the hearing in this matter. Claimant specified that she experiences symptoms in her right hip, left leg, throughout her lower back and down her right leg. She noted that she suffers constant pain that requires her to take two Aleve tablets per week to alleviate the symptoms.

13. On April 9, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Kalevik. Dr. Kalevik maintained that Claimant has not reached MMI and recommend further diagnostic testing. In reviewing Claimant's medical records, Dr. Kalevik noticed that Claimant's case ended less than three months after her work injury and she was still symptomatic in her back and right hip with 4/10 pain levels. He explained that Claimant exhibited significant symptoms on physical examination. Dr. Kalevik commented that Claimant demonstrated range of motion loss in the flexion/extension of the lumbar spine and into the right hip on extension. He thus determined that further diagnostic testing including a right hip MRI and EMG/nerve conduction studies were necessary. Dr. Kalevik noted that Claimant also required a physical medicine evaluation. Finally, Dr. Kalevik disagreed with Dr. Lesnak's opinion that Claimant exaggerated her symptoms. Specifically, in evaluating Claimant for possible malingering and symptom magnification Dr. Kalevik did not notice any exaggeration or inconsistencies in her presentation.

14. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Kalevik that Claimant has not reached MMI as a result of her August 21, 2019 industrial injuries. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Kalevik's' MMI determination was incorrect. Initially, on August 21, 2019 Claimant slipped on a wet bathroom floor and fell to the ground while at work. Specifically, Claimant struck her right hip, twisted when she hit the floor and rolled onto her left hip. After receiving conservative care, ATP Dr. Bird determined that Claimant had suffered a lumbar strain and released her to MMI with no permanent impairment or work restrictions.

15. Claimant subsequently underwent a DIME with Dr. Kalevik. He recounted that Claimant had slipped and fallen on a wet floor in a bathroom at work. Claimant reported lower back, right ankle and left hip symptoms. After reviewing Claimant's medical records and performing a physical examination Dr. Kalevik diagnosed Claimant with the following: (1) chronic lower back pain; (2) chronic right SI joint dysfunction; (3) bilateral hip pain; (4) left thigh numbness; (5) suspected left meralgia paresthetica; and (6) a history of unrelated thoracic pain. He concluded that Claimant had not reached MMI because she remained "significantly symptomatic" and her injuries affected her activities of daily living. Relying on the *AMA Guides* Dr. Kalevik assigned Claimant an 11% provisional whole person permanent impairment rating for her lumbar spine. He also assigned 3% provisional scheduled impairment ratings for the left and right lower extremities. Dr. Kalevik recommended additional diagnostic testing and treatment. In contrast to Dr. Kalevik's DIME determination, Dr. Lesnak agreed with Dr. Bird that Claimant reached MMI on November 18, 2019. He explained that Dr. Kalevik clearly erred in removing Claimant from MMI and assigning provisional impairment ratings for her lumbar spine and bilateral hips. Dr. Lesnak commented that Claimant's physical examination did not reveal any reproducible objective findings in her right hip. He explained that Claimant had significant psychosocial issues affecting her symptoms and perceived function.

16. Although Drs. Bird and Lesnak concluded that Claimant had reached MMI as a result of her August 21, 2019 industrial injuries, they failed to identify Dr. Kalevik's

specific error or improper application of the *AMA Guides.* Dr. Kalevik determined Claimant had not reached MMI because she remained “significantly symptomatic” and required additional diagnostic testing and treatment. Claimant’s credible testimony and the medical records support Dr. Kalevik’s opinion that Claimant has not reached MMI. Dr. Kalevik’s opinion reflects that additional diagnostic procedures are necessary to ascertain Claimant’s condition or suggest further treatment. Additional treatment may thus be reasonably expected to improve Claimant’s condition. Contrary determinations by Drs. Bird and Lesnak are mere differences of medical opinion that do not constitute clear and convincing evidence to overcome Dr. Kalevik’s’ DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Kalevik’s’ conclusion that Claimant has not reached MMI is incorrect.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. MMI is primarily a medical determination involving a diagnosis of the claimant’s condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to

the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

5. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Kalevik that Claimant has not reached MMI as a result of her August 21, 2019 industrial injuries. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Kalevik's' MMI determination was incorrect. Initially, on August 21, 2019 Claimant slipped on a wet bathroom floor and fell

to the ground while at work. Specifically, Claimant struck her right hip, twisted when she hit the floor and rolled onto her left hip. After receiving conservative care, ATP Dr. Bird determined that Claimant had suffered a lumbar strain and released her to MMI with no permanent impairment or work restrictions.

9. As found, Claimant subsequently underwent a DIME with Dr. Kalevik. He recounted that Claimant had slipped and fallen on a wet floor in a bathroom at work. Claimant reported lower back, right ankle and left hip symptoms. After reviewing Claimant's medical records and performing a physical examination Dr. Kalevik diagnosed Claimant with the following: (1) chronic lower back pain; (2) chronic right SI joint dysfunction; (3) bilateral hip pain; (4) left thigh numbness; (5) suspected left meralgia paresthetica; and (6) a history of unrelated thoracic pain. He concluded that Claimant had not reached MMI because she remained "significantly symptomatic" and her injuries affected her activities of daily living. Relying on the *AMA Guides* Dr. Kalevik assigned Claimant an 11% provisional whole person permanent impairment rating for her lumbar spine. He also assigned 3% provisional scheduled impairment ratings for the left and right lower extremities. Dr. Kalevik recommended additional diagnostic testing and treatment. In contrast to Dr. Kalevik's DIME determination, Dr. Lesnak agreed with Dr. Bird that Claimant reached MMI on November 18, 2019. He explained that Dr. Kalevik clearly erred in removing Claimant from MMI and assigning provisional impairment ratings for her lumbar spine and bilateral hips. Dr. Lesnak commented that Claimant's physical examination did not reveal any reproducible objective findings in her right hip. He explained that Claimant had significant psychosocial issues affecting her symptoms and perceived function.

10. As found, although Drs. Bird and Lesnak concluded that Claimant had reached MMI as a result of her August 21, 2019 industrial injuries, they failed to identify Dr. Kalevik's specific error or improper application of the *AMA Guides.* Dr. Kalevik determined Claimant had not reached MMI because she remained "significantly symptomatic" and required additional diagnostic testing and treatment. Claimant's credible testimony and the medical records support Dr. Kalevik's opinion that Claimant has not reached MMI. Dr. Kalevik's opinion reflects that additional diagnostic procedures are necessary to ascertain Claimant's condition or suggest further treatment. Additional treatment may thus be reasonably expected to improve Claimant's condition. Contrary determinations by Drs. Bird and Lesnak are mere differences of medical opinion that do not constitute clear and convincing evidence to overcome Dr. Kalevik's' DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Kalevik's' conclusion that Claimant has not reached MMI is incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME opinion of Dr. Kalevik that Claimant has not reached MMI for her August 21, 2019 industrial injuries.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.*

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she sustained a compensable industrial injuries to her right shoulder and left knee on July 11, 2020.

II. If compensable, whether Claimant proved by a preponderance of the evidence the medical treatment she received is authorized, reasonable, necessary and related to a compensable industrial injury and whether she is entitled to a general award of medical benefits.

III. If compensable, whether Claimant proved by a preponderance of the evidence she is entitled to temporary total disability ("TTD") benefits from July 14, 2020, ongoing.

STIPULATIONS

1. The ALJ approved the parties' stipulation of an average weekly wage ("AWW") of $493.44.

FINDINGS OF FACT

1. Claimant is a 50-year-old woman who worked for Employer as a package handler. Claimant's job duties included sorting and lifting packages.

2. Claimant alleges she sustained a work injury to her right shoulder and left knee on July 11, 2020. Claimant initially testified she felt a pop in her knee when twisting and pulling a heavy bag off a slip belt, then hurt her shoulder pushing a heavy box. She later testified that she first injured her shoulder and then her knee, in close proximity. Claimant testified that, by the end of her shift, her right shoulder hurt the most.

3. Claimant testified that at the end of her shift she notified supervisors Jasmine O[Redacted] and Kim Cisneros of her alleged injuries and how they occurred. She testified that she did not request medical attention at the time because she was not scheduled to work over the next few days and planned to rest and see if there was any improvement in her condition.

4. Jasmine O[Redacted], Sort Operations Manager, testified that on July 11, 2020, Claimant told her she hurt her left shoulder at some time throughout the night. Ms. O[Redacted] testified that Claimant stated she did not know exactly how or when she injured herself during the shift, but that the items on the belt were very heavy all night so it could have been any time. Ms. O[Redacted] asked Claimant if she wanted to see a

doctor, which Claimant declined at the time. Ms. O[Redacted] testified Claimant did not indicate she hurt her knee or that her knee popped when she reported the shoulder injury.

5. Kim C[Redacted], Safety Operations Manager, testified she was present when Claimant reported an injury to Ms. O[Redacted]. She testified Claimant said her left shoulder was hurting and that she did not know how or when it happened. Ms. C[Redacted] testified Claimant did not indicate her knee popped or that she sustained any knee injury.

6. On Sunday, July 12, 2020, Claimant sent a text message to Ms. C[Redacted] stating her right shoulder was still hurting. The message contains no reference to Claimant's right or left knee.

7. The following day, July 13, 2020, Ms. C[Redacted] texted Claimant at 12:15 p.m. instructing Claimant to meet her at 1:00 p.m. Claimant responded stating, "Ok I'm heading there now. I have to take 2 buses and walk there. I won't get there before 1." (Exhibit E-6). At 1:41 p.m., Ms. C[Redacted] notified Claimant her paperwork was at the guard shack, to which Claimant responded she was almost there.

8. Instead of taking the bus, Claimant was able to get a ride from a friend, who drove her to the guard shack. At that time, Claimant retrieved paperwork from Employer, including the Employee Notice of Authorized Treating Physicians, which identified CO Occupational Medical Partners ("COMP") as one of the authorized providers, along with North Suburban Medical Center as the designated emergency room option.

9. On July 13, 2020, Ms. C[Redacted] prepared a Safety Compliant Management System Report regarding Claimant's injury. Ms. C[Redacted] wrote, "[Claimant] stated her left shoulder started hurting. Unknown how or when she may have done this." (Exhibit A-1). Ms. C[Redacted] began entering data into the system on July 13, 2020 and updated the form once Claimant's medical documentation was received.

10. On July 14, 2020, Claimant sought evaluation at North Suburban Medical Center with complaints of right shoulder pain and left knee pain and swelling that began three days prior at work with no associated fall or trauma. Claimant reported that her job required lifting heavy boxes. On examination, Claire Sakamoto, PA-C noted tenderness to the posterior aspect of the left knee with full range of motion, and tenderness to the lateral aspect of right shoulder with full range of motion. X-rays of the shoulder and knee revealed arthritis. PA-C Sakamoto's diagnosed Claimant with a shoulder strain and knee sprain. Claimant was provided an arm sling and knee wrap and instructed to rest, ice and elevate and take pain medication. PA-C Sakamoto placed on light duty work with limited use of her right shoulder and limited walking/weight-bearing on the left knee.

11. That same day, Claimant also sought treatment at Thornton COMP with complaints of right shoulder and left knee pain. Claimant reported that she lifted a

package that was heavier than expected and felt pain in her right shoulder and left knee, including a pop in her left knee. Left knee x-rays demonstrated chronic degenerative changes. A right shoulder x-ray revealed mild osteoarthritis of the AC joint. Claimant reported a previous history of left knee injury in which she hyperextended her left knee approximately 22 years prior. On examination, Monica Fanning-Schubert, APN, noted swelling and decreased range of motion of the left knee, and right shoulder tenderness. Claimant was assessed with left knee pain and swelling and right shoulder pain. She was prescribed medication and referred for physical therapy for the right shoulder and left knee. Claimant was released to modified duty with five-pound lifting/carrying restrictions, no kneeling/squatting/climbing, and limiting standing/walking to 15-20 minutes/hour, along with no overhead lifting or reaching away from the body with the right arm.

12. Claimant subsequently sent screenshots of her medical documentation to Ms. C[Redacted] via text message on July 14, 2020. Claimant wrote, "And my knee did pop when I hurt my shoulder. The reason I didn't say nothing than (*sic*) was it wasn't hurt at that moment. Plus I did tell Jessica that night my right knee was swallow (*sic*)." The ALJ infers Claimant meant "swollen" when she wrote "swallow." Claimant testified she mistakenly referred to her right knee in the text message when she meant her left knee.

13. Ms. C[Redacted] testified that the first time she was made aware Claimant was alleging a knee injury was on July 14, 2020.

14. Claimant underwent physical therapy and continued to report left knee complaints. APN Fanning-Schubert referred Claimant for a left knee MRI, which Claimant underwent on August 1, 2020. The MRI revealed: 1) a complex medial meniscal body and posterior horn tear with horizontal and vertical components; 2) suggestion of prominent enchondroma of the distal left femur; 3) apparent chronic full-thickness tear of the anterior cruciate ligament; 4) mild to moderate patellar chondromalacia; and 5) small to moderate left knee joint effusion with synovitis.

15. Claimant attended a follow-up evaluation at Thornton COMP on August 6, 2020, at which time the left knee MRI results were discussed with Claimant. Bryan Alavarez, M.D. opined that Claimant has a medial meniscus tear of the body and posterior horn, along with most likely a chronic tear of the anterior cruciate ligament ("ACL"). He noted Claimant has a remote history of knee injury in her 20's and an x-ray performed in 2019. Dr. Alvarez recommended Claimant see an orthopedic specialist.

16. On August 27, 2020, Claimant presented to Rajesh Bazaz, M.D. at Western Orthopaedics. She reported experiencing a twisting injury to her left knee on July 11, 2020 with immediate onset of pain. On examination of the left knee, Dr. Bazaz noted some effusion, decreased range of motion, and reproducible medial joint tenderness and positive McMurray's test. He noted that the left knee MRI revealed left knee acute medial meniscus pathology. He opined that Claimant has some level of chronic ACL insufficiency, but nothing that was previously causing her instability. Dr. Bazaz noted that, after the reported pop in her knee on July 11, 2020, Claimant has had medial-sided

pain that has not improved. He opined that Claimant's medial meniscus tear correlates with her history and physical exam. Dr. Bazaz noted that Claimant's medical records included complaints regarding a right shoulder issue, which Claimant did not make any mention of at his evaluation.

17. Dr. Bazaz recommended Claimant proceed with a left knee arthroscopy with partial medial meniscectomy, for which he requested authorization on September 17, 2020. Respondents denied the request for left knee surgery.

18. By September 1, 2020, Claimant was not reporting any right shoulder complaints but continued to complain of 5-9/10 left knee pain. She continued on work restrictions. As of December 2, 2020, Dr. Alvarez's work restrictions for Claimant consisted of no kneeling/squatting/climbing/crawling, limiting lifting/carrying to 10 pounds, and walking/standing 20-25 minutes/hour.

19. As a result of the work injury, Claimant has not worked since July 14, 2020. Claimant did not sustain any injuries since the work incident on July 11, 2020. Claimant testified she had no prior left knee injuries and a prior injury to her right knee approximately 20 years prior. Claimant testified that since then, she has not had any problems with her knees and had been able to work up. Claimant has not had any prior shoulder injuries.

20. The ALJ credits Claimant's testimony, as supported by the credible opinion of Dr. Bazaz and the medical records, and finds it is more likely than not Claimant sustained a compensable industrial injury to her right shoulder and left knee on July 11, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant is required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of employment and the alleged injury or occupational disease was proximately caused by the performance of such service. §8-41-301(1)(b)&(c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

Claimant proved it is more likely than not she sustained a compensable industrial injury to her right shoulder and left knee on July 11, 2020. The record indicates Claimant tends to confuse her left and right sides of her body. The ALJ is persuaded Claimant misspoke when she initially reported a left shoulder injury to Ms. O[Redacted] and Ms. C[Redacted] and a right knee injury to Ms. C[Redacted] via text message. In a text message to Ms. C[Redacted] the day following the injury, Claimant referred to her right shoulder and has continued to do so in her reports to medical providers. Claimant was also consistent in her reports to the medical providers regarding a left knee injury. Claimant explained that she did not mention her left knee injury to Ms. O[Redacted] and Ms. C[Redacted] on the date of injury because she was focused more on right shoulder, which hurt more at the time. Claimant ultimately reported her left knee injury to Ms. C[Redacted] on July 14, 2020, only three days after the incident.

Objective findings of a left knee injury were noted in the days and weeks after the injury. Swelling and tenderness of the left knee was noted at an evaluation on July 14, 2020. An MRI obtained three weeks after the incident revealed what Dr. Bazaz credibly opined was an acute meniscal tear. There is no indication Claimant was suffering from any symptomatic left knee condition leading up to the work injury. Claimant credibly testified she was able to perform her regular job duties leading up to the work injury. No evidence was offered indicating it is likely the meniscal tear occurred outside of work prior or subsequent to the date of injury. Dr. Bazaz credibly opined that Claimant's medial meniscus tear correlates with her history and physical exam. Thus, despite some inconsistencies in Claimant's testimony and her reports of an injury, the totality of the credible and persuasive evidence establishes Claimant sustained an industrial injury to her right shoulder and left knee, for which she required medical treatment and was placed on restrictions.

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

Claimant sought treatment for her work injury at the facilities identified as authorized providers on Employer's list of designated treatment providers. Claimant initially presented to the emergency room listed on the Employee Notice of Authorized Treating Physicians, and followed up the same day at one of the other listed options. Claimant's initial treatment at North Suburban Medical Center, as well as her treatment at COMP and subsequent referrals, was authorized treatment that was reasonable, necessary and casually related to the industrial injury. Accordingly, Respondents are liable for such treatment and future treatment that is causally related to the injury and reasonably necessary to cure and relieve Claimant of its effects.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

As a result of the industrial injury, Claimant has not been able to resume her prior work and has not worked since July 14, 2020. As of the date of hearing, none of the above-listed occurrences resulting in termination of TTD has occurred. Accordingly, Claimant is entitled to TTD benefits from July 14, 2020, and ongoing.

ORDER

1. Claimant showed by a preponderance of the evidence she suffered a compensable industrial injury to her right shoulder and left knee on July 11, 2020.

2. Insurer is liable for reasonable, necessary and casually-related medical treatment to cure and relieve Claimant from the effects of the compensable injury, including the medical treatment Claimant received at North Suburban Medical Center, COMP and related referrals.

3. Respondents shall pay TTD benefits from July 14, 2020 and ongoing, until terminated by operation of law.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 7, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove her average weekly wage (AWW) should be adjusted to account for post-injury changes in the minimum wage?

- Did Claimant prove her AWW should be based on potentially higher wages she could have earned working for the Spanish Peaks Veterans Community Living Center?

FINDINGS OF FACT

1. Claimant worked for Employer as a Food Service Supervisor. suffered admitted injuries on December 20, 2018, when she tripped and fell. She injured multiple parts of her body, including her face, both hands and wrists, and both knees.

2. Insurer filed a General Admission of Liability (GAL) on May 21, 2019, with an AWW of $491.08. The admitted AWW was based on 13 weeks of wages before the accident.

3. Claimant's base rate of pay at the time of injury was $11.33 per hour. She worked a full-time schedule, with some overtime in a typical week. Based on the admitted AWW, Claimant averaged $37.88 of overtime per week ($11.33 x 40 = $453.20 + $37.88 = $491.08). This equates to 2.23 hours per week ($11.33 x 1.5 = $17.00), ($37.88 / $17.00 = 2.23 hours).

4. Claimant was on restrictions working reduced hours from May 6, 2019 through July 7, 2019. Insurer admitted for TPD benefits.

5. Claimant underwent a TFCC repair surgery on December 24, 2019.

6. Claimant was off work December 24, 2019 through April 6, 2020. Insurer admitted for TTD benefits.

7. Besides ongoing issues involving her wrists, Claimant continues to have symptoms and limitations relating to her knees.

8. On April 7, 2020, Claimant started a new job an administrative assistant at the Spanish Peaks Veterans Community Living Center. She thought she could do the job because it was less physically demanding than her preinjury job. However, Claimant could not tolerate various aspects of the job, including 2-3 hours of walking per day, squatting to write information on boards, and more extensive keyboarding than she anticipated. Claimant resigned on April 10, 2020, and Insurer reinstated TTD benefits.

9. Claimant's work restrictions in April 2020 were: lifting and carrying no more than five pounds; no crawling, kneeling, or squatting; and wear a brace on the left wrist.

10. Claimant was paid $14.50 per hour at the Veterans nursing home. She anticipated working four 10-hour shifts per week. Claimant worked only 31.13 hours before resigning on April 10.

11. Colorado has a state minimum wage that exceeds the Federal minimum wage. The Department of Labor and Employment adjusts the Colorado minimum wage on January 1 of each year. Since Claimant's date of injury, the Colorado minimum wage has been as follows:[1]

January 1, 2018	$10.20
January 1, 2019	$11.10
January 1, 2020	$12.00
January 1, 2021	$12.32

12. There is no persuasive evidence Employer is exempt from the Colorado minimum wage. Employer would have had to adjust Claimant's base wage rate to at least $12.00 per hour on January 1, 2020, and at least $12.32 on January 1, 2021.

13. Claimant proved her AWW should be increased on January 1, 2020, and again on January 1, 2021 to reflect the adjusted Colorado minimum wage. The corresponding AWW calculations are:

Eff. Date	40-hours	Avg OT	Total
January 1, 2020	$480.00	$40.14	$520.14
January 1, 2021	$492.80	$41.21	$534.01

14. Claimant's AWW is $520.14 effective January 1, 2020.

15. Claimant's AWW is $534.01 effective January 1, 2021.

16. Claimant failed to prove her AWW should be adjusted to reflect the potentially higher wages she might have earned at the Spanish Peaks Veterans Community Living Center. The short duration of work (three days) does not allow an accurate determination of her average earnings over a sustained period. Claimant's testimony she expected to work 40 hours per week is unsubstantiated by any other persuasive evidence. Additionally, the job was unsuitable because it exceeded Claimant's physical abilities and work restrictions.

[1] Claimant submitted minimum wage data from 2020 and 2021. However, the state minimum wage history is readily available on the Colorado Department of Labor and Employment website. https://cdle.colorado.gov/wage-and-hour-law/minimum-wage. The accuracy of the CDLE website cannot reasonably be questioned, and the minimum wage history compiles therein is a proper subject of administrative notice. CRE 201.

CONCLUSIONS OF LAW

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The discretionary authority regarding AWW extends to post-injury pay raises a claimant would have received but for the injury. *Ebersbach v. UFCW Local No. 7*, W.C. No. 4-240-475 (May 5, 1997); *Romero v. Cub Foods*, W.C. No. 4-218-823 (September 28, 2000). The critical question is whether the post-injury wage increase was "sufficiently definite" rather than merely speculative. In *Ebersbach*, *supra*, the ICAO held that the claimant was entitled as a matter of law to have her AWW adjusted to account for post-injury pay raises she was eligible to receive under a union contract. The Panel stated,

> [T]he facts in this case cannot be meaningfully distinguished from those in *Campbell*. Here, at the time of the injury, the claimant had a contractual right to an increase in her hourly earnings as of May 7, 1995. This right was not contingent on performance evaluations or other subjective factors. Thus, the undisputed evidence establishes that the claimant would have been earning an additional twenty-five cents per hour subsequent to that date but for the intervention of the industrial injury. The claimant's right to receive the increase was sufficiently definite that it would be manifestly unjust to deprive her of the benefit of the increase when calculating her average weekly wage.

Similarly, in *Marr v. Current Inc*., W.C. No. 4-407-504 (September 20, 2000), the ALJ recomputed the claimant's average weekly wage to include a pay raise the claimant received approximately one month after the injury. The ICAO affirmed based on the rule in *Campbell*. The dispositive factor was whether the pay raise was sufficiently definite to be included in the AWW. The Panel held that,

> [T]his claimant's raise is inherently definite. It is undisputed the claimant received and 80 cent per hour wage increase . . . and all subsequent wages were paid at the [higher] rate. Under these circumstances, this claim is factually indistinguishable from the circumstances in *Campbell*.

As found, Claimant proved her AWW should be increased on January 1, 2020, and January 1, 2021, to reflect the adjusted Colorado minimum wage. Claimant's entitlement to wage increases on January 1, 2020, and January 1, 2021, was mandated by Article XVIII § 15 of the Colorado Constitution. There is no persuasive reason to think Employer would have violated the law and refused to increase Claimant's rate of pay to at least the minimum wage. Because Claimant would have been paid at least the Colorado minimum wage, it would be manifestly unjust to continue using her wages “at the time of injury” as the measure of her injury-related wage loss.

Claimant failed to prove her AWW should be adjusted to $580 based on her brief employment at the Spanish Peaks Veterans Community Living Center. Claimant’s potential earnings from the Veterans nursing home are not sufficiently definite to support an additional increase in the AWW. Although a claimant’s AWW can be calculated “based on anticipated earnings rather than past earnings,” Claimant’s expectation she would work 40 hours per week at the nursing home is not substantiated by other persuasive evidence. *Wheeler v. Archdiocese of Denver Management Corp*., W.C. No. 4-669-708 (December 21, 2010). The job was not a salaried position and there is no persuasive evidence Claimant was guaranteed a minimum number of hours. Claimant started the job at the start of the COVID-19 pandemic, which certainly could have affected the work schedules of employees in long-term care facilities. Claimant worked the job for less than one week and we can only speculate what she would have actually earned over a sustained period. Additionally, the job was unsuitable because it exceeded Claimant’s physical abilities and work restrictions. Under the circumstances, the ALJ is unpersuaded Claimant’s potential earnings at the nursing home provides a “fair approximation” of her earning capacity and actual wage loss caused by the injury.

ORDER

It is therefore ordered that:

1. Claimant’s average weekly wage shall be adjusted to $520.14 effective January 1, 2020.

2. Claimant’s average weekly wage shall be adjusted to $534.01 effective January 1, 2021.

3. Claimant’s request to adjust her average weekly wage to $580 based on potential earnings from the Spanish Peaks Veterans Community Living Center is denied and dismissed.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email

address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUE

Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his February 21, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant is a 69 year-old male who worked as a local truck driver for Employer. On February 21, 2019 Claimant was involved in a motor vehicle accident (MVA) while driving a truck eastbound on I-70 in Colorado around exit 279. Another semi truck clipped the rear driver side of Claimant's vehicle when changing lanes. Claimant was thrown forward then slammed back into the seat. After taking pictures at the scene, Claimant pulled off I-70 into a service station and contacted Employer. Claimant completed his work shift at about 3:30 p.m.

2. On February 22, 2019 Claimant visited Concentra Medical Centers for treatment. Authorized Treating Physician (ATP) Karen Larson, M.D. conducted an examination. She diagnosed Claimant with a cervical strain, thoracic strain and lumbar strain with radicular leg pain. Dr. Larson prescribed Cyclobenzaprine 10mg oral tablets and referred Claimant to physical therapy.

3. On March 1, 2019 Claimant visited Concentra for physical therapy. Claimant reported constant bilateral numbness/tingling in his anterior, lateral and posterior legs. He had difficulty standing without bracing himself and reported significant weakness in his bilateral lower extremities. A physical examination of Claimant's bilateral hips revealed tenderness in the gluteus minimus and maximus with limited range of motion.

4. On March 15, 2019 Claimant visited ATP Charles Bellows, M.D. at Concentra for an evaluation. Claimant presented for a recheck of his neck, back and legs but noted he was feeling a "little bit better." Dr. Bellows reported that Claimant was about 25% of the way toward meeting the physical requirements of his job for Employer. He assessed Claimant with cervical and lumbar strains. Dr. Bellows assigned work restrictions that included no lifting, pushing or pulling in excess of 20 pounds frequently. He also noted that Claimant could only bend occasionally and should not drive a company vehicle due to functional limitations.

5. On March 26, 2019 Claimant returned to his fifth of six physical therapy visits at Concentra. Jaci Settler, DPT remarked that Claimant continued to demonstrate improvement in ambulation, symptoms and range of motion. She noted that Claimant would begin functional activities including squatting and ambulation for endurance.

6. On March 29, 2019 Claimant again visited Dr. Bellows for an evaluation. Dr. Bellows diagnosed Claimant with cervical and lumbar strains. He noted that Claimant was making progress in physical therapy and his condition was improving. Dr. Bellows maintained work restrictions that included no lifting, pushing or pulling in excess 20 pounds frequently. He also noted that Claimant could only bend occasionally and should not drive a company vehicle due to functional limitations.

7. On April 5, 2019 Dr. Bellows released Claimant from care and determined he had reached Maximum Medical Improvement (MMI) with no permanent impairment. He noted that Claimant had achieved 100% of his goals in physical therapy and returned to baseline. Dr. Bellows commented that Claimant's active problems included cervical and lumbar strains, a history of back surgery, an MVA, radicular leg pain and a strain of the thoracic spine. Claimant exhibited no tenderness and full range of motion in both his cervical and lumbosacral spines. Notably, Claimant had no joint pain, no muscle pain, no back pain, no neck pain, no joint swelling, no joint stiffness, no muscle weakness, no limping, no night pain, and full range of motion. Dr. Bellows remarked that Claimant understood his functional restoration and post-discharge plans.

8. On April 12, 2019 Respondents' filed a Final Admission of Liability (FAL) consistent with Dr. Bellows' MMI and impairment determinations. The FAL also denied medical maintenance benefits.

9. Claimant testified at the hearing in this matter. He explained that when he was released to MMI he had not returned to baseline because he required pain medications. Claimant remarked that he was not at 100% by April 5, 2019 because he could only complete his work assignments with pain medications. He specified that he had symptoms of sharp left hip pain, numbness, tingling and instability that worsened after being placed at MMI.

10. Claimant initially sought a Division Independent Medical Examination (DIME). However, he testified he did not follow-up with the process because of the costs associated with the DIME.

11. More than six months after reaching MMI Claimant visited personal physician Peak Orthopedic & Spine for an examination on October 22, 2019. Claimant reported worsening, constant, sharp, aching 8/10 posterolateral hip pain, Associated symptoms included numbness, tingling, instability and muscle spasms from the left hip into the back. Claimant also had pain radiating into the lateral thigh and lateral calf. X-rays revealed mild degenerative changes in both hips, slight joint space narrowing and osteophyte formation. Robert Greenhow, M.D. determined that possible diagnoses included early osteoarthritis and a labral tear. Treatment options included a referral to a spine specialist and a left hip MRI.

12. On November 13, 2019 Claimant visited Hugh McPherson, M.D. at Peak Orthopedic & Spine for an examination. Claimant reported a nine-month history of pain in the left posterior lateral buttock down through the leg and calf and radiating up to the

lower back. He attributed the onset of his symptoms to his February 21, 2019 MVA. Dr. McPherson assessed Claimant with a prior fusion of the lumbar spine, osteoarthritis with radiculopthy of the lumbar spine, and degenerative disc disease of the lumbar spine. He concluded that Claimant's left leg symptoms were likely related to L3 foraminal narrowing.

13. On January 8, 2020 Claimant visited personal physician Stephen F. Pehler, M.D. at Colorado Orthopedic Consultants with chief complaints of lower back pain, left lower extremity radiculopathy and left hip pain. Dr. Pehler reviewed MRI images of the lumbar spine and left hip. The MRI demonstrated a prior L4-S1 healed fusion, L3-4 neuroforaminal stenosis, bilateral facet joint hypertrophy and edema, and a superior labral tear of the left hip. Dr. Pehler discussed surgical repair in the form of an oblique, lumbar, interbody fusion at L3-L4 for Claimant's neuroforaminal stenosis and nerve root impingement.

14. On May 13, 2020 Claimant visited Sophia Rosebrook, D.O. at Concentra. Dr. Rosebrook recounted that Dr. Bellows had closed Claimant's case on April 2, 2019. The MMI report noted that Claimant was feeling fine. However, Claimant denied "having agreed to any of that" and was still significantly symptomatic. Dr. Rosebrook explained that the case might need to be reopened because Claimant felt he had not reached MMI. Although Dr. Rosebrook remarked that Claimant may not have been at MMI on April 2, 2019 because he sought care outside of the Workers' Compensation system, she wanted documentation from the period prior to Claimant's February 21, 2019 MVA to assess causality. Dr. Rosebrook specifically summarized "this case needs to be reopened [Claimant] was never at MMI based on review."

15. On June 3, 2020 Claimant returned to Dr. Rosebrook for a recheck of his lumbar and cervical spines. Dr. Rosebrook noted that it was not clear whether Insurer's adjuster had approved reopening of Claimant's case. She could not provide treatment until the matter was officially reopened.

16. On June 12, 2020 Dr. Rosebrook responded to inquiries from insurer regarding Claimant's case. She explained that "[b]ased on EXTENSIVE case review, patient interview and questioning, and physical exam, it is my professional medical opinion that his [symptoms] are directly correlated…and that this case should be reopened & patient should get further evaluation and treatment of cervical/lumbar/left hip injuries." She emphasized that Dr. Bellows should not have placed Claimant at MMI.

17. On August 24, 2020 Wallace K. Larson, M.D. performed a records review of Claimant's case. On September 2, 2020 Dr. Larson reviewed additional documents and issued an addendum report. After considering Claimant's mechanism of injury and reviewing medical records, Dr. Larson explained that Claimant's symptoms were far out of proportion from what would be expected from a minor MVA. Although Claimant had a history of degenerative disc disease in the lumbar spine and a previous lumbar spine surgery, he did not exhibit any objective injuries as a result of his February 21, 2019 MVA. Dr. Larson summarized that Claimant's reported symptoms were not consistent with what could reasonably be related to the February 21, 2019 accident. He detailed that

Claimant's symptoms lacked the expected temporal relationship for L3-L4 foraminal stenosis. Notably, Claimant was free of symptoms by April 5, 2019. Moreover, Claimant did not report groin pain immediately following the MVA and the accident did not likely cause a labral tear. Dr. Larson concluded that the MVA did not aggravate, accelerate or worsen Claimant's pre-existing lower back condition.

18. On October 9, 2020 Claimant underwent an independent medical examination with Timothy O. Hall, M.D. Dr. Hall reviewed Claimant's medical records and performed a physical examination. He diagnosed Claimant with the following: (1) lumbar disc disease/spondylolisthesis with the potential for spinal stenosis; (2) L4-S1 healed fusion, L3-L4 neuroforaminal stenosis, bilateral facet joint hypertrophy and edema; (3) superior labral tear of the left hip; and (4) diffuse myofascial pain in the cervicothoracic area. Dr. Hall determined that Claimant's ongoing lower back, hip, leg, upper back and neck symptoms all related to his February 21, 2019 MVA. He explained that Claimant did not have the preceding symptoms and was fully functional prior to the MVA. Dr. Hall also commented that Claimant was predisposed to an injury at the level above his prior fusion and labral tears are common in MVAs. Moreover, the MVA rendered Claimant's degenerative disc disease symptomatic. He concluded that the February 21, 2019 MVA constituted a "very good explanation for [Claimant's] rather diffuse symptoms."

19. On October 22, 2020 Dr. Larson issued a report after reviewing additional medical records and Dr, Hall's independent medical examination. Dr. Larson maintained that medical records documented that Claimant had reached MMI by April 5, 2019. Claimant's constellation of subjective symptoms did not suggest "a specific area or areas of anatomic or structural injury." Dr. Larson explained that Dr. Hall's opinion that Claimant's symptoms were caused by the February 21, 2019 MVA was speculative because it was based solely on subjective reports. He thus reiterated that Claimant's symptoms were not related to the February 21, 2019 MVA.

20. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his February 21, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant was involved in a MVA while driving a truck for Employer. Another semi clipped the rear driver side of Claimant's vehicle when changing lanes. Claimant was thrown forward then slammed back into the seat. He received medical treatment on the day following the accident and obtained follow-up care through Concentra. After undergoing conservative treatment including physical therapy Dr. Bellows determined that Claimant had reached MMI with no impairment, medical maintenance treatment or permanent restrictions on April 5, 2019. Dr. Bellows noted that Claimant had achieved 100% of his goals in physical therapy and returned to baseline. He remarked that Claimant's active problems included cervical and lumbar strains, a history of back surgery, radicular leg pain and a strain of the thoracic spine. Respondents then filed an FAL consistent with Dr. Bellows' MMI and impairment determinations. Claimant contends that he suffered a worsening of condition after reaching MMI that is causally related to his February 21, 2019 MVA. However, the

medical records reflect that he has not suffered a change in condition pursuant to §8-43-303(1), C.R.S. that is causally related to his February 21, 2019 work accident.

21. Claimant explained that when he was released to MMI he had not returned to baseline because he required pain medications. He remarked that he was not at 100% by April 5, 2019 because he could only complete his work assignments with pain medications. More than six months after reaching MMI Claimant visited his personal physician and reported worsening pain in the left hip area. X-rays revealed mild degenerative changes in both hips, slight joint space narrowing and osteophyte formation. Dr. Greenhow determined that possible diagnoses included early osteoarthritis and a labral tear. An MRI demonstrated a prior L4-S1 healed fusion, L3-4 neuroforaminal stenosis, bilateral facet joint hypertrophy with edema, and a superior labral tear of the left hip. On November 13, 2019 Dr. McPherson assessed Claimant with a prior fusion, osteoarthritis with radiculopthy, and degenerative disc disease of the lumbar spine. He concluded that Claimant's left leg symptoms were likely related to L3-L4 foraminal narrowing. Dr. Pehler discussed possible surgical repair.

22. Dr. Larson summarized that Claimant's reported symptoms were not consistent with what could reasonably be related to the February 21, 2019 accident. Although Claimant had a history of degenerative disc disease in the lumbar spine and a previous surgery, he did not exhibit any objective injuries as a result of his February 21, 2019 MVA. Dr. Larson detailed that Claimant's symptoms lacked the expected temporal relationship for L3-L4 foraminal stenosis. He concluded that the MVA did not aggravate, accelerate or worsen Claimant's pre-existing lower back condition. In contrast, Dr. Hall determined the MVA rendered Claimant's degenerative disc disease symptomatic. Dr. Hall concluded that the February 21, 2019 MVA constituted a "very good explanation for [Claimant's] rather diffuse symptoms." Similarly, Dr. Rosebrook emphasized that Claimant's case should be reopened because he never reached MMI for his February 21, 2019 MVA.

23. Relying on the opinions of Drs. Hall and Rosebrook, Claimant contends that he had not reached MMI by April 5, 2019 and his symptoms continued to worsen. However, he did not challenge Dr. Bellows' MMI determination by pursuing a DIME and his claim subsequently closed. To reopen his claim Claimant is required to prove a change in condition that is causally connected to the original injury. However, because Claimant had an opportunity but failed to request foreseeable medical treatment at the time of MMI, his need for additional medical treatment or testing is insufficient to support a reopening of the claim. Moreover, although Claimant's symptoms may have changed after he reached MMI, it is speculative to attribute any worsening to his February 21, 2019 MVA. Instead, the persuasive medical records and temporal relationship of Claimant's symptoms to the MVA reflect that any worsening of his condition is related to degenerative changes from L3-L4 foraminal narrowing. There is simply an attenuated causal connection between a worsening of Claimant's symptoms after MMI and his February 21, 2019 MVA. Claimant has thus failed to establish that he suffered a worsening of condition that is causally related to his February 21, 2019 MVA. Accordingly, Claimant's request to

reopen his Workers' Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). When the claimant has an opportunity but fails to request foreseeable medical treatment at the time of MMI, the need for additional medical treatment or testing is insufficient to support a reopening of the claim. *See Bowles v. Energy Air Systems, Inc.*, W.C. No. 4-400-573 (ICAO, Dec. 26, 2003); *Anderson v. Ready Mix Concrete*, W.C. No. 3-948-266 (ICAO, June 19, 1992). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. A request for continuing medical treatment must be presented at the time of MMI. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). Furthermore, the issue of medical benefits is closed if the respondents file an uncontested final admission that denies liability for future medical benefits. *Burke v. Industrial Claim Appeals Office*, 905 P. 2d 1 (Colo. App. 1994). When a claim is closed, the claimant is precluded from receiving further benefits unless there is an order reopening the claim on the grounds of error, mistake or change of condition. *See Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), (a claim may reopened for further medical treatment when the claimant experiences an "unexpected and unforeseeable" change in condition); *Brown and Root, Inc. v. Industrial Claim Appeals Office*, 833 P.2d 780 (Colo. App. 1991).

6. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his February 21, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant was involved in a MVA while driving a truck for Employer. Another semi clipped the rear driver side of Claimant's vehicle when changing lanes. Claimant was thrown forward then slammed back into the seat. He received medical treatment on the day following the accident and obtained follow-up care through Concentra. After undergoing conservative treatment including physical therapy Dr. Bellows determined that Claimant had reached MMI with no impairment, medical maintenance treatment or permanent restrictions on April 5, 2019. Dr. Bellows noted that Claimant had achieved 100% of his goals in physical therapy and returned to baseline. He remarked that Claimant's active problems included cervical and lumbar strains, a history of back surgery, radicular leg pain and a strain of the thoracic spine. Respondents then filed an FAL consistent with Dr. Bellows' MMI and impairment determinations. Claimant contends that he suffered a worsening of condition after reaching MMI that is causally related to his February 21, 2019 MVA. However, the medical records reflect that he has not suffered a change in condition pursuant to §8-43-303(1), C.R.S. that is causally related to his February 21, 2019 work accident.

7. As found, Claimant explained that when he was released to MMI he had not returned to baseline because he required pain medications. He remarked that he was not at 100% by April 5, 2019 because he could only complete his work assignments with pain medications. More than six months after reaching MMI Claimant visited his personal physician and reported worsening pain in the left hip area. X-rays revealed mild degenerative changes in both hips, slight joint space narrowing and osteophyte formation. Dr. Greenhow determined that possible diagnoses included early osteoarthritis and a labral tear. An MRI demonstrated a prior L4-S1 healed fusion, L3-4 neuroforaminal stenosis, bilateral facet joint hypertrophy with edema, and a superior labral tear of the left hip. On November 13, 2019 Dr. McPherson assessed Claimant with a prior fusion, osteoarthritis with radiculopthy, and degenerative disc disease of the lumbar spine. He concluded that Claimant's left leg symptoms were likely related to L3-L4 foraminal narrowing. Dr. Pehler discussed possible surgical repair.

8. As found, Dr. Larson summarized that Claimant's reported symptoms were not consistent with what could reasonably be related to the February 21, 2019 accident.

Although Claimant had a history of degenerative disc disease in the lumbar spine and a previous surgery, he did not exhibit any objective injuries as a result of his February 21, 2019 MVA. Dr. Larson detailed that Claimant's symptoms lacked the expected temporal relationship for L3-L4 foraminal stenosis. He concluded that the MVA did not aggravate, accelerate or worsen Claimant's pre-existing lower back condition. In contrast, Dr. Hall determined the MVA rendered Claimant's degenerative disc disease symptomatic. Dr. Hall concluded that the February 21, 2019 MVA constituted a "very good explanation for [Claimant's] rather diffuse symptoms." Similarly, Dr. Rosebrook emphasized that Claimant's case should be reopened because he never reached MMI for his February 21, 2019 MVA.

9. As found, relying on the opinions of Drs. Hall and Rosebrook, Claimant contends that he had not reached MMI by April 5, 2019 and his symptoms continued to worsen. However, he did not challenge Dr. Bellows' MMI determination by pursuing a DIME and his claim subsequently closed. To reopen his claim Claimant is required to prove a change in condition that is causally connected to the original injury. However, because Claimant had an opportunity but failed to request foreseeable medical treatment at the time of MMI, his need for additional medical treatment or testing is insufficient to support a reopening of the claim. Moreover, although Claimant's symptoms may have changed after he reached MMI, it is speculative to attribute any worsening to his February 21, 2019 MVA. Instead, the persuasive medical records and temporal relationship of Claimant's symptoms to the MVA reflect that any worsening of his condition is related to degenerative changes from L3-L4 foraminal narrowing. There is simply an attenuated causal connection between a worsening of Claimant's symptoms after MMI and his February 21, 2019 MVA. Claimant has thus failed to establish that he suffered a worsening of condition that is causally related to his February 21, 2019 MVA. Accordingly, Claimant's request to reopen his Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen his February 21, 2019 Workers' Compensation claim based on a change in condition is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further* *information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 8, 2021.

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for his own termination, thus ineligible for TTD benefits?

II. Assuming that Respondents have met such burden, has Claimant shown that his wage loss (at least for certain time periods) is nonetheless still attributable to his work injury?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $811.66.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant Works at this Location for Years without Documented Issues

1. In 2008, Claimant started his work at the farm, which raises pigs, and on 2/7/16 he was hired by [Employer], as the pig farm operation had been purchased by [Employer]. (Ex. 5, p. 2).
2. Claimant's work evaluation of 3/23/16, was mainly 'good' with some 'satisfactory' ratings and no ratings for 'needs improvement'. (Ex. 5, p.1).

Claimant has Performance Issues with New Supervisor

3. On May 20, 2019, Claimant's new supervisor, Kayla D[Redacted], issued a Job Performance Evaluation for Claimant, which he signed on May 22, 2019. (Ex. D, p. 17.) That memorandum gave the Claimant 30 days to improve his performance to continue in the Utility position at Farm 31. There were not allegations of absenteeism per se.

4. Eleven days later, on May 31, 2019 Claimant received a written warning, which he signed on June 10, 2019. (Ex. E, p. 18.). Claimant's conduct leading to this written warning was instructing an employee to use flex pipe to unclog a bin while the augur was still running. The augur was supposed to be stopped prior to clearing it. The warning was labeled as "Step 2-1st Written Warning". *Id.* At hearing, Claimant admitted that this incident happened, but testified the employee was already using the flex pipe to unclog the bin before he arrived on the scene.

5. At hearing, Ms. D[Redacted] testified that Claimant advised her of the incident at the time it happened, and admitted to her in person that he had instructed the employee to use

the flex pipe to unclog the bin with the augur running. Ms. D[Redacted] testified she discussed this conduct with Claimant at the time, that his conduct was a violation of [Employer Redacted]'s safety policy, and that every [Employer] employee has responsibility for ensuring compliance with safety policies. She stated that Claimant knew better, as he had previously taken [Employer]s safety course on its lock-out, tag-out policy. Claimant admitted that this behavior violated [Employer]s safety policy.

6. On July 1, 2021 Claimant was demoted, in writing, from the Utility position to a Level 3 employee. (Ex. F, p. 19.) At hearing, Ms. D[Redacted] testified that she demoted Claimant based on the numerous job performance issues as outlined in her memo. It was not labeled as a disciplinary action per se. This demotion resulted in a reduction to Claimant's pay, but not his benefits.

7. Claimant was once again disciplined for poor work performance for conduct occurring on September 22, 2019. (Ex. G, p. 20.) On this date, Claimant noticed the in-use light on the alarm system was blinking. He unplugged the phone line and the light went off. When he plugged the phone line back in, the light was no longer blinking. Claimant never called maintenance or reported this alarm failure to his supervisor, and it was not detected until Ms. D[Redacted] ran a test on the alarm a week later. His warning was labeled as "Step 3- 2nd Written Warning". *Id.*

8. Claimant acknowledged he essentially deactivated the alarm system and that he should have informed his supervisor or maintenance and completed a work order. At hearing, Ms. D[Redacted] testified that the alarm system allows [Employer] to monitor temperatures in the barns. A significant fluctuation in temperature that is not corrected can kill the livestock; thus, it is critical this system remain in place and is active at all times.

9. At hearing, Claimant testified that he was disciplined numerous times by Ms. D[Redacted] after her arrival at Farm 31. He further testified that he had engaged in this type of behavior Ms. D[Redacted] disciplined him for in the past without incident and believed Ms. D[Redacted]'s way of doing things was incorrect. He testified that he believed things were done at Farm 31 the 'right way' before Ms. D[Redacted] arrived, and she essentially did not have adequate knowledge of how the Farm should run.

Claimant Injures his Shoulder at Work / Placed on Work Restrictions

10. Claimant sustained an admitted injury to his right shoulder while working at [Employer] on November 4, 2019. (Ex 1, p. 1). He testified that he had not sustained any shoulder injury prior to this incident, and that he never received or provided any work restrictions to [Employer] prior to this injury.

11. Claimant testified that he reported his injury to his immediate supervisor, who was still Kayla D[Redacted]. He testified that he worked under Ms. D[Redacted] from around May, 2019 when she arrived as the manager of Farm 31.

12. Following Claimant’s right shoulder injury with [Employer], he was placed on modified duty effective November 15, 2019. (Ex. J, p. 23.) This included no lifting or carrying over 20 pounds, and no lifting carrying for more than 30 minutes for weights between 11 and 20 pounds, and no pushing or pulling over 40 pounds, and no pushing or pulling between 21 and 40 pounds for more than 30 minutes. (Exhibit J, p. 23). Employer accommodated Claimant’s light duty restrictions, and Claimant returned to regular work.

Performance Issues Continue

13. On November 29, 2019 Claimant received another written warning from Ms. D[Redacted]. (Ex. H, p. 21.) It was labeled as “Step 4-Termination or suspension pending investigation for discharge.” This warning was for insubordination. Claimant had been instructed to power wash the farrowing hallway when he was finished with lunch. When Ms. D[Redacted] followed up, she discovered that Claimant had requested that someone else to perform the activity for him. He was also scheduled to drive the skid to haul away dead pigs on November 30 and December 1, 2019. This task required no lifting whatsoever. Again, however, Claimant had another co-worker do this work for him.

14. Claimant admitted that he was not required to lift anything when he drove the skid and that his job duties on November 30 and December 1, included driving the skid. However, he testified that he was not able to power-wash the hallway on November 29, since this activity bothered his shoulder, so he asked “Andrew” to finish the job. He further testified that he did not discuss his physical problems with power-washing the hallway with Ms. D[Redacted] before he assigned the duty to someone else, as she was already done for the day. Ms. D[Redacted], however, testified that she had not left for the day, when Claimant delegated the power-washing activity, and that she saw the Claimant later that day before he finished his shift.

15. Ms. D[Redacted] testified that no one, Claimant or otherwise, ever discussed with her his inability to perform any power washing activity or any other aspect of his modified duty, nor had Claimant been instructed by anyone else not to complete his power-washing or skid driving duties.

16. Claimant was terminated on December 3, 2019 for insubordination. (Ex. I, p. 22.). Ms. D[Redacted] testified that his job performance and failure to follow instructions from his supervisor was progressive over time. His termination had nothing to do with his inability to lift dead pigs or otherwise work beyond his assessed work restrictions. Ms. D[Redacted] testified that Claimant was not required to perform any work duties in excess of his work restrictions, that power-washing the hallway uses around 20 pounds of force and takes no more than 30 minutes, and that driving the skid to haul dead pigs did not require Claimant to engage in any lifting at all.

17. At hearing, Ms. D[Redacted] testified that she discussed Claimant’s termination with him in person at the time, and he advised her that he had planned to quit anyway. (also *see*

Ex. I, p. 22). Ms. D[Redacted] testified that [Employer] can accommodate work restrictions of 5 pounds lifting, carrying, pushing and pulling for any employee who sustains an injury in the workplace. She testified that such tasks include things like inventory checking, taking head counts, visual wellness inspections, and office duties.

18. Ms. D[Redacted] testified that if Claimant had not been terminated due to the behavior he engaged in, he would still be able to work for his regular wages with [Employer] to this day.

Claimant Receives Unemployment Benefits

19. Following Claimant's termination, he applied for unemployment benefits. (Ex. P,). He was awarded unemployment benefits, and initially received benefits starting on December 14, 2019. *Id* at 38. Initially, he received $478 per week; however, on April 15, 2020 his benefits increased an additional $600 per week due to COVID relief benefits. *Id* at 37. On August 12, 2020, his COVID payment ended and his benefits were reduced back to $478. *Id* at 35. His benefits increased again on February 2, 2021 for bi-weekly COVID relief payments of an additional $300. On March 15, 2021 he received his last unemployment benefit check. *Id* at 33.

Work Restrictions Change after Claimant is Terminated / Surgery Discussed

20. Claimant was removed from work by PA Daniel Klepacz, on December 19, 2019, until his next appointment. (Ex. K, p. 24.) The WC 164 indicates Claimant is not presently working, and he was referred to physical therapy. There is no accompanying narrative report to indicate whether or not Claimant's condition had worsened to any extent; however, the box is checked stating that MMI date unknown at this time because *evaluation and PT beginning, possible surgery*. *Id.*

21. On January 13, 2021 Dr. Bomberg, while acknowledging that Claimant had not resumed his work with [Employer], returned the Claimant to light duty work, effective that date. He later clarified that the prior work restrictions assessed on November 19, 2019 would be appropriate. (Ex. L, p. 26; Ex. N, p. 30.). However, the WC 164 he signed that same date states that Claimant is Unable to Work *from 1/13 to next* [appointment]. Ex. 1, p. 4).

22. In his narrative, Dr. Bomberg noted severe degenerative changes to Claimant's shoulder, but stated: "There is bone marrow edema, probable from this injury…..I think that in these cases where there is an injury and the patient has previously not noted any difficulties that this exacerbates the underlying problem, and also we see this bone edema that is *probably* from the contusion that the patient sustained in his injury. (Ex. L, p. 26)(emphasis added).

23. On February 3, 2020, Claimant was removed from work by PA Klepacz *from 2/3 to next.* (Ex. 4, p. 5). Although this report was created by PA, Daniel Klepacz, it was signed by Dr. Bomberg on February 12, 2020. There is no medical narrative per se to indicate if

Claimant's condition had worsened. However, the WC 164 now states there is a Treatment Plan for *PT,* and MMI date is unknown because *physical therapy.* The report does note that Claimant is not presently working, and Claimant's recommended PT treatment did not change.

24. On March 9, 2020 Dr. Carr removed Claimant from work entirely. (Ex. 4, p. 6). This report again contains no medical narrative per se to indicate if Claimant's medical condition had worsened. However, the WC 164 now states there is a Treatment Plan for *Reverse shoulder surgery,* and MMI date is unknown because *surgery needed.* It does note that Claimant was not presently working, and continued to recommend physical therapy.

25. Dr. Carr subsequently returned the Claimant to light duty work with a 5-pound lift, carry, push and pull restriction on June 17, 2020. (Ex. Q, pp. 39-40.). However, this same WC 164 checked the box that Claimant is Unable to Work from *{date left blank}*. Both the WC 164 and its accompanying narrative state that conservative treatment has failed, and that the reverse shoulder surgery is recommended. Claimant has not been removed entirely from work by any physician since that time.

26. However, on January 18, 2021 Respondents, apparently for the first time, authorized the recommended shoulder replacement surgery. (Ex. O, p. 31.) It is unknown if such surgery has been scheduled. Claimant testified that he has not returned to any work, and has not been asked by Employer to return to modified work in writing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act ("Act") of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. However, it is the Claimant in a workers' compensation claim who carries the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,* 104 P.3d 273, 275 (Colo. App. 2004). Furthermore, the facts in a workers' compensation case are not to be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. It is axiomatic that a workers' compensation case must be decided on its merits. *Id.*

2. The ALJ's factual findings in a workers' compensation case concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings in this matter as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility of witnesses, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); C.J.I, Civil 3:16 (2007). The ALJ finds that Kayla D[Redacted] has been a reliable historian in this case. Overall (except as noted, infra) the ALJ finds that Claimant has been rather forthright as well, in owning up to his mistakes, and in expressing the job dissatisfaction that ultimately led to his termination.

Temporary Total / Partial Disability / Responsible for Termination

4. To establish entitlement to TTD and TPD benefits the Claimant maintains the burden of proof by a preponderance of the evidence that his wage loss has some connection to his industrial injury. *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995). Once Claimant establishes entitlement to temporary disability benefits, it becomes incumbent upon the Respondent to prove, by a preponderance of the evidence, that the temporarily disabled employee is responsible for his termination of employment, and if proven, the resulting wage loss of the injured worker shall not be attributable to the on-the-job injury. C.R.S. sec. 8-42-105 (4), sec. 8-42-103 (1)(g), *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004).

5. Claimant will be held responsible for his separation of employment from the insured if he performed some volitional act, or exercised some control over the circumstances of the termination. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994) (opinion after remand, 908 P.2d 1185 (Colo. App. 1995)). The determination of the fault issue is ordinarily one of fact for resolution by the ALJ. *Id.*

6. Claimant had apparently enjoyed a good working relationship with this farm for a number of years. However, once [Employer] bought the business, things deteriorated for Claimant. He began to be supervised by a supervisor who he did not like, nor did he particularly respect. Various work protocols apparently become more demanding and formalized. Right or wrong, Claimant did not adapt to his new chain of command. He was counseled, in writing, that his performance was lacking, then formally demoted, based upon his inability (as perceived by new management) to perform as a utility. Then, on two separate occasions, Claimant violated serious safety protocols, for which he was warned in writing. It is clear from the documentation – and the ALJ so finds - that anyone in Claimant's shoes would know he was on very thin ice. It is also clear from

the records that Claimant was, in effect, counseled in writing back when he was demoted (number 1 on the scorecard), regardless of how such document is labeled. It is also clear that in each of the next two write-ups (numbers 2 and 3 on the scorecard), Claimant exercised considerable control over the circumstances leading to his written discipline. He just went ahead and performed these volitional acts, when there was no need to do so.

7. The final straw occurred on November 29, 2019, and become formalized on December 3, 2019. In that instance, once again, the ALJ finds that Claimant committed the volitional act of 'delegating' his assigned tasks to others, without authority. Each task was within his work restrictions. To the extent there is a conflict in the evidence over whether Claimant was given de facto delegation authority by a different supervisor, the ALJ resolves that in favor of Ms. D[Redacted]. Claimant, once again, exercised some control over the circumstances leading to his termination, and the ALJ finds that such termination was due to Claimant's conduct, and not as a result of his work injury. Had he followed instructions, he could still be working modified duty at [Employer].

8. It is noted that while Respondent's have shown substantial compliance with their own internal processes in completing a termination, the ALJ does not feel bound to formally "check all four boxes" in sequence to perfect a termination. Perhaps for some sort of union grievance process, maybe for unemployment, but not here. Progressive discipline may be bypassed altogether if such actions are sufficiently egregious. In any event, the ALJ finds that Respondents have shown that Claimant was responsible for his own termination, effective 12/3/2019.

Was Claimant's Subsequent Wage Loss Attributable to his Work Injury?

9. Despite Claimant's termination for cause, Claimant now requests that there be a finding that his condition *worsened* after his termination, thus restoring his TTD benefits. The ALJ is unable to make such finding. However, the available evidence shows that Claimants *prognosis* and *treatment plan* fluctuated with the times, depending upon which ATP was evaluating him at that particular appointment. As a result of that process (and not due to a *worsening*, per se), Claimant went from modified duty, to off work, back to modified duty, back off work, and then back to modified duty. As such, the ALJ will analyze this case as occurred in *Hittinger v. Brookdale Senior Living, Inc.,* W.C. 5-082-915-003 (ICAO, March 16, 2019). In *Hittinger*, the ALJ found that while Respondents had shown that Claimant was properly terminated for cause, her subsequent wage loss, at least in part, was still attributable to her work injury, based upon the recommendations of her ATPs.

10. So it is here. To the extent there is a conflict, on any given treatment date, between what was stated on the WC 164 and what is stated in the accompanying narrative, the ALJ will rely upon the narrative as representing the actual intent of the ATP.

11. Claimant was on modified duty when he was terminated on 12/3/2019. His wage loss, beginning that date, was *not attributable to his work injury*, until he was placed onto “no-work” status on 12/19/2019.

12. Claimant remained on “no work” status from 12/19/2019 until 1/13/2020. For that period, Claimants wage loss was *attributable to his work injury.*

13. On 1/13/2020, Claimant was placed back on modified duty (which the ALJ finds could have been accommodated by Employer), until his next appointment. From 1/13/2020 through 2/3/2020, Claimant’s wage loss was *not attributable* to his work injury.

14. On 2/3/2020, Claimant was placed back onto “no work status”. This remained in effect through his next appointment (on 3/9/2020), and continued up until his next appointment on 6/17/2020, after which he was rendered, once again, available for modified duty. From 2/3/2020, through 6/17/2020, Claimant’s wage loss was *attributable* to his work injury.

15. From 6/17/2020, through the present, Claimant’s wage loss is *not attributable to his work injury.* He is therefore not entitled to TTD from that point forward.

16. However, since surgery has now been authorized, it is likely that **if** Claimant goes through with it, he will likely be placed back onto “no work“ status for a considerable period of time. That, however, will wait for another day.

17. The ALJ notes further that the unemployment benefit information supplied by the parties is not pertinent to the issue of termination for cause; however, it presents issues of *offsets,* the calculations of which will be left to the parties.

ORDER

It is therefore Ordered that:

1. Claimant’s Average Weekly Wage is $811.66.

2. Claimant is entitled to TTD payments from 12/19/2019 through 1/13/2020.

3. Claimant is entitled to TTD payments from 2/3/2020 through 6/17/2020.

4. Any TTD payments are to be offset by applicable unemployment benefits paid during the same time periods.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: June 9, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease to her right upper extremity that began on June 12, 2020 during the course and scope of her employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her June 12, 2020 cumulative trauma injuries.

FINDINGS OF FACT

1. Claimant worked at Employer's [Redacted] facility as a night shift machine operator. The position generally included both production and sanitation duties except on Sundays when her duties involved only sanitation. Claimant's schedule was Friday through Tuesday from 8:00 pm to 4:30 am.

2. Employer's [Redacted] Leader William B[Redacted] testified that the Mountain View plant is a fluid dairy facility that produces and bottles milk, orange juice, coffee creamers and broth. Mr. B[Redacted] further remarked that there are three distinct rooms at this facility: (1) the blow mold room, where containers are produced; (2) the filler room where containers are filled with milk; and (3) the case stacker room where the containers are placed into crates.

3. Claimant testified that her job duties as a night shift machine operator specifically included the following: finishing production from the prior shift until approximately 10:00 pm; taking the weights of milk containers during production; cleaning the machines; lifting belts into tubs to be cleaned; reviewing paperwork; inspecting machines; and tearing down vacuum systems.

4. Claimant detailed her job functions. She stated there are three rooms for work and cleaning. Claimant explained that the clean in place process occurs daily. She is first required to spray the conveyors and machines to remove excess milk and debris. This process takes about 20-30 minutes of continuous spraying while holding the hose. Foaming the walls, conveyors, machines and floors takes another 15-20 minutes. Once the foam is applied, she has to immediately rinse or it sticks to the machines and traps bacteria. Rinsing takes about an hour and a half per machine. There are three machines in each room. Depending on the production schedule Claimant must clean between one and three machines.

5. Claimant noted that she sometimes worked up to six days each week because of overtime and a lack of personnel. She remarked that she was only one of two

people responsible for cleaning. Claimant's longer hours caused more repetitive hose use that required a forceful grip on the nozzle during cleaning. Claimant specified that when she was moved to work the third or night shift in May 2019, there was a large drop in consistency in her department and her work duties intensified. Claimant began to develop symptoms in her right upper extremity because of constant gripping and squeezing of the hose nozzle.

6. On June 13, 2020 Claimant reported a work-related injury to her supervisor and Employer's former Resource Leader Kiet N[Redacted] . Mr. N[Redacted reported that the occurrence was caused by "constant gripping (& squeezing) of the hose nozzle, muscle and tendon causing soreness on the right hand. Due to overtime, the whole right arm is sore as well."

7. On June 17, 2020 Claimant presented for initial care to Nurse Practitioner Monica L. Fanning-Schubert at Occupational Medical Partners. Claimant reported pain in her right neck, posterior shoulder, elbow, forearm, wrist, hand and right trigger finger due to repetitive, cumulative trauma. NP Fanning-Schubert documented that the mechanism of injury was using a heavy pressure spray handle with a forceful grip to clean 2-3 hours per day, pulling hoses and gripping bottles of milk for quality checks. She listed the mechanism of injury as "Cumulative Trauma Repetitive Use." NP Fanning-Schubert diagnosed Claimant with right trigger finger as a result of her work activities.

8. On June 30, 2020 Jill Adams completed a Job Demands Analysis and Risk Factor Analysis for the position of Fresh Employee at Employer's facility. Ms. Adams produced a report and an addendum report after interviewing Claimant. Claimant was unavailable for observation on the date of the job site visit. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Ms. Adams did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. After conducting time studies of Claimant's job tasks Ms. Adams specifically determined that gripping/coupling while using a hose nozzle/wand did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting.

9. Notably, the Job Demands Analysis specified that Claimant spent about 1-2% of her workday preparing to enter her work area including applying safety gear. She spent the majority of her time or about 65-70% of her workday operating machines. Claimant was specifically responsible for operating and monitoring milk filling production equipment. The final 25-30% of Claimant's workday involved the sanitation process.

10. The Job Demands Analysis detailed that Claimant works in teams of 5-8 employees and rotates cleaning operations. She was responsible for using 1-2 hoses/nozzles in one of three rooms to rinse, apply foam cleaner, and again rinse all machinery, walls and equipment. The final rinse lasted between 45 minutes and one hour. Frequently, two employees were responsible for sanitizing a room, but occasionally one employee completed the task. Total sanitization of each room typically lasted 2.5-3.0 hours.

11. On July 28, 2020 Jonathan L. Sollender, M.D. issued a report outlining his independent medical examination of Claimant. He reviewed the Job Demands Analysis prepared by Ms. Adams. Dr. Sollender compared the data collected by Ms. Adams to the criteria for force, awkward posture, repetition, cold exposure, vibration and computer use delineated in the *Guidelines*. He noted that Ms. Adams did not identify a single occupational risk factor that met the threshold level for an exposure. Dr. Sollender diagnosed Claimant with right trigger finger and mild right lateral epicondylitis. Recounting Claimant's work activities, he remarked that Claimant was not exposed to any occupational risk factors as outlined in Rule 17, Exhibit 5 of the *Guidelines*. Dr. Sollender summarized that Claimant was not exposed for the requisite time period to force, awkward posture, repetition, cold, vibration or computer tasks significant enough to cause any upper extremity occupational disease.

12. On August 18, 2020 John Burris, M.D. authored a report following an independent medical examination and records review of Claimant. Dr. Burris determined that he was unable to establish a cumulative trauma disorder diagnosis based on the Job Demands Analysis. He specifically noted the absence of Primary and Secondary Risk Factors. Because of the absence of risk factors delineated in the Job Demands Analysis, causation could not be established between Claimant's work activities and a cumulative trauma or shoulder disorder.

13. On January 14, 2021 Dr. Burris authored an addendum report after reviewing additional medical records. Dr. Burris determined that the additional records reflected that Claimant's physical symptoms corresponded to psychosocial stressors. He determined that his prior opinion on causation remained unchanged.

14. On January 14, 2021 Authorized Treating Physician (ATP) Bryan T. Alvarez, M.D. authored a letter addressing Claimant's repetitive trauma condition. He remarked that Claimant worked 12-hour days, three days per week, with one week of four hour days. Claimant reported that for the preceding year there were crew shift changes and she had to work eight hour days for five days each week. Dr. Alvarez explained that most of Claimant's shift involved sanitation duties. Claimant used a heavy pressure spray handle to clean areas about two to three times per shift. Using a spray handle required a forceful, repetitive grip that sometimes twisted her hand and wrist into an awkward position. Claimant also pulled a 40-foot hose over obstacles. Finally, Claimant repetitively gripped bottles of milk to perform quality control checks. Claimant eventually developed neck, right shoulder and right elbow pain. On June 12, 2020 Claimant noted pain in her right third digit. Dr. Alvarez concluded that Claimant's repetitive work activities caused her right upper extremity symptoms

15. On September 21, 2020 NP Fanning-Schubert authored correspondence disagreeing with Dr. Burris's opinion on the cause of Claimant's trigger finger. NP Fanning-Schubert asserted that the main risk factor for Claimant's trigger finger injury was forceful, repetitive gripping of a power hose that could have produced vibration. She acknowledged that she was unsure of the grip force necessary for Claimant to use the

hose. NP Fanning-Schubert recognized that Claimant's right shoulder and neck complaints were not work-related.

16. Mr. B[Redacted] testified that the night shift crew was responsible for finishing production from the prior shift followed by cleaning. He specified that the night shift typically began cleaning between 12:00-1:00 a.m. Mr. B[Redacted] explained that cleaning the machines was divided into the following three parts: (1) rinsing the machines for 30 minutes; (2) foaming the machines with a cleaning agent for about 20 minutes; and (3) rinsing the cleaner off the machines. He remarked that, because the chemicals had to sit on the machines, there was a break between applying the foam cleaner and the final rinse. Mr. B[Redacted] noted that the sprayers used at the facility were similar to a nozzle and garden hose with a locking mechanism to permit continuous spraying without manually engaging the trigger.

17. Mr. N[Redacted explained that night shift cleaning typically began between 11:00 p.m. and 12:00 a.m. except on Sundays when no production occurred. He testified that there were typically three employees working on the night shift with managers available to fill in and help with breaks, lunches or finishing production. Mr. N[Redacted further remarked that the total time an employee would continuously use the sprayer during the night shift lasted from 30-90 minutes. He summarized that a night shift employee typically used a hose for approximately two hours out of an eight-hour shift. Mr. N[Redacted noted that the nozzles had a locking mechanism that could be depressed to provide continuous spraying without hand pressure.

18. Employer's Senior Human Resource Leader at Mountain View Jeff S[Redacted] commented that night shift employees typically worked an eight-hour shift with at least two fifteen-minute breaks and one thirty-minute lunch. He noted that employees were required to notify a supervisor or resource leader as soon as they felt they might have sustained a work injury.

19. Ms. Adams testified that the primary objective of a worksite evaluation is to observe the performance of the job and address the presence of any risk factors specified by the Colorado Division of Workers' Compensation. She commented that Mountain View employees were permitted to take two scheduled fifteen-minute breaks and a thirty-minute lunch. Employees also had natural breaks during the sanitation process including waiting for foam to sit on the machines.

20. Ms. Adams described that the sanitation process involved using a hose and nozzle to rinse machines Employees then applied foam cleaner. The final rinse involved removing the cleaner. The sanitation process tasks varied and typically lasted approximately two to three hours per shift. Ms. Adams explained that activities during the sanitation process varied because employees moved around the entire room to access different machines. In fact, based on Claimant's testimony, Ms. Adams characterized Claimant's job tasks as "more varied than what I observed."

21. Ms. Adams testified that she was evaluating Primary and Secondary Risk Factors outlined by the Division of Workers' Compensation for grip force during an eight-hour shift. She detailed that the Primary Risk Factor for grip is two pounds of pinch force for six hours and the Secondary Risk Factor for grip is two pounds of pinch force for three hours. Although Ms. Adams recognized that Claimant applied hand force to use the sprayer, it did not occur for a sufficient time to constitute a Primary or Secondary Risk factor. Ms. Adams also noted that she did not observe any risk factors for vibration or awkward wrist postures. Finally, she did not note any risk factors for shoulder pathology.

22. In delineating Claimant's job duties Dr. Burris relied on the Job Demands Analysis prepared by Ms. Adams. Dr. Burris diagnosed Claimant with myofascial pain based on the diffuse nature of her complaints and lack of findings on examination. He remarked that trigger finger is an inflammation of the tendon that restricts movement within the tendon sheath. Dr. Burris explained that cumulative trauma disorders are caused by performing repetitive tasks without permitting tissues to rest. He commented that, because Claimant's work activities varied, her tissues had an opportunity to rest.

23. In order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated Primary Risk Factors. Dr. Burris compared Claimant's job duties with the Primary Risk Factors in the *Guidelines*. He considered the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Burris remarked that the algorithm for establishing medical causation specifies that, if no Primary or Secondary Risk factors are present, then the injury is probably not work-related. He determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors to satisfy the minimum thresholds in the *Guidelines* for developing a cumulative trauma disorder. Specifically, based on the Job Demands Analysis, there were no risk factors associated with a trigger finger diagnosis. Finally, Dr. Burris disagreed with NP Fanning-Schubert's analysis because Claimant did not perform her job tasks for the requisite time periods to meet the criteria established by the Division of Workers' Compensation in Rule 17 of the *Guidelines*.

24. Claimant disagreed with several details of Ms. Adams' Job Demands Analysis. She specifically noted that she was not on a team of 5-8 employees. Instead, there were five employees to cover all seven days of the week. Claimant testified the amount of time it took to clean the machines listed in the Job Demands Analysis was inaccurate because it did not consider running liquid through the machines for an in-depth cleaning. She further noted that she originally worked in 40-degree rooms all shift but the temperature was raised to 48 degrees after employee complaints. Finally, she occasionally worked in the cooler room with the temperature set at 32 degrees,

25. Claimant has failed to demonstrate that it is more probably true than not that she suffered an occupational disease to her right upper extremity that began on June 12, 2020 during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of

her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant spent about 1-2% of her workday preparing to enter her work area including applying safety gear. She spent the majority of her time or about 65-70% of her workday operating and monitoring milk filling production equipment. The final 25-30% of Claimant's workday involved the sanitation process.

26. Relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Adams did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. The Job Demands Analysis detailed that Claimant works in teams of 5-8 employees and rotates cleaning operations. She was responsible for using 1-2 hoses/nozzles in one of three rooms to rinse, apply foam cleaner, and again rinse all machinery, walls and equipment. The final rinse lasted between 45 minutes and one hour. Frequently, two employees were responsible for sanitizing a room, but occasionally one employee completed the task. Total sanitization of each room typically took 2.5-3.0 hours. Ms. Adams also remarked that Claimant engaged in a variety of tasks during the sanitation process. She detailed that the Primary Risk Factor for grip is two pounds of pinch force for six hours and the Secondary Risk Factor for grip is two pounds of pinch force for three hours. Although Ms. Adams recognized that Claimant applied hand force to use the sprayer/nozzle, it did not occur for a sufficient time to constitute a Primary or Secondary Risk factor. After conducting time studies of Claimant's work activities Ms. Adams specifically determined that gripping/coupling while using the hose nozzle/wand did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting. Ms. Adams also noted that she did not observe any risk factors for vibration or awkward wrist postures. Finally, she did not note any risk factors for shoulder pathology.

27. Dr. Burris persuasively maintained that Claimant did not suffer a work-related exposure that constituted a cumulative trauma condition pursuant to the *Guidelines*. He remarked that trigger finger is an inflammation of the tendon that restricts movement within the tendon sheath. Dr. Burris explained that cumulative trauma disorders are caused by performing repetitive tasks without permitting tissues to rest. He commented that, because Claimant's work activities varied, her tissues had an opportunity to rest. Dr. Burris compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He considered the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Burris remarked that the algorithm for establishing medical causation specifies that, if no Primary or Secondary Risk factors are present, then the injury is probably not work-related. He determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors to satisfy the minimum thresholds in the *Guidelines* for developing a cumulative trauma disorder. Specifically, based on the Job Demands Analysis, there were no risk factors associated with a trigger finger diagnosis. Similarly, Dr. Sollender compared the data collected by Ms. Adams to the criteria for force, awkward posture, repetition, cold exposure, vibration and computer use delineated in the *Guidelines*. He noted that Ms. Adams did not identify a single occupational risk factor that met the threshold level for an exposure. Dr. Sollender diagnosed Claimant with right trigger finger and mild right lateral epicondylitis.

Considering Claimant's work activities, he remarked that Claimant was not exposed to any occupational risk factors as outlined in Rule 17, Exhibit 5 of the *Guidelines*. Dr. Sollender summarized that Claimant was not exposed for the requisite time period to force, awkward posture, repetition, cold, vibration and computer tasks to cause an upper extremity occupational disease.

28. In contrast, Dr. Alvarez explained that most of Claimant's shift involved sanitation duties. Claimant used a heavy pressure spray handle to clean areas about two to three times per shift. Using a spray handle required a forceful, repetitive grip that sometimes twisted her hand and wrist into an awkward position. Dr. Alvarez thus concluded that Claimant's work activities caused her right upper extremity injuries. Similarly, NP Fanning-Schubert disagreed with Dr. Burris's opinion on the cause of Claimant's trigger finger. She explained that the main risk factor for Claimant's trigger finger injury was forceful, repetitive gripping of a power hose that could have produced some vibration. Moreover, Claimant testified that the Job Demands Analysis was inaccurate because it underestimated the amount of time she engaged in the sanitation process. Despite Claimant's testimony and the opinions of Dr. Alvarez and NP Fanning-Schubert, the record reveals that Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for a cumulative trauma condition. The opinions of Dr. Alvarez and NP Fanning-Schubert failed to consider the force or time periods necessary for the development of a cumulative trauma condition. In fact, NP Fanning-Schubert acknowledged that she was unsure of the grip force necessary for Claimant to use the hose. In contrast, the *Guidelines* provide a detailed methodology and algorithm for evaluating the cause of cumulative trauma conditions. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinions of Drs. Burris and Sollender, Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for the development of a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that "CTC's of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures." W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma

analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that "[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment." W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

8. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. W.C.R.P. Rule 17, Exhibit 5, pp. 26-27. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, p. 24.

9. The *Guidelines* also specifically delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when

addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease to her right upper extremity that began on June 12, 2020 during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant spent about 1-2% of her workday preparing to enter her work area including applying safety gear. She spent the majority of her time or about 65-70% of her workday operating and monitoring milk filling production equipment. The final 25-30% of Claimant's workday involved the sanitation process.

11. As found, relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Adams did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. The Job Demands Analysis detailed that Claimant works in teams of 5-8 employees and rotates cleaning operations. She was responsible for using 1-2 hoses/nozzles in one of three rooms to rinse, apply foam cleaner, and again rinse all machinery, walls and equipment. The final rinse lasted between 45 minutes and one hour. Frequently, two employees were responsible for sanitizing a room, but occasionally one employee completed the task. Total sanitization of each room typically took 2.5-3.0 hours. Ms. Adams also remarked that Claimant engaged in a variety of tasks during the sanitation process. She detailed that the Primary Risk Factor for grip is two pounds of pinch force for six hours and the Secondary Risk Factor for grip is two pounds of pinch force for three hours. Although Ms. Adams recognized that Claimant applied hand force to use the sprayer/nozzle, it did not occur for a sufficient time to constitute a Primary or Secondary Risk factor. After conducting time studies of Claimant's work activities Ms. Adams specifically determined that gripping/coupling while using the hose nozzle/wand did not fit within the Primary or Secondary Risk Factors regarding pinch force or lifting. Ms. Adams also noted that she did not observe any risk factors for vibration or awkward wrist postures. Finally, she did not note any risk factors for shoulder pathology.

12. As found, Dr. Burris persuasively maintained that Claimant did not suffer a work-related exposure that constituted a cumulative trauma condition pursuant to the *Guidelines*. He remarked that trigger finger is an inflammation of the tendon that restricts movement within the tendon sheath. Dr. Burris explained that cumulative trauma disorders are caused by performing repetitive tasks without permitting tissues to rest. He commented that, because Claimant's work activities varied, her tissues had an opportunity to rest. Dr. Burris compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He considered the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Burris remarked that the algorithm for establishing medical causation specifies that, if no Primary or Secondary Risk factors are present, then the injury is probably not work-related. He determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors to satisfy the minimum thresholds

in the *Guidelines* for developing a cumulative trauma disorder. Specifically, based on the Job Demands Analysis, there were no risk factors associated with a trigger finger diagnosis. Similarly, Dr. Sollender compared the data collected by Ms. Adams to the criteria for force, awkward posture, repetition, cold exposure, vibration and computer use delineated in the *Guidelines*. He noted that Ms. Adams did not identify a single occupational risk factor that met the threshold level for an exposure. Dr. Sollender diagnosed Claimant with right trigger finger and mild right lateral epicondylitis. Considering Claimant's work activities, he remarked that Claimant was not exposed to any occupational risk factors as outlined in Rule 17, Exhibit 5 of the *Guidelines*. Dr. Sollender summarized that Claimant was not exposed for the requisite time period to force, awkward posture, repetition, cold, vibration and computer tasks to cause an upper extremity occupational disease.

13. As found, in contrast, Dr. Alvarez explained that most of Claimant's shift involved sanitation duties. Claimant used a heavy pressure spray handle to clean areas about two to three times per shift. Using a spray handle required a forceful, repetitive grip that sometimes twisted her hand and wrist into an awkward position. Dr. Alvarez thus concluded that Claimant's work activities caused her right upper extremity injuries. Similarly, NP Fanning-Schubert disagreed with Dr. Burris's opinion on the cause of Claimant's trigger finger. She explained that the main risk factor for Claimant's trigger finger injury was forceful, repetitive gripping of a power hose that could have produced some vibration. Moreover, Claimant testified that the Job Demands Analysis was inaccurate because it underestimated the amount of time she engaged in the sanitation process. Despite Claimant's testimony and the opinions of Dr. Alvarez and NP Fanning-Schubert, the record reveals that Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for a cumulative trauma condition. The opinions of Dr. Alvarez and NP Fanning-Schubert failed to consider the force or time periods necessary for the development of a cumulative trauma condition. In fact, NP Fanning-Schubert acknowledged that she was unsure of the grip force necessary for Claimant to use the hose. In contrast, the *Guidelines* provide a detailed methodology and algorithm for evaluating the cause of cumulative trauma conditions. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinions of Drs. Burris and Sollender, Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for the development of a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: June 10, 2021.

WORKERS' COMPENSATION NO. WC 5-120-654

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury on September 13, 2019.

II. Whether Claimant proved by a preponderance of the evidence the medical treatment he received is reasonable, necessary and related to the industrial injury, and whether he is entitled to a general award of medical benefits.

III. Whether Claimant proved by a preponderance of the evidence he is entitled to temporary indemnity benefits from September 14, 2019, ongoing.

IV. Whether the right of selection of the authorized treating physician ("ATP") passed to Claimant.

V. Determination of Claimant's average weekly wage ("AWW").

VI. Whether Respondent-Employer is subject to penalties pursuant to §8-43- 408(1), C.R.S. for failing to carry workers' compensation insurance.

VII. Whether Claimant is entitled to a disfigurement award.

FINDINGS OF FACT

Non-Appearance of Respondent-Employer

1. The Longmont Address is the only address for Respondent-Employer on file with the OAC. The Longmont Address is the address listed for Respondent-Employer on checks Respondent-Employer issued to Claimant. Claimant has picked up tools from Respondent-Employer at the Longmont address and knows the address to be the address of Respondent-Employer.

2. On January 12, 2021, Claimant's counsel sent copies of the Application for Hearing and interrogatories to Respondent-Employer at the Longmont address via certified mail. USPS certified mail receipts note the documents were delivered to Respondent-Employer on January 14, 2021.

3. On January 28, 2021, Claimant's counsel sent a copy of a hearing confirmation to Respondent-Employer at the Longmont address via certified mail. A USPS certified mail receipt notes the document was delivered to Respondent-Employer on February 1, 2021.

4. OAC records reflect Notice of Hearing for the April 15, 2021 hearing was mailed to Respondent-Employer at the Longmont Address on March 9, 2021. OAC records contain no indication the Notice of Hearing was returned as undeliverable.

5. In a notarized affidavit, Process Server Christopher Lacey detailed multiple instances of attempting to effect service of process on Respondent-Employer in February 2021. Mr. Lacey determined the Longmont address is the usual place of abode and the appropriate address for Respondent-Employer, noting he observed the white van driven by Respondent-Employer parked at such address. Mr. Lacey observed a camera at the front door and garage door of the property and, when attempting to serve Respondent-Employer, could hear dogs barking and individuals speaking inside of the property. Mr. Lacey believes Respondent-Employer was avoiding service of process.

6. The ALJ finds Notice of Hearing was sent to an address at which it was likely to be received by Respondent-Employer. Notice of Hearing was sent to the Longmont Address, at which Respondent-Employer had received an Application for Hearing, interrogatories, and hearing confirmation. Checks issued to Claimant by Respondent-Employer identify the Longmont Address as Respondent-Employer's address. Claimant credibly testified that he knows the Longmont Address to be that of Respondent-Employer. Mr. Lacey determined the Longmont Address is the appropriate address for Respondent-Employer and credibly stated his belief that Respondent-Employer was avoiding service of process. The record indicates the Longmont Address is the correct and most recent address for Respondent-Employer. The OAC sent Notice of Hearing to the Longmont Address and there is no indication the mail was returned as undeliverable. The totality of the evidence indicates it is likely Respondent-Employer received notice of the hearing, is attempting to avoid the proceedings and elected not to appear. Accordingly, the ALJ proceeded with the hearing and now issues this order on the merits.

September 13, 2019 Work Injury

7. Claimant worked for Respondent-Employer for approximately eight or nine months performing various construction duties.

8. Claimant worked for Respondent-Employer on a full-time basis, working from approximately 7:30 a.m. to 5:00 p.m.

9. Claimant earned between $1,100.00 and $1,200.00 per week working for Respondent-Employer.

10. On September 13, 2019, Claimant sustained an industrial injury while performing his regular job duties during a scheduled work shift. While using a hammer to remove a nail from a piece of wood, the nail struck Claimant in his left eye. Claimant experienced an immediate onset of pain and blurry vision.

11. The same day of the incident, Claimant sought treatment at North Colorado Medical Center emergency room where he saw Matthew J. Uyemura, M.D. Dr. Uyemura diagnosed Claimant with a left corneal laceration with traumatic left cataract. He determined Claimant required urgent surgical repair as a result of the work injury. Dr. Uyemura performed further evaluation of Claimant at his own clinic and performed a left corneal repair with left lenesctomy and anterior vitrectomy on September 13, 2019. Dr. Uyemura performed the surgery at BSC Mountain Vista Surgery Center/Banner Health. Claimant was discharged with restrictions of no heavy lifting or bending over and was instructed to keep his eye shield in place.

12. Claimant attended a follow-up evaluation with Dr. Uyemura on September 14, 2019. Dr. Uyemura noted Claimant was doing well after the procedure. He planned to treat Claimant’s residual cortical material with steroids and wait before taking further treatment steps. He instructed Claimant to keep his eye covered with an eye shield and restricted Claimant from lifting greater than 20 pounds and bending over. Claimant was to keep dirt and dust out of his eye.

13. Claimant continued to follow-up with Dr. Uyemura, who referred Claimant to Aimee M. Verner, M.D. for additional evaluation of the work injury. Claimant first presented to Dr. Verner on September 18, 2019. Dr. Verner opined that Claimant would likely need multiple operations and procedures to regain his best-corrected visual acuity.

14. On September 30, 2019, Claimant underwent removal of retained cortical material fragments in his left eye, performed by Dr. Uyemura. Dr. Uyemura restricted Claimant from heavy lifting and straining for three weeks. He instructed Claimant to keep dirt and debris out of his eye for at least a week, and to avoid environments were dirt and debris may occur.

15. At an October 2, 2019 follow-up evaluation, Dr. Verner noted Claimant has scarring and irregularity in the left cornea. She remarked that treatment options included specialty contact lenses or, possibly, a full-thickness cornea transplant if the scarring was too dense.

16. On October 11, 2019, Claimant saw Dr. Uyemura and reported continued blurry vision and mild irritation. Dr. Uyemura noted Claimant's vision would not improve until he underwent a cornea repair and lens implant with Dr. Verner. Dr. Uyemura opined that Claimant could return to work as long as Claimant wore goggles all the time. He noted Claimant needed to be careful at work due to his depth perception being off. Dr. Uyemura instructed Claimant to try to avoid straining when lifting and not lifting much over 50 pounds.

17. Claimant continued to see Drs. Uyemura and Verner and continued to report blurry vision and eye irritation. As of the date of hearing, Claimant had yet to undergo a cornea transplant.

18. Respondent-Employer was aware of the incident and did not send Claimant for medical treatment or provide Claimant a list of designated providers. Claimant spoke with Respondent-Employer about his injury and asked for insurance to cover his medical treatment. It is Claimant's belief Respondent-Employer did not have workers' compensation insurance. On September 18, 2019 and September 17, 2019, Respondent-Employer issued checks to Claimant in the amount of $900.00 and $1,400.00, respectively. The memo section of the aforementioned checks read "Cirujia."

19. On October 4, 2019, Respondent-Employer issued Claimant a check for $700.00. In the memo section of the check, Respondent-Employer wrote "Workers comp check." Claimant testified that when he attempted to further discuss a workers' compensation claim with Respondent-Employer, Respondent-Employer gave him the "runaround" for some time, then eventually told Claimant to just sue him.

20. As a result of the work injury, Claimant did not work or earn wages from September 14, 2019 to late February 2020 or early March 2020. Claimant was unable to return to performing his regular duties due to the risk of further injuring his eye, lifting restrictions, as well as safety concerns performing certain construction duties with his poor depth perception. When Claimant returned to working, he performed duties such as picking up debris. Claimant has not worked for Respondent-Employer since the date of the work injury. Claimant has earned $600/week since returning to work.

21. Claimant's testimony is found credible and persuasive.

22. Claimant proved it is more probable than not he sustained a compensable industrial injury arising out of and in the scope of his employment for Respondent-Employer on September 13, 2019. Claimant suffered an injury to his left eye that resulted in disability and the need for medical treatment.

23. Claimant’s treatment at North Suburban Medical Center was emergency care. Respondent-Employer was on notice of Claimant’s on-the-job injury and did not provide Claimant a list of designated treatment providers. Accordingly, the right of selection of an ATP passed to Claimant. The treatment Claimant received with Banner Surgery Center, Dr. Uyemura, the Eye Care Center of Northern Colorado, and Dr. Verner was authorized treatment. The aforementioned treatment was directly related to Claimant’s industrial injury and was reasonable and necessary to cure and relieve Claimant of the effects the injury.

24. As of the date of hearing, the expenses for the authorized, reasonable and necessary treatment related to Claimant’s eye injury total $18,574.90, consisting of the following expenses: Matthew Uyemura, M.D. (9/13, 9/30, and 1/28/20 charges were reduced) of $3,367; Rocky Mountain Anesthesia of $3,078; Eye Care Center of Northern Colorado of $717.84; Banner Health of $10,732.95 (NCMC and ER services from 9/13/19); and Mountain Vista Orthopaedic Surgery for lens material after the statement write-off of $1,396.95.

25. Claimant has yet to be placed at maximum medical improvement (“MMI”) by an ATP. He continues to experience issues with his eye and has yet to undergo a cornea transplant. Claimant is entitled to a general award of reasonably necessary medical benefits as related to the industrial injury.

26. As Claimant averaged between $1,100.00 and $1,200.00 per week for Respondent-Employer, Claimant’s AWW is $1,150.00. Based on Claimant’s AWW of $1,150.00, Claimant’s TTD rate is $766.67.

27. Claimant proved it is more probable than not he is entitled to temporary total disability (“TTD”) benefits from September 14, 2019 through February 28, 2020, and temporary partial disability (“TPD”) benefits from March 1, 2020, ongoing. As a result of the industrial injury, Claimant was unable to resume his prior work, which resulted in actual wage loss for more than three work shifts. When Claimant returned to work, certain work was unavailable to Claimant due to his work injury, resulting in Claimant earning less than his AWW of $1,150.00.

28. Respondent-Employer is subject to penalties for its failure to carry workers’ compensation insurance as required at the time of Claimant’s compensable injury.

29. The ALJ was unable to adequately observe Claimant’s alleged disfigurement via video at the hearing. Claimant’s counsel indicated he would submit photographs of Claimant’s alleged disfigurement with his post-hearing position statement. As of the date

of this order, no photographs were received from Claimant. Accordingly, there is insufficient evidence for the ALJ to make a determination regarding disfigurement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

As found, Claimant proved it is more likely than not he sustained an industrial injury arising out of and in the course of his employment with Respondent-Employer. Claimant was struck in the left eye with a nail while performing his usual job duties during a regular work shift. The incident caused disability and the need for medical treatment. Accordingly, Claimant sustained a compensable industrial injury on September 13, 2019.

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). For a service to be considered a “medical benefit” it must be provided as medical or nursing treatment or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., WC 4-517-537 (ICAO, May 31, 2006).

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers’ Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, “the employee shall have the right to select a physician.” §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, “the employer shall provide the injured worker with a written list of designated providers.” W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that “the injured worker may select an authorized treating physician of the worker’s choosing.” An employer is deemed notified of an injury when it has “some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim.” *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

If upon notice of the injury the employer timely fails to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer’s obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

As Claimant proved he sustained a compensable industrial injury, Respondent-Employer is liable for reasonable and necessary medical treatment that is causally related to the industrial injury. Respondent-Employer was on notice of Claimant’s on-the-job injury and did not provide Claimant a list of designated treatment providers. As such, the right to select an ATP passed to Claimant. Claimant sought evaluation due to the work injury and required treatment, including two surgeries. No evidence was presented indicating Claimant’s left eye condition and need for treatment was the result of some issue unrelated to the work injury. The preponderant evidence establishes that Claimant’s treatment with North Colorado Medical Center, Dr. Uyemura, Dr. Verner, and the associated clinics and surgical centers was directly related to Claimant’s industrial injury and was reasonable and necessary to cure and relieve Claimant of the effects the injury. Respondent-Employer is liable for the costs Claimant incurred for the medical treatment he has received for the work injury, totaling $18,574.90, as well as further reasonably necessary and causally related treatment.

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant’s earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

At the time of injury, Claimant earned an average of $1,100.00 to $1,200.00 per week. A fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of $1,150.00.

Temporary Indemnity Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Section 8-42-106(1), C.R.S., provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

As a result of the industrial injury, Claimant was unable to resume his prior work, which resulted in actual wage loss for more than three work shifts. Claimant's left eye condition impaired his ability to safely, effectively and properly perform his regular employment. Although Claimant received checks from Respondent-Employer on September 18, 2019 and September 27, 2019, there is insufficient evidence establishing those checks were wages paid to Claimant for his missed time and not for time worked prior to the incident. Claimant credibly testified he did not work from September 14, 2019 to late February 2020 or early March 2020. As found, Claimant is entitled to TTD benefits from September 14, 2019 to February 28, 2020, a period of 24 weeks at a rate of $766.67. The total amount of TTD owed to Claimant is $18,400.08 ($766.67 x 24 weeks).

As of March 1, 2020, Claimant returned to performing some work, earning $600.00 per week, which is less than his AWW of $1,150.00. Claimant's impaired earning capacity was the result of the work injury, as Claimant was unable to find certain work and perform certain duties due to his left eye condition. Thus, Claimant is entitled to TPD benefits from March 1, 2020, ongoing. Based on Claimant's AWW and weekly earnings during this time period, Claimant is entitled to TPD at a rate of $366.66 ($1,150 - $600 = $550. $550 x 2/3 = $366.66). As of the date of the hearing, the total amount of TPD owed to Claimant is $21,475.28 ($366.66 x 58.57 weeks).

Penalties for Uninsured Employers

Every employer subject to the provisions of the Workers' Compensation Act shall carry workers' compensation insurance. §8-44-101, C.R.S. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Act and has not complied with the insurance provisions required by the Act, the injured employee may claim the compensation and benefits provided in those articles. Prior to July 1, 2017, Section 8-43-408(1), C.R.S., provided that, in such cases, the compensation or benefits payable to the claimant were to be increased by fifty percent. Effective July 1, 2017, Section 8-43-408(1), C.R.S. was amended to remove the language regarding a fifty percent increase in the claimant's compensation or benefits.

If compensation is awarded, the ALJ shall compute and require the employer to pay a trustee an amount equal to the present value of all unpaid compensation or benefits or require the employer to post a bond a bond within 10 days of the order. §8-43-408(2), C.R.S.

Section 8-43-408(5), C.R.S., provides that in addition to any other compensation or benefits paid or ordered, an employer that is uninsured at the time an employee suffers a compensable injury shall pay an additional amount equal to 25% of the compensation and benefits to the Colorado Uninsured Employer Fund.

The present value of all unpaid compensation or benefits owed to Claimant is $57,750.26. This amount represents the sum of the owed medical benefits, TTD and TPD ($58,450.26) minus $700.00 paid to Claimant on October 9, 2019 for the injury.

As found, Respondent-Employer did not carry workers' compensation insurance at the time of Claimant's industrial injury. Accordingly, Respondent-Employer shall pay an additional $14,437.57 (25% of $57,750.26) to the Colorado Uninsured Employer Fund.

ORDER

1. Claimant suffered a compensable industrial injury to his left eye on September 13, 2019 arising out of and in the course and scope of his employment with Respondent-Employer.

2. Respondent-Employer shall pay for Claimant's reasonable and necessary medical treatment related to Claimant's September 13, 2019 injury, including reimbursement of $18,574.90 in outstanding medical expenses. Respondent-Employer is also liable for additional medical treatment that is reasonable, necessary and causally related to the work injury.

3. Claimant's AWW is $1,150.00.

4. Respondent-Employer shall pay Claimant TTD in the amount of $18,400.08, representing a period of 24 weeks at a TTD rate of $766.67, subject to applicable offsets.

5. Respondent-Employer shall pay Claimant TPD in the amount of $21,475.28, representing a period of 58.57 weeks at a rate of $366.66, subject to applicable offsets.

6. Claimant's claim for a disfigurement award is dismissed, without prejudice.

7. For failing to maintain workers' compensation insurance, Respondent-Employer shall pay $14,437.57 (25% of $57,750.26) to the Colorado Uninsured Employer Fund. The check shall be payable to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, CO 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

8. Respondent-Employer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. In lieu of payment of the above compensation and benefits to the Claimant, the Respondent-Employer shall:

   a. Deposit the sum of $57,750.26 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, Colorado 80202, Attention: Gina Johannesman / Trustee Special Funds Unit; or

b. File a surety bond in the sum of $57,750.26 with the Division of Workers' Compensation within ten (10) days of the date of this order:

    i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

    ii. Issued by a surety company authorized to do business in Colorado.

    iii. The bond shall guarantee payment of the compensation, penalties and benefits awarded.

10. Respondent-Employer shall notify the Division of Workers' Compensation, and counsel for the Claimant, of payments made pursuant to this order.

11. The filing of any appeal, including a petition to review, shall not relieve the Respondent-Employer of the obligation to pay the designated sum to the Claimant, to the trustee or to file the bond as required by paragraph (b) above. §8-43-408(2), C.R.S.

12. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

13. Pursuant to § 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately and forthwith cease and desist from any further collection efforts from the Claimant because the Respondent-Employer is solely liable and responsible for the payment of all medical costs related to the Claimant's work injury.

14. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 10, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-107-502-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],
Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 27, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 5/27/21 , Google Meets, beginning at 1:30 PM, an ending at 3:00 PM).

The Claimant was present in person, virtually, and represented by [Redacted], Esq. Respondent was represented by [Redacted], Esq., Assistant City Attorney.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted], shall be referred to as the “Employer” or “Respondent.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 8 were admitted into evidence, without objection. Respondent’s Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant , which was filed, electronically, on June 4, 2021. On June 9, 2021, counsel for Respondent filed a response, indicating that counsel for Claimant emailed the proposed decision to a “fictitious person” at the Respondent   Further, counsel for Respondent indicates receipt of the proposal via U.S. Mail at the close of business on June 8, 2021. Ultimately, Respondent indicates that the proposed order “are consistent with the rulings made by the ALJ on May 27, 2021” from the bench. Respondent further indicates that the Respondent will file a Final Admission of Liability, consistent with the permanent impairment, rating assigned by the Division Independent Medical Examiner (DIME), Caroline Gellrick, M.D. After a consideration of the proposed decision and response thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUE

The sole issue herein concerns whether Respondent has overcome the DIME rating of 34% whole person and 7% whole person, separately, for mental impairment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant suffered the compensable occupational disease (OD) of prostate cancer, with complications, on June 7, 2019. See § 8-41-209, C.R.S. He was initially referred for treatment to COSH at Denver Health and eventually underwent a robotic assisted laparoscopic prostatectomy with Samson Shen, M.D., at Kaiser on November 5, 2019 (Claimant’s Exhibit 7).

2. After surgery, the Claimant continued in treatment with authorized treating physician (ATP) Jennifer Pula, M.D. (COSH). Dr. Pula placed the Claimant at maximum medical improvement (MMI) on August 20, 2020 (Claimant’s Exhibit 4).

3. On May 7, 2019, ATP Dr. Pula rendered the opinion that Claimant had suffered a 39% whole person permanent medical impairment. This included an assigned whole person impairment of 34% for his prostate cancer, with a 7% whole person impairment from Stephen Moe, M.D., a psychiatrist. Claimant’s MMI date of August 20, 2020, is not challenged by either party (Claimant’s Exhibit 4, bates stamp 52) and the ALJ finds that MMI was reached on August 20, 2020..

Division Independent Medical Examination (DIME) of Caroline Gellrick, M.D.

4. Respondent sought a DIME, which was performed by Dr. Gellrick. DIME Dr. Gellrick was of the opinion that Claimant was entitled to a 39% whole person impairment rating, which included a 7% whole person for mental impairment.

5. Dr. Gellrick was of the opinion that the Claimant’s impairment rating contained a 20% whole person impairment for bladder dysfunction.

Respondent’s Independent Medical Examiner (IME), John Burris, M.D.

6. Respondent challenged the DIME opinion of Dr. Gellrick, relying on the medical testimony of IME Dr. Burris. Dr. Burris disagreed with DIME Dr. Gellrick’s bladder rating of 20% whole person for the Claimant’s dysfunction. He stated the opinion that Claimant’s whole person impairment for bladder dysfunction was limited to 5% whole person. Dr. Burris offered no clearly convincing, underlying rationale for his 5% attributable to the bladder, as opposed to Dr. Gellrick’s 20% rating, attributable to the bladder

7. Although Dr. Burris expressed an arguable, credible difference of opinion with DIME Dr. Gellrick’s rating, he did not demonstrate that the rating of DIME Dr. Gellrick was clearly erroneous, nor did this difference of opinion rise to the level of “highly persuasive, probable and free from serious and substantial doubt.

The Claimant

8. The Claimant credibly testified that he has ongoing/continuous bladder problems including daily leakage for which he must wear an absorbent pad throughout the day. His bladder dysfunction causes limitations to activities of daily living. Although he is performing the essential functions of his job as a firefighter, this is interfered with by an ongoing problem of bladder leakage. His bladder problem has improved somewhat since April 20, 2021, but it is still continuous, not sporadic. Additionally, the Claimant requires and receives ongoing medical attention from his doctors at the Urology Center of Colorado (TUCC).

Claimant’s IME, Ronald Swarsen, M.D..

9. Dr. Swarsen, is a Level II certified doctor, was called to testify. Dr. Swarsen stated that DIME Dr. Gellrick’s impairment rating was consistent with the AMA *Guides to the Evaluation of Permanent Impairment* 3rd Ed., Rev.

Ultimate Findings

10. The ALJ finds that the opinions of Dr. Swarsen and of DIME Dr. Gellrick on the degree of permanent medical impairment are more credible than the opinion of IME Dr. Burris.

11. Between conflicting medical opinions on the degree of permanent medical impairment, the ALJ makes a rational choice, based on substantial evidence, to

accept the opinions of DIME Dr. Gellrick and Claimant's IME Dr. Swarsen, and to reject the opinion of IME Dr. Burris.

12. Respondent has failed to demonstrate that the DIME opinion of Dr. Gellrick is free from serious and substantial doubt, and that it is highly probable that Dr. Gellrick's opinion is clearly in error. Therefore, Respondent failed to overcome the DIME opinion concerning the degree of Claimant's permanent medical impairment by clear and convincing evidence. The DIME opinion of Dr. Gellrick has **not** been overcome in any respect.

13. The opinions of DIME Dr. Gellrick and IME Dr. Swarsen support the Claimant's need for post-maximum medical improvement (MMI) medical maintenance care *Grover* meds). The ALJ finds that the Claimant has proven the need for *Grover* meds by a preponderance of the evidence..

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof).

See Young v. Burke, 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Swarsen and of DIME Dr. Gellrick on the degree of permanent medical impairment were more credible than the opinion of IME Dr. Burris. Therefore, the opinions of the former support the DIME determination of permanent medical impairment.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the DIME opinions of Dr. Gellrick, the IME opinion of Dr. Swarsen, and to reject the IME opinion of Dr. Burris.

Elevated Burden of Proof

c. The DIME's determinations regarding whole person impairment are binding unless overcome by clear and convincing evidence. §8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

d. "Clear and convincing evidence" means evidence which is stronger than a mere preponderance. It is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). As found, this is **not** the case herein.

e. A DIME physician must rate impairment in accordance with the provision of the AMA Guides. §8-42-101(3.7), C.R.S.; *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003). Whether the DIME physician properly applied the AMA Guides is an issue of fact for determination by the ALJ. *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000). Once the ALJ determines that the DIME's rating has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (Sept. 5, 2001). As found herein above, the DIME opinion of Dr. Gellrick has **not** been overcome in any respect.

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to post-MMI medical maintenance benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his buirden on post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent having failed to overcome the Division Independent Medical Examination of Caroline Gellrick, M.D., the degree of Claimant's permanent medical impairment is 34% whole person, plus 7% whole person impairment for mental impairment, to be paid separately under the provisions of §8-42-107 (7) (b) (III).

B. The Claimant reached maximum medical improvement on August 20, 2020. Therefore, Respondent shall pay the Claimant permanent partial disability benefits, based on 34% working unit, plus 7% working unit for mental impairment, paid according to the limitations set forth in §8-42-107 (7) (b) (III), C.R.S.

C. Respondent shall pay all of the authorized, reasonably necessary and causally related post-maximum medical improvement maintenance benefits, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all indemnity benefits due and not paid when due.

DATED this 14th day of June 2021.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that his average weekly wage (AWW) should be higher than the previously admitted to AWW of $1,341.64.

FINDINGS OF FACT

1. The claimant worked for the employer at the [REDACTED] (a coal mine) for 20 years. In January 2020 he was working full-time in Surface Utility on the overland belts. The claimant earned a different hourly rate depending upon the shift worked. In addition the claimant was eligible for overtime pay. The different hourly rates were negotiated by the union and ratified every five years.

2. The claimant suffered an injury at work on January 17, 2020. The respondents have admitted liability for the injury. In addition, the respondents have admitted an average weekly wage (AWW) of $1,341.64.

3. The ALJ calculates that when the admitted AWW is multiplied by 52 weeks in a year, the total indicates annual earnings of $69,765.28.

4. The respondents began paying the claimant temporary total disability (TTD) benefits based upon the AWW of $1,341.64 beginning on January 18, 2020.

5. The pay records entered into evidence indicate that the claimant's year to date gross earnings for 2019 were $82,541.45. The claimant argues that this is the amount that should be used in calculating the claimant's AWW on the date of his injury in January 2020. When this total is divided by 52 weeks in a year, it results in an AWW of $1,587.33.

6. In December 2019, the claimant was paid $6,939.59 for "Annual Incentive". Danny C[REDACTED], Human Resources Manager for the employer testified that this annual incentive fluctuates each year. The amount of the incentive depends upon market conditions, mine production, the quality of the coal produced, whether or not there are MSHA[1] or other safety violations. An employee can be paid a bonus between zero percent to 10 percent of their gross wages. This rate is determined by mine ownership.

7. The pay records indicate that the claimant received a YTD total of $2,049.84 for "Bonus". This was paid to the claimant in three payments. The first was on January 11, 2019 in the amount of $375.00. The second was on January 25, 2019 in the amount

[1] Mine Safety and Health Administration.

of $324.84. The claimant was then paid an additional $1,350.00 on November 15, 2019. The parties agree that the payment of $1,350.00 was the annual Christmas bonus.

8. Mr. C[Redacted] testified that each year all employees are paid a Christmas bonus, which fluctuates between $1,200.00 to $1,500.00 per year. In 2019, the claimant's Christmas bonus was $1,350.00.

9. The pay records indicate that the claimant received a YTD total of $1,817.02 for "Incentive". Mr. C[Redacted] testified that such payments are paid as an "extra bonus".

10. Each year, the claimant is paid a clothing allowance of $650.00 per year. Mr. C[Redacted] testified that in 2019 employees were paid an additional clothing allowance of $1,000.00. This one time payment was paid pursuant to the union contract.

11. The claimant was also paid $600.00 in 2019 for "Safety". Mr. C[Redacted] testified that these payments are made following a monthly drawing. Each month in which there are no safety violations, employees are entered into a drawing to win between $100.00 and $500.00.

12. The claimant testified that the clothing allowance of $650.00 and the Christmas bonus are paid every year. The claimant also testified that "Incentive", "Bonus", and "Safety" amounts are not paid every year. When these other incentives and bonuses are paid, the payments fluctuate in amount.

13. The claimant testified that the "Annual Incentive" is paid each year, but those payments vary from year to year. The claimant also testified that the incentive paid as the "Annual Incentive" used to be paid monthly, but at some point was converted to an annual payment.

14. The respondents agree that the claimant's AWW should be increased. However, the respondents argue that such an increase should only reflect the annual Christmas bonus and annual clothing allowance. The respondents calculate that the AWW should be increased by $62.03 per week, for a total AWW of $1,403.67.

15. The ALJ is persuaded that the annual clothing allowance and a Christmas bonus of between $1,200.00 and $1,500.00 are paid to the claimant every year and the claimant can rely on receiving those payments. As the Christmas payment for 2019 was $1,350.00, the ALJ adopts this amount in calculating the claimant's AWW.

16. In calculating the claimant's AWW, the ALJ declines to include the 2019 "Incentive", "Bonus", and "Safety" amounts as these vary each year, and are not always paid to employees. Therefore, the claimant does not have access to those amounts on a day-to-day basis,nor an immediate expectation of receiving the benefit under appropriate, reasonable circumstances.

17. The ALJ also declines to include the amount of the 2019 “Annual Incentive”. The ALJ credits the testimony of Mr. C[Redacted] that this incentive fluctuates upon market conditions, mine production, the quality of the coal produced, whether or not there are safety violations. Although the claimant testified that he received the Annual Incentive each year, it is clear that the amount paid varied from year to year. Therefore, the claimant does not have access to that payment on a day-to-day basis, nor does he have an immediate expectation of receiving the benefit under appropriate, reasonable circumstances.

18. The ALJ calculates that the claimant’s AWW for this claim should be $1,393.94. The ALJ reaches this AWW as follows: The claimant’s gross earnings for 2019 were $82,541.45. The ALJ deducts from that total $6,939.59 in Annual Incentive; $2,049.84 in Bonus; $1,817.02 in Incentive; and $600.00 in Safety for a total of $71,135.00. Then, the ALJ adds back $1,350.00 for the Christmas bonus for a new total of $72,485.00. When this is then divided by 52 weeks in a year, the average is $1,393.94.

19. The ALJ recognizes that there is an order on appeal regarding the claimant’s entitlement to temporary total disability (TTD) benefits beginning on May 26, 2020 and thereafter. The present order is not intended to impact, in any way, any rulings, decisions, orders, or appeals related to that prior matter. Therefore, this present order applies to the calculation of TTD benefits from January 18, 2020 through May 25, 2020. Any additional TTD benefits which may be found to be due beginning May 26, 2020, would be assessed utilizing the new AWW of $1,393.94, once the current appeals have been exhausted on that prior matter.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; Celebrity Custom Builders v. Industrial Claim Appeals Office, 916 P.2d 539 (Colo. App. 1995).

5. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings at the time of the injury. In order for a particular payment to be considered "wages" it must have a "reasonable, present-day, cash equivalent value," and the claimant must have access to the benefit on a day-to-day basis, or an immediate expectation of interest in receiving the benefit under appropriate, reasonable circumstances. *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

6. Section 8-40-201(19)(a), C.R.S., defines wage as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of injury." Section 8-40-201(19)(b), C.R.S., provides that "wages" shall include the value of certain fringe benefits including health insurance, and the reasonable value of board, rent, housing, and lodging. However, it also states that wages, "shall not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19)."

7. In *Meeker v. Provenant Health Partners*, 929 P.2d 26, the Colorado Court of Appeals developed a test for whether an employer-paid benefit is a wage or enumerated fringe benefit. *Meeker* held that an employer-paid benefit constitutes wages if it has a "reasonable, present-day, cash equivalent value," and the employee has access to the benefit on a "reasonable day-to-day basis," or has "an immediate expectation of interest in receiving the benefit under appropriate, reasonable circumstances." *Id.*

8. In *Dan Yex v. ABC Supply Company and Ace/ESIS Insurance*, W.C. No. 4-910-373 (May 16, 2014), ICAP relied on the *Meeker* case, and its progeny *Orrell v. Coors Porcelain*, WC No. 4-251-934 (May 22, 2997), and determined that an employee's bonus earned during the employer's busy season was properly excluded from the AWW. The claimant in *Yex* had injured his back in December 2012 and asserted he received a bonus in April 2012. The ALJ found the employees were awarded bonuses if their branch showed a profit in the previous calendar year. Some years resulted in a bonus and others did not. Under *Meeker*, the ALJ reasoned that the bonus did not have a present day cash

equivalent value, the claimant did not have access to the proceeds of the bonus on a day to day basis, and did not have an immediate expectation of receiving the bonus. The bonus was appropriately identified as a fringe benefit not included in the calculation of wages.

9. As found, the claimant was paid fringe benefits in the form of “Incentive”, “Bonus”, and “Safety” as these payments were not paid every year, and when paid would vary in amount.

10. As found, the “Annual Incentive” was also a fringe benefit. As found, although the claimant received the Annual Incentive each year, that amount varied from year to year.

11. As found, the claimant did not have access to those amounts on a day-to-day basis, or an immediate expectation of receiving the benefit under appropriate, reasonable circumstances. However, with regard to the annual payments for a Christmas bonus and clothing allowance, the claimant did have an immediate expectation of receiving the benefit under appropriate, reasonable circumstances. As found, the AWW for this claim shall be $1,393.94.

ORDER

It is therefore ordered:

1. The claimant’s AWW for this claim shall be $1,393.94.

2. As noted above, this order shall be applied to the calculation of TTD benefits from January 18, 2020 through May 25, 2020.

3. Any additional TTD benefits which may be found to be due beginning May 26, 2020, would be assessed utilizing the new AWW of $1,393.94, once the current appeals have been exhausted on that prior matter.

4. The respondents shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined here are reserved for future determination.

Dated this 16th day of June 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove she suffered a compensable injury on October 17, 2019?

  If Claimant proved a compensable injury, the following issues will be addressed:

- Medical benefits.
- Average weekly wage.
- Two weeks of temporary total disability benefits.

FINDINGS OF FACT

1. Claimant has worked as a sales representative in Employer's call center for almost seven years. Her job primarily entails speaking with customers and potential customers by telephone.

2. Claimant's medical history incudes allergies to sulfa drugs. She also has a documented history of sinus congestion, cough, post-nasal drip, and sore throat.

3. At some point, Claimant conflated her allergy to sulfa drugs with an allergy to the element sulfur. For years, Claimant has experienced recurrent episodes of hoarseness, voice loss, headaches, and breathing difficulty she attributes to strong odors, sulfur smells, fireworks, match smoke, and wine sulfur exposure. She has this "reaction" multiple times per year and "deduced" they are triggered by "substances with sulfur."

4. Claimant also has reactions to asphalt paving operations.

5. On May 8, 2018, she sought treatment at Urgent Care for congestion, cough, itchy throat, and dyspnea she attributed to an "allergic reaction." She stated, "she took a walk around 11 am and there was construction going on. Pt believes she may have inhaled something in the air. . . . Last year she had pneumonia after exposure to match smoke, the sulfur smell."

6. Similarly, on April 18, 2019, Claimant went to Urgent Care for sinus congestion, cough, and difficulty breathing she believed was triggered by an "allergic reaction." Claimant reported, "She is very allergic to sulfa. . . . They are paving at her work and she walked to her car and thinks there was a sulfa component in the air. States she started coughing a lot."

7. Claimant was evaluated by an allergy specialist, Dr. Mark Ebadi on May 2, 2019, to investigate her complaints of recurrent laryngitis, hoarseness, and sudden onset dyspnea triggered by "strong odors, sulfur smells, and smoke." The testing was "totally

negative" for all environmental allergens. Dr. Ebadi opined, ["Claimant's] laryngitis is most likely due to postnasal drainage and frequent and forceful throat clearing. GERD may also be a contributing factor. Her clinical history is also highly suggestive of vocal cord dysfunction – her episodes of dyspnea occur sporadically, often triggered by strong smells, and are characterized by throat tightening, hoarseness, and inspiratory dyspnea when they do occur."

8. On May 13, 2019, Claimant's PCP, Dr. Kimberly Winter, documented, "[Claimant] is here to review short-term disability paperwork. She has missed a significant amount of work due to allergic reaction to the sulfur used in the paving of the parking lot at her work. She has a sulfa allergy and had tried to not be at work that day but the work was done a day earlier than planned. She immediately started having trouble breathing." Physical examination revealed no abnormality besides a slightly hoarse voice.

9. Claimant saw Dr. Winter for another such incident in August 2019.

10. Claimant usually works at Employer's call center in Golden, Colorado. The parking lot at the call center was being re-surfaced on October 17, 2019. Not wishing to cause potential distress or discomfort to a long-term employee, Claimant's manager recommended she work at Employer's alternate facility in downtown Denver the rest of the week.

11. During her lunch break on October 17, Claimant left the office building to locate the light rail station for her daily commutes the rest of the week. She walked around the corner of the building and discovered a street paving operation underway. She briefly smelled asphalt, covered her mouth, and quickly retreated inside. Claimant felt "tightening" in her throat and had difficulty breathing.

12. Claimant testified she left work and went to Urgent Care "the same day." However, her timeline is not supported by the medical records, which show she was seen at AFC Urgent Care the next day (October 18, 2019). Her chief complaint was "Allergic reaction [Onset 1 day(s)]." The physical examination showed no abnormalities. Notably, the oropharyngeal examination was entirely normal, including the posterior pharynx. No lung or breathing abnormalities were appreciated. The provider documented "no throat swelling or voice changes. No mucous membrane involvement. No wheezing. No angioedema." Claimant was given a nonspecific diagnosis of "allergic reaction" and prescribed prednisone.

13. Claimant saw Dr. Winter on October 23, 2019 for "another episode of voice hoarseness caused by breathing reaction to sulfur and asphalt." The examination was normal except some erythema in the posterior oropharynx. Dr. Winter assessed, "recurrent reaction to chemical substance, the sulfur in asphalt. This causes vocal cord dysfunction." She took Claimant off work for an unspecified time. Claimant testified she missed approximately two weeks from work.

14. Claimant saw Dr. Elizabeth George and Dr. Brian Modena at National Jewish Health on January 10, 2020. She reported a lengthy history of reactions to items

“including fireworks, hot asphalt, red wine, matches (she deduced this was substances with sulfur). . . . The reaction is characterized by rhinorrhea, loss of voice, coughing, shortness of breath which has progressed to throat closure more recently, she describes this as a ‘lung pain’ or her ‘lungs were on fire.’” Claimant’s voice was “mildly hoarse” but examination of her oral cavity and pharynx were normal with no inflammation, edema, exudate, or lesions. Dr. George and Modena opined, “She likely has some susceptibility to inflammation of the pharynx and vocal cords which is likely driven by a combination of gastroesophageal reflux, postnasal drip, and overuse.” They further opined, “We suspect there may still be a component of VCD given her constellation of symptoms secondary to strong odors with residual hoarseness which points to involvement of vocal cords.” Claimant was not diagnosed with any allergic condition.

15. Dr. Jeffrey Schwartz, a pulmonologist, performed an IME for Respondents on April 22, 2020. He also testified at hearing to elaborate on the opinions expressed in his report. Dr. Schwartz explained an “allergy” is an immunologic reaction to an organic substance. One cannot have an “allergy” to sulfur because sulfur is an inorganic element. Some individuals (including Claimant) can have allergic reactions to sulfonamide, an antibiotic commonly called sulfa. Although sulfonamide contains a sulfur molecule, the allergic reaction is not caused by the sulfur. Dr. Schwartz opined there is no evidence to suggest Claimant had an allergic reaction to asphalt fumes and there is no pathophysiological basis to conclude Claimant’s reported lung symptoms are related to asphalt exposure. Dr. Schwartz agreed asphalt fumes can cause irritations to the skin or lungs if inhaled directly, but these reactions typically occur among road crew workers with prolonged and repeated exposure to asphalt. It is not plausible for a reaction to occur from brief exposures such as those described by Claimant. Dr. Schwartz opined Claimant’s subjective complaints of throat swelling are not supported by objective evidence, and pointed to normal upper airway examinations on October 18 and October 23, 2019. Dr. Schwartz opined the symptoms reported by Claimant have no physiologic basis and are most commonly psychogenic. Ultimately, Dr. Schwartz concluded the symptoms Claimant experienced in October 2019 were unrelated to exposure to asphalt fumes or any other work-related cause.

16. Dr. Schwartz’s opinions and conclusions are credible and persuasive.

17. Claimant failed to prove she suffered a compensable injury arising out of and in the course of her employment.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The mere fact an employee experiences symptoms at or after work does not automatically establish a compensable injury. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008); *Garamella v. Paul’s Creekside Grill, Inc.*, W.C. No. 4-519-141 (March 6, 2002). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A claimant need not provide expert medical opinion evidence and can support a claim by any competent evidence. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983).

The existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove she suffered a compensable injury on October 17, 2019. By her own account, Claimant immediately turned around once she saw the paving operation and went back inside the office building. There is no persuasive evidence of any biologically plausible mechanism whereby such a fleeting exposure to asphalt fumes would proximately cause a need for medical treatment or disability. Dr. Schwartz's causation opinions and conclusions are credible and persuasive. Claimant suffered no physical injury to her vocal cords or respiratory system because of the asphalt fumes.

At most, Claimant's symptoms reflect an idiosyncratic psychological response to an otherwise non-injurious stimulus. But Claimant has not presented her claim as one based on mental impairment, and, in any event, there is no persuasive evidence she satisfies the requirements of § 8-41-301(2) and (3) regarding mental impairment claims. She did not prove she experienced a psychologically traumatic event generally outside her usual work experience that would evoke significant symptoms of distress in a worker in similar circumstances. *E.g., Granados v. Comcast Corporation*, W.C. No. 4-724-768 (February 19, 2010). Nor does she satisfy § 8-41-302(1), because the "hazard" allegedly triggering her emotional reaction (asphalt paving) is far more common outside her employment than inside a call center.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 16, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-096-055-003

ISSUES

The issues set for determination included:

- Did Claimant prove by a preponderance of the evidence that she sustained a compensable injury on December 11, 2018?

- If Claimant has proven by a preponderance of the evidence that she sustained a compensable injury, has she also proven by a preponderance of the evidence that she is entitled to TTD benefits?

- Is Claimant entitled to medical benefits to cure and relieve the effects of her December 11, 2018 injury?

- What was Claimant's average weekly wage ("AWW").

PROCEDURAL POSTURE

After the hearing, Claimant filed a Motion for an Adverse Inference Based on Spoliation of Evidence and to Reopen the Record if Necessary on March 16, 2020. Respondent opposed said Motion and denied spoliation of evidence occurred in this instance, filing the Response to the Motion on March 30, 2020. The ALJ concluded said Motion was moot, as it is unnecessary to decide the compensability and benefits issues before the Court.

The undersigned issued a Summary Order on April 12, 2021. Respondent filed a timely Request for Specific Findings of Fact and Conclusions of Law on April 19, 2021. Claimant filed timely proposed Amended Findings of Fact, Conclusions of Law and Order on April 26, 2021. Respondent filed an Objection to Claimant's Amended Findings of Fact, Conclusions of Law and Order on May 3, 2021.

On or about May 4, 2021, Claimant filed a Motion to Strike Respondent's Objection to Claimant's proposed Amended Findings of Fact, Conclusions of Law and Order. Respondents filed a "Response to the Motion to Strike on May 13, 2021. That Motion is granted because the Summary Order set a deadline of five (5) working days for submissions of revised proposed orders and any objection. Respondent's submission was untimely and stricken.

FINDINGS OF FACT

1. Claimant worked as a cashier for Employer for a little more than thirteen years.

2. Claimant‘s medical history was significant for a right elbow injury which occurred approximately 7-8 years ago. She also injured her right shoulder approximately 10 years ago. There was no evidence Claimant had residual problems/work restrictions related to these injuries. She did not require treatment for her shoulder or elbow in the year before December 2018.

3. Claimant treated at St. Anthony's North Family Med. Ctr. for head and neck pain in 2014-15 following a motor vehicle accident, as well as for migraine headaches in 2017-18. Claimant had a fall in July 2018 and treated for right knee and right-sided pain (one time). There was no evidence in the form of medical records admitted at hearing that Claimant required treatment for cervical/thoracic spine in the year before December 11, 2018.

4. There was evidence admitted at hearing that Claimant was subject to disciplinary action while working for Employer. This evidence included write-ups. The ALJ declined to conclude that this was motive for Claimant to claim an injury on December 11, 2018, if one did not occur.

5. Claimant testified she was off work in 2018 for approximately four (4) months for treatment of a non-work injury to her left ankle, which required surgery. The ALJ found this impacted Claimant's earnings. From September 3, 2018 – December 9, 2018, Claimant earned a total of $15,515.05 in the weeks prior to her injury.[1] Claimant's AWW for this 14 weeks was $1,108.22.

6. On December 11, 2018, Claimant sustained an injury while she was folding clothes. [Claimant Redacted] took a lunch break that day from 4:24pm–4:45pm. She then worked in the clothes department to straighten out the clothing because the cashier area was not that busy. Claimant testified the injury occurred when she reached over to grab an Eddie Bauer fleece to put in a basket. She said she felt pain all the way down her right side, from her shoulder to her back. Claimant described the pain as "substantial" and said it felt like she pulled something. There was no one in her immediate vicinity. The ALJ found Claimant was credible when describing the injury.

7. Claimant testified she was not able to move as quickly after she was hurt. Claimant reported the injury 10-15 minutes later to Michelle O'Connor, who was a front-end supervisor for Employer and also told two cashiers with whom she worked ([Names Redacted]). Claimant estimated the time of the injury to be about 6:15 p.m.[2]

8. After taking a break, Claimant worked as a cashier assistant and cashier. This was depicted on the video. The ALJ reviewed the video, which corroborated Claimant's description of what she was doing that evening. Claimant testified she met

[1] Exhibit 10.

[2] Hearing Transcript ("Hrg. Tr.") p. 25:3-4.

with the manager, Joyce, who completed the incident report.[3] Claimant completed her shift at 9:00 p.m.

9. There were video cameras in the area where Claimant was injured. These were within the exclusive control of Employer. P[Redacted] testified as a representative of Employer with regard to the video recording system. He is an Assistant General Manager. Assistant General Managers, as well as General Managers have access to the video. P[Redacted] said the video is stored on the server for 90 days and can be downloaded. Mr. P[Redacted] was contacted by the corporate office to find the video on which Claimant appeared. Mr. P[Redacted] testified he reviewed the camera feeds for Claimant's date of injury; a process which took two days.

10. There were fourteen cameras in the warehouse on December 11, 2018, three were focused on the area where Claimant was folding clothes. Mr. P[Redacted] testified he went back 15-20 minutes before the time of the injury. There was not a continuous video of Claimant working her entire shift that day, as there were times she went out of the picture. Mr. P[Redacted] copied those portions of the recording onto a file. Mr. P[Redacted] confirmed there was no video for the period 6:18 to 6:53 p.m.[4]

11. Mr. P[Redacted] admitted on cross-examination there were areas of the floor not covered by video and it was conceivable that something could happen and not be shown on the video. In addition, he was unsure where the Eddie Bauer fleeces were located on December 11, 2018.

12. The ALJ found Employer had exclusive control over the cameras and resulting video recordings on December 11, 2018.[5]

13. Claimant was treated at Concentra, the ATP for Employer and was evaluated by Darla Draper, M.D. on December 13, 2018. At that time, Claimant had pain in the right shoulder/upper arm, back and neck. Claimant's pain diagram specified the pain ran down her right side, including the mid to lower back.

14. Dr. Draper's diagnoses were: strain of muscle, fascia tendon at neck, shoulder/upper arm; strain of muscle and tendon of unspecified wall thorax. Dr. Draper issued work restrictions, including no use of the right upper extremity. Claimant was allowed to lift and push/pull up to 20 pounds occasionally up to three hours per day, but was restricted from reaching above shoulder level.

[3] Exhibit 1.

[4] This refers to the actual time. The video timestamp was actually one hour behind.

[5] As noted, *supra*, the ALJ concluded that Claimant's Motion for an Adverse Evidentiary Inference Based On Spoliation and to Reopen the Record If Necessary was moot, as it was not necessary to determine the issue of compensability. However, to the extent Employer failed to preserve relevant portions of the video that it knew or should have known were relevant and these were not maintained/preserved, Claimant would have been entitled to such an inference. *Aloi v. Union Pacific*, 129 P. 3d 999, 1002 (Colo. 2006)

15. Claimant returned to Concentra on December 27, 2018 and January 7, 2019 and was evaluated by Dr. Draper and Diana Halat, NP, respectively. Claimant‘s pain complaints remained consistent and she was prescribed physical therapy (“PT“), chiropractic treatment, acupuncture and an N wave unit. Claimant’s work restrictions were continued at those appointments.

16. Dr. Draper evaluated Claimant on January 21, 2019. Dr. Draper‘s assessment was right shoulder strain; strain of upper arm, right; thoracic myofascial strain; allergic reaction; cervical strain. Claimant’s restriction of no use of right upper extremity was in place through the January 21, 2019 appointment. Claimant’s other restrictions included: lift and push/pull up to 20 pounds occasionally up to three hours per day, but was restricted from reaching above shoulder level. Claimant was to sit 50% of the day. Dr. Draper referred Claimant to John Sacha, M.D. The ALJ inferred Dr. Draper was of the opinion Claimant required additional treatment for her work injury at the time she referred Claimant to Dr. Sacha.

17. On January 23, 2019, Claimant was evaluated by Dr. Sacha. She reported pain with right anterosuperior and posterior shoulder, worse with overhead activity. Claimant also said she had mild radiating pain when the shoulder pain was bad, which extended down to the right buttock. The right shoulder was positive for pain on the right, with diminished range of motion (“ROM”) with internal rotation. Crepitus was noted in the right shoulder. The ALJ found this was objective evidence of physiology present in the right shoulder. Dr. Sacha‘s impression was: rotator cuff tendinitis, rule out full–thickness tear; secondary myofascial pain. Dr. Sacha recommended a right MRI arthrogram of the shoulder.

18. On February 12, 2019, Claimant underwent an open MRI of the right shoulder. The films were read by Stephen Abrams, M.D., whose impression was: no evidence for full-thickness rotator cuff tear; no evidence for labral tear; focal thickening and increased signal within the distal/anterior supraspinatus tendon. This most likely represented tendinopathy/tendinosis or partial intrasubstance tearing. Trace amount of fluid in the subacromial/subdeltoid bursa was likely related to subacromial bursitis.

19. Claimant returned to Dr. Sacha on February 19, 2019. At that time, he reviewed the MRI of the shoulder, which showed supraspinatus tendinitis. Dr. Sacha could not rule out a very small partial tear, but no full-thickness tear was present. Dr. Sacha‘s impression was: shoulder impingement. He recommended treatment which included ultrasound-guided right shoulder injection scheduled for later this week. Claimant was to continue with chiropractic treatments and acupuncture. Claimant‘s work restrictions were continued.

