An ALJ may choose from two different methods set forth in Section 8-42-102, C.R.S. to determine a claimant's average weekly wage (AWW). The first method, referred to as the " default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." Sec. 8-42-102(2), C.R.S. The default provision in Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993); *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7,* W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841

P.2d 335 (Colo.App.1992). Here, the parties failed to provide records concurrent to the date of the compensable injury of September 1, 2021. The last records in evidence show wages only through April 10, 2021. This ALJ is unable to calculate the average weekly wage in this matter.

ORDER

IT IS THEREFORE ORDERED:

1. Pursuant to the stipulation of the parties, regarding the hernia injury which is the subject of the W.C. No. 5-153-595 claim, the parties' stipulation is approved and entered as an order. If a Final Admission has not been filed since the date of the August 17, 2022 hearing, Respondents shall file an admission consistent with Dr. Anjmun Sharma's DIME report within ten (10) days of this order.

2. Claimant sustained a work related injury on September 1, 2021, the subject of W.C. No. 5-184-07, in the course and scope of his employment with Employer and this claim is compensable.

3. Respondents shall pay for all medical benefits in this matter that are reasonably necessary and related to the aggravation of the preexisting osteoarthritis and the meniscal injuries caused by the September 1, 2021 work related accident. Any medical costs associated with the claim are subject to the Colorado Workers' Compensation Medical Fee Schedule.

4. Respondents shall pay temporary disability benefits from September 2, 2021 until terminated by law. The parties shall exchange any wage records from any of Claimant's earnings from April 2021 to the present within 10 days of this order, in order to calculate average weekly wage and the lost wages. Should the parties be unable to reach a determination of average weekly wage or benefits from September 2, 2021 to the present the parties shall provide the wage information to this ALJ within thirty (30) days of this order and a supplemental order shall be issued.

5. Respondents' claim of termination for cause is denied and dismissed.

6. Respondents shall pay interests at the statutory rate of 8% per annum on all amounts not paid when due.

7. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 22nd day of September, 2022.

Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant proved by a preponderance of the evidence she is entitled to Temporary Total Disability (TTD) benefits from September 20, 2021 through September 22, 2021, October 2, 2021, and October 14, 2021 through April 20, 2022.

- Whether Claimant proved by a preponderance of the evidence Respondent is subject to penalties under §8-43-304(1), C.R.S. for a violation of W.C.R.P. 5-2(C).[1]

STIPULATIONS

At hearing the parties stipulated to an AWW of $685.58 with a corresponding TTD rate of $457.08.

FINDINGS OF FACT

1. Claimant has worked for Employer for approximately four years as a head baker.

2. Claimant's scheduled shift was from 12:30 a.m. to 8:30 a.m.; however, with agreement from management, she would often report to work between 6:30 p.m. or 7:30 p.m. and work six to eight hours to complete her shift.

3. Claimant was scheduled to begin a shift at 12:30 a.m. on Sunday, September 19, 2021. Claimant clocked in for this shift at 6:28 p.m. on Saturday, September 18, 2021.

4. Claimant sustained an admitted industrial injury at approximately 11:45 a.m. on September 18, 2021. Claimant felt pain in her left shoulder and neck area while transferring sheet pans. Claimant completed her shift and clocked out at 2:10 a.m. Upon finishing her shift, Claimant went home and iced her shoulder, took ibuprofen, and went to sleep. Claimant testified that her shoulder did not feel any better when she woke up on Sunday, September 19, 2021.

5. Claimant's next shift was scheduled to begin at 12:30 a.m. on Monday, September 20, 2021. Timecards show that, per her usual procedure, Claimant clocked in for her Monday, September 20, 2021 shift at 6:35 p.m. on Sunday, September 19, 2021. Upon arriving at work, Claimant reported her injury to HR[Redacted], Human Resources Assistant Store Manager. Claimant's timecards show that she worked 7.18 hours for her shift on Monday, September 20, 2021, leaving work at 2:16 a.m. on Tuesday, September 20, 2021.

[1] Based on evidence presented at hearing, Claimant withdrew her penalty claim under §8-43-304(1), C.R.S. for Respondent's failure to admit or deny liability under §8-43-203(2)(a), C.R.S.

6. On September 20, 2021, Claimant presented to authorized treating provider Monica Fanning Schubert, NP at the office of Bryan Alvarez, M.D. NP Schubert diagnosed Claimant with a left shoulder strain and placed Claimant on the following temporary restrictions from September 22, 2021 to October 7, 2021: lifting, repetitive lifting, and carrying limited to 5 lbs. and no overhearing reaching. NP Schubert removed Claimant from all work from September 20, 2021 to September 21, 2021.

7. Claimant testified at hearing that she was unable to perform her regular job duties with these restrictions.

8. Claimant's next shift was scheduled to begin at 12:30 a.m. on Tuesday, September 21, 2021. Claimant did not work her scheduled shift on September 21, 2021 due to being removed from work by NP Schubert for that date. Claimant also did not work her scheduled shift on Wednesday, September 22, 2021 due to her work injury.

9. Claimant began light duty work for her next scheduled shift on September 25, 2021. Claimant testified that she was unsure if she missed any time from work as a result of her shoulder injury from September 22, 2021 until she stopped working on the evening of October 12, 2021, for her shift on October 13, 2021. Claimant had no specific memory of whether she did or did not miss work on October 2, 2021. The bakery schedule shows that Claimant was scheduled to work on October 2, 2021. Claimant's timecards do not show any hours worked on October 2, 2021.[2]

10. Respondent filed a First Report of Injury with the DOWC on September 28, 2021.

11. On October 7, 2021, Dr. Alvarez imposed restrictions from October 7, 2021 to October 28, 2021 of lifting/carrying/pushing/pulling of 5 lbs. and no reaching overhead with the left upper extremity. Timecards show that Claimant was off work on October 8, but worked her shifts with those restrictions on October 9-12, 2021.

12. Upon completing her scheduled shift on October 13, 2021, Claimant testified that she informed Ms. HR[Redacted] and CG[Redacted], Store Manager, that she could not continue performing the modified duty work in the bakery. Claimant testified that she had begun experiencing problems with her right shoulder due to overcompensating for her injured left shoulder, and that her left upper extremity continued to be in pain. At that time, Ms. HR[Redacted] and Ms. CG[Redacted], discussed with Claimant finding lighter duty work options in other parts of the store. They informed Claimant that she could work sitting at a table at the front of the store asking customers if they were interested in completing an application for employment. Claimant testified she declined the verbal offer at that time due to concerns about increased exposure to COVID-19.

13. Claimant returned to Dr. Alvarez on October 28, 2021. At that time Dr. Alvarez gave Claimant a written release to work with restrictions from October 28, 2021 to November 18, 2021 on both the left and right upper extremities of no

[2] Based on the evidence presented at hearing Claimant is not requesting TTD for October 2, 2021.

lifting/carrying/pushing/pulling more than 5 lbs. and no reaching overhead.

14. Claimant testified that she could not perform her regular or modified work duties with those restrictions.

15. Dr. Alvarez continued the same bilateral restrictions on November 18, 2021, December 9, 2021, January 20, 2022, and February 10, 2022. On March 3, 2022, Dr. Alvarez increased the bilateral restrictions to 15 lbs. lifting/carrying/pushing/pulling and 1 lb. overhead reaching.

16. Respondent filed a General Admission of Liability on December 7, 2021.

17. Claimant underwent left shoulder surgery on April 21, 2022 and has received TTD benefits since such time.

18. On or around November 9, 2021, Claimant received a written offer of modified duty from Employer (dated October 29, 2021). The letter noted Claimant's restrictions of no lifting, carrying, pushing, or pulling over 5 lbs. and no overheard reaching. The offer was for the same position discussed with Claimant on October 13, 2021 - sitting at a table at the front of the store asking customers if they were interested in completing an application for employment.

19. Claimant declined the written offer of modified duty on November 16, 2021. Under "Reason" Claimant wrote: "Increased exposure to COVID-19; while numbers of infect are high in community, And [Employer] does not require customers or employees to wear masks in store." Claimant authored a separate letter on November 16, 2021 stating, in relevant part,

> I'm declining the light-duty (other than bakery) that you are now offering because I do not want to be placed in front of store where every customer and employee will be entering and exiting the store, putting myself at a higher risk of contracting COVID-19. As of right now cases of COVID-19 in our neighborhood area are at highest numbers since last December. [Employer] does not require customers or employees to wear a mask in store even though signage is posted.

(Cl. Ex. 5, p. 37).

Claimant further stated that she was requesting FMLA leave until January 1, 2022 so that she could heal and return to her position in the bakery.

20. Claimant testified that she received the written offer of modified duty five days prior to November 16, 2021. Claimant testified that she declined the written offer of modified duty because of increased exposure to COVID. Claimant testified that she lives with other family members including, at the time, a five-month old granddaughter and her father-in-law. Claimant testified that two other family members also worked outside of the

house. Claimant testified that, at the time, COVID numbers were high and she practiced masking at work but, despite a mask mandate, Employer did not enforce the mandate. Claimant further testified that she was hired to work in the bakery and was not hired by Employer to take applications. Claimant further testified that she was in constant pain and did not want to work outside of the bakery, moving from night shift to day shift. Claimant did not state she was physically unable to perform the modified duty or that there were any other circumstances precluding her from doing so.

21. Ms. HR[Redacted] testified at hearing on behalf of Respondent. Ms. HR[Redacted] testified that the modified duty position offered to Claimant involved sitting at a table at the front of the store taking employment applications for approximately eight hours a day during a day shift. Ms. HR[Redacted] testified that the modified position was within Claimant's work restrictions.

22. PA[Redacted] testified at hearing on behalf of Respondent. Ms. PA[Redacted] was the adjuster on Claimant's claim beginning September 2021. Ms. PA[Redacted] has approximately seven years of experience adjusting workers' compensation claims in Colorado. Ms. PA[Redacted] is aware that the Act and the Rules require a position statement to be filed with 20 days of a First Report of Injury.

23. On October 1, 2021, Ms. PA[Redacted] completed a Notice of Contest listing the DOWC as a recipient, and certified the filing and mailing of the document to the DOWC. At hearing, Ms. PA[Redacted] admitted that she did not file the Notice of Contest with DOWC. She testified that, on October 1, 2021, she input the workers' compensation number from the DOWC into Insurer's computer system and mailed the Notice of Contest to Claimant only without filing a copy of the document with the DOWC. She testified that she mistakenly failed to complete the form that gets filed with the DOWC because October 1, 2021 was one of her last days with Insurer before her employment ended. She testified that she was trying to get everything done with a caseload of over 100 cases, was in a hurry, and mistakenly forgot to file Insurer's position with the DOWC.

24. Claimant testified that she spoke to Ms. PA[Redacted], who told Claimant that the claim was under investigation and that Respondent could not provide additional medical treatment until the investigation was completed and Respondent received Dr. Burris's IME report. In addition, Claimant confirmed that she received the Notice of Contest mailed by Ms. PA[Redacted] on October 1, 2021. Claimant testified that Respondent's failure to timely file with the DOWC caused her stress and financial struggles.

25. Ms. PA[Redacted] acknowledged that Claimant was on work restrictions as of October 14, 2021, and those and restrictions increased as of October 28, 2021. Ms. PA[Redacted] admitted that she knew of the fact that Claimant was off work from October 14 and continuing. She further acknowledged that Claimant had not received the light duty job offer until at least October 29, 2021 (at the earliest).

26. Claimant remains employed by Employer but has not returned to work for Employer since October 14, 2021.

27. Claimant failed to prove it is more likely than not she is entitled to TTD benefits for September 20, 2021, as she did not sustain any lost time on that day.

28. Claimant proved it is more probable than not she is entitled to TTD benefits September 21-22, 2021 and October 14, 2021 to November 16, 2021.

29. Respondent proved it is more probable than not that Claimant refused a reasonable offer of modified employment, thus terminating her TTD benefits from November 17, 2021 to April 20, 2022.

30. Claimant proved by a preponderance of the evidence Respondent violated W.C.R.P. 5-2(C). Respondent failed to prove its conduct was objectively reasonable and is thus subject to penalties.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

<u>September 20-22, 2021</u>

As found, Claimant is not entitled to TTD benefits for September 20, 2021 as Claimant did not miss any time from work on that date. Claimant did miss work and sustain wage loss on September 21 and 22, 2021 as a result of her work injury. As of the date of hearing, Claimant has missed more than 14 days of work as a result of her work injury. The preponderant evidence establishes, and Respondent does not dispute, that Claimant is entitled to TTD benefits for September 21 and 22, 2021.

<u>October 14, 2021 through April 20, 2022</u>

Respondent argues that Claimant's wage loss from October 14, 2021 through April 20, 2022 was not caused by her industrial injury, but instead by Claimant declining an offer of modified duty.

The applicable law to establish entitlement to temporary disability benefits should not be conflated with the applicable law for termination of temporary disability benefits due to a refusal to begin an offer of modified employment. *In re Claim of Tapp*, W.C. No. 5-120-394-001 (ICAO, Mar. 8, 2021); *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 378 (Colo. App. 2016).

It is undisputed Claimant continued working in the bakery in a modified capacity until October 14, 2021 and was not receiving any temporary indemnity benefits. Claimant's refusal of an offer modified employment cannot be a basis for finding Claimant is not *entitled* to temporary indemnity benefits in the first instance. Accordingly, here, the ALJ must first address Claimant's initial entitlement to temporary indemnity benefits.

Claimant proved it is more probable than not she is entitled to TTD benefits from October 14, 2021 through November 16, 2021. Claimant left work and sustained actual wage loss during this time period due to a disability caused by the work injury. Claimant credibly testified that she was physically unable to continue performing the modified duty work available to her in the bakery due to pain in her left and right upper extremities. Soon thereafter Dr. Alvarez placed Claimant on restrictions for her bilateral upper extremities. As a result of the work injury, Claimant suffered medical incapacity and was unable to resume her prior work.

As Claimant proved her initial entitlement to TTD benefits and has been awarded TTD benefits pursuant to this order, the ALJ's second determination is whether Claimant's TTD benefits should be terminated due to a refusal of a modified job offer.

Section 8-42-105(3)(d)(I), C.R.S., authorizes the termination of TTD benefits when "the attending physician" gives the claimant a "written release to return to modified employment, such employment is offered in writing, and the employee fails to begin such employment." Where the employers seek to terminate benefits under this statute, they bear the burden of establishing the factual predicate for its application. *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008); *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P.3d 790 (Colo. App. 2000). It is a question of fact for the ALJ to decide whether a claimant has been released to return to work. *Archuletta v. Industrial Claim Appeals Office*, *supra*.

The term "modified employment" means employment within the restrictions established by the attending physician. *See Flores-Arteaga v. Apple Hills Orchard Juice Co.*, W.C. No. 3-101-024 (ICAO, Feb. 15, 1996). The offered modified employment must be reasonably available to the claimant under an objective standard. *Willhoit v. Maggie's Farm*, WC 5-054-125-01 at *4 (ICAO, July 26, 2018); *Ragan v. Temp Force*, W.C. No. 4-216-578 (ICAO, June 7, 1996). A claimant's rejection of offered modified employment does not constitute responsibility for termination. The ALJ should consider the consequences of the industrial injury, the financial hardship that would be imposed on the

claimant by accepting the modified employment and "[a]ny other reasons that would, in the opinion of the administrative law judge, make it impracticable for the claimant to accept the offer of modified employment." §8-42-105(4)(b)(II), C.R.S.

Claimant's attending physician, Dr. Alvarez, gave Claimant a written release to return to modified employment. Respondent made a written offer of modified duty to Claimant on or around November 9, 2021 which was compliant with the restrictions assigned by Dr. Alvarez on October 28, 2021. Claimant declined the offer of modified employment and did not begin such employment. Claimant does not allege, nor is there any evidence, that the modified duty position offered to Claimant did not comply with her restrictions. There is no evidence, nor does Claimant contend, that she declined the offer of modified duty due to a physical inability to perform the work. Claimant instead declined the offer of modified employment because she did not want to increase her exposure to COVID and because she wanted to continue working in the bakery on the night shift. While the offer of modified employment was not ideal for Claimant, the preponderant evidence establishes that the offer was objectively reasonable and reasonably available to Claimant.

The modified employment did not require Claimant to violate any of her medical restrictions. While not enforced by Employer, there was signage requiring customers and employees to wear masks in the store. Claimant testified that she took precautions of wearing her mask. Outside of a general concern of COVID exposure, Claimant offered no evidence indicating she has a particular medical condition or that she was otherwise immunocompromised such that contracting COVID would place her at a higher risk. Although Claimant noted concerns of potentially exposing other individuals in her household to COVID, Claimant acknowledged that two other members of her household also worked outside of the home and thus would have some exposure to COVID as well.

The record establishes that Claimant also declined the work offer because she did not want to work outside of the bakery department and did not want to work a day shift. Claimant testified that she was hired to work in the bakery department and was not hired to take applications. Employer was not required to offer Claimant modified work in the bakery department nor on the night shift. Importantly, there is no evidence Claimant was unable to work on the day shift or that there were particular circumstances precluding Claimant from doing so. *See, e.g., Simington v. Assured Transportation and Delivery*, W.C. No. 4-318-208 (March 19, 1998) (the claimant's refusal of an offer of modified duty was reasonable where the claimant had moved further from the employer's place of business due to a fire at the claimant's home, the effects of medication taken for the industrial injury prevented the claimant from driving to work, and the claimant lived in a remote area where other forms of transportation were not available).

Based on the totality of the circumstances, the offer of modified employment was objectively reasonable and reasonably available to Claimant. Notwithstanding Claimant's subjective concerns, the offer was one which Claimant could accept as a practical matter. As such, her refusal of the offer of modified employment provides a basis for termination of TTD from November 17, 2021 to April 20, 2022.

Penalties

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* WC 4-619-954 (ICAO, May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Industrial Claim Appeals* Office, 126 P.3d 323 (Colo. App. 2005); *Espinoza v. Baker Concrete Construction*, WC 5-066-313 (ICAO, Jan. 31, 2020). When determining the penalty the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc*., WC 4-981-806 (ICAO, July 1, 2019).

Claimant seeks penalties for Respondent's violation of W.C.R.P. 5-2(C). W.C.R.P. 5-2(C) provides that the insurer shall state whether liability is admitted or contested within 20 days after the date the employer's First Report of Injury is filed with the Division.

Respondent argues that W.C.R.P. 5-2(C) requires that the insurer only "state" whether liability is admitted or contested, not "file" a document with the DOWC. Respondent, therefore, contends that the Notice of Contest mailed to Claimant on October 1, 2021 complies with the requirement of W.C.R.P. 5-2(C). The ALJ disagrees.

Respondent does not cite any authority supporting its argument and its argument does not comport with the established methods by which an insurer states its position pursuant to W.C.R.P. 5-2(C). An insurer states a position either contesting or admitting liability by filing with the DOWC a Notice of Contest or General Admission of Liability. Respondent effectively argues that an insurer could simply state, by any method, its position without notifying the DOWC, which could not be the intention of the rule. Moreover, Ms. PA[Redacted], an experienced adjuster, testified to her understanding that the Act and the W.C.R.P. require a position statement to be filed with the DOWC within 20 days of a First Report of Injury. Additionally, the certificate of service on the Notice of Contest, prepared and signed by Ms. PA[Redacted], demonstrates that the Notice of Contest was required to be filed with the DOWC and that Ms. PA[Redacted] intended to do so.

Respondent's failure to file the Notice of Contest with the DOWC within 20 days of filing the First Report of Injury constitutes a violation of W.C.R.P. 5-2(C). As Claimant proved Insurer violated a rule of procedure, she has made a prima facie showing of unreasonable conduct. Accordingly, it is Respondent's burden to prove its conduct was reasonable.

Respondent failed to prove its conduct was objectively reasonable. Ms. PA[Redacted] was aware of the requirement under W.C.R.P. 5-2(C) and failed to comply. Ms. PA[Redacted] admitted that she mistakenly failed to file Insurer's position with the DOWC because she was in a hurry and was busy attempting to complete all of her work before transferring jobs.Insurer's conduct was within its control and was objectively unreasonable. As such, penalties are appropriate.

Respondent offered no evidence of its ability to pay any imposed penalties. There is no evidence indicating Respondent is unable to pay a penalty that is proportionate to its offense. Based on the degree of reprehensibility of Respondent's conduct, the harm suffered by Claimant, and penalties assessed in comparable cases, the ALJ concludes that a penalty of $50.00/day is appropriate. Respondent was in violation of W.C.R.P. 5-2(C) from October 12, 2021 until it filed the General Admission of Liability on December 7, 2021 (a period of 56 days). Accordingly, a total penalty of $2,800 shall be imposed.

ORDER

1. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits September 21-22, 2021 and October 14, 2021 to November 16, 2021. Respondent shall pay Claimant TTD benefits at the stipulated TTD rate.

2. Respondent proved by a preponderance of the evidence Claimant refused a reasonable offer of modified employment, terminating Claimant's TTD benefits from November 17, 2021 to April 20, 2022.

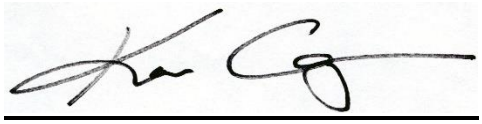
3. Respondent shall pay $2,800.00 in penalties its failure to timely state whether liability is admitted or contested pursuant to W.C.R.P. 5-2(C). 75% ($2,100.00) shall be paid to Claimant and 25% ($700.00) shall be paid to the Subsequent Injury Fund created in §8-46-101, C.R.S.

4. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 22, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues addressed in this order concerns the calculation of Claimant's average weekly wage (AWW). The specific question answered is:

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to an increase in his AWW from $460.62/week to $640.00/week.

FINDINGS OF FACT

Based upon the evidence presented, the ALJ enters the following findings of fact:

1. Employer operates as a staffing agency that matches workers with employers to fill job openings in the construction trades. Claimant was hired by Employer to work as a construction laborer for [Third party name redacted] in the area of erosion control.

2. Claimant testified that before being hired by [Employer Redacted], he had quit a job in erosion control with another company because he was not getting full time hours. He testified that after he quit his job, he sought work with [Third Party name Redacted] through [Employer redacted] because "Ms. A [Redacted]" assured him that he would get at "least get 40 hours of work and some overtime" with [Third Party name redacted]. Accordingly, Claimant testified that he applied for a position with [Employer redacted], was hired at $16.00/hour and placed with [Third Party Company redacted]. Claimant completed his "Employment Application Form" on January 20, 2022. (Clmt's. Ex. 5, p. 12). He indicated that he was available to start working January 29, 2022. (Resp. Ex. D, p. 7). Claimant agreed that he started working for [Third Party Company redacted] around January 29, 0222.

3. Claimant testified that he suffered a back injury on March 30, 2022, while digging a trench and moving dirt. (*See also*, Clmt's. Ex. 1, p. 2). Following this injury, Claimant completed a "Worker's Claim for Compensation form on March 31, 2022. *Id*. In his claim for compensation, Claimant declared an average weekly wage (AWW) of $720.00. *Id*. Although he was offered modified duty work, Claimant testified that his doctor would not approve the position. Consequently, Claimant testified that he has not worked since the date of his injury.

4. Respondents admitted liability for Claimant's injury as evidenced by a General Admission of Liability (GAL) filed on May 11, 2022. (Clmt's. Ex. 2, p. 4; Resp. Ex. A, p. 1). The May 11, 2022, GAL reflects that Claimant's wages were paid "from DOI (date of injury) through 4/24/2022." *Id*. As Claimant began to lose time from work beginning April 25, 2022, it was necessary for Respondents to calculate his AWW to

insure proper payment of temporary total disability (TTD) benefits.

5. Respondents calculated Claimant's AWW to equal $460.62. (Clmt's. Ex. 2, p. 4; Resp. Ex. A, p. 1). Respondents did not provide a basis for their calculation. Claimant contends that the admitted AWW is incorrect. He maintains that he had a reasonable expectation of getting at least 40 hours of work a week while working for [Third Party Company redacted] based upon his conversation with [Name Redacted, hereinafter Ms. A]. During cross-examination, Claimant suggested that he was not getting his anticipated full 40 hours of work due to weather, i.e. heavy snow/rain affecting the job site and the fact that he had no control over how his supervisor set his working hours.

6. Payroll records admitted into evidence begin with the pay period ending February 6, 2022 and run through the pay period ending April 24, 2022. (Resp. Ex. D, p. 18). As noted, Claimant testified that he has not worked since March 30, 2022. Accordingly, monies paid for the pay period ending April 3, 2022 through the period ending April 24, 2022 reflect the wage continuation referenced in the May 11, 2022 GAL rather than wages for hours worked. Counting the week for the pay period ending February 6, 2022 and including the remaining weeks extending through the period ending March 27, 2022, the last full week of work before Claimant was injured on March 30, 2022, represents a period of eight weeks. Claimant was paid a total of $3,428.00 over this period. *Id.* The payroll records also reflect that during this eight-week period, Claimant only worked a full 40-hour workweek once, i.e. for the pay period ending February 20, 2022. *Id.* Claimant also worked 5.50 hours of overtime for this same pay period. *Id.*

7. Claimant contends that the payroll records admitted into evidence are incorrect and do not accurately reflect the hours he worked. He testified that he worked overtime on at least two occasions whereas the payroll records indicate that he only worked overtime once before his injury. Claimant testified that although he expected he would get 40 hours per week, he did not call Ms. A [Redacted] to complain that his hours were short because he knew the weather was affecting his hours. He suggested that as the weather improved his hours would increase.

8. Ms. A [Redacted] testified as an Account Executive for Employer. She confirmed that Claimant was hired as a construction laborer at $16.00/hr. (*See also*, Resp. Ex. D, p. 12). Ms. A [Redacted] testified that while she anticipated that Claimant could work as many as 40 hours a week for [Third Party Company redacted], she made no promise or guarantee to Claimant that he would get 40 work hours per week plus overtime as he implied. She clarified during cross-examination that she told Claimant that he could work up to 40 hours, weather permitting.

9. Ms. A [Redacted] testified that the hours of [Employer redacted] employees placed with [Third Party Company redacted] vary from week to week. She testified that for the week of March 13, 2022, none of the [Employer redacted]'s employees placed with [Third Party Company redacted] worked a full 40 hours. (Resp.

Ex. D, p. 14). She also testified that out of nine employees placed with [Third Party Company redacted] on March 20, 2022; only four worked a full 40-hour workweek. (Resp. Ex. D, p. 15). For the week ending March 27, 2022, Ms. A [Redacted] testified that three out of sixteen employees placed with [Third Party Company redacted] worked 40 hours. (Resp. Ex. D, p. 16). Finally, the records reflect that Claimant worked 8 hours on March 29, 2022 and 5 hours March 30, 2022. He did not work March 31, 2022, April 1, 2022, or April 2, 2022. No employees placed with [Third Party Company redacted] worked Sunday, April 3, 2022. (Resp. Ex. D, p. 17).[1]

10. Ms. A [Redacted] testified that Employers payroll records cannot be tampered with in the system from which they are produced. She also confirmed that Claimant never called her to inform her that he was not getting his anticipated hours.

11. Ms. A [Redacted] confirmed that Claimant has not worked since March 30, 2022. She confirm that Employer paid Claimant at a rate of $16.00/hour for 40 hours or $640.00 for three weeks after his injury. She no explanation for why Claimant was being paid $640.00 a week for this period.

12. Based upon the evidence presented, the ALJ is not persuaded that Employer lead Claimant to believe that he would get 40 hours of work per week as a construction laborer at [Third Party Company redacted]. In this regard, the ALJ credits the testimony of Ms. A [Redacted] to find that no promises or guarantees of working 40 hours were extended to Claimant. Rather, the ALJ is convinced that Ms. A [Redacted] probably conveyed to Claimant that under [Third Party Company redacted] it was possible that he could work up to 40 hours per week. Nonetheless, the ALJ is convinced that weather probably altered the number of days and hours Claimant was able to work during the late winter and early spring months following his hire on January 22, 2022.[2] In fact, Ms. A [Redacted] seemingly acknowledged as much when she testified that Claimant could work as many as 40 hours per week, "weather permitting."[3]

13. As submitted the March 13, 2022, time sheet contained at Resp. Ex. D, p. 14 supports a finding that weather was likely affecting the entire crew's ability to work during the week of March 7-13, 2022. In fact, no employee worked every day this week, no employee worked 40 hours for the week and no one worked Thursday or Saturday. Moreover, only four of 16 employees worked on Monday and Friday of this week and only eight of 16 employees worked on Tuesday and Wednesday. (Resp. Ex. D, p. 14). While the March 20, 2022 and March 27, 2022 time sheets suggest that there was an improvement in the weather, based on the increased number of days the crew was working and the average number of hours for those employees, Respondents did not submit a time sheet for the week ending February 6, 2022 or

[1] Based upon the time sheets submitted, the ALJ finds to reasonable to conclude that [Third Party Company redacted] is closed on Sundays.
[2] As testified to by Ms. A [Redacted].
[3] Here, the wage records cover a period of typically unsettled weather in Colorado, namely February, March and April.

February 27, 2022. Thus, the number of days and the average number of hours each member of the crew was working is unknown. Nonetheless, it is known that Claimant only worked 18 hours for the week ending February 6, 2022 and 7.50 hours for the week ending February 27, 2022. Based on the information demonstrated by the March 13, 2022 time sheet, the ALJ finds it reasonable to infer that weather was probably affecting the number of hours Claimant was able to work for the weeks ending February 6, 2022 and February 27, 2022. (Resp. Ex. D, p. 18). Because the number of hours Claimant worked for the weeks ending February 6, 2022 and February 27, 2022, are conspicuously below his reported work hours for the balance of the reported period, the ALJ finds these hours to constitute an anomaly in his earnings. Because the earnings from these two weeks do not accurately and fairly represent Claimant's typical earnings, the ALJ finds that it would be manifestly unjust to calculate Claimant's AWW by including these reduced earnings in the overall computation of his AWW. Accordingly, the ALJ elects to exclude these two weeks of earnings, add the remaining earnings in the 8 week period and divide the total by six weeks to arrive at an AWW of $503.33 ($560.00 + $772.00 + $432.00 + $360.00 + $560.00 + $336.00 = $3,020.00 ÷ 6 weeks = $503.33). (Resp. Ex. D, p. 18).

14. Based upon the evidence presented, Claimant has proven that his AWW should be increased from $460.62 to $503.33 as the ALJ finds this figure most closely approximates Claimant's actual wage loss and diminished earning capacity at the time of his March 30, 2022 industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Average Weekly Wage

C. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993)[4]; *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo.App. 1997).

D. Sections 8-42-102(3) and (5) (b), C.R.S. (2013), give the ALJ discretion to calculate an AWW that will fairly reflect a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*; *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008). It is well settled that if the specified method of computing a claimant's AWW will not render a fair computation of wages for "any reason," the ALJ has discretionary authority under, § 8-42-102(3) C.R.S. 2020, to use an alternative method to determine AWW. *Campbell v. IBM Corp., supra*.

E. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity as of March 30, 2022 comes from the time sheets and wage records admitted into evidence. As found here, careful review of those materials persuades the ALJ that the computation of Claimant's AWW should not include the pay periods ending on February 6, 2022 and February 27, 2022. Here, the evidence presented supports a conclusion that the aforementioned pay periods represent an aberration in Claimant's proven earning capacity, probably due to factors beyond his control, specifically inclement weather and his supervisor's actions regarding the setting of Claimant's work hours. Indeed, the ALJ is convinced that but for the unsettled weather, Claimant likely would have worked the increased hours he testified he felt were coming as the weather improved. Accordingly, the ALJ concludes that it would be unjust to include Claimant's lowered earnings for the pay periods ending February 6, 2022 and February 27, 2022 as they were likely disproportionally affected by the weather at the time. Based upon the evidence presented, the ALJ agrees with Claimant that his AWW should be increased. While the ALJ is not convinced that Claimant is entitled to an increase to $640.00, the evidence supports and increase from $460.62 to $503.33, as this figure represents the fairest approximation of his wage loss and diminished earning capacity at the time of his March 30, 2022 industrial injury.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence, that he is entitled to an increase in his AWW from $460.62 to $503.33.

2. Respondents shall pay temporary total disability (TTD) benefits corresponding with an AWW of $503.33 for the time period reflected in the GAL filed May 11, 2022, i.e. from April 25, 2022 and ongoing until such time that the TTD

[4] The claimant in Campbell suffered three periods of temporary disability and for each subsequent period was earning a higher average weekly wage. The question resolved was whether Ms. Campbell was entitled to temporary disability benefits based on the higher AWW she was earning during each successive period of temporary disability. The Court held that it would be unjust to calculate her disability benefits in 1986 and 1989 on her substantially lower earnings she was making in 1979.

benefits can be terminated in accordance with the provisions of the Colorado Workers' Compensation Act.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that Q-SART and thermogram testing for CRPS is reasonable and necessary to cure or relieve the effects of Claimant's July 19, 2021 work injury.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on July 19, 2021, when he caught his left hand in a rope while performing his job duties and sustained a compression/crush injury to the left hand. Claimant's injury occurred when he wrapped a rope around his hand to pull a tarp off of a load of hay he was hauling on a truck.

RELEVANT PRIOR INJURIES AND CONDITIONS.

2. Claimant has a significant history of prior injuries to his left hand, including work injuries to the left hand in March 2012 and February 2017, which resulted in surgeries. Claimant was also diagnosed with a familial tremor of both hands in 1994. As a result of these prior conditions, Claimant had pre-existing diminished sensation in the ulnar distribution of his left hand, an essential tremor, and grip weakness.

3. Claimant's March 2012 work injury occurred when the ulnar aspect of Claimant's left hand was caught between two pipes, necessitating a skin graft and surgery. Claimant was evaluated for an impairment rating by Laura Caton, M.D., on March 28, 2013. Dr. Caton opined that Claimant's grip and motion had "fully recovered" and that he had occasional tingling in the left hand with barometric changes, and skin color changes in cold weather. Dr. Caton assigned an 18% left upper extremity permanent impairment rating and released Claimant from all work restrictions. Dr. Caton found Claimant had a 5% loss of range of motion at the left wrist, and loss of range of motion at the fingers, with the exception of the thumb. (Ex. 37).

4. In August 2012, Claimant was evaluated for possible complex regional pain syndrome (CRPS), through a thermogram, and bone scan, both of which were negative. It was determined Claimant did not have CRPS at that time. (Ex. K, L, M, N).

5. In May 2013, Claimant sustained a non-work-related injury when pulling a garden hose at his home. He experienced a pop in the ulnar wrist and lost sensation over the ulnar aspect of the left hand with swelling. (Ex. 36). No records of additional treatment for this injury were offered into evidence.

6. In February 2017, Claimant sustained an injury to his left thumb resulting in a fracture requiring ORIF surgery. (Ex. P, Q). As of April 2017, Claimant had limited range of motion in his left thumb, but had regained strength in the left hand. Claimant's provider, Malcolm Slaton, PA-C, indicated Claimant's left grip strength was close to his right-hand

grip strength. (Ex. P). On June 21, 2017, Claimant was evaluated by Robert Dupper, M.D., for an impairment rating. Dr. Dupper assigned a 26% left upper extremity impairment rating, which included 24% left thumb range of motion impairment, and complete loss of sensation of the left thumb. Dr. Dupper noted that Claimant had returned to work, and was working with pain and limitations of strength and sensation of the left hand. (Ex. P).

7. In May 2019, Claimant sustained another injury when he fell on his left wrist. Claimant had some tingling in his left arm, but reported that he believed it was due to his prior injuries. (Ex. L). During this timeframe, Claimant was also experiencing severe migraines which were associated with right-sided weakness and numbness. Due to the headaches, Claimant was off work for several months. (Ex. G, L).

8. In his dealings with health care providers related to the July 19, 2021 work injury, Claimant reported his prior injuries and hand conditions to his health care providers.

JULY 19, 2021 INJURY

9. Following his July 19, 2021 injury, Claimant was evaluated at Greeley Hospital, diagnosed with a hand contusion, and placed in a splint. On July 23, 2021, he was evaluated by authorized treating physician (ATP) Oscar Sanders, M.D., at UC Health. Claimant had pain in the thenar eminence and pain in the ulnar aspect of the left hand. Claimant reported tinging in the hand and grip weakness, which he characterized as chronic, but worsened since his injury. (Ex. 26).

10. After his initial evaluation, Dr. Sanders referred Claimant to Bret Peterson, M.D., a hand surgeon at Orthopaedic & Spine Center of the Rockies. Claimant first saw Dr. Peterson on August 5, 2021, and reported ulnar-sided pain and swelling, and noted that he had a pre-existing ulnar nerve injury with diminished sensation and weakness in his hand. Claimant also had pre-existing clawing of the left hand. Claimant's primary complaint at that time was pain in his radial hand and wrist pain. Dr. Peterson recommended an MRI arthrogram, which was negative for ligament tear. (Ex. Q).

11. On August 26, 2021, Claimant saw Dr. Peterson, reporting diminished sensation in the radial nerve distribution over the dorsum of the left hand. Dr. Peterson noted Claimant had baseline clawing of the left hand and a loss of intrinsic function. Dr. Peterson recommended Claimant undergo electrodiagnostic testing for new onset of radial sensory nerve dysfunction. (Ex. 31)

12. On September 29, 2021, Claimant saw Gregory Reichhardt, M.D., for electrodiagnostic testing, which was interpreted as showing chronic/old left ulnar neuropathy, but was otherwise negative. He noted Claimant had preexisting numbness, of the 4th and 5th digits. He also noted mild left-hand swelling and mottling of the skin, with no sweat or temperature changes noted. (Ex. D). Dr. Reichhardt opined that Claimant's symptoms extended "well beyond the distribution of any single nerve," that Claimant's findings were concerning for complex regional pain syndrome (CRPS). He indicated that Claimant met the "Budapest criteria" for CRPS, and referred Claimant for

the performance of Q-SART and thermogram[1] testing for further evaluation. Dr. Reichhardt submitted the request for Q-SART and thermogram testing to Insurer on October 5, 2021. (Ex. D).

13. The Colorado Medical Treatment Guidelines (MTG), for Complex Regional Pain Syndrome (CRPS), W.C.R.P. 17, Ex. 7, provide that patients who meet the "Budapest criteria," defined below, may begin initial treatment for CRPS. The MTG sets out the following criteria as:

- Continuing pain, which is disproportionate to any inciting event; and
- At least one symptom in 3 of the following 4 categories:
    - Sensory: reports of hyperesthesia and/or allodynia;
    - Vasomotor: reports of temperature asymmetry and/or skin color changes and/or skin color asymmetry;
    - Sudomotor/edema: reports of edema and/or sweating changes and/or sweating asymmetry;
    - Motor/trophic: reports of decreased range-of-motion and/or motor dysfunction (weakness, tremor, dystonia) and/or trophic changes (hair, nail, skin).
- At least one site at the time of evaluation in 2 or more of the following categories:
    - Sensory: evidence of hyperalgesia (to pinprick) and/or allodynia (to light touch and/or deep somatic pressure and/or joint movement);
    - Vasomotor: evidence of temperature asymmetry and/or skin color changes and/or asymmetry. Temperature asymmetry showing at least a 1°C difference between the affected and unaffected extremities;
    - Sudomotor/edema: evidence of edema and/or sweating changes and/or sweating asymmetry. Upper extremity volumetrics may be performed by therapist that have been trained in the technique to assess edema; or
    - Motor/trophic: evidence of decreased range-of-motion and/or motor dysfunction (weakness, tremor, dystonia) and/or trophic changes (hair, nail, skin).

- No other diagnosis that better explains the signs and symptoms. It is essential that other diagnoses which may require more urgent treatment, such as infection, allergy to implants, or other neurologic conditions, are diagnosed expediently before defaulting to CRPS.

14. On October 7, 2021, Insurer submitted Dr. Reichhardt's request for Q-SART and thermogram testing to Kathy McCranie, M.D., for review. Dr. McCranie opined that Claimant did not meet the Budapest criteria to begin diagnostic testing because Claimant's pre-existing conditions explained all of his symptoms, with the exception of swelling. Dr. McCranie opined that Claimant's preexisting tremor and weakness were "at

[1] Q-SART testing is an autonomic test measuring sweat, an a thermogram test measures temperature.

baseline," and Claimant had "baseline numbness from an ulnar neuropathy," previous loss of motion evidence by a prior impairment rating, and that his skin changes were explained by the prior ulnar skin graft. Dr. McCranie opined that the bulk of Claimant's findings were not related to his July 19, 2021 work injury. Dr. McCranie's opinion is not persuasive. (Ex. C).

15. On October 12, 2021, Claimant saw Dr. Peterson. Dr. Peterson acknowledged Claimant had a previous injury in 2012 resulting in permanent ulnar nerve dysfunction, and indicated Claimant had consistent pain out of proportion with neurologic involvement. Claimant reported pain in the proximal forearm, dorsal hand, and wrist. Claimant described splotchy colors, altered sweat patterns, and swelling in his left hand. He recommended Claimant undergo a thermogram. He also indicated it would be optimal to obtain a stellate ganglion block to gauge Claimant's response. Dr. Peterson also recommended a carpal tunnel release and radial neurolysis as treatment options. He noted that Claimant's symptoms would likely persist without intervention. (Ex. Q).

16. On October 20, 2021, Dr. Reichhardt responded to Dr. McCranie's opinion in his report from that date, indicating he disagreed with Dr. McCranie's opinion that Claimant's symptoms could not be considered part of Claimant's current Budapest criteria. Dr. Reichhardt opined that Claimant met the Budapest criteria, even accounting for Claimant's preexisting symptoms. Specifically, Dr. Reichhardt indicated that Claimant was reporting increased pain beyond his pre-July 19, 2021 baseline pain. Claimant's post-July 19, 2021 allodynia was on the radial side of the hand, rather than the ulnar side. Claimant's skin changes were also in a different location than his skin graft. He indicated that he did not consider Claimant's tremor as part of his Budapest criteria. Notwithstanding, he opined that Claimant, has subjective reports meeting three of four subjective criteria (allodynia on the radial aspect of the hand, color changes in the hand, edema in the left hand, and increased motor change compared to pre-injury). Objectively, he opined that Claimant met at least two criteria, including allodynia of the radial aspect of the hand, evidence of erythema and increased skin mottling. He noted that Claimant has evidence of mild edema of the left hand, meeting the sudomotor requirement, and significant weakness in the left hand and loss of range of motion. He opined that Claimant met the Budapest criteria even accounting for his prior injuries. (Ex. D).

17. On November 9, 2021, Claimant saw Dr. Peterson and his physician assistant, Jessica Ritengo, PA-C. Dr. Peterson indicated that Claimant "certainly falls into the CRPS spectrum." Claimant reported worsening numbness in his thumb, index and middle fingers beyond his baseline finger numbness. Claimant also reported splotchy colors and altered sweat patterns and swelling of the left hand, and provided video evidence of color change. On exam, Claimant had blotching to left hand to his skin color and tone, and loss of hair over the dorsum and knuckles of the left hand. Dr. Peterson's diagnosis was left upper extremity crush injury, preexisting ulnar nerve neuropathy and dysfunction from previous crush injury, probable CRPS/irritable carpal tunnel syndrome, and compressive radial neuropathy. (Ex. Q).

18. On November 16, 2021, Claimant was seen at the office of Timo Quickert, M.D., for evaluation for a stellate ganglion nerve block. Claimant reported excessive sweating

of the left hand, goosebumps to the left arm, temperature and color changes, and swelling. On examination, Claimant had tenderness with both light and moderate palpation of the left hand, the left hand was cooler than the right, and Claimant had increased erythema in the left hand and forearm, and slight swelling on the left. Dr. Quicker agreed with Dr. Reichhardt that Claimant demonstrated symptoms of CRPS, and recommended two stellate ganglion blocks one week apart, and that Claimant be evaluated by Dr. Reichhardt two hours after the procedure to determine effectiveness. (Ex. 35).

19. On December 3, 2021, Dr. Sanders opined that Claimant has CRPS and that more likely than not the CRPS is reasonably related to Claimant's July 19, 2021 work injury. (Ex. 19).

20. On January 7, 2022, Dr. Quickert performed a left stellate ganglion block without immediate complications. (Ex. B). Approximately two hours later, Claimant saw Dr. Sanders, noting increased pain, numbness, weakness, and tremors. Claimant had significant tachycardia. Dr. Sanders was concerned about Claimant's reaction to the injection and referred him to the UC Health emergency department for evaluation. (Ex. 17). At UCH, Claimant reported developing a left-sided migraine headache, and a left-sided facial droop, which Claimant reported was common with his migraine headaches. Later records from other providers describe Claimant's facial droop as right-sided.

21. On January 12, 2022, Claimant underwent an independent medical evaluation (IME) performed by Scott Primack, D.O., at Respondents' request. As relevant to the present issues in this case, Dr. Primack opined that Claimant does not have CRPS, based on his own examination and the fact that Claimant had no reported improvement or change in function following the stellate ganglion injection. He opined that an autonomic test battery or thermogram were not recommended based on Claimant's history, and examination. Dr. Primack also opined that Claimant was at maximum medical improvement (MMI). (Ex. A).

22. On January 21, 2022, Claimant underwent a neurologic evaluation with Ryan Barmore, M.D., to assess his hand tremor and right-sided facial droop. Claimant reported that since the stellate ganglion block, he had increased pain and weakness in his left arm with intermittent chills. Dr. Barmore noted that Claimant's facial droop was variable and not present when Claimant was distracted by conversation, and that Claimant's hand tremor was intermittent. He indicated that he suspected Claimant's facial droop was the result of a functional movement disorder, but could not rule out an underlying organic disorder related to his hand tremor. He diagnosed Claimant with functional neurological symptom disorder with abnormal movement, and tremor of both hands. (Ex. G).

23. Based on his reaction to the initial stellate ganglion block, Claimant declined to undergo a second block as initially recommended by Dr. Quickert. (Ex. E). Dr. Reichhardt opined that claimant's complication was not fully understood, which raised the risk of a second procedure, and that Claimant did not receive benefit from the first injection, calling into question whether a second injection would be of benefit. (Ex. D). He agreed with Claimant's decision not to undergo a second stellate ganglion block.

24. On February 4, 2022, Dr. Primack issued a second report in which he primarily addressed the reasonableness, necessity and relatedness of carpal tunnel and medial nerve compression surgeries proposed by Dr. Peterson. Dr. Primack opined that such surgeries would not be considered work-related or effective, and that Claimant's current symptoms were related to his pre-July 19, 2021 injuries. (Ex. B).

25. On March 1, 2022, Dr. Sanders indicated he continued to agree that Claimant should continue to be evaluated for CRPS, and that he considered Q-SART and thermogram testing to be reasonable. He indicated Claimant was not at maximum medical improvement because diagnostic testing had not been completed. Dr. Sanders felt a pain psychology evaluation was appropriate as well. (Ex. 14).

26. On March 17, 2022, Dr. Reichhardt noted in his examination report that he had reviewed Dr. Primack's opinion and continued to recommend Q-SART and thermogram testing. He again reiterated that Claimant met the Budapest criteria for CRPS, and that his presentation was made more complex by his pre-existing neurological injury, his functional neurologic disorder, and possible presence of a pain disorder. He acknowledged that although Q-SART and thermogram testing would not likely result in the performance of additional stellate ganglion blocks, or a spinal cord stimulator in the near future, he felt that establishing (or ruling out) CRPS as a diagnosis was reasonable. He indicated a bone scan would be a consideration with a positive Q-SART and/or thermogram. (Ex. 3)

27. On April 11, 2022, Dr. Sanders responded to a letter from Insurer that outlined Dr. Primack's opinion, and asked if Dr. Sanders agreed. In response, Dr. Sanders wrote:

> "[Claimant] has completed multiple evaluations with both Dr. Reichhardt and Dr. Peterson of orthopedic surgery. He has been previously noted to demonstrate signs and symptoms fulfilling the Budapest criteria, to include disproportionate pain/hypersensitivity, swelling, skin mottling, weakness and numbness. It has been noted that patient does have pre-existing ulnar nerve injury findings at baseline. His case has also been complicated by a potential functional neurologic disorder and pain disorder. However, his ongoing pain and dysfunction is a significant elevation from his preinjury baseline. To assist in providing diagnostic clarity, given the complexity of this case, I would strongly agree with proceeding with Q-SART and thermogram to assist in providing the most comprehensive and appropriate care for [Claimant], with the ultimate goal of returning him back to his preinjury baseline functioning and to work."

28. Respondents' presented Dr. Primack's testimony by deposition in lieu of live testimony. He was admitted as an expert in neurology, physiatry, physical medicine, and electrodiagnostic medicine without objection. Dr. Primack's testimony was consistent with his reports. Additionally, he testified, in his opinion, that Claimant's hand pain is the result of a wrist sprain and non-work-related functional neurologic disorder, rather than CRPS. He further testified that the fact that Claimant had a prior chronic nerve injury and a negative response to the stellate ganglion block was enough for him to determine that

Claimant does not need Q-SART or thermogram testing. He testified that if Claimant does not meet the Budapest criteria, Q-SART testing not appropriate, and that in his opinion, Claimant does not meet the Budapest criteria.

29. Dr. Primack testified that although he does not believe Claimant meets the Budapest criteria, if Claimant met the criteria, the results of a thermogram and Q-SART testing would tend to establish whether Claimant's condition was or was not work-related. Specifically, he testified as follows:

> Q: Have you had occasion before, though, when that argument also involves prior testing and prior evidence of all of that Budapest criteria?
>
> A: I'm not sure of your question, but it is not uncommon to see someone who has had a previous nerve injury and then there is another injury, and the concerns are, do they have CRPS? That is not uncommon.
>
> Q: Okay. In this case when we look at the argument about whether or not there is Budapest criteria, if there is Budapest criteria, let's say you are wrong and the other guys are right, if there is, is it probable that that is because of what occurred on July 19, 2021, or is it more probable that it was preexisting, given the testing and the prior medical records that you have?
>
> A: That is a great question. It depends upon the results of the thermogram and the Q-SART, meaning the thermogram, if the unmyelinated C fibers are only seen with the ulnar nerve, then that is CRPS type 2. That would not be a component of the work injury, if it is CRPS type 2 from an ulnar nerve problem because he has had ulnar nerve problems for a long time.
>
> If he has CRPS type 2 where the median nerve lights up, you can make a case that that would be work-related. If you have CRPS type 1, which means you don't have any nerve injury, then that would be considered work-related.
>
> Q: Okay. And you said that would require the median nerve to light up in this testing?
>
> A: It would have to be -- yeah. Well, what happens is, is that the data would look more towards, instead of a diffuse pattern, a specific pattern within a specific nerve dermatome.
>
> Q. Okay.

> A: That is what you would see on the thermogram and the autonomic test battery. So you would be sweating within those areas of the skin that specifically receive median nerve conduction or median nerve electrical input.
>
> Q. Okay. And given the MRI, because you said the MRI that was done, and the EMG that was done so far, do you anticipate that there would be median nerve involvement?
>
> A. No, I don't. But, you know, based upon your question, you know, there would be scenarios that you could analyze.

(Primack Deposition, p. 53, l. 6 - p. 55, l. 2).

30. Dr. Reichhardt testified at hearing and was admitted as an expert in physical medicine and rehabilitation and electrodiagnostic medicine. Dr. Reichhardt's testimony was consistent with his medical records. He testified that he has not diagnosed Claimant with CRPS, but that Q-SART and thermogram testing were reasonable and necessary tests to determine whether Claimant has CRPS. It is possible Claimant does not have CRPS. He testified Claimant's negative response to the stellate ganglion block was not definitive evidence that Claimant does not have CRPS. Dr. Reichhardt testified that Claimant met the Budapest criteria, at his first visit with Dr. Reichhardt, and that he satisfied more criteria as treatment progressed. Dr. Reichhardt opined Claimant ultimately met all objective Budapest criteria. Dr. Reichhardt testified that Claimant's condition could be treated without performance of the Q-SART and thermogram, but that testing will provide a proper diagnosis which will allow better clinical and treatment decisions.

31. At hearing, Claimant's testimony concerning his July 19, 2021 mechanism of injury, and his prior injuries was consistent with his reports of injuries documented in his medical records. Claimant testified before his July 19, 2021 injury, he had approximately 80% grip strength, and was able to perform his work duties. He had pain in the pinkie of his left hand, but had use of his left hand. He testified that he did not have swelling, hair loss or temperature changes in the left hand. He testified he would like to undergo Q-SART and thermogram testing if approved.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of

the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Specific Medical Benefits At Issue

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Diagnostic testing which is reasonable and necessary for treatment of a work-related injury is compensable. *Beede v. Allen Mitchek Feed and Grain*, W.C. No. 4-317-785 (ICAO Apr. 20, 2000). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that Q-SART and thermogram testing are reasonable and necessary to cure or relieve the effects of

Claimant's industrial injury. At issue is whether Claimant meets the appropriate criteria to undergo additional diagnostic testing to determine if Claimant's current condition constitutes CRPS. Claimant has not been definitively diagnosed with CRPS. Dr. Primack and Dr. McCranie have opined that Claimant does not meet the Budapest criteria, rendering Q-SART and thermogram testing unreasonable and/or unnecessary. Conversely, Claimant's treating providers, Dr. Reichhardt, Dr. Sanders, and Dr. Peterson believe Claimant meets these criteria. The ALJ finds the opinions of Dr. Reichhardt, Dr. Sanders, and Dr. Peterson to be more persuasive than those of Dr. Primack and Dr. McCranie, and that Claimant meets the Budapest criteria.

Throughout his treatment and evaluation with his treating health care providers, Claimant has consistently and forthrightly disclosed his prior injuries and conditions. As evidence by the medical records, Dr. Reichhardt, Dr. Sanders, and Dr. Peterson were aware of Claimant's pre-existing conditions, and considered these conditions when determining that Claimant meets the Budapest criteria. Although Claimant has significant pre-existing conditions, and has had multiple prior injuries to his left hand, he was tested for CRPS in 2013 and found not to have the condition.

Dr. Primack testified that although he does not believe Claimant meets the Budapest criteria, if Claimant meets those criteria, the results of a thermogram and Q-SART testing would tend to establish whether Claimant's condition was or was not work-related. Similarly, Dr. Reichhardt testified that performance of Q-SART and thermogram testing would assist in arriving at a definitive diagnosis, and would provide information that would assist in determining the appropriate treatment for Claimant's condition. Taken as a whole, the ALJ concludes that Claimant has established that it is more likely than not that he meets the Budapest criteria, and that Q-SART and thermogram testing is reasonable and necessary to cure or relieve the effects of his industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of Q-SART and thermogram testing is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 23, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable industrial injury on January 7, 2021.

II. Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical treatment.

III. Whether Claimant proved by a preponderance of the evidence he is entitled to temporary disability benefits.

IV. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Employer is a trucking company that transports trailers for FedEx. Owner is the sole operator of Employer.

2. Claimant began working for Employer as a team driver in February 2020. Claimant's job duties included transporting goods from Denver, Colorado to Omaha, Nebraska, hooking up trailers to trucks using dollies, and truck maintenance. Claimant testified that the dollies weighed approximately 400-600 pounds.

3. Claimant testified that, upon being hired by Employer, he met with Owner at Owner's office and completed paperwork. Claimant testified that one of the documents he completed was a waiver of workers' compensation. Claimant acknowledged that he did not reference any alleged waiver in his discovery responses and did not request a copy of the alleged waiver from Employer through discovery. Claimant did not offer the alleged waiver into evidence. Claimant testified that he mentioned the alleged waiver to his sister, but elected to sign it and start employment because of the pay and his understanding that Employer was a good company.

4. Claimant's older sister, J.V., testified at hearing that Claimant mentioned having signed a workers' compensation waiver sometime early on in his employment with Employer. Claimant lived with J.V. at the time. J.V. graduated law school and works as an auditor for Kaiser Permanente.

5. Owner testified at hearing that he never required Claimant to sign a waiver of workers' compensation. He testified that doing so would be unethical. Owner testified that Employer has dealt with work injuries of employees on prior occasions and had done so appropriately.

6. GL[Redacted] testified at hearing on behalf of Respondents. Mr. GL[Redacted] is Employer's PEO representative. He testified that he has previously handled workers' compensation claims for Employer and has no knowledge of Employer ever requiring an employee to sign a waiver of workers' compensation rights.

7. Claimant regularly worked with another team driver, RS[Redacted]. Claimant and Mr. RS[Redacted] took turns driving and sleeping. Claimant's shifts consisted of driving for 12 hours, being off for a few hours, then going back to work. This occurred approximately five days in a row until he was off for a few days.

8. Claimant testified that he talked to Mr. RS[Redacted] regarding workers compensation on approximately two or three occasions prior to his alleged injury. Claimant testified that Mr. RS[Redacted] informed him that if he was involved in a workers' compensation matter Owner would "f*ck" him. Claimant testified that Mr. RS[Redacted] also seemed to be "against" worker's compensation. Claimant testified that he was not aware of any employees that had work injuries.

9. Mr. RS[Redacted] testified at hearing that he never told Claimant Owner would "f*ck" him on a workers' compensation matter. He testified that he does not recall ever specifically talking with Claimant about workers' compensation. Mr. RS[Redacted] further testified that he was never forced to sign any waiver of workers' compensation, nor was he aware of any other employees that were required to do so.

10. Claimant alleges that he sustained an industrial injury while working for Employer at approximately 8:30 a.m. or 9:00 a.m. on January 7, 2021. Claimant testified that he was lifting a dolly to connect to trailers in the FedEx yard. Claimant testified that he bent down to lift the dolly, grabbed it, and lifted it with his arms and body. He testified that he then twisted his back to attach it the dolly to the cab and felt a pop in his lower back/buttocks area with a burning, tingling and numbness down his leg. There were no witnesses to the event. Claimant testified that, at the time, he believed he simply pulled a muscle and did not think much of it.

11. Claimant did not report the alleged injury to Owner, despite texting with Owner that same morning. Claimant testified he did not report the incident to Owner when it occurred because he did not think it was a serious injury and because he signed a waiver of workers' compensation. Claimant testified that he did not say anything about it to Mr. RS[Redacted] about the incident at the time because of Mr. RS[Redacted]'s alleged prior comment that Owner would "f*ck" him regarding workers' compensation matters.

12. Claimant worked full duty and completed the remainder of his shift on January 7, 2021, as well as his scheduled shifts on January 8 and January 9, 2021. Owner and Mr. RS[Redacted] testified that they did not notice any observable signs that Claimant was injured. Claimant was able to perform his regular job duties during this time.

13. Claimant testified he 'believed' he mentioned the incident to his sister the week of the incident. J.V. testified that, on or around January 10, 2021, Claimant informed her that he hurt his back moving a dolly at work.

14. Claimant took personal time from work January 10, 2021 to January 19, 2021 to travel to Wyoming to be with his father. Claimant testified that his leg symptoms were not as bad while he was in Wyoming because he was not sitting as much. Claimant testified that stretched and iced his lower back in an attempt to alleviate his symptoms.

15. Claimant worked full duty as scheduled from January 19 through January 23, 2021. Claimant testified that his pain worsened when he returned to work and that he was experiencing numbness and tingling. Owner and Mr. RS[Redacted] again testified that they did not notice any observable signs that Claimant was injured. Claimant was able to perform his regular job duties during this time. Claimant was scheduled off and did not work on January 24 and January 25, 2021.

16. J.V. testified that, between January 10 and January 26, 2021 Claimant was acting as if he were in pain. She testified she observed Claimant walking more slowly, and appearing to have a difficult time standing fully upright.

17. Claimant was scheduled to return to work on January 26, 2021. Claimant testified that he was in severe back pain when he woke up that morning. Claimant testified that he went out to his driveway, loaded his personal truck and began driving into work but was experiencing excruciating pain. Claimant testified that he did not feel he could safely drive in that condition. Claimant testified he drove back home, went into his house, sat on the couch, and contacted Owner. At 7:00 a.m. Claimant sent Owner a text message stating, "I'm debating on going to the ER, either tore my hamstring or it's sciatica." (R. Ex. J, p. 94). Both Claimant and Owner testified that they spoke via phone after that text message.

18. Claimant testified that he called Owner and told him "what was going on." Claimant did not specify what exactly he told Owner at that time. He acknowledged that he did not make any mention to Owner regarding the alleged January 7, 2021 incident or an injury at work.

19. Owner testified that, during the conversation on January 26, 2021, Claimant told him that he slipped and fell in his driveway while going to his personal vehicle. Owner testified that the weather conditions were snowy and icy on the morning of January 26, 2021. Owner testified that Claimant did not mention anything to him at the time regarding any alleged work injury.

20. Mr. RS[Redacted] testified that Claimant informed him that he slipped and fell next to his truck at home on January 26, 2021 and had to crawl back to the house.

21. Claimant testified that he did not fall on the morning of January 26, 2021 nor did he sustain any other trauma between January 11 and January 26, 2021. Claimant denies ever telling Owner or Mr. RS[Redacted] that he slipped and fell in his driveway on January

26, 2021. Claimant attributes the symptoms he experienced on January 26, 2021 to the alleged January 7, 2021 work injury.

22. J.V. testified that she recalled Claimant coming home in extreme pain on the morning of January 26, 2021. J.V. was just getting up when Claimant came back into the home. She testified that Claimant did not tell her he fell nor did she see him fall. J.V. did not see any bruising, scratches, tears in his clothing or dirt on Claimant's clothes that morning. J.V. testified that the ground was clear of snow that day.

23. Owner gave Claimant the day off on January 26, 2021. Claimant testified that the pain got so bad that he urinated himself and "blacked out" around 2:00 a.m. on January 27, 2021.

24. J.V. took Claimant to the emergency room at Lutheran Medical Center on the morning of January 27, 2021. Claimant testified that he does not have any recollection of that day, including the visit to the emergency room. Claimant testified he has no recollection of what he told the doctors at the emergency room. He testified that he did not recall anything until waking up at home on January 28, 2021.

25. J.V. testified that she was in the emergency room with Claimant and that he was having a hard time communicating with the hospital staff due to his pain. Despite this alleged difficulty communicating, J.V. testified that Claimant specifically told the nurses and doctors that he injured himself lifting a dolly on January 7, 2021.

26. The Lutheran Medical Center note from January 27, 2021 contains no reference to any incident on January 7th, any incident lifting a dolly, or any work incident. The note states that Claimant presented with

> [s]ymptoms since yesterday. [Claimant] felt feverish and sweaty yesterday. [Claimant] developed numbness to the left foot. He then developed pain from the foot all the way to the low back. It runs up the back of the leg. He denies a history of sciatica. No trauma. No IV drug use. No history of similar issues. He was incontinent of urine and felt he could not feel or hold his bladder last night. He has never had this issue. Symptoms are moderate and constant.

(R. Ex. E, p. 11).

27. The clinician noted a normal heart rate. Claimant was found to be alert and oriented with no acute distress. A lumbar MRI was performed, which revealed L4-L5 and L5-S1 stenosis due to congenitally short pedicles "confounded by [a] small disc herniation at L4-L5 and large [disc herniation] at L5-S1 with radiculopathy." (See Id. at p. 23). Claimant was provided pain medications and steroids and was referred for a neurosurgery consult.

28. Claimant saw neurologist Mark Magner, M.D. at 3:15 p.m. that same day. Dr. Magner noted an acute onset of symptoms on January 26, 2021, but also noted that Claimant had lower back pain for three days, and numbness, tingling and burning sensation in his left leg for a week. He documented that Claimant was calm, bright and alert. Dr. Magner diagnosed Claimant with spinal stenosis of the lumbar region with radiculopathy and lumbar disc herniation with radiculopathy. He remarked, "Given the hyper-acute timing and also he is not in extremis, we both agreed to try conservative measures." (Id.) Dr. Magner prescribed Claimant medication and referred him for physical therapy.

29. Claimant later called Owner January 27, 2021. Despite his initial testimony that his first recollection after he blacked out was on the morning of January 28, 2021, Claimant testified about this call, stating that he spoke with Owner to inquire about workers' compensation coverage and that Owner told him his injury would not be covered by worker's compensation because he went to the hospital from his house and not from work. Claimant testified that he did not recall telling Owner about the alleged January 7, 2021 work incident during this telephone call. He, nonetheless, testified that he recalled Owner telling him during this call that "You can't be lifting anymore dollies after this."

30. J.V. testified that she heard a telephone conversation on speakerphone between Claimant and Owner on January 27, 2021 in which Claimant "definitely" reported a work injury to Owner.

31. Owner testified that Claimant called him from Lutheran Medical Center on January 27, 2021 inquiring if his condition was work-related since he was heading to work when he fell. Owner informed Claimant that it was not work-related since his fall occurred at home. Owner testified that, at that time, Claimant never said anything to him about hurting himself while lifting a dolly or injuring himself at work.

32. Claimant subsequently sought treatment at Kaiser Permanente. Claimant presented to James Welle, M.D. on February 1, 2021 with complaints of radicular back pain. Dr. Welle noted "Patient reported symptoms restarting around his ed visit on 1/27/21. This is new for him. Withotu (*sic*) trauma." (R. Ex. F, p. 26). Although Claimant testified that he told Dr. Welle about his January 7, 2021 work injury at this appointment, the medical record from this date does not include any reference to a specific incident or any work incident. Dr. Welle diagnosed Claimant with a lumbar disc herniation and radiculopathy and chronic anxiety and referred Claimant for physical therapy.

33. A physical therapy note dated February 11, 2021 documents, "[Claimant] is a 32 year old male who presents with the complaint of: L LE pain starting on 1-27-2021 after walking and the L LE collapsed." (Id. at p. 31).

34. Dr. Welle reexamined Claimant on February 23, 2021. At this exam, Claimant reported that his injury occurred at work. Dr. Welle noted,

> First seen in ED, then referred to nsgy at SCL; Then came back in house; Was going to work; had symptoms of leg pain and numbness the week before; was pully (*sic*) dolly, felt pop in back, on older truck; has been sitting for 9 hours and thought that had pulled something; started having pain in the left leg; started stretching afterwards; then started noticing the burning back down the leg; the following week, started getting numbness from the foot; had time off; employed by [Employer] contacted (*sic*) to FedEx[.]"

(R. Ex. F, p. 37).

35. Claimant last saw Dr. Welle on February 23, 2021. On March 2, 2021, Dr. Welle issued a letter stating that, based on the description of events, his physical examination, and imaging studies, Claimant's disc herniation and resulting pain and disability resulted from his work duties.

36. Claimant continued at Kaiser Permanente for two chiropractic treatments on March 3 and March 8, 2021. During these appointments, Claimant continued his description of his injury occurring after lifting a dolly. However, he also stated they injury occurred approximately six weeks prior.

37. Owner testified that he spoke to Claimant on a daily basis after January 26, 2021 and, during that time, Claimant never changed his story to him that his injury occurred during a slip and fall in his driveway. Owner testified that approximately one month after January 26, 2021, Claimant and J.V. called him requesting workers' compensation paperwork.

38. Claimant and J.V. testified they requested workers' compensation paperwork from Owner on two or three occasions prior to being provided the paperwork.

39. Claimant filed a claim for worker's compensation on March 12, 2021 stating that he injured himself while hooking up a dolly on January 7, 2021.

40. Owner testified that his receipt of the claim for worker's compensation was the first time he was made aware Claimant was alleging a work injury occurred on January 7, 2021 lifting a dolly. Owner testified that, if Claimant would have reported a work incident to him, he would have completed an accident report and followed Employer's procedures.

41. Claimant subsequently selected Injury Care Associates as his authorized provider and presented to Martin Kalevik, D.O. on March 30, 2021 and April 6, 2021. Claimant reported that he felt a pop and burning sensation in his lower back while moving a dolly at work on January 7, 2021. Claimant denied having any falls or direct trauma. Dr. Kalevik assessed Claimant with lumbosacral radiculopathy and opined that Claimant sustained a work-related injury. He referred Claimant for physical therapy and an evaluation with Samuel Chan, M.D. Dr. Kalevik placed Claimant on work restrictions.

42. Dr. Chan evaluated Claimant on May 19, 2021. Claimant continued to report that he injured himself lifting a dolly on January 7, 2021 while at work. Dr. Chan requested authorization for steroid injections, which were denied due to Claimant's claim being contested.

43. Claimant treated by Thomas Robinson, PT on six occasions from April 22 to May 27, 2021. Claimant reported to PT Robinson that he injured his back lifting a dolly at work on January 7, 2021.

44. Dr. Kalevik changed medical offices and Claimant's care was transferred to Margaret Irish, D.O. Claimant first saw Dr. Irish on April 29, 2021. Claimant reported that he injured his back lifting a dolly on January 7, 2021. Dr. Irish found Claimant's lumbosacral radiculopathy work-related and continued his physical therapy and work restrictions. Dr. Irish's notes indicate that, at the time of treatment, she had emergency room records and the records of Dr. Magner.

45. On October 5, 2021, Dr. Irish issued a letter after reviewing additional records. Dr. Irish wrote that, at her May 20, 2021 visit, she did not have statements from Employer or medical records indicating Claimant had fallen at home on January 26, 2021, nor medical records from the neurosurgeon stating that there were congenital issues. Dr. Irish noted that, in reviewing those records, it appeared clear that Claimant had pre-existing lumbar spine degenerative/congenital changes. She opined that Claimant had a pre-existing back condition and that he fell outside while getting into his personal truck. She concluded that, while Claimant may have had a mild exacerbation of his low back pain from lifting a dolly on January 7, 2021, such exacerbation would have resolved in a few weeks. Dr. Irish opined that Claimant's back condition was not causally related to his employment.

46. Claimant did not return to work for Employer due to his back condition and restrictions. In November or December 2021 Claimant returned to work as a truck driver for a different employer. He sustained an injury in January 2022 to his back and subsequently quit employment as a truck driver.

47. Dr. Kalevik testified at hearing on behalf of Claimant. Dr. Kalevik is Level II accredited and board certified in family medicine. He testified that, based on Claimant's reported history, presentation, examination, and imaging, Claimant's injury is work-related. Dr. Kalevik testified that there are objective findings on MRI and examination of a lumbar disc herniation and radiculopathy. Dr. Kalevik explained that, while Claimant probably had pre-existing degenerative lumbar changes, an acute event had to occur in order to result in Claimant's disc extrusion and radiculitis. Dr. Kalevik testified that there was no evidence that Claimant underwent any treatment to his back prior to the alleged work injury. Dr. Kalevik testified that he did not review all of the Kaiser Permanente records but that he had seen employee statements regarding the relatedness of Claimant's alleged work injury. Dr. Kalevik explained that his opinion that Claimant sustained a January 7, 2021 work injury was based in part on Claimant's reported history. He acknowledged that the emergency room records from January 27, 2021 do not note a January 7th incident or work injury. Dr. Kalevik acknowledged that there was not an

objective way for him to tell whether Claimant was injured at work on January 7, 2021 or at home on January 26, 2021.

48. PT Robinson testified at hearing that Claimant's description of his injury to him seemed honest and was consistent with Claimant's symptoms. PT Robinson testified that he believes Claimant's injury is work-related. PT Robinson acknowledged that he is not Level II accredited or trained by the DOWC to make a causation opinion. He acknowledged that falls can cause disc herniations and there would very definitely be a severe onset of symptoms with a disc herniation.

49. Dr. Irish testified at hearing on behalf of Respondents as a Level II accredited expert in occupational medicine. Dr. Irish testified consistent with her October 5, 2021 letter and continued to opine that Claimant's condition is not work-related. She testified that Claimant did not mention any work injury on his initial evaluations. She explained that the medical records from that visit indicate that Claimant's blood pressure and pulse were not unusually high, and that his and exam was fairly unremarkable, contradicting Claimant's testimony that he was in so much pain at the time that he blacked out. Dr. Irish explained that Claimant has congenitally short pedicles which can compress the spinal cord and result in pain and sometimes numbness and tingling. She further explained that a disc herniation can be acute or chronic, and that lifting a dolly or falling can cause herniations.

50. Claimant testified that he did not have any back injuries or back problems prior to the work injury. Claimant alleges that Mr. RS[Redacted] "sucked up" to Owner. Claimant testified that Owner offered to pay for Mr. RS[Redacted]'s wife's plane ticket and their mortgage issues. Claimant further testified about an incident on August 21, 2021 when he accidently hit a FedEx trailer with his work truck and reported it to Owner. Claimant alleges that Owner did not report the incident to FedEx as required by Employer's contract with FedEx. Claimant acknowledged he has never reported a January 7, 2021 work injury to Owner, Mr. RS[Redacted] or anyone else at Employer. Claimant admitted he has several lawyers in his family, including his father, who owns a law firm that represents claimants in workers' compensation claims.

51. Owner testified that he did give Mr. RS[Redacted] a payday advance in the past and offered to help him in other ways like allowing him to stay at his home and buy a plane ticket. Owner attempted to assist his workers that needed assistance. Regarding the August 21, 2021 incident, Owner explained that he reported the incident to FedEx as required.

52. MC[Redacted] worked at FedEx at the time and testified at hearing that Owner did inform her of the August 21, 2021 incident, that she personally looked at the truck and determined there was not significant damage warranting filing of a written report. She testified that, although the written policy is to submit a written report, that sometimes does not occur due to being busy and understaffed. Ms. MC[Redacted] testified that there was no issue with how Owner handled the August 21, 2021 incident or with Owner failing to report incidents to FedEx as required.

53. Mr. RS[Redacted] confirmed that Owner has given him payday advances, which he paid back. He testified that he does not owe Employer any money and that he has no financial interest in testifying against Claimant.

54. The ALJ finds the testimony of Dr. Irish, Owner, Mr. RS[Redacted], Mr. L[Redacted] and Ms. MC[Redacted], as supported by the records, more credible and persuasive than the testimony of Claimant, J.V., and Dr. Kalevik.

55. The ALJ finds that Claimant failed to prove it is more probable than not he sustained a compensable work injury arising out of and in the scope of his employment for Employer on January 7, 2021.

56. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the

testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The medical records establish that Claimant suffered from small and large disc herniations with radiculopathy. While Claimant purports that he sustained a work injury on January 7, 2021, Respondents witnesses allege Claimant specifically told them his injury was the result of a slip and fall at home. There is a two-week time period from when Claimant alleges he injured his back at work to when he sought medical treatment and became disabled. Both Claimant's reported mechanism of injury and a slip and fall could

result in Claimant's condition and pathology. Accordingly, this case effectively turns on the credibility of the witnesses.

As found, Claimant and J.V. are less credible and persuasive than Respondents' witnesses. Claimant's testimony is refuted by the credible testimony of Owner and Mr. RS[Redacted]. Claimant purports that he signed a waiver of workers' compensation, which he did not refer to in discovery nor offer as evidence. Owner credibly testified that there was no such waiver. Mr. RS[Redacted] and Mr. GL[Redacted] credibly testified that they also were not aware of Employer having employees sign a waiver of workers' compensation. Claimant further testified that he was not aware of any other workers sustaining work injuries but contends that he and Mr. RS[Redacted] randomly discussed workers' compensation and that Mr. RS[Redacted] informed him that Owner would "f*ck him" on a workers' compensation claim. Mr. RS[Redacted] credibly testified he never made such statement to Claimant. Thus, these stated reasons for failing to report his alleged work injury to Employer are incredible.

While Claimant's sister, J.V., testified that Claimant appeared to be in pain from January 10, 2021 to January 26, 2021, Owner and Mr. RS[Redacted] credibly testified that they did not observe any issues with Claimant during that timeframe. Claimant was able to perform his regular work duties at that time. Claimant was not disabled nor did he seek any treatment until January 27, 2021. Claimant effectively alleges that, on January 26, 2021, his symptoms from the alleged January 7, 2021 work injury significantly worsened without any specific reason or trauma. He purports that he woke up in significant pain, attempted to go to work, and was unable to do so. Claimant's story is contradicted by the credible testimony of both Owner and Mr. RS[Redacted], who credibly testified that Claimant personally told them that he slipped and fell by his truck while at home on January 26, 2021. Claimant admitted that he did not report a January 7, 2021 work injury to Employer. Owner was unaware that Claimant was alleging a January 7, 2021 work incident until receiving workers' compensation paperwork from Claimant several months later. When Claimant inquired about workers' compensation coverage, it was with respect to whether his fall at home could be covered, not an alleged January 7, 2021 work injury.

Prior to February 11, 2021, the medical records are devoid of any mention of a work injury or work incident on January 7, 2021. While Claimant testified that he was in so much pain that he "blacked out" and did not remember anything from the emergency room visit on January 27 2021 until the next morning, the medical records from January 27, 2021 document that Claimant was alert and oriented. Dr. Irish credibly testified that certain normal exam findings contradicted Claimant's testimony that he was in so much pain at the time that he blacked out. Moreover, Claimant contradicted himself when he testified that he blacked out and did not remember anything until the morning of January 28, 2021, but then testified to remembering the specific telephone conversation he had with Owner on January 27, 2021 in which he inquired about workers' compensation and the Owner told him he could no longer lift dollies. Furthermore, Claimant's testimony that he was "blacked out" at the emergency room and J.V.'s testimony that Claimant was having difficulty communicating due to his pain does not comport with her testimony that Claimant specifically told multiple emergency room providers that he sustained an injury

on January 7, 2021 while lifting a dolly at work. J.V.'s testimony that Claimant "definitely" reported a January 7, 2021 work injury to Employer is controverted by Claimant's own testimony that he did not report such work injury to Employer.

Based on the totality of the evidence, it is more likely than not Claimant slipped and fell at home, causing his disability and need for medical treatment. The preponderant evidence does not establish that Claimant sustained an injury arising out of and during the course of his employment on January 7, 2021. The preponderant evidence does not establish that Claimant's condition, disability and need for medical treatment was caused, aggravated, accelerated, or exacerbated by a work injury. Accordingly, Claimant's claim shall be denied and the remaining issues are moot.

ORDER

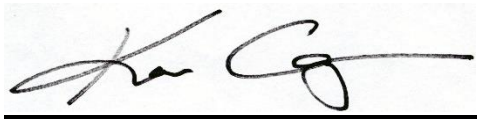
1. Claimant failed to prove it is more probable than not he sustained a compensable industrial injury arising out of and in the course of his employment on January 7, 2021.

2. Claimant's claim is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Douglas C. Scott, M.D. that he warranted a 0% whole person permanent impairment rating as a result of his December 8, 2020 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a firefighter who has worked for Employer since 1994. Claimant was diagnosed with renal cancer while treating for kidney stones in 2020. He reported his condition to Respondent on December 10, 2020.

2. At the time Claimant reported his diagnosis, he had already undergone surgical treatment for his renal cancer on December 8, 2020. The surgery was performed by Justin Green, M.D. and consisted of a right robotic assisted laparoscopic partial nephrectomy. The nephrectomy removed approximately 20% of Claimant's right kidney.

3. After reporting his cancer diagnosis to Employer, Claimant selected Alisa Koval, M.D. at Denver Health – Center for Occupational Health and Safety (COSH) as the Authorized Treating Physician (ATP). Claimant first visited Dr. Koval on December 18, 2020. Dr. Koval noted Claimant's recent surgery and that he was presenting to establish a Workers' Compensation claim. She determined Claimant had no residual symptoms and would likely soon be cleared to return to duty.

4. On January 8, 2021 Claimant returned to Dr. Koval for an examination. Dr. Koval stated "[Claimant] reports feeling well. He has recovered from his kidney procedure and has been cleared by his surgeon to resume activity. He may RTW for a trial of full duty at this time." On February 26, 2021 Dr. Koval placed Claimant at Maximum Medical Improvement (MMI) with no permanent impairment and no work restrictions. She recommended maintenance care in the form of follow-up with urology as needed.

5. Following an investigation and review of the relevant medical records, Respondent determined Claimant's renal cancer satisfied the criteria for the firefighter presumption under §8-41-209, C.R.S. On April 8, 2021 Respondent thus filed a General Admission of Liability (GAL). Respondent covered Claimant's lost work time from December 8, 2020 through January 7, 2021.

6. At the request of the claims adjuster, Claimant returned to Dr. Koval on December 10, 2021. The adjuster asked Dr. Koval to perform an impairment rating or clarify her position on impairment. Dr. Koval noted Claimant had no symptoms and was not clear on the purpose of the visit. In addressing impairment, Dr. Koval explained that "the upper urinary tract is graded by deterioration of renal function; his renal function is

nominal, and he does not meet criteria for the lowest class of impairment (Class I, pg. 20 I, AMA Guides 3rd Edition)."

7. On December 20, 2021 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Koval's MMI and impairment determinations. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

8. On March 11, 2022 Claimant underwent a DIME with Douglas C. Scott, M.D. After obtaining a detailed history and reviewing Claimant's medical records, Dr. Scott agreed that Claimant reached MMI on February 26, 2021 with a 0% whole person permanent impairment. In calculating the impairment, he reasoned:

> Using the AMA Guides to the Evaluation of Permanent Impairment, revised 3rd edition, and referencing Chapter 11 on The Urinary and Reproductive System, Section 11.1 on the upper urinary tract and referencing Table 1: Classes of upper Urinary Tract Impairment, page 201, [Claimant] has a Class 1 impairment of the whole person of 0% person, i.e. he has no diminution of upper urinary tract function or symptoms and signs of upper urinary tract dysfunction with no requirement of continuous treatment or surveillance. Therefore, [Claimant] has 0% whole person permanent impairment for his surgically removed renal cancer. Apportionment is not applicable.

Dr. Scott agreed with Dr. Koval that Claimant should undergo yearly follow-up care with his oncologist.

9. On March 17, 2022 Respondent filed an amended FAL consistent with Dr. Scott's MMI and impairment determinations. Claimant objected and sought a hearing to overcome the DIME opinion. He asserted he suffered permanent impairment as a result of the partial removal of his right kidney.

10. In support of his position, Claimant presented reports and testimony from Annyce S. Mayer, M.D. At hearing, Dr. Mayer testified as an expert in occupational medicine and as a Level II accredited physician. Dr. Mayer determined that Claimant sustained a 4% whole person impairment as a result of the nephrectomy. She specifically determined that her impairment consisted of a 2% whole person rating for partial removal of the kidney along with a 2% discretionary impairment due to the presence of cancer in the kidney under Section 11.1, Table 1, Class 1 (page 201) of the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)* (*AMA Guides*). Notably, Table 1, Class 1 permits up to a 10% discretionary whole person rating. The ratings combined to yield a total 4% whole person impairment.

11. In an April 21, 2022 letter, Dr. Mayer provided the following basis for her rating:

> The following calculation was made based on the operative and surgical reports and kidney dimensions in volunteers without known kidney disease (Emamian, 1993). The average length of the right kidney in males aged 30-

> 60 years was about 115 mm. The length of the right kidney for a person of his height of 186 cm was also about 115 mm. The surgical pathology specimen from [Claimant's] right kidney was 2.2 x 2.2 x 1.7 cm. This represents an approximately 19% loss of the right kidney. In my medical opinion, this is equal to 2% whole person impairment for loss of kidney structure, which along with consideration of that while continuous surveillance is not needed, periodic surveillance by his oncologist will be required on an ongoing basis. Considering all factors, I consider him to have a 4% whole person impairment of the Upper Urinary Tract.

12. Dr. Mayer testified at the hearing in this matter consistent with her written opinions. She addressed a sub-note to Table 1. The note reads "[t]he individual with a solitary kidney, regardless of cause, should be rated as having 10% impairment of the whole person. This value is to be combined with any other permanent impairment (including any impairment in the remaining kidney) pertinent to the case under consideration." Dr. Mayer then utilized Dr. Green's surgical report that noted the size of the specimen removed from Claimant measures 2.2 x 2.2 x 1.7 cm. Using a study on average kidney size, Dr. Mayer estimated the loss represented 20% of Claimant's right kidney. She reasoned that, if complete loss of a kidney, even without concurrent loss of renal function, is rated at 10% impairment of the whole person, then 20% loss of a kidney should be rated at 2% impairment of the whole person.

13. Dr. Mayer further explained that Claimant sustained a discretionary impairment under Section 11.1, Table 1, Class 1. Section 11.1, Table 1, Class 1 allows for up to 10% impairment of the whole person for either: (1) "Diminution of upper urinary tract function" that can be objectively measured; or (2) "Intermittent symptoms and signs of upper urinary tract dysfunction are present that do not require continuous treatment or surveillance." Dr. Mayer remarked that Claimant did not have measurable diminution of upper urinary tract function and thus did not qualify for impairment under the first category of Class 1. However, she further commented that Claimant exhibited signs of upper urinary tract dysfunction in the form of measurable kidney loss and required periodic monitoring for his kidney. Therefore, Claimant warranted a 2% discretionary whole person rating for impairment under the second category of Class 1.

14. Dr. Mayer concluded that, by combining the 2% rating from the sub-note to Table 1 and the 2% rating from Section 11.1, Table 1, Class 1 Claimant suffered a 4% whole person impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery. She reasoned that DIME Dr. Scott failed to properly apply the *AMA Guides*. Dr. Scott specifically did not consider Claimant's structural loss from his surgery for renal cancer and the required ongoing surveillance of his cancer by an oncologist. He also failed to take into account the loss Claimant sustained to his kidney structure that gave rise to his needed maintenance care due to the safety aspects of the loss of a portion of the kidney.

15. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott that he warranted a 0% whole person permanent impairment as a result of his December 8, 2020 admitted industrial injury. Dr. Scott's

DIME opinion is well-reasoned, based on a review of the records and an analysis of Claimant's symptoms, and relies on the proper portions of the *AMA Guides*. Dr. Scott correctly determined that Claimant has no diminution of upper urinary tract function and therefore does not qualify for a rating under the first portion of Section 11.1, Table 1, Class 1. He also noted Claimant has no symptoms of upper urinary tract dysfunction and does not qualify for a rating under the second portion of Section 11.1, Table 1, Class 1.

16. Dr. Scott's statement that Claimant "has a Class 1 impairment of the whole person of 0% person, i.e., he has no diminution of upper urinary tract function or symptoms and signs of upper urinary tract dysfunction with no requirement of continuous treatment or surveillance," is not a misstatement of fact. The statement is part of Dr. Scott's rationale for his impairment rating and is reasonably construed as reflecting that Claimant has no impairment under Section 11.1, Table 1, Class 1. Dr. Scott was merely quoting the relevant portion of the *AMA Guides* under which Claimant has no impairment. Furthermore, Dr. Scott's impairment rating is mirrored in rationale by the impairment rating of the ATP Dr. Koval. She noted that Claimant's renal function is nominal, and he does not meet criteria for the lowest class of impairment.

17. Dr. Scott's DIME opinion is not required to contain an analysis of every conceivable way Claimant could receive an impairment rating through a physician's exercise of discretion. His failure to address impairment under the provision that provides impairment for total loss of a kidney does not constitute error. He found Claimant had only a portion of his kidney removed. Under the plain language of the *AMA Guides* the removal of a portion of a kidney does not qualify for impairment. The section requires the total removal of a kidney. Dr. Scott therefore reasonably elected not to discuss why he did not exercise discretion to find impairment under an inapplicable portion of the *AMA Guides*.

18. In contrast to Dr. Scott's DIME opinion, Dr. Mayer determined that Claimant sustained a 4% whole person impairment as a result of the nephrectomy. She specifically determined that her impairment rating consisted of a 2% whole person impairment for partial removal of the kidney along with a 2% discretionary impairment due to the presence of cancer in the kidney under Section 11.1, Table 1, Class 1 (page 201) of the *AMA Guides*. Dr. Mayer concluded that, by combining the 2% rating from the sub-note to Table 1 and the 2% rating from Section 11.1, Table 1, Class 1 Claimant suffered a 4% whole person impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery. She reasoned that DIME Dr. Scott failed to properly apply the *AMA Guides*. Dr. Scott specifically did not consider Claimant's structural loss from his surgery for renal cancer and his required ongoing surveillance of his cancer by an oncologist. He also failed to take into account the loss Claimant sustained to his kidney structure that gave rise to required maintenance care due to safety concerns about the loss of a portion of the kidney.

19. Like Dr. Scott, Dr. Mayer also recognized that Claimant's renal function remains normal and he had no loss of function from the surgery. Signs, in the absence of symptoms, are inadequate to warrant an impairment rating under Section 11.1, Table 1, Class 1. Dr. Mayer also agreed that Claimant had no symptoms, but only signs, of upper urinary tract dysfunction. However, in the absence of both signs and symptoms of upper

urinary tract dysfunction, a rating under Table 1, Class 1 cannot be applied. Furthermore, Dr. Mayer incorrectly applied Table 1, Class 1 by testifying that a rating should be provided for periodic monitoring (as opposed to continuous monitoring), while Table 1, Class 1 actually reads that impairment "does not require continuous treatment or surveillance." Monitoring only becomes a factor in assigning a rating if the injured worker's impairment falls under Section 11.1, Table 1, Class 2 or higher.

20. Despite Dr. Mayer's opinion awarding a 2% whole person impairment for loss of a portion of the kidney, the *AMA Guides* note that an additional 10% whole person impairment is only for the "solitary kidney" i.e., total loss of a kidney. There is no mention in the *AMA Guides* of proportional impairment for partial loss of a kidney. The *AMA Guides* specify a detailed basis for impairment ratings, and frequently provide for impairments based on partial losses of body parts or function. However, where there is no discussion of proportionate impairment for partial losses, it is reasonable to read the *AMA Guides* as suggesting no impairment. The preceding interpretation is supported by the examples in Chapter 11 page 200. The examples show that in cases where there is partial loss of a kidney (Ex. 2 "marked diminution in size of one kidney" and Ex. 1 "contracted kidneys"), the corresponding impairment ratings lack a component for a proportionate amount of the 10% impairment for total loss of a kidney.

21. Finally, although Dr. Mayer relied on the discretion given to rating physicians to use the *AMA Guides* as a starting point for a final impairment rating, Drs. Scott and Koval also had the same discretion and declined to find impairment. Drs. Scott and Koval chose not to rate Claimant for a partial loss of the kidney without concurrent loss of renal function. Dr. Mayer's opinion to the contrary thus merely represents a difference of professional opinion and does not constitute clear and convincing evidence to overcome Dr. Scott's DIME opinion.

22. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott. Claimant has offered the opinion of Dr. Mayer with a different rationale for impairment. Dr. Mayer's reasoning represents an alternate application of the *AMA Guides* that is distinct from Dr. Scott's DIME opinion. To the extent Dr. Mayer's opinion is a plausible exercise of discretion by a rating physician, it constitutes a mere difference of opinion and does not reflect clear error on the part of Dr. Scott. The record reveals that Dr. Scott correctly determined that Claimant warranted a 0% whole person impairment rating. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Scott's determination that Claimant suffered a 0% permanent impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery is incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Indus. Claim Appeals Off.,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Indus. Claim Appeals Off.,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Indus. Claim Appeals Off.,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Indus. Claim Appeals Off.*, 487 P.3d 1007, 1012 (Colo. App. 2019). The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *See Eller v. Indus. Claim Appeals Off.*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590 (Colo. App. 1998). Consequently, when a party challenges a DIME physician's determination of MMI or impairment rating, the finding on

causation is also entitled to presumptive weight. *Egan v. Indus. Claim Appeals Off.*, 971 P.2d 664 (Colo. App. 1998).

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc.,* 961 P.2d at 592. In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. Section 11.1 of the *AMA Guides* addresses the upper urinary tract. The Section specifies the following:

> from a physiologic point of view, an individual with a solitary kidney may have no actual impairment of renal function; nevertheless, with that condition there exists an absence or loss of the normal safety factor that may be of potential significance in evaluating impairment, depending on the cause of the condition. The individual with a solitary kidney, regardless of cause, should be rated as having 10% impairment of the whole person because of a structural loss of an essential organ. This value is to be combined with any other permanent impairment, including any impairment in the remaining kidney, to determine the individual's impairment.

9. Section 11.1, Table 1, Class 1 delineates criteria for evaluating impairment of the upper urinary tract. Section 11.1, Class 1 notes, in relevant part:

> Class 1—Impairment of the Whole Person, 0-10%: A patient belongs in Class I when (a) diminution of upper urinary tract function is present, as evidenced by creatinine clearance of 75 to 90 liters/24 hr (52 to 62.5 ml/min) or PSP excretion of 15% to 20% in 15 minutes; or (b) intermittent symptoms and signs of upper urinary tract dysfunction are present that do not require continuous treatment or surveillance.

The sub-note to Table 1 specifically provides, in relevant part:

> The individual with a solitary kidney, regardless of cause, should be rated as having 10% impairment of the whole person. This value is to be combined with any other permanent impairment (including any impairment in the remaining kidney) pertinent to the case under consideration.

10. In challenging Dr. Scott's DIME opinion, Dr. Mayer relied on the Division of Workers' Compensation (DOWC) Desk Aid#11 Impairment Rating Tips. The Rating Tips provide, in relevant part:

> **Impairment rating for Workers Who Have Undergone an Invasive Treatment Procedure:** The rating physician should keep in mind the *AMA Guides, 3rd Edition (rev.)* definition for impairment: "The loss of, loss of use of, or derangement of any body part, system, or function." Given this definition, one may assume any patient who has undergone an invasive procedure that has permanently changed any body part has suffered a derangement. Therefore, the patient should be evaluated for an impairment by a Level II Accredited Physician. Although the rating provided may be zero percent, it is essential that the physician perform the necessary tests, as outlined in the *AMA Guides, 3rd Edition (rev.)* for the condition treated, in order to justify the zero percent rating.

11. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott that he warranted a 0% whole person permanent impairment as a result of his December 8, 2020 admitted industrial injury. Dr. Scott's DIME opinion is well-reasoned, based on a review of the records and an analysis of Claimant's symptoms, and relies on the proper portions of the *AMA Guides*. Dr. Scott correctly determined that Claimant has no diminution of upper urinary tract function and therefore does not qualify for a rating under the first portion of Section 11.1, Table 1, Class 1. He also noted Claimant has no symptoms of upper urinary tract dysfunction and does not qualify for a rating under the second portion of Section 11.1, Table 1, Class 1.

12. As found, Dr. Scott's statement that Claimant "has a Class 1 impairment of the whole person of 0% person, i.e., he has no diminution of upper urinary tract function or symptoms and signs of upper urinary tract dysfunction with no requirement of continuous treatment or surveillance," is not a misstatement of fact. The statement is part of Dr. Scott's rationale for his impairment rating and is reasonably construed as reflecting that Claimant has no impairment under Section 11.1, Table 1, Class 1. Dr. Scott was merely quoting the relevant portion of the *AMA Guides* under which Claimant has no impairment. Furthermore, Dr. Scott's impairment rating is mirrored in rationale by the impairment rating of the ATP Dr. Koval. She noted that Claimant's renal function is nominal, and he does not meet criteria for the lowest class of impairment.

13. As found, Dr. Scott's DIME opinion is not required to contain an analysis of every conceivable way Claimant could receive an impairment rating through a physician's exercise of discretion. His failure to address impairment under the provision that provides impairment for total loss of a kidney does not constitute error. He found Claimant had only a portion of his kidney removed. Under the plain language of the *AMA Guides* the removal of a portion of a kidney does not qualify for impairment. The section requires the total removal of a kidney. Dr. Scott therefore reasonably elected not to discuss why he did not exercise discretion to find impairment under an inapplicable portion of the *AMA Guides*.

14. As found, in contrast to Dr. Scott's DIME opinion, Dr. Mayer determined that Claimant sustained a 4% whole person impairment as a result of the nephrectomy. She

specifically determined that her impairment rating consisted of a 2% whole person impairment for partial removal of the kidney along with a 2% discretionary impairment due to the presence of cancer in the kidney under Section 11.1, Table 1, Class 1 (page 201) of the *AMA Guides*. Dr. Mayer concluded that, by combining the 2% rating from the sub-note to Table 1 and the 2% rating from Section 11.1, Table 1, Class 1 Claimant suffered a 4% whole person impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery. She reasoned that DIME Dr. Scott failed to properly apply the *AMA Guides*. Dr. Scott specifically did not consider Claimant's structural loss from his surgery for renal cancer and his required ongoing surveillance of his cancer by an oncologist. He also failed to take into account the loss Claimant sustained to his kidney structure that gave rise to required maintenance care due to safety concerns about the loss of a portion of the kidney.

15. As found, like Dr. Scott, Dr. Mayer also recognized that Claimant's renal function remains normal and he had no loss of function from the surgery. Signs, in the absence of symptoms, are inadequate to warrant an impairment rating under Section 11.1, Table 1, Class 1. Dr. Mayer also agreed that Claimant had no symptoms, but only signs, of upper urinary tract dysfunction. However, in the absence of both signs and symptoms of upper urinary tract dysfunction, a rating under Table 1, Class 1 cannot be applied. Furthermore, Dr. Mayer incorrectly applied Table 1, Class 1 by testifying that a rating should be provided for periodic monitoring (as opposed to continuous monitoring), while Table 1, Class 1 actually reads that impairment "does not require continuous treatment or surveillance." Monitoring only becomes a factor in assigning a rating if the injured worker's impairment falls under Section 11.1, Table 1, Class 2 or higher.

16. As found, despite Dr. Mayer's opinion awarding a 2% whole person impairment for loss of a portion of the kidney, the *AMA Guides* note that an additional 10% whole person impairment is only for the "solitary kidney" i.e., total loss of a kidney. There is no mention in the *AMA Guides* of proportional impairment for partial loss of a kidney. The *AMA Guides* specify a detailed basis for impairment ratings, and frequently provide for impairments based on partial losses of body parts or function. However, where there is no discussion of proportionate impairment for partial losses, it is reasonable to read the *AMA Guides* as suggesting no impairment. The preceding interpretation is supported by the examples in Chapter 11 page 200. The examples show that in cases where there is partial loss of a kidney (Ex. 2 "marked diminution in size of one kidney" and Ex. 1 "contracted kidneys"), the corresponding impairment ratings lack a component for a proportionate amount of the 10% impairment for total loss of a kidney.

17. As found, finally, although Dr. Mayer relied on the discretion given to rating physicians to use the *AMA Guides* as a starting point for a final impairment rating, Drs. Scott and Koval also had the same discretion and declined to find impairment. Drs. Scott and Koval chose not to rate Claimant for a partial loss of the kidney without concurrent loss of renal function. Dr. Mayer's opinion to the contrary thus merely represents a difference of professional opinion and does not constitute clear and convincing evidence to overcome Dr. Scott's DIME opinion.

18. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott. Claimant has offered the opinion of Dr. Mayer with a different rationale for impairment. Dr. Mayer's reasoning represents an alternate application of the *AMA Guides* that is distinct from Dr. Scott's DIME opinion. To the extent Dr. Mayer's opinion is a plausible exercise of discretion by a rating physician, it constitutes a mere difference of opinion and does not reflect clear error on the part of Dr. Scott. The record reveals that Dr. Scott correctly determined that Claimant warranted a 0% whole person impairment rating. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Scott's determination that Claimant suffered a 0% permanent impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery is incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a 0% whole person permanent impairment as a result of his December 8, 2020 admitted industrial injury and subsequent surgery.

2. Any other issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUE

1. Did Claimant establish by a preponderance of the evidence that the right wrist MRI requested by her authorized treating physician (ATP) is reasonable, necessary and related to her May 2, 2017 industrial injury?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 32 year-old right-handed female. On May 2, 2017, Claimant sustained an acute injury to the triangular fibrocartilage (TCFF) on the ulnar side of her right wrist in the course and scope of her employment.

2. On June 1, 2017, Claimant underwent a right wrist MRI. The report was read as showing severe extensor carpi ulnaris tendinopathy and tendinitis. The most significant pathology appeared at the ulna styloid going distally. (Ex. D, p. 19).

3. Claimant underwent a second right wrist MRI on September 29, 2017. The MRI was read as showing mild extensor carpi ulnaris tendinitis without tearing. (Ex. F, p. 114).

4. On December 6, 2017, John Safanda, M.D. performed a right wrist arthroscopy with debridement and partial excision of the TCFF. The indications for surgery included persistent and debilitating dorsal ulnar right wrist pain. (Ex. B, p. 8). Claimant initially did well postoperatively, but over the next couple of months she experienced a flare-up of pain with ongoing tenderness to palpation at the dorsal aspect of the distal ulna of the right wrist. (Ex. C, p. 11).

5. On September 21, 2018, Dr. Safanda opined that Claimant did not appear to be improving. He expressed reservations about additional surgery given her poor response to surgery. But at Claimant's request, Dr. Safanda referred her for a second opinion with a hand specialist. (Ex. C, p. 12).

6. Claimant began treating with Kai Mazur, M.D. in Santa Rosa, California where she lives. Dr. Mazur examined Claimant on October 3, 2019.[1] At that appointment, Claimant stated the popping and catching sensation in her wrist resolved following the December 6, 2017 surgery, but her dorsal wrist and hand pain persisted and slowly worsened. She described pain along the dorsal ulnar hand that worsened with activities requiring moving

[1] There is no evidence in the record regarding Claimant's treatment, if any, between September 21, 2018 and October 3, 2019.

the wrist. Dr. Mazur ordered another MRI to evaluate the extensor carpi ulnaris. (Ex. D, pp. 16-20).

7. Claimant had a third, right wrist MRI on November 26, 2019. The MRI was read as showing moderate extensor carpi ulnaris tendinosis without a focal tear. (Ex. F, p. 116).

8. Claimant continued to complain of pain in her right wrist. The pain over her dorsal wrist and hand persisted and worsened. The pain ran along the dorsal ulnar hand, and worsened with activities. (Ex. D, pp. 22-37).

9. On June 8, 2020, Dr. Mazur performed a right wrist arthroscopy with TFCC debridement and a right open extensor carpi ulnaris reconstruction. (Ex. D, pp. 38-39).

10. By October 13, 2020, Claimant reported her ulnar-sided pain was subsiding, but she was developing progressive radial wrist pain. Dr. Mazur diagnosed de Quervain's tenosynovitis, and noted that this pain was present previously, but it had worsened. (Ex. D, p. 48).

11. Dr. Mazur performed a right de Quervain's release on March 29, 2021, and Claimant did well following the surgery. (Ex. D, pp. 69-70).

12. On September 30, 2021, Dr. Mazur saw Claimant for a follow-up visit. Claimant complained of numbness surrounding the scar and radial wrist, which was present prior to surgery and had not resolved. Claimant indicated that wearing a watch was uncomfortable because of the pressure it applied to her wrist. On examination, Claimant's Finkelstein test was negative. Dr. Mazur noted Claimant had pain with wrist dorsiflexion and that the volar radiocarpal wrist joint was tender to palpation and there was pain with forced volar flexion. He suspected she had a small ganglion cyst that was not palpable nor visible, but caused pain with certain movement. (Ex. D, pp 79-81).

13. Dr. Mazur noted that Claimant's last MRI on November 26, 2019, nearly two years prior, did not show a ganglion cyst. Because Claimant's symptoms had persisted and slowly worsened, Dr. Mazur was concerned. He felt "[a] repeat MRI scan would be appropriate to rule out a ganglion cyst and guide further treatment." (Ex. D, pp. 80-81).

14. Dr. Mazur submitted a request for authorization on October 5, 2021. (Ex. D, p. 83). On October 7, 2021, Respondents denied Dr. Mazur's request for authorization for a repeat MRI because they deemed the request "incomplete." (Ex. 2, pp 31-32).

15. Claimant saw Dr. Mazur's physician assistant, Jennifer Henshaw-Lefever, two months later, on December 2, 2021. Claimant told Ms. Henshaw-Lefever that the request for the MRI had been denied, but the office did not have any documentation of this. According to the medical records, Claimant was still experiencing pain and it was localized to her radial wrist. Claimant reported swelling and a lump in the area she did not feel before. Claimant recently had foot surgery, and, at times, had to use crutches rather than her knee scooter, which increased her wrist pain. (Ex. D, p. 84).

16. On January 19, 2022, Claimant was treated by Dr. Mazur. He noted that her ulnar-sided pain had resolved, but the radial wrist pain had persisted and was not improving, despite a recent injection. Dr. Mazur diagnosed an occult ganglion cyst or possible flexor carpi radialis tendinosis, specifically noting that neither could be felt or seen. Dr. Mazur noted Claimant's symptoms had worsened and were "related to more weightbearing on the wrist while recovering from foot surgery". Dr. Mazur further noted, repetitive activities and forceful activities may force further fluid into the ganglion cyst which enlarges the cyst. (Ex. D., pp. 93-95).

17. Dr. Mazur submitted a follow up request for authorization for an MRI on January 14, 2022. (Ex. D, p. 101). On January 18, 2022, Respondents again denied the request for authorization on the basis it was deemed "incomplete." (Ex. 2, pp. 33-34).

18. Respondents retained John McBride, M.D., through Integrated Medical Evaluations, Inc. to review the records and provide an opinion. Dr. McBride completed a records review and issued his report on February 19, 2022. (Ex. H). Dr. McBride did not exam Claimant, nor did he speak with Dr. Mazur.

19. Dr. McBride opined that an MRI is a very sensitive test to detect a ganglion cyst, and none was identified on Claimant's May 29, 2019 MRI. He also noted that Claimant underwent foot surgery requiring her to use crutches, and she developed a new onset of volar radial wrist pain. He "agree[d] with Dr. Mazur that her new radial sided pain is more due to her weightbearing on her crutches while recovering from foot surgery." (Ex. H, p. 130).

20. Dr. McBride testified that the treatment of Claimant's work-related ulnar sided wrist pain has been completed, and Claimant's ulnar-sided wrist injury bears no relationship to, and did not cause, Claimant's current symptoms of radial volar wrist pain. Dr. McBride testified that, while the requested MRI is reasonable, the need for it is not related to the May 2, 2017, work injury.

21. The ALJ finds Dr. McBride's opinion credible, but not persuasive. As early as October 13, 2020, Claimant was developing progressive radial wrist pain. On January 19, 2022, Dr. Mazur noted the Claimant's radial pain had persisted. Dr. Mazur requested authorization for an MRI to rule out a ganglion cyst and to "guide further treatment" because of Claimant's continued pain. While Claimant's use of crutches in late 2021 worsened her pain, the ALJ finds that Claimant's radial sided wrist pain occurred prior to her use of crutches.

22. The ALJ finds Dr. Mazur's opinion regarding the need for an MRI credible and more persuasive. The ALJ finds that the repeat right wrist MRI, requested by Dr. Mazur, will help determine if Claimant's ongoing pain and numbness is related to this injury and her many surgeries, or some cause not related to the admitted claim. The MRI will be beneficial in setting the course of additional treatment, if any, for Claimant.

23. Based on the totality of the evidence, the ALJ finds that Claimant proved, by a preponderance of the evidence, that the repeat right wrist MRI is reasonable, necessary and related.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. ICAO*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Similarly, the question of whether

medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colo., Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

As found, Claimant complained of radial wrist pain as early as October 10, 2020. The right-wrist MRI will assist Claimant's ATP, Dr. Mazur, to determine if Claimant's ongoing pain is related to the admitted claim. The ALJ places greater weight on the ATP's request and explanation for the need for this diagnostic procedure than on the opinion of Dr. McBride. The MRI will be beneficial in setting the course of additional treatment, if any. As found, the right wrist MRI is reasonable, necessary and related.

ORDER

It is therefore ordered that:

1. Respondents shall provide the right wrist MRI for Claimant requested by the Dr. Mazur.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the repair of Claimant's right lateral epicondylitis requested by authorized treating provider ("ATP") Jason Rovak, M.D., is reasonable, necessary, and causally related treatment for Claimant's industrial injury.

II. Whether the Claimant proved by a preponderance of the evidence that the right shoulder arthroscopic extensive glenohumeral joint debridement, subacromial decompression, arthroscopic versus mini open rotator cuff repair, and possible long head bicep subpectoral tenodesis, requested by ATP Rudy Kovachevich, M.D., is reasonable, necessary and causally related treatment to Claimant's industrial injury.

STIPULATIONS

The parties stipulated at hearing that the radial tunnel surgery requested by Dr. Rovak is authorized and is reasonable, necessary and related to Claimant's work injury.

FINDINGS OF FACT

1. Claimant is a right-hand-dominant 55-year-old male who has worked for three years as a cement truck driver.

2. Claimant sustained an admitted industrial injury on May 19, 2021 when he was struck by the chute of a cement truck on the inside of his right forearm. Claimant testified that, upon being struck in the forearm, his arm was pushed down and backwards.

3. Claimant presented to Denver Health on May 24, 2021 with complaints of right forearm pain, bruising and swelling. Claimant reported that he was hit in his right forearm, causing his arm to push backwards. Claimant reported pain in the radial aspect of his wrist radiating up to his lateral forearm, lateral epicondyle and up to the biceps. Claimant further complained of numbness and tingling in his right hand and fingers. On examination, Lileya Sobechko, M.D. noted bruising and swelling over the anterior aspect of the forearm; swelling and bulging over the brachioradialis muscle; swelling, bulging and bruising over the distal bicep; and limited range of motion of the right elbow, forearm and right upper arm. Claimant was assessed with a right forearm contusion and right arm/forearm strain. Dr. Sobechko provided Claimant a sling and ordered an MRI for possible DBT rupture. She removed Claimant from work.

4. Claimant underwent an MRI of the right elbow on May 26, 2021 which revealed chronic appearing common extensor tendinosis with a moderate, high-grade, partial

thickness interstitial subacute tear with adjacent partial chronic tearing and scarring over the an 11 mm length; and adjacent partial chronic tearing and scarring involving the undersurface of the lateral ulnar collateral more than radial collateral ligaments.

5. Claimant underwent physical therapy and acupuncture treatment with no significant improvement. Claimant was subsequently referred to Jason Rovak, M.D. for an orthopedic evaluation.

6. Claimant first presented to Dr. Rovak on July 1, 2021. Claimant reported that his entire right extremity was pulled back during the work incident on May 19, 2021. Claimant described some burning discomfort on the posterior aspect of the forearm and occasional tingling in the fingers and some discomfort around the insertion of the deltoid. Dr. Rovak reviewed Claimant's occupational medical records and noted that an MRI showed biceps tendinosis without a tear, common extensor tendinosis as well as high-grade partial thickness tearing. Dr. Rovak concluded that, based on the contact site, Claimant certainly could have a bit of contusion around the radial tunnel. He remarked that epicondylitis or radial tunnel was "obviously" within the differential diagnosis given the MRI findings and site of contusion. (Cl. Ex. 7, p. 80). Dr. Rovak assessed with right arm pain and referred Claimant for a nerve conduction study.

7. On August 13, 2021, Claimant presented to Samuel L. Chan, M.D. for a consultation and EMG/nerve conduction study. Claimant reported diffuse pain over the extensor aspect of his right arm and numbness and tingling radiating into his 3rd and 4th digits on the dorsal aspect of his right upper extremity. Dr. Chan noted a normal examination of the bilateral shoulders. The EMG of the right upper extremity was normal. Dr. Chan opined that Claimant's clinical findings were most consistent with radial neuritis and a forearm contusion.

8. On September 8, 2021, Claimant saw Elizabeth Etsy, M.D. at Denver Health. On examination of the right shoulder, Dr. Etsy noted noted tenderness to palpation over distal right deltoid with pain with range of motion over the lateral deltoid. Dr. Etsy noted there was no evidence of rotator cuff dysfunction.

9. Claimant returned to Dr. Rovak on September 23, 2021. Claimant reported experiencing a burning discomfort from about the mid humerus level near the insertion of the deltoid down to the fingers. Dr. Rovak noted that Claimant's EMG was normal and that Claimant's MRI revealed biceps tendinosis as well as lateral epicondylitis findings. He opined that the site of pain reported on his examination was consistent with radial tunnel syndrome, which he noted "can go hand-in-hand with lateral epicondylitis, though it is not terribly common." (Cl. Ex. 7, p. 82). Dr. Rovak administered a steroid injection into Claimant's the radial tunnel for diagnostic and therapeutic purposes.

10. On October 7, 2021 Claimant saw Cynthia Kuehn, M.D. at Denver Health Claimant with complaints of sharp pain near his right shoulder.

11. On October 20, 2021, Dr. Etsy again examined Claimant's right shoulder and noted tenderness over the deltoid, painful range of motion, and diminished motor strength in the biceps and rotator cuff. Regarding Claimant's continued symptoms, Dr. Esty noted, "Consider contribution of initial R shoulder injury to the pt's current presentation. Will MRI shoulder to assess for rotator cuff pathology, given pt's pain and limited AROM on shoulder exam." (R. Ex. P, p. 77).

12. At a follow-up evaluation with Dr. Rovak on October 21, 2021, Claimant reported that the steroid injection helped. Dr. Rovak administered a second steroid injection to the radial tunnel, which did not provide any long-term benefits.

13. Claimant underwent an MRI of the right shoulder on October 22, 2021 which revealed: (1) intermediate and near full-thickness tearing of the supraspinatus; (2) mild tendinosis of the infraspinatus, supscapularis, and long head of the biceps; and (3) moderate acromioclavicular degenerative joint disease.

14. On November 11, 2021 Dr. Chan noted examination of Claimant's bilateral shoulders was normal.

15. On November 18, 2021 Dr. Rovak reviewed Claimant's shoulder MRI and referred Claimant to Rudy Kovachevich, M.D. for a shoulder evaluation.

16. Claimant presented to Dr. Kovachevich on December 2, 2021. He reported a sudden onset of right shoulder pain occurring 6 months prior and that the symptoms had been moderate and fluctuating and were exacerbated by motion at the shoulder and relieved by restricted activity. Dr. Kovachevich noted,

> …[the chute] came down forcefully and hit his forearm and forced his shoulder back aggressively. He had immediate pain in his forearm and subsequent swelling and bruising as well as pain in the shoulder. He was seen initially and the focus was on the forearm but during some of his therapy, he continued to have significant pain in the shoulder that persisted and would not improve.

(Cl. Ex. 8, p. 93).

17. Claimant reported that his pain was mainly on the anterior lateral aspect of the shoulder. On examination of the right shoulder, Dr. Kovachevich noted that rotator cuff musculature was weak and painful against resistance. He further noted decreased range of motion, moderate pain on provocative maneuvers with Neer and Hawkins impingement signs, moderate cross body adduction testing, minimal tenderness of the AC joint, moderate pain and speeds and O'brien testing, and mild to moderate tenderness over the anterior long head biceps tendon. Dr. Kovachevich noted that he had a lengthy discussion with Claimant over the nature of Claimant's traumatic right shoulder injury and persistent shoulder pain. He noted that Claimant "clinically and radiographically has evidence of a large near full-thickness supraspinatus rotator cuff tear as well as diffuse rotator cuff

tendinopathy, bursitis and long head bicep tendon." (Id.). Dr. Kovachevich concluded that further conservative care would not be beneficial or warranted and recommended that Claimant proceed with surgical invention consisting of arthroscopic extensive glenohumeral joint debridement, subacromial decompression, arthroscopic versus mini open rotator cuff repair, and possible long head biceps subpectoral tenodesis.

18. On December 6, 2021, Dr. Kovachevich submitted a request for authorization of right shoulder surgery, which was denied by Respondents.

19. Claimant returned to Dr. Rovak on December 9, 2021. Dr. Rovak opined that Claimant failed conservative management for the elbow and forearm. He recommended that Claimant undergo a lateral epicondyle debridement and radial tunnel release. Dr. Rovak further recommended that they try to do the surgery at the same time as Claimant's shoulder surgery to avoid multiple operative settings and recoveries.

20. Claimant saw Jennifer Pula, M.D. at Denver Health on December 16, 2021. Dr. Pula noted that Claimant had reported right shoulder pain since his initial injury. On examination of right shoulder, Dr. Pula noted tenderness to palpation on the superior right shoulder, with no tenderness to the AC joint or lateral acromion.

21. On December 23, 2021 Dr. Rovak submitted for authorization of a right lateral epicondyle debridement and radial tunnel release.

22. On December 30, 2021 Jonathan L. Sollender, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Sollender did not offer any opinion on Claimant's right shoulder as it was outside of his specialty. Dr. Sollender opined that Claimant has radial tunnel syndrome. He noted that there were radiographic findings of right lateral epicondylitis but very little clinical evidence in support of lateral epicondylitis. He noted that his examination of Claimant was inconsistent with the MRI findings of right lateral epicondylar pathology. Based on the lack of clinical findings and the chronic appearance of the tissues of the lateral epicondyle on his MRI imaging, Dr. Sollender opined that Claimant's right lateral epicondylitis was present prior to the May 19, 2021 work injury. Dr. Sollender noted that Claimant did not report being struck at the lateral right elbow, but instead was struck over the extensor surface of the right forearm. He opined that the only area of injury from the May 19, 2021 work injury is the right radial tunnel region. Dr. Sollender opined that a right radial tunnel release was a reasonable approach to treat Claimant's condition.

23. Claimant attended a follow-up evaluation with Dr. Chan on January 27, 2022. Dr. Chan noted that Drs. Rovak and Kovachevich recommended surgical intervention. Dr. Chan reviewed Dr. Sollender's IME report, noting Dr. Sollender's determination that Claimant did not have any objective findings of lateral epicondylitis but findings suggesting radial neuropathy. As such, Dr. Chan opined that the radial tunnel release would be considered appropriate. He further opined that it would be reasonable for Claimant to be evaluated by Dr. Kovachevich as well as Dr. Rovak to review Claimant's current symptoms as well as proposed surgical intervention.

24. At the request of Respondents, Mark Failinger, M.D. performed an IME on March 4, 2022 to address Claimant's right shoulder. Claimant reported that his right arm was pushed down and backwards during the work incident and that he experienced immediate pain in his right arm from the shoulder to the fingers. Claimant further reported having ongoing right shoulder pain with physical therapy. Dr. Failinger concluded that it was not medically probable that the reported mechanism of injury created tearing in Claimant's rotator cuff. He explained that, unless the movement was of severe magnitude torqueing the shoulder significantly beyond its normal range of motion, forcing the arm into some extension could not have created a rotator cuff tear. He further noted that there was no specific mention of shoulder pain in Claimant's initial medical visits nor in the physical therapy notes. Dr. Failinger opined that there was not reasonable temporal or timely reporting of shoulder symptoms.

25. Dr. Failinger testified consistent with his IME report at a post-hearing deposition. Dr. Failinger testified as a Level II accredited expert in orthopedic surgery and sports medicine. Dr. Failinger stated that there was a brief mention of shoulder symptoms in a physical therapy report from June 2021, but no mention of any significant shoulder symptoms or dysfunction until around October 7, 2021. He testified that it is highly improbable Claimant injured his shoulder on May 19, 2021 when there was no mention of the shoulder being the source of Claimant's pain until October 2021. Dr. Failinger explained that Claimant's right arm would have had to be severely pushed back to cause a rotator cuff tear, with force pushing the arm out behind and almost perpendicular to the body. He further testified that if Claimant did sustain a tear in his shoulder on May 19, 2021, there likely would have been high levels of shoulder pain complaints at that time. Dr. Failinger opined that Claimant has some preexisting degenerative tearing in his shoulder.

26. Claimant credibly testified at hearing that he had no limitations or symptoms in his right forearm or right shoulder prior to his admitted industrial injury of May 19, 2021. No evidence was offered indicating Claimant had prior symptoms or limitations or received prior treatment to the right forearm or shoulder. Claimant testified that, prior to the work injury, he had never been advised by any physician that he had a rotator cuff tear. He stated that he felt pressure at his right shoulder when the chute pushed his arm back and down. He testified that on the date of the work injury his forearm was in severe pain. Claimant further testified that he had some pain up through his arm into the shoulder and upon removing the sling he and participating in physical therapy he experienced continued right shoulder pain. Claimant testified that he continues to have burning numbness down from his elbow into his hand and into his middle and index ring fingers.

27. The ALJ finds the opinions of Drs. Rovak, Kovachevich and Etsy, as supported by Claimant's credible testimony and the medical records, more credible and persuasive than the opinions and testimony of Drs. Sollender and Failinger.

28. Claimant proved it is more probable than not the lateral epicondyle and right shoulder surgeries recommended by Drs. Rovak and Kovachevich are causally related to the work injury and reasonably necessary to cure and relieve its effects.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Claimant proved it is more probable than not the right lateral epicondyle debridement recommended by Dr. Rovak is reasonable, necessary and causally related to Claimant's work injury. Both Dr. Rovak and RIME physician Dr. Sollender opine that there is radiological evidence of lateral epicondylitis; however, Dr. Sollender concluded that the condition was pre-existing, asymptomatic and was not aggravated, accelerated or exacerbated by the work injury. Claimant credibly testified, and there is no evidence to the contrary, that he did not have any symptoms or limitations in his right forearm prior to the work injury. Subsequent to the work injury, Claimant has continued to experience symptoms and limitations in his right forearm into his hand. Dr. Rovak, who is familiar with Claimant's mechanism of injury and presentation, explained that lateral epicondylitis can go hand-in-hand with radial tunnel syndrome, and has recommended the surgery to cure and relieve Claimant from the effects of his work injury.

Claimant also proved it is more probable than not that the right shoulder surgery recommended by Dr. Kovachevich is reasonably necessary and causally related to his work injury. Claimant has been consistent in reporting to his physician that his arm was pushed backwards during the work incident. There is objective radiological evidence of a rotator cuff injury. Dr. Failinger opined that the need for shoulder surgery is unrelated to the work injury as the mechanism of injury is unlikely to cause Claimant's shoulder condition, and because there was a delay in documented shoulder symptoms and limitations. As noted by Dr. Kovachevich, he had a lengthy discussion with Claimant regarding the nature of his injury and his shoulder symptoms, and credibly concluded that Claimant requires surgery for his condition. Claimant credibly testified, and there is no evidence to the contrary, that he did not have any right shoulder symptoms or limitations prior to the work injury. There is no evidence Claimant sustained a separate injury after the work injury that resulted in his shoulder condition.

Regarding the delay in documented right shoulder symptoms or limitations in the medical records, the ALJ is persuaded that the treating physicians initially focused on Claimant's right forearm. When Claimant's condition did not improve with conservative treatment, Dr. Etsy then considered the contribution of an initial right shoulder injury to Claimant's symptoms. Upon obtaining an MRI, there was objective evidence of shoulder pathology. The ALJ does not consider Dr. Chan's normal shoulder findings to be dispositive on the issue of relatedness, as he consistently noted normal findings even after the rotator cuff tear was revealed on MRI and Drs. Etsy, Kovachevich and Pula noted abnormal shoulder findings. To the extent the rotator cuff tear is degenerative and preexisting, the ALJ is persuaded that the work injury aggravated, accelerated or exacerbated Claimant's right shoulder condition, causing the need for the recommended right shoulder surgery.

Based on the totality of the evidence, the lateral epicondyle and right shoulder surgeries recommended by Drs. Rovak and Kovachevich are causally related to the work injury and reasonably necessary to cure and relieve its effects.

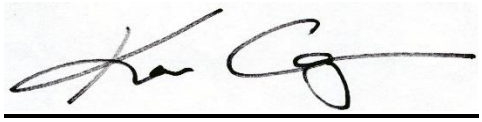
ORDER

1. Claimant proved by a preponderance of the evidence that the right lateral epicondylitis debridement recommended by Dr. Rovak and the right shoulder arthroscopic extensive glenohumeral joint debridement, subacromial decompression, arthroscopic versus mini open rotator cuff repair, and possible long head bicep subpectoral tenodesis requested by Dr. Kovachevich, M.D. are reasonable, necessary and causally related treatment for Claimant's industrial injury. Respondents are liable for the recommended surgeries.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Respondents are subject to penalties under §8-43-304(1), C.R.S. for failing to obey a February 9, 2022 prehearing order of Prehearing Administrative Law Judge (PALJ) Craig C. Eley.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on March 16, 2021.

2. On November 5, 2021, Claimant submitted a mileage reimbursement request to Respondents for mileage expenses incurred from September 2, 2021 through October 28, 2021. On January 6, 2022, Claimant submitted a mileage reimbursement request to Respondents for mileage expenses incurred from November 3, 2021 through December 12, 2021. The aforementioned mileage expenses total $3,901.46.

3. On November 5, 2021, Respondents submitted a request for reimbursement for a November 3, 2021 prescription in the amount of $17.80.

4. A prehearing conference took place before PALJ Craig C. Eley on February 9, 2022 on Claimant's Motion to Compel Mileage Payment and Prescription Reimbursement. Respondents requested payment for the mileage and prescription expenses detailed in Findings of Fact #2 and #3 herein.

5. PALJ Eley found good cause to grant Claimant's motion. He issued an order dated February 9, 2022 ordering Respondents to, no later than February 16, 2022, deliver to Claimant's attorney checks payable to Claimant for $3,901.46 for mileage expenses and $17.80 for prescription reimbursement.

6. As of the date of hearing in this matter, July 13, 2022, Respondents had not made any payments to Claimant pursuant to PALJ Eley's February 9, 2022 order. Respondents did not call any witnesses nor offer other evidence regarding its reason for failing to issue payment pursuant to PALJ Eley's order.

7. Claimant suffered financial harm and stress as a result of Respondents' failure to pay the reimbursement as ordered. Claimant credibly testified that her only income is $838.88 in workers' compensation benefits every two weeks, which is less than her expenses. Claimant testified her fuel costs are significant due to having to commute to her doctors' appointments for treatment of her work injury. Claimant further testified that she has had to borrow money and rely on her credit cards due to Respondents' failure to reimburse her mileage expenses.

8. Claimant's counsel has made numerous attempts to resolve the outstanding payments with Respondents to no avail.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Penalties

Section 8-43-304(1), C.R.S. authorizes the imposition of penalties of not more than $1000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." This provision applies to orders entered by a PALJ. *See* §8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Industrial Claim Appeals Office,* 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if she leaves

undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Per PALJ Eley's February 9, 2022 order, Respondents were required to pay Claimant a total of $3,919.26 no later than February 16, 2022. As of the date of hearing, Respondents had not paid Claimant pursuant to PALJ Eley's order. Respondents' failure to pay Claimant pursuant to PALJ Eley's February 9, 2022 order constitutes a failure to obey a lawful order.

Respondents' conduct was objectively unreasonable. Respondents provided no explanation for their failure to comply with PALJ Eley's order. There is no evidence Respondents were unaware of the order or attempted to comply. Respondents do not dispute that they owe Claimant the reimbursement ordered by PALJ Eley. Claimant's counsel has made numerous attempts to resolve the outstanding payments with Respondents to no avail. A reasonable insurer who received an order from an ALJ to reimburse Claimant for mileage and benefits by a certain date would comply. Respondents failure to do so was objectively unreasonable. Accordingly, the imposition of penalties is appropriate.

Respondents offered no evidence regarding their ability to pay a fine. As such, there is no evidence indicating Respondents are unable to pay a penalty that is proportionate to their offense. Based on the degree of reprehensibility of Respondents' conduct, the harm suffered by Claimant, penalties assessed in comparable cases, and Respondents' ability to pay, the ALJ concludes that a penalty of $100.00/day is

proportionate to the offense and appropriate. A penalty of $100.00 for the period of 146 days (February 17, 2022 to July 13, 2022, the date of hearing) totals $14,600.00.

The penalty of $100.00/day shall continue until Respondents issue the outstanding payment to Claimant for $3,901.46 in mileage reimbursement and $17.80 in prescription reimbursement.

ORDER

It is therefore ordered that:

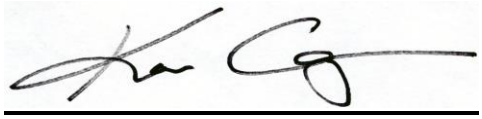
1. Respondents shall pay penalties at the rate of $100.00 per day from February 17, 2022 to July 13, 2022, in the aggregate amount of $14,600.00, and continuing thereafter at the same rate until Respondents issue payment to Claimant for $3,901.46 for mileage reimbursement and $17.80 for prescription reimbursement. 75% of the fine shall be apportioned to Claimant and 25% of the fine shall be apportioned to the Subsequent Injury Fund.

2. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due, pursuant to §8-43-410, C.R.S.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove he suffered a compensable injury on March 14, 2021?
- Respondents stipulated that the incident on July 28, 2021 was compensable, but dispute that nature or extent of the medical treatment related to the incident.
- Did Claimant prove a left total hip arthroplasty performed on June 1, 2021 by Dr. Schuck was causally related to the admitted work accident and/or the disputed claim?

STIPULATIONS

- The parties stipulated to an average weekly wage of $1,772.78 which included concurrent employment.
- The July 28, 2021 industrial injury is compensable.
- If the total hip replacement is found to be related to the industrial injury the Claimant is entitled to three weeks of temporary total disability benefits beginning on June 1, 2022 or credit for sick time or leave taken.

FINDINGS OF FACT

1. Claimant works for Employer as a fire engineer and arson investigator for the Pueblo Fire Department. The job is physically demanding, requiring heavy lifting of between 50 to 100 pounds, hauling hoses, and climbing on to the top of his fire truck to operate the flow of water from the pump control panel.

2. In addition to his job for the City, Claimant is a wildland firefighter. Every year, the physical requirements for that position is taking a "pack test". He was able to perform his annual pack test in February 2021. This test consists of wearing a 45 pound vest and walking 3 miles which he did in 40 ½ minutes, which was under the time limit of 42 minutes. Following this test, he had no pain in his left hip.

3. On March 14, 2021, following a fire at a residence, Claimant was assisting other fire department and law enforcement personnel in removing bodies from the basement of the residence through a narrow basement window. Claimant was at the bottom of the backboard with Claimant bearing most of the weight of one of the bodies. While removing the body on the backboard, Claimant he felt a pop like a rubber band midline on his left thigh. It felt like he pulled a muscle.

4. Claimant reported the injury on the same day and a First Report of Injury was filled out by Employer on March 17, 2021 (Claimant Exhibit 4, page 9).

5. Claimant did not seek medical treatment and continued working full duty. Claimant did not have pain in his hip joint. His pain was mostly in his thigh and groin. Prior to July 28, 2021, his pain did not completely resolve but he was able to function.

6. On July 28, 2021 the Claimant was performing his job as a fire engineer and was called to an alarm for smoke behind the steel mill in Pueblo. When he arrived he realized that a U-Haul truck was on fire. He was operating the panel on top of the fire truck that controlled the water flow while another firefighter was spraying the water from a hose attached to the fire truck. When he stepped down from the top of the truck, he stepped on to a large piece of steel angle iron on the ground. As he was stepping on to the angle iron, he did a pseudo-split and he fell backwards on the dirt and grass. He had tremendous pain in his left hip in the joint. He did not report the injury until he returned to the fire station. He sought medical treatment with Concentra the next morning.

7. He reported to Nurse Practitioner Brendon Madrid that he slipped off the side of the truck and felt a pop in his left hip. He also stated that he re-aggravated his prior March 14, 2021 injury. He also noted that he had clicking in his left hip joint. He had 6 or seven physical therapy appointments before it was decided to have an MRI performed.

8. The MRI performed on August 15, 2021 showed moderate to severe osteoarthritis with labral tearing, iliopsoas bursitis with reactive edema of the of the iliopsoas and abductor musculature, mild left hamstring tendinosis and moderate degenerative joint disease of the left hip with labral tearing.

9. Claimant was referred to Dr. Schuck by Concentra for an orthopedic consultation. Claimant was initially seen by Dr. Schuck's physician's assistant, Mitchell Dawson on August 31, 2021. Mr. Dawson performed an intra-articular corticosteroid injection into his hip at the time of the visit.

10. Claimant was next seen by Dr. Ellis, Dr. Schuck's associate on October 5, 2021. Dr. Ellis reported that following the injection, Claimant had a week's worth of relief. Following that, he returned to his baseline level of pain. On October 5, 2021, Dr. Ellis recommended a total hip replacement since conservative care had failed to resolve his pain.

11. Request for authorization of the left hip replacement was denied.

12. A left total hip arthroplasty was performed by Dr. Schuck on June 1, 2022. (Claimant's Exhibit 10).

13. Claimant was referred to Dr. Annu Ramaswamy for an IME at the request of Respondents. Dr. Ramaswamy's IME took place in two parts; the history section on April 4, 2022 and the physical examination section on April 8, 2022.

14. Dr. Ramaswamy's assessment was:

A. Partial or full-thickness left iliopsoas tendon tear – **acute and related to the July 28, 2021 work-related injury.**

B. Left adductor strain – work related-incident (as related to the July 28, 2021 injury.

C. History of pre-existing severe degeneration within the left hip and there appears to be no evidence for a labrum secondary to the degeneration. (Respondents Exhibit A, page 12).

15. Dr. Ramaswamy testified that he evaluated both claims. He felt that the March injury was an upper thigh strain based on the history given. He felt that the July incident was an adductor injury and a partial or full iliopsoas tear. He could not tell if the tear was a full tear or partial tear since the radiologist who he consulted with could not tell due to the amount of fluid present on the MRI. There was also bone edema shown on the MRI. The bone edema could be an acute condition or could be due to the friction of bone on bone.

16. Dr. Rook also performed an IME at the request of Claimant on May 2, 2022. Although he could not be certain as to the diagnosis following the first injury, since there was no examination or medical imaging, he thought the Claimant had a left hip sprain. With respect to the July 28, 2021 incident, the MRI showed an acute injury including fluid in the joint, bone edema in the weight bearing part of the hip joint and bone marrow edema in the head of the femur. Dr. Rook opined that the need for the hip replacement surgery due to the July 28, 2021. He disagreed with Dr. Ramaswamy that the work related injury was limited to the hip flexor muscle.

17. Claimant's testimony was credible and persuasive, including the testimony that he did not have left hip joint pain until July 28, 2021.

18. Claimant proved he suffered a compensable injury on March 14, 2021. The facts with respect to the incident that occurred on that date, namely lifting a body out of a small window when he felt a pop in his thigh are sufficient to establish a compensable injury. Both Dr. Ramaswamy and Dr. Rook concluded that the Claimant suffered a thigh strain from this incident.

19. With respect to the July 28, 2021 incident, Dr. Rook's causation opinions are credible and more persuasive than the contrary opinions offered by Dr. Ramaswamy. Both doctors agree that the hip flexor muscle was injured in the July 28, 2021 incident. What they disagree upon is whether the incident caused permanent aggravation of the Claimant's underlying degenerative left hip arthritis.

20. Claimant proved the right total hip arthroplasty performed by Dr. Schuck was reasonably necessary and causally related to the compensable work injuries. No one disagrees that the left hip arthroplasty was the appropriate procedure to address Claimant's ongoing hip problems. The surgery did in fact alleviate the Claimant's pain in

his hip. The work accidents aggravated, accelerated, or combined with the pre-existing condition to cause the need for the hip replacement.

21. The stipulated average weekly wage corresponds to a maximum TTD rate of $1,158.92.

22. The Claimant was off work beginning June 1, 2022 due to his hip surgery.

CONCLUSIONS OF LAW

A. Compensability

To receive medical or indemnity benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which they seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." Section 8-40-201(1). Workers' compensation benefits are only payable if an accident results in a compensable "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The fact that the employer provides treatment after an employee reports symptoms does not automatically establish a compensable injury. The claimant must prove the symptoms and need for treatment were proximately caused by their work. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered compensable injuries on March 14, 2021 and July 28, 2021. Claimant's lifting incident on March 14, 2021 caused a temporary strain of his thigh as both Dr. Ramaswamy and Dr. Rook have opined. Further, the fall on July 28, 2021 proximately caused left hip joint symptoms. Despite the fact that he had preexisting osteoarthritis, his condition was asymptomatic, despite his heavy duty work requirements including his ability to perform his annual pack test.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. If the pain triggers the need for medical treatment, the claimant is entitled to medical benefits as long as the pain is proximately caused by the employment-related activities and not the pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Abeyta v. Wal-Mart Stores, Inc*., W.C. No. 4-669-654 (January 28, 2008). However, the mere fact a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if it the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019).

The Claimant has proven that left total hip arthroplasty performed by Dr. Schuck was reasonably necessary. The dispute relates to causation. As found, Claimant proved the need for surgery was proximately caused by the work accident. Claimant's testimony regarding the accident, and the onset and progression of hip symptoms is credible. Dr. Rook's causation analysis is credible and more persuasive than the contrary opinions offered by Dr. Ramaswamy. Claimant arrived at work on July 28, 2021 with a degenerated but asymptomatic hip. He then fell and did a pseudo-split and had tremendous amount of pain in the hip joint. By the next day, he noticed clicking in the hip. Although Claimant had pre-existing degenerative changes before the accident, he was not a candidate for a hip replacement because he was asymptomatic. The possibility that Claimant would have developed hip symptoms at some point in the future does not negate the fact it became symptomatic on July 28, 2021 as a direct and proximate consequence of his industrial accident.

ORDER

It is therefore ordered that:

1. Claimant's claim for accidental injuries on March 14, 2021 is compensable. As stipulated, his injuries on July 28, 2021 are compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injuries, including the right total hip arthroplasty performed by Dr. Schuck on June 1, 2022.

3. Claimant's average weekly wage is $1,772.78, with a corresponding TTD rate of $1,181.85 per week. Since this amount exceeds the cap for the dates of injury his TTD is limited to $1,158.92 for the disability beginning on June 1, 2022.

4. Insurer shall pay Claimant TTD benefits, commencing June 1, 2022 and continuing until terminated according to law, subject to any wage continuation.

5. Insurer shall pay Claimant's statutory interest of 8% per annum on all compensation not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: September 27, 2022

/s/ Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that ongoing Botox injections constitute reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of her work-related injury or to prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (Colo. App. 1988).

FINDINGS OF FACT

1. On August 16, 2022, the parties entered into a stipulation which was approved by the ALJ on August 18, 2022. As relevant to the issued to be decided in this Order, the parties stipulated that Claimant's date of maximum medical improvement is August 1, 2022, the date of Claimant's most recent appointment with his authorized treating physician (ATP), Myles Nathaniel Cope, M.D. The remaining stipulations are not material to the issue for decision in the present matter (*i.e*., W.C. 5-091-017-001).

2. Claimant sustained an admitted injury when he was involved in a roll-over motor vehicle accident arising out of the course of his employment with Employer on October 30, 2018. As a result of the accident, Claimant sustained multiple injuries, including a close head injury, C1-C2 fracture, L1 compression fracture, left shoulder injuries, and left wrist injuries. Claimant was initially treated conservatively, and later underwent an occiput to C2 posterior fusion surgery on March 13, 2019. Following surgery, Claimant had continued care and treatment for multiple issues, including headaches. (Because the issue in the present matter relates to authorization for headache treatment, the ALJ does not address Claimant's other injuries or treatment, except as relevant to headaches and the medical benefits requested).

3. On January 24, 2020, Claimant was evaluated by authorized treating physician (ATP) James Rafferty, D.O. Dr. Rafferty indicated Claimant's headaches were fairly constant and variable in intensity since his injury. He indicated Claimant's headaches were thought to be cervicogenic in nature with muscle tension or contraction contributors. He diagnosed Claimant with likely cervicogenic headaches from cervical spine injury, and possible occipital neuralgia. Claimant was evaluated by a neurologist, Dr. Sykes, who placed Claimant on headache medications, which were discontinued due to side effects. (Ex. G).

4. Claimant was evaluated by Jeff Reynek, N.P., for headaches on January 27, 2021.[1] Mr. Reynek diagnosed Claimant with intractable chronic migraine without aura, chronic posttraumatic headache, and cervicogenic headaches. Claimant had tried various

[1] No treatment records from Mr. Reynek were offered or admitted into evidence. The information related to Claimant's treatment and diagnosis by Mr. Reynek is contained in report by other providers, and IME physicians.

headache medications without improvement. Mr. Reynek recommended consideration of Botox injections for headaches. (Ex. S).

5. On April 14, 2021, Claimant saw Dr. Rafferty who noted that his headaches remained symptomatic and were most likely cervicogenic in nature. Claimant was primarily using Tylenol for headaches, as other medications were not effective. Dr. Rafferty noted Claimant was going to wait until completion of treatment for his cervical spine, which included facet joint injections before considering Botox injections. (Ex. G).

6. On June 8, 2021, Claimant underwent a C5-6 cervical medial branch block which provided relief of Claimant's cervical pain after the injection. The admitted records are unclear as to whether the medical branch blocks relieved Claimant's headaches. Based on the results of the medial branch block, on June 9, 2021, one of Claimant's ATPs, Greg Reichhardt, M.D., recommended a radiofrequency nerve rhizotomy. (Ex. E).

7. On July 12, 2021, Claimant underwent Botox injections into the scalp and cervical spine, apparently performed by Mr. Reynek. (Ex. 7, S). Although not documented in any contemporaneous records, Claimant credibly testified that he noticed an approximately 20% improvement in his headaches following the July 12, 2021 Botox injection.

8. Claimant underwent a cervical rhizotomy on July 21, 2021, performed by David Columbus, M.D.[2] On August 12, 2021, Claimant saw Dr. Reichhardt and reported no improvement in his neck pain with the rhizotomy, but did note that his headaches "might have decreased a little bit from a 7 down to a 5-6/10." (Ex. E).

9. Claimant underwent a second set of Botox injections on October 6, 2021. Claimant testified that he improved approximately 10% additional relief when compared to the July 12, 2021 Botox injections. (Ex. 7).

10. On October 21, 2021, Kathy McCranie, M.D., performed a physician advisor review for Respondents related to Claimant's request for additional Botox injections. Dr. McCranie, citing an August 24, 2021 record from Dr. Rafferty indicated Claimant received 31 Botox injections into the scalp and cervical spine with no improvement, and that Claimant had persistent headaches and dizziness.[3] Dr. McCranie also summarized a record from Dr. Columbus dated July 21, 2021, in which Dr. Columbus indicated that the June 8, 2021 medial branch blocks resulted in a complete resolution of Claimant's cervicogenic headaches. (Ex. S).

11. Claimant received a third set of Botox injections on April 6, 2022, and testified that the relief he received was comparable to the relief he experienced following the October 6, 2021 injections. (Ex. 7).

12. On April 7, 2022, Claimant saw Dr. Rafferty. Claimant reported that "since his dizziness did, in fact, become worse recently he has to wonder about whether or not his

[2] No records from Dr. Columbus were offered or admitted into evidence. Information regarding the procedures performed by Dr. Columbus is contained in reports of other providers and IME reports.
[3] Dr. Rafferty's August 24, 2021 record was not offered or admitted into evidence.

first two sets of Botox injections had helped him with his dizziness as well." Claimant reported that he had not yet responded to the April 6, 2022 injections. (Ex. G).

13. Claimant saw Dr. Reichhardt on April 11, 2022, and reported a 15-20% improvement with the April 6, 2022 Botox injection and felt his balance was better for a couple of days. (Ex. E). Claimant reported similar results to Dr. Rafferty on May 5, 2022. (Ex. G).

14. On April 12, 2022, Dr. McCranie performed another physician advisor review, specifically reviewing an apparent appeal from Mr. Reynek regarding continuing Botox injections. Dr. McCranie characterized Mr. Reynek's appeal as indicating Claimant had receive "significant and sustained benefit having at least 7 less headache days per month and over 100 less headache hours per month. He has a history of chronic migraine headaches and pain occurring 15 days per month 4 or more hours per day and did not tolerate or failed to respond to migraine preventive."[4] Dr. McCranie indicated she did not see additional medical records supporting Claimant's response to Botox. She also noted that Claimant did not meet an 80% improvement requirement for continued Botox injections outlined in the Medical Treatment Guidelines, and there was no documentation of improved function in the appeal letter. Dr. McCranie recommended denying the request for Botox injections. (Ex. S).

15. On May 20, 2022, Annu Ramaswamy, M.D., performed a Rule 8 independent medical examination (IME), at Respondents' request, and issued a report dated June 26, 2022. Based on his review of medical records and examination of Claimant, Dr. Ramaswamy opined that Claimant has cervicogenic headaches. He noted the Botox injections Claimant received did not help substantially, and opined that additional Botox injections would not be clinically indicated. (Ex. F).

16. On June 15, 2022, Claimant saw Myles Cope, M.D., at UC Health, and again on July 18, 2022 and August 1, 2022. With the exception of a prescription for self-injectable Aimovig for migraine prevention, Dr. Cope's treatment records do not document evaluation or treatment of headaches. (A WC164 forms completed on July 19, 2022 and August 1, 2022 include "chronic migraine cephalgia" in the work-related diagnosis, but Dr. Cope's records otherwise do not otherwise mention headaches or migraines). (Ex. H). Claimant testified he had tried the Aimovig injection, but it had no effect on his headaches.

17. Dr. Ramaswamy testified at hearing and was admitted as an expert in occupational medicine and internal medicine. He testified that he does not dispute Claimant has experienced and continues to experience significant headaches. At his examination, Claimant reported constant pressure headaches, without nausea or light sensitivity. Dr. Ramaswamy opined that Claimant's headaches do not have the common features of migraine headaches such as being episodic in nature, or accompanied by photophobia or nausea.

[4] Mr. Reynek's appeal letter was not offered or admitted into evidence.

18. Instead, Dr. Ramaswamy testified that the results of Claimant's rhizotomy, and medial branch blocks, strongly suggest Claimant's headaches may be stemming from the cervical facets. He therefore opined that Claimant's headaches are more likely cervicogenic headaches than migraines.

19. Dr. Ramaswamy testified that there is evidence that Botox is no more effective than a placebo for treatment of cervicogenic headaches, and that Botox is not an appropriate treatment for cervicogenic headaches, citing the Medical Treatment Guidelines for treatment of traumatic brain head injury. He agreed that it would not be dangerous for Claimant to undergo additional Botox injections, but there was no indication to do so. He emphasized that medical treatment should be evidence based, and there is not substantial evidence that Botox is an appropriate treatment for cervicogenic headaches. He testified that it is difficult to scientifically explain how Botox injections would have helped with Claimant's dizziness, and that Botox is not a treatment for dizziness.