20. Dr. Sacha reevaluated Claimant on March 11, 2019. He noted mild tenderness over the trapezius and cervical paraspinal muscles, as well as an equivocal Spurling test. Dr. Sacha‘s impression was: shoulder impingement; secondary myofascial pain. He referred Claimant to Mark Failinger, M.D. and based upon this referral, the ALJ inferred Dr. Sacha believed Claimant required treatment. Claimant

was okayed for full duty. Dr. Sacha did not conclusively state Claimant was at MMI and no WCM 164 was completed by him to that effect.

21. Claimant testified she tried returning to work after Dr. Sacha released her to full duty and completed a partial shift. Dr. Draper reinstated restrictions and she has not been offered modified duty by Employer. The ALJ determined Claimant could not perform her regular job duties with the restrictions issued by Dr. Draper.

22. The attending physician, Dr. Draper, did not release Claimant to return to work through March 13, 2019. Dr. Draper evaluated Claimant on March 13, 2019. Dr. Draper referenced Dr. Sacha's March 11, 2019 report and noted Claimant was 25% of the way toward meeting the physical requirements of her job. Dr. Draper's assessment was: right shoulder strain; strain of upper arm and the work restrictions were continued.

23. On March 21, 2019, Dr. Failinger re-evaluated Claimant. On examination, Dr. Failinger noted discomfort on the right side of Claimant's neck, as well as some decreased turning to the right. His impression was: right entire neck, shoulder girdle, back and buttocks pain. Dr. Failinger stated he could not explain this type of injury, as there was "no injury just reaching out, with no lifting and no slip and fall". He could not explain the pain, which she described as diffuse.

24. Claimant received PT at Concentra from December 17, 2018 through March 18, 2019. She also received PT at Concentra Advanced Specialties from March 22, 2019, through July 22, 2019. The records showed Claimant received multiple modalities of treatment at these facilities, with some improvement.

25. When Dr. Failinger saw Claimant again on March 28th, he reviewed the MRI films, which he described as poor quality. He ordered a repeat MRI and the inference derived by the ALJ was that Dr. Failinger wanted to determine whether there were objective bases for Claimant's pain complaints.

26. On April 3, 2018, Claimant returned to Dr. Draper, who noted the repeat MRI was ordered by Dr. Failinger because of the poor quality of the first MRI. Dr. Draper's assessment was the same as the March 13 and 27, 2019 evaluations and Claimant continued to have work restrictions.

27. Dr. Sacha evaluated Claimant on April 8, 2019.[6] At that time, she had complaints of shoulder pain on the right side, right low back and buttocks pain, right periscapular pain and right arm pain. The neck pain was noted to have resolved. Dr. Sacha said Claimant had pain behaviors, but found pain with Hawkins and Neer testing. Tenderness was also noted over the trapezius, but no cervical paraspinal spasm was present.

28. Dr. Sacha's impression was: shoulder strain; non-physiologic presentation; expanded complaints. Dr. Sacha recommended MMI, case closure and

[6] This report was admitted as Exhibit B, pp. 21-22.

impairment rating. He found Claimant was at MMI as of the date of evaluation, with no work restrictions. Claimant was to follow-up with Dr. Failinger after the repeat MRI, if this could be done as maintenance. Dr. Sacha assigned a 3% upper extremity impairment, which converted to a 2% whole person impairment. The ALJ noted no WCM 164 was completed by Dr. Sacha.

29. There is no evidence in the record Claimant returned to Dr. Sacha after April 8, 2019.

30. On April 17, 2019, Claimant was reevaluated by Dr. Draper. Dr. Draper referenced Dr. Sacha's April 8, 2019 report. On examination, Claimant had tenderness in the subacromial bursa, with limited ROM in all planes. Dr. Draper's assessment was: right shoulder strain; strain of upper arm, thoracic myofascial strain; and cervical strain. A lidocaine patch was prescribed by Dr. Draper and Claimant was given a referral to a massage therapist, as well as a referral to Dr. McCranie for a second opinion.[7] Dr. Draper returned Claimant to full work/activity as of this appointment. Dr. Draper estimated the date of MMI as April 28, 2019.

31. Claimant returned to Dr. Failinger on April 18, 2019. At that time, she identified her worst symptoms as in her back, right buttock and mid-back, as her shoulder was not bothering her as much. Dr. Failinger administered an injection at this time. Dr. Failinger made no findings with regard to MMI. The ALJ inferred Dr. Failinger administered was the injection to cure and relieve the effects of Claimant's continuing symptoms. Claimant testified the second injection administered by Dr. Failinger helped her symptoms.[8]

32. One day later, on April 19, 2019, Dr. Draper saw Claimant, and stated she was off for the rest of her shift. Dr. Draper reimposed work restrictions, including no use of the right upper extremity and no reaching above the right shoulder. Claimant was allowed to lift and push/pull up to 20 pounds occasionally up to three hours per day. Claimant was to sit 50% of the time, change position as needed and limit standing to 30 minutes at a time.

33. Claimant underwent a closed right shoulder MRI on April 25, 2019. The films were read by Brian Cox, M.D. Dr. Cox's impression was: moderate supraspinatus tendinosis; mild infraspinatus tendinosis; moderate tendinosis involving the biceps tendon; mild acromioclavicular degenerative joint disease with moderate subacromial bursa edema.

34. Claimant underwent an IME with Michael Striplin, M.D on April 25, 2019, at the request of Respondent. At that time, Claimant complained of ongoing pain in the right side of her neck that radiated to her right shoulder girdle, down the right side of her

[7] No report from Dr. McCrainie was admitted into evidence.

[8] Hrg. Tr. p. 37: 15-19.

back, to her right buttock. Dr. Striplin noted tenderness in the right upper extremity on examination.

35. Dr. Striplin opined that the diagnosis of the shoulder strain was not justified since a strain implied that there was force that was sufficient enough to stress the body part. Dr. Striplin believed there was not significant enough force involved to cause an injury on the date of injury, Dr. Striplin noted an MRI scan of the right shoulder showed tendinosis and tendinopathy with possible partial intrasubstance tearing of the supraspinatus tendon and subacromial bursitis. He opined the abnormalities noted on the MRI scan were consistent with Claimant's age.

36. In his evidentiary deposition, Dr. Stiplin testified that an acute traumatic event can aggravate an underlying degenerative condition, but he did not believe Claimant experienced a strain of any body part. He disagreed with all of Claimant's ATP-s. He also opined many of Claimant's symptoms were subjective, as opposed to objective signs of injury. Dr. Striplin said the mechanism of injury does not fit with the diagnosis of strain and did not fit with the distribution of her complaints now involving the low back and buttock. Symptoms to Claimant's cervical spine, right trapezius, right shoulder going down to her right buttock could not be summed up with a single diagnosis. There was no logical explanation as to why a diagnosis of impingement should cause pain in the buttock and down the leg. Dr. Striplin said there was no evidence and no reasonable basis, to believe Claimant strained any body part. The ALJ credited the opinions of Claimant's treating physicians who found Claimant required treatment because of the injury over those of Dr. Striplin.

37. Claimant returned to Dr. Failinger on May 2, 2019, at which time the MRI was reviewed. Cuff tendinosis was present, along with degenerative changes in the labrum, but there was no major tear. Dr. Failinger's impression was: back pain; right buttock pain; right shoulder girdle pain; and right neck pain. Dr. Failinger noted Claimant's pain pattern was fierily diffuse, but her shoulder picture was clearers. She had problems was with abduction, which was her biggest weakness. Dr. Failinger injected Claimant with cortisone for diagnostic and therapeutic purposes.

38. On May 8, 2019, Claimant was evaluated by Dr. Draper. On examination, tenderness was found in Claimant's superior and posterior shoulder. Dr. Draper's assessment was: right shoulder strain; strain of upper arm, thoracic myofascial strain; and cervical strain, and lumbosacral strain. Lumbosacral strain was a new diagnosis. Claimant's same work restrictions were continued.

39. Claimant received a COBRA notice for herself and her husband from Costco on June 17, 2019.[9] Claimant stated she was unable to keep their insurance coverage nor have they obtained any other health insurance since then.[10] The cost of

[9] Exhibit 11.

[10] Hrg. Tr. pp. 39:14-40:3.

COBRA, beginning June 17, 2019, adds an additional $364.27 to Claimant's average weekly wage, ($1,578.50 per month x 12 months / 52 weeks), totaling $1,472.49.

40. Claimant returned to Dr. Draper on June 26, 2019. At that time, Dr. Draper noted she was not working as her restrictions could not be accommodated and her pain complaints/symptoms remained unchanged. Claimant reported some relief with the injections. On examination, tenderness was found in the superior and posterior shoulder (right), as well as right lumbar spine. Dr. Draper's assessment was cervical strain; thoracic myofascial strain; right shoulder strain; strain of the upper arm, right; lumbosacral strain. Dr. Draper prescribed a lidocaine patch. Dr. Draper estimated the date of MMI as June 28, 2019.

41. Dr. Draper stated Claimant's restrictions were: lift and push/pull up to 20 pounds occasionally up to three hours per day, but was restricted from reaching above shoulder level, as well as no use of right upper extremity. Claimant was to sit 50% of the day and change position as needed. Claimant was to limit standing to 30 minutes at a time. The ALJ concluded the treatment provided by Dr. Draper to Claimant was to cure and relieve the effects of the work injury.

42. In a follow-up evaluation on October 18, 2019, Paula Pook, M.D. (ATP) at Concentra reiterated Claimant's diagnoses and continued the lifting and push/pull work restrictions. Dr. Pook did not find Claimant was at MMI.

43. Claimant suffered an injury arising out of and in the course of her employment.

44. The medical treatment Claimant received through October 18, 2019 was reasonable and necessary, as well as related to the December 11, 2018 injury.

45. The treatment provided by Drs. Draper, Sacha, and Failinger and their referrals were authorized, reasonable, and necessary.

46. Claimant had continuous work restrictions after December 11, 2018, except for March 11, 2019 (full-duty release) and April 17-18, 2019 (full-duty release). The ALJ concluded Claimant's wage loss was attributable to the December 11, 2018 injury.

47. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2019). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2019).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2018). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, Claimant's entitlement to benefits turned on her credibility, as well as that of the expert witnesses.

Compensability

Claimant had the burden of proof in this case. The question is whether Claimant met this burden and proved she was injured on December 11, 2018. Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, she was performing service arising out of and in the course of the employment and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S. (2019). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

In the case at bench, the ALJ was persuaded Claimant suffered a compensable sprain/strain injury to the cervical/thoracic spine and right upper extremity on December 11, 2018, as she was reached over to grab an Eddie Bauer fleece. (Finding of Fact 43). As determined in Findings of Fact 6-7, the injury occurred while Claimant was working for Employer. This injury included an aggravation of the underlying condition of the right upper extremity. Support for this decision was based, first, upon Claimant's description of what happened, including confirmation that she was performing those job duties at the time she stated her injury occurred. *Id.* The ALJ found Claimant to be credible and her description of what happened on December 11, 2018 was corroborated by what was depicted on the video. *Id.*

Second, the conclusion the Claimant suffered a compensable injury was supported by the medical records and evidence in the case. Specifically, the treatment records of Drs. Draper, Sacha and Failinger led the ALJ to conclude that she was injured. In this regard, the ALJ concluded from the Dr. Draper's treatment records that Claimant suffered a sprain/strain, which required treatment. Dr. Draper treated Claimant from December 13, 2018 through June 26, 2019. (Findings of Fact 13-16, 26, 30, 32, 38, 40-41). Dr. Sacha also treated Claimant on multiple occasions and the ALJ concluded this treatment and the referral to Dr. Failinger was evidence that Dr. Sacha believed the injury was work re-related. (Finding of Fact 20).[11] Claimant also received treatment from Dr. Failinger on multiple occasions to address the symptoms which were the result of the work injury. (Findings of Fact 23, 25, 37). The ALJ ultimately decided that Claimant's doctors continued to treat her for symptoms that they attributed to her work injury. In short, the records of the ATP-s provided direct and inferential evidence that Claimant's treating physicians found Claimant was injured while working and required treatment. *Id.*

The evidence revealed that the sprain/strain was superimposed on degenerative conditions present in her right shoulder, which was confirmed by the second MRI. (Finding of Fact 33). The MRI also reflected objective evidence that Claimant's shoulder was injured, as was the crepitus documented by Dr. Sacha. (Finding of Fact 17).

In reaching this conclusion, the ALJ considered Respondent‘s arguments that the injury was not directly shown on the video and Claimant had an injury history, as well as a discipline history with Employer. Respondent also argued that there was insufficient force to cause an injury. The ALJ concluded prior injuries and evidence of disciplinary action did not foreclose the possibility that Claimant was injured on December 11, 2018. (Finding of Fact 4). The ALJ also considered the conclusions from Dr. Striplin, including his expert testimony regarding whether Claimant could have been injured as she claimed. The ALJ credited the opinions of Claimant's ATP-s over those offered by Dr. Striplin. (Finding of Fact 36).

[11] Dr. Sacha concluded Claimant sustained a permanent medical impairment, which was further evidence that he believed the injury was work-related.

In short, the evidence cited by Respondent did not dispel the conclusion that it was more probable than not the Claimant was injured arising out of and in the course of her employment. Accordingly, Claimant is entitled to receive benefits under the Colorado Worker's Compensation Act.

Medical Benefits

Given the finding on the issue of compensability, the ALJ concluded Claimant proved she was entitled to medical benefits to cure and relieve the effects of his industrial injury, which are to be provided by Respondent. § 8-42-101(1)(a), C.R.S. (2019). The treatment provided by Drs. Draper, Sacha, and Failinger and their referrals, were authorized, reasonable, necessary. (Finding of Fact 45).

Respondent has argued, in effect, that Claimant did not require medical treatment other than maintenance after Dr. Sacha declared she was at MMI. As found, both Dr. Draper and Dr. Failinger provided treatment after April 8, 2019. This included PT, massage therapy and an injection. Neither of these physicians stated Claimant was at MMI. Based upon the evidence in the record, the ALJ found the treatment Claimant has received through October 18, 2019 was reasonable and necessary. (Finding of Fact 43). That does not foreclose Respondent from contesting treatment in the future, however. As the Panel noted in *Davis v. Little Pub Holdings, LLC,* W.C. No. 4-947-977-01 (ICAO June 17, 2015), this determination does not preclude Respondent from challenging the reasonableness, relatedness, and the necessity for any particular treatment in the future.

Average Weekly Wage

§ 8-42-102(2), C.R.S. (2019) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court's decision was one of fairness and Justice Plank stated:

> "The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage". *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant's AWW.

In the case at bar, Respondent argued Claimant received an extra bonus check on September 16, 2018 in the amount of $1,730.40 and she would not get those more often than every 6 months. Respondent asserted it was reasonable to consider the 26 weeks of wages with check dates from July 8, 2018 December 9, 2018, which totaled $24,685.71. Respondent calculated Claimant's AWW as follows: $24,685.71 divided by 26 equaled an AWW of $949.45.

The ALJ concluded Claimant's her earnings for 2018 reflected time off taken for surgery and would be less than Claimant's actual AWW. (Finding of Fact 5). Further, AWW encompasses the bonus Claimant received during this time. Accordingly, the ALJ concluded the fairest calculation of Claimant's AWW was to use the fourteen (14) weeks before her injury in which Claimant earned a total of $15,515.05. Using this period, the ALJ found Claimant's AWW was $1,108.22. *Id.*

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The ALJ determined Claimant sustained a wage loss as a result of her work injury. (Finding of Fact 46). She was entitled to TTD benefits, until such time as these were terminated. The evidence in the record established Claimant had work restrictions as determined by an ATP which were in place through October 2019, with the exception of a few days in April 2019. (Findings of Fact 27-32).

More specifically, Claimant‘s TTD claim is complicated by the fact that Dr. Sacha (an ATP) concluded she was at MMI as of April 8, 2019 and assigned a medical impairment rating. (Finding of Fact 27-29). Then, Dr. Draper returned Claimant to full duty on April 17, 2019 but did not find she was at MMI (even though she referenced Dr. Sacha's MMI determination in her report). (Finding of Fact 30). When Claimant returned to Dr. Draper on April 19, 2019, Dr. Draper reimposed work restrictions. (Finding of Fact 32). Dr. Draper kept Claimant's work restrictions in place after that. (Findings of Fact 38, 40). There was no evidence in the record that Claimant was returned to full duty by an ATP, or was found to be at MMI after that. Given this evidence, the ALJ concluded Claimant was entitled to TTD following her industrial injury, except for the time in April 2019 when she had been returned to full duty.

ORDER

It is therefore ordered:

1. Claimant's Motion for an Adverse Evidentiary Inference Based On Spoliation and to Reopen the Record If Necessary is denied, as moot.

2. Claimant's Motion to Strike Respondent's Objection, as untimely is granted. Respondent's Objection is stricken.

3. Claimant met her burden of proof and proved she suffered an injury on December 11, 2018.

4. Respondent shall pay for Claimant's medical benefits (pursuant to the Colorado Workers' Compensation Fee Schedule) to cure and relieve the effects of her injury. This includes the treatment provided Drs. Draper, Sacha, and Failinger and their referrals, which are authorized, reasonable, necessary and related to the work injury.

5. Claimant's AWW was $1,108.22 with TTD rate $738.81 from December 12, 2018 – June 16, 2019. From June 17, 2019, and continuing, Claimant's AWW is $1,522.45 [because of COBRA], with a corresponding TTD rate of $981.66.

6. Respondent shall pay Claimant TTD at the applicable TTD rates set forth in the preceding from December 15, 2018 and continuing, except for the following period: April 8-18, 2019.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether EMPLOYER A[REDACTED], LLC has demonstrated, by a preponderance of the evidence, that on August 31, 2018, the claimant was an independent contractor pursuant to Section 8-40-202(2), C.R.S.

2. Whether Employer B[Redacted] Homes, LLC and/or Jared K[Redacted] have demonstrated, by a preponderance of the evidence, that on August 31, 2018, the claimant was an independent contractor pursuant to Section 8-40-202(2), C.R.S.

3. Whether EMPLOYER C[REDACTED] Development, Inc. and have demonstrated, by a preponderance of the evidence, that on August 31, 2018, the claimant was an independent contractor pursuant to Section 8-40-202(2), C.R.S.

4. If the claimant is deemed an employee of any respondent, whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment on August 31, 2018.

5. The parties have stipulated that if the claimant is deemed an employee of any respondent, the medical treatment the claimant received at Denver Health following the August 31, 2018 incident is reasonable, necessary, and related medical treatment.

6. The parties have also agreed to reserve the endorsed issues of temporary total disability (TTD) benefits and temporary partial disability (TPD) for future determination, if necessary.

FINDINGS OF FACT

1. This matter involves a number of potential employers of the claimant and conflicting testimony regarding those relationships. The ALJ has considered all evidence and testimony presented at the hearing and makes the following findings of fact.

2. Robert K[Redacted] has management and ownership interests in Employer C[Redacted], Inc.[1] ([Redacted]). On August 31, 2018, EMPLOYER C[REDACTED] had workers' compensation coverage through INSURER C[Redacted].

3. Jared K[Redacted] has management and ownership interests in Employer B[Redacted] Homes, Inc. (Employer B[Redacted]). On August 31, 2018, Employer B[Redacted] did not have workers' compensation coverage.

[1] Documents entered into evidence indicate that KED Development, Inc. does business as KED Builders. For continuity, the ALJ uses the KED Development, Inc. or KED throughout this order.

4. Robert K[Redacted] is Jared K[Redacted]'s father. After working many years with his father, Jared K[Redacted] established Employer B[Redacted] Homes, Inc. as a construction company.

5. EMPLOYER A[REDACTED] owns property located at [Address redacted], Colorado. On November 1, 2017, EMPLOYER A[REDACTED] entered into a General Contractor Agreement with Employer B[Redacted] Homes to build a duplex on that property. In this order, the construction project at [Address redacted], Colorado. will be referred to as "the Columbine project".

6. At no time did EMPLOYER A[REDACTED] have any interaction with the claimant.

7. As the general contractor, Employer B[Redacted] contracted with EMPLOYER C[REDACTED] as a subcontractor to complete framing and siding on the Columbine project.

8. The claimant has training as a roofer. For many years, the claimant worked with his father and brother in the family roofing company. From 2007 until 2017, the claimant and his brother operated the family roofing business. On September 13, 2017, the claimant filed Articles of Organization for his company Employer D[Redacted]. Although the claimant is a skilled roofer, he performs other construction work while working as EMPLOYER D[REDACTED].

9. The claimant has a work truck for EMPLOYER D[REDACTED]. In addition, he has hats and shirts that bear his company's logo that he wears at all of his job sites. The claimant wore these EMPLOYER D[REDACTED] clothing items while performing work on the Columbine project. The claimant has an email address specifically for EMPLOYER D[REDACTED].

10. The claimant has his own tools that he uses to perform his work through EMPLOYER D[REDACTED]. These tools include items such as rollers, knives, shovels, brooms, vacuums, hand tools (such as hammers and drills), hoses, and a backpack type leaf blower.

11. The claimant provides invoices to his customers for the work he performs. Those invoices are issued by EMPLOYER D[REDACTED]. Customers pay the claimant in the business name. Invoices entered into evidence show that the claimant was performing work as EMPLOYER D[REDACTED] throughout the spring and summer of 2018. The type of work the claimant billed for varied greatly. Those invoices include work such as: roof repair; material pick up; bending a drip cap; installing an ice and water shield; pick-up and installation of signs; dryer vent clean-out; construction, staining, and painting of patio furniture; fence installation; gutter clean-out; roof repair and dry-in; installation of shingles and metal flashing; a roof tear-off and dry-in; roof removal and dry-in; chimney cap fabrication and installation; picking up a sign, digging a hole, and installing a sign; a total ridge replacement; chimney area repair; and bending and installation of a metal drip cap.

12. The invoices from the spring and summer of 2018 also vary in the hourly rate the claimant charged his customers. These invoices reflect “man hours” billed at $50.00 per hour; $55.00 per hour; $60.00 per hour; and $70.00 per hour. In addition, on July 13, 2018, EMPLOYER D[REDACTED] invoiced RMC, LLC for materials.

13. The claimant has a bank account in the name of EMPLOYER D[REDACTED]. The claimant deposits customer payments into that account. The claimant also uses that account to pay various company expenses including materials for jobs, fuel for his work vehicle, and his cellphone.

14. The claimant came to work on the Columbine project after he ran into Robert KRedacted] at a roofing supply company. After that initial discussion, the claimant met with Jared KRedacted] and Robert KRedacted] to discuss his work on the Columbine project. At that meeting, it was discussed that the claimant was willing to perform work at the Columbine project for $30.00 per hour, if he was paid in cash. If he was not paid in cash, the claimant agreed to work for $60.00 per hour, plus materials and “run it through [EMPLOYER D[REDACTED]]”.

15. The parties agreed that the claimant would be paid the $60.00 per hour, plus materials. The claimant was initially assigned to work on sealing the garage floors. This was agreeable because there was living space below the garages. Therefore, the claimant’s expertise as a roofer was ideal for completing the garage floors (which was the ceiling of the living space). The claimant also agreed to help with siding, clean-up, or any other task available to him at the Columbine project.

16. The claimant was to provide invoices to EMPLOYER C[REDACTED] for his hours and materials. It was understood between Robert K[Redacted] and Jared K[Redacted] that EMPLOYER C[REDACTED] would then bill Employer B[Redacted] Homes for the claimant’s invoices.

17. The claimant was not restricted from working for other customers while working at the Columbine project. The claimant was able to come and go at the Columbine project based on his needs and other projects.

18. While completing the garage floors at the Columbine project, the claimant utilized his own tools. He provided some of his own materials and on August 22, 2018, EMPLOYER D[REDACTED] issued an invoice to EMPLOYER C[REDACTED] for $1,700.00 for materials related to cutting and bending a metal drip cap.

19. After the claimant completed the garage floor work at the Columbine project, the claimant began working on the duplex roof. During the roofing aspect of the Columbine project, Robert K[Redacted] also worked on the roof. While working on the roof in this manner, the claimant continued to use his own tools. When the claimant’s work on the roof began, there was no discussion regarding the claimant’s pay arrangement. The ALJ is persuaded that the parties understood that the claimant would work on the roof at the agreed rate of $60.00 per hour, plus materials.

20. On August 29, 2018, EMPLOYER D[REDACTED] issued an invoice to EMPLOYER C[REDACTED] for 63 man hours (at $60.00 per hour) and $1,755.16 for materials. The time billed on that invoice was as follows:

3 hours on Thursday, August 16;
12.5 hours on Saturday, August 18;
10.75 hour on Monday, August 20;
3.75 hours on Tuesday, August 21;
7.75 hours on Wednesday, August 22;
12.5 hours on Thursday, August 23;
6.75 hours on Friday, August 24; and
6 hours on Saturday, August 8/25.

21. On August 21, 2018, EMPLOYER C[REDACTED] paid the claimant $1,700.00 for materials. As of the date of the hearing, the claimant has not been paid any other amount for his Columbine project invoices.

22. Due to a delay in receiving materials, in late August 2018, the roofing work at the Columbine project was not completed. On August 30, 2018, Jared K[Redacted] was in the process of locating a water main to run a water line on the Columbine project. This was done by digging a trench from the road toward the location of the connection to the duplex.

23. As the claimant was unable to continue working on the roof, he agreed to help Jared K[Redacted] with the trench project. As noted above, the parties understood that the claimant was willing to perform different work at the Columbine project. When this work in the trench began, there was no discussion regarding the claimant's pay arrangement. The ALJ is persuaded that the parties understood that the claimant would work in the trench at the agreed rate of $60.00 per hour, plus materials.

24. Work on the trench continued on August 31, 2019. On that date, the claimant was in the trench with his own shovel. Jared K[Redacted] was operating a small excavator outside of the trench. The claimant utilized the shovel to locate any piping so that the excavator would not cause damage. While the parties were engaged in this activity on August 31, 2018, the trench collapsed and the claimant was buried.

25. Subsequently, the claimant was airlifted from the Vail area for medical treatment at Denver Health. The claimant suffered serious injuries from the trench cave-in. These injuries included multiple facial fractures, a skull fracture, and a pelvic fracture.

26. Following the August 31, 2018 incident, EMPLOYER D[REDACTED] began invoicing customers on November 30, 2018. Those invoices indicate that EMPLOYER D[REDACTED] continued to provide customers with a variety of services, including: snow shoveling; snow plowing; steel fabrication for steps; door fabrication and installation; rooftop snow removal; roofing repair and inspection work; fence and chimney repair; gutter cleaning and repair; tree light installation; freezer removal and disposal; flooring repair and installation; dishwasher disposal; mattress delivery; wood repairs; painting;

dryer vent cleaning; sprinkler blowout; lawn mowing and raking; tree installation; cabinet fabrication and staining; bike rack installation; and sod, mulch and rock installation.

27. The claimant credibly testified that he understood that while he was working at the Columbine project he was working as an independent contractor. As the ALJ understands the claimant's position, the claimant believes that once he began performing work on the roof and/or in the trench, he was no longer an independent contractor, rather an employee of some combination of the respondents in this case. Therefore, the claimant asserts that the injuries he sustained on August 31, 2018 from the trench cave-in should be compensable until the Colorado Workers' Compensation Act.

28. The ALJ finds that the respondents in this matter have successfully demonstrated that it is more likely than not that on August 31, 2018, the claimant was working as an independent contractor. The ALJ finds that while working at the Columbine project the claimant was free from the direction and control of the respondents and was customarily engaged in an independent business in the construction industry. The ALJ also finds that because the claimant was an independent contractor at the time of his injuries, those injuries are not compensable under the Colorado Workers' Compensation Act.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. “Employee” includes “every person in the service of any person, association of persons, firm or private corporation. . . under any contract of hire, express or implied.” Section 8-40-202(b), C.R.S.

5. Under Section 8-40-202(2)(a), C.R.S. “any individual who performs services for pay for another shall be deemed to be an employee” unless the person “is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed.”

6. The respondent has the burden of proving that the claimant was an independent contractor rather than an employee. Section 8-40-202(2)(b)(II), C.R.S., sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. See *Carpet Exchange of Denver, Inc. v. Industrial Claim Appeals Office*, 859 P.2d 278 (Colo. App. 1993). Those nine factors are whether the person for whom services are provided:

- required the individual to work exclusively for the person for whom services are performed; (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

- established a quality standard for the individual; (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

- paid a salary or hourly rate but rather a fixed or contract rate;

- may terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

- provided more than minimal training for the individual;

- provided tools or benefits to the individual; (except that materials and equipment may be supplied);

- dictated the time of performance; (except the completion schedule and range of mutually agreeable work hours may be established);

- paid the individual personally, instead of making checks payable to the trade or business name of the individual; and,

- combined their business operations in any way with the individual's business, or maintained such operations as separate and distinct.

7. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), C.R.S, provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in Section 8-40-202(2)(b)(II) in order to prove by a preponderance of the evidence that the individual is not an employee. *Nelson v. Industrial Claim Appeals Office*, 981 P.2d 210 (Colo. App. 1999).

8. In *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014) the Supreme Court revised the standard previously used to analyze whether or not an employee is customarily engaged in an independent trade or business. The previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court stated "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565. Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in Section 8-202(2)(b)(II), but also any other relevant factors. *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

9. The *Softrock* Court pointed to *Long View Systems Corp. v. Industrial Claim Appeals Office*, 197 P.3d 295 (Colo. App. 2008) in which the Panel was asked to consider whether the employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. See *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

10. The ALJ has considered the nine factors listed in Section 8-40-202(2)(b)(II), C.R.S. and the totality of the circumstances of the relationship of the parties and concludes that while working at the Columbine project the claimant was free from the direction and control of the respondents. In addition, the claimant was customarily engaged in an independent business in the construction industry.

11. The ALJ specifically notes that the claimant was not required to work exclusively at the Columbine project. As evidenced by his varied hours on the August 29, 2018 invoice to EMPLOYER C[REDACTED], the claimant worked at the Columbine project when it was convenient for him. The ALJ finds no persuasive evidence that any of the respondents established a quality standard for the claimant.

12. Although the claimant was paid an hourly rate, the rate of $60.00 per hour was negotiated by the claimant and he could “run it through” his business. In addition, $60.00 per hour is comparable to the amounts invoiced to other EMPLOYER D[REDACTED] customers in 2018. The respondents provided no training to the claimant. No tools were provided to the claimant. The claimant supplied some of his own materials and invoiced EMPLOYER C[REDACTED] for those materials. Payment was made to EMPLOYER D[REDACTED] and not to the claimant personally. The claimant did not combine his business operations with the respondents’ businesses. EMPLOYER D[REDACTED] was separate and distinct from the respondents’ business operations.

13. In addition, the claimant used a company vehicle, company bank account, wore shirts and hats with his business logo, and billed for his services through his company. The ALJ finds that all of these factors support a conclusion that the claimant was engaged in an independent trade or business as a construction contractor. As found, the ALJ concludes that the claimant performed all of his work at the Columbine project free from the direction and control of the respondents.

14. With regard to EMPLOYER A[REDACTED], the claimant had no interaction with that respondent. Therefore, the ALJ concludes that the claimant was not subject to any direction or control from EMPLOYER A[REDACTED], LLC.

15. With regard to EMPLOYER C[REDACTED], the claimant performed work at the job site and billed for his services. The ALJ finds that although the claimant worked with Robert K[Redacted] on the roofing project, there was no direction and control from EMPLOYER C[REDACTED] in the completion of the claimant’s work. The ALJ is not persuaded by the claimant’s assertion that due to his work in the roof his status somehow was converted from that of an independent contractor to an employee. Although the tasks the claimant performed changed, the claimant’s relationship with the respondents did not change when he started work on the roof. This is further supported by the agreement of the parties that the claimant would perform any type of work necessary at the Columbine project.

16. With regard to Employer B[Redacted] Homes and Jared K[Redacted], the ALJ concludes that the claimant was free from the direction and control of these respondents at the Columbine project. The ALJ is not persuaded by the claimant’s assertion that due to his work in the trench his status converted from that of an independent contractor to an employee. Although the task the claimant performed changed, the claimant’s relationship with the respondents did not change when he started work in the trench. This is further supported by the agreement of the parties that the claimant would perform any type of work necessary at the Columbine project.

17. For all of the foregoing reasons, the ALJ concludes that the claimant was working as an independent contractor at the time of his injury on August 31, 2018.

ORDER

It is therefore ordered that the claimant's workers' compensation claim related to an August 31, 2018 injury is denied and dismissed.

Dated this 17th day of June 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. WC 5-121-549 & 5-133-113-001

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an industrial injury or occupational disease to her left shoulder that began on September 4, 2019 during the course and scope of her employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that she suffered an industrial injury to her left shoulder on February 24, 2020 during the course and scope of her employment with Employer.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

FINDINGS OF FACT

1. Claimant works for Employer as a bus driver and trainer. Her job duties involve operating school buses and instructing other operators in safe driving practices.

2. Claimant testified that on September 4, 2019 she suffered the first of two left shoulder injuries as she lifted the hood of a bus at work. Claimant noted she did not have any left shoulder problems prior to the incident.

3. On September 18, 2019 Respondent completed a First Report of Injury. The document specified that Claimant was driving a bus and began to experience left shoulder pain when turning the steering wheel.

4. Employer referred Claimant to Midtown Medical for treatment. On September 18, 2019 Claimant visited Authorized Treating Physician (ATP) Kirk Holmboe, M.D. for an examination. Dr. Holmboe recounted that Claimant had been suffering left shoulder pain over the past few weeks that had recently increased. Claimant specifically noted that the pain worsened when she raised her arm and turned the steering wheel of her bus. She denied prior shoulder and neck problems, but had past intermittent paresthesias in the left hand. Dr. Holmboe diagnosed Claimant with left shoulder impingement. He recommended physical therapy and an MRI.

5. On October 22, 2019 Claimant underwent a left shoulder MRI. The imaging revealed a full-thickness tear of the supraspinatus tendon with mild rotator cuff tendinopathy, a large joint effusion and an attenuated biceps tendon.

6. On October 24, 2019 Carlos Cebrian, M.D. performed a records review of Claimant's claim. He considered Claimant's job description and the physical demands of her position. Dr. Cebrian remarked that Claimant attributed her left shoulder symptoms to

her work activities for Employer. She specifically noted the gradual onset of symptoms. Dr. Cebrian thus evaluated whether it was medically probable that Claimant's symptoms were related to a specific event or the cumulative effects of her work activities. He performed a causation analysis pursuant to the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Dr. Cebrian explained that, in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk factors.

7. Dr. Cebrian explained that left shoulder rotator cuff tendinosis with impingement was part of Claimant's differential diagnosis. He remarked that "[t]endinosis is damage to the tendon at the cellular level which describes chronic degeneration without inflammation." In defining Claimant's job duties, Dr. Cebrian compared the length and level of her work exposure to the normal population. He then compared Claimant's job duties with the delineated primary risk factors. Dr. Cebrian specifically explained scientific support for any cause and effect between the diagnosis and exposure. He detailed:

> It is important to understand that degeneration is not a wear and tear process. The concept and terminology of wear and tear has been outdated by appreciating the genetics and biochemistry behind degeneration. Degeneration takes place at a cellular level. Degeneration is the result of the inability to replace normal tissues as one ages. This is not the result of external trauma to the tissues but the aging of the cells. Over time, there is progressive loss of the number of cells that are available to produce new healthy tissue.

Dr. Cebrian remarked that Claimant's symptoms when engaging in certain work activities reflected an underlying disease process rather than a causal relationship between the disease and the work exposure. Furthermore, symptoms at work do not require a medical inference that work activities caused the condition. The symptoms may instead be the "reasonable and symptomatic manifestation of the underlying condition."

8. Dr. Cebrian applied the *Guidelines* in evaluating Claimant's left shoulder symptoms. The *Guidelines* specifically include factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Dr. Cebrian concluded that Claimant's left shoulder symptoms were not related to her employment. He noted that Claimant did not suffer an acute injury, but instead experienced the gradual onset of symptoms. Dr. Cebrian determined that Claimant's complaints were not caused by cumulative trauma. He emphasized that Claimant did not engage in forceful and repetitive activity for an amount of time that satisfied the minimum thresholds in the *Guidelines*. He commented that "[t]he medical literature does not support turning a bus steering wheel as an exposure which would lead to a cumulative trauma injury."

9. Claimant subsequently sought treatment through Kaiser Permanente for her left shoulder complaints. On December 16, 2019 she reported ongoing left shoulder pain. Claimant's examination was consistent with impingement. On December 31, 2019 Claimant underwent a subacromial steroid injection in her left shoulder. The physician noted that having a tear in the rotator cuff does not require surgical intervention and could be treated non-operatively. Claimant subsequently underwent a non-work-related knee surgery and was out of work for multiple weeks.

10. On February 24, 2020 Claimant returned to work for Employer. Claimant was performing third party tests that required her to pull a wagon full of cones and arrange them on a paved surface. She remarked that the wagon's tires were not fully inflated and it was strenuous to pull the wagon out of a shed. Claimant noted she injured her left shoulder while pulling the wagon.

11. After reporting her injury to her supervisor, Claimant obtained medical treatment on March 3, 2020 with ATP Dr. Holmboe. Dr. Holmboe noted Claimant's prior left shoulder complaints. Claimant remarked her left shoulder pain had significantly improved after receiving an injection, but increased after pulling the wagon at work. Dr. Holmboe diagnosed Claimant with a left shoulder strain and impingement as well as an underlying partial thickness tear of the rotator cuff. He requested a review of Claimant's MRI and referred her for physical therapy and an orthopedic evaluation.

12. On May 6, 2020 Claimant visited Eric McCarty, M.D. for an evaluation. Dr. McCarty examined Claimant and reviewed the October 22, 2019 MRI. He diagnosed Claimant with a left shoulder injury including a tear of the supraspinatus tendon. Dr. McCarty noted persistent inflammation around the biceps, AC joint pain and impingement. He remarked that Claimant might have incurred further injury as a result of the February 24, 2020 incident. Dr. McCarty commented that an injection would only provide a temporary benefit. He thus recommended a left rotator cuff repair, subacromial decompression, distal clavicle excision and biceps tenodesis.

13. On June 11, 2020 Claimant underwent an independent medical examination with Mark S. Failinger, M.D. Dr. Failinger performed a physical examination and reviewed prior medical records. Claimant reported that she experienced left shoulder pain when pulling a wagon full of cones at work on February 24, 2020. She noted that there were 72 cones in the wagon each weighing about two pounds for a total wagon weight of approximately 150 pounds. Dr. Failinger diagnosed Claimant with an exacerbation of a pre-existing rotator cuff tear and tendinosis. However, he noted that it was critical to know how difficult it was to roll the cart. Dr. Failinger summarized that "[i]f in fact the cart [was] very easy to roll, despite the 150 pounds of cones that are on it, it is not with reasonable medical probability that [Claimant] sustained an acceleration of permanent aggravation or pre-existing disease." He reasoned that in the absence of further information the "action of pulling a cart likely below chest level would not, with reasonable medical probability, cause any further work related injury to the rotator cuff." Dr. Failinger thus concluded that Claimant did not likely suffer a work-related injury or the acceleration of a pre-existing condition while pulling the cart at work on February 24, 2020.

14. Claimant testified at the hearing in this matter. She stated that on September 4, 2019 she injured her left shoulder while lifting the hood of her bus during a pre-trip inspection. Claimant commented that she again injured her left shoulder while pulling a wagon loaded with cones while setting up a driver training course on February 24, 2020. She remarked that the tires on the wagon were flat.

15. Claimant’s supervisor Charles C[Redacted] testified at the hearing in this matter. He acknowledged that he is familiar with Claimant’s job duties, including the bus she operates, the wagon used to transport cones and the area where she was performing the test when she experienced left shoulder pain on February 24, 2020. He explained that all of Employer’s buses have power steering and do not require significant force to turn the steering wheel. Furthermore, the hoods on all of the buses are spring-loaded, and after unlatching, can be raised with minimal to no effort. Mr. C[Redacted] also explained that the area where Claimant was setting out cones for the driver test on February 24, 2020 is paved and smooth. He commented that there is a slight downhill grade from the shed where the wagon is stored to the testing area.

16. On May 20, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Failinger. Dr. Failinger maintained that Claimant did not likely suffer a work-related injury or the acceleration of a pre-existing condition while pulling the cart at work on February 24, 2020. He recounted that Claimant did not immediately feel pain while pulling the wagon, but experienced left shoulder symptoms more than halfway to her destination. Claimant did not state that the wagon wheels were flat or specify the type or grade of ground she was traversing with the wagon. Dr. Failinger determined that, based on his review of the medical records and MRI, Claimant would not have torn her supraspinatus tendon while pulling the wagon. He elaborated that the supraspinatus tendon is not fired or engaged until the arm is raised to or above 70 degrees or lifting the shoulder so that the elbow reaches chest level. Dr. Failinger commented that below the 70 degree level the supraspinatus tendon and rotator cuff cannot be torn.

17. Dr. Failinger explained that the weight of the cart mattered because of the force needed to initiate movement. He detailed that “you would almost have to crouch down, reach your arms out, and then pull with all your strength going forward, like you would be pulling to start the movement. It would take that kind of a force in order to initiate, create, not only the movement of the cart, but also to create strain or stress or further tearing of a preexisting rotator-cuff tear.” Dr. Failinger noted that Claimant’s arms would not have been in a position to use the rotator cuff while pulling the wagon. He commented that in pulling a wagon “you would get your arm down at your side and you're elevating it behind you and it's, you know, reaching up to 30 degrees.” Pulling a wagon to keep it moving would thus not require the use of the supraspinatus tendon. Accordingly, Claimant did not likely suffer a left shoulder injury while pulling the cart full of cones at work on February 24, 2020.

18. Claimant has failed to demonstrate that it is more probably true than not that she suffered an industrial injury or occupational disease to her left shoulder that began on September 4, 2019 during the course and scope of her employment with Employer. Claimant has also failed to establish that it is more probably true than not that she suffered an industrial injury to her left shoulder on February 24, 2020 during the

course and scope of her employment with Employer. Initially, Claimant has provided a variety of accounts and descriptions of her left shoulder symptoms. Moreover, there are numerous conflicts between Claimant's testimony and her prior statements. When reporting the September 4, 2019 injury to Employer Claimant stated that she experienced the onset of pain when turning the steering wheel of her bus. Moreover, when Dr. Cebrian performed a records review he generally noted that Claimant attributed her left shoulder symptoms to her work activities for Employer. She specifically mentioned the gradual onset of symptoms. However, Claimant testified that her complaints began when lifting the hood of a bus. Similarly, Claimant reported to Dr. Failinger that she experienced left shoulder pain when pulling a heavy wagon full of cones at work on February 24, 2020. However, Claimant testified that the wagon had flat tires. She failed to mention the flat tires to Employer or Dr. Failinger despite her repeated assertions that the wagon was heavy. In contrast, Mr. C[Redacted] credibly explained that all of Employer's buses have power steering and do not require significant force to turn the steering wheels. Furthermore, the hoods on all of the buses are spring-loaded, and after unlatching, can be raised with minimal to no effort. Mr. C[Redacted] also remarked that the area where Claimant was placing cones for the driver test on February 24, 2020 is paved and smooth. He commented that there is a slight downhill grade from the shed where the wagon is stored to the testing area.

19. The medical records also demonstrate that Claimant did not likely suffer a left shoulder injury while working for Employer on September 4, 2019 or February 24, 2020. In evaluating whether Claimant's left shoulder symptoms in 2019 were related to a specific event or the cumulative effects of her work activities Dr. Cebrian performed a detailed causation analysis pursuant to the *Guidelines*. Dr. Cebrian persuasively concluded that Claimant's left shoulder symptoms were not related to her employment. He noted that Claimant did not suffer an acute injury, but instead suffered the gradual onset of symptoms. Dr. Cebrian determined that Claimant's complaints were not caused by cumulative trauma. He explained that overuse does not increase degeneration of the tendons. Dr. Cebrian persuasively emphasized that Claimant did not engage in forceful and repetitive activity for an amount of time that satisfies the minimum threshold in the *Guidelines*. He commented that "[t]he medical literature does not support turning a bus steering wheel as an exposure which would lead to a cumulative trauma injury." Furthermore, Dr. Failinger maintained that Claimant did not likely suffer a work-related injury or the acceleration of a pre-existing condition while pulling the wagon at work on February 24, 2020. He recounted that Claimant did not immediately feel pain while pulling the wagon but experienced left shoulder symptoms more than halfway to her destination. Claimant did not state that the wagon wheels were flat nor specify the type or grade of ground she was traversing. Dr. Failinger determined that, based on his review of the records and MRI, Claimant would not have torn her supraspinatus tendon while pulling the wagon. He explained that the supraspinatus tendon is not fired or used until the arm is raised to or above 70 degrees or lifting the shoulder so that the elbow reaches chest level. Dr. Failinger summarized that below the 70 degree level the supraspinatus tendon and rotator cuff cannot be torn.

20. In contrast, Drs. Holmboe and McCarty suggested that Claimant's left shoulder injuries and tear of the supraspinatus tendon were caused by her work activities

for Employer. However, neither physician engaged in a causation analysis pursuant to the *Guidelines*. Furthermore, neither Drs. Holmboe nor McCarty evaluated the circumstances under which Claimant was performing her job duties, inquired into the specific forces at work or otherwise engaged in any causation assessment. Therefore, based on Claimant's inconsistent accounts, the medical records and persuasive opinions of Drs. Cebrian and Failinger, Claimant has failed to demonstrate that she suffered a left shoulder injury while working for Employer on September 4, 2019 or February 24, 2020. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by

> the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

9. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

10. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that “CTC’s of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures.” W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that “[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment.” W.C.R.P. Rule 17, Exhibit 5, p. 21.

11. The *Guidelines* delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

12. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an industrial injury or occupational disease to her left shoulder that began on September 4, 2019 during the course and scope of her employment with Employer. Claimant has also failed to establish by a preponderance of the evidence that she suffered an industrial injury to her left shoulder on February 24, 2020 during the course and scope of her employment with Employer. Initially, Claimant has provided a variety of accounts and descriptions of her left shoulder symptoms. Moreover, there are

numerous conflicts between Claimant's testimony and her prior statements. When reporting the September 4, 2019 injury to Employer Claimant stated that she experienced the onset of pain when turning the steering wheel of her bus. Moreover, when Dr. Cebrian performed a records review he generally noted that Claimant attributed her left shoulder symptoms to her work activities for Employer. She specifically mentioned the gradual onset of symptoms. However, Claimant testified that her complaints began when lifting the hood of a bus. Similarly, Claimant reported to Dr. Failinger that she experienced left shoulder pain when pulling a heavy wagon full of cones at work on February 24, 2020. However, Claimant testified that the wagon had flat tires. She failed to mention the flat tires to Employer or Dr. Failinger despite her repeated assertions that the wagon was heavy. In contrast, Mr. C[Redacted] credibly explained that all of Employer's buses have power steering and do not require significant force to turn the steering wheels. Furthermore, the hoods on all of the buses are spring-loaded, and after unlatching, can be raised with minimal to no effort. Mr. C[Redacted] also remarked that the area where Claimant was placing cones for the driver test on February 24, 2020 is paved and smooth. He commented that there is a slight downhill grade from the shed where the wagon is stored to the testing area.

13. As found, the medical records also demonstrate that Claimant did not likely suffer a left shoulder injury while working for Employer on September 4, 2019 or February 24, 2020. In evaluating whether Claimant's left shoulder symptoms in 2019 were related to a specific event or the cumulative effects of her work activities Dr. Cebrian performed a detailed causation analysis pursuant to the *Guidelines*. Dr. Cebrian persuasively concluded that Claimant's left shoulder symptoms were not related to her employment. He noted that Claimant did not suffer an acute injury, but instead suffered the gradual onset of symptoms. Dr. Cebrian determined that Claimant's complaints were not caused by cumulative trauma. He explained that overuse does not increase degeneration of the tendons. Dr. Cebrian persuasively emphasized that Claimant did not engage in forceful and repetitive activity for an amount of time that satisfies the minimum threshold in the *Guidelines*. He commented that "[t]he medical literature does not support turning a bus steering wheel as an exposure which would lead to a cumulative trauma injury." Furthermore, Dr. Failinger maintained that Claimant did not likely suffer a work-related injury or the acceleration of a pre-existing condition while pulling the wagon at work on February 24, 2020. He recounted that Claimant did not immediately feel pain while pulling the wagon but experienced left shoulder symptoms more than halfway to her destination. Claimant did not state that the wagon wheels were flat nor specify the type or grade of ground she was traversing. Dr. Failinger determined that, based on his review of the records and MRI, Claimant would not have torn her supraspinatus tendon while pulling the wagon. He explained that the supraspinatus tendon is not fired or used until the arm is raised to or above 70 degrees or lifting the shoulder so that the elbow reaches chest level. Dr. Failinger summarized that below the 70 degree level the supraspinatus tendon and rotator cuff cannot be torn.

14. As found, in contrast, Drs. Holmboe and McCarty suggested that Claimant's left shoulder injuries and tear of the supraspinatus tendon were caused by her work activities for Employer. However, neither physician engaged in a causation analysis pursuant to the *Guidelines*. Furthermore, neither Drs. Holmboe nor McCarty evaluated

the circumstances under which Claimant was performing her job duties, inquired into the specific forces at work or otherwise engaged in any causation assessment. Therefore, based on Claimant's inconsistent accounts, the medical records and persuasive opinions of Drs. Cebrian and Failinger, Claimant has failed to demonstrate that she suffered a left shoulder injury while working for Employer on September 4, 2019 or February 24, 2020. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claims for Workers' Compensation benefits are denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: June 18, 2021.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury to his left knee on October 17, 2020?

II. If compensable, has Claimant shown, by a preponderance of the evidence, that he is entitled to all reasonable, necessary, and related medical treatment, to include the left knee surgery as proposed by Dr. Walden?

III. If compensable, has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability payments from October 17, 2020 and ongoing, subject to any offsets and/or reductions?

IV. If compensable, have Respondents shown, by a preponderance of the evidence, that Claimant willfully misled his prospective Employer about his ability to physically perform his job, and if so, was Claimant subsequently injured on the job as a result of the physical ability about which the Claimant willfully misled Employer?

V. What is Claimant's Average Weekly Wage?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Introduction

1. Claimant is a 53-year-old correctional officer hired at [Employer Redacted] on July 15, 2020. Respondents' Hearing Exhibits (Ex A). Claimant alleges he suffered an injury to the meniscus of his left knee while escorting an inmate for medical care during his October 17, 2020 shift.

Claimant's Previous Right Knee Injury and Subsequent Treatment

2. Prior to Claimant's hire, he was under the care of David Walden, M.D., for a right knee injury suffered with another employer. Dr. Walden performed arthroscopic meniscal repair to the right knee on October 2, 2019. Claimant was released from Dr. Walden's care on January 2, 2020. (Ex. G, p. 73).

3. Claimant was placed at MMI for the right knee on January 30, 2020 by Michael Dallenbach, M.D., and given a 25% scheduled impairment of the right knee. *Id* at 74. Claimant underwent a Functional Capacity Examination ("FCE") on this same date. Id at 82. In his narrative, Dr. Dallenbach noted:

> The following work restrictions are derived from the FCE performed 1/30/20, at which point in time James demonstrated the following: *No lift greater than 40 pounds; no carry greater than 50 pounds; no pushing greater than 80 pounds; no pulling greater than 50 pounds.* Regarding activities, he demonstrated the ability to walk on a frequent basis, climb stairs occasionally, stoop constantly, but was ***unable*** *to kneel or crouch. Id* at 74. (emphasis added).

4. The following are noted from the FCE's Test Information:

- Floor to Knuckle (lift) Occasional: 40# max tolerable limit. *Right Knee straining,* 5# increments.
  Walk: Task tolerable. **Pain behaviors when pivoting of[f] right LE.**
  Crouch: Task not tolerable. **Sig[nificant] compensation to left LE,** Right Knee pain reported.
  Climb Stairs: …*Right knee pain* (Id at 86)(emphasis added).

- Under Functional Abilities Summary, it was noted that Claimant fell significantly below 100% of Industrial Standard for Walk, Carry, and Climbing Stairs. Id at 87.

- Under the various tasks performed, under Kneel, it was noted:

> Task not tolerable, *Requires assistance arising from task position*. Right knee pain. *Id* at 95.

5. At the time of discharge, Dr. Dallenbach's report indicates "Functional Restoration and Status of Healing: [Claimant] is at MMI but will have permanent restrictions and/or permanent disability." *Id* at 71. Dr. Dallenbach states that "Functional restoration and post discharge plans were *discussed with the patient.* The patient *expressed understanding*." *Id*. (emphasis added)

6. At hearing, Claimant testified that he applied for his position with the Employer in May 2020. The job was "pretty physical" and involved all types of awkward positions, including kneeling, crouching, and squatting. Claimant's job description included the ability to forcibly break up fights, subdue inmates with force, move heavy objects, physically move people, access elevated surfaces, move over obstacles, and using force to gain entrance into confined areas. (Ex. D, pp. 11-12).

7. The Job Performance Characteristics for a correctional officer, signed by Claimant on May 11, 2020, require the applicant to *Occasionally*:

- Lift up to 150 pounds
- Carry up to 150 pounds
- Push up to 150 pounds
- Pull up to 150 pounds

- Squat
- Kneel
- Crawl.
- And *Frequently* climb stairs (Ex. D, pp.14-15).

Claimant signed a medical questionnaire and consent form indicating that he had read and understood the job description setting forth the essential functions of the job and stated that he did not require any reasonable accommodation. *Id* at 20. Claimant indicated that he did not have a disability as determined by a physician. *Id*. Claimant was approved for the job by the reviewing nurse on May 11, 2020 based upon his stated answers. *Id* at 21. On the signed Acknowledgement, Claimant certified that he was able to perform the essential functions of the positions as listed *without any restrictions or limitations. Id* at 14 (emphasis added).

The Work Incident, and Subsequent Treatment

8. In the late evening of October 17, 2020, Claimant was escorting an inmate to the medical ward when the inmate became unstable. Claimant was on the inmate's left side and Captain Robert Smotherman was on the inmate's right. According to an incident statement completed by Captain Smotherman, Claimant complained of pain in the left knee after the inmate transferred weight back and forth onto both escorting officers. (Ex. D, p. 23). Claimant had to push the inmate back up to stop his fall. Captain Smotherman indicated in his report that Claimant refused to sign a workers' compensation packet, give his information, get an anatomical, or write a "5-1(c)" statement. (Ex. D, p. 23). A later 5-1(C) statement was completed by Claimant, but was not signed or dated. *Id* at 22. An incident report from October 17, 2020 reflects that Claimant was not initially seeking medical treatment. *Id* at 24.

9. However, Claimant presented to Parkview Medical Center emergency department on October 18, 2020, upon the advice of Captain Smotherman. He had tried to reach other potential ATPs without success, since it was a Sunday. Triage notes from the ER state that a large inmate weighing about 400 pounds lost his balance and fell onto the Claimant's left knee. (Ex. I, p.116). Claimant reported experiencing immediate pain over the medial aspect of the knee, and especially with flexion. There was pain with valgus stress testing of the medial collateral ligament area, but without ligamentous instability. *Id*. Claimant denied any prior injury to the left knee. *Id*.

10. A physical examination showed no significant swelling or deformity of the left knee. *Id* at 117. There was full active and passive flexion and extension of the knee with mild pain on full flexion of the knee. *Id*. Claimant presented in no acute distress; there was no ligamentous instability noted. Id at 118. X-rays of the left knee were normal, and showed no acute injury or abnormality. *Id* at 119. Claimant was discharged with narcotic medications.

11. Claimant presented to Thomas Centi, M.D., at CCOM on October 21, 2020. Claimant reported that the inmate shifted his entire body weight onto him, causing him to shift

his weight onto the left side, twisting and adjusting his knee to keep from falling and holding the inmate up. (Ex. J, p. 122). The x-ray showed no acute injury. Claimant reported no history of previous injury of the left knee.

12. On physical examination of the knee, there was flexion of 120 degrees, and moderate discomfort on movement and palpation of the medial aspect soft tissue. *Id* at 123. Claimant had full extension. There was a slight antalgic gait with no effusions. Claimant was "slightly positive" for McMurray's test medially and negative for anterior/posterior drawer test, Lachman's test, Valgus, and Varus test. On the pain diagram, Claimant marked specifically the medial aspect of his left knee [the portion of the knee later demonstrated to have a tear]. (Ex. 5, p. 17). Dr. Centi diagnosed Claimant with a strain and recommended physical therapy. *Id*.

13. A patient history filled out by Claimant on October 21, 2020 reflected no prior history of treatment for the left knee. (Ex. J, p. 125). Claimant indicated the requirements of his job included kneeling/squatting, ladder/stair climbing, and lifting up to 400 pounds. Claimant was taking Vicodin at that time.

14. Claimant reported not feeling any better on October 28, 2020. (Ex. 6, p. 19). Physical examination did note scant edema on the *medial aspect* of the knee upon examination. *Id* at 20. Nurse Practitioner Joyce ordered the MRI of the left knee. Dr. Centi issued a referral for Claimant to see an orthopedist when he reviewed the MRI and examined Claimant on November 17, 2020. *Id* at 30. Physical examination on this date continued to document mild edema, mild effusion, and medial tenderness. *Id* at 31.

15. Respondents filed a Notice of Contest for further investigation on October 29, 2020.

16. However, Claimant continued to treat with Dr. Centi and reported no improvement with physical therapy. Dr. Centi ordered an MRI pursuant to ongoing knee pain. It was noted on November 6, 2020 that Claimant would be out of town for a job, but Claimant still had "point tenderness of the *medial* aspect [of his left knee]".. (Ex. J, p. 133). Claimant reported that he had a new employer and started work with them this week (of November 6) and would be out of town most of next week. *Id* at 134.

17. An MRI performed on November 9, 2020 Impression noted:

> 1. Posterior horn medial meniscus horizontal longitudinal undersurface 1 cm tear.
> 2. Subjacent subchondral osteoedema and contusion or stress change of the peripheral medial tibial plateau.
> 3. Small joint effusion. (Ex. L, pp. 175-176).

This MRI made no reference to left knee arthritis.

18. Dr. Centi referred Claimant for orthopedic evaluation on November 17, 2020. As of December 11, 2020, Claimant was now doing seasonal work as an airplane de-icer. (Ex. J, p. 142).

19. Claimant saw orthopedist Dr. David Walden on December 15, 2020 for evaluation of his left knee. In the description of the incident, it noted that the inmate was handcuffed, and that the inmate weighed more than 400 pounds. (Ex. K, p. 169). Claimant stated that the inmate's weight shifted to his left and that Claimant "believes his knee may have been twisted." Claimant reported immediate sharp pain and it is indicated that he elevated his knee and noted swelling. Claimant reported a great deal of pain in the knee in bringing his knee down from an elevated position when he stood a few hours later. Dr. Walden indicated that the mechanism of injury, clinical exam, and MRI findings were consistent with an ***acute*** *meniscus tear* and recommended arthroscopic repair. *Id* at 170. Dr. Walden reviewed the MRI films himself, and reached conclusions similar to those of the reading radiologist. (Ex. 8, p. 67).

20. On December 18, 2020, Respondents sent a letter to Dr. Walden indicating that the surgery was denied, as the claim was under a Notice of Contest pursuant to W.C.R.P. 16-7(B). (Ex. M).

21. On December 18, 2020, Claimant reported to CCOM that his new, part-time, seasonal job will be a sitting position. (Ex. J, p. 148). Claimant reported some improvement with PT, but was still using one crutch as needed, and his knee still hurt "a lot" when getting out of vehicles. *Id.*

22. On December 23, 2020, Claimant reported to CCOM that he was using crutches as needed and was stiff and sore with most movements, especially with stairs, and that he didn't attend a therapy appointment because he was training for his de-icing job (with Integrated De-Icing). (Ex. J, p. 152).

23. On December 31, 2020, Claimant reported to CCOM that he had been able to go fishing since his injury and that was hard to schedule therapy appointments around his new work schedule. *Id* at 156. Claimant requested that he stop therapy because it is "one less stressor due to work schedule." *Id* at 157.

24. Claimant continued to follow up with CCOM despite the denial of the left knee surgery. As of February 2, 2021, Claimant was still reporting ongoing left knee pain that was not improving. (Ex. 6, p. 47). Dr. Centi simply stated in his report to continue his medications, his home exercises, and "Continue with Orthopedics for surgery when scheduled." *Id.* at 48. Dr. Centi still noted that this was a work related condition. *Id.* Claimant's final note from CCOM of record dated February 25, 2021 reads similarly. *Id.* at 52. Claimant had a diagnosis of a tear of the medial meniscus, he was taking Ultram and Mobic for pain, doing his home exercises, and still advised to "Continue with Orthopedics when scheduled." *Id.*

IME with Dr. Hall

25. Claimant underwent an IME with Timothy Hall, M.D., on February 12, 2021. (Ex. 9). Dr. Hall indicates that the records begin with Colorado Sport & Spine therapy records, with an initial evaluation by Dr. Centi on October 21, 2020. *Id* at 70. Dr. Hall's report does not specifically indicate that he reviewed the October 18, 2020 ER record from Parkview. Claimant described the incident to Dr. Hall, and indicated that the inmate did not fall but instead was "caught by [Claimant]." *Id* at 71. Claimant completed the workday, even though his captain thought he should immediately be evaluated. Claimant stated that he was hoping he simply "tweaked" the knee and that it would calm down. Claimant reported no history of problems with the left knee prior to the incident. Dr. Hall noted:

> [Employer] has in my opinion a fairly straightforward situation. The mechanism of injury is certainly consistent with meniscal tear. When his foot was planted, his upper body rotated under the weight of his inmate pivoting on a fixed knee. This is the common mechanism of injury to the meniscus. He had symptoms immediately. He has not history of problems. I do not understand why this would be contested. *Id*.

Dr. Hall documented that Claimant's condition has not changed much at all since the initial injury. (Ex. 8, p. 72). He noted that "The longer he goes without surgery, the less likely he will have a good outcome." *Id.*

26. On March 1, 2021, Valerie Joyce, PA, at CCOM noted that Claimant continued to work for the de-icing company and was wearing a knee brace. (Ex. 6, p. 52).

IME with Dr. O'Brien

27. Claimant underwent an IME with Timothy O'Brien, MD, on March 18, 2021 (the report was issued on March 31, 2021). Claimant reported that the inmate began to faint and that he caught the inmate to prevent both of them from falling. (Ex. E, p. 36). Claimant reported he 'tweaked' his knee, and began to note increasing left knee pain as he was walking with a fellow corrections officer. He spent the rest of his shift with the knee elevated. It was noted that Claimant was working as a de-icer for the airlines and took as much part-time work as he can in order to help out with finances. *Id*.

28. Claimant reported his right knee felt pretty good from his prior surgery with Dr. Walden, but that it sometimes hurt because he was now dependent upon trying to protect the left knee. *Id*. Claimant reported that he had to give up hunting and fishing due to the alleged injury. *Id*. On physical examination, Dr. O'Brien indicated he could not perform a McMurray's test because Claimant would not allow flexion beyond 90 degrees and could not relax enough for the test to be performed. *Id* at 37. Dr. O'Brien also wrote that "Any gentle brushing of the skin or light palpation along the medial joint line caused wincing and withdrawal." *Id.* (No other medical provider has noted an exaggerated pain response to examination).

29. Dr. O'Brien noted right knee problems dating back to 2006. The records reflect that Claimant was seen by Nathaniel Moore, M.D., at MedNow Clinics in 2017 and 2018 for bilateral osteoarthritis. *Id* at 39-40. On October 8, 2017, Dr. Moore notes that Claimant was treating for musculoskeletal pain in the context of bilateral knee pain, rated at 8/10. (Ex. F, p. 58). The diagnosis indicated bilateral primary osteoarthritis of knee. *Id* at 59-67. Dr. Moore prescribed narcotic medications for pain.

30. Dr. O'Brien opined that neither Dr. Walden nor Dr. Hall had undertaken the due diligence to review the most contemporaneous medical report from the emergency room on October 18, 2020 in coming to their conclusions. (Ex. E, pp. 45-46). Dr. O'Brien opined that the October 17, 2020 incident resulted in a minor left knee strain that was innocuous and self-healing. Dr. O'Brien opined that the injury mechanism did not result in a meniscal tear. Dr. O'Brien stated that the meniscal pathology seen on the MRI was normal for a person of Claimant's age and identical findings are present in over 60% of cases.

31. Dr. O'Brien opined that Dr. Walden was over-reading the MRI *(this, despite the fact that Dr. O'Brien apparently did not look at these very films himself),* and that there was no objective evidence of an acute injury, since there was no tissue breakage or yielding of any significance in the initial medical records. Dr. O'Brien opined that with an acute tear, there would have been substantial swelling and bruising evidence on the exam and MRI. Dr. O'Brien opined that the surgery recommended by Dr. Walden was directed at a longstanding and preexisting age-related meniscal fissure and would not likely provide any benefit. *Id* at 46. Dr. O'Brien also opined that Claimant's account of the incident was inconsistent with the medical documentation and that he was an unreliable examinee.

32. Dr. O'Brien states in his report that Claimant's healing "definitely" occurred by November 9, 2020, and that he had already returned to his pre-injury level of function. (Ex. E, p. 45). The final line of Dr. O'Brien's report reads, "[Claimant] is capable of resuming all recreational activities and occupational endeavors with no restrictions." *Id.* at 47.

33. Posts from Claimant's Facebook account reflect that he was dissatisfied with the Employer and that he frequently fishes. Claimant indicated that he was fishing throughout November and December 2020. During this period Claimant made frequent posts indicating dissatisfaction with his job and fellow employees. (Ex. N).

Hearing Testimony of Claimant

34. Claimant testified that his job was quite physical and involved self-defense training for physical altercations, kneeling, crouching, squatting, and climbing up multiple levels of stairs in the facility on a daily basis. However, he had never had to actually deal with a physically combative inmate during his tenure. Claimant testified on the date of injury, he assisted in loading the inmate, to whom he referred as "a big boy," onto a backboard and carried him down a flight of stairs. Claimant testified the stabilization

board did not have wheels and took four men to lift. He estimated that the inmate weighed 300-400 pounds.

35. Claimant was in a standing position, with the inmate to his immediate right, while assisting the inmate to walk. Right arm around inmate's shoulder, left arm holding inmate's left bicep. Claimant testified that the inmate told him he was going to faint and shifted his weight onto Claimant's right side, causing him to brace against the weight of the inmate with his (outside) left knee, since Claimant's right knee was right next to the inmate's left knee. Claimant testified that he felt a sharp twinge up his left knee and initially thought it was just a tweak.

36. Claimant testified that he had no left knee issues prior to the incident. Claimant testified that he had initially gone to MedNow Clinic due to his back, and not his knees. Claimant testified that he did not have any arthritis issues. Claimant testified that the MedNow records are simply wrong.

37. Claimant testified that he did not recall the permanent work restrictions imposed by Dr. Dallenbach on January 30, 2020. Claimant testified that he did not disclose the restrictions to the Employer because he was unaware that he had restrictions. However, Claimant testified that he recalled that he was given permanent impairment rating by Dr. Dallenbach. He testified:

> I didn't even know I had a permanent restriction, to be honest with you. After that whole case was over, I was focused on getting better. And I did. I felt fine; I could do the job. And I did do the job for six months.

38. Claimant testified that he had not been happy working for the Employer and just "shut up for a paycheck."

39. Claimant stated that it was his understanding that the only treatment for his knee would be the surgery proposed by Dr. Walden. Claimant would like to undergo the surgery, especially with Dr. Walden, given how well the last (to his right knee) surgery proved to work out for Claimant in the end. He was not offered any modified duty by Employer, and has not worked for them since the date of injury.

Hearing Testimony of Dr. O'Brien

40. Dr. O'Brien testified that Claimant did not indicate any prior left knee issues to him upon questioning. Dr. O'Brien testified that the prior medical records indicated a history of noteworthy bilateral osteoarthritis.

41. Dr. O'Brien testified that the history provided by Claimant to the emergency room was different that that reported to other providers, and involved a fall against the left knee. A direct blow to the knee would not be consistent with the type of mechanism that produces a meniscus tear. Dr. O'Brien testified that the emergency room records on

the date after the injury were of special significance as the most contemporaneous documentation. Dr. O'Brien testified that there was a documented absence of swelling or any accumulation of fluid in the knee at the emergency room and that they were able to obtain full range of motion passively and actively.

42. Dr. O'Brien opined that the knee examination was completely inconsistent with a recent acute meniscus tear. If there were an acute meniscus tear, there would be substantial bleeding and accumulation of fluid in the knee. That would have been documented by even the most inexperienced examiner in an emergency room. With an acute tear the knee would have been massively swollen within minutes. This swelling would have been associated with substantial loss of range of motion both passively and actively. Dr. O'Brien testified that the x-ray done at the emergency room would have detected any fluid and bleeding and would have been very easy to see. Dr. O'Brien testified that "tweaking of the knee is not what people complain of when they've acutely torn their meniscus."

43. Dr. O'Brien testified that the MRI findings from November 9, 2020 corroborate the diagnosis of osteoarthritis from 2017. The MRI shows long-standing degenerative changes, including meniscal cysts which take many months, if not years, to form and become evident on a scan. Dr. O'Brien estimated the meniscal tear had been present for at least a year or two based on the nature of the study. The small effusion seen on the MRI was a physiologic amount of fluid there to nourish cartilage. There was no accumulation of blood or synovial fluid suggestive of an acute condition.

44. The MRI reflects age-related degeneration of the meniscus evident by the meniscal cysts, bone marrow edema, and fluid increase indicative of chronic arthritic changes. Dr. O'Brien also noted that the left knee study was nearly identical to those of the right knee done one year earlier, after which time Dr. Walden found extensive arthritis throughout the knee during surgery. Dr. O'Brien testified that although the radiologists identified the findings using the term "tear," from an orthopedic standpoint there is 'not really a tear' because this occurs only there the structure is exposed to sufficient energy to separate tissue. In this instance, there was no such force, and the findings show soft-tissue fracturing due to age-related fluid loss, not an acute meniscus tear.

45. Dr. O'Brien testified that the injury in this instance did not cause the need for medical treatment. He opined that the surgery recommended by Dr. Walden was not reasonably necessary regardless of relatedness, and would actually put Claimant at higher risk of hurting the knee.

Deposition Testimony of Dr. Moore

46. Dr. Moore testified that Claimant treated through him for opiate addiction. Dr. Moore testified that Claimant was treating for pain in the context of osteoarthritis in the bilateral knees. Dr. Moore testified that he would have to rely upon his records in regard to Claimant's pain complaints and that bilateral osteoarthritis could certainly be a cause of pain and a reason to take pain medications. {In summary, the ALJ finds

that Dr. Moore's testimony, while sincere, is of limited utility in deciding the issues in this case. To the extent that Respondents wish to impute some sort of drug-seeking behavior to Claimant, the evidence falls far short}.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

D. In this instance, the ALJ finds Claimant to have been reasonably, if imperfectly, consistent in describing his mechanism of injury, and relating the symptoms to his various medical providers at each step of his diagnosis and treatment. However, in light of the documentation in evidence, Claimant is less persuasive in his assertions that he was unaware of his limitations and restrictions when applying for his position at [Employer], to be addressed, *infra.*

Compensability, Generally

E. Claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

F. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

Compensability, as Applied

G. The evidence suggests that Claimant suffered from some degree of arthritis in both knees prior to this work incident. He received treatment in the form of painkillers from Dr. Moore. However, there is nothing in the record suggesting he brought a pre-existing torn meniscus into his new position at [Employer], Dr. O'Brien's opinion notwithstanding. In the unlikely event (which the ALJ specifically does *not* find) that Claimant's left medial meniscus was already torn, the evidence is clear that it became *symptomatic* on the date of this work incident, and will require further medical treatment as a direct result. The ALJ is much more persuaded by the MRI radiologist (who actually read the films), and Dr. Walden (a practicing orthopedist who also read the films) than Dr. O'Brien, who only read the narrative, and then criticized the other two for "over-reading" the films. The MRI showed an acute injury to the medical meniscus, which is completely consistent with Claimant's symptoms in the ensuing months.

H. Dr. O'Brien places great weight on the original ER records, and places blame on the other physicians for not exercising 'due diligence' in acquiring said records. Given that physicians base their opinions on what records they are actually provided, what exactly *would* constitute 'due diligence' in acquiring those records not provided? Were there other medical records that Dr. O'Brien did not receive/review, would he then confess to a lack of 'due diligence' himself? More records are always better than fewer, but Dr. O'Brien's emphasis on the ER records is misplaced when determining a mechanism of injury. ER personnel are focused on identifying injuries and pain generators and stabilizing the patient. Causation is of secondary concern, as is the precise mechanism of injury, unless it helps to target a treatment modality. The patients are in varying degrees of distress, and ER personnel are often multitasking. Leading questions are sometimes asked, certain dots get [mis]connected, and things can get lost in translation in that environment. "He fell **into** me, and hurt my left knee", can become "He fell **onto** me, and hurt my left knee." In such instance, the ALJ actually finds that a more precise mechanism of injury can be described in the calm of a physician's office after the fact, and even more so while being forged in the crucible of cross-examination. There is nothing in the record suggesting any material inconsistency by Claimant in describing how he got hurt, and how he felt in the ensuring months.

I. The ALJ finds Dr. Hall's straightforward reasoning, and that of Dr. Walden, and also that of Dr. Centi, to be far more persuasive than that of Dr. O'Brien. Claimant has shown, by a preponderance of the evidence, that he tore his left medial meniscus while assisting this inmate on October 17, 2020.

Medical Benefits, Generally

J. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo. App. 1997).

Medical Benefits, as Applied

K. The ALJ has found that Claimant sustained a compensable injury to his left knee. Respondents shall pay for all reasonable, necessary, and related treatment for Claimant's left knee, specifically, but not limited to, the left knee surgery requested by Dr. Walden. The ALJ is largely unpersuaded by the findings of Dr. O'Brien.

L. Instead, the ALJ credits the opinions of Drs. Walden, Hall, and Centi. The examinations, findings, and opinions of these three physicians, one of them an ATP and another a treating surgeon, are more reliable and persuasive than those of Dr. O'Brien. Drs. Walden, Centi, and Hall have all commented on whether the surgery is reasonably necessary, and/or whether it is related. They have all expressed consistent opinions at odds with those of Dr. O'Brien. Dr. O'Brien's statement that Claimant can resume full activity, despite his reported severe pain, documented tear, and request for surgery from a respected surgeon, does not carry the day.

Temporary Total Disability, Generally

M. To receive temporary disability benefits, the Claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the Claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the Claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc*. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

N. Claimant has established that he was injured at work. He was taken out of work beginning October 18, 2020 by the provider at Parkview Hospital and has remained under restrictions by an ATP. Respondents have not offered Claimant modified duty. He is therefore entitled to TTD from October 18, 2020 and ongoing, subject to any applicable offsets and/or reductions.

Reduction of Benefits Pursuant to C.R.S. §8-42-112(1)(d)

O. Compensation provided for under the Act shall be reduced by fifty percent where "the employee *willfully* misleads an employer concerning the employee's physical ability to perform the job, and the employee is subsequently injured on the job *as a result of the physical ability* about which the employee willfully misled the employer." C.R.S. § 8-42-112(1)(d). (emphasis added). The term "willful" as used in this statute means "with deliberate intent." *City of Las Animas* *v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990); *citing Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). The burden of proof is on the employer to show that the employee acted willfully. *Johnson v. Denver Tramway Corp.,* 115 Colo. 214, 171 P.2d 410 (1946).

Did Claimant Willfully Mislead his Employer?

P. Claimant argues that he cannot practically be expected to know the precise details of prior restrictions given to him, nor does the fact that Claimant received permanent restrictions for a prior right knee injury make his actions willful *per se*. Under the facts presented, the ALJ cannot concur. Claimant was an active participant in his FCE, and the validity criteria were met in his assessment; i.e., Claimant was indeed putting forth his best effort. As a result, he was duly compensated for a 25% LE Impairment Rating. *That means you are being compensated right now for your future inability to perform certain demanding tasks*. The ALJ finds that this would have been explained to Claimant during the process of his prior settlement for his right knee.

Q. But Claimant cannot have it both ways, by *now* arguing that his right knee disability was not really an impediment to performing the functions of this demanding position handling correctional inmates, some of whom outweigh even him, and some of whom have bad intentions – hence the hand-to-hand training. His right knee was so bad that he needed assistance just getting up off the floor. He was unable to even assume a crouching position. His lifting capacity had been seriously compromised, and due to his knee. Walking up stairs (it's a prison, after all) elicited pain. And despite Claimant's assertion that he got better before he applied for this position, *he was placed at MMI on the date of the FCE.*

R. Claimant signed the Job Performance Characteristics on May 11, 2020. When he did so, he knew he could not perform the tasks as outlined. But instead, he stated he did not have a disability as determined by a physician. He stated he could perform the essential functions of this job without any restrictions or limitations, and did not require any special accommodation. Even in this age of freewheeling interpretations of just about anything, some things are formalized into writing for a reason, and the parties are thereby placed on notice of their contents. The ALJ finds that Claimant willfully misled Employer concerning his physical ability to perform this job. Why did he do this? Simply stated, he was afraid if he disclosed his limitations, he might not get the job. It's quite understandable why one might do this, but there can be consequences when things go south. Be careful what you ask for.

Did Claimant Subsequently Injure his Left Knee, as a Result of his Nondisclosure of his Right Knee Disability?

S. After Claimant was hired, he performed the job for five months without any issue related to his left knee. He repeatedly participated in physical training *exercises*, none of which were evidenced to be hindered by Claimant's left knee. Claimant would argue that these facts would suffice to show that he had the ability to perform the tasks required by his job description. The ALJ is not persuaded. Up until his work injury, Claimant describes a fairly routine workday, albeit long (and unsatisfying, as he later acknowledged). However, *exercises* are no substitute for having to deal with the real thing, which occurred unexpectedly on this date. Claimant had never been in a real altercation up until this date. Whether this inmate's actions were medically induced, or an act of passive aggression remains unknown. However, prison personnel must be equipped to deal with issues such as this - and far worse. Hence, the questionnaire.

T. Claimant argues that his *right* knee limitations had nothing to do with the subsequent injury to his *left* knee. A closer examination of the record reveals that it is not so simple as matching body parts. In determining the Crouch component of the FCE, it was noted that there was **significant compensation to the left lower extremity**, due to pain in the right. (Finding of Fact #4, *supra*). Claimant himself in his testimony confirms that he had to use his left leg as a brace, since his right knee alone was not strong enough to support the shifting weight of the inmate (Finding of Fact #35, *supra*). And the more he had to crouch, due to the inmate's weight, the weaker and more painful his right knee became – so out goes his left leg as a 'brace', and the rest is history. The ALJ finds that Claimant's left knee injury came about as a result of his willfully undisclosed right knee disability. Further, the ALJ finds that Claimant's limited lifting abilities (amply put forth in the FCE) also contributed to his inability to hold this inmate upright, thus leading to the left knee injury.

Average Weekly Wage

U. Respondents did not address this issue in their brief. Both parties supplied identical payroll records for Claimant's tenure. The ALJ has reviewed Claimant's straightforward analysis, and finds it persuasive. Claimant's Average Weekly Wage is $852.00

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury to his left knee on October 17, 2020.

2. Respondents shall pay for all reasonable, necessary, and related medical treatment, including, but not limited to, the surgery as proposed by Dr. Walden.

3. Respondents shall pay TTD payments to Claimant from October 17, 2020 and ongoing, subject to any offsets from other employment, as well as reductions as provided by this Order.

4. Claimant's compensation shall be reduced by 50%, as provided by C.R.S. 8-42-112(1)(d).

5. Claimant's Average Weekly Wage is $852.00

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. ***In addition, to assure prompt attention to your petition to review, it is strongly recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.***

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered industrial injuries on May 28, 2020 during the course and scope of her employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

3. Whether Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians in compliance with §8-43-404(5)(a)(I)(A), C.R.S. and she was thus permitted to select David W. Yamamoto, M.D. as her Authorized Treating Physician (ATP).

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period June 5, 2020 until terminated by statute.

5. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving indemnity benefits.

6. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to recover penalties for Respondents' failure to report the injury to the Division of Workers' compensation within 10 days after notice or knowledge of the injury pursuant to §8-43-101(1), C.R.S. §8-43-103(1), C.R.S. and WCRP Rules 5-2 (A), (B)(1), and (B)(2).

7. Whether Claimant has established by a preponderance of the evidence that she may recover penalties for Respondents' failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S.

8. Whether Claimant has proven by a preponderance of the evidence that she is entitled to recover penalties for Respondents' failure to provide a complete copy of their claim file within 15 days.

9. Whether Respondents have demonstrated by a preponderance of the evidence that they are permitted to recover penalties for Claimant's late reporting of her injury pursuant to §8-43-102(1)(a), C.R.S.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $640.00.

FINDINGS OF FACT

1. Claimant is a 44-year-old female who performs janitorial duties for Employer. On May 28, 2020 she was vacuuming in a Ball Aerospace office facility. Claimant testified that she was using a vacuum that was much heavier than the device she regularly used. She noted that she had to bend over to vacuum under approximately 100 tables and chairs at the work site.

2. Claimant began her work shift on May 28, 2020 at 5:30 a.m. She testified that after she had been vacuuming for about 30 minutes to two hours she began to develop left arm pain. Claimant then took a break and told two co-workers about her left arm pain. She then "stood around" until 1:30 p.m. and did not resume working. In fact, Claimant noted that she was suffering pain at a 10/10 level by the end of her work shift. She left the site at the end of her shift and went home.

3. Claimant testified that she woke up on May 29, 2020 with a stiff neck. She went to work and informed job site supervisor Mary R[Redacted] that she was feeling pain in her neck and left arm. Claimant also informed Ms. R[Redacted] that she believed using a different vacuum for her shift had caused the pain. However, Claimant acknowledged that Ms. R[Redacted] is not her supervisor and did not work for Employer. She recognized that she is required to report any work injuries to her direct supervisor and Area Manager Maria Anna M[Redacted].

4. On June 8, 2020 Claimant sent Ms. M[Redacted] a text message specifying that she was going to the emergency room and would not make it to work. Claimant explained that she had been feeling badly for two or more weeks, her left arm had been falling asleep and she was having trouble breathing. She noted that she had been experiencing symptoms for a little over two weeks. Claimant remarked that she would keep Ms. M[Redacted] updated about her condition. Ms. M[Redacted] asked whether Claimant had been tested for COVID-19 and she replied that she had not. Claimant noted that because she had "so many health problems am not sure what could be causing it." Throughout the correspondence Claimant did not mention any work incident or symptoms while using a vacuum at work on May 28, 2020.

5. On June 8, 2020 Claimant visited the Swedish Medical Center Emergency Room because of breathing difficulties and concerns about a possible COVID-19 infection. Claimant denied any recent trauma. Notably, she did not mention any specific work incident while using a vacuum cleaner. Claimant had multiple complaints involving left arm paresthesias, neck pain, chest discomfort, lightheadedness, and shortness of breath. The medical record specifically provided:

> She first reports ongoing left arm paresthesias ongoing for 3 weeks left paraspinal and left shoulder pain ongoing for 2 weeks, intermittent chest pressure for approximately 1 week, and shortness of breath with exertion

> for approximately 1 week. She also reports 2-3 episodes of lightheadedness over the past 3 weeks.

Claimant mentioned that her neck pain felt like she had fallen asleep “in a weird position.” She noted left arm weakness but it was not easy to discern because the pain in her neck and left shoulder made it difficult to use her left arm.

6. At the emergency room Claimant underwent several diagnostic studies. The testing included a CT scan of the head and neck, an x-ray of the chest, an EKG, and an MRI of the neck. The neck CT scan revealed “at least moderate canal stenosis.” The MRI showed a small central disc extrusion at C4-5 with slight dorsal displacement of the cord, a small right paracentral disc extrusion at C3-4 without canal or foraminal compromise and degenerative spondylosis at C4-5 and C5-6. The report specified that displacement of the cord at C4-5 was the likely cause of her symptoms. Claimant received work restrictions for two days.

7. On the evening of June 8, 2020 Claimant sent another text message to Ms. M[Redacted]. She stated she would not make it to work the next day because she was undergoing tests. In response to Ms. M[Redacted]’s inquiry, Claimant noted she did not have any restrictions and would be able to work on Thursday, June 11, 2020. She commented that she would not be able to use the backpack vacuum because “its my upper left arm & upper neck.” Claimant again did not mention any work-related incident on May 28, 2020.

8. On June 9, 2020 Claimant again texted Ms. M[Redacted] and stated that testing revealed a herniated disc in her back. She was also awaiting results from her COVID-19 test. On the evening of June 10, 2020 Claimant sent another text message to Ms. M[Redacted] explaining that she would not make it to work on Thursday or Friday due to pain. Claimant had a doctor’s appointment and would provide a work excuse. Claimant did not note any injuries while vacuuming at work on May 28, 2020.

9. On Thursday morning June 11, 2020 Claimant texted Ms. M[Redacted] and remarked that “I think I messed up my arm when I used Mary’s heavy vacuum twice because it took you forever to bring us one and Ester even used it once and her arm was hurting.” Claimant testified that on June 11, 2020 “when I found out that I had two herniated discs, that is when I did tell her what was really going on with me.” She noted she would return to work on the following Monday. In a subsequent text Ms. M[Redacted] commented that she did not control the available vacuums and inquired whether Claimant could perform her job duties. Claimant replied that she was taking muscle relaxers and reiterated she would return to work on Monday.

10. On June 12, 2020 Claimant visited primary care provider Megan Champion, M.D. for an evaluation. Claimant informed Dr. Champion that she was injured at work using a heavy vacuum. She testified that she was referred to a specialist at the University of Colorado because Dr. Champion did not handle work-related injuries.

11. On Friday evening June 12, 2020 Claimant texted Ms. M[Redacted] with a note from CU Health reflecting that she could return to work on June 19, 2020 with restrictions. Claimant completed a Claim for Workers' Compensation on the same date through her attorney. There is no certificate on the claim reflecting that the document was sent to Employer.

12. On June 15, 2020 Ms. M[Redacted] texted Claimant inquiring why she was not at work. Claimant responded she had a work excuse through June 19. 2020. On June 18, 2020 Claimant told Ms. M[Redacted] that her doctors had extended the work excuse until June 25, 2020. On the morning of June 25, 2020 Ms. M[Redacted] again texted Claimant requesting a phone call. On June 29, 2020 Ms. M[Redacted] sent Claimant a text message and asked her to complete a leave of absence form but Claimant did not respond.

13. On July 1, 2020 Claimant visited David W. Yamamoto, M.D. for an examination. Claimant reported that while she was vacuuming at work on May 28, 2020 her left arm began to hurt. She noted left-sided neck pain with numbness into the left arm. Dr. Yamamoto diagnosed Claimant with a cervical strain, a herniated cervical disc, a trapezius strain and radicular pain in the left arm. He referred Claimant for physical therapy and a specialist evaluation. Dr. Yamamoto also assigned Claimant work restrictions.

14. On August 26, 2020 Employer received a Director's Order from the Division of Workers' Compensation (DOWC) advising that Claimant had filed a claim for Workers' Compensation. The Order specified that Claimant had filed a claim for compensation on June 15, 2020 and noted that Respondents' were required to file a position statement admitting or contesting liability within 20 days. The Order also directed Respondents to take a position on the matter within 15 days.

15. Respondents filed an Employer's First Report of Injury (FROI) on September 4, 2020 stating that the first notice of injury was the date of the Director's Order. Notably, the FROI provides that Claimant suffered cumulative trauma injuries to multiple body parts based on repetitive motion. Respondents filed a Notice of Contest on September 11, 2020. On September 14, 2020 the DOWC stated that the Director's Order had been satisfied.

16. Claimant continued to receive conservative treatment from Dr. Yamamoto. He assigned Claimant work restrictions on July 1, 2020, July 28, 2020, September 29, 2020, November 9, 2020 and January 20, 2021. Dr. Yamamoto most recently assigned temporary work restrictions with no expiration date on March 2, 2021. He has not placed Claimant at Maximum Medical Improvement (MMI) for her May 28, 2020 injuries.

17. On March 2, 2021 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Claimant reported that she developed left upper extremity pain on May 27, 2020 while she was using a heavy vacuum at work. Specifically, after pushing and pulling the vacuum with her left arm she developed pain from her left

wrist to left shoulder. Claimant remarked that she subsequently experienced symptoms at the base of her neck. Dr. Paz considered whether it was medically probable that Claimant's left upper extremity symptoms were related to her work activities. He performed a causation analysis pursuant to the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Dr. Paz explained that Claimant provided a direct history that her left upper extremity symptoms developed after using the vacuum for approximately one half hour. She did not report a traumatic event or mechanism of injury that correlated with the diagnosis of an extruded disc at the C4-C5 level. Furthermore, based on Claimant's text messages she developed symptoms prior to May 27, 2020. Based on Claimant's e direct history, the findings on physical examination and a review of Claimant's prior medical records, Dr. Paz concluded it was not medically probable that the "cervical spondylosis C4-5, with central disc extrusion with effacement of subarachnoid space and dorsal displacement of the cord in the spinal canal [was] causally related" to an industrial incident. He noted that the cervical spondylosis at the C4-5 level is a degenerative condition that preceded the work incident.

18. Ms. M[Redacted] testified at the hearing in this matter. She works for Employer as an Area Manager and was Claimant's direct supervisor on May 28, 2020. Ms. M[Redacted] noted that Employer trained employees and provided a handbook for reporting work-related injuries. The handbook addressed safety as well as attendance. Specifically, employees are trained to notify supervisors and then call a nurse line for direction regarding emergency medical assistance.

19. Ms. M[Redacted] explained that Claimant's work assignment on May 28, 2020 involved vacuuming floors and not lifting or carrying the vacuum up any stairs. She noted that on the date of the incident Claimant used an upright vacuum similar to one that would be used at home for small areas and entries. Ms. M[Redacted] commented that, in the area where Claimant was vacuuming on May 28, 2020, she would usually use a larger backpack vacuum. She thus remarked that the replacement vacuum Claimant was using on the date of injury was actually smaller than the one she would normally use and estimated it weighed less than 20 pounds.

20. Ms. M[Redacted] commented that Claimant did not inform her about any injury or need for medical treatment prior to June 8, 2020. Moreover, on June 8, 2020 Claimant did not communicate anything about an injury at work while using a vacuum. Ms. M[Redacted] remarked that after Claimant went to the emergency room on June 8, 2020 she never returned to work for Employer. Furthermore, Ms. M[Redacted] stated that she did not recall seeing Claimant's June 11, 2020 text message regarding "messing up" her arm, but sent Claimant a text message regarding the supply of vacuums based on an in-person conversation she had with Claimant and Esther about the availability of vacuums.

21. Ms. M[Redacted] explained that she attempted to contact Claimant on multiple occasions to have her return to work when her restrictions had expired. She also made several attempts through text message and phone calls for Claimant to complete a leave of absence form while she recovered. Ms. M[Redacted] commented that that she

was only aware Claimant was suffering personal health problems and not industrial injuries. She detailed that Employer's attendance policy permits an employee three no-call/no-shows. Ms. M[Redacted] thus terminated Claimant for violating Employer's attendance policy in September 2020 after not hearing from her for several months.

22. Dr. Paz testified at the hearing in this matter. He maintained that Claimant's left upper extremity symptoms were not related to her work activities for Employer. He explained that the June 8, 2020 MRI showed two herniated discs at C3-4 and C4-5 with extensive degenerative changes related to age and arthritis. The degenerative changes caused narrowing around the spinal cord or stenosis at multiple levels. Dr. Paz commented that Claimant suffers from cervical spondylosis with associated neurologic deficits resulting from myelopathy. Specifically, Claimant has a combination of arthritic changes and herniated discs causing displacement of the spinal cord. Dr. Paz explained that the herniations on the June 8, 2020 MRI cannot be characterized as acute, subacute or traced back to any particular time. He reasoned that there was no impact to any nerve that would cause symptoms in Claimant's left upper extremity. Accordingly, Claimant's condition is consistent with stenosis at the C4-5 level from the spinal cord rather than any particular nerve root.

23. Dr. Paz also explained that there was no mechanism of injury corresponding to Claimant's herniated discs or cervical spondylosis. The mechanism of injury for a herniated disc typically involves forceful pushing or carrying an object on the head or using the head as a lever. Dr. Paz commented that Claimant's two herniated discs would cause immediate pain, severe discomfort and weakness, instead of a slow evolution of symptoms. He summarized that Claimant's two herniated discs are degenerative in nature rather than the result of forceful traumatic extrusion of the discs. Specifically, it is not medically probable that the work activity reported by Claimant caused the MRI findings. Claimant thus did not suffer industrial injuries while working for Employer on May 28, 2020.

24. Claimant has failed to establish that it is more probably true than not that she suffered compensable industrial injuries on May 28, 2020 during the course and scope of her employment with Employer. Initially, on May 28, 2020 Claimant was vacuuming an office facility. She noted that the vacuum was much heavier than the device she regularly used. After about 30 minutes to two hours Claimant began to develop left arm pain. The pain was at a 10/10 level by the end of her work shift. Despite Claimant's testimony, the chronology of events and the medical records reflect that she did not likely suffer industrial injuries while performing her job duties for Employer on May 28, 2020.

25. On May 29, 2020 Claimant informed job site supervisor Ms. R[Redacted] that she was feeling pain in her neck and left arm. Claimant noted that using a different vacuum during her shift caused the pain. However, Claimant acknowledged that Ms. R[Redacted] is not her supervisor and did not work for Employer. She recognized that she is required to report any work injuries to her direct supervisor Ms. M[Redacted]. In fact, Ms. M[Redacted] remarked that Employer trained employees and provided a handbook for reporting a work-related injury. Specifically, employees are directed to notify

supervisors and then call a nurse line for instructions regarding emergency medical assistance.

26. Claimant did not seek medical treatment for the May 28, 2020 incident until June 8, 2020. Specifically, on June 8, 2020 Claimant sent Ms. M[Redacted] a text message specifying that she was going to the emergency room and would not make it to work. Claimant explained that she had not been feeling well for two or more weeks, her left arm had been falling asleep and she was having trouble breathing. She noted that, because she had "so many health problems am not sure what could be causing it." Throughout the correspondence Claimant did not mention any work incident or symptoms while using a vacuum on May 28, 2020. Notably, the correspondence reveals that Claimant suffered myriad symptoms that were not related to her work activities. Claimant presented to the emergency room on June 8, 2020 because of breathing difficulties and concerns about a possible COVID-19 infection. She denied any recent trauma and did not mention any specific work incident while using a vacuum cleaner. She had multiple complaints involving left arm paresthesias, neck pain, chest discomfort, lightheadedness, and shortness of breath. The medical record specifically provides that Claimant reported "ongoing left arm paresthesias ongoing for 3 weeks left paraspinal and left shoulder pain ongoing for 2 weeks, intermittent chest pressure for approximately 1 week, and shortness of breath with exertion for approximately 1 week." The time frames listed in the medical report reveal that Claimant's left arm symptoms likely preceded her May 28, 2020 work activities. Finally, a neck MRI showed a small central disc extrusion at C4-5 with slight dorsal displacement of the cord, a small right paracentral disc extrusion at C3-4 without canal or foraminal compromise, and degenerative spondylosis at C4-5 and C5-6. The report specified that displacement of the spinal cord at C4-5 was the likely cause of Claimant's symptoms.

27. On the evening of June 8, 2020 Claimant sent another text message to Ms. M[Redacted] and stated she would not make it to work the next day because she was undergoing tests. In response to Ms. M[Redacted]'s inquiry, Claimant noted she did not have any restrictions and would be able to work on Thursday, June 11, 2020. She commented that she could not use the backpack vacuum because "its my upper left arm & upper neck." Ms. M[Redacted] credibly commented that Claimant did not inform her about any injury or need for medical treatment. Claimant also did not communicate anything about an injury at work while using a vacuum cleaner. On the following day Claimant advised Ms. M[Redacted] that testing had revealed a herniated disc in her back. However, Claimant did not attribute the condition to her work activities on May 28, 2020. On Thursday morning, June 11, 2020 Claimant again texted Ms. M[Redacted] and remarked that she may have "messed up" her arm using a heavy vacuum. Importantly, Claimant attributed her left upper extremity symptoms to her vacuuming activities at work only after testing revealed a herniated disc. In fact, Claimant testified that on June 11, 2020 "when I found out that I had two herniated discs, that is when I did tell [Ms. M[Redacted]] what was really going on with me." On June 12, 2020 Claimant completed a Claim for Workers' Compensation. There is no certificate on the claim reflecting that the document was sent to Employer.

28. The persuasive medical opinion of Dr. Paz also reveals that Claimant did not likely suffer industrial injuries while working for Employer on May 28, 2020. Dr. Paz considered whether it was medically probable that Claimant's left upper extremity symptoms were related to her work activities. He performed a causation analysis pursuant to the *Guidelines*. Dr. Paz explained that Claimant developed left upper extremity symptoms after using a vacuum at work on May 28, 2020. She did not report a traumatic event or mechanism of injury that correlated with the diagnosis of an extruded disc at the C4-C5 level. Furthermore, based on Claimant's text messages she likely developed symptoms prior to the date of the incident. Dr. Paz explained that the herniations on the June 8, 2020 MRI could not be characterized as acute, subacute or traced back to any particular time. He reasoned that there was no impact to any nerve that would cause symptoms in Claimant's left upper extremity. Claimant's condition is thus consistent with stenosis at the C4-5 level from the spinal cord rather than any particular nerve root. Dr. Paz summarized that Claimant's two herniated discs are degenerative in nature rather than the result of forceful traumatic extrusion of the discs. Specifically, it is not medically probable that Claimant's reported work activity caused the MRI findings. Claimant thus did not suffer industrial injuries while working for Employer on May 28, 2020.

29. The preceding chronology of events, medical records, bulk of credible testimony and persuasive medical opinion of Dr, Paz reflect that Claimant did not likely suffer industrial injuries while performing her job duties for Employer on May 28, 2020. Although Claimant associated her left upper extremity symptoms with her work activities after she learned of two herniated discs, the medical records and preceding chronology do not reflect a causal relationship between Claimant's diffuse symptoms and her job duties. Claimant has failed to demonstrate that her work activities on May 28, 2020 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed. Therefore, Claimant's request for medical benefits, her choice of Dr. Yamamoto as her ATP and her appeal for TTD benefits are also denied and dismissed.

30. Claimant has failed to demonstrate that it is more probably true than not that she is entitled to recover penalties for Respondents' failure to report the injury to the DOWC within 10 days after notice or knowledge of the injury. The record reflects that Claimant provided Employer with insufficient notice of a work-related injury prior to August 26, 2020. Specifically, Ms. M[Redacted] credibly explained that Claimant sent her a text message on June 8, 2020 specifying that she was going to the emergency room and would make it to work. Claimant explained that she had been feeling badly for two or more weeks, her left arm had been falling asleep and she was having trouble breathing. Claimant noted that because she had "so many health problems am not sure what could be causing it." Throughout the correspondence Claimant did not mention any work incident or symptoms while using a vacuum on May 28, 2020. Notably, the correspondence reveals that Claimant suffered myriad symptoms that were not related to her work activities. Although Claimant mentioned to Ms. M[Redacted] in a June 11, 2020 text message that "I think I messed up my arm when I used Mary's heavy vacuum twice" she did not request medical treatment or otherwise detail a work-related injury. Based on

Claimant’s variety of symptoms, Ms. M[Redacted] was under the impression that Claimant was off work because of restrictions for non-work-related conditions. She thus requested Claimant to take medical leave. In the context of Claimant’s multiple symptoms and her uncertainty about their causes, Respondents’ failure to report an injury was predicated on a rational argument based in law or fact.

31. Moreover, the record reflects that Respondents did not receive notice of Claimant’s work-related injury until August 26, 2020. On August 26, 2020 Employer received a Director’s Order from the DOWC providing that Claimant had filed a claim for Workers’ Compensation. The Order specified that Claimant had filed a claim for compensation on June 15, 2020 and noted that Respondents’ were required to file a position statement admitting or contesting liability within 20 days. The Order also directed Respondents to take a position on the matter within 15 days. Upon receipt of the Order, the Employer filed a FROI within 10 days. Any violation was thus cured prior to Claimant’s Application for Hearing endorsing penalties. Claimant must therefore produce clear and convincing evidence that Employer had knowledge the conduct was unreasonable. Based on Claimant’s vague report of an injury, her failure to comply with Employer’s efforts to have her file a claim to elaborate on her condition, the lack of information regarding ongoing treatment through Dr. Yamamoto, and Employer’s immediate action once knowledge of the claim was received, Employer’s conduct was objectively reasonable. Accordingly, Claimant’s request for penalties based on the failure to report the injury to the DOWC within 10 days after notice or knowledge of the injury is denied and dismissed.

32. Claimant has failed to establish that it is more probably true than not that she is entitled to recover penalties for Respondents’ failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S. Initially, §8-43-203(2)(a), C.R.S. specifically provides that the respondents “may become liable to the claimant, if successful on the claim for compensation, for up to one day’s compensation for each failure to so notify.” However, as determined in the preceding sections of this order, Claimant has failed to demonstrate that she suffered compensable injuries while working for Employer on May 28, 2020. Because Claimant was not successful on her claim for compensation, Respondents are not liable to penalties under §8-43-203, C.R.S. Accordingly, Claimant’s request for penalties for failure to timely admit or deny liability is denied and dismissed.

33. Claimant has failed to prove that it is more probably true than not that she is entitled to recover penalties for Respondents’ failure to provide a complete copy of their claim file within 15 days pursuant to §8-43-203(4), C.R.S. Claimant asserts that she requested a copy of the claim file from Insurer on June 12, 2020 but did not receive the claim file until November 17, 2020. However, Claimant has failed to produce any evidence regarding the production of the file. Specifically, Claimant has not provided evidence of a request or the late production of the claim file. The mere allegation of the failure to timely produce the claim file, absent supporting evidence, is insufficient to demonstrate that Insurer violated §8-43-203(4), C.R.S. Accordingly, Claimant’s request for penalties for failure to timely provide a copy of the claim file under §8-43-203(4), C.R.S. is denied and dismissed.

34. Respondents have failed to demonstrate that it is more probably true than not that they are permitted to recover penalties for Claimant's late reporting of her injury pursuant to §8-43-102(1)(a), C.R.S. As determined in the preceding sections of this order, Claimant has failed to demonstrate that she suffered a compensable injury while working for Employer on May 28, 2020. Because Claimant is not entitled to receive any compensation, she cannot lose compensation. Accordingly, Respondents' request for penalties pursuant to §8-43-102(1)(a), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to establish by a preponderance of the evidence that she suffered compensable industrial injuries on May 28, 2020 during the course and scope of her employment with Employer. Initially, on May 28, 2020 Claimant was vacuuming an office facility. She noted that the vacuum was much heavier than the device she regularly used. After about 30 minutes to two hours Claimant began to develop left arm pain. The pain was at a 10/10 level by the end of her work shift. Despite Claimant's

testimony, the chronology of events and the medical records reflect that she did not likely suffer industrial injuries while performing her job duties for Employer on May 28, 2020.

9. As found, on May 29, 2020 Claimant informed job site supervisor Ms. R[Redacted] that she was feeling pain in her neck and left arm. Claimant noted that using a different vacuum during her shift caused the pain. However, Claimant acknowledged that Ms. R[Redacted] is not her supervisor and did not work for Employer. She recognized that she is required to report any work injuries to her direct supervisor Ms. M[Redacted]. In fact, Ms. M[Redacted] remarked that Employer trained employees and provided a handbook for reporting a work-related injury. Specifically, employees are directed to notify supervisors and then call a nurse line for instructions regarding emergency medical assistance.

10. As found, Claimant did not seek medical treatment for the May 28, 2020 incident until June 8, 2020. Specifically, on June 8, 2020 Claimant sent Ms. M[Redacted] a text message specifying that she was going to the emergency room and would not make it to work. Claimant explained that she had not been feeling well for two or more weeks, her left arm had been falling asleep and she was having trouble breathing. She noted that, because she had “so many health problems am not sure what could be causing it.” Throughout the correspondence Claimant did not mention any work incident or symptoms while using a vacuum on May 28, 2020. Notably, the correspondence reveals that Claimant suffered myriad symptoms that were not related to her work activities. Claimant presented to the emergency room on June 8, 2020 because of breathing difficulties and concerns about a possible COVID-19 infection. She denied any recent trauma and did not mention any specific work incident while using a vacuum cleaner. She had multiple complaints involving left arm paresthesias, neck pain, chest discomfort, lightheadedness, and shortness of breath. The medical record specifically provides that Claimant reported “ongoing left arm paresthesias ongoing for 3 weeks left paraspinal and left shoulder pain ongoing for 2 weeks, intermittent chest pressure for approximately 1 week, and shortness of breath with exertion for approximately 1 week.” The time frames listed in the medical report reveal that Claimant’s left arm symptoms likely preceded her May 28, 2020 work activities. Finally, a neck MRI showed a small central disc extrusion at C4-5 with slight dorsal displacement of the cord, a small right paracentral disc extrusion at C3-4 without canal or foraminal compromise, and degenerative spondylosis at C4-5 and C5-6. The report specified that displacement of the spinal cord at C4-5 was the likely cause of Claimant’s symptoms.

11. As found, on the evening of June 8, 2020 Claimant sent another text message to Ms. M[Redacted] and stated she would not make it to work the next day because she was undergoing tests. In response to Ms. M[Redacted]’s inquiry, Claimant noted she did not have any restrictions and would be able to work on Thursday, June 11, 2020. She commented that she could not use the backpack vacuum because “its my upper left arm & upper neck.” Ms. M[Redacted] credibly commented that Claimant did not inform her about any injury or need for medical treatment. Claimant also did not communicate anything about an injury at work while using a vacuum cleaner. On the following day Claimant advised Ms. M[Redacted] that testing had revealed a herniated disc in her back. However, Claimant did not attribute the condition to her work activities

on May 28, 2020. On Thursday morning, June 11, 2020 Claimant again texted Ms. M[Redacted] and remarked that she may have “messed up” her arm using a heavy vacuum. Importantly, Claimant attributed her left upper extremity symptoms to her vacuuming activities at work only after testing revealed a herniated disc. In fact, Claimant testified that on June 11, 2020 “when I found out that I had two herniated discs, that is when I did tell [Ms. M[Redacted]] what was really going on with me.” On June 12, 2020 Claimant completed a Claim for Workers’ Compensation. There is no certificate on the claim reflecting that the document was sent to Employer.

12. As found, the persuasive medical opinion of Dr. Paz also reveals that Claimant did not likely suffer industrial injuries while working for Employer on May 28, 2020. Dr. Paz considered whether it was medically probable that Claimant’s left upper extremity symptoms were related to her work activities. He performed a causation analysis pursuant to the *Guidelines*. Dr. Paz explained that Claimant developed left upper extremity symptoms after using a vacuum at work on May 28, 2020. She did not report a traumatic event or mechanism of injury that correlated with the diagnosis of an extruded disc at the C4-C5 level. Furthermore, based on Claimant’s text messages she likely developed symptoms prior to the date of the incident. Dr. Paz explained that the herniations on the June 8, 2020 MRI could not be characterized as acute, subacute or traced back to any particular time. He reasoned that there was no impact to any nerve that would cause symptoms in Claimant’s left upper extremity. Claimant’s condition is thus consistent with stenosis at the C4-5 level from the spinal cord rather than any particular nerve root. Dr. Paz summarized that Claimant’s two herniated discs are degenerative in nature rather than the result of forceful traumatic extrusion of the discs. Specifically, it is not medically probable that Claimant’s reported work activity caused the MRI findings. Claimant thus did not suffer industrial injuries while working for Employer on May 28, 2020.

13. As found, the preceding chronology of events, medical records, bulk of credible testimony and persuasive medical opinion of Dr, Paz reflect that Claimant did not likely suffer industrial injuries while performing her job duties for Employer on May 28, 2020. Although Claimant associated her left upper extremity symptoms with her work activities after she learned of two herniated discs, the medical records and preceding chronology do not reflect a causal relationship between Claimant’s diffuse symptoms and her job duties. Claimant has failed to demonstrate that her work activities on May 28, 2020 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed. *See Washburn v. City Market*, WC No. 5-109-470 (ICAO, June 3, 2020) (noting that the “claimant [might] be confusing causation for correlation” and declining to “blindly follow the common informal fallacy of "after this therefore because of this" (*post hoc ergo propter hoc*)). Therefore, Claimant’s request for medical benefits, her choice of Dr. Yamamoto as her ATP and her appeal for TTD benefits are also denied and dismissed.

Penalties

14. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (ICAO,. Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

15. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97, 99 (Colo. App. 2005); *see also Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hospital,* 114 P.3d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to demonstrate their conduct was reasonable under the circumstances. *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

16. Section 8-43-304(4), C.R.S. permits an alleged violator 20 days to cure the violation. If the violator cures the violation within the 20 day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). Section 8-43-304(4), C.R.S. modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *see In re Tadlock*, WC 4-200-716 (ICAO, May 16, 2007).

Failure to Report

17. Sections 8-43-101(1), C.R.S. and 8-43-103(1), C.R.S. as well as WCRP Rules 5-2 (A), (B)(1), and (B)(2) require the employer to notify the DOWC within 10 days of notice or knowledge that an employee sustained a permanently physically impairing or

lost-time injury. Because the preceding statutes and rules to not delineate specific penalties, Claimant seeks penalties pursuant to the general provision in §8-43-304(1) C.R.S.

18. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to recover penalties for Respondents' failure to report the injury to the DOWC within 10 days after notice or knowledge of the injury. The record reflects that Claimant provided Employer with insufficient notice of a work-related injury prior to August 26, 2020. Specifically, Ms. M[Redacted] credibly explained that Claimant sent her a text message on June 8, 2020 specifying that she was going to the emergency room and would make it to work. Claimant explained that she had been feeling badly for two or more weeks, her left arm had been falling asleep and she was having trouble breathing. Claimant noted that because she had "so many health problems am not sure what could be causing it." Throughout the correspondence Claimant did not mention any work incident or symptoms while using a vacuum on May 28, 2020. Notably, the correspondence reveals that Claimant suffered myriad symptoms that were not related to her work activities. Although Claimant mentioned to Ms. M[Redacted] in a June 11, 2020 text message that "I think I messed up my arm when I used Mary's heavy vacuum twice" she did not request medical treatment or otherwise detail a work-related injury. Based on Claimant's variety of symptoms, Ms. M[Redacted] was under the impression that Claimant was off work because of restrictions for non-work-related conditions. She thus requested Claimant to take medical leave. In the context of Claimant's multiple symptoms and her uncertainty about their causes, Respondents' failure to report an injury was predicated on a rational argument based in law or fact.

19. As found, moreover, the record reflects that Respondents did not receive notice of Claimant's work-related injury until August 26, 2020. On August 26, 2020 Employer received a Director's Order from the DOWC providing that Claimant had filed a claim for Workers' Compensation. The Order specified that Claimant had filed a claim for compensation on June 15, 2020 and noted that Respondents' were required to file a position statement admitting or contesting liability within 20 days. The Order also directed Respondents to take a position on the matter within 15 days. Upon receipt of the Order, the Employer filed a FROI within 10 days. Any violation was thus cured prior to Claimant's Application for Hearing endorsing penalties. Claimant must therefore produce clear and convincing evidence that Employer had knowledge the conduct was unreasonable. Based on Claimant's vague report of an injury, her failure to comply with Employer's efforts to have her file a claim to elaborate on her condition, the lack of information regarding ongoing treatment through Dr. Yamamoto, and Employer's immediate action once knowledge of the claim was received, Employer's conduct was objectively reasonable. Accordingly, Claimant's request for penalties based on the failure to report the injury to the DOWC within 10 days after notice or knowledge of the injury is denied and dismissed.

Failure to Admit or Deny Liability

20. Section 8-43-203(1)(a), C.R.S. provides:

> The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee . . . within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier.

21. Section 8-43-203(2)(a), C.R.S. specifies that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." Because the claimant seeks the imposition of a penalty for failure timely to admit or deny liability, the claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. *See Pioneer Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005) (claimant seeking imposition of penalty under § 8-43-304(1) bore burden of proof to establish circumstances justifying a penalty).

22. Under the language of §8-43-203(1)(a), knowledge of an insured may not be imputed to the insurer. *See State Compensation Insurance Fund v. Wilson,* 736 P.2d 33 (Colo. 1987); *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). Thus, an insurer is not responsible for admitting or denying liability until 20 days after it has knowledge of information that would require the employer to file a first report of injury with the DOWC under §8-43-101, C.R.S. Those circumstances include injuries that result in "lost time from work for the injured employee in excess of three shifts or calendar days." The mere knowledge that the claimant sustained an injury and had restrictions resulting in a prescription for modified duty does not establish that the claimant missed work as a result of the injury or the number of days missed. *See Ralston Purina-Keystone v. Lowry,* 821 P.2d 910 (Colo. App. 1991); *Atencio v. Holiday Retirement Corp.,* W.C. No. 4-532-443 (ICAP Nov. 15, 2002).

23. As found, Claimant has failed to establish by a preponderance of the evidence that she is entitled to recover penalties for Respondents' failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S. Initially, §8-43-203(2)(a), C.R.S. specifically provides that the respondents "may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." However, as determined in the preceding sections of this order, Claimant has failed to demonstrate that she suffered compensable injuries while working for Employer on May 28, 2020. Because Claimant was not successful on her claim for compensation, Respondents are not liable to penalties under §8-43-203, C.R.S. Accordingly, Claimant's request for penalties for failure to timely admit or deny liability is denied and dismissed.

Failure to Timely Produce Claim File

24. Section 8-43-203(4), C.R.S. states that "[w]ithin fifteen days after the mailing of a written request for a copy of the claim file, the employer or, if insured, the

employer's insurance carrier or third-party administrator shall provide to the claimant or his or her representative a complete copy of the claim file." Because §8-43-203(4), C.R.S. does not delineate specific penalties, Claimant seeks penalties pursuant to the general provision in §8-43-304(1) C.R.S.

25. As found, Claimant has failed to prove by a preponderance of the evidence that she is entitled to recover penalties for Respondents' failure to provide a complete copy of their claim file within 15 days pursuant to §8-43-203(4), C.R.S. Claimant asserts that she requested a copy of the claim file from Insurer on June 12, 2020 but did not receive the claim file until November 17, 2020. However, Claimant has failed to produce any evidence regarding the production of the file. Specifically, Claimant has not provided evidence of a request or the late production of the claim file. The mere allegation of the failure to timely produce the claim file, absent supporting evidence, is insufficient to demonstrate that Insurer violated §8-43-203(4), C.R.S. Accordingly, Claimant's request for penalties for failure to timely provide a copy of the claim file under §8-43-203(4), C.R.S. is denied and dismissed.

Late Reporting of Injury

26. Section 8-43-102(1)(a), C.R.S. specifies that an employee who sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four days of the occurrence of the injury." If the employee fails to report the injury in writing "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the discretion of the ALJ. *In re Johnson*, WC's 4-490-900 & 4-642-480 (ICAO, Dec. 7, 2006).

27. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are permitted to recover penalties for Claimant's late reporting of her injury pursuant to §8-43-102(1)(a), C.R.S. As determined in the preceding sections of this order, Claimant has failed to demonstrate that she suffered a compensable injury while working for Employer on May 28, 2020. Because Claimant is not entitled to receive any compensation, she cannot lose compensation. Accordingly, Respondents' request for penalties pursuant to §8-43-102(1)(a), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Workers' Compensation benefits is denied and dismissed.

2. Claimant earned an AWW of $640.00.

3. Claimant's requests for penalties are denied and dismissed.

4. Respondents' request for penalties is denied and dismissed.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.*

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-949-433-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that she is entitled to receive reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of her work-related injury or to prevent further deterioration of her condition pursuant to Grover v. Industrial Comm'n, 795 P.2d 705 (Colo. App. 1988).

2. Whether Respondents established by a preponderance of the evidence that Claimant received an overpayment of medical benefits, and whether Respondents are entitled to repayment.

FINDINGS OF FACT

1. On January 15, 2014, Claimant sustained an admitted industrial injury to her left ankle. She received medical treatment through Roberta Anderson-Oeser, M.D., at Concentra Medical Centers as her authorized treating provider (ATP), and later underwent left ankle surgery. (Ex. B).

2. On September 27, 2016, Claimant underwent a Division Independent Medical Examination (DIME) with John Aschberger, M.D. Dr. Aschberger determined that Claimant reached MMI on July 5, 2016, and assigned a 6% left lower extremity impairment rating. Dr. Aschberger indicated that medical maintenance care was reasonable for intermittent pain medication, although he "expected tapering utilization." (Ex. F).

3. On December 9, 2016, Respondents filed an Amended Final Admission of Liability (FAL) consistent with the 6% lower extremity rating and acknowledged that Claimant was entitled to received medical maintenance benefits. (Ex. A).

4. Claimant subsequently received medical maintenance treatment from Dr. Anderson-Oeser about once every one to two months. Dr. Anderson-Oeser noted that Claimant suffered persistent left ankle pain, but her condition remained stable. From at least December 2016, Dr. Anderson-Oeser prescribed Claimant tramadol for left foot and ankle pain. Claimant was prescribed 50 mg tramadol, 1-2 pills to be taken every 6 hours. Claimant's prescription and usage instructions for tramadol were unchanged from at least February 1, 2017, until August 14, 2019. (Ex. G).

5. On June 24, 2019, Claimant sustained another injury to her left ankle while shopping. (Ex. B).

6. July 17, 2019, Claimant filed a Petition to Reopen her claim asserting that the June 24, 2019 left ankle injury constituted a worsening of her January 15, 2014 industrial injury,

and seeking temporary total disability (TTD) benefits related to the June 24, 2019 injury. (Ex. B).

7. On December 17, 2019, the parties participated in a hearing before ALJ Peter Cannici to adjudicate Claimant's July 17, 2019 Petition to Reopen. In the corresponding Findings of Fact, Conclusions of Law and Order, issued on February 3, 2020, ALJ Cannici denied Claimant's petition to reopen, finding that Claimant failed to establish that she suffered a worsening of her left ankle that was causally related to Claimant's January 2014 injury and that the June 24, 2019 injury "constituted an intervening injury that severed the causal connection to Claimant's original January 14, 2014 work-related incident." Based on this finding, ALJ Cannici denied Claimant's request for additional TTD benefits. (Ex. A).

8. Subsequently, Claimant continued to see Dr. Anderson-Oeser for treatment of her left ankle, and continued to receive regular prescriptions for 50 mg tramadol. In September 2019, Claimant's tramadol usage instructions were changed from 1-2 pills every 6 hours as needed for pain, to 1 pill every 4 hours as needed for pain. (Ex. G).

9. Respondents denied liability for Claimant's treatment, asserting that ALJ Cannici's February 3, 2020 Order terminated Respondents' liability for medical treatment to the Claimant related to her left ankle.

10. On November 20, 2020, Claimant filed the present Application for Hearing seeking medical maintenance treatment, including authorization of Tramadol prescribed by Dr. Anderson-Oeser.

11. On March 3, 2021, Claimant saw Dr. Anderson-Oeser. In her treatment note, Dr. Anderson-Oeser expressed her opinion regarding the Claimant's need for continued pain medication therapy, stating:

> "It is my opinion that her current symptoms are related to her initial injury of January 15, 2014. She had required ongoing treatment including surgery, therapy and medications since her initial injury. Even though she had another injury to her left ankle in 2019, this did not significantly alter her pain medication therapy. She required ongoing pain medications up to the date of her 2019 injury and continues to require the same medication to maintain her function. Even though the pain medication does not completely alleviate her symptoms she is able to work, perform her ADLs, her exercise and stretching program, household activities, and to interact with her family." (Ex. 6).

12. At hearing, Respondents' expert, Dr. Schwappach testified as an expert in orthopedic surgery. Dr. Schwappach examined Claimant on March 3, 2021, and also conducted a previous IME in October 2019. Dr. Schwappach also testified that in his opinion, the Claimant's ongoing pain is the result of her June 2019 injury and subsequent surgery, and not the result of her 2014 work injury. Dr. Schwappach testified that based on his examination and interview of Claimant in March 2021, Claimant's present

symptoms are in her calf, which was not an issue prior to her June 2019 injury. Dr. Schwappach did not dispute that the Claimant's pain is improved through the use of tramadol, and believes Dr. Anderson-Oeser should be the one to assess whether the amount or length of time Claimant has used tramadol is an issue. He also testified that if Claimant is going to continue tramadol, continued visits with Dr. Anderson-Oeser for monitoring and directing the use of the medication are reasonable.

13. Claimant testified at hearing that the only continuing symptoms she experiences as a result of the June 2019 injury is tenderness at the site of surgical scarring. Otherwise, she believes the pain in her left ankle is the same as it was prior to the June 2019 injury and the result of her 2014 injury, and that the post-2014 pain has not improved.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MAINTENANCE MEDICAL BENEFITS

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Even where reasonable and necessary, medical maintenance care must be causally related to a claimant's industrial injury. In some cases, liability for treatment may be terminated by virtue of an intervening event. "Where the need for treatment results from an intervening injury unrelated to the industrial injury, treatment for the subsequent condition is not compensable*."* *Lancaster v. Arapahoe County Sheriff Dept*., WC. Nos. 4-744-646 and 4-746-515 (ICAO. May 12, 2010) *citing Owens v. Industrial Claim Appeals Office, 49 P.3d 1187 (Colo. App. 2002).* However, "[t]he determination of whether the need for medical treatment is the result of an independent intervening cause is a question of fact for resolution by the ALJ." *In re Vargas*, W.C. No. 4-325-149 (ICAO August 29, 2002), *citing Owens, supra*.

Claimant has established by a preponderance of the evidence that the tramadol prescribed by Dr. Anderson-Oeser, and the associated office visits with Dr. Anderson-Oeser are reasonably necessary to relieve the effects or prevent further deterioration of Claimant's industrial injury. As found, Claimant was taking tramadol for a significant period of time prior to her June 2019 injury. The tramadol dosage prescribed by Dr. Anderson-Oeser was unaffected by the June 2019 Although Dr. Anderson-Oeser modified Claimant's usage instructions in September 2019, the modification did not increase the dosage or the number of pills per day over what was previously described. Claimant's testimony, combined with Dr. Anderson-Oeser's March 3, 2021 report, credibly support that the Claimant’s use of tramadol is reasonably necessary to relieve the effects of her work injury.

ALJ Cannici’s determination that Claimant’s June 2019 injury was an intervening event does not lead to a different conclusion. Claimant’s July 17, 2019 Petition to Reopen sought to re-instate TTD benefits based on the allegation that the June 2019 injury constituted a worsening of Claimant’s industrial injury. ALJ Cannici found that Claimant’s June 2019 injury severed the causal connection between Claimant’s industrial injury and her then-existing disability. Accordingly, he denied Claimant’s petition to reopen to obtain TTD benefits. ALJ Cannici made no findings with respect to Claimant’s medical maintenance treatment or whether Claimant’s need for tramadol was related to the intervening injury. Claimant’s entitlement to medical maintenance benefits was unaffected by the denial of Claimant’s petition to reopen to obtain TTD benefits because Respondents admitted liability for post-MMI medical treatment in the Amended FAL. Thus, Claimant was not required to reopen her claim to obtain medical maintenance benefits.

OVERPAYMENT

At hearing, Respondents endorsed the issue of overpayment, asserting Claimant is obligated to repay medical benefits Respondents paid directly to health care providers after Claimant’s June 2019 injury.

Pursuant to § 8–43–303(1) C.R.S., upon a *prima facie* showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In 1997, The General Assembly amended subsections (1) and (2)(a) of § 8-43-303 to permit reopening of an award on grounds of fraud and overpayment, in addition to the already statutory reopening methods of error, mistake, or change in condition. *Haney v. Shaw, Stone, & Webster*, W.C. No. 4-796-763 (ICAO July 28, 2011), citing *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev’d on other grounds Benchmark/Elite, Inc., v. Simpson*, 232 P.3d 777 (Colo. 2010).

The 1997 amendments also provide that no such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or *overpayment*. *Haney*, at *1. The 1997 amendments added § 8-40-201(15.5) defining “overpayment” to mean:

> [M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

There are thus three categories of possible overpayment pursuant to §8- 40-201(15.5). *In Re Grandestaff,* No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011). Respondents bear the burden of proof on this issue. *See In re Claim of Jones*, W.C. No. 4-976-657-03 (ICAP August 18, 2017).

Respondents have failed to establish that Claimant received any overpayments or their own entitlement to repayment. Respondents' position statement is silent on the issue of recovery of purported overpayments and does not list overpayment as an issue for decision. Notwithstanding Respondents cite no authority, no facts and make no argument in support of their claim for the recovery of alleged overpayments. The ALJ concludes that Claimant has failed to meet their burden of proof and have not established a legal or factual basis for repayment.

ORDER

It is therefore ordered that:

1. The tramadol prescribed by Dr. Anderson-Oeser, and periodic visits with Dr. Anderson-Oeser to monitor Claimant's use of tramadol are reasonably necessary to relieve the effects of Claimant's January 15, 2014 industrial injury.

2. Respondents' request for repayment of alleged overpayments is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 22, 2021 ________________________________

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-111-050-004

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],
Claimant,

v.

[Redacted],
Employer,

and

[Redacted],
Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), o June 9, 2021 , in Denver, Colorado. The h 1:30 PM , an ending at 2:30 PM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq.. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 7 were admitted into evidence, without objection. Respondents offered no exhibits into evidence.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on June 10, 2021. Respondents filed no timely objections as to form. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns whether the Claimant is entitled to post-maximum medical improvement (MMI) medical maintenance benefits after the agreed MMI date of June 28, 2020.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant was employed by the Employer in the position of Team Leader.

2. On May 20, 2019, the Claimant injured his right foot while working for the Employer.

3. Ultimately, Respondent filed a Final Admission of Liability (FAL), admitting for medical benefits; an average weekly wage (AWW) of $838.72; an MMI date of June 28, 2020; and, 5% scheduled of the right foot below the ankle. Claimant filed a timely objection to the FAL. No position on the issue of post-MMI medical maintenance benefits (*Grover* meds) was stated on the FAL

4. The Claimant had to work while recovering from this injury, returning to full duty on August 5, 2019. The symptoms he experienced included severe pain in his right foot. The symptoms experienced, along with continuing complications from the injury, interfered with the Claimant's ability to work as effectively as he had before. Due to this, he has since been reassigned to a new position within the company.

5. Following the admitted injury, the Claimant first went to Urgent Care on May 22, 2020. The physicians at Urgent Care informed him that he had an infection and that if he felt poorly then he would need to visit the emergency room (ER).

6. After visiting the ER, the Claimant saw Greg Reichhardt, M.D., who did not recommend continued maintenance care, stating that it was unnecessary, and declared the Claimant at MMI for Claimant on June 18, 2020. The Claimant only met with Dr. Reichhardt this one time.

7. Despite using the medicine that he had been provided, the Claimant continued to experience symptoms in his right foot after MMI such as the steady continuation of pain. Dr. Reichardt had assured the Claimant that the pain would begin to decrease.

8. In response to the continued symptoms, the Claimant sought continued care for his right foot elsewhere.

9. From a previous foot injury in June 2016, the Claimant had gone to St. Anthony's and was eventually referred to Jessica Johnson, D.P.M., a podiatrist. He again sought out care from Dr. Johnson at St. Anthony's to address these continuing symptoms.

10. Dr. Johnson is connected with Concentra, where she has sent the Claimant to receive therapy to address the continued symptoms he is experiencing. At Concentra, the therapies that Claimant receives include massages, foot exercises, and electrical stimulation of the muscles in his foot.

11. Dr. Johnson formerly sent the Claimant elsewhere to receive foot therapies, but the Claimant has had to pay for these services out of his own pocket since his declaration of MMI. He ultimately chose to continue to go to Concentra because they are affordable. At Concentra, the Claimant is paying $85 per visit.

12. Respondent has noted that St Anthony's is not an authorized healthcare provider under the company insurance and that Dr. Johnson is not recognized as an authorized doctor under the, is an authorized treating provider (ATP) under the company insurance. Despite not being authorized by Respondent, Dr. Johnson is a licensed medical professional, with specialized expertise in the treatment of foot injuries. In fact, the ALJ hereby finds that Dr. Johnson's expertise in the treatment of foot inujries is greater than Dr. Reichhardt's expertise.

13. The Claimant feels that the continued treatment he has been receiving from Concentra and Dr. Johnson have helped alleviate the continued pain he has been experiencing from his injury. The Claimant believes that failing to continue this treatment could result in his condition worsening and this would have an effect on his ability to work. If Claimant's condition worsens, interfering with his ability to work, then another worker's compensation case may have to be initiated.

Ultimate Finding

14. The ALJ finds the opinions of podiatric physician, Dr. Johnson and the Claimant's lay opinion, more credible and persuasive on the issue of *Grover* meds than the opinions of Dr. Reichhardt, primarily on the basis of Dr. Johnson's greater foot expertise and the Claimant's credible actions and testimony..

15. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, the accept the opinions of Dr. Johnson and the

Claimant on the issue of *Grove* meds, and to reject the opinions of Dr. Reichhardt on thereon.

16. Despite being declared at MMI by Dr. Reichhardt, effectively ending Claimant's worker's compensation benefits that he had been receiving, the Claimant has had persisting symptoms from his injury.

17. Without worker's compensation benefits, the Claimant privately sought ways to address his continuing symptoms, eventually finding Dr. Johnson and Concentra. His actions in this regard enhance the Claimant's credibility and cause the ALJ to infer and find that the Claimant's post-injury effects are real, work-related and in need of a remedy. Although not in the chain of authorized referrals, the continued treatment by Dr. Johnson and Concentra is causally related to the admitted right foot injury and reasonably necessary to cure and relive the effects thereof.

18. The services provided by both Dr. Johnson and Concentra have been beneficial to Claimant, improving his condition, and he believes that a discontinuation of these services would lead to a worsening of his condition. The ALJ infers and finds that the Claimant's continued treatment by Concentra and Dr. Johnson will maintain the Claimant at MMI and prevent a deterioration of his right foot condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of podiatric physician, Dr. Johnson and the Claimant's lay opinion, were more credible and persuasive on the issue of *Grover* meds than the opinions of Dr. Reichhardt, primarily on the basis of Dr. Johnson's greater foot expertise and the Claimant's credible actions and testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical and lay opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Johnson and the Claimant on the issue of *Grove* meds, and to reject the opinions of Dr. Reichhardt on thereon.

Post-MMI Medical Maintenance Benefits

c. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. At a minimum, such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity thereof at any time. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to maintain him at MMI and to prevent deterioration of his work-related condition.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the entitlement to benefits beyond those admitted. As noted, the FAL was silent concerning *Grover* meds. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, Claimant has sustained his burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Respondents shall pay the costs of all authorized, causally related and reasonable necessary post-maximum medical improvement medical maintenance benefits, subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this 22nd day of June 2021.

ISSUES

- Did Claimant prove she suffered a compensable injury to her right knee on November 6, 2020?

- Did Claimant prove entitlement to reasonably necessary and related medical treatment for her right knee?

- What is Claimant's average weekly wage (AWW)?

STIPULATIONS

"Optum" is the primary ATP if the claim is compensable.

FINDINGS OF FACT

1. Claimant worked for employer as an RN charge nurse. She manages other staff and performs direct patient care. The job is fast-paced and physically demanding, including extensive walking on a daily basis.

2. Claimant believes she injured her right knee at work on November 6, 2020, while moving a patient. She had gone to the patient's room with a CNA. The patient had a bowel movement and needed to be changed. The patient had to be turned over one way and then the other way to be fully cleaned. Claimant planned to have the CNA move the patient, but discovered the CNA had a back injury and could not move the patient. The patient was a "larger" individual, which required Claimant to use "all my weight." Claimant braced her knees against the metal frame of the bed while maneuvering the patient. Her right knee felt "uncomfortable" while it was pressed against the metal bed frame moving the patient.

3. After she finished changing the patient, Claimant exited the room and began walking back to the nurse's station. After a short distance, she felt a "pop" in her right knee "behind the kneecap." She testified the pop felt "weird" but "there wasn't any pain associated with it at that time." A short time later, she felt a "catching" sensation "in the popliteal space . . . behind the kneecap." Claimant's right knee became increasingly painful as she attended to patients and walked around the unit the remainder of the shift.

4. Claimant texted her supervisor at the end of her shift and reported "the back of my leg popped in the popliteal area. It has been getting worse. I can bare [sic] weight but it is painful." When asked whether it was related to her work, Claimant replied, "Honestly I'm not sure. I had just finished changing a resident that was larger. I had to use all my weight to roll her bc the aide had a hurt back. It happened right after that."

5. Claimant saw Dr. Robi Baptist at Optum on November 7, 2020. The "chief complaint" section of the report states, "she was rolling a large pt over to the pt side. Holding the pt weight with her legs. When she was done, she heard a pop in her R leg behind her knee."[1] Examination of the right knee demonstrated a "moderate effusion," and Dr. Baptist suspected internal derangement "because of the amount of the effusion."[2] X-rays were normal with no evidence of bony or soft tissue pathology. Dr. Baptist restricted Claimant to sedentary duties, ordered an MRI, and referred her for an orthopedic evaluation.

6. The MRI was completed on November 19, 2020. It showed a 1 cm injury/fracture to the right paracentral patellar articular cartilage with possible associated chondral delamination, and a focal subchondral medullary injury/bone bruise. The remainder of the knee was normal, with no meniscal, ligamentous, tendinous, chondral, or osseous pathology.

7. Claimant saw Leann Murphy, an orthopedic PA-C, on December 9, 2020. Claimant explained her knee pain "started acutely" after "turning and pushing a larger pt on bed at work. Then afterwards, she felt popping at back of the knee and at kneecap." She states her knee went into the febrile [sic][3] of the bed. After which she experienced progressively worsening pain." Ms. Murphy reviewed the MRI images and noted "bone bruise of the patella in addition to chondral injury with potential fissuring." Claimant's pain at the time of evaluation was primarily behind and around the kneecap. The knee was tender to palpation with no effusion or instability. Ms. Murphy diagnosed a right patellar chondral defect. She gave Claimant an adjustable leg immobilizer and recommended she start physical therapy.

8. Claimant received no further treatment after December 9, 2020, because the claim was denied and she has no health insurance.

9. Claimant credibly testified she had no problems with or limitations from her right knee before November 6, 2020. Her testimony is corroborated by the lack of medical records reflecting any pre-injury knee issues, and her ability to work as a charge nurse and perform direct patient care without difficulty.

10. Dr. Timothy Hall performed an IME for Claimant on March 11, 2021. Dr. Hall documented that Claimant had some knee pain while she was pushing the patient, consistent with Claimant's testimony of knee "discomfort" because her knee was being pressed against the metal bed frame. Claimant finished moving the patient and was walking back to the nurses station when she felt a pop in her knee. Her knee became progressively more symptomatic during her shift. Dr. Hall diagnosed a chondral injury involving the right paracentral patellar hyaline articular cartilage with a bone bruise. He noted Claimant has given a consistent history since her first injury-related office visit with

[1] Another section of the report contains an inaccurate history indicating the pop occurred while moving the patient.

[2] This clinical finding is supported by a text message Claimant sent to her manager in November stating, "[my knee] was still swollen last week when [Dr. Baptist] saw me."

[3] Ms. Murphy probably meant "frame."

Dr. Baptist. Dr. Hall opined Claimant's described mechanism of injury was consistent with the trauma seen on the MRI and supported a work-related injury.

11. Dr. Timothy O'Brien performed an IME for Respondents on March 16, 2021. Dr. O'Brien opined it was "medically improbable that [Claimant's] occupational exposure and the work incident which she represents occurred on November 6, 2020 resulted in any type of right knee injury." Dr. O'Brien opined the activity Claimant described did not generate enough force to exceed the injury threshold and cause the pathology found in Claimant's knee. He concluded if Claimant had sustained the injuries found on the MRI while at work, she would have had "massive accumulation of fluid" in her knee, and the absence of any accumulation of fluid "proves" that the MRI findings were chronic, pre-existing, and not caused by pushing with her knees or walking. He also noted Claimant did not behave as he would expect if she acutely fractured the chondral surface, the x-rays demonstrated no post-traumatic effusion, and clinical findings demonstrated no objective evidence of an acute injury.

12. Dr. O'Brien issued a supplemental report on April 16, 2021, after reviewing additional records. He incorrectly stated Dr. Baptist performed no physical examination on November 7, 2020, even though a physical examination is documented in the report, including a finding of "moderate effusion" of the knee. Relying on this alleged lack of clinical examination findings, Dr. O'Brien opined Dr. Baptist's report supports his conclusion Claimant suffered no acute injury.[4] He further wrote, "If [Claimant] had fractured the chondral surface of her patellofemoral joint, there would have been excruciating pain, and she would have needed urgent or emergent medical attention, but in fact did not seek medical attention on November 6, 2020." Dr. O'Brien opined all findings on the MRI were chronic with no evidence of any acute injury.

13. Dr. Hall testified at hearing consistent with his report. Dr. Hall pointed to knee swelling documented by Dr. Baptist on November 7, 2020 as evidence of a recent injury. Dr. Hall explained Claimant did not "fracture" her patella but instead injured or fractured the articular cartilage on the underside of the patella. He explained an acute chondral injury would not necessarily produce copious swelling because of the limited blood supply to articular cartilage. Dr. Hall opined the chondral defect and bone bruise were caused by moving the patient with Claimant's knee braced against the frame of the bed. The injury subsequently became symptomatic a few moments later when she onloaded the patella and started walking. Dr. Hall was not particularly concerned about the exact details of the "pop" because "it's hard to be definitive about pops." Dr. Hall disagreed with Dr. O'Brien's opinion Claimant did not act as she "should" have if she sustained an acute injury. Dr. Hall assumed Respondents' counsel's repeated references to an "arthritic knee" were hypothetical because Claimant's knee is otherwise healthy aside from the isolated patellar pathology. He opined, "this would be a rather unusual chronic finding, because it's so localized. . . . This is a single, specific finding, in an otherwise normal study, which I think points more toward acuteness than chronicity."

[4] When questioned at hearing about Dr. Baptist's initial finding of "moderate effusion," Dr. O'Brien dismissed the finding as merely "historical." This is an incorrect reading of Dr. Baptist's report.

14. Dr. O'Brien testified it was "virtually impossible" for the incident Claimant described to cause her right knee condition. Dr. O'Brien was "nearly 100% certain" the event described by Claimant did not cause any of the findings seen on the MRI. The pathology reflects a pre-existing degenerative condition that would have been found by an MRI the day before the work accident. He believes had Claimant acutely fractured the chondral surface of her knee, she would have felt immediate and unrelenting pain immediately after the fracture and certainly upon weight-bearing seconds later. He did not believe Dr. Hall's explanation of "delayed" onset of pain was medically possible were the fracture acute. He reiterated with "100% certainty" an acute chondral injury would cause "massive amount of blood or synovial fluid" in the knee joint. Dr. O'Brien opined it was "virtually zero percent likely" the activity described by Claimant could have exceeded the energy threshold required to damage her patellar cartilage. Dr. O'Brien testified delamination of articular cartilage "does not" happen acutely and can only be a degenerative phenomenon. He doubted Claimant's testimony the knee was asymptomatic before the work injury and was confident he would have found the underlying pathology had he examined Claimant's knee before the accident. He further opined Claimant's work activities did not aggravate or accelerate the underlying condition and it was entirely coincidental Claimant's knee became symptomatic at work on November 6, 2020.

15. Claimant's testimony was credible and persuasive.

16. Dr. Hall's analysis and opinions are credible and more persuasive than the contrary opinions offered by Dr. O'Brien.

17. Claimant proved she suffered a compensable injury to her right knee on November 6, 2020.

18. Claimant is entitled to reasonably necessary treatment from authorized providers to cure and relieve the effects of her compensable injury. Optum is the ATP, per the parties' stipulation. The evaluations and treatment provided through Optum were reasonably necessary.

19. Claimant earned $8,409.83 in the three full pay periods (46 days) from September 16, 2020 through October 31, 2020. This equates to an AWW of $1,279.76.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove an injury directly and proximately caused the condition for which she seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not disqualify a claim for compensation or medical benefits. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But the mere fact that a claimant experiences symptoms after an incident or activity at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved she suffered a compensable injury to her right knee on November 6, 2020. Claimant's testimony is credible and persuasive. Dr. Hall's opinions are credible and more persuasive than the contrary opinions offered by Dr. O'Brien. The absolutist rhetoric employed by Dr. O'Brien detracts from the persuasiveness of his opinions. The argument that Claimant's right knee symptoms merely reflect the natural progression of osteoarthritis and degeneration is unconvincing for several reasons. First, Claimant's right knee was asymptomatic and did not affect her ability to perform a demanding job as a charge nurse before November 6, 2020. Second, Dr. O'Brien emphasized the "100% certainty" of swelling after an acute injury but ignored the effusion observed by Dr. Baptist the day after the accident and mentioned in Claimant's text messages. Third, imaging studies show Claimant's knee is in generally good condition. X-rays showed no degenerative changes, and the MRI identified no abnormalities aside from the relatively focal patellar defects. As Dr. Hall opined, the isolated nature of the pathology in Claimant's knee is more consistent with a specific injury as opposed to a longstanding degenerative process. It is reasonably probable Claimant injured her patellar cartilage on November 6, 2020, as outlined by Dr. Hall. Alternatively, if Dr. O'Brien is correct that the pathology existed before the injury, Claimant probably aggravated a previously asymptomatic condition while moving the patient.[5] On the threshold question of compensability, whether Claimant's work caused new pathology or aggravated a pre-existing but asymptomatic condition is "six of one, half dozen of the other," and leads to the same outcome. The least likely scenario in this case is that a latent pre-existing condition spontaneously and coincidentally became symptomatic shortly after pressing her knee forcefully against a metal bed frame while maneuvering a heavy patient. When considered in combination, the probability Claimant suffered a new injury or aggravated a pre-existing condition is substantially greater than 51%. Accordingly, Claimant proved she suffered a compensable knee injury on November 6, 2020.

[5] Although Claimant did not specifically argue an aggravation theory, this hypothesis jumps out as fairly suggested by the evidence. Respondents clearly appreciated this issue too, as evidenced by the multiple questions Respondents' counsel asked Dr. O'Brien about whether Claimant's work aggravated or accelerated a pre-existing condition.

B. Medical benefits

The respondents are liable for medical treatment from authorized providers reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. As found, the evaluations and treatment Claimant has received from Optum were reasonably necessary. The parties stipulated Optum is Claimant's ATP.

C. Average weekly wage

Section 8-42-102(2) provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). As found, Claimant's AWW is $1,279.76. Claimant's proposed computational methodology using the three full pay periods (46 days) immediately preceding the work injury is reasonable and provides a fair approximation of her average earnings at the time of the injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on November 6, 2020 is compensable.

2. Insurer shall cover all treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including but not limited to evaluations and treatment through Optum commencing November 7, 2020.

3. Claimant's average weekly wage is $1,279.76.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email

address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-134-036-001

ISSUE

1. Whether Respondents established by a preponderance of the evidence that Claimant received an overpayment of temporary total disability benefits during the year 2020 for which Respondents are entitled to repayment.

FINDINGS OF FACT

1. Claimant is a 48-year-old man who owns and operates Employer. Employer is a landscaping, snow removal and remodeling business. Claimant is Employer's sole employee, shareholder, officer, and director.

2. Claimant sustained an admitted low back injury on August 30, 2019, and received temporary total disability (TTD) benefits from December 23, 2019, through April 5, 2021. Claimant's admitted gross average weekly wage was $1,069.87 (adjusted to $713.25 per week for TTD benefits pursuant to § 8-42-105 (1), C.R.S.). For the year 2020, Insurer paid Claimant 52 weeks of TTD benefits totaling $37,089.00 (i.e., 52 weeks x $713.25 per week). (Ex. C). Claimant returned to work full time in April 2021.

3. Claimant has not reached maximum medical improvement.

4. During the year 2020, Claimant continued to operate his business (Employer) and perform labor, including landscaping projects. Snow removal projects were performed by family members whom Claimant did not pay for their services. Claimant received gross compensation from Employer in the amount of $7,500.00. Although Claimant reported these payments to Insurer, Claimant's TTD benefits were not reduced during 2020 to account for the compensation.

5. According to Claimant's 2020 Federal Tax Return, Employer's ordinary business income (i.e., profits) during 2020 was $678.00. Claimant credibly testified that he did not receive income from Employer in 2020 other than $7,500 in compensation, and that any corporate profits remained in Employer's bank account for the payment of business and operating expenses in 2021.

6. Claimant credibly testified that he currently earns $904.00 per week from Employer. Claimant also testified that he has approximately $130,000 in credit card debt and pays "thousands" of dollars per month to service the credit card debt. Claimant's Exhibit 5 demonstrates that, Claimant (and/or Employer) has credit card debt in excess of $93,000 and had made monthly payments of approximately $2,600 towards various credit cards, although some of the credit card debt appears to be debt of Employer, rather than Claimant's personal debt. For example, Ex. 5, page 00027 identifies an American Express card and another business credit card as expenses of Employer, with monthly payments of $1,000 and $300, respectively. These correlate with billing statements and

monthly payments for an American Express/Lowe's Business Rewards card and a Business Line Master Card in the name of Employer contained in Exhibit 5. Another card, a Wells Fargo Visa, shows charges for Pioneer Sand of $2,977.67, which the ALJ infers is an expense related to Employer, and not a personal expense of Claimant. Claimant testified that a repayment rate of $800.00 per month would not be feasible without incurring additional credit card debt.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERPAYMENT

The Act defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." § 8-40-201 (15.5), C.R.S. Under § 8-42-105 (1), a claimant is entitled to receive temporary total disability (TTD) benefits equal to 66 2/3% of the claimant's average weekly wage "so long as such disability is total." TTD benefits continue until, *inter alia*, "the employee returns to regular or modified employment." § 8-42-105 (3)(b), C.R.S. Once a claimant returns to "regular or modified employment," a claimant may become entitled to temporary partial disability (TPD) benefits under § 8-42-106, C.R.S., which continue until such disability is removed or the claimant reaches maximum medical improvement. Where a claimant is entitled to TPD benefits, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability." § 8-42-106 (1), C.R.S.

Respondents have established by a preponderance of the evidence that Claimant received an overpayment during the year 2020 and that Respondents are entitled to recover such overpayment. Claimant does not dispute he received $7,500.00 in wages from Employer during the calendar year 2020, and does not dispute that the receipt of wages constitutes an overpayment of temporary disability benefits. Claimant returned to work in some form in 2020 and received wages for that work. Accordingly, Claimant's entitlement to TTD benefits terminated, and he was, instead, entitled to TPD benefits to account for the diminution in wages. Because Claimant received TTD payments without reduction for the wages received during 2020, claimant received money that exceeded the amount that should have been paid, resulting in an overpayment under the Act.

The amount of overpayment is determined based on the difference between the TTD benefits Claimant received and the TPD benefits to which he was entitled in 2020. As found, Claimant received $37,089.00 in TTD benefits during 2020. Applying the TPD formula from § 8-42-106 (1), C.R.S., Claimant was entitled to $32,088.68 in TPD benefits, resulting in an overpayment of $5,000.32. The chart below sets forth the overpayment calculation.

TTD received for 2020 (See Findings of Fact, ¶2)		$ 37,089.00
TPD Benefits Calculation		
Admitted AWW at time of injury (See Ex. C)	$ 1,069.87	
LESS: AWW during 2020: (i.e., $7,500 ÷ 52 weeks)	$ (144.23)	
Weekly TPD AWW (i.e., $1,069.87 - $144.23)	$ 925.64	
Weekly TPD benefit under § 8-42-106 (1): (i.e., $925.64 x 66 2/3%)	$ 617.09	
TPD entitlement for 2020: ((i.e., $617.09 x 52 weeks)		$ (32,088.68)
Overpayment: TTD less TPD (i.e., $37,089.00 - $32,088.68)		**$ 5,000.32**

The ALJ notes that the overpayment calculation methods proposed by the parties in position statements yield substantially the same result (i.e., 66 2/3% of the wages Claimant received during 2020).

Respondents' contention that Employer's profits of $678.00 should constitute Claimant's "wages" under the Act is without merit. Section 8-42-102 (1), provides: "The average weekly wage of an injured employee shall be taken as the basis upon which to compute compensation payments." Section 8-40-201 (19)(a), C.R.S., defines "wages" as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." The term "recompense" is not defined in the Act, but means "[a] reward or payment for services, remuneration paid for goods or other property." 1272 BLACK'S LAW DICTIONARY (6th ed. 1990). The term does not include undisbursed corporate profits. As found, Claimant was not paid Employer's retained profits of $678.00, thus that sum was not "recompensed" to Claimant. Rather, the funds remained Employer's property. Although Claimant is the sole shareholder of Employer, in general "a corporation is treated as a legal entity separate from its shareholders, officers, and directors." *McCallum Family L.L.C. v. Winger*, 221 P.3d 69, 73 (Colo. App. 2009). Respondents have cited no legal authority for the proposition that Employer's profits constitute Claimant's wages under the Act.

OVERPAYMENT RECOVERY

Section 8-42-113.5, C.R.S. governs the recovery of overpayments. Where a claimant receives any payments from any source which requires the reduction of any disability benefit, § 8-42-113.5 provides for different methods of recovery for respondents. Under § 8-42-113.5 (a), a claimant is required to provide written notice of learning of such payment within twenty days, and any resulting overpayment "shall be recovered by the employer or insurer in installments at the same rate as, or at a lower rate than, the rate at which the overpayments were made." "Such recovery shall reduce the disability benefits … payable after all other applicable reductions have been made." *Id*. Where no written notice is provided, "the employer or insurer is authorized to cease all benefit payments immediately until the overpayments have been recovered in full." § 8-42-113.5(1)(b). If, however, recovery under § 8-42-113.5 (a) or (b) is "not practicable," respondents are authorized to seek an order for repayment. § 8-42-113.5(1)(c), C.R.S. The term "practicable" refers to a respondent's ability to recover the overpayment from ongoing or unpaid benefits." *In re Martin*, W. C. No. 4-453-804 (ICAO, Oct. 4, 2004).

When the parties are unable to agree upon a repayment schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994).

As Respondents note, the methods of repayment set forth in § 8-42-113.5 (1)(a) & (b), C.R.S., are not practicable because Claimant is not currently receiving disability benefits against which the overpayment may be offset. Respondents request a repayment schedule which would extinguish Claimant's overpayment within six payments. Claimant's request that any overpayment be offset against any future permanent partial impairment award.

While overpayment may be recovered by reduction of a permanent partial disability award, Claimant has not yet reached MMI or received a permanent impairment rating, and the evidence is insufficient to determine if any such award would be sufficient to satisfy Claimant's repayment obligation. Claimant testified that he currently earns $904 per week in wages, and could not repay at the rate of $800.00 per month without incurring additional credit card debt. Although Claimant has substantial credit card debt, the evidence indicates that a significant portion of that credit card debt is likely debt of Employer, and not Claimant individually.

Based on the evidence presented, the ALJ concludes that a repayment schedule of $288.47 per month will extinguish the overpayment in approximately eighteen months. Should Claimant become entitled to permanent partial disability benefits before the overpayment is satisfied, unpaid balance shall be offset against PPD payments, until the overpayment is extinguished. The ALJ concludes that this repayment schedule balances the rights of Respondents to timely recover the overpayment, while lessening the potential of creating an undue hardship on Claimant.

ORDER

It is therefore ordered that:

1. Claimant shall repay Respondents a total of $5,000.32 at a rate of $288.47/month. Claimant's first payment is due on the 15th day of the calendar month after this order becomes final and subsequent payments are due on the 15th day of each calendar month thereafter until the overpayment is satisfied. If prior to the satisfaction of the overpayment, Claimant becomes entitled to permanent partial disability benefits, the unpaid balance shall be offset against PPD payments until extinguished. Claimant's counsel shall contact Respondents' counsel to obtain the necessary details regarding where payments are to be remitted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable occupational injury?

II. If compensable, has Claimant shown, by a preponderance of the evidence, that he is entitled to medical benefits to treat his occupational disease?

STIPULATIONS

The parties stipulated to an Average Weekly Wage of $2,092.05.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / Claimant Treats with Dr. Inman

1. Claimant was formerly employed as a firefighter/paramedic [Employer]. He was hired in May 2000 and retired as of March 31, 2021.

2. Claimant found Dr. Emily Inman, Psy.D, through Employer's peer support program. Claimant initially sought treatment with Dr. Inman in October 2014 for personal issues with the recent loss of his father, relationship issues with his girlfriend, as well as nightmares related to work. Dr. Inman's initial diagnoses were major depressive disorder and bereavement. (Ex. 1, p. 3).

3. Claimant first saw Dr. Inman on October 22, 2014. She noted his chief complaint was: "compounding grief and trauma. Client is a firefighter, recently lost his father to cancer, broke up with his girlfriend, and is having recurrent nightmares that include victims from his work." (Ex. 1, p. 4). She recommended he begin psychotherapy, and "bereavement and trauma therapy are recommended." Similarly, on November 20, 2014 Dr. Inman noted, "Paul discussed his employment and history as a firefighter and his concerns that he struggles with coping with some of the things he has seen. He also reported the recent death of his father/best friend and his struggle with grieving and how to handle it, as well as the recent breakup with girlfriend that was his support through the loss of his father." *Id* at 7. Dr. Inman's diagnosis was "bereavement" and "major depressive DO, single episode."

4. Dr. Inman administered a Trauma Symptom Inventory ("TSI") test on November 26, 2014. (Ex. 1, pp. 11-20). On December 4, 2014, she noted that Claimant's Mother had passed away over Thanksgiving. *Id* at 22. On December 17, 2014 Dr. Inman noted, "…Results from his TSI were also reviewed and it was noted that he had symptoms of stress, but did

not meet full criteria for PTSD and plans to address the specific symptoms were made." *Id* at 24. Dr. Inman removed the diagnosis of "major depressive disorder."

5. On January 29, 2015, Dr. Inman reported, "…Paul spent the session processing the struggle of the vicarious trauma he was collecting through his work. He revisited the nightmare he was having and related the elevated awareness of negative possibilities to his daily life, citing examples of feeling unsafe in a parking lot with his girlfriend's kids due to the presence of harassing individuals. Ways to balance the survival/planning for the worst case at work and not being as extreme in thought when at home was explored." *Id* at 30.

6. On February 18, 2015, Dr. Inman noted, "…He reported continuing to work on transition from work to home and was experiencing a lot less distress at work…" *Id* at 32. On March 17, 2015, Dr. Inman noted, "…Paul spent the majority of the session focusing on what was going well and the reduction he was noticing in his symptoms." *Id* at 38. On March 26, 2015, Dr. Inman reported, "…Paul continues to appear to be making progress toward his goals, with reports in reduction of symptoms and improved interpersonal functioning." *Id* at 40. A visit on April 22, 2015 appears to concern only Claimant's relationship with his partner and what he felt was a "constant roller coaster ride." *Id* at 42.

7. Claimant was not seen again until November 11, 2015, at which time Dr. Inman noted, "…Paul reported that he required a booster session to explore the recent changes in his significant relationship and the impact of the upcoming holidays on his bereavement. Paul stated that he was feeling better about the holidays as he 'knew what to expect' with the loss of both parents and shared that he was actively planning for the holidays to stay connected an engaged…" *Id* at 44.

8. Claimant was not seen again for over three years, until December 19, 2018. Then Dr. Inman noted, "…Reviewed recent thoughts and behaviors and discussed ways to address and challenge with maladaptive and distressing ones. Also reviewed healthy coping skills that have proven effective and explored ways to further set healthy boundaries with others." *Id* at 45. Dr. Inman's diagnosis once again was "bereavement."

9. On January 15, 2019, Dr. Inman reported, "…Reviewed with Paul the events of the last month and the successes and non of application (sic) from last session. Discussed what he would like to continue to improve and created a plan with goals to address that during the new year…Paul will call to schedule another session when he feels it is necessary." Diagnostic Impressions were 'Uncomplicated Bereavement'. *Id* at 46.

10. On August 7, 2020, Claimant presented to Dr. Inman after he had an intrusive thought or flashback when he was at his significant other's house for a barbeque and saw neighbor kids jumping on a trampoline that had a protective cage or netting around it. Claimant saw this and experienced a flashback to the scene of a call in which a young boy who had accidently been hung in such netting 8 -10 years earlier; "…I was talking to my girlfriend, saying why are those kids jumping on there? They're going to get killed." . He requested Dr. Inman complete FMLA paperwork for him. He explained he occasionally needed to take a little extra time off because he wasn't sleeping well.

11. This time Dr. Inman diagnosed Claimant with PTSD. *Id* at 47. Dr. Inman noted in the FMLA paperwork that she completed on August 14, 2020, that Claimant's "condition has intensified in the last four months." She indicated the probable duration of his condition was six months to a year with effective treatment. [The ALJ notes that Claimant submitted at hearing a list of "significant alarms," from September 2000 through December 2020. He testified he started preparing the list shortly after August 2020 as documentation of mental distress due to the job. (Ex. 8)].

12. In FMLA paperwork she filled out on August 14, 2020, Dr. Inman noted, "While the employee is physically capable of performing his job, he is experiencing worsening of PTSD symptoms that are negatively impacting his clarity of thinking and emotional responding. This worsening of symptoms has interfered with his daily functioning (i.e. his ability to sleep at night) and began impacting many aspects of his life. It is recommended that he participate in a trauma focused / trauma informed treatment protocol to reduce his symptoms and build effective coping skills to allow him to return to his baseline functioning for both his ability to function at home and work…" (Ex. W, p. 97). In response to the question, "Is it medically necessary for the employee to be absent from work during the flare-ups? Dr. Inman answered, "That will depend on the nature of the flare-ups." *Id* at 98. In response to the question of 'approximate date condition commenced?' Dr. Inman noted, "His condition has intensified in the last four months."

13. At hearing, Claimant attributed this to "the general stressors of working in that environment, I would say." Dr. Inman elaborated; "My belief, it was a cumulative experience and the lack of capacity to continue to manage. That he noted a lot of – increase in his nightmares, which had been under control, previously, avoidance of areas of town, isolating in his home, high levels of anxiety, hypervigilance." *Id* at 51.

14. On September 15, 2020, Dr. Inman reported, "…Reviewed anxiety and PTSD symptoms. Discussed at length a specific incident that has caused excessive stress and triggered PTSD sx [symptoms]…Explored antecedents and results. Reviewed coping/relaxation skills that are working and those that are not. Discussed new options, to include EMDR." *Id* at 54. At hearing, Dr. Inman testified she believes the incident she referenced was the trampoline incident in early August.

15. On October 2, 2020, Claimant was involved in a search and rescue and discovered the bodies of an older woman who had been shot and a man who had shot himself (the inference being a murder/suicide). At hearing, Claimant described:

> And right near -- right near the creek, we -- we saw an older lady who had been shot. And without being too graphic, was obvious signs of death. And the -- the other person apparently shot himself.
>
> And so we -- we responded back to the -- back to the command post that I had positively found them. That they're here, and what I didn't see is that one of their sons -- it was night. This is at approximately midnight when we found them. Their son had followed us down. And telling him that and with what we had seen, it was -- it was extremely difficult.

> And I went back to the fire station after we cleared that call and left it with the -- the police department. I just -- I couldn't sleep.
> It was pretty much the -- the straw that broke the camel's back for me with the -- the amount of trauma I'd been through before, then seeing this. It was really, kind of, what I felt, kind of, did me in.

16. Claimant compared his symptoms after the event in August versus that of October:

> Q. And then, did the symptoms change after the event in August versus the event in October?
>
> A. Yeah, they worsened. And -- but October was really the -- the breaking point for me. And that's -- that's what's, kind of, led us here today. That was, kind of, the game -- the game ender for me.

17. Claimant then testified that the October incident led to his decision to retire from the Fire Department:

> And after that, I started to increasingly take more and more time off from work. And then, Dr. Inman and I had talked about addressing the root cause of what my -- my issues were, instead of just dealing with the symptoms. And that, maybe, it was time for me to end my career as a firefighter and paramedic. And I made that decision. And -- because I was missing more work than I was really going to at that point in time. And made that decision and applied for retirement in February.

18. Claimant testified that, after the incident in October 2020, he and Dr. Inman talked about addressing the root cause of his issues, instead of just dealing with the symptoms, and that maybe it was time for him to end his career as a firefighter and paramedic. Dr. Inman testified that was a decision Claimant made. Claimant stated at hearing:

> After … the incident in October, and I saw how -- I was responding to that particular incident and how it was affecting those around me. And, after a good discussion with Dr. Inman, thought that maybe it was time to move on to something … we were no longer able to handle the symptoms and had to deal with the cause. And so, the cause of that was working as a firefighter and paramedic. And so, it was time to make the decision to move on to something else.

19. Dr. Inman then testified at hearing as an expert in the field of psychology. She testified that when she began seeing Claimant in 2014, “He was experiencing symptoms related to trauma, bereavement, and relationship issues.” She testified her initially diagnosis was “major depressive disorder, single episode,” but that this was changed to “bereavement” within a few weeks. Dr. Inman first diagnosed Claimant as suffering from PTSD on August 7, 2020.

20. Dr. Inman testified that, per the diagnostic statistical manual, fifth edition, PTSD is an exposure to a situation or series of situations where the individual felt threatened, witnessed death, was experiencing death, or severe bodily injury, or witnessing of these things. It requires symptoms such as avoidance, hypervigilance, intrusiveness. She noted the DSM specifically talks about avoidance of efforts of external reminders as well as distressing memories. She noted Claimant has exhibited avoidance behaviors; "He has showed examples of areas of town where he's been on calls. There's also people that remind him of certain incidences."

21. Dr. Inman testified about her treatment for the PTSD that she first diagnosed on August 7, 2020.

> Q. And how -- were you treating him for the PTSD?
>
> A. My treatment, from the beginning, has been cognitive behavioral therapy. It reached a level where I believed that it was no longer an effective treatment and was recommending other options with other providers.
>
> Q. Such as what?
> A. EMDR.
>
> Q. What is that?
> A. Movement desensitization and reprocessing. It is a type of trauma treatment protocol that was put into place specifically for traumas. I'm not trained in it, so I can't speak to it specifically. I just am aware that it exists and had recommended out. We also discussed the equine therapy, which is something that I've also been minimally educated about and talked about being a possibility as well.

22. Dr. Inman was asked about the significance of the October 2, 2020 event; "That was a - he was very disrupted for that session. It was upsetting. It also doesn't help that my new office is not very far from that location. We talked – we spent the entire session just re-going over the sensory perception he had of that, trying reality check, ground himself." She added, "That incident took up an extensive amount of conversation, as compared to other incidences, yes." Later she elaborated; "It was a very significant incident. A … very significant exposure that was very triggering and brought up a lot of maladapted behaviors and symptoms."

Dr. Kleinman conducts an IME

23. Dr. Robert Kleinman conducted a RIME and authored three reports. In the first, dated February 1, 2020, the doctor opined that, "[Claimant] does not have a psychiatric diagnosis related to the event of 10/02/2020." (Ex. HH, p. 136). Dr. Kleinman stated, "…a feature of PTSD is avoidance, which [Claimant] does not meet. Recall that he does not miss work. He goes to work despite anxiety." *Id* at 137. In the second report, dated

February 17, 2021, Dr. Kleinman conceded that Claimant "…does have some symptoms consistent with Posttraumatic Stress Disorder, but without avoidance he does not meet the full criteria…That [Claimant] does not have a permanent disability is evidenced by his continuing to work despite facing traumatic event." *Id* at 143. In his third report, Dr. Kleinman admitted Claimant "now meets full criteria for PTSD" but he opined the incident of October 2, 2020 did not cause the PTSD. *Id* at 156. Dr. Kleinman testified regarding the opinions of Drs. Moe, Shuman, and Casper (Claimant's Exhibits 2-4). Dr. Kleinman's testimony at hearing was largely consistent with his written reports.

24. At hearing, Dr. Kleinman (who is Level II accredited) noted that although Claimant indicated, in a checklist Dr. Inman gave Claimant at his initial appointment in 2014, there was no objective data, nor any subjective complaints in the narrative report to actually support that. He agreed with Dr. Inman that at that time, Claimant had some symptoms consistent with post-traumatic stress disorder, but he did not meet full criteria.

25. When Dr. Kleinman evaluated Claimant on January 29, 2021, he concluded Claimant did not have a psychiatric disorder related to the event of October 2, 2020. He noted there were multiple contributing factors to Claimant's initiating treatment with Dr. Inman in 2014 including traumatic work events. He stated Claimant continued to have symptoms that did not meet the full criteria for PTSD in that he did not avoid triggering situations. He concluded the predominant cause of Claimant's mental illness was relationship issues, even though he was exposed to trauma and had some symptoms consistent with PTSD. (Ex. HH, pp. 136–137).

26. Dr. Kleinman testified that, when he met with Claimant, Claimant discussed specific incidents at work, including the murder-suicide from 2020, without a change in his affect, "as if it was history." He didn't seem distressed. He was working and expressed his intention to continue to work. He said work was demanding, but he got along with the people and enjoyed the camaraderie. He specifically said that, although he was anxious at work, he still liked the work. He enjoyed helping people, and he planned on continuing it. Claimant didn't tell Dr. Kleinman he was missing work for FMLA. Based on Claimant's reported activities of daily living, Dr. Kleinman did not see enough evidence of avoidance to make the diagnosis of post-traumatic stress disorder at that time.

27. Based upon the information that Claimant began missing work or is not working at all since March of 2021, Dr. Kleinman opined Claimant now meets full criteria for a diagnosis of PTSD if he's missing work due to avoiding situations that would cause him to have recall of traumatic events. In his opinion, however, the event of October 2nd, 2020, was not the "signature event" that caused his PTSD. He noted Claimant is missing work related to the accumulation of traumas that started before 2014.

Claimant is Evaluated by Three other Mental Health Professionals

28. Claimant also saw psychiatrist Edmund Casper, MD in connection with a FPPA claim on March 11, 2021. Dr. Casper reported:

> …[Claimant] outlined over 50 calls of severe trauma where he responded to the victims during his duties. He stated that the onset of traumatic flashbacks started with the call in 2014 where he witnessed the strangulation of a young boy and has flashbacks of this event as well as other events throughout the years. He reported he applied for family leave in August 2020 but continued performing as many shifts *as he could tolerate.*
>
> [Claimant] reported he sought professional help in 2014 after he suffered severe anxiety, chronic nightmares, mood swings, feeling overwhelmed and panic. He reported he began to have more intrusive thoughts and memories of traumatic events that became worse in August 2020 when he had intrusive thoughts [of] the boy who was strangled while jumping on a jumper. Then when he witnessed the trauma of the elder couples' murder suicide in October 2020, he felt *he was forced to take more time off in order to recover and* *avoid* *being around people…*(Ex. 4, p. 85)(emphasis added).

29. Dr. Casper diagnosed "posttraumatic stress disorder, chronic, severe. Major depressive disorder chronic, severe." Dr. Casper recommended Claimant receive "intensive treatment" for both conditions. *Id* at 89. Dr. Casper recommended "permanent occupational disability," which means "an occupational disability caused by a condition that is permanent or degenerative, and for which there is no prognosis for improvement or recovery through surgical treatment, counseling, medication, therapy, or other means." As for the cause of the problems, Dr. Casper reported, "It is my professional opinion that exposure to repeated traumatic experience." *Id* at 89.

30. Claimant then saw Dr. Charles Shuman, MD in connection with the FPPA claim on March 17, 2021. Dr. Shuman reported:

> …[Claimant] reports that he first started experiencing symptoms of PTSD approximately 6 months prior to first seeking treatment in 2014. He states that when he started experiencing symptoms, he began having nightmares and intrusive thoughts related to trauma from the past. He states that the symptoms were tolerable until August of 2020, when he was at a barbecue. There was a trampoline in the back yard, and he had a flashback to a time in the past when a child had been hung from a trampoline. The [He] states that this triggered severe anxiety at the time, and he took time off from work and increased his therapy. He reported that he was having difficulty performing work due to difficulty handling stress and insomnia was causing difficulty the next day being able to function. After returning to work, In October he responded to a call, a murder-suicide scene. The graphic nature of the scene triggered intense symptoms of PTSD, including avoidance of trauma triggers, increased nightmares, physical reactivity to calls, intrusive thoughts, flashbacks, worsening nightmares, and self-isolation. *Since January of 2021 he has only been able to attend work intermittently.* He last worked in the

> beginning of March 2021, approximately 2 weeks ago. He says that he worked a partial shift, during which he experienced irritability, difficulty focusing, concentrating, and interacting with public and peers…(Ex. 3, p. 78) (emphasis added).

31. Dr. Shuman noted, “The cause of PTSD and depression are exposure to traumatic experiences during his work as a firefighter.” *Id* at 80. Dr. Shuman noted, “He is currently *unable* to perform job duties associated with work as a firefighter due to severe anxiety, severe insomnia when working, difficulty concentrating, *avoidance* symptoms, and difficulty interacting with others.” *Id* at 82 (emphasis added). The doctor made extensive treatment recommendations and noted that if Claimant was still experiencing symptoms or remains unable to return to work, then permanent occupational disability would be appropriate.

32. Claimant next saw psychiatrist Stephen Moe, MD in connection with the FPPA claim on March 22, 2021. The history of events prior to October 2, 2020 that Dr. Moe took is consistent with the history taken by Drs. Casper and Shuman, as is the significance of the October incident:

> …On 10/2/20, [Claimant] and a fellow firefighter were summoned to an incident involving a murder/suicide. In the session with me, the claimant broke down emotionally in reflecting on that call, and I therefore did not ask him to provide details about it. [Claimant] characterized that incident in a manner that brought to mind the adage "the straw that broke the camel's back," insofar as he reported that since that day, he has experienced a further, and much more debilitating, increase in his psychiatric symptoms. In contrast to his previous ability to function at work in the face of his symptoms for many years, since 10/2/20 he has found his functioning at work to be quite impaired. *He reported that whereas he has taken many days off work since 10/2/20, when he has attempted to work as a firefighter since that date he has experienced high anxiety while at the fire station in anticipation of the next call.* He stated that his sleep has been severely impaired, both at work and when not on duty. He said that at work, he is "not there mentally" to a sufficient degree that he can ensure the safety of his fellow crew members and the public at large. (Ex. 2, p. 70)(emphasis added).

33. Dr. Moe concluded; “…[Claimant]’s psychiatric difficulties map very well onto a typology of PTSD associated with exposure to disturbing experiences. As such, regardless of whether there is a contribution from ‘job burnout,’ his symptoms call for the diagnosis of PTSD.” *Id* at 74. Dr. Moe confirmed that, “Cumulative exposure to emotionally traumatic experiences in his job is responsible for [Claimant]’s PTSD.” *Id* at 76. Like Dr. Casper, Dr. Moe concluded the condition is permanent.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ has heard from Claimant, and finds him to be sincere in recounting his symptoms at hearing, and in describing, to the best of his abilities, his symptoms to the various mental health professionals he has encountered.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has heard directly from two highly credentialed mental health professionals, and reviewed the reports from three others. Each of them are no doubt sincere in their interpretations of the data in rendering their opinions. Keeping in mind the burden of proof, the issue here is one of persuasiveness, but one cannot ignore the far greater access to Claimant that Dr. Inman has had through her numerous sessions through the years.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Occupational Disease, Generally

F. An "occupational disease" is defined in §8-40-201(14) C.R.S., as a disease that follows naturally from the conditions under which work was performed. The character of such an injury, as opposed to an 'accidental' injury, often makes difficult the act of locating the date to be assigned the injury. Nonetheless, the issue is significant because the "rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability." *Henderson v. RSI, Inc*., 824 P.2d 91, 96 (Colo. App. 1991). The standard for measuring the onset of disability provides: "The onset of disability occurs when the occupational disease impairs the claimant's ability effectively and properly to perform his or her regular employment, or rendered the claimant incapable of returning to work except in a restricted capacity." *Ortiz v. Charles J. Murphy & Co.* 964 P.2d 595, 597 (Colo. App. 1998).

G. Prior to July 1, 2018, however, a compensable mental impairment was limited to a psychologically traumatic event that arose out of and in the course of employment when the accidental injury "consists of a psychologically traumatic event that is generally *outside* of a worker's usual experience ...." *See* §8-41-301(2)(a) C.R.S. Effective July 1, 2018, the section of the statute dealing with claims of mental impairment, §8-41-301, C.R.S., was amended by House Bill 17-1229. The amendments effective on that date broadened the category of compensable mental impairment injuries to include, at least potentially, PTSD arising from events "*within* a worker's usual experience"

H. Section 8-41-301(2)(a) and (b) now provides, as pertinent to this claim:

> (a) "Mental impairment" means a recognized, permanent disability *arising from* an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a *psychologically traumatic event*. …
>
> …
>
> (b)(II) "Psychologically traumatic event" also includes an event that is within a worker's usual experience only when the worker is diagnosed with post-traumatic stress disorder by a licensed psychiatrist or psychologist after the worker experienced exposure to *one or more* of the following events:
>
> …
>
> (B) The worker *visually* or audibly, or both visually and audibly, *witnesses* a death, or *the immediate aftermath of the death*, of *one or more people as the result of a violent event;* **or**
>
> (C) The worker *repeatedly* and either visually or audibly, or both visually and audibly, *witnesses* the serious bodily injury, or *the immediate*

> *aftermath of the serious bodily injury,* of one or more people as the result of the intentional act of another person *or* an accident. (emphasis added).

Occupational Disease, as Applied

I. The record is clear in this case that Claimant was already psychologically fragile from various issues of bereavement and relationships. Claimant has now reproduced, via Exhibit 8, exactly 100 'Significant Alarms' dating to year 2000. The ALJ now notes that 84 of them predate the change in the statute, *supra*; thus they fell within Claimant's *usual experience* as a firefighter. While no doubt disturbing to the casual observer, most of these involved cardiac arrest, usually in older victims. Some were merely house fires, with no mention of fatalities. As such, these are neither the result of violent acts, or even accidents. Routine matters for a firefighter. However, thrown in were a few apparent suicides by firearm. [While the trampoline incident itself no doubt occurred sometime in the past, it cannot be identified from Exhibit 8]. Even the remaining events occurring after 7/1/2018 are mostly routine incidents not involving violence – save two gunshot deaths, which did not apparently manifest great trauma in their aftermath. Taken as a whole, while Exhibit 8 does not demonstrate any overt evidence of cumulative trauma, per se, it does serve as some evidence of Claimant's overall progressively weakening psyche, wrought in significant part by his work duties.

J. The 'signature event' in this case involves the 10/2/2020 murder/suicide. As such, it fits under 8-41-301(2)(b)(II)(B), supra. Claimant visually witnessed the immediate aftermath of the death of one or more people as a result of a violent event. A single exposure to such 'psychologically traumatic event' is sufficient to qualify, if it involves a *death.* In this instance, Claimant has been diagnosed with PTSD by a licensed psychologist, and three psychiatrists. In fact, even Dr. Kleinman now concurs that Claimant now has a PTSD diagnosis – assuming there is sufficient evidence of *avoidance* of situations which might cause Claimant to have recall of such traumatic event.

K. Claimant continued to work into 2021, but his attendance became sporadic, to the extent that it became untenable to maintain his position. He was avoiding placing himself into such a position, even if such avoidance was not total. The only way to totally avoid such situations was to retire from a job he otherwise apparently enjoyed. It is noted that Dr. Kleinman examined Claimant on 1/29/2021 (authoring his report on 2/1/2021) when Claimant was still employed, if sporadically. Claimant then retired on March 31, 2021, thus avoiding the situation entirely as best he could. The ALJ finds that there is sufficient evidence in the record to support a finding of such *avoidance* to merit the diagnosis of PTSD, as opined by Drs. Inman, Casper, Shuman, and Moe.

L. The remaining issue is whether Claimant's PTSD *arose from* this exposure to the *psychologically traumatic event* of 10/2/2020. As noted, Claimant was already psychologically fragile in the time leading up to this. In that sense, Claimant may well have had a 'preexisting condition' that had not yet become sufficiently symptomatic to merit a formal diagnosis requiring treatment through the Workers Comp system. Dr. Inman first diagnosed PTSD during the August 7, 2020 visit, and linked it to Claimant's work. Dr. Casper considered Claimant’s PTSD to be more cumulative in nature, but still attributed it to his work environment. Dr. Shuman found it to be work-related. Dr. Moe also considered it to have been cumulative in nature, due to his work environment. In no case did any of them – or Dr. Kleinman – link Claimant’s PTSD to any ‘psychologically traumatic events’ *outside of his work duties as a firefighter.* No such events are documented in his personal life, from the military, or anywhere else.

M. The ALJ finds that a sufficient causal link between Claimant’s work and his PTSD diagnosis. While perhaps not as dramatic as one might expect (in the form of hospitalization, or the like), there is sufficient evidence that the 10/2/2020 event was truly the ‘straw that broke the camel’s back,’ with the resultant PTSD diagnosis, *and need for treatment through the Workers Compensation system.*

Medical Benefits

N. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The ALJ concludes, based upon the opinions of Drs. Inman, Casper, Shuman, and Moe that Claimant has proved he requires additional treatment to cure and relieve the effects of his PTSD.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a compensable occupational disease.

2. Respondents shall pay for all reasonable, necessary, and related medical treatment to relieve the effects of Claimant’s occupational disease.

3. Claimant’s Average Weekly Wage is $2,092.05

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, to assure the prompt processing of such Petition, it is* ***strongly*** *recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: June 23, 2021

/s/ William G. Edie

Colorado Springs, Colorado 80906

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on June 7, 2019, she sustained an injury arising out of and in the course and scope of her employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to mileage reimbursement for travel to and from injury related medical appointment.

FINDINGS OF FACT

1. The claimant began working for the employer in May 2019 as a night stocker. The claimant's job duties involved unloading pallets of inventory from trucks, moving inventory from those pallets to empty pallets, and ultimately stocking the inventory onto the store shelves. These activities involved the use of a manual pallet jack, lifting heaving items, bending, and squatting. The claimant testified that she began to have pain in her left lower extremity on June 7, 2019. At that time, the claimant believed that her pain was emanating from her left groin.

2. The claimant and her coworker, Ms. C[Redacted], provided conflicting testimony regarding the claimant's initial report of her left lower extremity symptoms. On this issue, the ALJ finds the testimony of Ms. C[Redacted] to be credible and persuasive. Therefore, the ALJ finds that the claimant did not report that she believed she had suffered a work related injury until mid-July 2019.

3. On July 15, 2019, the claimant spoke with a representative in the employer's human resources department. Thereafter, the claimant was sent for medical treatment at PSMC[1]. The claimant was first seen at PSMC on July 17, 2019 by Aaron Singh, PA-C. At that time, the claimant reported left groin pain. PA Singh noted that an x-ray of the claimant's left hip showed no acute bony abnormalities. PA Singh diagnosed a muscle strain and opined that the claimant suffered a sports hernia or left groin strain. PA Singh took the claimant off of all work for four weeks.

4. On July 22, 2019, the claimant returned to PA Singh. In the medical record of that date, PA Singh noted that the claimant's left hip pain was worsening. As a result, he ordered magnetic resonance imaging (MRI) of the claimant's left hip. PA Singh also referred the claimant to Dr. William Webb for an orthopedic consultation.

[1] Pagosa Springs Medical Clinic.

5. On July 24, 2019, the claimant was first seen by Dr. Webb. On that date, Dr. Webb noted the claimant's job duties included "unloading tall pallets with manual pallet jacks and then breaking the pallets down to individual units". Dr. Webb also noted the claimant's report that PA Singh placed her on light duty. Dr. Webb opined that the claimant could have a stress fracture in her left hip. As a result, he recommended the claimant undergo a left hip MRI.

6. On July 30, 2019, a left hip MRI was performed. The MRI showed minimal degenerative changes in the left hip with an anterior superior labral tear.

7. On August 20, 2019 John Aucoin, CRNA, administered an injection to the claimant's left hip. Thereafter, the claimant was referred to physical therapy.

8. On October 3, 2019, the claimant returned to Dr. Webb. On that date, Dr. Webb noted that the claimant was not responding to physical therapy and the hip injection. As a result, he ordered a second MRI and also a lumbar spine MRI.

9. On October 14, 2019, a left hip MRI showed a "tiny" and chronic nondisplaced tear in the anterior labrum; grade 3 cartilage fissuring within the anterior superior aspect of the acetabulum; a small joint effusion and mild synovitis with perisynoval inflammation along the inferior aspect of the hip joint; and mild left trochanteric bursitis.

10. Following the October 2019 left hip MRI, Dr. Webb referred the claimant to Dr. Matthew Smith for a second opinion. The claimant was seen by Dr. Smith on January 22, 2020. Dr. Smith diagnosed the claimant with left hip osteoarthritis. He discussed various treatment options including activity modification, anti-inflammatory medications, injections and hip arthroplasty. At that time, the claimant opted to continue to treat with anti-inflammatories.

11. At the request of the respondent, on March 10, 2020, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Bernton opined that the claimant has a left hip degenerative labral tear in association with osteoarthritis. Dr. Bernton also testified that the claimant does need to undergo arthroscopic surgery on her left hip. However, it is his opinion that the condition of the claimant's left hip and her need for left hip surgery are not work related.

12. Dr. Bernton also noted his opinion that the presence of extensive degenerative changes and a small labral tear, makes it most probable that the tear is degenerative. Dr. Bernton further opined that there is nothing about the claimant's work activities that would be expected to cause any type or substantial and, particularly, persistent aggravation of the osteoarthritis.

13. Dr. Bernton's testimony was consistent with his written report. During his testimony, Dr. Bernton identified the claimant's diagnoses as degenerative osteoarthritis of the left hip, with a degenerative labral tear. He further testified that the claimant does need left hip surgery, due to the osteoarthritis. Dr. Berton also testified that it is his opinion that the claimant's need for left hip surgery is solely due to her pre-existing osteoarthritis and not due to her work activities. Dr. Bernton does not believe that the claimant's work activities aggravated or accelerated her preexisting left hip condition. Dr. Bernton found it very relevant that at the IME, and during her testimony, the claimant stated that she was worse and her symptoms did not get better after she stopped working. Dr. Bernton noted that this is consistent with the process of osteoarthritis.

14. On March 13, 2020, the claimant returned to Dr. Webb. In the medical record of that date, Dr. Webb noted his opinion that because the claimant has failed conservative treatment, a left total hip arthroplasty is medically necessary. He also opined that the claimant's preexisting hip arthritis was asymptomatic prior to her injury at work. Therefore, the claimant's current left hip issues are related to a work injury.

15. On December 23, 2020, Dr. Smith authored a letter in which he stated his opinion that the claimant's work injury in June 2019 "exacerbated a chronic condition".

16. Dr. Smith testified that he diagnosed the claimant with left hip arthritis and continues to recommend a total left hip replacement. Dr. Smith also testified that it is his opinion that the claimant's left hip condition was aggravated by her work activities. Specifically, it is his opinion that the claimant's activity of moving heavy things at work aggravated her left hip arthritis.

17. The claimant testified that prior to June 7, 2019 her activities included working with her horses, chasing neighbor cows off her property, and taking care of her 35 acre property. The claimant also testified that since June 7, 2019, she has difficulty doing any of those prior activities. In addition, she has difficulty walking due to pain.

18. The claimant's friends, Ms. Barber and Ms. Garrett testified at the hearing. Both of these witnesses corroborated the claimant's testimony that she was active previously, and now is not.

19. The ALJ does not find the claimant's testimony regarding the nature and onset of her hip symptoms to be credible or persuasive. The ALJ credits the testimony of Ms. C[Redacted] over that of the claimant with regard to when and how the alleged injury was reported. The ALJ also credits the opinions of Dr. Bernton over the contrary opinions of Drs. Webb and Smith. The ALJ specifically credits Dr. Bernton's opinion that the claimant's need for left hip surgery is due to her pre-existing osteoarthritis and not due to her work activities. For all the foregoing reasons, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an injury arising out of and in the course and scope of her employment with the employer. The ALJ further finds that the claimant has failed to demonstrate that it is more likely than not that the claimant's work activities aggravated or accelerated her left hip condition to necessitate medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory*, supra.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her pre-existing left hip osteoarthritis was aggravated or accelerated to necessitate medical treatment. The testimony of Ms. C[Redacted] and the opinions of Dr. Bernton are found to be credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim for workers’ compensation benefits is denied and dismissed.

Dated this 24th day of June 2021.

Cassandra M. Sidanycz
Administrative Law Judge
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-145-409

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she suffered a compensable injury arising out of and in the course of her employment with Employer?

II. Whether Claimant proved by a preponderance of the evidence the left total shoulder replacement surgery was reasonable medical treatment necessary to cure and relieve Claimant from the effects of a March 9, 2020 industrial injury?

III. Whether Claimant proved by a preponderance of the evidence that she is entitled to temporary total disability (TTD) from July 2, 2020 to November 8, 2020 and temporary partial disability (TPD) from November 9, 2020 to January 6, 2021.

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of $817.20.

FINDINGS OF FACT

1. Claimant is 53 years of age. Claimant has worked for Employer since 2004 as a full-time building manager, performing custodial duties at an elementary school. Claimant's job duties include collecting and disposing of trash. Claimant estimates the trash typically weighs 15-20 pounds.

2. Claimant alleges she sustained an industrial injury on March 9, 2020. On March 9, 2020, Claimant felt a pop and pain in her left shoulder while lifting and throwing a bag of trash into a dumpster. Claimant testified that she initially thought she pulled a muscle. Claimant was able to continue performing her regular job duties relying more on her right upper extremity and completed her shift for the day. She subsequently went home, took some Tylenol and rested. Claimant continued to experience pain the next morning, at which time she reported the incident to Employer.

3. Claimant underwent evaluation and treatment at authorized provider Banner Occupational Health Clinic. On March 12, 2020 Claimant saw Douglas Drake, PA-C under the supervision of Marc Chimonas, M.D. Claimant reported feeling a pop in her left shoulder when lifting a large bag of trash. Claimant reported not having any prior similar problems. On examination of the left shoulder, PA-C Drake noted diminished range of motion and positive Neer/Hawkin's and empty can tests. He diagnosed Claimant with left shoulder pain, referred Claimant for physical therapy, and placed Claimant on work restrictions. Dr. Chimonas signed a WC 164 form indicating his objective findings were consistent with the history of a work-related mechanism of injury.

4. Claimant participated in a course of physical therapy with some reported improvement but continued discomfort and decreased range of motion. She continued on work restrictions.

5. On May 6, 2020, Claimant underwent x-rays of the left shoulder that were negative for acute abnormalities. The x-rays showed hydroxyapatite deposition within the rotator cuff in the region of the supraspinatus footprint.

6. Claimant underwent a left shoulder MRI on May 13, 2020. Radiologist Samuel Fuller M.D. noted multiple degenerative findings, including mild degenerative hypertrophy and undersurface irregularity of the AC joint with an associated mild mass effect on the underlying rotator cuff, and mild degree of articular surface partial tearing in various areas. There were moderately severe degenerative changes in the glenoid articular cartilage, with reactive subchondral edema and a subarticular cyst demonstrated in the glenoid. There were also degenerative changes in the opposing humeral articular cartilage. There was no significant joint effusion demonstrated. Regarding the labrum, the MRI report identified tearing that was "compatible with degenerative fraying and/or ill-defined degenerative tearing." (Ex. A, p.5). Dr. Fuller gave the following impression:

> 1. Superior labral tearing, inclusive of a SLAP type lesion of the biceps/labral complex.
> 2. Glenohumeral joint degenerative changes, with reactive subarticular cyst formation and minimal marrow edema subjacent to overlying moderate degeneration of glenoid articular cartilage. There is no evidence of acute appearing osseous or osteochondral pathology.
> 3. Partial rotator cuff tearing at various sites as above. No full-thickness rotator tear is present on this exam. (Id.)

7. Based on the results of the MRI and Claimant's continued symptoms, PA-C Drake referred Claimant for an orthopedic evaluation. Claimant presented to Daniel Heaston, M.D. on May 27, 2020. Regarding the mechanism of injury, Dr. Heaston documented that Claimant felt a pulling sensation while throwing away trash. Claimant denied having any prior shoulder problems. Dr. Heaston reviewed the MRI results, noting the MRI showed left glenohumeral arthritis with cartilage thinning, degenerative labral tearing, and multiple glenoid subchondral cysts with some rotator cuff thinning and slight degenerative change but no significant tearing. He noted that the rotator cuff appeared inflamed but intact without any significant tears. Dr. Heaston's assessment was arthritis of the left shoulder region. He noted that Claimant's exam, history and imaging were all consistent with left shoulder arthritis with multiple subchondral cysts formed in the glenoid. Dr. Heaston opined that the most reliable surgery for Claimant would be a shoulder replacement. He recommended Claimant exhaust all nonoperative treatment options prior to proceeding with surgery.

8. Claimant requested a second surgical opinion and was referred to David A. Beard, M.D. Claimant presented to Dr. Beard on June 9, 2020. Claimant reported experiencing shoulder pain when throwing trash into a dumpster. Dr. Beard documented, "[Claimant] states that even prior to this injury she was having some issues with her shoulder. She has modified her physical activities." (Ex. D, p. 21). Dr. Beard reviewed the May 13, 2020 MRI, which he noted revealed "some supraspinatus tendinosis with no evidence of high-grade partial or full-thickness cuff tearing. There is signal change within the superior labrum, which may represent age-related degeneration or degenerative type tearing. She has fairly significant loss of articular cartilage in the glenoid with areas of subchondral cystic change and some bone marrow edema. The biceps tendon remains intact." (Id.) Dr. Beard diagnosed Claimant with left shoulder supraspinatus tendinosis, possible superior labral tear, and left shoulder glenohumeral osteoarthritis. He discussed treatment options with Claimant, who wanted to avoid any type of steroid injection due to difficulties she experienced with prior injections. Dr. Beard remarked, "I would be concerned about shoulder arthroscopy not alleviating her symptoms given the amount of degenerative changes as Dr. Heaston was concerned about. While she certainly could consider glenohumeral arthroplasty, I am concerned given her younger age…and the fact she is still doing a manual labor type of job." (Ex. D, p.22).

9. Claimant returned to Dr. Heaston on June 17, 2020, who noted Claimant failed conservative treatment. Dr. Heaston requested authorization for a left total shoulder arthroplasty.

10. On June 20, 2020, Jon M. Erickson, M.D. performed a Physician Advisor review of Dr. Heaston's request for authorization of a total shoulder arthroplasty. Dr. Erickson agreed with Drs. Heaston and Beard that, based on Claimant's level of pathology and the MRI, an arthroscopic procedure would not likely cause any improvement and that a shoulder replacement was indicated. However, Dr. Erickson opined that Claimant's need for surgery was not caused by the March 9, 2020 work incident. Dr. Erickson noted that the amount of arthroplasty seen in Claimant's shoulder was pre-existing and not caused by throwing a bag of trash into a dumpster. He opined that there was no evidence of any acute trauma revealed on the MRI and thus no evidence the trash-throwing incident caused any aggravation or worsening of Claimant's pre-existing condition. Dr. Erickson concluded that Claimant likely sustained a minor sprain or strain and her problems were due to a pre-existing condition. Respondents denied the request for authorization of surgery.

11. Claimant elected to proceed with surgery and underwent a left total shoulder arthroplasty with biceps tenotomy, performed by Dr. Heaston on July 2, 2020. Dr. Heaston noted "advanced left shoulder glenohumeral degenerative joint disease" as the preoperative and postoperative diagnoses.

12. From the date of the work event until July 2, 2020, Claimant worked full-time with modified duties. From July 2, 2020 through November 8, 2020 Claimant did not work due to recovering from surgery. Claimant continued to receive her full wages

during this time period, using vacation and sick leave. Claimant returned to work on a part-time basis on November 9, 2020 working approximately four hours per day until being placed at maximum medical improvement (MMI) on January 7, 2021.

13. On December 16, 2020, Robert L. Messenbaugh, M.D. performed an Independent Medical Examination (“IME”) at the request of Respondents. Claimant reported to Dr. Messenbaugh experiencing a sudden pop and pain in her left shoulder when throwing a garbage bag into the dumpster. Dr. Messenbaugh concluded that Claimant’s x-rays and MRI revealed advanced degenerative arthritis and soft tissue tearing and pathology that was present prior to the March 9, 2020 work incident. He explained that the hydroxyapatite deposition noted on the May 6, 2020 x-rays indicated Claimant’s rotator cuff tissues had been degenerative prior to March 9, 2020. He further explained that the cysts revealed on the MRI developed over a long period of time, indicating the chronicity of Claimant’s left shoulder pathology, which predated the March 9, 2020 event.

14. Dr. Messenbaugh opined Claimant did not sustain an actual injury to her shoulder on March 9, 2020, noting there was no acute tearing of the rotator cuff, labrum, anterior shoulder capsule, or articular cartilage surfaces within the glenohumeral joint. He noted Dr. Beard’s June 9, 2020 documentation of reports of pre-existing shoulder issues and explained that the popping sensation Claimant reported was likely the glenohumeral bone-on-bone surfaces rubbing together. Dr. Messenbaugh opined that Claimant had extensive pre-existing degenerative osteoarthritis with cartilage wear resulting in exposed bone, along with associated rotator cuff and labral degenerative fraying, wearing and tearing. He concluded that Claimant’s need for a total shoulder replacement was due to the advanced degree of Claimant’s pre-existing degenerative pathology and not the work events of March 9, 2020.

15. On January 7, 2021, Douglas Scott, M.D. at Banner Health placed Claimant at MMI. Dr. Scott noted a 30% upper extremity impairment for the total shoulder arthroplasty, but remarked,

> In my opinion the need for the left shoulder total arthroplasty was to treat [Claimant’s] underlying and pre-existing severe osteoarthritis of the left shoulder. In my opinion the aggravation of her left shoulder condition did not require a left shoulder total arthroplasty, i.e. the mechanism of injury did not cause her severe osteoarthritis and did not cause a specific diagnosed acute traumatic injury to the left shoulder. In my opinion, although she has a 30% upper extremity rating for the total left shoulder arthroplasty, it is a rating for a treated condition not work related to the claimed injury.

(Ex. E, p. 73).

16. On January 12, 2021, John Hughes, M.D. performed an IME at the request of Claimant. He gave the following assessment, in pertinent part: occult left shoulder

degenerative arthritis with no documentation of prior symptoms; work-related left shoulder sprain/strain with multiple injury components; and left shoulder arthritis. Dr. Hughes agreed that Claimant's degenerative pathology predated March 9, 2020, but noted Claimant was not symptomatic with degenerative pathology prior to March 9, 2020. He opined that the degenerative process was truly "occult" and presented a vulnerability for a left shoulder injury. Dr. Hughes opined that the work-related event of throwing the trash into the dumpster set in motion a "degenerative cascade" that led to Claimant undergoing the replacement arthroplasty of the left shoulder. He opined Claimant's need for the shoulder replacement arthroplasty stemmed from the work injury, which aggravated a previously occult left shoulder.

17. Dr. Hughes testified by pre-hearing deposition as a Level II accredited expert in occupational medicine. Dr. Hughes testified that the work events of March 9, 2020 accelerated Claimant's previously asymptomatic degenerative pathology, as well as superimposed acute injuries of a labral tear and/or partial rotator cuff tear. Dr. Hughes testified he believes the labral and rotator cuff tears evidenced on MRI were acute based on Claimant's description of the injury and documentation of her symptoms. Dr. Hughes opined that the shoulder replacement was the best option to address Claimant's shoulder condition. Dr. Hughes opined that Claimant became symptomatic because of the March 9, 2020 event. On cross-examination, Dr. Hughes acknowledged that he had reviewed Dr. Beard's June 9, 2020 medical report which contained the statement that Claimant was having some shoulder issues prior to the incident. He stated he mistakenly omitted that from his own report and acknowledged that it was not clear Claimant was asymptomatic prior to the work event, in light of Dr. Beard's records. Nonetheless, Dr. Hughes remained of the opinion that the March 9, 2020 work event caused a substantial and permanent aggravation of Claimant's degenerative shoulder pathology, resulting in the need for surgery.

18. Dr. Messenbaugh testified by pre-hearing deposition as a Level II accredited expert in orthopedics and orthopedic surgery, with a specialty in shoulders. Dr. Messenbaugh testified consistent with his report and continued to opine that Claimant did not sustain a work injury on March 9, 2020. Dr. Messenbaugh disagreed with Dr. Hughes's conclusion that Claimant experienced a labral and/or partial rotator cuff tear as a result of the March 9, 2020 event. He explained the MRI showed degenerative changes with no evidence of an acute injury, including no evidence of an acute labral tear or rotator cuff tear. Dr. Messenbaugh testified that no effusion was seen on the MRI that would be indicative of an acute injury. Dr. Messenbaugh explained that the radiologist's described the appearance of the labrum as degenerative fraying and tearing. Dr. Messenbaugh testified that Claimant's history of finishing her shift after the alleged injury is inconsistent with experiencing an acute rotator cuff tear, which would likely result in severe and debilitating shoulder pain. He explained that Dr. Heaston's surgical report does not indicate the surgery was performed for any rotator cuff or labral tear. Dr. Messenbaugh agreed with Dr. Erickson that Claimant had advanced pre-existing degenerative arthritis and that the events of March 9, 2020 did not cause her need for a total shoulder arthroplasty.

19. Dr. Messenbaugh testified that the March 9, 2020 event did not aggravate or accelerate Claimant’s pre-existing shoulder condition, as there was no change of pathology as a result of the March 9, 2020 event. He testified it was unlikely Claimant’s shoulder was asymptomatic prior to March 9, 2020 based on the advanced nature of Claimant’s pre-existing degenerative changes.

20. Claimant testified she did not have any shoulder issues prior to the March 9, 2020 event. She stated that, prior to the March 9, 2020 event, she was never informed she had arthritis. Claimant testified that she does not recall telling Dr. Beard she had prior shoulder pain and is not sure why Dr. Beard included that in his medical note. She testified she told Dr. Beard that she experienced body aches in the winter when performing snow removal at work. Claimant testified that she would treat the body aches with rest and over-the-counter medication and the pain would resolve. Claimant testified that the pain from the March 9, 2020 incident did not resolve with rest and medication.

21. The ALJ finds the opinions of Drs. Scott, Heaston, Beard, Erickson and Messenbaugh, as supported by the medical records, more credible and persuasive than the opinion of Dr. Hughes and Claimant’s testimony.

22. The ALJ finds that Claimant failed to prove it is more likely than not the March 9, 2020 event resulted in an injury that caused disability or the need for medical treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (the “Act”), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’ testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Claimant failed to prove it is more probable than not she sustained a compensable industrial injury to her left shoulder on March 9, 2020. Claimant is credible in her reports of feeling a pop and pain while throwing away trash at work on March 9, 2020. However, the preponderant evidence does not establish the event caused an acute injury or aggravated, accelerated or combined with Claimant's pre-existing condition creating disability or the need for medical treatment. Claimant suffered from significant, longstanding pre-existing degenerative changes in her left shoulder. While Claimant asserts she did not have any left shoulder issues leading up to the work incident, such assertion is contradicted by Dr. Beard's documentation of Claimant's reports of shoulder issues prior to the work incident. Claimant's explanation that she was referring solely to general aches and pains is unpersuasive. Additionally, Dr. Messenbaugh credibly explained that it is not likely Claimant experienced no shoulder symptoms prior to the injury given the severity of Claimant's pre-existing degenerative shoulder condition. Dr. Hughes' opinion was based, in part, on the belief that Claimant was asymptomatic prior to the work incident. He later acknowledged it was not clear if Claimant was, in fact, asymptomatic prior to March 9, 2020.

Claimant's IME physician, Dr. Hughes, is the only physician in this matter who opined that Claimant sustained acute tears of her rotator cuff and/or labrum as a result of the work event. Radiologist Dr. Fuller, ATPs Heaston and Beard, as well as Drs. Erickson and Messenbaugh, all refer to the MRI findings as degenerative. Dr. Messenbaugh and Dr. Erickson credibly opined that there was no evidence of any acute trauma demonstrated on the MRI. Dr. Erickson credibly testified that Claimant's ability to continue performing her regular job duties for the remainder of the shift was inconsistent with sustaining an acute tear of the rotator cuff or labrum. While Claimant's pre-existing condition does not preclude a determination that she sustained a work injury, the ALJ is not persuaded the occurrence of symptoms at work was the result of an injury as opposed to the natural progression of Claimant's severe, pre-existing degenerative condition.

As Claimant failed to prove it is more likely than not she sustained a compensable industrial injury, the remaining issues are moot.

ORDER

1. Claimant failed to prove she suffered a compensable industrial injury on March 9, 2020. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right total knee arthroplasty, as recommended by Dr. Thomas Dwyer, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2020 work injury.

The endorsed issues of average weekly wage (AWW), temporary total disability (TTD) benefits, and temporary partial disability (TPD) benefits are reserved for future determination.

FINDINGS OF FACT

1. The claimant has been employed with the employer since June 25, 2016. On September 8, 2020, the claimant was performing her normal job duties as a surgical cleaning technician. The claimant's job duties include cleaning all aspects of the operating room (OR) department. This includes mopping, sweeping, and wiping all surfaces, including ceilings, walls, and floors.

2. On September 8, 2020, the claimant was moving an operating table for cleaning and rotated on her right leg. While rotating in this way, the claimant felt a pop in her right knee and a burning sensation. Despite this pain, the claimant completed her shift on September 8, 2020. She also worked her normal shifts on September 9 and 10, 2020. On September 11, 2020, the claimant reported her right knee pain to the employer. The claimant testified that she continued working during this time because there was no one to replace her.

3. The claimant testified that prior to September 8, 2020, she was able to perform all of her normal job duties. She was also able to go on walks and hikes. The claimant also testified that since her September 8, 2020 injury, she is unable to walk on uneven ground.

4. On October 8, 2020, the respondents filed a General Admission of Liability (GAL).

5. On October 14, 2020, the claimant began working in a modified position as a "screener" for the employer. That position involved performing temperature checks of individuals entering the hospital.

6. The claimant's authorized treating provider (ATP) for this claim is Dr. Randal Shelton. The claimant was first seen by Dr. Shelton on September 16, 2020. On that date, the claimant reported right knee pain with standing and motion. In addition, the claimant reported her pain level as four to five out of 10. Dr. Shelton noted some swelling on exam and ordered a right knee magnetic resonance image (MRI).

7. On September 28, 2020, a right knee MRI was performed. The MRI showed degeneration of the medial meniscus; a small tear of the meniscus; and advanced medial compartment degenerative changes.

8. Subsequently, Dr. Shelton referred the claimant to Dr. Thomas Dwyer for an orthopedic consultation. The claimant was first seen by Dr. Dwyer on October 22, 2020. The claimant reported increasing right knee pain and intermittent sharp pain. On that same date, an x-ray of the claimant's right knee showed complete loss of articular cartilage in the medial femoral condyle and medial tibial plateau. Dr. Dwyer diagnosed unilateral primary arthritis in the claimant's right knee. He recommended and administered an injection to the claimant's right knee.

9. The claimant testified that she had a reaction to the injection and sought emergent treatment for elevated blood pressure. The claimant also testified that the right knee injection gave her three or four months of pain relief.

10. On November 19, 2020, the claimant returned to Dr. Dwyer and reported side effects from the injection. The claimant also reported continued right knee pain with weight bearing activities. Dr. Dwyer recommended the claimant undergo a total right knee arthroplasty.

11. Dr. Dwyer testified that the claimant has advanced osteoarthritis in her right knee. Dr. Dwyer also testified that he continues to recommend a total right knee arthroplasty. He further testified that if he were to only repair the claimant's torn meniscus, such an arthroscopic surgery would not address the claimant's knee arthritis. With regard to causation, Dr. Dwyer testified that the claimant's mechanism of injury was "a factor" in her need for a knee replacement. In support of this opinion, Dr. Dwyer noted that the claimant did not have symptoms or limitations prior to her work injury.

12. The respondents attempted to schedule an independent medical examination (IME) in this case. The claimant declined to attend an IME on the basis of COVID related restrictions and because she did not wish to travel in the winter. Based upon this, the respondents requested that Dr. Jon Erickson review the claimant's medical records and opine regarding whether the recommended right knee replacement was reasonable, necessary, and related to the claimant's work injury.

13. In his January 18, 2021 report, Dr. Erickson opined that the September 8, 2020 incident was a "relatively minor" twisting injury. Dr. Erickson noted that the claimant has pre-existing advanced tricompartmental osteoarthritis in her right knee. It is Dr. Erickson's opinion that the September 8, 2020 incident did not aggravate or accelerate the claimant's pre-existing right knee condition. In addition, Dr. Erickson opined that the

claimant reached maximum medical improvement (MMI) when she received the October 22, 2020 injection. In support of this opinion, Dr. Erickson noted that the injection was successful in relieving the claimant's pain. He further noted that the return of the claimant's right knee pain was secondary to the pre-existing osteoarthritis.

14. Based upon the opinions of Dr. Erickson, the respondents denied authorization for the right total knee arthroplasty.

15. Dr. Erickson's testimony was consistent with his written report. Dr. Erickson testified that he diagnosed the claimant with advanced bone-on-bone osteoarthritis of the knee. Dr. Erickson also testified that the claimant reached MMI for her knee twisting injury after the October 2020 injection. Dr. Erickson also testified that the claimant's need for surgery is not related to her work injury.

16. The claimant testified that she was cleared to return to her environmental services technician position by Dr. Shelton. The claimant did return to that position on March 10, 2021. The claimant testified that she attempted to work in that position and comply with her work restrictions. However, after five hours working in that position, the claimant experienced right knee pain. She was then returned to the screener position.

17. The ALJ credits the medical records and the opinions of Dr. Erickson over the contrary opinions of Dr. Dwyer. The ALJ specifically credits the opinion of Dr. Erickson that the three to four months of pain relief the claimant experienced (following the right knee injection), demonstrate that the claimant has reached MMI. The ALJ is persuaded that the claimant's current need for a right total knee replacement is due to her pre-existing osteoarthritis. The ALJ is further persuaded that the minor twisting injury at work on September 8, 2020 did not aggravate or accelerate the arthritic condition of the claimant's right knee to necessitate surgery. For all of the foregoing reasons, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the right total knee arthroplasty, as recommended by Dr. Dwyer, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2020 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the right total knee arthroplasty recommended by Dr. Dwyer is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2020 work injury. As found, the claimant's September 9, 2020 injury was resolved following the October 2020 injection. As found, the claimant's current need for right total knee replacement is related to her pre-existing osteoarthritis and not her work injury. As found, the September 9, 2020 work injury did not aggravate or accelerate the pre-existing osteoarthritis to necessitate surgery. The medical records and the opinions of Dr. Erickson are found to be credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for a right total knee arthroplasty is denied and dismissed.

2. All matters not determined here are reserved for future determination.

Dated this 28th day of June 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-089-386-002 & 5-105-392-001

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted]
Claimant,

v.

[Redacted]
Employer,

and

[Redacted]
Self-Insured Respondent.

No further hearings have been held. On June 24, 2021, both attorneys filed a “Joint” Stipulation, as opposed to a unilateral stipulation, for correction of the June 7, 2021 Full Findings of Fact, Conclusions of Law and Order. Although the Stipulation recites technical errors that are not necessarily outcome determinative, the parties seek a corrective order to allegedly avoid “a lengthy and costly appeal.” The undersigned ALJ hereby corrects the June 7, 2021 decision in accordance with the parties requested corrections.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on July 10, 2020 and March 12, 2021 in Denver, Colorado. The session of the virtual hearing by Google Meets on July 10, 2020 was recorded (reference: 7/10/20, Google Meets, beginning at 8:30 AM, and ending at 12:30 PM). There was no recording of the proceedings on March 12, 2021. Because of this, the ALJ ordered each side to submit their summaries of the testimony, allowing for objections by each party. Claimant’s Summary was submitted on March 19, 2021. Respondent filed objections to Claimant’s Summary on March 26, 2021. Respondent’s Summary was filed on March 19, 2021. On March 26, 2021, Claimant filed objections to paragraphs 15 and 24 of Respondent’s Summary of Dr. Burris’ testimony.

There were no objections to the rest of Respondent’s Summary. Consequently, the ALJ adopted all but paragraphs 15 and 24 of Respondent’s Summary and modified paragraphs 15 and 24 thereof, accordingly. Thereafter, on April 14, 2021, after considering the parties' proposed summaries of the testimony of March 12, 2021, the ALJ issued his Summary of the Testimony of March 12, 2021, giving the parties three (3) working days within which to file objections to the ALJ's Summary of the Testimony. As of April 21, 2021, no objections to the ALJ's Summary of the Testimony of March 12, 2021 had been filed and the matter was deemed ready for a briefing schedule. As of April 21, 2021, the matter was ripe for a briefing schedule as detailed herein below.

W.C. No. 5-089-386 -002 concerns an admitted single-event injury to the Claimant's right shoulder and abdomen (hernia). The Claimant also alleges a fully contested consequential injury to his left shoulder on January 17, 2019 (W.C. No. 5-105-393-001 after the Claimant returned to work at light duty for the Respondent and that the restrictions on his right shoulder, imposed by his authorized treating (ATP), allegedly caused the Claimant to overuse his left shoulder. W.C. No. 5-105-392-001 is a fully contested cumulative trauma case involving only the left shoulder. Claimant alleges he cumulatively injured his left shoulder doing his regular job duties in Respondent's warehouse. Over Respondent's objection, both cases were consolidated into W.C. No. 5-089-386-002 for purposes of hearing and decision.

The Claimant was present in person, virtually, and represented by [Redacted]
, Esq. Respondent was represented by [Redacted], Esq.

Hereinafter [Redacted]shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer," and/or Respondent or "the District. All other parties shall be referred to by name.

Claimant's Exhibits 1 through 34 were admitted into evidence, with the following objections and rulings thereon: Exhibit 1, ruling reserved and ultimately sustained. Respondent's objection to Exhibit 18 was withdrawn and it was admitted. Also, Respondent's objections to Exhibits 20 through 29 were withdrawn and these exhibits were admitted into evidence. Respondents' Exhibits A through W were admitted into evidence, without objection.

Claimant's opening brief was timely filed on May 7, 2021. Respondent's answer brief was timely filed on May 14, 2021. Claimant was give three (3) working days within which to file a reply brief, if any, or no later than May 19, 2021. The matter was deemed ready for decision as of May 20, 2021.

ISSUES

The issues to be determined by this decision concern the compensability of the Claimant's left shoulder injury and medical benefits.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. At the commencement of the hearing, the parties stipulated and the ALJ so finds that Claimant's average weekly wage (AWW) was $748.58, as of September 26, 2018. Respondent filed a Final Admission of Liability (FAL) in W.C. No. 5-089-386-002, admitting for medical benefits causally related to the admitted right shoulder and hernia injuries; an AWW of $748.58; a temporary total disability (TTD) rate of $499.05, through January 6, 2019; a maximum medical improvement (MMI) date of May 22, 2019, and zero permanent partial disability (PPD).

2. The parties further stipulated and the ALJ so finds that the Claimant was overpaid TTD benefits in the amount of $712.93 and Respondent is entitled to a credit in that amount.

W.C. No. 5-089-386-002

3. On September 26, 2018, the Claimant sustained an admitted abdominal hernia and injuries to his right shoulder when he was moving items from a freezer to a pallet while working as a warehouse delivery driver for the Respondent in the Food and Nutrition Services warehouse.

4. On December 12, 2018, the Claimant underwent surgical repair of his hernia and was taken off work duty. Following the hernia surgery, the Claimant returned to Annu Ramaswamy, M.D., on January 2, 2019 and was released to return to light duty work effective January 7, 2019 (**Respondent's Exhibit J, p.. 112).** The work restrictions were imposed to accommodate proper healing of Claimant's hernia repair. As of March 20, 2019, Dr. Ramaswamy imposed the following light duty work restrictions: no lifting, no repetitive lifting and no carrying 40 lbs. or more. As of April 30, 2019, Claimant's restrictions were increased to no lifting, no repetitive lifting and no carrying of 20 lbs. or more. These same restrictions were continued as of May 15, 2019; and, as of May 28, 2019, Dr. Ramaswamy indicated "no restrictions" **Respondent's Exhibit J).**

W.C. No. 5-105-392-001 Consolidated Into W.C. No. 5-089-386-002

5. On October 14, 2014, the Claimant commenced his employment relationship with Respondent. He continues to work for the school district as a

warehouse delivery driver at the Food and Nutrition Center. During his 6-year tenure with the school district, the Claimant has not worked at any position other than as a warehouse delivery driver for Respondent. There is no credible evidence Claimant has performed concurrent employment while employed with the Respondent.

6. The **job duties** of the position of Warehouse Delivery Driver (identified as Job Number 6186 by the District) include, but are not limited to, the following, as enumerated by District formal job descriptions (Claimant's Exhibit Nos. 17 & 19):

a. This employee provides support to the food and nutrition services warehouse operation. Responsibilities include delivering bakery, produce and warehouse products to the schools as well as loading, unloading and storing products at the warehouse.
b. May pull product and load trucks with items ordered by the food and nutrition service managers.
c. May pull product and bakery products for delivery to the schools with accuracy and in a timely manner.
d. May drive routes and deliver product to each kitchen.
e. Return bakery carts and produce containers from kitchens to student nutrition center.
f. Assists warehouse manager with receipt and storage of product into appropriate dry, cooler or freezer storage area.
g. Delivers equipment to school kitchens and picks up equipment from schools when directed to do so.

7. The **physical requirements** of the position of Warehouse Delivery Driver (identified as Job Number 6186 by the District) include, but are not limited to, the following, as enumerated by District formal job descriptions (Claimant's Exhibit Nos. 17 & 19):

h. Constant bending, reaching and climbing.
i. Extremely heavy physical effort (lifting over 50 pounds).
j. Overhead work.
k. Repetitive movements.
l. Constant lifting, pulling, and/or pushing.
m. Ability to stand, to walk, stoop, reach, kneel, and bend.
n. Ability to lift, to push, and/or pull objects from five (5) to (50) pounds frequently.
o. Ability to lift 70 to 90 pounds occasionally.
p. Ability to work in freezers up to 2 hours per day.
q. Ability to work in coolers up to 2 hours per day.

8. The District has provided the following estimates as to how often, in a given workday, employees like the Claimant would be performing assigned job

duties as a warehouse delivery driver (Claimant's Exhibit Nos. 17 & 19):

r. Receiving and stocking product in dry, cooler, and freezer storage—10%.
s. Pulling orders from dry, cooler, and freezer storage—40%.
t. Driving and unloading orders at schools—50%.

Medical in W.C. No. 5-089-386-002

9. On September 27, 2018, the Claimant presented to Annu Ramaswamy, M.D., complaining of an injury he sustained working for the District the day before. The doctor found evidence of both a left inguinal hernia as well as rotator cuff impingement within the Claimant's right shoulder. Dr. Ramaswamy recommended that the Claimant undergo an ultrasound to confirm the hernia injury (Claimant's Exhibit 31, pp. 276-278)

10. On October 3, 2018, the Claimant underwent the ultrasound recommended by Dr. Ramaswamy. The study showed that the Claimant was suffering from a "large direct internal hernia". (Claimant's Exhibit 32, p. 327)

11. Based upon the results of the ultrasound, Dr. Ramaswamy referred the Claimant to Robert T. Rowland, M.D.—a general surgeon. (Claimant's Exhibit 30, pp. 282-283) On November 20, 2018 Dr. Rowland recommended surgical repair of the hernia (Claimant's Exhibit 30, pp. 211-212).

12. On December 12, 2018 Claimant underwent surgery to repair his hernia. The surgeon was Dr. Rowland. (Claimant's Exhibit 31, p. 287)

13. The Claimant was paid TTD benefits by the District for the inclusive period from December 12, 2018 through January 6, 2019. (Respondent's Exhibit A, p. 2)

14. Dr. Ramaswamy recommended and the Claimant returned to light-duty work on January 7, 2019. (Claimant's Exhibit 30, pp. 287-288)

W.C. No. 5-105-392-001 Consolidated Into W.C. No. 5-089-386-002

15. On January 17, 2019 Claimant's restrictions were increased to 40 pounds (Claimant's Exhibit 30, pp. 289-290)

16. On February 14, 2019, Dr. Ramaswamy maintained the Claimant at his 40 lbs. lifting restriction but added that "he is working within his restrictions but states that whenever he has to lift, he tends to compensate for (*sic)* the right side". (Ex 30, p. 291-293)

17. Both at his February 17 and February 28, 2019 appointments, Dr. Ramaswamy kept THE Claimant on the same 40 lbs. lifting restriction.(Claimant's Exhibit 30, pp. 294 & 296)

18. The Claimant returned to Dr. Ramaswamy on March 20, 2019 at which time the doctor charted the following:

> "(Claimant) states that he has been working for the last few months (almost full duty). He states that with that work load, the left shoulder pain has returned and he has lost range of motion slowly over time,"

Dr. Ramaswamy recommended that the Claimant undergo an MRI (magnetic resonance imaging) study of his left shoulder "to rule out rotator cuff tear" Claimant's Exhibit. 30, pp. 297-299). Dr. Ramaswamy's implicit opinion is effectively that the Claimant's left shoulder condition is causally related to Claimant's job duties upon his return to light duty.

19. On March 22, 2019, the Claimant underwent the MRI scan of his left shoulder as recommended by Dr. Ramaswamy. That study was with the following findings (Exhibit 32, p. 328-329):

- **Supraspinatus tendon:** Full thickness tear measuring 2.3 cm associated with no muscle atrophy
- **Infraspinatus tendon:** Tear extending into the anterior aspect of the tendon

The reading radiologist's impression was: large full-thickness tear of both the supraspinatus and infraspinatus tendons.

20. The Claimant returned to see Dr. Ramaswamy on April 2, 2019 to go over the results of his recent MRI scan. On that date, Dr. Ramaswamy stated as follows:

> "(Claimant) states that he still notes left shoulder pain with range of motion loss. He did undergo MRI testing of the left shoulder and he was noted to have a large full-thickness tear within the supraspinatus and infraspinatus…in March the patient indicated that he returned to full duty status, he developed left shoulder pain. It appears that he did not mention a traumatic injury but instead was noticing a repetitive injury."

Dr. Ramaswamy increased the Claimant's lifting restriction to 10 lbs.and referred the Claimant to an orthopedic shoulder surgeon—Michael S. Hewitt, M.D.(Claimant's Exhibit 30, pp.300-302)

Michael S. Hewitt, M.D., Surgeon

21. On April 8, 2019, the Claimant presented himself to Dr. Hewitt on

referral from Dr. Ramaswamy-- for treatment of his left shoulder injury. Upon examination Dr. Hewitt noted that the Claimant was with positive impingement. Upon review of his MRI scan, Dr. Hewitt determined that the Claimant had a large full-thickness rotator cuff tear involving both the supraspinatus and infraspinatus tendons. Dr. Hewitt noted that both tendons were without any atrophy. Dr. Hewitt recommended surgery (Claimant's Exhibit 33, pp.. 331-335)

22. On April 10, 2019, the Claimant returned to his ATP, Dr. Ramaswamy, describing ongoing left shoulder pain and range of motion loss. On this date, Dr. Ramaswamy stated the following:

> "It appears that left shoulder pain started when the patient returned back to work (after recovery from the groin/hernia surgery). Therefore, the patient is apparently describing a repetitive injury…in regards to left shoulder, the patient will fill out a new claim-describing a repetitive injury. It will be helpful to review the patient's job description and a worksite analysis may be helpful to determine causality for the left rotator cuff tears" (Claimant's Exhibit 31, pp. 303-305)

23. On April 12, 2019, the Claimant received a written warning from his supervisor, Kim Kilgore, Director of Food and Nutrition Services, for the following infractions:

- Failure to report for duty while on-call
- Handling work comp appointments while on shift

Had the Claimant exceeded his 40-pound restriction at the time, Claimant could have been written up for doing so—he was not written up (Respondent's Exhibit R, pp. 254-256)

24. The Claimant returned to Dr. Ramaswamy on April 22, 2019, reporting ongoing left shoulder pain. On this date Dr. Ramaswamy charted as follows:

> "(Claimant) states that he injured his left shoulder when he returned back to work (after the hernia repair). [Claimant] describes a repetitive injury. As he was returning back to work (after a left hernia repair), he began to notice increasing discomfort in the left shoulder with range of motion loss.
>
> He describes his job as being physical. He states that he has to lift heavy weight at all levels. His job description

> notes that he does have to perform heavy work. He states that they were short staffed early in the year and the workload was quite heavy. He recently was diagnosed as having two rotator cuff tears in the left shoulder. Dr. Hewitt recommended surgical intervention. Impingement test positive. Causality needs to be determined at this point. I did review the patient's job description and it indicates that he does have to lift, push and pull objects from 5-50 pounds frequently and he does have to lift 70-90 pounds on occasion. The job is repetitive. For now, I am recommending a job analysis so that the patient's job can be quantified (amount of weight lifted and frequency of lifting at various levels—especially at shoulder and overhead levels). Once the job analysis is available, I can fully comment on causally" (Claimant's Exhibit 31, pp. 306-308)

25. On May 1, 2019, Kirstie Smith of Hellman & Associates conducted a worksite evaluation of the position of "Warehouse/Driver Employee – Food and Nutrition Services". This was pursuant to the recommendations from Dr. Ramaswamy. In her report, Smith provided the following **Observations:**

> "At the time of the assessment, warehouse employees were responsible for all facets of receiving, stocking, picking orders, and delivering individual orders to schools using box trucks. The position was intended to be fairly even split between picking orders and delivering to schools. At the time of the assessment however, the warehouse was significantly short staffed. Three employees working in the warehouse during the assessment had been working almost exclusively to receive orders, stock materials, and pick orders/prepare them for delivery. Remaining employees were mainly driving trucks and delivering orders to schools across the district. Drivers were running double routes in order to get all orders out to the schools."

26. The physical demands of the warehouse/driver position were summarized by Smith as:

- Continuous (67-100%) standing/walking and reaching.
- Max weight lifted in pounds: 90.
- Frequent weight lifted in pounds: 15-50.
- Empty wood pallets weighed approximately 40 pounds each and were handled frequently by individual workers—approximately ¼ of the pallets handled were

heavy duty construction and weighed closer to 70 pounds.

- Employees were trained to move the pallet jack to the area closest to the items being picked, and to place the heaviest items on the bottom of the pallet to ensure maximum stability for transport and unloading by kitchen staff.
- During the assessment, each pallet had approximately four to eight 40-pound items on the bottom of the pallet. Photo 6 showed “Heavy items on the bottom of an order”. Lighter items (15-38 pounds) were then stacked on the heavier items and stretch-wrapped together using an open roll of industrial stretch wrap while the employee walked backward around the pallet several times.
- New pallets of certain materials required reaching above shoulder height to remove the first layer or two of packages.

27. Delivery trucks were noted to be “typical box trucks.” In Smith’s report ,there was no mention of the amount and frequency that Claimant and other warehouse employees similarly situated would be required to lift and reach at or above shoulder height or overhead (Respondent’s Exhibit P, pp. 199-205)

28. On May 15, 2019, the Claimant returned to Dr. Ramaswamy’s office. The doctor described that the job site evaluation was deficient inasmuch as it did not describe the amount and frequency the Claimant would be required to reach and lift at shoulder height and above. Dr. Ramaswamy described in his report his

> “We discussed his job at length. We discussed that I did review the job site analysis and is looking to see whether or not overhead maneuvers were mentioned. We did contact the company that performed the evaluation and they indicated that all of the information that they gathered would be in their report. I asked the patient about his job: he believes that he lifts about 25% of the time at shoulder level and above shoulder level. He states that weight ranges from 10-50 pounds. Therefore, it appears that he is lifting occasionally at an overhead level. The main issue has to do with causality. I did contact the District so that the district can comment on the amount of overhead lifting that occurs on-the-job. It would also be helpful to note the amount of weight that Mr. [Redacted] is lifting overhead. Once I obtain this data, I can formally comment on causality. At the

> moment it does not appear that the patient does not lift repetitively/frequently in the overhead fashion."
>
> "The *Colorado Medical Treatment Guidelines* discussed that chronic repetitive overhead work/lifting would correlate with a work-related injury. Mister [Redacted] discussed his job hours and indicates that the repetitive work occurs on an occasional basis. Will await the data from the district but it appears that the rotator cuff tear would not be a work-related condition based on the patient's history."

(Exhibit 31, p. 312-315)

29. On May 15, 2019, the following E-mail exchange occurred by and between Kim Kilgore and Diane Howell, Risk Management Specialist for the Employer—the "Subject" being "RE: Additional information needed with regards to job site evaluation (Claimant's Exhibit 7, pp.. 36-38)

HOWELL: Hi Kim,

> We spoke with the doctor today regarding [Redacted]'s job site evaluation. He is requesting a little bit more information before he can make a determination regarding Gary's 01/17/19 injury. Please see attached note.
>
> With regards to over the shoulder lifting:
>
> - ♦ How frequently are employees lifting/reaching from shoulder level to above shoulder level per day? Occasionally (1/3 of the day), frequently (2/3 of the day) or constantly?
> - ♦ How heavy are the items that are being lifting or retrieved from shoulder level to above shoulder level?
>
> These items were not specifically stated in the job site evaluation report, and when the doctor called the company, they stated that they could only address what was in the written report. We are hoping that you can provide this information.

KILGORE: Hello Diane,

> The lifting/reaching from shoulder level to above shoulder level occurs 1/3 of the day I would say or occasionally.
> The majority of our products are in the 50# weight range per case—there are a few that may be up to 70#.

HOWELL: Just to clarify, would 70# boxes be stacked to shoulder height or above?

KILGORE: No—those would be put on the bottom of pallets and/or 2 wheelers when being delivered. They would not be stacked to shoulder and above shoulder height.

30. The Claimant returned to Dr. Ramaswamy on May 22, 2019 “to discuss the causality of this condition”. Regarding this ,Dr. Ramaswamy said:

> “I did receive documentation from his school district in regards to the amount of overhead work that is performed. It appears that [Claimant] would need to lift overhead on an occasional basis (less than 1/3 of the day). Lifting varies from a 10 to pound lift to a 50-pound lift and therefore during the overhead lifting, [Claimant] would not always be lifting very heavy material. This information is consistent with the information that [Claimant] gave me previously in regards to his job duties…”
>
> “We discussed causality at length. I did refer to the Colorado medical treatment guidelines and the AMA guides to the evaluation of disease and injury causation. In looking at work-related mechanisms of injury for a rotator cuff tear, typically prolonged/repetitive overhead lifting is required. In quantifying the workload, the overhead maneuvers occur occasionally and constant/repetitive overhead maneuvers do not occur. The amount of weight that is lifted overhead varies from 10 pounds to 50 pounds. We discussed that based on this data, I would not be able to opine that the rotator cuff tear relates to a work-related injury mechanism. We discussed that rotator cuff tears can occur from degeneration over time and do not always occur in the setting of trauma…we discussed that there is a chance that the tendon can retract over time making repair difficult at some point.”

31. On May 22, 2019, Dr. Ramaswamy released the Claimant from care and at MMI with no ratable impairment to both his admitted hernia and right shoulder injuries. (Claimant’s Exhibit 31, pp. 314-321)

32. The Claimant’s primary care physician is Christopher M. Hicks, M.D. at Kaiser Permanente. In his note, dated November 22, 2019, Dr. Hicks wrote:

> I called Jennifer Squire. Pt had signed consent to speak to her, HR at his work.
>
> He must be able to lift above shoulder 50 lbs repeatedly for his job
>
> I think in general most pts should not do that as it is difficult for the shoulder…Jennifer appreciated the phone call.
>
> I spent at least 3 minutes on the telephone with the Jennifer. (Claimant's Exhibit 30, p. 263)

33. Also, on November 22, 2019 Jennifer Squire wrote as follows:

> Dr. Hicks—Kaiser
>
> Notes by Jennifer Squire
>
> [Redacted] can lift 50 pounds over his shoulder repeatedly and may return to his position with no restrictions. (Claimant's Exhibit 14, p. 65).

The ALJ finds that Squire misinterpreted the total picture concerning the Claimant's restrictions on his return to "light duty."

John Soto

34. John Soto was the Claimant's direct supervisor at all times relevant to the issues in this case. He retired from the Employer on July 1, 2019. His job for the School District was Warehouse Manager, Food & Nutrition Services, Student Nutrition Center. Soto described the Claimant's job duties as follows: (1) pulling orders for school district (Tr. at 28.12); (2) taking products so pulled to the district schools; (Tr. at 26.48); and finally (3) once at the individual school he would deliver products to the school freezers.

35. According to Soto, boxes lifted by the Claimant would be in the 50-to-60-pound range (Tr. at 28.43) Frozen food products, however, would weigh over 60 pounds. (Tr. at 34.41).

36. According to Soto, the Claimant and other warehouse workers worked 8-hour shifts. (Tr. at 31.39) Claimant would spend approximately 2-3 hours per day driving a delivery truck (Tr. at 31.25)

When not driving the truck Claimant would be “pulling orders for next day” (Tr. at 31.52) Pallets would be built the day before scheduled delivery of the products to outlying schools (Tr. at 33.13) At times, more than one delivery would need to be made to an individual school because not all of the necessary items would fit in one delivery truck load (Tr. at 32.55)

37. According to Soto, the heavier boxes would necessarily be stacked at the bottom of the pallet (Tr. at 33.44) This would include the 50-60 lbs. items mentioned earlier (Tr. at 34.20) Lighter items, such as potato chips, would be stacked at the top of the pallet so “they wouldn’t get smashed”. (Tr. at 34.04). The Claimant would be required to load all these items by himself without any help from a co-worker and then the finished pallet would be shrink wrapped by [the Claimant] himself (Tr. at 34.59)

38. According to Soto, pallets were stacked to shoulder level & above when pulling orders for delivery to individual schools (Tr. at 46.10) The average height of stacks in the freezer was 7 foot (Tr. at 46.34) There were times when warehouse workers had to down stack pallets to get them to fit into the delivery trucks because they were built and stacked too high and as such would not fit into the delivery trucks (Tr. at 45.28)

39. Soto testified that the warehouse was short-staffed in the spring of 2019. The District called in temporary workers in an attempt to complete fulfillment requirements (Tr. at 41.58)

40. Until January 2019, Soto was not aware of any problems the Claimant was experiencing with his left shoulder (Tr. at 24.56) Nor was Soto made aware of any problems the Claimant had completing his job as a delivery driver because of a left shoulder problem before that date (Tr. 25.32) . Finally, [Claimant] did not get any assistance doing his job (Tr. at 26.15).

41. The Claimant reported to Soto that he injured his left shoulder lifting and pulling orders for the Employer (Tr. at 41.21).

42. The ALJ finds that Soto was in a better position than other Respondent witnesses to be aware of the Claimant’s job duties, however, Soto merely established that the Claimant did not complain about his **left** shoulder until the Claimant reported the **left** shoulder problems sometime after Claimant’s return to light duty. Soto’s testimony does not refute Dr. Ramaswamy’s causality opinion, which supports an “overuse syndrome” of the left shoulder.

The Claimant’s Testimony

43. The Claimant agreed that Soto accurately described his job requirements (Tr. at 1.12.51).

44. The Claimant stated that prior to January 2019 he had no medical problem, injury or condition affecting his left shoulder (Tr. at 1.13.18) and that prior to September of 2018 he had no problems doing the required duties of his job because of a chronic shoulder problem—nor did he ever need assistance doing his job before that date (Tr. at 1:44:44)

45. According to the Claimant, in January 2019 following his hernia surgery he returned back to work at light-duty (Tr. at 1.16.21) By January 17, 2019 he was on a 40-pound lifting restriction and at that point began working within that restriction lifting less than 40 pounds (Tr. at 1:16:56) In January, February and March of 2019, the Claimant was still "pulling orders" (Tr. at 1:52:49) According to the Claimant, he had no problem "pulling" dry goods ("aint as heavy as cases of canned goods were the only things heavier than dry goods (40-50 pounds) chips and other dry goods were within his restrictions and Claimant could readily work with these item weights (5 to 10 pounds) to stay within his given restrictions (Tr. at 1:18:36 & 1:48:36) Certainly—Claimant was not made to work outside his restrictions in the months of January, February and March of 2019. (tr. at 2:01:03)

46. The Claimant described his job tasks as follows:

a) Started in the morning loading up and delivering to schools pallets made the day before. (Tr. at 1:19:24) At the school, Claimant would then use a pallet jack to get each pallet as close to kitchen storage as possible—then he would break each pallet down and downstack the items onto a two-wheeled dolly which he would then use to deliver the items to either the freezer or dry good storage, as appropriate. (Tr. at 1:54:07)

b) He would be back at the warehouse around 8:30 to 9:00 in the morning at which time he would take a 15-minute break. (tr. at 1:19:33)

c) At 9:30 a.m. he would either start pulling orders for the next day's delivery to the schools or start putting away all US Food deliveries that had been brought in that day (between 1000 – 1,800 pieces consisting of both frozen and dry goods). (tr. at 1:19:47)

d) Once the US Food delivery items were "stacked away" then Claimant would start pulling orders together for the next day. (tr. at 1:20:02)

e) Out of his 8-hour work shift Claimant testified that 2-3 hours was spent delivery driving and delivering food products to the outlying schools. The rest of the time was spent pulling orders and stacking pallets, shrink wrapping the pallets and otherwise getting them ready for next day. (tr. at 1:20:30)

47. Concerning the up-stacking of a pallet, the Claimant confirmed, as did others, that the bulkier, heavier, larger items were placed on the bottom. This would specifically include 70-to-80-pound boxes of chicken (tr. at 1.21.13) Most other items in the freezer weighed between 50-60 pounds (Tr. 1:21.20)

48. The Claimant confirmed that he is “close to 6’” tall (Tr at 1:21:22) and that he built and up-stacked pallets “higher than his raised hand” (Tr. at 1:21:26).

49. The pallets were generally built 4 x 8’ and built “as square as can be” (Tr. at 1:21:40)

50. The Claimant took the photograph reflected in Claimant’s Exhibit 20, which was in the warehouse freezer showing stack items (Tr. at 1:22:26) This photograph represents the typical way the freezer looked while the Claimant worked there and specifically demonstrates, according to the Claimant, how he would necessarily have to reach up to grab an item “consistently lifting above his head” (Tr. at 1:23:23)

51. The Claimant verified that Claimant’s Exhibit 22 is a picture of him holding a pallet jack used to maneuver 400-500 pounds of food products on a built pallet (Tr. at 1:25:58) According to the Claimant ,the pallet shown in this picture is representative of the size of pallets he and other warehouse workers build and pull each time for delivery to outlying schools (Tr. at 1:26:03) To be more specific—Exhibit 22 is an average sized pallet in terms of its height. This pallet will also fit in the Employer’s delivery trucks (Tr.1:26:28). The Claimant agreed with Soto that many times he and others would try to take a shrunk wrapped pallet built the previous day into the truck for delivery and a couple of boxes or even a complete layer of boxes would have to come down off the top to make the stack fit into the door of the truck (Tr. at 1:26:58)

52. The Claimant testified that Exhibit 23 is a photograph of him reaching above his shoulders and rink wrapping a pallet—which has to be done every time the Claimant finishes building a pallet. (tr. at 1:27:26)

53. According to the Claimant, the warehouse was short-staffed in 2019 which caused him extra work which in turn contributed to his left shoulder pain. The warehouse being short-staffed was peculiar to 2019 (Tr. at 1:37:49) Although temporary workers were provided—turnover among the temps was high (Tr. at

1:37:53). Despite generalizations by Employer witnesses concerning temporary help, the ALJ finds the Claimant's testimony in this regard highly persuasive and credible.

54. The Claimant disagrees with the work site analysis (Respondent's Exhibit P) done by Kirstie Smith in two respects: (1) because it did not describe the extent of lifting done on his job overhead (Tr. at 2:04:00); (2) that at the time the job assessment was done in May of 2019, the warehouse was winding things down to start the summer vacation which resulted in the workers "pulling smaller pallets" (Tr. at 2:22:25).

55. The Claimant initiated primary care treatment at Kaiser Permanente on February 17, 2015, which treatment continued through and beyond his injury date in the current case (Claimant's Exhibit 30, p. 99-270). On June 5, 2017, the Claimant presented to his Kaiser doctor complaining of left shoulder pain. The Kaiser PA charted the following:

- ♦ Left shoulder pain
- ♦ Injury: No, but was lifting/doing yard work Friday and felt an ache and burning sensation
- ♦ Duration: 3 days
- ♦ Already feeling better

56. Both radicular symptoms and previous injury to the shoulder were denied. The PA (Physician's Assistant), Pelikan, noted that the Claimant on this occasion June 5, 2017) was with both full range of motion and strength. The Claimant was diagnosed as "suspect mild muscle strain, already sx resolving on own". No x-ray was run and no follow-up treatment was either recommended nor had (Claimant's Exhibit 30, p. 145-147). This is the one and only injury—if in fact it even was an injury, that Claimant reported to his left shoulder area at any time before January of 2019.

57. Kilgore testified that she heard the Claimant's testimony at the first portion of the hearing that the Claimant was continuing to load and down stack pallets in January and February 2019 and that was new information for her. The Claimant had not previously put her on notice of these alleged duties. The Claimant's light duty restrictions did not include performance of these duties other than moving lighter duty boxes of dry goods. Although Kilgore testified to this—she did not deny that the Claimant actually performed these activities as he described, just that she was not aware that he was doing these things. Her testimony in this regard does not detract from the Claimant's testimony.

58. Kilgore stated that Employer pallets are always loaded with the heavier items on the bottom and the light items on the top of the pallet. This is consistent with the Claimant's description of his job duties.

Respondent's Independent Medical Examination (IME) by John Burris, M.D.

59. Dr. Burris' testified at hearing regarding his evaluation of the Claimant on August 27, 2019. Dr. Burris testified that the Claimant has pre-existing bilateral shoulder injuries that are documented in his Kaiser medical records and that the Claimant did not disclose these relevant prior injuries to him at the IME. As found herein above, the Kaiser records disclose a temporary strain of the Claimant's left shoulder from which he fully recovered after three days. The ALJ infers and finds that Dr. Burris magnified the Kaiser left shoulder incident and attempted to parlay it into a significant pre-existing condition in order to support his opinion concerning lack of causality. The ALJ rejects Dr. Burris' take on the Kaiser record in this regard. Dr. Burris goes on to observe that the medical records from Dr. Ramaswamy do not indicate that Claimant reported these prior injuries to Dr. Ramaswamy either. This is understandable since the Kaiser record notes an insignificant left shoulder strain rom which the Claimant recovered in three days. Dr. Burris noted that the Claimant's Kaiser records further indicate that Claimant has played both football and basketball (Respondent's Exhibit G, p. 93). Grasping at potential rationalizations to support his IME opinion concerning lack of causality, Dr. Burris indicated that these sports are possible risk factors for rotator cuff tears. The ALJ infers and finds that these observations highlight the insubstantiality of Dr. Burris' ultimate opinion.

60. Dr. Burris stated the opinion that it is not medically probable that Claimant sustained a repetitive motion injury or aggravation of a pre-existing left shoulder condition as a result of performing his work duties in the warehouse or as a result of overcompensating with his left upper extremity due to pre-existing right shoulder injuries.

61. Concerning overcompensation as the cause of the Claimant's medically documented left shoulder injury, Dr. Burris stated the opinion that there is no medical evidence to support that commencing in January 2019 the Claimant would have needed to have adjusted his physical maneuvers involving the right arm by compensating with the left arm because Claimant's right shoulder. The ALJ infers and finds that Dr. Burris lacked a comprehensive appreciation of the Claimant's job duties after the return to light duty. Therefore, the ALJ rejects Dr. Burris' conclusion regarding Claimant's complaints.

62. Dr. Burris testified, without any supporting authority, that despite the common belief, the concept of an injury caused by overcompensation is not generally accepted by the medical community. In this regard, his testimony is contrary to the weight of opinions by the Claimant's treating physicians who have "no skin in the game." Despite Dr. Burris' apparent pronouncements *ex cathedra,* he offered no convincing support for his opinion that is contrary to the weight of the opinions of treating physicians. Dr. Burris further opined, without convincing support, that there is not adequate medical evidence to support the theory that when an individual sustains an injury to one extremity that there is a resulting mechanical burden placed on the other extremity sufficient to cause an injury. Mechanically one arm cannot perform the two handed tasks associated with job duties such as moving bulky cardboard boxes. This

observation defies lay reason and common sense and it is contrary to the weight of the rest of the medical evidence.

63. According to Dr. Burris, if the Claimant's work duties had caused a rotator cuff tear during the months of January through March 2019, Dr. Burris explained that there would have been a dramatic presentation of pain complaints and loss of function in the shoulder during this time period. According to Dr. Burris, the Claimant's continued ability to perform regular duty work since December 2019, despite his left shoulder MRI findings supports Dr. Burris' theory concerning a long standing pre-existing degenerative nature of the Claimant's shoulder complaints. There is no persuasive evidence to support this theory.

64. Dr. Burris was of the opinion that the duties set forth in the Job Site Analysis, and the job duties as described by the Claimant, did not provide sufficient risk factors for the development of an occupational disease repetitive motion injury.

Caroline Gellrick, M.D., Independent Medical Examiner (IME)

65. The Claimant was examined by Dr. Gellrick, on January 30, 2020 (Claimant's Exhibit 34, pp. 336-352) Dr. Gellrick rendered the following medical opinion:

> "The time under consideration of January/February/March of 2019, (Claimant) was doing double routes for short-staffed reasons and had to unload 2-wheel trucks anywhere from 4 to 6 schools, depending on the route. As he unloads the product, he does have to lift overhead again, put it onto the 2-wheel truck, and then push that into the school. In the school, he unloads again. The patient estimates this is actually 50% at this time handling the product, moving the boxes. Based on this narrative from the patient when they were short-staffed, **it would appear that the left shoulder injury of January 17, 2019 would have occurred on-the-job with greater than 50% medical probability this is compensable to WkComp."**

66. Dr. Gellrick did not think Claimant to be at maximum medical improvement for his left shoulder injury and felt that an orthopedic consult was in order.

Ultimate Findings

67. As found herein above, the ALJ finds the opinions of Dr. Ramaswamy concerning causal relatedness of the "overuse" syndrome of the left

shoulder more credible than the opinion of IME Dr. Burris that “overuse” syndrome probably does not exist. Also, the opinions of the Kaiser treating medical providers and Dr. Gellrick are more credible than the opinions of Dr. Burris. Concerning lay testimony, the ALJ finds the Claimant’s testimony more credible than the testimony of Kim Kilgore. Further, the testimony of the Claimant’s supervisor, John Soto, which essentially supports the Claimant’s testimony concerning job duties after the Claimant’s return to light duty is more credible than the testimony of Kim Kilgore, who did not have as extensive an opportunity as Soto to observe the Claimant’s work after his return to light duty. In sum, the ALJ does not find IME Dr. Burris’ opinions regarding lack of causality persuasive or credible.

68. Between conflicting medical opinions and lay testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of all ATPs, including Dr. Ramaswamy, Dr. Hewitt and IME Dr. Gellrick, concerning work-related causality, and to reject the opinions of Dr. Burris on lack of work-related causality.

69. The Claimant sustained an occupational disease to his left shoulder, consisting of overuse because of his admitted right shoulder and hernia injury, and this occupational disease resulted directly from the conditions of his light duty work after his return, and is it is fairly traced to his light duty work as a proximate cause and it did **not** come from a hazard to which Claimant would have been equally exposed outside of work. This light duty exposure aggravated and accelerated any of the Claimant’s underlying left shoulder conditions. Therefore, the Claimant has proven, by preponderant evidence, that he sustained a compensable occupational disease, with a last injurious exposure date of January 17, 2019.

70. It was stipulated and the ALJ finds that the Claimant’s average weekly wage (AWW) was $748.58, during any periods of temporary disability after January 17, 2019.

71. It was stipulated and the ALJ finds that the Claimant was overpaid $712.93 in the admitted right shoulder/hernia injury of September 26, 2018 and Respondent is entitled to a credit against indemnity benefits in the present left shoulder occupational disease case.

72. All medical care and treatment for the Claimant’s left shoulder was, and is, authorized, causally related to the left shoulder occupational disease, and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Ramaswamy concerning causal relatedness of the "overuse" syndrome of the left shoulder are more credible than the opinion of IME Dr. Burris that "overuse" syndrome probably does not exist. Also, the opinions of Kaiser treating medical providers are more credible than the opinions of Dr. Burris. Concerning lay testimony, the Claimant's testimony is more credible than the testimony of Kim Kilgore. Further, the testimony of the Claimant's supervisor, John Soto, which essentially supports the Claimant's testimony concerning job duties after the Claimant's return to light duty, is more credible than the testimony of Kim Kilgore, who did not have as extensive an opportunity as Soto to observe the Claimant's work after his return to light duty. In sum, the ALJ finds IME Dr. Burris' opinions regarding lack of causality, lacking in persuasiveness and credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence. As found, between conflicting medical opinions and lay testimony, the ALJ made a rational choice, based on substantial evidence to accept the opinions of Dr. Ramaswamy,Dr. Hewitt and Dr. Gellrick, concerning work-related causality, and to reject the opinions of Dr. Burris on lack of work-related causality.

O**ccupational Disease of Left Shoulder Overuse Syndrome/Aggravation/Acceleration of Potential Underlying Left Shoulder Condition**

c. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). Occupational diseases typically involve long latency periods, sometimes produce symptoms at times remote from the last exposure, and yet may lead to disability or death. An occupational disease might be said to "occur" when the disease becomes **disabling.** *See Union Carbide Corporation v. Indus. Claim Appeals Office,* 128 P.3d 319 (Colo. App. 2005). As found, Claimant has proven an occupational disease with an onset date of January 17, 2019 and a last injurious exposure of January 17, 2019.

d. A compensable injury or occupational disease is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's overuse of his left shoulder to compensate for the restriction of "no use" of the right shoulder aggravated and accelerated any potential underlying left shoulder condition.

Medical Benefits

e. The employer's initial right to select the treating physician is triggered once the employer has some knowledge of the facts concerning the injury or occupational disease with the employment and indicating "**to a reasonably conscientious manager**" that a **potential** workers' compensation claim may be involved. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). As found, The Employer referred the Claimant to authorized medical providers, who in turn referred the Claimant to Dr. Hewitt.

f. All referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all left shoulder related referrals emanated from Dr. Ramaswamy, the Claimant's principal ATP and were in the authorized chain of referrals.

g. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, all of Claimant's medical treatment for the left shoulder is causally related to his overuse in order to compensate for his right shoulder restrictions after his return to light duty, with a date of last injurious exposure of January 17, 2019. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary. to cure and relieve the effects of his left shoulder overuse –after January 17, 2019.

Average Weekly Wage / Indemnity Benefits and Overpayment

h. It was stipulated and found, the Claimant's AWW is $748.58.

i.. It was stipulated and found that the Claimant was overpaid $712.93 in the admitted right shoulder/hernia injury of September 26, 2018 and Respondent is entitled to a credit against indemnity benefits in the present left shoulder occupational disease case.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury or occupational disease and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on all issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. **Claimant sustained a compensable occupational disease to his left shoulder in W.C. No. 5-105-392-001, with an onset date of January 17, 2019.**

B. Respondent shall pay all the costs of authorized, causally related and reasonably necessary medical care and treatment for the Claimant's left shoulder occupational disease, reflected in W.C. No. 5-105-392-001, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. The Claimant's average weekly wage is $748.58, the establishment of which does not award or deny a benefit.

D. Respondent is entitled to a credit of $712.93 against any indemnity benefits awarded in W.C. No. 5-105-392-00

D. Any and all issues not determined herein are reserved for future decision.

DATED this 28th day of June 2021.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease to her right shoulder that began on December 26, 2019 during the course and scope of her employment with Employer.

FINDINGS OF FACT

1. Claimant is a 56 year-old female who worked for Employer as a shuttle bus driver for approximately eight months. Her job duties consisted of transporting passengers to the airport, communicating with passengers, cleaning her vehicle and assisting passengers with luggage. Claimant specified that she lifted and stacked luggage weighing between 20-50 pounds when assisting airport passengers.

2. Claimant testified that she was hired on July 18, 2019 and separated from Employer in mid-March 2020 due to Covid-19 closures. She generally worked between 27 and 40 hours per week.

3. Claimant asserts that she suffered a work-related right shoulder occupational disease that began on December 26, 2019. She attributed the condition to her repetitive job duties for Employer. Claimant contends she experienced pain in her right shoulder and eventually sought medical treatment for her symptoms in March 2020.

4. On March 2, 2020 Claimant visited her personal physician at the Salud Clinic for an examination. Claimant reported right arm pain that had persisted for several weeks. She worked as a shuttle driver at the airport. Her position involved frequent lifting for the past eight months. Claimant noted limited range of right arm motion. She lifted about 15-50 pound pieces of luggage throughout the day. Claimant noted periodic symptoms involving her right shoulder, elbow and forearm. She was diagnosed with right rotator cuff tendonitis and right tennis elbow. Claimant underwent physical therapy from March through May 2020.

5. On July 21, 2020 Claimant returned to the Salud Clinic for an evaluation. Claimant remarked that she continued to suffer right shoulder pain with yard work and lifting. She also experienced spontaneous right shoulder subluxation. The medical record also reflects that Claimant suffered a horse related injury to her right shoulder a few years earlier. Claimant continued physical therapy.

6. On July 23, 2020 Claimant underwent x-rays of the right shoulder. The imaging revealed mild degenerative changes to the glenohumeral and acromioclavicular joints.

7. On August 4, 2020 Claimant underwent a right shoulder MRI. The MRI revealed the following: (1) a remote appearing Hill-Sachs and non-displaced Bankart

lesion; (2) a small focal rim rent tear of the superior rotator cuff with mild bursal inflammation; (3) no delamination or full-thickness tear; (4) a low grade tear and tendinosis of the subscapularis tendon; and (5) mild osteoarthrosis and chondromalacia of the glenohumeral joint.

8. On August 6, 2020 Claimant returned to the Salud Clinic. Claimant reported that her right shoulder pain persisted with yard work and lifting. She was referred to an orthopedic surgeon for an evaluation.

9. On September 23, 2020 Claimant visited Sunil Jani, M.D. for an examination. Dr. Jani documented that Claimant presented with right superior, anterior shoulder pain since an injury at work in February 2020. Claimant specified that "she was unable to move her arm several days after finishing work – lifting luggage from 25-60 pounds up to 10 pieces per trip up to 3 trips per day." Dr. Jani remarked that Claimant attended physical therapy from February until July 2020 "that helped about 90%." He noted that her condition deteriorated between two courses of physical therapy and had steadily worsened since her last physical therapy treatment.

10. On October 9, 2020 Claimant reported her right upper extremity injuries to Employer. Employer prepared a First Report of Injury and provided Claimant with a list of four designated medical providers. Claimant chose Workwell Clinic as her Authorized Treating Physician (ATP).

11. On October 29, 2020 Claimant visited Workwell Clinic for an examination. Claimant reported that in January 2020 she developed right shoulder pain as a result of her work activities. She detailed that her job duties involved heavy, repetitive lifting of luggage. Despite several months of physical therapy, Claimant still exhibited discomfort and decreased range of motion. After conducting a physical examination, William Ford, ANP-C diagnosed Claimant with an unspecified sprain and impingement syndrome of the right shoulder. Based on Claimant's reported history, ANP-C Ford concluded "it does appear that this is a work-related injury."

12. On November 16, 2020 vocational evaluator Jill Adams of Genex visited Employer's job site and performed a Job Demands Analysis and Risk Factor Analysis for the position of Shuttle Driver. She quantified the force and repetition involved in Claimant's work activities. Ms. Adams extrapolated her findings based on an average eight hour workday. She applied her data to the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* Rule 17, Cumulative Trauma Conditions (*Guidelines*). The purpose of her evaluation was to obtain the correct measurements and information necessary to determine whether Claimant's work activities met the delineated criteria in the *Guidelines*.

13. Because Claimant was no longer working for Employer when Ms. Adams completed the Job Demands Analysis, she observed one of Claimant's co-workers perform the job duties of shuttle driver and recorded the length of each activity. Notably, the Job Demands Analysis specified that Claimant spent about 1-2% of her workday performing a pre-driving vehicle inspection. She spent the majority of her time or about 65-70% of her workday driving passengers between Boulder and Denver International

Airport. Claimant spent another 10-15% of her workday handling luggage. She specifically handled/lifted luggage weighing between 20-80 pounds with the most frequent weight in the 20-50 pound range. Claimant used 2-4% of her time cleaning, wiping and vacuuming her vehicle. Finally, 2-5% of Claimant's workday involved communicating with dispatchers and other drivers through a two-way radio.

14. Ms. Adams noted that the *Guidelines* delineate the following risk factors for the development of shoulder pathology: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. After conducting time studies of job tasks Ms. Adams determined that Claimant's overhead reaching consisted of occasionally loading luggage but did not typically take place for 30 minutes per day and she had not worked for Employer for five years. Furthermore, Claimant did not engage in shoulder movement at 15-36 repetitions per minute without pauses. Ms. Adams also noted that there are also at least two second pauses for 80% of Claimant's work cycle. Finally, she commented that heavy lifting of greater than 44 pounds at least 10 times per day did not typically occur on a daily basis but could take place during some work shifts. Accordingly, Ms. Adams concluded that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*.

15. On March 11, 2021 David Orgel, M.D. performed a Physician Advisor Review. He issued a report after reviewing Claimant's medical records and Job Demands Analysis. Respondents specifically inquired whether Claimant's complaints constituted a work-related cumulative trauma disorder. Dr. Orgel responded that "[t]he mechanism of injury is not supported by the Job Demands Analysis. There are no risk factors for a shoulder injury; therefore, her complaints are not work-related."

16. On March 29, 2021 Albert Hattem, M.D. performed an independent medical examination and issued a report. Dr. Hattem considered Claimant's medical records, the Job Demands Analysis and interrogatory responses. Dr. Hattem remarked that Claimant attributed her right shoulder pain to repetitively lifting luggage while working as a shuttle bus driver. However, relying on the *Guidelines*, he determined that Claimant's right shoulder condition was not related to her work activities for Employer.

17. In addressing causation as related to cumulative/repetitive-type shoulder disorders, Dr. Hattem referred to Rule 17, Exhibit 4 of the *Guidelines*. Specifically, the *Guidelines* delineate the following risk factors for the development of shoulder pathology: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Finally, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology under Rule 17, Exhibit 4.

18. Dr. Hattem determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors to satisfy the minimum thresholds in the *Guidelines* for developing a cumulative trauma shoulder disorder. He remarked that Ms. Adams determined that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*. Dr. Hattem explained that "most significantly," Claimant had only worked for Employer for eight months before she visited the Salud Clinic on March 2, 2020 complaining of right shoulder pain. Claimant informed the Salud practitioner that she had been experiencing right shoulder pain periodically since the beginning of her employment. Dr. Hattem emphasized that Claimant's development of right shoulder symptoms after only months of employment "is clearly not consistent with the [*Guidelines*] requirement that the claimant be employed 'over years' before repetitive heavy lifting can be considered a risk factor for a repetitive type shoulder disorder." Finally, Dr. Hattem remarked that Claimant's degenerative joint disease noted by Dr. Jani constituted a preexisting age related condition that was not caused by her work activities as a shuttle bus driver.

19. Dr. Hattem testified at the hearing in this matter consistent with his report. He maintained that he was unable to establish a cumulative trauma disorder diagnosis based on the Job Demands Analysis. In order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated Primary Risk Factors. The algorithm for establishing medical causation specifies that, if no Primary or Secondary Risk factors are present, then the injury is probably not work-related. Dr. Hattem determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors to satisfy the minimum thresholds in the *Guidelines* for the development of a cumulative trauma disorder. Specifically, based on the Job Demands Analysis, there were no risk factors associated with a right shoulder injury.

20. Dr. Hattem emphasized the importance of conducting a causation analysis utilizing the *Guidelines* when assessing a cumulative trauma shoulder condition. He commented that, although the *Guidelines* are not perfect, they are reliable because they are based on empirical evidence and a consensus among experts in the field. Dr. Hattem remarked that, if Claimant told her treating physicians that she lifted heavy luggage at work throughout the day, her statements were inaccurate based on the Job Demands Analysis. Notably, ANP-C Ford and Dr. Jani did not have an opportunity to consider the Job Demands Analysis in reaching their conclusions. Importantly, ANP-C Ford relied exclusively on Claimant's subjective reporting and did not possess an accurate and detailed understanding of Claimant's specific job duties. ANP-C Ford thus did not complete a causation analysis pursuant to the *Guidelines*. Furthermore, Dr. Hattem reiterated that Claimant only worked for Employer for eight months, but the *Guidelines* provide that it takes years to develop a cumulative trauma shoulder condition. Finally, because Claimant only lifted luggage for about one hour each day, her job duties did not meet the minimum thresholds of force, repetition and duration to develop right shoulder pathology pursuant to Rule 17, Exhibit 4 of the *Guidelines*.

21. Claimant has failed to demonstrate that it is more probably true than not that she suffered an occupational disease to her right shoulder that began on December

26, 2019 during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant spent about 1-2% of her workday performing a pre-driving vehicle inspection. She spent the majority of her time or about 65-70% of her workday driving passengers between Boulder and Denver International Airport. Claimant spent another 10-15% of her workday handling luggage. She specifically handled/lifted luggage weighing between 20-80 pounds with the most frequent weight in the 20-50 pound range. Claimant used 2-4% of her time cleaning, wiping and vacuuming her vehicle. Finally, 2-5% of Claimant's workday involved communicating with dispatchers and other drivers through a two-way radio.

22. Relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Adams did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of job tasks Ms. Adams determined that Claimant's overhead reaching consisted of occasionally loading luggage but did not typically occur for 30 minutes per day and she had not worked for Employer for at least five years. Furthermore, Claimant did not engage in shoulder movement at 15-36 repetitions per minute without pauses. Ms. Adams also noted that there are also at least two second pauses for 80% of Claimant's work cycle. Finally, she commented that heavy lifting of greater than 44 pounds at least 10 times per day did not typically occur on a daily basis but could take place during some work shifts. Accordingly, Ms. Adams concluded that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*.

23. Dr. Hattem persuasively concluded that Claimant's work activities while employed as a shuttle driver for Employer did not meet any of the thresholds in the *Guidelines* for the development of a repetitive-type shoulder disorder. He recounted that Ms. Adams determined that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*. Dr. Hattem explained that "most significantly," Claimant had only worked for Employer for eight months when she presented to the Salud Clinic on March 2, 2020 complaining of right shoulder pain. Claimant informed the Salud practitioner that she had been experiencing right shoulder pain periodically since the beginning of her employment. Dr. Hattem determined that Claimant's development of right shoulder symptoms after only months of employment "is clearly not consistent with the [*Guidelines*] requirement that the claimant be employed 'over years' before repetitive heavy lifting can be considered a risk factor for a repetitive type shoulder disorder." He emphasized the importance of conducting a causation analysis utilizing the *Guidelines* when assessing a cumulative trauma shoulder condition. He commented that, although the *Guidelines* are not perfect, they are reliable because they are based on empirical evidence and a consensus among experts in the field. Dr. Hattem concluded that, because Claimant only lifted luggage for about one hour each day, her job duties did not meet the minimum thresholds of force, repetition and duration to develop right shoulder pathology pursuant to Rule 17, Exhibit 4 of the *Guidelines*. Similarly, Dr. Orgel issued a report after reviewing the medical records and Job Demands Analysis. He concluded that "[t]he mechanism of injury is not supported

by the Job Demands Analysis. There are no risk factors for a shoulder injury; therefore, her complaints are not work-related."

24. In contrast, ANP-C Ford and Dr. Jani did not perform a causation analysis pursuant to the *Guidelines*. As noted by Dr. Hattem, ANP-C Ford and Dr. Jani did not have an opportunity to consider the Job Demands Analysis in reaching their conclusions. Importantly, ANP-C Ford relied exclusively on Claimant's subjective reporting and did not possess an accurate and detailed understanding of Claimant's specific job duties. The opinions of Dr. Jani and ANP-C Ford failed to consider the force or time periods necessary for the development of a cumulative trauma condition. In contrast, the *Guidelines* provide a detailed methodology and algorithm for evaluating the cause of cumulative trauma conditions. As Dr. Hattem commented, although the *Guidelines* are not perfect, they are reliable because they are based on empirical evidence and a consensus among experts in the field. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinions of Drs. Hattem and Orgel, Claimant did not engage in forceful and repetitive activities for a sufficient period of time to meet the threshold for the development of a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). “Occupational disease” is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. Rule 17, Exhibit 5 provides an algorithm for evaluating Cumulative Trauma Conditions (CTC) pursuant to the *Guidelines*. In addressing applicability, the *Guidelines* note that “CTC’s of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures.” W.C.R.P. Rule 17, Exhibit 5, p. 6. In determining a diagnosis when performing a cumulative trauma analysis the *Guidelines* delineate specific musculoskeletal conditions and peripheral nerve disorders. Nevertheless, the Guidelines provide that “[l]ess common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment.” W.C.R.P. Rule 17, Exhibit 5, p. 21.

7. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual’s voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

8. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing two pounds or more. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. W.C.R.P. Rule 17, Exhibit 5, pp. 26-27. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that “the case is probably not job related.” W.C.R.P. Rule 17, Exhibit 5, p. 24.

9. The *Guidelines* also specifically delineate factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology. W.C.R.P. Rule 17, Exhibit 4, p. 16.