20. Dr. Ramaswamy testified he believes Claimant's headaches have a component of occipital neuralgia, and would recommend that Claimant undergo bilateral occipital nerve blocks, which have not been performed. He noted that Dr. Rafferty originally included "occipital neuralgia" as a possible diagnosis, but that no further evaluation for occipital neuralgia was performed. He opined that it would reasonable and necessary to evaluate Claimant for occipital neve blocks, and that Claimant could receive 2-3 such blocks per year if he experienced a positive response. Dr. Ramaswamy's testimony and opinions were credible and persuasive.

21. Claimant testified at hearing that he experienced some, but not complete relief from his headaches with Botox injections. Claimant testified that he received some relief of dizziness following Botox injections, and that he continues to experience headaches, dizziness, and balance issues today. He testified, credibly, that he has had continuous headaches since his work-related injuries, and has constant, but not severe dizziness. Claimant continues to experience constant neck pain as well.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Even where reasonable and necessary, medical maintenance care must be causally related to a claimant's industrial injury. In some cases, liability for treatment may be terminated by virtue of an intervening event. "Where the need for treatment results

from an intervening injury unrelated to the industrial injury, treatment for the subsequent condition is not compensable*." Lancaster v. Arapahoe County Sheriff Dept*., WC. Nos. 4-744-646 and 4-746-515 (ICAO. May 12, 2010) *citing Owens v. Industrial Claim Appeals Office, 49 P.3d 1187 (Colo. App. 2002).* However, "[t]he determination of whether the need for medical treatment is the result of an independent intervening cause is a question of fact for resolution by the ALJ." *In re Vargas*, W.C. No. 4-325-149 (ICAO August 29, 2002), *citing Owens, supra*.

MAINTENANCE MEDICAL BENEFITS

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Fin. Serv,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has failed to establish by a preponderance of the evidence that ongoing Botox injections are reasonably necessary to relieve the effects or prevent further deterioration of Claimant's condition. Claimant has experienced significant headaches and moderate dizziness since the October 30, 2018 as the result of his work-related motor vehicle accident.

Claimant was initially diagnosed with cervicogenic headaches, and possible occipital neuralgia. At some point, Claimant was referred to Mr. Reynek, who apparently diagnosed Claimant with migraine headaches. However, Mr. Reynek's records were not offered or admitted into evidence, and the only information related to his examination, diagnosis, and treatment of Claimant is references by other providers and IME physicians. No credible evidence was admitted indicating any other provider independently diagnosed Claimant with migraine headaches. Instead, it appears other providers merely reiterated Mr. Reynek's diagnosis.

No credible, persuasive evidence was admitted indicating that Claimant's headaches are migraine. The record contains no direct evidence of the basis for Mr. Reynek's diagnosis, or how Claimant's response to Botox injections was assessed at or around the time of the injections. For example, Claimant received his first Botox injections

on July 12, 2021, and underwent a cervical rhizotomy and medial branch blocks nine days later, on July 21, 2021. The next relevant treatment documentation in the record following these two procedures is Dr. Reichhart's August 12, 2021 record, in which he indicated Claimant's headaches may have decreased following the rhizotomy, but made no reference to the effect of the Botox injections. The lack of contemporaneous records of either the procedures performed or the Claimant's responses to the Botox injections vs. the cervical spine procedures renders it speculative to determine which procedure actually caused Claimant's headaches to improve. The next admitted medical record from an ATP referencing Botox injections is Dr. Rafferty's February 9, 2022 record (four months after Claimant's second Botox injections) which indicates Claimant received "some but incomplet[e] resolution of his headaches." The evidence is insufficient to determine that Claimant's headaches are migraine in nature.

The ALJ credits Dr. Ramaswamy's testimony and opinions that Claimant's headaches are more likely than not cervicogenic in nature, rather than migraine. Dr. Ramaswamy credibly, and persuasively opined that Botox injections are not an appropriate treatment for cervicogenic headaches. Dr. Ramaswamy's opinions are supported by the Colorado Medical Treatment Guidelines for Traumatic Brain Injury, W.C.R.P. Rule, 17, Exhibit 2, p. 68, which provides Botox injections are "not different from placebo for cervical pain and is not likely to be clinically more effective than placebo for cervicogenic headache." The MTG also provides that Botox injections "are no longer generally recommended for cervicogenic or other headaches" due to evidence of lack of effect.

Dr. Ramaswamy testimony that Claimant's headaches likely have a cervical facet component and that the initial concern about occipital neuralgia was not fully explored was persuasive. Similarly, his testimony that occipital nerve blocks would be a reasonable and necessary procedure for treatment of his headaches, was credible and persuasive, and supports his opinion that Claimant's headaches are not migraine in nature, and that Botox is not an indicated treatment for Claimant's headaches.

ORDER

It is therefore ordered that:

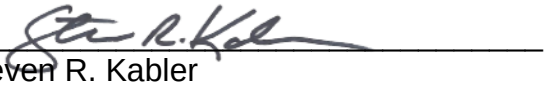
1. Claimant's request for authorization of ongoing Botox injections for as medical maintenance treatment is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2022



Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-183-188-001

ISSUE

1. What is Claimant's pre-injury average weekly wage (AWW)?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant works as a lifeguard for Employer. Claimant was hired on May 18, 2021. (Tr. 9:10-15).

2. On July 1, 2021, Claimant was hit on the head by a large umbrella when the wind knocked it over and she sustained a concussion. (Ex. B).

3. Claimant was treated and placed at Maximum Medical Improvement ("MMI") on May 19, 2022. (Ex. A).

4. Respondents have admitted to medical benefits of $50,513.83 and Temporary Total Disability ("TTD") benefits from July 1, 2021 (the date of injury) through May 18, 2022 (the day before she was placed at MMI). (Ex. A).

5. Claimant testified that Employer hired her at a rate of $17.50 per hour, and she had an expectation of working 40 hours per week. (Tr. 9:19-25).

6. Claimant testified that she worked when her shift required, and the length of her shift varied. Claimant's supervisor determined her shift and when it ended each day. (Tr. 11:22-23:1 and 14:20-15:1).

7. Claimant testified that she was required to clock in an out each day, and her timecard reflected this. (Tr. 12:8-12).

8. Claimant never worked a full 40-hour week. (Ex. C).

9. Prior to being hired, Claimant notified Employer she had a vacation scheduled. She took a week-long vacation shortly after being hired. (Tr. 10:8). This is reflected in Claimant's first paycheck, where she only earned $52.50 for the period between May 10, 2021 and May 23, 2021. (Ex. C).

10. The ALJ finds that the period of time between May 10 and May 23, 2021 is not a reasonable or accurate reflection of Claimant's AWW.

11. Between May 24, 2021 and July 1, 2021, Claimant earned $2,704.66. (Ex. C)

12. There are 39 days between May 24, 2021 and July 1, 2021, which equates to an AWW of $485.45. ($2,704.66 / 39 days = $69.35/day * 7 = $485.45/week).

13. The ALJ finds that $485.45 is a reasonable and fair approximation of Claimant's AWW.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

Section 8-42-102(2) of the Colorado Revised Statutes, requires the ALJ to base the claimant's AWW on her earnings at the time of injury. But under certain circumstances the

ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The ALJ has discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. C.R.S. §8-42-102(3); *Coates*, *Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra.

As found, Claimant earned $17.50 an hour and she had an *expectation* of working 40 hours per week. Claimant did not have control over her schedule, and at no time between May 24, 2021 and July 1, 2021 did Claimant work a 40-hour week. As found, Claimant's AWW is $485.85, which is a reasonable and fair approximation of her wage loss.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $485.45.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-189-623-001

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained injuries to his low back arising out of and in the course of his employment as parts manager for Employer on November 2, 2021.

II. If Claimant established that he sustained compensable injuries to his low back, whether he also established that his medical care through UC Health, Dr. Emily Burns and Dr. Kenneth Finn was reasonable, necessary and related to cure and relieve him of the effects of the November 2, 2021 industrial injury.

III. If Claimant established his entitlement to treatment, who is/are the provider(s) authorized to deliver care.

IV. If Claimant established that he suffered compensable work related injuries on November 2, 2021, whether he also established, by a preponderance of the evidence, that he is entitled to Temporary Total Disability ("TTD") benefits beginning November 10, 2022 through the present and ongoing.

V. If Claimant established that he sustained a compensable injury, depending on the date, whether Respondents established, by a preponderance of the evidence, that they are entitled to penalties pursuant to C.R.S. § 8-42-102(1)(a) for Claimant's alleged failure to timely report the injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Ms. [Redacted, hereinafter M] and Drs. Burns, Brunworth, and Castrejon, the ALJ enters the following findings of fact:

Background

1. Claimant is a 47-year old male who was employed as a parts to service manager by Employer. Among other things, Claimant's duties included stocking oil and various motorcycle parts, delivering those parts to the technicians who needed them and taking inventory. Claimant testified that he was required to lift items that weighed up to seventy pounds at times. Occasionally there were carts and dollies available to move heavier items but, since they were shared by other departments, they were not always available to Claimant.

2. Claimant testified that on November 2, 2021, he was stocking cases of oil when he injured his low back. Apparently, there was no cart/dolly available to Claimant

on this date. Regardless, Claimant explained that he was moving stacked cases of oil forward in the service area so that it would be readily available to the technicians for oil changes. Claimant testified that as he bent down to lift a case of oil from the stack, he felt something "pop/snap" in his back. Claimant testified that he then fell forward striking his left side/flank on the cases of oil.

3. Claimant testified that he had severe bruising on his left side and back toward the spine that lasted for a couple of weeks as a consequence of falling into the cases of oil. Moreover, he testified that following his fall into the stacked cases of oil, he developed progressive tingling in his left leg and toes. Ultimately, the entirety of his left leg went numb and he had difficulty standing upright and walking. He also reported symptoms of saddle aesthesia (sensation loss to the perineum) causing bladder retention and erectile dysfunction. (Resp. Ex. E, p. 20).

4. The incident was unwitnessed.

Claimant's October 27, 2021 Emergency Room Treatment

5. Approximately one week prior to the November 2, 2021 incident, Claimant presented to the Emergency Room (ER) at Grandview Hospital on October 27, 2021 after getting sick and vomiting at work. Upon arrival to the ER, Claimant described a five-day history of coughing, mild shortness of breath, vomiting, diarrhea and headaches. Claimant reported that just prior to his appearance in the ER, he had to vomit and as he was dry heaving, he felt something "exploded" (sic) in his left flank. (Resp. Ex. E, p. 14). Accordingly, he also complained of "flank pain" while in the ER. Per the medical report from this visit, Claimant described his flank pain as "constant, sharp and severe" and made worse by movement, coughing or heaving. *Id.* Claimant had no complaints of anterior abdominal discomfort/tenderness and had no urinary symptoms. *Id*.

6. While in the ER, concern was raised for a possible Covid infection or other viral syndrome and the risk that Claimant may have damaged a lead connected to an implanted spinal stimulator Claimant had placed following a previous injury. CT imaging was ordered which demonstrated the "left back stimulator lead [to be] intact". (Resp. Ex. E, p. 13). Indeed, no abnormality was demonstrated on CT imaging. *Id.* Claimant was assessed with a suspected Covid-19 infection, flank pain and a "strain of [the] lumbar region". He was subsequently discharged from the ER with documentation removing him from work until 11/1/2021. (Resp. Ex. E, p. 12-13, 17).

7. Based upon the evidence presented, the ALJ finds that Claimant's illness and treatment on October 27, 2021 was not in the course and scope of his employment. As such, any healthcare to cure or relieve the effects of what occurred to Claimant on or about October 27, 2021 and any subsequent wage loss caused thereby are not compensable.

Reporting of the November 2, 2021 Injury

8. The evidence presented supports a finding that Claimant had been taught to report all work related injuries to his supervisor. (Depo. Tr. Jackie Mogensen, p. 5). The evidence also supports a finding that Employer posted the Notice regarding the reporting of work-place injuries in four locations around the facility. *Id*. at p. 6, ll. 1-11. Accordingly, the ALJ is convinced that Claimant knew how to report any suspected work-related injury to his supervisor/management.

9. Claimant testified that he notified Doug [Redacted, hereinafter L], his direct supervisor of his November 2, 2021 injury but did not request medical treatment immediately because he believed that the injury was "not that bad" and would resolve quickly. Moreover, because he had missed work the week before with a suspected Covid-19 infection, he did not want to be out of work again for fear of losing his job. Consequently, Claimant testified he went to work, albeit in pain and in a reduced capacity on November 3rd, 4th and 5th.[1] Indeed, Claimant testified that he could not perform the full range of duties associated with his job without help from co-workers related to lifting, carrying and stocking of heavy items.

10. Based upon the evidence presented, including the testimony of Ms. Mogensen and Mr. L[Redacted], the ALJ is persuaded that while Claimant knew how to report on-the-job injuries, he probably failed to inform Mr. L[Redacted] that he developed back pain on November 2, 2021, while stocking cases of oil. Rather, the evidence presented persuades the ALJ that Claimant first reported his alleged November 2, 2021 workplace injury on November 9, 2021, prompting Doug L[Redacted] to complete a "First Notice of Accident Report Form". (Resp. Ex. A, p. 5).

11. The First Notice of Accident Report Form can be interpreted to indicate that Claimant was injured on November 7th or 9th. *Id.* Concerning the mechanism of injury (MOI) referenced on the form, Claimant noted: "I was picking up cases of oil to stock and felt something pop/snap in my back & I couldn't stand up straight". He listed a very similar MOI on the second page of the form. (See Resp. Ex. A, p. 6). Neither statement regarding the alleged MOI contains any reference to falling into the cases of oil. An Employer's First Report of Injury was completed November 16, 2021 and indicates that Employer was notified of Claimant's alleged injury on November 9, 2021 and that "[w]hile picking up cases of oil to stock them, [Claimant] felt a pop/snap in his lower back causing him difficulty in standing up straight". (Resp. Ex. C, p. 10). Similar to the Notice of Accident Form, the First Report of Injury contains no reference to falling into the cases of oil. Moreover, it lists the day of injury as November 7, 2021. (Resp. Ex. C, p. 10).

---

[1] Claimant called into work sick on November 6, 2021. Nonetheless, he did not report to his supervisor that his inability to work was due to an alleged industrial injury that occurred on or about November 2, 2021.

The Testimony of WM[Redacted]

12. Claimant's co-worker, WM[Redacted] testified that he worked in Employer's shipping and receiving area, next to where Claimant worked. Mr. WM[Redacted] testified that after November 2, 2022, he noticed that Claimant appeared to be in pain. According to Mr. WM[Redacted], Claimant was having a hard time moving, walking and lifting heavy items at work. He helped Claimant move oil and parts and suggested that Claimant take it easy at work because he appeared to be in pain. He also recalled an episode where Claimant got sick and threw up at work, hurting his back. He testified that sometime later he observed a very large bruise on Claimant's left side and back extending from just below Claimant's left nipple to and below the belt line; however, could not recall when Claimant showed him this bruising. Nonetheless, when he saw the extent of Claimant's bruising, Mr. WM[Redacted] testified that he immediately notified their supervisor, DL[Redacted] who sent Claimant to Grandview Hospital.

The Initial Treatment for Claimant's Alleged November 2, 2021 Injury

13. Claimant presented to the ER at Grandview Hospital on November 9, 2021 reporting worsening pain in his left leg and foot. (Resp. Ex. E, p. 19). The report from this visit indicates: "About a week ago, his left side was still hurting him while he was at work. [H]e was trying to lift a case of oil. Because of the pain, he says he lifted awkwardly and lost his balance, falling and striking his left flank on a pallet. He did not strike his head or lose consciousness. At the time, he felt a popping sensation in his low back. He does have a history of previous lumbar surgery due to a disc herniation. Review of his chart shows that he had surgery with Dr. Roger Sung in October 2016, a left L3-L4 extrapedicular decompression discectomy. He also has a spinal cord stimulator placed". (Resp. Ex. E, p. 19). Medical documentation supports that the heavy bruising Claimant reported encompassed his left side was visible on this date, suggesting that he had suffered an insult to his flank sometime prior to November 9, 2021. (Resp. Ex. E, p. 27).

14. While in the ER on November 9, 2021, Claimant reported continued pain over the "past week", which was radiating down his left leg and into the foot. (Resp. Ex. E, p. 20). Claimant described a "pins and needle sensation in his left leg and decrease (sic) sensation to light touch. *Id.* He also reported that his left leg felt weak causing him to walk with a limp. *Id.* He reported increased pain with attempts to stand straight, when sneezing or laughing. *Id.* He also reported penile numbness, erectile dysfunction and trouble empting his bladder.[2] CT imaging of the abdomen and pelvis revealed a post void urine residual of 15 mL and a "small muscular injury along the lateral abdominal wall with small hematoma" (findings not present during Claimant's first CT scan of the abdomen and pelvis on October 27, 2021). *Id*. at p. 19; see also Resp. Ex. E, p. 13). Imaging also revealed degenerative disc disease along the lumbar spine,

[2] Claimant testified that he had never had any issues with emptying his bladder or his bowels nor any difficulties obtaining an erection prior to November 2, 2021.

without acute fracture or injury, greatest at "L3-L4 with disc height loss and small anterior osteophyte formation". *Id. (see also,* Resp. Ex. E, p. 25). Physical examination revealed decreased sensation about the left lower extremity and perineum. (Resp. Ex. E, p. 19). Based upon the evidence presented, including the Claimant's medical records and the deposition testimony of Drs. Burns, Brunworth and Castrejon, the ALJ finds that Claimant's reported symptoms and physical examination findings on November 9, 2021 raised concern for possible cauda equine syndrome. (Clmt's. Ex. 1, p. 76). Medical personnel recommended transfer to Memorial Central Hospital for evaluation by CT myelogram by neurosurgery.

15. Because Claimant did not have available childcare on November 9, 2021, he declined the transfer to Memorial Hospital for further evaluation. Instead, he returned to Memorial Central the next morning where he was admitted to the hospital for observation and additional testing. CT myelogram and additional testing[3] was performed. Claimant underwent CT myelogram studies of the cervical, thoracic and lumbar spine, because he was "ineligible" for MRI because of the placement of the aforementioned implanted stimulator in his lower back. An MRI could only be performed if the Claimant's permanent stimulator was physically removed. Upon arrival at the ER, Claimant demonstrated a positive straight leg raise test on the left and 4 out of 5 strength to the left lower extremity. He also complained of decreased sensation to the left groin and lower extremity. (Clmt's Ex. 1, p. 76). Post myelogram imaging (CT) of the lumbar spine demonstrated "no significant lumbar spinal canal stenosis"; however, did reveal "[m]oderate bilateral L3-L4 and L4-L5 foraminal stenosis. (Clmt's Ex. 1, p. 83). Post myelogram imaging of the thoracic spine revealed no thoracic spinal canal or foraminal stenosis. Nonetheless, imaging demonstrated changes to the spinal cord, which could be consistent with spinal dural AV fistula. Consequently, Claimant was referred for a spinal angiogram. (Clmt's Ex. 1, p. 81-82, 96, 100, 125-128). Claimant's angiogram was negative. *Id*. at p. 96. Finally, post myelogram imaging of the cervical spine revealed multilevel foraminal stenosis as multiple spinal segments. (Clmt's Ex. 1, p. 83).

16. As part of his workup on November 10, 2021, Claimant was evaluated by Dr. Janice Miller of the inpatient neurology service for the hospital. Dr. Miller obtained the following history from Claimant on November 12, 2021: "Patient states that a few days before the injury he was ill and had some forceful vomiting and felt like he strained a muscle in his left abdominal region. On the day of the injury he was a work and attempted to pick up a heavy pallet of motor oil and stated that he used slightly different lifting mechanics and immediately felt pain and felt a pop in his lower back". (Clmt's Ex. 1, p. 96). Claimant did not indicate that he had fallen and hit his left flank.

17. Dr. Miller reviewed the results of Claimant's CT myelogram and found "no compressive lesion. (Clmt's Ex. 1, p. 100).

[3] The consult report of attending neurologist Dr. Janice Miller indicates that Claimant also underwent a spinal angiogram to rule out a possible spinal dural AV fistula, which was negative of any vascular anomaly. (Clmt's Ex. 1, p. 95).

18. During his hospital stay, Claimant was also evaluated by physical therapist (PT), Tiffany Woods. Ms. Woods noted that the Claimant was functioning below baseline level of mobility. She recommended use of a walker but also provided the Claimant with education on the use of a cane pending improvement in his symptoms. (Claimant's Ex. 1, p. 106). The Claimant was discharged from the Hospital on November 11, 2021 with recommendations that he follow up with neurology as well as the UC Health Occupational Medicine.

19. Claimant was seen on December 27, 2021, by Physician Assistant (PA) Jayme Eatough under the direction of Dr. Elizabeth Bisgard, MD for evaluation of his back pain. PA Eatough obtained the following history from Claimant: "He was carrying cases of oil from the back hall up to the front. At the time of the injury he had one case in his right hand and went back to pick up another with his left. He did bend over and when he lifted it off the pallet, he felt a pop and immediate pain right away. He dropped everything and could not walk. He reported his injury had occurred when he was carrying cases of oil when he felt a pop and immediate pain". Claimant did not indicate to PA Eatough that he had fallen and hit his left flank.

20. Emily Burns, M.D. ultimately became Claimant's treating provider for his claimed injury. Dr. Burns fist saw Claimant on January 18, 2022 during which appointment she noted MOI of "lifting cases of oil". (Resp. Ex. H, p. 80). On April 20, 2022, Dr. Burns noted that Claimant tried additional physical therapy, which "made his symptoms worse. . ." She also noted that Claimant was "working on getting approval for possible steroid injections followed by nerve ablation. Finally, she noted that Claimant had been evaluated by a neurosurgeon who did not recommend surgical intervention or restrictions for his spine. (Resp. Ex. H, p. 93). Physical examination revealed Claimant's persistent pain was "centered in the area of the spinal cord stimulator pack." *Id*. at p. 94. It was suggested that Claimant consider removal of the stimulator outside of the workers' compensation system. *Id*. Claimant was released by to "very light duty" and scheduled for a follow-up in 3-4 weeks. *Id*.

The Independent Medical Examination and Testimony of Dr. Gretchen Brunworth

21. Gretchen Brunworth, M.D., performed an independent medical examination (IME) of Claimant on April 21, 2022, which included a physical examination and range of motion measurements. (Resp. Ex. I). Dr. Brunworth's diagnoses included low back and leg pain. *Id*. at p. 102-103.

22. In her April 21, 2022 IME report, Dr. Brunworth noted that Claimant had "significant nonphysiologic findings and pain behaviors on examination. (Resp. Ex. I, p. 103). She also noted that he was "not a good historian based upon his inability to recall details of his prior accidents/injuries outlined in a lettered drafted to her by Respondents' attorney. *Id*. Accordingly, Dr. Brunworth concluded that, Claimant appeared to be "consciously misrepresenting his history" and that "significant

psychiatric/psychological issues [were] affecting his presentation". *Id.* Because Dr. Brunworth did not have what she considered to be a "full set" of records, including records surrounding Claimant's prior accidents/injuries or an EMG report, she deferred further opinions regarding additional work-related diagnoses (other than low back pain), apportionment and additional treatment needs. *Id.* at p. 103-104.

23. Dr. Brunworth testified by Deposition on July 19, 2022. She reiterated her belief that there was a probable component of malingering in this case because Claimant is "very inconsistent with his histories" and because Claimant "obviously had significant back and left leg pain within a week of this [November 2, 2021] incident." (Depo. Tr. Dr. Brunworth, p. 18, ll. 11-18). Dr. Brunworth testified that Claimant's lumbar symptoms were inconsistent with his narrative that he was injured from moving cases of oil on November 2, 2021. (Depo. Tr. Dr. Brunworth, p. 23, l. 14-15).

24. Dr. Brunworth testified that medical record in the case is devoid of any objective medical evidence that would support a "theory" that the November 2, 2021 incident caused, aggravated or accelerated the pre-existing degenerative changes within Claimant's lumbar spine to become symptomatic. (Depo. Tr. Dr. Brunworth, p. 20, ll. 13-19). Moreover, she testified that there is no objective evidence to suggest that Claimant has an annular tear in a disc to support Dr. Castrejon's suggestion that Claimant's symptoms may be emanating from a chemical radiculitis. Id. at p. 25-26, ll. 1-13. Accordingly, Dr. Brunworth testified that there is not a candidate for discography. Id. at lines 14-25. The ALJ finds from Dr. Brunworth's testimony that she believes Claimant's lumbar stenosis and current symptoms, including his urinary retention, bowel urgency and erectile dysfunction are a product of the natural progression of the pre-existing degenerative changes in his lumbar spine without contribution from the November 2, 2021 incident.

25. Dr. Brunworth testified that Claimant "had had the upper extremity problems for quite some time, and that the implantation of the stimulator was to treat the symptoms related to Claimant's prior upper extremity injury. Accordingly, the upper extremity symptoms and treatment therefore including the use of a stimulator were not related to the alleged November 2, 2021 incident." (Depo. Tr. Dr. Brunworth p. 16, ll. 7-11).

The Independent Medical Examination and Testimony of Dr. Miguel Castrejon

26. Claimant was seen by Dr. Miguel Castrejon for an IME on May 23, 2022. Following a records review and a physical examination of Claimant, Dr. Castrejon opined that while Dr. Brunworth concluded that Claimant consciously misrepresented his medical history and presented with many nonphysiologic findings, he (Dr. Castrejon) found no evidence of "conscious misrepresentation, i.e. malingering. (Clmt's Ex. 2, p. 245). Rather, Dr. Castrejon concluded that what is clear from the record is that "there has been no diagnosis offered to explain [Claimant's] current condition despite the documentation by multiple examiners of similar abnormal findings". *Id.*

27. Dr. Castrejon testified that the Claimant presented at his office with a cane although he did not know who recommended it. The Claimant did not remember many specifics of his previous motor vehicle accidents or injuries (or even that they occurred) without prompting by the doctor. He did remember that he had no residual effects from any accident aside from an initial ER visit. In assessing the Claimant's range of motion, Dr. Castrejon used an inclinometer and based upon the Claimant's symptoms and known dermatomal patterns, Dr. Castrejon opined that L4-5 and L5-S1 are probably the affected levels of the spine the Claimant is dealing with. Generally, stocking glove distribution of numbness distal to the knee on the left ***can*** be evidence of L4-5 and L5-S1 nerve root compression. (Depo. Tr. Dr. Castrejon p. 23, ll. 7-15).

28. When asked about the CT evidence of moderate bilateral L3-L4 and L4-L5 foraminal stenosis, Dr. Castrejon could not conclude that it relates back to the surgery performed by Dr. Sung as Dr. Sung's procedure involved only the L3-L4 level. (Depo. Tr. Dr. Castrejon p. 26, ll. 10-22). Dr. Castrejon testified that a person can develop back pain with radiculopathy without any known inciting event. *Id.* at p. 20, ll. 4-8). He also agreed that foraminal stenosis is a degenerative condition that develops over time and is not typically caused by an outside entity/event. *Id*. at. p. 26, ll. 23-25 through p. 27, ll. 1-6.

29. EMG results reflected evidence of a left limb chronic L4-L5 radiculopathy but not necessarily ongoing denervation or radicular process at the L4-L5 level (Dr. Castrejon Depo. p. 28-29). He explained that an EMG study does not show sensory radiculopathies so if the Claimant had that at either the L4-L5 or any other level, it would be missed on an electrodiagnostic study. (Depo. Tr. Dr. Castrejon p. 27-30). Dr. Castrejon further opined that the Claimant could have suffered an annular tear causing chemical radiculitis but without being able to do an MRI, one cannot be sure. Id. at p. 30, ll. 19-25. According to Dr. Castrejon, the only other diagnostic testing available (other than an MRI) would be to have the Claimant undergo a discogram to determine which level is causing the Claimant's symptoms. Id. at p. 31, ll. 9-19.

30. Dr. Castrejon confirmed with the Claimant the alleged MOI noting that Claimant reported that he was lifting a case of oil, lifted, rotated slightly, experienced a popping sensation accompanied by moderate to severe pain that extended into the left leg. (Depo. Tr. Dr. Castrejon p. 35, ll. 2-5). He also noted that Claimant reported falling backward into the cases of oil, which the ALJ finds would be inconsistent with causing a contusion and bruising to the flank and back. Id. at p. 35, ll. 6-25. Upon questioning the Claimant as to why he did not report the November 2, 2021 incident immediately, Dr. Castrejon testified that Claimant stated that he thought he would get better and would not require medical care. (Depo. Tr. Dr. Castrejon p. 36, ll. 9-16). Dr. Castrejon testified that his review of the medical records supports the Claimant's described MOI and that Claimant experienced two separate conditions involving his back, one on October 27, 2021 and one occurring November 2, 2021 causing both back and leg pain. Id. at p. 38, ll. 10-22, & p. 53, ll. 9-25 through p. 55, ll. 1-5.

31. The ALJ interprets Dr. Castrejon's deposition testimony to indicate that Claimant's current back and left leg pain is causally related to the November 2, 2021 event based upon the Claimant's presentation at Grandview Hospital on October 27, 2021. Indeed, the ALJ understands Dr. Castrejon's testimony to indicate that following the forceful vomiting event on October 27, 2021, Claimant's symptoms in the ER that day did not implicate the presence of an acute radicular process typically associated with disc related pain. In contrast, Claimant's neurologic presentation, on November 9, 2021, including his left leg and foot symptoms and significant proximal sensory disturbances, support a conclusion that Claimant's symptoms are radicular in nature and related to a discogenic source caused by the lifting incident occurring November 2, 2021.

The Deposition Testimony of Dr. Emily Burns

32. Dr. Emily Burns testified by deposition on May 24, 2022 and June 29, 2022. Dr. Burns testified that Claimant had previously seen her colleague and had given a history of "carrying cases of oil from the back hall up to the front' when he was injured. (Depo. Tr. Dr. Burns, Vol. I, p. 9, ll. 16-25). According to Dr. Burns, Claimant reported that he had one case of oil in his right hand and went to pick up another with the left, so he had to bend over and when he lifted this second case off the pallet, he felt a "pop and immediate pain in his lower back with left sided numbness". Id. at p. 10, ll. 3-7. Claimant did not report falling. Id. at p. 11, ll. 11-12, p. 28, ll. 2-15. Dr. Burns suspected that the reference to a fall may have been "dropped" from the record at some point, but that did not mean that the Claimant did not have a back injury. Id. at p. 29, ll. 8-17.

33. Concerning the EMG performed February 17, 2022, Dr. Burns testified that that the primary finding was "moderate chronic lumbar polyradiculopathy . . . affecting levels L4 and L5 without active denervation". (Depo. Tr. Dr. Burns, Vol. I p, 37, ll. 6-9. She testified that she would leave the determination of whether this finding estyablished any pathology related to the alleged November 2, 2021 incident to neurology or neurosurgery because that was a "pretty specialized question about the exact time frame relative to [Claimant's] injury and what happened. Id. at p. 37, ll. 11-21. Nonetheless, she later testified that the EMG, by report, "showed moderate chronic lumbar, several root involvement at L5-5 without active denervation, which suggested to her that the results of Claimant's EMG supported the existence of an "older injury, not necessarily a newer injury". (Depo. Tr. Dr. Burns, Vol. II, p. 49, ll. 17-24). Accordingly, Dr. Burns testified that it was less probable that the EMG findings related to anything that happened sometime in November 2021 while Claimant was at work. Id. at p. 50, ll. 7-18. She also agreed that the CT myelograms performed November 10, 2021 did not establish that Claimant's pathology, i.e. foraminal stenosis was caused by the November 2, 2021 incident Claimant reported occurred at work. Id. at p. 52, ll. 7-23.

34. Given the inconsistencies/omissions, i.e. Claimant's failure to report a fall when describing the MOI in this case coupled with the lack of corresponding findings on physical examination and diagnostic testing, Dr. Burns testified that there is "plenty of suggestion" to support a conclusion that Claimant's current symptoms are not related to an alleged incident occurring at work. (Depo. Tr. Dr. Burns, Vol. II, p. 57, ll. 2-11). Accordingly, Dr. Burns testified that she was "leaning" towards the conclusion that it was possible that Claimant's current symptoms are related to an event occurring at work, but she could not say it was probable. Id. at p. 58, ll. 14-20. Thus, Dr. Burns concluded that Claimant's symptoms were more likely emanating from the progression of Claimant's underlying degenerative disc disease rather than a fall or industrial injury as described by Claimant. Id. at p. 58, ll. 21-25 and p. 59, line 1.

35. Dr. Burns testified that while a history of Claimant's fall was included in his medical records, in his statement to prior providers, she "hadn't been aware of the fall because that wasn't reported to us". (Depo. Tr. Dr. Burns, Vol. II, p. 60, ll. 8-22). She went on to testify that this made Claimant's evaluation difficult and she questioned, "I think the question is now why -- you know, why did the story change [?]" Id. at p. 65, ll. 3-6.

36. Dr. Burns testified that due to Claimant's inconsistent story, it made diagnosing him difficult, stating, **"**I can't honestly sort out exactly what happened . . . it does not sound as straightforward as everything was fine, then I lifted a can of oil at work, and then I had back pain and have had it ever since." (Depo. Tr. Dr. Burns, Vol. II p. 68, ll. 2-13). Thus, Dr. Burns concluded that it was not probable that Claimant's described MOI would aggravate his underlying pre-existing condition. Id. at p. 67-68.

Claimant's Hearing Testimony

37. The Claimant testified that he did not fill out all of the questions on the First Notice of Accident Report Form (Resp. Ex. A, p. 5). Indeed, Claimant testified that he did not fill out the sections of the form regarding the date, time, and location the incident was reported. Those specifics were filled out by Douglas L[Redacted]. The Claimant testified further that he did not fill out certain portions of the form entitled "Actions Preceding the Incident Completed by the Employee". (See Resp. Ex. A, p. 6). He testified that the date written on that form (on the same line as his signature) was not written by him.

38. The Claimant testified that he has a history of alcohol and drug addiction, but that he has been sober for three years. He acknowledged on cross-examination that, at times, he has problems with his memory and has to be reminded of things.

39. Claimant has a significant medical history of injury to his low back going back many years, which has resulted in prior surgery. He also underwent placement of a spinal cord stimulator secondary to an injury to his upper extremity. Claimant testified that in 2016 he had a previous successful lumbar spine surgery performed by Dr. Roger

Sung. He testified that he had no problems subsequent to the surgery. He also testified that he was involved in previous motor vehicle accidents. He explained that he did not remember some of them and that none of them involved any follow up care (post hospital ER visit). He explained that the fact that his memory is not good and that he did not receive any follow up care (post ER visit) were the main reasons that he did not mention the accident(s) to many of the physicians who saw him with regards to this injury. On cross-examination, the Claimant did not remember a claim he made against 7-11 in 2001; a motor vehicle accident in February of 2015; or a visit to UC Health in July of 2015 where he got x-rays of his neck. He did remember presenting to Memorial Hospital on July 21, 2017, with stroke like symptoms where he was informed his symptoms were a result of a migraine headache. He also remembered a rear-end motor vehicle accident on November 14, 2019, which he described as a "fender bender". He does not recall whether he sought any treatment as a result of this accident. He also acknowledged a motor vehicle accident, which occurred in January of 2020, where he did go to the emergency room but did not receive any follow-up treatment after that. Finally, he acknowledged the October 27, 2021, incident where he thought he had COVID and had broken or "popped" a rib due to coughing and vomiting. He does not remember complaining of any left leg pain at that time.

*The Hearing Testimony of D*L[Redacted]

40. DL[Redacted] testified as Claimant's direct supervisor. He testified that he did not witness the Claimant injure himself. He acknowledged Employer's immediate reporting policy if an employee is hurt on the job. Nonetheless, he could not recall [Claimant] contacted him on November 2, 2021 to report an industrial injury. Indeed, he could not remember if the Claimant contacted him at any time between November 2 and November 5 to report the alleged injury nor could he recall if Claimant, at any point in time during the week of November 2 through November 5, notified him that he was having difficulties performing his job duties. He testified that on November 6, 2021, he received a text message from Claimant stating that he would not be able to come into work but the text did not explain the reason for his absence.

41. Mr. DL[Redacted] also testified that on November 9, 2021, Mr. WM[Redacted] notified him that Claimant had a very large bruise on his back. He remembers that Claimant had a cane in his hand and was not moving very well at that time. He acknowledged that upon seeing the bruising, he sent immediately directed Claimant to the hospital. He acknowledged that he never asked Claimant the date of the accident. Rather, he completed much of the First Notice of Accident Report Form including the portion that called for the date and time of the accident, which he simply reported as 11/9/2021.

42. Mr. DL[Redacted] also acknowledged that he could not remember if November 9, 2021, was the first date that he had been made aware of the Claimant's injury. He testified that Claimant told him that he did not immediately report the incident because he was afraid he would lose his job.

43. Claimant's medical records support a finding that he was taken off work on December 27, 2021 by PA Eatough under the supervision of Dr. Bisgard. (Clmt's Ex. 1, p. 228). Moreover, Dr. Burns continued Claimant's off work status through April 20, 2022, when she noted she would return Claimant to "very light duty." While Dr. Burns released Claimant to light duty, the evidence presented fails to persuade the ALJ that Employer accommodated the restrictions outlined in Dr. Burns' April 20, 2022 report (Clmt's Ex. 3, p. 297) in a modified duty position.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The Alleged Mechanism of Injury (MOI) and Claimant's Credibility

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of

the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. Here, a question exists regarding whether the MOI described by Claimant may be causative of his alleged increased back/leg pain and the findings demonstrated on post injury imaging. As presented, the evidence persuades the ALJ that, consistent with the opinions of Dr. Castrejon, Claimant likely suffered two separate injuries causing pain in his low back and in reference to the November 2, 2021 incident, corresponding sensory disturbances and radicular pain in the left leg and foot. The ALJ credits Claimant's testimony and the opinions of Dr. Castrejon to conclude that the November 2, 2021 lifting incident, while Claimant was stocking cases of oil, probably aggravated an already compromised, surgically altered and diseased low back, worsening the pain caused by his vomiting episode on October 27, 2021, giving rise to new sensory disturbances, i.e. saddle aesthesia, urinary retention and erectile dysfunction in addition to radicular pain in the left leg/foot. While Claimant did not initially report that he fell forward striking his flank on the cases of oil after feeling a "pop/snap" in his low back, the severe bruising visible by medical personnel on November 9th, seven days after the alleged November 2, 2021, incident provides sufficient circumstantial evidence of a fall/insult to the left side of the body. Moreover, Claimant has consistently indicated that the lifting associated with his stocking duties on November 2, 2021 is causative of his symptoms, not the fall. Given Claimant's self-observed memory problems coupled with his consistent report that the lifting caused a pop/snap followed by pain which he thought would improve on its own, the ALJ is not surprised that Claimant failed to reference the fall as a major aspect of his November 2, 2021 injury. Given the totality of the evidence presented, the ALJ is convinced that Claimant probably did suffer an aggravation of a pre-existing condition, i.e. his degenerative disc disease, as a consequence of lifting cases of oil on November 2, 2021.

Compensability

E. A "compensable" injury is one that requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), ***aff'd*** *Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous

and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

G. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). There is no presumption that an injury which occurs in the course of employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo.App.1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation. To the contrary, lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo.App.1986).* In this case, Claimant contends that the evidence supports a conclusion that he has proven that his low back injury occurred during the time and place limitations of his employment and arose out of his stocking duties for Employer.

H. On the other hand, Respondents contend that the inconsistencies in the record regarding the exact mechanism of injury (MOI) combined with the pre-existing condition of Claimant's lumbar spine warrant a very different conclusion. Respondents maintain that the evidence presented more convincingly supports the conclusion that Claimant's symptoms represent natural and probable progression of his underlying degenerative disc disease, which was probably aggravated by the events of 10/27/2021 involving forceful vomiting causing something to "explode" in his left flank rather than any incident occurring November 2, 2021. Simply put, Respondents contend that Claimant's low back/leg pain and his subsequent disability and current need for treatment are not related to any incident that occurred November 2, 2021. The ALJ is not persuaded.

I. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question*

Submitted by the United States Court of Appeals, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Although there are inconsistencies in the record regarding the MOI in this case, the ALJ resolves those conflicts in favor of Claimant to find and conclude that he probably lifted a case of oil while bending to the left leading to a sudden outset of symptoms in his low back/leg, which caused him to fall forward into the product he was stocking for employer. In reaching this conclusion, the ALJ is mindful that Claimant had experienced back pain on October 27, 2021, yet the evidence presented supports a conclusion that Claimant had returned to work after getting sick on October 27, 2021 and was working without restriction on November 2, 2021. Contrary to the suggestions of Dr. Burns and Dr. Brunworth, the evidence presented fails to support a conclusion that Claimant's left-sided paresthesia's and radicular pain originated as a result of the October 27, 2021 or the natural progression of a pre-existing condition. Rather, the evidence presented supports a conclusion that the onset of Claimant's radicular symptoms and symptoms originally thought to represent cauda equina syndrome arose immediately after the November 2, 2021 lifting incident and progressively worsened until Claimant was forced to seek treatment on November 9, 2021.

J. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a pre-existing infirmity or disease to produce disability or the need for treatment for which workers' compensation is sought. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by employment related activities and not an underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

K. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, as asserted by Respondents, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005).

L. Based upon the totality of the evidence presented, the ALJ credits the opinions of Dr. Castrejon to find and conclude that Claimant probably suffered an acute aggravation of a pre-existing condition in his low back on November 2, 2021 giving rise to his reported radicular pain and proximal neurologic symptoms, including saddle

aesthesia, urinary retention and erectile dysfunction. While the ALJ is not convinced that the November 2, 2021 incident caused any of the degenerative findings in Claimant's lumbar spine, the aforementioned symptoms/sensory disturbances are directly traceable to Claimant's stocking duties on November 2, 2021. The evidence presented persuades the ALJ that Claimant's symptoms and functional decline after November 2, 2021, as well as his need for treatment were probably related to this acute aggravation. In concluding as much, the ALJ rejects Respondents' suggestion, based primarily on the opinions of Dr. Burns and Dr. Brunworth that Claimant's disability and current need for treatment is the culmination of the natural progression of a pre-existing condition in Claimant's back following his prior injuries and subsequent surgeries to his lumbar spine. The ALJ finds and concludes that Claimant has established the requisite causal connection between his employment duties and his medical condition. Accordingly, the ALJ concludes that the claimed injury is compensable.

Claimant's Entitlement to Medical Benefits and Authorization to Treat

M. As noted above, Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. This includes medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, supra. Regardless, Respondents are only liable for authorized treatment. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997).

N. Under §8-43-404(5) (a) (I) (A), C.R.S. 2018 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973).

O. As noted, § 8-43-404(5) (a), C.R.S. affords an employer or its insurer the right in the first instance to select a physician to treat the injury. The statute requires the employer or insurer to "provide a list of at least four physicians . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on

the job injury, the employer or insurer shall provide the injured worker with a written list . . .” In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician . . . at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (ICAO, September 6, 2011).

P. In this case, the record contains substantial evidence to support a conclusion that the medical care Claimant received through UC Health, Dr. Emily Burns and Dr. Kenneth Finn was reasonable, necessary and related to the November 2, 2021 injury to cure and relieve his symptoms. Accordingly, the ALJ finds Respondent’s liable for the costs of this care. Moreover, the record supports a conclusion that Claimant probably requires additional treatment, to cure and relieve him of the ongoing effects of his November 2, 2021 industrial injury. Indeed, the medical reports outline persistent pain and functional decline secondary to neurologically correlated pain, lower extremity weakness and decreased sensation, leading Dr. Castrejon to recommended additional treatment and diagnostic testing. Nonetheless, it is necessary to determine who is authorized to provide such care.

Q. As noted above, an employer's duty to designate a medical provider in the first instance is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. The questions of whether Employer failed to timely tender the services of a physician and the right of selection passed to Claimant are questions of fact for resolution by the ALJ. *See Ruybal v. University Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988); *Buhrmann v. University of Colorado Health Sciences Center,* W.C. No. 4-253-689 (November 4, 1996). In this case, the ALJ concludes that Claimant probably informed Mr. P[Redacted] that he injured his back while stocking oil on November 9, 2021. Based upon the evidence presented, the ALJ finds/concludes that Employers duty to select a provider to treat Claimant’s injury was triggered November 9, 2021 and Employer timely tendered the services of a physician as required by statute at that time.

R. Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an authorized treating provider (ATP) refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment

is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). Here, Claimant was originally seen on an emergent basis at Grandview Hospital Emergency Room. The physicians then transferred him to Memorial Hospital Central who, at the point of discharge, referred Claimant to Dr. Emily Burns and for a neurosurgical evaluation. (Clmt's Ex. 1, p. 214). Respondents designated UC Health Occupational Medicine Clinic to treat the Claimant. He was seen by Dr. Elizabeth Bisgard and Dr. Emily Burns to attend to the claimed injury pursuant to W.C.R.P. 8-2(A) and C.R.S. § 8-43-404(5)(a)(I)(A). The Claimant has not been treated outside of the chain of referral for which benefits are sought. Consequently, the ALJ concludes that the providers at UC Health and those providers to whom they referred Claimant are designated providers and authorized to treat Claimant under this claim.

Claimant's Entitlement to Temporary Disability Benefits & Respondents Request for Late Reporting Penalties

S. To receive temporary disability benefits, a claimant must prove the injury caused a disability, he/she leaves work as a consequence of the injury, and the disability is total and lasts more than three regular working days. *C.R.S. § 8-42-103(1); PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Here, the evidence presented persuades the ALJ that PA Eatough, under the direction of Dr. Elizabeth Bisgard, who reviewed PA Eatough's treatment record, removed Claimant from work due to the ongoing effects of his low back injury on December 27, 2021 (Clmt's Ex. 1, p. 228). Furthermore, the medical records reflect that Claimant continued to be restricted from working per Dr. Burns until April 20, 2022 when she released him to "very light duty". (*See* Clmt's Ex. A, pp. 250, 254, 269, 281, 297). Nonetheless, Respondents failed to demonstrate that they accommodated Claimant's restrictions by offering him modified duty. The ALJ credits the medical record and Claimant's testimony to find that he has been unable to perform the full range of his work duties since December 27, 2021 and Respondents failed to offer modified duty. Consequently, Claimant is "disabled" within the meaning of section 8-42-105, C.R.S. and is entitled to TTD benefits from December 27, 2021 and ongoing. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999).

T. Respondents seek a penalty against Claimant for his alleged failure to timely to report the injury in writing as required by § 8-43-102(1) (a), C.R.S. Section 8-43-102(1) (a) provides that an employee that sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four days of the occurrence of the injury." If the employee fails to report the injury in writing, "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left

to the discretion of the ALJ. *LeFou v. Waste Management*, W.C. No. 4- 519-354 (ICAO March 6, 2003). In this case, the evidence overwhelming supports a conclusion that Claimant failed to submit a written report of injury until November 9, 2021. Based upon the evidence presented, including the testimony of Ms. M[Redacted] and Mr. DL[Redacted], the ALJ is persuaded that Claimant was probably aware of the reporting requirements for work-related injuries. Nonetheless, Claimant was not entitled to lost wages until December 27, 2021, more than one month after he filed his written report of injury, when he was taken off work by PA Eatough. Accordingly, the ALJ refuses to impose a penalty for late reporting.

ORDER

It is therefore ordered:

1. Claimant's November 2, 2021 claim for work-related injuries to his low back/left leg is compensable.

2. Respondents are liable for Claimant's treatment with UC Health in addition to any treatment he obtained as part of the referrals received from UC Health. All medical expenses shall be paid pursuant to the Workers' Compensation medical benefits fee schedule.

3. Respondents shall pay TTD in accordance with C.R.S. § 8-42-103(1)(b), for the period beginning December 27, 2021 and ongoing at a rate of sixty-six and two-thirds percent of Claimant's average weekly wage (AWW), but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. C.R.S. § 8-42-105(1).

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

DATED: September 28, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he was injured in the course and scope of his employment on February 3, 2021.

ONLY IF CLAIMANT HAS PROVEN COMPENSABILITY,

II. Whether Claimant has proven that he is entitled to reasonably necessary medical benefits related to the February 3, 2021 incident.

III. Whether Claimant is entitled to reasonably necessary medical benefits and whether Claimant has proven that the treatment he obtained was authorized within the chain of referral and or by a provider on a designated provider list.

IV. Whether the lumbar spine, right shoulder and neck conditions were caused by that compensable event.

V. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits as a consequence of the injuries sustained.

VI. Whether Claimant has proven by a preponderance of the evidence that he is entitled to a specific average weekly wage.

VII. Whether Respondents have proven by a preponderance of the evidence that Claimant was either responsible for termination or that his wage loss was not a result of the compensable event.

VIII. Whether Respondents have proven by a preponderance of the evidence that there should be a reduction in compensation due to Claimant's late reporting of the injury pursuant to Sec. 8-43-102(1)(a), C.R.S.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on December 10, 2021 through prior counsel on the above listed issues. Respondents filed a Response to Application for Hearing dated January 6, 2022 adding the above defenses.

A hearing was convened on May 10, 2022 before this ALJ. Following a *pro se* advisement to the self-represented Claimant, Claimant made a motion to continue the hearing in order to obtain the services of another attorney. Claimant explained that he had hired two separate lawyers and that the last lawyer withdrew from representing him. The order approving the withdrawal of counsel was issued by ALJ Peter J. Cannici on April 28, 2022. Claimant indicated that he had no funds to pay an attorney and was requesting that he be assigned an attorney *pro bono.* This ALJ provided Claimant information that, under Colorado law, attorneys in workers' compensation matters were limited to charging fees based on Sec. 8-43-403(1), C.R.S. in the amount of twenty

percent on contested benefits, upon winning the claim. Over Respondents' objections, this ALJ found good cause for a continuance in this matter, issuing an order dated May 11, 2022. This ALJ suggested to Claimant that he to obtain a list of attorneys promulgated by the Colorado Bar Association Workers' Compensation Section from the OAC staff for his convenience. Claimant was further admonished that the case would be reset for hearing within 60 days of the date of this hearing and Claimant must have taken affirmative steps to secure the services of an attorney or the case would proceed without assistance of counsel. Claimant was provided with a large packet of records of approximately 2,424 pages which included all medical record in Respondents' possession. Respondents indicated that they would be culling the records to a more manageable size for the continued hearing and that it would be Claimant's responsibility to submit any exhibits he wished for the court to consider.

At the commencement of the July 8, 2022 hearing, Claimant indicated that he had contacted a couple new attorneys but that they had not yet responded. This ALJ found that this action was not sufficient affirmative steps to further continue the hearing and the hearing proceeded forward. This ALJ, again, provided a *pro se* advisement.

FINDINGS OF FACT

Based on the evidence presented at the hearings, the ALJ enters the following findings of fact:

1. Claimant was 55 years old at the time of the last hearing in this matter. He worked as a foreman assistant for Employer on February 3, 2021. Employer is a company providing landscaping and snow removal for residential and commercial clients. Snow was expected the following day, and Claimant was instructed to take one of the Employer's trucks and to hook up a snow plow on the truck before leaving the Employer's place of business. Claimant clocked out of work on February 3, 2021 at approximately 4:30 p.m. but was paid for an additional hour and one half to perform any tasks necessary to accomplish the work needed for the next day, including hooking up the plow to the work truck while at the shop and collect any other tools needed to perform the work the next day. Claimant was assigned to do the snow removal for specific client properties in Northwest Denver, close to where Claimant lived.

2. Claimant was driving away from Employer's shop, after having hooked up a snowplow to the Employer's truck, when he was involved in a hit and run motor vehicle accident while driving westbound on Arapahoe Road. Claimant stated that he was on his way to assess the parking lots where he was assigned to do snow removal on the following day, if there was any snow fall. The hit and run motor vehicle accident (MVA) occurred at approximately 5:08 p.m. in Greenwood Village, many miles south of his home and the properties Claimant was responsible for plowing. The truck was hit by a U-Haul truck on the front right side of the plow. Claimant stated that the person driving the U-Haul van immediately left the accident scene and parked at a Motel 6, then fled from the place of the accident, abandoning the U-Haul truck. Claimant followed the driver but was unable to locate him. He returned to his vehicle, and he flagged a police officer that was responding to another call at the Motel 6, where he found the abandoned the damaged U-Haul truck. That police officer called in further help and an investigation commenced

relating to the hit and run. Claimant also called the Employer's shop to report the accident.

3. The second officer arrived at the scene and was investigating the U-Haul truck when a woman approached. When questioned, she informed the officer that the driver had departed because he had outstanding warrants against him. She later revised her story, in order for the U-Haul not to be towed, stating that she was the driver of the vehicle. Claimant spoke with the police officer, denying that the woman was the driver, stating that the drive had been male, but that Claimant would not recognize his face. The police officer confirmed that the woman had not been driving the vehicle by reviewing video footage from the Motel 6 that showed that a male parked the U-Haul truck at the Motel 6 and departed.

4. Footage of the police body cameras were reviewed and did not show any significant indications that Claimant was injured. It specifically showed Claimant walking without any difficulty as he spoke to the officers and walked back and forth from his truck to the U-Haul truck to take photographs. He also got in and out of his truck and stood against his truck filling out paperwork at chest level, turning his head without difficulty.

5. The police reports failed to show any particular notifications or reports of injuries. Claimant did not request the services of an ambulance and was seen walking in the parking lot, completing paperwork without indications of injuries or altered movement patters. In fact, while Claimant stated that he was injured in the collision, including injuries to his neck, teeth, low back, right knee and right shoulder, Claimant confirmed that he did not report any injuries at the time of the accident to either the police or his employer justifying this omission because he was frightened and nervous. The officer body camera video failed to show Claimant as an individual that was either frightened or nervous and this assertion was not credible.

6. Mr. C[Redacted] was Claimant's direct supervisor. Mr. C[Redacted] testified that it did not snow on either February 3, 2021 or February 4, 2021. Mr. C[Redacted] testified that Claimant was not sent out on an assignment to clear snow on February 3, 2021 as it did not snow greater than two inches. Claimant was told that snow was expected, and told to get the truck at the shop, hook up the plow, and take the truck home so that, if it did snow, he could go to his assigned properties and plow. Mr. C[Redacted] stated Claimant was not being paid at the time the accident occurred. Claimant was not paid for travel time or to go to inspect the property he was to plow the next day, if it snowed, and he was not paid to be on call. Mr. C[Redacted]'s testimony was corroborated by other Employer witnesses and was credible.

7. Claimant called Mr. C[Redacted] from the motel after the incident occurred. Mr. C[Redacted] asked Claimant if he was hurt and Claimant just reported the damage to the truck and plow. Mr. C[Redacted] asked Claimant if the truck was operational, and Claimant said it was.

8. Claimant reported to work the next morning between 7 a.m. and 8 a.m. and met with Mr. C[Redacted] and Mr. W[Redacted], the Safety Manager. A report was completed regarding the incident with Claimant's assistance. There was no mention of injury in the report. Claimant, Mr. C[Redacted] and Mr. W[Redacted] were involved in the meeting, discussing the incident. During the meeting Claimant was asked if he was injured by both his supervisor and the Safety Manager and he responded that he was fine. In the meeting, all, including Claimant, agreed that Claimant was off the clock when the accident occurred and was on his way

home. Claimant returned to his regular work for several weeks, as shown by the check stubs, performing his regular job without limitations.

9. As found, there was no snow on February 3 or February 4, 2021. Claimant's timecard detail showed the date, location, type of work done and payment per hour. When he worked snow removal, "plowing" was indicated, and he was paid $25 per hour for that regular time and $37.50 for overtime worked. Claimant's regular work for clients was indicated as "Labor Hardscapes" or "Labor-Unbillable." and paid at a rate of $17.00 per hour. For example, on February 3, 2021, he was paid 9 hours for "Labor Hardscapes." This matches Claimant's handwritten sheet, with Claimant clocking out at 4:30. Claimant was not paid for plowing on February 3, 2021, February 4, 2021, or February 5, 2021. He was paid for landscaping work. Mr. C[Redacted] testified that there had been no snow and Claimant did not plow and did not say he had plowed when he met him the following morning, on February 4, 2021, to discuss the incident and complete the incident report.

10. Claimant submitted Exhibit 10 of 2, which contained a handwritten timesheet purporting to reflect plowing on February 4, 2021. This document was unfamiliar to the Employer witnesses. All testified that they had not seen it before. In general, Claimant used the same type of form, completed his time himself in his handwriting, and turned the forms in to be paid. The handwritten timesheets were the basis for his Timecard Details and pay.[1] Appearing a few times in the hearing packet was a handwritten Daily Job report which represented claimant working from 2 a.m. until 3:30 a.m. on February 4, 2021. Claimant represented this was evidence that he had plowed snow after the U-Haul incident and before appearing at work on February 4, 2021, apparently arguing that this put the incident that occurred on February 3, 2021 at 5:08 p.m. within the course and scope of employment. Mr. C[Redacted] testified that it appeared to him that Claimant had created the handwritten time sheet for purposes of the hearing.

11. Ms. E[Redacted], the Human Resources Manager, testified that Claimant had not turned in a February 4, 2021 timecard showing snow plowing for payment. Claimant's Timecard Detail did not reflect that this was claimed as time worked. Claimant testified that the plow had been damaged and that he had difficulty using it after the incident. Mr. C[Redacted] met Claimant that morning to look at the damage on the plow and do the report, and testified that it had not snowed, it would not make sense to plow, and Claimant did not mention plowing in the early morning with the damaged plow. Mr. C[Redacted]. testified that Claimant was not paid for plowing in the pre-dawn hours of February 4, 2021. They testified that Claimant never complained about not being paid for snow plowing work. There were several weeks between February 4, 2021 and when Claimant quit his employment in late March, 2021, and ample opportunity for him to rectify it if he had actually turned that time in and been unpaid. The handwritten timecard Claimant presented to the court showing plowing work on February 4, 2021 is not credible, and is not evidence that he was in the course and scope of his work at the time of the U-Haul incident.

12. On February 17, 2021, Employer was provided a letter regarding a UM/UIM and Med pay claim Claimant was bringing against Employer's auto carrier, Selective Insurance Company of America. Employer noted that this was the first they had learned that Claimant was alleging any injury associated with the incident of February 3, 2021.

[1] Timecard and handwritten sheet match: 6 hours at one client and 4 hours at another, neither of which was the assigned snow plowing addresses.

After receipt of that letter, Mr. C[Redacted], Mr. W[Redacted] and Ms. E[Redacted] called a meeting with Claimant, scheduled for February 18, 2021, to ask him about the claimed injury under their auto policy. For the first time during that meeting, Claimant indicated that he had started feeling right knee pain and hired an attorney. Claimant had brought an invoice for his initial visit along with an order from his doctor for a knee x-ray. Claimant was told that this would be passed on to the auto insurance carrier, which it was pursuant to an email dated the same day. Ms. E[Redacted] testified that Claimant agreed he was off the clock when the incident happened. Claimant testified that he said this because he was frightened and intimidated at this meeting, and that Ms. E[Redacted] stood behind him and yelled at him for retaining an attorney. Ms. E[Redacted], Mr. C[Redacted], and Mr. W[Redacted] all credibly testified this was untrue and denied that this occurred. Ms. E[Redacted] testified that she asked Claimant for a doctor's note regarding any restrictions he had as a result of his knee complaints. Claimant provided no restriction report. Ms. E[Redacted] followed up with Claimant three times, asking for restrictions, and he still did not provide one.

13. Claimant worked until March 25, 2021. At that time Claimant told Mr. C[Redacted] and Ms. E[Redacted] that he had found another job that paid him more money and was closer to his home. At hearing Claimant testified that Employer was taking away his hours. Mr. C[Redacted] testified that at the time he quit, Claimant did not complain that Employer was taking away hours. Mr. C[Redacted] testified that Employer was not taking hours away from him. Hours for the employees depended upon the needs of the clients and varied over time.

14. Claimant initially filed a Workers' Compensation Claim against the wrong employer and wrong carrier on or about July 13, 2021.[2]

15. Since February 18, 2021, Claimant sought treatment from several providers and underwent surgeries. By the time of the hearing, he had undergone a right knee surgery, a lumbar spine fusion, right shoulder surgery and cervical fusion. Most of these records were not made available to Respondents. These surgeries have been paid for through Medicaid, according to Claimant's testimony.

16. Dr. Fall evaluated Claimant on January 13, 2022 and testified by deposition on March 4, 2022 as an expert in occupational medicine, physical medicine and rehabilitation, causation analysis, as well as a Level II provider fully accredited by the Division. Her conclusion was that Claimant did not sustain any injury that required medical treatment as a result of the event of February 3, 2021. During her interview with Claimant, he was very evasive about how he claimed he was injured. Claimant eventually told her that he put pressure on his right leg applying the break, and damaged his right knee. He said he just felt pain in his neck, low back and right shoulder while he was sitting in the seat. He did not identify any movement inside the vehicle or say that he had hit anything inside the vehicle. Dr. Fall also pointed out that medical records reveal that Claimant experienced an intervening lumbar injury, reporting to the emergency room on August 2, 2021 and saying that he bent over and had immediate worsening of chronic low back pain. This lead to surgery on August 6, 2021 for Claimant's pre-existing severe

[2] Claimant's Workers' Compensation Claim form indicated Employer was Stake Center Locating, and S and N Communications Inc., and the insurer as First Liberty Insurance Corp. who were not parties to this claim. This was not notice of a work related injury to his Employer or their Insurer.

lumbar stenosis and degenerative spondylosis superimposed on L4-5 degenerative anterior spondylolisthesis.

17. Dr. Fall noted that, by description of the U-Haul accident, the main direction of the force from the U-Haul would be a sideswipe, which would not be expected to cause any significant force or movement to a restrained driver in the vehicle. Injuring the knee as the result of slamming on the breaks was highly unlikely. In addition, there was a lack of medical documentation and lack of a report of injury on the day of the event or even close to the MVA.

18. Dr. John Hughes evaluated Claimant, at claimant's request, for an independent medical examination on February 14, 2022. Claimant reported he had pain and symptoms all over his body immediately after the collision. After hearing Claimant's various complaints and history, including complaints of the neck, shoulders, arms, extremities and the low back pain, Dr. Hughes only concluded that Claimant's right knee was injured in the incident. His basis for this was Claimant's history and his conclusion that Claimant had developed an acute medial meniscus tear in the right knee. Among the history provided to Dr. Hughes was that Claimant was "perfect" after a prior 2016 work injury and a prior 2018 motor vehicle accident. Dr. Hughes did not have prior medical records and was dependent upon Claimant's representations. Dr. Hughes indicated Claimant was at MMI and had a work related rating of 10% lower extremity for the right knee.

19. Neither Dr. Fall nor Dr. Hughes had many relevant pre-injury records at the time of their reports. Neither of them viewed the body camera video on the date of the alleged injury. Review of those records shows clearly that Dr. Hughes' conclusions are based upon a faulty history provided by Claimant. Claimant's pattern of keeping one medical provider uninformed about what went before them is evident from the medical records. Claimant in fact already had a 12% rating for right knee pain under his prior 2016 work injury claim. This rating was admitted and PPD benefits were paid based upon that rating. Long after the settlement of that claim and a year before this claim, Claimant was awaiting surgery for the right knee.[3] He was taking medication because of his low back and right knee pain for years and continued to do so within months of the incident.

20. Dr. Hughes's opinion that the right knee was injured during the U-Haul event was based upon inaccurate information and is not credible or persuasive. Dr. Fall's opinion is found more credible than any contrary opinions. As found, Claimant did not sustain a new injury or aggravation of the preexisting condition because of the U-Haul incident.

21. Although Claimant is claiming new injuries, Claimant was certainly not "perfect" after his 2016 work injury as he attempted to obtain benefits and treatment after that incident. In fact, he claimed he was permanently and totally disabled.[4] As a result, he received a lump sum and structured settlement that continues to pay out. At the time of MMI on July 19, 2018, ATP Dr. Yusuke Wakeshima's notes show 13 alleged work related problems in his assessment. This included low back and neck pain, which had been treated under the 2016 work injury until a full medical record review showed they

[3] This was documented by Dr. Joshua Emdur, D.O. on February 6, 2020 at Clinica Colorado, who reported: "Right knee pain 9/10 constant sharp pain. Awaits surgery." It also reports "Back pain 6/10 sharp constant and radiates to left leg." See Ex. I, Bates 597

[4] See Ex. FF, Bates 2265, and 2277-2283, see specifically Bates 2280, Section 9(A)(8).

were in fact pre-existing and not related to the work injury. Claimant received a 13% whole person impairment and a 5% mental impairment under the 2016 workers' compensation claim. He signed the settlement documents in that claim on November 19, 2018 and an Order approving the settlement was signed by Director Paul Tauriello on November 21, 2022.

22. Claimant was involved in an MVA on October 14, 2018, before signing the settlement documents from his claim of permanent total disability due to his claimed knees, neck and back complaints. Records from the Bovidilla Clinic state,

> [Claimant] reported that before the 10-14-2018 accident he was under care for a workers comp left knee injury. [Claimant] states his right knee hit the inside of the car on impact. [Claimant] states his right knee, neck and back pain is all new after this 10-14-12018 crash.[5] [*Claimant's name, redacted*.]

Claimant settled his workers' compensation claim while overlapping with a new claim for the same body parts and conditions. This indicates that Claimant was not truthful with regard to his allegations of injuries related to the February 3, 2021 U-Haul incident.

23. Further records from Dr. Wakeshima, after the settlement, also show that the representation to Dr. Hughes that Claimant was "perfect" was incorrect. On February 1, 2019, Claimant was again evaluated by Dr. Wakeshima. He reported that his low back had worsened and was asking for injections for the low back pain. He did not give the history of the intervening MVA. He was using a cane, wearing knee braces on both knees, and an ankle brace. Dr. Wakeshima arranged for injections. However, when Claimant returned on March 1, 2019, Dr. Wakeshima discharged him for non-compliance with his opioid agreement based upon a urinalysis that showed morphine and diazepam metabolites, none of which appeared to have been prescribed. In the meantime, Claimant was also being treated in Chicago and Colorado for injuries attributed to the October 2018 MVA. In May, 2019, he was treating for that MVA and complained of low back, bilateral leg pain, bilateral shoulder pain, right knee pain, including popping clicking, give-way issues affecting his activities of daily living and function, neck pain, midback pain, headaches, tinnitus, sleep and mood issues. This is far from "perfect" as represented to Dr. Hughes. Dr. Robert Williams, of Clinica Colorado, noted that "He cancelled the Ortho referral here and on the advice of his attorney went to Chicago (where he was injured in 2018) to see an orthopedist there. They are planning on giving him some injections in the back and neck." On September 11, 2020 he continued to diagnose musculoskeletal pain, chronic radicular low back pain among other diagnosis.

24. The 2016 workers' compensation claim and the 2018 MVA were not the first accidents Claimant had alleged caused injury to his neck, back, shoulders and knees as well as psychological issues including depression. On October 12, 2013 Claimant was evaluated for neck and low back injuries related to another MVA the prior month. Then on November 24, 2013 Claimant reported another injury three days prior causing mid back, low back and left knee injuries. There are also indications that Claimant's psychological problems date back many years. On March 27, 2014 Claimant was seen at Riverside Community Hospital in California with a history of depression, substance abuse in the ED with psychosis, exhibiting paranoia, delusions, and disorganized thought process due to being off psycho meds. Claimant was hospitalized from March 28, 2014

[5] Ex. N, Bates 697

to April 2, 2014. These complaints clearly goes back many years. Claimant's back pain was described as "chronic" in 2013, as were his "severe" psychological issues.

25. As found, Claimant has failed to show by a preponderance of the evidence that he sustained compensable injuries on February 3, 2021 in the course and scope of his employment. In fact, it is more likely than not that Claimant had chronic ongoing low back, mid back, bilateral shoulder, bilateral lower extremity, teeth, or face injuries, as well as psychological conditions that were ongoing for many years prior to the February 3, 2021 event, none of which were aggravated or accelerated as a result of the 2021 MVA.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seek medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay

witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, *supra*.

The Act distinguishes between the terms "accident" and "injury." The term "accident" refers to an unexpected, unusual, or undesigned occurrence. Section 8-40-201(1), C.R.S*., supra*. By contrast, an "injury" refers to the physical trauma caused by the accident. Thus, an "accident" is the cause and an "injury" the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable injury. A compensable industrial accident is one, which results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

In this matter, an incident occurred on February 3, 2021, however, there was no injury caused as a result. The substantial amount of video of Claimant immediately after the incident makes it quite clear that he was not in pain and did not experience any injury at the time of that incident. He did not display any injury or speak of any injury to the police. His co-workers are credible in their testimony that he did not display or speak of any injury for weeks after the incident, despite being directly asked about it. The fact that he underwent surgery for unquestionably chronic symptomatic preexisting conditions after the incident occurred does not lead to the conclusion that this was because of the incident.

An injury may be compensable if, at the time of the injury, the employee was performing services arising out of and in the course of the worker's employment. C.R.S. § 8-41-301(1)(b). "For an injury to occur 'in the course of' employment, the Claimant must demonstrate that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions*." Madden*

v. Mountain W. Fabricators, 977 P.2d 861, 863 (Colo. 1999). To establish that an injury arose out of employment, "the Claimant must show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract." *Id.* "In general, a Claimant who is injured while going to or coming from work does not qualify for recovery because such travel is not considered to be performance of services arising out of and in the course of employment." *Id.* The established reasoning behind this is that travel to the worksite does not confer a benefit upon the employer other than arrival at work, which has been rejected as justification to expand the course and scope of employment. This doctrine is commonly called the "going to and from work" rule. *Id.; Berry's Coffee Shop, Inc. v. Palomba,* 423 P.2d 2 (1967): *Colorado Civil Air Patrol v. Hagans,* 662 P.2d 194 (Colo. App. 1983).

There are exceptions to the going to and from work rule that establish a causal connection between employment and a travel injury, but these do not apply in this case. See, e.g. *Perry v. Crawford & Co.* 677 P.2d 416 (Colo. App. 1983). Under *Madden,* variables that would support an exception to the rule include: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer premises, (3) whether the travel was contemplated by the employment contract and (4) whether the obligations or conditions of employment created a "zone of special danger' out of which the injury arose. The question of whether travel was contemplated by the employment contract is satisfied only if travel is a substantial part of the service to the employer, shown by, for example, (a) whether a particular journey is assigned or directed by the employer, (b) when the employee's travel is at the employer's express or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work, and (c) when travel is singled out for special treatment as an inducement to employment. *Madden* at 865. One of the most recent ICAO cases to use the *Madden* analysis was *Essary v. General Dynamics* WC 5-117-912 (ICAO December 1, 2020), aff'd, Colo. Ct. App, 10CA2103, August 12, 2021, unpublished. In that decision, the ICAO found that Claimant's travel to work when on call did not create an exception to the "going to and from work" rule.

Essary and *Madden* both cite to the case of *Varsity Contractors v. Baca*, 709 P.2d 55 (Colo. App. 1988), which discusses that the use of a company vehicle does not create an exception to the "going to and from work" rule. In *Baca,* the car and gas were provided by the employer for personal and business use and Claimant was on call when driving at the time of the accident. This still did not mandate a finding that the accident involved was an exception to the "going to and from work" rule.

In this case, Claimant did not receive additional remuneration for travel to and from work, no payment for being on call, no persuasive evidence that Claimant was on his way to his plow snow on the properties at the time of the U-Haul incident, and no persuasive evidence that travel to and from the job site was an inducement to employment. See, *Hafner v. Stergeon Electric*, W.C. Nos. 4-507-018 and 4-506-807 (ICAO June 26, 2007)(Claimants were paid additional wages for a particular job, which was determined to be for travel costs driving to a Casino Project in Black Hawk, therefore an incentive to travel); *Sanchez v. Accord Human Resources,* W.C. 4-551-435, 4-552-982 (ICAO May 19, 2003). As found, Claimant was driving the company pick up with the plow home, but was not on the clock, and was not on his way to perform services for the employer with that truck. In the end, as found, there was no snow and no need to use the plow. It is

found and concluded that, Claimant's situation is not an exception to the going and coming rule as he was not in the course and scope of employment when this incident occurred.