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease to her right shoulder that began on December 26, 2019 during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Furthermore, Claimant engaged in a variety of activities throughout each shift. The record reflects that Claimant spent about 1-2% of her workday performing a pre-driving vehicle inspection. She spent the majority of her time or about 65-70% of her workday driving passengers between Boulder and Denver International Airport. Claimant spent another 10-15% of her workday handling luggage. She specifically handled/lifted luggage weighing between 20-80 pounds with the most frequent weight in the 20-50 pound range. Claimant used 2-4% of her time cleaning, wiping and vacuuming her vehicle. Finally, 2-5% of Claimant’s workday involved communicating with dispatchers and other drivers through a two-way radio.

11. As found, relying on the *Guidelines* in conducting a Job Demands Analysis, Ms. Adams did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. After conducting time studies of job tasks Ms. Adams determined that Claimant's overhead reaching consisted of occasionally loading luggage but did not typically occur for 30 minutes per day and she had not worked for Employer for at least five years. Furthermore, Claimant did not engage in shoulder movement at 15-36 repetitions per minute without pauses. Ms. Adams also noted that there are also at least two second pauses for 80% of Claimant's work cycle. Finally, she commented that heavy lifting of greater than 44 pounds at least 10 times per day did not typically occur on a daily basis but could take place during some work shifts. Accordingly, Ms. Adams concluded that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*.

12. As found, Dr. Hattem persuasively concluded that Claimant's work activities while employed as a shuttle driver for Employer did not meet any of the thresholds in the *Guidelines* for the development of a repetitive-type shoulder disorder. He recounted that Ms. Adams determined that Claimant's overhead reaching, lifting and shoulder movement did not satisfy the Primary or Secondary Risk Factors detailed in the *Guidelines*. Dr. Hattem explained that "most significantly," Claimant had only worked for Employer for eight months when she presented to the Salud Clinic on March 2, 2020 complaining of right shoulder pain. Claimant informed the Salud practitioner that she had been experiencing right shoulder pain periodically since the beginning of her employment. Dr. Hattem determined that Claimant's development of right shoulder symptoms after only months of employment "is clearly not consistent with the [*Guidelines*] requirement that the claimant be employed 'over years' before repetitive heavy lifting can be considered a risk factor for a repetitive type shoulder disorder." He emphasized the importance of conducting a causation analysis utilizing the *Guidelines* when assessing a cumulative trauma shoulder condition. He commented that, although the *Guidelines* are not perfect, they are reliable because they are based on empirical evidence and a consensus among experts in the field. Dr. Hattem concluded that, because Claimant only lifted luggage for about one hour each day, her job duties did not meet the minimum thresholds of force, repetition and duration to develop right shoulder pathology pursuant to Rule 17, Exhibit 4 of the *Guidelines*. Similarly, Dr. Orgel issued a report after reviewing the medical records and Job Demands Analysis. He concluded that "[t]he mechanism of injury is not supported by the Job Demands Analysis. There are no risk factors for a shoulder injury; therefore, her complaints are not work-related."

13. As found, in contrast, ANP-C Ford and Dr. Jani did not perform a causation analysis pursuant to the *Guidelines*. As noted by Dr. Hattem, ANP-C Ford and Dr. Jani did not have an opportunity to consider the Job Demands Analysis in reaching their conclusions. Importantly, ANP-C Ford relied exclusively on Claimant's subjective reporting and did not possess an accurate and detailed understanding of Claimant's specific job duties. The opinions of Dr. Jani and ANP-C Ford failed to consider the force or time periods necessary for the development of a cumulative trauma condition. In contrast, the *Guidelines* provide a detailed methodology and algorithm for evaluating the cause of cumulative trauma conditions. As Dr. Hattem commented, although the *Guidelines* are not perfect, they are reliable because they are based on empirical

evidence and a consensus among experts in the field. Accordingly, based on the Job Demands Analysis, a review of the medical records and the persuasive opinions of Drs. Hattem and Orgel, Claimant did not engage in forceful and repetitive activities for a sufficient period of time to meet the threshold for the development of a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant's claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: June 29, 2021.

ISSUES

I. Has Claimant shown, by clear and convincing evidence, that the DIME opinion of Dr. Watson should be overcome as it relates to his cervical spine?

II. Has Claimant shown, by clear and convincing evidence, that the DIME opinion of Dr. Watson should be overcome as it relates to his lumbar spine?

III. Has Claimant shown, by a preponderance of the evidence, that the L4-S1 surgery already performed by Dr. Stanley is reasonable, necessary, and related to his work injury, thus subject to reimbursement by Respondents?

STIPULATIONS

The parties agreed that the issue of Disfigurement shall be held in abeyance.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Initial Work Injury / Subsequent Care

1. Claimant sustained an admitted on the job injury on August 8, 2018. The first report of injury states: "Employees were lifting a piece of equipment when a chain slipped. [Claimant] had to quickly move out of the way. He states his neck and shoulder are hurt." (Ex D., p. 14). Claimant did not seek treatment initially for his condition, but he subsequently went to his primary care physician to discuss the pain he had been having since August 8, 2018. (Ex. L, p. 424). The note from Claimant's PCP, Dr. Bryan Hynes, stated that Claimant did have chronic neck and back pain; however, the note documents a "recent exacerbation of neck pain with injury which has been discontinued [sic] worse over time." *Id.* "He also injured his left shoulder 4 weeks ago and he cannot move his shoulder." *Id.* Claimant was recommended to have an MRI of his neck and left shoulder.

2. Claimant did not see a Workers' Compensation provider until October 27, 2018, when he was evaluated by Dr. Eric Ritch with Emergicare. (Ex. M, p. 444). At this time, it was again documented that Claimant was injured at work, "Patient presents today for back/neck pain, left shoulder pain, left hand pain, and bilateral leg weakness following an incident at work almost 2 months ago." *Id.* Dr. Ritch was not sure if Claimant was there for an accepted claim or for evaluation of causation. It was reported that Claimant was helping to move a 3,000 to 4,000 pound metal object. One of the attachment points between the machinery moving the object and the object itself broke, causing the metal

object to begin to fall. Claimant ended up trying to deflect the object from himself and was "thrown backward, wrenching his low back, left shoulder, and neck." *Id.*

3. Claimant reported having pain in all of those places since then. (Ex. M, p. 444). He was reporting 7 out of 10 pain at this time. Claimant reported doing his best to keep working, but that the pain was worsening. It was also noted that Claimant had a posterior laminectomy the prior year from L3 to L5 for chronic back pain. Claimant felt he had recovered from that condition and surgery. *Id.*

4. Dr. Ritch's examination documented bilateral paraspinous muscle tenderness bilaterally, primarily in the low back, but also in the neck. *Id* at 445. He had decreased range of motion of his cervical spine, shoulder, and back. Dr. Ritch opined that Claimant sustained a work injury, that a lumbar spine x-ray performed documented shifting of the L4 vertebra, and he recommended a lumbar MRI when also factoring in Claimant's complaints of leg numbness. *Id.* at 446. He also diagnosed a cervical strain.

Claimant's Previous Lumbar Treatment

5. Claimant did have a prior lumbar surgery performed by Dr. Scott Stanley. A July 5, 2016 MRI of his lumbar spine had shown an L4-5 circumferential disc bulge with posterior central-broad based disc protraction, and with grade 1 retrolisthesis at L5-S1 with moderate circumferential disc bulging. (Ex. J, p. 211). Claimant was diagnosed with lumbar stenosis with neurogenic claudication. *Id.* Dr. Stanley opined it was best to move forward with surgery, given Claimant's lack of improvement with conservative care. *Id* at 212. He planned to perform laminectomies at L3, L4, and L5.

6. The surgery was performed, and Claimant followed up with Dr. Stanley one month status post L3, L4, and L5, laminectomies including partial facetectomies and foraminotomies. (Ex. J, p. 224). He reported his pain had been improving, his numbness and tingling had resolved, and he was only having mild discomfort climbing up and down stairs. Claimant had no sensory deficits per Dr. Stanley's examination on December 15, 2017. *Id.* at 225. Claimant followed up again on March 2, 2018, reporting that he was doing well, had only mild residual discomfort at the site of surgery, but his numbness and tingling was still gone and he was no longer inhibited in his activities of daily living. *Id.* at 231.

7. However, on May 4, 2018 Claimant reported to his provider at Kaiser Permanente that the surgery initially helped, but now his symptoms were returning. (Ex. K, p. 365). Claimant complained of lower back pain, neck pain, and numbness into his lower extremities. He had a return appointment scheduled with Dr. Stanley to discuss further treatment options. On June 18, 2018 he returned to Kaiser, with continued complaints of radiating neck pain. *Id* at 390. On July 17, 2018 he reported to Dr. Sanchez that he had residual numbness in his legs, which was persistent after his surgery and neck pain present since 2016. No back pain was noted at this visit. *Id* at 401.

8. On August 3, 2018, Claimant was establishing primary care, for among other things, chronic neck and back pain, with Dr. Bryan Hynes, MD. The intake notes state: "Patient currently being worked up for cervical spine arthritis and degenerative disc diseases with impingement seeing physician in Denver. *He has chronic neck and lower back pain radiating down his arms bilaterally."* (Ex. L, p. 421) (emphasis added). Claimant was tender to palpation in his cervical, thoracic, and lumbar spine during examination, with decreased range of motion. *Id* at 422.

Clamant Continues to treat his Cervical and Lumbar

9. Claimant followed up with Dr. Michael Dallenbach, also with Emergicare, on November 5, 2018. (Ex. M, p. 450). Dr. Dallenbach noted that Claimant had injured his left shoulder, back, and neck while pushing a falling beam away and turning while doing so. Regarding his back, Claimant was initially referred to physical therapy. Claimant was also referred for an MRI. *Id* at 453.

10. The MRI results obtained on November 21, 2018 showed interval posterior decompression from L3-4 through L5-S1 with a small residual or recurrent posterior central disc protrusion at L4-5, without evidence for significant residual or recurrent central spinal canal stenosis. (Ex. F, p. 24). Claimant had foraminal stenosis bilaterally at L3-S1, most pronounced at L4-5 bilaterally, and on the left at L5-S1. *Id. No evidence of acute injury was identified.*

11. When Claimant failed to improve with conservative care, on November 26, 2018, Dr. Dallenbach referred Claimant to Dr. Michael Sparr. (Ex. M, p. 456). Claimant was later referred back to his prior surgeon, Dr. Stanley, by Dr. Dallenbach.

12. Claimant was evaluated by Dr. Stanley's Physician Assistant, Kaitlyn Anglelett, PA-C at Centura Orthopedics on September 4, 2019. (Ex. J, p. 313). Claimant reported to Dr. Stanley that he was having low back pain with numbness, tingling, and a sensation into his bilateral lower extremities that he described as worsening for one year. Claimant reported that it worsened after the work injury in August of 2018. *Id.* Claimant reported that his prior preoperative complaints had resolved with surgery and he was returning for the new injury. Due to Claimant's reported change in symptoms, and the previous MRI being a year old, she requested a new MRI.

13. These MRI results obtained on October 28, 2019 showed posterior decompression from L3-L4 through L5-S1 with no evidence of significant residual or recurrent central spinal canal stenosis. (Ex. F, p. 34). Claimant had mild to moderate foraminal stenosis bilaterally, without significant central spinal canal or foraminal stenosis elsewhere. No acute injury was identified.

14. Claimant followed up with Dr. Stanley himself on February 26, 2020. (Ex. J, p. 329). The note documents Claimant already attended formal lumbar physical therapy and bilateral ESIs at L4-5. *Id.* Claimant now complained of muscles spasms in his bilateral lower extremities, worse at night. The MRI of October 28, 2019 showed posterior

decompression from L3-4 to L5-S1 with mild to moderate foraminal stenosis. *Id* at 331. Dr. Stanley diagnosed Claimant with L4-5 Spondylolisthesis and L4-5 foraminal stenosis and bilateral lumbar radiculopathy. *Id.* They discussed a possible fusion of L4-5, but Dr. Stanley wanted further workup done first, including an EMG and then a follow up.

15. However, Claimant reported to Pain Management of the Rockies on February 28, 2019 for his continuing neck pain. (Ex. N, p. 502). Dr. Ross believed Claimant's neck pain was emanating from his facet joints, and recommended that he undergo right-sided C2-3, C3-4, and C4-5 facet medial branch blocks with possible rhizotomy based on pain response. *Id.* Dr. Ross planned on first treating Claimant's neck pain, followed by possible ESI to his lumbar spine.

16. Medial branch blocks were administered by Dr. Ross on April 8, 2019. Claimant told Dr. Ross during this February 28, 2019 examination that his low back pain and leg pain resolved after surgery, and *he had no symptoms* until reoccurrence after the most recent work-related injury. *Id* at 502.

17. Claimant returned to Dr. Stanley on April 3, 2020 to review the EMG study. (Ex. J, p. 334). The EMG indicated chronic/stable lumbar radiculopathies affecting the bilateral L4 and L5 nerve roots. Dr. Stanley indicated that Claimant had not responded to conservative care to date. Dr. Stanley recommended an L4-5, L5-S1 fusion at that time. *Id* at 337.

Respondents Deny the Proposed Lumbar Surgery, but it still Proceeds

18. The surgery was denied, based on the April 13, 2020 physician advisor review report of Michael Janssen, D.O. (Resp. Ex. R). It was Dr. Janssen's opinion that Claimant's condition that warranted surgery was long-standing and age-related, but there was not any evidence of an anatomical condition clearly related to Claimant's work-injury. *Id* at 572. Dr. Janssen did state Claimant should have the surgery done under his private insurance, indicating he felt the surgery was reasonable, but unrelated. *Id.*

19. Dr. Stanley still felt it was necessary to perform the surgery, especially given Claimant's instability pattern at the time. Dr. Stanley stated, "Given the patient's refractory pain and neurologic issues, I do not recommend ongoing non-operative maintenance care. Without surgical intervention, the patient is at increased risk of chronic neurologic deficits." *Id.* at 342. They discussed having the surgery performed under Claimant's private insurance, due to the denial of the surgery by Respondents.

20. Despite the denial by Respondents, on June 8, 2020 Claimant underwent left L4-5, L5-S1 posterior lumbar interbody fusions with combined L4-5, L5-S1 posterolateral arthrodesis with bilateral L4-5, L5-S1 decompressions and bilateral L4 and L5 laminectomies including facetectomies and foraminotomies by Dr. Scott Stanley at Centura Orthopedics. (Resp. Ex. J, pp. 352-357).

21. After Claimant's fusion surgery, he began treating with Dr. Anthony Stanulonis at Concentra on July 6, 2020. (Ex. P, p. 552). The note documents Claimant's surgery was performed under his private insurance with resolution of the pain, weakness, and numbness in both of his legs, and that he had not returned to work since the spine surgery. Claimant was continuing to complain of neck pain as well. Claimant had full range of motion in his left shoulder and c-spine. Dr. Stanulonis placed Claimant at MMI on July 6, 2020. *Id* at 553. He provided no impairment rating, but recommended maintenance care with Dr. Stanley for one year for low back pain. Claimant was also given no restrictions. *Id* at 555.

IME by Dr. Reiss

22. Orthopedic spinal surgeon Brian Reiss, MD conducted an IME on September 16, 2020. (Ex. S). Dr. Reiss noted inconsistencies in Claimant's denials of pre-existing symptoms in his neck and low back and documented the numerous medical records in contradiction. Dr. Reiss found it significant that Claimant, just 5 days before the work injury, was complaining of chronic low back and neck pain with recurrence of his prior symptoms. However, Dr. Reiss had none of the actual imaging studies available for his review at the time. The return of Claimant's low back pain post-2017 surgery was not a surprise to Dr. Reiss, as most laminectomies fail to reduce lower back pain.

23. Claimant's mechanism of injury was noted by Dr. Reiss as unlikely to have injured his neck/back and Claimant had failed to seek treatment for over 1 month after the alleged injury; then only complained of neck and left shoulder pain. Dr. Reiss believed it more likely than not that Claimant injured his left shoulder during the incident, but likely did not injure his neck or lower back, as there was no objective evidence of injury and Claimant's subjective statements were in doubt.

DIME by Dr. Watson

24. Claimant then sought a Division Independent Medical Examination ("DIME"). The DIME with Dr. William Watson was performed on November 10, 2020. (Ex. T). Claimant again reported that they were moving heavy equipment when a chain broke and a multi-thousand pound object swung towards Claimant. He did his best to try to deflect the object, but it still knocked him to the ground onto his left side and back, reporting that it caused injury to his left shoulder, neck, and back. Claimant reported ongoing lower back pain, but he was only three months post fusion at the time. Claimant noted the left shoulder surgery was completely successful and that he currently had minimal discomfort in his neck and left shoulder. Physical examination of Claimant revealed inconsistent range of motion findings in his lumbar spine, full range of motion in his left wrist and shoulder, and no tenderness or muscle spasms noted in his c-spine.

25. Dr. Watson ultimately concluded that Claimant's shoulder condition was work-related, but that the neck and back were not. Dr. Watson mentioned a note from *June* 3, 2018 [*The ALJ notes that this is a typo in the DIME report - this appointment occurred on *August* 3, 2018 (Ex. L, p. 421)], five days prior to the accident, from his PCP,

Dr. Bryan Hynes. This [August 3] note indicated Claimant was having chronic neck and back pain radiating down both arms.

26. Dr. Watson concurred with Dr. Stanulonis regarding Claimant's MMI date of July 6, 2020 and opined that Claimant's lumbar, cervical, and thoracic spine were not related, since medical records confirmed these issues were pre-existing and a likely a continuation of previous problems Claimant was having prior to the work-injury. Dr. Watson disagreed with Claimant that he was asymptomatic prior to the August 8, 2018 work-incident, as prior records clearly showed a return of low back/lower extremity symptoms prior to his work incident. Claimant had already been referred for surgical consultation and evaluation of his low back prior to the work incident, and had complained of ongoing symptoms for at least 3 months prior to this work injury. Claimant's cervical spine complaints had resolved, his left shoulder complaints had resolved, and his left wrist complaints had resolved. Dr. Watson gave Claimant a 0% impairment rating for all work-related injuries and believed maintenance care was only appropriate for Claimant's left shoulder. Dr. Watson did provide Claimant with a provisional 22% impairment rating for Claimant's lumbar spine, in the event it was determined to be work related. (Ex. T, p. 609).

Claimant Testifies at Hearing

27. Claimant testified at hearing. He indicated that at the time of the incident, he did not feel any significant symptoms, but within days he started feeling pain in his neck and back. Claimant was treating under the claim and eventually Dr. Stanley requested authorization for surgery, which was denied. After it was denied, Claimant went forward with the fusion surgery with Dr. Stanley, paid for by his private insurance carrier, Anthem – Blue Cross Blue Shield.

28. Claimant testified that he had his prior back surgery in November of 2017 and clarified it was not a workers' compensation claim. Prior to that surgery, Claimant was having most of his pain in the back with his legs going numb pretty much every day if he sits longer than ten to fifteen minutes. Claimant underwent rehab after that surgery and testified that he felt he recovered 100% from the surgery itself.

Dr. Reiss Testifies at Hearing

29. Dr. Reiss testified at hearing held on May 27, 2021. Dr. Reiss explained why he did not believe Claimant's cervical spine and lumbar spine were related to the work-incident, and that he concurred with the conclusions reached by Dr. Watson. Dr. Reiss did not believe Claimant was forthright in his denial of low back and neck symptoms immediately prior to the incident. He did not believe there was any objective evidence of an acute injury to those areas, and noted that Claimant failed to complain of lower back injuries for over 1 month after the injury. He opined that all records supported the conclusion that Claimant had longstanding and chronic issues with his neck and lower back.

30. Dr. Reiss doubted the mechanism of injury aggravated or accelerated any of Claimant's prior conditions. Instead, he noted that Claimant was already seeking treatment prior to the incident, and continued to seek the same treatment post-incident. He was not surprised that Claimant had continued back pain before this work incident, as the laminectomy in 2017 was meant to address his lower extremity symptoms, and not lower back pain. After review of the medical records, Dr. Reiss concurred that no expert had opined that Claimant's lower back was related to the August 8, 2018 injury. He did not believe Dr. Watson had made any errors, and that Dr. Watson correctly came to the same conclusions as he did, based on the medical records.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds that Claimant has been an inconsistent and unreliable medical historian. There is ample evidence in the medical records to demonstrate that Claimant had not, in fact, maintained a full recovery from his first lumbar surgery. Instead, his condition was actually deteriorating.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, based upon the information they were provided. In this instance, the ATP, the reviewing physician, Respondents' IME, and the DIME physician each arrived at similar conclusions regarding causation. Claimant has not supplied, even through medical records or reports, even one expert opinion which supports Claimant's theory on causation. Here, there are no expert medical opinions to even weigh against one another, much less evidence of a *mistake* in the DIME process.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

I. However, the mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App, 1986) ("[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five-percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.")

J. Generally, the Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). However, in this instance, the DIME physician has concluded that Claimant's current symptoms were not proximately caused by the work injury; instead, they were the inevitable, natural progression of his preexisting condition. Claimant must now overcome the DIME in this regard.

Overcoming the DIME, as Applied

K. As noted, Claimant has offered no medical opinions, even of an indirect nature, which contradict the findings of the DIME (and the ATP, the reviewing physician, and Respondents' IME). Even were this not the case, offering a mere contrary opinion on causation, however well informed, would not overcome the DIME's opinion. Here, Claimant has tendered essentially nothing, save his own statements to his medical providers, and his hearing testimony. Assuming, arguendo, that the ALJ finds Claimant to have been highly reliable (which the ALJ pointedly does *not* in this instance), Claimant has offered no case law in support of his proposition that a Claimant's cumulative statements would ever be sufficient to overcome a DIME opinion. Were it so easy, the entire statutory construct underlying the DIME process could easily be undermined. Faced with overwhelming medical evidence (and the statutorily enhanced burden of proof), Claimants would be encouraged to throw the 'Hail Mary', and hope to find a sympathetic ALJ - despite a dearth of medico-legal evidence that the original DIME process was fatally flawed in some fashion.

L. The ALJ in this case finds that Claimant has failed to carry his burden. Claimant's current medical condition (either lumbar or cervical) was not caused, aggravated, or accelerated by this work incident (such incident did, however, injure his shoulder). Claimant has not presented evidence that the DIME is 'highly probably incorrect,' much less, that such evidence is, 'unmistakable and free from serious or substantial doubt.' The DIME, therefore, is upheld.

Medical Benefits, Generally

M. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo. App. 1997).

Medical Benefits, as Applied

N. While the surgery already performed by Dr. Stanley may well have been *reasonable and necessary* to treat Claimant's condition, the DIME has found, with the ALJ's concurrence, that such surgery is not *causally related* to Claimant's work injury. No reimbursement for said surgery, therefore, will be ordered.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Watson regarding Claimant's cervical condition is upheld.

2. The DIME opinion of Dr. Watson regarding Claimant's lumber condition is upheld.

3. Claimant's claim for reimbursement for the surgery by Dr. Stanley is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

I. Whether Claimant proved he is entitled to Temporary Total Disability (TTD) benefits from December 21, 2020, ongoing.

FINDINGS OF FACT

1. Claimant worked for Employer as a delivery driver.

2. On November 11, 2019, Claimant sustained an admitted industrial injury when he slipped on icy stairs.

3. Claimant treated at UC Health with authorized treating physician ("ATP") Rachel Frank, M.D., Diana Douleh, M.D. and Kevin Shinsako, PA-C. He was diagnosed with a patellar tendon rupture and underwent a patellar tendon repair on November 20, 2019.

4. Respondents admitted for ongoing TTD benefits beginning November 12, 2019.

5. Claimant attended follow-up appointments on December 2, 2019, February 3, 2020, February 20, 2020, March 16, 2020, and August 10, 2020. Claimant continued to report left knee pain and weakness. At follow-up evaluations with PA Shinsako and Tyler Freeman, M.D. on September 21, 2020, Claimant also reported significant back pain radiating down his right leg. He was referred Claimant to Venu Akulthota, M.D. for evaluation of his lumbar spine.

6. Dr. Akulthota evaluated Claimant on October 22, 2020 and referred Claimant for a lumbar spine MRI.

7. Respondents drafted a proposed modified duty offer for Claimant, which they sent to Dr. Frank on November 20, 2020 for her review. The proposed job offer consisted of the following:

> Work Schedule: Working 3-4 days with 25-30 hours per week.
>
> Description of Job Duties: Assistant Closing – Checking vans for gas, damages, and cleanliness. Checking vans' pouches for phones, gas cards, charger, and other items.

> Additional Details Regarding Job Duties: No lifting, mainly sitting, will have to walk to vans to check them in the warehouse.

(Ex. C, p. 6).

8. Respondents also emailed a copy of the proposed job offer to Claimant's counsel on November 20, 2020, and sent Claimant a copy of the proposed job offer via certified mail the same day.

9. Dr. Frank approved the modified duty offer on December 2, 2020. A copy of her response was sent to Claimant's counsel on December 3, 2020.

10. Respondents sent the modified job offer, with a copy of Dr. Frank's approval, to Claimant on December 14, 2020. The offer was sent to Claimant by certified mail and by email to an email address Claimant identified as his correct email address. Respondents also sent a copy of the modified job offer to Claimant's counsel by email on December 14, 2021.

11. The job offer was for an assistant closer position, working from 3:00 p.m. to approximately 8:30 p.m. - 10:00 p.m. at $17.00 per hour. The job offer complied with the position approved by Dr. Frank on December 2, 2020. The job offer asked Claimant to report to work on December 18, 2020.

12. Claimant did not report to work on December 18, 2020 or thereafter.

13. No evidence was offered indicating Claimant attended any medical evaluations between October 22, 2020 and December 21, 2020.

14. On December 21, 2020, Claimant saw PA Shinsako reporting continued left knee pain and buckling as well as continued right lower back pain and radicular symptoms. PA Shinsako advised Claimant to follow-up with Dr. Akulthota for his lumbar spine. He recommend Claimant undergo another knee MRI "due to persistent issues of the left knee, limitations in ADLs, continued buckling and giving way, weakness." (Ex. G, p. 61). In a section in the medical report titled "Attending Addendum" dated 12/21/2020, Dr. Frank stated, "The patient was seen, discussed and evaluated with Dr. Freeman and I agree with the findings and plan as documented. Any pertinent edits have been made directly to today's progress note." (Id.)

15. On December 21, 2020, PA-C Shinsako issued a letter stating Claimant continued to have significant limitations in his ability to perform activities of daily living without limitation. He removed Claimant from work until further evaluation.

16. Claimant has not returned to work since December 21, 2020.

17. On January 20, 2021, Respondents filed a General Admission of Liability admitting for medical benefits, temporary total disability from November 12, 2019 through December 17, 2020 and temporary partial disability from December 18, 2020, ongoing.

18. Claimant saw Dr. Frank on April 15, 2021 with continued complaints of knee pain and weakness and low back pain. Claimant reported significant pain with prolonged standing, stairs and lifting heavy items. Dr. Frank released Claimant to modified duty with temporary restrictions of sedentary work only. She recommended Claimant undergo a functional capacity evaluation.

19. Claimant credibly testified at hearing that he discussed the modified job offer with PA Shinsako on December 21, 2020 and informed PA Shinsako he was unable to perform some of the duties outline in the modified job offer.

20. Binyam A[Redacted], Owner of Employer, credibly testified that Claimant’s modified duty position mainly consisted of sitting down, with no lifting, climbing or walking outside. He testified that the modified job offer is no longer open to Claimant because he assumed Claimant abandoned his job when he did not appear for the modified employment.

21. The ALJ finds Claimant proved it is more probable than not he is entitled to TTD benefits from December 21, 2020 and ongoing. Claimant was removed from work due disability from his work injury, resulting in Claimant missing more than three work shifts and lost wages.

CONCLUSIONS OF LAW
Generally

The purpose of the Workers’ Compensation Act of Colorado (the “Act”), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Indemnity Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following§8-42-105(3)(a)-(d), C.R.S.

Respondents argue Claimant is not entitled to TTD benefits because his benefits terminated as a result of the December 14, 2020 modified job offer pursuant to WCRP

6-1(A)(4) and Section 8-42-105(3)(d)(I), C.R.S. Respondents' reliance on termination of benefits pursuant to WCRP Rule 6-1(A)(4) and Section 8-42-105(3)(d)(I), C.R.S. as it relates to Claimant's entitlement to benefits for the period beginning December 21, 2020 is misplaced. WCRP 6-1(A)(4) provides that an insurer may terminate temporary disability without a hearing by filing an admission of liability form with a letter to the claimant containing on offered of modified employment if certain other conditions are met. Section 8-42-105(3)(a)-(d), C.R.S. provides that temporary total disability benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment.

Respondents' argument effectively asks the ALJ to bar a claimant from receiving future TTD benefits if his or her benefits for a particular time period were properly terminated. As endorsed on Claimant's Application for Hearing, and stated by Claimant's counsel at hearing, Claimant is requesting TTD benefits for a period beginning December 21, 2020. Claimant does not dispute there was an offer of modified employment made prior to December 21, 2020, nor does Claimant dispute he did not appear for work on or after December 18, 2020. Whether the December 14, 2020 modified job offer effectively terminated Claimant's TTD prior to December 21, 2020 does not affect the determination of Claimant's entitlement to TTD benefits beginning December 21, 2020 based on the specific facts of this case, as Claimant was removed from all work on December 21, 2020. The relevant consideration here is whether, beginning December 21, 2020, Claimant missed more than three work shifts as a result of a disability caused by his industrial injury and suffered actual wage loss.

PA-C Shinsako's December 21, 2020 medical note and letter clearly indicate he removed Claimant from work due to Claimant's persistent left knee issues and significant ability to perform ADLs without limitation. He recommended Claimant undergo further evaluation and treatment as a result of the work injury. The record indicates the work injury resulted in disability as evidenced by Claimant's restricted bodily function and an inability of Claimant to resume his prior work. Claimant has not returned to work since December 21, 2020 as a result of the disability, resulting in actual wage loss. Accordingly, Claimant is entitled to TTD benefits beginning December 21, 2020.

The ALJ is not persuaded by Respondents' argument that there is a conflict in the record regarding Claimant's ability to perform the modified job or his release to return to work. Respondents rely on Dr. Frank's December 2, 2020 approval of the modified job offer and contend there is no evidence Dr. Frank was aware of or agreed with PA-C Shinsako's decision to later remove Claimant from work. As found, no evidence was offered indicating Dr. Frank or any other provider evaluated Claimant between October 22, 2020 and December 21, 2020. Dr. Frank's approval of the modified job offer on December 2, 2020 occurred almost three weeks prior to the PA

December 21, 2020 evaluation of Claimant. As stated by Dr. Frank in the December 21, 2020 medical record, she agreed with the findings and plan as documented. The ALJ thus infers Dr. Frank was aware of and agreed with PA Shinsako's removal of Claimant from all work as a result of the work injury. Dr. Frank subsequently evaluated Claimant on April 15, 2021 and released Claimant to sedentary work. There is no indication in the April 15, 2021 record or any other record that Dr. Frank disagreed with the restrictions imposed on December 21, 2020.

To the extent Respondents contend that the December 21, 2020 restrictions were based on Claimant's inaccurate representations to PA Shinsako regarding the modified job offer and his abilities, there is insufficient evidence to find and conclude that the restrictions imposed by PA Shinsako and agreed to by Dr. Frank were not the result of their independent professional judgment. The credible and persuasive evidence establishes Claimant was unable to resume work due to the effects of the work injury beginning December 21, 2020. The preponderant evidence establishes Claimant is entitled to TTD benefits beginning December 21, 2020, ongoing.

ORDER

1. Respondents shall pay Claimant TTD beginning December 21, 2020 and ongoing, until terminated by operation of law.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 30, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-116-183-002

ISSUES

- Did Respondents prove by a preponderance of the evidence Claimant's follicular lymphoma did occur on the job with Employer?

- Did Claimant prove treatment he received through Rocky Mountain Cancer Centers was reasonably needed, injury-related, and authorized?

- Did Claimant prove his average weekly wage (AWW) is $1,192.31?

FINDINGS OF FACT

1. Claimant is a 54-year-old fire captain who has worked as a firefighter for Employer since May 2013.

2. Claimant was diagnosed with follicular lymphoma (FL) in July 2019.

3. Claimant reported the diagnosis to Employer on July 18, 2019, and stated it was related to exposures to carcinogenic materials during his work as a firefighter. Claimant was not referred for medical treatment but told he could see the doctors of his choice. He went to Rocky Mountain Cancer Centers where he underwent treatment, including chemotherapy for follicular B-cell lymphoma.

4. Claimant completed chemotherapy with a good response. The cancer is currently in remission, and he has returned to full duties.

5. Claimant's father was an oncology radiologist. He was diagnosed with non-Hodgkin's lymphoma (NHL) and recovered. He eventually died of Alzheimer's at age eighty-two. The record does not establish the precise dates or type of his NHL.

6. Claimant has an identical twin brother who is a firefighter with North Metro Fire Protection District. He has never been diagnosed with NHL/FL or any other cancer. Claimant also has three sisters, two of whom were diagnosed with breast cancer.

7. Claimant has been a firefighter for 25 years. His career began in 1996 at Cherryvale Fire Department in Boulder, Colorado. He started as a volunteer and became a paid firefighter in 2000. He worked for several fire departments in the years that followed, eventually coming to work for Employer on May 31, 2013.

8. Employer's department is much busier than the other fire departments in which Claimant worked. There were also significant differences in the frequency and types of fires, including more grass fires and structural fires. Claimant did not wear SCBA while working grass fires. Additionally, the Plymovent diesel exhaust system at the station did not function properly. Claimant testified five bays are out of service. Chief Ritter

testified he had not inspected the Plymovent systems but heard from another captain that only two of the systems were broken on the day of the hearing. Regardless of the specific number of bays with malfunctioning ventilation equipment as of the hearing, Claimant was probably exposed to excessive diesel exhaust regularly.

9. Dr. Annyce Mayer performed an IME and testified on behalf of Claimant. Dr. Mayer confirmed FL is a cancer of the hematological system and persuasively opined Claimant satisfies the threshold criteria to trigger the statutory presumption in § 8-41-209. Although Respondents declined to stipulate that Claimant satisfied the threshold criteria at hearing, they conceded the issue in their post-hearing brief.

10. Dr. Mayer acknowledged that a precise causation determination of NHL/FL is challenging due to the symbiotic nature of the disease. She opined the development of cancer is complex and often multi-factorial. It is difficult if not impossible to identify the specific materials to which any individual firefighter has been exposed because of the wide variety of combustible materials at fire scenes. Nevertheless, Claimant was probably exposed to and absorbed a wide variety of known carcinogens through his respiratory system and his skin. Dr. Mayer opined,

> It is my medical opinion to a reasonable degree of medical probability that [Claimant] was exposed to carcinogens capable of causing this cancer during his 23 years as a firefighter, and in particular during the approximately 8 years of service on [Employer's] Fire Department, where the fires were much more frequent, much more intense, and there was no use of respiratory protection at grass fires, where the grass was notably contaminated with roadside debris including plastics, located along railroad tracks and including agricultural land that had been sprayed with herbicides, pesticides, including widespread use of glyphosate-containing herbicides which itself has been linked to non-Hodgkin's lymphoma, making his exposure there very different from the other fire department on which he served.

11. Dr. Mayer also cited Claimant's repeated exposure to diesel exhaust as a significant risk factor.

12. Regarding the epidemiological evidence, Dr. Mayer opined, "four separate meta-analyses on risk of cancer in fire fighters showed statistically significant increased risk of NHL." She principally relied on the 2006 LeMasters meta-analysis, which found a "probable" relationship, and the 2010 IARC meta-analysis, which found a statistically significant increased risk of NHL among firefighters. She also cited two more recent meta-analyses—Soteraides (2019) and Jalilian (2019)—that found elevated incidence and mortality risk estimates for NHL in firefighters. She conceded she knew no study that found an increased risk of developing FL from being a firefighter but offered critiques of the only two studies that have specifically looked at FL rather than the umbrella diagnosis of NHL.

13. Dr. Mayer agreed genetic risks probably play a role in development of NHL/FL but are not necessarily the exclusive or even predominant cause. She referenced Claimant's twin brother and testified, "it's obviously not a matter of genetic risks, and it's because of different exposures. Even though they've both worked as firefighters, they've worked in different environments, different personal protective equipment, different types of fires, and different types of things present at those fires."

14. Dr. Mayer concluded Claimant's cancer was probably caused by his occupational exposures as a firefighter, "primarily" during his eight years working for Employer.

15. Dr. Sander Orent performed an IME and testified for Claimant. Dr. Orent has extensive experience providing safety instruction to multiple Colorado Fire Districts and treating firefighters as a designated provider. Dr. Orent previously evaluated Claimant while Claimant worked for Boulder Rural and North Metro. This experience gives Dr. Orent a unique perspective on the differences in occupational exposures experienced by Claimant and his brother. Dr. Orent explained,

> [Claimant's] identical twin is also a professional firefighter. This twin works at North Metro Fire where [Claimant] also worked for a short time. However, this twin has continued. I have direct and personal knowledge of the intensity of dedication of North Metro Fire Services to decontamination on scene and the proper use and cleaning of personal protective equipment. I have been intimately involved in assisting them with recommendations in this regard and have done many on-site visits to North Metro Fire Department, where I have examined every member of that department within the last 18 months. In addition, I have similar experiences with Boulder Rural Fire where I have direct and personal knowledge of their dedication to the use of personal protective equipment and have performed virtual evaluations of these firefighters as well, as well as in-person evaluations over the years. The difference between Sterling's environment, personal protective equipment utilization, and contamination and North Metro's use of personal equipment, dedication to contamination, and vigilance regarding carcinogenic exposure could not be more stark.

16. Dr. Orent noted, "these brothers have identical genetic footprints," which shows "in extraordinarily clear terms the fact that genetics is not the primary determinant of cancer in this patient." He agreed with Dr. Mayer that a synergistic process take place in the evolving development of cancer, including carcinogens exposures and familial predispositions. He noted Claimant "obviously" has a genetic propensity to develop a malignancy in the lymphatic system. But he emphasized the need for a "trigger," which he believed was provided by Claimant's occupational exposure to carcinogens over many years. He opined Claimant's exposure to carcinogens was probably causative of his NHL/FL.

17. Herman Gibb, Ph.D. performed a record review and testified for Respondents. Dr. Gibb explained that NHL encompasses a group of cancers of

lymphocytes or white blood cells. There are over 30 NHL subtypes; the two most common subtypes being diffuse large B-cell lymphoma (DLBCL) and follicular lymphoma (FL). Dr. Gibb identified risk factors for NHL as being male, being white, living in a developed country such as the United States, having a first degree relative with NHL, having a weakened immune system, having certain autoimmune diseases, and having certain infections. Based on his review of Claimant's medical records, occupational records, and various case studies, Dr. Gibb concluded Claimant's risk of FL was not increased by his work as a firefighter but was increased by having a first degree relative with NHL (his father).

18. Dr. Gibb discussed a large cohort study of firefighters (Glass 2014, 2017) which found no increased incidence of FL. He further testified that the InterLymph Consortium's analysis of pooled case-control studies did not find the occupation of firefighter to be a risk factor for FL. Dr. Gibb believes the LeMasters meta-analysis is outdated, flawed, and overestimated the association between firefighting and NHL. Dr. Gibb opined the firefighter cancer studies he considers to be the highest-quality studies have not showed increased incidence of NHL. Dr. Gibb opined risk factors vary among the various subtypes of NHL, but one risk factor common to both NHL and the FL subtype is having a first degree relative with NHL. Dr. Gibb noted claimant's father had NHL. He cited literature that reported family history of any hematologic malignancy in a first-degree relative was the most significant risk factor examined.

19. Based on his review of medical records and published literature, Dr. Gibb concluded Claimant's risk of FL was not increased by his work as a firefighter but was increased by his father having NHL. Dr. Gibb was unimpressed by the fact Claimant's brother has not been diagnosed with FL or NHL and opined it does not affect the causation analysis of Claimant's cancer.

20. Dr. Gibb's epidemiological opinions regarding a causal link between firefighting and FL were no more persuasive than the opinions offered by Dr. Mayer and Dr. Orent.

21. Dr. Mayer's and Dr. Orent's opinions regarding the role of familial history in the development of Claimant's cancer were more persuasive than Dr. Gibb's opinions.

22. Respondents failed to prove Claimant's work as a firefighter did not increase the risk of and cause FL.

23. Respondents failed to prove Claimant's familial history of NHL is a more likely cause of his FL than his employment.

24. Respondents failed to prove Claimant's FL did not occur on the job.

25. The treatment Claimant received at Rocky Mountain Cancer Centers was reasonably needed to cure and relieve the effects of his compensable cancer. Claimant had the right to select his own provider because Employer did not refer him to a physician.

26. Claimant's average weekly wage (AWW) is $1,192.31 based pre-injury earnings of earnings of $62,000 per year ($62,000 / 52 = $1,192.31).

CONCLUSIONS OF LAW

A. Compensability

Section 8-41-209 (the "firefighter cancer statute") provides:

> (1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed five or more years of employment as a firefighter, caused by cancer of the brain, skin, digestive system hematological system or genitourinary system and resulting from his or her employment as a firefighter, shall be considered an occupational disease.
>
> (2) Any condition or impairment of health described in subsection (1) of this section:
>
> (a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter; and
>
> (b) Shall not be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows by a preponderance of the medical evidence that such condition or impairment did not occur on the job.

Proof by a preponderance of the evidence requires the proponent to establish that the existence of a "contested fact is more probable than its nonexistence." *Page v. Clark*, 592 P.2d 792 (Colo. 1979). In general, "medical probability" or "more likely than not" means the existence of a contested fact is more than 50% likely.

Once a firefighter has met the threshold requirements of the firefighter cancer statute, the burden shifts to respondents to prove by a preponderance of the evidence that the firefighter's cancer was not caused by his or her employment. As found, Claimant satisfies the threshold statutory requirements, thereby shifting the burden to Employer.

The firefighter cancer statute has been the subject of significant litigation and appellate case law since its passage. The Supreme Court provided the definitive interpretation in *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157 (Colo. 2016) and the companion case *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151 (Colo. 2016). *City of Littleton* held that the statutory presumption embodied by § 8-41-209(2) "is substantive in that it remains in the case as a substitute for evidence." *Id*. at 165. But the court emphasized that the statutory presumption "is not conclusive, or irrebuttable." *Id*. at 168. The employer can overcome the statutory presumption by proving, by a preponderance of the evidence, that the firefighter's cancer "did not occur on the job." *Id*. at 165. Nevertheless, the employer faces a "formidable" burden, "because the employer is tasked with proving a negative." *Id*. at 172.

City of Littleton clarified the types of evidence the employer can use to rebut the statutory presumption and prove a firefighter's cancer is probably not work-related. The employer can attempt to meet its burden either with evidence addressing "general causation" or evidence regarding "specific causation." The court stated "the employer may establish, by a preponderance of the medical evidence, either: (1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) that the firefighter's employment did not cause the firefighter's particular cancer, where, for example, the claimant firefighter was not exposed to the cancer-causing agent, or where the medical evidence renders it more probable that the cause of the claimant's cancer was not job-related." *Id*. Additionally, an employer can rely on "particularized risk-factor evidence" to prove that a firefighter's cancer is not related to his employment, but "is not required to prove a specific alternate cause of the firefighter's cancer." *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151, 157 (Colo. 2016).

The evidence presented by Employer addresses both general and specific causation. Dr. Gibb discounted the LeMasters and IARC studies upon which Claimant's experts relied and opined more current epidemiological evidence shows no increased risk or incidence of NHL or FL among firefighters. With respect to specific causation, Dr. Gibb noted Claimant had a significantly increased risk of FL because his father had NHL. Because Dr. Gibb believes the only valid risk factor was personal to Claimant and unrelated to his work, Dr. Gibb concluded Claimant's FL probably did not occur on the job.

Dr. Gibb raised some significant questions regarding the empirical basis for the presumed causal connection between FL and firefighting. This is a complex issue and Dr. Gibb's opinions would be quite challenging for Claimant were he tasked with proving general causation. But in this case, the traditional roles are reversed by virtue of § 8-41-209. The ALJ appreciates Dr. Gibb's insight on this issue, but finds the opinions of Dr. Mayer and Dr. Orent sufficiently persuasive to prevent Respondents from crossing the "more likely than not" threshold to prove firefighting does not increase the risk of NHL or FL. As Dr. Mayer explained, firefighters are exposed to a wide variety of established and suspected carcinogens, and several studies have shown firefighters have an increased risk of NHL. Dr. Gibb dismissed those studies in favor of studies focusing more narrowly on FL. But drilling down to more specific types of cancer amplifies the challenges associated with determining cancer risk factors in a relatively small percentage of the workforce.[1] Moreover, firefighters tend to be healthier and more physically robust that the average person, which has a natural tendency to decrease disease rates (the so-called "healthy worker effect"). Although researchers try to account for these factors with study designs and analytical methodology, they still impact the certainty that can be obtained

[1] This limitation is highlighted by the InterLymph study, which Dr. Mayer noted did not have a large enough sample size to evaluate FL risk by length of employment as a firefighter.

with increasingly granular epidemiological investigation. This, in turn, has significant implications for the party with the burden of proof—Employer in this case.

Additionally, the explanatory power of Claimant's family history is effectively neutralized by the fact his identical twin brother does not have cancer. As Dr. Mayer credibly opined, this fact makes family history "a possible but not probable cause" of Claimant's FL. Dr. Gibb's macro-level focus on population data and generalized familial risk data is ill-suited to account for micro-level factors that can explain the different disease outcomes of Claimant and his identical twin brother. By contrast, Dr. Orent persuasively described multiple differences between the environments in which Claimant and his brother worked which provide a reasonable explanation why Claimant's cancer could be considered work-related even though his brother does not have cancer.

Although this is a close case, Employer failed to prove by a preponderance of the evidence that Claimant's cancer did not occur on the job. Therefore, Claimant's FL is compensable under § 8-41-209.

B. Medical benefits

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Besides proving treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. If the employer does not tender medical treatment "forthwith" upon receiving notice of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

As found, the treatment Claimant received through Rocky Mountain Cancer Centers was reasonably needed to cure and relieve the effects of his compensable FL. Rocky Mountain Cancer Centers is authorized because Employer never referred Claimant to a physician after receiving notice of his claim.

C. Average weekly wage

Section 8-42-102(2) provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). As found, Claimant's average weekly wage (AWW) is $1,192.31. Respondents did not take a position on AWW. Claimant's proposed computational methodology based on annual earnings of $62,000 is reasonable and provides a fair approximation of his average earnings at the time of injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits related to follicular lymphoma is compensable.

2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable occupational disease, including but not limited to, treatment provided by Rocky Mountain Cancer Centers.

3. Claimant's average weekly wage is $1,192.31.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-134-645-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the left shoulder surgery requested by Armodios Hatzidakis, M.D., is reasonable, necessary, and causally related to his admitted industrial injury of February 17, 2020.

FINDINGS OF FACT

1. Claimant is a 37-year-old man who sustained an admitted industrial injury to his left shoulder arising out of the course of his employment with Employer on February 17, 2020.

2. On February 17, 2020, Claimant was assisting a coworker in transferring boxes of vinyl flooring from a pallet to a truck, when one of the boxes (weighing approximately 60 pounds) struck Claimant on the left shoulder. Claimant testified that he had no prior injuries to his left shoulder and had full use of his shoulder without pain prior to February 17, 2020.

3. Claimant immediately felt pain in his shoulder, but believed the pain would resolve and did not report the incident to his supervisor on February 17, 2020. The following day, Claimant's pain did not resolve and worsened, and Claimant reported the incident to Employer. For various reasons, including the onset of the 2020 coronavirus pandemic, Claimant did not see a medical provider until March 9, 2020, approximately three weeks following the date of injury.

4. On March 9, 2020, Claimant saw James D. Fox, M.D., at Concentra. Based on x-rays taken on that day, Dr. Fox diagnosed Claimant with a grade 2 acromioclavicular (AC) separation of the left shoulder, which Dr. Fox attributed to Claimant's work injury. He recommended that Claimant undergo physical therapy twice per week for three weeks and avoid heavy physical activity. (Ex. 2).

5. Claimant participated in physical therapy which helped increase Claimant's strength, but did not resolve his pain. By March 30, 2020, Claimant had been laid off by Employer due to a work slow-down caused by the pandemic. Dr. Fox recommended work restrictions to include no lifting, pushing, or pulling more than 30 pounds with the left upper extremity and no lifting greater than 15 pounds above shoulder level with the left arm. (Ex. 2).

6. By May 4, 2020, Claimant's shoulder pain condition had not resolved, and Dr. Fox referred Claimant for a left shoulder MRI and a referral with an orthopedic surgeon, Armodios Hatzidakis, M.D. Claimant remained under the same work restrictions and previously recommended. (Ex. 2).

7. On June 30, 2020, Claimant saw Rose Christensen, PA-C, at Dr. Hatzidakis' office for evaluation of his left shoulder. Ms. Christensen reviewed x-rays of Claimant's left shoulder and interpreted the x-ray as showing a type I/II AC joint separation when compared to the right side. Ms. Christensen diagnosed Claimant with a left shoulder and left AC joint strain with type I/II AC joint separation. She recommended additional physical therapy and a cortisone injection into the left AC joint for improvement of pain. The injection was performed by Dr. Hatzidakis on June 30, 2020. (Ex. 3).

8. Claimant saw Dr. Hatzidakis on September 29, 2020, Claimant reported relief from the June shoulder injection for 1 to 2 days. Dr. Hatzidakis testified that the Claimant's relief from the AC injection confirmed that Claimant's AC joint was the source of Claimant's shoulder pain. Dr. Hatzidakis testified that Claimant's AC joint separation was causally related to Claimant's work injury.[1] Claimant also reported some pain into his biceps and arm while twisting his wrist, and also exhibited scapular winging. An EMG study was performed to determine if Claimant had any nerve involvement due to scapular winging. The EMG was incomplete and did not evaluate Claimant's nerves, but Dr. Hatzidakis determined that it was appropriate to proceed with surgery because Claimant's scapular winging had improved, and the source of his pain was his AC joint. (Ex. 3 and Hatzidakis deposition).

9. On November 16, 2020, Dr. Hatzidakis submitted a request for authorization of surgery to Insurer. The proposed procedure was:

> "Left Shoulder: Arthroscopy shoulder debridement extensive, Arthroscopy shoulder decompression subacromial partial acromioplasty WITH coracoacromial release, Arthroscopy shoulder distal claviculectomy, Arthroscopy shoulder WITH bicep tenodesis, Arthroscopy shoulder repair slap lesion." (Ex. 3)

10. On December 8, 2020, Dr. Hatzidakis submitted a revised request for authorization to Insurer, requesting authorization of the following procedure:

> "Left Shoulder: Arthroscopy shoulder debridement extensive, Arthroscopy shoulder decompression subacromial partial acromioplasty WITH coracoacromial release, Arthroscopy shoulder distal claviculectomy."

11. On December 15, 2020, Insurer denied Dr. Hatzidakis' request for authorization pending the completion of a WCRP Rule 16-7 (e) Independent Medical Examination. (Ex. 3).

12. Dr. Hatzidakis testified the recommended surgery is to evaluate Claimant's shoulder, perform debridement as necessary for any partially-torn tissue in the shoulder and to remove the end of Claimant's collarbone (i.e., a distal clavicle resection or claviculectomy). Dr. Hatzidakis expressed that the only "certain" procedure was the distal clavicle resection, which is to address Claimant's work-related injuries. However, he also

[1] Dr. Hatzidakis was admitted as an expert in orthopedic surgery and his deposition was accepted in lieu of live testimony.

sought authorization for “possibles,” meaning evaluation and potential treatment of other areas of the shoulder if pathology was discovered during surgery in the joint subacromial space. In this case, the “possible” included potential repairs to Claimant’s biceps or labrum, if injuries to those structures are identified during surgery and debridement of any partially torn tissue.

13. Dr. Hatzidakis credibly testified evaluation and treatment of other structures to address pathology identified during surgery beyond the distal clavicle resection is the standard of care, and that it would be unreasonable to ignore other pathology if found. Dr. Hatzidakis indicated that Claimant does not have any obvious tear of the labrum or rotator cuff, and that it is probable that those areas would not need to be addressed during surgery. He also credibly testified that if no pathology is present, no surgery on these areas would be performed.

14. Nonetheless, Dr. Hatzidakis believes that evaluation of the labrum and biceps is appropriate because Claimant had some question of findings due to his biceps and because the labrum is often injured with the AC joint in injuries similar to Claimant’s. Similarly, he testified that the long-head of the biceps is attached to the labrum and it would be potentially repaired if it had sustained damage. Dr. Hatzidakis credibly testified that due to the mechanism of injury, it is not possible to know with certainty what structures within Claimant’s shoulder were damaged, and that while a small amount of fraying in the rotator cuff or labrum may be normal, tears or areas of significant finding may reasonably be assessed as due to Claimant’s work-injury. Dr. Hatzidakis also credibly testified that the mechanism of injury was also consistent with a rotator cuff injury. He expressed that Claimant would not be at maximum medical improvement until completing surgery and any follow-up rehabilitation associated with the surgery.

15. Mark Failinger, M.D., performed IMEs at Respondents’ request, and issued reports related to those examinations. Dr. Failinger was admitted as an expert in orthopedic surgery and his deposition was accepted in lieu of live testimony. As relevant to the issues in this hearing, Dr. Failinger agreed that Claimant sustained a work-related injury to his AC joint and testified that performance of an arthroscopic distal claviculectomy is a reasonable and necessary procedure related to Claimant’s industrial injury because the AC joint injection previously performed confirmed the AC joint as a pain generator.

16. Dr. Failinger expressed that the remaining procedures were not unreasonable, but were not related to Claimant’s industrial injury because pathology for which the other procedures would be performed was not likely present in Claimant’s shoulder. For example, when asked if debridement is a reasonable procedure, he indicated that the procedure would be reasonable to perform, but he did not believe that pathology requiring a debridement would be present. With respect to the decompression subacromial partial acromioplasty with coracoacromial release, Dr. Failinger opined that the procedure was brief 3–5-minute procedure that is performed where the surgeon believes the rotator cuff is irritated by bone in the acromion. However, he does not believe that there is MRI evidence of irritation at the rotator cuff. Dr. Failinger also agreed that post-surgical physical therapy would be reasonable.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

The Act imposes upon respondents the duty to furnish medical treatment "as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury." § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). In addition, the duty to furnish medical treatment includes furnishing treatment for conditions representing a natural development of the of the industrial injury, providing compensation for incidental services necessary to obtain the required medical care, and "paying for treatment of unrelated conditions when such treatment is necessary to achieve optimum treatment of the industrial injury." *In re Claim of Walling,* W.C. No. 4-760-050-02 (ICAO, Dec. 10, 2013) (internal citations omitted). Diagnostic procedures are also compensable if they are reasonably necessary to the provision of treatment designed to cure and relieve the effects of the injury*. Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). An "expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition." *In re Abeyta*, W.C. No. 4-669-654 (2008). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the surgery requested by Dr. Hatzidakis is reasonably needed to cure or relieve the effects of his industrial injury. Specifically, the distal clavicle resection or claviculectomy is reasonably necessary to address Claimant's AC joint separation. Both Dr. Hatzidakis and Dr. Failinger agree that this surgery is reasonable, necessary, and related to his work injury, and the ALJ finds the testimony of both physicians credible on this issue.

The remaining potential portions of the requested surgery (i.e., debridement, decompression subacromial partial acromioplasty with coracoacromial release) present a different issue because the scope of the surgery cannot be determined until Claimant's shoulder joint is inspected during surgery. Similarly, whether Claimant requires intervention at his biceps, labrum or rotator cuff is also incapable of determination at this time. The ALJ credits Dr. Hatzidakis' testimony that the standard of care requires that Dr. Hatzidakis' evaluate the structures of the shoulder and treat pathology found during surgery, and that no surgery would be performed on undamaged structures. In that sense, the surgery requested by Dr. Hatzidakis is essentially a combination of compensable treatment and diagnostic procedures, which are intertwined. Moreover, the ALJ credits Dr. Hatzidakis' testimony that evaluation and repair of the Claimant's labrum and biceps tendon, if pathology exists, is reasonable because the labrum is often injured with the AC joint. Similarly, his testimony that partially-torn tissue is often found in a shoulder that has been injured was also credible. Given the totality of the evidence, including Claimant's testimony that his shoulder was asymptomatic prior to his injury, the

ALJ concludes that the full surgery recommended by Dr. Hatzidakis is reasonably necessary to cure or relieve the effects of Claimant’s industrial injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the full right shoulder surgery recommended by Dr. Hatzidakis as described in Dr. Hatzidakis’ December 8, 2020, request for authorization.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by preponderance of the evidence, that the right total knee replacement recommended by Dr. Vineet Singh is related to the June 27, 2020 work injury.

2. At hearing, the parties stipulated that the recommended surgery is reasonable and necessary medical treatment of the condition of the claimant's right knee.

FINDINGS OF FACT

1. The claimant has worked for the employer for two years as a registered nurse and night supervisor. The claimant works at Valley Manor, a long-term care and rehabilitation center. In her position, the claimant has 30 residents assigned to her for purposes of administering medication and providing other treatment during the night shift.

2. During her shift on June 27, 2020, the claimant noted that a resident appeared to be vomiting blood, with symptoms indicative of internal bleeding. The claimant ran to get help for the resident. As she did so, she felt her right knee "give out" and she began limping.

3. After reporting the incident to the employer, the claimant was seen at Cedar Point Health for medical treatment. The claimant was first seen at that practice on July 6, 2020, by Chris Polsley, PA-C. On that date, the claimant reported right knee pain with stiffness, popping, and catching. The claimant also reported that she does not have a prior history of right knee issues. PA Polsley noted his concern for possible internal derangement of the claimant's right knee. As a result, he ordered a magnetic resonance image (MRI) of the claimant's right knee. PA Polsley also recommended the claimant use a hinged knee brace.

4. On July 20, 2020, a right knee MRI showed a radial tear of the posterior horn of the medial meniscus, advanced medial compartment degenerative changes, and mild to moderate patellofemoral compartment chondromalacia.

5. On July 27, 2020, the claimant returned to PA Polsley. Based upon the MRI results, PA Polsley referred the claimant for an orthopedic consultation.

6. On July 30, 2020, the respondents filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits.

7. On August 20, 2020, the claimant was seen by orthopedic surgeon, Dr. Vineet Singh. On that date, Dr. Singh noted the claimant had pain on the inner aspect of her right knee that worsened with rotation. Dr. Singh recommended and administered a

corticosteroid injection to the claimant's right knee. Dr. Singh also referred the claimant to physical therapy.

8. On October 6, 2020, the claimant returned to Dr. Singh. At that time, the claimant reported that the knee injection did not relieve her symptoms. Dr. Singh recommended the claimant undergo a right knee arthroscopy and meniscus repair.

9. On October 23, 2020, Dr. Singh performed a right knee partial medial meniscectomy and loose body removal.

10. On November 12, 2020, the claimant was seen by Dr. Singh and reported slow improvement. In the medical record of that date, Dr. Singh noted that during the surgery he observed grade 4 chondromalacia on the femur, with a corresponding lesion on the tibia. Dr. Singh discussed possible additional treatment including another injection, the use of Synvisc, and potentially a unicompartmental or total knee arthroplasty.

11. The claimant credibility testified that following the meniscus repair, her symptoms worsened. She had increased pain, weakness and her limp worsened.

12. On December 8, 2020, the claimant reported to Dr. Singh that she had experienced daily right knee pain of seven to eight out of ten. Dr. Singh again referenced the grade 4 chondromalacia in the claimant's right knee and opined that the chondromalacia is unlikely work related. He further opined that the claimant's meniscus pathology is work related. On that same date, Dr. Signh administered an injection to the claimant's right knee.

13. On December 9, 2020, Dr. Singh requested authorization for a right total knee replacement.

14. On January 29, 2021, the claimant attended an independent medical examination (IME) with Dr. Mark Failinger. In connection with the IME, Dr. Failinger reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Failinger identified that the claimant has exacerbation of a significant pre-existing right knee medial compartment degenerative joint disease. Dr. Failinger opined that it would be reasonable to treat the condition of the claimant's right knee with a knee replacement. He further opined that the claimant's need for a right knee replacement is not related to the June 27, 2020 work incident. In support of this opinion, Dr. Failinger noted that the claimant's mechanism of injury would not accelerate that pre-existing condition in her right knee. Dr. Failinger specifically noted that it is the grade 4 chondromalacia that is necessitating the knee replacement.

15. Based upon the opinions of Dr. Failinger, the respondents denied authorization for the requested right knee arthroplasty.

16. On March 19, 2021, the respondents filed a second GAL. This GAL reflected TTD and temporary partial disability (TPD) benefits.

17. The ALJ credits, the medical records and the opinions of Dr. Failinger. The ALJ also credits the opinion of Dr. Singh that although the claimant’s meniscus pathology is work related, the chondromalacia is unlikely to be work related. The ALJ is not persuaded that the claimant’s June 27, 2020 work injury aggravated, accelerated, or combined with her pre-existing right knee condition to necessitate a right knee replacement. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that her need for a right knee replacement is related to the admitted June 27, 2020 work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury.

Section 8-42-101, C.R.S.; see Sims v. Industrial Claim Appeals Office, 797 P.2d 777 (Colo. App. 1990).

6. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

7. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the right total knee replacement recommended by Dr. Singh is related to the admitted June 27, 2020 work injury. The medical records and the opinions of Dr. Failinger are found to be credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for right total knee arthroplasty is denied and dismissed.

Dated this 1st day of July 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that she suffered an occupational disease arising out of and in the course and scope of her employment with the employer.

2. If the claimant proves a compensable occupational disease, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of her right upper extremity, including surgery performed by Dr. James Treadwell, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the occupational disease.

3. If the claimant proves a compensable occupational disease, whether the claimant is entitled to temporary total disability (TTD) benefits for the period of August 7, 2020 through November 4, 2020 and/or the period of January 6, 2021 and ongoing.

4. If the claimant proves a compensable occupational disease, what is her average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant has been employed with the employer for 23 years. For the last six years, she has worked for the employer as a pharmacy technician. The claimant's job duties include filling customer prescriptions, speaking with customers in person and over the phone, and computer work. The task of filling prescriptions involves a number of steps, including the use of a handheld device for scanning. The handheld divide weighs 1.2 pounds when in use.

2. With each prescription, the claimant would scan a bag with the handheld device. The device would inform her of what drug to obtain. The claimant would then find the appropriate drug bottle and scan it. She would also scan the printer to print labels and paperwork. The claimant would then open the twist bottle and pour out the pills. The claimant would hand count the pills and place them in a new bottle. She would twist on a cap and affix a label.

3. The claimant is right hand dominant. When using the handheld device, she held it in her right hand. To scan, she would press buttons on either side of the device, with her thumb and third finger.

4. The claimant testified that in April or May 2019, she began to experience numbness in her right hand. Due to these symptoms, the claimant sought treatment with a chiropractor, Dr. John Unger. On September 30, 2019, the claimant was seen by Dr. Unger. At that time, the claimant reported pain, numbness, stiffness, and tingling in her right hand and wrist. The claimant also reported to Dr. Unger that these symptoms had begun six months prior. However, in the medical record of that date, Dr. Unger noted that the claimant's symptoms "[o]ccurred after repetitive grasping on 9/20/2019."

5. The claimant testified that treatment with Dr. Unger did not resolve her symptoms. The claimant further testified that she would feel some symptom relief after a treatment with Dr. Unger. However, after working an eight hour shift, her symptoms would return as if she had never seen Dr. Unger.

6. As a result of her ongoing symptoms, on May 29, 2020, the claimant reported her right hand and wrist symptoms to the employer. Based upon the claimant's report, a workers' compensation claim was initiated. In an Employer's First Report of Injury dated May 29, 2020, the claimant's date of injury/illness was identified as April 26, 2020.

7. The claimant's authorized treating physician (ATP) for this claim is Dr. Craig Stagg. The claimant was first seen by Dr. Stagg on June 1, 2020. At that time, the claimant reported that over the last month she had pain and numbness in her right upper extremity and triggering of the third finger on both hands. Dr. Stagg recommended a job site analysis and causality assessment, pursuant to the Colorado Medical Treatment Guidelines (MTG). Dr. Stagg also recommended occupational therapy and a wrist x-ray.

8. On June 7, 2020, the claimant returned to Dr. Stagg. In the medical record of that date, Dr. Stagg listed the claimant's diagnoses as de Quervain's tenosynovitis and right finger triggering. Dr. Stagg recommended continued therapy.

9. On June 30, 2020, Torrey Kay Beil, Vocational Rehabilitation Counselor and Medical Case Manager, performed a job demands analysis (JDA) related to the claimant's job duties in the pharmacy. As part of the JDA, Ms. Beil observed the claimant performing her normal job duties. It is noted in Ms. Beil's report that the claimant used both hands during the JDA to perform her duties because she wore a wrist splint on her right wrist. Ms. Beil understood that although she observed the claimant using both hands during the JDA, the claimant normally would use her right hand to perform her job duties. Specifically, Ms. Beil noted that when the claimant typically used the handheld device, she would do so with her right hand. Ms. Beil concluded that the claimant uses both hands frequently for gripping, and constantly for handling. Ms. Beil found that a risk factor of "6 hours of bilateral elbow flexion at 90° is calculated and present."

10. Extensive video footage was entered into evidence that shows the pharmacy technicians performing their job duties. That video evidence is consistent with the physical activities and risk factor assessment outlined by Ms. Beil in her report.

11. Subsequently, Dr. Stagg referred the claimant for an orthopedic consultation. On July 29, 2020, the claimant was seen by orthopedic surgeon, Dr. James

Treadwell. On that date, the claimant reported that she had experienced right wrist pain and thumb pain for several months. The claimant also reported triggering in her right index and long fingers. Dr. Treadwell listed the claimant's diagnoses as right first dorsal compartment tenosynovitis (De Quervain's), right index finger trigger digit, and right long finger trigger digit. Dr. Treadwell recommended an injection, which the claimant declined at that time.

12. The claimant returned to Dr. Treadwell on September 28, 2020, and reported continued symptoms in her right wrist and fingers. Dr. Treadwell again recommended a wrist injection, which he administered on September 28, 2020. Dr. Treadwell noted that if the claimant did not experience improvement from the injection, surgical intervention would be discussed.

13. The claimant testified that because of her work restrictions, she was moved from her pharmacy position to that of a door greeter. The claimant worked as a door greeter from May 2020 to August 7, 2020. The claimant also testified that she received short term disability benefits from August 2020 through November 2020.

14. Based upon the records entered into evidence, on January 7, 2021, Dr. Treadwell performed surgery to the claimant's right wrist.

15. At the request of the respondents, on April 26, 2021, the claimant attended an independent medical examination (IME) with Dr. Carlos Cebrian. In connection with the IME, Dr. Cebrian reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In addition Dr. Cebrian reviewed the JDA report prepared by Ms. Beil. In his IME report, Dr. Cerian opined that the claimant's right de Quervain's tenosynovitis and trigger finger conditions are not work related. He further opined that the claimant's prior history of paresthesias in a medical nerve distribution is also not work related. In support of his opinions, Dr. Cebrian noted that Ms. Beil's JDA demonstrated that the claimant's work activities did not meet the MTG minimum threshold for forceful and repetitive activity. Dr. Cebrian noted that the claimant's work activities did not have any primary risk factors or secondary risk factors.

16. Dr. Cebrian's testimony was consistent with his IME report. Dr. Cebrian testified that the claimant's medical providers have not performed a formal causation analysis as provided for in theMTG for Cumulative Trauma Conditions. Dr. Cebrian also testified that the claimant did not engage in forceful and repetitive activity for an amount of time necessary to meet the minimum threshold in the MTG. Dr. Cebrian testified that, based on the information available, it is not medically probable that the claimant's right upper extremity complaints were directly, or indirectly, related to her work activities, nor were they the proximate result of her work activities.

17. Dr. Cebrian testified that although there was a finding by Ms. Beil that the claimant's job duties had a risk factor related to the claimant's elbow, that risk factor is unrelated to the claimant's wrist and hand symptoms.

18. The ALJ credits the medical records, the JDA, and the opinions of Dr. Cebrian over the contrary opinions of Dr. Treadwell. The ALJ does not find the claimant's

testimony regarding the nature, onset, and extent of her symptoms to be credible or persuasive. In addition, the ALJ is not persuaded by the claimant's assertion that the JDA is inconsistent or irrelevant. On the contrary, the ALJ credits the JDA and the opinions of Ms. Beil that the claimant's position did not pose any risk factors to support a finding of an occupational disease. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an occupational disease that arose out of and in the course and scope of her employment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory, supra.*

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause.

Campbell v. IBM Corporation, 867 P.2d 77 (Colo. App. 1993). “Occupational disease” is defined by Section 8-40-201(14), C.R.S. as

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008).

8. The Colorado Workers’ Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers’ Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: “In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these ‘Medical Treatment Guidelines.’ This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.” WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG “set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate.”

9. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

10. Rule 17, Exhibit 5 of the MTG provides instructions for determining causation of cumulative trauma conditions, including a "Risk Factors Definitions Table". That table provides primary and secondary risk factors related to a claimant's job duties. The ALJ finds no persuasive evidence on the record that the claimant's duties as a pharmacy technician contributed primary or secondary risk factors in the development of her symptoms

11. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an occupational disease arising out of and in the course and scope of her employment with the employer. As found, the medical records, th JDA, and the opinions of Dr. Cebrian are credible and persuasive.

12. All remaining endorsed issues are dismissed as moot.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 1st day of July 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the

ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-049-938-001

ISSUES

I. Whether Respondents proved by a preponderance of the evidence that they may withdraw their admissions of liability based on fraud and can recover from Claimant all medical and disability payments made under this claim.

II. Whether Claimant overcame by clear and convincing evidence the Division Independent Medical Examination (DIME) opinions of Jade E. Dillon, M.D. dated September 11, 2020, and September 14, 2020, regarding maximum medical improvement and permanent impairment.

III. Whether Respondents may recover from Claimant the overpayment of temporary disability benefits if Respondents cannot establish Claimant committed fraud and Claimant fails to overcome the Division Examiner's opinion on MMI and impairment.

IV. Whether Claimant proved by clear and convincing evidence that the DIME of Jade Dillon, M.D., was in error as to MMI and/or impairment and shall be overcome.

V. Whether laches and/or waiver precludes Respondents from withdrawing their admissions and recovering medical and disability benefits paid under this claim based on fraud.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This case involves an admitted claim based on an alleged injury on May 4, 2017.
2. At the time of the alleged injury, Claimant was 39 years old.

Medical Treatment Before the Alleged Work Injury

Treatment in 2013

3. On October 12, 2013, Claimant presented to Emergency Department at Denver Health Medical Center due bilateral flank pain and low back pain that had been ongoing for one month. Claimant was diagnosed with a back strain and prescribed ibuprofen. Claimant was also provided a handout with instructions for managing his low back pain. Ex. Q, pp. 245-247.

4. On October 18, 2013, Claimant returned to Denver Health. At this appointment, he was again diagnosed with low back pain and had an x-ray taken of his back. The x-ray was normal. Ex. Q, pp. 250-252.

Treatment in April 2017

5. On April 22, 2017, Claimant presented to the Federico Pena Urgent Care Center at Denver Health because of pain in his right calf that radiated up to his hip that had been present for 5-7 days. Claimant told them he had a family history of DVT (deep vein thrombosis). The onset of pain occurred without a known injury. Based on Claimant's symptoms and family history of DVT, they evaluated Claimant for DVT. The DVT testing did not, however, reveal Claimant was suffering from DVT. In the end, the medical provider diagnosed Claimant with sciatica. Claimant was prescribed diclofenac and sciatica stretches. They also gave Claimant a handout that explained sciatica. Ex. Q, p. 255-256. (Ex. Q, p. 261 and deposition transcript of Dr. D'Angelo.)

6. On April 24, 2017, due to worsening symptoms, Claimant escalated his treatment by going to the Emergency Department at Denver Health. At this appointment, Claimant complained of leg pain and back pain. It was also noted that Claimant was limping as he walked to the examination room and that he rated his pain at 7/10. Ex. Q, p. 263-267. Claimant also provided the following history about the onset of his pain as well as the presence of back pain:

   > Patient is a 39 y/o male who presents with leg pain that radiates down from R buttock to calf x 5-6 days. Patient denies any trauma, joint swelling, or fever/chills. Was seen at Pena clinic a few days ago and given sciatica stretches and diclofenac, but this did not improve his pain. Pain is intermittent, sharp, occasionally shooting, and is 7/10 in severity.
   >
   > . . .
   >
   > Review of Systems
   > Musculoskeletal: ***Positive for Back Pain*** (Emphasis added)
   >
   > Ex. X, p. 265.

   The doctor did a physical examination and some provocative testing to assess Claimant's low back pain and leg pain that included a straight leg raise test. The straight let test was positive. Based on Claimant's back pain, they also performed x-rays of his lumbar spine. The x-rays showed degenerative changes. Ex. X, p. 265 and 272.

   Claimant was again diagnosed with sciatica. Based on the doctor's findings on physical exam – Claimant's back pain, positive straight leg test, and sciatica – Claimant was advised to schedule a follow up appointment "***as soon as possible for a visit in 1 week***." (Emphasis added) Ex. Q, pp. 263-279.

   Thus, before Claimant alleged that he injured his back at work, Claimant had a bout of back pain in 2013 that lasted a month. And, just 10 days before his claimed work injury, he had back pain and sciatica that was so bad the doctor directed him to make a follow up appointment for his back and sciatica as soon as possible and within a week. As a result, the ALJ finds that as of April 24, 2017, Claimant knew he had a back condition that was causing pain with sciatica and that his leg pain was not based on a DVT or some other condition and that he needed additional medical treatment. Put another way, on April 24, 2017, Claimant knew his back condition was causing his right leg pain and that he needed to seek additional medical treatment in one week.

Treatment for Alleged May 4, 2017, Injury

7. On May 4, 2017, just 10 days after his visit to the emergency room, Claimant alleged he injured his back at work. Claimant reported his injury and went to Advanced Urgent Care.

8. On May 4, 2017, Claimant presented to Advanced Urgent care and was seen by Dr. Julie Parson's. Just like the symptoms he reported 10 days earlier, Claimant reported having pain in his back and right leg. Claimant stated that his symptoms developed at work and while "replacing the breaker." According to the medical report, Claimant "felt a sharp pull in the whole back going into the right leg." Ex., 16, p. 71. Dr. Parson's reviewed Claimant's past medical history. Ex. 16, p.70. Despite Claimant having a history of back pain and right leg pain – the exact symptoms 10 days earlier – there is no indication in Dr. Parson's medical report that Claimant told her he had the same symptoms 10 days earlier. Moreover, Claimant was asked the duration of his back pain. And, instead of saying he had been having pain for about 3 weeks (5-7 days before his April 22, 2017, ER appointment), Claimant lied and stated that his back pain started on the "date of injury (05/4/2017)." Ex. 16, p. 71.

9. Claimant was diagnosed with a lumbar strain. He was instructed to use over the counter pain medication and to use a heating pad. Claimant was also advised to follow up on May 9, 2017. Ex. X, p. 72-73.

10. On May 6, 2017, instead of May 9, 2017, Claimant returned to Advanced Urgent Care for his ongoing back and leg pain. At this visit Claimant was evaluated by Christi Burge, FNP-C and she changed Claimant's treatment plan. Rather than have Claimant keep taking over the counter medications, she prescribed cyclobenzaprine, Norco, and prednisone. She also ordered an MRI - "ASAP" - of Claimant's lumbar spine and sacrum. Then, she directed Claimant to follow up with Dr. Parsons in two days. Again, there is no indication Claimant advised her at this visit that he had the same symptoms just 10 days before the claimed work injury. Ex. Q, p. 75-77.

11. On May 9, 2017, Claimant returned and saw Dr. Parsons and said that his symptoms were getting worse. At this visit, Claimant complained of worsening stabbing, throbbing, and sharp pain. He also complained of numbness in his toes and numbness going down his right leg. Thus, his symptoms worsened between May 6th and May 9th. Claimant did not, however, report an intervening injury between May 6th and May 9th. Ex. Q, 79. Claimant's back condition was just continuing to worsen on its own. At this visit, Dr. Parson's reviewed Claimant's MRI. She noted that the MRI showed a disc herniation with disc fragment and migration at the L4-5 level as well as the L5-S1 disc being on the nerve root. Because of the MRI findings – a disc rupture with fragment – she referred Claimant to a spine surgeon for possible surgery. Again, there is no indication Claimant advised Dr.

Parson's that he had back and right leg pain just 10 days before his claimed injury. Ex. Q, p. 78-81.

12. The ALJ finds Claimant intentionally omitted his prior back and leg pain history – which was material - from Dr. Parsons and his providers at Advanced Urgent Care.

Claimant's Written Statement and Adjuster's Investigation of Claim

13. On May 10, 2017, Claimant provided a written statement. The statement provides:

> I was trying to install the bull-prick attachment for the pneumatic accessory on a backhoe after removing the tamper attachment. The bull-prick is held in by a ½" by 6" pin, and the attachment is about 20", about 20-25 lbs. I lifted the bull-prick and felt a pain in my lower back on the right side, going all the way down to my right foot. I cannot stand still or sit for very long. Ex. F, p. 17.

14. Again, there is no indication in Claimant's written statement about his prior back and leg pain. Nor is there any indication in his written statement that the incident on May 4, 2017, may have worsened his preexisting back and leg pain. Thus, Claimant again omitted material information about his preexisting medical condition.

15. On May 15, 2017, the adjuster noted that she discussed the Claim with Employer, and they were questioning the claim. Ex. I, p. 139.

16. On May 18, 2017, the adjuster interviewed Claimant and obtained a recorded statement. During the interview, Claimant was asked whether he had any prior injuries to the same area. Despite having documented back and leg pain for about three weeks before his claimed work injury, Claimant stated that he had a back strain 20 years ago. Claimant, however, omitted the problems he was having just before his work injury as well as the month-long bout of back pain Claimant had in 2013.[1] Claimant was also asked to describe how the injury at work occurred. Claimant stated that he was lifting the breaker and felt a sharp pain in his back and pain that ran down his right leg and all the way down to his toe. He also stated that it was something that "had never happened before." Again, despite Claimant having pain in his back and leg just before his work injury – and seeking medical treatment for back and leg pain just 10 days before his claimed work injury – Claimant omitted material information about having back and leg pain just before the claimed work accident. Ex. U.

17. On May 22, 2017, the adjuster obtained information that Claimant was involved in a motor vehicle accident on April 5, 2007, while insured by Safeco. The adjuster also noted that Claimant denied being in a motor vehicle accident that required medical treatment. As a result, the adjuster indicated she would have to get a medical release and request the medical records associated with the 2007 claim to verify Claimant's statement. Ex. I, p.135.

[1] Although Claimant was specifically asked about injuries, and Claimant's back and leg pain just came on without an identifiable incident, Claimant did reference a back strain 20 years earlier. As a result, the ALJ infers that Claimant knew the adjuster was trying to determine whether Claimant's current complaints were related to his claimed injury or something else. As a result, the ALJ finds Claimant intentionally omitted material information about his back and leg pain that preceded his alleged work accident.

18. On May 22, 2017, the adjuster called Safeco Insurance to follow up on Claimant's 2007 motor vehicle accident. Safeco advised the adjuster that Claimant did not treat for any injuries and that no medical payments were made under the claim. Based on Claimant's recorded statement, and the information obtained from Safeco, the adjuster concluded "After further review, there is no other previous claims or reports that support the idea that the claimant's injury is preexisting." Ex. I, pp. 134-135.

19. Based on Claimant's recorded statement, material omissions, and the information obtained from Safeco, which led to the adjuster determining Claimant was not suffering from a preexisting back injury before the alleged work accident, the adjuster concluded the Claim was compensable. The adjuster's reasoning for admitting liability is as follows:

    > [Claimant] is a 39-year-old machine operator that was working on a machine that breaks solid ground. When he was working, he had a change the breaker on the machine. When he was lifting the breaker to attach to the machine, he felt a sharp pain in back that ran down his right leg and then down to his toe on his right foot. Claim was thought to be for a preexisting injury as the claimant had a prior claim with Safeco Insurance for a personal automobile accident where there was a injury reported of back pain. After investigation, the claimant did not seek any medical treatment for the previous injury so there was no evidence to support that the injury was preexisting and not related to the injury experienced on DOI.

    Ex. I, p. 134.

20. The ALJ finds that Claimant's omission of his prior back and leg pain was a material fact in the adjuster's decision to admit liability for Claimant's claim. This finding is based on the fact that the adjuster was diligently trying to determine whether Claimant's current back and leg complaints were due to a preexisting condition and not the incident at work as claimed by Claimant. To determine whether Claimant's current complaints were preexisting, the adjuster investigated a 10-year-old motor vehicle accident claim in which it was reported Claimant injured his back. However, upon further investigation, by calling Safeco, it was revealed that Claimant did not hurt his back in 2007. To continue to investigate whether Claimant's pain complaints were due to a preexisting condition, the adjuster also interviewed Claimant and obtained a recorded statement. Again, during the recorded statement the adjuster sought to find out if Claimant had any prior back injuries and wanted Claimant to clarify how the incident occurred. During Claimant's recorded interview, he knew the adjuster was trying to determine whether his condition was preexisting or whether it was caused by work. And it was during this recorded statement that Claimant omitted the material fact that he had back problems in 2013 and back and right leg pain just before he claimed his work injury.

21. On May 26, 2017, Claimant presented to Douglas C. Wong, M.D., an orthopedic surgeon, for a surgical evaluation. According to the notes from this appointment, Claimant told Dr. Wong that he first noticed his symptoms while he was putting the breaker on the backhoe at work. According to the notes, Claimant told Dr. Wong

that he has had severe leg pain and weakness since putting the breaker on the backhoe on May 4, 2017. Dr. Wong's notes also indicate Claimant did not report any relevant medical history. Absent from the notes is any indication Claimant told Dr. Wong that his back and right leg symptoms started 10-12 days before his alleged work injury. Based on the history provided by Claimant, and Dr. Wong's assessment, he recommended either an ESI or surgery. Based on his symptoms, Claimant wanted to proceed with surgery. As a result, Dr. Wong stated that he would work on getting the surgery approved. Consistent with his report, Dr. Wong "ordered" a hemilaminectomy with decompression and excision of a herniated disc. Ex. 18, pp. 93-96.

22. On June 1, 2017, Claimant returned to Dr. Parsons for a follow up evaluation after seeing Dr. Wong. At this appointment, they discussed Dr. Wong's surgical recommendations and Claimant's expectations. The appointment concluded with Dr. Parsons requesting Claimant to follow up and call her to let her know the surgery date. Ex. 16, pp. 82-84.

23. On July 3, 2017, Claimant underwent surgery with Dr. Wong. According to Dr. Wong, the indication for surgery was based on Claimant's contention that he developed "severe right leg pain and weakness since putting [on] a breaker on a backhoe on 5/4/2017." Based on Claimant's statements to Dr. Wong, Dr. Wong concluded that the "weakness and right leg pain" and the "right L4-5 and L5-S1 disk herniation is work related." Ex. 18, pp. 97-98.

General Admission of Liability filed based on Claimant's material omissions

24. On August 9, 2017, and based on Claimant's material omissions, Respondents filed a General Admission of Liability and admitted liability for the claim and for medical benefits. Ex. B, p. 7.

Claimant's Ongoing Medical Treatment and Omissions

25. On August 16, 2017, Claimant presented to Rehabilitation Services and completed a Past Medical History Form. Claimant was asked to check a box next to the problems for which he has been diagnosed or circle a condition for which he had had or has. Claimant did not circle "low back pain." He also denied having a significant past medical or injury history. Ex. 19, pp. 132,133, and 137.

26. On August 26, 2018, Kathleen D'Angelo, M.D., completed an IME report under an evaluation for ongoing complaints. Claimant was accompanied by a Spanish-speaking interpreter. Claimant reported right leg pain and low back pain after the reported injury and moved to his back, headaches, and neck. Ex. M, pp. 175-176. Claimant reported "immediate effects after the accident" to include "severe pain, unable to move, low back." Ex. M, p. 175. Delayed effects included right leg pain. *Id.* Claimant also completed a questionnaire before the examination that asked about "Similar Pre-Existing Issues." Ex. M, p. 224. Claimant denied similar previous problems. Ex. M, pp. 176, 224. Claimant denied being under a physician's care before the injury. *Id*. Claimant denied any other significant disabling problems or accidents. *Id*. A pain diagram completed by Claimant showed pain in the right hip region down the side and back of his right leg. Ex. M, pp. 177, 226. Dr. D'Angelo

questioned Claimant about the pain at the time of the first appointment with Dr. Parsons and Claimant responded, “I had some pain in my low back, but it was mainly in my leg,” confirming pain “only” in the right leg. Ex. M, p. 179.

27. Dr. D’Angelo was unaware of the preexisting treatment at Denver Health and did not have records from Denver Health available during her review. Ex. M, p. 200. Dr. D’Angelo did not have any records predating the May 4, 2017, claim available for her review. *Id*. Dr. D’Angelo concluded that Claimant was not at MMI and recommended an electrodiagnostic study to rule out any recurrent radiculopathy as well as a work hardening program. Ex. M, p. 197.

28. An MRI of the lumbar spine was performed on December 27, 2018, and compared to a November 8, 2017, MRI and reflected unchanged neuroforaminal stenosis with possible impingement on the lumbosacral nerve roots. There was no significant change between the two studies. Ex. N, p. 232.

29. On January 28, 2019, Claimant underwent evaluation with Dr. Elliott’s PA for recurrent postsurgical radiculopathy and back pain. An April 2018 EMG was normal. After that, Dr. Elliott recommended a lumbar decompression and revision procedure. Ex. N, p. 232.

30. Respondents submitted the request for repeat surgery to Allison Fall, M.D., for review. Dr. Fall performed an IME on February 28, 2019, and Claimant was accompanied by a Spanish translator. Ex. N, p. 231. Claimant reported that at first, he was not very painful but that after half-an-hour, he could not move. *Id*. Pain was primarily in the right leg and that was the only thing he could remember. *Id*. Again, Claimant denied prior similar symptoms and any past medical history. Ex. N, pp. 232, 236. Dr. Fall concluded that the complaints were consistent with a diagnosis of somatic symptom disorder. Ex. N, p. 237. Dr. Fall opined Claimant was a poor surgical candidate and recommended against further surgery. *Id*. Dr. Fall recommended psychological evaluation and treatment. Ex. N, p. 238.

Another Admission Filed Based on Claimant’s Omissions

31. On July 15, 2019, and based on Claimant’s false statements and material omissions, Respondents filed another General Admission of Liability. Based on Claimant’s condition and inability to work, Respondents also admitted for temporary total disability (TTD) benefits. Respondents started paying TTD as of June 26, 2019, at a weekly rate of $927.71. Ex. C.

Additional Treatment and Misrepresentations of Material Fact

32. Dr. Wong subsequently saw Claimant and could not determine whether additional surgery was required. Ex. L, p. 166. Dr. Wong instead performed a lumbar steroid injection on September 10, 2019, and Claimant reported more pain after the injection. Dr. Wong concluded that further surgery would not be helpful. *Id*. Yet Dr. Elliott again recommended a decompression surgery. *Id*.

33. On February 18, 2020, Claimant provided Respondents with answers to interrogatories. In Interrogatory No. 12, Claimant was asked to state the name of any doctor, physician, or medical practitioner for any injury, illness, or disability with whom Claimant had received treatment in the last 10 years. In Claimant’s answer,

he objected to the interrogatory in part, but answered it in part. He objected to providing any information going back more than 5 years and for body parts that were not part of this claim. And, in the part he answered, which should have included his treatment for his back just 10 and 12 days before his alleged work injury, Claimant did not disclose any of the treatment he obtained through The Federico Clinic and Denver Health. He also listed none of the physicians or providers who treated him for his back at The Federico Clinic and Denver Health just 10 and 12 days before his claimed work injury. Ex. V.

34. On March 11, 2020, Claimant was evaluated by Dr. Miller during a follow-up visit. Ex. S. In this record, it is revealed that Claimant's PCP had performed initial testing for urinary complaints and that Dr. Miller would be contacting this office for follow-up. *Id*. It is indicated that the PCP office was Federico Pena/Denver Health, previously undisclosed. *Id*. Respondents were not previously aware of this provider and requested records after Claimant's answers to discovery.

35. On April 1, 2020, Respondents initiated a 24-Month DIME. Dr. Jade Dillon was confirmed as the DIME physician.

36. Dr. William Miller saw Claimant on July 15, 2020 and concluded that Claimant was at MMI with a 27% whole person impairment for spine impairment plus mental impairment. Ex. S, p. 331. The report was rendered after initiation of the 24-Month DIME process and Dr. Miller did not review or incorporate any medical documentation of the preexisting conditions and treatment from April 2017.

37. On August 7, 2020, Dr. Fall completed a record review that included the newly obtained medical records from Federico Pena Clinic/Denver Health from April 22, 2017, documented above. Ex. N, p. 240. Dr. Fall also reviewed Claimant's prior interrogatory responses documenting Claimant's denial of prior injuries to his low back. Dr. Fall noted multiple instances in the medical records in which Claimant either denied prior symptoms or failed to disclose prior treatment. *Id*. Dr. Fall concluded that the April 2017 records changed her opinion on causation in that they reflected prior similar symptoms and preexisting radiculopathy without specific trauma noted. Ex. N, p. 241. Dr. Fall also noted that Claimant was obese, a risk factor for lumbar degeneration, and that causation of the condition with radiculopathy leading to surgery and subsequent treatment was not caused by a work-related injury on May 4, 2017. *Id*. Dr. Fall said that Claimant was not forthcoming and did not disclose prior symptoms. *Id*.

38. Dr. Dillon rendered a DIME opinion dated September 11, 2020 and amended opinion on October 2, 2020. Ex. L. Claimant was interviewed through a Spanish interpreter. Claimant said that his last day working was the date of injury, claiming that he tried to work but could not perform any work on light duties. Ex. L, p. 164. Dr. Dillon had documented an extensive review of the available medical records, which included records preexisting the May 4, 2017, injury. Dr. Dillon also documented her review of multiple diagnostic studies throughout the claim with included discussion. Dr. Dillon performed a physical examination and recorded loss of range of motion. Ex. L, p. 167. Dr. Dillon also included a separate section documenting Claimant's pertinent psychological issues. Ex. L, p. 168. Under

"Pertinent Medical Issues," Dr. Dillon specifically noted the April 22, 2017, record from Denver Health with a chief complaint of sciatica and documented complaints of radiating pain in the right leg and hip. Ex. L, p. 166.

39. Dr. Dillon concluded that "This is clearly a preexisting condition" and provided exhaustive rationale for her opinion. Ex. L, p. 169. Dr. Dillon explained that the degenerative changes seen on diagnostics do not arise quickly and were present early in treatment. *Id*. Dr. Dillon stated that "The same symptoms were present prior to the claimed occupational injury, as documented in multiple records." *Id*. Dr. Dillon noted Claimant's failure to disclose these symptoms or treatment as a great concern. *Id*. Dr. Dillon concluded that "the occupational injury even as described by [Claimant] was minor to trivial" and was "unlikely to have caused any significant problem other than a strain" or to "significantly exacerbate any underlying condition other than perhaps on a transient basis." *Id*. Dr. Dillon said that Claimant had symptoms out of proportion with objective findings seen on the diagnostics. *Id*.

40. Dr. Dillon said that Claimant was at MMI for his physical injuries effective February 28, 2019, and for his psychological condition effective June 17, 2019. *Id*. Dr. Dillon wrote: "This is stated with the knowledge that the condition is actually preexisting." *Id*.

41. Dr. Dillon provided a 25% whole person impairment based on Table 53 of the *AMA Guidelines, 3rd ed., rev*. and recorded loss of range of motion. *Id*. That said, Dr. Dillon stated that the rating was without consideration of causation. Under The Division of Workers' Compensation Impairment Rating Tips, which allow nullification of any work-related impairment based on assessment of causation, Dr. Dillon declared that the condition was unrelated to the work injury. *Id*. Dr. Dillon further said that because the psychological symptoms hinged on Claimant's physical status, with no applicable physical impairment there was also no applicable psychological impairment. *Id*. Dr. Dillon stated that excessive treatment had been provided and no further treatment was recommended. *Id*.

42. To the extent there is any ambiguity about Dr. Dillon's findings and conclusions, the ALJ finds that Dr. Dillon concluded Claimant did not suffer an occupational injury on May 4, 2017, that caused the need for medical treatment or caused any disability or impairment. What she found was that Claimant reached MMI for non-work-related conditions and that Claimant has permanent impairment which flow from his non-work-related conditions. Put another way, she found Claimant did not suffer a compensable injury on May 4, 2017, and the conditions for which she provided a date of MMI and impairment rating are unrelated to Claimant's alleged May 4, 2017, work accident.

43. Respondents filed a Final Admission of Liability (FAL) in accordance with Dr. Dillon's opinion on October 13, 2020. Ex. D. Respondents did not list any indemnity benefits in the benefits history and claimed an overpayment for $62,024.04 in TTD paid from June 26, 2019, through October 5, 2020. Respondents admitted for $69,408.97 in medical benefits and 0% permanent impairment. Respondents also denied maintenance medical treatment.

Testimony of Dr. Fall

44. Dr. Fall testified that when she saw Claimant for an IME on February 28, 2019, she asked about preexisting symptoms or treatment of the back or right leg and Claimant specifically denied these. Tr. at 93. Dr. Fall was unaware of any preexisting relevant history at the time of her IME. Tr. at 96. Dr. Fall testified that sciatica is nerve pain radiating down the back of the leg to below the knee. Tr. at 97. Dr. Fall testified that the most likely etiology of sciatica is compression of a nerve root. *Id*. Dr. Fall testified that the nerve root irritation comes from the lumbar spine down the back of the leg. Tr. at 98. Dr. Fall testified that the records preexisting the May 4, 2017, injury reflected a positive straight leg test, which is used to determine irritation from the low back. *Id*. If there is inflammation of a nerve in the spine, the test will reproduce pain shooting down the leg past the knee. *Id*. Dr. Fall testified the straight leg test can be indicative of a disc herniation. *Id*.

45. Dr. Fall testified that the x-ray study performed on April 24, 2017, showed signs of degeneration at the lower lumbar spine. Tr. at 99. Dr. Fall testified that an x-ray would not have reflected a disc protrusion and can only show the distance between bones indicating degeneration of the spine but would not show soft tissue disc structures, which would require an MRI. *Id*. Dr. Fall testified that the x-ray performed would not have been able to view central stenosis, which was present on the June 8, 2017, MRI. *Id*.

46. Dr. Fall testified that it was relevant that Claimant was limping at the April 24, 2017, visit as this points to a significant pain generator. Tr. at 103. Dr. Fall testified that a degenerative condition of the spine can result in loss of function of the legs. *Id*. Dr. Fall testified that there does not have to be trauma for the onset of radiculopathy and that a radicular condition may have an insidious onset, as in this case. *Id*. Dr. Fall testified that obesity is a risk factor for lumbar degeneration more so than physically carrying something for a period of time because the added weight is constantly present. Tr. at 103-104.

47. Dr. Fall testified that the symptoms in the weeks before May 4, 2017, were consistent with radiculopathy. Tr. at 104. Dr. Fall testified that lumbar radiculopathy would not typically resolve within a week and pain is typically the worst within the first six weeks due to inflammation of the nerve. *Id*. Dr. Fall testified that there was no evidence that the condition was resolving itself when Claimant left the clinic on April 24, 2017. Tr. at 105. Dr. Fall noted that the first visit from April 22, 2017, was to his regular clinic and the subsequent April 24, 2017, record was to the emergency department. *Id*.

48. Dr. Fall testified that the gabapentin prescribed on April 24, 2017, is a medication used to treat back pain and pain of a neuropathic origin. Tr. at 104. Dr. Fall testified that Claimant still would have had the prescribed gabapentin when he reported his work-related injury based on the dosage and recommended frequency. Tr. at 106.

49. Dr. Fall agreed with Dr. Dillon’s opinion that the symptoms preexisting the May 4, 2017, injury were the same as those after the claimed injury. Dr. Fall testified that the initial presentation was for leg, hip, and calf pain which is related to the first presentation of radiculopathy. Tr. at 107. Dr. Fall testified that the fact that the leg

was nontender to the touch was something associated with a radiculopathy rather than muscular origin. *Id*. Dr. Fall noted that on the first visit, sciatica was suggested and on the second visit this was confirmed as a diagnosis. *Id.* Medications and therapy were prescribed for this diagnosis. *Id*. Dr. Fall testified that it was not medically probable that Claimant aggravated a preexisting condition on May 4, 2017, as there did not appear to be any new processes but a progression of a prior condition. Tr. at 108. Dr. Fall testified that Claimant's failure to disclose a prior condition to his providers would have been an error of omission. Tr. at 113. Dr. Fall testified that she could not have come up with a scenario where Claimant would not have known that he was having the same issues before his reported work injury. Tr. at 114.

50. Dr. Fall testified credibly that Dr. Dillon's opinion on impairment and causation was consistent with the *AMA Guidelines* and Level II physician accreditation. Tr. at 108. Dr. Fall testified that there were no clear errors in the DIME report and that Dr. Dillon's opinion was supported by the facts. *Id*.

51. Dr. Fall's opinions are consistent with the underlying medical records and consistent with the conclusions of the DIME physician and Dr. D'Angelo. As a result, the ALJ finds Dr. Fall's ultimate opinions to be credible and highly persuasive.

Testimony of Dr. D'Angelo

52. Dr. D'Angelo testified that she gave Claimant the same questionnaire she gives to all of her patients to complete before examination and that this was submitted to her as Claimant's answers. Ex. T, pp. 340-341. Dr. D'Angelo testified that she used the answers to complete her IME report and specifically reviewed them with the translator. Ex. T, p. 341. Dr. D'Angelo testified that she took a verbal history directly from Claimant and he described the immediate effects after the injury as being primarily in the right leg. Ex. T, p. 343.

53. Dr. D'Angelo testified that the symptoms before the work injury appear to be similar to those documented by Dr. Parsons after the work injury. Ex. T, p. 349. Dr. D'Angelo testified that on April 22, 2017, when Claimant reported leg pain a DVT was ruled out and there was no swelling or tenderness in the leg. Ex. T, pp. 348-349. Dr. D'Angelo noted the pain documented by Dr. Parsons radiated to the tibia — the level of the calf muscle. Ex. T, p. 350. Dr. D'Angelo testified that patients report differing symptoms when they have radiculopathy and that pain going up the leg or down the leg is nonspecific and difficult to distinguish. Ex. T, p. 353. Dr. D'Angelo testified that the relevant issue is whether there is pain anywhere along the nerve root. *Id*. Dr. D'Angelo testified that there was clearly not a lot of difference between the pains Claimant reported before the injury and afterwards and were in the same regions. *Id*. Dr, D'Angelo testified that the preexisting symptoms were consistent with what Claimant was reporting as part of the work injury. Ex. T, p. 354. Dr. D'Angelo testified that the patient instructions were given to Claimant to explain what the doctor was concerned about and to augment the instructions to follow-up with the PCP. Ex. T, p. 355. Dr. D'Angelo testified as a former emergency room physician that the symptoms reported by Claimant would have given rise to radicular origin. *Id*.

54. Dr. D’Angelo reviewed the audio recording of the initial interview with the Insurer and testified it was significant to her opinion that Claimant did not disclose treatment for right leg issues and sciatica in the weeks before the reported injury. Ex. T, p. 356. Dr. D’Angelo testified that presentation to a clinic in the weeks before the reported injury was big deal that is not typical day for most working people. Ex. T, p. 357.

55. Dr. D’Angelo testified that she could not even state there was any medically probable aggravation of preexisting symptoms on May 4, 2017, and that the condition may have been constant since the preinjury issue based on the history. Ex. T, p. 359. Dr. D’Angelo testified that she agreed with Dr. Dillon and Dr. Fall that there was no work-related impairment in this claim as it does not appear the symptoms began when Claimant alleges and he did not appear to be truthful in respect to the onset of symptoms. Ex. T, p. 360. Dr. D’Angelo testified that she agreed with Dr. Dillon that Claimant was at both physical and psychological MMI. *Id*.

56. Dr. D’Angelo’s opinions are consistent with the underlying medical records and consistent with the conclusions of the DIME physician and Dr. Fall. As a result, the ALJ finds Dr. D’Angelo’s ultimate opinions to be credible and highly persuasive.

Testimony of Sandi G[Redacted]

57. Ms. G[Redacted] testified as the present claims adjuster for the Insurer. Ms. G[Redacted] testified that she filed the FAL and that the admitted figures were calculated based on the medical and indemnity payment logs, which reflected the extent of payments on the claim. Ms. G[Redacted] testified that Elijah C[Redacted] was the former adjuster on the claim and was the adjuster at the time of the initial interview with Claimant and investigation into compensability. Ms. G[Redacted] testified that Marie E[Redacted] is the Employer representative on the claim who discussed the initial investigation of the claim with Mr. C[Redacted]. Ms. G[Redacted] testified that whoever’s name was on the journal entry is the person who created that entry. Tr. at 133. She also provided an adequate foundation for the admission of the journal notes to be admitted as a record of a regularly conducted activity – a business record.

Testimony of Claimant

58. Claimant testified that on May 4, 2017, he was working on the backhoe and had to assemble a breaker, a pointy piece of metal between 25-30 pounds designed to break up asphalt. Tr. at 44, 48. Claimant had to bend to lift the breaker up to where the machine was. Tr. at 44. Claimant testified he was lifting the breaker and felt a “poking thing” in his back that went all the way from the back radiating through his calf. Tr. at 51. Claimant went to the doctor after reporting the injury and testified that he told the doctor his pain occurred “exactly in the moment that I bent and I got the breaker and I stood up.” Tr. at 54.

59. Claimant testified that on April 22, 2017, he went to the clinic for pain in his right leg and concern of a family history of blood clots. Tr. at 54. Claimant testified he experienced pain in the front of his leg that would radiate upward and finish on the side of the hip. *Id*. Claimant testified that the pain he experienced on May 4, 2017, was very different and would go down through his butt through his leg. Tr. at 55.

Claimant testified that "At no point, those two pains crossed with each other." *Id*. Claimant testified that when he went to the clinic, "there wasn't another date, like, another appointment or they didn't give me therapy. They didn't give me any other appointment with another doctor. They didn't tell me that I needed anything else." Tr. at 57.

60. Claimant testified that he had never had a back injury before May 4, 2017, and that the prior clinic visit was not, in any way, related to a low back injury. *Id*. Claimant testified that he did not intentionally mislead the insurer in relation to the work injury. Tr. at 60. Claimant testified that he gave all of his information to his attorney and never gave any false or misleading information. *Id*. Claimant testified that he was paid while on modified duty and subsequently went on temporary disability for wage loss and deposited all checks sent to him. Tr. at 83-84.

61. The ALJ, however, does not find Claimant's testimony to be credible. Claimant had back pain and severe leg symptoms right before his alleged work injury and after his alleged work injury. To state that that they were different is not credible based on the medical documentation to the contrary. The fact that Claimant did not tell his providers or evaluators that he had similar – if not the same – back and leg pain 10-12 days before his alleged work injury establishes Claimant's intent to deceive. Plus, Claimant's ongoing deceit continued with subsequent medical providers as well as his answers to discovery. Moreover, his contention that he was not provided a follow up appointment after his visit to the Emergency Room at Denver Health on May 24, 2017 is not true. The notes from that visit make clear Claimant was advised to follow up "ASAP" and within a week.

Ultimate Findings of Fact

62. Claimant's concealment of his prior back and leg symptoms was not an atypical mistake or inadvertent omission but was part of a consistent pattern of concealment of material facts. Claimant's omissions and false statements were made intentionally and with a reckless disregard of their truth or falsity. His omissions and concealment of material facts were also of the type that in equity and good conscience should have been disclosed.

63. Moreover, Claimant knowingly concealed the material facts from the adjuster and the medical providers which he knew should have been disclosed. Claimant did this with knowledge that they were false; utter indifference to their truth or falsity; and with knowledge that he was concealing material facts that in equity and good conscience should have been disclosed.

64. Based on Claimant's continuous omissions of material facts, the adjusters relied on such, and filed several admissions of liability that admitted for medical and temporary disability benefits.

65. The adjusters were also ignorant of the material facts concealed by Claimant.

66. The ALJ further finds that Claimant's omissions and false statements were made with the intention that they would be acted on by each adjuster so each adjuster would admit liability for his preexisting condition and provide ongoing medical and disability benefits.

67. The ALJ finds Claimant's omissions and false statements caused the adjuster to admit liability for the claim and caused damages in the form of the payment of medical benefits and disability payments to Claimant to which he was not entitled.

68. Furthermore, consistent with the above findings, the ALJ finds that Claimant did not suffer a compensable work injury. The condition for which Claimant received medical and disability benefits under this claim was a preexisting condition that was neither caused nor aggravated by his work activities on May 4, 2017.

69. The ALJ finds Claimant committed fraud and has been overpaid medical and disability benefits.

70. Claimant has been overpaid medical benefits in the amount of $69,408.97. Claimant has also been overpaid disability benefits in the amount of $62,024.04. Ex. D. As a result, Claimant shall reimburse Respondents for the total overpayment which equals $131,433.01. The rate at which the overpayment must be repaid was not fully developed at the hearing. As a result, such issue will be reserved.

71. Respondents timely filed their Application for Hearing to withdraw their admissions and seek an overpayment, and recovery of same, based on fraud. Upon finding out that Claimant's condition might be preexisting in 2020, which was done by obtaining Claimant's previously omitted medical records and getting a revised opinion from Dr. Fall and Dr. D'Angelo, Respondents timely filed an Application for Hearing to withdraw their admissions. Claimant failed to present credible and persuasive evidence that the time between when Respondents obtained the omitted medical records, plus the opinions from Dr. Fall and Dr. D'Angelo, and filed their application was unconscionable or that he was prejudiced by the time Respondents ultimately determined they could withdraw their admissions and filed their Application for Hearing. As a result, Respondents did not waive the issue and are not barred by laches.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents proved by a preponderance of the evidence that they may withdraw their admissions of liability based on fraud and can recover from Claimant all medical and disability payments made under this claim.

The elements of fraud are set forth by the Colorado Supreme Court in *Morrison v. Goodspeed*, 100 Colo. 470, 68 P.2d 458 (1937). In that case, the Court stated:

> The constituents of fraud, though manifesting themselves in a multitude of forms, are so well recognized that they may be said to be elementary. They consist of the following:
>
> (1) A false representation of a material existing fact, or representation as to a material existing fact made with a reckless disregard of its truth or falsity; or concealment of a material existing fact, that in equity and good conscience should be disclosed.
>
> (2) Knowledge on the part of the one making the representation that it is false; or utter indifference to its truth or falsity; or knowledge that he is concealing a material fact that in equity and good conscience he should disclose.
>
> (3) Ignorance on the part of the one to whom representations are made or from whom such fact is concealed, of the falsity of the representation or the existence of the fact concealed.
>
> (4) The representation or concealment made or practiced with the intention that it shall be acted upon.

(5) Action on the representation or concealment resulting in damages.

As noted by ICAO in *Essien v. Metro Cab*, W.C. Number 3-853-693 (ICAO August 22, 1991), “[t]he existence of the elements is generally a question of fact for the determination of the ALJ”, and because proof of fraud is a factual issue, the ALJ may base his decision on inferences drawn from circumstantial or direct evidence. See *Essien*, supra, citing *Electric Mutual Liability Insurance Co. v. Industrial Commission*, 154 Colo. 491, 391 P.2d 677 (1964). As discussed below, the elements of fraud have been proven by Respondents in this matter.

The first element of fraud has been proven. As found, Claimant’s concealment of his prior back and leg symptoms was not an atypical mistake or inadvertent omission but was part of a consistent pattern of concealment of material facts. Claimant’s omissions and false statements were made intentionally and with a reckless disregard of their truth or falsity. Moreover, his omissions and concealment of material facts were also of the type that in equity and good conscience should have been disclosed.

The second element of fraud has been proven: As found, Claimant knowingly concealed material facts about his preexisting back condition from the adjuster and the medical providers which he knew should have been disclosed. Claimant did this with knowledge that they were false; utter indifference to their truth or falsity; and with knowledge that he was concealing material facts that in equity and good conscience should have been disclosed.

The third element of fraud has been proven. As found, based on Claimant’s continuous omissions of material facts, the adjusters relied on such, and filed several admissions of liability that admitted for medical and temporary disability benefits. Moreover, the adjusters were ignorant of the material facts concealed by Claimant.

The fourth element of fraud has been proven: As found, Claimant’s omissions and false statements were made with the intention that they would be acted on by the adjusters so the adjusters would admit liability for his preexisting condition and keep paying medical and disability benefits.

The fifth element has been proven: As found, Claimant’s omissions and false statements caused the adjusters to admit liability for the claim and caused damages in the form of the payment of medical and disability payments to Claimant to which he was not entitled.

It was found that Claimant, for self-gain, omitted material facts and willfully made false statements material to the claim for the purpose of obtaining medical and disability benefits under the Colorado Workers’ Compensation Act. Claimant knew that his back condition was preexisting and sought treatment for such by filing a false claim for a preexisting condition. And, based on Claimant’s omissions and false statements, Claimant obtained medical and disability benefits to which he was not entitled.

As a result, the ALJ finds Respondents established by a preponderance of the evidence that Claimant obtained his benefits through fraud.

To the extent that the GALs and FALs are an “award,” the ALJ concludes that Respondents have established by a preponderance of the evidence that the GALs and

FAL filed in this case shall be reopened based on fraud and overpayment. *See Meza v. BMC West Corp*. W.C. No. 4-651-065 (January 3, 2007) *citing Burke v. Industrial Claim Appeals Office*, 905 P.2d 1, 2 (Colo. App. 1994).

The ALJ also concludes that Respondents have established by a preponderance of the evidence that they can retroactively withdraw each General Admission of Liability and Final Admission of Liability that admitted for temporary total disability benefits and medical benefits for which Claimant had no right to receive and recover the overpayment.

Respondents have requested the reopening and withdrawal of the admissions of liability to recover the overpayment of temporary total disability benefits and medical benefits. Although a request to reopen and withdraw an admission of liability may be duplicative, since each remedy allows the same relief, the ALJ concludes that Respondents are entitled to both remedies to effectuate their ultimate request which is to obtain an order determining the amount of the overpayment that has occurred and an order to recover the overpayment.

The ALJ finds and concludes that Respondents have established by a preponderance of the evidence that they have overpaid Claimant $131,433.01. However, regarding the recovery of the overpayment, that issue was not fully developed at the hearing. As a result, the issue regarding the rate at which the overpayment is to be recovered is reserved.

II. Whether laches or waiver precludes Respondents from withdrawing their admissions and recovering medical and disability benefits paid under this claim based on fraud.

To prove laches, Claimant had to establish that Respondents' delay in asserting their right to withdraw their admissions and seek recovery of the overpayment was "unconscionable' and that, the delay was "prejudicial." *Bacon v. Industrial Claim Appeals Office*, 746 P.2d 74 (Colo. App. 1987).

As found, Respondents timely filed their Application for Hearing to withdraw their admissions and seek an overpayment, and recovery of same, based on fraud. Upon finding out that Claimant's condition might be preexisting in 2020, which was done by obtaining Claimant's previously omitted medical records and getting a revised opinion from Dr. Fall and Dr. D'Angelo, Respondents timely filed an Application for Hearing to withdraw their admissions. Claimant failed to present credible and persuasive evidence that the time between when Respondents obtained the omitted medical records, opinions from Dr. Fall and Dr. D'Angelo, and filed their application was unconscionable or that he was prejudiced by the time Respondents ultimately determined they could withdraw their admissions and filed their Application for Hearing. As a result, Respondents did not waive the issue and are not barred by laches.

Thus, the ALJ finds and concludes Claimant failed to establish by a preponderance of the evidence that Respondents are barred from asserting their claims due to waiver or laches.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' admissions are withdrawn based on Claimant obtaining the admissions and resulting medical and disability benefits by fraud.

2. Claimant has been overpaid $131,433.01 in medical and disability benefits.

3. Claimant shall repay Respondents the $131,433.01 overpayment. However, the rate at which Claimant must repay the overpayment is reserved fur future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 2, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-130-718-002

ISSUES

The issues set for determination were:

- Did Claimant sustain a compensable injury on February 7, 2020?

- If Claimant sustained a compensable injury, is the treatment he received reasonable and necessary?

- Is Dr. Lackey an ATP?

- What was Claimant's AWW?

- If Claimant sustained a compensable injury, is he entitled to TTD benefits from February 7, 2020 and ongoing?

PROCEDURAL STATUS

The undersigned issued a Summary Order on May 28, 2021, which was served on June 1, 2021. Respondents filed a timely Request for Specific Findings of Fact and Conclusions of Law on June 14, 2021. Respondents filed (Amended) Findings of Fact, Conclusions of Law and Order on June 21, 2021. Claimant filed (Amended) Findings of Fact, Conclusions of Law and Order on July 1, 2021.

STIPULATION

The parties stipulated if the claim was found compensable CCOM and Dr. Centi would be authorized. This Stipulation is made part of this Order.

FINDINGS OF FACT

1. Claimant worked as a transit driver for Employer for fourteen years, nine months before he was terminated. He drove various sizes of vehicles in this position. Claimant testified his rate of pay was $23.64 per hour and he worked 40 hours per week.

2. Claimant's medical history was significant in that he had prior symptoms in his left shoulder, which began in February-March 2019. He received medical treatment for these symptoms.

3. On May 31, 2019, Claimant was evaluated by Charles Lackey, M.D. He mentioned shoulder pain and noted it began after long driving and rotating the wheel of the bus. The pain was aggravated by driving the bus. Claimant stated that his greatest pain was 10/10 and the least amount was 6/10. Dr. Lackey said Claimant had limited

abduction to 90°, forward flexion to 110°, external rotation to 45° and internal rotation to 50° in the left shoulder.

4. Dr. Lackey's assessment noted he suspected a rotator cuff injury, which was most likely due to work activity. Dr. Lackey refilled the prescription for cyclobenzaprine. He recommended getting plain X-rays first and then possibly an MRI.[1]

5. Claimant testified he filed a Worker's Claim for Compensation alleging cumulative trauma in 2019, which was denied. There was no hearing on that claim.

6. On October 24, 2019, Claimant underwent an Independent Medical Examination, which was performed by Nicholas Olsen, D.O., at the request of Respondents. At that time, he complained of left shoulder pain, which he said occurred "daily" in the patient questionnaire. Claimant took Advil, as needed and kept a prescription for Flexeril, which he filled when he needed it On examination, Dr. Olsen noted there was no atrophy in the left shoulder. Moderate tenderness was present in the suprascapular fossa with deep palpation. Scaption and external rotation were 4/5 and the drop test was negative. No crepitus was noted.

7. Dr. Olsen's assessment was: clinical signs of rotator cuff bursitis versus tear, left shoulder. Dr. Olsen said there was weakness in the left rotator cuff, which was indicative of rotator cuff inflammation, bursitis or possible rotator cuff degeneration. He noted Claimant continued to work at full duty and did not describe any modification to his job. He did not believe Claimant's job duties were highly repetitive or entailed high force trauma. Dr. Olsen did not provide any work restrictions for Claimant. Dr. Olsen agreed with Dr. Lackey that plain x-rays and an MRI would be the next step.

8. There was no evidence Claimant had work restrictions for his left shoulder before February 7, 2020.

9. Claimant testified his average workday was approximately 10 hours long, with a lunch break. As part of this job, he would conduct a pre-trip inspection of the bus and pick up passengers. He drove a regular route three days per week, picking up passengers throughout Summit County. On the fourth day per week, he provided door-to-door service to people with disabilities. Those duties require him to occasionally manually load riders in wheelchairs into the vehicle and this required heavy pushing.

10. On February 7, 2020 at approximately 9:30 a.m., Claimant testified he was driving a 12 seat paramountain mobility vehicle. It had snowed a "massive amount" the night before and he got stuck in deep snow in the middle of the street. After contacting the base, Claimant said that he crawled under the bus and used a dispatch clipboard and brush to try to brush the snow from underneath the tires.[2] Claimant said he heard a very loud pop and felt extreme pain in his left shoulder while reaching under the vehicle. He called for maintenance to assist him in freeing the vehicle.

[1] Claimant also returned to Dr. Lackey on June 5, 2019, however, it was for an unrelated condition.

[2] Hearing Transcript (Hrg. Tr.) p. 20:25-21:4.

11. Claimant reported the injury to Y[Redacted] once he returned to base. He was asked by Mr. Y[Redacted] if he needed medical attention, which he declined. Claimant thought his may have been a Saturday when this happened and said he was asked to fill out a workers' compensation claim when he returned to work on Tuesday. Claimant testified he performed a second passenger pickup and no further driving duties that day.

12. The ALJ took judicial notice that February 7, 2020 was a Friday.[3]

13. An incident report was prepared and signed that day. In the report, Claimant recounted how the injury occurred. He said in attempting to shovel out the S12, he aggravated the injury to his left shoulder.[4]

14. Mr. Y[Redacted] testified as witness for Respondent-Employer. He was the dispatcher, a position he has held for five years. He testified Claimant told him he might have injured his shoulder, but declined medical treatment. Mr. Y[Redacted] stated this was at approximately 8:45 a.m. and Claimant then went back to work. On cross-examination, Mr. Y[Redacted] said he did not recall seeing the written Notice of Injury to Employer, which was signed on February 11, 2020.

15. There was no evidence admitted at hearing which contradicted Claimant's testimony that he was performing those job duties on the date in question. Claimant's description of the injury was credible.

16. Claimant said the first treatment he received was the following week, as he already had an appointment scheduled with Charles Lackey, M.D. The appointment was to renew prescriptions and for an annual visit. There was no evidence that Employer referred Claimant to Dr. Lackey or authorized this evaluation. Dr. Lackey was not an ATP, as that term is defined under the Act. Claimant testified Dr. Lackey took him off work.

17. Claimant was evaluated on February 10, 2020 by Dr. Lackey. Dr. Lackey described the reason for the visit was because of an exacerbation of left shoulder pain which occurred when he slipped on the ice at work and injured the shoulder. On examination, there was subtle wasting of the supraspinatus muscle on the left side, as well as tenderness to palpation over the lateral deltoid muscle.

18. Dr. Lackey stated this was clearly a Worker's Compensation injury with an acute new exacerbation. He stated Claimant should not drive with the limitation of motion and pain in the shoulder. Dr. Lackey noted he was a DOT examiner and stated Claimant did not meet the qualifications of a driver at that point. The ALJ credited Dr.

[3] C.R.E. Rule 201(c).

[4] Exhibit 5.

Lackey’s opinion that this was an exacerbation of the underlying condition of the shoulder.

19. Claimant was referred by Employer to Centura Centers for Occupational Medicine (“CCOM”) for treatment and was evaluated by Taryn Barrette, PA-C on February 12, 2020. CCOM was the ATP for Employer. On examination, Claimant had tenderness to palpation over the anterior biceps tendon insertion, as well as pain over the superior trapezius and biceps muscles. Reduced range of motion (“ROM“) was also present.

20. PA-C Barrette‘s diagnosis was: strain of the muscles and tendons of the rotator cuff of the left shoulder, initial encounter. The treatment plan included X-rays of the left shoulder, continue with OTC ibuprofen; continue with heat and ice topically; gentle ROM exercises with left shoulder.

21. A WCM 164 was completed on February 12, 2020 by Thomas Centi, M.D. at CCOM, who concluded the objective findings were consistent with history and/or work-related mechanism of injury/illness. Claimant was placed on modified duty/restrictions of no driving CMV, no lifting or carrying with left arm, no pushing or pulling with left arm, no overhead lifting with left arm. This opinion that Claimant’s symptoms were work-related was persuasive.

22. On February 13, 2020, an Employer’s First Report of Injury (“E-1”) was completed on behalf of Employer by Geoff Guthrie. The E-1 listed Claimant’s AWW as $1,026.00. A CTSI Superviser’s Accident Incident Report was also completed that day.[5]

23. On February 14, 2020, Claimant returned to CCOM and was evaluated by PA-C Barrette. The diagnosis was: strain of muscle(s) and tendon(s) of the rotator cuff of left shoulder, subsequent encounter. At that time, an MRI of the left shoulder was ordered. Claimant was able to return to modified duty as follows: lifting maximum 2 pounds, repetitive lifting 0 pounds, carrying/pushing/pulling-2 pounds. Claimant was evaluated at CCOM on February 17 and February 21, 2020 and his work restrictions were continued.

24. Claimant was also evaluated by PA-C Barrette at CCOM on February 28, 2020. The diagnosis remained the same and Claimant’s work restrictions were changed to no lifting/carrying-left arm greater than 5 pounds; no pushing/pulling with left arm greater than 5 pounds; no overhead lifting with left arm. Dr. Centi signed the WCM 164, as well as PA-C Barrette‘s report.

25. On March 5, 2020, Claimant underwent an MRI of the right shoulder. The films were read by William Wahl, M.D. Dr. Wahl‘s impression was: supraspinatus tendinosis and there may be a focal, 2-3mm full-thickness defect of the insertional fibers of the supraspinatus; advanced degenerative arthritis of the glenohumeral joint; mild

[5] Exhibit 7.

degenerative changes of the acromioclavicular joint; joint effusion, as there appeared to be two, small, 5–6mm intra-articular osteochondral loose bodies.

26. On March 6, 2020, Claimant returned to CCOM. At that time, anterior tenderness was noted to the biceps tendon, along with limited ROM. Claimant was complaining of "aching, sharp pain" in the left shoulder. The diagnosis was: strain of muscle(s) and tendon(s) of the rotator cuff of left shoulder, subsequent encounter. PA-C Barrette stated the "cause of this problem was related to work activities". Claimant was to begin physical therapy ("PT"). The report was signed by Dr. Centi, who also signed the WCM 164. Claimant's work restrictions were no lifting/carrying-left arm greater than 8 pounds; no pushing/pulling with left arm greater than 8 pounds; no overhead lifting with left arm.

27. Dr. Centi extended Claimant's restrictions for March 31 through April 13, 2020.

28. Claimant returned to Dr. Lackey on April 3, 2020. Claimant was diagnosed with a strain of muscles and tendons of the rotator cuff of the left shoulder. Dr. Lackey noted Claimant had prior pain in the left shoulder and degenerative arthritis, but was able to perform his usual job duties. Dr. Lackey recommended physical therapy ("PT") and completed an FMLA form.

29. On or about April 10, 2020, Claimant completed a short term disability statement in which he stated that his left shoulder injury prevented him from driving. This form was signed by Claimant.

30. Claimant returned to CCOM and was evaluated by Caroline Whalen, PA on April 13, 2020. He reported continued pain in the shoulder. Claimant had not been to PT since Covid, but was doing home exercises. On examination, pain to palpation was not present, nor was there swelling. ROM was noted as normal, although there was no evidence that PA Whalen performed ROM measurements at that time. Claimant's shoulder strength was normal. The diagnosis it was the same and claimant was to continue with Tylenol and cyclobenzaprine. Claimant's work restrictions were continued. Dr. Centi also signed the report.

31. Claimant testified that the shoulder pain he experienced in 2019 was intermittent. The pain in 2020 was virtually constant. He was able to do his job with when he experienced the intermittent pain in 2019 and January 2020.

32. On July 2, 2020, Claimant underwent a follow-up IME, which was performed by Dr. Olsen, at the request of Respondents. At that time, Claimant estimated his pain level to be 8/10. He described the events of February 7, 2020, noting that he felt very sharp pain in the left shoulder while trying to get the bus unstuck. On examination, Dr. Olsen found no atrophy in the left shoulder. Moderate tenderness with palpation of the suprascapular and infrascapular fossas was present. The drop test was negative. ROM testing demonstrated 90° of forward flexion, 110° of

abduction, 50° of extension. External rotation was limited to 40° and internal rotation to 45°. These ROM findings were similar to those on October 24, 2019.

33. Dr. Olsen‘s diagnosis was: advanced degenerative changes in the glenohumeral joint, including superficial and full-thickness erosion of the articular cartilage. Dr. Olsen opined Claimant suffered a temporary aggravation on February 7, 2020 of long-standing degenerative glenohumeral arthritis that had been symptomatic for over a year. He believed Claimant was in need of an orthopedic consultation, which should be done under his commercial insurance for the glenohumeral arthritis.

34. Dr. Olsen testified as an expert in Physical Medicine and Rehabilitation at hearing. His testimony was consistent with the IME report and he reiterated his conclusion that Claimant's symptoms were the result of his pre-existing condition and that he suffered, at most, a temporary aggravation of that condition. Dr. Olsen testified:

> "Because Mr. [Claimant redacted] had indicated that he had extreme pain, but the pain following the February 7th, 2020, incident was the same as what he was experiencing on 10/24/2019. And do [sic] the degree that he had -- elevated pain -- pain levels for a week or two after the event, they were back to his baseline constant sharp, stabbing pain that he'd been reporting since February 2019".[6]

35. Dr. Olsen testified that the Claimant testified that his pain was intermittent prior to February 7, 2020, but constant after the injury. The ALJ found Claimant distinguished between his level of pain before versus after February 7, 2020.

36. Dr. Olsen also testified that the MRI showed the degenerative changes in Claimant's shoulder;

> "And, the MRI indicates no evidence of an acute injury, but a longstanding degenerative sources of his pain in the form of reformation of osteophytes in the humeral head, and a worn out labrum and a cartilage that is at – at its end of life. And these are chronic findings that had been present for over a year".

37. The ALJ noted the MRI showed the degenerative changes as identified by Dr. Olsen. However, the presence of effusion, potentially an acute finding, was not explained.

38. Claimant proved he suffered a compensable injury on February 7, 2020, namely an aggravation of the underlying condition of his left shoulder.

39. There was no evidence in the record that Claimant was placed at MMI by an ATP.

[6] Hrg. Tr. pp. 66:20-67:1.

40. Claimant was given work restrictions by the physicians at CCOM from February 12, 2020 through May 7, 2020.

41. The E-1 stated Claimant's AWW was $1,026.00 per week. However, no payroll records or checks stubs were submitted and the ALJ was unable to determine how this calculation was made. Claimant's testimony established his AWW was $945.60 per week, which gives a weekly TTD rate of $630.40.

42. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant argued that he was injured in a discreet traumatic event, which was an aggravation of an underlying pre-existing condition. Respondents argued Claimant's symptoms were the result of his underlying degenerative condition and that the event which occurred on February 7, 2020 was a temporary aggravation of this condition.

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2020). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Although it was a close question, the ALJ determined Claimant suffered a traumatic injury while working for Employer that aggravated the degenerative changes in his shoulder.

As a starting point, there was no dispute that Claimant had degenerative changes in his left shoulder. As determined in Findings of Fact 2-4, Claimant's testimony and the medical records admitted into evidence confirmed that his left shoulder symptoms prompted him to seek treatment. Specifically, prior to February 7, 2020, Claimant was evaluated by Dr. Lackey, who recommended diagnostic testing in the form of x-rays and potentially an MRI. (Findings of Fact 3-4). The record showed Claimant continue to perform his job duties and had no documented work restrictions before February 7, 2020. (Finding of Fact 8).

As found, Claimant injured his left shoulder while working on February 7, 2020. Specifically, he was picking up a disabled passenger and the commercial vehicle he was driving became stuck in the street. (Finding of Fact 10). Claimant tried to free the vehicle and the evidence in the record and the ALJ credited his testimony when he described feeling pain and hearing a pop while he cleared snow from under the vehicle. (Finding of Fact 15). As found, there was no evidence which contradicted Claimant‘s testimony as to his activities that day. (Finding of Fact 15). In fact, the incident report prepared that day corroborated Claimant‘s testimony. (Finding of Fact 13).

When Claimant was evaluated by Dr. Lackey (with whom he had treated prior to February 7, 2020) on February 10, 2020, Dr. Lackey concluded this was a work-related injury. (Finding of Fact 18). When Claimant was referred to CCOM, Dr. Centi at that facility also concluded in the WCM164 the Claimant‘s symptoms were the result of a work-related injury. These opinions were persuasive to the ALJ. (Finding of Fact 21). Thus, the combination of Claimant's testimony and the medical records led the ALJ conclude Claimant suffered a compensable injury on February 7, 2020.

The ALJ considered Respondents‘ argument that had Claimant followed up to undergo x-rays and potentially an MRI, as recommended by Dr. Lackey, the findings would have been virtually identical to those after February 7, 2020. Respondent asserted Claimant probably would have had work restrictions after that time. However, the facts of the case established Claimant did not receive x-rays and continued to work full duty, even though he was evaluated by Dr. Lackey. It was the events on February 7, 2020 that caused the aggravation in his left shoulder and required treatment, as well as necessitating work restrictions. Claimant then was given work restrictions which continued through May 2020. (Finding of Fact 39).

The ALJ also considered Dr. Olsen‘s opinions, including his expert testimony. Dr. Olson focused on Claimant‘s subjective rating of his pain complaints to conclude that he suffered only a temporary aggravation of the underlying condition. He also postulated that because the MRI did not show evidence of recent trauma, Claimant's symptoms and need for treatment was a result of the underlying degenerative changes. However, Dr. Olsen did not explain the MRI finding of effusion, as shown on the MRI done right after the injury. (Finding of Fact 36). In addition, Claimant's testimony regarding the difference in his pain before February 7, 2020 (intermittent), versus after the injury (constant) was credible.

Based upon the totality of the evidence, the ALJ concluded it was more probable than not that the events of February 7, 2020 aggravated the underlying degenerative condition of Claimant's left shoulder while working for Employer. Therefore, the injury sustained on February 7, 2020 was compensable.

Medical Benefits

Given the finding on the issue of compensability, the ALJ concluded Claimant proved he was entitled to medical benefits to cure and relieve the effects of his industrial injury, which are to be provided by Respondents. § 8-42-101(1)(a), C.R.S. (2019). The treatment provided by Dr. Centi and the healthcare providers at CCOM were authorized, pursuant to the Stipulation of the parties. All referrals from CCOM were reasonable and necessary and Respondents are required to provide those benefits.

Respondents asserted that Dr. Lackey was not an ATP. The ALJ agreed with this contention. As found, Claimant treated with Dr. Lackey before the injury as well as after February 7, 2020. There was no evidence Respondents referred Claimant to Dr. Lackey after the injury. The ALJ found Dr. Lackey was not an ATP and not within the chain of referral. (Finding of Fact 16). There was also no evidence that Respondents agreed Dr. Lackey was an ATP. Accordingly, Claimant's request that the ALJ find Dr. Lackey is an ATP will be denied.

AWW/TTD

Claimant asserted that his average weekly wage was $945.60, based upon a 40-hour workweek and a rate of pay of $23.64 per hour. The ALJ noted the E-1 stated Claimant's AWW was $1,026.00 per week. (Finding of Fact 22). However, no payroll records or checks stubs were submitted and the ALJ was unable to determine how this calculation was made. The ALJ found Claimant's AWW was $945.60 per week, which gives a weekly TTD rate of $630.40. (Finding of Fact 41).

On the question of TTD benefits, the ALJ concluded Claimant was issued work restrictions when he was evaluated at CCOM on February 12, 2020. These restrictions continued throughout the time he was under the care of those healthcare providers. In addition, the ALJ noted no ATP concluded Claimant was at MMI. (Finding of Fact 39). Respondent argued that Claimant would have been given work restrictions had he followed up with diagnostic testing and further treatment with Dr. Lackey. However, this simply did not take place before the injury on February 7, 2020 and the ALJ concluded

Claimant proved he sustained a wage loss as a result of the injury. Therefore, Claimant was entitled to TTD benefits from February 12 and continuing, until terminated by law.

ORDER

It is therefore ordered:

1. Claimant established by a preponderance of the evidence that he sustained a work-injury on February 7, 2020 and is entitled to benefits under the Colorado Workers' Compensation Act.

2. Claimant has not proven by a preponderance of the evidence that Dr. Lackey should be considered an authorized treating physician.

3. The authorized treating providers are the physicians and other providers at Centura Centers for Occupational Medicine (CCOM) and all authorized referrals from CCOM. Respondents shall provide medical treatment to cure and relieve the effects of Claimant's injury.

4. Respondents shall TTD benefits to Claimant at the rate of $630.40 per week from February 12, 2020 and continuing, until terminated by law.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-131-725-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury to her right shoulder arising out of the course of her employment with Employer on January 30, 2020.

2. Whether Claimant established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits?

3. Whether Claimant established by a preponderance of the evidence that right shoulder surgery performed at Denver Health is reasonable, necessary, and related to an industrial injury?

4. Whether Claimant established by a preponderance of the evidence the right to select her own authorized treating provider (ATP)?

FINDINGS OF FACT

1. Claimant is a fifty-one-year-old woman who began employment with Employer in February 2019 as an order selector or "order picker." Employer distributes pet products such as animal feed, bones, and other products. Claimant's position required her to retrieved products from shelves in Employer's warehouse and place the products on a manual pallet jack to fill orders for shipment.

2. On February 18, 2020, Employer filed an Employer's First Report of Injury (FROI) indicating that Claimant had reported an injury to her shoulders which she indicated occurred on January 30, 2020. The FROI, completed by supervisor Tom Palmer, indicates Claimant stated she sustained a strain while performing her normal work activities. Claimant was sent to Concentra Medical Center for evaluation. (Ex. A).

3. On February 18, 2020, Claimant saw Jonathan Joslyn, PA-C at Concentra. Claimant reported pushing a pallet jack and feeling pain in her right shoulder on January 30, 2020. Claimant indicated she had not been seen elsewhere for the injury. Mr. Joslyn noted tenderness in the superior and posterior right shoulder, with pain on flexion and abduction. Rotator cuff testing was negative. Mr. Joslyn diagnosed Claimant with a right shoulder strain, referred her for physical therapy, and assigned work restrictions including lifting up to 10 pounds, pushing/pulling up to 20 pounds, and no reaching above shoulders with her right arm. (Ex. 1).

4. Claimant returned for a recheck with Mr. Joslyn on February 20, 2020. Claimant reported feeling better although she reported some pain with overhead lifting. Claimant had tenderness in the posterior and superior shoulder and pain with flexion and abduction, with full range of motion. Rotator cuff tests, including Hawkin's, Neer and arm

drop tests were negative, with an equivocal painful arc. Claimant's work restrictions were slightly modified to limit pushing and pulling to 10 pounds. (Ex. 1).

5. Between February 25, 2020, and March 13, 2020, Claimant attended six sessions of physical therapy at Concentra. At Claimant's initial physical therapy appointment, she reported that she injured her work lifting a box from waist level up to an overhead shelf and felt pain in the back of her shoulder. Initial range of motion testing showed restrictions in right shoulder abduction, internal and external rotation. At the March 13, 2020 visit, Claimant's shoulder range of motion had progressed with only deficits of right shoulder external rotation noted. (Ex. C).

6. On March 3, 2020, Darla Draper, M.D., evaluated Claimant at Concentra. Claimant reported increased shoulder pain at night with pain going into her right upper back. Claimant reported that her right upper back had hurt since her injury. On examination, Claimant's right shoulder had full range of motion with the exception of a mild decrease on internal rotation. Claimant's Hawkin's test was negative with a painful arc, and Neer, drop arm and empty can tests were negative. (Ex. 1).

7. On March 18, 2020, Claimant reported to Mr. Joslyn that her arm pain was unchanged with radiation into the neck and shoulder. Claimant had full range of motion of the right shoulder, no muscle weakness, and negative rotator cuff tests, with an equivocal painful arc. (Ex. B).

8. On April 1, 2020, Claimant saw Mr. Joslyn reporting she was working modified duty and that she was experiencing a burning pain in her right shoulder. Claimant reported pain in the anterior and lateral shoulder, and her right shoulder range of motion was noted to be limited in all planes with pain. (Ex. B).

9. On April 10, 2020, Claimant attended a physical therapy appointment with Concentra which the records denominate as visit 7 of 12 appointments. Claimant reported pain along the posterior portion of the upper shoulder and into the midline of the back. Claimant indicated she was scheduled for an MRI in two weeks, although the provider ordering the MRI was not indicated. The physical therapy record does not indicate Claimant was discharged or that therapy was discontinued, nonetheless, Claimant did not attend any further physical therapy appointments at Concentra. (Ex. C).

10. On May 11, 2020, Claimant was seen at the emergency department at UC Health. Claimant reported that she had right shoulder pain with an onset over the previous two days. Claimant reported that she had an injury in January that she re-exacerbated while at work. Claimant reported that her shoulder was injured in January 2020 resulting from a fall, and that she had not followed up with a primary care provider. Claimant also reported that she had received therapy through worker's compensation. Shoulder x-rays performed at UC Health were interpreted as showing osteoarthritis. The ER physician referred Claimant for physical therapy. (Ex. 2).

11. On June 17, 2020, Claimant underwent an MRI of the right shoulder at Denver Health Radiology. The MRI was interpreted as showing a "large near complete full-

thickness tear of the supraspinatus tendon with 1.2 cm of tendon retraction and mild muscular atrophy. This is on the background of mild rotator cuff degeneration"; and "degenerative appearing labral tear." (Ex. 3). The MRI report does not identify the referring provider.

12. On September 23, 2020, an unidentified physician assistant completed a "Health Care Provider Medical Certification" related to Claimant. Based on the address of the physician indicated on the form it appears the form was completed by someone at Denver Health. The form indicates Claimant underwent surgery on August 27, 2020, for a "traumatic complete tear of right rotator cuff," with subsequent physical therapy and follow up visits. However, no other documentation was provided to the ALJ to identify the nature of the surgery or whether the unidentified treating physician had offered any opinion as to whether the surgery had arisen out of the course of Claimant's employment with Employer. (Ex. 5).

13. On October 22, 2020, Shannon Ortell, RN of Denver Health, issued a letter addressed to "To Whom It May Concern" indicating that Claimant may return to light duty work with no pushing, pulling, reaching, lifting, or carrying with the right shoulder or arm. (Ex. 4).

14. On February 17, 2021, Anthony Beardmore, M.D., issued a letter addressed to "To Whom It May Concern" indicating that Claimant may return to light duty work immediately, with lifting, pushing, and pulling restrictions, and no overhead work with the right arm. Dr. Beardmore's letter also indicates that Claimant would be re-evaluated in 3 months with expected lifting of restrictions. (Ex. 4). No other records from Dr. Beardmore were offered or admitted into evidence, and no other substantive information regarding Dr. Beardmore's role in Claimant's treatment was presented to the ALJ.

15. On February 25, 2021, Claimant underwent an independent medical examination with Mark Failinger, M.D., at Respondents' request. Dr. Failinger was admitted to testify as an expert in orthopedic surgery. By the time of Claimant's IME with Dr. Failinger, she had already undergone surgery on her right shoulder, although the exact nature of the surgery is unclear. Claimant reported to Dr. Failinger that her symptoms began when bringing a box weighing between 5 and 10 pounds from overhead. Claimant reported that she dropped the box and did not attempt to catch it as it fell to the floor. Dr. Failinger opined that it was not medically probable that Claimant retrieving the box from overhead would create any new pathology in her shoulder or aggravate any existing pathology. Similarly, he opined that merely reaching up to retrieve the box would not likely cause an acceleration of pre-existing pathology. Dr. Failinger also opined that it would be unlikely that Claimant would sustain a permanent aggravation or acceleration of pre-existing disease by pushing or pulling a pallet jack with her arms.

16. Claimant's testimony at hearing was presented through a translator. Claimant testified that on January 30, 2020, while standing on a ladder, she raised her arms overhead to reach a box that was situated on a high level and sustained an injury to her right arm and shoulder. Claimant testified that she informed her supervisor, Ivan O[Redacted], that she had hurt her shoulder, but that she did not wish to see a health

care provider, and that she would continue to work. Claimant testified that she later pulled a pallet jack and experienced pain in her shoulder again, and she again reported the injury to Mr. O[Redacted]. Claimant testified that Mr. O[Redacted] reported the incident to his supervisor, and then returned with a piece of paper with instructions for Claimant to be seen at Concentra.

17. Claimant testified that she was seen at Concentra on January 30, 2020. However, no medical records exist for that date of treatment. Claimant testified that after going to Concentra, she received physical therapy and treatment from Concentra and was provided with work restrictions. Claimant continued to perform her job, but was in pain. Claimant testified that her providers informed her that her insurance was "cancelled" and so she applied for Medicaid and received subsequent treatment through providers at Denver Health, including right shoulder surgery in August 2020. Claimant did not work again for Employer after June 15, 2020.

18. With respect to Claimant's testimony that she was seen at Concentra on January 30, 2020, the ALJ does not find Claimant's testimony to be credible. However, based on the testimony of Mr. O[Redacted] and the totality of the evidence, the ALJ finds that Claimant either confused the dates of treatment or conflated the events of February 18, 2020, with the events of January 30, 2020.

19. Ivan O[Redacted] testified that he was Claimant's supervisor and that Claimant reported to him that she had injured her right shoulder. Mr. O[Redacted] did not specify a date of this report. He testified that he asked Claimant if she needed to be seen for medical care, Claimant declined and continued to work that day. Mr. O[Redacted] testified that Claimant did not offer an explanation as to how her shoulder was injured. Mr. O[Redacted] also testified that Claimant came to him a second time about her shoulder, and he reported the incident to his supervisor, and Claimant was sent to Concentra for evaluation. Again, Mr. O[Redacted] did not provide a date for the second report. Based on the date of the FROI, and the totality of the evidence, the ALJ infers that the second report occurred on or about February 18, 2020.

20. Mr. O[Redacted]'s testimony is consistent with Claimant's testimony that she sustained an injury to her right shoulder and reported that injury to Mr. O[Redacted] on or about January 30, 2020, that Claimant initially declined medical care, and later reported the injury in February 2020 and sought and received medical care at Concentra.

21. The parties stipulated that if Claimant were found to have a compensable injury, Concentra would be considered Claimant's authorized treating physician (ATP).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

"Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City*

Market, W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right shoulder arising out of the course of her employment with Employer on January 30, 2020. The evidence demonstrates that Claimant sustained a right shoulder strain on or about January 30, 2020, and reported the injury to her supervisor, Mr. O[Redacted], on that date. Although Claimant refused medical care on that date, she credibly testified that she had no prior issues with her shoulder and was able to perform her job duties prior to January 30, 2020, without pain. Claimant subsequently reported an aggravation or second incident causing pain in the right shoulder on February 18, 2020, and was seen by a health care provider on that date and diagnosed with a right shoulder strain. Although, Claimant described her mechanism of injury in various ways, a claimant is not required "to understand the exact mechanism of the injury to prove a compensable injury, nor is [a claimant] required to explain in the medical, physiological, or anatomical terms of an expert the way in which the accident resulted in the symptoms." *In Re Montoya*, W.C. No. 4-633-835 (ICAO, April 26, 2006). The ALJ concludes that Claimant has established that it is more likely than not that she sustained a right shoulder strain arising out of the course of her employment with Employer on January 30, 2020.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has established a compensable injury, Claimant has established by a preponderance of the evidence that she is entitled to a general award of medical benefits.

SPECIFIC MEDICAL BENEFITS (RIGHT SHOUDLER SURGERY)

The Act imposes upon respondents the duty to furnish medical treatment "as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury." § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). In addition, the duty to furnish medical treatment includes furnishing treatment for conditions representing a natural development of the of the industrial injury, providing compensation for incidental services necessary to obtain the required medical care, and "paying for treatment of unrelated conditions when such treatment is necessary to achieve optimum treatment of the industrial injury." *In re Claim of Walling,* W.C. No. 4-760-050-02 (ICAO, Dec. 10, 2013) (internal citations omitted). Diagnostic procedures are also compensable if they are reasonably necessary to the provision of treatment designed to cure and relieve the effects of the injury*. Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). An "expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition." *In re Abeyta*, W.C. No. 4-669-654 (2008). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has failed to establish that her right shoulder surgery performed at Denver Health in August 2020 was reasonably necessary to cure or relieve the effects of her right shoulder strain. Claimant underwent an undetermined surgery on her right shoulder in August 2020 at Denver Health. Although an MRI demonstrated pathology in Claimant's right shoulder, Claimant offered no evidence as to the nature of the surgery performed, the rationale for the surgery and whether the surgery was reasonably necessary to address Claimant's shoulder strain, or whether the pathology demonstrated on the MRI was related to Claimant's employment. Claimant offered no medical records from Denver Health and no testimony from any health care provider to support a finding that the August 2020 surgery was reasonably necessary to cure or relieve the effects of the injury she sustained in January 2020 or that the pathology addressed during the surgery was work-related. The ALJ credits the testimony of Dr. Failinger that the mechanisms of injury described by Claimant would not be likely to cause the Claimant's shoulder pathology for which surgery was apparently performed. The ALJ concludes that Claimant has not established by a preponderance of the evidence that her right shoulder surgery was related to her January 2020 work injury.

AUTHORIZED TREATING PROVIDER

Section 8-43-404(5)(a), C.R.S. gives the respondents the right in the first instance to select the ATP. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997). Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999).

However, respondents may by their conduct or acquiescence waive the right to object to a change of physician. A claimant "may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion." *Greager v. Industrial Commission,* 701 P.2d 168, 170 (Colo. App. 1985); *see also, Brickell v. Business Machines, Inc.,* 817 P.2d 536 (Colo. App. 1990). Thus, where an employer directed the claimant to file a PIP claim rather than a workers' compensation claim, the compensation carrier waived any subsequent right to object to a change of physician authorized by the PIP carrier. *McLaughlin-Kramer v. Capital Pacific Homes,* W.C. No. 4-491-883 (I.C.A.O. June 20, 2002); *aff'd., Capital Pacific Homes v. Industrial Claim Appeals Office,* (Colo. App. No. 02CA1367, May 15, 2003) (not selected for publication).

Claimant has failed to establish that Denver Health constitutes an authorized treatment physician. On February 18, 2020, Claimant was referred to Concentra and received treatment from Concentra. Claimant presented no persuasive evidence that she was discharged from Concentra or that treatment a Concentra was denied. Further, Claimant presented no persuasive evidence indicating that Respondents conveyed to her the impression that she was entitled to change physicians to Denver Health.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her right shoulder in the nature of a shoulder strain on or about January 30, 2020.

2. Respondent shall pay for medical benefits that are reasonably necessary to cure or relieve the effects of Claimant's January 30, 2020, shoulder strain.

3. Claimant has failed to prove by a preponderance of the evidence that shoulder surgery performed at Denver Health in August 2020 was reasonably necessary to cure or relieve the effects of her January 30, 2020 shoulder strain, and her

request that Respondents pay for the August 2020 shoulder surgery is denied and dismissed.

4. Denver Health is not an authorized treating health care provider.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-125-130-001

ISSUES

The issues set for determination included:

- Is Claimant entitled to mileage reimbursement from August 29, 2019 to March 16, 2020?

STIPULATION

Respondent-Employer agreed to pay reimbursement for 1,109 miles in the sum of $587.77. Respondent agreed that this amount will be sent to the Claimant. The Court accepted this Stipulation and it is made part of this Order.

FINDINGS OF FACT

1. Claimant has worked for Employer since December 1, 1995.

2. On May 21, 2019, Claimant sustained an admitted industrial injury. The date of injury was before the amendment to W.C.R.P. 16-9(E). Claimant required medical treatment for this injury and these benefits were paid.

3. Claimant testified the adjuster assigned to his case was Tyler.

4. Claimant said he used his own vehicle to attend doctors appointments, which was the basis for his mileage request. There was no dispute that these appointments were with ATP-s providing treatment to cure and relieve the effects of Claimant's work injury.

5. The Worker's Compensation Rules of Procedure, specifically Rule 16-9(E) was amended, effective January 1, 2020. The new rule required mileage reimbursement requests to be submitted within 120 days.

6. Prior to January 1, 2020, Rule 16-9(E) imposed no such 120-day limitations period. See Rule 16-9(E), W.C.R.P. (2019).[1] The Director duly issued public notices of the proposed rule changes prior to their enactment. [2]

7. There was no evidence in the record which stated whether the Director intended for the amendment to Rule 16-9(E) was to be applied retroactively or prospectively.

[1] Exhibit B.

[2] *Id.*

8. The amendment to W.C.R.P. 16-9(E) affected Claimant's right to receive mileage reimbursement for trips to medical appointments with ATP-s.

9. Respondent did not send notification of the rule change to Claimant.

10. On or about July 16, 2020, Claimant sent a request for mileage reimbursement to Respondent-Employer.[3]

11. Claimant's request for mileage reimbursement was based upon his treatment with authorized medical providers.

12. Respondent sent Claimant a letter, dated August 12, 2020, notifying Claimant that it would reimburse Claimant only for that mileage incurred from March 16, 2020, and thereafter.

13. Claimant testified that he was not aware that the rule regarding submissions of mileage reimbursement requests was changed. He said the adjuster, Tyler, never informed him of any limitations on when mileage reimbursements could be submitted. Claimant also stated he was never informed that the time for submission had changed by the passage of the change of Rule 16-9 (E), W.C.R.P.

14. Good cause existed to excuse Claimant from the 120-day time limitation to submit mileage reimbursement in the new rule.

15. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

[3] Exhibits 1 and A- mileage reimbursement request.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Mileage Reimbursement

In this case, Claimant argued he relied on the instruction by the adjuster for Respondent, which did not provide information that there was a time limitation for submission of mileage reimbursement. Claimant also asserted that a strict application of the 120-day limit in the revised rule was not consistent with the beneficent purpose of the Act.

Respondent argued that amended rule precluded submission of mileage reimbursement request beyond the 120 days. Respondent also asserted that the change to Rule 16-9 (E) was a change that was procedural in nature, as it did not "create, change, or eliminate vested rights or liabilities", but prescribed the means by which a Claimant pursued claims for mileage reimbursement. Respondent cited *Shell Western E&P, Inc. v. Dolores County Board of Commissioners*, 948 P.2d 1002, 1012 (Colo. 1997) and *Rosa v. Industrial Claim Appeals Office*, 885 P.2d 331, 334 (Colo. App. 1994). Finally, Respondent argued Claimant did not set forth sufficient facts to show good cause to excuse the untimely submission of the request for mileage reimbursement.

The ALJ concluded first that Claimant made a sufficient showing of good cause to allow reimbursement beyond the 120-day limit. Second, the ALJ found this situation was analogous to one where the Act was amended and it affected Claimant's right to receive benefits.

As a starting point, the right to mileage reimbursement is incidental to medical benefits a Claimant receives, pursuant to § 8-42-101, C.R.S. However, this section does not explicitly reference mileage reimbursement. The right to mileage reimbursement is codified in § 8-43-203(3)(c)(IV), C.R.S. (2019), which details what information a Respondent-Employer must provide to an injured worker, including a brochure which states:

"Description of the claimant's right to receive benefit payments, including the claimant's right to receive:

. . . Mileage expenses for travel to and from work-related medical care and to and from pharmacies to obtain medical prescriptions for work-related medical care; . . .."

As determined in Findings of Fact 5-6**,** W.C.R.P. Rule 16-9(E) was amended, effective January 1, 2020.[4] This provision governs the submission of mileage reimbursement requests and provides:

> "Injured workers shall submit requests for mileage reimbursement within 120 days of the date of service or reimbursement may be denied unless good cause exists."

The ALJ notes language of amendment to the rule is mandatory with the presence of the word "shall" in the requirement that a mileage reimbursement request be submitted with 120 days. This provision did not explicitly state whether it applied to injuries before or after the change to the rule. There was no evidence in the record which established what the Director's intent was on the subject. (Finding of Fact 7). "Good cause" is not defined by the rule and no Colorado appellate court has construed this provision. Neither Claimant nor Respondent cited an appellate case which defined what a proper "good cause" showing would be under these circumstances. Indeed, there is not clear authority as what constitutes "good cause" under the rule. When considering the evidence before the Court, the ALJ concluded that Claimant's testimony that he was in contact with the adjuster and was not informed of any change in the rule was a fact that supported finding that good cause was present not to apply the 120-day limitation. (Findings of Fact 13-14).

In addition, the ALJ reasoned that where the Act has the requirement that Respondent provide information to Claimant regarding his rights to receive mileage reimbursement, it follows that Claimant should have been informed of the rule change. As found, Claimant was not informed of the change to Rule 16-9(E). (Finding of Fact 9). Accordingly, the ALJ concluded Claimant had shown good cause to allow for submission of a mileage reimbursement request outside the 120-day time limit.

The second rationale supporting this decision was that this rule change was akin to a substantive amendment of the Act. In this regard, the ALJ concluded that the right to mileage reimbursement was inextricably linked to medical benefits. (Finding of Fact 4). On the question of whether the rule change should be applied prospectively or retrospectively, the ALJ noted the change in the rule did not specify whether the change was prospective or retrospective in nature. Therefore, the ALJ analyzed the rule changes using the same framework as when a provision of the Act was amended concerning benefits.

Absent legislative intent to the contrary, a statute is presumed to be prospective in its operation. § 2–4–202, C.R.S. (2009); *Ficarra v. Dep't of Regulatory Agencies*, 849 P.2d 6, 13 (Colo.1993). Unless a contrary intent is expressed, statutory changes in procedural law are applicable to existing claims while changes in substantive law generally apply only prospectively. *People in Interest of S.B.,* 742 P.2d 935 (Colo.App.1987). In *In Re Estate of DeWitt*, 54 P.3d 849, 854 (Colo.2002), the

[4] The current version of Rule 16-9(E), effective January 1, 2021, does not have the 120-day time limitation.

Colorado Supreme Court conducted an analysis of when a statute could be applied retrospectively and when that was constitutional. A vested right is one with an independent existence, which is no longer dependent for its assertion upon the common law or statute under which it was acquired. *Specialty Restaurants Corp. v.* Nelson, 231 P.3d 393, 399 (Colo. 2010).

"Determining whether a statute violates the prohibition on retrospective application of laws requires a two-step inquiry; the reviewing Court first must determine whether the General Assembly intended the challenged statute to operate retroactively, then, if retroactive application was intended, the Court must determine whether the challenged statute is unconstitutionally retrospective in that it takes away or impairs a vested right acquired under existing laws". *Div. of Child Support Enf't v. Indus. Claim Appeals Off. of State of Colo.*, 109 P.3d 1042, 1043 (Colo. App. 2004).

The promulgation of rules governing the WCA is a quasi-legislative function that the General Assembly has delegated to the DOWC. Thus, the DOWC's rulemaking is subject to the prohibition against retrospective legislation found in Colo. Const. art. II, § 11. See *Abromeit v. Denver Career Serv. Bd*., 140 P.3d 44, 50 (Colo. App. 2005). "For legislation to be given retroactive effect without being unconstitutional, it must clearly be the intent of the General Assembly to do so…" *Shell Western E & P, Inc. v. Dolores County Board of Commissioners*, 948 P.2d 1002 (Colo. 1997); *Villa at Greeley, Inc. v. Hopper*, 917 P.2d 350 (Colo.App.1996). Such principles also apply here to a change in the rules governing Claimant's right to mileage reimbursement made by the DOWC.

Courts generally presume that if the General Assembly or Rulemaking agency intended the statute to achieve a particular result, it would have employed terminology clearly expressing that intent. *See Colorado Consumer Health Initiative v. Colorado Bd. of Health*, 240 P.3d 525, 531 (Colo. App. 2010). In the present case, there is nothing in the four corners of the rule to indicate that Rule 16-9(E) was meant to be applied retrospectively. The only reference to time in the proposed rules is not in the language of the rule itself but on the proposed rule document itself which stated that the proposed rules were to become effective January 1st, 2020. *Ex. B*.

In *Lobato v. Industrial Claim Appeals Office*, 105 P.3d 220, 223–24 (Colo. 2005). the Colorado Supreme Court found that the General Assembly intended a statute of limitations to apply retrospectively when an amendment to the law in question explicitly stated it would apply to cases from prior to the effective date of the amendment and it used language describing the amendment as "remedial and procedural" in nature*. Lobato v. Industrial Claim Appeals Office*, *supra*, 105 P.3d at 227. Further, the Court also found legislative history which pointed to legislative intention for retrospective application of the statute of limitations. *Id.* Specifically, the bill's sponsors testified to the bills retrospective purpose as being to "get cases off the books." *Id.* Despite this clear legislative intent to apply the statute of limitations retrospectively, the Court declined to do so, indicating that it conflicted with the parallel legislative intent to provide adequate procedural notice to Claimants. *Id*. at 226.

In contrast to the current case, no language in Rule 16-9(E) expressly points to an intention by the DOWC to apply the rule retrospectively. Nor was there any evidence in the record which points to any findings or history in which the DOWC intended the rule to apply retrospectively. Instead, like *Lobato v. Industrial Claim Appeals Office*, there is statutory evidence that the General Assembly intended for workers' compensation Claimants to receive accurate notice of their rights to reimbursement provided by employers or insurers. See § 8-43-203(3)(c)(4), C.R.S. (2019). Further, as previously noted, the only codification of the right to mileage reimbursement is notice of the right, signaling the importance the General Assembly placed on notice of procedural rights. Therefore, because there is no clear intention for Rule 16-9(E) to apply retrospectively, it is unnecessary to continue to the second part of the retrospectivity analysis because both prongs of the test are required to defeat the presumption of prospective application of the law. See *Div. of Child Support Enf't* 109 P.3d at 1043.

Respondent relied on *People in Interest of S.L.H,* 736 P.2d 1226, 1228 (Colo.App.1986) to analogize to a situation in which the Court of Appeals held a statute of limitations ("SOL") applied to a cause of action which occurred prior to the passing of the SOL. As the Court of Appeals made clear, its decision was made primarily because of public policy concerns around protecting the family unit. The Court noted:

> "Such a time limitation is well within the General Assembly's power to enact… and furthers the public policy of maintaining stability in the family unit and providing children with a means of support by limiting the time within which challenges to the presumption of fatherhood must be brought".

Both the factual and legal context are different in the case at bench. The public policy concerns identified by the Court in *People in Interest of S.L.H, supra* are vastly different than those present in this case, which involves the payment of compensation for an already admitted injury, rather than the maintenance of a family unit. Further, *People in Interest of S.L.H* was decided prior to the Colorado Supreme Court announcing its review standard for retrospective statutes in *Ficarra* and, therefore, is not controlling. Finally, there was no evidence that Rule 16-9(E) was intended by the DOWC to be retrospective, which is the first part of the modern retrospectivity analysis. Many of the cases referenced by Respondent had some legislative intent to have the pertinent laws to apply retrospectively, whereas none is present here.

ORDER

It is therefore ordered:

1. Respondent shall pay mileage reimbursement from August 29, 2019 to March 16, 2020, as requested by Claimant.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 5-026-699-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

NON-INSURED,

Non-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 17, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 6/17/21, Google Meets, beginning at 8:30 AM , an ending at 12:00 PM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq.. Respondent was represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 19 were admitted into evidence, without objection. Respondents’ Exhibits A through E were admitted into evidence, without objection. There was sworn testimony by the Claimant and Marty Soudani, principal of the Employer.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondent, which was filed, electronically, on June 24, 2021. On June 28, counsel for the Claimant filed objections to the proposed decision in the form of alternative proposed findings, etc., without specifically pinpointing his objections. Nonetheless, the ALJ will consider certain alternative fact findings proffered as objections. After a consideration of the proposed decision and Claimant's alternative findings, the ALJ has modified both items and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the amount of penalties to be imposed on the Employer for not timely paying under the parties' Settlement Agreement (as defined below) and not timely paying those penalties, considering Employer's ability and/or inability to pay.

The Employer bears the burden of proof, by a preponderance of the evidence, on the issue of ability to pay. The Claimant bears the burden of proof, by preponderant evidence, on the issue of aggravating factors.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture/Findings

1. On September 28, 2016, the Claimant filed a Claim for Compensation related to an incident that occurred on August 31, 2016 (Claimant's Exhibit 1).

2. On October 24, 2017, the Division of Workers' Compensation (hereinafter DOWC) approved a Settlement Agreement between the parties (Claimant's Exhibit 2 -- the "Settlement Agreement").

3. Pursuant to the terms of the Settlement Agreement paragraph 9(A)(2), the Employer's payments to the Claimant "shall be delivered to the office of the Claimant's attorney by mail or hand delivery by no later than the 1st day of each month." The Employer failed to make any payments to the Claimant as provided in the Settlement Agreement (Claimant's Exhibit 2).

4. On June 29, 2018, the Claimant filed a Motion Regarding Enforcement of Settlement Agreement and Penalties (Claimant's Exhibit 3).

5. The Director of the DOWC entered a Director's Order, dated September 10, 2018. The Employer raised a constitutionality argument regarding the excessiveness of the penalties requested under *Colorado Department of Labor and Employment v. Dami Hospitality LLC and Indus. Claim Appeals Office,* 442 P. 3d 94 (Colo. 2019). The Director found Employer's actions reprehensible stating, "[e]ven accepting Respondent's contention that the financial difficulties arose spontaneously following approval of the agreement, the conduct in this matter was still reprehensible." The conduct of Employer demonstrated to the Director that it knew or should have known that it could not comply with the Settlement Agreement the parties entered. Claimant had twice withdrawn her applications for hearing on disputed benefits and that

Employer had unfairly deprived Claimant of her legal rights and needlessly burdened the workers' compensation system. The Director imposed various penalties totaling $71,940 based on the penalties outlined in paragraph 9(A)(2) of the Settlement Agreement (Claimant's Exhibit 8).

6. The Employer did not comply with the September 10, 2018 Director Order. On November 7, 2018, the Director, *sua sponte* entered a Director's Order directing the Employer to show caused why additional penalties should not be imposed due to non-payment of the penalties imposed on September 10, 2018 (Claimant's Exhibit 9).

7. On December 10, 2018, the Director imposed additional penalties of $71.94 per day. The Director found that Respondent had failed to timely appeal the Director's Order dated September 10, 2018. "Once Respondent failed to properly file the petition to review, the Industrial Claims Appeals Office was deprived of jurisdiction to review the order." The imposition of the $71,940 penalty became final and the Director ordered a daily penalty equal to one percent of the total penalties imposed until Employer complied with the September 10, 2018 order (Claimant's Exhibit 10)

8. Thereafter, the Employer filed a petition to review the December 10, 2018, Director's Order. The Director then issued a Director's Supplemental Order, dated March 8, 2019, rejecting the petition to review (Claimant's Exhibit 11).

9. The Employer then timely appealed to the Industrial Claim Appeals Office (ICAO), which, on June 14, 2019, affirmed in part and reversed the Director's orders, holding that the Director did not err in denying a retroactive extension of time to file a petition to review the Director's Order dated September 10, 2018, but erred in refusing to consider the Employer's ability to pay when assessing penalties under *Colorado Dep't of Labor & Empl. v. Dami Hospitality, LLC* (Claimant's Exhibit 12).

10. On February 6, 2020, the Director issued a Director's Order on Remand directing the Employer to file written materials concerning the penalties imposed on October 31, 2018 (Claimant's Exhibit 13).

11. On April 8, 2020, the Director entered the Director's Second Order on Remand, finding the imposition of a $71.94 per day penalty to be appropriate. The Director invited the Employer to submit evidence of its ability to pay. The Employer did not file an application for hearing, though it requested "an evidentiary hearing." In rejecting the Employer's argument over the excessiveness of the daily penalty, the Director stated,

> To accept Respondent's position that the validity of a penalty should be considered based on the aggregate would permit any party to merely ignore a daily penalty until the aggregate reached an excessive amount. At the time the initial order imposing this penalty was issued, the aggregate penalty was $2,949.54.
>
> (Claimant's Exhibit 15).

12. The Employer again timely filed a petition to review the Director's Second Order on Remand, and the Director then issued a Director's Supplemental Order on Remand, dated June 23, 2020. The Director did not hold an evidentiary hearing to determine whether daily penalties in the amount of $71.94 was unconstitutionally excessive (Claimant's Exhibit 16).

13. On September 11, 2020, ICAO remanded the matter, determining that the Director erred in refusing to hold an evidentiary hearing. The court noted that the *Dami Hospitality* decision had been reversed by the Colorado Supreme Court [*Colorado Department of Labor and Employment v. Dami Hospitalty LLC and Indus. Claim Appeals Office, supra*] and therefore the Director erred in failing to hold an evidentiary hearing on the Employer's ability to pay the $71.94 daily penalty imposed (Claimant's Exhibit 17).

14. The *Dami Hospitalty* Supreme Court concluded that the proper test to assess the constitutionality of government fines under the Eighth Amendment is that set forth by the U.S. Supreme Court in *United States v. Bajakajian*, 524 U.S. 321, 334, 118 S.Ct. 2028, 141 L.Ed.2d 314 (1998), which requires an assessment of whether the fine is grossly disproportional to the offense for which it is imposed. An analysis of the malfeasor's ability to pay is necessary to determine proportionality. To make such an analysis, an evidentiary hearing was necessary and it was held on June 17, 2021.

15. On November 17, 2020, the Director issued another Supplemental Order on Remand directing an evidentiary hearing be held on the Employer's ability to pay $71.94 per day in penalties, and with ultimate jurisdiction remaining with the Director. *See* Claimant's Exhibit 18).

Findings Concerning Employer's Situation, Based on Evidentiary Hearing

16. The Employer has paid all but $2,000.00 of the amounts due under the Settlement Agreement (Claimant's Exhibit 19).

17. Since at least 2015, the Employer has not realized a profit in all but 2 years (Employer's Exhibit A to E). Even in those years in which the Employer's balance sheet shows positive net income, those figures do not show an actual profit for the Employer's President and sole shareholder, Marty Soudani. Soudari extended substantial loans to the Employer to keep it afloat.

18. The COVID-19 pandemic and the stay-at-home orders, beginning in approximately March of 2020, caused the Employer to, for all intents and purposes, shut down its operations until just recently the past few months. During that time, the Employer was unable to take on new, revenue-generating work and was forced to outsource its existing work, at a loss, to business in states not affected by stay-at-home orders. With the easing of the COVID-19-related business restrictions, the Employer has realized only modest revenues that do not come close to meeting its overhead and

other company financial obligations, regardless of whether or not the penalties previously imposed by the Director are included.

19. Soudani has liquidated essentially all of his personal assets in order to keep the Employer operating and to make payroll (presently the Employer employs approximately 9 individuals). Indeed, Soudani does not own or rent a home, but instead resides in the commercial unit out of which the Employer operates. The ALJ finds Soudari credible in his exposition of the company's financial situation.

20. The Employer is insolvent and the Employer realizes negative net income without any profits. Any profits that may be realized are invested back into the company to keep it operating and to make payroll.

21. Soudani illustrated a new found sense of good faith in his stated intentions to complete the terms of the Settlement Agreement, despite the prolonged failure to make payments for ten months.

22. The first payment pursuant to the Settlement Agreement was to be delivered to the Claimant's attorney's office by the first of each month. The Claimant waited ten months and only after the Claimant filed a Motion Regarding Enforcement of Settlement Agreement and Penalties against the Employer was the first installment payment was made.

Findings Concerning Claimant's Situation

23. The Claimant has been unable to work while she awaited payment of the proceeds pursuant to the settlement agreement. The Claimant was forced to sell her vehicle and other belongings in order to survive. Out of financial necessity, the Claimant made an unplanned moved to South Dakota, where she currently resides near her family for support.

Ultimate Findings

24 The ALJ finds both Soudani and the Claimant credible. There is no dispute concerning the extreme financial situations of the Employer and the Claimant.

25. The ALJ infers and finds that Soudani could have chosen to take the Employer into Chapter 7 or Chapter 13 Bankruptcy, where everyone would lose, but Soudani chose to honor his obligation to the Claimant and to pay reasonable penalties within his ability to pay and to continue doing business..

26. Weighing the extreme situations of both the Employer and the Claimant, in terms of aggravation/mitigation, the ALJ finds that the Employer is capable of completing the Settlement Agreement by paying the remaining $2,000 within thirty (30 days of the date of this decision; plus, paying aggregate penalties of $9,200 in equal monthly installments of $2,300, the first payment to be made on or before August 19, 2021, and succeeding monthly payments of $2,300, continuing until the full sum of

$9,200 has been paid in full, 90% of penalties, or $8,200, apportioned to the Claimant and $1,000 apportioned to the Colorado Uninsured Employer Fund, pursuant to §8-43-304 (1), C.R..S, or $2,070 per month, payable to the Claimant ;and, $230 per month, payable to the Colorado Uninsured Employer Fund.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, both Soudani and the Claimant were credible. There is no dispute concerning the extreme financial situations of the Employer and the Claimant.

Excessive Fines and the Gross Disproportionality Test

b. In *Colorado Dep't of Labor & Empl. v. Dami Hospitality, LLC*, 442 P.3d 94 (Colo. 2019), the Colorado Supreme Court held that the excessive fines clause of the 8th amendment to the U.S. Constitution applies to administrative penalties, such as those in contention herein, and it protects corporations as well. The *Dami* court also adopted the "gross disproportionality" test to analyze whether a fine is unconstitutionally excessive. Under that test, the following factors should be considered: "whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions", as well as the ability of the entity fined to pay. Based on these factors, the ALJ concludes that the penalties previously imposed by the Director in the Director's Orders dated September 10, 2018, and December 10, 2018 were unconstitutionally excessive. First and foremost, when considered based on the daily rate of the penalties, the penalties far exceed the Employer's ability to pay. Indeed, at the daily rate imposed, payment of the penalties could force Employer to shutter, in which case, no party will be better off—Claimant will not receive any further payments and Employer will have to lay off its workforce. Also, the Employer could be forced into Chapter 7 or 13 bankruptcy, in which case everyone loses.

c. The ALJ concludes that the gravity of the offense is not that substantial in relation to the rate of the penalties. As found, the testimony of Soudani that He/the Employer had every intention to make good on the Settlement Agreement but due to a series of errors and circumstances beyond his control, he was simply unable to do so. Further, as found, the Employer's non-payment of the penalties is not due to any willful flouting of the Director's Orders, but due to the Employer's dire financial situation at the time.

d. Although the Employer failed to timely appeal the Director's Order dated September 10, 2018, after an evidentiary hearing, the ALJ jurisdiction and authority to re-open the matter and vacate the Director's Order dated December 10, 2018, because it was properly on appeal and remand before the ALJ herein.. *See Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 24 P.3d 1, 2 (Colo. App. 2000). As such, the ALJ concludes the fines previously assessed were unconstitutionally excessive.

Burden of Proof

e. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). Unless clearly specified by statute, the burden is by a preponderance of the evidence. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). In this case the burden is on the Employer to show the extenuating circumstances, as found herein above, establishing an inability to pay. The burden is on the Claimant to establish the harm caused by the delay in payment, as found herein above.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Employer shall completing the Settlement Agreement by paying the remaining $2,000 within thirty (30 days of the date of this decision to the Claimant; plus, paying aggregate penalties of $9,200 in equal monthly installments of $2,300, the first payment to be made on or before August 19, 2021, and succeeding monthly payments of $2,300, continuing until the full sum of $9,200 has been paid in full, 90% of penalties, or $8,200, apportioned to the Claimant and $1,000 apportioned to the Colorado Uninsured Employer Fund, pursuant to §8-43-304 (1), C.R..S, or $2,070 per month, payable to the Claimant and, $230 per month, payable to the Colorado Uninsured Employer Fund.

B. Any failure of the Employer to make timely payments, as specified herein above, shall result in additional penalties to be considered after an evidentiary hearing.

C. Respondent-Employer shall pay the Claimant, apportioned at 90%, to the Claimant and 10% to the Colorado Uninsured Employer Fund, statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 6th day of July 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-079-988-005

ISSUE

1. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from June 19, 2018, until December 23, 2018.

2. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

PROCEDURAL HISTORY

The ALJ takes judicial notice of the following procedural history based on Office of Administrative Courts records and files. See *Habteghrgis v. Denver Marriott Hotel*, W.C. No. 4-528-385 (ICAP, March 31, 2006) ("A court can take judicial notice of its own records and files."):

1. On March 11, 2021, Claimant filed an Application for Hearing in WC 5-079-988-005. The Application for Hearing was mailed to Employer, at [Redacted], LLC, 5820 S. Parker Road, Aurora, CO 80015. Subsequently, Claimant's counsel sent a request to the Office of Administrative Courts (OAC) requesting that the OAC select a hearing date pursuant to OACRP Rule 8.I., because Respondents had not responded to the Application for Hearing.

2. On April 7, 2021, the Office of Administrative Courts (OAC) sent a Notice of Hearing to Claimant and to Respondent Claimant's counsel and to Respondent at [Redacted], LLC, 5820 S. Parker Road, Aurora, CO 80015 and [Redacted], LLC, 11133 S. Parker Road, Parker, CO 80134 providing notice that this matter that this matter was scheduled for hearing on June 10, 2021, at 8:30 a.m.

3. Respondent did not respond to the Notice of Hearing, and has not appeared or otherwise participated in this matter. Respondent did not appear for hearing on June 10, 2021.

4. A hearing was previously held in W.C. 5-079-988-002 on July 2, 2020, before ALJ Felter. In the Findings of Fact, Conclusions of Law and Order associated with that hearing, ALJ Felter found that Respondent received proper notice of hearing by virtue of mailing of the notice of the hearing to Respondent at [Redacted], LLC, 5820 South Parker Road, Aurora, Colorado 80015. The ALJ finds that the official Notice of Hearing for the present matter was sent to the same address, and the OAC has no record that the Notice of Hearing was returned as undeliverable or otherwise not delivered by the U.S. Postal Service. Therefore, there is a presumption of receipt which has not been overcome, and the ALJ finds that the Respondent received proper notice of the June 10, 2021 hearing and failed to attend or otherwise participate.

Relevant Facts

5. Claimant was employed as the general manager of Employer's restaurant. On June 17 and 18, 2018, Claimant sustained an injury to his back while moving supplies from a delivery truck into the restaurant.

6. On July 2, 2020, Claimant had a hearing before ALJ Felter regarding this matter. The ALJ takes judicial notice of the July 22, 2020 Findings of Fact, Conclusions of Law and Order ("FFCL") issued in that matter. In the July 22, 2020 FFCL, ALJ Felter found that Claimant sustained a compensable injury to his lower back on June 17 and 18, 2018. The injury arose out of and in the course of Claimant's employment with Employer and the injury was not intentionally self-inflected. ALJ Felter also found that Employer failed to insure its liability for workers' compensation.

7. At the time of Claimant's injury, Claimant earned $1,900.00 in wages, with an average weekly wage of $950.00. (Ex. A).

8. Between June 19, 2018, and December 24, 2018, Claimant did not work for any employer.

9. Claimant testified that he was informed by Employer that if he did not return to work after June 18, 2018, he would be deemed to have abandoned his job. Employer did not further communicate with Claimant, did not respond to phone calls, and did not provide Claimant with workers' compensation benefits.

10. The ALJ credits Claimant's testimony that he was seen by Dr. Oswald Grenado and also at Mountain Pain Clinic and was advised that if he were to return to work, he would be in danger of soiling himself. Claimant testified that Dr. Grenado took Claimant off work. The ALJ infers from Claimant's testimony that due to his work injury, he was unable to perform the functions of his position with Employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge.

University Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

TEMPORARY TOTAL DISABILITY

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

The Workers' Compensation Act prohibits a claimant from receiving temporary disability benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006).

"Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment." *Gilmore*, 187 P.3d at 1132. "Generally, the question of whether the claimant acted volitionally, and therefore is 'responsible' for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances." *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987); *Windom v. Lawrence Construction Co.*, W.C. No. 4-487-966 (November 1, 2002). *In re Olaes*, WC. No. 4-782-977 (ICAP, April 12, 2011). Implicit in the termination statutes is a requirement that Respondents prove Claimant committed an "act" which formed the basis for his termination. Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits for the period of June 19, 2018, to December 23, 2018. Claimant's testimony that he was unable to work was credible and unrebutted. When Claimant returned to work on December 24, 2018, the causal connection between Claimant's loss of earning capacity and his work injury was severed, and Claimant's entitlement to TTD benefits ended at that time. Claimant also established by a preponderance of the evidence that he was terminated from his position with Employer on or about June 19, 2018. No evidence was presented to establish that Claimant was responsible for his termination. Accordingly, that ALJ finds that Claimant has established entitlement to TTD benefits from June 19, 2018, to December 23, 2018.

AVERAGE WEEKLY WAGE

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp.*, *supra*.

As found, Claimant's average weekly wage as of the date of his injury was $950.00 per week.

ORDER

It is therefore ordered that:

1. Claimant is entitled to temporary total disability benefits from June 19, 2018, to December 23, 2018.

2. Claimant's average weekly wage for the purpose of calculating temporary total disability benefits is $950.00.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 7, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that she suffered an injury arising out of and in the course and scope of her employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment she has received from Mountain Family Health Centers is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that recommended physical therapy is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

4. At the hearing, the parties agreed that the remaining endorsed issues are reserved for future determination, if necessary. Those reserved issues are: average weekly wage (AWW), temporary total disability (TTD) benefits, temporary partial disability (TPD) benefits, and whether the claimant is responsible for the termination of her employment.

FINDINGS OF FACT

1. The claimant worked at the employer's hotel as a housekeeper. The claimant's job duties included all aspects of cleaning hotel rooms. Housekeepers are expected to take out the trash.

2. The claimant testified that she suffered an injury on August 22, 2020. The claimant testified that while placing bags of trash in a dumpster, she felt as though a "bone came disengaged from [her] back". The claimant further testified that she then felt pain in her right wrist while closing a window.

3. The claimant testified that on August 22, 2020, she told Mr. G[Redacted], Guest Services Manager, that she suffered an injury, but that Mr. G[Redacted] refused to write an accident report. The ALJ does not find this testimony to be credible or persuasive.

4. On August 22, 2020, the claimant was presented with a write-up for not taking out the trash. The claimant refused to sign the write-up. The claimant completed her shift on August 22, 2020. The claimant continued working for the employer until early October 2020.

5. On September 27, 2020, the employer presented the claimant with another write-up. The reason for the write-up was the claimant's failure to clean behind a bathroom door. This infraction was discovered because the hotel guest had left clothing behind the door. This write-up was identified as a "final warning". The claimant refused to sign this write-up.

6. Mr. G[Redacted] testified at the hearing. He testified that the claimant did not report an injury to him on August 22, 2020. Mr. G[Redacted] testified that on October 5, 2020, the claimant reported that she was having pain in her wrist and shoulder. In the October 5, 2020 incident report, the date of the claimant's injury was identified as October 2, 2020. In that same report, the nature, cause, and location of the injury/incident are identified as "unknown".

7. On October 7, 2020, the claimant received medical treatment at Valley View Hospital Association for her right upper extremity. At that time, the claimant was seen by Dr. Crystal Roney. The claimant reported right wrist and right finger pain. With regard to her wrist pain, the claimant reported that she first felt the pain after moving a heavy cart. Dr. Roney diagnosed the claimant with medial epicondylitis, neck muscle strain, and right wrist pain. Dr. Roney recommended the use of a wrist splint and physical therapy.

8. General Manager Dana Livings also testified at the hearing. Ms. Livings testified that the claimant did not report a work injury directly to her. Ms. Livings's testimony was consistent with Mr. G[Redacted]'s regarding the disciplinary actions provided to the claimant and her refusal to sign.

9. On May 4, 2021, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his May 18, 2021 IME report, Dr. Raschbacher opined that the claimant did not suffer a right upper extremity injury at work. In support of this opinion, Dr. Raschbacher noted that the claimant did not have a discreet mechanism of injury. Dr. Raschbacher also noted that the claimant's "presentation was grossly non-physiologic and didn't make much sense medically and would not be consistent with a right wrist strain or sprain or ligamentous injury." Dr. Raschbacher's testimony was consistent with his IME report.

10. The ALJ credits the testimony of Ms. Livings and Mr. G[Redacted] regarding the disciplinary discussions with the claimant. The ALJ also credits the testimony of Ms. Livings and Mr. G[Redacted] regarding the timing of the claimant's report of a work injury. The ALJ credits the opinions of Dr. Raschbacher. The ALJ does not find the claimant's testimony to be credible or persuasive. Specifically, the ALJ is not persuaded by the claimant's testimony regarding the nature and onset of her symptoms. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered a right upper extremity injury while employed with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the testimony of Ms. Livings and Mr. G[Redacted] is credible and persuasive. As found, the opinions of Dr. Raschbacher are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 7th day of July 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Did Respondents overcome the DIME's 35% whole person impairment rating by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on October 25, 2014, while working for Employer as a maintenance technician. He was cleaning a large ice machine with a cleanser that contained phosphoric acid. The acid splashed onto his forearms above his protective gloves, causing chemical burns.

2. Claimant awoke the following morning with large, painful blisters on his forearms. He sought treatment at Premier Urgent Care and was given Silvadene cream to apply to his arms.

3. A few days after using the Silvadene cream, Claimant developed an itching, burning rash moving up from his arm to his neck and a portion of his back. He was initially diagnosed with allergic contact dermatitis.

4. Claimant then started taking Benadryl. Initially, the rash seemed to improve. But several days later he broke out in large hives on multiple areas of his body.

5. Claimant received two steroid injections which helped for approximately two days each time. He was also given a prednisone taper starting at 60 mg, which was not helpful.

6. Claimant began treating with Dr. Matthew Bowdish at the William Storms Allergy Clinic on January 12, 2015. Dr. Bowdish noted the onset of hives following the Silvadene and Benadryl treatment. Claimant showed Dr. Bowdish photographs of the lesions, and Dr. Bowdish stated: "they look like urticarial lesions." Dr. Bowdish noted that Claimant was still breaking out in hives approximately two to three times per week despite discontinuing the Silvadene and Benadryl. Dr. Bowdish diagnosed subacute-going-on-chronic urticaria. He opined that "either the Silvadene or the Benadryl cream promoted some sort of immunologic response that is still sputtering with urticarial lesions that are not very well controlled and not particularly responsive to systemic corticosteroids." Dr. Bowdish further documented Claimant was experiencing shortness of breath with these episodes, for which he prescribed a rescue inhaler.

7. On February 24, 2015, Dr. Bowdish noted several urticarial lesions on Claimant's hands, left arm, and chest. Dr. Bowdish diagnosed chronic idiopathic urticaria, which was resistant to multiple antihistamines, leukotriene inhibitors, and systemic steroids. He recommended omalizumab ("Xolair") therapy to hopefully modulate and suppress Claimant's immune response.

8. Insurer did not authorize the omalizumab.

9. Claimant underwent an Independent Medical Examination (IME) at Respondents' request with Dr. Tashof Bernton on June 1, 2015. Dr. Bernton opined the symptoms such as rashes, hives, swelling, and difficulty breathing represented different aspects of a "type 1" allergic reaction, which is characterized by histamine release and mediated by an IgE antibody. Dr. Bernton noted such allergic reactions are typically time-limited, particularly with treatment. But occasionally "allergic reactions such as this can go on to chronic urticarial reactions such as this patient had." Dr. Bernton noted there was no prior medical history to suggest an alternate cause of Claimant's symptoms. Dr. Bernton concluded:

> given the timing of the initial allergic reaction and the characteristics of the history, it is most probable that the chronic urticaria was precipitated by the patient's use of Silvadene cream to treat the work-related injury and the subsequent allergic reaction. I would, therefore, regard this problem as work-related.

10. Claimant was put at MMI on June 30, 2015, by Dr. Anjmun Sharma. Dr. Sharma diagnosed chemical dermatitis and urticaria. Dr. Sharma recommended Claimant receive the Xolair treatment as maintenance care.

11. Insurer still did not authorize omalizumab.

12. Claimant saw Dr. Jack Rook for a DIME on November 30, 2015. Dr. Rook noted that Claimant had broken out in hives within a few weeks of his MMI evaluation with Dr. Sharma and was having "full-blown hives" approximately once per month. He also reported difficulty breathing when the allergic symptoms flared. Dr. Rook noted Claimant had developed a DVT in his left leg in April 2015, which Claimant believed was related to the steroid injections and prednisone he received shortly after his accident.

13. Dr. Rook diagnosed a generalized allergic reaction "related to use of Silvadene cream after chemical burns." Dr. Rook agreed Claimant should try Xolair as recommended by Dr. Bowdish. Because Claimant continued to have allergic symptom and all medications recommended by the allergist had not yet been tried, Dr. Rook opined that Claimant was not at MMI. Dr. Rook estimated an impairment rating of 10-20% whole person for a Class 2 skin disorder.

14. Dr. Bernton reviewed Dr. Rook's DIME report and disagreed with the suggestion of a Class 2 skin disorder rating. Dr. Bernton opined Claimant should be rated as Class 1 because Dr. Rook noted no specific limitations in Claimant's performance of daily activities. He also opined there is no basis for concluding the DVT was related to the steroids Claimant received.

15. Claimant subsequently underwent an IME with Dr. Michael Volz on November 17, 2016. Dr. Volz described Claimant's case as "highly complex and involved with multiple factors to consider." Dr. Volz's diagnoses included chronic urticaria (CU) and angioedema (swelling). He indicated it was clearly histaminergic because histamine

blockers, montelukast and systemic steroids all helped reduce the manifestations. He opined it is challenging to determine why the episode began and why the manifestations are being perpetuated. But Dr. Volz concluded there is "a high degree of medical probability that the chemical exposure was involved in initiating the [disease] process." According to Dr. Volz, Silvadene has been available for many years and is typically well tolerated by most patients. Although rare, it is medically "plausible" that Silvadene triggered Claimant's reaction. Dr. Volz agreed that Xolair is a reasonable option and, in many cases, can lead to a full resolution, sometimes after a single dose.

16. The undersigned ALJ ordered Insurer to cover the Xolair in a final order dated March 9, 2017.

17. Claimant was evaluated by Dr. Christopher Webber, an allergy specialist, on April 16, 2018. Dr. Weber opined, "a lot" of Claimant's breathing issues appeared related to the chronic urticaria "either directly or due to medications." He planned to wind down respiratory medications once he got the urticaria under control. Dr. Webber ordered pulmonary function testing, which was normal.

18. Claimant started Xolair treatment in May 2018 under Dr. Webber's direction. The hives and pulmonary symptoms improved dramatically in less than a month. In October 2018, after six months without significant symptoms, Dr. Webber tried stopping Xolair. Unfortunately, the hives and pulmonary symptoms returned in full force within two months. Claimant restarted the medication in approximately February 2019, and the hives largely resolved. In mid-2020, the symptoms worsened despite monthly injections, so Dr. Webber increased the injections to every two weeks. After approximately six weeks, Claimant's condition stabilized, and he resumed injections at monthly intervals.

19. Claimant returned to Dr. Volz on July 13, 2020, for an MMI and impairment evaluation. He noted Claimant's excellent response to Xolair, followed by a quick regression when the medication was stopped. Dr. Volz stated after Xolair was restarted in February 2019, "all manifestations improved markedly and were well controlled without any effect on QOL or ADLs." However, Claimant was still using his recue inhaler approximately once per month for urticaria-related dyspnea. Dr. Volz opined Claimant would require "continual" Xolair treatment (every 4 weeks) "indefinitely," because "intermittent" injections had been ineffective.

20. Dr. Volz determined Claimant reached MMI on October 1, 2018.[1] Dr. Volz opined Claimant's injury-related impairments "are not limited to the skin or being cutaneous but are systemic." He assigned a Class 3 Impairment under Table 1, page 232 of the *AMA Guides*. The Class 3 category of impairment applies "when signs **and** symptoms of skin disorder are present **and** continuous treatment is required **and** there is limitation in the performance of many activities of daily living." (Emphasis in original). Class 3 provides a range of impairment from 25% to 50%, from which Dr. Volz selected 25%. He also assigned a 5% pulmonary rating under Table 8 on page 125 of the *AMA*

[1] Although it is unclear why Dr. Volz chose this MMI date, neither party is contesting MMI.

Guides for the ongoing dyspnea issues despite normal PFTs. The combined final rating was 29% whole person.

21. Claimant returned to Dr. Rook for a follow up DIME on December 14, 2020. Claimant's primary complaints at the time were ongoing hives, shortness of breath, and poor sleep. Dr. Rook referenced notes from Dr. Webber showing a "decrease" in Claimant's symptoms when on the Xolair as opposed to completely resolving all symptoms. He noted Claimant's recent flare despite receiving injections every four weeks. Claimant stated that with the Xolair, he generally does not get hives, but he continues to break out with "little bumps all over my body which are extremely itchy." Dr. Rook noted Claimant was "chronically fatigued" from years of "chronically poor" sleep. Claimant explained "his work-related condition has adversely affected numerous functional activities." Claimant had been unable to maintain full-time work because of poor endurance and stamina. He had difficulty with exertional activities could no longer exercise as he had before the injury. Claimant's concentration and cognition were impaired by the chronic fatigue.

22. Dr. Rook listed Claimant's injury-related diagnoses as:

(1) Chronic urticaria and angioedema,
(2) Chronic shortness of breath and cough worsened during exacerbations of number 1,
(3) Systemic symptoms associated with the chronic urticaria diagnosis, including:
Generalized fatigue
Reactive depression disorder
Weight gain due to steroid treatment and inactivity
Impaired concentration
Sleep apnea and reactive airway disease; and
Sleep disorder.

23. Claimant ascribed multiple other issues to the work injury, such as chronic diarrhea, headaches, diffuse body pain, G.I irritability, erectile dysfunction, and high blood pressure. However, Dr. Rook did not include these as injury-related diagnoses.

24. Dr. Rook agreed with Dr. Volz that Claimant was at MMI on October 1, 2018. He generally agreed with Dr. Volz's rating methodology and opined, "Certainly, this patient falls into this class III category based upon all of these criteria. Given the effect that this injury has had on his life, I would rate his impairment somewhere between 25% and 50%, and will give him a 35% whole person impairment rating." Dr. Rook disagreed that a separate pulmonary rating under Table 8 was warranted because PFTs and clinical oximetry were repeatedly normal. Dr. Rook noted the shortness of breath primarily seems to occur during exacerbations of his skin condition, and stated, "the 35% whole person rating provided for the chronic urticaria will incorporate the difficulties that he has systemically as well as from a pulmonary perspective." Although Dr. Rook believes the prior DVT was probably related to use of steroids after the injury, he did not attribute any

functional limitations to the condition. Accordingly, it does not appear the history of DVT played a role in Dr. Rook's determination of the 35% rating.

25. Dr. Bernton reviewed the DIME report and disagreed with Dr. Rook's determinations in multiple respects. Although chronic urticaria and itching are likely associated with the patient's work-related disorder, he thought Dr. Rook uncritically adopted the "catalog of conditions" that Claimant attributes to the work injury. Dr. Bernton opined diffuse body pain, GI irritability, erectile dysfunction, elevated blood pressure, and weight gain are not due to chronic urticaria.

26. Dr. Bernton disagreed with Dr. Volz's and Dr. Rook's assignment of Class 3 skin impairment. Dr. Bernton pointed to Dr. Volz's notation that when Claimant restarted Xolair in February 2019 "all manifestations improved markedly and were all well controlled without any effect on quality of life or activities of daily living." Dr. Bernton believes this notation "by definition" describes a Class 1 impairment. Dr. Bernton testified the rating physician has discretion to choose the appropriate rating from within the applicable range. Dr. Bernton concluded Claimant has a 5% whole person skin rating under Class 1.

27. Claimant's descriptions of constant itching, recurrent hives, associated dyspnea, and chronic fatigue are generally credible.

28. Respondents failed to overcome Dr. Rook's impairment rating by clear and convincing evidence. Dr. Bernton's opinions and analysis reflect mere differences of opinion with Dr. Rook and Dr. Volz regarding the applicability of Class 3 skin impairment.

CONCLUSIONS OF LAW

A DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing burden also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents failed to overcome Dr. Rook's rating by clear and convincing evidence. The key disagreement here is about the extent to which Claimant's condition impacts the performance of ADLs. The description of a Class 3 impairment refers to "limitation in the performance of many activities of daily living" Although the provision requires that "many" ADLs be affected, it does not specify the degree of impact, such as, “mild,” “moderate,” or “severe.”[2] The relatively imprecise language appears to provide the rating physician a greater degree of discretion than exists in some other sections of the *Guides*. Here, the persuasive evidence shows chronic itching has disrupted Claimant’s sleep for years, which undoubtedly contributes to his fatigue. As Dr. Rook noted, the chronic fatigue affects Claimant’s ability to engage in a variety of ADLs, notwithstanding other limitations potentially caused by unrelated diagnoses. Additionally, Claimant had at least one “breakthrough” episode of urticaria lasting at least six weeks, which required injection every other week to bring it back under control. Given the apparently fragile nature of the symptom relief Claimant obtains from the injections, it is not unreasonable to conclude the condition is not 100% controlled and still causes limitations. Although Dr. Bernton’s arguments are well-presented, Dr. Rook and Dr. Volz performed thorough evaluations, and they both concluded Claimant has sufficient injury-related limitations to warrant a Class 3 impairment. In this context, Dr. Bernton’s opinions reflect “mere differences of opinion,” and do not rise to the level of “clear and convincing” evidence. The totality of persuasive evidence does not show Dr. Rook was “highly probably incorrect” to agree with Dr. Volz and assign a Class 3 skin rating.

ORDER

It is therefore ordered that:

1. Respondents request to overcome the DIME regarding permanent impairment is denied and dismissed.

2. Insurer shall pay Claimant PPD benefits based on Dr. Rook’s 35% whole person rating.

3. Insurer shall pay Claimant statutory interest of eight percent (8%) per annum on all benefits not paid when due.

4. All matters not decided herein are reserved for future determination.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory

[2] The description of a Class 5 impairment does reference “severe” limitation of ADLs, which suggest lesser impact on ADLs in the lower categories.

reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUE

Whether Respondents have proven by a preponderance of the evidence that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's September 19, 2014 industrial injury or prevent further deterioration of his condition.

FINDINGS OF FACT

1. Claimant is 62 year old male who resides in Twain Harte, California. He has lived in California since July 16, 2017. Claimant previously lived in Denver, Colorado. Employer is a restaurant located in Sheridan, Colorado who hired Claimant as a Grill Cook on October 23, 2012.

2. On September 19, 2014 Claimant was injured while working for Employer. He specifically bent over to put away a grill scraper, stood up, twisted and felt a pop in his lower back. Claimant initially underwent medical treatment at Concentra Medical Centers. He received Percocet, physical therapy and a lumbar MRI. Claimant was subsequently referred to Authorized Treating Physician (ATP) John T. Sacha, M.D. for pain management.

3. Dr. Sacha is a Colorado licensed physician who is Board Certified in Physical Medicine and Rehabilitation, Electrodiagnostic Medicine, and Pain Management. He has been Level II accredited by the Colorado Division of Workers' Compensation (DOWC) for the past 25 years. Dr. Sacha is on the PDMP committee for opioids and the committee that develops guidelines for the safe use of opioids in the State of Colorado. He treats patients with acute and chronic complex spinal disorders and provides medication management as part of his regular practice.

4. Dr. Sacha first evaluated Claimant on November 21, 2014. He documented that Claimant's lumbar MRI revealed degenerative disc disease with facet spondylosis and bulging at L4-L5 and L5-S1 with left-sided foraminal narrowing. Dr. Sacha's initial plan included administration of left L5 and S1 transforaminal epidural steroid injections (TF ESIs)/spinal nerve blocks, immediate discontinuation of Percocet and utilization of Tramadol and Gabapentin.

5. Dr. Sacha subsequently administered left L5 and S1 TF ESIs/spinal nerve blocks. Claimant also underwent lower extremity EMG/NCV testing that confirmed S1 radiculopathy. Dr. Sacha referred Claimant to Andrew Castro, M.D., for a surgical consultation.

6. Dr. Castro evaluated Claimant on February 18, 2015 and recommended repeat ESIs prior to surgical consideration. Dr. Sacha administered repeat injections.

On March 27, 2015 Dr. Sacha reported that Claimant’s pain had worsened, the injections had not relieved his symptoms and the only remaining options were surgery or placing him at Maximum Medical Improvement (MMI).

7. On May 7, 2015 Claimant underwent lower back surgery with Dr. Castro. The specific procedure consisted of a bilateral laminectomy and discectomy at L4-5 and a left-sided laminectomy and discectomy at L5-S1.

8. Claimant received opioids immediately following surgery, but was quickly weaned from the medications. His condition improved slightly but his symptoms waxed and waned. Claimant suffered constant lower back pain and intermittent left leg symptoms.

9. On September 28, 2015 Dr. Sacha concluded that Claimant had reached MMI because his symptoms had plateaued. Dr. Sacha determined that Claimant required medical maintenance care in the form of a medication maintenance program, a gym pass, a couple of psychological visits and medications over the next 12–24 months. He explained that the preceding recommendation constituted a standard maintenance care plan for patients who have undergone spinal surgery. On October 5, 2015 Dr. Sacha assigned 13% lumbar spine and 2% mental permanent impairment ratings.

10. On November 13, 2015 Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Sacha’s MMI and impairment determinations. The FAL also acknowledged medical maintenance care. Following the parties’ stipulation to resolve residual issues, Respondents filed an Amended FAL on January 21, 2016. Claimant did not challenge the Amended FAL and his claim closed by operation of law on all issues other than medical maintenance benefits.

11. Claimant continued to receive maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. His maintenance care during the period included non-opioid medications, utilization of a TENS unit, chiropractic treatment, acupuncture, an additional lumbar MRI, further sets of TF ESIs, another EMG and a surgical reevaluation.

12. On July 14, 2017 Claimant visited Dr. Sacha for the final time before moving to California. Dr. Sacha noted that Claimant’s condition remained unchanged, his symptoms were tolerable and he experienced good and bad days. His treatment involved continued medications for two months, a gym pass and a new ATP for maintenance management in California.

13. On November 8, 2017 Tariq Mirza, M.D. located in Modesto, California, began treating Claimant. He noted that Claimant’s symptoms included pain in his back and legs as well as reactive depression. Dr. Mirza immediately prescribed medications, including Duragesic (Fentanyl) patches of 50 micrograms (mcg)/hour, Soma and Neurontin.

14. On November 22, 2017 Dr. Mirza conducted a physical examination that revealed findings virtually identical to Claimant's previous visit. He continued to prescribe the same medications. Dr. Mirza recommended repeat lumbar ESIs, continued utilization of the TENS unit and physical therapy.

15. On February 14, 2018 Claimant returned to Dr. Mirza for an examination. He reported "as long as I have medications in my system I am functional, without medication pain in my lumbar spine is 8-9 or even 10, however with the help of medication it [decreases] to 3-4 and it is manageable." Dr. Mirza increased Claimant's Fentanyl patches to 100 mcg/hour and continued the other medications.

16. On April 11, 2018 Dr. Mirza noted that Claimant had completed therapy but had not noticed any improvement in flexibility. Claimant remarked that his lower back pain was 7-8 or sometimes 9, on a 0-10 scale, but with medication it diminished to 3-4/10. Dr. Mirza continued to prescribe the same medications at the same dosages.

17. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha to determine whether his condition had worsened so that he was no longer at MMI. Dr. Sacha obtained an updated history from Claimant, reviewed Dr. Mirza's records and performed a physical examination. He was critical of Dr. Mirza's renewed prescription of opioids. Dr. Sacha detailed that Claimant "was opioid naïve and on non-opioid analgesics from this practitioner [and] is now on 100 mcg Fentanyl patches. As expected, the patient has had an increase in pain in all body parts including his neck, back, buttocks, and left leg and has not been compliant with his home exercise program."

18. Dr. Sacha explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He emphasized that Fentanyl is a particularly dangerous drug and the State of Colorado recommends never exceeding 50 Morphine Milligram Equivalents (MMEs) per day. Notably, on July 5, 2018 Claimant was taking 240 MMEs/day or five times the recommended limit. Dr. Sacha further explained that opioid medications were 100% contraindicated for patients like Claimant who suffer lung issues. When Dr. Sacha informed Claimant that his use of Fentanyl was wildly inappropriate, did not meet any medical treatment guidelines and was dangerous, their relationship deteriorated from excellent to antagonistic.

19. Dr. Sacha testified at the hearing in this matter that during his July 5, 2018 evaluation Claimant acknowledged that his functioning had decreased while taking opioids. He explained that opioids increase a patient's pain receptors. However, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. Dr. Sacha thus outlined a maintenance care plan that included a change of physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. He further recommended a gym pass for 12 months, one further ESI and one to three visits with a physical medicine or pain management specialist. Dr. Sacha emphasized that his maintenance care plan was not directed at a spinal issue, but at the problem of increased pain receptors caused by opioid analgesics.

20. On August 30, 2018 the parties conducted a hearing before ALJ Goldman. He issued an order dated October 1, 2018 denying Claimant's petition to reopen based on a worsening of condition.

21. After the hearing, Dr. Mirza began decreasing Claimant's opioid analgesics. He gradually reduced Claimant's Fentanyl from 100 mcg/hour patches to 75 mcg/hour patches on October 24, 2018, then to 50 mcg/hour patches on November 28, 2018 and finally to 25 mcg/hour patches on May 17, 2019. Dr. Mirza stated that his goal was to discontinue opioid analgesics "in a few months." However, over the next 22 months between May 17, 2019 and March 24, 2021 Dr. Mirza continued Claimant on 25 mcg/hour Fentanyl patches without providing any other maintenance medical care.

22. On February 5, 2021 Claimant returned to Colorado to visit Dr. Sacha for an evaluation. Dr. Sacha reviewed Claimant's medical records and conducted a physical examination. He noted that Claimant's continued use of Fentanyl was "surprising" because he was clearly not a candidate for opioids. Dr. Sacha explained that the 25 mcg/hour patch constituted 60 MMEs/day. The amount exceeded the State of Colorado recommended dosage of 50 MMEs/day. Dr. Sacha remarked that Claimant's continued Fentanyl usage placed him at high risk for opioid misuse and sudden respiratory depression. He proposed an updated maintenance treatment plan that included the following: (1) immediate discontinuation of Fentanyl; (2) three months of non-opioid analgesics; and (3) other treatment modalities including chiropractic care and acupuncture treatment for symptom control during the weaning period.

23. On February 25, 2021 Respondents applied for a hearing on the issue of medical benefits. Respondents specifically sought "an order compelling discontinuation of opioids (Fentanyl), with a weaning/tapering schedule, and then discontinuation of maintenance care under this claim as per Dr. Sacha."

24. On March 24, 2021 Dr. Mirza noted that he had a long discussion with Claimant about discontinuing Fentanyl patches and replacing them with Suboxone films. Claimant testified and the record reflects that he has not taken any Fentanyl since March 24, 2021.

25. On May 8, 2021 Dr. Sacha issued a report following his review of Dr. Mirza's March 24, 2021 report. He noted that Dr. Mirza had discontinued Fentanyl and started Claimant on Suboxone. Dr. Sacha commented that it was reasonable to provide Claimant with a one month supply of Suboxone before weaning him off the medication over a four-week timeframe. He explained that any further use of Suboxone and any other medical care after the weaning period should be performed under private insurance because it would not be related to Claimant's September 19, 2014 industrial injury.

26. Dr. Sacha updated his opinion and testified that it was acceptable for Claimant to continue Suboxone for a three-month time period and then discontinue the medication. At the conclusion of the three-month time frame Claimant would no longer require medical maintenance treatment. Dr. Sacha emphasized that three-months of post-Fentanyl care was the humane way to wean Claimant from pain medications.

27. Dr. Sacha remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his ongoing symptoms and functional limitations were caused by the medications. Specifically, the opioid medications caused an increase in Claimant's pain receptors. Dr. Sacha summarized that allowing Claimant to receive additional medical maintenance care beyond the three-month weaning period will cause harm. Specifically, additional medical treatment will only worsen Claimant's condition even if he still has pain after the weaning period. Dr. Sacha explained that Claimant needs to cease receiving medical care after the weaning period, perform his home exercise program and move on with his life. He determined that Claimant will be better off functionally, mentally and from a pain standpoint if his care is discontinued and he stops visiting doctors.

28. Claimant testified at the hearing in this matter. He explained that he has suffered constant pain since his September 19, 2014 industrial injury. Although his symptoms have waxed and waned over time, they have persisted. Nothing other than opioid medications have decreased his severe pain and improved his function.

29. Respondents have proven that it is more probably true than not that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's September 19, 2014 industrial injury or prevent further deterioration of his condition. On September 19, 2014 Claimant injured his lower back while working for Employer. Claimant initially received conservative treatment and was referred to ATP Dr. Sacha for pain management. Dr. Sacha administered left L5 and S1 TF ESIs/spinal nerve blocks. Claimant also underwent lower extremity EMG/NCV testing that confirmed S1 radiculopathy. On May 7, 2015 Claimant underwent lower back surgery consisting of a bilateral laminectomy and discectomy at L4-L5 and a left-sided laminectomy and discectomy at L5-S1. On September 28, 2015 Dr. Sacha concluded that Claimant reached MMI and required medical maintenance treatment including medications over the next 12–24 months. Claimant then received maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. His maintenance care during the period included non-opioid medications, utilization of a TENS unit, chiropractic treatment, acupuncture, an additional lumbar MRI, further sets of TF ESIs, another EMG and a surgical reevaluation. Ultimately, Dr. Sacha was Claimant's primary ATP for more than two and a half years and saw him approximately 40 times.

30. On November 8, 2017 Dr. Mirza began treating Claimant in California. He immediately prescribed opioid medications in the form of 50 mcg/hour Fentanyl patches. By February 14, 2018 Dr. Mirza increased Claimant's Fentanyl patches to 100 mcg/hour and continued other medications. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha. Dr. Sacha was critical of the renewed prescription of opioids and explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He emphasized that Fentanyl is a particularly dangerous drug and the State of Colorado recommends never exceeding 50 MMEs per day. Notably, on July 5, 2018 Claimant was taking 240 MMEs/day or five times the recommended limit. Dr. Sacha explained that opioids increase a patient's pain receptors. However, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. He thus outlined a maintenance plan that included a change of

physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. Dr. Sacha emphasized that his maintenance care plan was not directed at Claimant's spinal issue, but at the increased pain receptors caused by opioid analgesics.

31. After an August 30, 2018 hearing before ALJ Goldman, Dr. Mirza began decreasing Claimant's opioid analgesics. He gradually reduced Claimant's Fentanyl from 100 mcg/hour patches to 75 mcg/hour patches on October 24, 2018, then to 50 mcg/hour patches on November 28, 2018 and finally to 25 mcg/hour patches on May 17, 2019. Over the ensuing 22 months between May 17, 2019 and March 24, 2021 Dr. Mirza continued Claimant on 25 mcg/hour Fentanyl patches without providing any other maintenance medical care. After a February 5, 2021 evaluation, Dr. Sacha explained that the 25 mcg/hour patch constituted 60 MMEs/day. The amount exceeded the State of Colorado recommended dosage of 50 MMEs/day. Dr. Sacha remarked that Claimant's continued Fentanyl usage placed him at high risk for opioid misuse and sudden respiratory depression. Furthermore, on May 8, 2021 Dr. Sacha issued a report following his review of Dr. Mirza's March 24, 2021 report. He noted that Dr. Mirza had discontinued Fentanyl and started Claimant on Suboxone. Dr. Sacha commented that it was reasonable to provide Claimant with a one month supply of Suboxone before weaning him off the medication over a four-week timeframe.

32. Dr. Sacha updated his opinion and testified that it was acceptable for Claimant to continue Suboxone for a three-month time period and then discontinue the medication. At the conclusion of the three-month time frame Claimant would no longer require medical maintenance treatment. Dr. Sacha emphasized that three-months of post-Fentanyl care was the humane way to wean Claimant from pain medications. He remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his ongoing symptoms and functional limitations were caused by the medications. Specifically, the opioid medications caused an increase in Claimant's pain receptors. Dr. Sacha testified that Claimant's ongoing pain issues are not spine-related but instead caused by the excessive prescribing of opioid analgesics by Dr. Mirza over the past three and a half years. The opioid analgesics increased Claimant's pain receptors and decreased his functional ability.

33. The preceding chronology and persuasive opinion of ATP Dr. Sacha reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's September 19, 2014 industrial injury. Instead, Claimant's continuing symptoms are attributable to his increased pain receptors from using Fentanyl for a prolonged time period. Because the three-months of Suboxone treatment began on March 24, 2021, the appropriate weaning period has now ended. Accordingly, Respondents request to terminate Claimant's medical maintenance benefits is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to *Grover* they can seek to terminate their liability for ongoing maintenance medical treatment. *See* §8-43-201(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.* However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn*, W.C. No. 4-754-838 (ICAO, Oct. 1, 2013); *see* §8-43-201(1), C.R.S. (stating that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. *See In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

5. Because Respondents seek to terminate all of Claimant's medical maintenance care, they bear the burden of demonstrating that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's September 19, 2014 industrial injury or prevent further deterioration of his condition. Dr. Sacha's opinions regarding the need to wean Claimant from Fentanyl then terminate all further maintenance medical care is persuasive. Accordingly, based on a review of the medical records and the opinions of Dr. Sacha,

Respondents have established that additional medical maintenance care is no longer reasonable, necessary or causally related to Claimant's September 19, 2014 industrial injury.

6. As found, on September 19, 2014 Claimant injured his lower back while working for Employer. Claimant initially received conservative treatment and was referred to ATP Dr. Sacha for pain management. Dr. Sacha administered left L5 and S1 TF ESIs/spinal nerve blocks. Claimant also underwent lower extremity EMG/NCV testing that confirmed S1 radiculopathy. On May 7, 2015 Claimant underwent lower back surgery consisting of a bilateral laminectomy and discectomy at L4-L5 and a left-sided laminectomy and discectomy at L5-S1. On September 28, 2015 Dr. Sacha concluded that Claimant reached MMI and required medical maintenance treatment including medications over the next 12–24 months. Claimant then received maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. His maintenance care during the period included non-opioid medications, utilization of a TENS unit, chiropractic treatment, acupuncture, an additional lumbar MRI, further sets of TF ESIs, another EMG and a surgical reevaluation. Ultimately, Dr. Sacha was Claimant's primary ATP for more than two and a half years and saw him approximately 40 times.

7. As found, on November 8, 2017 Dr. Mirza began treating Claimant in California. He immediately prescribed opioid medications in the form of 50 mcg/hour Fentanyl patches. By February 14, 2018 Dr. Mirza increased Claimant's Fentanyl patches to 100 mcg/hour and continued other medications. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha. Dr. Sacha was critical of the renewed prescription of opioids and explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He emphasized that Fentanyl is a particularly dangerous drug and the State of Colorado recommends never exceeding 50 MMEs per day. Notably, on July 5, 2018 Claimant was taking 240 MMEs/day or five times the recommended limit. Dr. Sacha explained that opioids increase a patient's pain receptors. However, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. He thus outlined a maintenance plan that included a change of physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. Dr. Sacha emphasized that his maintenance care plan was not directed at Claimant's spinal issue, but at the increased pain receptors caused by opioid analgesics.

8. As found, after an August 30, 2018 hearing before ALJ Goldman, Dr. Mirza began decreasing Claimant's opioid analgesics. He gradually reduced Claimant's Fentanyl from 100 mcg/hour patches to 75 mcg/hour patches on October 24, 2018, then to 50 mcg/hour patches on November 28, 2018 and finally to 25 mcg/hour patches on May 17, 2019. Over the ensuing 22 months between May 17, 2019 and March 24, 2021 Dr. Mirza continued Claimant on 25 mcg/hour Fentanyl patches without providing any other maintenance medical care. After a February 5, 2021 evaluation, Dr. Sacha explained that the 25 mcg/hour patch constituted 60 MMEs/day. The amount exceeded the State of Colorado recommended dosage of 50 MMEs/day. Dr. Sacha remarked that Claimant's continued Fentanyl usage placed him at high risk for opioid misuse and sudden respiratory depression. Furthermore, on May 8, 2021 Dr. Sacha issued a report

following his review of Dr. Mirza's March 24, 2021 report. He noted that Dr. Mirza had discontinued Fentanyl and started Claimant on Suboxone. Dr. Sacha commented that it was reasonable to provide Claimant with a one month supply of Suboxone before weaning him off the medication over a four-week timeframe.

9. As found, Dr. Sacha updated his opinion and testified that it was acceptable for Claimant to continue Suboxone for a three-month time period and then discontinue the medication. At the conclusion of the three-month time frame Claimant would no longer require medical maintenance treatment. Dr. Sacha emphasized that three-months of post-Fentanyl care was the humane way to wean Claimant from pain medications. He remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his ongoing symptoms and functional limitations were caused by the medications. Specifically, the opioid medications caused an increase in Claimant's pain receptors. Dr. Sacha testified that Claimant's ongoing pain issues are not spine-related but instead caused by the excessive prescribing of opioid analgesics by Dr. Mirza over the past three and a half years. The opioid analgesics increased Claimant's pain receptors and decreased his functional ability.

10. As found, the preceding chronology and persuasive opinion of ATP Dr. Sacha reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's September 19, 2014 industrial injury. Instead, Claimant's continuing symptoms are attributable to his increased pain receptors from using Fentanyl for a prolonged time period. Because the three-months of Suboxone treatment began on March 24, 2021, the appropriate weaning period has now ended. Accordingly, Respondents' request to terminate Claimant's medical maintenance benefits as a result of his September 19, 2014 industrial injury is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to terminate Claimant's medical maintenance benefits is granted.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see*

Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

DATED: July 8, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-143-218-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury.

II. Whether Respondent Employer established by a preponderance of the evidence that Claimant is an independent contractor and not an employee.

III. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical benefits.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits as of June 10, 2020, and continuing.

V. Determination of Claimant's average weekly wage.

VI. Whether Claimant violated a safety rule by not wearing a seatbelt and should have his disability benefits reduced by 50%.

VII. Whether Respondent-Employer is subject to penalties pursuant to 8-43-408 for failing to carry workers' compensation insurance.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Cesar M[Redacted] operates [Redacted] (hereinafter Employer).

2. Employer is a trucking company that uses semitrucks to transport fruits and vegetables mainly in Denver and Texas.

3. At the time of Claimant's accident, Employer was operating and conducting its business with five semitrucks.[1]

4. Employer was operating without workers' compensation insurance.

[1] The employer did not own each semitruck. Instead, the employer was leasing each truck. The employer did not, however, lease Claimant the truck he was driving at the time of the accident under any type of lease agreement.

Terms of Employment

5. Employer hired Claimant in May 2019 to work as a semitruck driver. Claimant's primary job duties involved driving the Denver to Texas round trip route twice a week to deliver fruits and vegetables. Each round trip route took three days. As a result, Claimant usually worked for Employer six days a week.

6. Employer contends Claimant worked as an independent contractor. However, Claimant and Employer did not enter into any type of written lease agreement or written employment agreement. There was only an oral agreement in which Employer agreed to pay Claimant to drive one of his semitrucks and Claimant agreed to drive one of Employer's semitrucks. The weekly rate of pay Employer offered Claimant for driving two round trip routes from Denver to Texas, which took 6 days, was $1,800. Claimant accepted the offer and began driving mainly the Denver and Texas route – twice per week – for $1,800 per week.

7. Although Employer contends Claimant was an independent contractor, there was no credible or persuasive evidence submitted at hearing that established Claimant customarily maintained an independent business as a truck driver – or any other type of business. For example, Claimant did not have a business card, a business listing, or a business address. In addition, there was no evidence presented that established Claimant employed others to complete any work tasks for any business. Nor was there any credible evidence presented that established Claimant had a financial investment in a trucking business - such as a truck – or any other business. Lastly, there was no evidence submitted at hearing that established Claimant carried liability insurance for any type of business.

8. In addition, Employer directed Claimant when and where to pick up and deliver the fruits and vegetables. As a result, Claimant was not free to pick up and deliver the goods on his own time schedule.

9. Besides being paid $1,800.00 per week, Employer also paid Claimant's expenses to operate the truck, such as fuel, to drive the two roundtrip delivery trips from Denver to Texas and back to Denver. As a result, there was no indication Claimant could suffer a loss while working for Employer.

10. Claimant usually worked six days a week for Employer. Plus, there was no credible evidence submitted at hearing which established Claimant worked for anyone other than Employer between May 2019 and the June 10, 2020, work accident.

11. In addition, Employer provided Claimant the primary tool to perform his job - a semitruck.

12. Employer paid Claimant personally rather than making checks payable to a trade or business name.

13. Claimant was working for Employer for an indefinite time period. Thus, Claimant's employment with Employer was not limited to a finite time period by either party.

14. Claimant was not working for Employer under a lease agreement or contract pursuant to 40-11.5-102, C.R.S. When Claimant was hired by Employer, he was not offered workers' compensation insurance or other insurance with similar coverage as set forth in 40-11.5-102(5).

15. Employer did not establish a quality standard and did not oversee Claimant's work and instruct Claimant how to perform his job.

16. Employer did not pay Claimant a salary or an hourly rate. Instead, Employer paid Claimant a fixed rate for each roundtrip Claimant made from Denver to Texas. But Employer did reimburse Claimant for his expenses such as fuel and other expenses Claimant incurred while driving his route.

17. Employer did not terminate Claimant at any time for his failure to meet the employer's job requirements.

18. There is no indication Employer provided Claimant any training.

19. There is no indication Employer required Claimant to work exclusively for employer. On the other hand, Claimant did not have his own truck. Therefore, Claimant could not work as a truckdriver for someone else without them providing him a truck to drive.

20. As a result, the ALJ finds Claimant was an employee and not an independent contractor because Claimant was not free from the control and direction in the performance of the services, both under the contract for performance of service and was not customarily engaged in an independent business of any kind.

Accident

21. On June 10, 2020, Claimant was driving his Denver/Texas route and driving through New Mexico. While driving through New Mexico - in his Employer's truck - Claimant was blown off the road by strong winds. After being blown off the road, Claimant went through the median and was bounced around violently. After Claimant went through the median his truck crossed into the oncoming lanes of traffic and then rolled onto the driver's side. Ex. 1, pp. 1-5. As a result, Claimant suffered serious spinal injuries.

22. At the time of the accident, Claimant was restrained and using his seatbelt, but his seatbelt came undone during the accident.

23. As a result, Claimant's injury arose out of the course and scope of employment with his Employer.

Medical treatment due spinal cord injury

24. After the accident, Claimant was flown by helicopter to University Hospital in Albuquerque New Mexico. Ex. 1, p. 3 and Ex. 2, pp. 1-2. Due to his spinal cord injury, Claimant underwent spine surgery on June 11, 2020, and June 17, 2020. On June 29, 2020, Claimant was discharged to Craig Rehabilitation Hospital. To get Claimant to Craig Hospital, Claimant was flown from University Hospital in Albuquerque New Mexico to Craig Hospital in Englewood, Colorado. Ex. 2, pp. 1-2.

25. On June 29, 2020, Claimant was admitted to Craig Hospital and stayed until discharged on July 22, 2020. At the time of admission, Claimant was diagnosed as suffering from paraplegia. During his rehabilitation treatment at Craig Hospital, Claimant's paraplegia improved, but yet his final diagnosis at discharge was tetraplegia.

26. Due to his work injury, Claimant developed a neurogenic bladder. In September and October 2020, Claimant presented to the emergency department at Longmont United Hospital due to complications from his neurogenic bladder. Due to his neurogenic bladder, Claimant developed a urinary tract infection and treated for such condition at Longmont United Hospital.

27. Since his injury, Claimant has continued to require medical treatment to cure and relieve him from the effects of his work injury.

TTD

28. Since Claimant's accident of June 10, 2020, Claimant has been suffering from paraplegia and tetraplegia. As found above, Claimant was hospitalized from June 10, 2020, through July 22, 2020.

29. Claimant could not work while hospitalized and there is no indication Claimant has been released to full duty or placed at maximum medical improvement. As a result, Claimant continues to be disabled and has been unable to return to work as a semitruck driver since the accident.

30. After the accident, Employer continued paying Claimant for a short time period. Employer paid Claimant $1,800 one week and $900 for two subsequent weeks. Thus, Employer has paid Claimant $3,600 in lost wage benefits since June 10, 2020.

31. As a result, Claimant is entitled to TTD as of June 10, 2020. Employer, however, is entitled to a credit of $3,600.

AWW

32. As found above, Claimant typically drove two trips per week from Denver to Texas and back to Denver. Claimant was paid $1,800 per week to drive these two trips. As a result, Claimant's average weekly wage is $1,800.

Credibility Determinations

33. Claimant testified about the terms and conditions of his employment, how the accident occurred, that he was wearing a seatbelt at the time of the accident, the extent of his injuries, the need for medical treatment, and to his wages. The ALJ finds Claimant's testimony to be credible.

34. Mr. Cesar M[Redacted] testified on behalf of Employer. He testified that he hired Claimant as an independent contractor. That said, despite his testimony, he did not provide any documentation to support such assertion. Moreover, the facts as found establish Claimant was an employee of Employer and not an independent contractor. As a result, the ALJ does not find Mr. M[Redacted]'s testimony to be credible or persuasive regarding Claimant's status as an independent contractor.

Safety Rule Violation

35. Mr. M[Redacted] also asserted that Claimant was not wearing his seatbelt at the time of the accident. The ALJ, however, has credited Claimant's testimony that he was wearing his seatbelt at the time of the accident and that it came undone during the accident. Thus, to the extent Employer was asserting a safety rule violation, additional findings are unnecessary since it has been found that Claimant was wearing his seatbelt at the time of the accident. As a result, no safety rule violation can exist.

Lack of Workers' Compensation Insurance

36. Mr. M[Redacted] confirmed that [Redacted] does not carry workers' compensation insurance. The ALJ credits this portion of his testimony. Plus, there was no credible and persuasive evidence submitted that established Employer had a workers' compensation policy in place on the date of the accident.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury.

II. Whether Respondent Employer established by a preponderance of the evidence that Claimant is an independent contractor and not an employee.

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Workers' Compensation Act, he was performing service arising out of and in the course of his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The term “employer” is defined to include every person, firm, or corporation “who has one or more persons engaged in the same business or employment, except as expressly provided in articles 40 to 47 of this title, in service under any contract of hire, express or implied.” §8-40-203(1)(b), C.R.S. The term “employee” is defined as any person in the service of any person or corporation “under any contract of hire, express or implied.” §8-40-202(1)(b), C.R.S.

An employer-employee relationship is established when the parties enter into a "contract of hire." §8-40-202(1)(b), C.R.S.; *Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991). A contract of hire may be express or implied, and it is subject to the same rules as other contracts. *Denver Truck Exchange v. Perryman*, 134 Colo. 586, 307 P.2d 805 (Colo. App. 1957). The essential elements of a contract are competent parties, subject matter, legal consideration, mutuality of agreement and mutuality of obligation. *Aspen Highlands Skiing Corp. v. Apostolou*, 866 P.2d 1384 (Colo. 1994); *Martinez Caldamez v. Schneider Farm*, WC 4-853-602 (ICAO, July 16, 2012). A contract of hire may be formed even in the absence of every formality attending commercial contracts. *Rocky Mountain Dairy Products v. Pease*, 161 Colo. 216, 422 P.2d 630 (1966); *In re Ritthaler*, WC 4-905-302-02 (ICAO, May 7, 2014).

Pursuant to §8-40-202(2)(a), C.R.S. “any individual who performs services for pay for another shall be deemed to be an employee*”* unless the person “is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed.” Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

Section 8-40-202(2)(b)(II), C.R.S. enumerates nine factors to be considered in evaluating whether an individual is deemed an employee or independent contractor. However, the test considered by the Colorado Supreme Court in the unemployment insurance case of *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014) concerning whether a worker is an employee or an independent contractor applies to Workers’ Compensation claims. The test requires the analysis of not only the nine factors enumerated in §8-40-202(2)(b)(II), C.R.S. but also the nature of the working relationship and any other relevant factors. *Pella Windows & Doors, Inc. v. Industrial Claim Appeals Office*, 458 P.3d 128 (Colo. App. 2020). The *Softrock* decision noted indicia that would normally accompany the performance of an ongoing separate business in the field and included whether: the worker used an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance. *Softrock Geological Services*, 325 P.3d 565.

It was found that:

- Employer hired Claimant in May 2019 as an employee to work as a semitruck driver. Claimant's primary job duties involved driving the Denver to Texas round trip route twice a week to deliver fruits and vegetables. Each round trip route took three days. As a result, Claimant usually worked for Employer six days a week.

- Claimant and Employer did not enter into any type of written lease agreement or written employment agreement. There was only an oral agreement in which Employer agreed to pay Claimant to drive one of his semitrucks and Claimant agreed to drive one of Employer's semitrucks. The weekly rate of pay Employer offered Claimant for driving two round trip routes from Denver to Texas, which took 6 days, was $1,800. Claimant accepted the offer and began driving mainly the Denver and Texas route – twice per week – for $1,800 per week.

Employer contends Claimant was an independent contractor. That said, the ALJ found that there was a lack of credible and persuasive evidence submitted at hearing establishing Claimant was an independent contractor.

It was found that:

- Claimant did not maintain an independent business as a truck driver – or any other type of business. For example, Claimant did not operate any independent business. He therefore did not have a business card, a business listing, or a business address. In addition, there was no evidence presented that established Claimant employed others to complete any work tasks for any business. Nor was there any evidence presented that established Claimant had a financial investment in a trucking business - such as a truck – or any other business. Lastly, there was no evidence submitted at hearing that established Claimant carried liability insurance for any type of business.

- Employer directed Claimant when and where to pick up and deliver the fruits and vegetables. As a result, Claimant was not free to pick up and deliver the goods on his own time schedule.

- Besides being paid $1,800.00 per week, Employer provided the truck and paid Claimant's expenses to operate the truck, such as fuel, to drive the two roundtrip delivery trips from Denver to Texas. As a result, there was no indication Claimant could suffer a loss while working for Employer.

- There was no credible evidence submitted at hearing which established Claimant worked for anyone other than Employer between May 2019 and the June 10, 2020, work accident.

- Employer provided Claimant the primary tool to perform his job - a semitruck.

- Employer paid Claimant personally rather than making checks payable to a trade or business name.

- Claimant was working for Employer for an indefinite time period. Thus, Claimant's employment with Employer was not limited to a finite time period by either party.

- Claimant was not working for Employer under a lease agreement or contract pursuant to 40-11.5-102, C.R.S. When Claimant was hired by Employer, he was not offered workers' compensation insurance or other insurance with similar coverage as set forth in 40-11.5-102(5).

It was also found that:

- Employer did not establish a quality standard and did not oversee Claimant's work and instruct Claimant how to perform his job. But Claimant was directed where to pick up his loads and when to deliver his loads. Nor is there any indication that any type of quality standard was required – other than Claimant delivering his loads on time.
- Employer did not pay Claimant a salary or an hourly rate. Instead, Employer paid Claimant a fixed rate for each roundtrip Claimant made from Denver to Texas. But Employer did reimburse Claimant for his expenses such as fuel and other expenses Claimant incurred while driving his routes.
- Employer did not terminate Claimant at any time for his failure to meet the employer's job requirements.
- Employer did not provide Claimant any training. On the other hand, many employees can be hired for their qualifications and expertise and not require any training. And this appears to be the case in this matter. There was no credible evidence submitted indicating Claimant required training to drive a semitruck.
- Employer did not require Claimant to work exclusively for Employer. On the other hand, Claimant did not have his own truck. Therefore, Claimant could not work as a truckdriver for someone else without them providing him a truck to drive.

Based on the totality of the evidence submitted at hearing and considering all of the factors set forth in Section 8-40-202(2)(b)(II), C.R.S., the ALJ finds and concludes that Claimant was not free from the control and direction in the performance of the services, both under the contract for performance of service and was not customarily engaged in an independent business of any kind. As a result, Claimant established by a preponderance of the evidence that he was an employee of Employer, and it was not established that Claimant was an independent contractor.

III. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical benefits.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered serious injuries that caused paraplegia and tetraplegia. As a result, Claimant has been provided medical treatment by several providers, including University Hospital in Albuquerque New Mexico and Craig Hospital in Englewood Colorado. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he is entitled to a general award of medical benefits to cure and relieve Claimant from the effects of his work injury.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits as of June 10, 2020, and continuing.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant suffered a severe spinal cord injury and was hospitalized from June 10, 2020, through July 22, 2020. As a result of his work injury, Claimant suffers from paraplegia/tetraplegia.

Claimant was unable to work while hospitalized and there is no indication Claimant has been released to full duty or placed at maximum medical improvement. As a result, Claimant has been totally disabled and unable to return to work as a semitruck driver since the accident. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits as of June 10, 2020.

After the accident, Employer continued paying Claimant for a short time period. Employer paid Claimant $1,800 one week and $900 for two subsequent weeks. Thus, Employer has paid Claimant $3,600 in lost wage benefits since June 10, 2020. Employer is therefore entitled to a credit of $3,600 against Claimant's temporary total disability benefits.

Based on Claimant's average weekly wage of $1,800, his temporary total disability rate is the maximum rate of $1,022.56.[2] The amount of TTD owed from June 10, 2020, the date of injury, through the date of this order, July 12, 2021, is $58,139.84.[3] Employer is, however, entitled to a credit of $3,600. As a result, Employer owes Claimant $54,539.84 in TTD for that period.

V. Determination of Claimant's average weekly wage.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, Claimant typically drove two trips per week from Denver to Texas and back to Denver. Claimant was paid $1,800 per week to drive these two trips. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that his average weekly wage is $1,800.

VI. Whether Claimant violated a safety rule by not wearing a seatbelt and should have his disability benefits reduced by 50%.

Employer asserted Claimant was not wearing his seatbelt at the time of the accident. The ALJ, however, credited Claimant's testimony that he was wearing his seatbelt at the time of the accident and that it came undone during the accident.

[2] See AWW calculation below.

[3] June 10, 2020, through July 12, 2021, is 56 weeks and 6 days – or 398 days - from June 10, 2020, through July 12, 2021.

Therefore, to the extent Employer was asserting a safety rule violation, additional findings and analysis are unnecessary since it has been found that Claimant was wearing his seatbelt at the time of the accident. As a result, the ALJ finds and concludes Employer has failed to establish a safety rule violation.

VII. Whether Respondent-Employer is subject to penalties pursuant to 8-43-408 for failing to carry workers' compensation insurance.

Section 8-43-408(5), C.R.S. (2018) provides,

> In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

The penalty for failure to insure only applies to indemnity benefits; it does not apply to medical benefits. *Industrial Commission v. Hammond*, 77 Colo. 414, 236 P. 1006 (1925); *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc*., W.C. No. 4-155-231 (February 13, 1998).

As found, Employer is uninsured. Employer has been ordered to pay Claimant $54,539.84 in TTD benefits from June 10, 2020, through July 12, 2021. Twenty-five percent (25%) of the compensation awarded is $13,634.96.

VIII. Payment to Division trustee or a bond to secure payment of benefits

Employer was not insured for workers' compensation liability at the time of Claimant's injury. Under § 8-43-408(2), Employer must pay to the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Although this Order awards ongoing TTD benefits, the end date is unknown, so the present value of ongoing TTD cannot be calculated. The total compensation and penalties Ordered herein is $68,174.80. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by some surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's injury on June 10, 2020, is compensable.

2. Employer shall cover reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's injury.

3. Claimant's average weekly wage is $1,800.

4. Employer shall pay Claimant $54,539.84 in TTD benefits from June 10, 2020, through July 12, 2021.

5. Employer shall pay Claimant $1,022.56 per week in TTD benefits commencing June 20, 2020, and continuing until terminated by law.

6. Employer shall pay $13,634.96 to the Colorado Uninsured Employer Fund. The check shall be payable to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, CO 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

7. In lieu of payment of the above compensation and benefits to the Claimant, the Employer shall:

   a. Deposit $68,174.80 with the Division of Workers' Compensation, as trustee, to secure payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit; or

   b. File a surety bond in the amount of $68,174.80 with the Division of Workers' Compensation within ten (10) days of this order:

      (1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

      (2) Issued by a surety company authorized to do business in Colorado.

      The bond shall guarantee payment of the compensation, penalties and benefits awarded.

8. Employer shall notify the Division of Workers' Compensation and Claimant's attorney of payments made pursuant to this order.

9. Filing any appeal, including a petition to review, shall not relieve Employer of the obligation to pay the designated sum to the Claimant, to the trustee or to file the

bond as required by paragraph 11(b) above. Section 8-43-408(2), C.R.S.

10. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

11. If Employer fails to pay the Claimant indemnity and/or medical benefits as ordered herein, Employer shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation, pursuant to § 8-43-408 (6), C.R.S.

12. Pursuant to § 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately and forthwith cease and desist from any further collection efforts from the Claimant because the Respondent-Employer is solely liable and responsible for the payment of all medical costs related to the Claimant's work injury.

13. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-146-527-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 10, 2021 (Session 1) and June 1, 2021 (Session 2) , in Denver, Colorado. There was no audio recording of the first session of the hearing. Consequently, the ALJ requested counsel for the parties to submit their summaries of the testimony on that date. After receiving the parties' summaries of the testimony, the ALJ synthesized both summaries and issued the ALJ' summary of the testimony of March 10, 2021, giving the parties three (3) working days within to object to the ALJ's summary. No timely objections were filed and the ALJ issued his summary to serve in lieu of a verbatim transcript of Session 1 of the hearing. Session 2 on June 1, 2021 was recorded by Google Meets (reference: 6/1/21,, Google Meets, beginning at 8:30 AM , and ending at 9:30 AM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq. Respondent was represented by [Redacted], Esq., [Redacted].

Hereinafter Kristoffer Henshaw shall be referred to as the “Claimant."   City and County of Denver, Denver Fire Department,shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 12 were admitted into evidence, without objection. Respondent’s Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant’s opening brief was submitted on June 11, 2021. Respondent’s answer brief v(labeled “Reply Brief’)c was submitted on June 18, 2021. Claimant did not submit a timely reply brief and the matter was deemed submitted for decision on June 23, 2021.

ISSUES

The issues to be determined by this decision concern compensability of an aggravating/accelerating event, medical benefits, authorized provider (ATP), temporary indemnity benefits and causal relatedness of treatment following an alleged intervening event.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulation and Finding

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds, that if the claim is compensable the Claimant’s average weekly wage (AWW) is $1,904.00.

The March 23, 2020 Event

2. The Claimant is a 32-year-old firefighter with the Employer, employed in this capacity since 2016.

3. On March 23, 2020, the Claimant was engaged in his usual duties as a fireman when he felt onset of left foot pain following stepping down from a fire truck. He estimated the step down was between 2 -3 feet, and that the onset of pain was immediate. Thereafter, the Claimant felt ongoing pain and had a limp for the remainder of his shift on March 23, 2020. He reported the incident to his supervisor, Captain Mike Morris, on March 23, 2020.

4. Captain Morris made a March 23, 2020 Run Log entry regarding the Claimant's report which stated, "FF [Redacted] reported a sudden onset pain in his foot about 3 pm on 3/23/20, which steadily worsened over the rest of the shift. OUCH Line was called the next morning (3/24/20) before going off shift and the FF injury reporting process was started" (**Respondent's Exhibit D) read into the record by Captain Morris at hearing.** Captain Morris testified that on reporting the incident, the Claimant had also mentioned his concerns over whether his significant running the weekend before could have been the cause of his left foot pain.

5. Reporting his condition to the Employer's OUCH Line on March 24, 2020, the Claimant stated, "I don't really know what happened. We had just left and when we were back I stepped off the rig and my left foot hurt" (**Respondent's Exhibit A p. 3).** The OUCH Line records also note that the Claimant selected Concentra from the list of designated providers to serve as the ATP.

6. Regarding his exercise regime leading up to the date of injury, the Claimant stated that he was training for the Colfax half marathon, which was scheduled for April 2020. According to the Claimant, his training consisted of running three times per week at lengths of 5-10 miles, and that his weekend run was the longest run, usually of 10 miles. He confirmed he had been on a 10-mile run the weekend before the Monday March 23, 2020 onset of symptoms. Based on the Claimant's undisputed testimony, the ALJ infers and finds that the Claimant was in good physical shape, thus, buttressing the injurious nature of the incident of March 23, 2020.

Medical

7. The Claimant was first seen by the ATPs at Concentra, on March 25, 2020. At this evaluation, Jonathan D. Joslyn, P.A. (Physician's Assistant) noted the that the Claimant reported "he stepped off a fire engine and began to feel pain in his left foot." There was tenderness in the plantar fascia noted by the PA and an initial assessment of a left ankle strain was given, along with a referral to podiatry. PA Joslyn also noted running was typical for the Claimant and he had been training (**Respondent's Exhibit E p. 19).** There is no persuasive evidence that the Claimant sustained any traumatic events while training/running.

8. The Claimant was seen by podiatrist Michael Zyzda, D.P.M. on April 1, 2020. The Claimant reported to Dr. Zyzda that he had had plantar fasciitis in the past[1], but stated that after the March 23, 2020 incident it was much worse. Dr. Zyzda noted, at the time of the injury, the Claimant was training for a half marathon. Most of the Claimant's left foot pain was in the arch towards the heel on the medial band of the plantar fascia. Dr. Zyzda found that the Claimant had a pes valgus foot type (flat footedness). His assessment was left foot plantar fascial strain versus small tear,

[1] At hearing, claimant testified his past plantar fasciitis was based on self-diagnosis through researching symptoms on the internet.

posterior tibial tendonitis, and/or peroneal tendonitis (**Respondent's Exhibit E pp. 26-7).** Dr. Zyzda referred the Claimant for continued physical therapy, orthotics and an MRI (magnetic resonance imaging) if the symptoms worsened. The ALJ infers and finds that the plantar facial strain was aggravated and accelerated by the March 23, 2020 incident.

9. On April 15, 2020, the Claimant reported to Dr. Zyzda that he was 60% improved with minimal pain of the arch at the medial band of the plantar fascia. There was no pain at the posterior tibial tendon and no pain at the peroneal tendons. The assessment was left foot plantar fascial strain versus small tear, with the posterior tibial and peroneal tendonitis improved (**Respondent's Exhibit E pp. 31-32).**

10. On May 15, 2020, the Claimant returned to Concentra where PA Joslyn noted that the Claimant had ongoing 2 out of 10 non-constant pain. The Claimant reported overall that he was 70% back to to baseline (**Respondent's Exhibit E pp. 36-38).** On June 5, 2020, the Claimant was seen by a Jeffrey Peterson, M.D., at Concentra, who also noted 2 of 10 non-constant pain and that the Claimant close to being able to complete the full duties of his job (**Respondent's Exhibit E pp. 39-41).** Because of ongoing pain, however, the Claimant was referred for an MRI.

11. On June 10, 2020, the Claimant underwent a left ankle MRI finding: 1) Soft-tissue edema superficial to the plantar fascia, possibly due to contusion. *There was no plantar fascial tear*. There was no calcaneal edema or fracture, and 2) Chronic tearing of the anterior talofibular and calcaneofibular ligaments (**Respondent's Exhibit H 78-79**).

Non Work-Related Intervening Event

12. The Claimant testified to an event at his home on June 10, 2020, which occurred after the MRI. He mis-stepped on the edge of his driveway and into his yard. The height difference between the driveway and yard caused the Claimant's left ankle to invert/twist inward with an immediate onset of pain. The Claimant later confided to PA Joslyn that the June 10, 2020 incident was "when I really took a turn downhill."

13. The Claimant saw Dr. Zyzda on June 18, 2020 to review the MRI results. Dr. Zyzda assessed the MRI as revealing possible soft-tissue contusion of the heel with no plantar fascial tear and chronic tear of the ATF and CFL. Dr. Zyzda felt he did not have much to go on to explain the Claimant's pain given the MRI had minimal findings. At the same evaluation, the Claimant also reported that he had rolled his ankle the prior Friday and, since then, he had more pain of his ankle and heel. Dr. Zyzda recommended crutches and instructed the Claimant to remain non-weight bearing for two weeks (**Respondent's Exhibit F pp. 63-64).** The Claimant was also given a cast boot to immobilize his left foot.

14. On June 25, 2020, the Claimant was again seen by PA Joslyn at Concentra. At this evaluation, the Claimant reported 3 to 4 out of 10 pain. He also reported that he stepped off a curb and rolled his ankle and had been feeling a lot of pain since (**Respondent's Exhibit E pp. 45-48).**

15. On July 2, 2020, Dr. Zyzda assessed possible findings of tarsal tunnel syndrome and performed a steroid injection into the tarsal tunnel. At a July 8, 2020 follow-up, the Claimant reported that he was much improved from the tarsal tunnel injection (**Respondent's Exhibit F pp. 65-68).** The first documentation of neurological complaints was at the July 2, 2020 evaluation by Dr. Zyzda when Dr. Zyzda documented that there was some tingling.

16. On July 15, 2020, Dr. Zyzda noted that the Claimant was doing much better with his cast boot on and Dr. Zyzda felt that the Claimant could do more activity (**Respondent's Exhibit F pp. 69-70).** On July 17, 2020, PA Joslyn noted that the Claimant reported some tingling and numbness in his left heel, and that the Claimant was wearing a boot on his left ankle (**Respondent's Exhibit E pp. 53-55).**

Kaiser Permanente

17. On July 22, 2020, the Claimant initiated care with his primary health care physician at Kaiser. According to the Claimant's testimony, this was two months prior to his being contacted by the workers' compensation claims adjuster and being advised that Respondent would be not provide further care under a Notice of Contest. According to the intake documentation, the Claimant was seen for complaints of chronic heel pain for four months. The Claimant was referred for an orthopedic evaluation, which was conducted by Edward C. Pino , M.D., on July 29, 2020.

18. At the initial evaluation, Dr. Pino had limited records available to review, but did have an MRI scan which the Claimant brought to the appointment. Dr. Pino noted that the MRI showed some mild changes consistent with insertional plantar fasciitis that was not dramatic. Based on the information available, Dr. Pino assessed left foot pain of unknown etiology. Differential diagnoses included plantar fasciitis, tarsal tunnel syndrome and reflex sympathetic dystrophy (**Respondent's Exhibit G pp. 73-75).** Dr. Pino referred the Claimant for a repeat MRI, which was conducted on July 30, 2020, and was compared to the previous MRI with "no new findings."

19. The Kaiser medical records contain a thorough workup for CRPS (chronic regional pain syndrome), including a triple phase bone scan as well as sympathetic nerve blocks. The Kaiser physicians ultimately ruled out CRPS as a diagnosis, which was also the conclusion of Carlos Cebrian,M.D. [Respondent's Independent Medical Examiner (IME)] and is discussed in Dr. Cebrian's report. The parties agreed at hearing that CRPS is not a condition for which the Claimant is seeking benefits (a discussion of

the CRPS workup from August to December 2020 is not relevant to the issues before the ALJ.

20. The Claimant returned to Dr. Zyzda on August 5, 2020 with unchanged findings on examination. Dr. Zyzda continued his clinical and diagnostic assessment of tarsal tunnel syndrome on the left. Dr. Zyzda also noted, if provided by Kaiser, the Claimant could utilize a cast to immobilize his left foot (**Respondent's Exhibit F p. 71).**

21. On August 14, 2020, the Claimant returned to Concentra for an evaluation with PA Joslyn. At this evaluation, the Claimant reported feeling a little better and with less tingling, but his heel pain remained, and he was unable to bear weight. The Claimant indicated to PA Joslyn that surgery might be offered by Kaiser, and he would pursue this outside of the workers' compensation system. This was the Claimant's last appointment with Concentra (**Respondent's Exhibit E pp. 56-58).**

22. On September 2, 2020, the Claimant was evaluated by Jeffrey R. Jockel , M.D., at Kaiser for a second orthopedic opinion on referral from Dr. Pino. At this evaluation, the Claimant's Patient Questionnaire indicated that Claimant was unsure if there was a specific injury. The ALJ infers that there is nothing unusual about the Claimant's statement that he was unsure. The Claimant stated that he noticed pain after getting off a fire truck and had a second injury two months later, where he sprained his ankle, and that brought about substantial heel pain for some reason. Dr. Jockel assessed work related neuritis with recommendations for ongoing medication use and acupuncture (**Respondent's Exhibit J pp. 224-228).**

23. The Claimant underwent a left foot EMG on September 25, 2020, which was normal. Subsequently, on September 28, 2020, Dr. Pino was of the opinion that while he still did not have a diagnosis for the Claimant but, by Claimant's history, he believed symptoms were directly related to the injury at work, whatever the diagnosis (**Respondent's Ex.hibit J pp. 98-99).**

24. On October 13, 2020, Dr. Pino again assessed left foot pain of unknown etiology. He recommended that the Claimant wear the cast for at least a month and then follow-up. A month later, on November 13, 2020, Dr. Pino found that the Claimant's use of a cast had not provided dramatic relief, and the Claimant had probably exhausted that type of treatment and cast removal was recommended.

25. On December 10, 2020, the Claimant underwent an ultrasound-guided tarsal tunnel injection with a good result. Thereafter, on January 18, 2021, because the Claimant's pain was relieved with injection of the tarsal tunnel, Dr. Pino recommended that it would be reasonable to proceed with a tarsal tunnel release (**Respondent's Exhibit J pp. 161-162).** The Claimant underwent a tarsal tunnel release on February 3, 2021 (records were not available at the time of the March 10, 2021 hearing).

Postoperatively, the Claimant testified at hearing to some improvement, but also ongoing pain and disability while he recovered from the surgery.

Temporary Disability

26. The Claimant had taken 24 hours of sick leave to recover from his tarsal tunnel release in February 2021 and sought to use another 12 hours of sick leave for his attendance at the March 10, 2021 hearing. Otherwise, the Claimant has been working full-time at modified duty in the Fire Department's Dispatch Center. The ALJ finds that the Claimant had less than three (3) days of work-related disability.

Respondent's IME, Carlos Cebiran, M.D.

27. Dr. Cebrian was accepted as an expert in occupational medicine. He was of the opinion that Claimant's diagnosis following the March 23, 2020 symptoms was plantar fasciitis. Dr. Cebrian explained that the Claimant was predisposed to having plantar fasciitis due to a pes valgus deformity (flat foot) and noted the preexisting diagnosis of plantar fasciitis in Dr. Zyzda's notes – or at least Claimant's reporting to Dr. Zyzda of his self-diagnosis based on similar preexisting symptoms. Dr. Cebrian explained that plantar fasciitis is a chronic micro-tearing and inflammation of the plantar facia, which runs along the bottom of the foot. He explained that it can be aggravated through repetitive use, especially in individuals with pes valgus. The chronic condition can flare up after a period of inactivity where the plantar facia are allowed to contract, which is why it is called the "first step" condition. Dr. Cebrian rendered the opinion concerning how the Claimant's description of the incident fit perfectly with the "first step" condition. Dr. Cebrian's opinion in this regard does not contra-indicate a temporary aggravation/acceleration of the Claimant's underlying condition of plantar fasciitis.

28. According to Dr. Cebrian, the medically probably cause of the Claimant's plantar fasciitis was his training for a marathon and not work. He explained that the Claimant's training the weekend before the incident was a 10-mile run, which would be a more likely mechanism causing plantar fasciitis than stepping down from a firetruck. He also explained that the onset after inactivity of riding in a fire truck would be an expected means for the Claimant to first experience his plantar fasciitis symptoms – and (on cross examination on June 4, 2021) *that claimant's symptoms would have occurred that Monday, regardless of whether he was at work.* He attempted to support this conclusion by noting the Claimant's prior similar symptoms, his predisposition due to flat footedness and his marathon training. Dr. Cebrian also discussed why the Claimant's diagnosis was not an acute tear of the plantar facia, and that this was later confirmed by an MRI. The ALJ infers and finds that the totality. The ALJ finds that a preponderance of the medical evidence supports the occurrence of a temporarily aggravating/accelerating event on March 23,, 2020.

29. Dr. Cebrian was of the opinion that the June 10, 2020 , non-work related ankle sprain led to the development of tarsal tunnel syndrome. Dr. Cebrian stated that the plantar fasciitis likely resolved on Cimmobilization following the June ankle sprain. Dr. Cebrian stated that tarsal tunnel syndrome was a separate condition and that an ankle twist/sprain is a medically probable cause of tarsal tunnel syndrome. Dr. Cebrian was of the opinion that the Claimant's treatment following the June 10, 2020 incident would not be related to his plantar fasciitis nor to his employment.

30. Dr. Cebrian's diagnosis was supported, in part, by the opinion of Dr. Zyzda, and also by observation of the Claimant's change in symptoms over time and considering the intervening event. The radiology and diagnostic injections also support his opinions on both plantar fasciitis and tarsal tunnel syndrome.

Ultimate Findings

31. The ALJ finds the aggregate medical opinions of the ATPs support a temporary foot strain caused by the Claimant stepping down 2 to 3 feet from a fire truck on March 23,2020 . The opinions of the podiatric doctors are more convincing and persuasive than the opinions of an occupational doctor such as Dr. Cebrian because of their specific expertise concerning feet. Also, the podiatric opinions are more convincing than those of Dr. Cebrian and they span a reasonable period of time, thus, furnishing them a greater opportunity to observe the Claimant than Dr. Cebrian's opportunity. Therefore, the ALJ finds the opinions of the podiatric doctors are more credible and persuasive than the opinions of Dr. Cebrian.

32. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of the podiatric doctors and the Kaiser doctors and the reject the opinions of Dr. Cebrian's.

33. The totality of the evidence supports the fact that the March 23, 2020 "stepping off the fire truck" incident temporarily aggravated and accelerated the Claimant's underlying foot condition from the date of the incident through June 1, 2020, the date of the effective, intervening event.

34. During the period of the temporary aggravation, the Claimant did **not** sustain more than three days or shifts of temporary disability.

35. The Claimant has proven by a preponderance of the evidence that he sustained a compensable temporary aggravation/acceleration of his pre-existing foot condition between the date of the incident and the date of the effective, intervening event on June 1, 2020

36. The Claimant has proven, by preponderant evidence, that all of the medical care and treatment for his foot condition between March 23, 2020 and June 1, 2020, was attributable to the temporary aggravation/ acceleration of his pre-existing foot

condition was authorized (with the exception of Kaiser), within the chain of authorized referrals, causally related and reasonably necessary to cure and relive the effects of the temporary aggravation/acceleration.

37. The Claimant has failed to prove, by preponderant evidence, entitlement to temporary indemnity benefits during the period of the temporary aggravation/acceleration.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the aggregate medical opinions of the ATPs support a temporary foot strain caused by the Claimant stepping down 2 to 3 feet from a fire truck on March 23,2020 . The opinions of the podiatric doctors were more convincing and persuasive than the opinions of occupational Dr. Cebrian because of their specific expertise concerning feet. Also, the podiatric opinions were more convincing than those of Dr. Cebrian because they span a reasonable period of time, thus, furnishing these doctors and medical providers a greater opportunity to observe the Claimant than Dr. Cebrian's opportunity. Therefore, the opinions of the podiatric doctors are more credible and persuasive than the opinions of Dr. Cebrian.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, , to accept the opinions of the podiatric doctors and the Kaiser doctors and the reject the opinions of Dr. Cebrian.

Temporary Compensable Aggravation/Acceleration of Underlying Foot Condition

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993);

National Health Laboratories v. Indus. Claim Appeals Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997)*.* An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the totality of the evidence supported the fact that the March 23, 2020 “stepping off the fire truck” incident temporarily aggravated and accelerated the Claimant’s underlying foot condition from the date of the incident through June 1, 2020, the date of the effective, intervening event.

Effective, Intervening Event

d. An intervening event which severs the causal connection between the injury and a subsequent injury and causes subsequent disability is an “efficient, intervening cause,” which cuts off entitlement to benefits. *Schlage Locik v. Lahr,* 870 P.2d 615 (Colo. App. 1993). Where an employee had returned to work after a compensable injury and sustained a subsequent injury to the same body part and there was no proof that the previous injury contributed to the disability after the subsequent injury, the subsequent injury constituted “an efficient intervening injury.” *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). As found, the June 1, 2020 non-work related fall was an efficient, intervening event which severed the causal relation to the March 23, 2020, aggravating injury.

Medical Benefits

e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all of the medical care and treatment for his foot condition between March 23, 2020 and June 1, 2020, was attributable to the temporary aggravation/ acceleration of his pre-existing foot condition was authorized (with the exception of Kaiser) and within the chain of authorized referrals.

f. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant’s medical treatment is causally related to the aggravation /acceleration of his pre-existing foot condition condition of March 23, 2020.. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment, attributable to the temporary aggravation/acceleration, was reasonably necessary. to cure and relieve the effects thereof.

Average Weekly Wage

g. As stipulated and found**,** the Claimant's average weekly wage (AWW) is $1,904.00, which is academic at the present time.

Temporary Indemnity Benefits

h. Section 8-42-103 (1) (a), C.R.S., provides that no disability benefits are recoverable if the disability is less than three days or here shifts. As found, the Claimant failed to prove entitlement to temporary indemnity benefits during the period of the temporary aggravation/acceleration.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden with respect to compensability of the temporary aggravation/acceleration of his foot condition, prior to the date of the effective, intervening event on June 1, 2020.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant having sustained a temporary aggravation/acceleration of his underlying foot condition, Respondent shall pay the costs of all of the authorized, causally related and reasonably necessary medical care and treatment from March 23, 2020, through June 1, 2020, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Claimant's average weekly wage is $1,904.00.

C. Any and all claims for temporary indemnity benefits from March 23, 2020, through June 1, 2020, are hereby denied and dismissed.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 12th day of July 2021.

Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-153-441-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the right total shoulder arthroplasty recommended by Adam Seidl, M.D. is reasonably necessary and causally related to his admitted, August 7, 2020, industrial injury.

STIPULATIONS

- In their June 11, 2021, status report to the court, Respondents stipulated that Claimant suffered a compensable left shoulder injury. They did not, however, stipulate that the shoulder surgery recommended by Dr. Seidl is reasonable, necessary, and related to Claimant's work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. In 2017, Claimant started working for the Employer as a master mechanic. Claimant's job duties involve heavy duty work on diesel and other trucks. Claimant's job duties are physical and require him to change/fix brakes, including removing a drum that weighs 150 pounds, and to replace hydraulic booms that weigh from 100 to 300 pounds, among other duties. *See Claimant's Exhibit 12, pages 138-144*. Before the work injury, Claimant he never had any problem doing his job for the Employer because of his right shoulder.

2. Over 30 years before his work injury, Claimant injured his right shoulder while working on an oil rig and underwent right shoulder surgery. Claimant was released to full duty and did not have any ongoing/persistent right shoulder issues. Claimant then worked as a firefighter for [Redacted] for 25 plus years. When Claimant started working for the fire department - and many times thereafter - he had to undergo training and testing. Claimant never had any problem completing the testing, training, or certification because of right shoulder issues.

3. On August 7, 2020, Claimant was replacing the breaks and rotors on a large truck. Claimant was using a 4-pound sledgehammer to ring the rotor and knock it loose. Claimant struck the 4-pound sledgehammer as hard as he could against the rotor and immediately felt significant right shoulder pain. It also felt like rubber bands snapping in his shoulder and pain like he had never felt before. Claimant yelled out, reported his claim immediately, and was taken to the ER. Claimant felt like he was being stabbed in the shoulder with a knife and that he could not move his arm. The pain was also sharp and burning.

4. That same day, Claimant treated at the University of Colorado ER and reported "he was swinging a hammer at work and hit something and felt like his shoulder was still

moving and heard a pop." Claimant reported he now has pain radiating down his right arm to his hand. Claimant reported he had shoulder surgery about 30 years before. *Claimant's Exhibit 6, pages 9-12*. A right shoulder x-ray revealed no fracture of dislocation. *Claimant's Exhibit 7, page 13*.

5. On August 12, 2020, the Employer filed a First Report of Injury, detailing the circumstances of Claimant's right shoulder injury. *Claimant's Exhibit 1, page 1*. On November 17, 2020, Claimant filed a Workers' Claim for Compensation. *Claimant's Exhibit 2, page 2*. On December 9, 2020, Respondents filed a Notice of Contest. *Claimant's Exhibit 3, page 3*. On January 13, 2021, Claimant applied for a hearing on reasonable and necessary medical benefits, specifically surgery authorization, along with other issues that are no longer ripe for determination. *Claimant's Exhibit 4, pages 4-5*. On February 2, 2021, Respondents filed a Response to Claimant's Application for Hearing. *Claimant's Exhibit 5, pages 6-8*.

6. On August 13, 2020, Claimant treated with Larry Vo, NP, nurse practitioner to Adam Seidl, M.D., an orthopedic surgeon. NP Vo documented Claimant's mechanism of injury and prior right shoulder injury, including that Claimant did not have any right shoulder issues preceding his August 7, 2020, industrial injury. NP Vo recommended a right shoulder MRI. *Claimant's Exhibit 8, pages 16-19*.

7. On August 17, 2020, Claimant underwent a right shoulder MRI. The radiologist noted "there are metallic suture anchors present, which generate susceptibility artifact degrading assessment of adjacent osseous and soft tissue detail." The radiologist noted Claimant's prior rotator cuff repair and that "the repair is thin with small regions of focal full-thickness/near full-thickness fluid signal, which could represent re-tear or areas of nonwatertight seal. There is no evidence for a complete re-tear or definitive retraction." The radiologist noted "there is evidence of degeneration and scarring of the repaired tendon," and that "there is moderate tendinosis without a definitive tear of the non-repaired portion of the infraspinatus." The radiologist also noted glenohumeral osteoarthritis with cartilage loss reaching full thickness along the posterior guard. *Claimant's Exhibit 8, pages 14-15*.

8. On August 27, 2020, Claimant treated with Dr. Seidl, who noted Claimant was wearing his right shoulder in a sling. Dr. Seidl diagnosed Claimant with right shoulder pseudoparalysis. Dr. Seidl noted while Claimant's right shoulder was asymptomatic before his industrial, he now has significant pain and dysfunction. Dr. Seidl reviewed Claimant's right shoulder MRI and opined the MRI revealed a re-tear in his rotator cuff, atrophy of the rotator cuff, thinning of the tendon, and osteoarthritis. Dr. Seidl noted Claimant's treatment options, including conservative care, arthroscopy, and a reverse total shoulder replacement. Dr. Seidl recommended PT and Claimant follow-up in four weeks. Dr. Seidl concluded that given the right shoulder MRI findings he would recommend a reverse total shoulder arthroplasty *Claimant's Exhibit 8, pages 20-24*.

9. From September 14, 2020, through December 1, 2020, Claimant underwent eight physical therapy sessions. *Claimant's Exhibit 11, pages 61-137*. At his first physical therapy session, the therapist noted Claimant's signs and symptoms are consistent with a right shoulder rotator cuff tear and impingement of the rotator cuff tendons.

Claimant also had positive objective testing consistent with a rotator cuff tear. Claimant also had *Claimant's Exhibit 11, page 61-63*. On October 19, 2020, Claimant reported he is unable to sleep anymore due to right shoulder pain. *Claimant's Exhibit 11, page 70*. On November 11, 2020, Claimant still had significantly decreased right shoulder range of motion and significant right shoulder pain with motion. *Claimant's Exhibit 11, page 104*. On December 1, 2020, Claimant reported persistent right shoulder pain and limitations and that his shoulder continues to catch often throughout the day. The therapist noted had the same right shoulder findings and issues with range of motion. Post treatment, the therapist noted Claimant had a positive drop arm test, indicating a potential rotator cuff tear. *Claimant's Exhibit 11, page 136*.

10. On September 24, 2020, Claimant treated with Dr. Seidl, who noted Claimant's right shoulder was still pseudoparalytic. Dr. Seidl noted Claimant still has significant right shoulder pain and loss of function. On physical examination, Dr. Seidl noted significantly decreased range of motion. Dr. Seidl reviewed the right shoulder MRI again and recommended proceeding with the right reverse total shoulder arthroplasty. *Claimant's Exhibit 11, page 25*.

11. On September 25, 2020, Dr. Seidl requested authorization for a right reverse total shoulder arthroplasty. *Claimant's Exhibit 9, pages 26-52*.

12. On October 9, 2020, Adam Farber, M.D., Respondents' retained expert witness, performed a records review regarding Dr. Seidl's surgery authorization request. Dr. Farber reviewed Claimant's medical records, including the MRI report. Dr. Farber did not review the actual MRI. He also did not physically evaluate Claimant or personally interview Claimant to obtain a detailed history. Dr. Farber opined Claimant's right shoulder MRI did not identify a rotator cuff tear based on the radiologist's interpretation of the MRI. Dr. Farber opined the recommended right reverse total shoulder arthroplasty is not reasonable, necessary, or causally related to Claimant's alleged industrial injury because there is no MRI evidence of a rotator cuff tear (as outlined in the Colorado Division of Workers' Compensation Medical Treatment Guidelines, Rule 17, Exhibit 5). *Respondents' Exhibit D, pages 6-11*.

13. On March 17, 2021, Claimant underwent an IME with William Ciccone II, M.D., Respondents' retained expert witness. Dr. Ciccone reviewed Claimant's medical history and mechanism of injury, as well as Claimant's medical records. Dr. Ciccone did not review Claimant's right shoulder MRI, just the radiologist's report. Dr. Ciccone opined that on August 7, 2020, Claimant sustained a right shoulder sprain or strain. Dr. Ciccone opined Claimant's persistent right shoulder pain and other symptoms are related to his preexisting right shoulder condition. Dr. Ciccone opined Claimant's August 7, 2020, industrial injury did not permanently aggravate his underlying degenerative changes in Claimant's right shoulder. Dr. Ciccone opined, "[g]iven the shoulder arthritis, the discussion of a shoulder replacement is not unreasonable, however the potential need for this procedure is not causally related to a work event." *Respondents' Exhibit E, pages 12-19*.