Claimant failed to prove that he experienced a compensable work injury on February 3, 20221 as he was clearly not injured in that event as demonstrated by observing the video, which lasted a substantial amount of time after the event. As found, the lack of damage to his vehicle, his failure to complain of any injury or report any injuries to the police, his ability to walk, bend, lift, stand, and turn his head, with no difficulty at all, support the finding that he, in fact, sustained to injury or disability. Further, as found his current history and testimony is unlikely as he was not a credible historian. He mislead his own IME physician, Dr. Hughes by not disclosing prior complaints and injuries. Even Dr. Hughes didn't support him in his "whole body" claim, and narrowed his opinion down to the knee. That opinion was based upon his lack of knowledge of the history of that knee. After reviewing the medical records, it is clear that Claimant has monetized his body in multiple personal injury and workers' compensation claims. The records show has occurred from at least the 2016 workers' compensation claim. He then claimed PT in 2018, and just as he was settling his 2016 claim, including claiming to be permanently and totally disabled, he claimed a new accident had caused new injuries or aggravations. As found, Claimant provided an incomplete history to those providers, and started up a new personal injury claim for the same body parts. It is clear that all the records of prior injuries have not been provided by the parties as there is mention of a motor vehicle accident in Chicago and treatment for the same body parts in California. Claimant may have had surgeries since the February 3, 2021 incident, as he testified, (as the records of all the surgeries were not in evidence), but the treatment for any of those conditions alleged by Claimant were not proximately caused by the U-Haul incident.

Claimant had ample opportunity to present evidence to prove that the incident of February 3, 2021, may have caused injuries, to his neck, low back, head, jaw, teeth, right shoulder, right knee, light headedness, blurry vision, ringing in his ears, sensitivity to light and anxiety, but, as found he specifically failed to prove by a preponderance of the evidence that any of the claimed conditions were proximately caused by the incident as he claims. Claimant simply did not present evidence that could overcome the clear medical and factual record. No treatment was necessitated by the February 3, 2021 incident. The video is clear. Everything claimed was clearly pre-existing. As found, the large gap of time before Claimant sought treatment, while continuing to perform his regular duties for Employer, is a key factor in the determination that no disability was created by the U-Haul incident of February 3, 2021. Even if Claimant was injured, it is found that he was not in the course and scope of employment at the time as he was off the clock and heading home after work. This is simply not a compensable work injury.

All other issues are moot in light of a finding that the claim is not a compensable event.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant failed to prove by a preponderance of the evidence (that it was more likely than not) that he was injured in the course and scope of his employment on February 3, 2021, and his claim is *denied* and *dismissed.*

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 30th day of September, 2022.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to a reopening of his claim.

II. Whether Claimant established that the uninsured Employer is subject to penalties pursuant to § 8-43-304(1) C.R.S. for failure to comply with ALJ Spencer's May 12, 2020 order, specifically for failing to cover reasonable, necessary, and related medical care to cure and relieve the effects of Claimant's compensable injury, and pay temporary total disability (TTD) benefits and interest on all TTD owed and not paid when due.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This claim has been the subject of a prior hearing held before ALJ Patrick Spencer on March 12, 2020. The issues presented at that hearing included compensability of an alleged September 7, 2019 injury and whether Claimant was entitled to reasonably necessary medical benefits and lost wage benefits, i.e. temporary total disability (TTD) commencing September 7, 2019.

2. Despite proper notice, Employer failed to appear for the March 12, 2020 hearing. Accordingly, ALJ Spencer took Claimant's testimony at the March 12, 2020 hearing and issued an Order to Show Cause to Employer. Employer did not respond to the show cause order prompting ALJ Spencer to issue his order on May 12, 2020. As part of his May 12, 2020 order, ALJ Spencer found Claimant's September 7, 2019 injury compensable and ordered Employer to "cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's injury." ALJ Spencer also ordered Employer to pay "Claimant $6,200 in TTD benefits from September 8, 2019 through May 12, 2020" and "$175 per week in TTD benefits commencing May 15, 2020 and continuing until terminated by law." Finally, ALJ Spencer ordered Employer to pay interest on all past due TTD.

3. The ALJ adopts ALJ Spencer's Findings of Fact, as articulated in the May 12, 2020 order, as follows:

   a. Employer hired Claimant in August 2019 to tear off and re-cover a 1500 square foot roof on a customer's home. Employer told Claimant it was a "simple" one-layer job.

b. Employer agreed to pay Claimant $35 “per square” to tear off and replace the roof. A “square” is 100 square feet of roof, so there were 15 “squares” in the 1500 square foot roof. Claimant estimated it would have taken two weeks to complete the job had it been a single-layer roof as anticipated.

c. When he got on the roof and started the job, Claimant realized there were four layers of existing roof to tear off.

d. Employer was supposed to supply the materials for the project and stock them on the roof. Employer also told Claimant he would provide a worker to help with the project. Employer provided a helper the first day, but after that, Claimant was left to finish the job by himself.

e. Claimant worked on the project for a couple of days but his progress was stymied by weather. Then a representative from Regional Building came and shut the project down because Employer had not pulled a permit.

f. Two days later, Employer called and informed Claimant he had secured the building permit and work could resume.

g. Employer stopped responding to Claimant’s calls after that. The homeowners also tried to reach Employer without success. They had paid Employer $3,200 for materials, but he had not brought materials to the job site. Repeated heavy rains were causing leaking into the home, so Claimant used his personal funds to buy materials to cover the roof. The homeowners then gave Claimant additional money so he could purchase the materials needed to finish the job.

h. Claimant purchased the materials and loaded them onto the roof by himself because Employer provided no one to help him. Throughout the project, Claimant struggled to move roofing materials and complete repeated trips up and down the ladder. He developed progressively worsening low back and leg pain during the project as a direct and proximate result of the physically demanding work. The lack of help during the project probably contributed to Claimant’s injury.

i. Employer appeared at the job site on September 7, 2019, when Claimant was almost finished with the project. Claimant informed Employer he could not keep working because of his severe low back and leg pain. Employer took over work on the project.

j. Claimant filed a Workers’ Claim for Compensation form on September 20, 2019. He mailed a copy to Employer.

k. On October 15, 2019, Employer appeared at Claimant's home and berated him for filing a workers' compensation claim. He told Claimant, "You are not getting anything." Employer never paid Claimant for his work on the project.

l. Employer never referred Claimant to a physician for treatment.

m. In December 2010, Claimant sought treatment for his back pain at the VA Rocky Mountain Regional Medical Center. He underwent x-rays on December 10, 2019, but the results are not in the record. Claimant was referred for a lumbar MRI and a physical medicine evaluation before he could have a surgical consultation.

n. Claimant proved he was performing services for pay for Employer when he was injured. There is no persuasive evidence he was free from direction and control or customarily engaged in an independent trade or business related to the service provided.

o. Claimant proved he suffered an injury to his low back arising out of and occurring within the course and scope of his employment for Employer.

p. The right to select a physician passed to Claimant and he selected the VA Medical Center.

q. Under the terms of hire, Claimant would have been paid $525 for the roof project. Claimant estimated it would have taken two weeks to complete the project. Claimant's AWW is $262.50 ($525 ÷ 2 = $262.50). This equates to a weekly TTD rate of $175 and a daily rate of $25.

r. Claimant proved he is entitled to TTD benefits commencing September 8, 2019 and ongoing. Claimant stopped work on September 7, 2019 because of the effects of the work injury. Claimant has not returned to work, has not been released to full duties, and has not been put at MMI.

s. The total past-due TTD is $6,200 through the date of this decision. The total accrued statutory interest is $161.58 through the date of this decision. TTD will continue to accrue at the rate of $175 per week until terminated by law. Interest will continue to accrue at the rate of $1.39 per day until the past-due TTD is paid in full.

t. Employer must pay an additional $1,550 to the Colorado Uninsured Employer Fund because it was uninsured at the time of Claimant's injury ($6,200 x 25% = $1,550).

u. Employer knew Claimant had to stop working because of the injury on September 7, 2019. Employer was required to formally admit or deny liability no later than Monday, October 7, 2019. Employer never filed an admission of liability or notice of contest with the Division of Workers' Compensation.

v. Employer should be penalized $25 per day, from October 7, 2019 through the date of this decision (May 12, 2020), for failing to admit or deny liability.

4. Claimant testified that after the May 12, 2020 order of ALJ Spencer was issued, he filed a new application for penalties because Employer never paid his lost wages as ordered. (Clmt's. Ex. 2). Claimant filed his Application for Hearing on April 15, 2022; more than a year after ALJ Spencer's May 12, 2020 order was issued. *Id.* Claimant sent a copy of the Application for Hearing to Employer's address on file with the OAC, namely: 1819 West 22nd Street, Pueblo, Colorado 81003. This is the same address that the prior May 12, 2020 and Show Cause orders were sent to without response by Employer. There is no indication that the prior mailings were undeliverable and returned to sender. Accordingly, the ALJ finds that Claimant's April 15, 2022 Application for Hearing was probably delivered to Employer as was the prior May 12, 2020 Order of ALJ Spencer.

5. Based upon the evidence presented, the ALJ finds that Employer has made no effort to abide by the May 12, 2020 order of ALJ Spencer. Similar to his non-appearance for hearing on March 12, 2020, Employer failed to appear for the August 11, 2022 hearing despite proper notice. Moreover, he did not respond to either Show Cause Order. Based upon the evidence presented, the ALJ finds that Employer has elected to ignore the proceedings and the prior orders of ALJ Spencer. Indeed, the evidence presented, including Claimant's testimony supports a finding that Employer has failed to perform a duty lawfully mandated within the time prescribed by ALJ Spencer, namely the payment of TTD as ordered. Accordingly, for the reason set forth below, the ALJ finds that the imposition of penalties is appropriate in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

II. Penalties

C. Section 8-43-304(1) authorizes the imposition of penalties when an employer or insurer: (1) Violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under §8-43-304(1), supra, requires a two-step analysis. First, the ALJ must determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo.App. 1995). If the ALJ finds a violation, the ALJ must then determine whether the insurer or employer's actions, which resulted in the violation, were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo.App. 2003). Objectively unreasonable conduct will result in the imposition of penalties. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo.App. 1995). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo.App. 2003). Section 8-43-304(4) also provides that an application for penalties "shall state with specificity the grounds on which the penalty is being asserted."

D. A purported violator can "cure" a penalty by paying the benefits or complying with the statute or order, which was allegedly violated. Section 8-43-304(4) provides that any party alleged to have committed any violation categorized above shall have twenty days to cure the violation from the date of mailing of an application for hearing in which penalties are alleged. Section 8-43-304(4) also provides that if the alleged violator cures the violation within the twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The cure statute effectively adds an element of proof to a claim for penalties in cases where a cure is proven. In the ordinary case, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. All that is necessary is that the party seeking penalties prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965 (Colo.App.2003); *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo.App. 1996). Section 8-43-304(4) modifies this rule and adds

an extra element of proof when a cure has been effected. Accordingly, when a penalty allegation has been cured the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse,* 942 P.2d 1312 (Colo.App. 1997); *Ray v. New World Van Lines of Colorado* W. C. No. 4-520-251 (October 12, 2004). Employer did not assert that any alleged penalty had been cured. Indeed, Employer failed to respond in any fashion to ALJ Spencer's May 12, 2020 order or Claimant's April 15, 2022 Application for Hearing despite those documents being served on Employer's address of record.

E. In this case, Claimant has asserted penalties pursuant to § 8-43-304(1) for Employer's failure to follow ALJ Spencer's May 12, 2020 order requiring payment of, among other things, lost wage benefits. (Clmt's Ex. 2). As noted, a violation of an order occurs when a party authorized or obligated to perform performs an action prohibited by the order, or fails to take an action required by the order. *See Dworkin, Chambers and Williams, P.C. v. Provo,* 81 P.3d 1053, 1058 (Colo. 2003). Before analyzing Claimant's penalty claim, the ALJ notes that ALJ Spencer's May 12, 2020 order became final on June 1, 2020 as Employer did not appeal it. Moreover, the evidence presented supports finding that Employer has failed to follow the order to date. Accordingly, the asserted penalty is ongoing.

F. In this case, the Application for Hearing filed April 15, 2022, specifically notes that Claimant was seeking penalties beginning "May 12, 2020 and ongoing pursuant to § 8-43-304(1) for failure to "[respond] to the order by ALJ Spencer to pay benefits. Although Claimant did not indicate the rate at which he requested penalties be paid, he did indicate that he was seeking penalties pursuant to § 8-43-304(1), which provides that penalties for refusing to obey lawful orders shall be punished by a fine of not more than $1,000.00/day. Based upon the evidence presented, the ALJ concludes that the basis for Claimant's penalty assertions was sufficient, pursuant to § 8-43-304(4), to place Employer on notice of the basis for the penalty by noting that the alleged conduct resulting in the penalty allegation was the purported violation of ALJ Spencer's May 12, 2020 order, specifically that portion which required Employer to pay TTD benefits.

G. Based upon the totality of the evidence presented, the ALJ concludes that Employer violated ALJ Spencer's May 12, 2020 order requiring the payment of TTD benefits. Once a violation occurs, each subsequent day that the violation continues constitutes a separate violation, which may be joined with the first for purposes of adjudicating the violator's total liability for penalties. *Spracklin v. Industrial Claim Appeals Office,* 66 P.3d 176 (Colo. App. 2002). As ALJ Spencer's May 12, 2020 order did not become final until June 1, 2020, the imposition of penalties extends from June 2, 2020 and is ongoing.

H. While the evidence presented supports that a violation of ALJ Spencer's May 12, 2020 order occurred for failure to pay TTD benefits, it is necessary to analyze

whether Claimant filed his request for penalties timely and whether Employer's failure to pay TTD was objectively unreasonable. Here the evidence presented establishes that Claimant filed his Application for Hearing requesting penalties in excess of one year after the date that he reasonably should have known of the facts giving rise to the penalty. Indeed, Claimant did not file his request for penalties for approximately 23 months after ALJ Spencer issued his Order. Claimant was represented by Counsel at the time the May 12, 2020 Order was issued. Accordingly, the ALJ finds it reasonable to infer that his counsel would have advised him regarding the potential repercussions; including the imposition of penalties should Employer fail to abide by the Order shortly after it was issued.

I. Section 8-43-304(5) provides: "A request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty. Section 8-43-304(5) constitutes a statute of limitations. *Spracklin v. Industrial Claim Appeals Office, supra.* While the ALJ is convinced that the "statute of limitations" probably ran out before Claimant filed his Application for Hearing, Employer failed to respond to the request for penalties. Indeed, review of the file materials finds them devoid of any response to the claim for penalties. Raising the statute of limitations is an affirmative defense that is subject to procedural waiver if not explicitly plead and proven in a timely fashion. *Lewis v. Scientific Supply Co*., 897 P.2d 905 (Colo. App. 1995); *Kersting v. Industrial Commission*, 39 Colo. App. 297, 567 P.2d 394 (1977). Based upon the evidence presented, the ALJ is convinced that Employer waived any statute of limitations defense by not filing any response to Claimant's request for penalties. Moreover, the ALJ concludes that Employer has unreasonably failed to cooperate in the proceedings by failing to appear for hearing despite proper notice or respond to two separate Orders to Show Cause for his failure to appear. Based upon the evidence presented, the ALJ concludes that Employer has consciously decided to ignore the claim in hopes that Claimant will tire of the matter and cease all efforts to recover under the claim. Accordingly, the ALJ finds and concludes that Employer's actions in failing to follow the May 12, 2020 order of ALJ Spencer are objectively unreasonable.

ORDER

It is therefore ordered that:

1. Employer shall pay to Claimant a penalty in the amount of fifty ($50.00) dollars per day beginning June 2, 2020 and continuing through the date of this order, October 3, 2022, for a total of 853 days for $42,650.00 in penalties. The assessment of penalties shall continue beyond October 3, 2022 at the same rate until such time that the temporary total disability and interest payment ordered May 12, 2020 by ALJ Spencer is paid.

2. Pursuant to § 8-43-304(1) the penalty assessed is apportioned between Claimant and the Colorado uninsured employer fund created in § 8-67-105. Fifty

percent (50%) of the penalty assessed shall be paid to Claimant and the remaining fifty percent of the penalty assessed shall be paid to the Colorado uninsured employers fund.

3. All issues not decided herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove she suffered compensable injuries to her left wrist and right middle finger on January 5, 2021?
- Is Claimant entitled to a closed period of TTD benefits from August 11, 2021 through January 16, 2022?
- Did Respondents prove Claimant was responsible for termination of her employment?
- Did Claimant prove entitlement to medical benefits?
- The parties stipulated to an average weekly wage of $770.

FINDINGS OF FACT

1. Claimant's customary profession is a hairdresser. She stopped that work in late 2020 because of issues related to COVID protocols and exposures.

2. In the end of December 2020, Claimant was hired by Employer to work on a cheese packing line. After completing a period of orientation, classroom training, and "job shadowing," Claimant worked on the packing line, packing blocks of cheese into large totes. Workers in the packing area rotate through several stations during each shift, changing tasks approximately every 30 minutes.

3. Claimant alleges injuries to her left wrist and right middle finger on January 5, 2021. There is uncertainty in the record about the exact date of injury, but the persuasive evidence shows the incidents she described occurred on her first full day working on the packing line.[1]

4. Claimant developed pain in her left wrist while packing 7" x 9" x 2" blocks of cheese into totes, To pack the cheese, Claimant would grasp four blocks of cheese and press them together, lift the cheese off the conveyor belt, turn to the side, and place the cheese into the tote. She repeated this procedure approximately every second. Claimant was later told she should only have been lifting two blocks of cheese at a time.

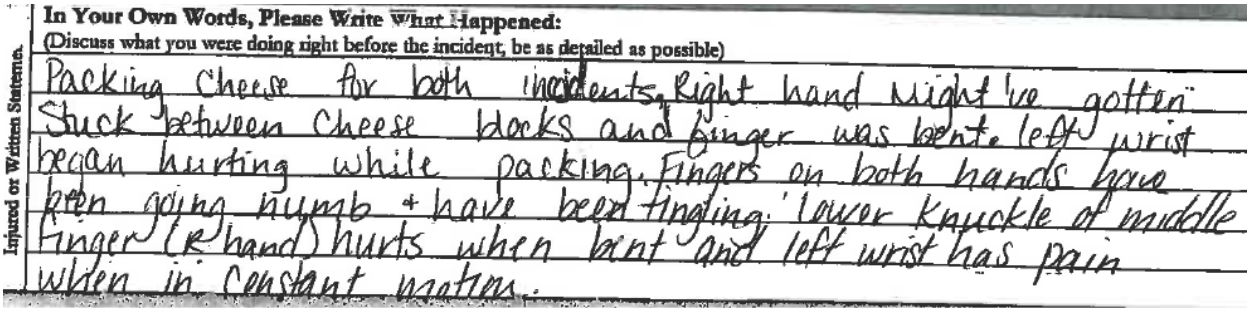
5. Claimant's supervisor noticed her shaking her left hand and moved her to the tote liner station, which requires less hand and arm use.

[1] Claimant's time cards suggest the correct date of injury is probably January 4, 2021. Nevertheless, using January 4 or January 5 as the date of injury makes no practical difference to the claim.

6. While working at the liner station, Claimant was repositioning cheese inside the tote when a block of cheese hit her right middle finger and caused the finger to abduct and hyperextend. She felt immediate pain in the base of the finger extending into the palm.

7. Claimant finished her shift that day, and continued working her regular position for approximately three weeks. She did not report an injury to Employer and sought no treatment.

8. On January 24, 2021, Claimant filed an incident report with her supervisor, Mr. DG[Redacted]. Claimant testified she reported the incident because her wrist and finger were still bothering her. Claimant wrote,



Injured or Written Statement

In Your Own Words, Please Write What Happened:

(Discuss what you were doing right before the incident, be as detailed as possible)

Packing Cheese for both incidents, Right hand might've gotten stuck between Cheese blocks and finger was bent. left wrist began hurting while packing. Fingers on both hands have been going numb + have been tingling. Lower knuckle of middle finger (R hand) hurts when bent and left wrist has pain when in constant motion.

9. Mr. DG[Redacted] gave Claimant a list of designated provides but Claimant declined to seek medical attention. Mr. DG[Redacted] said "someone from safety" would contact Claimant to discuss the injury. He also gave her names and telephone numbers of three members of management she could contact if she had questions about the situation.

10. No one from the safety department contacted Claimant about the accident.

11. Claimant continued working her regular job for approximately three months.

12. On April 23, 2021, she informed another supervisor, CB[Redacted], that she wanted treatment for her wrist and finger. Mr. CB[Redacted] recommended Claimant try physical therapy at Colorado In Motion. Claimant attended two therapy sessions, on April 23 and 28, 2021.

13. At the April 23 PT session, Claimant reported the gradual onset of left wrist pain in January, and sudden pain in her right long finger. She was not certain what caused the finger pain, but said she may have "jammed" or "caught" it. The finger was not painful that day but was painful if bumped. She also described "numbness and tingling, in both arms when sleeping or when holding her hands in front of her body." The examination showed tenderness to palpation of both forearms at the wrist, and over the right palm. Tinel's was positive bilaterally at the cubital tunnels. Finkelstein's test was mildly positive on the left. Range of motion was normal bilaterally. The therapist provided no specific diagnoses. The therapist gave Claimant a "quick" forearm massage, recommended stretches, and dispensed a thumb splint for the left hand.

14. At the April 28 visit, Claimant stated she was "fine now." She was wearing the brace at work "because her left wrist was bothering her when transferring the 7x9 cheese blocks." Her right middle finger hurt with twisting or bearing weight. The therapist massaged Claimant's right hand and demonstrated stretches. She also suggested changing postures during the day and wrapping the middle finger. No follow up was scheduled.

15. Claimant continued working regular duties until late June 2021.

16. On June 22, 2021, Claimant contacted Mr. CB[Redacted] and was directed to Workwell.

17. Claimant saw Dr. Lloyd Luke at Workwell on June 23, 2021. She told Dr. Luke, "I was packing 7x9 cheese and a piece fell on my finger (right-hand) and caused pain towards middle of hand/middle finger. Packing 7x9 cheese in the line and [left] wrist began to hurt." The right middle finger was still painful. She also described continued left wrist pain with movement, and paresthesias over the extensor surface. The symptoms were aggravated by grasping. Dr. Luke noted Claimant had tried a splint without significant benefit. Examination of the left wrist showed decreased sensation over the extensor surface, limited range of motion, and decreased strength. The right finger was painful to palpation and with motion. Dr. Luke diagnosed a right middle finger contusion and a left wrist "strain." He was also concerned about possible unhealed fractures given the length of time since the onset of symptoms. Dr. Luke opined the history and objective findings were consistent with a work-related injury. He put Claimant on work restrictions of no lifting over five pounds and no repetitive tasks involving the left wrist.

18. Employer accommodated the restrictions with modified duties. Initially she was assigned to the sealer and liner stations, which were less demanding than the packer station. Later she was assigned to a "hold and release" position, which primarily involved administrative duties. There is no persuasive evidence Claimant lost any wages while working modified duty.

19. Claimant started PT on July 2, 2021. She attended approximately 11 PT sessions between July and October 2021.

20. On July 20, 2021, PA-C Daniel Downs documented, "she has been working in a light-duty position . . . and this has been helpful. She is not manipulating heavy cheese." Claimant's right middle finger was "feeling a lot better" and the numbness and tingling had resolved. However, she still had aching pain in the left wrist.

21. On July 27, 2021, Claimant gave two-week notice that she was resigning. Claimant stated her last day would be August 10, 2021, "as I have chosen to pursue other ventures outside" the company. She made no mention of the work injury.

22. Claimant followed up with Mr. Downs on August 5, 2021, five days before the effective date of her resignation. Her right hand was doing well. She estimated approximately 50% improvement in the left wrist but progress was slow. She stated the symptoms were aggravated by her work and "she cannot tolerate her regular duties at

this time." There is no persuasive indication she was having any difficulty with the modified duty assignment. Claimant did not mention that she had tendered a resignation.

23. An MRI of the left wrist was completed on August 19, 2021. It showed a third metacarpal carpal boss with focal mild arthritic change, and a 7mm dorsal ganglion cyst with possible mile surrounding soft tissue edema.

24. Examinations by multiple providers before the MRI documented pain to palpation around the dorsal left wrist.

25. After reviewing the MRI, Dr. Luke referred Claimant for an orthopedic evaluation.

26. Claimant saw Dr. Christopher Stockburger, an orthopedic surgeon, on September 29, 2021. She described "extensive repetitive motion with her left wrist" that caused worsening pain since January. She reported intermittent swelling over the dorsal aspect of the wrist. She had some pain-free days but generally was "quite bothered" by wrist pain. Dr. Stockburger opined Claimant had "pretty mild early dorsal bossing with a mild dorsal cyst." He thought Claimant should respond well to conservative treatment, and gave her a cortisone injection.

27. The injection initially caused Claimant's symptoms to flare, but the symptoms were "almost completely resolved" a week later.

28. In mid-October 2021, Claimant attempted to return to work in a salon, but her symptoms quickly flared.

29. On October 28, 2021, Dr. Luke documented Claimant "generally has no pain, or minimal achy pain but has flares of intense carpal row pain." But the same report documented, "left wrist has gotten worse to the point where she is not able to work in the salon at all."

30. Claimant returned to Dr. Stockburger on November 17, 2021. She stated the injection helped briefly but "she has had a complete recurrence of symptoms and actually now has multifocal complaints in areas where she did not have pain previously, including volarly over her FCR, more on the ulnar side of her wrist and proximally into her forearm. These are areas where there is no obvious abnormality on the MRI." He opined her symptoms were "difficult to hone in on" and were "inconsistent with her MRI." If she were just having focal pain over the dorsal ganglion and dorsal boss area, Dr. Stockburger would consider surgery. But her new complaints raised concern about a "more global issue." He recommended a rheumatological panel to look for an autoimmune or inflammatory disorder that could be contributing to her symptoms. He also recommended she continue bracing, NSAIDs, and PT.

31. On November 19, 2021, Claimant reported more pain and reduced ROM. The pain had spread throughout her wrist and hand. Dr. Luke ordered blood work, which showed a positive ANA in a diffuse, dense, fine speckled pattern. Rheumatoid factor, CRP and ESR were normal. It was noted that the dense fine speckled pattern could be

seen in normal individuals and was rarely associated with the lupus, Sjogren's syndrome, and systemic sclerosis.

32. Claimant started a new job as a customer service representative on January 17, 2022. The job involves telephone and computer work. Claimant has tolerated the work without difficulty.

33. Claimant saw Dr. Barry Ogin on May 6, 2022 for an IME at Respondents' request. She described ongoing pain in her left wrist. Dr. Ogin noted the pathology on the MRI "does seem to match the area where she is most tender on my examination today." He opined pathology shown on MRI probably existed before the claimed injury date, but might have been aggravated to her work.

34. Dr. Ogin reviewed the Medical Treatment Guidelines (MTGs) for risk factors associated with aggravated osteoarthritis. Based on Claimant's and Mr. DG[Redacted]'s description of the job, he saw no primary risk factors. Dr. Ogin thought it plausible Claimant was exposed to the secondary risk factor of at least two pounds of pinch force or 10 pounds of hand force three times or more per minute occurred. But he opined a cumulative trauma disorder is unlikely given the short exposure, *i.e.,* the onset of symptoms during the first day on the job. Dr. Ogin opined the potential diagnosis of aggravated left wrist osteoarthritis did not fit Claimant's clinical course. The steroid injection gave no relief, and the development of multifocal complaints in new areas were not consistent with aggravated arthritis affecting the carpal boss at the base of the third metacarpal. Further, if there was aggravated arthritis, and it was caused by the claimant's occupational duties, the symptoms should have diminished once the job duties were modified, and especially once they ended entirely. Instead, Claimant's pain complaints and perception of functional disability seemed to worsen, even after she left Employer. Ultimately, Dr. Ogin concluded Claimant's complaints of refractory left wrist pain, right hand pain, and numbness and tingling to both extremities are unrelated to occupational exposures with Employer.

35. Dr. Ogin makes a well-reasoned argument, particularly regarding causation of the new and worsening symptoms starting in November 2021. However, the ALJ credits Dr. Luke's causation assessment regarding the initial left wrist "strain" and right middle finger contusion.

36. Claimant proved she suffered compensable injuries to her left wrist and right middle finger on January 5, 2021. She consistently reported dorsal left wrist pain triggered and perpetuated by work activities. The MRI confirmed mild objective findings in the same area. Even if the underlying conditions were not caused by her job, they were probably aggravated and became symptomatic because of the work. The right finger became symptomatic after a minor trauma, and remained so for several months. Even though Claimant sought no treatment until April 2021, the symptoms that ultimately prompted her to request medical attention were the same symptoms of which she initially complained. The injury-related symptoms were sufficient to warrant evaluation and conservative treatment, including PT.

37. Respondents proved Claimant was responsible for termination of her employment on August 10, 2021. Claimant resigned her job, and the argument she left work because of the injury is not corroborated by persuasive evidence. Employer accommodated Claimant's work restrictions and there is no persuasive reason she could not have continued working for Employer after August 10. Mr. DG[Redacted]'s testimony is credible regarding Claimant's modified duty assignments. Claimant's resignation letter stated nothing about the injury, and there is no persuasive evidence she reported difficulties to a manager in any other context. Claimant's medical records contain no persuasive evidence she was having difficulty tolerating the modified duty. To the contrary, contemporaneous records indicate the activity modifications were "helpful" and Claimant was doing better. The preponderance of persuasive evidence shows Claimant voluntarily resigned on August 10, 2021 for reasons unrelated to her injuries.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury requires medical treatment or causes a compensable disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

A pre-existing condition does not disqualify a claim for compensation or medical benefits if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing

condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved she suffered compensable injuries to her left wrist and right middle finger on January 5, 2021. She consistently reported dorsal left wrist pain triggered and perpetuated by work activities. The MRI confirmed mild objective findings in the same area. Even if the underlying conditions were not caused by her job, they were probably aggravated and became symptomatic because of the work. The right finger became symptomatic after a specific incident, and remained so for several months. Even though Claimant sought no treatment until April 2021, the symptoms that ultimately drove her request for medical attention were the same symptoms of which she initially complained. The dorsal left wrist pain and right middle finger pain Claimant reported to the therapist in April and to Dr. Luke in June 2021 were probably a continuation of the symptoms she developed on January 5, 2021. The injury-related symptoms were sufficient to warrant evaluation and conservative treatment, including PT.

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Claimant proved evaluations and treatment by and on referral from Dr. Luke and Workwell was reasonably needed and authorized.

C. TTD

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, “In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.” A claimant’s responsibility for termination not only provides a basis to terminate temporary disability benefits, but also limits the initial eligibility for TTD. Section 8-42-103(1)(g); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002); *Valle v. Precision Drilling*, W.C. No. 5-050-714-01 (July 23, 2018). The respondents must prove the claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial*

Claim Appeals Office, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to moral turpitude or culpability but merely requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

It is well established that a claimant who voluntarily resigns her job is "responsible for termination" unless the resignation was prompted by the injury. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2008); *Kiesnowski v. United Airlines*, W.C. No. 4-492-753 (May 11, 2004); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (April 24, 2002).

As found, Respondents proved Claimant was responsible for termination of her employment. Claimant resigned her job, and the argument she left work because of the injury is not corroborated by credible evidence. Employer accommodated Claimant's work restrictions and there is no persuasive reason she could not have continued working for Employer after August 10. Mr. DG[Redacted]'s testimony about Claimant's modified duty assignments is credible. Claimant's resignation letter stated nothing about the injury. Nor is there persuasive evidence she reported difficulties to a supervisor in any other context. Claimant medical records contain no persuasive evidence she was having difficulty tolerating the modified duty. Instead, contemporaneous records indicate the activity modifications were "helpful" and Claimant was doing better. Claimant voluntarily resigned her job for reasons unrelated to the work injury.

ORDER

It is therefore ordered that:

1. Claimant's claim is compensable.

2. Claimant's average weekly wage is $770.

3. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injuries, including but not limited to evaluations and treatment received from Workwell, the August 19, 2021 MRI, and Dr. Stockburger.

4. Claimant's claim for TTD benefits from August 11, 2021 through January 16, 2022 is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the

order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 4, 2022

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on November 30, 2021, she suffered an injury arising out of and in in the course and scope of her employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that recommended psychological therapy with Dr. Melissa Carris is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that recommended physical therapy treatment is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

4. If the claim is found compensable, what is the claimant's average weekly wage (AWW)?

5. Following the hearing, the parties stipulated that the claimant would withdraw the previously endorsed issues of temporary partial disability (TPD) and temporary total disability (TTD) benefits through September 20, 2022.

FINDINGS OF FACT

1. The claimant worked for the employer as a sales associate at the Grand Junction, Colorado location. The claimant testified that on November 30, 2021, she was walking quickly through the store and caught her foot on a free standing mirror. This caused her to lose her balance and fall into a clothing rack. The claimant testified that she injured both of her wrists and her knees when she fell.

2. This incident was reported to the employer, specifically to Jacob Jones, Operations Manager. The claimant was offered medical treatment on November 30, 2021. The claimant declined medical treatment at that time. The claimant was then sent home by Mr. J[Redacted].

3. The claimant continued working for the employer in her regular position and performing her normal job duties following the November 30, 2021 incident until December 27, 2021. On December 27, 2021, the claimant requested medical treatment related to the November 30, 2021 incident. The claimant testified that she requested

medical treatment at that time because she was approached about deficiencies in her job performance.

4. On December 27, 2021, Mr. J[Redacted] prepared an Employer's First Report of Injury. The body parties identified in that document were the claimant's "LOWER EXTREMITIES-ANKLE" (emphasis in the original). The incident was described as "[a]ssociate came around a corner, and tripped after catching her foot on a free standing mirror."

Medical Treatment Prior to November 30, 2021

5. On March 9, 2015, the claimant was seen by Dr. Craig Gustafson at Appleton Clinics. The medical record of that identifies a diagnosis of fibromyalgia.

6. On March 21, 2015, an x-ray of the claimant's left knee showed calcific density in the joint space medially and laterally, which was consistent with chondrocalcinosis (also called pseudogout).

7. On June 9, 2017, the claimant was seen by Dr. Donald Adams with Memorial Medical Group in Collinsville, Illinois. A number of issues were addressed with Dr. Adams on that date. Relevant to the present matter is the identification of a diagnosis of fibromyalgia. The claimant reported to Dr. Adams that her fibromyalgia symptoms were well controlled with Lyrica. The claimant's Lyrica prescription was refilled on that date.

8. On September 14, 2017, the claimant returned to Dr. Adams and reported that she wanted to try a different medication to treat her fibromyalgia. As a result, Dr. Adams prescribed gabapentin .

9. On September 27, 2021, the claimant was seen at Appleton Clinics by Dr. Lawrence Stelmach. At that time, the claimant reported bilateral leg and knee pain and swelling. Dr. Stelmach noted that the claimant had significant venous varicosities in both legs. He diagnosed the claimant with venous insufficiency and leg pain. Dr. Stelmach recommended the claimant use compression stockings and footwear with arch support.

10. On November 4, 2021, the claimant returned to Appleton Clinics and was seen by Jared Barjenbruch. On that date, the claimant reported left lower back pain that radiated down her buttock and posterior thigh. The claimant also reported this pain began without a specific incident or injury. The claimant was instructed to take ibuprofen and tylenol. The claimant was also prescribed cyclobenzaprine (Flexeril).

11. On November 15, 2021, the claimant was seen by Alison Weirich at Appleton Clinics. On that date, the claimant reported two weeks of sciatic pain. The claimant reported that the pain radiated from her low back down her buttock and left thigh. The claimant further stated that "she works a [Employer, redacted]'s so she would like something to help because by the end of her shift she can barely walk". The previously

prescribed cyclobenzaprine did not help her symptoms. Ms. Weirich advised the claimant on sciatic specific stretches. In addition, she recommended and administered a trigger point injection.

12. On November 24, 2021, the claimant was seen by Dr. Stelmach. The claimant reported that the trigger point injection did not help her low back pain. Dr. Stelmach recommended that the claimant avoid frequent and prolonged bending. He also recommended the use of a backrest. On that same date, Dr. Stelmach prescribed prednisone to treat the claimant's low back symptoms. Dr. Stelmach noted that the claimant "feels the need to work without interruption. It could take some time to settle this down."

Treatment after November 30, 2021

13. After requesting medical treatment from the employer on December 27, 2021, the claimant was seen at St. Mary's Occupational Health[1] on December 28, 2021. On that date, the claimant saw James Harkreader, NP. The claimant reported that she was experiencing pain in left knee, left wrist, and low back. PA Harkreader ordered x-rays of the claimant's left wrist, left knee, and lumbar spine. He restricted her to lifting no more than 10 pounds and no kneeling, squatting, or climbing.

14. The recommended x-rays were performed on December 28, 2021. For the claimant's left wrist, the x-ray showed no fracture or bony lesion. The radiologist noted chondrocalcinosis that "may represent CPPD arthropathy". The left knee x-ray also showed no fracture. There was also a finding of chondrocalcinosis in the claimant's left knee. The lumbar spine x-ray showed no acute fracture and minimal degenerative disc disease, and a renal stone was noted.

15. On December 29, 2021, the claimant returned to NP Harkreader to review the x-rays. At that time, NP Harkreader identified the claimant's diagnoses as left wrist strain, lumbosacral back strain, and left knee contusion with improving suprapatellar bursitis. NP Harkreader also noted that the claimant had CPPD (pseudogout). He opined that the claimant's fall could have aggravated the CPPD. The claimant was referred to physical therapy.

16. On January 11, 2022, the claimant reported to NP Harkreader that she was doing better and her knee pain was a three out of ten. She also requested a low back injection, as she had received one from her primary provider in November. Despite this request the claimant stated that she felt she had returned to baseline for her low back. NP Harkreader continued to recommend physical therapy.

[1] St. Mary's Occupational Health is the claimant's authorized treating provider (ATP) for this claim.

17. On January 25, 2022, NP Harkreader identified the claimant's diagnoses as left knee contusion and strain with underlying CPPD, and work related aggravation of lumbosacral back strain.

18. On February 2, 2022, the claimant returned to NP Harkreader and reported soreness and swelling in her left knee at the end of a workday. She also reported pain in her left wrist. The claimant asked for a work restriction that would allow her to work four days in a row, with three days off. NP Harkreader provided the requested recommendation regarding the claimant's work schedule.

19. On February 14, 2022, the claimant was seen by NP Harkreader. At that time she reported that physical therapy was beneficial. NP Harkreader recommended six additional physical therapy visits. He also requested to review the claimant's prior medical records to assess her back pain.

20. On March 23, 2022, the claimant returned to PA Harkreader. On that date, PA Harkreader noted the claimant's complaints of low back pain prior to November 30, 2021. Based upon his review of the prior medical records, NP Harkreader opined that the claimant's low back pain began prior to her injury. He recommended further physical therapy and referred the claimant to a knee specialist, Dr. Justin McCoy.

21. On April 26, 2022, the claimant was seen by Dr. Stagg. In the medical record of that date, Dr. Stagg noted that the claimant has a long history of low back symptoms and treatment. Dr. Stagg noted that the claimant had been referred to Dr. McCoy for an orthopedic consultation, and to Dr. Melissa Cariss "for stressors". In addition, Dr. Stagg referred the claimant to Dr. Rooks regarding her left wrist.

22. On May 6, 2022, the claimant was seen by Dr. McCoy. In the medical record of that date, Dr. McCoy listed the claimant's diagnoses as: 1) chronic bilateral knee pain; 2) left wrist pain; 3) chronic bilateral low back pain, without sciatica; 4) chondrocalcinosis; 5) pseudogout in multiple joints; and 6) back spasm. Dr. McCoy recommended a Medrol Dosepak to address the symptoms related to the CPPD. He also recommended that the claimant see a specialist regarding her left wrist and physical therapy for her back symptoms.

23. On June 7, 2022, NP Harkreader authored a response to questions posed to him by the claimant's counsel. NP Harkreader opined that the claimant's mechanism of injury could have produced or exacerbated the claimant's left wrist and left knee symptoms. He further opined that treatment of the claimant's low back should be addressed by her primary care provider.

24. At the request of the respondents, on June 16, 2022, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak obtained a history from the claimant, performed a physical examination, and reviewed the claimant's medical records. In his IME report, Dr. Lesnak opined that although an incident occurred on November 30, 2022, the claimant did not sustain an injury at that time. Dr. Lesnak further opined that the claimant did not experience an aggravation or exacerbation of any pre-existing condition on November 30, 2021. In support of his opinions, Dr. Lesnak noted that imaging studies done of the claimant's left wrist, left knee, and lumbar spine showed no evidence of an acute injury. Dr. Lesnak also noted that prior to November 30, 2021, the claimant had reported low back pain, left buttock pain, and left leg sciatica to her PCP. In addition, the claimant was previously diagnosed with fibromyalgia, and recently diagnosed with CPPD/pseudogout.

25. On June 17, 2022, the claimant returned to Dr. McCoy. At that time, the claimant reported that the Medrol Dosepak did not provide any relief of her symptoms. The claimant also reported that the back pain she was experiencing was different from her past sciatica type symptoms. The claimant's knees continued to bother her. Dr. McCoy recommended magnetic resonance imaging (MRI) of the claimant's knees. He opined that the claimant's fall at work could have caused an acute flareup of her pre-existing CPPD.

26. The claimant testified that her current symptoms include pain in her left hand, left wrist, and left knee. The claimant also testified that she has numbness in her left wrist and swelling in her left knee.

27. Dr. Lesnak's deposition testimony was consistent with his IME report. Dr. Lesnack reiterated his opinion, that based upon the medical evidence, the claimant did not suffer any injuries as a result of the November 30, 2021 incident. Therefore, medical treatment is not reasonable, necessary, or related to that incident. Dr. Lesnak also testified that there was no evidence of any acute injury in the claimant's wrists or left knee.On the contrary, the imaging supports a diagnosis of pseudogout or chondrocalcinosis, which is a type of arthritis. Dr. Lesnak also noted that the claimant has been diagnosed with fibromyalgia and chronic venous varicosities, which can cause pain and swelling in the legs and knees.

The Claimant's Last Day of Employment

28. The claimant's last day of employment with the Employer was February 4, 2022. The claimant testified that she had a confrontation with a coworker. Ultimately, the claimant decided that she no longer wished to work at the store and informed Mr. T[Redacted] that she was putting in a two week notice.

29. Mr. T[Redacted]s testified that the claimant was not going to be fired on February 4, 2022. Mr. T[Redacted] was going to investigate what occurred between the claimant and her coworker. However, before that process was completed, the claimant indicated her intention to provide her two week notice. Mr. T[Redacted] accepted the resignation as "effective immediately", and the claimant's employment ended that same date[2]. If the claimant had not resigned, continuing work was available to her with the employer.

Additional testimony on September 9, 2022

30. Following the conclusion of the July 19, 2022 proceeding, the respondents filed a motion asking to recall various witnesses due to an allegation regarding notes left on cars belonging to Ms. C[Redacted] and Mr. T[Redacted]. The ALJ granted the respondents' motion, over the objection of the claimant. The parties returned to hearing on September 9, 2021. On that date, Ms. L[Redacted] testified that she authored the notes in question and placed them on the individuals' cars. Ms. L[Redacted] further testified that she did so because she was upset with what she understood to be Ms. C[Redacted] and Mr. T[Redacted]'s testimony at the hearing. The claimant had no involvement in the creation or placement of these notes.

The ALJ's Factual Conclusions

31. The ALJ credits the medical records and the opinions of Dr. Lesnak over the contrary opinions of PA Harkreader. While it is undisputed that the claimant fell at work on November 30, 2021, that incident did not result in an injury necessitating medical treatment. The ALJ also credits the claimant's testimony that she requested medical treatment only after she was approached about deficiencies in her job performance. The ALJ finds that the claimant's current need for treatment of her left knee and left wrist is due to pre-existing conditions. It is clear from the medical records that the claimant suffers from fibromyalgia, chronic venous varicosities, and CPPD/pseudogout. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an injury arising out of and in the course and scope of her employment with the employer. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that her fall on November 30, 2021 aggravated or accelerated the pre-existing conditions in her left knee and left wrist.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure ~~the quick and efficient deli~~very of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section

[2] The ALJ recognizes that the paperwork the claimant signed indicating her resignation lists a date of January 21, 2022 as the date of resignation. This effectively "backdated" the claimant's resignation to allow for a two week period that ended on February 4, 2022. The ALJ recognizes that this was not an ideal way for the employer to accept the claimant's resignation as effective immediately. However, this does not change the fact that the claimant resigned from her position with the employer.

8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, than she suffered an injury arising out of and in the course and scope of her employment with the employer on November 30, 2021. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her fall on November 30, 2021 aggravated or accelerated the pre-existing condition in her left knee and left wrist. As found, the medical records and the opinions of Dr. Lesnak are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim is denied and dismissed. All remaining endorsed issues are dismissed as moot.

Dated October 6, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-120-710-001

ISSUES

1. Did Claimant waive his right to the lower extremity impairment ratings Respondent admitted to previously by not requesting that the DIME physician examine his left and right knees?

2. If Claimant did not waive his right, what is the appropriate impairment rating for Claimant's lower extremities?

3. What is the propriety of Respondent's February 22, 2022 Final Admission of Liability?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant sustained an admitted injury on September 11, 2019 in the course and scope of his employment as a security guard with Employer. Claimant suffered bilateral knee injuries when a student knocked him backwards over another student.

2. Claimant was diagnosed with an acute medial meniscus tear of his right knee. Claimant did not improve with physical therapy, so he had a right knee surgery. Claimant developed post-surgery sepsis in his right knee, and had a second surgery to drain his right knee. (Ex. C).

3. On January 17, 2020, Claimant presented with two weeks of diarrhea and his stool was C difficile positive. Claimant continued to have digestive issues over the next year related to the post-surgery infection. (Ex. C).

4. Felix Meza, M.D., Claimant's authorized treating physician (ATP), referred Claimant to John Aschberger, M.D., for an impairment assessment. Dr. Aschberger assigned Claimant a 14% left lower extremity impairment rating, a 22% right lower extremity impairment rating, and a 10% whole person impairment rating for the gastrointestinal (GI)/digestive issues Claimant developed as a result of treatment for the knee injuries. (Ex. 1).

5. Respondent filed a Final Admission of Liability (FAL) on August 31, 2021, admitting for medical benefits of $93,303.79, Temporary Total Disability ("TTD") benefits of $26,481.61 and medical maintenance care after reaching MMI. Respondent further admitted for an MMI date of August 17, 2021, a 14% left lower extremity scheduled impairment rating, a 22% right lower extremity scheduled impairment rating, and a 10% whole person impairment rating for digestive issues. (Ex.1).

6. Claimant objected to the August 31, 2021 FAL and requested a Division Independent Medical Examination (DIME) to evaluate Claimant's GI issues. The objection and request for a DIME were not submitted into evidence.

7. The ALJ finds that Respondent was on notice that Claimant was challenging the impairment rating for Claimant's GI issues.

8. Caroline Gellrick, M.D. was selected as the DIME examiner. Claimant paid Dr. Gellrick's $1,000 DIME fee. On January 2, 2022, Dr. Gellrick notified counsel that the DIME fee was $1,400, because the date of injury was more than two years before the DIME. Claimant paid Dr. Gellrick the additional $400. Dr. Gellrick also noted in her email: "IR has been given for the knees with Dr. Ashberger [sic]. Am I suppose [sic] to address just the Digestive system OR do the knees and the DIGESTIVE????" (Ex. 3)

9. Claimant's attorney responded to Dr. Gellrick on January 3, 2021, saying "[j]ust the digestive system." Dr. Gellrick's question and counsel's response were copied to the IME Unit and Respondent's counsel. (Ex. 3).

10. The ALJ finds Claimant did not dispute the lower extremity impairment ratings admitted by Respondent in the August 31, 2021 FAL. The ALJ further finds that Respondent knew Claimant was only challenging Dr. Acheberger's GI impairment rating.

11. Claimant underwent a DIME with Dr. Gellrick on January 6, 2022. According to, Dr. Gellrick's DIME report, she was asked "to determine MMI, impairment, and apportionment of [Claimant's] digestive system." Dr. Gellrick further noted "[a]lthough the MRR shows the knees were injured and one knee had surgery, this examiner was only asked to consider the digestive system." (Ex. 2).

12. Dr. Gellrick concluded that Claimant did not require any further invasive treatment, but did need medical management and medication. She found Claimant was at MMI on October 29, 2021. Dr. Gellrick assigned Claimant a 20% whole person impairment rating for his digestive issues. (Ex. 2).

13. Respondent filed an FAL on February 22, 2022, admitting for medical benefits of $93,303.79, TTD benefits of $26,481.61 and medical maintenance care after reaching MMI. Respondent further admitted for an MMI date of October 29, 2021 and a 20% whole person impairment rating based on Dr. Gellrick's DIME report. (Ex. 2).

14. Although Respondent previously admitted to a 14% left lower extremity impairment rating and a 22% right lower extremity impairment rating, Respondent listed the scheduled impairments as 0% for Claimant's left and right lower extremities in the February 22, 2022 FAL. (Ex. 2).

15. Respondent relied on W.C.R.P. 5-5(f) when filing the February 22, 2022 FAL, and admitted liability strictly in conjunction with Dr. Gellrick's DIME report.

16. Claimant objected to the FAL and filed an Application for Hearing on March 16, 2022, endorsing penalties for failure to admit for Claimant's physician's extremity ratings as well as DIME rating, attorney's fees, Permanent Partial Disability ("PPD"), medical benefits, and TTD benefits. (Ex. D). In the Response to the Application for Hearing, Respondent endorsed, in addition to several other issues, Claimant's failure to meet his burden to overcome the DIME. (Ex. E).

17. At hearing, Claimant's counsel clarified that the issue at hand was PPD, and specifically, the impairment ratings for Claimant's lower extremities. Respondent's counsel agreed with this recitation of the issue.

18. In communications to Claimant's counsel, Respondent's counsel asserted "Respondent cannot unilaterally admit to any rating it so chooses and is required to take a position on the DIME's rating as stated via admission or file an application for hearing to overcome the DIME. Respondent asserts Claimant waived his right to have the extremity ratings addressed by failing to include those body parts in the DIME application." Respondent further stated "there was no agreement between the parties that respondent would maintain an admission for the extremity ratings assigned by the authorized treating physician in addition to any rating assigned by the Division IME doctor." (Ex. 3).

19. In his impairment assessment, Dr. Aschberger described Claimant's meniscal tear, the surgical intervention, and subsequent infection. Dr. Aschberger also described the degenerative changes in both of Claimant's knees and the restricted range of motion in his right knee. (Ex. 1).

20. Claimant credibly testified at hearing that his left and right knee symptoms, including pain and restricted range of motion, remain.

21. The ALJ finds that Claimant did not waive his right to the lower extremity impairment ratings admitted by Respondent, in the August 31, 2021 FAL.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of

the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Scheduled and Non-Scheduled Injuries

As agreed at hearing, the issue here is PPD, specifically Claimant's lower extremity impairment ratings, and Respondent's argument that Claimant waived his right to have his lower extremity ratings addressed because these body parts were not listed in the DIME application. Scheduled and non-scheduled injuries are treated differently under the Act for purposes of determining permanent disability benefits. *Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). It is undisputed that Claimant suffered an admitted injury in the course and scope of his employment. Claimant suffered a meniscus tear in his right knee that required surgical intervention. Claimant has degenerative changes in both knees, and a loss of range of motion in his right knee. (Findings of Fact ¶¶ 9-10). These are scheduled injuries. *See* § 8-42-107(2) C.R.S. Dr. Aschberger assigned Claimant a 14% left lower extremity impairment rating, and a 22% right lower extremity impairment rating. If Claimant wanted to challenge the impairment ratings for his scheduled injuries, he could have proceeded to hearing, and he did not have to go through the DIME process. *See Delaney* 30 P.3d at 693 (there is no absolute right to a DIME as a prerequisite to a hearing in cases that clearly involve only scheduled injuries). As found, Claimant did not challenge the impairment rating for his scheduled injuries. (Findings of Fact ¶ 10).

Waiver

Respondent, relying on *Michael Baldrey v. RTD,* WC 5-092-210, asserts that Claimant waived his substantive right to an examination of his lower extremities by the DIME physician by not requesting an evaluation of those areas of the body. In *Baldrey*, the claimant's ATP placed him at MMI and found he had no permanent medical

impairments. The claimant requested a DIME, and on the DIME form the claimant selected region 3 (psychological) and region 5(ENT-face). The claimant did not endorse region 1 (upper extremity) or region 4 (spine), nor did he pay the fee for the additional parts of his body. When the claimant was evaluated by the DIME physician, he reported neck and left shoulder pain as well as left arm numbness and weakness, and the claimant expected the DIME physician to evaluate those areas of his body. The ALJ found the Claimant waived his right to have these other areas of his body evaluated by not selecting these regions on the DIME form and not paying for them. *Baldrey*, however, is distinguishable. First, the claimant in *Baldrey* was found to have no impairment ratings. Here, Dr. Aschberger assigned Claimant a 14% left lower extremity impairment rating, a 22% right lower extremity impairment rating, and a 10% whole person impairment rating for digestive issues. (Findings of Fact ¶ 4). Second, the claimant in *Baldrey* wanted the DIME physician to evaluate his upper extremity and spine, but intentionally did not select those areas on the DIME form, nor did he pay for them. In contrast, Claimant only wanted the DIME physician to evaluate his digestive system, and this is what was marked on DIME form. (Findings of Fact ¶¶ 9-10). Lastly, the respondents in *Baldrey* never admitted liability, but here Respondent filed an FAL and admitted liability. (Findings of Fact ¶ 5).

"Waiver is the intentional relinquishment of a known right. Waiver may be express, as when a party states its intent to abandon an existing right, or may be implied, when a party engages in conduct that manifests its intent to relinquish the right, or that is inconsistent with its assertion." *Ross v. Republic Insur.*, 134 P.3d 505, 510 (Colo. App. 2006) (emphasis added); *see also Leprino Food Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 479 (Colo. App. 2005); *In re Marriage of Robbins*, 8 P.3d 625 (Colo. App. 2000). Respondent argues Claimant waived his substantive right to an examination of his lower extremities by the DIME physician by not requesting an evaluation of those areas of the body. *See* Ross *v. Republic In. Co.,* 134 P.3d 505, 510 (Colo. App. 2006). As found, Claimant was not seeking an examination of his lower extremities. Claimant's decision to accept the lower extremity ratings assigned by Dr. Aschberger does not constitute a waiver of Claimant's previous admission regarding the lower extremity ratings. Respondent admitted liability to the lower extremity rating, and as found, Claimant did not challenge the impairment ratings for this scheduled injuries. Claimant did not waive Respondent's admission of liability in the August 31, 2021 FAL with respect to his lower extremity impairment ratings.

ORDER

It is therefore ordered that:

1. Claimant did not waive his right to the previously admitted lower extremity ratings.

2. Respondent shall pay Claimant PPD based on a 14% lower left extremity impairment rating, a 22% lower right extremity impairment rating, and a 20% whole person impairment rating for Claimant's digestive issues.

3. Respondent is entitled to a credit for PPD benefits previously paid.

4. Respondent shall pay statutory interest at 8% on all benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 6, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove he suffered a compensable low back injury on January 29, 2021?

- Whether the medical treatment provided by Brandi Olson, N.P. on February 4, 2021 was authorized, reasonable, necessary and related to the claimed work injury?

STIPULATIONS

- The low back surgery performed by Dr. Chung on April 2, 2021 was unauthorized.

FINDINGS OF FACT

1. Claimant has worked as a trucker and mechanic for his own company. As part of his trucking business, he performs maintenance on his trucks and trailers. The maintenance work is physically demanding and includes lifting truck tires weighing 175 to 200 pounds.

2. On January 29, 2021, he had just finished performing work on one of his 3 trucks and was putting the tires back on the truck. The tire was next to a wall and had fallen over. As he attempted to lift the tire to put it back on the truck, he bent and had extreme pain. He could not stand due to the pain. He called his wife at approximately 8:30 p.m. and let her know he had injured his back and needed help.

3. Claimant's wife, K[Redacted] testified that after she spoke with the Claimant, she called their son, Joshua and informed him that they needed to go from their homes in Rye, Colorado to the shop in Pueblo to help the Claimant since he could not stand due to his low back pain. They drove from Rye to the shop in Pueblo where they found the Claimant sitting next to a wall. When she arrived with her son, the truck Claimant had been working on was half way in and half way out of the shop. She and her son, Joshua helped the Claimant get up on his feet and they put him in her car. Joshua finished putting the tires back on the vehicle and put the vehicle outside the shop and closed up the shop.

4. K[Redacted] drove the Claimant home and she and Joshua placed him on the bed. They did not take him to the emergency room since Claimant thought he would get better on his own. This occurred on a Friday. He spent that weekend on the bed. She had never seen him hurt that badly before. On the morning prior to the incident of lifting the tire Claimant was pain free. That weekend, after the incident, K[Redacted] would have to assist him in going to the restroom since he was in so much pain.

5. S[Claimant's son redacted] testified that after his mother called him on the date of injury she picked him up and they drove to the shop. When they arrived, Claimant was sitting on the floor near a wall. He was unable to get up and they helped him get up and get to her vehicle. He put on the remaining 2 tires on the truck. He estimated the tires weighed between 150 to 200 pounds. After the tires were on the truck, he moved the truck out of the truck bay, cleaned up and then secured the shop. He followed his mother's vehicle in his father's truck home. He helped his mom to get the Claimant into the house since he could not walk on his own. They helped him into the house.

6. Claimant testified that he was self-employed and had worked for his company for a total of 14 years, both under the current name and a previous company name. His job duties included long-haul truck driver, mechanic and processing the final payroll. In a typical week he would spend 60 to 70 hours on the road. The company had 3 trucks and 4 trailers. The trucks had 10 tires and the trailers had 8 tires. He would normally change the tires every 7 months on average. He would perform maintenance work on the weekends. Prior to the date of the incident, he was never unable to change the tires or perform his mechanic work due to back pain.

7. On the date of the incident Claimant performed general maintenance on the trucks. He was replacing bushings on the truck which required him to remove the tires. He started this project around 2:00 p.m. He worked by himself. He had pulled eight of the 10 tires off to perform this work. He had put 6 of the tires back on and was lifting the 7th tire off the ground. As he was lifting, he felt immediate pain in his back and right leg. His pain level was a 10 out of 10 and he had tingling and numbness in his right leg. After his wife and son took him home, he had to utilize a walker and a cane to ambulate.

8. K[Redacted], Claimant's wife, called Nurse Practitioner, Brandi Olson at Parkview Internal Medicine on Monday morning. They were able to get an appointment with Brandi Olson for February 4, 2021. In the medical record for that day, the reason for the appointment is listed as "Annual". (Respondents Ex. C, p. 32). The document appears to document an annual physical with items such as preventive care items. However, in the treatment portion of the report, she identifies that he had lumbar back pain with radiculopathy affecting right low extremity. She recommended, among other things, x-rays, MRI and a referral to neurosurgery. The History of Present Illness does not list any mechanism of injury. It is devoid of any history to explain the reason why he was experiencing low back pain with radiculopathy requiring x-ray, MRI and referral to neurosurgery.

9. The Claimant testified that when he saw Brandi Olson on February 4, 2021 he told her that he injured himself while he was picking up a tire and heard a "pop" and fell to the floor and had pain in his right leg. Claimant's wife testified that she heard Claimant tell Ms. Olson that he injured himself lifting a tire at work. However, the medical record for that date does not reflect the mechanism of injury.

10. Claimant came under the care of Dr. Chung. It is unclear as to whether Claimant was referred to Dr. Chung by N.P. Olson based on the initial report from his office dated March 18, 2021. The more specific statement on how he got there was that

he was self-referred appears to be more accurate based on the specificity of the information rather that the more general statement under the chief complaints section of the medical report. (Respondents Exhibit E, p. 054). After consideration of conservative care, the Claimant elected to have surgery which was performed on April 2, 2021. The surgery included posterior wide complete bilateral laminectomies at L2-S1 for stenosis leading to lumbar radiculopathy and neurogenic claudication to decompress and explore the neural elements. It also included transforaminal lumbar interbody fusions at L2-3, L3-4, L4-5 and L5-1 using cages. "(Respondents Exhibit F, pp. 98 – 105).

11. Claimant has a history of low back problems, and had treated periodically with Donald Dressen, D.C. (Respondents Ex. B). He would see him infrequently for everyday soreness or after "rough-housing" with his grandchildren. He had injured his back about 32 years ago when he was hauling gravel for Kirkland Construction and the truck rolled on its side. He injured his back just below the shoulder blades. He did not injure his low back at that time.

12. Claimant did not file a workers compensation claim prior to March 9, 2022 since he thought that as an owner he could not make a claim. He changed his mind after speaking with a social security representative to make a disability claim. After speaking with her, he filed a claim on March 9, 2022 which was about 4 or 5 days after the conversation.

13. Dr. Brian Reiss performed an IME for Respondents and issued a report dated July 13, 2022. Dr. Reiss stated in his report that "Diagnosis of claimant's lumbar condition includes lumbar strain with pain along with preexistent degenerative disc disease, spondylolisthesis and spondylolysis and persistent chronic pain." (Respondents' Exhibit A, p.006).

14. Dr. Reiss further opined as to the course of treatment that: 'A visit to his primary care provider would have been reasonable after a work incident. Some imaging studies may have been reasonable but with pre-existing symptomatology it is not clear that the imaging studies would necessarily be related to any work incident. He would have been sent for some physical therapy and perhaps injections with a rehabilitation physician but never was. I do not believe surgical intervention was indicated in relationship to the work incident and would not be considered related to the work incident. The physical therapy after surgery was reasonable but as the surgery was not reasonable or related, therapy also would not be related to any work incident. The ALJ determines that Dr. Reiss' opinion surgery performed by Dr. Chung was not reasonably necessary or related to cure and relieve the effects of Claimant's the work injury is not credible. Prior to this work incident, the Claimant was capable of performing his job duties of driving long distances and mechanical work on his vehicles that involved periodic lifting of heavy weights including tires, truck batteries and other truck parts without difficulty. It was not until after this incident that Claimant had pain running down his leg which interfered with his ambulation and which ultimately required extensive surgery.

15. Claimant proved he suffered a compensable injury to his low back on January 29, 2021. Claimant's testimony regarding the incident and onset of symptoms was credible. These facts are sufficient to establish a compensable claim.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." Section 8-40-201(1). Workers' compensation benefits are only payable if an accident results in a compensable "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The fact that the employer provides treatment after an employee reports symptoms does not automatically establish a compensable injury. The claimant must prove the symptoms and need for treatment were proximately caused by their work. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. *E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered a compensable injury to his low back on January 29, 2021. Claimant's testimony regarding the incident and onset of symptoms was credible. Although Brandi Olson's initial report on February 4, 2021 does not document the mechanism of injury, Claimant and Claimant's wife credibly testified that she was given the details of the work related injury. Although Claimant did seek occasional chiropractic treatment before the tire lifting incident, the nature and extent of the symptoms and pain he experienced after the incident on January 29, 2021 differed in degree. He was unable to ambulate without assistance and the pain radiated into his right lower extremity. This sequela emanated from the tire lifting incident of January 29, 2021.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

In addition to proving treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). The parties have stipulated that the surgery performed by Dr. Chung was unauthorized.

The parties have indicated that in addition to compensability, the second issue to be determined is whether the medical treatment provided by Brandi Olson, N.P. on February 4, 2021 was authorized, reasonable, necessary and related to the claimed work injury. There appears to be no question that the treatment provided by Ms. Olson was reasonable, necessary and related to the work injury. The real issue is authorization. Since the injury was not reported to the carrier in this case, the carrier had no opportunity to designate a medical provider, the question is whether the treatment provided was emergent in nature.

Emergent medical care is compensable. *Marks v. Continental Airlines, Inc.* W.C. 4-170-455 (February 27, 1998); *Lucero v. Jackson Ice Cream,* W.C. 4-170-105 (January 6, 1995). However, after the incident, the Claimant did not seek emergency care, but instead waited over the weekend to contact his regular provider. The visit to Brandi Olson, N.P. was not emergent. The care provided by Brandi Olson on February 4, 2021 is unauthorized.

ORDER

It is therefore ordered that:

1. Claimant's claim for a low back injury on January 29, 2021 is compensable.

2. Insurer is not liable for the treatment provided by Brandi Olson, N.P., on February 4, 2021, as unauthorized.

3. As stipulated, the surgery performed by Dr. Chung on April 2, 2021 is unauthorized.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 11, 2022

ISSUES

- Should Respondents be penalized under § 8-43-304(1) for violation of WCRP 5-5(A)?
- Whether the Final Admission of Liability is void *ab initio*?
- Whether Respondents are entitled to attorney's fees and costs based on §C.R.S. 8-43-211(2)?

FINDINGS OF FACT

1. Claimant filed an Application for hearing on January 12, 2022 asserting a penalty against Respondents for violation of W.C.R.P 5-5. Specifically, Claimant alleged the following: "The Respondents are subject to a penalty of up to $1,000 per day for each rule violation pursuant to C.R.S. section 8-43-304(1). The Respondents violated W.C.R.P. 5-5(A) for filing a final admission of liability without a report attached from a treating physician. When a final admission is predicated upon medical reports, a narrative report and appropriate worksheets MUST accompany the admission. The attachment of the physician's report of workers compensation injury form is required in cases where such document is supplied by the physician concurrently with the narrative report. Attached documentation must provide a statement from an authorized treating physician regarding the date of maximum medical improvement, permanent impairment and maintenance medical benefits. The penalty violation started on March 11th, 2021 and is ongoing." (Respondents Exhibit K, p. 38).

2. A hearing was set on this application for May 12, 2022 and the hearing was cancelled on February 15, 2022. (Respondents Exhibit N). A second Application for Hearing dated March 11, 2022 was filed. In addition to the language set forth above, Claimant added: "The Claimant is only requesting $1.00." (Respondents Exhibit O, p. 46).

3. The Final Admission of Liability (FAL) that was filed on March 11, 2021 did have attached to it the Closing Physician's Report of Worker's Compensation Injury dated July 7, 2022 signed by Steven Quackenbush, PA-C and electronically counter-signed by John Reasoner, M.D. (Respondents Exhibit B, page 10). Additionally, a narrative report, also dated July 7, 2022 was also attached to the Final Admission. (Respondents Exhibit B, pages 12 – 15).

4. Both reports address maximum medical improvement (MMI) which occurred on July 7, 2020, provided for 0 percent permanent impairment and indicated there was no need for maintenance care after MMI.

5. Claimant testified at hearing that prior to the MMI determination, he was never examined by Dr. Reasoner and was only seen by Mr. Quackenbush.

6. Claimant filed an objection to the Final Admission of Liability and a notice and proposal and application for Division IME. (Respondents Exhibit C and D).

7. A prehearing conference was held before PALJ Laura Broniak on March 30, 2022. In addition to the stipulated issue of allowing the DIME to proceed, Respondents also raised the issue of ripeness of the issues set forth in Claimant's application for hearing; namely penalties and whether the FAL was void *ab initio*. Claimant argued that the issues were ripe since he was never evaluated by a physician in violation of the rules of procedure. Judge Broniak determined that issues brought by Claimant were ripe. (Respondents Exhibit P).

8. The Division IME was performed by Dr. Douglas Scott on June 22, 2022. Dr. Scott determined that the Claimant reached MMI on July 7, 2020 and had 0% impairment. He also determined that the Claimant required no maintenance medical treatment. (Respondents Exhibit T).

CONCLUSIONS OF LAW

Section 8-43-304(1) provides that an insurer "who violates any provision of [the Workers' Compensation Act] . . . shall be punished by penalties of up to $1,000 per day."

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. First, the ALJ must determine whether the insurer or employer violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). A party establishes a *prima facie* showing of unreasonable conduct by proving that an insurer violated the statue or a rule of procedure. If the claimant makes a *prima facie* showing, the burden shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999). An insurer acts unreasonably if it fails to take action a reasonable insurer would take to comply with a statute, rule or order. *Pioneers Hospital, supra*. To be objectively reasonable, an insurer's actions (or inaction) must be predicated on "a rational argument based in law or fact." *Diversified Veterans Corporate Center v. Hewuse, supra*.

If the alleged violator cures the violation within 20 days of the mailing of an application for hearing seeking penalties, no penalty shall be assessed unless the party seeking the penalty proves by clear and convincing evidence that the alleged violator knew or should reasonably have known they were in violation. Section 8-43-304(4).

Claimant argues Respondents violated W.C.R.P. 5-5 since the medical reports attached to the FAL were based primarily on the opinions of the physician's assistant and the reviewing doctor, despite the fact that Dr. Reasoner never examined the Claimant. W.C.R.P. 16-3(E)(2) provides "The Physician must evaluate the injured worker at least once within the first three visits to the Designated Provider's office." The only evidence as

to whether Claimant was seen by Dr. Reasoner is Claimant's testimony and his testimony is credible. However, Claimant did not plead a violation of W.C.R.P. 16-3(E)(2). 8-43-304 requires that a penalty be pleaded with specificity. Since Claimant did not afford Respondents the opportunity to cure the penalty violation he cannot pursue the penalty violation.

Claimant further argues that Doctor Reasoner's failure to examine the Claimant renders the FAL void ab initio. The basis for this argument is the decision in *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). In that case, the court of appeals held that the FAL did not include the entire report of the rating physician and was legally insufficient and did not operate to close the claim. The court's rationale for the holding was that the statute required medical reports to be filed in order to put the claimant on notice of the exact basis of the admitted or denied liability so that the claimant can make an informed decision whether to accept or contest the final admission. Here, the Claimant does not allege that he did not have the requisite notice of the basis of the FAL. To the contrary, he did have notice which prompted him to object to the FAL and request a DIME. Therefore, it is evident that Claimant was afforded the opportunity to dispute the FAL with sufficient notice based on the FAL, despite the fact that Claimant was not examined by Dr. Reasoner prior to the Final Admission of Liability. The Claimant did obtain a DIME which was performed by Dr. Douglas Scott. This independent evaluation validates the prior determinations by the authorized treating physician, despite the fact that Claimant testified that was never examined by Dr. Reasoner. The rationale in *Paint Connection Plus v. Industrial Claim Appeals Office, supra*. does not apply in this case.

Respondents have requested attorney's fees and costs for Claimant's alleged prosecution of an unripe issue. C.R.S. 8-43-211(3) provides for reasonable attorney fees when an attorney requests a hearing on an issue that is not ripe for adjudication at the time the request or filing is made. As noted by Judge Broniak in her prehearing order, an issue is ripe when it is real, immediate and fit for adjudication. *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178, 1180 (Colo. App 2006. The term "fit for adjudication" refers to a disputed issue for which there is not legal impediment to immediate adjudication. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which never occur. Olivas-Soto v. ICAO, supra. (Citations omitted). *See also McMeekin v. Memorial Gardens*, W.C. 4-384-910 (ICAO 9/30/2014). The ALJ determines that both issues brought by Claimant; namely penalties and whether the FAL was void *ab initio* were ripe and have been decided by this order. There is nothing speculative or contingent with respect to the determination of these issues. Respondent argues that since Dr. Reasoner was not joined by Claimant in the claim for penalties the issue is not ripe as against Respondent. While that argument may be valid if the penalty sought was for a violation of W.C.R.P.16-3(E)(2), the specific penalty actually alleged was for Respondent's violation was of W.C.R.P. 5-5(A). As such, the issue of penalties asserted against Respondent is ripe. However, as previously determined, there was no violation of that Rule by Respondent.

ORDER

It is therefore ordered that:

1. Claimant's claim for penalties is denied and dismissed.

2. Claimant's request to render the FAL void *ab initio* is denied and dismissed.

3. Respondent's request for attorney's fees and costs is denied and dismissed.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2022

/s/Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove she suffered a compensable injury to her left knee on July 11, 2021?
- If compensable, did Claimant prove entitlement to TTD benefits from July 13, 2021 through January 11, 2022?
- Did Respondents prove TTD should be reduced because of late reporting?
- Did Respondents prove Claimant's eligibility for TTD terminated on or after November 2, 2021 because she was released to her regular employment?
- Did Claimant prove the left knee treatment she received was reasonably necessary and causally related to the compensable injury?
- Did Claimant prove treatment she received was authorized?
- The parties stipulated to an average weekly wage (AWW) of $150.50, with a corresponding TTD rate of $100.33.

FINDINGS OF FACT

1. Claimant worked part-time for Employer as a barista. She injured her left knee on July 11, 2021 when she slipped on a wet section of floor. Her left knee "popped" and she felt immediate pain.

2. Claimant did not report the injury to anyone at work that day. Instead, she called her mother during a break and stated she almost fell "again," her knee popped, and it was hurting. The "again" to which Claimant referred was an incident a few weeks prior, when she slipped on a wet floor and fell. Claimant suffered no injuries during the fall. She and some co-workers "laughed [about it] and that was the end of it."

3. Claimant finished her shift on July 11, 2021 and went home. She and her mother applied ice to the left knee, and she rested it.