14. On May 18, 2021, Dr. Ciccone testified by deposition. Dr. Ciccone testified as an expert in orthopedic surgery. *Dr. Ciccone's May 18, 2021 Deposition Transcript,*

page 6, lines 6-8 (hereinafter Depo. Tr. 6:6-8). Dr. Ciccone testified the industrial injury caused Claimant a right shoulder sprain or strain. *Depo. Tr. 8:7-8*. Dr. Ciccone testified he did not review Claimant's right shoulder MRI, just the radiologist's report interpreting the MRI. *Depo. Tr.* 9:2-12. Dr. Ciccone testified Dr. Seidl's request for a right total shoulder arthroplasty is not indicated according to the Colorado Medical Treatment Guidelines because the MRI does not show a large rotator cuff tear. *Depo. Tr. 10:24-25; 11:1-2*. Dr. Ciccone testified Claimant's MRI findings are chronic and probably unrepairable, which is why Dr. Seidl is recommending a reverse total shoulder arthroplasty. *Depo. Tr. 11:3-7*. Dr. Ciccone testified Dr. Seidl's recommendation for a right reverse total shoulder arthroplasty is reasonable and necessary. *Depo. Tr. 15:13-14*.

15. On cross-examination, Dr. Ciccone testified no evidence exists that Claimant was having any right shoulder issues, including no pain, lack of function, inability to work, inability to do activity, such as fishing, hunting, daily hygiene, playing with is grandkids, etc., before his August 7, 2020 industrial injury. *Depo. Tr. 18:11-24; 21:9-23; 31:7-25; 32:1-7*. Dr. Ciccone testified that at the time of his IME, Claimant reported he was swinging a 4-pounds sledgehammer to break loose rotors when he felt a sensation like rubber bands popping and ripping in his shoulder when he struck the hammer against the metal rotors. *Depo. Tr. 19:1-12*. Dr. Ciccone testified that Claimant told him he yelled out and pain and had to be taken to the ED. *Depo. Tr. 19:21-15; 20:1-3*. Dr. Ciccone testified that following the August 7, 2020, industrial injury, Claimant had significant right shoulder pain, significantly decreased range of motion (only 30 degrees of flexion), and that he was really unable to do anything with his arm extended. *Depo. Tr. 20:4-15; 21-23.* Dr. Ciccone testified that when he performed the IME, Claimant had bad right shoulder range of motion. *Depo. Tr. 28:23-25; 29:1-22*

16. Dr. Ciccone testified the radiologist who reviewed Claimant's right shoulder MRI noted that the MRI was hard to read because there is a lot of stuff in there (metallic suture anchors present, which generates susceptibility artifact, degrading assessment of adjacent soft tissue osseous and soft tissue detail). *Depot Tr. 22:11-22*. Dr. Ciccone testified that only two people have reviewed Claimant's right shoulder MRI: the radiologist and Dr. Seidl. *Depo. Tr. 23: 11-25; 24:3-13*. Dr. Ciccone testified Dr. Seidl reviewed Claimant's right shoulder MRI and found a "massive rotator cuff tear." *Depo. Tr. 24:21-24*. Dr. Ciccone testified that he is an orthopedic and surgeon and that he does not rely on a radiologist's interpretation of an MRI. *Depo. Tr. 24:25; 25:1-8*. Dr. Ciccone testified that while he may take a radiologist's interpretation into consideration, he always, in every case, reviews his patients MRIs and makes his recommendations for treatment based on his review of an MRI. *Depo. Tr. 25:9-18*. But Dr. Ciccone testified that in Claimant's case, he did not review Claimant's right shoulder MRI. *Depo. Tr. 24:14-16*.

17. Dr. Ciccone testified that when determining whether a patient needs a shoulder arthroplasty, the patient must have both the pathology and the symptoms. *Depo. Tr. 25:21-25; 26:1*. Dr. Ciccone testified he would not perform a shoulder arthroplasty on a patient just because the patient has pathology. *Depo. Tr. 26:2-5*. Dr. Ciccone testified Claimant had the pathology for a reverse total shoulder arthroplasty before

his August 7, 2020 industrial injury, but not the symptoms. *Depo. Tr. 26:9-16*. Dr. Ciccone testified no evidence exists Claimant had the symptoms for a reverse total shoulder arthroplasty before August 7, 2020. *Depo. Tr. 26:25; 27:1-3*. Dr. Ciccone testified it was not until the August 7, 2020, industrial injury that Claimant had the right shoulder symptoms. *Depo. Tr. 27:4-9*. Dr. Ciccone testified that it wasn't until his August 7, 2020, industrial injury that Claimant had both the pathology and the symptoms to necessitate a reverse total shoulder arthroplasty. *Depo. Tr. 27:4-20*; 28:1-5. Dr. Ciccone testified Claimant's August 7, 2020, industrial injury caused his right shoulder symptoms. *Depo. Tr. 28:6-16*. Dr. Ciccone testified Dr. Seidl's recommendation for a right reverse total shoulder arthroplasty is reasonable. *Depo. Tr. 30:16-19*

18. Since his August 7, 2020, industrial injury, Claimant has been dealing with constant right shoulder pain, cannot sleep on his right side, cannot reach with his right arm, cannot play with his grandchildren, and cannot swim, ride his bike, fish, or hunt. Even the slightest wrong movement with his shoulder causes Claimant such significant pain that it will knock him to his knees. Claimant did not have any issues like this with his right shoulder before or leading up to his work injury. All of Claimant's current right shoulder issues started on August 7, 2020. Moreover, physical therapy has not helped his shoulder. Furthermore, from a functional standpoint, Claimant is nowhere near where he was in the days leading up to his work injury. Claimant's August 7, 2020, injury has changed his life in a bad way.

19. The issue in this case is whether the recommended right total shoulder arthroplasty is reasonably necessary and causally related to Claimant's now admitted industrial injury. Claimant's right shoulder was asymptomatic before the August 7, 2020, industrial injury. Before August 7, 2020, Claimant worked a heavy duty, physically demanding job without any right shoulder problems or limitations. On August 7, 2020, Claimant sustained a right shoulder industrial injury, which permanently aggravated his underlying, preexisting right shoulder condition. A dispute exists as to whether Claimant's right shoulder MRI revealed a rotator cuff tear. The radiologist who reviewed the MRI did not identify a rotator cuff tear. Dr. Seidl, Claimant's surgeon, identified a massive rotator cuff tear on the MRI. Neither Dr. Farber nor Dr. Ciccone reviewed the actual MRI. Dr. Farber opined that because the radiologist did not identify a rotator cuff tear on the MRI, Claimant does not meet the Colorado Medical Treatment Guidelines for a reverse total shoulder arthroplasty. Dr. Ciccone testified that as an orthopedic surgeon, he always reviews his patients MRIs to determine the proper course of treatment and does not rely on a radiologist's interpretation of an MRI. Dr. Ciccone concluded that regardless of the MRI findings and the Colorado Medical Treatment Guidelines, the right reverse total shoulder arthroplasty recommended by Dr. Seidl is reasonable and necessary.

20. Additionally, Dr. Ciccone testified that as a surgeon he would never recommend a shoulder arthroplasty unless a patient has both the pathology and symptoms to necessitate the surgery. Dr. Ciccone opined that while Claimant may have had the pathology for a shoulder arthroplasty before August 7, 2020, he did not have the symptoms. Dr. Ciccone opined Claimant did not have both the pathology and

symptoms necessitating the right reverse total shoulder arthroplasty until his August 7, 2020, industrial injury, which caused Claimant's right shoulder symptoms.

21. Claimant's testimony about the lack of shoulder symptoms before the work accident and the immediate development of severe shoulder symptoms at the time of - and after - the accident is supported by the underlying medical record. As a result, the ALJ finds Claimant's testimony to be credible and persuasive.

22. The ALJ finds portions of Dr. Ciccone's testimony to be credible and persuasive. The ALJ credits that portion of Dr. Ciccone's testimony that found the need for surgery to be reasonable and necessary. The ALJ finds that portion of his testimony to be credible and persuasive because it is consistent with Claimant's testimony and the underlying medical record. For example, Claimant was not having any right shoulder symptoms before the work accident. Since the accident, Claimant has had significant shoulder symptoms such as pain and limited range of motion which has caused significant functional impairment. Plus, since his work injury, Claimant has also undergone conservative treatment which has not improved his condition. Lastly, the primary recommendation to relieve Claimant's symptoms is the surgery recommended by Dr. Seidl.

23. On the other hand, in reading Dr. Ciccone's deposition – especially his answers during cross examination- it is hard to tell the basis for his opinion that the surgery is not causally related to Claimant's work injury. Thus, to the extent Dr. Ciccone does not think the need for surgery is causally related, the ALJ does not find that portion of Dr. Ciccone's opinion to be persuasive. For example, Dr. Ciccone agreed that Claimant was asymptomatic before the accident, suffered a work injury and became symptomatic, and that the surgery is reasonable and necessary to cure and relieve Claimant's symptoms. Based on that testimony, the missing link in his opinion is how he determined the surgery is unrelated, when in essence he concluded the surgery is reasonable and necessary to cure Claimant's symptoms that were caused by the work accident. In other words, his testimony during his cross examination supports a conclusion that the surgery is reasonable, necessary, and related to treat Claimant from the effects his work injury.

24. The ALJ also does not credit or find persuasive the opinion of Dr. Farber as set forth in his report. In this case, one of the primary issues raised by Dr. Farber is that the rotator cuff tear identified by Dr. Seidl after reviewing the actual MRI films is not identified in the MRI report. Despite this issue, Dr. Farber failed to obtain and review the actual MRI films. Instead, he was content with completing his report without reviewing critical information. Moreover, despite concluding the surgery is not reasonable, necessary, and related, he did not offer a reasonable treatment plan to cure and relieve Claimant from the effects of his work injury. As a result, the ALJ does not find his report to be credible or persuasive.

25. The ALJ finds Claimant's August 7, 2020, industrial injury caused a significant right shoulder injury, including significant pain, range of motion loss, and functional limitations, none of which Claimant had before the injury. Claimant's right shoulder was functioning fine and pain free before the August 7, 2020, event. Claimant did not

need the right shoulder arthroplasty before August 7, 2020. The August 7, 2020, industrial injury permanently aggravated Claimant's underlying right shoulder condition and is the proximate cause of his need for the reverse total shoulder arthroplasty. The ALJ finds Claimant's August 7, 2020, industrial injury aggravated, accelerated, and combined with his preexisting condition to cause an injury and need for treatment, including the right reverse total shoulder arthroplasty recommended by Dr. Seidl. The ALJ finds Claimant proved by a preponderance of the evidence the right reverse total shoulder arthroplasty recommended by Dr. Seidl is reasonable, necessary, and related to his compensable, August 7, 2020, industrial injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential*

Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved by a preponderance of the evidence that the right total shoulder arthroplasty recommended by Adam Seidl, M.D. is reasonably necessary and causally related to his admitted, August 7, 2020, industrial injury.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*.

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Indus, Comm'n*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo.

App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

Claimant's August 7, 2020, industrial injury caused a significant right shoulder injury, including significant pain, range of motion loss, and functional limitations, none of which Claimant had before the injury. Claimant's right shoulder was functioning fine and pain free before the August 7, 2020, event.

Claimant did not need the right shoulder arthroplasty, which Dr. Ciccone concludes is reasonable and necessary, before August 7, 2020. The August 7, 2020, industrial injury permanently aggravated Claimant's underlying right shoulder condition and is the proximate cause of his need for the reverse total shoulder arthroplasty. Claimant's August 7, 2020, industrial injury aggravated, accelerated, and combined with his preexisting condition to cause an injury and need for treatment, including the right reverse total shoulder arthroplasty recommended by Dr. Seidl.

As a result, the ALJ finds and concludes Claimant proved by a preponderance of the evidence the right reverse total shoulder arthroplasty recommended by Dr. Seidl is reasonable, necessary, and causally related to his compensable, August 7, 2020, industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

A. Claimant proved by a preponderance of the evidence that the right total shoulder arthroplasty recommended by Adam Seidl, M.D. is reasonably necessary and causally related to his August 7, 2020, industrial injury. Respondents shall pay for the right total shoulder arthroplasty subject to the Division of Workers' Compensation Medical Fee Schedule.

B. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 15, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondent has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bruce Belleville, M.D. that Claimant suffered a 13% whole person impairment rating as a result of his September 25, 2019 industrial injury.

2. A determination of Claimant's Average Weekly Wage (AWW).

PROCEDURAL MATTER

1. Claimant failed to attend the June 4, 2021 video hearing in this matter. Therefore, prior to entering an order, the ALJ must consider whether Claimant had adequate notice of the proceedings.

2. Office of Administrative Courts Rules of Procedure for Workers' Compensation Hearings (OACRP) Rule 23 governs the entry of orders against non-appearing parties at hearings. Rule 23 provides, in relevant part:

> If a party fails to appear at a hearing after the OAC has sent notice of the hearing to that party, prior to entering any orders against the non-appearing party as a result of that hearing, the judge will consider:
>
> A. The addresses to which the notice of hearing was sent are the most recent addresses provided by the non-appearing party to either the OAC or the Division of Workers' Compensation; or
>
> …
>
> C. A copy of a record or other written statement from the OAC or the Division of Workers' Compensation containing the most recent address provided by the non-appearing party to either of those agencies shall be sufficient to create a rebuttable presumption that the non-appearing party received notice of the hearing.

3. On March 18, 2021 the OAC sent a Notice of Hearing and Status Conference to Claimant at his physical address on file with the Division of Workers' Compensation (DOWC) and the OAC, 930 Boltz Court, Fort Collins, CO 80525. The OAC also sent the Notice to Claimant's email address on file with both agencies: jim.[Redacted]@colostate.edu. Furthermore, at hearing Respondent's counsel remarked that his office also sent an email to Claimant on March 19, 2021 forwarding OAC's March 18 email and the Notice of Hearing and Status Conference.

4. On March 25, 2021 the parties participated in a pre-hearing conference before PALJ David W. Gallivan to discuss Respondent's motions (1) to depose the Division Independent Medical Examination (DIME) physician and (2) compel signed releases. On the same date PALJ Gallivan issued an order that was sent to Claimant at jim.[Redacted]@colostate.edu.

5. At hearing, Respondent's attorney represented that the email address used by the DOWC and the OAC was correct. He noted it was the same email address used by his office to correspond with Claimant. In fact, Claimant had acknowledged receipt of documents on April 28, 2021 and May 13, 2021 in replies to emails.

6. Claimant did not file a Case Information Sheet prior to the hearing in this matter as required by OACRP 20 and as instructed on the Notice of Hearing and Status Conference. He also did not appear at the telephone status conference held at 1:00 p.m. on June 2, 2021. The notice of the status conference provided the telephone number for the parties to call as well as the participant code.

7. On June 3, 2021 the OAC emailed the parties details of the virtual hearing to be conducted on June 4, 2021 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. The telephone number and access code were provided on the invitation.

8. Despite the preceding notice of the June 4, 2021 video hearing Claimant failed to appear. At the outset of the hearing, the ALJ reviewed the record to determine whether Claimant had received adequate and proper notice of the 1:00 p.m. hearing. Based on a review of the file and comments from Respondent's counsel, the ALJ was satisfied Claimant had proper and adequate notice of the matter. Because the case involved Respondent's Application for Hearing, the ALJ proceeded with the hearing.

9. On June 22, 2021 Claimant filed a motion "to have a hearing where I'm represented." He asserted that he did not receive timely notice of the June 4, 2021 hearing and had technical difficulties. After receiving a response from Respondent's counsel, the undersigned ALJ denied Claimant's motion in a written order dated June 24, 2021.

10. The preceding chronology reflects that Claimant had adequate notice of the June 4, 2021 hearing in this matter. The Notice of Hearing was sent to Claimant's email address on file with the OAC and the DOWC. Moreover, on June 3, 2021 the OAC emailed the parties details of the virtual hearing to be conducted on June 4, 2021 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. Furthermore, Respondent's corresponded with Claimant on multiple occasions through the same email address. The record thus demonstrates sufficient evidence to create a rebuttable presumption that Claimant received notice of the hearing. Claimant has failed to rebut the presumption. Because Claimant had adequate notice of the June 4, 2021 hearing but chose not to appear, entry of an order in this matter is appropriate.

FINDINGS OF FACT

1. Claimant worked for Employer as an Equipment Operator in Facilities Management. On September 25, 2019 Claimant suffered an admitted industrial injury to his left upper extremity during the course and scope of his employment with Employer. Claimant received medical treatment through Workwell Occupational Medicine.

2. Claimant's annual salary as of the date of injury was $31,632.00. Dividing $31,632.00 by 52 weeks yields an Average Weekly Wage of $608.31. An AWW of $608.31 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

3. On September 27, 2019 Claimant visited Elizabeth Otto, APN at Workwell for an evaluation. Claimant reported that he injured his left shoulder at work on September 25, 2019. He specifically experienced pain when he lifted his arm and reached back to close the door of his truck. Claimant noted numbness in his left forearm beginning on the date of injury. After conducting a physical examination, APN Otto diagnosed Claimant with the following: (1) cervicalgia; (2) an unspecified sprain of the left shoulder joint; (3) pain in the left wrist; and (4) paresthesia of the skin. She assigned work restrictions consisting of no lifting, pushing or pulling in excess of 10 pounds, no climbing or crawling, no lifting away from the body and no overhead work. APN Otto concluded that the objective findings were consistent with a work-related injury.

4. Claimant subsequently underwent conservative care while he continued to work full time for Employer. His treatment specifically included massage therapy, physical therapy, acupuncture and an epidural steroid injection to the cervical spine.

5. Logan Jones, D.O. of WorkWell referred Claimant to Authorized Treating Physician (ATP) Eric Shoemaker, D.O. in December 2019. Based on left forearm symptoms, Dr. Shoemaker originally felt Claimant stressed or injured the brachial plexus area. He also noted that "there [was] no evidence on exam of cervical etiology and no evidence of any injury to the shoulder itself, including the rotator cuff." Dr. Shoemaker described Claimant's overall presentation as "quite benign" and remarked that the prognosis was good for spontaneous recovery. He ordered an MRI of the brachial plexus and an EMG of the left upper extremity.

6. The January 6, 2020 MRI of the left brachial plexus was normal. A January 16, 2020 EMG of the left upper extremity showed no evidence of cervical radiculopathy.

7. Dr. Shoemaker subsequently ordered an MRI of the cervical spine. The January 29, 2020 MRI revealed discogenic degenerative changes most prominent in the mid-cervical spine. At C4-5 and C5-6 there was an annular disc bulge with bone spur formation. The MRI report also noted mild foraminal narrowing at C4-5 bilaterally with no central canal stenosis.

8. On January 30, 2020 Claimant returned to Dr. Shoemaker for an evaluation. Dr. Shoemaker reported that Claimant suffered localized pain from his neck through his left shoulder into his radial forearm and the base of his thumb at his radial wrist. After

reviewing Claimant's January 29, 2020 cervical spine MRI, Dr. Shoemaker assessed Claimant with right C6 radiculitis in the setting of severe foraminal stenosis due to disc osteophyte complex. He also noted severe bilateral foraminal stenosis at C4-5 and C5-6 as well as C6-7 on the left. The MRI also reflected at least moderate canal stenosis at C4-5 and to a lesser degree at C5-6. Dr. Shoemaker explained that Claimant's symptoms began when he was closing a door behind him with his shoulder in an abducted position at 90 degrees with slight extension and then rotating externally with his hand overhead. He also noted some chronic baseline axial neck pain "though the symptoms are superimposed." Dr. Shoemaker recommended a cervical epidural steroid injection because of Claimant's persistent "functionally limiting radicular pattern pain." He remarked that the injection was for diagnostic and therapeutic purposes.

9. On March 2, 2020 Dr. Shoemaker performed a left paramedian C7-T1 interlaminar epidural steroid injection. On March 18, 2020 Claimant informed Dr. Shoemaker that the injection slightly worsened his neck pain and he sustained 0% benefit. Nevertheless, Claimant noted that his pain was not significant enough to warrant surgical intervention. Dr. Shoemaker thus prescribed medications for Claimant's symptoms.

10. On May 19, 2020 Claimant explained to Dr. Shoemaker that he felt the sensation in his arm was returning and his arm was "waking up." After conducting a physical examination, Dr. Shoemaker determined Claimant had reached Maximum Medical Improvement (MMI). He recommended medical maintenance care in the form of medications for the following 12 months.

11. Claimant's physicians at WorkWell referred him to Robert Watson, M.D. for an impairment rating. At the August 13, 2020 visit, Claimant explained that he injured his left shoulder at work on September 25, 2019. He experienced numbness and tingling into the left radial forearm. The remaining numbness in the left forearm had "begun to resolve." Other than some intermittent shoulder discomfort, Claimant's left shoulder did not require any extensive treatment and his symptoms resolved. Dr. Watson explained that as Claimant's injury progressed, physicians determined that his symptoms were most likely originating from his cervical spine. An MRI of the cervical spine demonstrated nerve root Impingement in the C5-6 region with a probable left C6 radiculopathy as well as multilevel degenerative changes. Extensive physical therapy and an epidural steroid Injection did not provide substantial improvement.

12. After conducting a physical examination, Dr. Watson diagnosed Claimant with the following: 1) cervicalgia; (2) a strain of other muscles, fascia and tendons at shoulder and upper arm level of the left arm; (3) pain in the left wrist; (4) paresthesia of the skin; and (5) a strain of muscle, fascia and tendon at the neck level. Dr. Watson completed an impairment rating pursuant to the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*). He noted that Claimant warranted a cervical spine impairment rating. Specifically, there was a left C6 nerve root impingement causing the C6 radiculopathy. Relying on Table 53 IIC of the *AMA Guides* he assigned a 6% cervical spine impairment rating. Dr. Watson also assigned an 8% rating based on range of motion deficits. He finally noted a neurological Impairment for

left C6 sensory loss. Based on Table 12 Claimant's sensory loss equaled 8% for C6 that rounded to a 1% whole person rating. Combining the ratings yielded a 15% whole person permanent impairment.

13. Respondent challenged Dr. Watson's impairment rating and sought a Division Independent Medical Examination (DIME). On January 11, 2021 Claimant underwent a DIME with Bruce R. Belleville, M.D. Dr. Belleville described that on September 25, 2019 Claimant was delivering products while working for Employer. He closed a van door with his left arm and immediately felt a "zinger" that traveled from his left shoulder down to the tips of his left hand fingers. Claimant noted he had experienced a sensation of numbness in his left radial forearm since September 25, 2019 that was especially noticeable on the day following the incident.

14. Dr. Belleville reviewed Claimant's medical records and performed a physical examination. He determined that Claimant had a residual paresthesia and decreased pinwheel sensation, but no motor deficits in his left radial forearm. Claimant also exhibited degenerative findings on his cervical spine MRI. Furthermore, Claimant had decreased cervical spine range of motion. Dr. Belleville also remarked that electro-diagnostic testing of the left upper extremity by Dr. Shoemaker on January 6, 2020 revealed changes that were consistent with left C6 radicular irritation.

15. Dr. Belleville agreed that Claimant reached MMI on May 19, 2020. He assigned Claimant a 6% cervical spine impairment pursuant to Table 53 of the *AMA Guides* and a 6% rating for range of motion deficits. Dr. Belleville also determined that Claimant warranted a 1% neurological impairment. He thus concluded that Claimant suffered a 13% whole person permanent impairment rating as a result of his September 25, 2019 injuries.

16. On October 13, 2020 Claimant underwent an independent medical examination with Frederick Scherr, M.D. In addition to his report of October 13, 2020, Dr. Scherr produced supplemental reports dated February 3, 2021 and April 29, 2021. Dr. Scherr also testified at the hearing in this matter. He concluded that Claimant did not sustain a permanent impairment to his cervical spine as a result of the September 25, 2019 incident. He reasoned that Dr. Belleville's DIME determination was thus clearly erroneous.

17. The *AMA Guides* require a Table 53 diagnosis and rating in order to assign a range of motion impairment. The Division of Workers' Compensation *Impairment Rating Tips* (*Rating Tips*) also provide for a range of motion impairment only in unusual cases when there is established severe shoulder pathology accompanied by treatment of the cervical musculature and the isolated cervical range of motion impairment is well justified by the clinician. The *Rating Tips* finally note that "otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating."

18. Dr. Scherr maintained that Dr. Belleville erred in assigning Claimant a 6% Table 53 impairment for the cervical spine, a 6% impairment for range of motion deficits and a 1% rating for neurological deficits. He remarked that Claimant did not suffer a Table

53 cervical spine disorder injury on September 25, 2019. Dr. Scherr specifically explained that Dr. Belleville's impairment rating was predicated on Claimant's complaint of numbness in the forearm. However, Dr. Belleville did not perform a two-point discrimination test to confirm Claimant's subjective complaint. In contrast, Dr. Scherr performed a two-point discrimination test and found no evidence of numbness. Moreover, electrodiagnostic testing did not provide objective evidence of C6 nerve impairment.

19. Dr. Scherr concluded that there is no persuasive evidence that Claimant suffered a specific or discrete injury to the cervical spine while working for Employer on September 25, 2019. Furthermore, Dr. Shoemaker's examination of the cervical spine provided little evidence of a cervical etiology for Claimant's arm numbness. Notably, Claimant's negative diagnostic response to Dr. Shoemaker's March 2, 2020 epidural steroid injection reflected that the cervical spine was not the cause of Claimant's symptoms. The cervical spine MRI showed only foraminal stenosis but no actual nerve root impingement correlating to the C6 level. Dr. Scherr thus determined that Claimant did not warrant any permanent impairment rating as a result of closing the door to his truck with his left arm on September 25, 2019.

20. Respondent has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Belleville that Claimant suffered a 13% whole person impairment rating as a result of his September 25, 2019 industrial injury. Specifically, Respondent has not demonstrated that it is highly probable that Dr. Belleville's impairment determination was incorrect. Initially, on September 25, 2019 Claimant suffered left upper extremity symptoms when he lifted his arm and reached back to close the door of his truck. On September 27, 2019 Claimant was diagnosed with the following: (1) cervicalgia; (2) an unspecified sprain of the left shoulder joint; (3) pain in the left wrist; and (4) paresthesia of the skin. Claimant subsequently underwent conservative care while he continued to work full time for Employer. In January 2020 diagnostic testing of the left brachial plexus was normal and the left upper extremity showed no evidence of cervical radiculopathy.

21. On January 29, 2020 Claimant underwent a cervical spine MRI. After reviewing the MRI ATP Dr. Shoemaker assessed Claimant with right C6 radiculitis in the setting of severe foraminal stenosis due to disc osteophyte complex. Dr. Shoemaker explained that Claimant's symptoms began when he was closing a van door behind him at work on September 25, 2019. He also noted some chronic baseline axial neck pain "though the symptoms are superimposed." On May 19, 2020 Dr. Shoemaker determined Claimant had reached MMI. He recommended medical maintenance care in the form of medications for the following 12 months. After an impairment evaluation Dr. Watson assigned Claimant a 6% cervical spine rating based on Table 53 IIC of the *AMA Guides and* an 8% impairment based on range of motion deficits. Dr. Watson also assigned a neurological Impairment rating for left C6 sensory loss. Combining the ratings yielded a 15% whole person permanent impairment.

22. On January 11, 2021 Claimant underwent a DIME with Dr. Belleview. He determined that Claimant had a residual paresthesia and decreased pinwheel sensation, but no motor deficits in his left radial forearm. Claimant also exhibited degenerative

findings on his cervical spine MRI. Furthermore, Claimant had decreased cervical spine range of motion. Dr. Belleville also remarked that electro-diagnostic testing of the left upper extremity by Dr. Shoemaker on January 6, 2020 revealed changes that were consistent with left C6 radicular irritation. He agreed that Claimant reached MMI on May 19, 2020. Dr. Belleview assigned Claimant a 6% cervical spine impairment pursuant to Table 53 of the *AMA Guides* and a 6% rating for range of motion deficits. In conjunction with a 1% neurological impairment, Dr. Belleview concluded that Claimant suffered a 13% whole person permanent impairment rating as a result of his September 25, 2019 work injuries.

23. In contrast, Dr. Scherr commented that there is no persuasive evidence that Claimant suffered a specific or discrete injury to the cervical spine on September 25, 2019. Specifically, an examination of the cervical spine provided little evidence of a cervical etiology for Claimant's arm numbness. Notably, Claimant's negative diagnostic response to Dr. Shoemaker's March 2, 2020 epidural steroid injection reflected that the cervical spine was not the cause of Claimant's symptoms. Furthermore, the cervical spine MRI showed only foraminal stenosis but no actual nerve root impingement correlating to the C6 level. Dr. Scherr thus determined that Claimant did not warrant any permanent impairment rating as a result of closing the door to his truck with his left arm on September 25, 2019.

24. Although Dr. Scherr concluded that Claimant did not suffer a cervical spine injury while closing the door of his truck at work, he failed to identify Dr. Belleview's specific error or improper application of the *AMA Guides.* Dr. Belleview recognized that Claimant had degenerative findings on his cervical spine MRI, but remarked that electro-diagnostic testing of the left upper extremity revealed changes that were consistent with left C6 radicular irritation. Moreover, Dr. Shoemaker diagnosed Claimant with right C6 radiculitis in the setting of severe foraminal stenosis due to disc osteophyte complex. He also noted severe bilateral foraminal stenosis at C4-5 and C5-6 as well as C6-7 on the left. He explained that Claimant's symptoms began when he was closing his van door behind him at work. Although Dr. Shoemaker noted some chronic baseline axial neck pain Claimant's current "symptoms [were] superimposed." Finally, Dr. Watson explained that as Claimant's injury progressed, physicians determined that his symptoms were most likely originating from his cervical spine. He noted that Claimant warranted a cervical spine impairment rating based on a left C6 nerve root impingement that caused a C6 radiculopathy. The opinions of Drs. Shoemaker and Watson thus support DIME Dr. Belleview's opinion that Claimant suffered a cervical spine injury and warranted a 13% whole person permanent impairment rating as a result of his September 25, 2019 industrial incident. The contrary determination of Dr. Scherr is a mere difference of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Belleview's DIME determination. Accordingly, Respondent has not produced unmistakable evidence free from serious or substantial doubt that Dr. Belleview's 13% whole person impairment rating is incorrect.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician’s opinion, the ALJ should consider all of the DIME physician’s written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician’s determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant’s impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician’s impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician’s findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician’s opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides

that “[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence.” *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant’s medical condition are causally related to the industrial injury. *See Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Consequently, when a party challenges a DIME physician's opinion regarding MMI or impairment rating, the determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998).

7. “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondent has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Belleville that Claimant suffered a 13% whole person impairment rating as a result of his September 25, 2019 industrial injury. Specifically, Respondent has not demonstrated that it is highly probable that Dr. Belleville’s impairment determination was incorrect. Initially, on September 25, 2019 Claimant suffered left upper extremity symptoms when he lifted his arm and reached back to close the door of his truck. On September 27, 2019 Claimant was diagnosed with the following: (1) cervicalgia; (2) an unspecified sprain of the left shoulder joint; (3) pain in the left wrist; and (4) paresthesia of the skin. Claimant subsequently underwent conservative care while he continued to work full time for Employer. In January 2020 diagnostic testing of the left brachial plexus was normal and the left upper extremity showed no evidence of cervical radiculopathy.

9. As found, on January 29, 2020 Claimant underwent a cervical spine MRI. After reviewing the MRI ATP Dr. Shoemaker assessed Claimant with right C6 radiculitis in the setting of severe foraminal stenosis due to disc osteophyte complex. Dr. Shoemaker explained that Claimant’s symptoms began when he was closing a van door behind him at work on September 25, 2019. He also noted some chronic baseline axial neck pain “though the symptoms are superimposed.” On May 19, 2020 Dr. Shoemaker determined Claimant had reached MMI. He recommended medical maintenance care in the form of medications for the following 12 months. After an impairment evaluation Dr. Watson assigned Claimant a 6% cervical spine rating based on Table 53 IIC of the *AMA Guides and* an 8% impairment based on range of motion deficits. Dr. Watson also

assigned a neurological Impairment rating for left C6 sensory loss. Combining the ratings yielded a 15% whole person permanent impairment.

10. As found, on January 11, 2021 Claimant underwent a DIME with Dr. Belleview. He determined that Claimant had a residual paresthesia and decreased pinwheel sensation, but no motor deficits in his left radial forearm. Claimant also exhibited degenerative findings on his cervical spine MRI. Furthermore, Claimant had decreased cervical spine range of motion. Dr. Belleville also remarked that electro-diagnostic testing of the left upper extremity by Dr. Shoemaker on January 6, 2020 revealed changes that were consistent with left C6 radicular irritation. He agreed that Claimant reached MMI on May 19, 2020. Dr. Belleview assigned Claimant a 6% cervical spine impairment pursuant to Table 53 of the *AMA Guides* and a 6% rating for range of motion deficits. In conjunction with a 1% neurological impairment, Dr. Belleview concluded that Claimant suffered a 13% whole person permanent impairment rating as a result of his September 25, 2019 work injuries.

11. As found, in contrast, Dr. Scherr commented that there is no persuasive evidence that Claimant suffered a specific or discrete injury to the cervical spine on September 25, 2019. Specifically, an examination of the cervical spine provided little evidence of a cervical etiology for Claimant's arm numbness. Notably, Claimant's negative diagnostic response to Dr. Shoemaker's March 2, 2020 epidural steroid injection reflected that the cervical spine was not the cause of Claimant's symptoms. Furthermore, the cervical spine MRI showed only foraminal stenosis but no actual nerve root impingement correlating to the C6 level. Dr. Scherr thus determined that Claimant did not warrant any permanent impairment rating as a result of closing the door to his truck with his left arm on September 25, 2019.

12. As found, although Dr. Scherr concluded that Claimant did not suffer a cervical spine injury while closing the door of his truck at work, he failed to identify Dr. Belleview's specific error or improper application of the *AMA Guides.* Dr. Belleview recognized that Claimant had degenerative findings on his cervical spine MRI, but remarked that electro-diagnostic testing of the left upper extremity revealed changes that were consistent with left C6 radicular irritation. Moreover, Dr. Shoemaker diagnosed Claimant with right C6 radiculitis in the setting of severe foraminal stenosis due to disc osteophyte complex. He also noted severe bilateral foraminal stenosis at C4-5 and C5-6 as well as C6-7 on the left. He explained that Claimant's symptoms began when he was closing his van door behind him at work. Although Dr. Shoemaker noted some chronic baseline axial neck pain Claimant's current "symptoms [were] superimposed." Finally, Dr. Watson explained that as Claimant's injury progressed, physicians determined that his symptoms were most likely originating from his cervical spine. He noted that Claimant warranted a cervical spine impairment rating based on a left C6 nerve root impingement that caused a C6 radiculopathy. The opinions of Drs. Shoemaker and Watson thus support DIME Dr. Belleview's opinion that Claimant suffered a cervical spine injury and warranted a 13% whole person permanent impairment rating as a result of his September 25, 2019 industrial incident. The contrary determination of Dr. Scherr is a mere difference of medical opinion that does not constitute clear and convincing evidence to overcome

Dr. Belleview's DIME determination. Accordingly, Respondent has not produced unmistakable evidence free from serious or substantial doubt that Dr. Belleview's 13% whole person impairment rating is incorrect.

Average Weekly Wage

13. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of the injury. *Id.*

14. As found, Claimant's annual salary on his date of injury was $31,632.00. Dividing $31,632.00 by 52 weeks yields an AWW of $608.31. An AWW of $608.31 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a 13% whole person permanent impairment rating as a result of his September 25, 2019 industrial injuries.

2. Claimant earned an AWW of $608.31.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts.

For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-016-216-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that Botox injections for headaches are reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of her work-related injury or to prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (Colo. App. 1988).

2. Whether Respondents established by a preponderance of the evidence that further maintenance medical treatment is not reasonable, necessary, or related to Claimant's industrial injury.

FINDINGS OF FACT

1. Claimant is a 50-year-old pharmacist who sustained an admitted injury arising out of the course of her employment with Employer on May 9, 2016, when a plastic tote weighing approximately four pounds fell from a shelf and struck the crown of her head.

2. Approximately six years prior to her industrial injury, in May 2010, Claimant was involved in a bicycling accident and sustained significant injuries resulting in her being in a coma for 18 days. As a result of the accident, Claimant sustained a significant head injury and multiple fractures. Claimant was hospitalized at Craig Hospital for approximately six weeks following the accident. Claimant underwent multidisciplinary rehabilitation, including physical therapy, occupational therapy, and speech therapy. Over approximately two years, Claimant progressed to the point where she was functional but continued to have higher level cognitive impairment and post-traumatic brain injury sequelae of slowed speed of processing, cognitive fatigue, balance and coordination difficulties, and vertigo. Claimant was off work for a significant period of time, and by at least 2016, had returned to work as a pharmacist on a limited schedule of 22 – 27 hours per week. Following this injury, Claimant continued to experience cognitive issues including cognitive fatigue and slow processing speed, as well as other issues. No medical records or other evidence was admitted at hearing indicating that Claimant complained of or received treatment for significant headaches related to her May 2010 injuries.

3. After her industrial injury on May 9, 2016, Claimant was initially seen at the St. Joseph Hospital Emergency Department on May 15, 2016, and reported intermittent headaches, associated with nausea, radiating from the crown of her head to her forehead. The clinical impression was non-intractable headache. (Ex. G).

4. Over the course of the next two to three years, Claimant saw numerous providers for treatment of headaches and cervical spine complaints. This treatment included

physical therapy, chiropractic care, various injections, medial branch blocks, occipital nerve blocks, medications (both prescribed and over-the-counter), massage, and biofeedback. Additionally, Claimant had consults, examinations and treatment including neurology, neuropsychology, psychology and physiatry. Throughout this time, Claimant continued to report headaches, and none of the treatments provided significant relief of Claimant's reported headaches. (Ex. B. and C).

5. Beginning in June 2016, Claimant saw providers at Concentra for her headaches and cervical spine complaints, initially being followed by Lynne Yancey, M.D., and later by Eric Tentori, D.O. Dr. Yancey indicated that Claimant's mechanism of injury could cause cervicogenic headaches. Claimant saw Concentra physiatrist, John Aschberger, M.D., approximately 19 times after September 2016. In October 2016, Dr. Aschberger described Claimant's headaches as multifactorial, with cervicogenic, myofascial, post-concussive and rebound components. He later opined that Claimant's headaches were facetogenic. On February 18, 2018, Dr. Aschberger placed Claimant at MMI and assigned Claimant a 13% whole person impairment based on a specific disorder impairment of the cervical spine and range of motion impairment. (Ex. B and C).

6. Claimant was also followed by neurologist Alexander Zimmer, M.D., who saw Claimant approximately ten times between June 22, 2016, and October 2017. Dr. Zimmer treated Claimant with various medications which did not provide lasting relief of her headaches. At his initial visit on June 22, 2016, Dr. Zimmer's assessment was that Claimant's presentation was consistent with a mild concussion and post-concussion headache syndrome, and that her symptoms would like resolve within a matter of months.

7. Claimant was also evaluated by Kevin Reilly, Psy.D., for several neuropsychological consults. Dr. Reilly opined that emotional and psychological factors contributed to Claimant's somatic and cognitive symptoms. Dr. Reilly did not believe Claimant's May 9, 2016-work injury resulted in a traumatic brain injury. He also opined that Claimant's testing indicated symptom magnification, and that Claimant's cognitive symptoms did not appear to be directly attributable to her work injury. Dr. Reilly did not express opinions regarding Claimant's headaches. (Ex. F).

8. On February 12, 2018, Carlos Cebrian, M.D., performed a medical examination of Claimant at Respondent's request. Dr. Cebrian conducted an extensive medical record review, interviewed Claimant, and issued a 56-page report. Based on his evaluation and review of records, Dr. Cebrian opined, *inter alia*, that as the result of her May 9, 2016-work injury, Claimant sustained a mild concussion with post-traumatic headaches. Dr. Cebrian indicated Claimant's cervical spine was not a contributing factor to Claimant's headaches. He opined Claimant was at maximum medical improvement and did not qualify for an impairment for ongoing headaches under Episodic Neurological Disorders, or for a cervical spine impairment rating. Dr. Cebrian concluded no further treatment was indicated for Claimant's work injury because Claimant had undergone extensive and varied medical treatments without improvement in her symptoms. Dr. Cebrian did not specifically address Botox treatment for Claimant's headaches. (Ex. B).

9. On September 11, 2018, Claimant underwent a Division Independent Medical Examination (DIME) performed by John Hughes, M.D. Dr. Hughes determined that Claimant did not sustain a traumatic brain injury but did sustain a cervical spine sprain/strain as a result of her industrial accident. He assigned Claimant an 11% cervical spine range of motion impairment which converts to a 15% whole person impairment. At the time of the DIME, Claimant continued to report constant, right-sided headaches. Dr. Hughes expressed no opinion on the need for medical maintenance care for Claimant's headaches, although he did state she had reached maximum therapeutic benefit with respect to her cervical spine, from which the ALJ infers that he did not believe further cervical spine treatment was reasonable or necessary. Dr. Hughes did not address Botox treatment for Claimant's headaches. (Ex. C).

10. On November 6, 2018, Respondents filed a Final Admission of Liability (FAL), which admitted for maintenance care, including ongoing medical benefits that are reasonable and necessary. (Ex. I).

11. Claimant apparently continued to treat with Dr. Aschberger after being placed at MMI. On December 13, 2018, Dr. Aschberger referred Claimant to Marc Treihaft, for right occipital headaches, and to evaluate Claimant for Botox treatment. (Ex. 11).

12. On February 18, 2019, Marc Treihaft, M.D., sought authorization for Claimant to undergo Botox treatment for her head and neck. Insurer denied Dr. Treihaft's request for authorization. (Ex. E).

13. Claimant apparently continued to see Dr. Zimmer after being placed at MMI. On March 28, 2019, Dr. Zimmer authored a letter addressed "To Whom It May Concern," in which he indicated that Claimant continued to suffer from intractable daily headaches and that he believed a trial of Botox injections to attempt to reduce headache frequency and severity would be medically indicated for her headaches. (Ex. 1).

14. At some undetermined point, Claimant began seeing neurologist Marc Wasserman, M.D., at Blue Sky Neurology. On April 9, 2020, Insurer denied a request from Marc Wasserman, M.D., for authorization of Botox treatment for "Cervicalgia – Chronic migraine without aura, not intractable …." (Ex. E).

15. On December 4, 2020, Claimant received a Botox injection through Blue Sky Neurology, which resulted in reduction of Claimant's headaches. (Ex. I).

16. On March 25, 2021, Dr. Wasserman authored a letter recommending Botox treatment for Claimant's headaches. Dr. Wasserman indicated that Claimant had been suffering from chronic migraines since 2016, and indicated that "[w]hile unusual, the specific timing of [her injury from the falling tote] does suggest that this injury most likely was the trigger of the onset of her chronic migraines." Dr. Wasserman indicated that Botox is the standard treatment for chronic migraines and Claimant appeared to be doing better with the treatment. (Ex. 3).

17. On March 4, 2021, John Raschbacher, M.D., conducted a medical record review of Claimant's medical records at Respondent's request and issued a report of the dame

date. At the time of the examination, Claimant reported experiencing headaches manifesting as pressure on the right side, with photophobia but no phonophobia. In his summary of medical records, Dr. Raschbacher notes that Dr. Aschberger and Dr. Treihaft discussed Botox injections with Claimant in July 2018 and January 2019, respectively. (Ex. A).

18. Based on his review, Dr. Raschbacher opined that Claimant sustained a significant brain injury in 2010, and that the mechanism of injury for her May 9, 2016-work injury "seems trivial." He opined that the mechanism of the May 9, 2016-injury "does not appear to be a mechanism of injury that would, medically, be anticipated to cause any brain injury or any cervical injury of significance." He further opined that he would not anticipate that Claimant would have any persistent symptoms from her May 9, 2016-injury. Dr. Raschbacher did not recommend any treatment for migraine headache, including Botox injection and recommended no further treatment of any kind for Claimant's May 9, 2016-work injury. When addressing the recommendation for Botox injections for cervicogenic headache, Dr. Raschbacher expressed that the Colorado Medical Treatment Guidelines do not recommend Botox for cervicogenic headaches. He further opined that it was not likely that migraine headache is a residual from the 2016 injury. Dr. Raschbacher is the only physician who specifically opined that Botox treatment for Claimant was not reasonable, necessary, or related to her work injury. (Ex. A).

19. On April 8, 2021, Claimant saw Marc Wasserman, M.D. Dr. Wasserman opined that the reason prior neck injections and massage had not relieved Claimant's headaches is that her headaches were not cervicogenic, but chronic migraines. He indicated Claimant had received Botox treatment, which reduced her headaches significantly. Consequently, he recommended that Claimant undergo Botox treatment. Dr. Wasserman indicated that Claimant had migraine headaches immediately after her injury that were not present before the injury. Only one treatment record from Dr. Wasserman, dated April 8, 2021, was offered, or admitted into evidence. Consequently, the ALJ is unable to determine when Claimant initiated treatment with Dr. Wasserman and whether Dr. Wasserman reviewed Claimant's prior medical record to arrive at the conclusion that Claimant had suffered from migraine headaches since 2016. Consequently, the ALJ does not credit any causation opinions from Dr. Wasserman, although his opinions regarding diagnosis, reasonableness and necessity of Botox treatment are credible. (Ex. 4).

20. On April 9, 2021, Claimant saw Ang Li, M.D., of Blue Sky Neurology. Dr. Li noted that Claimant received Botox injections to treat concussive chronic migraines on December 4, 2020, which provide relief. In a letter of the same date, Dr. Li noted that Botox was very effective, and medically reasonable and necessary in treating her chronic migraine. On April 13, 2021, Dr. Li performed a second set of Botox injections. (Ex. 7 and 8).

21. On April 12, 2021, Dr. Zimmer authored a second letter in which he indicated Claimant received Botox therapy on December 5, 2020, with an excellent response, lasting more than three months. He opined that it was medically probable that Claimant's headaches "fall into the category of chronic migraine and are secondary to the head injury experienced at work on May 9, 2016." Dr. Zimmer also opined that given the Claimant's

response to Botox treatment, the therapy was reasonable and necessary for treatment of the headaches. He recommended Botox injections once every 3-4 months, with clinical follow to determine the duration of the treatment. (Ex. 2).

22. On April 14, 2021, Dr. Aschberger authored a letter indicating that Claimant had undergone a full comprehensive course of conservative measures, without lasting benefit, until the administration of Botox injections. He indicated Claimant experienced excellent relief. Dr. Aschberger noted that Botox injections are not delineated under the Colorado Medical Treatment Guidelines, however, Claimant "has had a specific response to the injections with the procedure performed to correlating areas involved with the physical examination. This has been a consistent area of involvement since the original injury." Dr. Aschberger concluded that given Claimant's response to the original Botox injection, further treatment is medically reasonable, necessary, and related to her workers' compensation injury. (Ex. 9)

23. At hearing, Claimant testified that she did not have any treatment for headaches prior to her May 9, 2016-work injury. She testified that after her work injury, she tried multiple treatments and medications which did not effectively treat her headaches. She further testified that the Botox treatment she received has been effective in treating her headaches. Claimant's testimony was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim*

Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MAINTENANCE MEDICAL BENEFITS

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established by a preponderance of the evidence that Botox treatments for headaches are reasonably necessary to relieve the effects or prevent further deterioration of Claimant's industrial injury. The evidence before the ALJ indicates that, although Claimant sustained a significant head injury in 2010, she did not experience ongoing headaches after recovery from that injury and was not experiencing headaches at the time of her May 9, 2016-industrial injury. Although there has been no consensus on the diagnoses of Claimant's headaches, which have been variously diagnosed as cervicogenic, facetogenic, myofascial, post-concussive, rebound and migraine, the evidence establishes that Claimant's headaches began after her May 9, 2016-injury, and continued essentially unabated until she received Botox treatment in December 2020. Multiple providers, including Dr. Yancey, Dr. Aschberger, Dr. Zimmer, and Dr. Cebrian, diagnosed Claimant with headaches related to her work injury. The ALJ does not credit causation opinions offered by Dr. Wasserman, Dr. Li, or Dr. Treihaft (to the extent such an opinion can be inferred from his request for authorization for Botox treatment), because there is insufficient evidence in the record to ascertain the bases for those opinions.

Notwithstanding, the ALJ does credit Dr. Wasserman's April 8, 2021-treatment note, in which he indicates that Claimant's headaches were not cervicogenic to start with, as indicating that the source of Claimant's headaches were fully appreciated. Dr. Wasserman's assessment is supported by Dr. Cebrian's conclusion that Claimant did not have cervicogenic headaches. The ALJ finds the opinions of Dr. Zimmer and Dr. Aschberger, both of whom followed Claimant for her injuries since June 2016, that Botox treatments are reasonable, necessary, and related to Claimant's May 9, 2016-work injury, to be more persuasive than those of Dr. Raschbacher, whose involvement was limited to a medical record review. Although Dr. Cebrian and Dr. Hughes opined that no further treatment was warranted, neither specifically addressed Botox treatment.

Claimant has established that it is more likely than not that Botox treatment for headaches is reasonably necessary to relieve the effects or prevent further deterioration of Claimant's May 9, 2016-injury.

MEDICAL MAINTENANCE BENEFITS – GENERALLY

Where the respondents attempt to modify an issue that previously has been determined by an admission, respondents bear the burden of proof for such modification. § 8-43-201(1), C.R.S. This includes the termination of previously admitted maintenance medical benefits. *Arguello v. State of Colorado*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Accordingly, Respondents bear the burden of proving that maintenance medical treatment in general is no longer medically reasonable and necessary.

Respondents have failed to establish by a preponderance of the evidence that maintenance medical treatment is no longer medically reasonable and necessary. Because Claimant has established that Botox treatment is reasonably necessary to relieve the effects or prevent deterioration of her May 9, 2016-injury, grounds do not exist for terminating maintenance medical completely.

ORDER

It is therefore ordered that:

1. Botox treatment for Claimant's headaches is reasonably necessary to relieve the effects or prevent deterioration of Claimant's May 9, 2016- industrial injury.

2. Respondents' request to terminate all maintenance medical treatment is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
W.C. No. 5-139-395-001

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

No further hearings have been held. After the issuance of the decision, counsel for the Claimant filed a Motion to Correct the Full Findings, Conclusions of Law and Order, mailed July 2, 2021, requesting that Respondents' Petition to Terminate Benefits be denied. Respondents' Petition was granted in part and denied in part as herein below specified in the Order portion of this decision.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 11, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 5/11/21, Google Meets, beginning at 1:30 PM , and ending at 5:30 PM).

The Claimant was present in person, virtually, and represented by [Redacted], Esq.. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 13 were admitted into evidence, without objection. Respondents' Exhibits A through Q were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed on June 1, 2021. Respondents' answer brief was filed on June 22, 2021. On June 23, 2021, Claimant advised that a reply brief would not be filed. Consequently, the matter was submitted for decision on June 23, 2021.

ISSUES

The paramount issue to be determined by this decision concerns Respondents' Petition to Terminate Benefits, based on the allegation that Claimant's low back injury is not causally related to his admitted inguinal hernia of May 15, 2020. Temporary total disability benefits are ongoing, pursuant to a General Admission of Liability (GAL), dated March 11, 2021. Consequently, Respondents bear the burden of proof, by a preponderance of the evidence, to establish that a termination of benefits is warranted. A secondary issue concerns whether treatment for the Claimant's low back at the hands Haley Burke, M.D. and ACP Home Physical Therapy was authorized, causally related to the admitted hernia injury and reasonably necessary to cure and relieve the effects of injuries in the direct causal chain from the hernia injury of May 15, 2020. The Claimant bears the burden of proof by preponderant evidence on the latter issue.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On May 15, 2020, the Claimant was tasked with collecting all the beer cases and 6-packs in the store to put them on pallets for transport and build a display [Hearing Transcript (hereinafter "Tr," followed by a page number, *i.e.,* Tr., p. 74). According to the Claimant, while building the display, he experienced a sharp, burning sensation in his front right side, hip, and lower back. *Id.* at p. 76. At the time of his injury, Claimant was on his knees moving beer cases from one side to another by twisting at the waist when he experienced an onset of low back pain. He informed his Employer of the injury the following day but continued to work over the next three days. His pain symptoms worsened each day. Ultimately, the Employer referred the Claimant to Troy Manchester, M.D., a physician at Concentra.

Procedural Findings

2. On March 12, 2021, Respondents filed a Petition to Terminate Temporary Indemnity benefits as of January 22, 2021, which was denied (Respondent's Exhibit E). Respondents relied on the August 22, 2020, report from Dr. Paz denying treatment of Claimant's low back issues (Respondent's Exhibit Q). Respondent relied on the medical records from Dr. Manchester documenting that Claimant's pain was primarily unrelated to the back issues following the hernia repair as of January 22, 2021 (Respondents' Exhibit L, p. 112).

3. Previously, Respondents filed a General Admission of Liability (GAL), dated March 11, 2021, concerning the right inguinal hernia sustained on May 15, 2020.

The GAL is open ended concerning temporary total disability (TTD) benefits—January 6, 2021 to “TBD.”

Troy Manchester, M.D.

4. On May 22, 2020, during his initial appointment with Troy Manchester, M.D., at Concentra, the Claimant reported that while he was lifting and organizing product, he felt a sharp pain in his right low back radiating towards his groin (Respondents’ Exhibit L, p. 100). The Claimant also reported that he continued to work on May 15, 2020, and returned to work on May 17, 2020 when he continued to work with organizing heavy product. *Id*. at pp.100-101. Dr. Manchester noted the Claimant’s complaints of pain and spasms in his right low back, with pain in his right groin during spasms. Dr. Manchester examined the Claimant, noting right low back spasms. Dr. Manchester initially diagnosed lumbar strain and lumbar spasms. The Claimant was then restricted from work activity by Dr. Manchester (Claimant’s Exhibit 1).

5. Dr. Manchester stated that the Claimant did not disclose a preexisting history of low back pain to him (Tr. p. 62). Dr. Manchester also testified that “eighty/ninety percent of people will have some level of back pain in life.” *Id*. at 59.

6. Ultimately, an MRI (magnetic resonance imaging) was obtained that demonstrated degenerative conditions at L4-L5 and L5-S1, along with a disc protrusion at L5-S1 (Claimant’s Exhibit 3). Dr. Manchester referred the Claimant to physiatrist, Robert Kawasaki, M.D.

Robert Kawaski, M.D.

7. Dr. Kawasaki’s first appointment with the Claimant was on July 2, 2021. Following a review of the MRI and examination of the Claimant, Dr. Kawasaki diagnosed the Claimant with a low back strain with “spondylitic changes with some facetogenic pain generation”, but also suggested the additional possibility of an inguinal hernia (Claimant’s Exhibit 2A).

8. Ultimately, Dr. Kawasaki diagnosed a right-sided inguinal hernia. Respondents do not contest the compensability of the right inguinal hernia. The Claimant saw Dr. Kawasaki again on August 20, 2020, and the doctor noted severe low back pain. Dr. Kawasaki recommended bilateral L4-L5 and L5-S1 medial branch blocks with the potential for a future rhyzotomy (Claimant’s Exhibit 2A).

Previous Low Back Treatment

9. The Claimant “had treatments for his lumbar spine condition in the past (Claimant’s Exhibit 8). He treated with Chiropractic Dr. Christopher Stull, D.C., for low back pain from July 15, 2014 to April 28, 2016. *Id*. On April 28, 2016, at Claimant’s final appointment with Dr. Stull, the Claimant reported “frequent tightness discomfort in the low back” with a pain level of 7 out of 10 on the visual analog pain scale occurring

“approximately 70% of the time” (Respondents’ Exhibit J, p. 94). The question concerns the consequences of Claimant’s admitted inguinal hernia of May 15, 2020, and whether it is causally related to an aggravation/acceleration of Claimant’s preexisting low back condition.

10. According to the Claimant, he stopped chiropractic care because he “was feeling better.” (Tr., p. 94). On April 7, 2016, prior to stopping chiropractic care, according to Chiropractic Dr. Stull, the Claimant reported that he was experiencing “frequent sharp and tightness discomfort in the low back” at an 8 out of 10 on the visual analog pain scale occurring “approximately 80% of the time” (Respondent’s Exhibit J, p. 92).

Haley Burke, M.D.

11. According to Dr. Burke, a low back history of pain from 2013 to 2019 would constitute a chronic low back history (Tr. pp. 34-35). Dr. Burke testified that the Claimant did not disclose a preexisting history of low back pain to her. *Id*. at 33. Dr. Burke stated that the MRI (magnetic resonance imaging) findings included degenerative bilateral foraminal stenosis. *Id*. at 32. Dr. Burke further indicated that the MRI findings did not include any acute findings, signal change, or swelling. *Id*. at 32-33. Dr. Burke was of the opinion, based on medical probability, that reports of back pain for the past seven to eight years could be related to the degenerative changes in the Claimant’s spine. *Id*. at 35. Dr. Burke also stated that she did not address any Waddell’s signs as part of her examination. *Id*. at 40.

F. Mark Paz, M.D., Respondents’ Independent Medical Examiner (IME)

12. In Dr. Paz’s April 20, 2021 supplemental report, he is of the opinion that Dr. Burke did not provide a medical opinion consistent with the State of Colorado, Department of Labor and Employment, Division of Workers’ Compensation, Level II Accreditation Curriculum (Respondent’s Exhibit Q, p. 205). Dr. Paz further stated in his supplemental report that the Waddell’s findings were 4/5 positive in the prior report and he stated the opinion that “Waddell’s findings are non-physiologic responses to physical examination, which support nonorganic low back pain.” *Id*. at 205. The ALJ infers and finds that Dr. Paz’s opinions that the Source of the Claimant’s present low back pain amounted to functional overlay, which is contrary to the opinions of the treating physicians in the case.

13. Dr. Paz testified that “there was not a pain generator which correlated clinically with the subjective symptoms reported by [Claimant]” (Tr. p.. 98). Dr. Paz further testified that “[Claimant] had findings which were consistent with nonorganic low-back pain.” *Id*. Dr. Paz stated that nonorganic pain was defined in response to physical examination and explained the importance of conducting alternate range of motion (ROM) assessments to objectively determine limitations based on pain. *Id*. at 101-102. Dr. Paz stated that he disagreed with the lumbar strain diagnosis because there were subjective symptoms not supported by objective findings. *Id*. at 99. Dr. Paz further testified that the Level II guidelines direct treating physicians to find a mechanism of

injury, a diagnosis, and a need for treatment; in this case, there was no diagnosis according to Dr. Paz, because L4-5 and L5-S1 levels have not been demonstrated to be a pain generator. *Id*. at 104. The ALJ infers and finds that Dr. Paz's opinions of the non-organic nature of the Claimant's complaints plus his disagreement with the lumber strain diagnosis is contrary to the diagnostic opinions of Dr. Kawasaki and Dr. Burke, *i.e.* "lumbar strain." The ultimate question is whether the Claimant suffered a consequential aggravation/acceleration of his low back condition as a result of the May 15, 2020 beer case handling incident in which the Claimant sustained an admitted inguinal hernia.

14. Dr. Paz's August 24, 2020 report documents that Claimant reported a history of chiropractic care for his low back and that he had historically experienced a sore back in the past (Respondent's Exhibit Q, pp. 188-189). In his report, Dr. Paz stated the opinion that the Claimant's low back pain was not supported by objective findings and that the MRI of the lumbar spine did not clinically correlate with the distribution of the subjective symptoms reported by the Claimant and were not supported by objective findings on physical examination. *Id*. at 193. In his report, Dr. Paz concluded that the chronic low back pain symptoms were "inconsistent with discogenic findings on physical examination." *Id*. at 194.

15. The opinions of Drs. Manchester, Kawasaki and Burke support a consequential temporary aggravation/acceleration of Claimant's pre-existing, incipient low back condition.

16. Based on the totality of the evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Drs. Manchester, Kawasaki and Burke, concerning the lumbar strain arising out of the May 15, 2020 "beer case handling" incident, and to reject the opinions of Dr. Paz pertaining thereto.

The Claimant

17. The Claimant testified that his treatment at the Little Clinic on February 1, 2019, was related to dehydration (Tr. pp. 72-73). Medical records from this visit document Claimant's report of left lower back pain with radiation down the leg with pain of 8 out of 10 (Claimant's Exhibit 10). The Claimant was ultimately assessed with "acute left-sided low back pain with left-sided sciatica" at this visit. *Id*. Medical records from this visit do not provide an assessment of dehydration. *Id*. The Claimant stated that he was advised to do stretches because his psoas muscles were so tight (Tr., p. 73)..

18. The Claimant testified that following the May 15, 2020 industrial injury, he was able to take the remaining beer back to storage (Tr., p. 86). The Claimant further testified that on May 15, 2020, he was able to drive home from work and drive back to work the following days. *Id*. at 86-87.

Ultimate Findings

19. In the face of aggregate medical opinions that the Claimant sustained a lumbar strain at the time he sustained an inguinal hernia on May 15, 2020, and Dr.

Paz's opinion that the Claimant did not sustain a lumbar strain but had a non-organic (functional overlay) source of his pain, the ALJ finds the opinions of Drs. Manchester, Burke and Kawasaki, concerning the diagnosis of lumbar strain, more credible than the opinions of Dr. Paz thereon. Dr. Paz categorically opined that Claimant's low back condition was pre-existing and he effectively, by implication, was of the opinion that Claimant's pain was psychosomatic. As found herein above and below, the ALJ rejects this opinion.

20. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions, concerning the diagnosis of lumbar strain arising out of the "beer box" incident of May 15, 2020, and to reject the opinions of Dr. Paz thereon.

21. The admitted inguinal hernia of May 15, 2020 aggravated or accelerated the Claimant's preexisting low back condition, temporarily, in the form of a low back strain and it resulted in disability and need for treatment as a compensable consequence of the "beer box" incident of May 15, 2020. The Claimant's personal susceptibility or predisposition to injury did not disqualify him from receiving benefits for the low back consequence of the admitted inguinal hernia. **The Claimant's employment-related activities aggravated and accelerated his low back condition, on a temporary basis before he returned to his pre-injury baseline, combining with his pre-existing condition to cause a need for medical treatment and produce the disability for which benefits are sought.**

22. Regardless of the fact that Respondents bear the burden of proof on "termination of benefits," the ALJ is obliged to examine the totality of the evidence to determine whether the Claimant's lumbar strain temporarily caused disability and the need for medical treatment. In fact, the Petition to Terminate benefits does not affect the GAL, dated March 11, 2021, concerning the admitted right inguinal hernia. Simply stated, the question is whether the consequences of the lumbar strain were of a finite duration whereupon the Claimant returned to his pre-injury low back baseline, or were the consequences thereof permanent. A determination of this question entails an analysis of the burden of proof. In this case, the evidence fails on the issue of a permanent aggravation and acceleration of the low back condition, however, Respondents have proven entitlement to a termination of benefits, attributable to the lumbar strain, for a finite period from the date of the Petition to Terminate, March 12, 2021, through the hearing date of May 11, 2021, which does not affect the admitted right inguinal hernia. Beyond the hearing date, the evidence of a permanent or continuing aggravation/acceleration fails.

23. Respondents has proven by a preponderance of the evidence that a termination of temporary disability benefits, attributable to the lumbar strain, form March 12, 2021 through May 11, 2021, is warranted.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, in the face of aggregate medical opinions that the Claimant sustained a lumbar strain at the time he sustained an inguinal hernia on May 15, 2020, and Dr. Paz's opinion that the Claimant did not sustain a lumbar strain but had a non-organic (functional overlay) source of his pain, the ALJ finds the opinions of Drs. Manchester, Burke and Kawasaki, concerning the diagnosis of lumbar strain, more credible than the opinions of Dr. Paz thereon. Dr. Paz categorically opined that Claimant's low back condition was pre-existing and he effectively, by implication, was of the opinion that Claimant's pain was psychosomatic. As found herein above and below, the ALJ rejects this opinion.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is “that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence.” *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ’s resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Manchester, Burke and Kawasaki and to reject the opinions of Dr. Paz.

Compensability of Low Back—Aggravation/Acceleration

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm’n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the admitted inguinal hernia of May 15, 2020 aggravated/ accelerated the Claimant’s preexisting low back condition, temporarily, in the form of a low back strain and it resulted in disability and need for treatment as a compensable consequence of the “beer box” incident of May 15, 2020. The Claimant's personal susceptibility or predisposition to injury did not disqualify him from receiving benefits for the low back consequence of the admitted inguinal hernia. **The Claimant’s employment-related activities aggravated and accelerlow back condition to cause a need for medical treatment and produce the disability before he returned to his pre-injury baseline.**

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and/or the causal relatedness of a consequential injury to the admitted injury; plus entitlement to benefits beyond those admitted.. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, The admitted inguinal hernia of May 15, 2020 temporarily aggravated/accelerated the Claimant's preexisting low back condition, in the form of a low back strain and it resulted in disability and need for treatment as a compensable consequence of the "beer box" incident of May 15, 2020. The Claimant's personal susceptibility or predisposition to injury did not disqualify him from receiving benefits for the low back consequence of the admitted inguinal hernia. **The Claimant's employment-related activities aggravated/ accelerated his low back condition, on a temporary basis, before he returned to his pre-injury baseline. The May 15, 2020 incident combined with his pre-existing condition to cause a need for medical treatment and to produce the disability.**

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The General Admission of Liability, dated March 11, 2021, remains in full force and effect insofar as it concerns the right inguinal hernia.

B. The Petition to Terminate Benefits is granted **in part and denied in part** from March 12, 2021, through the hearing date, May 11, 2021, insofar as it affects the Claimant's low back condition and **it is denied without prejudice for benefits from May 11, 2021 and thereafter.** It has no effect on the General Admission of Liability insofar as it concerns the right inguinal hernia.

C. Respondents shall pay the costs of authorized, causally related and reasonably necessary medical care and treatment for the temporary aggravation/acceleration of the Claimant's low back condition, through the hearing date of May 11, 2021, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all indemnity benefits due and not paid when due.

E. Any and all issues not determined herein, including temporary disability after May 11, 2021, attributed to the low back, are reserved for future decision.

DATED this 19th day of July 2021.

Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-156-087-001

ISSUES

I. Whether Claimant sustained a compensable injury to his left shoulder on November 19, 2020.

II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits as it relates to his left shoulder.

III. Whether claimant is entitled to change authorized treating physicians.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered a compensable injury on November 19, 2020.
2. Before his compensable injury Claimant never had any issues with his left shoulder.
3. On November 19, 2020, Claimant was working for Respondents on top of scaffolding that was 15-16 feet off of the ground. While walking on the scaffolding, Claimant fell through, hit the ground feet first, and then hit the ground with the rest of his body. Claimant is not sure whether he grabbed on to anything while falling, whether he tried to break his fall with his left hand and arm against the ground, whether his left shoulder hit the ground, or a combination thereof.
4. An ambulance was called. Upon arrival of the paramedics, Claimant's primary complaint was bilateral foot pain which he rated as 9/10. Claimant was taken by ambulance to the Saint Francis Medical Center Emergency Department. Although the paramedics noted abrasions on Claimant's back and head, they did not note any on his left shoulder. While at Saint Francis Medical Center, X-rays were taken of his feet, lumbar spine, and thoracic spine. Plus, CT scans were taken of his lumbar spine, thoracic spine, and head. Although the paramedics found abrasions, none are noted in the emergency room notes. In the end, Claimant was diagnosed with a closed nondisplaced calcaneus fracture.
5. For about the next four days, and based on falling 15-16 feet, Claimant's entire body hurt.
6. On November 30, 2020, Claimant followed up with UCHealth Orthopedic Foot and Ankle Clinic. At this appointment he was evaluated by PA, Lindsey Schultz. At this appointment Claimant stated both heels were painful. Claimant was taking Norco for pain. It was noted that he had moderate soft-tissue swelling through the right foot and ankle and mild soft-tissue swelling through the left foot. There was tenderness at the bilateral calcaneus. There was pain with manipulation of the subtalar joints and tenderness at the calcaneocuboid articulation on the right side. Radiology

studies were pertinent for comminuted intraarticular calcaneus fracture on the right side. There was not any acute bony pathology on the left foot or ankle radiographs. Assessment was closed displaced fracture of right calcaneus, left foot pain, and acute right and left ankle pain. Claimant was placed in a tall boot on the left side and a new splint on the right.

7. On November 30, 2020, Claimant also underwent x-rays of his left shoulder. Dr. Rachel Frank noted on a follow up appointment that: "four views of the left shoulder were obtained 11/30/2020 for indication of shoulder pain including anterior-posterior, Grashey axillary, and scapular-Y views. Exhibit 2, page 20-22. As a result, the ALJ finds that Claimant was reporting shoulder pain – and was being evaluated for shoulder pain – at his second doctor appointment following his fall.

8. On December 9, 2020, Claimant was seen by Dr. Gina Phillips at Sister Joanna Bruner Family Medicine Center for ongoing complaints because of his fall. Claimant complained of acute pain in his left shoulder. Dr. Philips noted "3 weeks of pain after work injury. No direct trauma to shoulder, unclear mechanism of shoulder injury. Exam consistent with impingement syndrome. ROM full with pain, not consistent with full rotator cuff tear. Fracture or AC separation also possible, though less likely." As result, Claimant reported having shoulder pain after the accident, which occurred 19 days earlier. An x-ray was ordered, as well as physical therapy. It was also noted that Claimant had no previous injury to his left shoulder.

9. On December 21, 2020, Claimant was referred for an MRI on his left shoulder, noting "shoulder pain, rotator cuff disorder suspected, x-ray done" and "left shoulder injury s/p fall." Exhibit 2, page 43.

10. On January 8, 2021, Claimant underwent a left shoulder MRI without contrast. The impression of this MRI was: "Focal partial-thickness, partial width this particular sided tear of the conjoined tendon of supraspinatus and infraspinatus with associated tendinosis. Nondisplaced tear of the superior glenoid labrum extending from anterior to posterior. Mild acromioclavicular joint osteoarthrosis." Exhibit 3, page 46-47.

11. On January 14, 2021, Claimant was seen by Dr. Rachel Frank at UCHealth Orthopedic Surgery Sports Medicine. It was noted Claimant fell 16 feet at work and had no prior history of issues with this shoulder. The MRI taken demonstrated "a focal partial thickness, partial width this particular sided tear of the conjoined tendon of supraspinatus and infraspinatus with associated tendinosis, a nondisplaced tear of the superior glenoid labrum extending from anterior to posterior and mild acromioclavicular joint osteoarthrosis." It was noted Claimant would like to try physical therapy for the shoulder first, prior to any injections. The diagnoses for this visit included "traumatic tear of left rotator cuff, unspecified tear extent, initial encounter." Exhibit 2, page 36-40.

12. On February 5, 2021, Claimant underwent an IME with Dr. Timothy Hall. Dr. Hall met with Claimant and Claimant's son, took a history from the two of them, reviewed the medical records, and performed a physical examination. It was Dr. Hall's opinion that Claimant's left shoulder injury was work related:

> The shoulder situation/injury had occurred as he was trying to break his fall by reaching out to these metal parts of the scaffolding or perhaps when he hit the ground. Even though he did land on his feet, he did end up on the ground. He may have tried to break his fall using his left arm. In either case, it is extremely unlikely that his left shoulder just happened to start hurting a very short time after this fall. It is very unlikely that it is an unrelated area of symptomatology. The left shoulder should be followed upper work comp.

13. Dr. Hall also testified at hearing and testified consistent with his report.

14. Dr. Hall employed a three-step process to determine the cause of Claimant's left shoulder injury. Dr. Hall evaluated:

    I. Whether the event – a fall from 15 to 16 feet – could plausibly cause Claimant's shoulder injury?

    II. Whether there is a temporal relation between the event and Claimant's shoulder injury?

    III. Whether there are other explanations for Claimant's shoulder injury that are more probable at the same point in time?

15. Dr. Hall concluded that a fall from 15 to 16 feet could plausibly cause Claimant's shoulder injury. Dr. Hall also concluded there is a temporal relationship between Claimant's fall and the injury to his shoulder. Lastly, he concluded that there were no other explanations for the injury that are more probable at that time.

16. The ALJ finds Dr. Hall's testimony to be consistent with Claimant's testimony as well as the underlying medical record. The ALJ also finds he performed a thorough causation analysis. As a result, the ALJ finds his testimony to be credible and persuasive.

17. On March 5, 2021, Claimant was seen by Dr. Frank at UCHealth Orthopaedic Surgery Sports Medicine. Dr. Frank commented on the shoulder x-rays that were taken on November 30, 2020. Dr. Frank noted in her Diagnostic Studies portion that "four views of the left shoulder were obtained 11/30/2020 for indication of shoulder pain including anterior-posterior, Grashey axillary, and scapular-Y views. I personally reviewed these films." She stated that Claimant "has continued left lateral and posterior lateral shoulder pain that is consistent with both rotator cuff partial-thickness tearing as identified by MRI and physical exam. He has many symptoms that likely overlap with cervical spine radiculopathy." She requested physical therapy for Claimant. Exhibit 2, page 20-22.

18. The MRI and physical exam findings support Claimant's left shoulder pain complaints.

19. On April 7, 2021, Claimant underwent an IME at Respondents' request with Dr. Allison Fall. Dr. Fall agreed that Claimant's left shoulder injury was work related. Dr. Fall then issued a one-page addendum report on April 21, 2021, changing her

opinion and now stating that Claimant's left shoulder is not work related. Part of her reasoning was that there was no mention or documentation of an abrasion on Claimant's left shoulder from the paramedics who took Claimant from the scene of the accident to the emergency department at Saint Francis Medical Center.

20. Dr. Fall also testified via deposition. Her deposition testimony is consistent with her addendum report. In essence, Dr. Fall concluded Claimant's shoulder condition is unrelated to his fall because the paramedics did not document abrasions on his left shoulder and because Claimant did not complain of shoulder pain on the day of the accident.

21. The ALJ does not, however, find Dr. Fall's opinions to be persuasive for several reasons. First, although the paramedics only identified abrasions on Claimant's back and head, the emergency room physicians did not identify Claimant as having any abrasions. The ALJ does not think that means Claimant did not have the abrasions noted by the paramedics. Thus, the lack of documented abrasions on Claimant's left shoulder by either the paramedics or emergency room physicians is not persuasive as to whether Claimant injured his left shoulder. Second, there was no credible and persuasive evidence submitted that indicated Claimant had to have abrasions in order to have a shoulder injury. In other words, an abrasion is not a prerequisite to a shoulder injury. Third, Dr. Fall failed to provide a reasonable explanation for why she discredited the December 9, 2020, medical report that indicated Claimant had had shoulder pain for about 3 weeks – which coincides with date of the accident – and that x-rays were taken on November 30th, which was Claimant's second medical appointment for his work injury. Fourth, Dr. Fall's opinion that Claimant's development of shoulder pain is just a coincidence is just not found to be credible on its face, considering the totality of the evidence. In support of her opinions, she appears to be saying that there is a lack of evidence that there was a traumatic event sufficient enough to cause Claimant's shoulder injury. That said, the facts do not support such a finding because although Claimant first hit his feet, he did not just land on his feet. His body and upper torso still hit the ground after falling 15 feet.

22. Claimant also testified at hearing. Claimant basically testified that he does not recall actually grabbing onto anything on the way down. He also testified that following the accident, his entire body hurt. It was only after the rest of his symptoms got better that his shoulder pain persisted. Claimant could have testified that he tried to break his fall by actually grabbing onto something or that he tried to break his fall with an outstretched arm before hitting the ground. But the fact that Claimant did not try to conform his testimony to some of the evidence supports a finding that Claimant's testimony was credible. In the end, Claimant does not know how he injured his shoulder during the accident. But he did note that he did not have shoulder pain before the accident and that he did have shoulder pain after the accident and that his shoulder pain has persisted.

23. Claimant also testified that he was not happy with the treatment he has received from his treating doctors. He complained of the time it took for them to start treating him after his incident and testified that he would like to see a different doctor if given the option. See Hearing transcript, page 66, line 19 – page 67, line 10.

24. There was no credible and persuasive evidence submitted that indicated Claimant was receiving substandard care from his medical providers. Nor does the ALJ find that Claimant has lost confidence in his treating physicians as it relates to the quality of care he has been provided. Again, the only complaint is that there was a delay in instituting treatment.

Ultimate findings of fact

25. Although Claimant did not report shoulder pain on the day of the accident, Claimant did develop shoulder pain within days of the accident. Based on the fall, Claimant injured, among other parts of his body, his left shoulder. Thus, Claimant's development of shoulder pain after falling 15 feet is not a mere coincidence. His shoulder pain was caused by the fall.

26. Claimant needs medical treatment to cure and relieve him from the effects of his shoulder injury.

27. Claimant is not receiving substandard care for his shoulder. Nor has Claimant lost confidence in his treating physicians as it relates to the quality of care he is receiving.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App.

2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant sustained a compensable injury to his left shoulder on November 19, 2020.

II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits as it relates to his shoulder.

The Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant fell 15-16 feet and landed on his feet before the rest of his body hit the ground. While Claimant cannot explain the exact mechanism of injury to his shoulder in granular detail – was it due to grabbing something on the way down or was it due to the impact on the ground – Claimant was involved in a serious accident when he fell from a significant height. Moreover, shortly after the accident Claimant developed shoulder pain and underwent x-rays and an MRI. The MRI demonstrated various findings which support Claimant's pain complaints. And in light of the MRI findings and Claimant's pain complaints, treatment was recommended.

In order to assist in determining causation, Claimant underwent an IME with Dr. Hall. Dr. Hall employed a three-step process to determine the cause of Claimant's left shoulder injury. Dr. Hall evaluated:

I. Whether the event – a fall from 15 to 16 feet – could plausibly cause the injury?

II. Whether there is a temporal relation between the event and the injury?

III. Whether there are other explanations for the injury that are more probable at the same point in time?

Dr. Hall concluded that a fall from 15 to 16 feet could plausibly cause Claimant's shoulder injury. Dr. Hall also concluded there is a temporal relationship between Claimant's fall and the injury to his shoulder. Lastly, he concluded that there were no other explanations for the injury that are more probable at that time.

The ALJ found Dr. Hall's testimony to be consistent with Claimant's testimony as well as the underlying medical record. The ALJ also found Dr. Hall performed a thorough causation analysis. As a result, the ALJ found his testimony to be credible and persuasive.

Claimant was also evaluated by Dr. Fall in order to help address causation. Dr. Fall ultimately concluded that Claimant's shoulder condition is unrelated to the fall, but more likely a coincidental onset of shoulder pain that merely occurred after Claimant fell 15 feet. She based her opinion on the lack of documented abrasions on Claimant's left shoulder just after the fall. The ALJ, however, did not find her opinions to be credible for many reasons. First, although the paramedics only identified abrasions on Claimant's back and head, the emergency room physicians did not identify Claimant as having any abrasions. The ALJ does not think that means Claimant did not have the abrasions noted by the paramedics. Thus, the lack of documented abrasions on Claimant's left shoulder by either the paramedics or emergency room physicians is not persuasive as to whether Claimant injured his left shoulder. Second, there was no credible and persuasive evidence submitted that indicated Claimant had to have abrasions in order to have a shoulder injury. In other words, an abrasion is not a prerequisite to a shoulder injury. Third, Dr. Fall failed to provide a reasonable explanation for why she discredited the December 9, 2020, medical report that indicated Claimant had had shoulder pain for approximately 3 weeks – which coincides with date of the accident. Fourth, Dr. Fall's opinion that Claimant's development of shoulder pain is just a coincidence is just not found to be credible on its face, considering the totality of the evidence. In support of her opinions, she appears to be saying that there is a lack of evidence that there was a traumatic event sufficient enough to cause Claimant's shoulder injury. That said, the facts do not support such a finding because although Claimant first hit his feet, he did not just land on his feet. His body and upper torso still hit the ground after falling 15-16 feet.

Respondents also contend that just because Claimant developed symptoms after the accident, the timing does not establish causation. This argument was raised during Dr. Fall's deposition. To make the point, Respondents' counsel stated that just because a rooster crows in the morning does not mean the crow caused the sun to rise. While a classic rule of logic – a logical fallacy - the application of such rule may also yield inaccurate results, i.e., that sequence is not relevant to causation. In other words, the mere timing of events can be a strong indicator of causation, especially when a Claimant's symptoms occur nearly simultaneously and paired with other supporting evidence, such as MRI and physical findings of pathology, a lack of symptoms before the accident, plus credible testimony and medical records that document the onset of pain shortly after the accident.

Thus, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that he suffered a compensable left shoulder injury on November 19, 2020, and that he needs medical treatment to cure and relieve him from the effects of his shoulder injury.

III. Whether claimant is entitled to change authorized treating physicians.

Upon a proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. Section 8-43-404(5)(a)(VI), C.R.S*.* Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009). The claimant may procure a change of physician where he/she has reasonably developed a mistrust of the treating physician. *See Carson v. Wal-Mart,* W.C. No. 3-964-07 (ICAO April 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (ICAO November 1995). But, where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *See Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995) (ICAO affirmed ALJ's refusal to order a change of physician when the ALJ found claimant receiving proper medical care); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (ICAO August 23, 1995) (ICAO affirmed ALJ's refusal to order a change of physician where physician could provide additional reasonable and necessary medical care claimant might require); and *Guynn v. Penkhus Motor Co.*, W.C. No. 3-851-012 (ICAO June 6, 1989) (ICAO affirmed ALJ's denial of change of physician where ALJ found claimant failed to prove inadequate treatment provided by claimant's authorized treating physician).

As found, there was no credible and persuasive evidence submitted that indicated Claimant was receiving substandard care from his medical providers. Moreover, the ALJ did not find that Claimant had lost confidence in his treating physicians as it relates to the quality of care he has been provided. The only complaint was that there was a delay in instituting treatment.

As a result, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that he is entitled to a change of physician.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to his left shoulder.

2. Respondents shall provide Claimant reasonable, necessary, and related treatment to cure Claimant from the effects of his work-related injury to his shoulder.

3. Claimant is not entitled to change physicians.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 20, 2021.

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence additional medical treatment, including a neuropsychological evaluation by William Boyd, Ph.D., is reasonable, necessary and causally related to her industrial injury.

II. Whether Respondents proved by a preponderance of the evidence Claimant is responsible for her termination from employment and thus not entitled to temporary indemnity benefits.

STIPULATIONS

The ALJ approved the parties' stipulation that Eric Shoemaker, M.D. is Claimant's authorized treating physician in this matter.

FINDINGS OF FACT

1. Claimant is 51 years of age. Claimant worked for Employer as an egg packer.

2. Claimant suffered an admitted industrial injury on September 18, 2019 when a metal bar fell and struck Claimant on the top of her head while she was kneeling on the ground. It is estimated the bar fell anywhere from nine to five feet before striking Claimant. Claimant did not lose consciousness, but felt lightheaded and nauseous upon standing up. Claimant then developed a headache and bumps on her head. Claimant did not immediately seek medical attention, instead going to the breakroom and icing her head.

3. Claimant subsequently sought treatment at Advanced Urgent Care on September 19, 2019. Claimant presented to Sarah Owens, NP with complaints of nausea, pain, fatigue, fogginess, memory issues, blurry vision, headaches and dizziness after being struck in the head at work. On examination, NP Owens noted Claimant presented confused and agitated with an abnormal affect. NP Owens diagnosed Claimant with, *inter alia*, a blunt trauma closed head and neck injury. She referred Claimant to the emergency department for imaging. Claimant underwent a CT scan of the cervical spine at Platte Valley Hospital, which was negative for acute abnormalities.

4. NP Owens reexamined Claimant on September 24, 2019 and diagnosed Claimant with a Owens closed head injury, post-concussion syndrome and cervical

neck strain. She placed Claimant on 10-pound lifting/carrying/pushing/pulling restrictions.

5. On September 30, 2019, Claimant saw Julie Parsons, M.D. with complaints of headaches, photophobia, and muscle aches. Dr. Parsons continued Claimant's 10-pound lifting/carrying/pushing/pulling restrictions, also limiting Claimant's bending and twisting. She noted Claimant may wear sunglasses at work if needed. Dr. Parsons referred Claimant for a consultation with Roberta Anderson-Oeser, M.D. at Ascent Medical Consultants. Claimant's work restrictions continued on November 14, 2019.

6. On November 25, 2019, Respondents filed a General Admission of Liability (GAL) in this matter admitting for medical benefits.

7. Claimant presented to Dr. Anderson-Oeser on December 4, 2019 with complaints of headache, nausea, dizziness, and neck discomfort. Dr. Anderson-Oeser diagnosed Claimant with a concussion without loss of consciousness, headache, postconcussional syndrome, nausea, and neck strain. She referred Claimant for physical therapy (to include vestibular therapy for dizziness and balance), massage therapy, and a neuropsychological evaluation with William Boyd, Ph.D. for postconcussive symptoms. Dr. Anderson-Oeser subsequently submitted a request for authorization of the aforementioned treatment, which was denied by Respondents.

8. As of December 11, 2019, Claimant was removed from work restrictions other than wearing sunglasses and ear plugs as needed.

9. On January 16, 2020, Jeffrey Wunder, M.D. performed an Independent Medical Examination (IME) at the request of Respondents. Dr. Wunder opined that, if Claimant sustained a traumatic brain injury (TBI), it was mild because Claimant did not sustain any loss of consciousness. Referring to medical literature, Dr. Wunder explained that natural spontaneous healing of the brain was expected to occur within three weeks to three months after a mild TBI. He thus opined that ongoing or worsening symptoms over time are a result of psychosocial issues or litigation and are unrelated to the trauma involved. Dr. Wunder noted that the findings on his physical examination of Claimant were not supportive of cervicogenic headache. He opined that Claimant's pain ratings and pain behavior are extreme and that her subjective complaints cannot be taken at face value. Dr. Wunder further opined that the referrals for additional treatment, including vestibular therapy, massage therapy and neuropsychological evaluation were not reasonable or necessary. He pointed to a lack of objective physical findings and what he deemed nonphysiologic cognitive symptoms and complaints. Dr. Wunder concluded that symptom embellishment is a significant part of Claimant's presentation. He opined Claimant had reached maximum medical improvement (MMI) without permanent impairment or the need for restrictions.

10. Claimant returned to full-time, modified work for Employer after the September 18, 2019 injury and worked in such capacity until January 31, 2020. In her modified duty, Claimant made boxes and crates, transferred eggs to the conveyer belt, and

assisted with overwrap. The heaviest weight she lifted during this time was approximately five pounds.

11. On January 31, 2020, Vince R[Redacted], Claimant's supervisor, and Amada G[Redacted] met with Claimant to discuss a letter which advised Claimant that she had been released to full duty and that she was expected to return to her regular duties immediately. The letter stated,

> We have reviewed the restrictions you have on file for both of your work-related injuries and see no restrictions that would preclude your [sic] fully performing the duties of the job. We do understand that you are allowed to wear sunglasses and hearing protection as needed for the claim filed on September 18, 2019, and have no problem with that accommodation. Effective today, January 31, 2020, the expectation is that you will perform your normal work duties. (Rs' Ex. J, p. 253).

12. No medical records were attached to the letter. Claimant reviewed the essential functions listed in the job description, which included the ability to lift 25 pounds frequently, and advised Mr. R[Redacted] and Ms. G[Redacted] that she could not perform those duties. It was Claimant's understanding at the time of the meeting that she continued to have lifting restrictions of 10 pounds. At the time of the meeting, Claimant was unaware her restrictions had changed and she had not been provided any medical documentation indicating the lifting restrictions were removed as of December 11, 2019.

13. Soon after the meeting, Mr. R[Redacted] informed Claimant that work was no longer available for her if she did return to her full duty position. Claimant did not return to work with this understanding. She has not worked since January 31, 2020. Claimant has received unemployment insurance benefits.

14. Nita Nurmi is Employer's Senior Human Resources Manager. Ms. Nurmi was not present at the meeting between Claimant, Mr. R[Redacted] and Ms. G[Redacted]. Ms. Nurmi testified that Employer wanted Claimant to return to the pack line. She testified that if Claimant had issues lifting, she would be able to skip that position in the rotation. Per Employer policy, an employee missing work for three consecutive days without notifying a manager results in automatic termination. Employer considers Claimant to have abandoned her job as she has not worked since January 31, 2020. Claimant is no longer an active employee of Employer.

15. Claimant continued to undergo evaluation at Advanced Urgent Care with Laura McDonough, PA and Kevin Chicoine, M.D. and continued to report nausea, headaches, neck pain, photophobia, and dizziness. On May 6, 2020, Dr. Chicoine referred Claimant for a neuropsychological evaluation with Dr. Boyd for continued headaches, nausea and dizziness, x-rays of the cervical spine, and physical therapy for the neck. Requests for authorization were again denied by Respondents. On May 27, 2020, Dr. Chicoine noted, that Claimant has chronic pain and limitations from the September 2019 injury as

well as postconcussive syndrome, and other specialists agreed Dr. Boyd's evaluation will be helpful to move Claimant's case and treatment plan forward.

16. Claimant underwent a Functional Capacity Evaluation in August 2020. The FCE primarily focused on Claimant's bilateral lower extremities as related to a prior work injury Claimant sustained in September 2018.

17. Dr. Shoemaker began treating Claimant on January 5, 2021. Claimant continued to complain of headaches, nausea, dizziness, and diffuse neck pain. Dr. Shoemaker noted that the mechanism of impact on September 18, 2019 was not one which would be expected to cause a significant concussion given the lack of any coup contrecoup component. He further noted that the failure of Claimant's symptoms to improve over 18 months was inconsistent with the natural history of a concussion. Dr. Shoemaker reviewed the FCE and noted it was highly inconsistent, with Claimant failing numerous validity measures and demonstrating significant performance discrepancies. Dr. Shoemaker stated he wanted to review Claimant's cervical MRI and clinical notes. Dr. Shoemaker "strongly" agreed with Dr. Anderson-Oeser's recommendation for a neuropsychological evaluation to assess for objective evidence of postconcussive neurocognitive findings. He further agreed with Dr. Anderson-Oeser's recommendation for vestibular therapy. Dr. Shoemaker did not see the need for work restrictions, but deferred to Claimant's primary team. He noted a neuropsychological evaluation would help define the need for any cognitive restrictions.

18. On January 5, 2021, Claimant also saw Kristen Hinson, NP at Blue Sky Neurology. NP Hinson recommended Claimant proceed with a neuropsychological evaluation and MRI of the cervical spine.

19. At a follow-up evaluation on March 2, 2021, Dr. Shoemaker noted Claimant had undergone a cervical MRI, the results of which were normal. He opined some of Claimant's symptoms were consistent with a facet strain injury and were cervicogenic in nature. He continued to "strongly recommend" that Claimant undergo a neuropsychological evaluation as well as vestibular therapy.

20. Dr. Wunder performed a second IME on March 10, 2021. He reviewed additional records, including Claimant's August 2020 FCE. He opined that Claimant had persistently very high pain ratings yet no matching behavioral observations with subjective pain complaints. He further opined that Claimant did not have a cervicogenic source for her headaches, and noted that her cervical range of motion measurements were completely inconsistent and that there were no neurological abnormalities suggesting cervical radiculopathy. Dr. Wunder remarked that Claimant's chronic pain complaints needed to be based on a biopsychosocial model of evaluation rather than the strict biomedical evaluation system in light of Claimant's presentation. He continued to opine that additional medical treatment, including a neuropsychological evaluation and vestibular treatment, is not reasonable or necessary.

21. Dr. Wunder testified at hearing and by post-hearing deposition as a Level II accredited expert in physical medicine and rehabilitation. Dr. Wunder testified consistent with his IME reports. He testified that Claimant had extensive subjective pain complaints that he believes do not have much validity. Dr. Wunder commented that Claimant presented to multiple medical providers, including himself, with extremely high pain ratings but minimal objective and physical exam findings. Dr. Wunder testified that he could not find a cervical pain generator for Claimant's headaches and that there is no clear etiology to explain her headaches. He testified that Claimant's headaches are not related to the work incident.

22. Dr. Wunder testified that it was possible Claimant sustained a mild concussion as a result of the September 18, 2019 mechanism of injury. He reiterated that most mild traumatic brain injuries resolve within a matter of two to three months and again explained that studies demonstrate delayed concussion symptoms beyond two to three months is more related to psychosocial factors and litigation. Dr. Wunder testified that Claimant's symptom progression is not physiologic and that her ongoing symptoms are unrelated to the initial mechanism of injury. Regarding the August 2020 FCE, Dr. Wunder explained that Claimant was inconsistent on 13 of 22 validity tests and various observational inconsistencies were noted by the therapist. Dr. Wunder agreed with Dr. Shoemaker when Dr. Shoemaker stated he would not expect Claimant's mechanism of injury to cause a significant traumatic brain injury and her course of ongoing symptoms would not be expected and physiologic. Dr. Wunder did not agree with Dr. Shoemaker's recommendations for further treatment. Dr. Wunder testified that it did not make sense for Dr. Shoemaker to recommend a neuropsychological evaluation and facet injections when Dr. Shoemaker acknowledged consistency or validity issues in the FCE and the medical records did not support her subjective complaints. Dr. Wunder acknowledged that the FCE was primarily for Claimant's lumbar and knee complaints from a prior work injury, but stated it was significant for invalid and inconsistent findings.

23. Dr. Wunder stressed that the neuropsychological testing is based on Claimant's cooperation and effort. He testified that Claimant's issues of symptom magnification cause concern that a valid neuropsychological evaluation could occur. Dr. Wunder opined that Claimant is at MMI with no need for work restrictions or maintenance care.

24. Dr. Wunder acknowledged that symptom magnification does not necessarily mean there is no organic basis for a patient's complaints. Dr. Wunder initially testified that, if a neuropsychological evaluation is warranted, it should occur within the first three months of an injury. Dr. Wunder later acknowledged that the MTG do not place a limit on the time to administer a neuropsychological evaluation with respect to mild TBIs. Dr. Wunder disagreed with the MTG that in some cases of mild TBIs functional improvement can be made beyond one year.

25. Claimant testified at hearing that she continues to experience nausea, dizziness, headaches, short-term memory loss, "fuzzy thinking", neck pain, and unsteadiness when walking. She testified she also continues to experience some photophobia and phonophobia.

26. The ALJ finds the opinions of Drs. Anderson-Oeser, Shoemaker, Chicoine and NP Hinson, as supported by the medical records and Claimant's credible testimony, more credible and persuasive than the opinion of Dr. Wunder. Claimant proved it is more probable than not the recommended neuropsychological evaluation by Dr. Boyd is reasonable, necessary and causally related to her September 18, 2019 industrial injury.

27. Respondents failed to prove it is more probable than not Claimant is responsible for her termination from employment.

28. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

As found, Claimant met her burden to prove the recommended neuropsychological evaluation is reasonable, necessary and causally related to her September 18, 2019 industrial injury. Multiple providers have diagnosed Claimant with a mild traumatic brain injury and postconcussive syndrome. Claimant has consistently continued to report ongoing symptoms. Her treating physicians have credibly opined that a neuropsychological evaluation is reasonable and necessary to further evaluate and treat Claimant's condition as it relates to her September 18, 2019 work injury. Dr. Wunder's opinion that a neuropsychological evaluation is not indicated is heavily based on his opinion that Claimant is magnifying her symptoms. Dr. Wunder pointed to perceived inconsistencies in Claimant's FCE and on examination. Claimant's current ATP, Dr. Shoemaker, reviewed the August 2020 FCE, made note of certain inconsistencies, yet continues to "strongly" opine that Claimant is in need of a neuropsychological evaluation.

The recommendation for a neuropsychological evaluation is consistent with the MTG. Section B.12 of the MTG regarding delayed recovery states, in relevant part:

> For individuals with mild TBI (mTBI), strongly consider requesting a neuropsychological evaluation, if not previously provided. Interdisciplinary

> rehabilitation treatment and vocational goal setting may need to be initiated for those who are failing to make expected progress 6 to 12 weeks after an injury. In individuals with mTBI, neurological recovery is generally achieved within a range of weeks/months up to one year post-injury, but functional improvements may be made beyond one year. The Division recognizes that 3–10% of all industrially injured individuals will not recover within the timelines outlined in this document despite optimal care. Such individuals should have completed a full neuropsychological evaluation.
>
> (MTG, p. 8)

Section E.1.d. of the MTG discusses neuropsychological evaluations, noting they are "generally accepted and widely used as a valuable component of the diagnosis and management of individuals with TBI…Neuropsychological assessment assist in the differential diagnosis of neural behavioral disorders and the cumulative effect of multiple TBIs." (MTG, p. 34). The MTG provides that neuropsychological testing is not typically recommended prior to three months post-injury and that validity testing is required for all neuropsychological testing to assess performance and symptoms.

Claimant has experienced delayed recovery from what has consistently been diagnosed as a mild TBI. To the extent there are concerns of potential symptom magnification, validity tests are required as part of the neuropsychological testing. Here, the preponderant evidence establishes the neuropsychological testing recommended by Claimant's ATP is reasonable, necessary and related treatment.

Responsibility for Termination

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if he is aware of what the employer requires and deliberately fails to perform. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As found, Respondents failed to prove it is more probable than not Claimant is responsible for her termination of employment. Claimant's separation from employment occurred because Claimant did not return to her full duty work as required by Employer. Although the medical records indicate Claimant was, in fact, not subject to any lifting restrictions on January 31, 2020, Claimant credibly testified that at the time she was unaware she was no longer subject to those restrictions. Claimant credibly testified that, at the time of the meeting with Mr. R[Redacted] and Ms. G[Redacted], she had not seen any medical documentation indicating she was no longer subject to lifting restrictions. Although, per the medical records, Claimant's lifting restrictions had changed as of December 11, 2019, Claimant credibly testified that between the date of injury and until January 31, 2019, she had been performing modified work that did not require lifting more than five pounds. When Claimant informed Mr. R[Redacted] that she could not perform her regular job duties as a result of the work injury, Employer indicated there was no work available for Claimant. No testimony was offered from either Mr. R[Redacted] or Ms. G[Redacted] refuting Claimant's testimony. Claimant reasonably believed she remained under lifting restrictions and could not perform the regular duties requested by Employer. Claimant did not abandon her job. Accordingly, Claimant did not act volitionally or exercise control with respect to her termination.

ORDER

1. Claimant proved by a preponderance of the evidence the recommended neuropsychological evaluation by Dr. Boyd is reasonable, necessary and causally related to her September 18, 2019. Respondents shall authorize and pay for the recommended neuropsychological evaluation.

2. Respondents failed to prove by a preponderance of the evidence Claimant was responsible for termination from employment. Claimant remains entitled to TTD benefits until terminated by operation of law, subject to applicable offsets for unemployment insurance benefits.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 19, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown that at the time of his injury, that he was an *employee* of [Alleged Employer], and not an *independent contractor*?

II. If Claimant was an employee of [Alleged Employer], has he shown, by a preponderance of the evidence, that he suffered a compensable work injury to his left arm while in the employ of [Alleged Employer]?

III. If Claimant did suffer a compensable injury as an employee of [Alleged Employer], can [General Contractor] and Landscaping be deemed a *statutory employer* of Claimant, despite the lack of an employer/employee relationship between those parties?

IV. If the injury is compensable, is Claimant entitled to all medical treatment, which is reasonable, necessary, and related to his work injury?

V. If the injury is compensable, is Claimant entitled to Temporary Total Disability and Temporary Partial Disability payments?

VI. If this injury is compensable, is Claimant entitled to the recovery of a 50% penalty against [Alleged Employer], and/or [General Contractor]?

VII. What is Claimant's Average Weekly Wage?

STIPULATIONS

All parties stipulated that Claimant, [Redacted], was not an *employee* of [General Contractor] at the time of his injury. However, Claimant wished to proceed under the theory that [General Contractor] was a *statutory employer* of Claimant.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for [Alleged Employer] installing and repairing windows. [General Contractor Redacted] would contract with Lowes, apparently through Premier Services Group ("Premier") a large home improvement store, to install windows that customers purchased from Lowes. [It appears from the documents supplied that Premier is the authorized installation arm for Lowes]. Lowes would sell the windows, including installation costs, to its customers. [General Contractor] then subcontracted with [Alleged Employer] to perform the installations, and also to perform repairs connected with the installations.

2. Claimant started working for [Alleged Employer] in the early summer of 2020. [Alleged Employer] is owned by Kyler S[Redacted]. At hearing, S[Redacted] indicated that [Alleged Employer] was never set up as a separate business entity; instead, he used his own social security number for tax identification purposes.

3. While working for [Alleged Employer], Claimant's work hours were set by S[Redacted]. Claimant indicated – largely corroborated by S[Redacted] – that he was to report for work at S[Redacted]'s storage unit at 7:45 a.m., after which he would generally ride to the job site in S[Redacted]'s vehicle. He was paid $800 per week, based upon a 40-hour week, but if he exceeded that, he would sometimes be paid an 'incentive' bonus.

4. S[Redacted] supervised Claimant and inspected his work. S[Redacted] told Claimant what jobs to go to and when. S[Redacted] told Claimant what to do at the job sites. All materials for the jobs were provided by S[Redacted]. Almost all the tools to complete the jobs were supplied by S[Redacted]; however, Claimant did indicate that it was OK for him to use his own basic tools, such as his own hammer and drills, but other tools necessary for the job were supplied by [Alleged Employer]. S[Redacted] supplied the truck Claimant used for work. Claimant performed his tasks for no other business entities except [Alleged Employer] during his entire tenure there.

5. Claimant further indicated that if, for example, he or a co-worker were to break a window, that [Alleged Employer] would pay for it. He stated that he was originally hired by [Alleged Employer] as an 'apprentice', since he did not have the skills to install windows without training. [This was essentially corroborated by S[Redacted]].

6. Claimant had to ask for time off a week or two in advance, which had to be approved by S[Redacted] - but with sufficient notice, it usually would be approved. Claimant was effectively precluded from leaving this jobsite early on any given day, since S[Redacted] had the truck. Claimant's personal vehicle, a Toyota sedan, was not suitable to carry the equipment necessary to perform many of the window tasks. Sometimes Saturday work would be required.

7. Claimant was injured on September 19, 2020, when he fell from a ladder while repairing windows at a home east of Colorado Springs. It was estimated to be from a height of about 12 feet. Claimant injured his left elbow, and went to the Emergency Room.

8. Claimant later had surgery performed on his left elbow by Jeffrey Watson M.D. Claimant's treatment for his elbow injury (Exhibit 2), which shows total medical expenses of $107,395.71 of which Colorado Medicaid paid $14,122.60.

9. Claimant testified that he was told by S[Redacted] prior to his injury that S[Redacted], d/b/a [Alleged Employer], had Workers Compensation insurance.

Claimant was then informed by S[Redacted], after his injury, that S[Redacted] in fact did not have Workers Compensation insurance. At hearing, S[Redacted] testified he did not consult with any professional, other contractor or the division of labor in determining whether Claimant would be considered an employee or independent contractor for purposes of Workers Compensation. S[Redacted] did no other research, other than ask Mr. R[Redacted], the owner of [General Contractor]. [Claimant alleges that [General Contractor] also did not carry Workers Compensation insurance; it is unclear from the record if this is actually the case. However, as noted, the apparent owner of [General Contractor], Jason R[Redacted], was present during the hearing, and never stated a position on this issue. However, since no appearance of counsel was made on behalf of [General Contractor], the ALJ will infer – and find - that [General Contractor] was not insured at the time Claimant was injured.] There is nothing in the written record that [General Contractor] had a written subcontractor agreement with [Alleged Employer], although this fact is not in dispute by any party. [Alleged Employer], did, however, have a written subcontractor agreement, apparently with Premier (Respondent's Exhibit 2), but bearing only one signature. There are documents (Respondent's Exhibits 3, 4) wherein [General Contractor] is directing various parties to supply photos for ID badges, and the carrying of GL ("General Liability") Insurance. No mention is made in any of the documents in the record regarding Workers Compensation insurance.

10. Claimant missed two months' work after his injury. Claimant returned to work on November 10, 2020, for the Salvation Army earning $12.32 per hour for 20 hours per week, bell ringing. Claimant next worked for the Taste of Philly restaurant starting December 5, 2020 and was paid $13 per hour for 30 hours per week. Following this Claimant worked for Buckeye Gardener beginning on March 10, 2012, working 32 hours per week at $14 per hour. Claimant still works at Buckeye as a Landscaper. At hearing, Claimant indicated that [Alleged Employer] let him go, once it became apparent that he was no longer physically able to perform window installation.

11. Claimant was originally referred by Jason R[Redacted] of [General Contractor] to work for [Alleged Employer]. While working for [Alleged Employer], Claimant understood that all of the jobs he worked at were sub-contracted by [Alleged Employer] from [General Contractor]. However, he understood [as did S[Redacted]] that [General Contractor] also used other subcontractors, similar to [Alleged Employer], for some of its Lowes business.

12. Dean B[Redacted], Claimant's co-worker at [Alleged Employer], testified at hearing. B[Redacted] testified that he worked for [Alleged Employer] from March of 2020 to November of 2020. He was paid $650 per week, performing tasks such as trash cleanup, demo work, and washing. [Alleged Employer] set his work hours, where he would work, and what tasks he would perform. [Alleged Employer] supplied him with a vehicle for work, tools and all materials.

13. He testified he understood that he had been hired as an employee of S[Redacted] and [Alleged Employer]. B[Redacted] testified while with [Alleged Employer], he never performed work for any entity other than [Alleged Employer]. [The ALJ notes that B[Redacted] [unlike Claimant] did in fact sign an Acknowledgement and Release (Respondent's Exhibit 3), agreeing that he be designated a subcontractor of [Alleged Employer]]. However, B[Redacted] testified that he was never *told* by S[Redacted] that he was anything other than an employee.

14. Mr. B[Redacted] testified that he was present when Claimant was injured, and saw Claimant fall off the ladder and hit the ground. He saw Claimant leave the site to go to the hospital. B[Redacted] testified Claimant never returned to work for [Alleged Employer] or S[Redacted].

15. Mr. S[Redacted] testified at hearing. He was aware Claimant was injured when he fell off the ladder on September 19, 2020. He did not challenge the cause of Claimant's injuries being work-related and did not challenge the reasonableness and relatedness of the medical care received by Claimant. S[Redacted] also did not challenge Claimant's post injury employment and earnings. S[Redacted] stated his own belief that he did not act negligently in assigning the tasks to Claimant, and never assigned any work he felt would be beyond Claimant's ability to safely perform.

16. At hearing, S[Redacted] acknowledged that there is not a written document outlining Claimant's status as an independent contractor. [The ALJ notes that [Alleged Employer]'s Exhibit 1 (An 'Authorization and Release' appears to bear Claimant's signature, with a box to check whether said individual is considered to be an 'Employee' or a 'Subcontractor' of [Alleged Employer]. Neither box is actually checked. However, Claimant did acknowledge on this form that he was *not* an employee of *Lowes*]. S[Redacted] believed that this subcontractor relationship was a verbal understanding between Claimant and him. S[Redacted] stated that in support of his position, he sent a 1099 form to Claimant, and indicated that he did not withhold federal, state, or social security taxes from Claimant's paycheck. [The ALJ notes that the exhibits and testimony do corroborate this particular assertion].

17. The ALJ notes that [Alleged Employer]'s Exhibit 5 is self-labeled as "Payroll Records", and each check written to Claimant is called a "Paycheck" in the memo section. In one check, for example, Claimant is given a Paycheck for $640, it being duly noted in the memo line that this was for '4 days' of work that week. Another was written for $1440, it being noted that this was for '2 weeks -1 day off'. [In each instance, this equates to $800 per week - $160 per day- in a regular 5-day week].

18. Since Claimant was injured, and a claim filed, S[Redacted] has since researched the issue further, and acknowledged that he was naïve in this process, and did

not think it through. He has always acted as subcontractor himself while performing these tasks for others, and was always paid via a 1099. Now that he was starting his own business, he did not know to do anything any differently. He figured that since Jeremiah had Medicaid, then he would be adequately covered in the event of an injury. He did not, however, have any agreement with Claimant that he would be waiving Workers Compensation insurance.

19. S[Redacted] testified that he understood his own relationship with [General Contractor] was as a subcontractor. [The ALJ notes that [Alleged Employer]'s Exhibit 2 is the identical form, on letterhead of Premier, which Claimant had signed with [Alleged Employer]]. [Alleged Employer] did not pay anything to [General Contractor] (that he recalled) for receiving these jobs; however, [Alleged Employer] did *lease* a truck and trailer from [General Contractor], for which S[Redacted] paid [General Contractor] $350 per week.

20. A recording of a telephone conversation between S[Redacted] and Claimant was offered as Claimant's Exhibit 5. In this recording S[Redacted] appears to acknowledge that Claimant was his employee when the fall occurred and admits he does not have workers compensation insurance. S[Redacted] also tries to persuade Claimant.to advise Medicaid that this injury had occurred on "his" [Claimant's work] time, rather than [Alleged Employer]'s time.

21. Upon further review, the ALJ concludes that such phone conversation, however inartful, constituted an attempt by S[Redacted] to settle the claim without litigation. In fact, if S[Redacted] *believed* Claimant to have been a subcontractor, Claimant could indeed ask Medicaid to consider this accident to have occurred on Claimant's time, and not on an Employer's time. The ALJ does not infer that S[Redacted] intended to perpetuate a fraud; rather, it was an attempt to persuade Claimant of what his actual status was. The ALJ, therefore, gives no significant weight to this recording, beyond the factual admission that S[Redacted], d/b/a [Alleged Employer], was in fact not insured for Workers Compensation.

22. Mr. S[Redacted]'s sole defense is Claimant was an independent contractor.

23. Similarly, [General Contractor] does not challenge the cause of Claimant's injury being work related, his medical care being reasonable and related, his post injury employment or his post injury earnings. [General Contractor]'s apparent sole defense is it is not a statutory employer.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability

and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

4. In this instance, the ALJ finds Claimant, along with Dean B[Redacted], sufficiently credible to establish that this is a compensable claim, which occurred while in the employ of Respondent, [Alleged Employer]. In the final analysis, the ALJ finds Respondent's sole witness, Kyler S[Redacted], to have testified in a sincere manner, in his legally mistaken and misguided, but sincerely held belief that Claimant was an independent contractor, instead of an employee. Mr. S[Redacted] simply did not know any better, but it serves as no legal defense in these circumstances.

Compensability, Generally

5. To qualify for recovery under the Workers' Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of her employment at the time of her injury. See§ 8-41-301(1)(b) C.R.S. 2007. For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. See *Gregory v. Special Counsel, and Travelers Indemnity Co.,* W.C. 4-713-707 (2008); *Triad Painting Co. v. Blair,* 812 P.2d 638, 641 (Colo. 1991). The "arise out of" requirement is narrower than the "in the course of" requirement. *See id.* For an injury to arise out of employment, the claimant must show a

causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See id.* at 64-1-42; *Industrial Comm'n v. Enyeart,* 81 Colo. 521, 524-25, 256 P. 314, 315 (1927) (denying recovery to claimant who was injured when his steering gave out while he was driving across a bridge on his employer's property on his way home from work). The claimant must prove these statutory requirements by a preponderance of the evidence. *See City of Boulder v. Streeb,* 706 P.2d 786, 789 (Colo.1985).

Compensability, as Applied

6. In this instance, there is no dispute that Claimant was injured by falling off a ladder while servicing windows on behalf of [Alleged Employer]. As such, the ALJ finds that Claimant's injuries occurred in the course of his employment (discussed supra) with [Alleged Employer], and such injuries also arose out of his employment relationship.

Was Claimant an Employee, or an Independent Contractor of [Alleged Employer]?

7. The claimant is required to prove by a preponderance of the evidence that at the time of the injury that both he and the employer were subject to the provisions of the Workers' Compensation Act, that he was performing service arising out of and in the course of his employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(a) through (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

8. The term "employer" is defined to include every person, firm or corporation "who has one or more persons engaged in the same business or employment, except as expressly provided in articles 40 to 47 of this title, in service under any contract of hire, express or implied." Section 8-40-203(1)(b), C.R.S. Similarly, the term "employee" is defined as including any person in the service of any person or corporation "under any contract of hire, express or implied." Section 8-40-202(1)(b), C.R.S.

9. For purposes of Colorado's Workers' Compensation Act, an employer-employee relationship is established when the parties enter into a "contract of hire." Section 8-40-202(1)(b), C.R.S.; *Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991). A contract of hire may be express or implied, and it is subject to the same rules as other contracts. *Denver Truck Exchange v. Perryman*, 134 Colo. 586, 307 P.2d 805 (Colo. App. 1957). The essential elements of a contract are competent parties, subject matter, legal consideration, mutuality of agreement, and mutuality of obligation. *Aspen Highlands Skiing Corp. v. Apostolou*, 866 P.2d 1384 (Colo. 1994); *Martinez Caldamez v. Schneider Farm*, W.C. No. 4-853-602 (ICAO, July 16, 2012). A contract of hire may be formed even in the absence of every formality attending commercial contracts. *Rocky Mountain Dairy Products v. Pease*, 161 Colo. 216, 422 P.2d 630 (1966); *In re Ritthaler*, W.C. No. 4-905-302-02 (ICAO, May 7, 2014). Where there is conflicting

evidence the existence of a contract of hire presents a question of fact for the ALJ. *Rocky Mountain Dairy Products v. Pease,* 161 Colo. 216, 422 P.2d 630 (1966); *In re Huffman*, W.C. No. 4-876-455-03 (ICAO, Feb. 20, 2013).

10. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence *may* be demonstrated through a written document.

11. A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

12. The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAO, June 23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

13. If the evidence establishes that the claimant was performing services for pay, and there is no written document establishing the claimant's independent contractor status, the burden of proof rests upon the respondents to rebut the presumption that the claimant was an employee. *Baker v. BV Properties, LLC,* W.C. No. 4-618-214 (ICAO, Aug. 25, 2006). The question of whether the respondents have overcome the presumption and established that the claimant was an independent contractor is one of fact for the ALJ. *Nelson v. Industrial Claim Appeals Office, supra*. *See Industrial Claim Appeals Office v. Softrock Geological Services, Inc*., 325 P.3d 560 (Colo. 2015) (whether an individual is customarily engaged in an independent trade, occupation, profession, or

business related to the service performed must be determined by applying a totality of circumstances test that evaluates the dynamics of the relationship between the individual and the putative employer). The analysis in *Softrock* reflects that tribunals must look not only at the nine factors to discern customary engagement in an independent business but must also examine other factors involving “the nature of the working relationship” is equally germane to that question in the context of a workers’ compensation matter. *See In re Claim of Pierce*, W.C. No. 4-950-181-02) (ICAO, Sept. 18, 2018).

Employee vs. Independent Contractor, as Applied

14. In this instance, [Alleged Employer] has not produced a written document that Claimant was serving as an Independent Contractor. However, it is crucial to note that under the facts of his case, *even had [Alleged Employer] produced such a document, the outcome would remain the same,* based upon the enumerated factors noted. Claimant was clearly paid a *daily rate of compensation* of $160 per day, based loosely upon an understanding that he was to be paid $20 per hour. Claimant was never paid at a *fixed contract rate* to perform discrete tasks. He was paid in his *individual capacity*, in the form of a ‘paycheck’, under ‘Payroll’. Claimant had no *trade or business name* to be paid under. Claimant was hired as an ‘apprentice’, and as such, he had to be *trained* in all facets of the job. [Alleged Employer] dictated the *times of performance*, established a *quality standard*, which was monitored on a nearly daily basis. While it was not explicitly discussed between Claimant and S[Redacted], as a practical matter, this was a full-time job of 40 hours per week, plus some Saturdays. As such, Claimant *could not accept other ‘contract’ work from any other business entity.* [Alleged Employer] provided the needed *tools* (although Claimant was permitted to use his own basic hand tools, if he chose) and transportation. The windows and installation *supplies* were apparently supplied by the customer, who had been billed by Lowes; Such windows and supplies were apparently stored at [Alleged Employer]’s storage unit prior to installation. Claimant never supplied them. If a window was broken, it was [Alleged Employer], and not Claimant, who replaced it, i.e., *Claimant assumed no risk of loss*, as might be expected of an independent contractor. Lastly, it is noted that [Alleged Employer] simply *terminated* Claimant from further employment, due to his inability to continue to install windows, and not due to any failure to live up to the terms of any written ‘contract’.

15. The only thing S[Redacted] can really point to is that [Alleged Employer], by all accounts, did not withhold income and social security taxes from the paycheck; instead, he issued a 1099 form to Claimant for tax year 2020. As such, this sole action, while perhaps indicative of S[Redacted]’s unilateral intent, is wholly inadequate to tip the balance back into [Alleged Employer]’s favor. Applying the balancing test under C.R.S. 8-42-202(2)(b)(II), this is not even a close call. Claimant was, at all times pertinent, [Alleged Employer]’s *employee*, and not an *independent contractor*.

Medical Benefits

16. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an

injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

17. In this instance, Claimant has shown that all medical treatment to date has been reasonable, necessary, and related to his work injury as an employee of Respondent [Alleged Employer] . There is simply no evidence to the contrary. In the final analysis, any offsets due to Medicaid, or limitations due to the Fee Schedule, must be resolved between the affected entities.

Average Weekly Wage

18. The evidence shows that Claimant was being paid $800 per week at the time of his injury, and the ALJ so finds. In his brief, Claimant is actually claiming his AWW to be $533.33. The ALJ notes that this is actually two thirds of Claimant’s de facto AWW, which is in reality the TTD rate. The ALJ finds that this claim of a $533.33 AWW is in error, and in fact, the AWW is $800 per week.

Temporary and Partial Total Disability

19. To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the

employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

20. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has *caused* the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

21. In this instance, Claimant has shown uncontroverted evidence that he suffered, at the outset, from a temporary total disability. Later, due to his efforts and need for income, he took work at a rate less than his average weekly wage. Without the application of any potential penalties (addressed, *supra*), the ALJ finds that Claimant's TTD period ran for 7 weeks and one day. While at Salvation Army, Claimant worked for 3 weeks and 4 days. While with Taste of Philly, Claimant worked for 13 weeks and 2 days. Since March 10, and ongoing, Claimant has worked at Buckeye. Using the hours worked and hourly wage supplied by Claimant, the ALJ finds that *total* TTD should be paid in the amount of $3,840. *Total* TPD from Salvation Army comes to $1,403. *Total* TPD from Taste of Philly is $3,663. The *weekly* rate of TPD payments due, ongoing from 3/10/2021 with Buckeye is $234.68.

Statutory Employer

22. Liability for workers compensation benefits can arise in any contracting out situation. C.R.S. 8-41-401. This applies where a corporation is engaged in a business by subcontracting out its work. Under this situation the general contractor is required to provide workers compensation benefits for the sub-contractor and the sub-contractors' employees. C.R.S. 8-41-401(1). The purpose of this statute is to prevent employers from avoiding responsibility under the workers compensation act by interposing intermediate contractors between themselves and those performing the work. *Finlay v. Storage Technology Corp.* 764 P.2d 62 (Colo. 1984). In *Finlay*, the court held Storage Technology Corp was the statutory employer for the employees of its janitorial company as the cleaning of Storage Tech's bathrooms met the applicable test to establish statutory employment.

23. To determine when an employer which contracts out work is a statutory employer these factors must be considered: Is the work contracted out part of the regular business of the employer as part of its total business operations. In applying this test consideration must be given to the elements of routineness, regularity, and the importance of the contracted service to the regular business of the employer. See, *Meyer v Lakewood Country Club,* 220 P.2d 371 (Colo. 1950 and *M & M Management v. ICAP,*

979 P.2d 574 (Colo. App. 1988). See, also *Curtiss v. GSX Corp of Colorado,* 774 P.2d 873 (Colo. 1989). The Colorado Supreme Court in *Curtiss* held "" A company contracting out any part of its work is considered a statutory employer even though the contractor or sub-contractor to which work was contracted out is also insured for workers compensation benefits and actually provided these benefits to the injured worker." [General Contractor] meets this test. [General Contractor] obtained all its contracts from Lowes and sub-contracted all this work to others which included S[Redacted], d/b/a [Alleged Employer] . Thus, while Claimant was not an employee of [General Contractor], [General Contractor] must be deemed a statutory employer for the purposes of providing Workers Compensation coverage and benefits.

24. Claimant has alleged (and the ALJ so finds, by inference) that [General Contractor] was uninsured for Workers Compensation at the time of this injury. The next step for Claimant would, presumably, be to determine the next statutory employer "upstream" from [General Contractor], who might have had WC insurance in effect at the time of this injury. Whether this would be Premier Services Group, Lowes, some other entity, or nobody, remains unknown at this stage of the proceedings. All that can be stated is that [General Contractor] has now been found here to be a statutory employer.

Penalties against [Alleged Employer] and/or [General Contractor] for failure to have WC Insurance.

25. Claimant seeks a 50% penalty against [Alleged Employer] and/or [General Contractor], payable to Claimant, for failure to carry WC insurance on the date of injury. In support, Claimant cites C.R.S. 8-43-408, but cites no subsection. The ALJ finds such reliance misplaced, although such was indeed potentially the case, prior to the revision of this statute. Currently, the penalty provision is governed by 8-43-408(5), which imposes penalties of 25% of *compensation or benefits*, but payable only to the *Colorado Uninsured Employer Fund*, created by C.R.S. 8-67-105, et seq. Since neither the total compensation, nor the benefits can be ascertained at this point, the ALJ cannot assess a monetary penalty, but in no event would it be payable to Claimant. Claimant may only seek to collect penalties for noncompliance by an employer with the terms of C.R.S. 8-443-408(4). Such events have neither been alleged nor proven at this juncture. Claimant's claim to be paid 50% penalties from either employer must be denied.

Bond from Uninsured Employer

26. C.R.S 8-43-408(2) provides:

> In all cases where compensation is awarded under the terms of this section, the director or an administrative law judge of the division shall compute and require the employer to pay to a trustee designated by the director or administrative law judge an amount equal to the present value of all unpaid compensation or benefits computed at the rate of four percent per annum; or, in lieu thereof, such employer, within ten days after the date of such order, shall file

> a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado. The bond shall be in such form and amount as prescribed and fixed by the director and shall guarantee the payment of the compensation or benefits as awarded. The filing of any appeal, including a petition for review, shall not relieve the employer of the obligation under this subsection (2) to pay the designated sum to a trustee or to file a bond with the director or administrative law judge.

27. There is no dispute that [Alleged Employer] was uninsured. Assuming that [General Contractor] was similarly uninsured (which the ALJ so finds) and that no further statutory employer can be identified who carried WC insurance to cover this claim, then said Respondents would have to pay a bond, which should be sufficient to cover anticipated benefits in the case, as well as a fifty percent increase for temporary disability benefits. *Miller v. United Insurance Group*, W.C. Nos. 4-940-803-01 & 4-940-803-02 (December 2, 2016); § 8-43-408(2), C.R.S. (2020).

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury as an employee of [Alleged Employer] .

2. Since [Alleged Employer] was not insured for Workers Compensation at the time of the compensable work injury, [General Contractor] is found to be a statutory employer, and thus also responsible for Claimant's Workers Compensation benefits.

3. Respondents shall pay for all of Claimant's medical treatment, which is reasonable, necessary, and related to his work injury.

4. Claimant's Average Weekly Wage is $800.

5 Respondents shall pay for Claimant's Temporary Total Disability and Temporary Partial Disability payments.

6. Claimant's claim for a 50% penalty against each Respondent is denied and dismissed; however, Respondents are Ordered to post a bond to cover anticipated WC benefits, pursuant to C.R.S. 8-43-408(2).

7. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-962-740-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 14, 2021 , in Denver, Colorado. The hearing was recorded by Google Meets (reference: 6/14/21, Google Meets, beginning at 1:30 PM, and ending at 3:30 PM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq.. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted]shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 16 were admitted into evidence, without objection. Respondents' Exhibits A through N and P and Q were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed on June 28, 2021. Respondents' answer brief was filed on July 13, 2021. Claimant's reply brief was filed on July 15, 2021, at which time the matter was submitted for decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant has experienced a change of condition after June 28, 2016 which would entitle her to a reopening of her claim regarding her September 25, 2014 work injury; if reopened, whether the Claimant is entitled to temporary total disability (TTD) benefits beginning on July 7, 2016, ongoing; and, whether Respondents are entitled to repayment of an overpayment of $8,890.97 as asserted in the September 1, 2020, Final Admission of Liability (FAL).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Facts

1. The Claimant was born on July 28, 1953, and was 67 years-old on the date of hearing. She worked for the Employer on September 25 and 26, 2014, when she sustained admitted work related injuries to her neck, right arm, and right shoulder (Respondents' (Respondents' Exhibits A-G).

2. After extensive treatment, the authorized treating physicians (ATPs) had not placed the Claimant at maximum medical improvement (MMI) and Respondents sought a 24-month Division independent medical examination (DIME), which was performed by Clarence Henke, M.D. (Respondents' Exhibit G) *.* Dr. Henke was of the opinion that the Claimant was not at MMI, and Respondents filed an Application for Hearing to overcome that opinion (Respondents' Exhibits G and H).

3. The hearing to overcome Dr. Henke's DIME opinion was held before ALJ Kimberly Turnbow on May 30, 2017. *Id.* The Claimant testified regarding Botox injections she received in June of 2016, that the injections caused the muscles of her shoulder and neck to freeze, and that she had ongoing pain and stiffness as a result of the Botox injections (*See Transcript of Proceedings W.C. No. 4-962-704-05 at 10-33, 102-107*). The Claimant did not testify that she experienced any grinding, snapping, cracking, or audible sounds from her shoulder following her Botox injections. *Id.* ALJ Turnbow found the Claimant not credible due to inconsistent presentation, exaggeration of her pain and symptoms, and the conflict between objective medical findings and the Claimant's subjective complaints (Respondents' Exhibit H, p. 176). ALJ Turnbow cited to medical records as recent as March 13, 2017 in her decision, including numerous records following the administration of Botox injections on June 6, 2016. Id at 172-173. ALJ Turnbow found that Dr. Henke's DIME opinion was unsupported by the facts and that the Respondents had overcome his DIME opinion by clear and convincing evidence. *Id.* ALJ Turnbow found the Claimant reached MMI as of June 28, 2016

without permanent impairment, and that the Claimant's cervical spine issues were not work related. *Id.*

4. The ALJ herein determines that ALJ Turnbow's fixing MMI as of June 28, 2016, is the law of the case and this ALJ finds that the Claimant's date of MMI was June 28, 2016.

5. Respondents filed a FAL on August 7, 2017, based on ALJ Turnbow's decision *(*Respondents' Exhibit I). ALJ Turnbow subsequently issued a supplemental order on November 22, 2017, which removed an order for the Claimant to undergo a psychologic evaluation (Respondents' Exhibit J).

6. The Claimant filed a Petition to Review and the Industrial Claim Appeals Office (ICAO) upheld ALJ Turnbow's decision (Respondents' Exhibit K). The Claimant appealed the ICAO order to the Colorado Court of Appeals, which ruled in favor of the Claimant. Respondents filed a Petition for a Writ of Certiorari with the Colorado Supreme Court, which overturned the Court of Appeals ruling and upheld ALJ Turnbow's decision (Respondents' Exhibit M).

The Petition to Reopen

7. During the pendency of the appeals, the Claimant filed a Petition to Reopen and endorsed "Change in Medical Condition" as the basis of the Petition (Respondents' Exhibit. L). The Claimant attached the reports from Michael N. Horner, D.O., and James T. Johnson, M.D.

8. Respondents filed a FAL on September 1, 2020, consistent with ALJ Turnbow's supplemental order. The admission addressed periods of TTD and TPD (temporary partial disability) designated the date of MMI as June 28, 2016, and asserting an overpayment of $8,890.97 (Respondents' Exhibit N, pp. 304, 311). The Claimant filed an Objection to this FAL and designated that an Application for Hearing would be filed on contested issues. The Claimant did not, however, file an Application for Hearing regarding the Objection to this FAL. The Claimant ultimately filed an Application for Hearing on the issues of her Petition to Reopen and TTD from "7/7/16 to ongoing" (Respondents' Exhibit O).

The Claimant

9. The Claimant testified at hearing that she disagreed with her medical records, that her cervical spine was not the source of her issues in March of 2016. The Claimant stated that she started hearing cracking from her right shoulder on June 7, 2016, the date of her Botox injections. She testified that the pain and grinding and snapping are still present and the same on the date of her testimony as when they began on June 7, 2016.

10. The Claimant testified that she had no injuries or problems with her right arm or shoulder before her admitted inguinal hernia injury and that the noise from her right shoulder blade did not exist until she got the Botox injections from Dr. Horner and that the grinding and popping noise from her right shoulder blade has not stopped since it began. Claimant stated that she did not work after her injury except for the one day in May 2016 when she went as directed to modified duty that was not modified enough for her to do the actual job requirements. Claimant also testified that the intense pain from the Botox injections from Dr. Horner did not subside until 4 months later.

11. The Claimant's husband, John [Redacted], also testified that he observed the Claimant exhibit signs of new pain on June 7, 2016, after the Botox injections. Mr. [Redacted] also testified that he heard snapping and cracking from the Claimant's right shoulder.

12. No medical records state that the Claimant reported grinding, snapping, or audible crepitation as a symptom throughout her treatment, including on dates that Dr. Johnson noted crepitation was present. No treatment notes support the Claimant's testimony that the snapping shoulder was the source of her pain. Allison Fall, M.D., who is the last physician to have examined the Claimant, included a detailed statement of the Claimant's symptoms in her report, none of which included any grinding or snapping in her right shoulder (Respondents' Exhibit A at bates 002). The Claimant stated in her initial answers to interrogatories that her condition worsened on July 7, 2016, due to the Botox injections (Respondents' Exhibit P). No allegation of snapping or grinding in her right shoulder was made. *Id.* After the Claimant took the deposition of Dr. Johnson, she submitted supplemental interrogatories which include a detailed statement regarding the development of snapping in her right shoulder.

13. Leading up to the Claimant's Botox injections, she reported 8-10/10 pain in her right shoulder area and that her symptoms were worsening (Respondents' Exhibit E, p. 115; D, p. 86).

Michael N. Horner, D.O.

14. Dr. Horner administered the Botox injections on June 7, 2016, and the Claimant reported her condition was worse on June 8, 2016, with 8/10 pain. *Id.* The Claimant's flexion was measured at 85 degrees on February 11 and June 8, 2016. *Id at 109, 115.* The Claimant's report of severe pain and negative symptoms continued through June 20, 2016. *Ex. E at 117, 120, 122, 124*. The Claimant did not report any snapping, grinding, or audible crepitation at any physical therapy session after the Botox injections, through February 2, 2017, though she complained of severe right shoulder pain throughout that time (Respondents' Exhibit E).

James T. Johnson, M.D.

15. Dr. Johnson testified that he has not examined or treated the Claimant since 2018 and he was not aware whether she was currently in paint (Transcript of

Deposition of Dr. Johnson, p. 26, l. 10). Dr. Johnson stated that the Botox injections improved the Claimant's neck and shoulder symptoms permitting her to increase her range of motion (ROM) of the shoulder to permit flexion up to 70 degrees, which permitted him to observe the snapping scapula. Id at p. 16, l. 1-17. Dr. Johnson recommended a treatment plan for the Claimant to have surgery for her cubital tunnel syndrome, but Dr. Johnson also testified that he does not know the cause of the Claimant's cubital tunnel syndrome. Id at p. 23, l. 4-8; p. 21, l. 17-19. Dr. Johnson stated that before any treatment, the Claimant needs a physical exam to determine the cause of her symptoms and then address if her shoulder blade continues snapping, only after this evaluation and work-up did Dr. Johnson state that surgery may be appropriate, depending on the findings. Id at p. 23, l. 4-22. Dr. Johnson testified that the snapping scapula was the only new claim related diagnosis he was aware of on or after July 11, 2016. Id at p. 45, l. 25 – p. 46, l. 15.