4. Claimant worked her regular shift the next day. Despite having "a lot of pain and discomfort," she said nothing about the accident to her supervisor.

5. The knee remained swollen and painful, so Claimant saw her PCP, Dr. Davison-Tracy, on July 13, 2021. Dr. Davison-Tracy documented a "2D[ay] history of knee pain after she slipped and 'caught herself' from falling and the knee buckled? Some inc pain and swelling and that is the knee she had repaired her medial meniscus in 2017 and again in 2019. Pain seems worse to patient than her prev[ious] injuries." Examination

of the left knee showed swelling, tenderness, decreased range of motion, and laxity with varus and valgus maneuvers. Dr. Davison-Tracy ordered an MRI and referred Claimant to Dr. Albright, an orthopedic surgeon.

6. As mentioned in Dr. Davison-Tracy's report, Claimant had significant problems with the left knee before July 11, 2021. She first injured the knee in 2015 or 2016 while playing basketball. She underwent an arthroscopic partial lateral meniscectomy July 2016 with Dr. Albright. She recovered well and returned to sports in September 2016.

7. Claimant played basketball with no problems until 2019, when the knee started swelling during a tournament. An MRI showed a recurrent lateral meniscus tear and she underwent a second arthroscopic surgery. Claimant attended post-operative PT for approximately two months and was released from regular follow up. Claimant resumed running but did not return to playing basketball. She had no significant ongoing issues related to the left knee until the work accident in July 2021.

8. On July 14, 2021, Claimant spoke with a nurse in Dr. Albright's office. She explained she injured her left knee on July 11 at work. The report documents, "The floor was slick and she almost slipped. Patient caught herself but in so doing she may have twisted and she did feel and hear a pop from her knee. Since then it has been very painful . . . lacking range of motion . . . her knee is very swollen and she can't bear any weight." Dr. Albright was on vacation, so Claimant was scheduled for the earliest available appointment on July 26. The nurse advised Claimant to wrap the knee, wear her old knee brace, and use crutches to avoid weightbearing.

9. Claimant texted her supervisor, Ms. SC[Redacted], the morning of July 16, 2021. She stated, "I injured myself and am supposed to be immobile until at least the 26th. I have a doctors note, where do you want me to send it?" She said nothing about hurting herself at work. Ms. SC[Redacted] replied that she would call [Insurer, Redacted] and request medical leave so Claimant would have time to recover without having to worry about her job.

10. [Insurer, Redacted] handles workers-related injuries, short-term disability, and nonwork-related leaves of absence for Employer. Ms. SC[Redacted] contacted [Insurer, Redacted] about personal medical leave for Claimant because she had been given no reason to think the condition was work-related.

11. Claimant had an MRI of the left knee on July 21, 2021, which showed a radial tear of the lateral meniscus and chondromalacia.

12. Claimant saw Dr. Albright on July 26, 2021. She stated her knee pain started a few weeks ago after she slipped on a wet spot at work. Before the injury she felt some "occasional" knee pain that generally resolved within a day or two. However, after the work accident "pain did not resolve, and she has had persistent swelling. She has increased pain with prolonged standing or walking activities as well." She described 5/10

knee pain at rest, 7/10 with ADLs and 10/10 with physical activities. Dr. Albright reviewed the MRI and diagnosed an acute lateral meniscus tear. He recommended surgery.

13. Claimant and her mother testified they stopped by Employer's store for coffee as they were on their way to the appointment with Dr. Albright the morning of July 26. They testified Ms. SC[Redacted] was outside taking orders from customers in the drive-through. They testified Claimant's mother told Ms. SC[Redacted] they were on their way to a medical appointment for the injury "she had at work." They testified Ms. SC[Redacted] responded by merely offering a free coffee and asking them to "keep her posted." Claimant and her mother initially thought the conversation took place on July 21, but later decided it was July 26 because they were on the way to a medical appointment.

14. Ms. SC[Redacted] denied being outside taking orders on July 26, or speaking with Claimant or her mother about Claimant's knee on July 26. Ms. SC[Redacted] testified her standard procedure when an employee reports an injury is to complete an incident report, contact [Insurer, Redacted], and inform the district manager.

15. Claimant and her mother's testimony regarding the alleged conversation the morning of July 26 is no more credible than Ms. SC[Redacted]'s testimony. Claimant failed to prove she reported the injury on July 26, 2021.

16. Claimant texted Ms. SC[Redacted] the evening of July 26 and stated she had been scheduled for surgery the following week. Claimant stated she had not heard from [Insurer, Redacted]. Ms. SC[Redacted] asked Claimant to check her spam folder because "I had them send your information to email." The text exchange contains no mention of any work-related injury.

17. On July 29, 2021, Claimant's mother spoke with the physical therapist and "requested information about waiting until 8/24/21 for surgery." The records do not explain why Claimant postponed the surgery, nor could Claimant recall a reason when asked about it at hearing.

18. On September 6, 2021, Dr. Albright performed a left knee arthroscopy with a partial lateral meniscectomy and lateral compartment chondroplasty. Intraoperative inspection showed a radial lateral meniscus tear and grade 1 to 1 lateral compartment chondromalacia. Claimant was admitted to the hospital and discharged on September 8.

19. An Employer's First Report of Injury was completed on September 10, 2021. The form lists Claimant as the preparer, although that is questionable given some of the verbiage used. Claimant testified she did not know who completed the form. In any event, Respondents accept September 10, 2021 as the date Claimant first provided notice of the injury. The form describes the accident as "slipped on wet floor heading towards cold bar, locked knee and heard a pop and jerked leg." The form lists July 11, 2021 as the date Employer was notified. This notation is inaccurate; Claimant admitted she told no one about the accident on July 11 and testified the first mention of a work-related injury was on July 26.

20. Employer did not refer Claimant to a medical provider after being notified of the injury on September 10, 2021. As a result, Claimant had the right to select her own treating physician.

21. Claimant had a post-op appointment with Dr. Albright on September 17, 2021. This appointment effectuated Claimant's selection of Dr. Albright as her ATP.

22. As with the previous surgeries, Claimant recovered well from the September 2021 surgery.

23. On November 2, 2021, Dr. Albright gave Claimant a work excuse stating her only restrictions were "walking only, no high-impact (running or jumping) activities." Claimant acknowledged receiving a copy of the work note from Dr. Albright's office.

24. Claimant's regular job with Employer required no high impact activities such as running or jumping. Dr. Albright's November 2, 2021 restrictions would not have precluded Claimant's regular work.

25. Claimant saw Dr. Mark Failinger on April 16 2022 for an IME at Respondents request. Claimant described the accident and onset of symptoms consistent with her statements to other providers and her testimony. Claimant told Dr. Failinger about her previous knee injuries and surgeries, and that she had no significant residual problems with the knee after the second surgery and no difficulties before the work accident on July 11, 2021. Dr. Failinger performed an extensive review of Claimant's pre- and post-injury medical records. Dr. Failinger stated radial meniscal tears are generally caused by an acute, traumatic event rather than a degenerative process. He opined the accident as described by Claimant could have created a radial tear and accelerated pre-existing chondromalacia. Dr. Failinger concluded the work accident probably caused, accelerated, or permanently aggravated the pathology in Claimant's left knee.

26. Dr. Failinger testified via deposition consistent with his report. He agreed surgery was a reasonable option given the pathology and Claimant's failure to improve with time.

27. Claimant received and reviewed an employee handbook when she was hired by Employer. The handbook states, "a partner who suffers a work-related injury or illness must notify the store manager as soon as possible. The partner or manager must report the injury by calling . . . or by using the online service . . . ." Claimant interpreted the handbook to allow a verbal report of an injury. Her interpretation is reasonable because the handbook does not explicitly state the method by which the employee should "notify" the store manager. Additionally, the alternative procedure of calling the toll-free number would necessarily result in a verbal report. Nevertheless, Claimant's failure to report the injury in any form is clearly inconsistent with the instructions in the handbook.

28. Employer prominently displays a large poster with labor-related notices, including procedures regarding work-related injuries. The poster clearly states, in large type, "IF YOU ARE INJURED ON THE JOB, WRITTEN NOTICE OF YOUR INJURY MUST BE GIVEN TO YOUR EMPLOYER WITHIN FOUR WORKING DAYS AFTER THE

ACCIDENT." The section about reporting injuries is the largest and most readily noticeable part of the poster. There is also a second notice in smaller typeface that repeats the instruction to report all injuries in writing within four working days. This poster is displayed in a location where all employees would be reasonably expected to see it. Claimant admitted she was aware of the poster.

29. Claimant proved she suffered a compensable injury to her left knee on July 11, 2021. Claimant's description of the accident and resulting symptoms is credible. Although Claimant had previous left knee problems, here is no persuasive evidence she had any residual limitations or required any treatment before the work accident.

30. Claimant proved the left knee evaluations and treatment she received starting July 13, 2021 was reasonably needed to cure and relieve the effects of her injury.

31. Claimant failed to prove she reported the injury or otherwise gave put Employer on notice of a potential work-related injury before September 10, 2021.

32. Claimant failed to prove the treatment she received before September 10, 2021 was authorized. There is no persuasive evidence of, and Claimant did not argue, a bona fide emergency that would render treatment authorized before Employer was notified of the injury.

33. Claimant had the right to select her own physician after September 10, 2021. She selected Dr. Albright, who became authorized as of September 17, 2021.

34. Respondents proved Claimant's TTD benefits should be reduced for failure to timely report the injury. The ALJ finds it appropriate to reduce TTD benefits to zero until September 6, 2021, when Claimant had surgery and no longer would have been capable of even modified duty.

35. Respondents proved Claimant was given a release to regular employment on November 2, 2021. The persuasive evidence shows the remaining restrictions as of that date would not have precluded her regular job as a barista.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A pre-existing condition does not disqualify a claim for compensation. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But the mere fact that a claimant experiences symptoms during or after work activity does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The mere fact that an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008). There is no presumption that a condition that manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant proved she suffered a compensable injury to her left knee on July 11, 2021. Claimant's description of the accident and resulting progression of symptoms is credible. She described the injury in a consistent manner to multiple providers starting with the first evaluation on July 13. Dr. Failinger's opinions and conclusions regarding causation are credible. Although Claimant had two prior left knee surgeries, there is no persuasive evidence of any residual limitations or need for treatment before the work accident. The accident probably caused or new radial tear, aggravated or accelerated an underlying condition, or some combination thereof.

B. Medical treatment was reasonably needed

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. As found, Claimant proved the left knee treatment she received starting July 13, 2021 was reasonably needed and causally related to the work accident.

C. Treatment before September 10, 2021 was not authorized

Besides proving treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). The respondents are only liable for treatment rendered by authorized treating providers. Absent an emergency, the ALJ cannot award medical treatment provided by unauthorized providers, even if the treatment was otherwise reasonably needed or causally related. *E.g., Torres v. City and County of Denver*, W.C.

No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995).

Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985). Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment "forthwith," or the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

The obligation to designate a physician arises when the employer receives information indicating to a reasonably conscientious manager that a potential compensation claim might be involved. *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984).

Claimant failed to prove she or her mother notified Employer of a potential work-related injury before September 10, 2021. Claimant concedes she did not report the injury on July 11 or July 12 while working. Nor did she say anything about a work injury in her texts with Ms. SC[Redacted]. The only possible notification before September 10 is the alleged conversation between Claimant's mother and Ms. SC[Redacted] in the drive-through. Claimant and her mother were unsure about the date of the conversation but eventually settled on July 26. Claimant and her mother appeared credible in describing the alleged conversation with Ms. SC[Redacted]. But Ms. SC[Redacted]'s testimony also appeared credible. It is possible the conversation took place. It is also possible it was on a different day or simply did not happen at all. Given the description of an essentially off-hand comment during a brief conversation in a drive-through line, Ms. SC[Redacted] may have not heard, or misunderstood Claimant's mother's comment that the knee injury occurred at work. Ms. SC[Redacted]'s alleged response does not sound like the reaction one would expect from an experienced manager had she understood Claimant's mother to be reporting a work injury. Claimant has the burden of proof on this issue, and the aforementioned uncertainties prevent her from crossing the threshold of "more likely than not." Claimant failed to prove she or her mother reported a work accident at any time before September 10, 2021.

Employer has no obligation to designate a treating physician before September 10, 2021 because it had no notice of the injury. Although Ms. SC[Redacted] knew Claimant was having problems with her left knee, she did not know it was work-related because Claimant did not inform her of such. Accordingly, evaluations and treatment Claimant received before September 10, 2021 were unauthorized and not the responsibility of Respondents.

D. Dr. Albright became authorized on September 17, 2021

There is no persuasive evidence Employer referred Claimant to a physician after she reported the injury on September 10, 2021. Therefore, the right of selection passed

to Claimant. A claimant "selects" a physician when she demonstrates by words or conduct she has chosen a physician to treat the industrial injury. *Squitieri v. Tayco Screen Printing*, Inc., W.C. No. 4-421-960 (September 18, 2000). Claimant saw Dr. Albright on September 17, 2021, which constitutes the "selection" of Dr. Albright as her ATP as of that date.

E. TTD commencing July 13, 2021

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. As found, Claimant proved she was disabled from her regular job and suffered an injury-related wage loss commencing July 13, 2021. Ordinarily, Claimant would be entitled to TTD benefits retroactive to the date she left work. But Respondents have requested the ALJ impose a "late reporting" penalty until September 10, 2021, the date Claimant provided notice of the injury.

Section 8-43-102(1)(a) requires a claimant to notify their employer of the injury *in writing* within four days of its occurrence. If the claimant does not timely report the injury in writing, the ALJ "may" impose a penalty of "up to one day's compensation for each day's failure to so report." The term "may" means the imposition of a "late reporting" penalty is not mandatory but is left to the ALJ's discretion. *Lefou v. Waste Management*, W.C. Nos. 4-519-354 & 4-536-799 (March 6, 2003). The penalty for late reporting is an affirmative defense on which the respondents bear the burden of proof. *Postlewait v. Midwest Barricade*, 905 P.2d 21 (Colo. App. 1995).

Respondents proved Claimant's TTD benefits should be reduced to zero until September 6, 2021. The requirement to report an injury in writing serves several functions, not the least of which is to ensure a record of exactly when an injury was reported and remove ambiguity as to whether the claimant believes a medical problem is potentially work-related. Another important purpose is to allow the respondents to timely comply with their statutory obligations regarding the provision of medical benefits and mitigate their liability for indemnity benefits. Those concerns were directly implicated here. Although Ms. SC[Redacted] knew Claimant was having problems with her knee, she reasonably assumed it was a personal issue. The written notice need not take any particular form, and Claimant could have easily referenced the work injuries in a text message to Ms. SC[Redacted]. At a minimum, Claimant could have simply told Ms. SC[Redacted] about the accident. Claimant offered no persuasive explanation for not reporting the injury before September 10, 2021. The ALJ further notes Claimant postponed the surgery over a month for no known reason, which prolonged the period of disability. Based on the foregoing factors, it is appropriate to penalize Claimant one day's compensation for each day from July 13, 2021 through September 5, 2021.

Claimant had surgery on September 6, 2021, at which point she would have been off work regardless of any modified duty Employer might have offered. Once she had surgery, the late reporting no longer impacted Respondents' liability in any meaningful way. Claimant is entitled to TTD benefits commencing September 6, 2021.

F. Termination of TTD effective November 2, 2021

Once commenced, TTD benefits continued until one of the events enumerated in § 8-42-105(3)(a)-(d). Here, Respondents seek to apply § 8-42-105(3)(c), which mandates termination of TTD when "the attending physician gives the employee a written release to return to regular employment." Section 8-42-105(3)(c) is an affirmative defense on which Respondents have the burden of proof. *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (December 16, 2004); *Schuldies v. United Sporting Good Wholesale*, W.C. No. 4-413-232 (January 7, 1999). Whether a claimant has been released to regular employment duty by the attending physician is a question of fact for the ALJ. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

Dr. Albright is Claimant's primary ATP, so he qualifies as "the attending physician." Claimant acknowledged receiving a copy of the November 2, 2021 release. The only remaining question is whether Claimant was released to "regular employment" despite the fact she still had some limitations on certain types of activities.

The phrase "regular employment" in § 8-42-105(3)(c) refers to the claimant's regular employment at the time of the injury. *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995); *see also Plotner v. Westran, Inc*., W.C. No. 3-108-724 (March 9, 1995) ("8-42-105(3)(c) reflects the General Assembly's view that once the attending physician finds the claimant to be physically capable of performing all the functions of his preinjury employment, any subsequent wage loss is the result of the claimant's own actions or general economic circumstances and not the industrial injury."); *Estes v. Schlage Lock*, W.C. No. 4-154-405 (December 11, 1995); *Morgan v. Bear Coal Company, Inc.,* W.C. No. 3-105-057 (December 1, 1995).

Dr. Albright released Claimant to return to work on November 2, 2021 with the only restrictions of "walking only, no high impact (running or jumping) activities." Those restrictions would not have prevented Claimant from performing her regular job as a barista. Respondents proved Claimant's attending physician gave her a release to return to regular employment on November 2, 2021.

ORDER

It is therefore ordered that:

1. Claimant's claim for a left knee injury on July 11, 2021 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably need to cure and relieve the effects of Claimant's compensable injury, including but not limited to treatment by Dr. Albright and his referrals on or after September 17, 2021.

3. Claimant's claim for medical benefits related to evaluations and treatment received before September 10, 2021, including the September 6, 2021 left knee surgery, is denied and dismissed.

4. Claimant's average weekly wage is $150.50, with a corresponding TTD rate of $100.33.

5. Insurer shall pay Claimant TTD from September 6, 2021 through November 1, 2021.

6. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

7. Claimant's claim for TTD from July 13, 2021 through September 5, 2021 is denied and dismissed.

8. Claimant's claim for TTD from November 2, 2021 through January 11, 2022 is denied and dismissed.

9. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES[1]

1. Whether Respondents established by clear and convincing evidence that the opinion of DIME physician, Dr. McAlpine is incorrect based on her failure to apportion Claimant's permanent impairment rating.

2. Whether Claimant established by a preponderance of the evidence that he is entitled to permanent total disability benefits.

3. Whether Claimant established by a preponderance of the evidence an entitlement to reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of his work-related injury or to prevent further deterioration of his condition pursuant to *Grover v. Indus. Comm'n*, 795 P.2d 705 (Colo. App. 1988).

PROCEDURAL ISSUE

Claimant originally endorsed the issue of disfigurement. However, due to video and logistic issues, Claimant was permitted to withdraw the issue of disfigurement without prejudice and to refile an application for hearing on that issue.

FINDINGS OF FACT

1. The parties stipulated that Claimant's average weekly wage is $723.53.

2. Claimant is a 44-year-old native of Oaxaca, Mexico who moved to the United States in 1999. Claimant's primary language is Spanish, and he has limited ability to speak English. Claimant earned a high school degree in Mexico, and has no additional formal education. Claimant was unable to provide a detailed work history, and testified his work history is primarily limited to construction jobs, including performing stucco installation.

3. On January 12, 2018, Claimant sustained admitted injuries arising out of the course of his employment with Employer on January 12, 2018, when a large pile of wood planks fell on him at a construction site where he was working. As a result of the incident, Claimant sustained an open fracture of his right femur, and other injuries. At the scene, Claimant was evaluated by emergency medical personnel, for a right leg fracture and

[1] Claimant's Position Statement identifies as issues: Injury to Claimant's right hip & knee; Soft-tissue injury to Claimant's neck & back; and Injury to Claimant's left shoulder." Based on Claimant's Position Statement, it appears Claimant seeks a determination regarding the compensability of these alleged injuries. Although "compensability" was identified in Claimant's Application for Hearing, it was not identified in Claimant's Case Information Sheet, nor was it identified as an issue for decision at the outset of hearing. (Hrg. Tr., p. 9, l. 10 – p. 12, l. 14). Accordingly, the ALJ does not address the compensability of alleged injuries to Claimant's right hip, right knee, neck, back or left shoulder, except as relevant to deciding the issues identified for determination.

swelling and abrasions of his left hand. Claimant was then transported by ambulance from the site to North Suburban Medical Center (NSMC) (Ex. N).

4. On January 12, 2018. At NSCM, Jared White, M.D., performed an open reduction internal fixation (ORIF) surgery to repair Claimant's right femoral shaft fracture. Claimant remained hospitalized until being discharged on January 15, 2018. During his hospitalization, Claimant reported left arm and abdominal pain, indicating he shielded himself with his left arm when the wood fell on him, and that wood fell on his abdomen. Claimant denied pain elsewhere in the body. X-rays of Claimant's chest, left wrist, left hand, and right knee performed were negative for fractures. (Ex. O).

5. On February 26, 2018, Claimant began treatment at Colorado Occupational Medical Partners (COMP). From February 26, 2018 through May 2, 2018, Claimant's treatment at COMP was primarily post-surgical physical and occupational therapy directed at his right leg. During that time, Claimant reported pain in his right leg, right knee, and groin. (Ex. R). In April 2018, Claimant received a brace for his right knee. (Ex. T).

6. On May 8, 2018, Claimant was evaluated by Tom Chau, PA-C, at COMP for complaints of left arm pain and numbness, neck, and back pain. Mr. Chau diagnosed Claimant with left arm pain, dorsalgia, and cervicalgia. He recommended additional physical therapy and ordered a cervical MRI. (Ex. 18). The MRI was taken on May 18, 2018, and showed mild degenerative changes and no acute pathology. (Ex. V).

7. Claimant was then evaluated by Matthew Lugliani, M.D., at COMP, on May 23, 2018. Dr. Lugliani recommended chiropractic care, and massage for Claimant's neck, and back. On June 6, 2018, Dr. Lugliani referred Claimant for a left shoulder MRI. (Ex. R). The left shoulder MRI showed mild tendinosis without a tear, and was otherwise normal. (Ex. W).

8. From May 9, 2018 through July 24, 2018, Claimant attended physical therapy at COMP, during which he was noted to have an antalgic gait and required the use of a cane. Physical therapy addressed Claimant's right leg, left arm, neck and back. (Ex. R). At discharge from COMP on July 24, 2018, Claimant continued to experience pain and weakness in his right leg, and was using a cane for ambulation. The therapist noted Claimant had plateaued with strength and could continue independently with exercise at home. (Ex. R).

9. On June 25, 2018, Claimant was evaluated by Rafer Leach, M.D., at MSK Medical, reporting headaches, neck pain, back pain, abdominal pain, left shoulder and elbow pain, right hip pain, and right knee pain. Dr. Leach referred Claimant for cervical and lumbar x-rays, which were normal, with the exception of mild lumbar discogenic endplate changes. (Ex. 13). Dr. Leach referred Claimant for chiropractic care and massage at MSK, which Claimant attended for approximately one month. (Ex. 16 & X).

10. On July 30, 2018, Claimant began treatment with Kristin Mason, M.D., at Rehabilitation Associates of Colorado. Dr. Mason's initial diagnosis was a femoral shaft

fracture and probable tibial plateau fracture, left shoulder sprain, with possible rotator cuff injury and scapular myofascial pain; cervical sprain/strain; lumbar sprain-strain; and prior thoracic injury with impairment rating. Dr. Mason referred Claimant to Jason Gridley, D.C., for chiropractic care directed at his spine, and to Denver Physical Therapy. In October 2018, Dr. Mason added a diagnosis of right hip labral tear, and referred Claimant for evaluation to Brian White, M.D., authorization for the referral was denied, and Claimant has not been treated for his right hip. (Ex. Z).

11. Claimant saw Dr. Gridley eight time between August 6, 2018 and September 26, 2018. At Claimant's final visit, he reported improved pain in his lower back, and shoulder. (Ex. 8).

12. Claimant attended three courses of physical therapy at Denver Physical Therapy. From August 17, 2018 to October 12, 2018; from April 29, 2019 through November 5, 2019; and from August 20, 2020 through November 5, 2020. (Ex., AA). At Claimant's final visit on November 5, 2020, Claimant continued to have pain in his right knee and left shoulder, and difficulty walking. (Ex. AA).

13. On November 26, 2018, Dr. Mason referred Claimant to Patrick McNair, M.D., for evaluation of his knee and concerns about Claimant's hardware from the ORIF procedure. In April 2019, Dr. McNair performed hardware revision surgery due to screw failure and also performed a right meniscectomy, chondroplasty, and lysis of adhesions. (Ex. 20).

14. Claimant remained under Dr. Mason's care for approximately four years, with his last documented visit on June 30, 2022. In February 2021, Dr. Mason assigned permanent restrictions, including lifting limited to thirty pounds, repetitive lifting limited to 15 pounds, and carrying limited to 30 pounds. On March 1, 2021, Dr. Mason added a restriction of limiting pushing and pulling to thirty pounds. Between March 1, 2021, and June 30, 2022, Claimant saw Dr. Mason thirteen times, for each visit, Dr. Mason completed a WC 164 form, which assigned the same restrictions, without modification. (Ex. Z).

15. During Claimants visits with Dr. Mason between March 1, 2021 and June 30, 2022, he reported swelling around his knee on March 1, 2021, and again on June 30, 2022. On January 3, 2022, Dr. Mason noted "generalized swelling" after Claimant had sustained a fall two weeks earlier. Otherwise, no lower extremity swelling was noted, and specifically noted as not being present on several occasions. At Claimant's June 30, 2022 visit with Dr. Mason, Claimant reported that his knee continues to "swell at time" and she noted slight swelling in the knee on examination. (Ex. Z).

Kristin Mason, M.D.

16. Dr. Mason testified at hearing and was admitted as an expert in physical medicine and rehabilitation. Dr. Mason testified that as a result of the January 12, 2018 incident, Claimant sustained a right hip labral tear, and a right knee medial meniscal tear (in addition to the conditions previously diagnosed). She opined that Claimant's April 2019 knee surgery was causally related to Claimant's accident. Dr. Mason also opined that

Claimant's spinal issues are myofascial in nature, and that his prior lower back and neck issues were aggravated by the January 12, 2018 injury, and the alteration in his gait was due to his leg injury. Additionally, she indicated although Claimant had some left rotator cuff tendinosis, there was no discrete significant tear. She testified that Claimant is at maximum medical improvement.

17. With respect to medical maintenance, Dr. Mason testified Claimant is on medications for which he needs to be monitored, and he requires orthotics, a TENS unit, and single-point cane. She also testified it would be reasonable for Claimant to follow up with orthopedics and to see Dr. Gridley for chiropractic care. Dr. Mason's testimony was credible and persuasive.

18. Dr. Mason testified she had Claimant on 30-pound lifting restrictions for a long period of time, and that Claimant has gait difficulties which are caused by a leg length discrepancy and pain. Claimant's right leg is approximately one inch shorter than his left, which is managed with shoe modifications and orthotics. Claimant uses a cane in his right hand to support himself.

19. Dr. Mason does not believe Claimant can return to work in construction. She recommended a 30-pound lifting restriction (but that Claimant could not carry that weight due to his use of a cane). She testified Claimant continues to require a cane for ambulating and standing, and he is limited to 20-30 minutes of walking or standing per hour and 2 hours of standing in an eight-hour shift. She further opined Claimant needs to elevate his leg four times per day for approximately ten minutes per session, that Claimant is unable to stoop, kneel, crouch or crawl (i.e., positional restrictions), and that Claimant can work while seated and frequently lift five pounds, with the ability to elevate his leg.

20. Many of the work restrictions in Dr. Mason's testimony were not identified in her medical records or the WC 164 forms she completed since February 2021, and, in at least one instance, not supported by Claimant's medical records. For example, although Dr. Mason testified that Claimant would need to elevate his leg four times per day for 10 minutes to address swelling, during the thirteen visits between March 1, 2021 and June 30, 2022, Claimant reported knee swelling three times, one of which was related to a fall. Claimant also indicated at the June 30, 2022 visit that his knee would swell "at times," and Dr. Mason documented "slight" swelling. Claimant's contemporaneous records are inconsistent with the recommendation that Claimant elevate his leg four times daily to address swelling. Moreover, Claimant demonstrated "elevating" his leg by resting it on his cane, which he can do while seated.

Kathie McAlpine, M.D. - DIME

21. On November 17, 2020, Kathie McAlpine, M.D., performed a Division Independent Medical Examination (DIME). As the result of her review of Claimant's medical records and examination, Dr. McAlpine diagnosed Claimant with a comminuted right femur fracture with ORIF repair; right hip labral tear and mild chondral degeneration; left shoulder sprain; left shoulder chronic distal infraspinatus tendinosis; cervical spine sprain with mild degenerative changes; and mild lumbar spine degenerative changes with mild

bilateral sciatica. She placed Claimant at MMI effective November 17, 2020. Dr. McAlpine assigned Claimant the following permanent impairment ratings:

Left upper extremity 8% scheduled impairment
Left lower extremity 9% scheduled impairment
Cervical spine 8% whole person impairment
Lumbar spine 13% whole person impairment.

The cervical and lumbar spine impairments assigned by Dr. McAlpine combined for a 20% whole person impairment.

22. Dr. McAlpine did not apportion Claimant's impairment noting: "No impairment ratings were provided concerning any previous injury/conditions of the Right Hip, Left Shoulder, Cervical & Lumbar spines, therefore an apportionment was not done." (capitalization original). (Ex. M).

23. Dr. McAlpine recommended the following work restrictions for Claimant: "Standing and walking should be done for no more than 20-30 mins per time up to a maximum of 1-3 hours per shift with rest periods between the periods of standing or walking. Lifting and carrying up to 25-30 lbs. as tolerated. (Ex. M).

24. With respect to maintenance care, Dr. McAlpine opined that reasonable maintenance care included 12 weeks of physical therapy with exercise and massage for the cervical and lumbar spine, upper and lower extremities. She also recommended providing an in-home TENS unit and adaptive shoe inserts. (Ex. M).

John Burris, M.D.

25. John Burris, M.D., at Respondents' request, performed two independent medical examination (IME) of Claimant – one on December 10, 2019 and a second on April 27, 2021. In both reports, Dr. Burris indicated he was not provided a significant portion of Claimant's medical records. In his first report, Dr. Burris opined Claimant reached maximum medical improvement on July 8, 2018, and that Claimant had near full range of motion of the right hip and right knee, and normal neurologic function. He opined that Claimant had no ratable impairment, no work restrictions, and that no further medical treatment was reasonable or necessary. He also indicated Claimant had no measurable leg length discrepancy based on Dr. Burris' measurements. (Ex. L).

26. In his second report dated April 27, 2021, Dr. Burris indicated he disagreed with Dr. McAlpine's assigned impairment ratings, and opined that Claimant's symptoms were not work-related. He reiterated his opinion that claimant reached MMI on July 18, 2018, and that no impairment was appropriate.

27. Dr. Burris testified by deposition, and was admitted as an expert in occupational medicine. Dr. Burris opined that Claimant's sole work-related injury was his right femur fracture, and that Claimant had no evidence of a residual deficit associated with the injury.

28. In his testimony, Dr. Burris provided additional information about his examinations taking place in April 2021 and December 2019 not documented in his IME reports or inconsistent with his reports. For example, Dr. Burris testified that the only objective findings in his examination of Claimant were a slight shortening of the right leg and atrophy of the quadriceps muscle. He characterized the leg length discrepancy as two centimeters. However, in his December 10, 2019 report he specifically indicted there was no measurable discrepancy, and did not document a leg length examination in the April 27, 2021 report. In his December 10, 2019 report, Dr. Burris indicated "[d]uring many provocative maneuvers, he reports pain in unrelated anatomic regions," without describing or documenting the maneuvers. In testimony, he offered examples that were not otherwise documented. In his testimony, Dr. Burris indicated Claimant showed signs of "Waddell's testing" indicating non-physiologic complaints, although he did not document Waddell's testing in either of his IME reports.

29. In large measure, Dr. Burris' opinions regarding restrictions and permanent impairment rating are based on his view that Claimant's only work-related injury was a fractured femur, and that the femur has completely healed. Dr. Burris' opinions are inconsistent with Claimant's treating providers, in that no treating provider has opined that Claimant's only work-related injury was his femoral fracture, that he has no restrictions or that he has no impairment. The ALJ does not find Dr. Burris' opinions persuasive.

Claimant's Prior Injury and Impairment Rating

30. Claimant also sustained a work-related injury in September 2014, when a sheet of drywall fell on him. As the result of that event, Claimant underwent treatment with Lawrence Lesnak, D.O., and other providers. On April 2, 2015, Dr. Lesnak assigned Claimant a 5% whole person impairment rating for a mild closed head injury. He further opined that Claimant did not qualify for any type of impairment for his low back, buttock, or neck. (Ex. U).

31. On December 22, 2015, Claimant underwent a DIME with David Orgel, M.D. Dr. Orgel assigned Claimant a 16% impairment for his cervical spine; 26% impairment for his lumbar spine, and a 12% psychiatric impairment. Claimant's cervical and lumbar spine impairment ratings convert to a combined 38% whole person impairment. (Ex. DD).

32. In addition, in association with Claimant's 2014 injury, treating provider Lon Noel, M.D., assigned permanent restrictions based on a functional capacity evaluation, including the following:

a. Overhead lifting: 5-10 pounds occasionally, no frequent overhead lifting;

b. floor-to-waist, waist-to-shoulder lifting: 30 pounds occasionally, 10 pounds frequently;

c. Bilateral upper extremity carrying: Maximum 20 pounds for total of 50 feet occasionally;

d. Right/left upper extremity carrying: Maximum 15 pounds for total of 50 feet occasionally;

e. Bilateral push/pull: Maximum of 45 pounds/50 pounds respectively;

f. Sitting for 1 hour, standing for 2 hours; walking for 2 hours, before changing position.

g. No working in unprotected heights, such as high ladders or scaffolding; and

h. No use of heavy vibrating machinery such as jackhammers.

(Ex. GG).

33. Although these restrictions were recommended, Claimant was able to obtain and maintain full time employment working construction, and work without accommodations for restrictions..

Katie Montoya – Vocational Expert

34. Vocational consultant, Katie Montoya, testified at hearing. Ms. Montoya was admitted as an expert in vocational rehabilitation, job placement, training, and evaluation. Ms. Montoya met with Claimant by video and performed a vocational assessment in April 2021. Ms. Montoya testified that Claimant's vocational profile was that of an unskilled worker, with the ability to perform a limited set of semiskilled jobs. Ms. Montoya opined that absent Claimant's injuries, he would be qualified to perform semiskilled jobs, including construction work, labor work, landscaping, some heavy equipment operation, restaurant/kitchen work, and machine operation. She testified that but for his injury, Claimant would have been able to perform any job in "any work classification that didn't require more than a semiskilled profile."

35. Ms. Montoya opined that the work restrictions recommended by Dr. Mason limit Claimant to sedentary work. She indicated Claimant cannot, based on is work restrictions, return to construction labor positions, and that the Claimant's use of a cane limits the environments in which he is able to work, although it would not prevent Claimant from working entirely. She testified that the additional work restrictions identified by Dr. Mason in her testimony, including Claimant's need to change positions, take breaks and elevate his leg, and limitations on operating a vehicle make it unlikely that Claimant would be able to perform competitive full-time work. She further opined that it is unlikely that Claimant could be retrained for other work. Ms. Montoya testified that if the restrictions recommended by Dr. McAlpine were applied, there may options for employment.

36. Ms. Montoya prepared a preliminary report regarding her opinions in April 2021, which was not offered or admitted into evidence. She did not prepare a final report. She testified that she performed labor market research, but did not perform a labor market survey with respect to Claimant, although she routinely performs labor market surveys. (A labor market survey involves contacting potential employers to determine the availability of suitable employment). Ms. Montoya's determination of available work is

based, in part, on labor market research which consists of reviewing employment listings and postings, and determining based on that information whether Claimant could perform the work available. The ALJ finds Ms. Montoya's opinion that Claimant is unlikely to engage in competitive employment unpersuasive.

Cynthia Bartmann – Vocational Expert

37. Vocational expert, Cynthia Bartmann testified at hearing. Ms. Bartmann was admitted as an expert in vocational rehabilitation, job placement training and evaluation. Ms. Bartmann authored two reports regarding Claimant's ability to obtain employment considering the work restrictions assigned by Dr. McAlpine and Dr. Mason prior to hearing.

38. Ms. Bartmann prepared two employability evaluations of Claimant, one dated July 26, 2021, and one dated March 19, 2022. Based on Dr. McAlpine's work restrictions (i.e., lifting 20-30 pounds, standing, and walking for 20-30 minutes for up to three hours per day. Ms. Bartmann was present for hearing and was aware of the additional restrictions about which Dr. Mason testified, and indicated the additional restrictions did not affect her opinions regarding Claimant's employability, although she indicated that they would reduce Claimant's employment options to the sedentary work category. In such a position, lifting would be limited to 10 pounds or less, and sitting at least six to eight hours per day.

39. She opined Claimant would be eligible for employment in positions falling into the sedentary work category. Ms. Bartmann performed labor market research and a labor market survey to assess Claimant's employment opportunities, within the Claimant's restrictions assigned by Dr. McAlpine. Ms. Bartmann's survey included contacting potential employers to obtain information regarding available employment opportunities. She opined that she believes job opportunities exist for Claimant within his vocational skills and work restrictions.

40. Examples of such employment included working light packing, labeling, and assembly positions. Ms. Bartmann provided several examples of light assembly positions which would fit with Claimant's restrictions, and would not be affected by Claimant's limited English proficiency. These included sedentary work packing paper products for restaurants that would require lifting less than 10 pounds, packaging dental products, packaging tea, and working at a bindery. She testified these types of positions are available locally, and do not require transferrable skills.

Claimant

41. Claimant testified at hearing that he was not aware of prior work restrictions related to his 2014 injury, and that he was able to work without difficulty prior to his January 2018 injuries. He has had no prior injuries to his left shoulder, right knee, or right hip prior to the January 12, 2018 injury. Claimant testified that his right hip currently swells "a lot" and that his legs are not strong. Claimant testified that he has constant pain, and that he has pain in his neck and arm, which waxes and wanes. He testified that he uses a cane the majority of the time, but at home he finds other objects to support himself. Claimant

testified that he elevates his leg during the day, and uses his cane to do so. Claimant demonstrated “elevating” his leg by placing his right leg extended on his cane, while the end of the cane rests on the ground.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME - Apportionment

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician’s opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear

and convincing evidence. “Clear and convincing evidence means evidence which is stronger than a mere ‘preponderance’; it is evidence that is highly probable and free from serious or substantial doubt.” *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME’s determination of whole person impairment rating must present “evidence demonstrating it is ‘highly probable’ the DIME physician’s MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician’s opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Respondents assert Dr. McAlpine’s permanent impairment rating is incorrect because she did not deduct the 2015 impairment rating for Claimant’s cervical and lumbar spine from her calculations. The version of § 8-42-104 (5), C.R.S., in effect prior to September 7, 2021[2], provides “In cases of permanent medical impairment, the employee’s award or settlement shall be reduced: (a) When an employee has suffered more than one permanent medical impairment to the same body part and has received an award or settlement under [the Act] or a similar act from another state. The permanent medical impairment rating applicable to the previous injury to the same body part, established by award or settlement, shall be deducted from the permanent medical impairment rating for the subsequent injury to the same body part.”

As found, Claimant received permanent medical impairment ratings for his cervical and lumbar spine from Dr. Orgel regarding his 2014 injury and from Dr. McAlpine regarding his 2018 injury. Dr. McAlpine did not deduct Dr. Orgel’s cervical and lumbar impairment ratings from her own because she was not provided with any records related to the prior impairment. The assignment of a prior impairment rating does not, by itself, require apportionment. Instead, the Act requires deduction of the prior impairment rating where the employee has “received an award or settlement,” and the prior rating is “established by an award or settlement.” The record before the ALJ contains no evidence that Claimant received an award or settlement. That is, no documents reflecting an award or settlement were offered or admitted into evidence, and no testimony was elicited to establish that Claimant’s 2015 impairment rating was reduced to an award or settlement.

[2] The version of section 8-42-104(5), C.R.S., effective September 1, 2021, only modifies the first sentence of the section to state: “In cases of permanent medical impairment, the employee’s award shall not be reduced except:,” and does not change the standard for apportionment.

In position statements, Respondents contend, “Claimant and Big Horn Plaster, Inc. reached a settlement agreement for $95,000 in November 2016.” Respondents’ contention, however, is not supported by evidence before the ALJ. Respondents therefore argue “The Court should take judicial notice of files in the Division of Workers Compensation and the Office of Administrative Courts. This settlement was filed and approved by the Division and this Court can take judicial notice of the same.” (Respondents’ Position Statement, p. 5).

Colorado Rule of Evidence 201 permits an ALJ to take judicial notice (*i.e.*, administrative notice) of an adjudicative fact that is “one not subject to reasonable dispute in that it is either (2) generally known within the territorial jurisdiction of the trial court or (2) capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned.” Because an alleged settlement is not “generally known”, the analysis falls under the second prong of C.R.E. 201. An “ALJ's decision to take administrative notice is discretionary unless the party requesting administrative notice provides the ALJ with the necessary information." *In Re Mendez*, W.C. No. 4-330-270 (ICAO Jan. 19, 2001); see also C.R.E. 201 (c) and (d). Respondents did not provide the ALJ with the documents for which administrative notice is sought. Consequently, administrative notice is discretionary.

The ALJ declines to take administrative notice of documents contained within the Division files for several reasons. First, Respondents did not provide the ALJ with the necessary information permitting the ALJ to take administrative notice. The OAC has no record of any settlement related to Claimant’s 2014 claim, thus the ALJ cannot merely refer to the court’s own records. Instead, the records for which notice is requested are asserted to be in Division files. Division files are not maintained by the OAC, and the ALJ nor does not have direct access to Division files. While the ALJ may, within his discretion take administrative notice of Division records, “[i]t is the obligation of the party desiring the ALJ to consider documents in the Division’s file to obtain certified copies from the Division.” *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (Jun. 9, 2009). W.C.R.P. 9-10 provides a mechanism for the parties to obtain certified files from the Division, and renders such certified documents self-authenticating. Respondents, however, did not obtain the Division file, and instead seek to place the burden on the court to obtain the Division file.

Respondents’ position statement refers to a purported settlement in November 2016, without identifying the case number or specific documents for which administrative notice is requested. Consequently, Respondents’ request places the burden on the court to determine the case number of Claimant’s prior claim, request the entire certified file from the Division, and determine the documents for which administrative is sought. The ALJ sees no basis to engage in an exercise available to the parties under W.C.R.P. 9-10, and of which they chose not to avail themselves.

Second, even assuming the OAC independently obtains the Division file, the “fact” of which Respondents request the ALJ take notice is more nuanced than merely determining Claimant entered into a settlement for $95,000 in November 2016. The issue

is whether Claimant received a settlement for a prior permanent impairment rating to his cervical and lumbar spine. Thus, the ALJ would be tasked with reviewing and analyzing the Division file to determine the scope of any settlement and whether the criteria for apportionment under § 8-42-104 (5) are met. Given it is Respondents' burden of proof to establish these elements, the ALJ declines to devote the OAC's resources to this task.

Finally, it would be prejudicial to the Claimant for the ALJ to take administrative notice of this issue at this stage in the proceedings. Although judicial notice may be taken at any stage in the proceeding, the facts for which notice is sought are elements of the Respondents' claim not otherwise supported in the record. Because Respondents bear the burden of proof, Claimant was not obligated to (and did not) elicit evidence on the issue. It would be manifestly unfair to permit a party to establish an essential element of its claim after the close of evidence through an untimely request for administrative notice. Doing so would deprive the Claimant of the opportunity to present evidence or argument regarding the effect of such a settlement or award on his current impairment rating.

Because Respondents have failed to present credible evidence that Claimant received a prior settlement or award for permanent partial disability to the same body parts at issue in the present case, Respondents have failed to establish that the permanent partial disability rating assigned by the DIME physician is incorrect.

Permanent Total Disability (PTD)

To prove permanent total disability the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. §§8-40-201(16.5)(a) and 8-43-201, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Yeutter v. Indus. Claim Appeals Office*, 487 P.3d 1007 (Colo. App. 2019). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Grant v. WalMart Assoc., Inc.,* WC 4-905-009 (ICAO, Mar. 18, 2019). In weighing whether a claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Yeutter, supra*. The critical test is whether employment exists that is reasonably available to claimant under his or her particular circumstances. *Bymer*, *supra*; *Blocker v. Express Pers.,* WC 4-622-069-04 (ICAO July 1, 2013). The question of whether the claimant proved the inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995); *see Yeutter, supra* (reasoning that DIME opinion held no special weight in a subsequent hearing where claimant sought permanent total disability benefits).

Claimant has failed to establish an entitlement to permanent total disability benefits or that he is unable to earn any wages. As found, Claimant has been assigned permanent work restrictions limiting his lifting and pulling to thirty pounds. He also has mobility restrictions which prevent him from walking or standing for more than 30 minutes per hour. The ALJ finds the opinions of Ms. Bartmann to be more persuasive than those of Ms. Montoya with respect to Claimant's employability. Specifically, Ms. Bartmann's opinion that Claimant can engage in sedentary work and that his limited English proficiency does not exclude Claimant from employment. The ALJ finds credible Ms. Bartmann's testimony that she has contacted and spoken with potential employers who have or may have available work Claimant can perform considering his restrictions, including the restriction that Claimant elevate his leg four times per day. Because Claimant's restrictions do not prevent Claimant from earning any wages, the ALJ concludes Claimant is not entitled to permanently total disability benefits.

Medical Maintenance Benefits

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Ctr. v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002). "An award of Grover medical benefits is typically general in nature and is subject to the respondent's subsequent right to challenge particular treatment." *Trujillo v. State of Colorado*, W.C. 4-668-613-03 (ICAO Aug. 21, 2021).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover,* 759 P.2d at 710-13; *Stollmeyer v. Indus. Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, WC No. 3-979-487, (ICAO Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna*, 77 P.3d at 866; *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Ctr.,* 919 P.2d at 704.

Claimant has established by a preponderance of the evidence an entitlement to a general award of medical maintenance benefits. Both Dr. Mason and Dr. McAlpine credibly opined that Claimant will likely require durable medical equipment in the future, including orthotics and a TENS Unit. Further, Dr. Mason credibly opined that Claimant should be permitted follow up appointments with orthopedics to address his leg, and chiropractic care as needed. No evidence was presented that Claimant requires any current medical maintenance benefits. The ALJ credits the opinions of Dr. Mason and Dr. McAlpine, and concludes Claimant has established that future medical treatment is reasonably necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of his condition.

Because no specific medical treatment has been requested by Claimant's ATP at this time, the issue of whether any specific medical treatment should be authorized as medical maintenance benefits is not ripe, and the ALJ is without jurisdiction to authorize any specific treatment. *See Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995). The ALJ makes no findings or conclusions regarding the reasonableness, necessity, or relatedness of any specific treatment.

ORDER

It is therefore ordered that:

1. Respondents' request to apportion Claimant's cervical and lumbar impairment ratings is denied and dismissed.

2. Claimant's request for permanent total disability benefits is denied and dismissed.

3. Claimant's request for a general award of medical maintenance benefits is granted. Respondents shall pay for reasonable and necessary medical maintenance treatment causally related to Claimant's January 18, 2018 work injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 13, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the admitted average weekly wage (AWW) of $1,154.00 should be increased for purposes of permanent partial disability (PPD) benefits.

Whether the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation.

FINDINGS OF FACT

1. On January 30, 2020, the claimant suffered an injury at work. The respondent has admitted liability for the claimant's work injury. At the time of her injury, the claimant worked as the Chief Deputy Clerk and was paid $28.85 per hour. During her employment with the employer, the claimant had medical insurance, dental insurance, and vision insurance.

2. After her work injury, the claimant received various pay increases before resigning from her position on August 25, 2022. Those increases are as follows:

a) On June 15, 2020, the claimant's pay was increased to $34.00 per hour.

b) On December 11, 2020, the claimant's pay was increased to $35.70 per hour.

c) On January 28, 2021, the claimant's pay was increased to $42.2692 per hour; ($7500.13 per month).

3. In April 2022, the claimant was placed on administrative leave without pay. On May 9, 2022, the claimant received a letter regarding continuation of medical insurance coverage pursuant to COBRA. In that letter, the claimant was informed that the monthly premium to continue her health insurance coverage would be $806.10. The claimant did not pay this premium.

4. On May 20, 2022, the respondent filed a Final Admission of Liability (FAL) admitting for a permanent impairment rating of 18 percent, whole person. The average weekly wage (AWW) identified in the FAL was $1,154.00

5. On June 20, 2022, the claimant received a letter from the Social Security Administration (SSA) confirming that the amount of $170.10 would be withheld for medical insurance premiums under Medicare.

6. The claimant asserts that her AWW should be increased to $1,726.15 to reflect the various raises she received after the work injury.

7. Due to her January 30, 2020 work injury, on September 24, 2020, the claimant underwent low back surgery that included L2-L3 microdiscectomy with laminectomy.

8. As a result of the September 24, 2020 lumbar surgery, the claimant has a disfigurement on her lower back consisting of a well-healed surgical scar that runs from just below her belt-line up her spine and measures 18 cm in length. This scar is a different color than the surrounding skin.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid to the employee under the contract of hire in force **at the time of the injury**. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). Under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply Section 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp., supra*.

5. A claimant's AWW must also include the employee's cost of continuing the employer's group health insurance plan, and upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan. Section 8-40-201(19)(b), C.R.S. It is not required that the employee actually purchase the insurance coverage for the AWW to be increased. *Ray v. Industrial Claim Appeals Office*, 124 P.3d 891 (Colo. App. 2005), aff'd. 145 P.3d 661 (Colo. 2006).

6. The claimant's AWW shall be increased to reflect the cost of continuation of insurance coverage. Therefore, claimant's AWW shall be increased by $806.10 for a total AWW of $1,960.10. The ALJ recognizes that the SSA is withholding $170.10 for the claimant's Medicare coverage. However, the ALJ finds that the cost identified in the May 9, 2022 COBRA letter is reasonable and appropriate in determining the cost of replacement insurance coverage. Therefore, that amount is also reasonable in calculating the claimant's AWW. The ALJ declines to include the claimant's post-injury raises to her AWW.

7. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

8. As a result of her January 30, 2020 work injury and related surgery, the claimant has sustained a permanent disfigurement to areas of the body normally exposed to public view.

ORDER

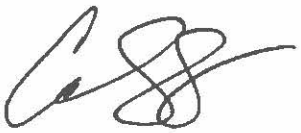
It is therefore ordered:

1. For purposes of calculating PPD benefits, the claimant's AWW is increased to $1,960.10.

2. The respondent shall pay claimant $2,000.00 for her permanent disfigurement. The respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined here are reserved for future determination.

Dated October 18, 2022.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove the admitted 10% scheduled ratings should be "converted" to the equivalent 6% whole person rating?

- Did Claimant prove entitlement to an award of medical benefits after MMI?

FINDINGS OF FACT

1. Claimant worked as a licensed psychiatric technician at the Colorado Mental Health Institute and had done so for over 16 years. He suffered an admitted injury to his left shoulder on October 6, 2020 while reaching to open a heavy metal door. As he was doing so, he felt a pop in his shoulder.

2. Claimant was initially diagnosed with a left shoulder strain.

3. An MRI performed on December 28, 2020 showed mild glenohumeral arthritis along with tendinosis and fraying of the supraspinatus. No full thickness tear was seen. (Claimant Exhibit 14, p. 355).

4. After several months of conservative care, Dr. Kobayashi performed surgery consisting of left shoulder arthroscopic subacromial decompression/rotator cuff repair (supraspinatus) and left proximal biceps tenodesis (subpectoral) on July 14, 2021. The surgery included insertion of a double loaded Y-knot anchor in the greater tuberosity with sutures placed through the supraspinatus tendon. Additionally, the subpectoral biceps tenodesis was performed with 2 Mitek Panalok suture anchors. (Claimant's Exhibit 8, pp. 219 – 220).

5. Following the surgery, Claimant received physical therapy with Synergy Physical Therapy & Wellness. He received therapy from November 22, 2021 through February 14, 2022, when he was discharged. At the time of discharge, the assessment was "Loss of motion since last PN. Improvements made in functional strength and able to perform a 10# shelf lift to 72" for 5 reps. Continuation of home program should allow maintenance of symptomatic elimination over time and lessen chance of recurrence." (Claimant's Exhibit 11, p. 336).

6. Claimant's primary ATP, Dr. Thomas Centi, put Claimant at MMI on February 16, 2022. (Claimant Exhibit 6, p. 195). Physical examination showed well healed surgical scars. There was no edema and no ecchymosis. There was mild tenderness with palpation to the bicep region. Range of motion was slight limited in all planes. Strength was good. Dr. Centi provided a right shoulder impairment rating of 10% extremity which converted to 6% whole person. Dr. Centi opined Claimant required no maintenance treatment and released him from care.

7. Respondent filed a Final Admission of Liability (FAL) on March 21, 2022 admitting for the 10% scheduled extremity rating assigned by Dr. Centi. The FAL denied medical benefits after MMI.

8. Claimant timely objected to the FAL and requested a hearing. Claimant endorsed "Permanent Partial Disability Benefits" on the Application for Hearing.

9. Respondents filed a timely Response to Application for Hearing on April 11, 2022.

10. At the request of Respondent, Dr. Fall performed an IME on August 10, 2022. (Respondent's Exhibit A). In her report, which is consistent with her testimony, she states, "Regarding the functional deficit, there is no indication of any functional deficit proximal to the shoulder."

11. Claimant credibly testified that currently he can accomplish most tasks involving his left shoulder, but that the pain builds up and he has to take Tylenol. He also has loss of strength with lifting. Because of the loss of strength, he has to lift closer to his core. When he is doing the laundry, he has to take the laundry basket with the clothes with his right hand. Claimant's testimony has demonstrated that he has limitations extending beyond his left extremity. Dr. Fall's IME did not consider the limitations that Claimant testified to at the hearing. Although the examination and testing done by Dr. Fall did not replicate the Claimant's symptoms, the Claimant's testimony with respect to his pain and loss of strength is more credible since the IME was a single time and of limited duration.

CONCLUSIONS OF LAW

A. Claimant proved that his impairment should be converted to a whole person impairment.

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-

705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant proved he suffered functional impairment not listed on the schedule. The surgery performed by Dr. Kobayashi was directed to anatomical structures proximal to the "arm," including the supraspinatus tendon. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008); *see also Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). More importantly, Claimant credibly described pain and associated functional limitation in areas proximal to his arm. The preponderance of persuasive evidence shows Claimant's functional impairment extends beyond his "arm at the shoulder."

Dr. Centi provided Claimant with a 6% whole person. Neither party requested a DIME, so Dr. Centi's rating is binding under § 8-42-107.2(b). Claimant is entitled to PPD benefits based on Dr. Centi's 6% whole person rating.

B. Claimant failed to prove entitlement to medical benefits after MMI

The respondents are liable for authorized medical treatment reasonably needed to cure or relieve the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). A claimant need not be receiving treatment at the time of MMI or prove that a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). If the claimant establishes the probability of a need for future treatment, they are entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove he needs additional treatment to relieve the effects of his injury or prevent deterioration of his condition. Multiple treating and examining providers agree no further treatment is required. Claimant testified he would like to return to an ATP "to get the thing fixed and get on with - - get on with my life." Dr. Centi was aware of Claimant's ongoing symptoms but did not think he needed any further treatment. There is no persuasive evidence of any change in Claimant's condition or other factor that would reasonably be expected to change his ATPs mind on that subject.

ORDER

It is therefore ordered that:

1. Claimant's request for an award for whole person impairment based on 6% whole person is granted.

2. Claimant's request for a general award of medical benefits after MMI is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

- Did Claimant prove a revision total knee arthroplasty is reasonably necessary and causally related medical treatment after MMI?

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right knee on March 4, 2019 when he slipped on ice.

2. An MRI showed an unstable osteochondral lesion, and Dr. Lucas King performed an arthroscopic chondroplasty on April 22, 2019.

3. The surgery was not helpful and Dr. King eventually performed a total knee arthroplasty (TKA) on October 9, 2019. Manipulation of the knee at the conclusion of the surgery showed good stability and full range of motion.

4. Postoperative x-rays on October 9, 2019 showed the prosthetic components were in satisfactory position with no fracture, dislocation, or other complication.

5. Claimant struggled with post-operative pain and limited range of motion. On October 24, 2019, Dr. King advised Claimant to become more aggressive with PT and exercises, or his knee would continue to stiffen.

6. At a follow up with Dr. King on December 10, 2019, Claimant's pain was fairly well controlled but he had only 75 degrees of flexion. Claimant was ambulating with a very stiff, one-legged gait. Dr. King obtained x-rays, which showed a well-placed prosthesis with no signs or loosening or acute pathology. Dr. King did not think additional PT would improve Claimant's range of motion and recommended a manipulation under anesthesia (MUA) to break up scar tissue.

7. Dr. King performed an MUA on December 16, 2019. He noted that the October 2019 TKA was successful from a technical standpoint "but unfortunately, the patient did not go to therapy right away and became extremely stiff, despite going to therapy finally." Before the MUA, Claimant had motion from 20-80 degrees. During the procedure, Dr. King obtained full extension and 135 degrees of flexion.

8. On January 14, 2020, Dr. King's PA-C noted Claimant was not going to therapy as prescribed. Claimant inquired about another MUA. Examination showed Claimant was lacking 30 degrees of full extension and had only 90 degrees of extension. According to Dr. King, the reason Claimant was in this situation was because he was not going to therapy and was not pushing to get his motion back. A repeat MUA would not help without therapy.

9. Claimant followed up with Dr. King on February 11, 2020. His knee was still severely limited despite going to therapy and working with home exercises. He had only 90 degrees of flexion and -20 degrees of extension. Claimant was very frustrated and wanted another manipulation. Dr. King requested authorization for a repeat MUA with arthroscopy to remove scar tissue. Dr. King noted post-op PT would be "critical" to regaining ROM.

10. Dr. William Ciccone II reviewed the surgery request for Respondents. He opined the first MUA was reasonable but a second procedure would probably not be helpful given the prior poor outcome. Dr. Ciccone recommended a second opinion from a fellowship-trained joint replacement specialist to evaluate other factors such as implant position and extensor mechanism function.

11. Dr. King performed an MUA and arthroscopic synovectomy and debridement on February 21, 2020. His report notes that Claimant "did not get into physical therapy right away [after the first MUA] and became extremely stiff once again." Dr. King removed "significant" and "abundant" scar tissue. During the procedure, Dr. King obtained full extension and 125 degrees of flexion "without difficulty at all."

12. Claimant started PT immediately and was given a continuous passive motion (CPM) machine to use at home.

13. Claimant's pain and range of motion slowly improved over the next several months. On July 23, 2020, Claimant had no pain and was "pleased with his progress." He demonstrated 120 degrees of flexion and full extension.

14. At a September 22, 2020 appointment with Dr. King, Claimant was described as "doing very well" and "happy with his recovery." Range of motion testing showed full extension and 110 degrees of flexion "without difficulty." Claimant was a "little bit disappointed that he cannot get full flexion as of yet, but he knows that he need to continue to work on it." Dr. King released Claimant to annual follow up.

15. Claimant had a right knee MRI on December 17, 2020 that showed extensive artifact from the TKA, possible patella baja, and a small joint effusion. No structural issue related to the implants was suggested in the report.

16. Claimant was put at MMI on January 26, 2021 by his ATP, Dr. Thomas Centi. His ROM had decreased to 88 degrees of flexion. Dr. Centi assigned a 37% lower extremity impairment rating, and recommended three years of orthopedic follow up as maintenance care.

17. Respondents filed a Final Admission of Liability (FAL) on February 8, 2021 based on Dr. Centi's report. The FAL admitted for post-MMI maintenance care.

18. Claimant returned to Dr. King on February 25, 2021. His knee was still limiting his activity and "he is not very happy at this point." Claimant had full extension but only 90 degrees of flexion. Dr. King obtained updated x-rays and reviewed them with Claimant, along with the prior films. Dr. King could not see any difference from the

previous x-rays. The prosthesis looked "well aligned" with no sign of loosening or acute pathology. Dr. King suggested additional PT but Claimant was frustrated and did not think therapy would to anything more for him. Claimant wanted to pursue another MUA and arthroscopy because "he needs to get that flexion better." Dr. King noted, "The patient understands that he is very prone to having scar tissue."

19. Dr. King performed the arthroscopy and MUA on March 8, 2021. He again lysed and debrided "significant" scar tissue in multiple areas of Claimant's knee. During the manipulation, Dr. King obtained almost 130 degrees of flexion and full extension with no evidence of instability.

20. Claimant saw Dr. King again on September 16, 2021. His knee was still very stiff despite the multiple manipulations. Dr. King noted, "He did seek a second opinion over at St. Mary's and was told that it might be some overstuffing of his anterior compartment." [1] Dr. King obtained updated x-rays, and compared them to the previous x-rays. The prosthesis was "well placed" with no sign of loosening. Dr. King was unsure if overstuffing was the issue "as much as just significant scar tissue." Claimant requested another opinion, and Dr. King referred Claimant to his partner, Dr. Shane Rothermel, who specializes in revision arthroplasty.

21. Dr. Rothermel evaluated Claimant on September 20, 2021. He saw no obvious cause for Claimant's continued symptoms from physical exam and radiographic imaging. He reviewed multiple x-rays and opined they showed "overall good alignment of components with no evidence of loosening osteolysis or hardware complications." Dr. Rothermel asked Claimant to obtain inflammatory lab work to rule out any concern for infection.

22. Claimant completed the bloodwork, and returned to Dr. Rothermel on September 23, 2021. Dr. Rothermel opined, "I am unable to identify any correctable aspect of his prior total knee arthroplasty." Dr. Rothermel thought the most likely explanation was recurrent scar tissue. He concluded, "I do not believe that I can make him better by revising his knee arthroplasty."

23. Dr. King met with Claimant again on December 2, 2021, and reiterated he saw no surgical solution to Claimant's situation. Claimant was insistent he wanted a revision, so Dr. King referred him for another opinion with a different total joint surgeon.

24. Claimant saw Dr. Centi on December 15, 2021, who concurred with the referral to another specialist. Dr. Centi and/or Dr. King referred Claimant to Dr. David Walden.

25. Dr. Walden evaluated Claimant on January 13, 2022. Claimant explained he had received no sustained benefit from any of the previous procedures, and the ongoing lack of mobility significantly limited his activities. Claimant referenced second opinions from Dr. VanManen[2] and Dr. Rothermel regarding a possible revision TKA. Dr.

[1] Based on information in later reports, the provider was probably Dr. VanManen.
[2] No records from Dr. VanManen were offered at hearing.

Walden reviewed x-rays taken on August 23, 2021[3] and opined, "there may be a rotational abnormality of the femoral component." Dr. Walden called a partner in his practice who specializes in joint replacements and revisions, Dr. William Howarth, to review the images. Dr. Howarth agreed "there appears to be some malpositioning of the components including a rotational problem with the femoral component and an inferior positioning of the patella." He opined Claimant would likely need a revision TKA.

26. Claimant saw Dr. Howarth on February 10, 2022. Dr. Howarth opined the August 23, 2021 x-rays show evidence of internal rotation of the femoral component and a revision TKA was indicated.

27. Claimant saw Dr. Mark Failinger on May 28, 2022 for an IME at Respondents' request. Dr. Failinger found no indication of misalignment based on the physical examination. He noted some mild laxity, which argues against malpositioning of the femoral component. Dr. Failinger opined it is possible but not probable the femoral component is malpositioned. But even if it were malpositioned, is it not probable a revision TKA will improve Claimant's range of motion and function. Dr. Failinger could not corroborate Dr. Howarth's interpretation of the August 23, 2021 x-rays because he did not have access to the images or even the report. However, no such problem was identified on any previous imaging. Dr. Failinger emphasized any misalignment would have occurred at the first TKA because there was no evidence of loosening or shifting of the hardware. Therefore, it should have been visible on all imaging done since the TKA. Dr. Failinger concluded Claimant's pain probably stems from a combination of pre-existing degenerative changes and post-surgical scar tissue.

28. Dr. Howarth testified via deposition on August 10, 2022. He described two "radiographic findings" he believes he can remedy with a revision TKA. The first issue is "apparent" malpositioning of the femoral component. Dr. Howarth opined the malpositioning is subtle and would not necessarily require a revision absent Claimant's clinical presentation. The second issue Dr. Howarth identified is excessive posterior tibial slope. Although the tibial slope is not causing a problem at present, it will inevitably fail in the future. Dr. Howarth testified a revision TKA is the only surgical option that can improve Claimant's condition. He opined doing multiple MUAs would "never work" and "if someone is doing three [MUAs] . . . they don't know what they are doing." Dr. Howarth emphasized a revision TKA is a "very difficult procedure" and would entail a "very difficult rehab" to regain function because Claimant's knee ROM has been limited for several years.

29. Dr. Failinger testified at hearing to elaborate on the opinions in his report and address some of the issues raised in Dr. Howarth's deposition. Dr. Failinger noted Claimant's knee demonstrated full range of motion immediately after the TKA components were installed, and later after each MUA. The ability to move the knee normally while Claimant is unconscious is a strong indicator that the hardware is properly positioned. Given the disagreement between surgeons regarding the x-ray findings, Dr. Failinger recommended a CT scan as the "gold standard in determining whether or not that femoral component is positioned properly." Dr. Failinger agreed the tibial slope angle

[3] The August 23, 2021 x-rays were not offered at hearing.

discussed in Dr. Howarth's deposition may cause premature failure of the TKA in the future, but it has no impact on Claimant's current symptoms or restricted range of motion. Dr. Failinger testified Claimant is predisposed to forming excessive scar tissue, which leads to inflexibility and decreased range of motion. Scar tissue was cited by more than one provider as a likely source of Claimant's symptoms and limitations. Dr. Failinger opined that even if Claimant were to undergo a revision TKA, he will probably still struggle with knee motion because his body will inevitably produce more scar tissue. Dr. Failinger also noted Claimant's underlying diagnosis of rheumatoid arthritis, which is known to cause poor outcomes after a TKA.

30. Claimant failed to prove a revision TKA is reasonably needed to relieve the effects of his injury or prevent deterioration of his condition.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). Medical benefits can continue after MMI if necessary to relieve the effects of the injury and prevent deterioration of the claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Surgery can be a permissible form of post-MMI treatment, if it is undertaken for the purposes outlined in *Grover*. *E.g., Shipman v. Larry's Transmission Center*, W.C. No. 4-721-918 (August 25, 2008) (surgery to correct a leg-length discrepancy approved as post-MMI treatment); *Hayward v. UNISYS Corp., supra* (knee surgery may be curative or may be *Grover*-style maintenance treatment designed to alleviate deterioration of the claimant's condition). Even if the respondents admit liability, they retain the right to dispute the reasonable necessity of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). The claimant must prove entitlement to specific medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove the revision TKA recommended by Dr. Howarth is reasonably needed to relive the effects of the work injury or prevent deterioration of his condition. There is no doubt Claimant is severely limited by his knee problems and he is quite understandably searching for a solution. The difficult question is whether a revision procedure will probably help. Multiple surgeons have looked at Claimant's situation and reached well-reasoned but conflicting conclusions. Dr. Rothermel and Dr. King saw no correctable abnormality after reviewing multiple imaging studies conducted over several years. No interpreting radiologist suggested a problem either. Dr. Walden and Dr. Howarth looked at different x-rays and saw an issue with femoral rotation. Dr. VanManen apparently saw a different issue (patellofemoral overstuffing), although his report was not offered at hearing. Dr. Failinger did not have the opportunity to review the August 2021 x-rays, but based on the available evidence he concluded a revision TKA probably will not help Claimant. Dr. Howarth and Dr. Walden are no more persuasive than Dr. King, Dr. Rothermel, and Dr. Failinger regarding the need for a revision TKA. Moreover,

regardless of whether femoral malpositioning is contributing to Claimant's symptoms and disability, Dr. Failinger persuasively explained that Claimant's propensity to form scar tissue will significantly hamper his ability to improve after a revision TKA, as will his underlying rheumatoid arthritis. The preponderance of persuasive evidence fails to establish that Claimant "more likely than not" will benefit from a revision TKA.

ORDER

It is therefore ordered that:

1. Claimant's claim for a revision total knee arthroplasty is denied and dismissed.

2. All issues not decided herein, and not previously closed by operation of law, are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 19, 2022

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. The issue addressed in this decision involves Claimant's entitlement to maintenance medical treatment. The specific question answered is whether Claimant established, by a preponderance of the evidence, that she is entitled to a maintenance medical appointment with Dr. Robert Leland to determine the integrity of the surgical hardware in her right foot and whether he is a candidate for removal of the same.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's November 18, 2019 Injury

1. Claimant works as a teacher for Employer. She sustained an admitted work-related injury on November 18, 2019, when her right foot inadvertently got caught between two desks and she fell forward as she was passing out papers to her students.

2. Claimant testified she experienced "instant" pain and asked to go to the emergency room (ER) for treatment. She presented to the emergency department of Prowers Medical Center where x-rays were taken. X-rays revealed "[n]o evidence of acute or concerning boney abnormality in the right foot or ankle." (Resp. Ex. I, p. 217). Claimant was diagnosed with an acute right foot ligamentous injury but with concern for Lisfranc injury based on the location. *Id.* She was discharged to home with crutches and recommendations to ice and elevate the foot. *Id*. at p. 217-221.

3. On November 26, 2019, Claimant was evaluated during her initial workers' compensation medical appointment by Physician Assistant (PA) Dan Klepacz. Physical examination revealed no swelling, redness or bruising about the right foot. Claimant reported tenderness over the dorsum of the foot, especially over the right 2nd, 3rd, and 4th metatarsals. (Resp. Ex. I. p. 224). She also demonstrated limited dorsi and plantar flexion of the right ankle due to pain. *Id*. Claimant was advised that full healing could take a "couple of weeks". *Id*. She was again advised to ice and elevate the foot frequently and take NSAIDs (non-steroidal anti-inflammatory drugs) as needed and scheduled for a follow-up appointment. *Id.*

4. Claimant returned to PA Klepacz on December 18, 2019 for a follow-up appointment. During this encounter she reported continued pain and daily swelling especially with standing and walking. (Resp. Ex. I, p. 227). Because Claimant's progress had plateaued but was still symptomatic, PA Klepacz referred her to physical therapy for exercise, stretching, and alternative treatment to include ultrasound and dry needling. *Id.* at p. 228. (Rs' Ex. I, p. 215).

5. Claimant returned to PA Klepacz for a follow-up on January 10, 2020. During this appointment, Claimant reported ongoing right foot pain. PA Klepacz referred Claimant to podiatry for evaluation. (Resp. Ex. I, p. 237).

6. Claimant presented to the offices of Dr. Robert Leland at UC Health Foot and Ankle Center for an orthopedic evaluation on January 24, 2020. (Resp. Ex. G, p. 26). Dr. Leland opined that review of Claimant's previously obtained x-rays were "strongly suspicious for widening of her first intercuneiform and intermetatarsal base space consistent with a Lisfranc disruption. *Id*. at p. 26-27. Dr. Leland recommended a weight bearing CT scan to "better delineate [Claimant's] injury". *Id*. at p. 26.

7. CT of the right foot performed February 14, 2020 demonstrated "comminuted fracture fragments involving the base of the second metatarsal with slight widening of the Lisfranc joint with increased distance between the medial cuneiform and the second metatarsal base. (Resp. Ex. G, p. 31).

8. Based upon Claimant's imaging, Dr. Leland diagnosed a right subtle right ligamentous Lisfranc injury. (Rs' Ex. G, p. 36; *see also* p. 40). He noted that Claimant was at "high" risk for continued pain as the displacement seen on imaging would not improve over time. Accordingly, he proposed surgical intervention. *Id.*

9. Claimant underwent an open reduction internal fixation (ORIF) of the right tarsometatarsal disruption, right midfoot arthrodesis, right gastrocnemius recession, and a local bone graft on March 5, 2020. (Resp. Ex. G, p. 48). The operative note included a description of the potential risks of the operation, to include but not be limited to "bleeding, infection, neurovascular damage leading to loss of limb or limb function, malunion, nonunion, *need for hardware removal*, pain or functional limitations despite operative treatment and anesthetic risks". *Id*. (emphasis added). Moreover, the operative note supports a finding that three, 3.5 mm surgical screws were implanted into the right foot as part of the March 5, 2020 procedure. *Id*. at p. 49, 53.

10. Post-operative x-rays were obtained April 16, 2020. (Resp. Ex. I, p. 249). These images showed three threaded screws present from the operation and no evidence of hardware fracture or loosening. *Id.* Following a telemedicine appointment with Claimant on April 23, 2020, Dr. Leland documented that the x-rays taken April 16, 2020, demonstrated "maintenance of hardware and arthrodesis position". (Resp. Ex. G, p. 124). He also opined that there was "early favorable signs of healing across her arthrodesis site". *Id.*

11. Dr. Leland discharged Claimant from his care on May 28, 2020. (Resp. Ex. G, p. 126). Closing x-rays of the right foot showed status post Lisfranc fixation without visualized complication. (Rs' Ex. G, p. 129).

12. On June 2, 2020, Claimant participated in a telehealth visit with PA Klepacz. (Resp. Ex. I, p. 256). During this visit, Claimant denied pain in the foot and reported that

she had completed her physical therapy. *Id.* PA Klepacz noted that Dr. Leland had taken Claimant out of her walking boot, had prescribed some exercises and reported to Claimant that "*there may need to be a screw removal at a later date"*. *Id*. at p. 256 (emphasis added).

13. On June 29, 2020, Claimant presented to her primary care physician ("PCP"), High Plains Family Health Center, for follow up of conditions unrelated to the work-injury. (Rs' Ex. H, p. 135). During the evaluation she reported that her foot was improving following the workers' compensation injury, that she was no longer wearing the walking boot, but that she had some occasional pain with walking. *Id*. Her PCP recommended she inquire into physical therapy under the workers' compensation claim. *Id*. Claimant testified that she continued with physical therapy after the surgery and did well with it. (Hrg. Tr. p, 14, ll. 2-3).

14. Claimant completed additional post-surgical physical therapy (PT) between June 25, 2020 and August 14, 2020. (Resp. Ex. I, pp. 259-277). At her discharge from PT on August 14, 2020, it was documented that Claimant was "doing great" and according to her doctor, "did not need more physical therapy". *Id*. at p. 277.

15. Claimant returned to PA Klepacz on August 21, 2020. (Resp. Ex. I, p. 278). PA Klepacz noted that Claimant had been "doing a lot of activities such as light jogging, hiking, waiting (sic) in a riverbed" and was "functioning at work like she would expect to without any restrictions needed. *Id*. PA Klepacz placed Claimant at maximum medical improvement (MMI) during this appointment, noting that Claimant had no permanent impairment and no permanent work restrictions. (Resp. Ex. I, p. 278). While he indicated that Claimant had no maintenance care needs after MMI, PA Klepacz noted that he "discussed future imaging needs with Claimant should there be any new onset or worsening of pain". Id. at p. 278, 281. PA Klepacz' August 21, 2020 report of MMI and impairment was not countersigned by a physician until September 1, 2020. (Resp. Ex. I, pp. 278-281).

16. Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Frank Polanco on February 11, 2021. (Resp. Ex. F, p. 21). After completing a records review and a physical examination, Dr. Polanco agreed that Claimant reached MMI on August 21, 2020. *Id*. at p. 23. He also opined that Claimant had no permanent impairment and did not "require further active treatment or diagnostics", noting specifically that "maintenance care is not required". *Id*.

Respondents' February 23, 2021 Final Admission of Liability and Claimant's March 22, 2022 Application for Hearing

17. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Polanco's DIME opinions. (Resp. Ex. B, p. 2). The FAL is dated February 23, 2021 and was purportedly mailed to Claimant and the Division of Workers' Compensation (Division). *Id.* While the February 23, 2021 FAL was supposedly mailed to the Division, there is no record showing that it was received there. Indeed, after Claimant filed an

Application for Hearing on March 22, 2022, endorsing medical benefits and her request for a "reevaluation" of her permanent medical impairment, the parties attended a prehearing conference (PHC) before Pre-hearing Administrative Law Judge (PALJ) Craig Eley on July 13, 2022. (Resp. Ex. E, p. 16). The PCH was convened to address Respondents' Motion to Engage in Discovery with an Unrepresented Claimant. *Id.* During the PHC, Respondents argued that they needed information from Claimant regarding whether and when she received the February 23, 2021 FAL in order to determine if Claimant's time to request a hearing to overcome the DIME determination regarding impairment had expired. *Id.* Because the DIME process was closed by the Division on February 11, 2021 and Claimant did not file an application ostensibly challenging the impairment rating opinion of Dr. Polanco for more than a year after that closure, Respondents asserted that an order to engage in discovery was appropriate. *Id.* at p. 17.

18. PALJ Eley observed that pursuant to C.R.S. § 8-43-203(2)(b)(II), "Claimant's right to apply for hearing to overcome the DIME opinion arises upon the filing of a Final Admission of Liability by Respondents adopting the DIME opinion. PALJ Eley went on to note that "regardless of whether Claimant ever received a Final Admission, the Division [had] not. Thus, PALJ Eley noted that "[e]ven if a Final Admission [had] been sent to Claimant, unless filed with the Division it is of no effect". (Resp. Ex. E, p. 17). During the PHC, Claimant explained that she did not intend to pursue an effort to overcome the DIME opinion. Rather, she noted that she was seeking an order for maintenance medical benefits. *Id.*

19. PALJ Eley struck the issue of reevaluation of Claimant's permanent impairment as an issue for hearing and determined that the issue of medical maintenance benefits was ripe, despite the lack of an FAL being filed with the Division, based on Respondents' representation that maintenance care was being denied. (Resp. Ex. E, p. 19).

20. The record supports a finding that Respondents did not endorse claim closure in their June 22, 2022 response to Claimant's Application for Hearing nor did they appeal PALJ Eley's July 13, 2022 PHC order. (Resp. Ex. D, E). The evidence presented also supports a finding that Respondents did not move to add claim closure or any other affirmative defense to the claim for maintenance medical benefits as an issue for hearing. Most importantly, Respondents did not object to proceeding to hearing on September 15, 2022 on the issue of maintenance care. Consequently, the ALJ finds that Respondents waived "claim closure" as a defense when challenging the request for maintenance treatment despite Claimant's admission that she received a copy of Respondents February 23, 2021 FAL denying maintenance medical benefits.

Claimant's Treatment With her Primary Care Physician (PCP) Following the February 11, 2021 DIME with Dr. Polanco

21. On April 28, 2021, Claimant presented to her PCP with reports of continued pain in her right foot following her workers' compensation injury. (Rs' Ex. G, p. 153). She

wanted to try something for "chronic pain". *Id.* Physical examination revealed that all extremities moved with full range of motion and there was no appreciable joint tenderness or swelling. *Id*. She was prescribed Duloxetine for her increased right foot complaints. *Id*. at 154.

22. On May 6, 2022, Claimant presented to her PCP and it was noted that she was having significant pain in her hips, thigh, and elbows for which she was seeing a chiropractor and massage therapist. (Rs' Ex. H, p. 163). The pain in her hips was reported to cause her to toss and turn at night and cause deep muscular pain. *Id*. It was further noted that the massage therapy was deep therapeutic massage mainly to the lateral hips and medial thighs, as well as low back and elbows. *Id*. She was diagnosed with pain in the right hip and pain in the left hip. *Id*. at 165. There is no mention of right foot complaints in the report from this date of visit. *Id*.

23. On June 17, 2022, Claimant presented to her PCP for follow up of the hip and leg pain. (Rs' Ex. H, p. 168). It was noted that she had undergone blood tests and x-rays which were essentially normal, and she continued to see the chiropractor and massage therapist but still had pain with movement. *Id*. She reported having gone to Hawaii with the ability to do most things except one of her hikes due to pain. *Id*. Physical therapy for the left hip was recommended. *Id*. Claimant made no mention of right foot complaints. *Id*.

24. On August 12, 2022, Claimant presented to her PCP for follow up of the hip pain. (Rs' Ex. H, p. 211). It was reported that she had approximately seven-week history of left hip pain for which she was seeing physical therapy. *Id*. During this visit it was noted that Claimant reported increasing right foot pain and her surgeon previously indicated that due to having small bones she may need to have the screws removed a couple of years after surgery. *Id*. It was noted that over the last couple of months she had increased pain and numbness in her right foot that was limiting her ability to hike and go down stairs. *Id*.

25. During the August 12, 2022, visit with her PCP, Claimant reported that approximately two weeks prior she was lifting a kayak and pulled her groin muscles for which she had to take a muscle relaxant with significant improvement. (Rs' Ex. H, p. 211). It was further reported that Claimant stated she may have a hip labral tear, possibly bilateral, for which a bilateral hip MRI was recommended. *Id*.

Claimant's Hearing Testimony

26. At hearing Claimant testified that since her February 11, 2021 DIME with Dr. Polanco, the condition of her right foot has worsened. She reported increasing pain and testified that she has "[d]aily pain, swelling, and [a] decrease in ability to do activities, and increased pain in work activities". (Hrg. Tr. p. 15, ll. 9-23). Claimant testified that she was having increasing difficulties with activities that require her to put extra weight on her right foot, including hiking, basic walking, paddle boarding, housework, ascending/descending stairs and performing yardwork that required repetitive any repetitive bending up and down movements. (Hrg. Tr. p. 16, ll. 3-6).

27. During cross-examination, Claimant testified that while Dr. Leland discharged her from his care without the need for follow-up visits, he indicated that she may need a screw removal at a later date. (Hrg. Tr. p. 23, ll. 9-17). She also agreed that by his report, Dr. Polanco did not recommend maintenance treatment. (Hrg. Tr. p. 24, ll. 6-8).

28. Claimant disagreed with Respondents' contention that "no medical provider has determined that you actually need hardware removal", testifying: "I have not been approved to see the surgeon, so I have not gotten that message from him". (Hrg. Tr. p. 28, ll. 2-5). In response to the question of whether her PCP recommended hardware removal, Claimant responded: "That's not her expertise, so she has not even discussed that. She referred me to see Dr. Leland". *Id.* at ll. 6-9. Nonetheless, Claimant did not produce a medical record evidencing that her PCP recommended she follow up with Dr. Leland or orthopedics.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion

of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Maintenance Medical Benefits

D. A claimant is entitled to ongoing medical benefits after MMI if he/she presents substantial evidence that future medical treatment will be reasonably necessary to relieve the claimant of the effects of the injury or prevent deterioration of the his/her condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo.App. 1995). When the respondents challenge a request for specific medical treatment, the claimant bears the burden of proof to establish entitlement to the benefits by a preponderance of the evidence. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015).

E. In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra.* In announcing its decision in *Grover*, the Court stated that "before an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease." Subsequent Courts have indicated that ongoing medical treatment can be ordered if a claimant's condition can be expected to deteriorate so that greater disability results in the absence of such care. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo.App. 1995). Indeed, in *Milco,* the Court of Appeals refined the test for awarding maintenance medical benefits by noting that irrespective of its nature, maintenance treatment "must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." *Milco Construction v. Cowan, supra*. If the Claimant reaches this threshold, the Court in *Milco* stated that the ALJ should then, as a second step, enter a "general order similar to that described in Grover." Thus, while a claimant does not have to prove the need for a specific medical benefit, he/she must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra*. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial*

Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003).

F. In this case, Respondents argue principally that Claimant failed to demonstrate that any need for continued treatment directed to the right leg/foot is causally related to her November 18, 2019 industrial injury. Rather, Respondents seemingly argue that Claimant's current need for treatment, including any treatment directed to the right foot is related to her onset of non work-related hip and thigh pain. Indeed, Respondents note as follows:

> [Claimant's] chiropractic treatment and massage therapy were prescribed in response to the onset of Claimant's hip and thigh pain complaints. In fact, it was not until three months after the onset of hip and thigh pain that Claimant first reported right foot pain. By that time, she had been receiving chiropractic treatment and massage therapy specifically focused on the lateral hips and medial thighs for approximately three months. The record does not support a causal connection between Claimant's alleged right foot pain and these treatments, nor does it support the relation of these treatments to Claimant's alleged right foot pain complaints. Claimant cannot use treatment rendered to two unrelated body parts as support for her claim that she has treated for alleged right foot symptoms.

Based upon the evidence presented the ALJ is not persuaded that Claimant is attempting to "use" the treatment directed to her bilateral hips/thighs, i.e. two non work-related body parts to justify her claim for a maintenance medical appointment with the authorized surgeon in this case. While Claimant testified that she believes her increasing right leg/foot pain and functional decline are related to her November 18, 2019 industrial injury, the evidence presented persuades the ALJ that Claimant made it clear that her hip pain is unrelated to that injury. The ALJ credits Claimant's testimony to conclude that her condition of her right foot has worsened since her surgery and DIME appointment. The ALJ is convinced that Claimant is probably experiencing daily swelling and increased pain/difficulty with activities that require her to put extra weight on her right foot, due to the deteriorating nature of her right foot condition.

G. Based upon the evidence presented, the ALJ is convinced that Claimant's reoccurring right lower extremity pain and functional decline is likely emanating from and in part caused by her November 18, 2019 right foot injury. While it is clear that Claimant's bilateral hip pain may be impacting her functional abilities, her increasing right foot pain, which is impinging on her ability to engage in weight bearing activities combined with the indication that she is at risk for a hardware removal supports a conclusion that there is a periodic need to monitor (evaluate) the condition of Claimant's right foot. Because the ALJ is convinced that Claimant's persistent and worsening right leg/foot pain is related to her November 18, 2019 industrial injury and because her PCP is not an orthopedist who has opined regarding the cause of Claimant's persistent and worsening right foot pain,

the ALJ finds Claimant's request to return to Dr. Leland for further evaluation reasonable and necessary.

H. In this case, the ALJ concludes that there is substantial evidence in the record to support an ongoing need to assess and if necessary, treat the injuries Claimant sustained during his admitted claim. As noted, without such evaluation, the ALJ is convinced that Claimant's present condition will likely deteriorate further resulting in greater functional decline. Accordingly, the ALJ concludes that Claimant has proven, by a preponderance of the evidence, that she is entitled to a follow-up examination with Dr. Leland to assess the integrity of the surgical hardware used to treat her work-related Lisfranc fracture and otherwise address/prevent further deterioration of her condition. Respondents retain the right to challenge any/all treatment recommendations, including a request for hardware removal on the grounds that the recommended treatment is no longer reasonable, necessary or related to Claimant's November 18, 2019 industrial injury. *See*, *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003).

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for reasonably necessary post-MMI medical treatment from authorized providers to relieve Claimant from the ongoing effects of her industrial injuries and/or prevent deterioration of her condition, including authorization of a follow-up medical appointment with Dr. Leland.

2. Respondents retain the right to challenge future requests for maintenance treatment on the grounds that such care is maintenance in nature, is not reasonable, necessary or related to Claimant's November 18, 2019 industrial injury. *See generally*, *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo.App. 1995); Section 8-42-101 (1) (a), C.R.S.; *Hanna v. Print Expediters Inc., supra.*

3. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For

statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2022

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-204-318-001

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury on July 1, 2021.

II. If found compensable, whether Claimant is entitled to temporary disability benefits.

III. If found compensable, whether a penalty of one day of indemnity benefits for each day Claimant did not report a work injury should be found.

IV. If found compensable, whether Claimant is entitled to a general award of medical benefits and whether the treatment Claimant received at Salud Clinic, and its referrals, is authorized.

V. If found compensable, the appropriate average weekly wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 65-year-old, Spanish speaking man, who worked for Employer, a plant nursery, for approximately 30 years, full time and then seasonally in 2020 and 2021. The last day he worked for Employer for the 2021 season was September 24, 2021. *Ex. F, 61, 68, 73, 76.*
2. Claimant's performed irrigation work. He would complete this work by using a tractor, hoe, and shovel.
3. Following his departure at the end of the 2021 season, Claimant claimed and received unemployment benefits. *Ex. F, 69; Test. Cl.* In January 2022, he represented to the unemployment office that he intended to return to his employment and asked for an exception and waiver of his work search requirement. *Ex. F, 67*. In early spring, 2022, Claimant contacted his supervisor, Mr. TG[Redacted], and told him he was having trouble with unemployment. *Test. of TG[Redacted] and Claimant.* In early April 2022, Mr. TG[Redacted] told Claimant that he did not have a position for him at that time. On May 3, 2022, approximately 10 months after his alleged injury, Claimant filed a claim for workers' compensation, stating that he sprained his low back digging irrigation on July 1, 2021, at 11:00 a.m. *Ex. N, 103.*
4. In April 2022, Claimant began drawing social security retirement benefits. *Ex. 8, 75.* He testified that he did not intend to go back to work.
5. Claimant testified that on July 1, 2021, he was shoveling for irrigation and experienced a

back injury. He testified that he told his supervisor, Mr. TG[Redacted], that his back was bothering him and that he had made an appointment to be seen at the clinic. He did not, however, tell Mr. TG[Redacted] that he suffered a work injury. Claimant testified that on July 2, 2021, he went to his PCP Salud Family Health Centers, and was provided a letter with restrictions. *CL's Ex. 4, Bates 30.* He testified that he took that letter to Mr. DZ[Redacted], the General Manager, with his son and gave it to Mr. DZ[Redacted]. Claimant contends that that was his report of a work injury. He testified that he did not say anything to Mr. DZ[Redacted] at all during this meeting, because the letter speaks for itself. The letter, however, makes no reference to a work-related injury. It says, "Please be aware [Claimant] is currently being treated for lumbago that affects the right lower extremity. At this time, recommend [Claimant] to avoid activities that worsen current symptoms. Also recommend light duty and avoid heavy lifting/pushing or pulling for the next 4-6 weeks."

6. During his testimony, Claimant denied complaining to a medical provider that he has had back pain for five years. This testimony, however, is in direct conflict with the medical record from May 2022 that documents Claimant has had back pain since about 2017 and that his back pain had been getting worse since about 2019. *Ex. E, p. 13.*

7. Claimant testified that he gave Employer the July 2, 2021, letter issued by Diana Kessel, PAC, that set forth his work restrictions. Based on the credible and persuasive testimony of Mr. TG[Redacted], and Mr. DZ[Redacted], as set forth below, the ALJ finds that Claimant did not give Employer the July 2, 2021, letter that set forth his restrictions.

8. Two witnesses from Claimant's employer, Mr. TG[Redacted] and Mr. DZ[Redacted], testified. Mr. DZ[Redacted] testified that Employer is a tree nursery and employed seasonal and full-time workers such as Claimant. He testified that Claimant had worked for the company for several years and that Claimant received unemployment benefits in the off season in 2020 and 2021. He also testified that when Claimant had issues he wanted to discuss with him, Claimant would bring his son in to translate and they would have a meeting. Claimant did not hesitate to arrange for these meetings when he apparently felt it was important. Mr. DZ[Redacted] testified that Claimant did not at any time meet with him and report a work injury. Claimant did, however, meet with Mr. DZ[Redacted] and discuss retirement. Mr. DZ[Redacted] testified, contrary to Claimant, that Claimant did not meet with him and provide him the letter seen at *Ex. 4, 30*. Mr. DZ[Redacted] had not seen that letter before the hearing. The ALJ finds Mr. DZ[Redacted]'s testimony to be credible and persuasive.

9. Mr. TG[Redacted], who speaks Spanish, was Claimant's supervisor. Mr. TG[Redacted] testified that Claimant never informed him of a back injury. He testified that on July 1, 2021, Claimant did tell him that walking over uneven or muddy ground hurt his leg. Claimant therefore asked not to do particular things at work. Mr. TG[Redacted] accommodated this request and assigned Claimant to driving the tractor. Mr. TG[Redacted] was not informed of a back injury or of a work-related injury. Mr. TG[Redacted] testified he was not provided any written letter regarding restrictions for Claimant. He further testified that Claimant worked the entire 2021 season, ending in late September 2021, working his regular hours on the tractor and doing other things, based upon Claimant's indication of what he preferred to do and what hurt him. According to Mr. TG[Redacted], Claimant did not at any time during the rest of his time working that

season report a work injury or a back injury to Mr. TG[Redacted]. Mr. TG[Redacted] testified that Claimant did not request medical treatment for a work injury. But, Claimant did call and speak to Mr. TG[Redacted] sometime in February of 2022, asking when work would start, and represented that he was ready to work. He did not report a work injury at that time either. Mr. TG[Redacted] also spoke to Claimant in March or April of 2022, when again Claimant represented he was ready to work. He did not, however, report a work injury during this phone call. Mr. TG[Redacted] told Claimant that the nursery was at a stage in the season where Claimant's preferred work was not available yet. Claimant was not brought back to work at that time and his workers' compensation claim followed. Based on his interaction with Claimant, at no time did Mr. TG[Redacted] get the impression that Claimant was contending that he hurt himself at work – until Claimant filed a claim in 2022. The ALJ finds Mr. TG[Redacted]' testimony to be credible and persuasive.

10. Both Mr. TG[Redacted] and Mr. DZ[Redacted] credibly testified that the required notification regarding workers' compensation reporting was posted in the greenhouse and the office where meetings took place. This was not disputed by Claimant.

Medical Treatment and Records

11. On June 18, 2021, Claimant presented to his PCP at Salud Family Health Centers. At this visit, Claimant complained of having 2 weeks of back pain on the right with pain radiating down the back of his leg. Thus, his symptoms started almost one month before his alleged work injury of July 1, 2021. At this visit, Claimant also stated that there was no fall or injury, but he "thinks he tweaked [his back] at work picking up a heavy object." Claimant was diagnosed with acute right-sided low back pain with right sided sciatica. X-rays were also taken and showed signs of arthritis in his lower back. Based on Claimant's complaints and presentation, he was prescribed physical therapy for 6-12 weeks. Absent from this report is any indication that he hurt his back doing irrigation work with a shovel. Moreover, the medical report indicates that Claimant merely said that he 'thinks" he injured himself at work. *Ex. E, pp. 29-32.*

12. On July 2, 2021, Claimant returned to his PCP complaining of back pain. At that time, however, he had already been in treatment through Salud Family Health Centers for back complaints which began around June 4, 2021. He already had had an x-ray and his doctor had called him to let him know that he had arthritis in his back. *Ex. E, pp. 32, 33.* Absent from this report is any indication Claimant stated that he injured his back the day before doing irrigation work and working with a shovel. At this visit, his PCP recommended Claimant continue taking his medications and also issued restrictions which included avoiding heavy lifting, pushing, and pulling for the next 4-6 weeks. *Ex. E, pp. 33, 34; Ex. 4, p. 30*.

13. After the July 2, 2021, medical appointment, Claimant underwent PT and indicated that his back was better. *Ex. E, p. 38*.

14. On October 13, 2021, after being laid off from work, Claimant returned to his PCP and indicated that his right sided back pain and sciatica had returned. He also indicated that his back pain returned after he performed his physical therapy. But, he also stated that his back pain was better when he was not working. *Ex. E, p. 38*.

15. On November 30, 2021, Claimant returned to Salud Family Health Services. At this appointment, Claimant treated for a UTI, and underwent a urinalysis. Claimant did not complain of back or leg pain at this visit. *Ex. E, pp. 45-47*.

16. On March 30, 2022, Claimant returned to Salud. At this appointment, Claimant sought additional medical treatment for his back and leg pain which continued to worsen. At this appointment, it was noted that Claimant's condition continued to worsen and that he now had pain radiating down to his calf area and that these symptoms occurred more frequently. Thus, Claimant's condition continued to worsen – despite the fact that he had not worked since September 2021.

17. Dr. Reiss was retained by Respondents to perform an independent medical examination (IME). Claimant showed up for the evaluation, but without an interpreter. Dr. Reiss, or Respondents, were ultimately able to arrange for an interpreter, but Claimant had already left and refused to return to his office to complete the IME with an interpreter. As a result, Dr. Reiss performed a medical records review and set forth his opinions in his report. Dr. Reiss also testified at hearing and was qualified as an expert in orthopedics. The opinions set forth in his report are consistent with his testimony.

18. In his report, Dr. Reiss noted a number of discrepancies in Claimant's medical history when compared to Claimant's contention that he injured his back on July 1, 2021, while digging with a shovel. Dr. Reiss noted the following:

    - The June 18, 2021, medical report demonstrates a history of back pain starting in early June. The history provided in the report does not correlate well with Claimant's claim of injuring himself while digging. The complaints of back pain significantly predate his claimed injury of July 2021.
    - The July 2, 2021, report does not appear to mention a work injury.
    - The July 2021, physical therapy records appear to demonstrate that Claimant became asymptomatic.
    - The October 13, 2021, medical report seems to demonstrate that Claimant was sent to physical therapy to treat his back pain that started in June of 2021, and that the physical therapy in July resolved Claimant's complaints.
    - The March 30, 2022, report demonstrates episodes of right low back pain worsening over time, but yet there does not appear to be any mention of a work-related injury.
    - The medical records demonstrate Claimant's back condition is long standing, chronic, and preexisting.

    Ex. A, pp. 1-4.

19. Dr. Reiss ultimately concluded that Claimant's current diagnosis is most likely low back pain associated with degenerative disc disease of the lumbar spine with some degree of spinal stenosis and possible neurogenic claudication – all of which were preexisting and not related to Claimant's work. The ALJ finds Dr. Reiss' opinions and conclusions that Claimant's low back pain, need for medical treatment, and disability, was not caused by his work activities to be credible and persuasive.

Ultimate Findings of Fact

20. Based on the totality of the evidence, Claimant's testimony is not found to be credible.

21. Claimant has had ongoing low back pain since 2017.

22. Claimant's back pain started to worsen in 2019.

23. On approximately June 4, 2021, approximately one month before Claimant's claimed work injury, Claimant's back pain continued worsening and he developed pain radiating down his leg.

24. On June 18, due to his back and leg symptoms that started around June 4, 2021, Claimant went to Salud for medical treatment to address his worsening back and leg pain.

25. Claimant returned to Salud Family Health Services on July 2, 2021, for ongoing back pain with radiation down his leg. Claimant was evaluated and provided work restrictions. The report from this visit does not indicate Claimant injured his back while performing irrigation duties while digging at work. Moreover, despite Claimant's testimony to the contrary, the ALJ finds that Claimant did not provide the July 2, 2021, letter from Diana Kessel that set forth Claimant's restrictions to Employer or report a work injury.

26. After Claimant stopped working for Employer in September 2021, Claimant's condition still continued to worsen.

27. Claimant failed to establish by a preponderance of the evidence that his need for medical treatment was caused by his work activities. Claimant also failed to establish by a preponderance of the evidence that the restrictions and resulting disability was caused by his work activities.

28. Claimant also failed to establish by a preponderance of the evidence that his work activities aggravated a preexisting condition and necessitated the need for medical treatment or caused any disability.

29. Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury on July 1, 2021.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to carry his burden to prove by a preponderance of the evidence that he suffered a compensable work injury. Claimant did testify consistent with his claim for compensation, alleging a specific injury occurring while shoveling at a specific time on a specific day: July 1, 2021. Claimant also contends that he reported an injury that day and asked for treatment, but Mr. TG[Redacted] credibly denies a report of a work injury occurred. Mr. TG[Redacted] credibly testified that Claimant made him aware that his leg hurt when he did particular things. But Claimant did not report a back or work injury. Mr. TG[Redacted] did not understand him to ever be complaining of a back issue, let alone a work-related injury. Claimant was allowed to avoid work that gave him difficulty and to do the type of work that he preferred. Claimant had been working for this employer for many years, is an older worker, and that accommodation, unrelated to any work injury, makes sense.

As found, on July 2, 2021, Claimant reported to his personal medical provider and did not give any report of a work injury. By then, he had already been seen for back pain that had worsened around June 4, 2021, had x-rays taken, and had been notified by his PCP that he had arthritis in this back. Moreover, Claimant had reported that he had experienced problems with his back for 5 years. Plus, if Claimant had reported a specific injury, the medical records would not read as they do.

Mr. TG[Redacted] allowed Claimant to do the things that did not bother his leg, and Claimant finished the season with regular pay. Claimant is 65 years old and has a degenerative back, which hurts with and without activity, and has continued to worsen – even after he stopped working for Employer.

The ALJ finds and concludes that Dr. Reiss' ultimate opinion is that Claimant did not suffer a work-related injury and that his back and leg pain is due to a degenerative back condition that has continued to degenerate, without any contribution from Claimant's work. The ALJ has credited and found persuasive the opinion of Dr. Reiss because the ALJ finds and concludes that his opinion is consistent with, and supported by, Claimant's medical records.

The ALJ has considered whether Claimant's work activities caused a new and discrete injury or whether they aggravated his preexisting back condition. The ALJ finds and concludes that his work activities did not cause his back condition in the form of a discrete injury, or aggravate his preexisting back condition, and cause the need for medical treatment or cause any disability.

Based upon the totality of the evidence, the ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that he suffered a compensable work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 21, 2022

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to a reopening of his claim.

II. Whether Claimant established that the uninsured Employer is subject to penalties pursuant to § 8-43-304(1) C.R.S. for failure to comply with ALJ Spencer's May 12, 2020 order, specifically for failing to cover reasonable, necessary, and related medical care to cure and relieve the effects of Claimant's compensable injury, and pay temporary total disability (TTD) benefits and interest on all TTD owed and not paid when due.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This claim has been the subject of a prior hearing held before ALJ Patrick Spencer on March 12, 2020. The issues presented at that hearing included compensability of an alleged September 7, 2019 injury and whether Claimant was entitled to reasonably necessary medical benefits and lost wage benefits, i.e. temporary total disability (TTD) commencing September 7, 2019.

2. Despite proper notice, Employer failed to appear for the March 12, 2020 hearing. Accordingly, ALJ Spencer took Claimant's testimony at the March 12, 2020 hearing and issued an Order to Show Cause to Employer. Employer did not respond to the show cause order prompting ALJ Spencer to issue his order on May 12, 2020. As part of his May 12, 2020 order, ALJ Spencer found Claimant's September 7, 2019 injury compensable and ordered Employer to "cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's injury." ALJ Spencer also ordered Employer to pay "Claimant $6,200 in TTD benefits from September 8, 2019 through May 12, 2020" and "$175 per week in TTD benefits commencing May 15, 2020 and continuing until terminated by law." Finally, ALJ Spencer ordered Employer to pay interest on all past due TTD.

3. The ALJ adopts ALJ Spencer's Findings of Fact, as articulated in the May 12, 2020 order, as follows:

   a. Employer hired Claimant in August 2019 to tear off and re-cover a 1500 square foot roof on a customer's home. Employer told Claimant it was a "simple" one-layer job.

   b. Employer agreed to pay Claimant $35 "per square" to tear off and replace the roof. A "square" is 100 square feet of roof, so there were

15 “squares” in the 1500 square foot roof. Claimant estimated it would have taken two weeks to complete the job had it been a single-layer roof as anticipated.

c. When he got on the roof and started the job, Claimant realized there were four layers of existing roof to tear off.

d. Employer was supposed to supply the materials for the project and stock them on the roof. Employer also told Claimant he would provide a worker to help with the project. Employer provided a helper the first day, but after that, Claimant was left to finish the job by himself.

e. Claimant worked on the project for a couple of days but his progress was stymied by weather. Then a representative from Regional Building came and shut the project down because Employer had not pulled a permit.

f. Two days later, Employer called and informed Claimant he had secured the building permit and work could resume.

g. Employer stopped responding to Claimant’s calls after that. The homeowners also tried to reach Employer without success. They had paid Employer $3,200 for materials, but he had not brought materials to the job site. Repeated heavy rains were causing leaking into the home, so Claimant used his personal funds to buy materials to cover the roof. The homeowners then gave Claimant additional money so he could purchase the materials needed to finish the job.

h. Claimant purchased the materials and loaded them onto the roof by himself because Employer provided no one to help him. Throughout the project, Claimant struggled to move roofing materials and complete repeated trips up and down the ladder. He developed progressively worsening low back and leg pain during the project as a direct and proximate result of the physically demanding work. The lack of help during the project probably contributed to Claimant’s injury.

i. Employer appeared at the job site on September 7, 2019, when Claimant was almost finished with the project. Claimant informed Employer he could not keep working because of his severe low back and leg pain. Employer took over work on the project.

j. Claimant filed a Workers’ Claim for Compensation form on September 20, 2019. He mailed a copy to Employer.

k. On October 15, 2019, Employer appeared at Claimant’s home and berated him for filing a workers’ compensation claim. He told

Claimant, “You are not getting anything.” Employer never paid Claimant for his work on the project.

l. Employer never referred Claimant to a physician for treatment.

m. In December 2010, Claimant sought treatment for his back pain at the VA Rocky Mountain Regional Medical Center. He underwent x-rays on December 10, 2019, but the results are not in the record. Claimant was referred for a lumbar MRI and a physical medicine evaluation before he could have a surgical consultation.

n. Claimant proved he was performing services for pay for Employer when he was injured. There is no persuasive evidence he was free from direction and control or customarily engaged in an independent trade or business related to the service provided.

o. Claimant proved he suffered an injury to his low back arising out of and occurring within the course and scope of his employment for Employer.

p. The right to select a physician passed to Claimant and he selected the VA Medical Center.

q. Under the terms of hire, Claimant would have been paid $525 for the roof project. Claimant estimated it would have taken two weeks to complete the project. Claimant’s AWW is $262.50 ($525 ÷ 2 = $262.50). This equates to a weekly TTD rate of $175 and a daily rate of $25.

r. Claimant proved he is entitled to TTD benefits commencing September 8, 2019 and ongoing. Claimant stopped work on September 7, 2019 because of the effects of the work injury. Claimant has not returned to work, has not been released to full duties, and has not been put at MMI.

s. The total past-due TTD is $6,200 through the date of this decision. The total accrued statutory interest is $161.58 through the date of this decision. TTD will continue to accrue at the rate of $175 per week until terminated by law. Interest will continue to accrue at the rate of $1.39 per day until the past-due TTD is paid in full.

t. Employer must pay an additional $1,550 to the Colorado Uninsured Employer Fund because it was uninsured at the time of Claimant’s injury ($6,200 x 25% = $1,550).

u. Employer knew Claimant had to stop working because of the injury on September 7, 2019. Employer was required to formally admit or deny liability no later than Monday, October 7, 2019. Employer never

filed an admission of liability or notice of contest with the Division of Workers' Compensation.

v. Employer should be penalized $25 per day, from October 7, 2019 through the date of this decision (May 12, 2020), for failing to admit or deny liability.

4. Claimant testified that after the May 12, 2020 order of ALJ Spencer was issued, he filed a new application for penalties because Employer never paid his lost wages as ordered. (Clmt's. Ex. 2). Claimant filed his Application for Hearing on April 15, 2022; more than a year after ALJ Spencer's May 12, 2020 order was issued. *Id.* Claimant sent a copy of the Application for Hearing to Employer's address on file with the OAC, namely: 1819 West 22nd Street, Pueblo, Colorado 81003. This is the same address that the prior May 12, 2020 and Show Cause orders were sent to without response by Employer. There is no indication that the prior mailings were undeliverable and returned to sender. Accordingly, the ALJ finds that Claimant's April 15, 2022 Application for Hearing was probably delivered to Employer as was the prior May 12, 2020 Order of ALJ Spencer.

5. Based upon the evidence presented, the ALJ finds that Employer has made no effort to abide by the May 12, 2020 order of ALJ Spencer. Similar to his non-appearance for hearing on March 12, 2020, Employer failed to appear for the August 11, 2022 hearing despite proper notice. Moreover, he did not respond to either Show Cause Order. Based upon the evidence presented, the ALJ finds that Employer has elected to ignore the proceedings and the prior orders of ALJ Spencer. Indeed, the evidence presented, including Claimant's testimony supports a finding that Employer has failed to perform a duty lawfully mandated within the time prescribed by ALJ Spencer, namely the payment of TTD as ordered. Accordingly, for the reason set forth below, the ALJ finds that the imposition of penalties is appropriate in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and

resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

II. Penalties

C. Section 8-43-304(1) authorizes the imposition of penalties when an employer or insurer: (1) Violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under §8-43-304(1), supra, requires a two-step analysis. First, the ALJ must determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo.App. 1995). If the ALJ finds a violation, the ALJ must then determine whether the insurer or employer's actions, which resulted in the violation, were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo.App. 2003). Objectively unreasonable conduct will result in the imposition of penalties. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo.App. 1995). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo.App. 2003). Section 8-43-304(4) also provides that an application for penalties "shall state with specificity the grounds on which the penalty is being asserted."

D. A purported violator can "cure" a penalty by paying the benefits or complying with the statute or order, which was allegedly violated. Section 8-43-304(4) provides that any party alleged to have committed any violation categorized above shall have twenty days to cure the violation from the date of mailing of an application for hearing in which penalties are alleged. Section 8-43-304(4) also provides that if the alleged violator cures the violation within the twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The cure statute effectively adds an element of proof to a claim for penalties in cases where a cure is proven. In the ordinary case, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. All that is necessary is that the party seeking penalties prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965 (Colo.App.2003); *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo.App. 1996). Section 8-43-304(4) modifies this rule and adds an extra element of proof when a cure has been effected. Accordingly, when a penalty allegation has been cured the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v.*

Hewuse, 942 P.2d 1312 (Colo.App. 1997); *Ray v. New World Van Lines of Colorado* W. C. No. 4-520-251 (October 12, 2004). Employer did not assert that any alleged penalty had been cured. Indeed, Employer failed to respond in any fashion to ALJ Spencer's May 12, 2020 order or Claimant's April 15, 2022 Application for Hearing despite those documents being served on Employer's address of record.

E. In this case, Claimant has asserted penalties pursuant to § 8-43-304(1) for Employer's failure to follow ALJ Spencer's May 12, 2020 order requiring payment of, among other things, lost wage benefits. (Clmt's Ex. 2). As noted, a violation of an order occurs when a party authorized or obligated to perform performs an action prohibited by the order, or fails to take an action required by the order. *See Dworkin, Chambers and Williams, P.C. v. Provo,* 81 P.3d 1053, 1058 (Colo. 2003). Before analyzing Claimant's penalty claim, the ALJ notes that ALJ Spencer's May 12, 2020 order became final on June 1, 2020 as Employer did not appeal it. Moreover, the evidence presented supports finding that Employer has failed to follow the order to date. Accordingly, the asserted penalty is ongoing.

F. In this case, the Application for Hearing filed April 15, 2022, specifically notes that Claimant was seeking penalties beginning "May 12, 2020 and ongoing pursuant to § 8-43-304(1) for failure to "[respond] to the order by ALJ Spencer to pay benefits. Although Claimant did not indicate the rate at which he requested penalties be paid, he did indicate that he was seeking penalties pursuant to § 8-43-304(1), which provides that penalties for refusing to obey lawful orders shall be punished by a fine of not more than $1,000.00/day. Based upon the evidence presented, the ALJ concludes that the basis for Claimant's penalty assertions was sufficient, pursuant to § 8-43-304(4), to place Employer on notice of the basis for the penalty by noting that the alleged conduct resulting in the penalty allegation was the purported violation of ALJ Spencer's May 12, 2020 order, specifically that portion which required Employer to pay TTD benefits.

G. Based upon the totality of the evidence presented, the ALJ concludes that Employer violated ALJ Spencer's May 12, 2020 order requiring the payment of TTD benefits. Once a violation occurs, each subsequent day that the violation continues constitutes a separate violation, which may be joined with the first for purposes of adjudicating the violator's total liability for penalties. *Spracklin v. Industrial Claim Appeals Office,* 66 P.3d 176 (Colo. App. 2002). As ALJ Spencer's May 12, 2020 order did not become final until June 1, 2020, the imposition of penalties extends from June 2, 2020 and is ongoing.

H. While the evidence presented supports that a violation of ALJ Spencer's May 12, 2020 order occurred for failure to pay TTD benefits, it is necessary to analyze whether Claimant filed his request for penalties timely and whether Employer's failure to pay TTD was objectively unreasonable. Here the evidence presented establishes that Claimant filed his Application for Hearing requesting penalties in excess of one year after the date that he reasonably should have known of the facts giving rise to the penalty.

Indeed, Claimant did not file his request for penalties for approximately 23 months after ALJ Spencer issued his Order. Claimant was represented by Counsel at the time the May 12, 2020 Order was issued. Accordingly, the ALJ finds it reasonable to infer that his counsel would have advised him regarding the potential repercussions; including the imposition of penalties should Employer fail to abide by the Order shortly after it was issued.

I. Section 8-43-304(5) provides: "A request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty. Section 8-43-304(5) constitutes a statute of limitations. *Spracklin v. Industrial Claim Appeals Office, supra.* While the ALJ is convinced that the "statute of limitations" probably ran out before Claimant filed his Application for Hearing, Employer failed to respond to the request for penalties. Indeed, review of the file materials finds them devoid of any response to the claim for penalties. Raising the statute of limitations is an affirmative defense that is subject to procedural waiver if not explicitly plead and proven in a timely fashion. *Lewis v. Scientific Supply Co*., 897 P.2d 905 (Colo. App. 1995); *Kersting v. Industrial Commission*, 39 Colo. App. 297, 567 P.2d 394 (1977). Based upon the evidence presented, the ALJ is convinced that Employer waived any statute of limitations defense by not filing any response to Claimant's request for penalties. Moreover, the ALJ concludes that Employer has unreasonably failed to cooperate in the proceedings by failing to appear for hearing despite proper notice or respond to two separate Orders to Show Cause for his failure to appear. Based upon the evidence presented, the ALJ concludes that Employer has consciously decided to ignore the claim in hopes that Claimant will tire of the matter and cease all efforts to recover under the claim. Accordingly, the ALJ finds and concludes that Employer's actions in failing to follow the May 12, 2020 order of ALJ Spencer are objectively unreasonable.

ORDER

It is therefore ordered that:

1. Employer shall pay to Claimant a penalty in the amount of fifty ($50.00) dollars per day beginning June 2, 2020 and continuing through the date of this order, October 3, 2022, for a total of 853 days for $42,650.00 in penalties. The assessment of penalties shall continue beyond October 3, 2022 at the same rate until such time that the temporary total disability and interest payment ordered May 12, 2020 by ALJ Spencer is paid.

2. Pursuant to § 8-43-304(1) the penalty assessed is apportioned between Claimant and the Colorado uninsured employer fund created in § 8-67-105. Fifty percent (50%) of the penalty assessed shall be paid to Claimant and the remaining fifty percent of the penalty assessed shall be paid to the Colorado uninsured employers fund.

3. All issues not decided herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 3, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-183-987-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable accidental injury or occupational disease.

II. If compensable, whether Claimant proved by a preponderance of the evidence that the medical treatment he received was reasonable, necessary, and related to his to his work injury and whether he is entitled to a general award of medical benefits.

III. If compensable, whether Claimant proved by a preponderance of the evidence that he is entitled to temporary disability benefits.

PRELIMINARY ISSUES - STIPULATIONS

- The parties stipulated that they are reserving a determination of the Claimant's average weekly wage. If the case is found compensable the parties agreed to confer on the time period for temporary partial disability or temporary total disability benefits.
- Though penalties were initially endorsed on Claimant's January 5, 2022, Application for Hearing, Claimant asserted at hearing that penalties were no longer being sought.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 59-year-old Package Driver for [Employer] in Boulder, Colorado. *RHE A.* [EMPLOYER] employed Claimant since January 19, 2015. *Id.*
2. On a typical workday, Claimant would arrive at the Boulder [Employer] center about 8:30 in the morning. Upon his arrival, his truck would be pre-loaded with packages that have to be delivered that day. Claimant works as a "swing" driver, meaning he is assigned different routes by [Employer], but works full-time. Claimant's truck on average would have 250-300, but sometimes up to 700, packages at the start of his shift. Claimant would spend the first part of his day quickly re-organizing the packages in the truck to conform to his delivery route. Because of the number of packages that have to be delivered, [Employer] puts a lot of pressure on drivers to get their routes done quickly, but 9 to 10-hour days were not uncommon. Claimant delivered packages that weighed up to 150 pounds maximum and that 70-to-100-pound packages of various shapes were not uncommon. Packages were packed all the way to the back of the truck which was 700 to 1,000 square feet in size. *Hrg.Tr*. 19:22 to 21:7, 22:15 to 23:11, and 23:16 to 24:1.

3. During the years that Claimant worked for Employer he had experienced pain when moving boxes, but he would ordinarily continue working and usually the problem subsided. *Hrg.Tr*. 24:2-14.

4. Claimant testified that he felt a left wrist twinge while working that he felt worsened rather than improved, and that his best estimate of the date this occurred was July 29, 2021 – because it took the wrist pain awhile to worsen to the point that he reported it to his supervisor and obtained treatment. *Hrg.Tr*. 14:17 to 25:4, 27:5-8, and 29:9-16.

5. Claimant reported a left wrist injury on September 15, 2021. He stated that the left wrist "just started hurting." *RHE A; Tr. 41:22-25.*

6. The First Report of Injury was completed by Employer and lists September 16, 2021, which is the first date Claimant received medical treatment, as the date of first reporting. *CHE 3*.

7. Claimant at first did not provide a specific mechanism of injury, date, or time as to the occurrence of the condition.

8. On September 16, 2021, Claimant sought treatment at Concentra Medical. *RHE I.* He reported to PA Devon Jacobs that he was uncertain as to the cause of his left wrist pain and offered no specific mechanism of injury. Claimant merely felt the condition may have been related to job duties. *Id.* Claimant denied any specific injury, fall, or trauma and described the gradual onset of aching discomfort. *Id.* There was no mention of him feeling a twinge in his wrist while working and then it not getting better. Following a physical exam, an x-ray of the left wrist was performed and was negative for fracture or acute findings. *Id.* Claimant was diagnosed with osteoarthritis of the left wrist and work-related causality was not established by the Concentra provider. Thus, Claimant was referred to his PCP or an orthopedist under his private insurance for further evaluation and treatment. *Id.*

9. Later that same day, on September 16, 2021, Claimant was seen by Kathleen Jegapragasan, M.D. at Boulder Centre for Orthopedics. Dr. Jegapragasan reviewed the X-rays and did a physical examination which revealed that Claimant likely had a TFCC (triangular fibrocartilage complex) tear. Dr. Jegapragasan informed Claimant he should be restricted from work and ordered an MRI to confirm the diagnosis. *CHE 5*, p. 18**.**

10. On September 29, 2021, Dr. Jegapragasan reviewed the MRI of the left wrist, identifying a "complex TFCC tear, with some foveal detachment and severe ECU (extensor carpi ulnaris) tendonitis." Dr. Jegapragasan prescribed injections and bracing for the TFCC and ECU. *CHE 5*, p. 23.

11. Respondents filed a Notice of Contest on October 7, 2021, asserting that the illness was not work-related based on the ATP findings. *RHE B.*

12. Upon being referred to an orthopedist under his private insurance for further evaluation, Claimant received ongoing treatment through April 2022 at Boulder Centre for Orthopedics. *RHE F; RHE H.* Though various treatments were discussed to address Claimant's TFCC tear to the left wrist (including physical therapy, injections, and surgery), at no point during Claimant's treatment at Boulder Centre for Orthopedics was the injury determined to be work-related. *Id.* Nor do the medical

records indicate that Claimant was ever referred back to an ATP at Concentra to pursue treatment through workers compensation. *Id.*

13. On January 4, 2022, Claimant underwent a TFCC repair and debridement by Dr. Daniel Master at Boulder Surgery Center to address the following diagnoses: (1) left wrist triangular fibrocartilage complex tear; (2) left wrist ulnar impaction syndrome; and (3) left wrist extensor carpi ulnaris tearing. *RHE K.*

14. Claimant filed an Application for Hearing on January 5, 2022, endorsing the following issues: compensability; medical benefits, authorized provider; reasonably necessary; average weekly wage; temporary total benefits; and penalties. *RHE C.* Respondents filed their Response to the same on February 4, 2022. *RHE D.*

15. Respondents arranged for Claimant to undergo an independent medical examination (IME) with L. Barton Goldman, M.D. A prehearing was held to limit the scope of Dr. Goldman's Questionnaire, which was requested to be completed by Claimant before the IME. It was Claimant's position that he did not have to complete the entire Questionnaire. Pursuant to the prehearing order that was issued, Claimant was not required to complete the entire questionnaire. The prehearing ALJ determined that Claimant did not have to answer a number of questions, including providing information about his prior hospitalizations, accidents, and injuries. He was also not required to provide information about his hobbies and recreational activities. But the prehearing order indicated that Dr. Goldman could still inquire about the information Claimant did not answer on the Questionnaire if he felt it was relevant or pertinent to his evaluation. *RHE E* pp. 13, 36, 37.

16. Following the prehearing conference on Claimant's motion to limit the scope of information for the IME, Claimant attended the IME with Dr. Goldman on July 8, 2022, and July 11, 2022. *RHE E.* On interview with Dr. Goldman, Claimant reconfirmed that he did not recall a specific injury or incident with respect to the gradual onset of wrist pain. But he did state that he felt a twinge while repositioning a box. *Id.*

17. Dr. Goldman did ask Claimant to provide certain information he left off the Questionnaire, such as hobbies and recreational activities, but Claimant declined. *Hrg*. *Tr*, p. 100.

18. Dr. Goldman persuasively testified consistent with his comprehensive report. In his IME report, Dr. Goldman concluded that symptoms for a TFCC tear should mainly be on the ulnar side of the wrist, which did appear to be the case with Claimant. *RHE E.* He concluded that the diagnosis had been accurately assessed but the causation was not work-related. *Id.* Claimant described variable and multi planar activities related to his work responsibilities that did not rely specifically on repetitive unilateral left ulnar wrist supination nor prolonged wrist extension with repetitive supination of the forearm or elbow extension. *Id.* Thus, Dr. Goldman concluded that Claimant's subjective history did not provide sufficient medical evidence that would support an occupational illness causation determination for his left wrist symptoms and diagnosis consistent the evidence-based medicine analysis. *Id.*

19. Dr. Goldman also relied on the Medical Treatment Guidelines during his assessment of Claimant's injury. *RHE E.* He referred to page 12 of Rule 17, Exhibit 5, Cumulative

Trauma medical treatment guidelines. *Id.* He noted that a TFCC tear symptoms should mainly be on the ulnar side of the wrist with tenderness over the TFCC complex, localized pain, clicking findings, and abnormal motion with one of the following movements: (1) forced supination and pronation with axial pressure on an ulnar deviated wrist; (2) the patient pushing up from a seated position using the hand; and/or (3) ballottement of the distal ulna with the wrist supinated causes of normal motion as compared to the asymptomatic side. *Id.*

20. Regarding his causality analysis, Dr. Goldman considered that Claimant described "variable and multi planar activities that do not rely specifically on repetitive unilateral left ulnar wrist supination and extension nor prolonged wrist extension with repetitive supination of the forearm or elbow extension." *RHE E.* Further, Claimant did not consistently describe a discrete wrist hyperextension trauma, and his history noted more symptoms with flexion as compared to extension. *Id.*[1]

21. Instead, Dr. Goldman provided that for the type of repetitive injury asserted, "you're generally talking about repetitive motion on a frequent basis within, in this case . . . certain plains of motion for four to six hours." *Tr. 66:14-18.* He elaborated that "I see it more with . . . factory works, people who are doing fine work on production lines where they can't move around very much. It's the same thing over and over and over and over again." *Id. 66:21-25.* In contrast, Dr. Goldman testified that "[Claimant] also has a job where he can use his hands in all kinds of different ways." *Tr. 67:9-12.*

22. Again, when asked about activities outside of work during the IME with Dr. Goldman, Claimant declined to answer whether he participated in any strength training of recreational activities that would repetitively use his upper extremities in a more restricted fashion than the essential duties of his work. *RHE E, p. 23.* Claimant also refused to share the specific avocational or recreational activities he was either currently participating in or would like to resume. *Id.*

23. Considering Rule 17, Exhibit 5 of the Medical Treatment Guidelines, the objective medical diagnoses, and Claimant's subjective account of his pain symptoms, Dr. Goldman concluded in his IME report that it was not more likely than not that his essential duties at [Employer] were the causative reason for the development of his left wrist pain and subsequent treatment. In other words, he found Claimant's work activities did not cause Claimant's left wrist condition and need for medical treatment. *RHE E.*

24. While Dr. Goldman did state at the beginning of his testimony that he thinks Claimant's condition and need for medical treatment is based on an aggravation of a preexisting condition, he clarified his testimony by stating that it is his opinion that the aggravation was not caused by Claimant's work activities. It was his opinion that Claimant's work activities did not contribute at all to Claimant's need for medical treatment. *Hr'*g *Tr*., p. 62, 88, 89. Thus, Dr. Goldman also analyzed this case as an aggravation or exacerbation of a preexisting condition due to Claimant's slightly longer ulnar styloid.

---

[1] Although Claimant did not describe a discrete wrist hyperextension occurring at work with Dr. Goldman, the medical records establish that Claimant attempted to climb over a fence and ultimately fell onto his left outstretched hand, an apparent hyperextension, in July 2019. *RHE F,* p. 43.

Hr'g Tr., p 64. In doing so, Dr. Goldman made an individualized causation assessment based on the Claimant's preexisting condition and his conditions of employment.

25. The ALJ finds Dr. Goldman's ultimate conclusion, that Claimant's work activities did not cause or aggravate Claimant's condition, or contribute to his pain and need for medical treatment, to be credible and persuasive for several reasons. First, he interviewed Claimant to determine his job duties. Second, he has experience evaluating delivery drivers for various medical conditions. Third, he has experience evaluating and treating Claimant's condition(s). Fourth, his use of the Medical Treatment Guidelines to assist in his causation assessment. Fifth, he teaches the Accreditation class for physicians, which includes teaching Rule 17, i.e., the Medical Treatment Guidelines. See *RHE E*; *Hrg, Tr*., p. 69. Sixth, he took into consideration Claimant's predisposition to this type of condition based on Claimant's slightly longer ulnar styloid. Seventh, he used all of the information he gathered, combined with his experience and expertise, to make his causation determination.

26. On June 29, 2022, Dr. Gary Zuehlsdorff was retained by Claimant to conduct an IME. Claimant, however, canceled the day before the evaluation. As a result, Dr. Zuehlsdorff was instructed to just issue an opinion based on the records supplied to him. *CHE 1*. p. 2.

27. Dr. Zuehlsdorff determined that "the patient's current clinical situation is positive work causal." *CHE 1*, p. 5. Dr. Zuehlsdorff pointed out that Claimant had "a preexisting abnormality of an excessively long ulnar styloid" – which was shortened by Dr. Master in the January 4, 2022, surgery. Dr. Zuehlsdorff stated:

> [W]hile the patient's preexisting ulnar positive variance syndrome, due to an excessively long ulnar styloid, was obviously preexisting and nonwork causal, it was only due to the application of years of multiple repetitive forces at the wrist and elbow, and thus an ulnar impaction syndrome that required surgical intervention. In other words, but for the application of the repetitive high physical forces in his job, as a [EMPLOYER] driver, with repetitively lifting, pushing, pulling, and carrying multiple boxes on a daily basis, the patient would not have progressed to a clinically positive subjective ulnar impaction syndrome. I would thus hold strongly that this case is 100% work causal." *RHE 1***,** p. 5.

28. Dr. Zuehlsdorff noted that Mr. Jacobs, the PA Claimant saw one time at Concentra, failed to appreciate the "obvious repetitive nature of his job, which is recognized as a form of cumulative trauma and is recognized in the work comp community as a viable work contributing factor." *Exhibit 1*, p. 6.

29. Dr. Zuehlsdorff also pointed out that with Claimant's excessively long ulna, "in certain positions you can cause compression of the TFCC between the ulnar styloid and the triquetrum, one of the carpal bones . . . due to (1) repetitive flexion and ulnar deviation when the forearm is pronated with the elbow flexed to 90 degrees and (2) supination/extension/ulnar deviation of the wrist on a repetitive basis." *Exhibit 1*, p. 5.

30. Dr. Zeuhlsdorff's report and analysis, however, is not as persuasive, credible, and comprehensive when compared to Dr. Goldman's report and hearing testimony. For example, Dr. Zuehlsdorff did not interview Claimant and obtain a detailed history – including any prior injuries or accidents. He was also unable to interview Claimant and obtain information about recreational activities or hobbies that might be the cause of Claimant's condition. Moreover, since Claimant failed to attend the IME, Dr. Zeuhlsdorff did not set up a telephone conference or virtual conference with Claimant to get pertinent information necessary to complete a comprehensive IME. *Tr. 47:16-20.* Instead, he just relied on a single interrogatory answer from Claimant and went to [EMPLOYER]' website to get a job description. At no point during the pendency of this litigation did Claimant speak with Dr. Zuehlsdorff. *Id. at 47:22-25.* Thus, his inability to get this critical information from Claimant detracts significantly from his causation analysis. In addition, the IME report written by Dr. Goldman was not provided to Dr. Zuehlsdorff at any time during the record review. *Tr. 49:6-20.* Thus, he did not get any additional historical information or analysis from Dr. Goldman's report that might have helped him perform his IME.

31. Additionally, Dr. Zuehlsdorff did not perform a causality analysis, like Dr. Goldman did, of Claimant's injury based on the Medical Treatment Guidelines. *CHE 1.*

32. In his report, Dr. Zeuhlsdorff also indicated that in formulating his opinion, he reviewed the "UpToDate medical website." There is not, however, any information about the quality of the information provided by this website or the breadth of the information. For example, is it a medical dictionary, is it a single page of basic information, does it contain articles - and if so - are the articles peer reviewed? Moreover, the phrasing of his opinion, "after reviewing UpToDate," gives the impression that his opinion is primarily based on the information contained on the website, and not his own opinion based on his own experience, knowledge, and training. While an expert is allowed to support his opinion with research, and the information obtained through such research, the credibility of that opinion is diminished when the foundation of the opinion might be based on information that could be from a source of questionable quality.

33. In addition, Claimant's actions of not attending the IME with Dr. Zeuhlsdorff and refusing to provide Dr. Goldman with details regarding his hobbies, recreational activities, and other information, detracts from Claimant's overall credibility. In essence, Claimant's refusal to attend the IME and refusal to provide Dr. Goldman such information prevented each IME physician, as well as the court, from determining whether any hobbies, recreational activities, or something else, did or did not, cause or contribute to Claimant's wrist problems and cause the need for medical treatment. In other words, Claimant refused to provide each physician with pertinent information necessary to determine whether work, or something else, caused Claimant's condition and need for medical treatment. While Claimant did admit on redirect examination that he did not engage in yoga, weightlifting, pushups, or hiking and using hiking poles, he did not indicate that he did not engage in golfing or playing tennis, which can affect the causation assessment. *See Tr.,* pp.72, 105,106*; MTG, Exhibit 5*, pp. 9, 18. Moreover, he did not provide this information when the causation assessments were being made by each physician before the hearing. As a result, Claimant providing

some of this information during the hearing does not overcome the negative credibility determination which has been found based on his failure to provide such information at the time of each IME.

34. Claimant failed to establish by a preponderance of the evidence that his left wrist symptoms represent the result of, or progression of, a condition that is related to his employment or was aggravated by his employment.

35. Claimant failed to establish by a preponderance of the evidence that he was involved in a work accident that caused an injury to his left wrist and caused the need for medical treatment or caused any disability.

36. Claimant failed to establish by a preponderance of the evidence that his left wrist condition(s) and need for medical treatment resulted directly from his employment or the conditions under which his work was performed.

37. Claimant failed to establish by a preponderance of the evidence that his left wrist condition(s) and need for medical treatment followed as a natural incident of his work activities. Therefore, Claimant failed to establish that his left wrist condition(s) can be fairly traced to the employment as a proximate cause.

38. Claimant also failed to establish by a preponderance of the evidence that his work activities aggravated an underlying preexisting condition of Claimant's left wrist and caused or accelerated his need for medical treatment or caused any disability.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See*

Bodensleck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Furthermore, proof of causation regarding a compensable injury or occupational disease is not limited to credible medical evidence, but may be established by lay testimony. *See Savio House v. Dennis*, 665 P.2d 141, 142-43 (Colo. App. 1983).

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable accidental injury or occupational disease.

a. Whether Claimant Sustained an Accidental Injury

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce the need for medical treatment or disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression

of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

Moreover, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant's left wrist pain complaints came on gradually without any specific work incident or accident causing his wrist pain, need for medical treatment, or disability. While Claimant contends that at some point, he felt a twinge in his wrist at times while at work, the ALJ has not found that contention to be credible. Therefore, the ALJ does not find that to contention to be persuasive evidence of a work accident and resulting injury. Instead, the ALJ finds and concludes that Claimant's underlying condition was painful while he was at work, but the work did not cause the pain, need for treatment, or disability. Thus, the underlying condition and need for medical treatment was not caused or aggravated by his work activities. In reaching this ultimate conclusion the ALJ has relied on Dr. Goldman's opinions as set forth in his report and testimony-which have been found to be credible and persuasive. The ALJ has also considered Claimant's credibility, based on his refusal to provide Dr. Goldman information about his recreational activities and hobbies-when asked during the IME. The ALJ has also considered Claimant's cancellation of his in-person IME with Dr. Zeuhlsdorff. This refusal to answer fully all of Dr. Goldman's questions during the IME and his failure to attend the IME with Dr. Zeuhlsdorff detracts from Claimant's credibility and his contention that his condition was caused or aggravated by his job duties. As a result, the ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable accidentally injury.

b. Whether Claimant Sustained an Occupational Disease

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified, or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The “rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability.” *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo. App. 1991). The standard for determining the onset of disability is when “the occupational disease impairs the claimant’s ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity.” *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005).

In this case, Claimant has asserted that he suffered either an injury or an occupational disease-which may be in the form of an aggravation of a preexisting condition. In response to this assertion, Dr. Goldman evaluated Claimant, and credibly and persuasively concluded that there was no causal connection between Claimant’s work activities and his wrist condition and the resulting need for medical treatment or disability. Thus, he concluded that there was no causal connection between Claimant’s work activities and Claimant’s need for medical treatment and no causal connection between Claimant’s work activities and any disability.

Proof of causation regarding a compensable injury or occupational disease is not limited to credible medical evidence, but may be established by lay testimony. In this case, the ALJ found the expert opinion of Dr. Goldman to be credible and highly persuasive for the reasons found above as well as the following: Dr. Goldman used the Medical Treatment Guidelines to support his conclusions about the cause of Claimant’s wrist condition and need for medical treatment. He also used Claimant’s medical history, objective diagnostic reports, description of job activities, in-person interview, and his examination to form his conclusion in this case. Plus, Rule 17, Exhibit 5 of the Medical Treatment Guidelines, sets forth risk factors to consider, including the following: (1) traumatic hyperextension, (2) wrist posture in extension and repetitive supination of the

forearm and/or elbow extension; and/or (3) for occupational illness, usually unilateral with ulnar wrist pain while supinating and extending the wrist as part of the regular work duty. Dr. Goldman elaborated at hearing that Claimant's daily work activities did not qualify as risk factors per the Medical Treatment Guidelines. Alternatively, Claimant would have to have been using his wrist in a repetitive motion four to six hours per day, similar to the work of a factory worker. However, Claimant's job allowed him to use varying movements, and required a balance between driving and carrying boxes. Dr. Goldman emphasized that Claimant instead described variable and multi planar activities that did not rely specifically on repetitive unilateral left ulnar wrist supination and extension, nor prolonged wrist extension with repetitive supination of the forearm or elbow extension. In contrast, his history noted more symptoms at the time with flexion as opposed to extension. In addition, Dr. Goldman also analyzed this case as an aggravation or exacerbation of a preexisting condition. In doing so, Dr. Goldman made an individualized causation assessment based on the Claimant's preexisting condition and his conditions of employment.

While Dr. Goldman does acknowledge that the left wrist injury/condition could be symptomatic during work (and also while performing daily activities such as lawncare or grocery shopping), he ultimately concluded that the causation of the injury, per the Medical Guidelines, is not consistent with the repetitive work required by Claimant's job.

Claimant, on the other hand, introduced Dr. Zuehlsdorff's record review report into evidence as support for his argument that an occupational illness occurred due to Claimant's role at [EMPLOYER]. However, the report by Dr. Zuehlsdorff fails to establish a causal relationship for several reasons. First, Claimant confirmed at hearing that he was never examined by Dr. Zuehlsdorff before the report was authored, nor did he ever have a conversation or any communication with Dr. Zuehlsdorff. Second, Dr. Zuehlsdorff concluded that Claimant's situation was "positive work causal", noting that causality was based on the limited information claimant provided in his interrogatory answers to Respondents and his review of the medical records. Relying on Claimant's answers to interrogatories and underlying medical records to base a causality opinion is not a replacement of the physician engaging in firsthand questioning of the Claimant regarding the mechanism of injury, history of recreational activities, or a discussion of Claimant's actual day-to-day job duties. His analysis would be similar to a Respondent-sponsored IME that bases a causality opinion primarily on a written job description, without the opportunity to be able to question the Claimant as to the actual job duties performed on a day-to-day basis which would be determinative of causality per Level II training and the Medical Treatment Guidelines. Further, as Claimant never spoke with Dr. Zuehlsdorff, no type of information was relayed to Dr. Zuehlsdorff for the completion of his report related to Claimant's activities outside of work. Finally, Dr. Goldman's comprehensive IME report was not even provided to Dr. Zuehlsdorff. While Dr. Goldman's IME report relied on the Medical Treatment Guidelines, an examination of Claimant, an interview with Claimant, and prior treatment records, Dr. Zuehlsdorff's report only relies on the information provided to him by Claimant's interrogatory answer and what is contained in the medical records provided to him.

As with the determination of Claimant's claim for benefits in the form of an accidental injury, the ALJ relies on the same credibility factors in assessing whether Claimant has an occupational disease. This includes Claimant's refusal to provide Dr. Goldman certain information as well as his refusal to attend the IME with Dr. Zuehlsdorff- both of which detract from his credibility. The ALJ finds and concludes that Claimant has not proven that his left wrist condition(s) can be fairly traced to any aspect of his employment by a preponderance of the evidence. Moreover, Claimant withheld information related to outside activities that could have shown that he had been equally, or entirely, exposed to life events causing Claimant's left wrist condition and symptoms outside of work, bolstering the argument that a finding of compensability and occupational illness is not warranted. Thus, the ALJ finds and concludes that Claimant has failed to put forth credible and persuasive evidence that demonstrates a causal connection between his employment and the injury in the form of an accident or occupational disease.

As a result, the ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that his work activities caused or aggravated his wrist condition(s) and proximately caused the need for Claimant's medical treatment or resulted in any disability. Thus, the ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury in the form of an occupational disease.

Since Claimant failed to establish that he suffered a compensable accidental injury or occupational disease, the remaining issues are moot.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's Claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 24, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the admitted average weekly wage (AWW) of $1,154.00 should be increased for purposes of permanent partial disability (PPD) benefits.

Whether the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation.

FINDINGS OF FACT

1. On January 30, 2020, the claimant suffered an injury at work. The respondent has admitted liability for the claimant's work injury. At the time of her injury, the claimant worked as the Chief Deputy Clerk and was paid $28.85 per hour. During her employment with the employer, the claimant had medical insurance, dental insurance, and vision insurance.

2. After her work injury, the claimant received various pay increases before resigning from her position on August 25, 2022. Those increases are as follows:

a) On June 15, 2020, the claimant's pay was increased to $34.00 per hour.

b) On December 11, 2020, the claimant's pay was increased to $35.70 per hour.

c) On January 28, 2021, the claimant's pay was increased to $42.2692 per hour; ($7,500.13 per month).

3. In April 2022, the claimant was placed on administrative leave without pay. On May 9, 2022, the claimant received a letter regarding continuation of medical insurance coverage pursuant to COBRA. In that letter, the claimant was informed that the monthly premium to continue her health insurance coverage would be $806.10. The claimant did not pay this premium.

4. On May 20, 2022, the respondent filed a Final Admission of Liability (FAL) admitting for a permanent impairment rating of 18 percent, whole person. The average weekly wage (AWW) identified in the FAL was $1,154.00

5. On June 20, 2022, the claimant received a letter from the Social Security Administration (SSA) confirming that the amount of $170.10 would be withheld for medical insurance premiums under Medicare.

6. The claimant asserts that her AWW should be increased to $1,726.15 to reflect the various raises she received after the work injury.

7. Due to her January 30, 2020 work injury, on September 24, 2020, the claimant underwent low back surgery that included L2-L3 microdiscectomy with laminectomy.

8. As a result of the September 24, 2020 lumbar surgery, the claimant has a disfigurement on her lower back consisting of a well-healed surgical scar that runs from just below her belt-line up her spine and measures 18 cm in length. This scar is a different color than the surrounding skin.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid to the employee under the contract of hire in force **at the time of the injury**. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). Under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply Section 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp., supra.*

5. A claimant's AWW must also include the employee's cost of continuing the employer's group health insurance plan, and upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan. Section 8-40-201(19)(b), C.R.S. It is not required that the employee actually purchase the insurance coverage for the AWW to be increased. *Ray v. Industrial Claim Appeals Office*, 124 P.3d 891 (Colo. App. 2005), aff'd. 145 P.3d 661 (Colo. 2006).

6. The claimant's AWW shall be increased to reflect the cost of continuation of insurance coverage. The monthly cost of insurance is $806.10. When multiplied by 12 months and then divided by 52 weeks in a year, this results in a weekly cost of $186.02. Therefore, the claimant's AWW shall be increased by $186.02 for a total AWW of $1,340.02. The ALJ recognizes that the SSA is withholding $170.10 per month for the claimant's Medicare coverage. However, the ALJ finds that the cost identified in the May 9, 2022 COBRA letter is reasonable and appropriate in determining the cost of replacement insurance coverage. Therefore, that amount is also reasonable in calculating the claimant's AWW. The ALJ declines to include the claimant's post-injury raises to her AWW.

7. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

8. As a result of her January 30, 2020 work injury and related surgery, the claimant has sustained a permanent disfigurement to areas of the body normally exposed to public view.

ORDER

It is therefore ordered:

1. For purposes of calculating PPD benefits, the claimant's AWW is increased to $1,340.02.

2. The respondent shall pay claimant $2,000.00 for her permanent disfigurement. The respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined here are reserved for future determination.

Dated October 25, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained compensable work related injuries within the course and scope of her employment on February 17, 2022.

ONLY IF COMPENSABILITY IS PROVEN, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to authorized, reasonably and necessary medical benefits that are related to the work related injury.

III. Whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits from February 17, 2022 to the present and ongoing until terminated by law.

STIPULATIONS

Claimant withdrew the issue of permanent partial disability benefits as premature. Respondents withdrew the issue of offsets.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Claimant's testimony:

1. Claimant was 31 years old at the time of the hearing and had been working for Employer for over 8 years. She was in the sales office as a Sales Agent. On the day of the incident on Thursday, February 17, 2022, Claimant was working the ticket window. She saw a man that looked like he was having a seizure. She joined the security officer, who was trying to get the man to lay flat on the floor. She went to get gloves on to go see if she could help, but another individual was helping the officer. The security officer could not find a pulse. He called for an ambulance and Claimant went outside to direct the Emergency Medical Technician to the lobby where the man was on the floor.

2. When she returned, the defibrillator that was placed on the man was reading no pulse, so the paramedics began CPR. Once she had directed the EMTs she started to have a panic attack. The EMTs started CPR but they could not revive the man. She had returned to her desk by this time, and she had a full view of what was going on in the lobby from her position at the window. She contacted her supervisor and requested to leave the premises and the response was she could leave but would not be paid for hours

not worked. Claimant stayed at her position as she could not afford the loss of pay. She watched while they tried to revive the man. She testified that they had continued with CPR for about forty minutes. Then the man was pronounced dead. The body was left in the lobby, which was closed by this point in time, while the coroner arrived. She stated that the body was left in the lobby for about two hours with a sheet over him. Several hours later, at approximately 1:30 p.m., her supervisor advised that she could go home if she felt the need to and would, after all, get paid for the rest of the day.

3. Claimant contacted the employee assistance program (EAP) requesting counselling. She was feeling very upset by what she had seen. She was able to reach them on that Thursday and was able to get counselling through the hotline by phone. They provided her with a list of therapists, and none she contacted were available to see her for several weeks. She also contacted her primary care provider (PCP) to get an appointment.

4. Claimant testified she had been diagnosed with anxiety prior to the February 17, 2022 work incident. Claimant stated that she had personal health conditions that were not work-related. She worried about these conditions. She further testified she was anxious about her medical conditions and had been diagnosed with insomnia. However, she denied having been diagnosed with depression or posttraumatic stress disorder (PTSD) before the incident.

B. Post-incident medical records:

5. On February 19, 2022 Claimant was attended by M. Shannon Arnsberger, D.O., her family medicine physician (PCP). Dr. Arnsberger noted that Claimant was diagnosed with post-traumatic stress disorder, for which she was prescribed medication, anxiety and acute reaction to situational stress. Dr. Arnsberger documented that Claimant required intensive therapy and she did not know how to obtain help from EAP since she could not get an in-person appointment. Dr. Arnsberger stated that she needed assistance through “WorkComp” to get therapy moving forward quickly. Claimant had reached out to a Kaiser therapist who talked to her by phone on Friday and was advised that she could follow up the following week by phone. Dr. Arnsberger took Claimant off work at that time, until she could get therapy.