16. Dr. Johnson was of the opinion that the "snapping scapula,'" which can be quite painful, was the result of her on-the-job injury and that it was very common with injuries such as the Claimant suffered, with constant pain and deconditioning of the shoulder, to occur over time. Dr. Johnson was also of the opinion that the Botox injections might have allowed the condition to develop when it did, but he was not aware that Botox injections could cause the "snapping scapula." Dr. Johnson's proposed a treatment plan to surgically repair the cubital tunnel Claimant allegedly got from the injury, then slowly reduce pain and swelling and strengthen the area with PT so that surgery would not be necessary but if nothing else worked, surgery to "shave down'"the inflamed bursa would be reasonable and necessary. On July 11, 2016, Dr. Johnson placed work restrictions on the Claimant of no lifting over one pound, among others, and never took her off those work restrictions (Claimant's Exhibit 11, p. 20; Deposition Transcript).

Alison Fall, M.D.

17. Dr. Fall examined the Claimant in June of 2015, August of 2016, and October of 2020. She testified that the Claimant did not report any snapping, grinding, or sounds coming from her right shoulder in August of 2016, or October of 2020. Dr. Fall stated that the Claimant alleged the Botox had frozen her shoulder, causing it to lock up so she was unable to move it. Dr. Fall was of the opinion that the physical therapy (PT) recommended by Dr. Johnson will not cure or relieve the effects of the Claimant's current condition because she already engaged in significant PT for the right shoulder with little to no reported improvement. Dr. Fall indicated that the Claimant had ulnar neuritis which was claim related, but denied that her cubital tunnel syndrome was work related. Dr. Fall further testified that she disagreed with Dr. Johnson's recommendation for surgery. Dr. Fall stated that the Claimant reported resolution of her cubital tunnel symptoms when she was last examined in October of 2020. Dr. Fall was of the opinion that the Claimant's subjective complaints were out of proportion to the objective findings. She further stated that the Claimant's primary symptoms following the Botox injections, the burning pain and numbness across her back and neck, would not be

caused either by Botox or by a snapping scapula. Dr. Fall noted that the Claimant's subjective complaints have gone essentially unchanged and unimproved for five years despite extensive treatment. Dr. Fall is of the opinion that there is no objective evidence of a change of the Claimant's medical condition on or after June 28, 2016, that no treatment is likely to cure or relieve the effects of her work related injury, and that no maintenance treatment is reasonably necessary in the Claimant's case.

Analysis of the Evidence

18. The Claimant's testimony and arguments allege that her symptoms began on June 7, 2016, the date of her Botox injections. This was before the MMI date and during the pendency of appeals. Dr. Johnson's theory of his discovery of the crepitation for the first time on July 11, 2016 depends on an improvement in the Claimant's ROM as a result of the Botox injections. Dr. Johnson has not examined the Claimant for three years. The Claimant and her husband both testified that the Claimant's new symptoms of snapping, grinding, and cracking, which were audible to them, developed and have not changed since June 7, 2016. Dr. Johnson's opinion is based on the snapping scapula alone, and he testified that the Claimant had no other new diagnosis besides the snapping scapula since July 11, 2016. To the extent that the Claimant has had any worsening of condition, the worsening occurred prior to June 28, 2016 and prior to the MMI date and during the pendency of appeals.. The worsening did not occur after the date of MMI. The worsening testified to by the Claimant, her husband, and Dr. Johnson preceded the Claimant's MMI date.

19. Dr. Johnson's testimony and conclusions are insufficient to meet the Claimant's burden to prove entitlement to a reopening. Dr. Johnson admitted that he had not actually examined or evaluated the Claimant since March of 2018, more than three years before testifying in this matter. Dr. Johnson's theory of discovering the Claimant's crepitation is not consistent with the medical records. Dr. Johnson recorded that the Claimant exhibited 85 degrees of flexion on June 29, 2015, but Dr. Johnson testified that he had only ever observed the Claimant to flex her shoulder from 20-30 degrees previously (Respondents' Exhibit B, bates 032). Dr. Johnson did not record any ROM measurements on March 14, 2016, but the Claimant exhibited 85 degrees of flexion at PT appointments before and after March 14, 2016. The Claimant also testified at this hearing and before ALJ Turnbow that she experienced no relief from Botox injections, instead they had the opposite effect and increased her pain and numbness. Dr. Johnson stated that the Claimant must have been mistaken about the function level of her right shoulder, however, the contemporaneous medical records corroborate the increased pain without a change and a decrease in her ROM. Furthermore, Dr. Johnson was equivocal in his treatment recommendations. Dr. Johnson admitted that he is not aware of the Claimant's current condition and that she should be evaluated first to determine if she is in pain and if so, what is causing her pain. These are questions that could not be answered by numerous ATPs for three years due to the Claimant's inconsistency between her subjective complaints and the objective findings. Dr. Johnson's testimony amounts to speculation as to what treatment might be attempted if the Claimant's symptoms are continuing and depending on their causation.

20. Dr. Johnson's treatment plan opens with the recommendation for treatment of a condition for which Dr. Johnson was unable to determine the claim relatedness of cubital tunnel syndrome. Dr. Johnson stated that this was the "low hanging fruit" and should precede PT, which should be attempted before any surgery is recommended to address the snapping scapula. These recommendations are not supportable medical diagnoses or referrals on which a reopening due to change in medical condition should be based. The Claimant's application for hearing and initial answers to interrogatories request TTD benefits beginning on July 7, 2016.

21. The Claimant filed a copy of Dr. Horner's July 7, 2016, report in which he records her complaints of increased pain due to the Botox injections. The Claimant's answers to interrogatories indicate that she was seeking reopening of her claim for increased pain caused by the Botox injections. Before ALJ Turnbow, the Claimant testified to pain and numbness across her shoulders and neck. In the Claimant's medical records, she reported increased pain and numbness across her shoulders and neck following the Botox injections. In her initial of answers to interrogatories, the Claimant alleged an increase in pain and numbness in her shoulders and neck.

22. At hearing in this matter and in the Claimant's supplemental answers to interrogatories submitted after the testimony of Dr. Johnson's (in his deposition), the Claimant made new allegations of snapping in her right shoulder due to the snapping scapula. The Claimant's theory of the case and allegations of onset changed after Dr. Johnson testified that his July 11, 2016 report recorded a diagnosis of snapping scapula and that was the source of the Claimant's current alleged discomfort.

23. The Claimant's prior answers to interrogatories, testimony, and medical records are devoid of reports of audible crepitation. The Claimant reported extensive symptoms to Dr. Fall at three separate examinations which Dr. Fall incorporated into her reports. None of these reports include any mention of the symptoms of snapping scapula the Claimant and her husband testified to at hearing. The Claimant has not produced any documentation that she has obtained any medical care since 2018, which is inconsistent with the pain and immobility she alleges. These inconsistencies are the same as those cited to by ALJ Turnbow in her determination that the Claimant was not credible and are disputed by records and pleadings preceding Dr. Johnson's testimony.

24. In the records in which Dr. Johnson notes his observation of crepitation, there is no indication that the Claimant reported snapping symptoms or that those symptoms were the source of her pain. The Claimant's testimony is inconsistent with her prior testimony, answers to interrogatories, and the medical record.

25. Dr. Fall testified that the Claimant's claim-related symptoms have resolved. Dr. Fall did not observe any crepitation of the Claimant's shoulder, nor did the Claimant report any, on October 19, 2020. Dr. Fall's testimony and reports establish that the Claimant is and has been at MMI since 2016. The Claimant underwent substantial care for a wide range of complaints from the date of injury through the end of her care in

March of 2018. During that time, the Claimant did not report any significant relief of symptoms, while she did report that numerous treatment modalities, including the Botox injections, had negative effects or no benefits. Dr. Fall is of the opinion that the Claimant's pain reports are not consistent with the objective findings on examination or in the medical records.

26. Dr. Fall is also the only physician to have examined the Claimant during the pendency of the present Application for Hearing and she found no basis for a worsening of condition. Dr. Fall concluded, rather, that the effects of the Botox injections would have subsided after approximately three months after the injections were administered. Dr. Fall further noted that the Claimant's reported pain levels were lower during the 2020 evaluation as compared to her prior examinations.

Issue Preclusion Not Applicable

27. ALJ Turnbow possessed all the information that is available to the present ALJ regarding the alleged date of worsening. The Claimant's "back channel" attempt to overturn her MMI status by way of reopening because the issue for determination in the present hearing is identical to the issue which was previously resolved by ALJ Turnbow, *i.e.,* whether the Claimant was at MMI as of June 28, 2016. Nonetheless Indeed, both Dr. Fall and the DIME physician examined the Claimant and were of the opinion that she was at MMI after the Botox injections had already been performed, and ALJ Turnbow considered the effects of those injections in determining whether the Claimant was at MMI at the hearing held nearly one year after they were performed.

Timing of the Petition to Reopen

28. The Petition to Reopen herein, dated May 8, 2018, alleges a change of condition (worsening) that occurred before the finality of the FAL, dated August 7, 2017, after the Objection thereto, and after the Claimant failed to prevail on her appeals. Indeed, the Petition alleges a worsening beginning before the established MMI date, June 28, 2016.

Ultimate Findings

29. Based on the totality of the evidence, especially the fact that Dr. Johnson admitted that he is not aware of the Claimant's current condition and that she should be evaluated first to determine if she is in pain and if so, what is causing her pain. These are questions that could not be answered by several ATPs for three years due to the Claimant's inconsistency between her subjective complaints and the objective findings. Dr. Johnson's testimony is speculative as to what treatment might be attempted if the Claimant's symptoms are continuing and depending on their causation. Essentially, Dr. Johnson is recommending one more test to determine whether the Claimant's condition has worsened. and the cause thereof.

30. Between conflicting opinions and testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the lack of causality opinion of Dr. Fall and to reject the inability to render causality opinions of Dr. Johnson, Dr. Horner, the Claimant and her husband, without further tests.

31. . The ALJ infers and finds that the Claimant is attempting to do an "end run" around the DIME determination of ALJ Turnbow and the appeals that ensued by filing a Petition to Reopen. The Claimant pursued her appeal, but it was unsuccessful. Following her unsuccessful appeal, the Claimant is now attempting to circumvent the appellate process which considered the facts that are relevant to the date of the alleged worsening. This is so although one may file successive petitions to reopen during the period of limitations.

32. The Claimant has failed to prove by a preponderance of the evidence that there is a causal connection between any change of condition and her original injury of September 25, 2014.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof).

See Young v. Burke, 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, based on the totality of the evidence, especially the fact that Dr. Johnson admitted that he is not aware of the Claimant's current condition and that she should be evaluated first to determine if she is in pain and if so, what is causing her pain. These are questions that could not be answered by several ATPs for three years due to the Claimant's inconsistency between her subjective complaints and the objective findings. Dr. Johnson's testimony is speculative as to what treatment might be attempted if the Claimant's symptoms are continuing and depending on their causation. Essentially, Dr. Johnson is recommending one more test to determine whether the Claimant's condition has worsened and the cause thereof.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, Between conflicting opinions and testimony, the ALJ made a rational choice, based on substantial evidence, to accept the affirmative lack of causality opinion of Dr. Fall and to reject the inability to render causality opinions of Dr. Johnson, Dr. Horner, the Claimant and her husband., without further tests. Further tests to determine a change of condition in a causally related injury are an appropriate measure, however, further tests to determine causal relatedness of a worsening physical condition would amount to a re-litigation of the issue of compensability of an alleged related condition.

Petition to Reopen

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services* *v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a worsened condition, she must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). It is well established that if an industrial injury leaves the body in a weakened condition, and that weakened condition is a proximate cause of further injury to the injured worker, then the additional injury is a compensable consequence of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). As found, there is no credible medical opinion linking the Claimant's worsening condition to the original admitted injury.

d. Although there is no restriction as to the number of times a case may be re-opened and when based upon new or different evidence no such limitation may be imposed by the courts, that being a matter for legislative expression. *Graden Coal Co. v. Ytoarralde,* 137 Colo. 527, 328 P.2d 105 (1958). A Petition to Reopen, however, must be based on a proven causally related change of condition, which is not supported by the totality of the evidence herein.

Maximum Medical Improvement (MMI)—Law of the Case

e. An ALJ determined that a claimant's surgery was not work related. That ALJ has, therefore, established the "law of the case," and this ALJ is bound by that determination, absent a clear error or changed circumstance, regardless of whether this ALJ disagrees with that ALJ's determination in this regard. *See Buckley Powder Co. v. State,* 70 P.3d 547 (Colo. App. 2002); *Giampapa v. American Family Mut. Ins. Co.,* 64 P.3d 230 (Colo. 2003); *Arizona v. California,* 460 U.S. 605, 103 S.Ct. 1382, 75 L.Ed.2d 318 (1983). As found, ALJ Turnbow's determination of MMI as of June 28, 2016 and ultimately affirmed on appeal, established the law of the case and this ALJ may not alter that MMI date.

Change of Condition Must Occur After MMI

f. An ALJ may reopen a claim based on a worsening of condition, which refers to a worsening of a claimant's condition from the industrial injury after MMI. *See El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Amin v. Schneider Nat'l Carriers*, W.C. No. 4-881-225-06 [Industrial Claim Appeals Office (ICAO), Nov. 9, 2017]; *Marsak v. Best W. Durango Inn,* W.C. 4-416-242 (ICAO, May 13, 2004); *Maher v. Afg Indus. Inc.,* W.C. No. 4-559-832 (ICAO, Jan. 26, 2004); *Canales v. Peak Contract Mfg. Inc.*, W.C. No. 4-348-069 (ICAO, Aug. 12, 2003); *Davis v. City and Cty. of Denver*, W.C. Nos. 4-371-397, 4-437-486 (ICAO, Oct. 1, 2003); *Lapean v. Aon Innovative Sols.,* W.C. Nos. 4-474-545, 4-540-403 (ICAO, July

21, 2003); *Maloney v. Swanson & Dad,* W.C. No. 4-298-382 (ICAO, Dec. 7, 2001); *Rhodes v. Pyramid Enterprises, Inc.*, W.C. No. 4-360-050 (ICAO, Sept. 16, 1999); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 (ICAO, September 15, 1995).

g. The change of medical condition must occur subsequent to MMI because MMI is the point in time when no further medical care is reasonably expected to improve the condition. *See* § 8-40-201(11.5), C.R.S. (2020); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997); *Padilla v. Waste Mgmt./Bakers Rural Sanitation Inc.*, W.C. No. 4-443-129 (ICAO, Dec. 16, 2002); *See also Romey v. Golden Corral Littleton Englewood Inc.*, W.C. No. 4-9629098-001 (ICAO, Feb. 20, 2019); *Lara v, Accent Intermediary Servs.*, 4-768-911 (ICAO, June 28, 2011); *Michel v. Freedomroads Holding*, W.C. No. 4-747-473 (ICAO, Oct. 2, 2009); *Wix v. Pro Drivers*, W.C. No. 4-662-476 (ICAO, June 17, 2009); *Olson v. Acuff Homes, Inc.*, W.C. No. 4-505-094 (ICAO, July 12, 2004); *Plotner v. Boggs Trucking, Inc.*, W.C. No. 4-334-768 (ICAO, June 5, 2000); *Scriven v. City of Westminster*, W.C. No. 3-959-793 (ICAO, Nov. 21 1995). As found, the Claimant's testimony and arguments allege that her symptoms began on June 7, 2016, the date of her Botox injections. Dr. Johnson's theory of his discovery of the crepitation for the first time on July 11, 2016 depends on an improvement in the Claimant's ROM as a result of the Botox injections. But Dr. Johnson, as found, has not examined the Claimant for three years. As further found, the Claimant and her husband both testified that the Claimant's new symptoms of snapping, grinding, and cracking, which were audible to them, developed and have not changed since June 7, 2016. Dr. Johnson's opinion is based on the snapping scapula alone, and he testified that the Claimant had no other new diagnosis besides the snapping scapula since July 11, 2016. To the extent that the Claimant has had any worsening of condition, as found, the worsening occurred prior to June 28, 2016, the MMI date. As the worsening must occur after the date of MMI, the worsening testified to by the Claimant, her husband and Dr. Johnson is not an appropriate basis upon which to reopen the claim.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012 A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistent, Claimant failed to meet her burden on reopening.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Claimant's Petition to Reopen is hereby denied and dismissed.

DATED this 21st day of July 2021.

DIGITAL SIGNATURE

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Did Claimant prove QSART and thermographic testing on her left leg is reasonably necessary?

- Did Claimant prove the following medical benefits are reasonably needed to relieve the effects of her industrial injury:

  (1) modifications to her front door and/or outside ramp,

  (2) a walk-in bathtub,

  (3) 3-4 hours of daily home assistance.

STIPULATIONS

Respondents agreed to widen two doors to Claimant's laundry room and bedroom.

FINDINGS OF FACT

1. Claimant worked for Employer as a registered nurse. She fractured her right fibular head when she fell at work on May 29, 2017. The fracture eventually healed but she developed severe neuropathic pain in the right leg. She was ultimately diagnosed with CRPS based on QSART and thermographic testing performed by Dr. Tashof Bernton in January 2018. Dr. Bernton noted the large temperature asymmetry between Claimant's legs was "uncommon."

2. Claimant was put at MMI on May 30, 2018 and assigned a 34% whole person rating for CRPS and psychological sequelae of her injury. Claimant has been receiving maintenance care since MMI, primarily under the direction of Dr. Levi Miller.

3. Claimant has a relatively severe case of CRPS, which has resulted in substantial disability. At the time of MMI, she was using a 4-wheeled walker for all weight bearing activities. She progressively lost her ability to ambulate independently and became wheelchair-dependent. At present, she primarily relies on a motorized wheelchair for mobility, even inside her home. She supplements the motorized wheelchair with a manual wheelchair because some doorways in her home are too narrow. This includes the doorway to her bedroom, which in turn limits her access to the master bathroom.

4. An evaluation for home modifications was performed on April 4, 2018. At the time, Claimant could only ambulate short distances, and the evaluator determined a powered wheelchair was medically necessary to improve her mobility and allow ingress and egress from her home. Claimant already had a ramp to access the front door, although it is unclear when or how that was provided. The evaluator also recommended

installing a back entrance ramp, increasing the bathroom door width, installing a shower stall with a bench, grab bars, and handheld shower, and a raised toilet seat.

5. On August 23, 2018, Dr. Miller noted Claimant had recently received home modifications to make her home more accessible, including a walk-in shower and “improved access to her hot tub which provides benefit.” Claimant was performing a regular stretching program in her hot but and had received a gym membership with access aquatic therapy “which has been quite beneficial.”

6. On April 18, 2019, Dr. Miller documented “substantial diminishment in all ADLs, including difficulty dressing, bathing, cooking. She has difficulty climbing in and out of her hot tub, which does provide some benefit.”

7. Claimant periodically travels to South Padre Island in Texas to stay with her mother. The warmer climate lessens her pain, and Claimant’s mother has made several modifications to her condominium to improve accessibility. There is conflicting evidence regarding the exact frequency and duration of Claimant’s trips Texas. Claimant was in Texas approximately eight weeks from February 2019 to April 2019. Dr. Miller’s July 18, 2019 report indicates Claimant was planning to go to Texas until December 2019, but Claimant credibly testified she went there in mid-September and returned before Thanksgiving. She spent three months in Texas during 2020 despite COVID-related travel disruptions. Claimant testified she generally plans to spend the colder months in Texas. She wants to move there permanently, but such a move is not feasible for at least 1.5 years because of the family’s finances. Based on the evidence presented, the ALJ infers Claimant can be expected to spend at least 3-4 months per year staying with her mother in Texas, primarily during the colder part of the year.

8. At her December 19, 2019 appointment with Dr. Miller, Claimant asked about a walk-in bathtub because “she is able to control the temperature quite well and minimize her symptoms. She states she has a hot tub outside, however, access during cold weather is exceedingly challenging.” Claimant’s daily activities remained severely restricted, and she found that lying flat with her leg elevated provided the greatest relief. Significant examination findings included swelling and hypersensitivity to light touch in the right leg and vasomotor changes in the left leg. Dr. Miller ordered a walk-in bathtub “to help manage the patient’s lower extremity symptoms, particularly as related to temperature changes.”

9. On January 20, 2020, Dr. Miller wrote to Insurer and stated, “The patient struggles with temperature changes and argues that a walk-in bathtub would improve her symptoms and quality of life.”

10. Insurer denied the request for a walk-in tub based on a Rule 16 review by Dr. Jeffrey Raschbacher.

11. Dr. Miller evaluated Claimant on June 11, 2020 via telemedicine. Claimant complained the landing outside her front door was too small to maneuver. Dr. Miller requested an occupational therapy home evaluation.

12. A second DME home evaluation was conducted on August 10, 2020. Claimant described various mobility challenges and modifications she would like to have provided. The therapist opined, “Some of her concerns are warranted, however some are not.” The evaluator recommended installing a gate with self-closing hinges at the top of the staircase near the front door. The evaluator believed the ramps at the front and back door satisfied “the medical need for two accessible exits.” However, the configuration of the front entrance ramp prohibited Claimant from leaving her home independently, such that remodeling the front ramp to allow for safe powered wheelchair management was medically necessary. The evaluator also recommended widening the doors to the bedroom and laundry room to allow access with the powered wheelchair. Regarding basic ADLs, the therapist noted Claimant can stand independently for short periods but she is very unsteady. Her right knee gives out and “now her left knee is beginning to give out.” This was corroborated by a physical examination that showed “not functional” right leg strength and 4-/5 strength in the left leg. The therapist opined Claimant needs standby assistance to prevent falls. Claimant cannot shower independently, and neighbors come help her when her husband is not available. She can dress her upper body but has difficulty dressing her lower body. Some days Claimant just wears a bathrobe. She also has difficulty toileting because of transfer issues. Claimant is “bedbound” on many days because she cannot self-propel her manual wheelchair due to weakness and pain, and the motorized wheelchair cannot fit through the doorway to her bedroom. Because of Claimant’s severe limitations, the therapist recommended “3-4 hours of attendant care per day to assist with self-care and higher level activities.”

13. The therapist opined Claimant does not need a lift for her hot tub but would benefit from a session with an occupational therapist to learn techniques to transfer safely in and out of the hot tub. Photographs of the hot tub show it is accessed solely by small steps that appear to be approximately 30 inches wide. The present steps appear ill suited to an individual with severe disability. The hot tub is situated on a concrete patio with open area on all sides and no apparent structural impediments to installing more appropriate entry options.

14. Claimant had a telemedicine appointment with Dr. Miller on September 3, 2020. She could not access the heated pool because of the pandemic and was having “great difficulty” accessing her hot tub at home. Claimant reported ongoing severe right leg pain and reported she was now experiencing similar pain and coldness in the left leg. Dr. Miller noted, “The patient is concerned that her CRPS is spreading to the left lower extremity. She understands I cannot assess this remotely. She will return to the clinic for further evaluation.”

15. Claimant had an in-person appointment with Dr. Miller on December 3, 2020. Her condition had been worsening “for several months.” Claimant described 9/10 pain and “cries nightly.” The pain had expanded diffusely throughout her right leg, and she felt similar pain down the left leg. Dr. Miller noted Claimant was “frustrated with her home exercise program. She has not been able to go to the gym due to the Coronavirus pandemic, cannot access hot tubs. She has a hot tub at home however it is outside, she is unable to tolerate walking through the cold due to her condition, as well as climbing into the hot tub as she is at risk for fall. She would like a walk-in bathtub at home such that

she can do exercises." Examination of the left leg showed allodynia along the lateral calf. Dr. Miller also noted "no temperature or color asymmetries" between Claimant's legs[1] Dr. Miller saw no other potential pathology that could be responsible for the progressive symptoms into the left leg, such as radiculopathy, new trauma, or DVT. Dr. Miller stated, "As her condition appears to have a progressed to the left side, a QSART and thermogram will be ordered to further define her condition."

16. Dr. Miller also indicated he would write a separate letter addressing Claimant's continued request for a walk-in bathtub. However, his letter dated December 9, 2020, did not actually request a tub. Dr. Miller stated,

> [Claimant] has CRPS of the right lower extremity, now with concerning progression to the left lower extremity. She requests a walk-in bathtub for her home, which would require an extensive remodeling of her home. Workers' Compensation guidelines state, "large expensive purchases such as spas, whirlpools, and special mattresses are not necessary to maintain function." However, the patient has an outdoor hot tub. She described difficulty with safe access to this hot tub and describes the cold triggering worsening of her CRPS. As she has a hot tub, but struggles with access, an evaluation of accessibility for this hot tub is reasonable to improve safety to access the hot tub. She describes being able to do a home exercise program in the hot tub as the warm water improves her condition.

17. Dr. Miller also requested 3-4 hours per week of in-home assistance "to help with housekeeping." As justification, he cited Claimant's very limited tolerance for ambulation and other physical activities. Dr. Miller did not mention the attendant care services recommended by the DME evaluation.

18. Dr. Miller wrote to Insurer again on January 15, 2021 to address the recommendations made by the occupational therapist from the August 10, 2020 home evaluation. Dr. Miller agreed the following modifications are medically necessary: (1) remodeling the ramp to Claimant's front door to allow safe passage of a power wheelchair, (2) a gate with self-closing hinges to prevent Claimant from falling down the stairs when utilizing her front door; (3) widening the bedroom door and laundry room door to allow access for her wheelchair, and (4) use of a transportation company that allows for her powered wheelchair.

19. Dr. Kathy McCranie performed several Rule 16 peer reviews for Insurer. She recommended denial of the walk-in bathtub because she thought there were other ways Claimant could perform a home exercise program. She cited a provision in the MTGs stating large expense purchases a generally unnecessary to maintain function. Dr. McCranie was under the impression Claimant was moving to Texas was imminent, which further cemented her opinion regarding the tub. Dr. McCranie recommended denial of the

[1] This finding is interesting because one would typically expect appreciable differences between the affected and unaffected legs with single-limb CRPS. Given the documented abnormalities affecting Claimant's right leg throughout the record, this finding suggests new vasomotor abnormalities in the left leg.

CRPS testing because she concluded Claimant did not meet the Budapest Criteria. Dr. McCranie further opined that home care services were not reasonably necessary. Dr. McCranie recommended denial of ramp modifications. However, Respondents have reversed their position on that issue and their post-hearing brief states they are “offering to provide ramp modifications, as per Dr. Fillmore’s recent IME.”

20. Dr. Bernton evaluated Claimant on March 26, 2021. She reported intermittent pain in her left leg. Dr. Bernton noted global give-way weakness in both legs, making it difficult to assess strength. Dr. Bernton observed Claimant’s right leg was darker and palpably colder than the left leg. He provided no diagnosis related to the left leg. The primary treatment options Dr. Bernton considered reasonable were a spinal cord stimulator and/or intravenous ketamine infusion. He opined a walk-in bathtub was reasonable because he was under the impression Claimant could not access her hot tub. He also agreed Claimant needs in-home assistance of 3-4 hours per week “for cleaning” because of her “significant limitation with respect to her ADL’s.”

21. Claimant credibly testified she needs home assistance because she fears falling, and she falls once or twice per week. Claimant credibly testified she sometimes remains in bed for hours or all day because she cannot get up on her own. On those days, she restricts her fluid intake to avoid having to urinate. Because the doorway to her bedroom is too narrow to accommodate the motorized wheelchair, she uses a wheeled office-type chair to move around in the bedroom.

22. Claimant testified she had difficulty accessing her hot tub with the current steps. Claimant further testified she cannot access her hot tub when it rains because the powered wheelchair cannot be exposed to water. Claimant agreed her hot tub is in good working condition, is bigger than an indoor tub, and she can perform her leg exercises in it. Claimant testified she is ok with modifying access to the hot tub but she still wants the walk-in bathtub for those days when she is in Colorado and the weather is too cold or rainy to go outside.

23. Dr. Joseph Fillmore performed an IME for Respondents on April 12, 2021. Claimant reported left leg symptoms since 2018. She could sometimes get out her front door with her powered wheelchair. She had hired someone to help with cleaning every 2-3 weeks for 3-4 hours. She reported needing help to take a shower, cook, do laundry, and transfer to the toilet. Dr. Fillmore noted weakness in the right leg but normal strength in the other extremities He saw no swelling, color changes, temperature changes, or skin or nail changes in the left leg. Claimant had hypersensitivity in the left leg but no sensory deficits. Dr. Fillmore found she did not meet the Budapest Criteria for clinical CRPS and the testing recommended by Dr. Miller was not indicated. He recommended training by an occupational therapist to help Claimant learn to perform activities herself. He opined it would be more reasonable to explore ways to make her hot tub accessible, such as a lift, before installing a walk-in tub. Although Respondents previously declined a request for a hot tub lift, they are now willing to explore that option based on Dr. Fillmore’s opinions. Regarding the front door access issues, Dr. Fillmore recommended adjusting Claimant’s wheelchair footrest as recommended by the DME evaluator, modifying the ramp,

removing the threshold bump, and installing a gate at the top of the stairway before structural changes to the home would be considered reasonably necessary.

24. Dr. Fillmore discussed the criteria for diagnosing CRPS set forth in WCRP 17, Ex. 7, Section G.2. and G.3. of the MTGs. He testified a claimant must meet the Budapest Criteria before confirmatory tests listed in Section G.3 are considered appropriate. Dr. Fillmore testified he appreciated no significant color or temperature changes in Claimant's left leg at the IME. He conceded he measured the temperature in Claimant's legs by touch rather than with an infrared thermometer. He found Claimant had subjective symptoms in the left leg consistent with CRPS but did not have two or more objective signs referenced in the MTGs. As a result, he did not believe QSART and thermography were warranted. Dr. Fillmore opined in-home assistance is not reasonably needed at this time because Claimant has not yet worked with an occupational therapist to learn transfer and other self-care techniques. He also suggesting installing additional grab bars in Claimant's bathroom to help her transfer to the toilet and shower, with instruction from an occupational therapist regarding transfer techniques. He opined those measures may substantially reduce or eliminate the amount of attendant care Claimant might need. Dr. Fillmore opined removing the threshold bump, modifying her footrest, and working with an occupational therapist regarding how best to exit the front door would be reasonable to explore first before structurally modifying the front door. Dr. Fillmore also testified modifications to the outside hot tub, such as a lift, should first be explored in lieu of installing a walk-in tub.

25. Claimant proved the QSART and thermographic testing recommended by Dr. Miller to investigate possible spread of CRPS to her left leg is reasonably needed.

26. The findings and conclusions of the August 10, 2020 DME evaluation regarding Claimant's limitations and need for in-home attendant care are credible and persuasive. Claimant proved 3-4 hours per week of in-home attendant care is reasonably needed to relieve the effects of her injury and prevent further injury from falls.

27. Claimant proved modifications to the front entrance ramp and installation of a protective gate at the top of the stairway near the front entry are reasonably necessary.

28. Dr. Fillmore's opinions regarding the request for a walk-in bathtub and modification of Claimant's front door are credible and persuasive.

29. Claimant failed to prove a walk-in bathtub is reasonably necessary at this time.

30. Claimant failed to prove modifications to her front door are reasonably necessary at this time.

CONCLUSIONS OF LAW

A. QSART and thermography

The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability and reasonable necessity of specific treatment. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the requested treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Diagnostic testing is compensable if it has a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *Soto v. Corrections Corp*., W.C. No. 4-813-582 (February 23, 2012). As found, Claimant proved the QSART and thermographic testing recommended by Dr. Miller to investigate possible spread of CRPS to Claimant's left leg is reasonably needed. Respondents argue the testing is not reasonable because Claimant does not meet the "Budapest Criteria" regarding the left leg. For several reasons, the ALJ concludes slavish adherence to the Budapest Criteria is not appropriate in this case.

First, the ALJ does not interpret the MTGs to invariably require fulfillment of the Budapest Criteria as a prerequisite to diagnostic *testing*. The MTGs emphasize the importance of "objective testing" to avoid "over-diagnosing" CRPS. Meeting the Budapest Criteria allows the claimant to begin "*treatment* with oral steroids and/or tricyclics, physical therapy, a diagnostic sympathetic block, and other treatments." (Emphasis added). Second, significant temperature changes have been a consistent vasomotor marker of CRPS in Claimant's right leg. But the severity of CRPS in the right leg makes it difficult to assess the temperature of the left leg simply by touching both legs. Claimant's left leg may be warmer than the right, but still colder than would be expected in a healthy limb. Additionally, palpable temperature changes may not be detectable in early stages of CRPS. *See* CRPS MTGs, § E.1.f.ii. Third, Claimant has exhibited clinical signs consistent with the Budapest Criteria on various occasions. Multiple providers have noted allodynia in the left leg. Dr. Miller documented vasomotor changes in the left leg on December 19, 2019, and the occupational therapist found left leg weakness (4-/5) in August 2020. The ALJ is not persuaded by Dr. Fillmore's opinion that Claimant must exhibit sufficient signs to meet the Budapest Criteria simultaneously at a single evaluation merely to qualify for testing.

In any event, the MTGs are primarily intended to guide medical providers and facilitate quick and efficient delivery of medical benefits without litigation. The ALJ may consider the MTGs as an evidentiary tool but is not bound by them when determining if requested medical treatment is reasonably necessary. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). Claimant has severe CRPS in the right leg. Dr. Miller has been treating Claimant for over three years, and was sufficiently concerned by Claimant's clinical presentation in December 2020 to request testing of the left leg. The ALJ sees no persuasive reason to deny Claimant's treating physician the additional data he believes he needs "to further define her condition" and evaluate treatment options.

B. In-home attendant care services

In her opening statement and post-hearing brief, Claimant indicated she is seeking an order for 3-4 hours of attendant care services as recommended by the August 2020 DME evaluation. Although Dr. Miller and Dr. Bernton recommended 3-4 hours per week of "housekeeping," Claimant has not requested an award of housekeeping services. As a result, this Order will only address attendant care.

Home health or attendant care services are a compensable medical benefit if they relieve the effects of the injury and are directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Atencio v. Quality Care, Inc*., 791 P.2d 7 (Colo. App. 1990). Such services may encompass assisting the claimant with activities of daily living, including personal hygiene. *Kraemer & Sons v. Downey*, 852 P.2d 1286 (Colo. App. 1992) (assistance with activities such as eating, bathing, preparing for bed, showering, and turning in bed to prevent bedsores); *Suetrack USA v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995) (assistance getting out of bed, walking, and maintaining hygiene).

As found, Claimant proved by a preponderance of the evidence the 3-4 hours per day of attendant care recommended by the August 10, 2020 DME evaluation is reasonably needed to relieve the effects of her injury. Claimant's ability to perform basic ADLs such as dressing, toileting, and bathing is severely limited by the effects of her injury. The limitations documented in the DME report are credible and the conclusions regarding Claimant's need for attendant care services are persuasive. The findings and conclusions of the DME evaluation are corroborated by Claimant's generally credible testimony. It is particularly troubling that Claimant avoids drinking liquids on many days because she has such difficulty toileting without assistance. Her repeated falls while attempting to stand or walk even short distances put Claimant at significant risk of additional injuries. Although training with an occupational therapist and some of the additional modifications recommended by Dr. Fillmore might lessen Claimant's need for assistance in the future, they do not to address her immediate needs. Nothing prohibits Respondents from seeking to modify the award of attendant care if circumstances change. In the meantime, Claimant requires the attendant care to satisfy her basic physical needs and minimize the risk of further injury.

C. Front ramp modifications and safety gate

The persuasive evidence shows such modifications are reasonably necessary to relieve the effects of Claimant's injury and prevent further injuries. Dr. Fillmore agreed with Dr. Miller and the DME evaluator about modifying the front ramp leading and installing a safety gate at the top of the staircase near the front door.

D. Walk-in bathtub

Claimant failed to prove a walk-in tub is reasonably necessary at this time. Although access to a hot water environment is reasonably necessary to allow Claimant to perform exercises and alleviate pain, it is not reasonable to jump immediately to a major bathroom remodel project without first exploring relative costs and feasibility of improving access to her existing hot tub. Claimant's trepidation about using the small steps into the hot tub is reasonable. But at a minimum that issue could be improved by installing a larger set of steps with a handrail. A hot tub lift is another potentially feasible option, as discussed by Dr. Fillmore. Dr. Miller also recommended improving access to the hot tub in his December 9, 2020 letter, and Claimant herself requested a hot tub lift in August 2020. Although Respondents previously denied the request to improve access to the hot tub, they have now abandoned that position based on Dr. Fillmore's recent recommendations. The weather-related access issues are mitigated by Claimant's frequent travels to Texas during "the colder months." The ALJ is also mindful that Claimant wants to relocate to Texas permanently. Although such a move is not imminent because of finances, it is a legitimate factor to consider when evaluating a request for major structural changes to her current home.

E. Front door modification

Claimant failed to prove modifications to her front door are reasonably necessary at this time. Claimant provided no contractor evaluations or quotes addressing the structural requirements/feasibility and/or relative costs of this work. Depending on the construction of Claimant's home, moving the front door may be a relatively minor undertaking, or may require major structural changes. These factors are significant to determining whether the modifications are reasonable. Additionally, no physician or evaluator has recommended such an accommodation. The DME evaluation recommended installing a gate at the basement stairs for safety, remodeling the ramp, and shortening the footrest of her wheelchair to allow better access. Dr. Miller agreed with the request for ramp modifications. Dr. Fillmore recommended ramp modification, gate installation, footrest shortening, and removal of the threshold bump to help Claimant access through her front door before structural change7s to the home would be considered reasonably necessary. Finally, Claimant can enter and exit the home through the back door, and no persuasive evidence was presented to explain why changes could not be made to allow exit from the back yard. Based on the evidence presented, Claimant has not proven structural changes to the front door are reasonably necessary at this time.

ORDER

It is therefore ordered that:

1. Insurer shall cover QSART and thermographic testing of Claimant's left leg as requested by Dr. Miller.

2. Insurer shall cover 3-4 hours per day of in-home attendant care, consistent with the recommendations of the August 10, 2020 DME report.

3. Insurer shall cover modifications to Claimant's bedroom door and laundry room door, per their stipulation at hearing.

4. Insurer shall provide modifications to Claimant's front door ramp and install a safety gate at the top of the staircase near the front door as recommended by Dr. Miller and the DME evaluation.

5. Claimant's request for a walk-in bathtub is denied and dismissed.

6. Claimant's request for modifications of the front door to her home is denied and dismissed.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-142-536-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the Decedent sustained a compensable occupational disease arising out of the course of his employment with Employer, entitling Claimant and her children to death benefits.

FINDINGS OF FACT

1. Decedent was a procurement director for Employer and worked at Employer's Mineral Road office in Arapahoe County, Colorado (the "Mineral Facility"). Decedent passed away on May 2, 2020, due to complications resulting from COVID-19. (Ex. 9).

2. Claimant is the widow of Decedent. Claimant and Decedent had two children who were both minors at the time of Decedent's death. Claimant and the minor children are dependents of the Decedent pursuant to section 8-41-501 of the Act.

3. On March 6, 2020, Claimant and the children left for a vacation in Mexico. Decedent did not accompany Claimant and the children on the trip. As of March 6, 2020, Decedent, Claimant, and their children were in their normal states of health, and none were exhibiting signs of any acute illness. Claimant and the children returned from Mexico late at night on March 13, 2020, or early in the morning on March 14, 2020. Claimant testified that, while she was on vacation, Decedent reported to her that he was short of breath on March 10, 2020, when riding his bike.

4. Decedent had multiple sclerosis and was receiving semi-annual infusion treatments for this condition. He was scheduled to undergo an infusion treatment on March 20, 2020. As a result of his condition, Decedent was immunosuppressed and considered high-risk for COVID-19. (Ex. I).

5. On March 12, 2020, in anticipation of his upcoming infusion appointment, Decedent emailed his one of his physicians at UC Health inquiring whether he should postpone his infusion given the onset of COVID. Decedent indicated he was not sick at that time and had not been around anyone who had been sick to his knowledge. The following day, the provider responded that infusions were not being canceled or postponed unless the patient had a fever. (Ex. H).

6. Between March 14, 2020, and March 16, 2020, Decedent began experiencing symptoms consistent with COVID-19, including cough and runny nose.

7. When Claimant returned from Mexico on March 14, 2020, the Decedent was tired, with running nose, congestion, and sneezing. The Decedent's symptoms waxed and waned over the next few days.

8. On March 18, 2020, Decedent saw his primary care provider, Andy Fine, M.D., reporting a recent cough with pain. Dr. Fine's records are ambiguous as to whether Decedent had a fever. Dr. Fine diagnosed Decedent with a viral infection, but no COVID-19 test was performed. (Ex. I).

9. On March 20, 2020, Decedent underwent his scheduled infusion treatment at Immunoe Health Centers. The records from this date of treatment indicated Decedent's temperature was measured 13 times between 8:40 a.m. and 12:30 p.m., ranging between 96.7°F and 97.3° F. (Ex. J).

10. On March 22, 2020, Decedent was seen at UC Health and diagnosed with a viral upper respiratory infection. Decedent reported he had been experiencing cough and cold symptoms for approximately 7 days and that the symptoms had begun the previous Monday (i.e., March 16, 2020). Decedent reported he had not had a fever, chest pain or shortness of breath. Decedent was not tested for COVID-19 at this visit, but was advised to self-quarantine, and to follow up with his primary care provider if he developed a fever, shortness of breath or chest pain. (Ex. H).

11. On March 24, 2020, Decedent had a telehealth appointment with a nurse practitioner at Dr. Fine's office and reported nasal congestion, cough, nausea, and loss of taste and smell. Decedent reported he had no fever, and that the symptoms had begun approximately one week earlier. (Ex. I).

12. On March 25, 2020, Decedent was seen at the UC Health Highlands Ranch Hospital. Decedent reported he had been ill since March 16, 2020, with a dry cough, pain, and a fever to 99°F. He reported he felt much worse after his infusion on March 20, 2020. Decedent was admitted for observation, treatment, and COVID-19 testing. (Ex. I).

13. On March 26, 2020, Decedent was diagnosed with an acute lower respiratory tract infection due to SARS-Cov-2, with a positive COVID-19 test. Decedent remained hospitalized and his condition deteriorated until, on May 2, 2020, Decedent died due to acute renal failure and COVID-19 infection. (Ex. 2, 9).

14. The ALJ finds it more likely than not that Decedent began exhibiting symptoms consistent with COVID-19 between March 14, 2020, and March 16, 2020, and likely contracted the virus sometime between February 29, 2020, and March 14, 2020.

DECEDENT'S WORKPLACE AND EMPLOYMENT

15. Decedent typically worked nine hours per day, five days per week. On Mondays, Tuesdays, Thursdays and Fridays, Decedent worked at the Mineral Facility. On Wednesdays, Decedent typically worked at Employer's facility located in Broomfield, Colorado. On March 13, 2020, due to the onset of the coronavirus pandemic, Decedent began working remotely, and did not return to either the Mineral Facility or the Broomfield location after that date.

16. As the procurement director, Decedent supervised a team of ten or eleven individuals, five of whom worked at the Mineral Facility, and the remainder worked at

different locations. The Mineral Facility is a 407,526 square foot office building that is divided into different sections for Employer's different business units. Lisa H[Redacted], one of Decedent's co-workers and a member of his work team, testified that the Mineral Facility was capable of housing 5,000 employees, although the number of individuals actually working at the facility is unknown.

17. The Mineral Facility is divided into nine sectors (each designated with a state name) which house different business units. Decedent's business unit was housed in the "Iowa" sector, in the northwestern portion of the facility. The procurement department in which Decedent worked was located in an area generally known as "Russ's Place" located within the Iowa sector. Russ's Place is a 5,864 square foot area that is walled-off from the other departments with floor-to-ceiling walls, and accessible through two doors. Russ's Place contained approximately 54 cubicle spaces, approximately 55-60% of which were occupied. (Ex. O. and H[Redacted] Testimony). From this information, the ALJ infers that approximately thirty employees regularly worked in Russ's Place. Individuals who worked in Russ's Place generally used restrooms located outside Russ's Place in the Iowa sector.

18. Ms. H[Redacted] testified that employees from other business units rarely entered Russ's Place, and that Decedent would periodically hold meetings with his work team or vendors in a conference room. However, Ms. H[Redacted] was not sure if any such meetings took place in February or March 2020.

19. Ms. H[Redacted] described the ventilation system at the Mineral Facility as "not very good" based on inconsistent temperatures and a sewage-type smell often present in Russ's Place.

STATE OF THE COVID-19 PANDEMIC

20. In early March 2020, the COVID-19 pandemic was in its initial stages. Testing for COVID-19 in Colorado began on February 28, 2020. The first presumptive positive COVID-19 test in Colorado was confirmed on March 5, 2010. On March 10, 2020, Governor Polis verbally declared a disaster emergency due to the presence of COVID-19 in Colorado. As of March 11, 2020, the Colorado Department of Public Health and Environment (CDPHE) identified 33 presumptive-positive COVID-19 cases in the state, and one indeterminate test result. (Ex. B).

21. On March 12, 2020, CDPHE issued Public Health Order 20-20, which, among other things, restricted visitor access to certain health care facilities. In that Order, CDPHE indicated that there were 39 known presumptive positive cases of COVID-19 in Colorado as of March 12, 2020. (Ex. C).

22. On March 13, 2020, the President of the United States declared a National Emergency due to COVID-19. (Ex. D).

23. On March 16, 2020, CDPHE issued Updated Public Health Order 20-22, which closed bars, restaurants, and other facilities. On March 19, 2020, CDPHE revised Public Health Order 20-22 extending the closure requirements to other facilities. In that order,

CDPHE indicated that there were 131 known presumptive cases of COVID-19 in Colorado as of March 16, 2020. (Ex. D). As of March 18, 2020, there were 183 presumptive positive cases of COVID-19 in Colorado. (Ex. E).

INCIDENCE OF POTENTIAL COVID-19 IN WORKPLACE

24. Ms. H[Redacted] testified that other than Decedent, none of the individuals on Decedent's procurement team contracted, were hospitalized for, or died of COVID-19. Ms. H[Redacted] testified that one other employee at the Mineral Facility contracted COVID-19 and died, although she did not know the employee's identity or when the employee began exhibiting symptoms. She also testified that other employees contracted COVID-19, but was not aware of when they tested positive for COVID-19 or began exhibiting COVID-19 symptoms. No credible evidence was admitted indicating when these other employees contracted COVID-19.

25. Zubin I[Redacted] works for Employer at the Mineral Facility as a director of software engineering, and testified at hearing. Mr. I[Redacted] was not a part of Decedent's work team, worked in a different department. His cubicle was located in the Iowa sector near, but not in Russ's Place. Mr. I[Redacted] testified he would normally see Decedent in the hallway at the Mineral Facility, and that they typically used the same restroom facility. Mr. I[Redacted] contracted COVID-19 in late March 2020, and tested positive on March 24, 2020. Mr. I[Redacted] testified that at least one and possibly up to three of his subordinates also tested positive for COVID-19. Mr. I[Redacted] did not identify the individuals who tested positive for COVID-19, when they tested positive for COVID-19, or whether he was aware of any contact those individuals had with Decedent.

26. Mr. I[Redacted] testified that another employee returned from a trip to Japan on February 14, 2020, and after her return emailed Mr. I[Redacted] indicating she had a fever and aches. Mr. I[Redacted] advised the employee to stay home and not come to work. The employee apparently returned to work and during a conference room meeting at the Mineral Facility on March 2, 2020, coughed, and sneezed. Decedent was not present at the March 2, 2020-meeting. Mr. I[Redacted] did not know if the other employee tested positive for COVID-19 or contracted the virus. The other employee did not testify at hearing, and no credible evidence was offered to indicate that she contracted COVID-19 or transmitted the virus to any other individual.

27. Mr. I[Redacted] did not recall having any contact with the Decedent after the March 2, 2020-meeting. Mr. I[Redacted] did not work with Decedent in person during February or March 2020, and did not have any reason to work with the Decedent in Russ's Place during that time frame. He testified that during February and March 2020, if he had contact with Decedent, it would have been transient interactions passing each other in the hallway but did not recall any specific contact. Mr. I[Redacted] testified he began working from home toward the end of the week of March 2, 2020, after the March 2, 2020-meeting. The ALJ infers that Mr. I[Redacted] did not work in person at the Mineral Facility after Friday, March 6, 2020.

DECEDENT'S POTENTIAL COVID-19 EXPOSURES

28. Based on the expert testimony, discussed below, most individuals who become infected with COVID-19 develop symptoms between 2 and 14 days after becoming infected, although the incubation period may be longer. Given that Decedent developed symptoms consistent with COVID-19 between March 14 and March 16, 2020, the presumed date of infection was between February 29, 2020, and March 14, 2020. During this time, the general public was not observing later-established COVID-19 protocols such as social distancing and mask-wearing.

29. Between February 29, 2020, and March 14, 2020, Decedent engaged in the following activities:

a. On Saturday, February 29, 2020, Decedent made credit card purchases at Deseret Books Company, Chick-Fil-A, King Soopers, and Buffalo Wild Wings. (Ex. N).

b. On Sunday, March 1, 2020, Decedent made credit card purchases at Pet Supplies Plus and King Soopers. (Ex. N).

c. On Monday, March 2, 2020, Decedent worked at Employer's Mineral Facility, and had a chiropractic visit at Vitaly Chiropractic. (Ex. G).

d. On Tuesday, March 3, 2020, Decedent worked at Employer's Mineral Facility.

e. On Wednesday, March 4, 2020, Decedent worked at Employer's Broomfield facility and made a credit card purchase at a Wendy's restaurant. (Ex. N).

f. On Thursday, March 5, 2020, Decedent worked at Employer's Mineral Facility, and made credit card purchases at a Bahama Buck's restaurant and a Starbucks. (Ex. N).

g. On Friday, March 6, 2020, Decedent worked at Employer's Mineral Facility and made credit card purchases at a Rolling Smoke barbeque restaurant, a King Soopers grocery store and a Sam's Club. (Ex. N). Also on March 6, 2020, Decedent drove his family to the airport.

h. On Saturday, March 7, 2020, Decedent ate at a Snooze restaurant and made credit card purchases at Jesse's Smokin' Nola Restaurant, DSW Park Meadows, Best Buy, Starbucks and two different King Soopers grocery stores. (Ex. N).

i. On Sunday, March 8, 2020, Decedent made credit card purchases at a Yogurtland restaurant, a King Soopers and a RedBox DVD rental location. (Ex. N).

j. On Monday, March 9, 2020, Decedent worked at Employer's Mineral Facility.

k. On Tuesday, March 10, 2020, Decedent worked at Employer's Mineral Facility, and made a credit card purchase at a Chick Fil A restaurant. (Ex. N).

l. On Wednesday, March 11, 2020, Decedent worked at Employer's Broomfield facility, and made a credit card purchase at a Burger King restaurant and a McDonald's. (Ex. N).

m. On Thursday, March 12, 2020, Decedent worked at Employer's Mineral Facility, made credit card purchases at PetSmart, a King Soopers, and a McDonald's. Also on March 12, 2020, Decedent received chiropractic treatment at Vitaly Chiropractic. (Ex. N).

n. On Friday, March 13, 2020, Decedent began working remotely and was not physically present at any of Employer's facilities. Decedent made credit card purchases at two different King Soopers and a McDonald's. (Ex. N).

o. In the early morning of March 14, 2020, Claimant and the children returned from their trip to Mexico, and Decedent picked them up from the Denver airport.

p. On Saturday, March 14, 2020, Decedent made credit card purchases at King Soopers, Sam's Club and a Baskin Robbins. (Ex. N).

30. In discussing Exhibit N (Claimant and Decedent's joint credit card statements), Claimant testified that credit card charges associated with the card ending in 1961 were made using Decedent's credit card. Some charges on Exhibit N are automated, recurring, or online charges that were not made in person by Decedent. Other charges were made personally by Decedent. Claimant testified that Decedent "never" ate alone at restaurants, and did not always go into a grocery store when his card was charged, because they used "Click List" and other times people would pick things up for them. Claimant testified that Decedent did go to Snooze restaurant for brunch with an acquaintance from the National MS Society, and that the individual with whom he dined did not contract COVID-19. Because the general public was not observing COVID-19 protocols during this time frame and restaurants and other retail stores had not been closed, the ALJ finds that it is more likely than not that Decedent had contact with the general public between February 29, 2020, and March 14, 2020, at grocery stores, retail stores and restaurants. Although it is possible that some of the purchases were made through drive-throughs or utilizing "Click List," the evidence does not establish that all purchases were made without contact with others.

TESTIMONY OF SANDER ORENT, M.D.

31. Sander Orent, M.D., was admitted as an expert in occupational and environmental medicine and internal medicine, and testified at hearing. Dr. Orent testified that the presumed period of exposure prior to the onset of symptoms (i.e., the "incubation period"), was thought to be 2 to 14 days, but may be considerably longer, and averages between 4.6 to 5 days. However, no test exists which can identify the precise date of exposure. He testified that COVID-19 may be spread by breathing, speaking or other respiration, and does not require coughing, sneezing or other expectoration, especially in areas where the air is not moving well. Dr. Orent also testified coronavirus may be "aerosolized" after toilet flushing. Dr. Orent also expressed that COVID-19 may be transmitted by asymptomatic individuals when community spread is occurring. Dr. Orent agreed that in March 2020, COVID-19 testing was not yet readily available.

32. Dr. Orent opined that Decedent most likely contracted coronavirus in the course of his employment with Employer because, in his opinion, community spread was not occurring during the time in which Decedent was likely exposed to the virus, and it was more likely that Decedent contracted the virus from a coworker at the Mineral Facility. Dr. Orent stated that, although he did not know who was on Decedent's work "team" or what his team interactions were, "I do know that other people in his workplace with whom he had contact became ill." Dr. Orent further testified that it was unlikely that Decedent contracted COVID-19 in the community because Decedent's contacts with the general public during the relevant time frame were limited to a single trip to a grocery store and a trip to a Sam's Club.

33. Dr. Orent also testified that as of March 10, 2020, there were no reported cases of coronavirus in the state of Colorado, and that "community spread was not occurring at the time that [Decedent] was infected with the coronavirus." Dr. Orent acknowledged that there may have been COVID-19 in Colorado at that time, but asserted that there were no reported cases. Consequently, Dr. Orent reasoned, the probability that Decedent contracted coronavirus in the community was minimal.

34. The ALJ does not find Dr. Orent's opinion to be credible or persuasive because many of the fundamental assumptions upon which his opinion is based were not supported by the evidence or were speculative.

35. Contrary to Dr. Orent's assertion, no credible evidence was offered that Decedent was in contact with other employees who contracted COVID-19 during the period of February 29, 2020, through March 12, 2020 (Decedent's last date working in one of Employer's facilities).

36. The only individual positively identified as having contracted COVID-19 was Mr. I[Redacted]. However, no credible evidence was offered indicating he had any contact with Decedent in March 2020. Mr. I[Redacted] and Ms. H[Redacted] also testified that other unidentified employees contracted COVID-19. However, no credible evidence was admitted that showed when these individuals contracted COVID-19 or whether Decedent was in contact with these individuals during the period in which he is presumed to have

contracted COVID-19. No members of Decedent's immediate work team contracted COVID, and no credible evidence was presented from which it could be inferred that Decedent contracted COVID-19 directly from a COVID-positive co-worker.

37. Dr. Orent testified that the employee who traveled to Japan was an "index case," and indicated in his report that the individual "ended up in an intensive care unit on a ventilator but did survive." No credible evidence was admitted at hearing to establish that this employee contracted COVID-19 at any point in time, and the ALJ cannot infer based on the admitted evidence that the individual was COVID-19-positive. Moreover, no credible evidence was offered to indicate that Decedent was in contact with this individual at any point after her return from Japan in mid-February 2020.

38. Dr. Orent's assumption that there was no community spread and no reported cases in Colorado as of March 10, 2020, is also not supported by the evidence. Although there were a small number of reported cases (i.e., 33) as of March 11, 2020, because there was limited testing occurring at that time, which was limited to only symptomatic individuals, it is not possible to conclude with any degree of probability the level of transmission that was occurring between February 29, 2020, and March 14, 2020.

39. Dr. Orent assumed that during Decedent's presumed incubation period, his only excursions into the community were one trip to a grocery store and one trip to a Sam's Club. Dr. Orent wrote that Decedent "did not go anyplace else, would go to work, and then come home." As found, during this time frame, Decedent visited multiple grocery stores, retail stores and restaurants, during which the ALJ infers that he would have had some level of contact with members of the community other than fellow employees in the workplace.

40. Based primarily on an interview with Claimant, Dr. Orent opined that the Mineral Facility was a "cube farm" in which the ventilation was "very poor." Dr. Orent's assumptions regarding the ventilation in the Mineral Facility are speculative. Dr. Orent did not review any data regarding the Mineral facility's ventilation system, did not test the ventilation system, did not have any information regarding the filters, maintenance, or installation of the system and made no inspection of the system. Other than anecdotal statements regarding the temperature and odors at the Mineral Facility, Dr. Orent did not offer any evidence that the air flow at the Mineral Facility was diminished, or otherwise created conditions conducive to the transmission of the virus. While Dr. Orent did discuss the very small size of the coronavirus and testified its size "allows the virus to stay in the air," and that the virus may be transmitted in areas where the air is not moving well, he offered no cogent, persuasive explanation as to how the building ventilation system purportedly contributed Decedent contracting COVID-19. The ALJ does not find credible Dr. Orent's opinion that the Mineral Facility's ventilation system supports the proposition that Decedent contracted COVID-19 in the workplace.

TESTIMONY OF ROBERT WATSON, M.D.

41. Robert Watson, M.D., was admitted as an expert in public health, occupational medicine, and epidemiology, and testified at hearing. Dr. Watson testified that the primary

transmission method of COVID-19 is respiratory droplets. Dr. Watson testified that the presumed transmission period for COVID-19 is 2 to 14 days before the appearance of symptoms. Dr. Watson explained that the employee who traveled to Japan would not be considered an "index case" because she was not known to be COVID-19 positive.

42. Dr. Watson testified that Dr. Orent's statement that there was no community spread in Colorado on March 10, 2020, was inaccurate, because by March 11, 2020, there were already 33 cases of known COVID-19 in Colorado, and that at that time there were serious concerns related to transmission by asymptomatic and pre-symptomatic individuals. At the time, testing was only being performed on symptomatic individuals. Dr. Watson testified that COVID-positive asymptomatic individuals can remain positive and transmit the virus for up to 21 days, and that greater than 50% of COVID-19 cases are transmitted by asymptomatic individuals. Dr. Watson credibly testified that although there were 33 known cases, because of the presence of asymptomatic and pre-symptomatic cases, the sparsity of testing, and a high false-negative testing rate, the actual number of COVID-19 cases at that time was unknown.

43. Dr. Watson credibly testified that based on the information available, it is not possible to state with any degree of medical probability where or when Decedent contracted COVID. He indicated Decedent's risk of exposure of the coronavirus was equal in workplace and outside the workplace. Dr. Watson noted that the date of Decedent's positive COVID-19 test – March 25, 2020 – does not assist in determining the date on which he contracted the virus. He testified that in late February and early March 2020, prevention mechanisms, such as masks and social distancing were not in place.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OCCUPATIONAL DISEASE

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause, and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, W.C. No. 4-726-429 (ICAO, July 7, 2010). Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Anderson*, *supra*.

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified, or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard, the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO Aug. 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Claimant has failed to establish by a preponderance of the evidence that Decedent contracted an occupational disease arising out of the course and scope of his employment with Employer. As found, Decedent was likely positive for COVID-19 when he began exhibiting symptoms on March 14, 2020, or March 16, 2020, and likely contracted the virus between February 29, 2020, and March 14, 2020. Although at least one fellow employee contracted COVID-19 in March 2020, the evidence failed to credibly establish that Decedent's COVID-19 could be fairly traced to his employment as the proximate cause.

Assuming Decedent became symptomatic on March 14, 2020, Decedent had numerous opportunities to interact with not only co-workers but the general public during the 14 days prior to March 14, 2020, including trips to grocery stores, restaurants, and retail stores. The ALJ credits the testimony of Dr. Watson that, given the possibility of non-symptomatic transmission, it is impossible to know with any degree of probability where Decedent contracted the virus. Accordingly, Claimant has failed to establish by a preponderance of the evidence that Decedent contracted an occupational disease arising out of the course of his employment with Employer.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that Decedent contracted a compensable occupational disease arising out of the course of his employment with Employer. Claimant's claim is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 22, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Determination of Claimant's AWW.

II. Whether Claimant proved by a preponderance of the evidence she is entitled to additional temporary partial disability ("TPD") benefits from 2/28/2020 to 4/28/2020 based on an increased AWW.

III. Whether Claimant proved by a preponderance of the evidence she is entitled to additional temporary total disability ("TTD") benefits from 04/29/2020 to 10/22/2020 based on an increased AWW.

IV. Whether Claimant proved by a preponderance of the evidence she is entitled to medical maintenance benefits.

V. Whether Claimant proved by a preponderance of the evidence she is entitled to an award of disfigurement benefits.

VI. Whether Claimant proved by a preponderance of the evidence penalties should be imposed pursuant to §8-43-304, C.R.S., §8-43-305, C.R.S., for alleged violations of §8-42-107, C.R.S., §8-42-105, C.R.S., WCRP Rule 5-5(E), WCRP Rule 6-2, and WCRP Rule 6-4.

FINDINGS OF FACT

1. Claimant worked for Employer as a nurse's aide.

2. Claimant sustained an industrial injury on February 27, 2020 when her right little finger was slammed in a fire door. Claimant immediately notified Employer of the injury and completed an incident report.

3. Employer filed its First Report of Injury on March 3, 2020.

4. Adjuster Colleen Kelly filed Insurer's first General Admission of Liability ("GAL") in this matter on May 13, 2020. The admitted AWW was $608.00.

5. As a result of the industrial injury, Claimant underwent finger surgery on April 29, 2020.

6. Insurer filed a second GAL on June 1, 2020 admitting for TTD benefits beginning April 29, 2020 and ongoing. The admitted AWW was $486.40. Respondents did not file

any supporting documentation regarding the lowered admitted AWW or any Petition to Modify.

7. Claimant earned $19.00/hour and $28.50/hour for overtime. The number of hours Claimant worked in a given week varied. Respondents paid Claimant on a weekly basis. Claimant earned a total of $5,927.50 between the pay periods ending 12/8/2019 and 2/9/2020, a total of 10 pay periods. Claimant worked but could not find the paystub for pay period 1/19/2020. $5,927.50 divided by nine weeks (pay periods) equals $658.61. Based on a review of the paystubs in Claimant's Exhibit 13, the ALJ finds an AWW of $658.61 is a fair approximation of Claimant's actual wage loss and diminished earning capacity. The TTD rate corresponding to an AWW of $658.61 is $439.09.

8. Claimant worked modified duty between 2/28/2020 and 4/28/2020. During the week of 2/24/2020 through 3/1/2020, Claimant's gross wages were $527.25. During the week of 3/9/ 2020 through 3/15/2020, Claimant's gross wages were $655.50. For the pay period 4/6/2020 through 4/12/2020 Claimant's gross wages were $641.25. The remainder of the weeks Claimant's earnings were equal to or greater than an AWW of $658.61 and no TPD benefits are owed. For the three weeks that Claimant earned less than her AWW of $658.61, $101.22 in TPD benefits are owed ($658.61 x 3 weeks = $1,975.83 less $1,824.00 paid = $151.83 x 2/3 = $101.22).

9. Claimant's authorized treating physician ("ATP"), Dr. Tomm VanderHorst, placed Claimant at maximum medical improvement ("MMI") on October 22, 2020. Her diagnosis included a crush injury of the right little finger; laceration of the right little finger; and neuroma digital nerve right little finger, status post radial nerve neurolysis with nerve wrapping. Dr. VanderHorst assigned 4% upper extremity impairment (2% whole person). Respondents have not filed a Final Admission of Liability or request for Division Independent Medical Examination ("DIME") in this matter.

10. The last TTD check Claimant received was check number 112169 dated October 2, 2020. This covered the TTD period of September 19, 2020 through October 2, 2020. As a result of the industrial injury, Claimant remained on work restrictions and did not work until after being placed at MMI by Dr. VanderHorst on October 22, 2020. On the date of MMI Dr. VanderHorst released Claimant to full duty.

11. The TTD benefits paid to Claimant after June 1, 2020 did not match either the first or second admitted AWW. Several TTD checks were paid to Claimant in the amount of $780.18 for a two-week period. This corresponds to a TTD rate of $390.09 that equates to an AWW of $585.13, which is neither of the admitted AWWs.

12. Based on an AWW of $658.61 and a TTD rate of $439.09, from April 29, 2020 through October 21, 2020 Claimant should have been paid $10,977.25 in TTD benefits. Claimant was paid $9,529.34 in TTD benefits, leaving a difference of $1,447.91 in TTD benefits owed.

13. Claimant filed an Application for Hearing ("AFH") on March 5, 2021, endorsing the issues of AWW, disfigurement, penalties, and other issues. Under penalties, Claimant wrote "Failure to timely file Final Admission of Liability and failure to pay PPD (WCRP 5-5E(1) and CRS 8-42-107." Under other issues Claimant wrote, "Adjust TTD/TPD paid on increased AWW; Interest on back due benefits; Grovers." (Exhibit 5, p. 11). Claimant did not attach additional documents further detailing the bases or dates of the alleged violations.

14. Claimant filed a Case Information Sheet ("CIS") on May 18, 2021 endorsing the following issues: Disfigurement; Penalties - Failure to timely file FAL; Failure to pay PPD; AWW; PPD; Interest on back due benefits; Adjust TTD/TPD for increased AWW; and Grovers. Claimant filed an Amended CIS on May 19, 2021 endorsing the same issues listed in the May 18, 2021 CIS. The CIS forms contain no reference to the rules or sections of the statute allegedly violated, or the dates of the alleged violations.

15. Hearing in this matter took place on May 25, 2021. Respondents did not appear for the hearing. At the start of the hearing, the ALJ found Respondents likely received notice of the hearing based on extensive evidence presented by Claimant. The ALJ thus proceeded with the hearing on the merits. The ALJ issued an Order to Show Cause on May 25, 2021 stating the ALJ would issue an order on the merits of the case unless Respondents, within 14 days of the date of the Order to Show Cause, showed good cause in writing for their failure to appear at the hearing. As of the date of this Findings of Fact, Conclusions of Law and Order, ("FFCL") no response had been filed by Respondents. The Order to Show Cause dated May 25, 2021 is incorporated herein by reference.

16. At the outset of the hearing, Claimant identified the following issues: AWW, disfigurement, adjustment of TTD and TPD based on an increased AWW, interest on back due benefits, PPD, failure to pay PPD, failure to file a FAL, unilateral decrease of AWW without any petition to modify, and unilateral termination of TTD without any petition to modify resulting in alleged penalties under §8-43-304, C.R.S., §8-43-305, C.R.S., §8-42-107, C.R.S., §8-42-105, C.R.S., WCRP Rule 5-5(E), WCRP Rule 6-2, and WCRP Rule 6-4.

17. Claimant submitted a post-hearing position statement in which she identified the following issues for determination, among others: whether Claimant proved penalties should be imposed pursuant to §8-43-304, C.R.S. and §8-43-305, C.R.S. for Respondents' alleged violations of:

a. WCRP Rules 6-2 and 6-4 due to Respondents unilateral decrease in the admitted AWW without filing a Petition to Modify;

b. Section 8-42-105(1), C.R.S for failing to pay TTD at the admitted rate.

c. Section 8-42-105(3), C.R.S for Respondents' unilateral termination TTD on 10/2/2020 without meeting the requirements of 8-42-105(3);

d. WCRP Rule 5-5(E) based on Respondents' failure to file a FAL within 30 days of receiving Claimant's MMI and impairment rating report; and

e. Section 8-42-107, C.R.S based on Respondents' failure to pay PPD benefits for Claimant's impairment rating.

18. Claimant credibly testified at hearing. Claimant testified that Respondents' failure to pay her PPD benefits as owed resulted in her borrowing money from her son and friends, seeking assistance from food banks and her church, falling behind on utility bill payments and asking for forbearance from her landlord for rent. Claimant was not able to give Christmas gifts to her family in 2020 because when she finally returned to work she had to work extra to pay off money borrowed. She continues to work overtime as well as extra 12 hour shifts when available in order to pay back the money she borrowed. Claimant testified became depressed having to borrow money from others, not being able to give Christmas gifts and having to work overtime and additional shifts to repay to others.

19. Claimant testified she continues to experience symptoms as a result of the industrial injury. Claimant wants to return to Dr. VanderHorst for further evaluation and possible consideration of physical therapy and injections.

20. Claimant proved by a preponderance of the evidence she is entitled to additional TPD and TTD benefits. Claimant's industrial injury resulted in disability and wage loss. Claimant is entitled to additional TPD based on an increase in her AWW. Claimant is entitled to additional TTD based on an increase in her AWW and TTD benefits owed yet not paid to Claimant for the period October 3, 2020 to October 22, 2020. There is no evidence indicating Claimant's TTD was properly terminated under §8-42-105(3)(a)-(d), C.R.S prior to Claimant being placed at MMI on October 22, 2020.

21. Claimant proved it is more probable than not she is entitled to a general award of maintenance medical benefits.

22. Claimant failed to plead the penalty allegations with specificity as required by Section 8-43-304(4), C.R.S.

23. Amidst discussion of preliminary matters, Claimant's presentation of evidence and discussion of other procedural matters, the ALJ did not observe Claimant's alleged disfigurement at hearing. As there is insufficient evidence regarding disfigurement, such issue, along with others not determined herein, is reserved for future determination.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v.*

Vigil, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

Claimant's hours and wages varied per week. As found, based on review of Claimant's paystubs, a fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of $658.61.

TPD and TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Section 8-42-106(1), C.R.S., provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

As a result of her February 27, 2020 industrial injury, Claimant suffered disability and resultant wage loss. Claimant earned less than the AWW of $658.61 when working modified duty the weeks ending 3/1/202, 3/15/2020 and 4/12/2020. As found, Claimant is entitled to an additional $101.22 in TPD benefits for the three weeks Claimant earned less than her AWW of $658.61 ($658.61 x 3 weeks = $1,975.83 less $1,824.00 paid = $151.83 x 2/3 = $101.22).

Claimant is entitled to TTD benefits from April 29, 2020 to October 22, 2020, as she sustained a disability due to the industrial injuring, resulting in wage loss. Respondents have paid Claimant TTD from April 29, 2020 to October 2, 2020; however, certain payments of TTD were less than the AWW of $658.61.Additionally, Respondents ceased paying Claimant TTD benefits after October 2, 2020, when Claimant was not placed at MMI until October 22, 2020. There is no evidence in the record indicating the termination of TTD as of October 2, 2020 was pursuant to §8-42-105(3)(a)-(d), C.R.S. As found, based on an AWW of $658.61 and a TTD rate of $439.09, from April 29, 2020 through October 22, 2020 Claimant should have been paid $10,977.25 in TTD benefits. Claimant was paid $9,529.34 in TTD benefits, leaving a difference of $1,447.91 in TTD benefits owed.

Maintenance Medical Benefits

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App.

1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

Claimant proved it is more probable than not future medical treatment will be reasonably necessary to relieve the effects of her industrial injury or prevent further deterioration of her condition. Claimant continues to experience symptoms as a result of the industrial injury and a follow-up evaluation by Dr. VanderHorst would determine if physical therapy and/or injections are indicated.

Penalties

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

Section 8-43-305, C.R.S. provides that every day during which any employer or insurer fails to comply with any lawful order of an administrative law judge, the director, or the panel or fails to perform any duty imposed by articles 40 to 47 of title 8 shall constitute a separate and distinct violation.

As found, Claimant failed to plead her several penalty allegations with specificity as required by Section 8-43-304(4), C.R.S. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015).

The purposes of the specificity requirement are to both: (1) provide notice of the basis of the alleged violation so the putative violator can have an opportunity to cure the violation and (2) provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. *See Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Davis v. K Mart,* WC 4-493-641 (ICAO, Apr. 28, 2004). The notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015). Nevertheless, the statute does not prescribe a precise form for pleading penalties and an ALJ may consider the circumstances of the individual case to ascertain whether the application for hearing was sufficiently precise to satisfy the statute. *See Davis v. K Mart*, WC 4-493-641 (ICAO Apr. 28, 2004).

The AFH form promulgated by the OAC instructs the party completing the form to "Describe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the statute allegedly violated, and the dates on which you claim the violation began and ended."

In the section regarding penalties, Claimant's AFH solely states "Failure to timely file Final Admission of Liability and failure to pay PPD (WCRP 5-5E(1) and CRS 8-42-107." At hearing and in her post-hearing position statement, Claimant identified multiple penalties pursuant to Section 8-43-304, C.R.S. and Section 8-43-305, C.R.S. for Respondents' alleged violations of WCRP Rules 6-2 and 6-4 (a unilateral decrease in admitted AWW without filing a Petition to Modify); Section 8-42-105(1), C.R.S. (failing to pay TTD benefits at the admitted rate); Section 8-42-105(3), C.R.S. (unilateral termination of TTD); WCRP Rule 5-5(E) (failure to file a FAL within 30 days as required); and Section 8-42-107, C.R.S. (failure to pay PPD benefits for Claimant's impairment rating). As found, Claimant's AFH, CIS and Amended CIS contain no mention of Sections 8-43-304 and 305, C.R.S., Section 8-42-105(1), C.R.S, Section 8-42-105(3), C.R.S., or WCRP Rules 6-2 and 6-4. There is no mention in the AFH or CIS forms of an alleged unilateral decrease in the admitted AWW, failure to pay TTD at the admitted rate, or unilateral termination of TTD. Furthermore, there is no reference to any dates of the alleged violations.

While Claimant did include WCRP Rule 5-5(E)(1) and Section 8-42-107, C.R.S. in the AFH, she failed to identify Section 8-43-304(1), C.R.S. as the statutory penalty section for which she sought penalties. A similar situation was addressed by ICAO in *Jordan v. Rio Blanco Water Conservancy District,* W.C. No. 4-937-000 (ICAO, June 23, 2015). In *Jordan,* the claimant sought penalties pursuant to Section 8-43-304(1) for multiple alleged violations, including the employer's or insurer's failure to submit an injury report to the director within 10 days pursuant to Section 8-43-101 and Section 8-43-103. The ALJ resolved that penalties could not be assessed pursuant to Section 8-43-304(1), as that statute was not referenced by either the clamant or the respondents in the AFH, CIS or at the outset of the hearing. The Panel affirmed the ALJ, holding that the claimant's pleading regarding a penalty claim was deficient to the extent it did not identify Section 8-43-304(1) as the statutory penalty section for which she sought a penalty pertinent to the employer's or insurer's failure to submit an injury report to the director within 10 days pursuant to Section 8-43-101 and Section 8-43-103. The Panel noted that the Act includes a variety of penalty sections, some overlapping, that may be subject to different defenses and standards. The Panel reasoned, "[a] statement of the particular penalty remedy sought is a critical element of the grounds for the penalty claim. The direction that the specific grounds for the penalty be identified in the application would include a specification of the penalty sought to be applied." *Id*.

Here, Claimant's failure to identify the general penalty provision pursuant to which she is seeking penalties, the dates for the alleged violations, and multiple rules and sections of statutes of the alleged violations in the AFH renders the pleading deficient in terms of the required specificity. Claimant's general penalty allegations did not provide Respondents with adequate notice of both the factual and legal bases of the claims and defenses to be adjudicated. Moreover, as Respondents did not appear for hearing, it cannot be found Respondents tried the penalty issues by consent. Despite Respondents' failure to appear for hearing after likely receiving notice and failing to respond to the Order to Show Cause, the ALJ cannot disregard the due process considerations requiring sufficient notice of issues to be adjudicated in the first instance. Accordingly, Claimant's claim for penalties shall be dismissed, without prejudice.

ORDER

1. Claimant's AWW is $658.61.

2. Respondents shall pay Claimant past due TPD benefits totaling $101.22.

3. Respondents shall pay Claimant past due TTD benefits totaling $1,447.91.

4. Claimant is entitled to a general award of medical maintenance care.

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Claimant's claim for penalties is denied, without prejudice.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 22, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she is entitled to an increase in average weekly wage ("AWW") for purpose of determining her permanent partial disability ("PPD") award.

FINDINGS OF FACT

1. Claimant has worked for Respondent-Employer as a police officer since 2017.

2. Claimant sustained an admitted industrial injury on July 28, 2018 during a motor vehicle accident. Claimant sustained contusions to her chest, two rib fractures, and was ultimately diagnosed with cervical facet dysfunction. She underwent medial branch blocks and right C4-C7 radiofrequency neurotomies on August 19, 2020 and September 16, 2020.

3. Respondent-Employer filed a General Admission of Liability ("GAL") on December 6, 2019 admitting for medical benefits and an AWW of $1,266.85.

4. Respondent-Employer filed a second GAL on September 22, 2020 admitting for temporary total disability ("TTD") and an AWW of $1,266.85.

5. Claimant's was placed at maximum medical improvement ("MMI") on January 15, 2021 with 13% whole person impairment. The impairment report of Dr. Frederic Zimmerman dated January 12, 2021 notes Claimant rated herself as 75% pain fee and that Claimant was working full duty without difficulty. Claimant was not assigned any permanent work restrictions.

6. Respondent-Employer filed a Final Admission of Liability ("FAL") on February 8, 2021 admitting for 13% whole person impairment. The FAL reflected an AWW of $1,266.85 and a TTD rate of $844.56. The FAL noted the following calculation for permanent partial disability ("PPD") benefits: "400 weeks x $844.56 x 1.52 x 13% = $66,754.02."

7. Claimant credibly testified at hearing. Claimant regarding multiple promotions and salary increases she received between the date of injury and the date Claimant was placed at MMI. Claimant testified at hearing that her promotions were based on her length of service with the police department.

8. At the time of the industrial injury, Claimant was a Police Officer Grade 3. Claimant was promoted to a Police Officer Grade 2 in approximately July 2019 and to a Police Officer Grade 1 in approximately July 2020. Each promotion came with a salary

increase. Claimant was a Police Officer Grade 1 at the time she was placed at MMI and continued to work as a Police Officer Grade 1 as of the date of hearing.

9. Claimant testified she does not anticipate receiving any demotions and anticipates potentially further moving up the ranks in the police department.

10. During the course of Claimant's claim, Claimant had a little over two weeks of lost time in late August and early September 2020. At that time, she was working as a Police Office Grade 1. Respondent-Employer paid Claimant salary continuation during that period.

11. Claimant's earning capacity at the time of her injury was that of a police officer grade-two. Review of the wage records for the several pay periods after Claimant's promotion to Police Officer Grade 2 are consistent with weekly earnings of $1,267.47. As a Police Officer Grade 1, Claimant averaged weekly earnings of $1,850.73 from July 19, 2020 to January 30, 2021

12. The ALJ finds that an AWW based upon Claimant's earnings around time of injury, $1,267.47, is a fair approximation of Claimant's diminished earning capacity.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant’s earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant’s earnings during a given period of disability, not the earnings on the date of the injury. *Id.*

In *Campbell,* the claimant suffered an industrial injury in 1979 and sustained three periods of temporary disability. The claimant’s AWW was greater at the time of each subsequent period of disability. The Colorado Court of Appeals concluded that it would be manifestly unjust to calculate the claimant’s “disability benefits in 1986 and 1989 on her substantially lower earnings in 1979.” *Id*. at 82. The Colorado Court of Appeals reasoned that, to fairly compensate for the claimant’s loss of actual income, her AWW should be determined based on her earnings at the time of each period of disablement. *Campbell v. IBM Corp.*, *supra.*

In *Pizza Hut v. ICAO*, 18 P.3d 867 (Colo. App. 2001), the claimant was injured while earning $110 per week as a delivery driver. The claimant completed his education and assumed work as a nurse earning $458 per week. The Colorado Court of Appeals considered whether the claimant’s PPD should be calculated based on the claimant’s AWW on the date of injury, or his earnings as a nurse at the date of MMI. Relying on the ALJ's discretionary authority contained in § 8-42-102(3), the court concluded that because PPD benefits compensate for loss of future earning capacity, it was proper for the ALJ to consider "the potential impact that claimant's impairment and his physical restrictions may have on his future nursing career." *Id*. at 869. Because the record contained evidence of permanent physical restrictions and the claimant's testimony concerning "possible limitations" he might face, the court concluded the ALJ did not abuse his discretion "in determining that the higher wage earned at the time of MMI more fairly compensates claimant for his future loss of earnings." *Id*. at 870.

Unlike temporary indemnity benefits, which are meant to compensate a claimant for actual wage loss, PPD benefits are instead based on the potential loss of future earning capacity. *Duran v. Industrial Claim Appeals Office*, 883 P.2d 477 (Colo.1994); *see also Hussion v. Industrial Claim Appeals Office*, 991 P.2d 346 (Colo. App.1999) (TTD benefits compensate employee for lost wages, while PPD benefits compensate for the loss of future earning capacity). The Workers' Compensation system is premised on the assumption that the future earning capacity of a partially disabled worker will be less than that of a non-disabled worker. *Business Ins. Co. v. BFI Waste Systems of North America*, Inc. 23 P.3d 1261, 1265 (Colo. App. 2001).

Claimant contends an AWW calculated based on her earnings at the time of MMI will result in the most fair and appropriate PPD award. Respondents argue that Claimant’s post-injury wage increases alone are insufficient to warrant divergence from the default method of calculating AWW as of the date of injury. The ALJ agrees.

While the courts have upheld an ALJ’s increase of AWW for PPD purposes based on post-injury pay increases, this has generally occurred in the context of substantial evidence establishing potential limitations of the claimant’s future earning capacity. *See, e.g., Pizza Hut v. ICAO, supra*; *Phyllis Martinez v. City of Grand Junction*, W.C. No. 4-528-390 (ICAO Sept. 30, 2003) (affirming an ALJ’s increase of AWW based on two post-injury pay increases in light of substantial evidence that the industrial injury resulted in permanent physical restrictions and ongoing pain that interfered with the claimant’s performance of duties); *Dan Waalkes v. The Salvation Army*, W.C. No. 4-533-879 (ICAO, May 21, 2003) (affirming an increase in AWW for purposes of calculating PPD benefits when the ALJ found Claimant had permanent lifting restrictions that limited the performance of his current job and may require him to seek less demanding employment).

Here, Claimant did not offer any evidence as to potential future loss of earnings. Claimant is not subject to any permanent restrictions nor did she testify to any ongoing symptoms that could potentially limit Claimant’s future earning capacity. Claimant received salary continuation during the claim. She has continued working full duty as a police officer and has moved up the ranks in the department and anticipates continuing to do so. There is insufficient evidence that calculating Claimant’s AWW based on earnings on the date of injury does not result in a fair approximation of Claimant’s diminished earning capacity. As found, a fair approximation of Claimant’s diminished earning capacity is an AWW of $1,267.47.

ORDER

1. Respondent shall admit for PPD benefits consistent with an AWW of $1,267.47.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 23, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Linda Mitchell, M.D. that he reached Maximum Medical Improvement (MMI) on May 6, 2019 for his March 18, 2019 "B[Redacted]" injury.

2. If Claimant fails to overcome Dr. Mitchell's DIME opinion, a determination of the appropriate repayment schedule for an overpayment to Claimant by Respondents B[Redacted] and P[Redacted] in the amount of $32,750.79.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period May 6, 2019 through March 21, 2021.

4. Whether Respondents H[Redacted] and Federated have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving indemnity benefits.

5. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period March 22, 2021 until terminated by statute.

STIPULATION

Respondents B[Redacted] and P[Redacted] agreed with Claimant that, if he fails to overcome Dr. Mitchell's DIME opinion, he received an overpayment of disability benefits in the amount of $32,750.79.

FINDINGS OF FACT

1. On April 18, 2018 Claimant suffered an admitted lower back injury while working as a plumber for H[Redacted] in WC No. 5-075-625-002. He received medical treatment at UC Health from Authorized Treating Physician (ATP) Melinda A. Gehrs, M.D.

2. Claimant underwent a lumbar spine MRI on May 15, 2018 that revealed multilevel spondylitic changes. The MRI specifically showed a posterior broad-based disc protrusion at L5-S1 with impingement upon the traversing left S1 nerve root and mild central canal stenosis and moderate bilateral neural foraminal narrowing. The imaging also reflected a posterior broad-based disc protrusion at L4-5 with a central annular tear, facet hypertrophic changes, and moderate bilateral neural foraminal narrowing with moderate canal stenosis. The findings were most significant at the L4-5 level.

3. On May 25, 2018 H[REDACTED] filed a General Admission of Liability (GAL) acknowledging an Average Weekly Wage (AWW) of $1,790.57 and a corresponding Temporary Total Disability (TTD) rate of $948.15. Claimant received TTD benefits for the period April 24, 2018 until May 20, 2018.

4. On May 21, 2018 Claimant returned to modified duty with H[Redacted] pursuant to an offer of modified employment signed by Dr. Gehrs. Claimant worked 40 hours per week and earned $12.00 per hour for a total of $480.00 each week. Dr. Gehrs assigned restrictions of one-pound lifting, no bending and frequent position breaks.

5. Claimant received Temporary Partial Disability (TPD) benefits for the period May 21, 2018 until June 19, 2018.

6. On June 19, 2018 Claimant resigned his employment with H[Redacted]. He began working for B[Redacted] as an Inspector on July 2, 2018.

7. On June 27, 2018 H[Redacted] filed a Petition to Modify, Terminate, or Suspend Compensation on the basis that Claimant voluntarily terminated his employment effective June 19, 2018. The Petition to Terminate noted Claimant was receiving TPD at the rate of $948.15 per week. H[Redacted] requested termination of benefits as of June 20, 2018.

8. Claimant did not respond to the Petition to Terminate. On July 23, 2018 the Division of Workers' Compensation (DOWC) approved H[Redacted]'s Petition to Terminate as of the date of the Petition. H[Redacted] filed a General Admission of Liability (GAL) on July 30, 2018 terminating TPD benefits.

9. On October 23, 2018 Claimant experienced the sudden onset of increased lower back pain after getting up for work and using the bathroom at home. Claimant was transported to the emergency room at UC Health. He underwent a repeat lumbar spine MRI that revealed worsened disc extrusions at L5-S1 with increased spinal canal stenosis, most severely affecting the left lateral recess with possible impingement of the left S1 nerve root.

10. Allan Nanney III, M.D. reviewed Claimant's lumbar MRIs and noted they demonstrated a "significant amount of stenosis to the descending S1 nerve on the left from a disc herniation." He recommended a microdiscectomy on the left at L5-S1. On October 26, 2018 Claimant underwent a left L5-S1 hemilaminotomy, medial facetectomy, and microdiscectomy with Dr. Nanney as a result of his April 18, 2018 H[Redacted] injury.

11. After a period of recovery and modified duty, Claimant resumed full-time field work in November 2018 as an inspector with B[Redacted]. His work restrictions included no lifting in excess of 15 pounds and no bending, twisting or use of ladders.

12. Claimant reported increased pain to Dr. Gehrs at his January 9, 2019 and February 20, 2019 appointments. Nevertheless, he continued to work full duty with restrictions of no ladder use and no crawling.

13. On February 1, 2019 Claimant underwent another lumbar MRI. On February 6, 2019 Richard Skurla, M.D. noted the imaging revealed a recurrent L5-S1 disc herniation compressing the S1 nerve root that was less severe than prior to the October 26, 2018 surgery.

14. On March 18, 2019 Claimant suffered a lower back injury while working for B[Redacted] in WC No. 5-103-884-002. He specifically fell through loose floorboards and his left leg dropped about 18-24 inches to the dirt below. The incident jarred Claimant's leg and back.

15. Claimant's pay records reflect that at the time of the March 18, 2019 incident he earned $28.28 per hour and worked 40 hours each week for B[Redacted].

16. Claimant subsequently received medical treatment through ATP Concentra Medical Centers. On March 20, 2019 Nancy Strain, M.D. remarked that Claimant suffered a large jolting action on March 18, 2019, but did not fall down. She concluded that Claimant aggravated his prior back condition. Claimant was unable to work because of pain and required a cane to walk.

17. After the March 18, 2019 incident at B[Redacted] Claimant underwent another lumbar MRI. The MRI did not reflect any significant changes from the February 1, 2019 MRI.

18. On March 26, 2019 Claimant visited ATP for the H[Redacted] claim Dr. Gehrs at UC Health for an examination. Dr. Gehrs noted that Claimant would follow-up with Concentra regarding the March 18, 2019 incident. She detailed that Claimant's pain was not in a new location and was somewhat worse. However, even prior to the March 18, 2019 incident he needed an epidural injection. Dr. Gehrs subsequently explained that Claimant had two "insurance companies dealing with the injury but I think most of his issues are really related to his first injury and this should be taken care of through that one. MRI did not worsen after the second injury."

19. On April 19, 2019 Claimant presented to Bryan A. Castro, M.D. Claimant reported that prior to the March 18, 2019 incident his pain level was 4-6/10 and he was able to work. However, after the B[Redacted] incident Claimant's pain level increased to 6-8/10 and he was unable to work. Dr. Castro reviewed the February 1, 2019 and March 21, 2019 MRIs and noted a small recurrence of a disc herniation on both, but there was no substantial worsening revealed on the March 21, 2019 MRI. He noted microdiscectomy decompression revision surgery could be a consideration, but recommended obtaining a repeat MRI with contrast to determine if the possible recurrent disc herniation actually constituted scar tissue.

20. Respondent H[Redacted] retained Jeffrey J. Sabin, M.D. for an independent medical examination. Dr. Sabin provided three reports, including a record review dated February 28, 2019, an evaluation dated April 1, 2019 and an additional record review dated April 26, 2019. In his first report, Dr. Sabin concluded, "it would appear that the patient's low back condition and need for further treatment are necessary and related to the April 2018 incident." He stated that if the MRIs revealed recurrent disc herniation at L5-S1, then epidural steroid injections would be reasonable. If the injections did not benefit Claimant, then a re-exploration and repeat hemilaminotomy and partial discectomy should be performed. After his final record review Dr. Sabin explained that "there is no medical record evidence of any intervening or new injury and therefore worsening of the disc herniation would be a naturally occurring event related back to the 04/18/18 alleged lifting incident."

21. On May 6, 2019 Claimant returned to Dr. Gehrs for an evaluation. She remarked that Claimant "has considerable pain issues limiting his ability to work which started after a second accident. Currently he is working through Concentra to try to bring him down to his pain level prior to this second accident." Dr. Gehrs commented that Claimant required surgical intervention under the April 18, 2018 H[Redacted] claim that was necessary even prior to his March 18, 2019 B[Redacted] injury.

22. Katherine F. McCranie, M.D. provided physiatry treatment through Concentra. After reviewing the medical records she issued a report dated August 30, 2019 and determined that recommendations for surgical evaluation and injections would have been the same without the B[Redacted] incident. Dr. McCranie commented that chiropractic care, massage and acupuncture had been recommended by Concentra under the March 18, 2019 B[Redacted] claim. She described the B[Redacted] incident as a temporary aggravation and noted that Claimant's pain ratings had been essentially unchanged compared to his visits just prior to the March 18, 2019 event. Dr. McCranie did not anticipate permanent impairment for the March 18, 2019 injury because it was a temporary aggravation. She summarized that Claimant's symptoms, medical recommendations and additional restrictions resulted from the expected progression of the admitted April 18, 2018 H[Redacted] claim.

23. On September 5, 2019 Allison M. Fall, M.D. performed an independent medical examination at the request of B[Redacted]. Dr. Fall noted that, although Claimant reported increased pain after the March 18, 2019 incident, his area of pain remain unchanged. Furthermore, the March 2019 MRI did not reveal any changes compared to the February 2019 MRI. Dr. Fall determined that, while Claimant may have had a temporary exacerbation of his symptoms on March 18, 2019, the event did not constitute a substantial intervening injury and the need for treatment was related to the April 18, 2018 H[Redacted] work injury. She noted that, although Claimant was taken off work after the March 18, 2019 incident, there was no objective evidence of a substantial worsening of his condition.

24. On September 13, 2019 Gretchen L. Brunworth, M.D. performed a medical record review at the request of H[Redacted]. She noted that Claimant's symptoms

worsened after the March 18, 2019 incident but an MRI did not reflect any change in pathology. Dr. Brunworth determined that surgery and injections were contemplated prior to the March 18, 2019 incident and it was “most reasonable” to perform the injections and surgery under the 2018 H[Redacted] claim.

25. As a result of the March 18, 2019 B[Redacted] injury Claimant attended 11 appointments with his authorized treating physicians at Concentra through February 12, 2020. Medical records from Concentra for the period March 18, 2019 through February 12, 2020 reveal that Claimant’s condition remained unchanged.

26. On February 11, 2020 Dr. Gehrs issued a report stating that Claimant had been unable to work since his March 18, 2019 B[Redacted] incident. She remarked that his status was unlikely to change until additional treatment pending a Workers’ Compensation hearing could be provided.

27. On April 27, 2020 Claimant’s ATP for the B[Redacted] claim Troy Manchester, M.D. determined that he had reached MMI as of February 12, 2020. Dr. Manchester noted that Claimant did not warrant any permanent impairment as a result of his March 18, 2019 B[Redacted] injury and released him to full duty employment. Respondents B[Redacted] and P[Redacted] filed an initial Final Admission of Liability (FAL) on May 8, 2020 consistent with Dr. Manchester’s MMI and permanent impairment determinations.

28. Between July 7, 2020 and September 9, 2020 Claimant returned to Boulder Neurological and Spine Associates for evaluation on three occasions with Physician’s Assistant Brian Bixler. PA Bixler recommended conservative treatment including injections, physical therapy and possibly a repeat EMG.

29. On September 23, 2020 Claimant visited John Dorman, M.D. at Boulder Neurological and Spine Associates for a surgical evaluation. Dr. Dorman recommended surgery in the form of a multi-level fusion and repeat discectomy.

30. Claimant objected to the May 8, 2020 FAL and sought a Division Independent Medical Examination (DIME). On November 11, 2020 Linda Mitchell, M.D. performed the DIME. In her December 1, 2020 report Dr. Mitchell concluded that Claimant reached MMI for the B[Redacted] claim on May 6, 2019. Dr. Mitchell also reasoned that Claimant did not suffer any permanent impairment as a result of the March 18, 2019 B[Redacted] claim.

31. Dr. Mitchell detailed the rationale for her MMI determination. She recounted that Claimant developed a left S1 radiculopathy following his April 18, 2018 H[Redacted] work injury. She noted that the injury resulted in an emergent L5-S1 microdiscectomy on October 26, 2018. Dr. Mitchell explained that Claimant’s condition did not change as a result of the March 18, 2019 B[Redacted] injury. She detailed:

> The distribution of [Claimant's] symptoms, examination findings, and MRI findings did not change after the injury of 03/18/19. His treatment plan has not changed because of the injury of 03/18/19. He does require further evaluation and treatment for the injury of 04/18/18, and the injury of 03/18/19 has not changed that. His permanent impairment has not changed due to the injury of 03/18/19.

32. Claimant received TTD benefits under the B[Redacted] claim until Dr. Manchester determined that Claimant reached MMI on February 12, 2020. However, DIME Dr. Mitchell concluded that Claimant had reached MMI several months earlier on May 6, 2019. Claimant received TTD benefits in the amount of $32,750.79 during the period May 6, 2019 through February 12, 2020.

33. Respondents B[Redacted] and P[Redacted] filed an amended FAL on November 24, 2020 consistent with Dr. Mitchell's MMI and impairment determinations. The B[Redacted] Respondents also asserted an overpayment of $32,750.79 for TTD benefits paid to Claimant after the MMI date of May 6, 2019.

34. On December 28, 2020 Claimant underwent a lumbar discectomy at L5-S1 in an attempt to remedy the radiculopathy he was experiencing in his lower back and left leg. The surgery was authorized by H[Redacted].

35. On March 17, 2021 Claimant returned to ATP Dr. Gehrs for an evaluation for his April 18, 2018 H[Redacted] injury. Dr. Gehrs recounted that Claimant had been receiving treatment for his H[Redacted] claim when he fell about 18-24 inches through a floor on March 18, 2019 while working for B[Redacted]. He suffered an immediate increase in lower back pain and had been unable to work since the incident. Claimant received treatment through Concentra for the injury. Because of the December 28, 2020 lumbar discectomy Claimant received medications and underwent physical therapy. Dr. Gehrs noted that Claimant's surgeon liberalized his work restrictions but did not want him to lift more than 20 pounds.

36. Claimant testified at the hearing in this matter. He explained that after he recovered from his December 28, 2020 repeat discectomy surgery, he was released with sufficient restrictions that allowed him to return to work. On March 22, 2021 Claimant began working as a city inspector for the Town of F[Redacted]. Claimant remarked that he earned an hourly wage of $28.85 and worked 40 hours per week. He had work restrictions of no climbing and no lifting in excess of 20 pounds.

37. Claimant continues to receive medical treatment as a result of his April 18, 2018 H[Redacted] lower back injury. On May 7, 2021 Claimant underwent a lumbar MRI that revealed "increased facet arthropathy related listhesis at L5-S1, unchanged multilevel degenerative changes with foraminal impingement at L4-L5 and L5-S1 levels, and unchanged spinal stenosis at L4-L5 level."

38. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mitchell that he reached MMI on May 6, 2019 for his March 18,

2019 B[Redacted] injury. Specifically, the record reflects that Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mitchell's MMI determination is incorrect. Claimant has failed to demonstrate that Dr. Mitchell improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) or otherwise clearly erred in concluding that he reached MMI on May 6, 2019.

39. Initially, on March 18, 2019 Claimant suffered a lower back injury while working for B[Redacted] in WC No. 5-103-884-002. He specifically fell through loose floorboards and his left leg dropped about 18-24 inches to the dirt below. Claimant attended 11 appointments with his authorized treating physicians at Concentra through February 12, 2020. Medical records from Concentra for the period March 18, 2019 through February 12, 2020 reveal that Claimant's condition remained unchanged. On April 27, 2020 Claimant's ATP Dr. Manchester determined that he had reached MMI for the B[Redacted] claim as of February 12, 2020. Dr. Manchester noted that Claimant did not warrant any permanent impairment as a result of his March 18, 2019 injury and released him to full duty employment.

40. On November 11, 2020 DIME Dr. Mitchell concluded that Claimant had reached MMI for the B[Redacted] claim on May 6, 2019 with no permanent impairment. She summarized that the distribution of Claimant's symptoms, physical examination findings, and MRI results did not change after his March 18, 2019 injury. Although Claimant still required further evaluation and treatment for the April 18, 2018 H[Redacted] claim, he did not require additional medical care related to the March 18, 2019 incident.

41. The opinions of multiple physicians support Dr. Mitchell's determination that Claimant's condition did not change after the March 18, 2019 incident and he reached MMI on May 6, 2019. ATP for the H[Redacted] claim Dr. Gehrs detailed that Claimant's pain was not in a new location and was somewhat worse. By May 6, 2019 Dr. Gehrs explained that Claimant would require surgical intervention under the April 18, 2018 H[Redacted] claim because surgery was necessary even prior to his B[Redacted] injury. Furthermore, Dr. Fall determined that, while Claimant may have had a temporary exacerbation of his symptoms, there was no substantial intervening injury on March 18, 2019 and the need for medical treatment was related to the April 18, 2018 H[Redacted] work injury. Finally, Dr. Brunworth determined that surgery and injections were contemplated prior to the March 18, 2019 B[Redacted] incident and it was "most reasonable" to perform the injections and surgery under the 2018 H[Redacted] claim.

42. DIME Dr. Mitchell concluded that Claimant reached MMI on May 6, 2019 for the March 18, 2019 B[Redacted] claim. Claimant has failed to produce sufficient evidence that Dr. Mitchell's determination was clearly erroneous. Moreover, the medical records and persuasive opinions of multiple physicians support Dr. Mitchell's MMI determination. Accordingly, Claimant reached MMI on May 6, 2019 for the B[Redacted] claim.

43. Respondents B[Redacted] and P[Redacted] agreed with Claimant that, if he failed to overcome Dr. Mitchell's MMI determinations, he received an overpayment in the

amount of $32,750.79 in disability benefits. Claimant's rate of TTD under his H[Redacted] claim of April 18, 2018 is $948.15 per week or $3,792.60 every four weeks. Moreover, on March 22, 2021 Claimant began working as a city inspector for F[Redacted]. Claimant testified that he earns $28.85 per hour and works 40 hours each week. Claimant thus earns weekly wages of about $1154.00 or $4616.00 every four weeks before taxes.

44. Although Respondents B[Redacted] and P[Redacted] seek recovery of the overpayment in the amount of at least $500.00 per month, the record reveals the requested amount would be excessive. Therefore, based on Claimant's current earnings, a monthly payment of $300.00 is appropriate. Claimant has not presented evidence that $300.00 per month would be unreasonable, unaffordable, or injurious. Accordingly, Claimant shall repay Respondent $300.00 per month in overpaid TTD benefits until recovered in full.

45. Nevertheless, Claimant will also likely receive a permanent impairment payout from the H[Redacted] claim of approximately $4,705.56 for each 1% whole person impairment. Moreover, if Claimant reaches a settlement with H[Redacted] or permanent impairment is due under that claim, he will receive, or be entitled to request, a lump sum award. If Claimant receives a lump sum award pursuant to the H[Redacted] claim, he shall pay Respondent P[Redacted] the equivalent of the lump sum or the remainder due of $32,750.79 in a lump sum, whichever is less, within 30 days of receipt of payment from Respondents H[Redacted] and I[Redacted]. If there remains an amount due following payment of this lump sum to P[Redacted], then Claimant shall continue to pay a monthly amount of $250.00 in reimbursement for the $32,750.79 overpayment until paid in full.

46. Claimant has demonstrated that it is more probably true than not that he is entitled to receive TTD benefits for the period May 6, 2019 through March 21, 2021. Initially, the persuasive evidence demonstrates that Claimant was responsible for his termination when he resigned from H[Redacted] on June 19, 2018. However, Claimant suffered a worsening of condition subsequent to his termination that caused a wage loss. Specifically, the record reveals that Claimant's condition continued to worsen after his termination of employment and prevented him from earning wages.

47. Initially, Claimant was responsible for his termination from employment with H[Redacted]. On June 19, 2018 Claimant resigned from his position as an plumber with H[Redacted]. He began working for B[Redacted] as an inspector on July 2, 2018. On June 27, 2018 H[Redacted] filed a Petition to Modify, Terminate, or Suspend Compensation on the basis that Claimant voluntarily terminated his employment as of June 19, 2018. Claimant did not respond to the Petition to Terminate. On July 23, 2018 the DOWC approved H[Redacted]'s Petition to Terminate as of the date of the Petition. Claimant has not asserted that his resignation was involuntary or otherwise improper. The record reflects that Claimant was thus responsible for his termination. He precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment.

48. However, even if Claimant was responsible for his termination from employment with H[Redacted], he would nevertheless be entitled to receive TTD benefits

if he suffered a worsening of condition. Claimant has presented sufficient evidence that his lower back condition, as related to the H[Redacted] claim, worsened and caused increased physical limitations or restrictions. Initially, the medical records demonstrate that Claimant suffered a disabling exacerbation of his condition when he fell through floorboards while working for B[Redacted] on March 18, 2019. However, as determined by DIME Dr. Mitchell, Claimant reached MMI for the B[Redacted] incident on May 6, 2019.

49. The record reveals that for the period May 6, 2019 until March 21, 2021 Claimant was unable to perform his job duties because his condition related to his H[Redacted] claim continued to worsen. Claimant's condition worsened until he returned to his pre-March 2019 baseline level of function when he was released to 20 pound lifting restrictions as noted by Dr. Gehrs in her March 17, 2021 report. Claimant remarked that by March 22, 2021 he returned to full-time work as an inspector with the City of F[Redacted].

50. The persuasive opinions of multiple physicians reflect that Claimant's condition continued to worsen after the B[Redacted] incident and his need for treatment was related to the H[Redacted] claim. Dr. Fall explained that, although Claimant reported increased pain after the March 2019 B[Redacted] incident, his pain remained in the same area and the March 2019 MRI did not reveal any changes compared to the February 2019 MRI. She determined that, while Claimant may have had a temporary exacerbation of his symptoms, he did not suffer a substantial intervening injury on March 18, 2019 and the need for treatment was related to his April 18, 2018 H[Redacted] work injury. Similarly, Dr. Brunworth remarked that surgery and injections were contemplated prior to the March 2019 incident and it was "most reasonable" to perform the procedures under the 2018 H[Redacted] claim. Furthermore, Dr. Sabin explained that, because Claimant did not suffer an intervening or new injury on March 18, 2019, the worsening of his disc herniation "would be a naturally occurring event related back to the 04/18/18 alleged lifting incident." Moreover, Dr. McCranie summarized that Claimant's symptoms, medical recommendations and additional restrictions resulted from the expected progression of the admitted April 18, 2018 H[Redacted] claim. Finally, ATP Dr. Gehrs remarked that Claimant required surgical intervention under the April 18, 2018 H[Redacted] claim that was necessary even prior to his March 18, 2019 B[Redacted] injury. In fact, on December 28, 2020 Claimant underwent a lumbar discectomy at L5-S1 in an attempt to remedy the radiculopathy he was experiencing in his lower back and left leg. The surgery was authorized by H[Redacted].

51. The preceding persuasive medical opinions reveal that, although Claimant experienced an exacerbation of symptoms related to the March 18, 2019 B[Redacted] injury, he suffered a worsening of condition related to his H[Redacted] claim that required treatment, surgical intervention and recovery. Claimant credibly explained that after he recovered from his December 28, 2020 repeat discectomy surgery, he was released with sufficient restrictions that allowed him to return to work. Because Claimant suffered a worsening of condition subsequent to his resignation of employment with H[Redacted] that caused a wage loss, his request for TTD benefits is granted. Claimant is thus entitled to receive TTD benefits related to the H[Redacted] claim for the period May 6, 2019 through March 21, 2021.

52. Claimant has failed to establish that it is more probably true than not that he is entitled to receive TPD benefits for the period March 22, 2021 until terminated by statute. On June 27, 2018 H[Redacted] filed a Petition to Modify, Terminate, or Suspend Compensation on the basis that Claimant voluntarily terminated his employment effective June 19, 2018. The Petition to Terminate noted Claimant was receiving TPD at the rate of $948.15 per week. H[Redacted] requested the termination of benefits as of June 20, 2018. On July 23, 2018 the DOWC approved H[Redacted]'s Petition to Terminate as of the date of the Petition. H[Redacted] filed a GAL on July 30, 2018 terminating TPD benefits. Although Claimant suffered an intervening injury while working for B[Redacted], he has since returned to his role as a municipal code inspector working full-time for F[Redacted]. Importantly, Claimant's pay records while working for B[Redacted] reflect that at the time of the March 18, 2019 incident he was earning $28.28 per hour and worked 40 hours each week. On March 22, 2021 Claimant began working as a city inspector for F[Redacted]. Claimant testified that he earned an hourly wage of $28.85 and worked 40 hours per week. He is thus earning higher wages while working for F[Redacted] than while he was employed by B[Redacted]. Based on Claimant's resignation of employment from H[Redacted] and higher earnings, he has failed to demonstrate that he suffered any wage loss subsequent to March 22, 2021 that was caused by his April 18, 2018 H[Redacted] injury. Accordingly, Claimant's request for TPD benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *See Eller v. Indus. Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo.App. 1998). Consequently, when a party challenges a DIME physician's determination of MMI or impairment rating, the finding on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998).

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mitchell that he reached MMI on May 6, 2019 for his March 18, 2019 B[Redacted] injury. Specifically, the record reflects that Claimant has

failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mitchell's MMI determination is incorrect. Claimant has failed to demonstrate that Dr. Mitchell improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) or otherwise clearly erred in concluding that he reached MMI on May 6, 2019.

9. As found, initially, on March 18, 2019 Claimant suffered a lower back injury while working for B[Redacted] in WC No. 5-103-884-002. He specifically fell through loose floorboards and his left leg dropped about 18-24 inches to the dirt below. Claimant attended 11 appointments with his authorized treating physicians at Concentra through February 12, 2020. Medical records from Concentra for the period March 18, 2019 through February 12, 2020 reveal that Claimant's condition remained unchanged. On April 27, 2020 Claimant's ATP Dr. Manchester determined that he had reached MMI for the B[Redacted] claim as of February 12, 2020. Dr. Manchester noted that Claimant did not warrant any permanent impairment as a result of his March 18, 2019 injury and released him to full duty employment.

10. As found, on November 11, 2020 DIME Dr. Mitchell concluded that Claimant had reached MMI for the B[Redacted] claim on May 6, 2019 with no permanent impairment. She summarized that the distribution of Claimant's symptoms, physical examination findings, and MRI results did not change after his March 18, 2019 injury. Although Claimant still required further evaluation and treatment for the April 18, 2018 H[Redacted] claim, he did not require additional medical care related to the March 18, 2019 incident.

11. As found, the opinions of multiple physicians support Dr. Mitchell's determination that Claimant's condition did not change after the March 18, 2019 incident and he reached MMI on May 6, 2019. ATP for the H[Redacted] claim Dr. Gehrs detailed that Claimant's pain was not in a new location and was somewhat worse. By May 6, 2019 Dr. Gehrs explained that Claimant would require surgical intervention under the April 18, 2018 H[Redacted] claim because surgery was necessary even prior to his B[Redacted] injury. Furthermore, Dr. Fall determined that, while Claimant may have had a temporary exacerbation of his symptoms, there was no substantial intervening injury on March 18, 2019 and the need for medical treatment was related to the April 18, 2018 H[Redacted] work injury. Finally, Dr. Brunworth determined that surgery and injections were contemplated prior to the March 18, 2019 B[Redacted] incident and it was "most reasonable" to perform the injections and surgery under the 2018 H[Redacted] claim.

12. As found, DIME Dr. Mitchell concluded that Claimant reached MMI on May 6, 2019 for the March 18, 2019 B[Redacted] claim. Claimant has failed to produce sufficient evidence that Dr. Mitchell's determination was clearly erroneous. Moreover, the medical records and persuasive opinions of multiple physicians support Dr. Mitchell's MMI determination. Accordingly, Claimant reached MMI on May 6, 2019 for the B[Redacted] claim.

Overpayment

13. Section 8-40-201(15.5), C.R.S, defines “overpayment” as “money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles.” There are thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandestaff,* W.C. No. 4-717-644 (ICAO Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). The language of the overpayment definition found in §8-40-201(15.5), C.R.S. necessarily contemplates that overpayments may result from a subsequent determination that claimant was not entitled to benefits at the time they were paid. *Wheeler v. The Evangelical Lutheran Good Samaritan Society,* W.C. No. 4-995-488-004 (ICAO, Apr. 23, 2018); *Turner v. Chipotle Mexican Grill*, W.C. No. 4-893-631-07 (ICAO, February 8, 2018). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAO, July 28, 2011).

14. When the parties are unable to agree upon a repayment schedule, the ALJ is empowered by §8-43-207(q), C.R.S. to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev’d on other grounds*, the Colorado Court of Appeals determined that the ALJ has discretion to fashion a remedy with regard to overpayments. Further, the ALJ has the authority to decide the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo. App. 1994).

15. As found, Respondents B[Redacted] and P[Redacted] agreed with Claimant that, if he failed to overcome Dr. Mitchell’s MMI determinations, he received an overpayment in the amount of $32,750.79 in disability benefits. Claimant’s rate of TTD under his H[Redacted] claim of April 18, 2018 is $948.15 per week or $3,792.60 every four weeks. Moreover, on March 22, 2021 Claimant began working as a city inspector for F[Redacted]. Claimant testified that he earns $28.85 per hour and works 40 hours each week. Claimant thus earns weekly wages of about $1154.00 or $4616.00 every four weeks before taxes.

16. As found, although Respondents B[Redacted] and P[Redacted] seek recovery of the overpayment in the amount of at least $500.00 per month, the record reveals the requested amount would be excessive. Therefore, based on Claimant’s current earnings, a monthly payment of $300.00 is appropriate. Claimant has not presented evidence that $300.00 per month would be unreasonable, unaffordable, or injurious. Accordingly, Claimant shall repay Respondent $300.00 per month in overpaid TTD benefits until recovered in full.

17. As found, nevertheless, Claimant will also likely receive a permanent impairment payout from the H[Redacted] claim of approximately $4,705.56 for each 1% whole person impairment. Moreover, if Claimant reaches a settlement with H[Redacted] or permanent impairment is due under that claim, he will receive, or be entitled to request, a lump sum award. If Claimant receives a lump sum award pursuant to the H[Redacted] claim, he shall pay Respondent P[Redacted] the equivalent of the lump sum or the

remainder due of $32,750.79 in a lump sum, whichever is less, within 30 days of receipt of payment from Respondents H[Redacted] and I[Redacted]. If there remains an amount due following payment of this lump sum to P[Redacted], then Claimant shall continue to pay a monthly amount of $250.00 in reimbursement for the $32,750.79 overpayment until paid in full.

Temporary Total Disability Benefits

18. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

19. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus

"responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

20. Section 8-42-105(4), C.R.S. does not bar TTD wage loss claims after a termination for which the employee was responsible when the worsening of a work-related injury incurred during that employment causes a subsequent wage loss. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 326 (Colo. 2004). This is limited to cases in which the "claimant's condition worsens after the termination of employment and prevents or diminishes the claimant's ability to work," rather than where the wage loss is the result of the voluntary or for-cause termination of the regular or modified employment. *Id.* at 326; *Grisbaum v. Indus. Claim Appeals Office*, 109 P.3d 1054, 1056 (Colo. App. 2005). A subsequent increase in work restrictions is not per se evidence of a worsening condition and whether a worsened condition caused the claimant's wage loss is a factual question for the ALJ. *See Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo.App.2014); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo.App.2002). An ALJ may consider several factors in determining that a worsened condition, and not an intervening termination of employment, caused the claimant's wage loss. *Apex Transportation, Inc.*, 321 P.3d at 633.

21. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive TTD benefits for the period May 6, 2019 through March 21, 2021. Initially, the persuasive evidence demonstrates that Claimant was responsible for his termination when he resigned from H[Redacted] on June 19, 2018. However, Claimant suffered a worsening of condition subsequent to his termination that caused a wage loss. Specifically, the record reveals that Claimant's condition continued to worsen after his termination of employment and prevented him from earning wages.

22. As found, initially, Claimant was responsible for his termination from employment with H[Redacted]. On June 19, 2018 Claimant resigned from his position as an plumber with H[Redacted]. He began working for B[Redacted] as an inspector on July 2, 2018. On June 27, 2018 H[Redacted] filed a Petition to Modify, Terminate, or Suspend Compensation on the basis that Claimant voluntarily terminated his employment as of June 19, 2018. Claimant did not respond to the Petition to Terminate. On July 23, 2018 the DOWC approved H[Redacted]'s Petition to Terminate as of the date of the Petition. Claimant has not asserted that his resignation was involuntary or otherwise improper. The record reflects that Claimant was thus responsible for his termination. He precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment.

23. As found, however, even if Claimant was responsible for his termination from employment with H[Redacted], he would nevertheless be entitled to receive TTD benefits if he suffered a worsening of condition. Claimant has presented sufficient evidence that his lower back condition, as related to the H[Redacted] claim, worsened and caused increased physical limitations or restrictions. Initially, the medical records demonstrate that Claimant suffered a disabling exacerbation of his condition when he fell through floorboards while working for B[Redacted] on March 18, 2019. However, as

determined by DIME Dr. Mitchell, Claimant reached MMI for the B[Redacted] incident on May 6, 2019.

24. As found, the record reveals that for the period May 6, 2019 until March 21, 2021 Claimant was unable to perform his job duties because his condition related to his H[Redacted] claim continued to worsen. Claimant's condition worsened until he returned to his pre-March 2019 baseline level of function when he was released to 20 pound lifting restrictions as noted by Dr. Gehrs in her March 17, 2021 report. Claimant remarked that by March 22, 2021 he returned to full-time work as an inspector with the City of F[Redacted].

25. As found, the persuasive opinions of multiple physicians reflect that Claimant's condition continued to worsen after the B[Redacted] incident and his need for treatment was related to the H[Redacted] claim. Dr. Fall explained that, although Claimant reported increased pain after the March 2019 B[Redacted] incident, his pain remained in the same area and the March 2019 MRI did not reveal any changes compared to the February 2019 MRI. She determined that, while Claimant may have had a temporary exacerbation of his symptoms, he did not suffer a substantial intervening injury on March 18, 2019 and the need for treatment was related to his April 18, 2018 H[Redacted] work injury. Similarly, Dr. Brunworth remarked that surgery and injections were contemplated prior to the March 2019 incident and it was "most reasonable" to perform the procedures under the 2018 H[Redacted] claim. Furthermore, Dr. Sabin explained that, because Claimant did not suffer an intervening or new injury on March 18, 2019, the worsening of his disc herniation "would be a naturally occurring event related back to the 04/18/18 alleged lifting incident." Moreover, Dr. McCranie summarized that Claimant's symptoms, medical recommendations and additional restrictions resulted from the expected progression of the admitted April 18, 2018 H[Redacted] claim. Finally, ATP Dr. Gehrs remarked that Claimant required surgical intervention under the April 18, 2018 H[Redacted] claim that was necessary even prior to his March 18, 2019 B[Redacted] injury. In fact, on December 28, 2020 Claimant underwent a lumbar discectomy at L5-S1 in an attempt to remedy the radiculopathy he was experiencing in his lower back and left leg. The surgery was authorized by H[Redacted].

26. As found, the preceding persuasive medical opinions reveal that, although Claimant experienced an exacerbation of symptoms related to the March 18, 2019 B[Redacted] injury, he suffered a worsening of condition related to his H[Redacted] claim that required treatment, surgical intervention and recovery. Claimant credibly explained that after he recovered from his December 28, 2020 repeat discectomy surgery, he was released with sufficient restrictions that allowed him to return to work. Because Claimant suffered a worsening of condition subsequent to his resignation of employment with H[Redacted] that caused a wage loss, his request for TTD benefits is granted. Claimant is thus entitled to receive TTD benefits related to the H[Redacted] claim for the period May 6, 2019 through March 21, 2021.

Temporary Partial Disability Benefits

27. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's Average Weekly Wage (AWW) at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

28. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to receive TPD benefits for the period March 22, 2021 until terminated by statute. On June 27, 2018 H[Redacted] filed a Petition to Modify, Terminate, or Suspend Compensation on the basis that Claimant voluntarily terminated his employment effective June 19, 2018. The Petition to Terminate noted Claimant was receiving TPD at the rate of $948.15 per week. H[Redacted] requested the termination of benefits as of June 20, 2018. On July 23, 2018 the DOWC approved H[Redacted]'s Petition to Terminate as of the date of the Petition. H[Redacted] filed a GAL on July 30, 2018 terminating TPD benefits. Although Claimant suffered an intervening injury while working for B[Redacted], he has since returned to his role as a municipal code inspector working full-time for F[Redacted]. Importantly, Claimant's pay records while working for B[Redacted] reflect that at the time of the March 18, 2019 incident he was earning $28.28 per hour and worked 40 hours each week. On March 22, 2021 Claimant began working as a city inspector for F[Redacted]. Claimant testified that he earned an hourly wage of $28.85 and worked 40 hours per week. He is thus earning higher wages while working for F[Redacted] than while he was employed by B[Redacted]. Based on Claimant's resignation of employment from H[Redacted] and higher earnings, he has failed to demonstrate that he suffered any wage loss subsequent to March 22, 2021 that was caused by his April 18, 2018 H[Redacted] injury. Accordingly, Claimant's request for TPD benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome Dr. Mitchell's DIME opinion that he reached MMI on May 6, 2019 with no permanent impairment.

2. Claimant shall repay Respondents $300.00 per month in overpaid TTD benefits until recovered in full. If Claimant receives a lump sum award pursuant to the H[Redacted] claim, he shall pay Respondent P[Redacted] the equivalent of the lump sum

or the remainder due of $32,750.79 in a lump sum, whichever is less, within 30 days of receipt of payment from Respondents H[Redacted] and I. If there remains an amount due following payment of this lump sum to P[Redacted], then Claimant shall continue to pay a monthly amount of $300.00 in reimbursement for the $32,750.79 overpayment until the amount is paid in full. Claimant shall notify Respondent P[Redacted] of the date of receipt of a lump sum settlement or disability payments under WC 5-075-625-002 within 20 days of receipt of those payments.

3. Claimant shall receive TTD benefits for the period May 6, 2019 through March 21, 2021 as a result of his April 18, 2018 H[Redacted] claim.

4. Claimant's request for TPD benefits for the period March 22, 2021 until terminated by statute is denied and dismissed.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-164-262-001

ISSUE

1. Determination of Decedent's average weekly wage for the purposes of determining Claimant's dependent death benefits.

FINDINGS OF FACT

1. Decedent was a firefighter employed by Respondent who developed lymphoma arising out of the course of his employment in January 2018. Beginning on February 7, 2018, Respondent paid Decedent temporary total disability (TTD) benefits due to his occupational disease based on an admitted average weekly wage (AWW) of $1,634.64. (Ex. 1 and 2).

2. During his employment, Decedent was enrolled in the Deferred Retirement Option Plan (DROP) offered through the Fire and Police Pension Association (FPPA) which permitted firefighters eligible for retirement to continue to work for a maximum of five years before reaching mandatory retirement. Decedent's mandatory retirement date under DROP, was July 12, 2019. (Ex. C). Decedent retired from his employment as a firefighter on July 12, 2019, and his retirement was unrelated to his occupational disease.

3. On July 9, 2019, and July 24, 2019, Respondent filed General Admissions of Liability (GAL) admitting for TTD benefits based on an AWW of $1,634.64. (Ex. 2).

4. Decedent's TTD benefits continued from February 7, 2018, through August 27, 2019, at which point Decedent's ATP Alisa Koval, M.D., removed Decedent's work restrictions. (Ex. H). Although Decedent's work restrictions were removed, Decedent remained retired, did not work, and did not earn any wages from Respondent or any other employer after his retirement.

5. On September 16, 2019, Respondents filed a GAL admitting for TTD benefits through August 27, 2019, based on an admitted AWW of $1,634.64. (Ex. G).

6. Decedent passed away from his admitted occupational disease on November 27, 2020, at the age of 72. Claimant is the surviving spouse of Decedent and is entitled to dependent death benefits pursuant to § 8-42-114, C.R.S. (2020). The parties stipulated that, at the time of his death, Decedent was not receiving temporary disability benefits.

7. On March 11, 2021, Respondent filed a Fatal Case General Admission admitting for death benefits for Claimant beginning November 27, 2020. Respondent admitted for an AWW of $.0.00, which, if accurate, would entitle Claimant to death benefits of $268.56 per week (i.e., 25% of the applicable maximum per week under § 8-42-114, C.R.S.), less applicable offsets. Respondent asserted an offset of $176.94 based on an estimate of the Social Security survivor benefits to which Claimant would be entitled, resulting in an

admitted death benefit of $91.62 (Ex. A). Respondent's claimed offset was based on an October 16, 2019-letter from the Social Security Administration which estimated Decedent's monthly Social Security benefits at $1,533.50.

8. After Decedent's death, Decedent's Social Security benefits terminated, and Claimant became entitled to Social Security survivor's benefits in the amount of $1,198.00 per month. The parties stipulated that Claimant receives surviving spouse benefits from Social Security which are to be offset against any dependent death benefits at the rate of $138.23 per week (rather than $176.94), beginning November 28, 2020.

9. Upon Decedent's death, Claimant also became entitled to receive Decedent's FPPA pension benefits in full in the amount of $3,235.80 per month. (Ex. C). There was no reduction in the amount of FPPA benefits resulting from Decedent's death.

10. As of November 27, 2020, the Colorado Division of Worker's Compensation established the maximum rate for temporary disability benefits to be $1,074.22 per week.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE FOR PURPOSES OF DEATH BENEFITS

The Colorado Worker's Compensation Act provides death benefits for the dependents of deceased workers. Specifically, section § 8-42-114 provides:

> In case of death, the dependents of the deceased entitled thereto shall receive as compensation or death benefits sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week for accidents occurring on or after July 1, 1989, and not less than a minimum of twenty-five percent of the applicable maximum per week. In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits.

The Act "does not prescribe the date or period of time to be used in determining the decedent's AWW," for the purpose of calculating dependent death benefits. *In re Pettigrew*, WC No. 4-422-345 (ICAO, October 30, 2000). "However, applying the 'rule of independence,' the courts have interpreted the predecessor to § 8-42-114 to require that death benefits be based on the deceased worker's AWW at the time of death." *Id., citing Hoffman v. Hoffman,* 872 P.2d 1367, 1370 (Colo. App.1994); and *Richards v. Richards and Richards*, 664 P.2d 254 (Colo. App. 1983).

"Under the 'rule of independence,' disability benefits awarded an employee and death benefits awarded an employee's dependents are independent of one another. *Hoffman*, 872 P.2d 1367 (Colo. App.1994), *citing State Compensation Ins. Fund v. Industrial Comm'n*, 724 P.2d 679 (Colo. App. 1986). Consequently, "there are two distinct rights, one for the benefit of the worker, the other for the benefit of his or her dependents." *Id.* (citation omitted). Under this principle, the rights, and liabilities of the parties to a workers' compensation claim for death benefits accrue or vest at the time of death, to be determined by the statutes in effect at that time. *Subsequent Injury Fund v. King*, 961 P.2d 575, 577 (Colo. App. 1998); *see also* Ragan v. Metal Stud Forming Corp., W.C. No. 4-920-457-02, at *4 (July 9, 2014). Consequently, Claimant's claim for dependent death benefits is a separate and distinct claim from Decedent's, and Claimant's dependent death benefits should be calculated based on Decedent's AWW at the time of death.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based a claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the default method for calculating AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., establishes the so-called "discretionary exception," which affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where a claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*. The discretionary exception also applies when calculating dependent death benefits. *See Kittleson v. City and County of Denver*, W.C. No. 4-923-057-01 (ICAO, Feb. 24, 2015).

The evidence established that as of the date of Decedent's death, his monthly income was comprised of FPPA pension benefits of $3,235.80 and Social Security benefits of $1,533.50. Neither Decedent's FPPA pension nor his Social Security benefits constitute "wages" under the Act, and neither party in this matter contends otherwise. At the time of Decedent's death, he had retired, and his work restrictions had been removed for approximately 14 months. During that time, Decedent did not earn an income and was not employed. Moreover, Decedent's retirement was mandatory and unrelated to his occupational disease. The ALJ concludes that Decedent's AWW at the time of death was $0.00. Given the fact that Claimant continues to receive Decedent's FPPA pension benefits without reduction, the ALJ finds no basis for exercising the discretionary exception under § 8-42-102 (3), C.R.S.

The ALJ finds Claimant contention that her death benefit should be based on the AWW admitted in the September 16, 2019-GAL to lack merit. Claimant contends that Respondent's failure to modify the September 16, 2019-GAL pursuant to § 8-43-201, C.R.S., binds Respondent to pay Claimant's dependent death benefits based on the AWW admitted therein. Claimant cites no authority for this proposition, which disregards the well-settled "rule of independence," under which Claimant's claim for dependent death benefits is separate and distinct from Decedent's TTD claim. Consequently, the September 16, 2019-GAL filed for Decedent's then-existing TTD claim is inapplicable to Claimant's dependent death benefit claim. Moreover, the September 16, 2019-GAL was filed approximately two months before Decedent's death and does not purport to admit Decedent's AWW at the time of death. In its Fatal Case General Admission, Respondent correctly calculated Decedent's AWW at the time of death as $0.00.

However, the admitted dependent death benefits in the Fatal Case General Admission must be recalculated to reflect the parties' stipulated Social Security offset of $138.23 per week. Under § 8-42-114, C.R.S., Claimant is entitled to dependent death benefits equal to 25% of state's maximum average weekly wage per week, less $138.23

per week beginning November 28, 2020. At the time of Decedent's death, the maximum rate for temporary disability benefits was $1,074.22. Claimant's dependent death benefit is, therefore, $130.33 per week (i.e., $1,074.22 x .25 = $ 268.56 less $138.23 = $130.33).

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant dependent death benefits in the amount of $130.33 per week, commencing on November 28, 2020, and continuing until terminated by law.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 26, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-132-135-001

ISSUE

1. Calculation of Claimant's average weekly wage.

2. Whether Claimant established by a preponderance of the evidence an entitlement to a disfigurement award pursuant to § 8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to her hand arising out of the course of her employment with Employer on January 23, 2020. (Ex. C). Based on the "year-to-date" totals of hours and wages contained in Claimant's payroll records, the ALJ infers that Claimant began working for Employer on or about September 30, 2019. (Ex. I).

2. Claimant worked full-time for Employer earning $16.44 per hour for regular time, and $24.66 per hour for overtime. Claimant also received a $.75 per hour "shift differential" for each hour worked, holiday pay, personal time off (PTO) and sick pay. (Ex. I). Between September 30, 2019, and January 19, 2020 (the pay period immediately preceding Claimant's injury), Claimant worked 15 weeks. She did not work and was not paid for the week of October 28, 2019 – November 3, 2019. During the 15 weeks she worked, Claimant frequently worked overtime and averaged 42.29 hours worked per week and was paid for an average of 44.43 hours per week, including holiday pay, sick pay, and PTO. (Ex. I).

3. Claimant's gross wages between September 30, 2019 and January 19, 2020 were as follows (Ex. I).:

Pay Period		Gross Wages
9/30/2019	10/6/2019	$ 676.95
10/7/2019	10/13/2019	$ 975.89
10/14/2019	10/20/2019	$ 974.59
10/21/2019	10/27/2019	$ 676.78
10/28/2019	11/3/2019	$ 0.00
11/4/2019	11/10/2019	$ 937.72
11/11/2019	11/17/2019	$ 982.85
11/18/2019	11/24/2019	$ 1,067.94
11/25/2019	12/1/2019	$ 830.20
12/2/2019	12/8/2019	$ 992.65
12/9/2019	12/15/2019	$ 753.36
12/16/2019	12/22/2019	$ 786.37

12/23/2019	12/29/2019	$	529.81
12/30/2019	1/5/2020	$	816.28
1/6/2020	1/12/2020	$	830.63
1/13/2020	1/19/2020	$	846.60
TOTAL		**$**	**12,678.62**

4. Respondents paid Claimant temporary partial disability (TPD) benefits for the period of January 24, 2020, through May 20, 2020, and temporary total disability benefits (TTD) for the period of May 21, 2020, through September 9, 2020. On September 10, 2020, Claimant was placed at maximum medical improvement with an 18% upper extremity rating. (Ex. C.) Claimant's TPD and TTD benefits were paid based on an admitted average weekly wage (AWW) of $760.51. (Ex. C).

5. On October 22, 2020, Respondents filed a Final Admission of Liability (FAL), admitting for temporary disability benefits based on an AWW of $760.51. (Ex. C). Respondents' calculation of AWW is the average of Claimant's gross wages earned during the six-weeks prior to her work injury (i.e., from December 9, 2019, through January 19, 2020). This calculation includes the week of Christmas 2019, during which Claimant was paid for 30.82 hours of work, and earned $529.81, the lowest weekly gross wage during the applicable time period.

6. For the 15 weeks Claimant worked between September 30, 2019, and January 19, 2020, her gross earnings were $12,678.62; an average of $845.24. (i.e., $12,678.62 ÷ 15 = $845.24). The ALJ finds that Claimant's AWW at the time of injury was $845.24.

7. As a result of Claimant's industrial injury, Claimant had surgery on her right thumb. Claimant has a visible disfigurement of the body consisting of a surgical scar on the outside of her right thumb and wrist measuring approximately 1½ inches. The scar is visibly distinct from the surrounding skin. The ALJ finds that Claimant should be awarded $300.00 for disfigurement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based a claimant’s monthly, weekly, daily, hourly, or other earnings. This section establishes the default method for calculating AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., establishes the so-called “discretionary exception,” which affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where a claimant’s AWW at the time of injury is not a fair approximation of Claimant’s later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*. The discretionary exception also applies when calculating dependent death benefits.

Respondents contend that calculating Claimant’s AWW based on the six weeks preceding her injury is appropriate, while Claimant contends her AWW should be calculated based on the ten weeks preceding her injury. Neither party has offered a persuasive argument for arbitrarily calculating Claimant’s AWW based on less than her entire tenure with Employer prior to her injury. Respondent’s calculation results in an artificially deflated AWW because Claimant’s lowest week of gross wages (i.e., the week of Christmas 2019) accounts for 1/6 of the total wages used to calculate AWW, when it actually constitutes 1/15 Claimant's total wages during the applicable time frame. At the same time, Respondents' omission of the first nine weeks of Claimant's employment excludes from the AWW calculation the six weeks in which Claimant earned her highest gross wages. Claimant's position that her hourly wage should be calculated based on the ten weeks preceding her injury is no less arbitrary, although it results in an AWW that is closer to Claimant's actual AWW.

Claimant has proven, by a preponderance of the evidence, that her average weekly wage at the time of her injury was $845.24. This the average of Claimant's gross wages for the 15 weeks actually worked between her start date and the pay period immediately preceding her date of injury. The ALJ concludes that $845.24 is a fair approximation of Claimant's wages and diminished earning capacity as the result of her industrial injury, as it does not give disproportionate weight to any week during which Claimant actually worked and earned wages, and accounts for all wages earned.

Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained disfigurement as a direct and proximate result of her January 23, 2020-injury. Claimant is awarded $300.00 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage at the time of her January 23, 2020, work injury was $845.24.

2. Respondents shall pay Claimant $300.00 for disfigurement.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents' prove by clear and convincing evidence that the Division of Workers' Compensation Independent Medical Examination (DIME) physician was incorrect in his findings with regard to maximum medical improvement (MMI)?

FINDINGS OF FACT

1. Claimant worked for Employer as a licensed certified nurses' assistant providing assistance to her niece (patient) to complete her activities of daily living (ADLs) for four hours a day. Claimant has custody of the patient, who is disabled and requires assistance with her ADLs.

2. Claimant stated that the patient is 14 year old, who has been diagnosed with multiple developmental disabilities, including bipolar disorder, oppositional defiance and sensory processing disorder, and moderate intellectual disability. The patient is 5 foot 5 inches in height and weighs approximately 160 lbs. Claimant stated that she is frequently belligerent and hard to handle as she does not respond to coaching to perform her most basic ADLs, such as brushing her teeth and combing her hair. Claimant also assists the patient with activities such as cutting her food, She has acted out in the past, including kicking her care giver, smacking her in the face, slamming her against items, throwing items and even jumping out of a moving vehicle. While living in Colorado Springs, the police were called to the house on thirteen different occasions. Claimant is found to be credible.

3. On March 26, 2020 Claimant was evaluated for left hip pain at American Family Care by John Vermilyeu, N.P. They obtained x-rays of the hip, which were read as negative for any acute bony abnormality. NP Vermilyeau recommended conservative care. On the same day, Dr. Julie Farrell reviewed the x-rays and found that "the proximal femur, acetabulum and pubic rami show no evidence for acute fracture or focal bone lesion. There is good preservation of the joint space. No soft tissue abnormality is identified." Her impression was that Claimant had a normal left hip.

4. On April 18, 2020, Claimant was assisting the patient with her hygiene, when the patient acted out, body slamming Claimant and snapping her left small finger in a struggle for the phone. Claimant was left with a broken left small finger and increasing problems with her left hip that required medical attention. Claimant testified that she heard and felt a tearing in her hip. Claimant reported the incident to Employer and was advised to complete a written statement. Pages 4-7 of Exhibit 1 were properly identified by Claimant as her handwriting and the report she turned in to Employer. The patient was removed from Claimant's home and placed with Children's Hospital.

5. On April 18, 2020 Claimant was evaluated at Centura Health Lakewood Urgent Care Unit by Dr. Mark Warner Stanford. She was diagnosed a left fifth digit nondisplaced fracture of the proximal phalanx of left little finger, and a contusion of the left hip. They ordered both x-rays of the left-hand digits and the hip. She was instructed to keep the hand elevated above the elbow to minimize swelling, to follow up with the primary healthcare clinic and to call the hand surgeon the following Monday. She was prescribed both morphine and naloxone. She was also advised to take ibuprofen or Tylenol for pain.

6. On April 24, 2020 Claimant was examined by Dr. John Ogrodnick, the occupational medicine physician. He commented that Claimant had been treated at Centura Health for X-rays of the finger and was splinted. He also provides a history that Claimant had had ongoing hip problems from multiple assaults from the patient prior to this injury. He diagnosed a left fifth digit nondisplaced fracture of the distal phalanx of left little finger and a contusion of the left hip. He referred Claimant for an orthopedic evaluation of the upper extremity and an MRI of the left hip. He stated that Claimant's objective findings were consistent with the work-related mechanism of the injury (repeated on M-164 forms for multiple dates), that Claimant was unable to work and that the exam suggested that the left hip had internal derangement which might require surgical repair. (Note: the left hand issues and medical care will not be further addressed in this order as they are not relevant to the ultimate issue to be decided.)

7. On May 1, 2021 an MRI of the left hip revealed that Claimant had moderate chondral degeneration within the anterior and central weightbearing portion of the left hip; mild effusion, mild to moderate undersurface and interstititial tearing of the left common hamstring tendon origin on the ischial tuberosity; mild fraying and irregularity of the anterosuperior and superolateral labrum although no definite displaced labral tears are identified; mild tendinosis with mild to moderate undersurface and interstitial tearing of the left common hamstring tendon origin on the ischial tuberosity.

8. On May 6, 2020 she was evaluated at SCLHealth Medical Group by physical therapist Deborah Wendt for the left hip contusion pursuant to a referral by Dr. Ogrodnick. The history provided by Claimant states that "Daughter ran at patient; broke 5th digit and hit patient on hip. States that daughter has repeatedly run at patient and patient states that she had hip soreness from previous hits but is much worse now than had been. She is unable to walk without pain. Prior to 4/18/2020 was walking Sloans Lake and walking in pool but was aggravated. Since injury she has had difficulty bearing weight on left lower extremity and states that it feels like it will give out on her. Feels like something is out of place in her hip." Ms. Wendt's assessment was that Claimant demonstrated antalgic gait with decreased hip ROM, and impingement symptoms of her hip. She may benefit from use of an assistive device to decrease compensatory pattern and would be a good candidate for skilled physical therapy intervention. Multiple subsequent physical therapy reports state that Claimant's compliance with therapy was good and that Claimant was improved overall.

9. On May 27, 2020 Claimant was evaluated by physician assistant Andrew Hildner of Dr. Ogrodnick's office as a walk-in patient due to increased pain and limitations

of the left hip, including worsening without interval injury, a 9/10 pain at rest, 10/10 with weight-bearing (though later revised to 6/10 when compared to a burst appendix), walking and standing, a "tearing" pain with movement, localized to the inferior buttocks and lateral groin, affecting ADLs and feeling that "a bone's out of place."

10. Dr. Ogrodnick provided a history of present illness on June 27, 2020 listing that Claimant had temporary relief with massage therapy, the TENS unit, which was approved for home use, had a 7/10 lateral left hip pain at rest which increases with walking just to trash and back to house causing limping; that she walked around in a pool and noticed her hip felt better, prompting her to request pool therapy. Dr. Ogrodnick confirmed for Claimant that the appointment with Dr. White on July 8, 2020 will be her first with him.

11. Claimant was evaluated by Dr. Brian J. White of Western Orthopaedics on July 8, 2020. Dr. White's examination showed Claimant had limited arc of rotation on the left side with significant pain with rotational motion and the anterior impingement maneuver, and this does recreate the pain she typically feels. Dr. White diagnosed Claimant with an underlying degenerative osteoarthritis with joint space narrowing, CAM morphology of the femoral neck, consistent with femoroacetabular impingement and labral tear as supported by objective diagnostic x-rays and MRI. Dr. White assessed that her "significant left hip pain coming from her labral tear in the presence of moderate arthritis in the anterosuperior aspect of the joint," requires a total hip arthroplasty because her hip degeneration is too advanced for an arthroscopy.

12. Dr. John Schwappach wrote a letter dated August 5, 2020 that states "As my July 15, 2020 letter states, I concur with Dr. White that Ms. [Claimant Redacted] is not a candidate for left hip arthroscopic labral repair. She does have underlying left hip arthritis. This, however, is not related to the April 18,2020 industrial accident. Her pain was more dramatic at rest. She presented for evaluation of hip pain less than a month prior to her April 18, 2020 industrial accident, as such, her hip complaints clearly predated the April 18, 2020 industrial accident. Even if her hip arthritis was related to the April 18, 2020 industrial accident, she does not meet the medical treatment guidelines for left total hip arthroplasty. She has had only one month of physical therapy, no documented NSAID use and she declined a left hip steroid injection."

13. On August 17, 2020, Dr. Ogrodnick noted that Claimant could not lift her left leg into a straight leg raise, had pain when rising from a chair, and had additional pain on exam that created pain in the sciatic notch. The following day she again saw Dr. Ogrodnick who commented that "it is extremely unlikely she would be acutely unable to walk unless she had infection from the steroid injection which is why she needs to contact Dr. White this morning to relay her concerns that the injection has worsened her pain. I repeatedly agreed that her pain was real, just did not equate to disability. She was advised I cannot substantiate continued time off work. This prompted tearfulness and she stated, "I am done with you"."

14. On August 24, 2020 Claimant reported to Dr. Ogrodnick some relief from the pain, potentially from the cortisone injection finally kicking in, which Claimant estimated was approximately by 70%, and pain free at rest. He returned Claimant

to work with the same limitations of walking/standing up to 30 minutes per hour and sitting for other 30 minutes of the hour, hoping that the injection would last, and stated Claimant was to continue with physical therapy at Western Ortho per Dr. White.

15. On September 25, 2020, Dr. Ogrodnick placed Claimant at maximum medical improvement (MMI) with an impairment rating of 16% for left lower extremity, and the of 31% the left small finger, recommending maintenance care of pool therapy and work restrictions of standing/walking less or equal to 30 minutes per hour and must be seated for the other 30 minutes. He documented that Claimant "is very tired of the W/C hassle and just wants to get her hip fixed and move on with her life. She plans to pursue further hip treatment through Medicaid. Therefore, she wishes to be placed at MMI today with permanent restrictions.

16. Respondents filed a Final Admission of Liability on October 8, 2020 admitting to Dr. Ogrodnick's determination of MMI and impairment rating.

17. On November 25, 2020 Claimant was again evaluated by Dr. White, who stated that Claimant does show moderate osteoarthrosis with degenerative change on her left hip. He stated that Claimant had a steroid injection approximately 3 months ago, which did not help long-term. He assessed that Claimant has moderate osteoarthrosis with degenerative change on her left hip and degenerative labral tear. Dr. White stated that at this point it is too far gone for hip arthroscopy and much better fit for total hip replacement.

18. On February 17, 2021 Dr. White opined that Claimant "did have a tingling sensation around her left hip and numbness and some baseline discomfort on this left hip. However, she was able to work, function, and do pretty much everything that she wanted to do without any restriction. With the assault, that is when everything changed. At that point she had significant tearing sensations and deep discomfort in the groin and in the hip. She is to the point now where she is extremely dysfunctional, in chronic pain, and needs to be fixed. Again, it is clear that she had a significant change in her symptoms as a result of the assault, and this is what took her from a high functioning person with minor symptoms that did not interfere with her activities of daily living, now to a completely dysfunctional person with significant pain and inability to work, function and has pain on a daily basis. At this point, my recommendation continues to be total hip replacement if and when we get the final clearance."

19. Dr. John Hughes conducted a Claimant-requested Division of Workers' Compensation Independent Medical Examination (DIME). The DIME physician issued a report on March 2, 2021. Dr. Hughes points out that significant diagnostic testing began with an x-ray obtained on March 26, 2020, where Dr. Parrrall documented normal left hip with no joint space narrowing. The left hip MRI of May 1, 2020 showed findings consistent with an acute superimposed injury to Claimant's left hip. Dr Hughes stated there is left hip effusion as well as mild to moderate tearing to Claimants' left common hamstring tendon origin and moderate chondral degeneration within the anterior and central weight bearing potion of the left hip which probably preexisted April 18, 2020. Subsequent x-rays of Claimant's left hip by Dr. White documented narrowing of the joint space not seen

on the initial x-rays of March 26, 20220. Dr. Hughes opined that this is consistent with a substantial and permanent aggravation of Claimant's left hip osteoarthritis. Dr. Hughes concluded that, based on this analysis, that Claimant was not at MMI as she was pending left total hip arthroplasty, that is reasonably necessary and related to Claimant's work-related injuries of April 18, 2020. The ALJ credited Dr. Hughes opinions on MMI and causation, particularly on the question of what caused Claimant's need for the total hip arthroplasty.

20. Dr. Hughes testified at a deposition on June 29, 2021 at Respondents' request. Dr. Hughes was questioned about records that existed prior to the April 18, 2020 date of injury, specifically with regard to records documenting that Claimant sought treatment for her left hip complaining of a history of left hip pain for three months prior to the injury, and if that would change his opinion with regard to MMI. Dr. Hughes stated that he "I would have to review the medical record, review again what Ms. M… [Claimant] told me directly on March 2nd, 2021, determine if there was a discrepancy and take that into account in my [his] causation analysis."

21. Dr. Hughes goes on to testify as follows:

> Q Okay. Dr. Hughes, is there anything in the record that would lead you to believe that she was nearing the need for a total hip arthroplasty prior to her injury?
>
> A No. And I'm going to refer back to Dr. Schwappach's report of July 15th, 2020 because apparently he was privy to some information that I did not have. So it's fair to all parties that I review this carefully.
>
> It looks like he was referencing an acute onset of left hip pain on March 25th, 2020 and that would have been shortly before the work-related injury of April 18th, 2020 and that these X-rays showed no acute injury.
>
> I think that based on the information in his report and the information contained in Dr. White's report that I've already testified to, it is my opinion that Ms. M… [Claimant] sustained a substantial aggravation of her underlying and pre-existing osteoarthritis meriting indication for replacement arthroplasty as recommended by Dr. White.

22. Respondents failed to overcome Dr. Hughes' opinions on MMI and causation.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws these conclusions of law:

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Whether Respondents overcame the DIME physician's opinion by clear and convincing evidence that that Claimant is not at MMI.

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S.

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S. The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). Clear and convincing evidence means evidence which is stronger than a mere preponderance. It is evidence that is highly probable and free from serious or substantial doubt. *Metro Moving Storage Co. v. Gussert*, 914 P.2d 411

(Colo. App. 1995). A party meets this burden if the evidence contradicting the DIME physician is “unmistakable and free from serious or substantial doubt.” *Leming v. ICAO,* 62 P.3d 1015 (Colo. App. 2002). A “mere difference of medical opinion” does not constitute clear and convincing evidence. E.g., *Gutierrez v. Startek USA, Inc.,* W.C. No. 4-842-550-01, *ICAO,* (March 18, 2016).

If the DIME physician offers ambiguous or conflicting opinions concerning MMI it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*, (if DIME physician offers ambiguous or conflicting opinions on MMI, it is for ALJ to resolve such ambiguity and conflicts and determine the DIME physician's true opinion). A DIME physician's finding of MMI consists not only of the initial report, but also any subsequent opinion given by the physician. See *Andrade v. ICAO*, 121 P.3d 328 (Colo. App. 2005). Thus, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. ICAO*, 984 P.2d 656, 659 (Colo. App. 1998); *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005). Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician’s true opinion regarding MMI. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *134 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

In *Fera v. Resources One, LLC, D/B/A Terra Firma,* W. C. No. 4-589-175, ICAO, (May 25, 2005) [aff'd, *Resources One, LLC v. Industrial Claim Appeals Office* 148 P.3d 287 (Colo. App. 2006)] the panel found that when the ALJ determined the DIME physician's true opinion on MMI, the ALJ did not err in assigning the respondents the burden of proof to overcome by clear and convincing evidence the DIME physician's finding that MMI had not been attained. See also *Viloch v. Opus Northwest, LLC*, W. C. No. 4-514-339, ICAO, (June 17, 2005); *Gurule v. Western Forge*, W. C. No. 4-351-883, ICAO, (December 26, 2001).

In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination [and true opinion] is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097, ICAO, (July 19, 2004); *Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

In the case at bench, Respondents’ had the burden of proof to overcome Dr. Hughes’ opinions on MMI and causation. Respondents relied on the opinion of Dr. Schwappach to support their contentions. The ALJ found Dr. Schwappach was unpersuasive in his opinion, especially as it concerns the citation with regard to the Medical Treatment Guidelines (MTGs) and his reference to Claimant’s having more pain at rest. The Medical Treatment Guidelines are developed by the Director pursuant to legislative direction in § 8-42-101(3.5) (a). The statute directs in § 8-42-101(3)(b) that the Guidelines “shall be used by health care practitioners.” The MTGs themselves provide in Rule 17-2 (A) that “all health care providers shall use the medical treatment guidelines.” Accordingly, compliance with the Guidelines is mandatory for medical providers. However, Rule 17-4 (A) acknowledges that “reasonable medical care may include deviations from the Guidelines in individual cases.” The provider is therefore allowed to “request prior authorization” in that situation.

When the treatment is outside the Guidelines, the provider is directed to Rule 16-9 (F) to make the request to the insurance carrier and then to Rule 16-10 (C) (3) to have any unresolved dispute determined by an ALJ. Because an ALJ is designated an arbiter for disputes pertinent to treatment requested outside of the Guidelines, § 8-43-201(3) (amended effective July 1, 2014) provides that an ALJ is “not required” to use the Guidelines as the sole basis for a determination that a medical treatment is reasonable or necessary. Were it otherwise, there would be no purpose to a hearing. See *In re Claim of Chrysler*, 4-951-475-002, ICAO, (July 15, 0202).

With regard to Claimant’s symptoms when she is at rest, there are multiple medical records form Dr. Ogrodnick as well as the physical therapist that document that Claimant has increased symptoms with walking, which is found more purpusasive. As found, Dr. Hughes’ true opinion is that Claimant is not at MMI and requires surgery as recommended by Dr. White. Dr. Hughes is found to be credible. Respondents have failed to produce clear and convincing evidence to overcome the DIME physician’s true opinion that Claimant has not reached MMI as a result of her April 18, 2020 industrial injuries and requires further treatment.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Respondents failed to overcome the DIME’s determination of not at MMI. Thus, Claimant is not at MMI.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. The Petition to Review shall be accompanied by a brief in support thereof. You may file the Petition to Review and brief by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. If a Petition to Review is filed, the opposing party shall have twenty days after the date of the certificate of service of the Petition to file a brief in opposition to the Petition. For statutory reference, see Section 8-43-301(6), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2021.

Elsa Martinez Tenreiro
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove he suffered a compensable injury on April 4, 2008?

- Did Claimant prove entitlement to reasonably necessary medical treatment before MMI?

- If the case is compensable, Claimant seeks to continue treating with ATP Dr. Delos Carrier, who is apparently no longer employed with Respondent. At hearing the parties agreed that if the case is compensable, they will attempt to resolve the issue of whether Claimant will locate Dr. Carrier and return to him for treatment, or instead treat with a different provider.

- Did Claimant prove entitlement to medical benefits after MMI?

- Did Respondent prove Claimant's claim barred by the statute of limitations?

- Did Respondent prove the claims should be precluded by the doctrine of laches?

- The parties agreed to hold average weekly wage in abeyance.

FINDINGS OF FACT

1. Claimant is a Captain with Employer's Fire Department. He has been employed with the Department for 23 years. He injured his right shoulder on April 4, 2008, while working a structure fire. He described the fire as "large," and "heavily involved." He was using a "roof hook" to pull down ceilings to access the fire and extinguish it. He engaged in this activity for several hours, and felt soreness in his shoulder afterwards. He thought little of it at the time.

2. In early May 2008, Claimant was reassigned to a staff position as a recruiter, where he was not using his shoulder as much.[1] He still had some soreness but "didn't really piece it all together." After a few weeks he suspected something was wrong with the shoulder and sought medical attention.

3. Claimant filled out a "standard injury reporting form" and followed the appropriate procedures to obtain care.

4. Claimant saw Dr. Delos Carrier at Respondent's Occupational Health Clinic on May 29, 2008. On a pain diagram he wrote, "First thought pain was muscle soreness. Progressed to pain with movement." Dr. Carrier reported, "he was on a fire on 04/04/2008 and he was pulling ceiling tiles down to inspect for a fire afterwards. He states that since

[1] Claimant credibly testified the reassignment had nothing to do with his shoulder injury.

that time he has had right shoulder ache and a couple of weeks later the pain was worse. . . . He says he first thought that he had just sprained his muscles of his shoulder, but it is getting worse and he thinks there is something internally wrong with it. Dr. Carrier diagnosed right shoulder impingement, with possible rotator cuff strain. He recommended an MRI.

5. Also on May 29, 2008, Respondent’s adjuster Joanie B[Redacted] wrote to the Clinic and advised that “We are investigating this claim and have not determined compensability. We will authorize in-house medical and physical therapy treatment only, and the MRI only.” Ms. B[Redacted] notified Claimant that Respondent designated its Clinic as the designated treating provider.

6. On May 30, 2008, Ms. B[Redacted]emailed BC Jim Schanel, asking “Hi Jim, can you please tell me how [Claimant’s] right shoulder injury occurred on 4/4/08? Were you aware a Work. Comp. claim was filed? Were there any safety violations or contributing factors that may have caused the injury? Please contact me by email or call me.” Later that day, Ms. B[Redacted] noted; “R/C from BC Schanel. Jim advised that he was not aware of the emp’s injury until after the fact. He was not aware that a WC claim was filed until just the other day. Jim did, however, confirm that the emp was pulling ceiling at the fire on the DOI and could verify the tasks performed. Jim also confirmed he was unaware of any shoulder complaints prior to this injury.”

7. Claimant had the shoulder MRI on June 2, 2008. Claimant followed up with Dr. Carrier on June 12, 2008, who reported, “[the MRI] shows mild to moderate tendinitis, tendinopathy involving the rotator cuff tendons, particularly the infraspinatus and supraspinatus tendons. There is a large partial thickness tear involving the anterior insertion of the supraspinatus tendon. There is no definite MRI evidence of full thickness tear. He has a type 2 acromion with inferior angulation and probable mild impingement syndrome. His physical examination is unchanged from last visit.” Dr. Carrier diagnosed right shoulder impingement, with partial rotator cuff tear. He recommended physical therapy for two weeks. After that, a possible injection and if no benefit then orthopedic surgery referral.

8. On July 7, 2008, Dr. Carrier noted, “He states overall he is about 85% to 90% better. He says it only aches occasionally about three times per week. He has started lifting more and feels that the lifting has not aggravated his pain much at all. He states that occasionally has an achy sensation in his right shoulder but does not have it presently.” Dr. Carrier recommended one more session of physical therapy.

9. On July 11, 2008, Dr. Carrier reported, “He states his right shoulder is overall about 90 to 95% better. He is pleased with his progress, and he has been discharged from physical therapy today. He states he is safely able to perform his duties as a firefighter and feels he can be discharged from care. He understands that he can return if his symptoms do not continue to improve or if they worsen. He just would need to talk to his claims adjustor first.” Dr. Carrier placed Claimant at MMI with no permanent impairment and no work restrictions. In a WC164 form, Dr. Carrier checked “no” to question of whether maintenance care was required, but in his narrative, he stated, “[Claimant] will follow up as desired.”

10. On July 15, 2008, Ms. B[Redacted] wrote to the Clinic and advised that, “This claim has been closed on a medical report. Please do not schedule any medical appointments after MMI until the claim adjuster has met with the employee and has provided authorization for further care.”

11. Claimant he never had the injection mentioned by Dr. Carrier, nor further workup. He confirmed that he felt 90 to 95% better when discharged by Dr. Carrier. Claimant credibly testified that his shoulder pain never completely resolved, but he was able to “self-manage” it over the ensuing years with exercise and relative rest when needed.

12. At approximately the end of July or beginning of August 2008, he left the recruiting position and returned to his regular job as a firefighter. Claimant’s shoulder did not impede his ability to perform his physically demanding job.

13. Claimant missed no time from work because of the shoulder injury. He was able to self-manage his symptoms over the years as noted. However, in the summer of 2020 Claimant’s self-management lost its effectiveness. He began having difficulty putting his bunker coat on without experiencing significant pain. The pain was interfering with his sleep. Claimant testified that he “had to do things differently” and “modify my activities” because of his shoulder pain. He gave examples of trying to put on a jacket or shirt, and the pain would become severe. When required to lift heavy equipment at work, Claimant used his left arm instead of his right. He described taking ibuprofen “like candy, almost, just to try to get through the pain.” Claimant was only able to throw a football with his son “a couple times” before pain prevented him from continuing. Claimant’s wife suggested he get his shoulder checked out.

14. Claimant tried to return to the Clinic for follow-up care. He wanted to know whether something could be done for his shoulder, or whether he would “just have to live with it.” He was referred to adjuster Stephen F[Redacted]. Mr. F[Redacted] told Claimant Respondent would not reopen his claim. At this point, Claimant simply wants to be evaluated so he can find out whether anything can be done for his shoulder.

15. Claimant filed a Worker’s Claim for Compensation form on December 22, 2020. The ALJ finds that Claimant did not realize the probable compensable nature of his injury until the summer of 2020.

16. Claimant has sustained no other injuries to his right shoulder, though he has injured other parts of his body on the job. For instance, he injured his right knee “while performing a high angle rescue on Blodgett Peak…” on August 26, 2011. In the a “New Patient Questionnaire” dated August 31, 2011, in response to the question “When were you last seen and what type of treatment have you been given?” Claimant responded, “P.T. due to shoulder injury – 2008.”

17. Claimant injured his left knee while performing high angle rescue training at Garden of the Gods on October 8, 2014. He completed a questionnaire that inquired about various body parts but mentioned no shoulder issues. In another questionnaire, Claimant disclosed a finger injury sustained when he was 6 years old but did not endorse

the 2008 shoulder injury. He explained at hearing that he “figured they [Respondent] already had the records about his shoulder.

18. Claimant injured his right elbow on April 28, 2018, while pulling down ceilings at the scene of a fire. He presented to the Clinic on May 17, 2018, where Paula Homberger, PA-C, noted; “He demonstrates full ROM of the shoulders, elbows, wrists, & fingers without guarding. There is no visible bony abnormality or erythema, edema, or ecchymosis. There is tenderness of the R lateral epicondyle and into the proximal forearm. There is mild tenderness of the medial epicondyle” Ms. Homberger diagnosed right medial and lateral epicondylitis. The ALJ does not find the lack of findings or discussion of Claimant’s shoulder surprising, because he was being treated for an elbow injury. Additionally, Claimant’s shoulder symptoms were well-controlled at that time and easily managed with exercise and OTC medications.

19. In a physical therapy note apparently pertaining to a June 15, 2018 visit for the right elbow injury, Claimant checked the space for “shoulders” and “arms” in response to the question “Have you ever hurt, broken or sprained” various body parts. He added, “R shoulder tear 2008. L lateral meniscus.”

20. When asked about the lack of documentation of ongoing shoulder problems in later treatment records regarding his other injuries, Claimant credibly testified that; “I wasn’t there for my shoulder,” rather, he was being seen for whatever the new injury was, whether the knee, elbow, etc., and his shoulder was not “the overwhelming pain” at the time.

21. Dr. Nicholas Olsen conducted an IME for Respondents on March 4, 2021. Dr. Olsen opined his examination was “most consistent with bicipital tendinitis of the right shoulder.” Dr. Olsen opined that Claimant’s shoulder problems “are not causally related to his 5/30/08 [sic] incident.” Dr. Olsen elaborated,

> It is improbable that if [Claimant] had continued difficulty from the 5/30/08 incident, certainly, this would have been discussed with Paula Homberger in 2018 when he injured his elbow. She noted full range of motion in his shoulders and reported no difficulty. The medical records would clearly indicate that Mr. Adams had recovered from the 5/30/08 incident certainly by April 2018.

22. Towards the end of the audio recording, Claimant expressed his desire to avoid shoulder surgery. He appeared to wonder if the problems were not from the work injury. Dr. Olsen responded, “Maybe the old injury is a piece of this, but I think a new piece is your biceps tendon. Seems to be pretty inflamed. It’s possible that ache that you felt is that old injury, and you have to decide whether that ache is enough to justify surgery.”

23. Dr. Olsen testified as an expert at hearing and his testimony was largely consistent with his written report. Dr. Olsen opined Claimant’s injury-related shoulder problems fully resolved and any problems he experiences now are not related to the work accident. Dr. Olsen’s opinion was based on his belief that medical records generated for

other injuries showed "no ongoing problems of any kind" regarding the shoulder. Dr. Olsen discounted Claimant statements and testimony regarding ongoing shoulder symptoms in favor of the medical records.

24. Claimant's testimony was generally credible and persuasive. Claimant proved he suffered a compensable injury to his right shoulder on April 4, 2008.

25. Claimant proved the treatment he received from Employer's occupational health clinic in 2008 was reasonably needed to cure and relieve the effects of his work injury.

26. Respondents failed to prove Claimant's claim is barred by the statute of limitations. Claimant did not reasonably appreciate the nature, seriousness, and probable compensable character of his injury until the summer of 2020. Claimant's claim was filed in December 2020, well within the two-year statutory period.

27. Claimant proved entitlement to medical benefits after MMI.

28. Respondents failed to prove the claim should be barred by laches.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury.

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant proved he suffered a compensable injury on April 4, 2008 that caused a need for medical treatment. Claimant's description of the accident is credible and persuasive. Claimant's testimony is consistent with the description of injury he gave at the initial appointment with Dr. Carrier. Although BC Schanel could not confirm the injury, he corroborated Claimant's account of the activities he was performing on the date of injury.

B. Treatment rendered by Respondent's Clinic, and its referrals, was reasonably necessary to diagnose, cure, and relieve the effects of Claimant's compensable injury.

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the Respondent disputes the claimant's entitlement to medical benefits, the claimant must prove the treatment is recently necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, the preponderance of persuasive evidence shows Claimant injured his right shoulder performing activities arising out of and in the course of his employment. Claimant required, and received, treatment for that injury from Dr. Carrier at Respondent's occupational health clinic.

C. Claimant's claim is not barred by the statute of limitations.

Section 8-43-103(2) requires a claimant to file a formal claim for workers' compensation benefits within two years after an injury, or within three years if a reasonable excuse exists and the late filing will not prejudice the employer's rights. The statute of limitations does not begin to run until the claimant, as a reasonable person, knows or should have known the "nature, seriousness and probable compensable character" of the injury. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967).

The concept of "injury" for statute of limitations purposes is narrower than required for a threshold showing of "compensability" as discussed in Section A, *supra*. Although so-called "medical only" claims are commonly referred to as "compensable," the term "injury" as used in the statute of limitations refers is disabling and entitles the claimant to compensation in the form of disability benefits. *City of Boulder, supra*, at 197; *see also Romero v. Indus. Comm'n*, 632 P.2d 1052, 1053 (Colo. App. 1981).

This reflects the longstanding distinction under the Act between medical benefits and "compensation." *See* § 8-43-103(2). A worker's need for medical treatment does not necessarily coincide with the period when the worker is disabled or entitled to disability benefits. *Wal-Mart Stores, Inc. v. Indus. Claims Office*, 989 P.2d 251, 253 (Colo. App. 1999). To be eligible for temporary disability benefits, a claimant must miss more than three work shifts or work days because of the injury. §§ 8-42-103(1)(a); 8-43-101(1); *City of Englewood v. Indus. Claim Appeals Office*, 954 P.2d 640, 643 (Colo. App. 1998) (the threshold period of disability triggers employer's notice obligations.). Permanent disability benefits become available only when a claimant's injury has caused a permanent physical impairment or is fatal. *See* §§ 8-42-107, 8-43-101(1), 8-43-203(1)(a). It follows, therefore, that claimants will realize the "probable compensable character" of an injury when they become aware that it is causally related to the employment and that it may be disabling and entitle them to temporary or permanent disability benefits. *See Intermountain Rubber Indus., Inc. v. Valdez*, 688 P.2d 1133, 1137 (Colo. App. 1984); *see also City of Colorado Springs v. Indus. Claim Appeals Office*, 89 P.3d 504, 506 (Colo. App. 2004).

Here, Claimant did not miss work or otherwise become eligible for temporary disability benefits. Dr. Carrier placed Claimant at MMI in 2008 with no impairment and no restrictions. Claimant did not dispute the MMI determination because, as Dr. Carrier noted, "his right shoulder is overall about 90 to 95% better. He is pleased with his progress, and he has been discharged from physical therapy today. He states he is safely able to perform his duties as a firefighter and feels he can be discharged from care."

The ALJ concludes Claimant reasonably should have appreciated the probable compensable character of his injury in the summer of 2020. At that time, Clamant was forced to modify his physical activities, both on and off the job, because of the effects of the injury. Claimant's self-management techniques lost their effectiveness, and he decided he needed to seek more medical treatment. Claimant realized his injury may be disabling in the summer of 2020. Thus, the Worker's Claim for Compensation form he filed on December 22, 2020 was timely.

D. Post-MMI medical treatment.

Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved he requires additional evaluation and treatment to relieve the effects of his injury or prevent further deterioration. Claimant credibly testified his condition got worse in the summer of 2020. His self-treatment modalities lost their effectiveness, he was forced to modify his physical activities, and it became necessary to take more ibuprofen and Tylenol to manage his pain. He sought, and was denied, permission to return to Respondent's Clinic for evaluation. Claimant's request is reasonable and appropriate to determine what, if any, additional treatment options are available. Coupled with his continued need for OTC analgesics,[2] Claimant has proved the probable need for treatment after MMI.

[2] *E.g.*, *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v. Ridge Erection Company*, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc*., W.C. No. 4-431-951 (September 12, 2002) (recommendation for OTC anti-inflammatories "as necessary for pain" can support a *Grover* award).

Dr. Olsen correctly points out ongoing shoulder complaints are not documented in Claimant's medical records since he was released by Dr. Carrier. But Claimant provided reasonable explanations for not mentioning the shoulder at appointments for various other conditions. Ultimately, Dr. Olsen dismissed Claimant's explanations. However, because the ALJ finds Claimant credible, arguments predicated on disbelieving his statements are not persuasive.

E. Claimant's claim is not precluded by the doctrine of laches.

The equitable doctrine of laches may be used to deny relief to a party whose unconscionable delay in enforcing his rights has prejudiced the party against whom enforcement is sought. *Burke v. Industrial Claim Appeals Office*, 905 P. 2d 1 (Colo. App. 1994); *Bacon v. Industrial Claim Appeals Office*, 746 P.2d 74 (Colo. App. 1987). Thus, application of the doctrine of laches requires both proof of a delay and prejudice. Further, laches is an affirmative defense. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Respondent failed to establish the claim should be barred by laches. Respondent's counsel stated in opening arguments that "some relevant people are no longer available," but did not identify such people or show how their absence resulted in prejudice. The threshold determination of compensability in this Order is primarily based on information Respondent had in 2008. After learning of the injury in 2008, Respondent conducted an investigation sufficient to verify an injury occurred. Respondent failed to prove it was prejudiced by claimant's filing his Worker's Claim for Compensation in 2020. And Claimant did not realize the probable compensable nature of his injury until the summer of 2020. The fact that he filed a claim in December of 2020 does not constitute the required "unconscionable delay." Because Respondent did not present evidence to prove delay or prejudice, the doctrine of laches is inapplicable and does preclude Claimant's claim.

ORDER

1. Claimant's claim for workers' compensation benefits based on injuries sustained on April 4, 2008 is compensable.

2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including but not limited to, Respondent's occupational health clinic.

3. Respondent shall cover all medical treatment after MMI from authorized providers reasonably needed to relieve the effects of Claimant's injury or prevent deterioration of his condition, including an evaluation with an ATP regarding further treatment options, if any.

4. Respondent's statute of limitations defense is denied and dismissed.

5. Respondent's laches defense is denied and dismissed.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION No. 5-123-320-001

ISSUES

- Did Claimant overcome the DIME's determination of MMI by clear and convincing evidence?

- If Claimant is at MMI, did he prove by a preponderance of the evidence the admitted extremity ratings should be converted to whole-person ratings?

- If Claimant is at MMI, did he prove by a preponderance of the evidence he is entitled to medical benefits after MMI?

- Did Claimant prove entitlement to a change of physician?

- The parties agreed to reserve the issue of disfigurement.

FINDINGS OF FACT

1. Claimant worked as a Correctional Officer at Respondent's Zebulon Pike Youth Services Center. He suffered admitted injuries to his left knee and right shoulder when involved in an altercation with a youth on October 18, 2019.

2. Claimant was referred to CCOM for authorized treatment. At his initial visit, Dr. Centi documented, "employee was dealing with an assaultive child and had to perform a takedown today, during the process he twisted his left knee and sprained his right shoulder, c/o pain weakness and difficulty with moving the shoulder, no numbness or tingling." Dr. Centi diagnosed unspecified sprains of the right shoulder and left knee. He ordered x-rays, prescribed medications, and imposed work restrictions.

3. An MRI of the right shoulder on October 25, 2019 revealed "partial thickness undersurface insertional tears of the supraspinatus tendon. No full thickness rotator cuff tears."

4. On October 28, 2019, Dr. Centi noted, "shoulder is not improving, hurts with any motion, no numbness or tingling, knee is still sore, now buckling." Dr. Centi recommended physical therapy and an MRI of the left knee.

5. The MRI was performed on November 2, 2019. It showed degenerative changes, effusion with a small Baker's cyst, and multiple loose bodies. Dr. Centi referred Claimant to Dr. David Walden, and orthopedic surgeon.

6. Claimant saw Dr. Walden's PA-C, Rachel Cerchia, on November 12, 2019. Ms. Cerchia reported, "The patient has a symptomatic description of the loose body within the knee and MRI evidence of that as well. I am setting him up for surgical intervention and further evaluation and review of these findings by Dr. Walden next Thursday. We will

begin the scheduling process for left knee arthroscopic loose body removal and chondroplasty."

7. Dr. Walden evaluated Claimant on November 21, 2019 and noted, "His knee is very inflamed and continues to lock. There is evidence on x-ray of a possible loose body. He also has some osteoarthritic changes of the patellofemoral joint. I talked to him about operative and non-operative options, and he chooses to pursue an arthroscopic evaluation of the knee with a probable loose body removal."

8. Dr. Walden performed left knee surgery on November 25, 2019. He described removing multiple small loose bodies from the knee. He also noted, "There were grade III and IV changes noted on the femoral trochlea with one area completely denuded of cartilage with large fragments of cartilage breaking off from this location. This was thought to be likely site of the loose body formation. Cartilage was cleaned free from this area stabilizing the residual cartilage and microfracture technique was now utilized with a microfracture pick in this area."

9. Claimant saw Dr. Walden for his right shoulder on January 30, 2020. Dr. Walden reported, "He has had pain in the right shoulder since [the accident] despite physical therapy. He actually improved a bit but then plateaued. He still [has] difficulty reaching out and away from his body predominantly out to the side. He is having difficulty with sleep as well. . . . At this point, the patient may have maximized his benefit from physical therapy, according to the therapist that he is seeing. He does not feel as though his shoulder is strong enough to do the regular activities and demands of his job at Zebulon Pike Detention Center." Dr. Walden administered a steroid injection to the shoulder.

10. On February 6, 2020, Ms. Cerchia noted Claimant's left knee was improving and that he would be sent for "what may likely be a final round of physical therapy for him.

11. Claimant's final visit with Ms. Cerchia was on February 27, 2020. He reported his shoulder "is doing extremely well and is having no problems or concerns. He states he had full strength return to the shoulder without pain or difficulties". Examination showed "full forward flexion, abduction, internal and external rotation without any problems or deficits. Good strength is noted with regard to supraspinatus position as well as internal and external rotation testing. Significant resistance was applied to him today and he has no difficulties." There was some pain noted with palpation on the anterior aspect of the shoulder. There is no indication of any proximal issues such as pectoral, scapular, trapezius, upper back, or neck pain.

12. Ms. Cerchia also documented Claimant had recently aggravated the left knee from prolonged sitting, standing, and possibly twisting it. There was no mention of low back or hip pain. Ms. Cerchia aspirated the knee and administered a steroid injection. She released Claimant to follow up "as needed." Claimant credibly testified the injection provided relief initially but eventually wore off.

13. At his March 20, 2020 physical therapy session, Claimant reported 0/10 shoulder pain and said his shoulder was "great." He was still having knee pain and

described the knee as “temperamental.” Claimant’s final PT appointment was on March 26, 2020.

14. Claimant attended a total of 24 PT sessions for his knee and shoulder. The PT records document no low back or hip symptoms because of altered gait.

15. On March 23, 2020, Claimant told Dr. Centi “[his] shoulder is much improved, has been released by orthopedics, no numbness of tingling, continues to progress. He considers it to be almost gone.” The shoulder was nontender to palpation with “nearly complete” ROM and good strength. Examination of Claimant’s neck showed no pain and full range of motion. Dr. Centi placed Claimant at MMI with a 16% lower extremity rating for the left knee, and a 4% upper extremity rating for the right shoulder. He opined Claimant required no maintenance and no work restrictions. Respondent filed FALs consistent with Dr. Centi’s findings on May 8 and June 3, 2020.

16. Claimant completed multiple pain diagrams during his treatment at CCOM. He consistently marked his left knee and right shoulder. He never indicated symptoms in his low back or hips.

17. Despite being released with no restrictions, Claimant believed he could not adequately perform the physical requirements of his job. He did not want to be unable to assist should a “code be called.” Respondent “administratively separated” Claimant on July 23, 2020.

18. Dr. Frank Polanco performed a DIME at Claimant’s request on September 8, 2020. Claimant described “constant, dull, knee pain, 2-3 out of 10. The pain becomes sharp when attempting to squat. He reports the knee ‘gave out’ 2-3 times last month. He states he is unable to run. Additionally, he experiences right shoulder pain when attempting a ‘throwing’ motion, 6-7 out of 10.” Palpation around the shoulder showed no soft tissue pain. Impingement tests were normal. Dr. Polanco also examined Claimant’s neck and back and found “full and fluid” range of motion with no soft tissue tenderness, trigger points, or spasms. Claimant testified Dr. Polanco’s examination was thorough. Dr. Polanco assessed “1. Status post arthroscopic chondroplasty and microfracture technique of femoral trochlea, loose body removal, extensive synovectomy left knee. 2. Right shoulder strain/partial thickness undersurface insertional tears of the supraspinatus.” Dr. Polanco agreed Claimant had reached MMI on March 23, 2020. He assigned a 14% lower extremity rating for the left knee (6% whole-person), and an 11% upper extremity rating for the right shoulder (7% whole-person). He summarized, “[Claimant] sustained a rotator cuff tear with residual symptoms and thus I provided a crepitus impairment. He has residual range of motion deficit in his knee resulting in a range of motion impairment but there is no Table 40 diagnosis upon which to give an impairment.” Dr. Polanco opined Claimant could work without restrictions and required no maintenance treatment.

19. Dr. Timothy Hall performed an IME at Claimant’s request on February 18, 2021. Dr. Hall noted, “What he wants is more treatment regarding his knee and more treatment regarding his shoulder if indeed that is reasonable.” Examination of the right shoulder showed tenderness around the long head of the biceps tendon and reduced

range of motion. Neck range of motion was full and there were "no significant findings through the soft tissues of the periscapular area." Examination of the knee showed joint line tenderness and limited flexion. Dr. Hall observed a "slight limp" favoring the left knee. Dr. Hall documented no exam findings of low back or hip pain. Dr. Hall had no quarrel with Dr. Polanco's impairment ratings. However, he recommended additional treatment for the knee:

> One level of intervention that has not been tried which could certainly be done under maintenance care but should have been done before he was put at MMI was trying viscosupplementation. As per the treatment guidelines, there is strong evidence to the effectiveness of these interventions. There may also be a role for steroid injections controlling in his pain. [Claimant] had done well with previous knee injury doing aquatic exercises and therapy, which is an option per the guidelines. These should have been provided in combination with the land-based therapies and would be appropriate under maintenance care as well as pre-MMI treatment.

20. Regarding the shoulder, Dr. Hall opined,

> I do not think he is at maximum medical improvement. All that has been done is one injection. He has clinical presentation consistent with biceps tendinitis and may well have rotator cuff pathology as evidenced on the MRI. Therapies regarding the biceps tendon would be appropriate. Even potential injection involving the biceps tendon. Generally, he needs more workup, more treatment regarding the shoulder. There was a time after the injection that things improved but he has lost what temporary relief he had from the injection and now has fairly significant symptoms regarding the right shoulder requiring at least maintenance care if not being taken off MMI and further investigated/treated.

21. Dr. Hall disagreed Claimant should have been released to full duties, citing difficulty with standing, walking, and concerns about engaging in "take downs."

22. Dr. Hall also opined, "He does report low back pain and problems with his gait involving the knee, which would render conversion regarding the knee to whole person appropriate."

23. Claimant experiences consistent pain in his knee, which becomes "sharp" if he tries to squat. Ascending stairs is painful, and he has difficulty running. Claimant can walk but has trouble with longer distances and can experience a "locking" of the knee, which sometimes "gives out." Claimant testified the knee pain has caused him to alter his gait, which has let do pain and discomfort in his low back and hip. Claimant testified he experiences spasms in his low back about once per week due to this altered gait.

24. No examining or treating provider documented low back or hip pain, except Dr. Hall.

25. Claimant testified his shoulder is “fine until I either go above my head and that’s when that pain starts, and if I catch myself in any way making any kind of a throwing motion, that’s when I have extreme pain. It’s a very sharp pain.” Claimant pointed to and indicated the pain is in the front of his shoulder joint. Claimant can reach overhead, but “I do have pain when I go straight above me.”

26. Before his injury, Claimant enjoyed sporting activities such as basketball, and was “big into the outdoors.” He enjoyed backcountry camping, hunting, and fishing. Claimant continues to engage in outdoor activities, although he has had to reduce their distance and duration because of his ongoing knee and shoulder issues. Claimant belongs to “Planet Fitness” and participates in strength building exercises for his knee and shoulder.

27. Claimant wants a change of physician because he feels there was not an effective doctor-patient relationship with Dr. Centi. He felt he was “kind of a number” and got the impression Dr. Centi was not interested in hearing about his concerns. Dr. Centi performed only three physical examinations. Claimant believes Dr. Centi was not invested in his care and recovery. Claimant tried to contact Dr. Centi about one week after being released because he continued to have difficulty squatting and running, but received no response.

28. Dr. Hall testified at hearing consistent with his report. Dr. Hall opined the work injury exacerbated Claimant’s underlying knee osteoarthritis, and believes viscosupplementation is a reasonable option to manage ongoing arthritic pain. If viscosupplementation does not work, Claimant is a candidate for steroid injections. Dr. Hall testified these options would be considered maintenance treatment, versus treatment necessary to reach MMI, because they are designed to manage symptoms and not change Claimant’s underlying condition.

29. Dr. Hall believes Claimant’s shoulder pain is probably related to impingement, bicipital tendonitis, and/or the partial supraspinatus tear shown on the MRI. Dr. Hall testified, “There are exercises and other things you can do to try to keep that humeral head down in its more appropriate position. . . . A therapist can teach patients specific exercises to avoid [the humeral head getting out of position].” Dr. Hall opined Claimant should be allowed to return to Dr. Walden or another orthopedic specialist for further evaluation.

30. Dr. Hall opined Claimant is not at MMI for the shoulder injury. He testified the recurrence of shoulder symptoms warrants additional work-up. Dr. Hall opined Dr. Polanco should have determined Claimant was no longer at MMI because his symptoms appeared worse at the DIME than when Dr. Centi initially put Claimant at MMI. He testified, “the benefit of the injection had worn [off] and more treatment would be appropriate. . . . [H]e was no longer as good as he was when placed at MMI, which by definition makes you not at MMI anymore.”

31. Claimant failed to overcome the DIME’s MMI determination by clear and convincing evidence.

32. Claimant failed to prove his scheduled shoulder or knee ratings should be converted to their whole person equivalents.

33. Claimant proved he requires medical benefits after MMI to relieve the effects of his injury or prevent deterioration of his condition.

34. Claimant failed to make a proper showing for a change of physician.

CONCLUSIONS OF LAW

A. MMI

A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Diagnostic procedures constitute a compensable medical benefit that must be provided before MMI if such procedures have a reasonable prospect of diagnosing the claimant's condition and suggesting further treatment. *E.g.*, *Watier-Yerkman v. Da Vita, Inc*., W.C. No. 4-882-517-02 (January 12, 2015); *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012).

As found, Claimant failed to overcome the DIME regarding MMI by clear and convincing evidence. Dr. Hall agreed Claimant's knee is at MMI, so the primary dispute relates to the shoulder. Dr. Polanco's determination of MMI as of March 23, 2020 is consistent with Dr. Centi's examination findings, and the reports of multiple other providers showing the shoulder symptoms had largely resolved. Although it appears Claimant's shoulder has worsened since March 23, 2020, that does not persuasively call the original MMI date into question. Dr. Hall's opinion Clamant is "not at MMI *anymore*" is essentially a concession he was at MMI in March 2020. Additionally, Dr. Hall did not describe specific treatment needed to improve the condition of Claimant's shoulder, and primarily recommends a return to Dr. Walden for further "work up." Although such investigations might lead to additional treatment recommendations, the existence of such a mere possibility does not persuade the ALJ Dr. Polanco was "highly probably incorrect" in finding Claimant at MMI as of March 23, 2020.

B. Whole person conversion

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine “the situs of the functional impairment.” This refers to the “part or parts of the body which have been impaired or disabled as a result of the industrial accident,” and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of “an arm at the shoulder.” Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the “arm,” he has sustained a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and “pain and discomfort which interferes with the claimant’s ability to use a portion of the body may be considered ‘impairment’ for purposes of assigning a whole person impairment rating.” *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant’s testimony regarding pain and reduced function. *Olson v. Foley’s*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitations in the trapezius, scapular area, or neck can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996); *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008). Similarly, back pain and associated functional limitations caused by altered gait can result in a whole person impairment. *E.g*., Abeyta v. Wackenhut Services, W.C. No. 4-519-399 (September 16, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

Claimant described multiple ways his shoulder and knee injuries limit his ability to perform various vocational, personal, and recreational activities. In that regard, his injuries have clearly caused some level of “disability.” *See AMA Guides, Third Edition (Rev.)* § 1.1 (“disability is the gap between what the individual *can* do and what the individual *needs* or *wants* to do.”). But to support conversion to whole person, the disability must arise from functional impairment in parts of the body beyond the arm or leg. *Strauch v. PSL Swedish Healthcare System*, *supra*, at 368.

The persuasive evidence demonstrates Claimant’s knee-related functional impairment is limited to his leg. The ALJ does not doubt that Claimant has difficulty with ambulation that affects his ability to perform routine activities. But those limitations are a function of his lower extremity impairment and not caused by any functional impairment to parts of the body beyond the leg. Claimant’s other main argument for whole person impairment is he developed low back and hip pain because of altered gait. But there is no persuasive corroborating evidence in the medical records to support that allegation.

Claimant did not indicate back or hip pain on any of his pain diagrams at CCOM. He did not report back or hip symptoms at the DIME, and Dr. Polanco's examination showed no evidence of back or hip issues. Although Claimant may experience transient low back or hip pain, the ALJ is not persuaded that any such symptoms represent a functional impairment that would justify a finding of whole person impairment.

There is even less support in the record for conversion of Claimant's shoulder impairment. Dr. Hall does not advocate conversion of the shoulder and, more important, does not identify factors that would justify conversion. As with the knee, the disability Claimant described is because of limitation in the use his arm, as opposed to any part(s) of his body beyond the arm.

C. Medical benefits after MMI

The respondent is liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). There is no requirement that a particular course of treatment be articulated or that the claimant actually be receiving treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

As found, Claimant proved a probable need for future treatment to relieve the effects of his injuries and prevent deterioration of his condition. Claimant's knee remains symptomatic, and his shoulder appears to have worsened since MMI. Although Dr. Hall cannot order treatment as an IME, his opinions regarding the types of modalities that could be employed to relieve Claimant's symptoms are persuasive. Even if Claimant's symptoms could be managed equally effectively with OTC analgesics and NSAIDs (as argued by Respondent), such medications would still support an award of *Grover* benefits. *E.g., Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v. Ridge Erection Company*, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc.*, W.C. No. 4-431-951 (September 12, 2002) (recommendation for OTC anti-inflammatories "as necessary for pain" can support a *Grover* award). Finally, Claimant's desire to follow up to Dr. Walden for to explore his options is reasonable in light of his ongoing symptoms.

D. Change of Physician

A claimant can obtain a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider many factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ need not approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant failed to establish a basis for a change of physician. Dr. Centi provided appropriate referrals and oversaw a course of treatment that resulted in substantial improvement. There is no persuasive evidence he dismissed Claimant's concerns or treated him with disrespect. Dr. Centi's declaration of MMI in March 2020 was reasonable because Claimant had stabilized and required no further active care. The ALJ has no reason to assume Dr. Centi will refuse to oversee the maintenance care being awarded herein. Finally, as Respondent pointed out, Claimant has another ATP (*i.e.*, Dr. Walden) he can see for treatment of his knee or shoulder.

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME regarding MMI is denied and dismissed.

2. Claimant's request to convert the admitted scheduled impairment ratings to the equivalent whole person ratings is denied and dismissed.

3. Respondent shall cover all medical treatment from authorized providers reasonably needed to relieve the effects of Claimant's injuries and prevent deterioration of his condition.

4. Claimant's request for a change of physician is denied and dismissed.

5. The issue of disfigurement is reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: July 29, 2021

Office of Administrative Courts

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury or occupational disease arising out of and in the course of his employment on or about January 13, 2021?

2. If Claimant proved compensability of the claim, did Claimant prove by a preponderance of the evidence that the medical treatment provided by medical providers after the work injury was reasonable, necessary, and related to his injury?

3. If Claimant proved compensability of the claim, did Claimant prove by a preponderance of the evidence which medical provider(s) are considered authorized treating providers?

4. If Claimant proved compensability of the claim, did Claimant prove by a preponderance of the evidence that he is entitled to an award of TTD benefits from February 4, 2021 through March 23, 2021?

5. If Claimant proved compensability of the claim, did Claimant prove by a preponderance of the evidence that he is entitled to an award of TPD benefits from March 1, 2021 and continuing until terminated by law?

6. Did Respondents prove by a preponderance of the evidence that Claimant voluntarily resigned his employment and, but for his resignation, Employer would have accommodated modified duty restrictions?

7. Did Respondents prove by a preponderance of the evidence that a penalty of up to one day's TTD benefits should be imposed from January 20 through February 3, 2021, for claimant's late reporting of the injury?

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of $850.00 at the commencement of the hearing.

FINDINGS OF FACT

1. Claimant worked as a warehouse associate for Employer. Claimant began this position in January 2019 as a temporary worker. Employer then hired him full time in June 2019, and Claimant worked for Employer through January 27, 2021.

2. Claimant's position generally involved support of the warehouse and customer service department, operating a forklift, moving and handling of tile and stone, working in hot and cold weather conditions, and working outside for certain periods of time. The warehouse was not heated, and Claimant was required perform his work despite weather conditions and extreme temperatures. He would work up to 8 or 9 hours in the cold conditions.

3. On both January 12 and January 13, 2021 the weather was extremely cold, reaching approximately minus five degrees Fahrenheit. Claimant stated that the cold weather was affecting his hands.

4. On January 13, 2020 Claimant's hands were swollen, burned and in pain. His hands were also cracked, discolored, and described them as being on fire. Claimant texted a photo of his right hand to his supervisor, who advised him to see his physician regarding the problems with his hands. Claimant testified, which his supervisor confirmed, that he sent the supervisor pictures of his hands after seeing his medical provider as well. Claimant stated that he was evaluated at the clinic, provided with pain medication, cream and he purchased gloves with warmers so that he may endure the colder temperatures. Claimant also testified that he did not know his condition was being diagnosed as frostbite until after the first visit and that he did not know what frostbite was.

5. Claimant's supervisor testified that on January 13, 2021, he received various texts from Claimant and also spoke with him over the phone with regard to Claimant's complaints of swollen and painful hands. He recommended to Claimant that he go to his personal physician to be evaluated.

6. Claimant was evaluated by Nurse Practitioner (NP) Tara Anne Taylor on January 13, 2021. Claimant complained of cracked dry skin, with swelling and pain in both hands due to exposure to cold the day before for up to 8 hours. Claimant advised that he was wearing gloves but got cold inside the gloves. Nurse Taylor documented that "He denies his hands every (sic.) becoming numb, pale, or full inability to move them. This has happened last year as well so he got new gloves and it is better than last year." Nurse Taylor examined Claimant's hands and found that there was mild swelling of the bilateral hands, with mild erythema over the knuckles, which was tender to the touch. She assessed that Claimant had bilateral hand pain.

7. Nurse Taylor evaluated Claimant next on January 21, 2021 reporting that Claimant was "post frostbite to B/L [bilateral] hands moderate without significant compromise or open wounds except for the dry cracked skin on knuckles. No areas that seemed in danger of loss of fingers. He was discharged home with supportive care APAP/IBU for swelling and pain, cerave BID, aquaphor nightly." Nurse Taylor describe Claimants hands as much better than the prior visit but assessed Claimant with a history of frostbite.

8. On February 3, 2021 Ms. Taylor again examined Claimant stating that Claimant continued to have problems with flexing his digits, but that the pain, redness,

paleness of the nails, shooting pain and ROM [range of motion] were all improving. He complained of shooting nerve pain in the right hand. In the left hand he had slight stiffness with movement. Claimant requested that Nurse Taylor write a note for his work to explain what happened to him. The assessments states that Claimant suffered from frostbite of both hands and "that after moderate frostbite such as he had it can take 1-6 months to determine if full recovery is possible of if there will be long term side effects such as chronic pain, neuropathic pain, decreased ROM, flushing and sweating as he is having some of these signs and symptoms now." He was advised not to work in the cold, continue off work for now and use warm packs and thick gloves when any cold exposure is expected. He was also advised to file a workers' compensation claim for this injury. Nurse Taylor did not order any further diagnostic testing.

9. On January 25, 2021 Claimant sent in an emailed to his supervisor stating that he would be taking personal time off from January 27, 2021 through February 3, 2021 and that his last day with Employer would be February 11, 2021. Claimant stated that the swelling after this did resolve but the pain and stiffness continued and that he felt that he could no longer work in an environment where he was constantly exposed to extreme cold temperatures. Claimant also stated that he spoke with his supervisor on various occasions about what was happening to his hands but that he did not know exactly what his diagnosis was until he obtained the notes from his provider on February 3, 2021. He contacted HR and provided the medical report and the restrictions that he could not work in cold temperatures. As of February 4, 2021 he was terminated, instead of being allowed to continue to work until his last day.

10. As of March 1, 2021 he started working for another employer as an auto parts delivery driver, part-time, earning $600.00 per week. Claimant stated that he believed he had permanent nerve damage because he could not work in either cold or air-conditioned areas for extended periods of time, that changes of weather and temperatures affected him and could not resume his regular activities.

11. Dr. Alexander Jacobs issued a report stating that he examined Claimant on May 21, 2021 and Claimant did not have any symptoms of frostbite. In fact he stated that Claimant has a history of multiple other conditions, including diabetes mellitus, depression, diabetic ketoacidosis, CVA/TIA once or possibly twice, pancreatitis and diverticulosis, incidences of elevated blood pressure, and a history of nephrolithiasis. He stated that "If he had frostnip, by now all of his symptoms should certainly have resolved. The symptom he does demonstrate is not a symptom of frostbite or frostnip. Frostnip causes no permanent tissue damage. If his symptoms don't continue to resolve, perhaps doing electromyographic testing and nerve conduction velocities, checking for Reynaud's phenomenon, and checking for other causes for vasculopathy should be pursued."

12. Dr. Jacobs testified at hearing that the history Claimant provided and was documented during the January 13, 2021 evaluations is not consistent with either frostbite or frostnip as he was evaluated for dry skin over the knuckles and swelling of the hands. Frostbite occurs when exposure to cold is severe and long enough for ice crystals to form in the water in the cells. This typically occurs in the toes, where the

blood vessels are smallest. If Claimant had frostbite, Claimant would have had symptoms the day he was exposed to the extreme cold on January 12, 2021, not when he woke up on January 13, 2021 and noticed the swelling of his hands. He also stated that it is very rare for someone to have frostbite on his fingers and not other exposed body parts such as the tip of his nose or his ears, which were not covered like his hands were with gloves. Further, the provider would have documented the diagnosis of frostbite on the first visit, which she did not.

13. Dr. Jacobs stated that the limitations of motion of Claimant's right long finger is more consistent with a trauma, transection of a tendon or other injury, not frostbite as it iss limited to the one digit. He also stated that Claimant was able to use the digit when distracted but not with active range of motion or during examination. Dr. Jacobs stated that, if Claimant had frostbite, it would have resolved by the time of his examination and certainly by the time of the hearing, yet Claimant is still complaining of symptoms into the right hand, including pain and stiffness of the right pointer finger. Lastly, Dr. Jacobs stated that Claimant's symptoms are more likely caused by Raynaud's phenomenon, which is triggered by vasospasm restriction of the vessels, caused by any cold exposure, even non-malignant cold exposure such as reaching into a freezer, and the work conditions did not aggravate or exacerbate the condition. Dr. Jacobs was persuasive and convincing in his testimony.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2020).

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment with employer. As found, the mere fact that claimant began to experience pain and swelling in his bilateral hands following exposure to cold the day prior to first seeing a medical provider is insufficient under the facts of this case to establish that he sustained an injury arising out of and in the course of his employment with employer. As found, claimant has failed to establish that his injury had it's origin in claimant's work related functions. Instead, the facts establish only that claimant began experiencing pain and swelling in his bilateral hands while returning to work on January 13, 2021, but fail to establish that the cause of that pain and swelling was related to claimant's work for employer. While the ALJ recognizes that Claimant was later diagnosed with frostbite by the nurse practitioner, Dr. Jacobs' testimony is more persuasive that Claimant did not have frostbite or frostnip, and in fact was likely suffering from conditions not related to working conditions.

Due to the fact that Claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer, all other issues are moot and Claimant's claims for benefits must be denied.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injury. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 30th day of July, 2021.

By: Elsa Martinez Tenreiro
Administrative Law Judge

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered a compensable chemical exposure on February 28, 2020 during the course and scope of her employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period March 5, 2020 through March 17, 2020.

4. Whether Claimant has proven by a preponderance of the evidence that she is entitled to a disfigurement award for facial scarring as a result of her February 28, 2020 chemical exposure pursuant to §8-42-108, C.R.S.

STIPULATION

The parties agreed that, if the claim is deemed compensable, Claimant is entitled to receive TTD benefits for the period March 5, 2020 through March 17, 2020.

FINDINGS OF FACT

1. Claimant is a 37-year-old female Deputy who has worked for Employer's Sheriff Department since 2005. Her specific job duties involved working at Employer's County Jail supervising inmates. Claimant asserts that she suffered a workplace chemical exposure during her overnight shift on February 28, 2020 that caused a severe rash and lingering facial scaring.

2. Claimant testified that on February 28, 2020 she worked an overnight shift in the County Jail. On the following day she noticed two bumps on her face. Claimant was off work for the following three days and her facial condition progressively worsened. She also began to feel ill. Claimant remarked that when she returned to work on March 4, 2020 her symptoms continued to increase. Claimant presented pictures of her skin condition at hearing that showed red swollen areas on her cheeks and forehead with crusting and some possible drainage.

3. Claimant explained that a cleaning chemical in the Jail may have caused her skin condition. Although Claimant was unaware of a specific chemical exposure, she noted that new chemicals were introduced at the facility to address COVID-19 at the time her symptoms developed. Claimant commented that, on February 28, 2020, there were multiple inmates who were positive for COVID-19 and she worked in a COVID-19 positive

pod. She also remarked that staff wore masks and a deputy had passed due to COVID-19. She detailed that, because of the COVID-19 pandemic, she and others were cleaning and disinfecting cells, phones and seats more frequently than ever before. Although Claimant acknowledged that she had received prior medical treatment for acne, she commented that her condition was well-controlled by February 28, 2020 and her new symptoms differed from prior acne outbreaks.

4. On March 5, 2020 Claimant visited her primary care physician Tanya Michelle Kern, M.D. and reported an acne flare. The condition involved a deep painful area on her skin with oozing that began several days before her evaluation. Dr. Kern reviewed pictures of the rash taken several days earlier that showed two large areas of bright red swelling and maceration. There was also a picture showing red skin peeling with clear fluid on the surface. Dr. Kern remarked Claimant "used to have problems like this in the past but doxycycline did help them improve. She stopped the doxy over a year ago bc the acne has improved." She diagnosed Claimant with acne vulgaris and possible cellulitis and/or possible MRSA. Dr. Kern restarted doxycycline and also prescribed Bactrim for possible MRSA.

5. On March 5, 2020 Claimant also reported her skin condition to Employer through the OUCH Line. The OUCH Line is a telephone service staffed by nurses designed to receive reports of workplace injuries and provide initial triage advice. Claimant told the OUCH Line provider that, following an overnight shift on Friday February 28, 2020, she began to feel poorly the next day. She specifically noted headaches and painful facial bumps. By Sunday Claimant reported the bumps were larger and started oozing. Her condition then continued to worsen. Although Claimant provided detailed information on possible disease outbreaks in the jail, including a small outbreak of shingles in the female unit and a hepatitis outbreak several months earlier, she did not mention COVID-19 or new cleaning protocols at the County Jail.

6. Following her call to the OUCH Line Claimant selected Concentra Medical Centers as her authorized provider. On March 6, 2020 Claimant visited Authorized Treating Physician (ATP) Amanda Cava, M.D. Claimant had a cyst on her face that had been swollen for the last four days and worsened with purulent drainage for the preceding two days. Dr. Cava noted that Claimant was already taking doxycycline and Bactrim as prescribed by her personal care provider and her condition was improving. She diagnosed Claimant with cellulitis of the face and released her to regular duty work.

7. On March 17, 2020 Claimant returned to Concentra for an examination. Nurse Practitioner Allison Hedien noted that, although Claimant's face was still red and tender, her condition was improving. NP Heiden continued to assess Claimant with diffuse cellulitis of the face. Because Claimant had achieved her functional goals, she was placed at Maximum Medical Improvement (MMI) without impairment.

8. Claimant returned to Concentra on March 26, 2020 for an evaluation. She reported a new, mildly painful, itchy rash on the left side of her neck that began on March 25, 2020. Claimant recounted that the rash was a recurrence of the symptoms she

experienced in late February and early March but had migrated to the left side of her neck. Lisa S. Grimaldi, PA-C diagnosed Claimant with a rash of the neck. She prescribed Mupirocin and Sulfamethoxazole and referred Claimant to a dermatologist. PA-C Grimaldi could not identify a causal relationship between Claimant's described mechanism of injury and presenting symptoms.

9. On May 12, 2020 Claimant visited dermatologist James R. DeVito at Dermatology Clinics for an evaluation. She reported a facial rash that had been present for one month. Dr. DeVito characterized the rash as itchy, bumpy and red. Based on pictures from several weeks earlier Dr. DeVito diagnosed Claimant with an eczematous reaction triggered by an aerosolized contact dermatitis. Although Claimant's face was clear at the time, lesions of the face, cheeks and neck as depicted in photographs supported his diagnosis. Dr. Devito explained that the most likely trigger was an aerosol in the form of a possible a cleaning solution used at work. However, he was uncertain which compound was the "culprit."

10. The medical records reveal that Claimant had previously visited Dr. DeVito and other physicians at Dermatology Clinics/Denver Dermatology Consultants a number of times prior to her February 28, 2020 alleged work exposure:

a. On July 1, 2010 Claimant was seen for worsening acne on her face and received several prescription medications including Doxycycline and topical creams. Claimant returned on September 30, 2012 reporting her acne had improved with prescriptions. She also received advice regarding treatment of her acne scars.

b. On March 31, 2011 Claimant was seen for ongoing acne treatment. On July 6, 2011 Claimant returned to Denver Dermatology Consultants reporting that "she went to the ER 3 days ago due to a large pimple like growth on the left medial cheek near the nose." Claimant was feeling fatigued and somewhat ill and the lesion had a strange sensation.

c. On February 22, 2019 and April 22, 2019 Claimant returned to Dermatology Clinics reporting, "acne, located on the face. The acne consists of cysts/nodules and scarring, is moderate in severity and has been persistent for years." Diagnoses included inflammatory papules and pustules and comedonal papules. Claimant received a prescription for Doxycycline.

d. On February 11, 2020, or shortly before her alleged work exposure, Claimant was evaluated by dermatologist, Tyler Vukmer, DO. Claimant had been taking spironolactone and using topical Epiduo. She reported her acne had been "interfering with personal relationships," and Dr. Vukmer noted it was "inadequately controlled" with an examination showing "papules pustules, cysts, comedonal papules, scars on face." He prescribed topical medications Aczone and Soolantra. Dr. Vukmer ceased spironolactone and

Epiduo. Claimant declined oral antibiotics that had been effective for past acne flares.

11. On September 14, 2020 Claimant visited dermatologist Leon S. Greos, M.D. at Colorado Allergy and Asthma. Dr. Greos authored a letter to Dr. Devito to provide an update on Claimant's condition. Dr. Greos considered the cause for Claimant's development of a facial rash. Claimant reported that her rash began when the County Jail began using new cleaning supplies at the start of the COVID-19 pandemic. She provided Dr. Greos with pictures of her skin irritation and safety data sheets for the cleaning supplies including: EnviroCide, ZEP DZ-7, Clorox wipes, and Oxivir TB wipes. Claimant also noted she was wearing a mask at work at the time of onset. Based on the information provided, Dr. Greos concluded that "[g]iven the transient nature of this rash, as well as its irregular distribution sparing her face where her face mask covered her skin, and without further recurrence, I think allergic contact dermatitis is unlikely. I therefore suspect she had an irritant chemical reaction to one of the above cleaning materials that she may have come into contact with at work."

12. Dermatologist Michael Contreras, M.D. performed an independent medical examination of Claimant and issued a report dated January 21, 2021. Dr. Contreras recounted that Claimant had a long history of acne and had been followed regularly over several years for acne flares by a dermatologist. Based on his review of the records, Dr. Contreras concluded the February 28, 2020 work event was likely the second or third documented incident of Claimant presenting for medical care with similar signs and symptoms. He reasoned that Claimant's skin condition was not due to any type of workplace exposure. Notably, a chemical exposure was unlikely because no new chemicals were introduced into the facility prior to onset of the rash.

13. On June 11, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Contreras. He maintained that Claimant's skin condition was not caused by a chemical exposure while working at the County Jail on February 28, 2020. Dr. Contreras explained several findings based on Claimant's physical appearance on examination and photographs. He remarked that Claimant had exhibited dark red ill-defined nodules. Dr. Contreras noted that Claimant had common acne rolled scars on her cheeks, forehead and glabella. She also had two more noticeable scars in a linear pattern on her left cheek. Dr. Contreras explained that Claimant's rash started with acne cysts that appeared as tender nodules and evolved over the course of two or three days to what was shown in the photographs as the weeping areas. He commented the weeping was most likely due to either something applied to the nodules in an attempt to treat them or physical manipulation that injured the epidermis and caused a discharge. In addressing the well-demarcated edge of Claimant's rash, Dr. Contreras remarked there was likely something external applied to treat the acne.

14. Dr. Contreras addressed the causation analyses from dermatologists Drs. DeVito and Greos. He noted that Dr. Devito diagnosed an eczematous reaction triggered by an aerosolized contact dermatitis. However, Dr. Contreras explained the pattern of Claimant's skin condition did not fit a diagnosis of allergic contact dermatitis. Aerosolized

contact would present differently because there is an allergen in the air that contacts the face. In contrast, allergic contact dermatitis would not cause isolated spots asymmetrically and it would commonly involve sensitive eyelids. However, Claimant had asymmetrical isolated spots and her eyelids were not affected. Alternatively, irritant contact dermatitis diagnosed by Dr. Greos was consistent with Claimant's course of symptoms. Dr. Contreras explained the temporal significance of irritant contact dermatitis. Although Claimant described a condition that evolved and worsened over 3-4 days, irritant dermatitis with a single exposure should occur rapidly within the course of hours or a day. Moreover, irritant contact dermatitis typically requires the direct exposure of a caustic substance to the skin. However, Claimant did not describe a direct skin exposure.

15. Captain James testified at the hearing in this matter. Captain J[Redacted] is the supervisor of the Sheriff Department's Logistics Unit. He oversees multiple aspects of the County Jail and Detention Center including laundry, grounds maintenance, fire and safety, commissary, work crews, mail screenings, warehouses, cleaning and supply requisition/distribution. Captain J[Redacted] was responsible for ordering cleaning supplies before and after the COVID-19 outbreak. He remarked that the Denver Sheriff did not have any specific COVID-19 cleaning protocols and no new cleaning chemicals were obtained before March 11, 2020. Specifically, ZEP DZ-7 was not present in the County Jail prior to March 26, 2020. Captain J[Redacted] explained that the "Pass on to Staff" memo dated March 26, 2020 that advised of new chemical ZEP DZ-7 and its safety data sheet was published before the chemical was introduced into the facility. Finally, he testified that Employer did not require deputies to wear face masks prior to March 27, 2020.

16. Claimant has failed to establish that it is more probably true than not that she suffered a compensable chemical exposure on February 28, 2020 during the course and scope of her employment with Employer. Initially, Claimant asserts that she suffered a workplace chemical exposure during her overnight shift on February 28, 2020 that caused a severe rash and lingering facial scaring. She detailed that, because of the COVID-19 pandemic, she and others were cleaning and disinfecting cells, phones and seats more frequently than ever before. Despite Claimant's contention, the credible testimony, medical records and persuasive medical opinions reflect that she did not likely suffer a chemical exposure while working the overnight shift for Employer on February 28, 2020.

17. Although Claimant's testimony regarding the Sheriff Department's COVID-19 protocols may have been accurate for measures during the pandemic in 2020-2021 her contention that increased chemical use and cleaning occurred as of February 28, 2020 is inconsistent with the bulk of the evidence. Notably, as Claimant acknowledged on cross-examination, she could not be certain of the timing of new protocols and chemicals. Moreover, Claimant's initial report to Employer's OUCH Line was detailed and discussed both shingles and hepatitis outbreaks, but did not mention COVID-19. Finally, Captain J[Redacted] credibly testified that the Denver Sheriff did not have any specific COVID-19 cleaning protocols and no new cleaning chemicals were obtained before March 11, 2020. Specifically, ZEP DZ-7 was not present in the County Jail prior to March 26, 2020. Captain J[Redacted] explained that the "Pass on to Staff" memo dated March

26, 2020 that advised of new chemical ZEP DZ-7 and its safety data sheet was published before the chemical was introduced into the facility. The record thus reflects that the County Jail had no specific COVID-19 safety or cleaning procedures in effect on February 28, 2020 and no new cleaning products had been introduced into the facility by February 28, 2020.

18. Although Claimant commented that her acne was well-controlled as of February 28, 2020 the medical records reflect that Claimant continued to suffer from a long history of acne flares. Notably, on February 11, 2020 Claimant sought medical treatment from dermatologist Dr. Vukmer. He recorded that Claimant’s acne had been "interfering with personal relationships" and it was "inadequately controlled" with an examination showing "papules pustules, cysts, comedonal papules, scars on face." Similarly, on February 22, 2019 and April 22, 2019 Claimant visited Dermatology Clinics reporting acne on her face that consisted of cysts/nodules and scarring that had persisted for years. Diagnoses included inflammatory papules and pustules and comedonal papules. Finally, on March 5, 2020 Claimant’s primary care physician Dr. Kern remarked Claimant “used to have problems like this in the past but doxycycline did help them improve.” The record thus reveals that Claimant had a history of recurrent acne that persisted throughout the years.

19. The persuasive medical opinions also reflect that Claimant did not likely suffer a chemical exposure and develop a facial rash while working the overnight shift for Employer on February 28, 2020. Dr. Contreras maintained that Claimant’s skin condition was not caused by a chemical exposure while working at the County Jail on February 28, 2020. He diagnosed acne cysts appearing on February 29, 2020 that evolved over the course of two or three days into a severe condition. Dr. Contreras’ diagnosis is supported by the opinion of Dr. Kern who assessed Claimant with acne vulgaris on March 5, 2020 as well as records from over a decade of medical treatment for acne prior to the alleged work incident. Dr. Contreras also explained that the progression of Claimant’s acne over several days would not occur with a chemical exposure at work. In fact, the condition resolved with the common acne treatment of doxycycline and Bactrim.

20. In contrast, Dr. DeVito diagnosed Claimant with an eczematous reaction triggered by an aerosolized contact dermatitis. He reasoned that the most likely trigger was an aerosol in the form of a possible cleaning solution used at work. However, he was uncertain which compound was the “culprit.” Moreover, Dr. Greos suspected Claimant had an irritant chemical reaction to one of the cleaning materials she may have come into contact with at work. However, the opinions of Drs. DeVito and Greos are not persuasive in ascertaining the cause of Claimant’s skin rash. Initially, the opinions of Drs. DeVito and Greos are inconsistent. Dr. DeVito determined that Claimant sustained allergic contact dermatitis and Dr. Greos diagnosed irritant contact dermatitis. Moreover, Dr. DeVito’s opinion failed to consider that the pattern of Claimant’s skin condition did not fit a diagnosis of allergic contact dermatitis. Dr. Greos also failed to consider the inconsistency between Claimant’s increased symptoms over several days with the diagnosis of irritant contact dermatitis. Furthermore, neither Dr. DeVito nor Dr. Greos identified a specific chemical irritant despite receiving safety data sheets from Claimant. The preceding

opinions are thus speculative regarding Claimant's development of a skin rash as a result of her work activities for Employer.

21. Based on the persuasive testimony of Dr. Contreras, Claimant suffered an acne flare following her February 28, 2020 shift at the County Jail that was unrelated to her employment or any chemicals in the facility. Considering Claimant's long history of treatment for acne, including past similar conditions, the record reveals that the symptoms she developed after February 28, 2020 were not caused by her work for Employer. Claimant's work activities also did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App.

1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to establish by a preponderance of the evidence that she suffered a compensable chemical exposure on February 28, 2020 during the course and scope of her employment with Employer. Initially, Claimant asserts that she suffered a workplace chemical exposure during her overnight shift on February

28, 2020 that caused a severe rash and lingering facial scaring. She detailed that, because of the COVID-19 pandemic, she and others were cleaning and disinfecting cells, phones and seats more frequently than ever before. Despite Claimant's contention, the credible testimony, medical records and persuasive medical opinions reflect that she did not likely suffer a chemical exposure while working the overnight shift for Employer on February 28, 2020.

9. As found, although Claimant's testimony regarding the Sheriff Department's COVID-19 protocols may have been accurate for measures during the pandemic in 2020-2021 her contention that increased chemical use and cleaning occurred as of February 28, 2020 is inconsistent with the bulk of the evidence. Notably, as Claimant acknowledged on cross-examination, she could not be certain of the timing of new protocols and chemicals. Moreover, Claimant's initial report to Employer's OUCH Line was detailed and discussed both shingles and hepatitis outbreaks, but did not mention COVID-19. Finally, Captain J[Redacted] credibly testified that the Denver Sheriff did not have any specific COVID-19 cleaning protocols and no new cleaning chemicals were obtained before March 11, 2020. Specifically, ZEP DZ-7 was not present in the County Jail prior to March 26, 2020. Captain J[Redacted] explained that the "Pass on to Staff" memo dated March 26, 2020 that advised of new chemical ZEP DZ-7 and its safety data sheet was published before the chemical was introduced into the facility. The record thus reflects that the County Jail had no specific COVID-19 safety or cleaning procedures in effect on February 28, 2020 and no new cleaning products had been introduced into the facility by February 28, 2020.

10. As found, although Claimant commented that her acne was well-controlled as of February 28, 2020 the medical records reflect that Claimant continued to suffer from a long history of acne flares. Notably, on February 11, 2020 Claimant sought medical treatment from dermatologist Dr. Vukmer. He recorded that Claimant's acne had been "interfering with personal relationships" and it was "inadequately controlled" with an examination showing "papules pustules, cysts, comedonal papules, scars on face." Similarly, on February 22, 2019 and April 22, 2019 Claimant visited Dermatology Clinics reporting acne on her face that consisted of cysts/nodules and scarring that had persisted for years. Diagnoses included inflammatory papules and pustules and comedonal papules. Finally, on March 5, 2020 Claimant's primary care physician Dr. Kern remarked Claimant "used to have problems like this in the past but doxycycline did help them improve." The record thus reveals that Claimant had a history of recurrent acne that persisted throughout the years.

11. As found, the persuasive medical opinions also reflect that Claimant did not likely suffer a chemical exposure and develop a facial rash while working the overnight shift for Employer on February 28, 2020. Dr. Contreras maintained that Claimant's skin condition was not caused by a chemical exposure while working at the County Jail on February 28, 2020. He diagnosed acne cysts appearing on February 29, 2020 that evolved over the course of two or three days into a severe condition. Dr. Contreras' diagnosis is supported by the opinion of Dr. Kern who assessed Claimant with acne vulgaris on March 5, 2020 as well as records from over a decade of medical treatment for acne prior to the alleged work incident. Dr. Contreras also explained that the progression

of Claimant’s acne over several days would not occur with a chemical exposure at work. In fact, the condition resolved with the common acne treatment of doxycycline and Bactrim.

12. As found, in contrast, Dr. DeVito diagnosed Claimant with an eczematous reaction triggered by an aerosolized contact dermatitis. He reasoned that the most likely trigger was an aerosol in the form of a possible cleaning solution used at work. However, he was uncertain which compound was the “culprit.” Moreover, Dr. Greos suspected Claimant had an irritant chemical reaction to one of the cleaning materials she may have come into contact with at work. However, the opinions of Drs. DeVito and Greos are not persuasive in ascertaining the cause of Claimant’s skin rash. Initially, the opinions of Drs. DeVito and Greos are inconsistent. Dr. DeVito determined that Claimant sustained allergic contact dermatitis and Dr. Greos diagnosed irritant contact dermatitis. Moreover, Dr. DeVito’s opinion failed to consider that the pattern of Claimant’s skin condition did not fit a diagnosis of allergic contract dermatitis. Dr. Greos also failed to consider the inconsistency between Claimant’s increased symptoms over several days with the diagnosis of irritant contact dermatitis. Furthermore, neither Dr. DeVito nor Dr. Greos identified a specific chemical irritant despite receiving safety data sheets from Claimant. The preceding opinions are thus speculative regarding Claimant’s development of a skin rash as a result of her work activities for Employer.

13. As found, based on the persuasive testimony of Dr. Contreras, Claimant suffered an acne flare following her February 28, 2020 shift at the County Jail that was unrelated to her employment or any chemicals in the facility. Considering Claimant’s long history of treatment for acne, including past similar conditions, the record reveals that the symptoms she developed after February 28, 2020 were not caused by her work for Employer. Claimant’s work activities also did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see*

Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

DATED: July 30, 2021.

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Castrejon on the issue of MMI? In this instance, stated differently, what is the actual DIME opinion of Dr. Castrejon?

II. Have Respondents shown, by a preponderance of the evidence, that Claimant obtained Workers Compensation benefits, including medical treatment and TTD payments, as a result of fraud?

III. If fraud is shown, can Respondents withdraw all Admissions of Liability filed in this case?

IV. If such Admissions are withdrawn, may Respondents seek retroactive, and not merely prospective, relief, for all benefits fraudulently obtained?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / Initial Treatment

1. Claimant was a bus driver for Employer. On February 18, 2019, he alleged in the *Employee Incident Report* that he was injured at "15:00" (3:00 pm) on February 15, 2019 when the lumbar pad on the driver's seat of the bus he was operating inflated and stayed inflated through his shift. He reported that the constant pressure on his lower back caused constant pain making it hard to stand, walk, and drive. (Ex. J, p. 65).

2. Clamant then presented to Concentra on February 18, 2019. The intake narrative stated that the inflated seat "caused increased pain in his low back *starting on 2/14* but worsened a lot on 2/15. He reports that *on the next day* he coughed and his back gave out on him and he fell and landed on the *bathroom floor*." (Ex. K, p. 73)(emphasis added). Claimant revealed a prior history of a broken lumbar vertebra, not surgically repaired, when he was 19, resulting in chronic low back pain, last seen for this 2 year prior.

3. The only issue addressed at this visit was the back pain, with no additional complaints of head pain. Head, face, and eyes were "reviewed and found to be negative" (Ex. P, p. 122). Tenderness in lumbosacral spine was noted, with limited range of motion, pain upon flexion and extension, but normal palpation. *Id* at 123. Claimant marked his lumbar area on the pain chart; nothing marked on his head. *Id.*

4. Claimant followed up with Dr. Daniel Peterson, MD on February 22, 2019, complaining now of light headedness, raccoon eyes, and HA (headache). Claimant restated the

mechanism of injury which exacerbated his back pain, but Dr. Peterson then notes: "He states that this happened on 2/15 and then on *2/17* he was in the bathroom at home and had a cough that led to marked sudden back pain then made him fall and hit his head *on the sink."* (Ex. K, p. 78)(emphasis added). At this visit, Dr. Peterson observed that: "He is a bit swollen around his eyes." *Id* at 79.

5. Given the new symptoms described, Claimant was referred for a CT scan, which occurred the same day. Dr. Peterson's narrative continued: "Later in the afternoon [radiologist] Dr. Sherman called to say CT scan showed bilateral *parieto-occipital* skull fractures, with hemorrhagic changes at R *frontal* cortex but not clear subdural hematoma. At this time, the report indicates that Claimant was to be transferred to Memorial Hospital for further evaluation. *Id* at 80. Lifting restrictions went into place, along with *No Commercial Driving. Id.*

Events never Disclosed by Claimant

6. Amy F[Redacted] is a friend of Claimant. She gave a statement dated July 16, 2020, to Amy B[Redacted], an investigator for Respondents. She states that on February 16, 2019 (the same day Claimant called off work), she, her boyfriend, James E[Redacted], and [Claimant]' roommate (who is Claimant) went out for the evening at Frankie's Bar on Powers Blvd, to celebrate Claimant's birthday. It was only the three of them. Claimant drove, and they arrived around 8:30 pm. Claimant was apparently drinking at their table, but behaving appropriately. Everything was fine, until she had an altercation with James, who was poking her repeatedly. She then loudly accused James of hurting her. James then left the bar for the parking lot. She thinks some other patrons apparently thought that Claimant, and not James, had hurt her.

7. Amy then stated:

> there was three of 'em, the guy in the middle had really long hair. And I remember, um, the guy with the long hair confronting Doug, and then came at him, punched him so hard that it knocked him *backwards* in his chair, he [Claimant] *hit his head on the chair behind him*. (Ex. U, p. 258)(emphasis added).
>
> 8. When asked about what happened with Claimant's head, she stated:
>
> It…hit the chair behind him, on his way down. Um, there is a good, high probability that his head could've hit the floor after that, once he was on the ground. *Id at 261.*

Ms. F[Redacted] was finally able to break up the fight, but indicated that Claimant really did not have a chance to defend himself. She was not certain how much Claimant had to drink that evening, but stated sometimes Claimant would drink Bud Light, and "just drink and drink and drink and drink". *Id* at 261.

9. She next saw Claimant 'easily a couple weeks later.' When asked about his appearance at that time, she noted that "he had black eyes...both eyes were black…his face was

swollen up." Claimant then described to her having difficulty getting out of bed, that going up and down stairs would make him sick…like he was going to pass out…. *Id* at 262. Ms. F[Redacted] reiterated all the above events, essentially verbatim, at a telephone deposition on January 7, 2021.

Claimant's DUI

10. After the altercation, Claimant attempted to drive himself home by himself. However, he was subsequently pulled over by the Colorado Springs Police Department at 12:04 a.m. [Now February 17] for failing to stay in his lane of traffic. In his report, Officer Christopher D[Redacted] observed that Claimant had a strong odor of alcohol coming from the cab of his truck. Officer D[Redacted] requested a DUI unit. Officer Cody Jergens responded. In his report, Officer Jergens noted that Claimant was "unsteady on his feet while walking and standing." Officer Jergens offered Claimant the voluntary roadside tests, which Claimant refused.

11. Officer J[Redacted] placed Claimant under arrest for Driving Under the Influence of alcohol on February 17th, 2019 at 1:33 a.m. Officer J[Redacted] informed Claimant that he would need to submit to breath or blood chemical testing. Claimant chose to submit to a blood test. Claimant was transported to Memorial Hospital Central. The blood draw was completed, without incident, in Officer Jergen's presence at 2:15 a.m. Subsequent lab testing indicated a blood alcohol content of 0.268, [noted to be more than three times the legal limit of 0.08 under C.R.S. §42-4-1301(2)(a)]. (Ex. Z). The test results were reported on 2/28/2019. *Id* at 307.

12. Claimant was charged by the Office of the District Attorney of El Paso County with Driving Under the Influence in violation of §42-4-1301(1)(a) in El Paso County District Court Case 2019T003075 on February 26th. 2019. Claimant subsequently pled guilty to the charge on October 10, 2019, and was sentenced to 18 months of probation on March 12, 2021. (Ex. HH).

Treatment Continues Unabated

13. The next medical entry is from Dr. Peterson, dated February 25, 2019. Dr. Peterson first notes that, based on the CT scan, he had arranged for Claimant to travel by ambulance to the ER; however, *Claimant never went*. New details began to emerge from Claimant at this visit:

> Sat 2/16 early Sunday morning got pulled over by a cop and cited with a DUI. He was taken to Memorial Hosp for a blood draw for blood ETOH level and then taken by the cop to the bus stop. He says he called his buddy to come pick him up and when his buddy got there he was supposedly lying on the sidewalk with a guy leaning over him who called to his ride "This guy needs help" and then ran off. Instead of taking him to the ER the friend took him home. But then claims he fell in the bathroom. This is his explanation for how he could have two skull fractures….GF [girlfriend, name unknown] says he has been trembling and been unsteady on his feet since the

> episode last Sunday 2/17. She denies seeing him this way before but they have been dating only 4 months. (Ex. P, p. 141).

14. On February 26, 2019, Claimant was again seen by Dr. Peterson to review the MRI report. Dr. Peterson this time notes:

> He [Claimant] does feel his LBP is back to baseline…. [then, after the sudden onset of back pain] …He stated he then fell and hit his forehead hard *whether on the sink or on the ground* is unclear. …Later he went out to have dinner and drinks late about 10 pm. Claims he went to a bar/restaurant **with his GF. His GF** says he was not himself Sat night and seemed confused and uptight and not his normal self Sat after the fall and head injury. ….Sunday morning he noticed a knot with bloody spot on the occipital area. He has no account of how he ended up lying on the ground being awoken by his roommate at the bus stop. Then this Sunday 2/24/19 he was tripped up by his dog and knocked down. *He fell and hit his temporal skull R side.* He has no explanation for what appear to be older bilateral parietal comminuted depressed skull fractures which are not at all tender and have no brain surface changes, edema, or bleeding…..*At this point, he denies any significant HA, confusion, disorientation, brain fogginess, irritability, fatigue, dizziness, visual or gait disturbance, N/V, trouble with multitasking, word finding, or other symptom of concussion*….He says he believes his blood alcohol level will come back normal as he had had food and *only split a pitcher of beer*. (Ex. P, pp. 145-146)(emphasis added).

15. Dr. Peterson later noted:

> His fall this past weekend hitting the R side of his head getting caught in his dogs leash is consistent with R temporal small subdural seen on MRI…It does not appear more plausible that an acute exacerbation of his back pain that started with his malfunctioning bus seat the two days before the fall, led to his sudden fall and blow to the forehead and the corroborating abnormalities seen is his frontal lobes on MRI and the bilateral ecchymosis. His R temporal subdural cannot be blamed on his back injury or his older parietal skull fractures. (Id at 148).

Record Review IME by Dr. Fall

16. On March 1, 2019, Allison Fall, M.D. reviewed Claimant's medical records pursuant to a Rule 16 Review. In her review, she summarized Claimant's medical history and his various stories regarding his falls. She reported that although his referral to *neurology would be appropriate for the significant head injuries he sustained as a result of his fall(s), this would not be related to the minimal lumbar injury he initially reported. She noted that, "…it sounds as if there are other issues regarding falling and remote and recent head injuries, which are completely unrelated to the work-related injury." He went on to note that, "…his low back was back to baseline reportedly on February 26, 2019, which was 11 days after the date of injury."* (Ex. L).

Continued Treatment with ATP

17. Claimant followed up with Dr. Peterson on 3/14/19, 4/17/19 and 5/17/19. His back pain had still long since resolved, but he began complaining increasingly about headaches, indicating at the May 17 visit that his headaches were increasingly frequent-now daily-and severe. A follow up brain MRI actually showed considerable improvement. Claimant was cleared for modified duty, but was not to drive a commercial vehicle until his symptoms resolved. *Id* at 169. A follow-up on 6/11/19 showed continued headaches, and with a change in proposed medication. Id at 175. A follow-up on 6/25/19 with Dr. Peterson reported little improvement with headaches, now occurring about every three days. *Id* at 184. On a 4/2/2019 visit to Peak Neurology, Claimant stated he was not able to exercise much, due to the ongoing *back pain* and the headaches. (Ex. R. p. 229).

18. On 7/9/2019, Claimant reported some improvement with the medication, but it was again noted that per DOT guidelines, Claimant could not operate a commercial vehicle within 12 months of what is now noted to have been a possible 'seizure'. *Id* at 195. A follow-up on 8/6/2019 revealed no major changes, but it was noted that Claimant's DUI court date had been moved back *again.* *Id* at 214.

19. On September 6, 2019, Claimant presented to Dr. Peterson for a recheck on his headaches and dizziness. Claimant advised he was scheduled for an IME on September 11, 2019. Dr. Peterson advised that Claimant would be released, with the understanding that if the IME decides more treatment is needed, treatment would start back up. Dr. Peterson noted that the *accepted* injury to Claimant's low back had resolved long ago. In the meantime, the Claimant was placed at MMI, with no impairment rating, for his back injury. (Ex. P, p. 214).

Dr. Lesnak's IME

20. Due to his ongoing complaints, Clamant underwent an Independent Medical Evaluation by Lawrence A. Lesnak, DO, on September 11, 2019. From the record review, Dr. Lesnak reported that Claimant reported a fall at home on February 16, 2019, now with at least *three* falls between February 16 and 17, 2019. In this visit, Claimant told Dr. Lesnak specifically: "He [Claimant] states that he fell forward and struck his *forehead* on the nearby bathroom *sink*." (Ex. M, p. 88). However, Claimant only mentioned this fall to Dr. Lesnak, and not the other two, during the IME history. Claimant further reported that he was charged with a DUI during that time, and had a syncopal episode while at the bus stop after being charged with his DUI.

21. Dr. Lesnak opined that the falls were not related to the Claimant's alleged low back pain. He further opined that the Claimant was drinking excessively during this period, and leading up to this evaluation. He further agreed with Dr. Peterson's documentation that the Claimant had reached MMI by February 26, 2019, regarding any temporary aggravation of his low back pain. (Ex. M).

22. Also on September 11, 2019, Claimant completed a Computerized Outcome Assessment as part of the IME. The resultant numerical values placed Claimant at the "distressed

somatic" category for psychosocial functioning. (Ex. M, p. 86). "An extremely high level of reported somatic pain complaints strongly suggests the presence of an underlying symptom somatic disorder/somatoform disorder. Patients who have these types of diagnoses frequently embellish/exaggerate their symptoms, thus causing their reported subjective complaints to be unreliable at best" *Id.*

23. Respondents filed a Final Admission of Liability on September 25, 2019. Claimant, by counsel, then timely filed an Objection to the Final Admission and Application for Hearing on October 24, 2019. (Ex. C-F).

Dr. Castrejon's DIME

24. Claimant then underwent a Division IME on January 9, 2020 with Miguel Castrejon, MD. Dr. Castrejon's report repeated Claimant's bathroom story that he felt a shock like pain to his back on February 16, 2019, causing him to fall in the shower, hitting his head. Claimant did share with Dr. Castrejon that he went out that evening, and got pulled over for a "DUI." Claimant made no mention of the assault incident at the bar, nor did he mention the BAC results, which had now been completed for almost a year, [and after Claimant's court dates had been moved back on more than one occasion].

25. Claimant admitted that he had been back to baseline for the next couple weeks for his lumbar complaints, but experienced headaches, memory difficulties, dizziness and poor balance since. Dr. Castrejon opined that *as a result* of the exacerbation of his low back pain, this resulted in the fall, that in turn, resulted in the head injury. He opined that the "bus stop event" was directly related to the effects of the initial head injury. Dr. Castrejon, in fact, stated: "This examiner proposes that at the time the claimant was pulled over for a DUI it is *medically probable* that whatever driving changes were observed by the detaining officer were *more likely secondary to the effects of the head injury*. (Ex. N, pp. 106-107)(emphasis added). As a result of these opinions, Claimant was found by the DIME to be not at MMI. *Id.*

Due Diligence by Respondents

26. Respondents continued investigating the claim, and submitted newly discovered information about Claimant's activities on the evening of February 16, 2019 to Dr. Lesnak. Dr. Lesnak then provided a supplemental/addendum IME report. He noted that the Claimant volitionally withheld pertinent information regarding the physical alternation of February 16, 2019, wherein he was repeatedly punched in the face on numerous occasions, knocked off a bar chair, falling backwards, and striking the back of his head. Dr. Lesnak reported that not only did Claimant withhold this information from him, but he had also withheld if from his ATP, as well as Dr. Castrejon.

27. With this new information, Dr. Lesnak opined that all of Claimant's symptoms are completely unrelated to any alleged incident that may have occurred during his work activities on February 14 or 15 of 2019. Dr. Lesnak opined:

> Mr. Dixon has clearly attempted to withhold very important information regarding his medical history to all of his healthcare providers who have

> evaluated him after February 18, 2019 (apparently in an attempt to "cover up" the fact that all of his symptoms and injuries were related to his involvement in a "bar fight" that occurred on February 16, 2019, two days prior to his initial occupational medicine evaluation. (Ex. O).

28. Dr. Lesnak noted that Claimant's original version of events, as related to Dr. Peterson, Dr. Castrejon, and himself, [now]:

> …appears to be *medically improbable* as well. Clearly, the patient has withheld information that he was apparently repeatedly punched in the face while at a local bar on 2/16/2019, by three men. Multiple blows to the face clearly would be *much more medically probable* to cause the diagnostic imaging on his head CT scam performed on 2/22/2019, as well as the brain MRI scan performed on 2/25/2019, as compared to him potentially falling at home and hitting his face. Additionally, the bilateral posterior parietal comminuted fractures would be consistent with being knocked off a bar chair, striking another chair, then landing on a floor, striking his head, *as compared to falling at home.* Additionally, the right orbital fracture identified on the brain MRI would clearly be consistent with a blow to the face, such as being punched by someone, *as compared to striking one's face when falling in a bathroom. Id* at 116. (emphasis added).

Dr. Lesnak opined that since there appears to have been no occupational injury whatsoever pertaining to work activities, a status of MMI is not applicable, as there was no injury. *Id.*

29. Further investigation of the claim revealed an internal email, from Kimberly T[Redacted], HR manager for Employer, directed to Claimant's work supervisor, Andrew C[Redacted]. The email is dated Monday, February 18, 2019 at 12:30 pm. In its entirety, it reads:

> [Claimant] came in to the office to seek treatment at CCOM for his bus injury that he sustained on 2/16/2019. He claims the lumbar adjustment on the seat hurt his back. He said yesterday he coughed just right in the shower and it made his injury flare up resulting in a fall. *He reports that he fell and hit the back of his head on the toilet. Both of his eyes were bruised/black and the whites of his eyes are red/blood vessels ruptured….* We sent him to the doctor for a workman's comp appointment. (Ex. T, pp. 254-255)(emphasis added).

30. A deposition was also taken on January 8, 2021 of Andrew C[Redacted], general manager of Employer, with supervisory authority over Claimant. Mr. C[Redacted] also assists with the filing of Workers Comp claims. Claimant came in to report this injury on 2/18/2019 at approximately 11:00 am. During this encounter, Claimant only mentioned his back issues, and did not say anything about injuring his head as a result. The following exchange also took place:

> Q What did [Claimant] look like? Could you describe it, please?
>
> A Oh, he had two severe black eyes, and my thoughts were he looked like he had just come out of a prize fight. I had never quite seen eyes like that before.
>
> Q Were they swollen?
>
> A Yeah, they were swollen, very dark, very black eyes, and even the whites of his eyes were bloodied. (Ex.BB, p. 315 {page 8 of the deposition transcript})

31. On June 23, 2020, Claimant, through counsel, answered Interrogatories in connection with this case. (Ex. FF). In response to #7, when asked about any injuries occurring after his alleged work injury, Claimant replied, in pertinent part:

> To the best of my recollection: The original back injury was reported on February 15, 2019. The next morning February 16, 2019 at *approximately 7:00 am* while I was getting ready to get in the shower, I coughed which caused a spasm a severe spasm in my back and I "doubled-up" and fell forward *hitting my forehead on the counter*. I had a *lump on my forehead* and both of my eyes started turning black *later that day*. …We were there for an hour ½ maybe two hours when James and his girlfriend got into an argument and left Frankie's walking. I waited about 5 minutes and then left to go home…. [no mention of the assault].
>
> About two weeks later my girlfriend was dropping stuff off at my house and I was getting my dog Tugger (Maleniois) out of the truck and his leash somehow got tangled around my legs and I tripped and fell. ***I landed on my right-arm and shoulder but was not hurt.*** I got up and went into the house to bed.
>
> In December of 2019 while in the VA Hospital in Sheridan, Wyoming I fell probably due to a seizure (*which I feel is related to my work related injury*) and hit my head near my left-eyebrow. I did have I believe 3 butterfly stitches put over the wound.
>
> I still continue to have seizures up to two times a week…. (Ex. FF, pp. 407-408)(emphasis added).

[The ALJ notes that neither this alleged fall, nor the dog leash fall were mentioned to the DIME examiner].

32. The ALJ takes administrative notice that a hearing was set for September 15, 2020, on Respondent's Application for Hearing, dated 2/20/2020, seeking to overcome the DIME of Dr. Castrejon. On 6/24/2020, the undersigned ALJ signed an Order permitting the deposition of the DIME physician, Dr. Castrejon.

33. There were no further court filings in connection with this case until 4 weeks, after the Interrogatories were completed. A Motion to Withdraw from Representation was then filed by Claimant's Counsel, [Redacted, on July 21, 2020. The sole reason for withdrawing cited was that "The undersigned [attorney] wishes to withdraw as Attorney of record from this claim." When Claimant filed no Response thereto, the undersigned ALJ signed the Order on August 4, 2020. The September 15 hearing was vacated.

DIME Revisited

34. DIME physician Dr. Castrejon was deposed on April 9, 2021. Claimant did not participate. (Ex. GG). During this deposition, Dr. Castrejon was supplied new information discovered since his original DIME report of January 9, 2020. When asked if he had *originally* found Claimant's recitation of the work injury to his back, and the subsequent fall in the bathroom to be truthful, he replied in the affirmative.

35. The transcript of Amy F[Redacted]'s statement was then read to Dr. Castrejon. Upon completion of this recitation, this exchange followed:

> Q ...are you still of the opinion that there was a back injury?
>
> A My opinion is still that he experienced a straining injury *to his back.* I certainly—with this information, there is question with regard to the head injury that he described as being directly related to a coughing episode.
>
> It would appear that there are inconsistencies that make me think that the coughing incident that he reported may not have occurred and *actually the head injuries he sustained were as a direct result of what was pretty vividly described by Ame (sic)[F[Redacted]].*

Hearing Testimony

36. Claimant testified at hearing. He also offered his sole exhibit (Ex. 1), which is a copy of one page of his cell phone records for February 10 through 16 of 2019. Claimant explained that there are entries for an incoming call (from a supervisor at work, he indicated, returning Claimant's call) on 2/15/19 at 6:58 pm. A voicemail was left, but then Claimant called him back at 7:01 am the following morning on 2/16/2019 to discuss his sore back. The ALJ found - and still finds - this document to be sufficiently corroborative of Claimant's timelines regarding reporting his *back injury* from the bus seat, and admitted Ex. 1, despite any corroboration from said supervisor.

37. At hearing, Claimant's testimony was essentially void of specifics. He persisted in his belief that the bus seat malfunction led to his fall in the bathroom, but otherwise was vague whenever a direct question was asked. [There is no transcript]. Claimant insists that he has no recall of any of the assaultive events at Frankie's Bar, even to this day; therefore, he provided the best information he could at all times pertinent.

38. However, Claimant did acknowledge recalling the DUI blood test occurring later in the evening. He could not recall that he had apparently been placed onto probation for his

performance issues at his job with Employer. When asked whether he ever provided any information to any medical provider, including Dr. Castrejon, about the bar incident, Claimant would not provide a cogent answer. He "could not recall" what he originally told the adjuster when the claim was filed.

Other Pertinent Evidence

39. Respondents also offered body cam footage from Claimants DUI arrest. The ALJ has viewed it in its entirely, but emphasizes only a few pertinent points: 1) While Claimant certainly appeared to be impaired, he was quiet and cooperative with the arresting officers {although he declined to submit to voluntary roadside maneuvers, he did submit to the required chemical test, and chose blood}. 2) Claimant appeared to understand what was going on around him, and could respond appropriately to the officers' inquiries and commands. 3) Claimant had no visible injuries to his face, did not complain of same, nor did the officers take any verbal or written note of any. 4) However, one officer noticed blood on Claimant's shirt, which Claimant originally attributed to his dog; however, when asked if he had actually been in 'a scrap', Claimant acknowledged that he had, but indicated he was OK, and the matter was then dropped.

40. An investigative report was prepared in connection with this case. (Ex. DD). Pertinent findings were that Claimant's girlfriend, Holly O[Redacted], did not go out with Claimant on the night of his birthday. She did, however, see him after the fact, and took him to his initial visit to his workers comp visit. A social media review showed Claimant's LinkedIn page stated that he had worked as a deputy sheriff for Elbert County from 2006-2013. *Id* at 341.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals*

Office, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). There was but one live witness in this hearing; Claimant.

The ALJ has reviewed the statements and depositions of all participants in this matter. The statements from each of the witnesses tendered by Respondents are internally consistent, and are not significantly contradicted by other extrinsic evidence. None of said witnesses have any apparent motives for secondary gain.

While it can be argued in any given case that the Claimant has a secondary motive, the facts of this case are considerably more compelling than is typical. Further, in light of other extrinsic evidence available, Claimant's various statements throughout the proceedings do not withstand scrutiny. Lastly, Claimant's explanation at hearing for his actions throughout revealed a level of evasiveness that cannot be ignored.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, *based upon the information they were provided-and at the time it was provided.* What is clear from all of this is that, for various reasons, no two of the medical providers has had access to the exact same material, at the time they rendered their opinions. And, it is duly noted that as new information comes in, the target starts moving once again. Opinions can be revised or refined, or perhaps nothing changes. The real issue here is one of *persuasiveness,* in the context of the legal arena. However, in the end, once all the reports are reviewed, and all witnesses are deposed, in sequence, and all witnesses testify, it is the ALJ who has everything there is to be had in each case.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME, as Applied

I. In this case, Dr. Castrejon originally opined that Claimant suffered a minor, compensable back strain, which resolved within a very short period of time, with no impairment, and no further need for treatment. However, he also originally opined that there was a causal link between the back strain and Claimant's alleged fall in the bathroom. This fall led to the brain injuries noted by the ATP. These injuries, in turn, may have led to other falls, which cumulatively have resulted in ongoing, and ever intensifying, TBI symptoms. Thus, he opined Claimant was not at MMI for the TBI complaints, and issued his DIME report. Based upon said DIME report, Respondents then requested a hearing to overcome the DIME, and continued to investigate this claim.

J. As a result of this investigation, newly discovered evidence was obtained, most notably in the form of Amy F[Redacted]'s statement, and subsequent deposition. At no point prior had Dr. Castrejon been aware that Claimant had suffered a beating to his head and face the very same day he alleged he had fallen in the bathroom. This changed Dr. Castrejon's mind on the causal link between Claimant's back aggravation and his ongoing complaints of TBI; in fact, it was instead the bar fight at Frankie's. In effect, Dr. Castrejon overcame his own earlier DIME opinion of "not at MMI", for the TBI complaints, finding no causal link to the work injury. In effect, this evidence was sufficiently 'clear and convincing' to change the DIME's mind. The ALJ concurs. The ALJ now finds that Dr. Castrejon's current DIME opinion is that Claimant is now at MMI for all work-related injuries. Such injuries are limited to Claimant's back only, which resolved to pre-injury status within 10 days, with minimal treatment. While Dr. Lesnak questions even the back injury, the ALJ finds that this is insufficient to overcome Dr. Castrejon's conclusion that Claimant did in fact suffer a minor compensable injury to his back. There is other corroborative evidence in the record in support as well.

Did Claimant Fraudulently Obtain Workers Compensation Benefits?

K. The elements of fraud in Colorado were set forth by the Colorado Supreme Court in *Morrison v. Goodspeed*, 100 Colo. 470, 68 P.2d 458 (1937). In that case, the Court stated: "The constituents of fraud, though manifesting themselves in a multitude of forms, are so well recognized that they may be said to be elementary. They consist of the following:

> (1) A false representation of a material existing fact, or representation as to a material existing fact made with a reckless disregard of its truth or falsity; or concealment of a material existing fact, that in equity and good conscience should be disclosed.
>
> (2) Knowledge on the part of the one making the representation that it is false; or utter indifference to its truth or falsity; or knowledge that he is concealing a material fact that in equity and good conscience he should disclose.

> (3) Ignorance on the part of the one to whom representations are made or from whom such fact is concealed, of the falsity of the representation or the existence of the fact concealed.
>
> (4) The representation or concealment made or practiced with the intention that it shall be acted upon.
>
> (5) Action on the representation or concealment resulting in damages."

L. As noted, there is sufficient evidence in the record to support that Claimant's inflatable seat cushion indeed malfunctioned shortly before he complained of back pain. Given Claimant's apparent preexisting lumbar injuries, it is conceivable that he might well have temporarily aggravated his low back sufficiently to report it and seek treatment. Claimant did so. In the process, he initially only sought treatment for his back, but mentioned to HR that he had also struck the *back* of his head on the *toilet.* In hindsight, this is perhaps not surprising, since Claimant then knew he had some blood on the *back* of his head – ostensibly discovered upon being awakened at the bus stop – and thus this original mechanism of injury would be more consistent with the evidence he was aware of *at the time*. However, Employer's HR and supervisory employee both noticed how bad Claimant's face and eyes looked on February 18.

M. Claimant then changed *what* he struck (from the toilet, to the bathroom floor, then the sink, and at one point, the counter), but apparently never clarified on *what part of his head* (front or back) he originally hit against those stationary objects. Dr. Peterson noted some swelling about Claimant's eyes on February 22, and combined with his account of striking his head, ordered imaging studies. When those came back with two notable findings (one to the front, one to the rear) on February 25, Claimant then offered that he was then found on the pavement at the bus stop after a DUI, and then recalled hitting the *front* of his head on the sink. Thus, now two falls (both unwitnessed and uncorroborated), correlating with two injuries on imaging studies. Based on the CT scan, Dr. Peterson advised Claimant to travel to Memorial Hospital ER; however, Claimant never went.

N. However, he returned on the next day, February 26, to discuss the imaging studies. At that visit, Claimant offered up a third fall, from February 24, involving his dog. Claimant stated *he hit his temporal skull, R side.* However, Claimant still denied any significant *symptoms* of TBI at this visit. However, Dr. Peterson then correlated Claimant's objective findings with his provided history of falls, and concluded that the fall to his temporal R side actually correlated far better with the imaging than did his alleged fall in the bathroom. However, the ALJ notes that since Claimant blamed his *dog* for this one, rather than back pain or some syncopal episode, such injury would not be work-related. There goes the WC claim, ***except that,*** Claimant then denied even striking his head during his interrogatories over a year later. Now he landed on his arm and shoulder, and was unharmed. Back in the game. But then his attorney withdraws shortly thereafter.

O. All the while, Claimant's reported TBI symptoms are intensifying, out of proportion to the imaging studies. His psychological testing in September, 2019 showed serious somatic issues. By the time Claimant answered his interrogatories, he was blaming seizures in Wyoming on his fall in the bathroom, and wanted to be compensated. Despite self-reporting that he was back to baseline for his back in late February, 2019, in April, he was now complaining that his back pain, combined with headaches, prevented him from exercising. Being unable to work as a bus driver, due his own self-reported TBI complaints, corroborated with imaging, Claimant continued to collect TTD payments, which ended on 9/11/2019, when he was placed at MMI by the IME.

P. Claimant describes pain so sudden and intense on 2/16/19 from a cough that he doubles over and strikes a stationary object (toilet, floor, sink, counter) with his head. Yet, later that day, he agrees to **drive** the three of them for a night out to celebrate his birthday. And the three of them did not include his **girlfriend**, as he reported on numerous instances to his medical providers. It was his roommate's girlfriend. And his roommate's girlfriend witnessed the assault (admittedly, unprovoked by Claimant) whereby he struck the back of his head on a bar chair behind him, and quite possibly then on the floor. He was then beaten about his face by three assailants. However, he never lost consciousness in this episode, and had the wherewithal, however ill-advised, to drive himself most of the way home. He recalled the DUI blood test, but could not recall how he wound up on the ground at the bus stop (if he did, since this remains uncorroborated by any extrinsic evidence), nor can he even recall being beat up. Although, in passing, he admitted to the DUI officer to being in a 'scrap'.

Q. Assuming arguendo, that Claimant truly did not recall the assault (but which this ALJ pointedly finds otherwise), *he certainly would have been told about it afterwards.* His bilateral facial injuries were also much more consistent with a beating than bouncing off a sink. And despite that, he 'neglected' to mention this to any of the medical providers, even days, weeks, or months after the fact. And, as a former law enforcement officer for at least seven years, he would know his very high BAC test results would be available shortly after their completion in late February. He then had several court dates after that, but never mentioned his BAC to any of his medical providers- and such information could have materially affected the treatment he received, regardless of its compensability. However, once Claimant became aware of the consequences of a TBI diagnosis, he could not go back to work as a bus driver for at least a year. The disability horse now had to be ridden to the finish.

R. The ALJ finds that each element of Fraud has been established by Respondents by a preponderance of the evidence. Claimant knew he was concealing material evidence, which he knew in good conscience should have been disclosed. Claimant intended that such concealment be acted upon by medical and insurance personnel to his benefit, and to the detriment of Employer and Insurer. Medical and insurance personnel did, in fact, act upon this concealed evidence, resulting in damages. One can easily connect the dots to see why Claimant's former counsel declined to participate further in pursuing this claim, despite a potentially large payout. Such damages include all medical treatment rendered beyond treatment for Claimant's lower back strain, which resolved days later, with no need for treatment of follow-up. Such damages also include any indemnification benefits paid by Insurer.

Withdrawal of Admissions of Liability, Generally

S. In *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981) the Court noted that there were no provisions in the Act authorizing “retroactive withdrawals of an admission of liability.” Nevertheless, the Court stated that the “beneficial intent” of the Act was predicated on claimant’s providing accurate information. In *Stroman v. Southway Services, Inc.*, W.C. No. 4-366-989 (August 31, 1999), ICAO interpreted *Vargo v. Industrial Commission*, and subsequent statutory amendments to permit retroactive withdrawal of admissions, and ICAO construed those authorities as permitting the ALJ to order repayment of compensation and benefits, including medical benefits. Specifically, in *Stroman*, ICAO stated that “[a]lthough the *Vargo* decision does not expressly state that a claimant may be ordered to repay the insurer for benefits obtained prior to withdrawal of the fraudulently induced admission, the court's reference to “retroactive withdrawal” of the admission indicates that repayment is the intended remedy. *Cf. HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990) (holding that admission may not be withdrawn retroactively unless procured by fraud, but permitting prospective withdrawal of an erroneous admission). Similarly, in *West v. Lab Corp.*, W.C. No. 4-684-982 (ICAO February 27, 2009), ICAO reiterated that in a circumstance of fraud, the ALJ did not err in ordering the withdrawal of the respondents' admissions and repayment of compensation and medical benefits. In *West*, ICAO further indicated that “[w]e perceive nothing in the language of [section] 8-43-304(2) indicating that the legislature intended the respondents’ only recourse to be an offset against future payments in cases where the claim was fraudulently filed and there will therefore be no future payments.” *Id.* C.R.S. §8-42-101(6)(a) states that “[a]n employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud.”

Withdrawal of Admissions of Liability, and Remedy, as Applied

T. The ALJ has found that Claimant’s fraudulent actions resulted in benefits being paid on his behalf by Respondents. In this case, Respondent Insurer filed several General Admissions of Liability, as well as Final Admission of Liability. Were it not for Claimant’s willful misrepresentations, as noted supra, none of said Admissions would have been filed. Therefore, the ALJ Orders that each Admission of Liability filed in this case may be withdrawn by Respondents, and replaced with a Notice of Contest, at Respondents’ discretion. Further, due to the fraudulent nature of Claimant’s actions, such relief will, in fact, include retrospective relief for all benefits extended on Claimant’s behalf. The ALJ is unable at this time to conclude that the case law cited, supra, authorizes the award of attorney’s fees or costs.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Castrejon on MMI has been overcome. Claimant was at MMI for his back injury (only) when declared by his ATP.

2. Claimant obtained Workers Compensation benefits as a result of fraud.

3. Based upon said fraud, Respondents may withdraw all Admissions of Liability filed in this case, and replace with a Notice of Contest.

4. Claimant must repay all fraudulently obtained Workers Compensation benefits, including all TBI medical diagnosis and treatment, and TTD payments.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: July 30, 2021

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury arising out of and in the course of his employment for Employer on May 8, 2017.

II. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to reasonably necessary and causally-related medical benefits and temporary disability benefits.

III. Whether Respondents proved Claimant's claim is barred by the statute of limitations pursuant to C.R.S. 8-43-103(2).

IV. Whether Claimant proved Respondents are subject to a penalty for a willful violation of C.R.S. 8-43-103(1) for the Employer's alleged failure to report an injury to the Division.

FINDINGS OF FACT

1. Employer is in the cannabis industry. Claimant worked for Employer as an outside salesman. His primary job duty consisted of making sales calls. At the time of Claimant's hire and around the date of the [alleged] injury, Employer was in its beginning stages and in the process of formally opening its business. Claimant generally worked remotely. Greg M[Redacted] and Dennis M[Redacted] are owners of Employer.

2. Claimant has a history of pre-existing and ongoing back, neck and right arm complaints. On August 30-31, 2014, Claimant sought evaluation at Lake Norman Regional Medical Center and Novant Health Emergency Department with complaints of back, neck and right arm pain after throwing a Frisbee. Claimant reported that his right arm was numb three times/week. A CT scan of the cervical spine revealed a right foraminal disc protrusion at C6-7 and mild cervical spondylosis. Claimant was diagnosed with cervical radiculopathy.

3. Claimant notified Employer of his prior injury and condition.

4. Claimant alleges he sustained an industrial injury while lifting an industrial oven on May 8, 2017. Claimant testified that he, Greg M[Redacted], Matt O[Redacted] and Jordan S[Redacted] participated in carrying an oven up a staircase. Claimant testified that something slipped, causing the weight of the oven to come down on him. Claimant testified he felt a pop in his back and severe pain. He initially testified that the sensation

was “a little different” than his previous injury and that, at the time, he was unsure if he aggravated his prior injury or if he sustained a new injury. Claimant was able to finish assisting moving the oven. He testified he went back to his work station and attempted to continue working, but that he was in significant pain. Claimant testified he subsequently notified Greg M[Redacted] that he was in pain and needed to go home.

5. Greg M[Redacted] and Mr. S[Redacted] testified they did not recall any incident in which Claimant assisted in carrying an oven or any work incident in which Claimant was injured. Greg M[Redacted] testified that based on Claimant’s reports, he believed Claimant’s symptoms were a manifestation of his prior injury.

6. Claimant went home and emailed Bob T[Redacted]. Mr. T[Redacted] is responsible for human resources and payroll functions for Employer. On May 8, 2017, Claimant wrote to Mr. T[Redacted], “Greg mentioned you might know of a place that gives decent service for people without health insurance. I was waiting until commission started to sign up for the company insurance, but I re-injured it when we were moving the ovens and I’m in constant pain.” (Ex. A, p. 2). Mr. T[Redacted] responded to Claimant via email the same day stating, “Sorry to hear you re-injured your back. I don’t really know for sure. I have heard some people in the back have gone to Denver General. Dennis thought the Colorado’s CPIC program might be an option.” (Id.) Mr. T[Redacted] copied Greg M[Redacted] and Dennis M[Redacted], Owner, on the email.

7. On May 12, 2017, Dennis M[Redacted] emailed all employees of Employer, including Claimant, and copied Mr. T[Redacted]. Mr. M[Redacted] addressed the office setup. He also stated, “I know you have all been doing a lot of work that is physical in nature. I really don’t want any of you getting hurt, so if something is just too physical, then don’t do it. If we have to hire someone else temporarily to help, that is fine with me. Worker’s Comp claims can raise the premiums so I am serious about not getting hurt so be cautious.” (Exhibit C, p. 17).

8. On May 15, 2017, Claimant sent an email to Dennis M[Redacted] and Greg M[Redacted] stating,

> I’m still in pain with my neck, but it’s manageable if I avoid lifting super heavy objects. I’m still able to make sales calls without issue. This is pre-existing issue that I just aggravated when we moved that oven, so I would not file a worker’s comp claim. I’ve known I needed to have a minor neck surgery procedure to correct a pinched nerve, I was just waiting until I could afford it.
>
> (Exhibit C, pp.17-18.)

9. On June 2, 2017, Claimant presented to Douglas Wong, M.D. with neck pain and right arm tingling and numbness. Dr. Wong noted Claimant’s symptoms had been present since a traumatic incident in 2015. Claimant reported experiencing constant symptoms aggravated by driving and using the computer. Claimant reported having undergone a

cervical spine MRI and epidural steroid injection in September 2016. There is no reference in the medical record of mid to low back pain or findings, the May 8, 2017 incident, or any alleged work injury. Dr. Wong referred Claimant for a cervical spine MRI, which Claimant underwent the same day. The MRI report notes the indication for the cervical spine MRI as a whiplash injury of the neck and right arm pain. The MRI revealed degenerative diseases at C3-4, C4-5, C5-6 and C6-7 without herniated disc fragment; mild stenosis of the central canal at C4-5 and borderline stenosis at C5-5; and bilateral foraminal narrowing due to uncinate spurs at C3-4, C4-5 and C6-7.

10. On June 2, 2017, Claimant emailed Dennis and Greg M[Redacted] "I saw the Dr. Wong (*sic*) at Panorama this morning and am supposed to get a call about scheduling an MRI today or Monday, then back to Panorama to see what the best course of action is. I hopefully know something definitive next week. Thanks again for your understanding. I hope everyone has a good weekend." (Exhibit C, p.20).

11. Dr. Wong reexamined Claimant on June 6, 2017, noting the cervical MRI showed some foraminal narrowing at C4-5 and C6-7. He noted Claimant was reporting neck pain, and had severe neck pain in the past, along with some past swelling in his right elbow and symptoms in his right fingers. The medical record contains no reference to mid to low back complaints or findings, the May 8, 2017 incident, or any alleged work injury. Dr. Wong referred Claimant for an EMG of the right upper extremity.

12. On June 27, 2017, Claimant underwent an evaluation and EMG with Michael Horner, D.O. Claimant reported having cervical spine pain, numbness and weakness that began two years prior while playing Frisbee. Claimant reported that his symptoms occurred constantly and had worsened with sharp and aching pain located in the neck and right elbow into his hand. The medical record contains no reference to low back complaints or findings, the May 8, 2017 incident, or any alleged work injury. Dr. Horner noted the EMG conducted produced normal findings. He opined that Claimant's reported symptoms could not be clinically explained by the findings. He assessed Claimant with cervical spine pain, right arm numbness, and right medial epicondylitis.

13. Dr. Wong spoke to Claimant by telephone on July 11, 2017. He opined that neck surgery was not necessary and referred Claimant for physical therapy for his right elbow.

14. Claimant was not placed on any work restrictions.

15. Claimant initially testified he did not return to work for Employer after the May 8, 2017 incident. He testified he was unable to work at all after the incident because of his severe pain. He testified he was not performing any of his job duties because he was in a lot of pain and lying in bed for most of the day. He later testified that after the injury he did continue to work remotely as scheduled for Employer, sending some work emails, and that he continued to receive his salary as scheduled until resigning in August 2017.

16. Due to continued delays with the opening of Employer's business, Claimant was not yet earning commissions as anticipated in his sales position. Accordingly, in approximately July 2017, Claimant and Greg M[Redacted] agreed that Claimant would work reduced hours for Employer so he could supplement his income by driving for Uber. Claimant did not make any indication to Greg M[Redacted] that he was unable to perform his job duties for Employer. Claimant proceeded to work as a driver for Uber while continuing to work remotely for Employer.

17. Claimant resigned from his employment with Employer on August 3, 2017. On August 3, 2017, Greg M[Redacted] emailed Claimant asking if he was done working for Employer, as Claimant had not signed in remotely from work. Claimant replied via email stating that he was "worn out and broke." (Exhibit J, p. 37). He stated that his position and financial situation were a source of stress and that he needed to find a way to move out of his financial struggles and start paying his debt. Claimant stated that maybe an inside sales person would be a better fit for the company. Claimant did not make any reference to an alleged work injury, his physical condition, or any inability to perform the job.

18. In an August 23, 2017 email to Greg M[Redacted] and Dennis M[Redacted], Claimant again pointed to his financial struggles as his reason for resigning. Claimant wrote, "As you know, [Employer's] opening delays caused great hardship for me financially. It was not my choice to resign. I simply couldn't afford to continue waiting 'another month' after over a year of delays." (Exhibit J, p. 39). Claimant again made no mention of a work injury, his health, or any inability to perform the work.

19. Claimant testified he did not resign for the reasons stated in his emails. He testified that he did not want to resign from his employment with Employer, but did so because his pain had become so severe he could no longer perform his job duties and there were several days he could not get out of bed. He then testified that the real reason for his resignation was that he was "afraid" and because Employer owed him money.

20. Claimant testified that after resigning from Employer, he took a few weeks off from driving for Uber. He testified that his condition improved when he rested his right arm, but the pain returned with any repetitive motions or driving. Claimant testified he continued working, but frequently switched jobs due to his condition. He testified that, over time, the pain and numbness increased and became worse than with his previous injury. Claimant testified he experiences pain emanating from his back to his arm, weakness, as well as numbness and pain in his fingers and arm similar to the symptoms from his previous injury. Claimant attempted to get medical care through Medicaid, to no avail. Claimant testified that he does not believe any need for neck surgery is related to the alleged work injury. On cross-examination, Claimant testified that the work injury is a separate issue that resulted in symptoms lower down his back than his prior injury. Claimant testified that at the time of work incident he did not think he had injured himself that badly and it was not until later that the situation worsened.

21. The record reflects Claimant earned income from multiple employers after he voluntarily resigned from his employment with Employer. Claimant continued working for

Uber. Claimant also worked at dispensaries and hemp farms, as well as performing landscaping and other odd jobs. Claimant was employed at a hemp farm, Haleigh's Hope, from October 2017 through December 2017, when work was no longer available for Claimant. Between December 2017 and June 2018, Claimant worked at a dispensary. Claimant was rehired by Haleigh's Hope in June 2018 and worked there until July 2020, when he was terminated for reasons unrelated to his physical condition or ability to perform his job duties.

22. Subsequent to his termination from Haleigh's Hope in July 2020, Claimant performed jobs such as landscaping and grill repair. In August 2020, Claimant posted on Reddit that he had "plenty of hourly work" and was working 50-60 hours per week. Claimant testified he was working in a commercial nursey at the time and that he exaggerated the amount of hours he was working.

23. Jason Cranford, owner of Haleigh's Hope, testified at hearing that Claimant worked 30-40 hours per week for Haleigh's Hope in various positions, including hemp trimmer, farm manager and extraction machine runner. Mr. Cranford testified that all of these positions involved physical labor including planting, watering, putting up trellis, spraying pesticides, farm work, installing underground irrigation, and harvesting hemp. Mr. Cranford testified that Claimant was able to perform manual labor during his entire employment, and that Claimant never complained about a prior work injury. Mr. Cranford testified that he never observed Claimant appearing to be in pain, Claimant never complained to him about being in pain, and Claimant never requested help from other employees to perform his tasks.

24. Claimant alleges that his son assisted him in performing some of his job duties. Mr. Cranford testified that when Claimant and his son worked together at other facilities, they worked as a team and performed the same tasks.

25. On May 3, 2020, Claimant filed a claim for workers' compensation, citing May 8, 2017 as the date of injury. Regarding the delay in filing a claim, Claimant testified he was trying to make a decision about what to do because he was afraid filing a claim would affect his employment with Employer and that he would be fired by Employer. Claimant further testified he waited so long to file a claim because he was afraid it would create a bad reputation and affect future employment opportunities in his industry. He testified that as his condition worsened he "just simply assumed it had been too long" to file a claim. He subsequently went back through his emails and thought about everything more and decided to file a claim.