6. Dr. Arnsberger took a history from Claimant that she had witnessed a death at work. Claimant initially saw the deceased having a seizure in the lobby where she worked. She watched security try to assist the person, including CPR being attempted and watched for approximately two hours until the individual was pronounced dead. She watched the lobby with the dead individual until the coroner came to take the body. Claimant requested leave from her boss but was told she wouldn’t get paid if she left early. A few hours later, her boss advised her she could leave if she felt the need. Dr. Arnsberger documented that Claimant was able to get phone counselling from EAP on the Thursday due to feeling very upset. Dr. Arnsberger documented that she had preexisting depression, anxiety and PTSD and was taking medications. Dr. Arnsberger noted that Claimant was crying through most of the visit. Dr. Arnsberger made a referral for a Psychologist through Clinical, Health and Forensic Psychology. The first available

visit set was for March 3, 2022. Patient tentatively scheduled for video visit with Dr. Moe on Friday at 8 am.

7. Dr. Arnsberger took Claimant off of work beginning February 19, 2022 and stated that maximum medical improvement (MMI) was unknown. She specifically noted that the objective findings were consistent with the history and work related mechanism of illness.

C. Reports of the incident:

8. On February 22, 2022 a Workers' Compensation Claim Intake Form was completed by Employer's investigating Adjuster, stating Claimant had worked for Employer since November 18, 2013. The investigator's description of the injury was that Claimant was working the window (ticket window). She looked out the window as she heard commotion and saw a man having a seizure. She observed the security officer (TSO) helping the man and laying him on the floor. Claimant went to get gloves on to see if she could help. The TSO could not find a pulse. Claimant went outside to show EMTs and the fire department (FD) personnel where the man was and started to have a panic attack. The EMT started CPR but they could not revive the man. Claimant advised her supervisor and took a break, getting some tea, trying to calm down. They noted that Claimant's window was closed and that Employer subsequently closed the lobby until the coroner was done. Eventually Claimant's supervisor told Claimant she could go home and would get paid. The report noted that Claimant first talked to EAP and to an online therapist, as well as her own therapist. On February 19, 2022 she went to her PCP and was referred to a specialist. The report noted Claimant was taking medications, and was having problems answering the Investigating Adjuster's questions, so they waived completing a questionnaire. The adjuster noted that she advised Claimant that this kind of claim would not be covered by workers' compensation as there would have needed to be an act of violence that caused a death that she had witnessed and Claimant did not report any acts of violence. Adjuster also advised Claimant that they would not be paying Claimant for her lost time from work.

9. The intake form included attached dispatch notes that stated as follows:

Dispatch Notes

10. The Narrative report of the investigator was consistent with the timeline issued by the dispatch notes and stated as follows:

> On Thursday, February 17, 2022, at approximately 0938 hours I, Officer [for Employer] along with Field Training Corporal [Redacted], responded to the Boulder Station located at [Redacted address] in the City of Boulder and County of Boulder for a report of a medical incident.
>
> Prior to arrival, Transit Police Communications two (TPC2) advised a male was in the lobby currently seizing. TPC2 noted Transit Security Officer (TSO)[1] [Redacted name] requested Emergency Medical service (EMS) and retrieved the Automated External Defibrillator (AED) for the male. [TSO] advised TPC2 the party had minimal breathing and EMS was on scene. TPC2 stated the responding fire department started CPR at 0945 hours and ended at 1013 hours. TPC2 stated the Boulder County Coroner was contacted for the incident. Upon arrival, I contacted Boulder Police Officer Morris (Badge #:1774) who stated Boulder fire department and American medical rescue were the responding medical services. Officer Morris explained Dr. Lund from Boulder Community Hospital was the Doctor that pronounced the male, [deceased], deceased at 1011 hours on 02/17/2022. Officer Morris stated the Boulder Police Department's case number is 22-1535 relating to this incident. A short time later, a Boulder Police department detective, Sarah Cantu (Badge #:5485) arrived on scene and took photographs of the scene. I also took photographs of the scene which will be uploaded to the case.
> I contacted [TSO] and asked if he would fill out a written statement to which he agreed. {TSO} stated he noticed [Deceased] at 0933 hours seated at the circular bench near the west side of the station. [TSO] explained he noticed [Deceased] was talking out loud to no one. At 0935 hours [TSO] asked [Deceased] to wear a mask to which [Deceased] stated he had a mask and would put it on. [TSO] then asked [Deceased] where he was headed. [Deceased] replied he had just got off a bus. [TSO] mentioned [Deceased] stated he was going to Pearl St.

[1] This ALJ infers that TSO from the Investigator's report and B1 from dispatch are one and the same person.

> {TSO] stated he returned to his desk for about 1-2 minutes after speaking with [Deceased], when he heard a female getting loud from the restroom area. [TSO] stated he went into the hallway to address the female in the bathroom area. After addressing the female, {TSO] noticed [Deceased] leaning to his right side and shaking as if he was having a seizure.
>
> [TSO] noted that [Deceased] had a blank stare on his face, and [TSO] was not able to get a strong pulse from multiple locations. At this point [TSO] observed [Deceased]'s breathing had slowed down, and he began to gasp. A patron in the lobby, later identified as Rey Alcala (unknown date of birth), offered to help. [TSO] stated Alcala helped place [Deceased] on his side. [TSO] stated he heard gurgling coming from [Deceased]. [TSO] explained him and Alcala put [Deceased] on the ground next to the bench. [TSO] noticed [Deceased] seemed to not be breathing and went to his desk to grab the AED.[2] [TSO] applied the AED and the device stated, "no shock was advised". Shortly after, [TSO] noticed Boulder Fire had arrived on scene, they began to preform CPR, and took control of the scene. See [TSO]'s written statement, which will be attached to the original case, for further.
>
> Boulder County Coroner Andrew Melvin arrived on scene at 1120 hours and took over the investigation. The Boulder County Coroner, Melvin, stated the initial investigation looks like a natural death and they would eventually take custody of the body. The investigation will be referred to [Employer] video investigations for further review.
>
> No further information at this date and time in reference to this incident.[3]

There was also a video timeline which was consistent with the investigator's report and the dispatch report above.

11. On March 7, 2022 Respondents filed a Notice of Contest stating that the claimed injury or illness was not work related.

D. Robert Kleinman, M.D.

12. On June 17, 2022 Dr. Robert Kleinman, a psychiatrist, evaluated Claimant at Respondent's request. He examined Claimant on June 15, 2022. The history taken by Dr. Kleinman was consistent with Claimant's testimony and the investigator's report. Claimant reported that she saw from her desk a man having a seizure. She put on gloves and went to the lobby to help the TSO, but when she got there, another man was helping. She watched the man have the seizure and then go limp. The TSO went to get the defibrillator. Claimant went to direct the paramedics to the man that had had the seizure. She noted that the defibrillator showed the man no longer had a pulse. She watched the paramedics try to resuscitate the man without result. Claimant asked her supervisor to allow her to go home as she felt traumatized by the incident. She was advised that she could go home but would not be paid. Claimant remained at work, since she could not afford to lose her pay. She was at her desk during the time the dead man laid on the ground. The investigator questioned her about what happened. They eventually closed the lobby and her supervisor allowed Claimant to go home with pay. Dr. Kleinman noted that Claimant contacted her therapist at Kaiser, who advised Claimant to get help from her employer. Claimant followed up with Employer, who completed some workers'

[2] Automated external defibrillator.
[3] Names redacted from the report and replaced with other identifiers.

compensation paperwork and, within a couple of days went to the WC doctor, who advised she had a lot of trauma and prescribed Ativan every eight hours. However, the adjuster told Claimant her claim was denied because she did not witness an act of violence. Dr. Kleinman noted that Claimant had not been back to work because of her emotional status.

13. Claimant explained to Dr. Kleinman that she had increased anxiety, depression and symptoms of traumatic stress, because she has her own medical conditions, and a defibrillator was used on her before. She had anxiety that she works behind a glass window and no one would see her if she had an episode. She dwelled on what happened to the man, thinking this could also happen to her. She had symptoms of anxiety, including racing heart, and feeling shaky. The anxiety attack gave her tingling, increased heart rate, sweating, feeling like she was having a heart attack. She also had depression, thinking she is worthless and useless, feeling exhausted, tired and her sleep patterns had varied. She also noted posttraumatic stress disorder, with distressing images of what happened in the lobby, with her mind racing, all of which are triggered by her own health problems. She struggled as she did not wish to be alone but could not tolerate being around people and she also was avoiding going back to the scene of the death.

14. Dr. Kleinman noted Claimant had a psychiatric medical history that dates back to when she was thirteen years old and currently continued seeing a therapist at Kaiser once a month at Kaiser Permanente. She was attending mental health appointments with Ms. Forest, went to an anxiety group for four (4) weeks in February and March 2022 and taking medications including Hydroxyzine, Ativan and a medication she could not recall. Claimant had open heart surgery in 2013 but subsequently had to undergo bypass surgery. She was in a medically induced coma, which is when she first started with anxiety. Following the birth of her child in 2015, Claimant had an embolic stroke, which caused some residual trauma. In 2018 she had a hysterectomy, and subsequent sepsis complications. In January 2022 her cardiologist advised her she required a defibrillator implant.

15. Dr. Kleinman noted that claimant continued to feel anxious, was not tolerant of being outside her home, and continued to feel exhausted. She felt she had no energy and her stepdaughter and her husband have had to help with her chores. Before this incident, Claimant was working forty hours a day for the past 9 years, took care of her children, completed her chores, and only missed work due to medical problems. Claimant reported that she had never missed work due to psychological problems.

16. Claimant was tearful throughout most of the interview with Dr. Kleinman. She was actively crying when discussing the incident. She was anxious and had anxiety attacks. Dr. Kleinman stated that Claimant had symptoms consistent with Posttraumatic Stress Disorder including intrusive memories, avoidance of triggers, negative alteration in cognition and increased arousal.

17. Dr. Kleinman reviewed the available medical records, which will be addressed below. He noted a history of depression and anxiety as well as multiple other medical problems as stated above, in addition to Marfan's disease. He opined that Claimant has had traumatic experiences in the past sufficient to cause Posttraumatic

Stress Disorder. Those include childhood abuse and more significantly medical crises with near death medical emergencies. With that, prior to and at the time of the date of injury, she was significantly stressed by concerns about her own chronic medical conditions. In addition, at about that time, her father had medical problems, as well. Despite that, she had been working full time for RTD and reported that she did not miss work for mental health problems. After the incident of February 17, 2022 Claimant reported symptoms that Dr. Arnsberger considered to be Posttraumatic Stress Disorder caused by the incident. Dr. Kleinman opined that it would have been more accurate to say that the incident triggered Claimant's anxiety about her own health, near death experiences, and fears of dying while at work, which included symptoms of PTSD. Nevertheless, witnessing a nonviolent death of a stranger, from a distance, would not typically be a sufficiently traumatic event to cause PTSD, though witnessing a death is one of the criteria listed in the DSM. But, taking into account the entire picture, considering Claimant as a whole, it was sufficient to trigger and exacerbate Claimant's anxiety about her own health and that she could have died already, and could die at work. Dr. Kleinman opined that Claimant's diagnosis were generalized anxiety disorder, persistent depressive disorder, posttraumatic stress disorder, psychological factors affecting a medical condition. He particularly noted that this event was traumatic to Claimant because of her personal medical history that included heart disease, heart surgery, stroke, and recent recommendation of a defibrillator implant. Medical records from Kaiser confirmed that Claimant's physical health stressors come first and are the major contributing factor to her depression and anxiety. Claimant's unique ongoing medical stressors and the several medical traumas that she has experienced predisposed her to anxiety and posttraumatic stress disorder (PTSD) symptoms after witnessing a death. Dr. Kleinman opined that another employee under the same circumstances would not have had the same response.

18. Dr. Kleinman testified at hearing that part of his Level II Accreditation training by the Division included determining causation as to whether a Claimant met the criteria for a compensable injury for a mental health condition. Dr. Kleinman addressed causation and opined, [Claimant] "does not meet the criteria for a compensable injury." Dr. Kleinman testified consistently with his IME report and his conclusions in which Claimant does not meet the criteria to have sustained a work injury on February 17, 2022 as her preexisting health conditions are the root of her ongoing mental health problems.

E. Medical Records prior to the incident:

19. While the Kaiser medical records are hard to read as they are not organized in a sequential manner and are riddled with abbreviations, for which this ALJ has had to extrapolate the meaning from the totality of record, they showed that Claimant had a significant prior history of psychological problems. For example, on visit date of January 22, 2016 there was a notation that Claimant had major depressive disorder (MDD)—recurrent episode, with a notation from PA Kristen Walden dated October 24, 2011, one from Felicia Gutierrez dated April 2, 2018 and another by Dr. Danette Silaban dated February 26, 2019. Then, on the same visit date of January 22, 2016, there was a diagnosis of major depressive episode—single episode, with a notation by Nicole Awuah on May 21, 2012 and one from Dr. James Walle on February 16, 2022. It looks like

Claimant was referred to a Licensed Clinical Social Worker for treatment of depression and prescribed bupropion (Wellbutrin), an antidepressant used for MDD.

20. The diagnosis of MDD continued on the January 28, 2016 visit date. On visit date of July 8, 2016 there was a mention that Mirtazapine, also an antidepressant, was being discontinued. Dr. Avi Kurtz recommended that Claimant try Remeron, another antidepressant to treat both the depression and problems sleeping. The diagnosis of MDD continued on December 8, 2017. On December 15, 2017 Claimant was seen due to depression (MDD-recurrent-moderate), anxiety and insomnia, which Claimant reported was worse over the last three months, and was again referred for counselling. At that time Dr. Silaban recommended an SSRI[4] medication. Also on this date Claimant was diagnosed with a generalized anxiety disorder (GAD). This also showed a notation by Dr. Daniel Smith dated February 11, 2021 and an overview addendum by Dr. Walle on February 16, 2022. This was followed by the following notations:

> Recently following with Psychiatry
> Complicated by panic attacks
> Was connected with therapists - poor rapport with 1st, 2nd left Kaiser, 3rd “changed departments”
> Rare Ativan p.r.n. use
> November 2021 starting p.r.n. Atarax for mild symptoms of anxiety, as needed - in February 2022 reports that had not been taken
> Patient with concern in the past that Zoloft 25 mg cause her to "hate her children”

21. On March 20, 2018 Claimant was referred by Mary Steele, PA to start chronic medication to treat her depressive symptoms. The clinical pharmacy specialist noted Claimant was prescribed Sertraline,[5] despite Dr. Silaban noting at that time that the MDD was in partial remission. However, it is clear to this ALJ that some of the notes are copied from one visit to the next as they had an identical wording and format.

22. On February 26, 2019, Claimant was diagnosed with Major Depressive Disorder, recurrent episode in partial remission.

23. Claimant reported on August 12, 2019 she had depression and anxiety. She was diagnosed with Depression—unspecified (chronic). Dr. Thomas Tsai noted that they had spent 20 minutes discussing her anger/depression/anxiety regarding her situation. This included near-death experiences with procedures. Claimant was referred to mental health.

24. On March 9, 2020, Dr. Danette Silaban evaluated Claimant. She diagnosed Claimant with insomnia and generalized anxiety disorder. She noted the anxiety disorder was uncontrolled. Claimant had tried medications in the past, which were not tolerated. She discussed alternatives. Claimant declined. Claimant was prescribed Trazadone for the insomnia.[6] Dr. Walle noted that Claimant had been non-compliant with her medication regime as she was taking medications intermittently.

25. On November 16, 2020 Claimant requested a letter from her cardiologist, Dr. Tsai because there were employees that were positive for COVID-19 and Claimant

[4] Selective serotonin reuptake inhibitors, a widely used antidepressants.
[5] Sertraline is a medication commonly used to treat MDD as well as anxiety and panic attacks.
[6] The notation found on December 15, 2017, cited in paragraph 20 above, was also found on March 9, 2020.

was terrified to go to work. Dr. Tsai issued the letter excusing her. Claimant continued to have the MDD and GAD diagnosis.

26. Dr. Tsai spoke with Claimant on January 5, 2021. She reported she had been having a lot of anxiety and panic attacks. It was noted the panic attacks were typical for her. She was meeting with a new behavioral health therapist.

27. Claimant reported on January 12, 2021, her anxiety was getting worse. She was “done trying to talk to the doctor.” Medications scared her and gave her more anxiety. She was worried about side effects. Claimant called and spoke to Andrea Machacek, RN who let her know Dr. Tsai had signed a letter to return Claimant to work. Claimant advised her that she really didn’t want to go back to work. She was continuing to have dyspnea and attributed it to Colorado altitude. She was tearful and said she was a "wreck." She stated that she could not function due to her anxiety, and trouble sleeping. Her father had CABG[7] and that added to her anxiety. She asked if Dr. Tsai would help her to get on disability due to her cardiac history and ongoing symptoms.

28. On February 11, 2021, Claimant was diagnosed with Generalized Anxiety Disorder complicated by panic attacks and rarely treated with Ativan.

29. Claimant reported on June 9, 2021 she had anxiety on a daily basis. She started Zoloft, but this made her hate her children, so she stopped. Dr. Walle noted that medications were subtherapeutic due to Claimant’s intermittent use. She had 10 pills of Ativan from her psychiatrist that she had not used. Dr. Walle recommended follow-up with psychiatrist however could trial SNRI in the future or Atarax

30. On July 16, 2021 Claimant followed up with Dr. Laura Caragol who documented that claimant was inconsistent with taking her heart medications, including the warfarin and antibiotics. Claimant talked to her counselor and was diagnosed with PTSD. Claimant reported that she didn’t have energy to do everything she needed to do, work 8 hours a day, then getting home so exhausted that didn't want to play with her 2 kids and felt guilty about this, stating it was not fair to her children. She worked in the sales department; and said it was not a stressful job.

31. On September 10, 2021 Dr Elisa Zaragoza Macias followed up with Claimant regarding the importance of taking her medications. They discussed change in medications she could take once per day at night. Dr. Zaragoza Macias noted Claimant continued with depression, anxiety and posttraumatic stress disorder and should follow up with the mental health clinic. Claimant reported that she felt fatigued, tired, breathless with even minimal activity, and that it was hard to take care of her 5 year old child as she continued to feel depressed, anxious and had PTSD as well as pain all over her joints.

32. On November 15, 2021, Claimant was prescribed Atarax for mild symptoms of anxiety as needed up to twice daily (changed from Ativan due to addictive nature). Her providers included a long list of diagnosis, for which they were providing, or attempting to provide, care, including but not limited to attention deficit disorder without hyperactivity, mitral valve disorder and mitro valve prolapse, Marfans Syndrome, dilatated aortic arch, idiopathic scoliosis, migraines, underweight, history of tobacco use, major depressive disorder, thoracic aortic aneurysm, cardiomyopathy, history of aortic valve replacement,

[7] Coronary artery bypass graft (CABG).

history of CABG, left facial weakness due to late effect of stroke, alteration of sensation due to stroke, mixed hyperlipidemia, long term anticoagulant therapy, history of DVT, adult obstructive sleep apnea, vitamin D deficiency, bacterial endocarditis, history of sepsis, tachycardia, diarrhea, gastroesophageal reflux disease, generalized anxiety, panic disorder, insomnia, posttraumatic stress disorder, urticarial and non-compliance with medication regime.

33. On January 17, 2022, Claimant reported having insomnia. This was due to multiple life stressors. She was requesting an appointment with Dr. Walle and he prescribed two weeks of doxepin for the insomnia.

34. The day prior to the work incident, on February 16, 2022, Claimant reported daily anxiety with many life stressors including pills. She reported thinking about her pills frequently. Her provider recommended a trial of Venlafaxine for generalized anxiety disorder. Dr. Walle noted that Claimant was intermittently tearful. He was concerned that the low range tachycardia was being caused by the anxiety.

F. Definitive Findings:

35. Claimant failed to show by a preponderance of the evidence that she has a compensable claim. This is a threshold question. Here, Claimant had to prove by a preponderance of the evidence that the incident of February 17, 2022 caused or aggravated her mental distress, which caused her disability and inability to return to work. The record shows a plethora of documentation that Claimant has a substantial psychological problem prior to the incident in question. Claimant was noncompliant with the treatment of her depression, anxiety and insomnia and declined to treat them with the medications that her providers were prescribing. It is clear that Claimant had an aversion to taking medications due to either concerns about her significant other medical problems, including the heart condition and the Marfans syndrome, and/or to becoming addicted to the medications.[8] Regardless of the reason, Claimant had a very significant preexisting history of conditions which have been present for a very long time, including the major depressive disorder, the anxiety, the posttraumatic stress disorder, the generalized anxiety disorder, the panic disorder as well as the insomnia. These diagnosis are repeated throughout the years of her care with Kaiser. While witnessing the death of an individual may have triggered a panic attack, it was not the cause of Claimant's continuing conditions and did not aggravate those conditions. Dr. Kleinman is credible in his opinion that Claimant does not meet the criteria to have sustained a work injury on February 17, 2022 as her preexisting health conditions are the root of her ongoing mental health problems.

36. Claimant argued that she was ready to assist the TSO with the man when she saw him have a seizure, going so far as to put on gloves in order to help, until she saw another individual helping the TSO. As found, Claimant did not stay to assist with

[8] Antidepressants are generally not a medical treatment that can be taken as needed. For them to work, a patient must take the medication on a daily basis, and even then, they do not start to work right away. It takes time to change the chemical composition of the body.

the deceased but went outside to guide the Fire Department EMT and paramedics/EMS to where the man was in the lobby, once they had arrived.

37. As found, the dispatch notes highlight that the medical call was made at 9:38 a.m. noting that a man was having a seizure. At 9:39 a.m. EMS was requested, EMS responded immediately and were on their way. At 9:42 a.m. the man was unconscious but breathing and the TSO (B1) retrieved the AED. At 9:44 a.m. the man had minimal breathing. By 9:45 a.m. the Fire Department personnel was on the scene and started CPR. At 9:48 a.m. the EMS ambulance was on the scene and took over CPR, and by 10:08 the police were on the scene.

38. If Claimant was the one to guide both the Fire Department and the Ambulance personnel to the correct area where the man was in the lobby, then Claimant was away from the scene from the time after emergency services were requested between 9:39 and when EMS arrived at 9:48 a.m. Claimant stated she started to have a panic attack at this time and that she returned to her desk once the personnel was present, so most of what Claimant saw was at a distance. Further, she was in the process of calling her supervisor and asking to be allowed to leave work and discussing whether she would be paid or not for the time off.

39. CPR was stopped by 10:13 a.m. Therefore, CPR was attempted for approximately 28 minutes. By 10:21 a.m. both FD and EMS were no longer on the scene and the lobby area was shut down. This ALJ infers that the deceased was covered at this time and the police were still on the scene awaiting the coroner. The coroner arrived at 11:20 a.m. and took the body by 11:35 a.m. Therefore, the body was in the lobby for approximately one hour and twenty minutes after EMS stopped CPR. According to Claimant, she was at her desk for this time period.

40. Further, while Claimant stated she did not miss any time from work due to any mental health conditions, this ALJ concludes from the evidence to the contrary. Claimant requested time off on November 16, 2020, as she was “terrified” of contracting COVID-19. She was also off when she was under mental distress due to her father undergoing coronary artery bypass surgery and feared for his life. She specifically told her cardiologist’s nurse on January 12, 2021, that she really didn’t want to go back to work. She was continuing to have dyspnea and attributed it to Colorado altitude. She was tearful and said she was a "wreck." She stated that she could not function due to her anxiety, and trouble sleeping. Her father had CABG and that added to her anxiety. She asked if Dr. Tsai would help her to get on disability due to her cardiac history and ongoing symptoms. This ALJ infers that Claimant was off work because of her ongoing symptoms, including her MDD and anxiety. Dr. Tsai issued the return to work letter, despite Claimant’s ongoing symptoms. This ALJ concludes Claimant was not off work the entire time from November 16, 2020 through January 12, 2021 but for two separate periods of time, and that her psychological condition played a great roll in obtaining time off, including her depression, posttraumatic stress disorder and anxiety causing panic attacks.

41. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives

of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 199f5). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

Claimant is making a claim for a mental impairment. As such, these claims are treated differently, effective July 1, 2018, pursuant to HB17-1229. Section 8-41-301(2) (a), C.R.S. (2022) governs any "mental-mental" claims and provides "A claim of mental impairment must be proven by evidence supported by the testimony of a licensed psychiatrist or psychologist." While it was any "physician" prior to the statutory change, now it is any psychiatrist or psychologist. It further states that "The mental impairment that is the basis of the claim must have arisen primarily from the Claimant's then occupation and place of employment in order to be compensable."

Further, Sec. 8-41-301(2)(c), C.R.S. states that "The claim of mental impairment cannot be based, in whole or in part, upon facts and circumstances that are common to all fields of employment." And under Sec. 8-41-301(2)(d) "The mental impairment which is the basis of the claim must be, in and of itself, either sufficient to render the employee temporarily or permanently disabled from pursuing the occupation from which the claim arose or to require medical or psychological treatment." And Sec. 8-41-301(3) (b)(I) provides that "Psychologically traumatic event" means an event that "is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances."

When interpreting a statute, we must give effect to the legislative intent and "construe all terms of a statute harmoniously, avoiding a strained or forced construction of any of its terms." *Davison v. Indus. Claim Appeals Office*, 84 P.3d 1023, 1036 (Colo.2004); see also *Anderson v. Longmont Toyota, Inc.,* 102 P.3d 323, 326 (Colo.2004). ("The plain and ordinary meaning of the statute, if clear." *Anderson,* 102 P.3d at 326; *Indus. Claim Appeals Office v. Orth*, 965 P.2d 1246, 1252 (Colo.1998).

To receive benefits, an injured worker bears the threshold burden of establishing, by a preponderance of the evidence, that he or she has sustained a compensable injury proximately caused by his or her employment. § 8–41–301(1)(c), C.R.S.2011; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000) ("Proof of causation is

a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded."). This case falls within the scope of "mental-mental" injuries, in which "mental impairment follows solely an emotional stimulus." *Oberle v. Indus. Claim Appeals Office*, 919 P.2d 918, 920 (Colo.App.1996). An injury that is "the product of purely an emotional stimulus that results in mental impairment," (*id*. at 921), requires a "heightened standard of proof" to "help prevent frivolous or improper claims." *Davison*, 84 P.3d at 1029. Under the express terms of the statute, "the testimony of a psychiatrist or psychologist" is required to establish a claim for mental impairment. *Oberle*, 919 P.2d at 921. The Colorado Supreme Court has interpreted this phrase broadly to include "the work product" of a provider which "may include letters, reports, affidavits, depositions, documents, and/or oral testimony." *Colo. Dep't of Labor & Emp't v. Esser,* 30 P.3d 189, 196 (Colo.2001).

However, not all components of such a claim must be proven by expert testimony. Rather, "[e]xpert testimony is necessary to prove that the event was psychologically traumatic, but the other elements can be proved by lay and/or expert evidence." *Davison*, 84 P.3d at 1033; *City of Loveland Police Dep't v. Indus. Claim Appeals Office*, 141 P.3d 943, 951 (Colo.App.2006). In addition, an expert need not use the precise statutory language to opine on a claimant's condition. "What is required is the presentation of sufficient facts such that the ALJ can find there existed a psychologically traumatic event or events." *City of Loveland*, 141 P.3d at 951; *Kieckhafer v. Indus. Claim Appeals Office of State*, 2012 COA 124, 284 P.3d 202 (Colo. App. 2012)

Although a preexisting condition does not disqualify a claimant from receiving workers' compensation benefits, the claimant must prove a causal relationship between the injury and the medical treatment claimant is seeking. *Snyder v. ICAO*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. ICAO*, 49 P.3d 1187, 1189 (Colo. App. 2002). And where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the medical care for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Renta*, 717 P.2d 965 (Colo. App. 1995).

Whether a claimant has met his or her burden of establishing a compensable mental impairment is a question of fact for determination by the ALJ. See *Pub. Serv. v. Indus. Claim Appeals Office*, 68 P.3d 583, 585 (Colo.App.2003) ("The causes of a claimant's mental impairment and the commonality of those causes are questions of fact to be resolved by the ALJ.").

Here, Claimant testified she had panic attacks, depression, insomnia following the February 17, 2022 incident of watching an individual through a seizure, unsuccessful attempts at resuscitation, and subsequent death. While they may be traumatic, they are not what caused the Claimant's need for medical care or for her loss of employment or disability from employment. The Claimant has underlying chronic conditions which

included her multiple medical conditions. Claimant has, requested work excuses due to her medical conditions, including her "anxiety," as well as requesting her providers' assistance with obtaining disability due to her medical conditions including heart disease. However, Claimant also has a long standing history of diagnosis of major depressive disorder, generalized anxiety disorder, posttraumatic stress disorder and insomnia as well as fatigue, and multiple other problems. The record of requesting medical assistance with these medical conditions was as recent as January and February 2022, before she witnessed the death on the job site. The records show that even when prescribed medication to assist with these problems, Claimant was not taking the medications as prescribed or was taking them intermittently, which is certainly contraindicated for most SSRI, depression or anxiety medications. Claimant also was inconsistent in taking other medications, such as the warfarin, a blood thinner medication.

Dr. Kleinman correctly opined and credibly testified another employee under the same circumstances would not have had the same response as Claimant. Dr. Kleinman credibly opined and testified Claimant does not meet the causative criteria to have sustained a mental health related work injury on February 17, 2022.

Claimant has failed to meet her burden of proving that it is more probably true than not that she suffered a mental health injury while in the course and scope of her employment on February 17, 2022. The persuasive and credible evidence shows that Claimant's asserted conditions were preexisting and do not meet the statutory criteria.

The ALJ finds the testimony of Dr. Kleinman as to the issues of causation of the asserted injury credible and persuasive. This ALJ accepts Dr. Kleinman's opinion the work incident of February 17, 2022 did not meet the criteria she sustained a mental health injury.

As Claimant has failed to show that she has a compensable claim, all other issues are moot.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for workers' compensation benefits related to the incidents of February 17, 2022 is *denied* and *dismissed*.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on February 17, 2022?

- If the claim is compensable, did Claimant prove he is entitled to medical benefits?

FINDINGS OF FACT

1. Claimant worked for the employer as an equipment operator for about 10 years. The Employer picks up trash and recycles. Claimant is a lead operator and operates a John Deere front-end loader. His job is to move recycling with his front-end loader from a pit to a belt where the recycling is sorted by two teams.

2. On February 17, 2022, Claimant alleges he injured his left shoulder when he was opening a large overhead warehouse door by pulling a chain. Claimant testified that he had excruciating pain immediately in the left side of his arm. Within 5 to 10 minutes after the incident he reported it to the facilities manager, EG[Redacted]. Claimant also testified that he was taken to Dr. Cynthia Schafer, the workman's comp doctor, following the injury by Mr. EG[Redacted]. (Hearing Transcript, p.19). Dr. Schafer is at UCHealth. (Claimant's Exhibit 7, p7). However, it does not appear that Claimant saw Dr. Schafer at UCHealth until after his initial visit UCHealth on March 9, 2022. He was actually seen by Jason Baker, PA-C at the time of the initial visit. He gave a history that he started having pain in early February and that when he was opening a heavy door with a chain and he felt a pop and sudden pain. (Claimant's Exhibit 7, p. 3).

3. The Claimant actually saw Dr. Schafer on March 15, 2022. The history given to Dr. Schafer is confusing. She took a history that on February 17 is when he pulled out on a chain on a rollup door with his right hand and felt a pop in the right shoulder with increased pain, a "stinger". It is unclear as to whether Claimant gave an inconsistent history or if Dr. Schafer incorrectly referred to the right shoulder instead of the left shoulder. Dr. Schafer eventually concludes that the left shoulder condition is not work related. However, because of the discrepancies in the history from the other medical records and the Claimant's testimony, I cannot accept her opinion as to the left shoulder condition as not being work related, and must look to other evidence to determine causation.

4. Prior to this incident, Claimant had a history of left shoulder pain. On November 26, 2018 he was seen at Optum Atrium by Megan Bartusek, N.P. with a chief complaint of "Left shoulder pain and range of motion". In the history portion of the report she states "Shoulder Pain: The patient present with complaints of gradual onset of constant episodes of severe left shoulder pain, described as sharp, radiating to the left upper arm. Episodes started 2 months ago. Symptoms are improved by restricted activity. Symptoms are made worse by shoulder motion and internal rotation Symptoms are unchanged (Pain started about 2 – 3 months ago, not injury related. Pain initially was

intermittent but now constant. Pain is worst with reaching, internal rotation. No locking but hears some clicking. Occasional tingling. Feels weak, but no troubles with grasping. Does a lot of steering with his left arm for work and the steering motion aggravates his arm symptoms.)." Ms. Bartusek prescribed Naproxen Sodium 550 mg and home exercises. (Respondents' Exhibit D, pp. 25 – 27).

5. The Claimant returned to Ms. Bartusek on January 18, 2019 to discuss the pain in his left shoulder. His diagnosis was "Biceps tendinitis of left upper extremity". He was prescribed Dicolofenac Sodium 1% transdermal Gel and referred to Orthopedics. She also order an X-ray of the left shoulder. (Respondents' Exhibit D, pp 28 – 30).

6. The next visit to Optum was on February 8, 2019 when the Claimant was seen by Dr. Plachta. He noted that the X-ray showed AC joint arthritis. His assessment was AC joint arthropathy. In addition to the Diclofenac Sodium gel, he prescribed Tramadol. (Respondents' Exhibit D, pp. 31 – 33).

7. Claimant had several visits to Optum for right shoulder pain between February 8, 2019 and November 18, 2021. On November 18, 2021, he complained of chronic pain of both shoulders. He denied any injury. Virginia Quiroz, N.P. administered cortisone injections into both shoulders. (Respondents' Exhibit D, pp. 50 – 54).

8. On February 1, 2022, Claimant was seen by Dr. Lockett and reported chronic shoulder problem for several months. She noted the prior cortisone shot in September and that he did ok until the past 2 weeks. He was also seen for left ring finger symptoms. (Respondents' Exhibit D, pp. 55 – 57).

9. Claimant returned to Optum on February 15, 2022, just 2 days prior to the incident with the warehouse door, complaining of bilateral shoulder pain. He was seen by Virginia Quiroz. Her assessment was Rotator cuff disorder. The plan was for an MRI of the left shoulder. Claimant was to follow up after the MRI was completed. (Respondents' Exhibit D, 58 – 61).

10. An MRI of the left shoulder was performed on February 17, 2022 at 5:18 p.m. (Respondents Exhibit E, p.79). The MRI showed:

> "1. AC joint arthrosis and mild osteoarthritis.
>
> 2. Complex SLAP tear with extension into the anterior labrum and horizontal split tear of the biceps tendon long head.
>
> 3. Partial thickness supraspinatus and infraspinatus tears.
>
> 4. Subacromial/subdeltoid bursitis.
>
> 5. Marrow reconversion."

11. Claimant returned to see Ms. Quiroz on February 24, 2022 to discuss the MRI. Based on the results, Ms. Quiroz referred the Claimant to an orthopedic surgeon for evaluation and treatment. (Respondents' Exhibit D, pp. 62 – 66).

12. Claimant was seen by Dr. Purcell at Orthopedic Centers of Colorado on March 8, 2022. Dr. Purcell's assessment was partial nontraumatic tear of both rotator cuffs. His impression was bilateral shoulder partial-thickness rotator cuff tears left greater than right; bilateral shoulder biceps tendinopathy; and work-related injury. He did not elaborate on his impression of work-related injury. He discussed surgery with the Claimant and indicated that surgery would be scheduled at their convenience. (Respondents' Exhibit F, pp. 135 – 139).

13. Claimant was referred to Dr. Lesnak by Respondents for an IME. Dr. Lesnak performed an IME of the Claimant on July 12, 2022. Dr. Lesnak performed a physical examination of the Claimant and reviewed medical records that predated and postdated the alleged work-related incident. Dr. Lesnak credibly testified in response to a question regarding whether the incident on February 17, 2022 caused a new injury or aggravated his preexisting problem in left arm that "his symptoms as documented by Ms. Quiroz, both before, right before and right after this reported incident are the same. His exam findings documented by Ms. Quiroz right before and right after this incident were the same. And his MRI showed no evidence of acute abnormalities that would in any way relate to an incident that was reported just several hours before that MRI was performed. So there's no evidence of any injury, no evidence of any aggravation of pre-existing symptomatic pathology as it pertains to the incident of February 17th." (Hearing Transcript p. 60).

14. Dr. Lesnak further opined that the need for the surgery recommended by Dr. Purcell is not related to the incident of February 17, 2022. (Hearing Transcript p.62). Dr. Lesnak's opinion is credible with respect to the cause of the need for surgery.

15. Claimant failed to prove he suffered a compensable injury to his left shoulder on April 5, 2021.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The mere fact an employee experiences symptoms at or after work does not automatically establish a compensable injury. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008); *Garamella v. Paul's Creekside Grill, Inc*., W.C. No. 4-519-141 (March 6, 2002). The claimant must prove entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is evidence that leads the ALJ to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). Put another way, the standard is met when the existence of a contested fact is "more probable than

its nonexistence." *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant failed to prove he suffered a compensable injury to his left shoulder on February 17, 2022. Although it is plausible that [Claimant] experienced pain in his left shoulder as reported to his supervisor, I conclude that the pain was a manifestation of the natural progression of preexisting shoulder pathology instead of as the result of a new injury or an aggravation of his preexisting condition. As found previously, Dr. Lesnak's testimony and written opinions, which are credible, supports this conclusion.

Claimant had a documented history of progressive shoulder pain for several years before the alleged accident. Claimant failed to prove his left shoulder condition was caused by or aggravated the incident on February 17, 2022 when he pulled on the chain to lift the warehouse door.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 26, 2021

Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-190-326 & 5-192-760

ISSUES

1. Did Respondents establish by a preponderance of the evidence that they met the statutory predicates to assert the intoxication penalty pursuant to section 8-42-112.5, C.R.S.?

2. If Respondents met their burden, did Claimants establish by clear and convincing evidence that Decedent's accident was not caused by the presence of any controlled substances?

STIPULATION

1. The parties stipulated that Decedent's average weekly wage was $824.17.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Decedent was a 31 year-old male who worked for Employer since February 26, 2020. (Ex. I).

2. On December 7, 2021, Decedent and DS[Redacted] were pulling new wire for a lighting repair in the parking lot, at DriveTime Auto in Denver, Colorado. Decedent was using an Elliot HiREACH L60 bucket truck. The truck has a walkway that extends from the main platform over the cab to the basket. (Ex. I).

3. Decedent and Mr. DS[Redacted] completed the job in the afternoon. Mr. DS[Redacted] went to another job, and Decedent stayed at the site to clean up and pick up his tools. Decedent called JN[Redacted] at Employer's office just before 2:00 p.m. to let him know the project was complete, and he planned to clean up. (Ex. I).

4. There is no evidence in the record that Mr. DS[Redacted] thought Decedent was impaired in any manner while they were working together on December 7, 2021.

5. There is no evidence in the record that Mr. JN[Redacted] thought Decedent was impaired in any manner when he spoke with Decedent around 2:00 p.m., on December 7, 2021.

6. Sometime between 2:00 p.m. and 3:00 p.m., Decedent attempted to egress from the man basket to the platform, but he slipped off the platform and fell head first on the pavement below. (Ex. I and Ex. 19).

7. At approximately 3:20 p.m. on December 7, 2021, the manager of DriveTime Auto found Decedent slumped over in his truck, disoriented, and "not acting normal." The manager called 911. (Ex. I).

8. Denver Health Paramedics responded to the scene. Decedent was groaning and unable to answer questions. The paramedics suspected that Decedent had been electrocuted. There were no medications or paraphernalia at the scene. The paramedics transported Decedent to the University of Colorado Health (UC Health) in Aurora. (Ex. 11).

9. According to the medical records, Decedent was admitted to the UC Health emergency department at 4:09 p.m. Decedent was agitated and at 5:20 p.m., Decedent was screaming in pain, "[p]lease let me go, I'm gonna freak out." Decedent was persistently confused and could not answer questions about what happened. The emergency department noted that no drugs or alcohol were found in Decedent's vehicle. (Ex. 12).

10. Decedent was intubated and taken to the neurosurgery operating room emergently for an intracranial hemorrhage. (Ex. 12) The medical team performed a suboccipital craniectomy for evacuation of the epidural hematoma. (Ex. G).

11. Despite substantial treatment at UC Health, Decedent died on December 21, 2022.

12. During the course of treatment, UC Health collected a sample of Decedent's whole blood, and a sample of Decedent's blood plasma. Both samples were collected at 4:15 p.m. on December 7, 2021, shortly after Decedent's admission. (Ex. 2 and Ex. 7).

13. UC Health also collected a sample of Decedent's urine, via catheter, at 9:29 p.m., about five and a half hours after his admission, on December 7, 2021. Decedent's urine test came back positive for benzodiazepines and cannabinoids. (Ex. G).

14. The ALJ finds that UC Health, a medical facility, conducted a forensic drug or alcohol test by testing Decedent's urine.

15. On December 10, 2021, a representative of Insurer called UC Health and requested a copy of Decedent's medical records. (Ex. G).

16. On December 13, 2021, Respondents sent a letter to UC Health demanding the hospital preserve Claimant's blood sample taken on December 7, 2021. (Ex. N).

17. On December 15, 2021, Respondents filed a General Admission of Liability, asserting a 50% penalty pursuant to section 8-42-112.5, C.R.S., and based on a safety violation. (Ex. A).

18. On December 15, 2022, Derrick McMillon, a Manager at UC Health, received an email indicating that specimens of Decedent's blood ***and*** urine samples had been retrieved and stored for preservation. He personally inspected and set aside three tubes of Decedent's fluids for preservation. One tube contained Decedent's whole blood (EDTA

anticoagulant). The second tube contained Decedent's plasma (lithium heparin with gel). The third tube contained Decedent's urine. (Ex. 14).

19. Respondents requested an emergency prehearing conference and represented that Decedent was in the ICU, incapacitated, and was not yet represented by counsel. Based on this representation, the PALJ held an *ex parte* hearing. Respondents were seeking to preserve "Claimant's blood sample taken on 12/7/21 that led to the positive controlled substance test results." On December 17, 2021, the PALJ granted Respondents' motions to preserve Decedent's blood sample and for leave to issue a subpoena to obtain a duplicate blood sample. (Ex. 17).

20. Decedent's medical records, which Respondents requested and reviewed, unequivocally state that the positive test for benzodiazepines and cannabinoids came from Decedent's urine sample, not his blood sample.

21. On January 12, 2022, Respondents filed a Fatal Case-General Admission and asserted a 50% penalty pursuant to section 8-42-112.5, C.R.S. In support of the penalty, Respondents attached the record of Decedent's December 7, 2021, positive urine drug test. (Ex. C).

22. On January 25, 2022, a pre-hearing conference was held on Claimants' request for the PALJ to reconsider his December 17, 2021 Order. Claimants asserted that the PALJ's Order "was based on incorrect factual information provided by Respondents' counsel. There was no blood sample tested for intoxicants. Rather, a urine drug screen indicated positive results for benzodiazepines and cannabinoids. This was indicated in medical records obtained from UC Health dated 12/7/21, which was in possession of Respondents as of 12/17/21." Ex. 18, p.75.

23. The PALJ found Claimant's request to reconsider his order to preserve the blood sample moot, as the blood was already preserved. Regarding Respondents' right to subpoena the blood, the PALJ stated "[w]hether or nor Claimant chooses to obtain the preserved blood sample for testing, if still available, will remain within Claimant's discretion. Nevertheless, there is no basis to permit Respondents to subpoena the blood sample and this portion of the 12/17/21 order is vacated." (Ex. 18).

24. On January 28, 2022, Mr. McMillon transferred the three tubes of Decedent's fluids to Wendy Degelman at Rocky Mountain Instrumental Laboratories. He stated in his affidavit that Decedent's urine sample, as established in the medical record, was taken and tested on December 7, 2021. (Ex. 14).

25. On January 28, 2022, Rocky Mountain Instrumental Laboratories took custody of the three tubes of Decedent's fluids: one tube of whole blood, one tube of plasma, and one tube of urine. (Exs. 1-10)

26. The Evidence Record – Custody form, from Rocky Mountain Instrumental Laboratories, notes a request for a quantitative analysis of Decedent's blood sample for THC/Benzos. There is no evidence in the record regarding the quantitative testing of Decedent's blood samples. (Ex. 1).

27. The ALJ finds that the only drug test that was positive for controlled substances, was the test conducted by UC Health on Decedent's urine on December 7, 2021.

28. According to the itemization of services, UC Health administered Midazolam to Decedent twice on December 7, 2021. They administered two units of Midazolam 1 mg/ml SOLN, and 50 units of Midazolam IN NS 50 mg/ 50 ml. There is no evidence in the record regarding the time Decedent received Midazolam on December 7, 2021. (Ex. 12, p.31).

29. Claimants retained Caroline M. Gellrick, M.D. to review Decedent's medical records and issues regarding his positive urine drug screen on December 7, 2021. Dr. Gellrick explained that Midazolam is a sedative hypnotic benzodiazepine used in emergency situations at hospitals, the ICU, and surgery centers. She specifically noted, "[i]t is well known that preop drugs and drugs that are used for agitation and sedation are in the benzodiazepine class and in this situation, Midazolam is a sedative hypotic benzodiazepine, and could have caused the positive drug screen for benzodiazepines." Dr. Gellrick opined that Decedent's positive test for benzodiazepines could be due to the Midazolam. (Ex. 13).

30. The ALJ finds that Decedent received benzodiazepines at UC Health on December 7, 2021.

31. Claimants assert that Decedent's urine sample was not separated into two samples prior to testing. Claimants further argue that an untested sample of urine was not saved, but the entire sample was tested and "dumped back into the tube." There is no evidence in the record to support this assertion.

32. Respondents retained toxicologist Michael Kosnett, MD., and he was admitted as an expert in medical toxicology. (Tr. 34:1-2).

33. Dr. Kosnett credibly testified that in his clinical experience with drug testing on urine, the original sample acts as a duplicate, as tests are not run on the whole sample, but on the portion that is separated off and tested, an aliquot. The remainder of the sample is untested and available for subsequent testing. He testified "when we talk about duplicate samples, we essentially would say that taking the same sample and then separating it represents a duplicate." (Tr. 37:14-38:24).

34. The ALJ finds that UC Health preserved a duplicate sample of Decedent's urine and made it available for testing.

35. In his report, Dr. Kosnett opined that Decedent's "positive urine drug test interpreted in isolation contributes relatively little if any information regarding the magnitude of the dose consumed, the date and time of consumption, and whether the donor was ever intoxicated by or under the influence of the drug. Many drugs and/or their metabolites, including those of THC and benzodiazepines, may be detectable in the urine for days to many weeks after the drug has last been consumed. This period of detection extends far beyond the interval of time that the drug exerts any pharmacodynamics effects, including neurocognitive or psychomotor impairment or intoxication. Acute

cannabis-induced decrements in psychomotor or neurocognitive performance, which may occur in some but not all users, typically resolve within six hour of cannabis smoking or vaping or within eight hours of cannabis ingestion." (Ex. J).

36. In his report, Dr. Kosnett cited a position statement from the American College of Medical Toxicology. The position statement noted: "[a] positive test for [THC] metabolite indirectly indicates that THC, a psychoactive compound in cannabis has been present in the body…The test results do not identify route of THC exposure, source of exposure, specific timing of exposure, dose, intentional or accidental nature of exposure, or clinical impairment." (Ex. J).

37. Dr. Kosnett credibly testified that the only test performed on Decedent, for controlled substances, the urine test, does not indicate when Decedent may have consumed any controlled substances. The test also does not indicate whether there were any active controlled substances present in Decedent's urine, or merely metabolites. Further, the positive urine test does not indicate whether Decedent was impaired in any way when he fell from the platform. (Tr. 44:18-45:9).

38. Dr. Kosnett opined "[i]n comparison to urine drug tests, analytical toxicology testing conducted on blood offers more informative data regarding the type of drug consumed, the dose administered, and the time since administration. . . . [T]here is a consensus that drug concentrations in the blood, rather than those in the urine, offer a better insight into the potential presence of impairing effects in an individual." (Ex. J)

39. The ALJ finds the opinions of Dr. Kosnett to be credible and persuasive.

40. The U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) issued a citation to Employer on April 29, 2022 for a serious level violation with respect to this incident. OSHA cited Employer for not providing and ensuring each employee uses a safe means of access and egress to and from walking-working surfaces. OSHA found Employer exposed employees to slip, trip and fall hazards, and that Decedent sustained serious injuries after falling to the parking lot while he was attempting to egress from the man basket to the platform. (Ex. 16).

41. OSHA determined that Employer modified the walking-working surface on Decedent's work truck. The platform that allowed Decedent to access and egress the bucket, while it was stowed over the head of the vehicle, was modified to a lower position. (Ex. 16).

42. Hellman & Associates conducted an investigation of the accident for Employer, and issued a report after viewing security footage and conducting interviews. In the report, Decedent's post-incident drug screen was noted as being positive for THC/Marijuana. This, however, was not listed as a contributing factor to the incident. Items that contributed to the incident included: used equipment unsafely, improper position/posture, and faulty design/construction. The "influence of intoxicant/drugs" was not found to be a contributing factor to the accident. (Ex. I).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Presumptive Intoxication Offset

The presumptive intoxication statute states:

> Nonmedical benefits otherwise payable to an injured worker are reduced fifty percent where the injury results from the presence in the worker's system, during working hours, of controlled substances, as defined in section 18-18-102 (5), C.R.S., that are not medically prescribed or of a blood alcohol

> level at or above 0.10 percent, or at or above an applicable lower level as set forth by federal statute or regulation, as evidenced by a forensic drug or alcohol test conducted by a medical facility or laboratory licensed or certified to conduct such tests. **A duplicate sample from any test conducted must be preserved and made available to the worker for purposes of a second test to be conducted at the worker's expense.** If the test indicates the presence of such substances or of alcohol at such level, it is presumed that the employee was intoxicated and that the injury was due to the intoxication. This presumption may be overcome by clear and convincing evidence.

§ 8-42-112.5, C.R.S. (emphasis added).

As the party seeking to impose a penalty, Respondents have the burden of proof to establish the predicates for application of the presumption. *Ray v. New World Van Lines,* W.C. No. 4-520-251 (ICAO Oct. 12, 2004) (citing *Lori's Family Dining v. ICAO,* 907 P.2d (Colo. App. 1995)). To apply the presumptive intoxication offset, Respondents must prove three factors: (1) the presence of a controlled substance during working hours; (2) as evidenced by a forensic drug test conducted by a medical facility or laboratory licensed or certified to conduct such test; and (3) that a duplicate sample from any test conducted was preserved and made available to the worker for purposes of a second test to be conducted at the worker's expense. §8-42-112.5, C.R.S.; *SkyWest v. Indus. Claim Appeals Office,* 2020 COA 131.

Respondents have met their burden of proof with respect to the first two factors. As found, on the day of the accident, Decedent underwent a forensic drug test at UC Health, a Medical Facility, and Decedent's urine drug screen was positive for benzodiazepines and cannabinoids. (Findings of Fact (FOF) ¶ 13). The disputed issue is whether the urine sample preserved by UC Health, and transferred to Rocky Mountain Laboratories, constitutes a ***duplicate sample*** for purposes of conducting a second test. While Decedent's blood and plasma samples were also preserved, made available for testing, and likely tested, these samples are not relevant. The only positive drug test was the test on Decedent's urine. (FOF ¶ 27).

Claimants argue that the single tube of Decedent's tested urine, does not constitute a "duplicate/second" sample of urine. Claimants rely on *Stohl v. Blue Mountain Ranch Boys Camp,* W.C. No. 4-516-764 (ICAO Feb. 25, 2005) for their position. In *Stohl,* the ICAO discussed the legislative intent behind the statutory requirement of a duplicate sample: "[t]he legislative history indicates that the requirement to preserve a second sample was enacted as a procedural protection against the possible reduction of benefits from a false positive result in the first blood sample testing. The General Assembly determined that given the magnitude of the evidentiary presumption created by an initial [positive] test result…the availability of a second sample for the Claimant to independently test is a necessary safeguard to the wrongful loss of benefits. . . . Therefore, the General

Assembly conditioned application of the penalty statute on the availability of a second sample for use by the Claimant to contest the accuracy of the initial test." *Stohl, supra.*

To discern the intent of the General Assembly, the examining authority must first examine the language of the statute. If the statutory language is clear and unambiguous, the words and phrases of the statute should be given their plain and ordinary meaning, and the statute must be applied as written unless the result is absurd. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550, 553 (Colo. 1998); *Spracklin v. Indus. Claim Appeals Office*, 66 P.3d 176, 178 (Colo. App. 2002). Statutory interpretations that render provisions superfluous or meaningless must be avoided. *Indus. Claim Appeals Office v. Orth*, 965 P.2d 1246, 1254 (Colo. 1998).

To the extent the language in the intoxication statute regarding a duplicate sample is ambiguous, the statute must be construed in light of the apparent legislative intent and purpose. *Henderson v. RSI, Inc*., 824 P.2d 91 (Colo. App. 1991). This language, however, is not ambiguous. The *American Heritage College Dictionary* (Third Ed.) defines duplicate as "identically copied from an original" and "existing or growing in two corresponding parts." Dr. Kosnett credibly testified that when a urine sample is tested for drugs, the original sample acts as a duplicate, as tests are not run on the whole sample, but on the portion that is separated off and tested, an aliquot. The remainder of the sample is untested and would be available for subsequent testing. (FOF ¶ 33). This testimony is uncontroverted. As found, UC Health preserved a duplicate sample of Decedent's urine and made it available for testing. (FOF ¶ 34). There is no evidence in the record of any test results from the duplicate sample of Decedent's urine.

The ALJ finds that Respondents proved by a preponderance of the evidence that the intoxication presumption applies. Claimants, however, can overcome this presumption by clear and convincing evidence. Clear and convincing evidence is evidence that is highly probable and free from serious and substantial doubt. *Metro Moving & Storage Co v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995).

As found, OSHA cited Employer for modifying the walking-working platform on Decedent's work truck. OSHA considered this a serious level safety violation, and cited and fined Employer. OSHA determined that this modification exposed employees to slip, trip, and fall hazards. (FOF ¶¶ 40-41).

Notwithstanding the positive urine drug screen, there is no evidence in the record that Decedent was impaired in any way on December 7, 2021, leading up to and including his fall. First, the investigation report specifically noted the following contributed to the incident: used equipment unsafely, improper position/posture, and faulty design/construction. Notably, the "influence of intoxicant/drugs" was not found to be a contributing factor to the accident. (FOF ¶ 42). Second, there is no evidence in the record, that Decedent's colleague, Mr. DS[Redacted], who worked with him on the day of the incident, had any concerns that Decedent was impaired in any way. (FOF ¶ 4). Third, Decedent spoke with Mr. JN[Redacted] at Employer's office shortly before the fall. There is no evidence in the record that Mr. JN[Redacted] thought Decedent was impaired in any

way. (FOF ¶ 5). Fourth, the paramedics noted that no drugs, medications, or paraphernalia were found on Decedent or in his work truck. (FOF ¶ 8).

As found, Decedent received benzodiazepines at UC Health on December 7, 2021. (FOF ¶ 30). Further, Respondents' expert credibly testified that a urine test does not indicate whether Decedent had any active controlled substances in his system at the time of the accident. Similarly, the urine test does not indicate the timing, dose, and intentional or accidental exposure to any controlled substances. Lastly, the urine test does not indicate that Decedent was impaired in any way at the time of his fall. (FOF ¶¶ 35-37). Based on the totality of the evidence, the ALJ finds that it is highly probable that Claimant's fall was not caused by the presence of any controlled substances.

The ALJ finds that Claimant has established by clear and convincing evidence that Decedent's fatal fall was not due to intoxication.

ORDER

It is therefore ordered that:

1. Respondents established by a preponderance of the evidence that the statutory predicates have been met to assert the intoxication penalty under section 8-42-112.5, C.R.S.

2. Claimant has established by clear and convincing evidence that Decedent's fatal fall was not caused by intoxication.

3. Respondents shall pay unreduced death benefits under W.C. No. 5-192-760-001 from December 7, 2021, until terminable by law.

4. Respondents shall pay unreduced temporary total disability benefits from December 7, 2021 until December 21, 2021.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 26, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the right shoulder arthroscopy with biceps tenodesis versus tenolysis and SAD requested by authorized treating physician (ATP) Michael Hewitt, M.D. is reasonable, necessary, and related to Claimant's admitted September 18, 2020 industrial injury.

FINDINGS OF FACT

1. Claimant is 47 years of age. Claimant has worked for Employer for approximately 14 years as a Technician I.

2. Claimant sustained an admitted industrial injury on September 18, 2020 when he was riding as a restrained passenger in the backseat of a work truck. The driver of the truck was reversing approximately 5-10 miles per hour to park and struck the dock.

3. Claimant testified at hearing that the vehicle was going at "high speed" and, immediately upon the truck hitting the dock, he was pushed back into the seat, his neck hit the head rest, and he experienced an immediate onset of neck and right-sided pain.

4. On September 21, 2020 Claimant presented Kelsey Smithart, M.D. at Denver Health with complaints of pain throughout the left side of his body. The "Location" section of the medical report lists left back, left hip, left knee, left lower leg and left shoulder. Claimant reported that he was in the jumpseat in the back of a truck that backed into a loading dock at approximately 5-10 miles per hour. Claimant reported that he did not feel much pain initially but realized he was in a lot of discomfort when he got home. Claimant complained of back stiffness/spasms, pain shooting down to the left knee, tingling in his left neck, and hip pain. Dr. Smithart noted,

> Pt reports his back was initially injured approx 9 years ago when he was driving snowplows for the city when he slid into a lightpole. Pt had lasting damage to the right side of his body and continues to work through the pain on a regular basis. Pt uses Tizanidine for his previous injury and takes Percocet every night. Pt stretches and continues his home PT exercises for right sided pain…Pt reports the left sided musculoskeletal pain is all new and from this most recent injury.

(Resp. Ex. A, p. 12.)

5. No new right-sided injury or complaints were noted. On examination, Dr. Smithart noted tenderness with the left-sided straight leg raise, as well as tenderness to the left clavicle and trapezius. There was tightness with palpation to the left trapezius. No

examination to the right side was documented. Dr. Smithart assessed Claimant with a muscle strain of lower back and placed Claimant on bilateral upper extremity restrictions. She referred Claimant for physical therapy and chiropractic treatment.

6. Claimant saw Alissa Koval, M.D. at Denver Health on October 28, 2020. The location of pain was noted as back, hip, neck and left shoulder. Dr. Koval noted Claimant presented for follow-up of his neck, left shoulder, upper back, and left hip. Claimant reported that the pain in his neck and left shoulder was largely unchanged, and that the pain was radiating into his hand and down into his upper back. No right-sided complaints were documented. Dr. Koval noted that she examined the general appearance and condition of the patient. No specific exam findings were documented. Dr. Koval assessed Claimant with a lower back strain, myalagia, and segmental and somatic dysfunction of the cervical, thoracic and lumbar regions. She referred Claimant to Robert Kawasaki, M.D.

7. On November 20, 2020 Dr. Koval again noted the location of Claimant's symptoms as his left neck and low back with no mention of right-sided complaints or findings.

8. On December 18, 2020, Claimant reported to Dr. Koval that his neck was bothering him more than his back. Neck and back exams were unchanged. Nothing was specified regarding Claimant's left or right side.

9. Claimant presented to Dr. Kawasaki on December 22, 2020. Dr. Kawasaki was familiar with Claimant, having provided maintenance treatment to Claimant for a prior low back injury. Regarding the mechanism of injury, Claimant reported that he was riding in the crew cab seat when the vehicle rammed into the loading dock in reverse traveling 5-10 miles per hour. Claimant reported that the crew cab seat was very tight and that the back seat did not have a headrest so the top of his shoulders were above the top of the seat, leaving his neck unsupported. Claimant further reported that he felt a jolting pain through his neck and low back when the collision occurred, and had since experienced pain from his neck down into his low back with increased pain in the neck and shoulder girdle region. Dr. Kawaski noted, "His pain was initially more on the left side but currently bilateral." (Resp. Ex. B, p. 54). Dr. Kawasaki did not document any examination of the left or right shoulders. He assessed Claimant with, *inter alia*, chronic pain syndrome, lumbosacral spondylosis without myelopathy and cervical spondylosis without myelopathy. He opined that Claimant suffered a new cervical strain with findings consistent of whiplash mechanism, and cervical spondylosis with facetogenic pain causing shoulder girdle myofascial irritation. Dr. Kawasaki ordered a cervical spine MRI.

10. Claimant continued to report pain at a telephone appointment with Dr. Smithart on January 8, 2021. Regarding the pain, Dr. Smithart noted, "Today it is primarily in his R shoulder and neck though it is typically in the center of his neck and in both shoulders." (Resp. Ex. A, p. 24).

11. At a follow-up evaluation with Dr. Kawasaki on January 18, 2021 Claimant reported increased pain, numbness and tingling down his right upper extremity. Dr. Kawasaki also noted pain in Claimant's neck and left shoulder.

12. Claimant returned to Dr. Smithart for a follow-up evaluation on January 22, 2021. The location of Claimant's injury was now noted to be the right neck and right shoulder. Claimant also endorsed occasional numbness and tingling of his right hand. On examination, Dr. Smithart noted active range of motion was limited by pain in the right upper extremity, full range of motion of the left upper extremity, and tenderness to palpation of right shoulder in the superior anterior quadrant, right upper scapula, and low thoracic spine.

13. On February 9, 2021 Claimant complained to Dr. Kawasaki of pain through his neck and shoulder girdles and into the right upper extremity.

14. On February 19, 2021 Claimant reported to Dr. Smithart fewer radicular symptoms in his right upper extremity, with sensations now only from the neck to right shoulder.

15. On February 23, 2021 Claimant's chiropractor, Mark Testa, D.C. remarked that Claimant's pain seemed to be more on the right, going into the right trapezius region.

16. On March 12, 2021, Dr. Kawasaki ordered an MRI of the right shoulder, which was obtained on March 24, 2021. Craig Stewart, M.D. gave the following impression of the MRI: "1. Moderate grade partial-thickness tear of the distal superior fibers of the subcapularis tendon. 2. Intact supraspinatus and infraspinatus tendons. 3. Sequela of an age-indeterminate low-grade acromioclavicular joint separation which may be chronic. Coracoclavicular ligaments are intact." (Cl. Ex. 4, p. 13).

17. Claimant reported pain in his neck, shoulder girdles and right shoulder at a follow-up evaluation with Dr. Kawasaki on April 6, 2021. On examination of the right shoulder, Dr. Kawasaki noted positive impingement signs, tenderness to palpation of the deltoid region, some give way pattern weakness with rotator cuff testing of supraspinatus testing, and some crepitus with motion particularly with abduction into overhead. He reviewed the right shoulder MRI, noting that Claimant had a partial tear of the subscapularis tendon.

18. Claimant presented to Michael Hewitt, M.D. on June 7, 2021. Claimant reported to Dr. Hewitt that he was injured when riding in the backseat of a work truck that struck a dock in reverse at approximately 20 miles per hour. Claimant reported that he experienced an immediate onset of cervical and shoulder pain, but did not lose consciousness. He denied a previous history of right shoulder issues. Claimant complained of lateral shoulder pain and night pain and radicular pain extending into his hand. On examination, Dr. Hewitt noted significant restriction of range of motion of the cervical spine. On the right side Dr. Hewitt noted positive impingement and positive biceps, and diffuse acromioclavicular bicipital groove and impingement. Dr. Hewitt reviewed the right shoulder MRI, noting no rotator cuff muscular atrophy, mild supraspinatus tendinopathy, leading edge subcapularis tearing with moderate biceps tendinopathy, and no displaced labral tear. He assessed Claimant with right diffuse shoulder pain with radicular symptoms status post whiplash injury. He noted that Claimant's shoulder findings on exam and MRI did not account for his primary pain complaints. Dr. Hewitt discussed treatment options, including conservative treatment,

injections and surgery. He recommended focusing on conservative management as Claimant's cervical spine appeared to be his primary pain generator.

19. On January 14, 2022 Dr. Kawasaki noted that Claimant had no relief from cervical medial branch block procedures. He noted that Claimant had a right C5-6 transforaminal steroid injection on December 17, 2021 with improvement 60-70% and improvement in his right arm but continued right arm pain. Dr. Kawasaki's January 14, 2022 report made no indication of a subacromial injection.

20. Dr. Hewitt reevaluated Claimant on February 7, 2022. He noted that Claimant underwent a subacromial injection with Dr. Kawasaki with significant improvement, but that Claimant's symptoms had since returned. A January 25, 2022 ultrasound report revealed subcapularis tendinopathy and medial subluxation of the biceps tendon. Dr. Hewitt opined that Claimant had undergone extensive conservative management and, given his persistent symptoms, MRI and ultrasound findings, as well as clinical examination, shoulder arthroscopy was medically appropriate.

21. On February 15, 2022, Dr. Hewitt requested authorization for right shoulder arthroscopy with biceps tenodesis vs. tenolysis and SAD, which was denied by Respondent.

22. On April 13, 2022, Michael Striplin, M.D. performed an Independent Medical Examination (IME) at the request of Respondent. Regarding the mechanism of injury, Dr. Striplin noted that Claimant was riding in the rear bench seat, the driver of the vehicle was backing up to the dock at the transportation department when the vehicle collided with the dock at approximately 20 to 25 miles per hour. Claimant reported being thrown forward and then thrown backward, striking his neck and right shoulder against the seatback and headrest. Claimant noted no immediate symptoms but an onset of neck pain and right shoulder girdle pain approximately 1.5 hours after the incident. Claimant complained of neck pain and right shoulder girdle pain and swelling of the right shoulder girdle and arm, limited right shoulder motion, and paresthesias in the right ring and little fingers occasionally involving the entire right hand. Claimant denied prior injuries or problems to his cervical spine, right shoulder and right upper extremity. On physical examination Dr. Striplin noted mild diffuse tenderness over the right shoulder girdle, and limited right shoulder range of motion.

23. Dr. Striplin noted that Claimant's report to him of neck and right shoulder pain the evening of the accident is inconsistent with medical records which indicate initial neck and left-sided symptoms, with focused attention to the right shoulder not occurring until March 12, 2021. He opined that Claimant's cervical pain is related to the September 18, 2020 work incident, but that Claimant's right shoulder complaints and right shoulder pathology on and ultrasound cannot be attributed to the work incident. Dr. Striplin explained that the March 2021 right shoulder MRI findings suggested a prior age undetermined injury. He noted that a right shoulder ultrasound performed on January 25, 2022 ultrasound showed an unremarkable right pectoralis tendon, apparent subcapularis tendinopathy or strain with at least moderate partial moderate partial articular surface

tear, and medial subluxation of the long head biceps tendon suggesting apparent biceps pulley mechanism dysfunction in addition to subcapularis tear.

24. Dr. Striplin's report documents a January 19, 2022 letter from Dr. Hewitt to Dr. Kawaski indicating that Claimant reported transient benefit from a right shoulder injection performed by Dr. Kawasaki, but the exact location of the injection was unclear. Dr. Striplin concluded that there was no actual evidence that Dr. Kawasaki performed a subacromial injection, let alone that Claimant had a diagnostic response to one. He opined that the diagnostic response that Claimant reported appeared to be from the cervical spine injections from the January 14, 2022 visit.

25. Claimant saw Jennifer Pula, M.D. on May 23, 2022. Dr. Pula noted that Claimant underwent a C5-6 transforaminal steroid injection and a C7 nerve block on the right on May 18, 2022. He reported that his right shoulder pain resolved for a few days but had since returned.

26. On June 3, 2022, Dr. Kawasaki noted that he was uncertain if the May 18, 2022 cervical transforaminal steroid injection was significantly helpful. Claimant continued to report pain in the right shoulder and down the right arm. Dr. Kawasaki stated he did not recommend additional injections for Claimant.

27. Claimant testified at hearing that prior to his admitted industrial injury he had no right upper extremity symptoms or limitations and was able to perform the full duties required of his position, that he has had pain in his right shoulder at the top going into the base of the trapezius and scapula since his admitted industrial injury of September 18, 2020. Claimant testified that references to left-sided complaints and symptoms in his early medical records are incorrect. He testified that he initially reported right-sided pain and was treating his right shoulder despite the medical records referencing the left shoulder. Claimant stated that he was unaware of any tear in his shoulder prior to March 24, 2021. Claimant testified that he had an injection in his shoulder performed by Dr. Kawasaki which provided temporary relief, but that the symptoms complained of in the shoulder extending into the scapula had returned.

28. On cross-examination, when Claimant was directed to a copy of the January 8, 2021 report by Dr. Smithart, Claimant testified that he did not know whether the subjective complaints in the report were accurate. Respondent's counsel pointed to the statements about the pain being primarily in Claimant's right shoulder and that the report documented Claimant reporting the pain typically being "in the center of his neck and both shoulders." Claimant responded, "I don't remember, honestly." (Hr'g Tr. 21:15). When asked to confirm that he did not remember specifically where his pain was, Claimant responded, "It was a year ago, honestly." (Hr'g Tr. 21:21). When asked whether he saw Dr. Koval after his first visit with Denver Health, Claimant testified that he did not see Dr. Koval until March 2021, despite the records showing that he saw Dr. Koval three times prior to March 2021, the earliest being October 28, 2020. Claimant then testified, "I don't really remember. It was so long ago. I think I seen about every doctor in that office." (Hr'g Tr. 20:16-18).

29. Dr. Striplin testified at hearing on behalf of Respondent as an expert in occupational medicine. He explained that it is difficult to be certain regarding Claimant's source of pain, stating it could be any or all of Claimant's MRI findings. He testified that does have pathology of the right shoulder evidence on MRI, but that the MRI does not evidence an acute injury. Dr. Striplin explained that the radiologist noted that the findings could suggest a prior injury. Dr. Striplin testified that the reported mechanism of injury is inconsistent with Claimant's MRI findings. He explained that shoulder injuries typically occur when falling onto a hand, when reaching over head or out to the side, or falling from a height and grabbing on to prevent the fall, and that being pressed back into a car seat would not cause injury to the shoulder. He discussed the discrepancies between Claimant's reports of the speed of the vehicle, testifying that he found it implausible that the vehicle was going 20-25 miles per hour. He testified that striking the dock at 5-10 miles per hour would not be expected to cause damage to the AC joint or produce a rotator cuff tear. Dr. Striplin further testified that he had never seen a shoulder injury whose symptoms did not manifest until months later. With regard to Dr. Hewitt's note that Claimant had a diagnostic response to a right shoulder injection, Dr. Striplin testified that he found no documentation in Dr. Kawasaki's reports that Dr. Kawasaki actually performed a right shoulder injection.

30. On cross-examination, Dr. Striplin testified that the recommended surgery is reasonable and that he does not dispute the necessity of the surgery. Dr. Striplin testified that, although there are references to the right shoulder in reports earlier than March 12, 2021, there remained a significant delay in Claimant's reports of right shoulder issues.

31. The ALJ finds the testimony of Dr. Striplin, as supported by the medical records, more credible and persuasive than the testimony of Claimant and the opinions of Drs. Kawasaki and Hewitt.

32. While the recommended right shoulder surgery is reasonable and necessary, Claimant failed to prove it is more probably true than not that the surgery recommended is causally related to his September 18, 2020 industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonably necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Claimant failed to prove it is more probably true than not the right shoulder surgery recommended by Dr. Hewitt is causally related to his September 18, 2020 industrial injury. Claimant's credibility is undermined by inconsistencies in his reports regarding the mechanism of injury and the onset and location of his symptoms.

Claimant reported to Dr. Smithart that the vehicle in which he was riding was going 5-10 miles per hour when it struck the dock and that he did not initially experience any pain. He then reported to Dr. Kawasaki the same speed, but that he experienced pain in his neck and low back during the collision. Dr. Kawasaki noted there was no headrest on Claimant's seat. Claimant later reported to Dr. Hewitt that the vehicle was going 20 miles per hour and that he experienced an immediate onset of neck and right shoulder pain. He later reported to Dr. Striplin that the vehicle was going 20-25 miles per hour, he struck the headrest, and experienced no immediate symptoms. Claimant testified at hearing that the vehicle was going at high speed and that he hit the headrest during the collision. Based

on the description of the accident, in which the driver was backing up into a dock to park, the ALJ is not persuaded it was likely the driver was going 20-25 miles per hour. Dr. Striplin credibly opined that it is not medically probable the mechanism of injury, striking the dock at 5-10 miles per hour, caused Claimant's right shoulder pathology and need for treatment.

Despite early medical records being devoid of any mention of right-sided complaints or findings, Claimant purports that he initially reported right shoulder and right-sided issues and that, since the beginning of his treatment, the treatment was focused on his right side. Claimant's contention is incredible based on a comprehensive review of the medical records. At Dr. Smithart's initial evaluation on September 21, 2020, she specifically made a distinction between Claimant's pre-existing right shoulder pain from a prior injury, and "new" left-sided pain from the September 18, 2020 incident. Additionally, the medical record from this evaluation does not document any examination of the right side. Claimant attended follow-up evaluations in October 2020 and November 2020, which also contain no reference to right-sided complaints or examinations of the right side. Dr. Kawasaki's December 22, 2020 medical note further contradicts Claimant's contention by stating that Claimant's pain initially was more on the left side but is currently bilateral. Dr. Smithart's January 8, 2021 note also undermines Claimant's argument in specifying that, on that particular day, Claimant's pain was primarily in the right shoulder although "typically center and both shoulders." While typographical errors in medical records are certainly possible, here, the ALJ is not persuaded that multiple providers at different over multiple visits failed to accurately document Claimant's reported symptoms and failed to examine the specific body parts about which Claimant allegedly complained.

Dr. Striplin credibly testified at hearing testified at hearing that Claimant's shoulder, had it been injured in the work incident, would have exhibited symptoms much sooner than three months after the date of injury. Dr. Striplin also credibly testified that the mechanism described by Claimant would not be anticipated to, and did not, cause a Claimant's shoulder injury. Based on the totality of the evidence, the preponderant evidence does not demonstrate the surgery is causally related to the September 18, 2020 work injury.

ORDER

It is therefore ordered that:

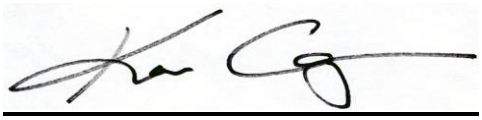
1. Claimant failed to prove by a preponderance of the evidence the right shoulder surgery recommended by Dr. Hewitt is causally related to his September 18, 2020 industrial injury. Claimant's claim is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their General Admission of Liability (GAL) acknowledging that Claimant suffered an industrial injury during the course and scope of her employment with Employer on December 3, 2019.

FINDINGS OF FACT

1. Claimant is a 42-year-old female who began working for Employer on October 14, 2019 in the position of General Labor/Hand Pack. The hand packing job involves manually picking up frozen string cheese sticks as they proceed down a conveyor belt. The worker gathers the cheese sticks together with both hands, straightens them, then pivots to place the cheese in a box. Each handful weighs anywhere from two to five pounds. Once the box is filled with 15-pounds of cheese, it is placed onto a roller to move to the next conveyor. The workers wear freezer gloves as well as one or two pairs of thick yellow gloves to help protect them from the cold product. The working environment is room temperature.

2. Claimant worked four days each week for 10 hours each day. She began her shift at 8:30 p.m. and worked until 6:00 a.m. Claimant received two 15-minute breaks and a 30-minute lunch period.

3. Employer's Processing Supervisor VF[Redacted] explained there are up to 12 stations in the hand packing line. The individuals at the front of the line box more cheese than those at the end of the line. In reviewing a photo of the hand packing line as one of the Exhibits, Ms. VF[Redacted] noted that individuals in stations 9-12 of the line had no cheese sticks to pack. She generally remarked that there are normally periods of time when workers near the end of line have no cheese to pack. Ms. VF[Redacted] also commented that employees rotate positions every hour on the line. Finally, she explained that employees are instructed to scoop the cheese with tucked elbows in armfuls of approximately two to five pounds.

4. Ms. VF[Redacted] detailed the reasons and process for rotating packing stations every hour. She remarked that employees do not rotate stations sequentially because they will not have adequate time to rest. Instead, workers rotate approximately five to seven stations down the line. For example, if a worker started at station eight and proceeded five stations down the line, she would rotate to station 1. The worker would then rotate the next hour to station 6. Similarly, if a worker rotated seven stations hourly and began at station 1, she would move to station eight. Ms. VF[Redacted] remarked that the rotating process gives employees "variety where they're not getting that much cheese because we found out that the first two stations normally get the vast amount of cheese. So to alleviate that pressure, we rotate them." She summarized that rotating stations gives

employees on the line a “period of time where they can sit at the end of the line and, kind of, get a breather.”

5. Ms. VF[Redacted] explained that hand packing is not performed on a daily basis, and employees engage in a variety of related jobs on off-days. On certain days, workers will “pick cheese.” The process involves identifying defective cheese sticks moving down a conveyor belt. If a defective cheese stick is found, the employee picks it up and drops it into a nearby tub.

6. The “bag tuck” position is another job on non-hand-pack days. The duties involve flipping over each side of the plastic bag in a box of cheese. The worker then folds the bag over the cheese and closes the flaps of the box.

7. Another job is “bag spotting.” The employee observes the boxes proceeding down the conveyor belt to make sure the plastic bags inside the boxes are in the proper positions. They then straighten the bags when necessary.

8. Employees also perform cleaning tasks. The worker uses a grabber to pick up cheese that has fallen on the floor and drops it into a tub. On some days there is nothing to clean and on other days employees may have to pick up fallen cheese for about 20 minutes out of an hour.

9. During Claimant’s first several weeks working for Employer she received training. Specifically, from October 14-26, 2019 Claimant engaged in computer-based education. For the next couple of weeks, Claimant shadowed other employees and began learning her various duties.

10. On November 18, 2019 Claimant began working in the hand packing position without shadowing a fellow employee. Hand packing was not performed again until November 25, 2019, when Claimant worked a 10.25-hour shift. Claimant did not return to hand-packing until December 2, 2019, when she worked a 12-hour shift. On the morning of December 3, 2019 Claimant reported to Ms. VF[Redacted] that she felt an aching and throbbing pain in her index finger. Ms. VF[Redacted] removed Claimant from the rotation and limited her to picking cheese.

11. On December 3, 2019 Claimant visited Brush Family Medicine and saw Ryan Reiss, NP for an evaluation. Claimant told NP Reiss that her job was to constantly dip her hands into cheese, squeeze it together, and fold it over in a mixing motion. She complained of severe right wrist pain when moving her right thumb. Claimant felt that the pain had been building over the previous three to four weeks. Physical examination revealed pain to palpation of the right wrist at the base of the thumb. NP Reiss assessed Claimant with right wrist pain that was likely related to de Quervain’s tenosynovitis. Claimant received a thumb spica splint and was restricted to limited lifting and use of the right hand. She subsequently attended six visits of physical therapy.

12. Claimant was placed on light duty from December 3, 2019 until February 11, 2020. On February 13, 2020 she performed the cheese picking job. On February 18,

2020 Claimant worked as break relief with no hand packing. She then worked 4.5 hours on February 19, 2020 in an unknown capacity.

13. On February 18, 2020 Respondents filed a General Admission of Liability (GAL). Respondents acknowledged that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits as a result of her December 3, 2019 industrial injury.

14. Claimant returned to the hand packing line on February 20-21, 2020. She did not work on February 22, 2020 and no hand packing was performed on February 23, 2020. On February 24, 2020 Claimant covered breaks on the hand packing line and worked for a maximum of five hours. Claimant again performed hand packing on February 25, 2020. On February 26, 2020 Claimant's work duties included bag spotting, picking cheese and other non-hand packing tasks.

15. On February 27, 2020 Claimant returned to NP Reiss for an evaluation. He noted that Claimant had returned to full duty with no lingering complaints. Claimant reported that on her second day back to work, she experienced bruising on the palm of her hand. NP Reiss noted that the pain over the base of the thumb had resolved and Claimant now reported pain radiating down into all four fingers. He placed Claimant on restrictions of limited use of the right hand up to five pounds.

16. Claimant never returned to work for Employer after February 26, 2020. She subsequently applied for social security disability benefits.

17. On March 16, 2020 NP Reiss remarked that Claimant's pain was in a different location than the previous two visits. Instead of pain over the base of her right thumb or in the palm of her hand, she now reported pain in the right wrist. NP Reiss documented that Claimant's wrist pain occurred after working in her garage at home. He referred Claimant to Gregory Reichhardt, M.D. for further evaluation and a possible impairment rating.

18. Claimant first visited Dr. Reichhardt for an evaluation on April 21, 2020. She informed him that her job involved grabbing a five to six-pound bundle of cheese and placing it in a box. She explained that her right wrist, thumb and distal forearm had all turned purple. Dr. Reichhardt assessed possible carpal tunnel syndrome and de Quervain's tenosynovitis. He could not rule out Chronic Regional Pain Syndrome (CRPS). Dr. Reichhardt recommended an EMG nerve conduction study.

19. On August 18, 2020 Claimant continued to report pain to Dr. Reichhardt over the volar aspect of her right wrist. Dr. Reichhardt saw no evidence of allodynia, hyperpathia, vasomotor changes, skin, hair, or nail trophic changes, and no sudomotor changes. After reviewing an August 13, 2020 right wrist MRI, Dr. Reichhardt assessed a ganglion cyst.

20. On October 21, 2020 Dr. Reichhardt recommended a pain psychology evaluation due to Claimant's reported significant anxiety. He assessed Claimant with

delayed recovery. At a November 3, 2020 examination Claimant demonstrated allodynia over the ulnar aspect of the right hand.

21. On February 9, 2021 Claimant visited George Schakaraschwili, M.D. for a CRPS evaluation. After QSART and thermogram testing, Dr. Schakaraschwili determined the findings were consistent with CRPS.

22. On March 30, 2021 Joseph B. Blythe, MA, CRC, performed a Job Demands Analysis (JDA) for the position of General Labor/Hand Pack at Employer's facility. He noted that Claimant's job duties while performing hand packing involved gathering cheese sticks bilaterally from a conveyor line and placing them into a shipping box until it weighed approximately 15 pounds. Once the correct weight was attained, the employee pushed the shipping box across rollers to a conveyer. The worker then transferred shipping boxes from the line to a packing table and repeated the process. The work cycle of filling a box of cheese and starting a new one measured between 28 and 41 seconds.

23. Mr. Blythe remarked that Claimant had been diagnosed with de Quervain's tenosynovitis. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Mr. Blythe did not find evidence of any Primary Risk Factors involved in Claimant's job duties. The only Secondary Risk Factor involved the handling of frozen foods because the temperature of the cheese sticks was 10 degrees Fahrenheit or less. He emphasized that the Factor could not stand alone and required assessment in combination with other Secondary Risk Factors. However, there were no others present.

24. Mr. Blythe specifically conducted time studies of workers' awkward posture and repetition/duration during the hand pack process. In assessing whether Claimant engaged in four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees, he determined she did not meet the threshold in the *Guidelines*. Claimant specifically spent 22 minutes and 11 seconds over a two-hour period, or 11.1 minutes each hour, performing the activities. The measurements transferred to 1.9 hours each day or 48% of the 4.0 hours per day threshold. Mr. Blythe also considered whether Claimant spent four hours of supination/pronaton with task cycles of 30 seconds or less or awkward posture was used for at least 50% of task cycle. He found none. Finally, Mr. Blythe timed Claimant's elbow flexion > 90 degrees. He measured only 30.0 minutes each day or 17% of the 3.0 hours/day Secondary Risk Factor.

25. On June 7, 2021 Carlos Cebrian, M.D. conducted an independent medical examination of Claimant. After reviewing Claimant's medical records, performing a physical examination and considering Mr. Blythe's JDA, Dr. Cebrian conducted a causation analysis pursuant to the *Guidelines*. Dr. Cebrian explained that, in order to perform a medical causation analysis for a cumulative trauma condition, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated Primary Risk Factors. He initially noted that Claimant had been diagnosed with de Quervain's tenosynovitis.

26. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for

Force and Repetition/Duration. Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The category requires four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees. Other risk factors in the category are six hours of elbow flexion > 90 degrees or six hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Dr. Cebrian concluded Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum thresholds in the *Guidelines*.

27. Because there were no Primary Risk Factors, Dr. Cebrian reviewed the Secondary Risk Factors delineated in the *Guidelines*. Notably, any Secondary Risk Factor must be physiologically related to the diagnosis. In performing the JDA, Mr. Blythe determined that Claimant had a Secondary Risk Factor for exposure to handling frozen foods that were 10 degrees for four hours. Because of the presence of the Secondary Risk Factor, Dr. Cebrian considered the Diagnosis-Based Risk Factor Table for Claimant's specific diagnosis of de Quervain's tenosynovitis. Dr. Cebrian concluded there was no correlation between the handling of frozen foods and the development of de Quervain's tenosynovitis. Claimant thus did not suffer a cumulative trauma condition as a result of her work activities for Employer. Dr. Cebrian summarized that Claimant's "right upper extremity complaints were never causally related to her work [for Employer]. No treatment should have occurred under the 12/3/2019 claim."

28. On December 26, 2021 Vocational Evaluator Daniel Best authored a JDA for Claimant's position as General Labor/Packager at Employer's facility. He explained that Claimant's job duties involved standing at a conveyor and repeatedly grasping from two to three pounds of frozen mozzarella cheese sticks weighing two ounces each into a plastic lined shipping box. Once the box weighed approximately 15 pounds, the worker pushed it down a roller to another conveyor belt exiting the packaging area. Mr. Best noted that filling a shipping box takes about 30 to 45 seconds. A task cycle involves reaching to full forward extension, using hands/wrists/fingers to align the product, scooping and lifting approximately 2.5 pounds of frozen cheese sticks, twisting and placing each bundle into a lined box. At the rate of five handfuls every 45 seconds, a task cycle is about 6.7 times each minute or every nine seconds. Mr. Best emphasized that each bilateral task cycle for Claimant's job duties requires reaching, twisting the hands to manipulate/grip/grasp/lift/move and transfer each handful of frozen cheese sticks.

29. Relying on the Primary and Secondary Risk Factors delineated in the *Guidelines*, Mr. Best explained that Claimant did not satisfy the requisite force and repetition/duration requirements to demonstrate a cumulative trauma condition. However, in evaluating awkward posture and repetition/duration as a Primary Risk Factor, Mr. Best concluded that Claimant exhibited four hours of wrist flexion greater than 45°, extension greater than 30°, or ulnar deviation greater than 20°. He also found that Claimant engaged in four hours of supination/pronation with task cycles of 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Claimant also met the Secondary Risk Factor of three hours of elbow flexion greater than 90°. Finally, Claimant satisfied the

Secondary Risk Factor of Ambient temperature of 45°F or less for four hours or more, such as handling frozen foods that are 10 degrees.

30. On May 27, 2022 Mr. Blythe performed a second JDA to evaluate the other duties Claimant performed after learning that the actual hand-packing job was only one of several tasks. He specifically considered Claimant's duties as Bag Tuck Helper, Bag Spotter, Picker and Cleaner. Mr. Blythe did not find any Primary or Secondary Risk Factors in the preceding job duties.

31. Mr. Blythe testified consistently with his JDA that Claimant did not exhibit any Primary Risk Factors pursuant to the *Guidelines* for the development of a cumulative trauma condition. The only Secondary Risk Factor involved the handling of frozen foods. He explained that his job is to ascertain the number of hours per day that risk factors exist in a job. Mr. Blythe remarked that the threshold for awkward wrist posture is four hours or more per day. He commented "that's extremely difficult to do, based on my, you know, thousands of observations of work sites because, essentially, a worker almost has to be in a static posture for half of the workday" to meet the threshold. Notably, although Mr. Blythe noted ulnar deviation while observing the hand packing position, the amount of time was insufficient to satisfy the threshold level because the workers were not in a static position. Furthermore, Mr. Blythe disagreed with Mr. Best's determination regarding the Primary Risk Factors of awkward posture and repetition/duration. He explained that Mr. Best did not visit Claimant's jobsite and was unable to time or count her activities. Moreover, Mr. Best did not specifically identify the Primary Risk Factors that were present within each category. He specifically did not mention whether awkward posture while performing the hand packing position involved flexion, extension or ulnar deviation.

32. Mr. Best also testified consistently with his JDA that Claimant satisfied the Primary Risk Factors of awkward posture and repetition/duration for the development of a cumulative trauma condition. Claimant also met the threshold for two Secondary Risk Factors. Mr. Best detailed that the activity of moving from a neutral position of the wrist to a scooping position constitutes a 90-degree supination. Furthermore, the grasping motion in placing the hands down to pick up a bundle of cheese involves an ulnar deviation. He remarked that in every picture in Mr. Blythe's report the employees are either engaging in ulnar deviation with their hands and wrists and/or elbow flexion at 90 degrees or more. Mr. Best emphasized that employees filled a box every 30 to 45 seconds. A task cycle occurs about every nine seconds during each shift. Therefore, the awkward posture of four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation of greater than 20 degrees met the minimum threshold to constitute a Primary Risk Factor under the *Guidelines*.

33. Mr. Best disagreed with Mr. Blythe's analysis. He explained that, according to OSHA, a repetitive task is one that is performed in the same way for a prolonged period. Mr. Best remarked that the hand packer position should be considered not just as filling a box with cheese every 28 to 41 seconds, but as grabbing handfuls of cheese every nine seconds to place them in a box. He specified that individuals are basically performing the same activity every minute until there is a break period. "So, it's a very highly repetitive job, and that's why they rotate those positions."

34. Dr. Cebrian persuasively maintained that Claimant did not suffer a cumulative trauma condition while working as a hand packer for Employer. He reiterated that Claimant suffered from de Quervain's tenosynovitis. Dr. Cebrian noted that Claimant performed other duties besides hand packing cheese sticks while working for Employer. He commented that Claimant only worked as a hand packer for approximately five days prior to the development of her symptoms. Claimant's other job activities rendered her tasks less repetitive and forceful. They thus reduced her exposure to the only Secondary Risk Factor of a cold environment. Considering the JDA, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties on the hand packing line failed to meet the causation requirements for a cumulative trauma condition. He compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. In considering the Primary Risk Factor Definition Table for Force and Repetition/Duration, Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. He summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Claimant thus did not suffer an occupational disease in the form of de Quervain's tenosynovitis or subsequent CRPS.

35. Dr. Cebrian explained that the period of time an individual performs a job is relevant to determining whether she has suffered a cumulative trauma condition. In reviewing the *Guidelines* and considering Level II training, there is no mention of a requisite time period for the development of certain cumulative trauma conditions. Instead, "there are many factors that can go into a situation as to whether somebody has a cumulative trauma condition." In specifically addressing Claimant's diagnosis, Dr. Cebrian noted that whether "she worked 20 years doing this job, she didn't rise to the level of having any kind of primary risk factor or a secondary risk factor that correlated with the diagnosis-based risk factor table that would come up with a cumulative trauma condition." He maintained that physicians exercise discretion and utilize clinical experience in determining whether an individual has suffered a cumulative trauma condition based on work exposure.

36. On August 25, 2022 the parties conducted the post-hearing evidentiary deposition of Dr. Reichhardt. He diagnosed Claimant with de Quervain's tenosynovitis and explained that the causes of the condition are typically activities that "involve gripping, grasping, repetitive movement of the thumb, the digits of the hand, the wrist, pronation and supination, repetitive wrist flexion, awkward postures with the wrist." In considering the causes of Claimant's condition, Dr. Reichhardt reviewed the JDA's prepared by Mr. Blythe and Mr. Best. However, after rejecting Mr. Blythe's analysis based on cycle times, Dr. Reichhardt relied on the nine second task cycles calculated by Mr. Best. He concluded that Claimant satisfied the minimum threshold in the *Guidelines* for the development of a cumulative trauma condition. Dr. Reichhardt detailed that the cycle time involved grabbing one bundle of cheese, not filling a box with cheese.

37. Dr. Reichhardt also addressed the length of time Claimant had engaged in hand packing while working for Employer. He explained that, even if Claimant had only worked as a hand packer for a single day, she could have developed a cumulative trauma

condition. Dr. Reichhardt remarked that Claimant's de Quervain's tenosynovitis ultimately developed into CRPS. However, Dr. Reichhardt acknowledged that the studies utilized by Rule 17 of the *Guidelines* in developing its evidence-based criteria probably did not involve subjects who had only been on the job for a few days. He also noted that individuals typically suffer a gradual onset of pain during the development of de Quervain's tenosynovitis.

38. Respondents have demonstrated that it is more likely than not that they are entitled to withdraw their GAL acknowledging that Claimant suffered an occupational disease during the course and scope of her employment with Employer on December 3, 2019. A review of Claimant's job duties as a hand packer reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. The hand packing position involves manually picking up frozen string cheese sticks as they proceed down a conveyor belt. The worker gathers the cheese sticks with both hands, straightens them, and pivots to place the sticks in a box.

39. Ms. VF[Redacted] explained there are up to 12 stations in the hand packing line. The individuals at the front of the line pack more cheese than those at the end of the line. Ms. VF[Redacted] remarked that there are normally periods of time when workers near the end of line have no cheese to pack. She also commented that employees rotate positions on the line every hour. Ms. VF[Redacted] detailed the reasons and process for rotating packing stations. She remarked that employees do not rotate stations sequentially because they will not have adequate time to rest. Ms. VF[Redacted] explained that workers rotate approximately five to seven stations down the line. She commented that the rotating process gives employees "variety where they're not getting that much cheese because we found out that the first two stations normally get the vast amount of cheese. Finally, Ms. VF[Redacted] remarked that hand packing is not performed on a daily basis and employees engage in a variety of related jobs on off-days.

40. Relying on the *Guidelines,* Mr. Blythe conducted a JDA and performed time studies of the hand packer position. He did not find evidence of any Primary Risk Factors involved in Claimant's job duties. The only Secondary Risk Factor involved the handling of frozen foods because the temperature of the cheese sticks was 10 degrees Fahrenheit or less. He emphasized that the Factor could not stand alone and required assessment in combination with other Secondary Risk Factors, However, there were no others present. Mr. Blythe specifically conducted time studies of workers' awkward posture and repetition/duration during the hand packing process. In assessing whether Claimant engaged in four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees, he determined she did not meet the minimum threshold in the *Guidelines*. Claimant specifically spent 22 minutes and 11 seconds over a two-hour period, or 11.1 minutes each hour, performing the activities. The measurements transferred to 1.9 hours each day or 48% of the 4.0 hours per day threshold. Mr. Blythe also considered whether Claimant engaged in excess of four hours per day of supination/pronaton with task cycles of 30 seconds or less or awkward posture was used for at least 50% of task cycle. He found none. Finally, Mr. Blythe timed Claimant's elbow flexion > 90 degrees. He measured only 30.0 minutes each day or 17% of the 3.0 hours/day Secondary Risk Factor.

41. Dr. Cebrian persuasively maintained that Claimant did not suffer a cumulative trauma condition while working as a hand packer for Employer. He diagnosed Claimant with de Quervain's tenosynovitis. Dr. Cebrian noted that Claimant performed other duties besides hand packing cheese sticks. He commented that Claimant was only working as a hand packer for approximately five days prior to the development of her symptoms. Claimant's other job activities rendered her tasks less repetitive and forceful. They thus reduced her exposure to the only Secondary Risk Factor of a cold environment. Considering Mr. Blythe's JDA, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties on the hand packing line failed to meet the causation requirements for a cumulative trauma condition. In considering the Primary Risk Factor Definition Table for Force and Repetition/Duration, Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. He summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Claimant thus did not suffer an occupational disease in the form of de Quervain's tenosynovitis or subsequent CRPS.

42. In contrast, in evaluating awkward posture and repetition/duration as a Primary Risk Factor, Mr. Best concluded that Claimant exhibited four hours of wrist flexion greater than 45°, extension greater than 30°, or ulnar deviation greater than 20°. He also found that Claimant engaged in four hours of supination/pronation with task cycles of 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Claimant also had the Secondary Risk Factor of three hours of elbow flexion greater than 90°. Finally, Claimant satisfied the Secondary Risk Factor of Ambient temperature of 45°F or less for four hours or more. Mr. Best noted that filling a shipping box takes about 30 to 45 seconds. He explained that a task cycle involves reaching to full forward extension, using hands/wrists/fingers to align the product, scooping and lifting approximately 2.5 pounds of frozen cheese sticks, twisting, and placing each bundle into a lined box. At the rate of five handfuls every 45 seconds, a task cycle is about 6.7 times each minute or every nine seconds.

43. After rejecting Mr. Blythe's analysis based on cycle times, Dr. Reichhardt relied on the nine second task cycles calculated by Mr. Best. He concluded that Claimant satisfied the minimum threshold in the *Guidelines* for the development of a cumulative trauma condition. Dr. Reichhardt explained that the cycle time involved grabbing a bundle of cheese and placing it in a box, not filling a box with cheese. Dr. Reichhardt also addressed the length of time Claimant had engaged in hand packing while working for Employer. He explained that, even if Claimant had only worked as a hand packer for a single day, she could have developed a cumulative trauma condition. Dr. Reichhardt concluded that Claimant's de Quervain's tenosynovitis ultimately developed into CRPS.

44. Despite the JDA of Mr. Best and the medical opinion of Dr. Reichhardt, the record reflects that Respondents have demonstrated that Claimant did not likely suffer a cumulative trauma condition while working for Employer. Initially, Dr. Reichhardt's opinion was predicated on Mr. Best's determination that a task cycle lasted nine seconds. Mr. Best calculated the task cycle by using a rate of five handfuls every 45 seconds to fill a 15-pound box with cheese sticks. However, Mr. Blythe credibly commented that Mr. Best

did not visit Claimant's jobsite and was unable to time or count the activities of a worker on the hand packing line. He remarked that the threshold for awkward wrist posture of four hours or more per day is difficult to achieve because "essentially, a worker almost has to be in a static posture for half of the workday" to meet the threshold."

45. Although Mr. Blythe noticed ulnar deviation while observing the hand packing position, the amount of time was insufficient to satisfy the threshold level delineated in the *Guidelines* because the workers were not in a static position. Mr. Blythe specifically conducted time studies of workers' awkward posture and repetition/duration during the hand packing process. In assessing whether Claimant engaged in four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees, he calculated she spent 22 minutes and 11 seconds over a two-hour period, or 11.1 minutes each hour, performing the activities. The measurements transferred to 1.9 hours each day or 48% of the 4.0 hours per day threshold. Mr. Blythe's time measurements are consistent with the *Guidelines*. The *Guidelines* specify that "[h]ours are calculated by adding the total number of hours per day during which the worker is exposed to the defined risk. Breaks, time performing other activities, and inactive time are not included in the total time. W.C.R.P. Rule 17, Exhibit 5, p. 21.

46. Mr. Best's analysis also failed to consider that workers on the cheese packing line rotate hourly to reduce the strain on employees at the beginning of the line. Ms. VF[Redacted] credibly remarked that the individuals at the front of the line pack more cheese than those at the end of the line. She detailed the reasons and process for rotating packing stations. Ms. VF[Redacted] noted that employees do not rotate stations sequentially because they will not have adequate time to rest. She explained that workers rotate approximately five to seven stations down the line. In contrast, Mr. Best simply relied on Claimant repeatedly picking up 2.5 pound handfuls of cheese every nine seconds throughout her shift. Although the preceding assumption may apply to workers at the front of the line, Employer purposely limited the occupational exposure of employees by rotating them down the line so there were fewer cheese sticks to grab.

47. The record reveals that Claimant was only on the hand packing line for three prior to her report of symptoms on December 3, 2019. Dr. Reichhardt commented that, even if Claimant had only worked as a hand packer for a single day, she could have developed a cumulative trauma condition. However, Dr. Cebrian persuasively explained that the period of time an individual performs a job is relevant to determining whether she has suffered a cumulative trauma condition. In reviewing the *Guidelines* and considering Level II training, he noted "there are many factors that can go into a situation as to whether somebody has a cumulative trauma condition." Dr. Cebrian maintained that physicians exercise discretion by using clinical experience to consider whether an individual has suffered a cumulative trauma condition based on work exposure. Furthermore. Dr. Reichhardt acknowledged that the studies utilized by Rule 17 of the *Guidelines* in developing evidence-based criteria probably did not involve subjects who had only been on the job for a few days.

48. Based on Mr. Blythe's JDA, a review of Claimant's job duties and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive

activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Respondents have thus demonstrated that they are entitled to withdraw their GAL acknowledging that Claimant suffered an occupational disease during the course and scope of her employment with Employer on December 3, 2019.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. Generally, a claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Off.,* 989 P.2d 251, 252 (Colo. App. 1999). However, §8-43-201, C.R.S. provides that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." On February 18, 2020 Respondents filed a GAL acknowledging that Claimant was entitled to receive medical benefits and TTD benefits as a result of her December 3, 2019 industrial injury. Because Respondents seek to withdraw their GAL, they bear the burden of proof by a preponderance of the evidence.

6. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds of pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three hours of two pounds of pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing at least two pounds. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the *Guidelines* provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, pp. 24-26.

8. Rule 17, Exhibit 5 instructs physicians about using risk factors for assessing causation of a cumulative trauma condition. After determining a diagnosis and defining the job duties of the worker, physicians should compare the worker's duties with the Primary Risk Factor Definition Table. The *Guidelines* specify that "[h]ours are calculated

by adding the total number of hours per day during which the worker is exposed to the defined risk. Breaks, time performing other activities, and inactive times are not included in the total time. W.C.R.P. Rule 17, Exhibit 5, p. 21.

9. As found, Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their GAL acknowledging that Claimant suffered an occupational disease during the course and scope of her employment with Employer on December 3, 2019. A review of Claimant's job duties as a hand packer reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. The hand packing position involves manually picking up frozen string cheese sticks as they proceed down a conveyor belt. The worker gathers the cheese sticks with both hands, straightens them, and pivots to place the sticks in a box.

10. As found, Ms. VF[Redacted] explained there are up to 12 stations in the hand packing line. The individuals at the front of the line pack more cheese than those at the end of the line. Ms. VF[Redacted] remarked that there are normally periods of time when workers near the end of line have no cheese to pack. She also commented that employees rotate positions on the line every hour. Ms. VF[Redacted] detailed the reasons and process for rotating packing stations. She remarked that employees do not rotate stations sequentially because they will not have adequate time to rest. Ms. VF[Redacted] explained that workers rotate approximately five to seven stations down the line. She commented that the rotating process gives employees "variety where they're not getting that much cheese because we found out that the first two stations normally get the vast amount of cheese. Finally, Ms. VF[Redacted] remarked that hand packing is not performed on a daily basis and employees engage in a variety of related jobs on off-days.

11. As found, relying on the *Guidelines,* Mr. Blythe conducted a JDA and performed time studies of the hand packer position. He did not find evidence of any Primary Risk Factors involved in Claimant's job duties. The only Secondary Risk Factor involved the handling of frozen foods because the temperature of the cheese sticks was 10 degrees Fahrenheit or less. He emphasized that the Factor could not stand alone and required assessment in combination with other Secondary Risk Factors, However, there were no others present. Mr. Blythe specifically conducted time studies of workers' awkward posture and repetition/duration during the hand packing process. In assessing whether Claimant engaged in four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees, he determined she did not meet the minimum threshold in the *Guidelines*. Claimant specifically spent 22 minutes and 11 seconds over a two-hour period, or 11.1 minutes each hour, performing the activities. The measurements transferred to 1.9 hours each day or 48% of the 4.0 hours per day threshold. Mr. Blythe also considered whether Claimant engaged in excess of four hours per day of supination/pronaton with task cycles of 30 seconds or less or awkward posture was used for at least 50% of task cycle. He found none. Finally, Mr. Blythe timed Claimant's elbow flexion > 90 degrees. He measured only 30.0 minutes each day or 17% of the 3.0 hours/day Secondary Risk Factor.

12. As found, Dr. Cebrian persuasively maintained that Claimant did not suffer a cumulative trauma condition while working as a hand packer for Employer. He

diagnosed Claimant with de Quervain's tenosynovitis. Dr. Cebrian noted that Claimant performed other duties besides hand packing cheese sticks. He commented that Claimant was only working as a hand packer for approximately five days prior to the development of her symptoms. Claimant's other job activities rendered her tasks less repetitive and forceful. They thus reduced her exposure to the only Secondary Risk Factor of a cold environment. Considering Mr. Blythe's JDA, Dr. Cebrian explained that the combination of repetition, force and cycle time in Claimant's duties on the hand packing line failed to meet the causation requirements for a cumulative trauma condition. In considering the Primary Risk Factor Definition Table for Force and Repetition/Duration, Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. He summarized that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Claimant thus did not suffer an occupational disease in the form of de Quervain's tenosynovitis or subsequent CRPS.

13. As found, in contrast, in evaluating awkward posture and repetition/duration as a Primary Risk Factor, Mr. Best concluded that Claimant exhibited four hours of wrist flexion greater than 45°, extension greater than 30°, or ulnar deviation greater than 20°. He also found that Claimant engaged in four hours of supination/pronation with task cycles of 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Claimant also had the Secondary Risk Factor of three hours of elbow flexion greater than 90°. Finally, Claimant satisfied the Secondary Risk Factor of Ambient temperature of 45°F or less for four hours or more. Mr. Best noted that filling a shipping box takes about 30 to 45 seconds. He explained that a task cycle involves reaching to full forward extension, using hands/wrists/fingers to align the product, scooping and lifting approximately 2.5 pounds of frozen cheese sticks, twisting, and placing each bundle into a lined box. At the rate of five handfuls every 45 seconds, a task cycle is about 6.7 times each minute or every nine seconds.

14. As found, after rejecting Mr. Blythe's analysis based on cycle times, Dr. Reichhardt relied on the nine second task cycles calculated by Mr. Best. He concluded that Claimant satisfied the minimum threshold in the *Guidelines* for the development of a cumulative trauma condition. Dr. Reichhardt explained that the cycle time involved grabbing a bundle of cheese and placing it in a box, not filling a box with cheese. Dr. Reichhardt also addressed the length of time Claimant had engaged in hand packing while working for Employer. He explained that, even if Claimant had only worked as a hand packer for a single day, she could have developed a cumulative trauma condition. Dr. Reichhardt concluded that Claimant's de Quervain's tenosynovitis ultimately developed into CRPS.

15. As found, despite the JDA of Mr. Best and the medical opinion of Dr. Reichhardt, the record reflects that Respondents have demonstrated that Claimant did not likely suffer a cumulative trauma condition while working for Employer. Initially, Dr. Reichhardt's opinion was predicated on Mr. Best's JDA that a task cycle lasted nine seconds. Mr. Best calculated the task cycle by using a rate of five handfuls every 45 seconds to fill a 15-pound box with cheese sticks. However, Mr. Blythe credibly commented that Mr. Best did not visit Claimant's jobsite and was unable to time or count

the activities of a worker on the hand packing line. He remarked that the threshold for awkward wrist posture of four hours or more per day is difficult to achieve because "essentially, a worker almost has to be in a static posture for half of the workday" to meet the threshold."

16. As found, although Mr. Blythe noticed ulnar deviation while observing the hand packing position, the amount of time was insufficient to satisfy the threshold level delineated in the *Guidelines* because the workers were not in a static position. Mr. Blythe specifically conducted time studies of workers' awkward posture and repetition/duration during the hand packing process. In assessing whether Claimant engaged in four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees, he calculated she spent 22 minutes and 11 seconds over a two-hour period, or 11.1 minutes each hour, performing the activities. The measurements transferred to 1.9 hours each day or 48% of the 4.0 hours per day threshold. Mr. Blythe's time measurements are consistent with the *Guidelines*. The *Guidelines* specify that "[h]ours are calculated by adding the total number of hours per day during which the worker is exposed to the defined risk. Breaks, time performing other activities, and inactive time are not included in the total time. W.C.R.P. Rule 17, Exhibit 5, p. 21.

17. As found, Mr. Best's analysis also failed to consider that workers on the cheese packing line rotate hourly to reduce the strain on the employees at the beginning of the line. Ms. VF[Redacted] credibly remarked that the individuals at the front of the line pack more cheese than those at the end of the line. She detailed the reasons and process for rotating packing stations. Ms. VF[Redacted] noted that employees do not rotate stations sequentially because they will not have adequate time to rest. She explained that workers rotate approximately five to seven stations down the line. In contrast, Mr. Best simply relied on Claimant repeatedly picking up 2.5 pound handfuls of cheese every nine seconds throughout her shift. Although the preceding assumption may apply to workers at the front of the line, Employer purposely limited the occupational exposure of employees by rotating them down the line so there were fewer cheese sticks to grab.

18. As found, the record reveals that Claimant was only on the hand packing line for three prior to her report of symptoms on December 3, 2019. Dr. Reichhardt commented that, even if Claimant had only worked as a hand packer for a single day, she could have developed a cumulative trauma condition. However, Dr. Cebrian persuasively explained that the period of time an individual performs a job is relevant to determining whether she has suffered a cumulative trauma condition. In reviewing the *Guidelines* and considering Level II training, he noted "there are many factors that can go into a situation as to whether somebody has a cumulative trauma condition." Dr. Cebrian maintained that physicians exercise discretion by using clinical experience to consider whether an individual has suffered a cumulative trauma condition based on work exposure. Furthermore. Dr. Reichhardt acknowledged that the studies utilized by Rule 17 of the *Guidelines* in developing evidence-based criteria probably did not involve subjects who had only been on the job for a few days.

19. As found, based on Mr. Blythe's JDA, a review of Claimant's job duties and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive

activity for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Respondents have thus demonstrated that they are entitled to withdraw their GAL acknowledging that Claimant suffered an occupational disease during the course and scope of her employment with Employer on December 3, 2019.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Respondents may withdraw their GAL acknowledging that Claimant suffered an occupational disease during the course and scope of her employment with Employer on December 3, 2019.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: October 27, 2022.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that his right knee condition has worsened and if so, whether this worsening is causally related to his admitted December 6, 2016 industrial injury.

PRELIMINARY DISCUSSION

At the outset of hearing, the ALJ discussed with the parties the issues they intended to litigate. Claimant's Counsel represented that he had discussed with Respondents' Counsel a willingness to narrow the issues to medical benefits, specifically Claimant's entitlement to PRP injections recommended by Dr. Simpson and "worsening" of Claimant's right knee condition. Respondents' Counsel acknowledged that she had spoken to Claimant's attorney and was in agreement that "worsening" had been endorsed on Claimant's Application for Hearing but the issue of medical benefits had not. Claimant then advised the ALJ that he would proceed forward solely on the issue of "worsening". The ALJ advised Claimant's counsel that based upon his Application for Hearing, medical benefits had not been endorsed and that Respondents' counsel was not agreeing to litigate the issue of Claimant's entitlement to additional medical benefits. Accordingly, the ALJ advised the Claimant to limit his presentation of evidence to the alleged worsening of condition. The ALJ also granted Claimant leave to submit photographs of his alleged disfigurement to the ALJ rather than attempt a video viewing of the same.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's December 6, 2016 Industrial Injury, his Medical Treatment and Maximum Medical Improvement

1. Claimant suffered an admitted injury to his right leg/knee on December 6, 2016, while employed as a rail marshal. According to the medical record, Claimant was turning on loose gravel when he fell injuring his right knee. As he was unable to put weight on his right leg, Claimant was taken to EmergiCare for medical treatment. X-rays were obtained and showed mild bony spurring with no apparent fracture and quadriceps tendon enthesopathy. An MRI demonstrated a distal quadriceps rupture with 5.8 cm retraction. (Resp. Ex. L, p. 185; Resp. Ex. N, p. 202).

2. Claimant was referred to Dr. Michael Simpson who determined Claimant would need surgery to repair his ruptured quadriceps tendon. Claimant underwent surgery with Dr. Simpson on December 10, 2016, during which his quadriceps tendon was repaired and excision of exostosis of the proximal superior patella was performed.

(Resp. Ex. L, p. 185). Claimant subsequently underwent a manipulation of the knee under anesthesia along with a second arthroscopic surgery consisting of a lysis of adhesions and debridement, i.e. meniscal trimming on April 4, 2017, in an effort to improve his right knee range of motion. *Id.* at p. 186.

3. Claimant was placed at maximum medical improvement (MMI) on August 28, 2017 by his authorized treating provider (ATP), Dr. Douglas Bradley. (Resp. Ex. L. p. 187; Resp. Ex. N, p. 205). In an impairment rating report dated September 17, 2017, Dr. Bradley assigned 10% lower extremity impairment for the right knee, which converts to 4% whole person impairment. (Resp. Ex. N, p. 203-204). Claimant was released to full duties. *Id*. at p. 203. Dr. Bradley did not recommend specific maintenance care other than to indicate that Claimant was to perform his "home exercises and stretch daily". *Id.*

4. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Bradley's September 17, 2017 impairment rating opinions on November 15, 2017. (Resp. Ex. E, p. 51).

5. Claimant objected to Respondents' November 15, 2017 FAL and requested a Division Independent Medical Examination (DIME). The DIME was performed by Dr. Wallace Larson on November 7, 2019. During the DIME, Dr. Larson confirmed that Claimant had suffered a ruptured quadriceps tendon. (Resp. Ex. K, p. 179). He also noted that Claimant had calcific tendinitis of the quadriceps. *Id.* He agreed with Dr. Bradley's MMI date and performed right knee range of motion measurements. *Id*. at p. 178. Following his physical examination, Dr. Larson opined that Claimant had sustained 11% lower extremity impairment, which converts to 4% whole person impairment. *Id.* at p. 179. Finally, Dr. Larson noted that "[n]o work restrictions [were] needed" and Claimant had no need for maintenance treatment. *Id.*

6. Respondents filed an Amended FAL on December 11, 2019, admitting to Dr. Larson's opinions concerning impairment and maintenance treatment as outlined in his November 7, 2019 DIME report. (Resp. Ex. F, p. 64).

7. Dr. Miguel Castrejon completed an independent medical examination (IME) of the Claimant on July 24, 2020. Dr. Castrejon obtained a history and completed a physical examination as part of the IME appointment. At his IME, Claimant reported "intermittent to occasional constant dull pain to the anterior aspect of the right knee and distal thigh that worsens with walking for more than 1-2 hours. (Resp. Ex. L, p. 184). He also reported swelling, perceived instability, occasional limping and difficulty ascending/descending stairs. *Id.* at p. 184. While Claimant reported that his knee condition had improved, it had begun to worsen by the time of the IME. *Id.*

8. Dr. Castrejon documented an alteration in Claimant's gait, trace effusion in the right knee, a slight decrease in baseline range of motion and strength along with "medial joint line tenderness and painful but negative McMurry" testing. (Resp. Ex. L, p. 189). Although Dr. Castrejon opined that Claimant was appropriately placed at MMI on August 28, 2017, he reported that Claimant had "recently experienced a worsening of his condition that was suspect for internal derangement". *Id.* Dr. Castrejon raised concern

surrounding the meniscal trimming that was required at the time of the manipulation and questioned whether Claimant sustained meniscal injury at the time of Claimant's slip and fall on December 6, 2016. While Claimant's exam was not suspect for quadriceps re-tear, Dr. Castrejon noted this could not be entirely ruled out. He recommended a right knee MRI to evaluate the integrity of the quadriceps repair as well as the meniscus. *Id.*

9. According to the medical record, Claimant's case was reopened on October 8, 2020. (Resp. Ex. G, p. 111). Claimant then returned to Dr. Simpson for "increasing right knee pain" on December 1, 2020. (Resp. Ex. Q, p. 221). Dr. Simpson documented that Claimant had done well following his quadriceps tendon repair surgery until around 4 months prior to his December 1, 2020 appointment, when he started to experience "increasing pain, achiness, and stiffness in his knee". *Id.* Examination of the right knee revealed some "obvious quadriceps atrophy" when compared to the left knee. Id. at p. 222. Nonetheless, Claimant demonstrated "full" extension and flexion of the right knee. Claimant also demonstrated "some patellofemoral crepitation" and "tenderness at the superior pole of the patella in the distal insertion of the quadriceps tendon". *Id.* Dr. Simpson expressed a "little" concern about Claimant's increasing symptoms noting that "[h]e may be developing some increasing quadriceps tendinosis", which could place him at risk of a repeat rupture. *Id.* Accordingly, Dr. Simpson recommended a repeat MRI, which he noted had been denied previously. *Id.* at p. 221-222.

10. Claimant underwent an MRI of the right knee on or about December 10, 2020 and this imaging was reviewed by Dr. Simpson during a follow-up appointment with Claimant on December 15, 2020. (Resp. Ex. O, p. 209; Resp. Ex. R, p. 225). Dr. Simpson noted that the MRI demonstrated:

> "[S]ignificant patellofemoral arthritis in his knee. They called this chrondromalacia, but I have reviewed his MRI and this is actually more progressive osteoarthritis of the patellofemoral joint. He has thickening of the distal pole of the quadriceps tendon with a recurrent spur at the distal insertion of the quadriceps tendon. Patellar tendon is also thickened.

Id. Dr. Simpson assessed Claimant with arthritis and quadriceps tendinitis of the right knee, noting further that Claimant had undergone a right quadriceps tendon repair. *Id.*

11. Regarding the cause of Claimant's arthritis, Dr. Simpson opined as follows: "I think given his altered patellofemoral mechanics from repair of his quadriceps tendon, the subsequent quadriceps weakness and chronic atrophy, as well as his job demands, he has developed progressive osteoarthritis in the patellofemoral joint". (Resp. Ex. R, p. 226). Accordingly, Dr. Simpson noted: "I think treatment of [Claimant's] knee osteoarthritis . . . should be covered under his workers' compensation claim". *Id.* Because Claimant had a history of "mild" hypertension, Dr. Simpson concluded that a corticosteroid injection and anti-inflammatory medications were contraindicated as treatment options for Claimant. Instead, Dr. Simpson recommended a series of PRP injections and increasing activities as tolerated. *Id.*

12. Claimant presented to Concentra for an unscheduled appointment on December 15, 2020, following his appointment with Dr. Simpson. (Resp. Ex. O, p. 209). Claimant was treated on an emergent basis for "chronic right knee pain". *Id.* Following a physical examination, Dr. Bradley noted, "MMI date unknown at this time because pain and therapy needed". *Id*. at p. 212. Dr. Bradley anticipated that Claimant would reach MMI by February 21, 2021. Id. at p. 208. (See also, Resp. Ex. P, p. 218).

13. Claimant returned to Dr. Simpson on June 1, 2021. (Resp. Ex. S, p. 229). During this appointment, Claimant continued to "struggle with pain and stiffness in his knee". *Id.* Claimant rated his pain at a 5/10, which represents an increase from the 3/10 pain he reported approximately 6 months earlier on December 15, 2020. Dr. Simson noted that the recommended PRP injections had been denied and that Claimant was treated with physical therapy instead. *Id.* Dr. Simpson opined that "based on recent studies", PRP injections would be the most effective treatment option for Claimant's condition but because "work comp is not willing to do any additional consideration, (for PRP injections) then I think effectively, I have nothing else to offer him". Consequently, Dr. Simpson released Claimant from his care. *Id*. at p. 230. Dr. Simpson opined further that Claimant could consider visco-supplementation under his private insurance. *Id.*

14. Dr. Bradley placed Claimant at MMI on June 14, 2021 without permanent medical impairment, noting that he was able to return to full duty work. (Resp. Ex. U, p. 240-242). During this appointment, Claimant reported 4/10 right knee pain while sitting. *Id.* at p. 238.

15. Respondents filed an Amended FAL on September 29, consistent with the opinions of Dr. Bradley regarding MMI and impairment as outlined in his June 14, 2021 medical report. (Resp. Ex. G). The September 29, 2021 FAL noted that the 11% permanent partial disability (PPD) award of $6,748.00 had previously been paid consistent with the November 7, 2019 DIME report of Dr. Larson. Because Dr. Bradley had opined that Claimant had reached MMI without impairment, Respondents noted that the prior PPD award of $6,748.00 was considered an overpayment. *Id.* at p. 88.

16. Respondents filed another Amended Final Admission of Liability on November 3, 2021 removing the asserted overpayment reflected in the September 29, 2021 FAL. (See Resp. Ex. H).

17. Claimant objected to the November 3, 2021 FAL and requested a DIME. Claimant's second DIME was completed by Dr. Nicholas Kurz, D.O. on April 11, 2022. (Resp. Ex. M). Dr. Kurz documented that at the time of the DIME, Claimant had not been treated with any injections, orthopedic evaluations or treatment through his primary care provider (PCP) for approximately one year. *Id.* at p. 193.

18. Dr. Kurz noted that while Claimant denied "new" injuries since December 6, 2016, he was "5 years older, and 22 pounds heavier with a BMI of 35.1". (Resp. Ex. M, p. 195). He opined further, that Claimant was "known to have right knee arthritic ongoing issues and complaints predating his DOI including visco-supplementation injections, indicating likely end-stage arthritic issues". Although he opined that Claimant had pre-

existing osteoarthritis in the right knee, the medical records review section of Dr. Kurz' DIME report is devoid of any specific records he reviewed to support this conclusion. (See Resp. Ex. M). Moreover, Dr. Kurz did not comment on Claimant's pain levels throughout his treatment. Nor did Dr. Kurz document Claimant's pain level at the time of the DIME appointment.

19. Dr. Kurz indicated that Claimant was appropriately placed at MMI on August 28, 2017. (Resp. Ex. M, p. 197). He also upheld the previous impairment of 11% lower extremity impairment for reduced range of motion. *Id.* at p. 198. Finally, Dr. Kurz opined that Claimant had no need for maintenance medical treatment. *Id*. at p. 199. In support of his opinion regarding maintenance care and the cause of Claimant's worsening symptoms, Dr. Kurz noted that at the time of his December 6, 2016 injury, "[Claimant] was 51 years old with documented bilateral knee osteoarthritis, left greater than right, including the large spur that broke off resulting in as quadriceps rupture, which was healed and treated properly per the division guidelines". (Resp. Ex. M, p. 198). He went on to note:

> Now years later, [Claimant] is a bit older and heavier and experiencing progressive bilateral lower extremity arthritis symptoms, which are not causally or temporally related to the mechanism of his original injury, which at the time was likely more related to his arthritis than a true work related mechanism, however it has been found compensable, treated and an impairment rating was completed.

Id. at p. 198.

20. Respondents filed an Amended Final Admission of Liability on May 23, 2022 based on Dr. Kurz's DIME report. (Resp. Ex. J). The May 23, 2022 FAL denied liability for maintenance care after MMI. *Id*. at p. 158. Claimant then filed an Application for Hearing on June 16, 2022 endorsing the issues of disfigurement, permanent partial disability benefits, worsening, and maximum medical improvement. (Resp. Ex. A). The Application for Hearing contains no endorsement for medical benefits as an issue for hearing nor is "Petition to Reopen Claim" endorsed on Claimant's application. *Id.* at p. 2.

Claimant's Hearing Testimony

21. Claimant testified that the surgery performed by Dr. Simpson did not resolve all the issues/pain in his right knee. He added that he underwent a synvisc injection with Dr. Simpson sometime in 2021, which helped relieve his symptoms for approximately 6 months before it wore off and his symptoms worsened. He described a steady deterioration and an increase in his pain/symptoms following this 6-month period. According to Claimant, this progressive worsening began before his DIME with Dr. Kurz and has continued since. Indeed, Claimant described the current condition of his knee as painful, tight, unstable and popping. Despite his claims of worsening pain/symptoms, Claimant has continued to work in an unrestricted full duty capacity since he was released to work by Dr. Bradley on June 14, 2021. (Resp. Ex. U, p. 240, 242).

22. During cross-examination, Claimant admitted to prior service connected left knee problems, which he testified required injection therapy through the VA medical system. He also admitted that because of his left knee pain/dysfunction he was overcompensating with his right leg and knee. Consequently, he developed right knee pain and underwent one or two steroid injections directed to the right knee.

The Testimony of Dr. Kurz

23. Dr. Kurz testified as a board certified Family Medicine specialist who has been practicing Occupational Medicine throughout his career. He is Level II Accredited.

24. Dr. Kurz agreed with Dr. Simpson that Claimant suffers from osteoarthritis and chondromalacia. He also testified that these conditions are progressive in nature and will not improve with time. While he agreed that Claimant had osteoarthritis, Dr. Kurz testified that a recent statement by the American Academy of Orthopedic surgeons concluded that PRP and visco-supplementation injections are not beneficial in treating arthritis. Consequently, he testified that workers' compensation insurers have stopped covering the cost of such injections.

25. Dr. Kurz testified that Claimant had treatment for pain associated with end stage arthritis as evidenced by his prior visco-supplementation injections. While the ALJ is persuaded that Dr. Simpson administered a synvisc injection to Claimant's right knee sometime in 2021, several years after the admitted industrial injury in this case, the record is devoid of any evidence/indication that he had any visco-supplementation injections to the right knee prior to his December 6, 2016 industrial injury. Rather, the evidence presented supports a conclusion that Claimant underwent a pre-injury steroid injection directed to the right knee for pain he was experiencing from overuse based upon the disability he was experiencing in the left knee at the time.

26. According to Dr. Kurz, Claimant's current pain and right knee symptoms are related to the natural progression of his pre-existing non-work related osteoarthritis. Dr. Kurz testified that this expected progression combined with aging, weight gain and deconditioning explains Claimant's persistent and worsening symptoms. In support of his opinion, Dr. Kurz testified that while the original MRI only assessed the condition of the distal quadriceps tendon rather than the knee, a subsequent December 10, 2020 MRI of the right knee did not establish an actual injury to knee, but rather the presence of osteoarthritis. He also testified that a quadriceps tendon rupture is not likely to accelerate the rate of degeneration in the knee. Accordingly, Dr. Kurz maintained his opinion that Claimant's right knee arthritis was not related to Claimant's December 6, 2016 injury. In fact, Dr. Kurz opined that Claimant's pre-existing non-work related osteoarthritis probably caused Claimant's quadriceps tendon to calcify and ultimately rupture on December 6, 2016.

Claimant's Disfigurement

27. Claimant is seeking a disfigurement award for surgical scarring associated with his right distal quadriceps tendon rupture repair surgery. As noted, Claimant attended the hearing via teleconference. Consequently, the ALJ granted Claimant's unopposed request for the ALJ to evaluate his disfigurement by photograph(s) submitted to the OAC with his post-hearing position statement.

28. Claimant submitted seven (7) photographs depicting the nature and extent of the disfigurement he claims is related to his December 6, 2016 industrial injury. The photographs are labeled collectively as "Claimant's Exhibit A" and admitted into evidence.

29. Based upon the photographic evidence, the ALJ finds that Claimant has a visible disfigurement to the body consisting of an approximately 5 ¾ inch long by ⅜ inch wide surgical scar located on the anterior (front) portion of the right knee. This scar traverses the length of the patella, is lightly pigmented and rough in appearance, when compared to the surrounding skin.

30. Although referenced by Dr. Simpson in his December 1, 2020 medical report, the ALJ is unable to perceive any atrophy, i.e. loss of muscle bulk in the right quadriceps muscle compared to the left thigh as the photographs fail to provide a side-by-side comparison of the upper legs.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40- 101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Claim Closure and Claimant's Alleged Worsening

C. A request for continuing medical treatment must be presented at the time of MMI, *Hanna v. Print Expediters Inc.*, 77 P. 3d 863 (Colo.App., 2003). Furthermore, the issue of medical benefits is closed if the respondents file an uncontested final admission that denies liability for future medical benefits. *Burke v. Industrial Claim Appeals Office*, 905 P. 2d 1 (Colo.App. 1994). Indeed, C.R.S. § 8-43-203(2)(b)(II) provides that a case will be "automatically closed as to the issues admitted in the [FAL] if the claimant does not, within thirty days after the date of the [FAL], contest the [FAL] in writing and request a hearing on *any disputed issues that are ripe for hearing*." . . . (emphasis added). *Olivas-Soto v. Indust. Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006). "Once issues are closed, they may only be reopened on the grounds stated in C.R.S. § 8-43-303. C.R.S. § 8-43-203(2) (d). Among those grounds is a change in the claimant's condition. C.R.S. Section 8-43-303(1); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo.App. 2004); *See also, Milco Construction v. Cowan*, 860 P. 2d 539 (Colo.App. 1992) (a claim may reopened for further medical treatment when the claimant experiences an "unexpected and unforeseeable" change in condition); *Brown and Root, Inc. v. Industrial Claim Appeals Office*, 833 P. 2d 780 (Colo.App. 1991).

D. Based upon the evidence presented, the ALJ is persuaded that Claimant objected to and filed an Application for Hearing contesting Respondents' May 23, 2022 FAL. Nonetheless, Claimant did not include an objection to Respondents denial of liability for future, i.e. maintenance treatment benefits in his Application for Hearing. Indeed, Claimant failed to endorse any issue surrounding Claimant's entitlement to additional medical benefits, which issues the ALJ concludes were ripe for hearing, whether such benefits were curative or maintenance in nature. Rather, Claimant simply endorsed MMI, PPD, disfigurement and worsening and narrowed the issues for hearing to a worsening of condition at the outset of the September 15, 2022 proceeding. Accordingly, the evidence presented persuades the ALJ that the issue of medical benefits, including post-MMI treatment is closed because it was not endorsed within thirty days of the FAL as required by § 8-43-203(2)(b)(II). Absent such an endorsement or an agreement to try the issue, which is not the case here, Claimant's entitlement to additional medical benefits is closed and cannot be litigated. *See, Olivas-Soto v. Indust. Claim Appeals Office*, *supra*.

E. As noted, Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based upon a change in condition which occurs after maximum medical improvement. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). In seeking to reopen a claim, the Claimant shoulders the burden of proving his/her condition has changed and that he/she is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo.App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or, as presented here, to a change in a Claimant's physical condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo.App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, October 25, 2006).

F. The question of whether a claimant has proven a change in condition of the original physical or mental condition, which can be causally connected to the original compensable injury, is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12, P.3d 844 (Colo.App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits relating to the original injury are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo.App. 2000); *Brickell v. Business Machines, Inc.*, 817 P.2d 536 (Colo. App. 1990) (reopening is appropriate if additional benefits are warranted). Reopening is not warranted if once reopened, no additional benefits may be awarded. *Richards v. Industrial Claim Appeals Office, supra; Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo.App. 1988).

G. In this case, the medical record supports a finding/conclusion that Claimant's recommended need for PRP injections was foreseeable treatment that could support an award of maintenance treatment at the time he was placed at MMI. Claimant had the opportunity to challenge the denial of maintenance treatment but failed to do so before the claim closed. The fact that Claimant may now need additional treatment, further medical evaluation and/or testing alone is insufficient to support a reopening of the claim. *Bowles v. Energy Air Systems, Inc*., W.C. No. 4-400-573 (ICAO, December 26, 2003), citing *Anderson v. Ready Mix Concrete*, W.C. No. 3-948-266, (ICAO, June 19, 1992), *aff'd, Anderson v. Ready Mix Concrete* (Colo.App. No. 92CA1060, March 25, 1993) (not selected for publication). Rather, the relevant questions to be answered are whether Claimant established that he suffered a post MMI change in his physical condition and whether that change is causally related to his admitted December 6, 2016 industrial injury. While the ALJ is convinced that Claimant's condition has changed and his persistent symptoms are probably emanating from his work related injury/condition (per the causality statement of Dr. Simpson), the evidence presented supports a conclusion that Claimant failed to endorse medical benefits or petition to reopen the as an issue for hearing. As noted above, a reopening is not warranted if once reopened, no additional benefits under the claim may be awarded. *Richards v. Industrial Claim Appeals Office, supra.* Because Claimant failed to endorse/preserve medical benefits in connection with his request to reopen and because the need for future medical benefits was foreseeable and ripe at the time of MMI, there are no medical benefits that can be awarded if the claim is reopened based upon a change of condition. Simply put, the ALJ concludes that there is no issue endorsed upon which additional benefits can be awarded if the claim is reopened based upon a change of condition. Accordingly, the ALJ concludes that any request to reopen the claim for additional medical benefits must be denied and dismissed.

Disfigurement

H. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found at Finding of Fact, ¶ 29 above, Claimant has suffered a "disfigurement", i.e. an approximately 5 ¾ inch long by ⅜ inch wide lightly pigmented and rough appearing surgical scar located on the anterior

(front) portion of the right knee, which the ALJ concludes constitutes an observable alteration in the natural appearance of the skin covering the right knee. Accordingly, the ALJ concludes that Claimant has suffered a visible disfigurement entitling him to additional benefits pursuant to C.R.S. § 8-42-108 (1).

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his claim is denied and dismissed.

2. Insurer shall pay Claimant $1,500.00 for his visible disfigurement.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

DATED: October 28, 2022

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, Co 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits for the period of December 7, 2021 through December 12, 2021 and from March 29, 2022 through April 1, 2022 and from May 17, 2022 through ongoing?

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary partial disability ("TPD") benefits for the period of December 13, 2021 through March 28, 2022 and from April 2, 2022 through May 16, 2022?

- Whether Claimant has proven by a preponderance of the evidence that the medical treatment he received from Dr. Budiman with Grand Valley Primary Care was authorized medical treatment necessary to cure and relieve Claimant from the effects of the work injury?

- Whether Respondents have proven by a preponderance of the evidence that Claimant committed a willful act that led to his termination of employment with Employer?

- If Respondents have proven Claimant committed a willful act that led to his termination of employment, whether Claimant has proven by a preponderance of the evidence that he subsequently sustained a worsening of his condition when he underwent surgery for his work condition which would result in Claimant being entitled to TTD benefits pursuant to *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323 (Colo. 2004).

- What is Claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant sustained an injury arising out of and in the course of his employment on December 6, 2021 while pulling off a forklift tire. Claimant testified that while removing the forklift tire, his left shoulder popped and he immediately felt a sharp pain. Claimant testified he reported his injury to Ms. L[Redacted] at the "North Avenue store" on the date of injury, but was not given a list of designated providers at that time.

2. Claimant testified he sought medical treatment with Grand Valley Primary Care on December 7, 2021. According to the medical records from Grand Valley Primary Care, Claimant was evaluated by Dr. Budiman, who diagnosed Claimant with impingement syndrome of the left shoulder. Claimant testified at hearing that Dr.

Budiman was his primary care physician ("PCP"). The medical records document that Claimant reported to Dr. Budiman that he had left shoulder pain when he felt a pop in his shoulder last night and immediately felt severe pain in his left shoulder. Dr. Budiman noted that Claimant reported chronic right shoulder pain which was not as severe as the left shoulder pain. Dr. Budiman provided Claimant with injections into his bilateral shoulders and took Claimant off of work until December 13, 2021 after which time Claimant was released to return to work with restrictions of no lifting over 30 pounds for two weeks.

3. Claimant testified he was later referred to Work Partners by Employer. Claimant sought treatment with Work Partners on December 21, 2021 at which time Claimant was examined by Dr. Fay. Dr. Fay noted a history of right shoulder treatment and diagnosed Claimant with pain in the left shoulder and rotator cuff strain. Dr. Fay provided Claimant with work restrictions for his left upper extremity including no lifting over 10 pounds and no lifting overhead or away from his body.

4. Respondents completed a first report of injury on December 22, 2021 indicating that Claimant had reported the injury to Employer on December 6, 2021.

5. Claimant's work restrictions were decreased to five pounds on January 12, 2022. On January 26, 2022, Claimant's work restrictions were again modified to restrict Claimant from commercial driving.

6. Claimant underwent a magnetic resonance image ("MRI") on January 31, 2022. The MRI showed a partial-thickness tear of the supraspinatus tendon, superior labral tear, infraspinatus tendinopathy, and possible tear of the humeral attachment of the glenohumeral ligament.

7. Claimant was referred to Dr. Scheffel for orthopedic consultation and was evaluated on February 17, 2022. Claimant reported to Dr. Scheffel that he injured his left shoulder when he was working on a forklift tire on December 6, 2021 and felt a pop and a sharp pain in his shoulder. Dr. Scheffel reviewed the MRI scan and recommended that Claimant undergo surgical intervention in the form of left shoulder arthroscopic rotator cuff repair and biceps tenodesis. Dr. Scheffel noted that he would be unable to perform the surgery as Dr. Scheffel would be out of work for an extended period of time, but recommended that Claimant be referred to another shoulder specialist to perform the surgery, as Dr. Scheffel opined Claimant cannot wait several months to have the procedure performed.

8. Claimant returned to Work Partners on February 23, 2022 and was evaluated by physicians' assistant ("PA") Meyer. PA Meyer reported Dr. Scheffel's recommended left shoulder arthroscopy rotator cuff repair and biceps tenodesis and noted that Dr. Scheffel was unable to perform the surgery, so Claimant was referred to other local surgeons. PA Meyer recommended Dr. Vance as the new orthopedic surgeon.

9. Claimant filed a Workers' Claim for Compensation on March 1, 2022. Claimant had an appointment with Work Partners on March 14, 2022 that was canceled due the fact that Respondents had denied Claimant's workers' compensation claim. Claimant returned to his PCP on March 16, 2022 and was provided with work restrictions that included no lifting heavier than five pounds in the left shoulder and no lifting greater than 20 pounds with the right shoulder.

10. Claimant again returned to his PCP on April 1, 2022 and was released to return to work as of April 4, 2022. There is no mention of restrictions in the release to return to work. The ALJ notes, however, that this was during a period of time when Claimant was not working and Respondents had not admitted liability for Claimant's injury. Claimant was off of work and not receiving workers' compensation benefits. The ALJ does not interpret the April 1, 2022 report that released Claimant to return to work without mention of any restrictions as a bona fide medical authorization to return to work without restrictions.

11. Respondents filed a general admission of liability ("GAL") for Claimant's work injury on May 4, 2022 admitting for medical benefits only. The GAL admitted for an average weekly wage ("AWW") of $1.00.

12. Claimant testified at hearing that the store manager, Mr. S[Redacted], told him that the store was going to make it hard for Claimant if he retained at attorney for his work injury. Mr. S[Redacted] testified he did not recall making that statement to Claimant.

13. Claimant testified that when he returned to work with his restrictions, he continued to work his job, but was not working the overtime hours he was working prior to his injury. Claimant testified Employer was not providing him with work that was within his restrictions. Mr. S[Redacted] testified that Employer offered Claimant work within his work restrictions. Mr. S[Redacted] testified he observed Claimant performing work outside of his work restrictions and when he saw Claimant performing work outside of his restrictions, he told Claimant not to exceed his work restrictions.

14. Mr. S[Redacted] testified that if Employer was unable to accommodate Claimant's restrictions, they would not have him work. Mr. S[Redacted] further testified that Employer would have been able to accommodate the work restriction provided after Claimant's surgery of no lifting great than paper weight.

15. DD[Redacted] runs wholesale operation for Employer. Mr. DD[Redacted] testified that Claimant would sometimes ask to run Mr. DD[Redacted]'s routes but that he did not ever direct Claimant to do so. Mr. DD[Redacted] testified that he is not a manager for Employer.

16. WK[Redacted] is a service manager for Employer. Mr. WK[Redacted] testified that he was in a management position for Employer in 2021, but was not a direct supervisor of Claimant. Mr. WK[Redacted] testified he requested Claimant perform certain tasks for him that Mr. WK[Redacted] believed were within Claimant's work restrictions. Mr. WK[Redacted] testified he never asked Claimant to perform work outside of his work

restrictions. Mr. WK[Redacted] testified he never witnessed Claimant show his genitalia to other employees.

17. Claimant testified that post injury there were times that he missed work for various reasons, including dental appointments and if Claimant's use of Ibuprofen caused stomach issues. Claimant testified his use of ibuprofen was increased post-injury due to his shoulder pain. Claimant testified he missed work between March 29 and April 1, 2022 due to stomach issues related to his use of ibuprofen. Claimant testified that on the occasions he needed to leave work early, he would ask permission from Employer prior to leaving work early.

18.Mr. S[Redacted] testified that Claimant returned to work at the same rate of pay and hours following his work injury, though business was slower in the wintertime. Mr. S[Redacted] testified Claimant was offered overtime after his work injury. Mr. S[Redacted] testified Claimant was offered light duty work that included delivering tires or driving. Mr. S[Redacted] testified Claimant applied for a position in sales after his work injury but was not offered that position because they were working through some issues with regard to Claimant's communication with teammates.

19.Claimant was terminated from his position with Employer on May 17, 2022. Mr. S[Redacted] testified Claimant was terminated for sexual harassment. Mr. S[Redacted] testified he found out on May 16, 2022 that Claimant was showing his genitalia to other employees and terminated Claimant for violating Employer's sexual harassment policy. Mr. S[Redacted] testified Employer had a no tolerance policy with regard to sexual harassment.

20.Claimant testified at hearing that he had exposed himself to co-workers at work several times in the previous five years as a joke. Claimant testified that the culture for Employer included horseplay and testified he had been "mooned" by a co-employee in the past. Claimant testified that at work co-employees would joke with each other and throw tools towards co-workers' crotches, or light fire crackers in the shop area. Claimant also testified that his co-workers would have "uncomfortable touch Tuesday." With regard to Mr. S[Redacted], Claimant testified he was aware that Mr. S[Redacted] was "not a hugger" and at the Christmas party in 2021 he approached Mr. S[Redacted] to give him a hug. Claimant testified that Mr. S[Redacted] responded by swatting him in the testicles with his hand.

21.Mr. S[Redacted] testified on cross-examination that he did hit Claimant in the testicles at the 2021 Christmas party and did so because he was protecting himself from getting a hug. Mr. S[Redacted] confirmed in his testimony that he is not a hugger. Mr. S[Redacted] testified that his action of striking Claimant in the testicles could be a violation of Employer's sexual harassment policy.

22. Respondents put into evidence written statements from three co-workers of Claimant, CR[Redacted], and JP[Redacted], who indicated in their written statements that Claimant had exposed himself to them. The statements from Mr.

CR[Redacted] and Mr. E[Redacted] did not indicate when Claimant had exposed himself. Respondents provided a letter from "J[Redacted]" that indicated Claimant approached him and asked him if he wanted to see or touch his "balls". The letter from "J[Redacted]" is likewise not dated and does not reference when the alleged comments were made by Claimant.

23. Claimant testified at hearing that he showed Mr. E[Redacted] his genitalia. Claimant testified he did not recall if he showed his genitalia to Mr. CR[Redacted]. Claimant denied asking "J[Redacted]" if he wanted to see his genitalia.

24. Mr. CR[Redacted] testified at hearing in this matter. Mr. CR[Redacted] testified that in the Summer of 2021, Claimant asked Mr. CR[Redacted] if Mr. CR[Redacted] wanted to see his belt buckle. Mr. CR[Redacted] testified Claimant then exposed himself to Mr. CR[Redacted]. Mr. CR[Redacted] testified he did not report this to any supervisor until May 2022. Neither Mr. E[Redacted] nor "J[Redacted]" testified at hearing in this matter.

25. Mr. S[Redacted] testified he did not believe there was a culture of sexual harassment at the workplace. Mr. S[Redacted] testified that he only became aware of Claimant exposing himself the day before he decided to terminate Claimant's employment with Employer. Mr. S[Redacted] testified that he was unaware of employees "mooning" each other while at work.

26. Claimant testified that he did not expose himself to other employees following his work injury. Claimant testified that his conduct prior to his work injury was performed in jest and was in relation to other work place behavior such as throwing tools at co-employees' crotches and "uncomfortable touch Tuesday".

27. Claimant remained on work restrictions following his initial visit with Dr. Budiman. Claimant was off of work pursuant to these work restrictions from December 7, 2021 (a Tuesday) through December 12, 2021 (a Sunday).

28. Claimant subsequently underwent surgery under the auspices of Dr. Vance. Dr. Vance performed a diagnostic arthroscopy, subacromial decompression, and distal clavicle excision on June 16, 2022. Claimant returned to Dr. Brown at Work Partners on June 30, 2022, following his surgery and reported his pain was 8 out of 10, which was an increase from 5 out of 10 prior to his surgery. Dr. Brown provided Claimant with increased restrictions that included no lifting, carrying, pushing, or pulling above paperweight with his left upper extremity.

29. Claimant returned to Dr. Brown on July 14, 2022. According to the WC164 form completed by Dr. Brown, Claimant's work restrictions continued to be no lifting, carrying, pushing or pulling above paperweight with the left upper extremity.

30. Claimant testified at hearing that after being terminated and undergoing surgery, he has not returned to work. Claimant testified that he has looked for work, but has not been able to find work within his restrictions.

31. Mr. S[Redacted] testified that Employer had administrative work that was within Claimant's work restrictions that Claimant could have performed for Employer following his surgery.

32. Dr. Brown testified by deposition in this matter. Dr. Brown opined that he believed the tearing of the posterior labrum constituted an aggravation of Claimant's preexisting shoulder issues. Dr. Brown testified Claimant's pain and lack of functionality of the shoulder led to Claimant's surgery. Dr. Brown testified that when he first saw Claimant on June 30, 2022, Claimant's pain had been aggravated by the surgical procedure with Dr. Vance. Dr. Brown testified that the physical examination of Claimant on that initial visit on June 30, 2022 was limited due to Claimant having just undergone shoulder surgery.

33. Dr. Brown testified that the physical examination on July 14, 2022 was again limited due the fact that Claimant remained in a lot of pain post-surgery and continued to wear a sling. Dr. Brown testified that Claimant was attempting to wean himself off of needing to use the sling, but this led to increased pain and Claimant again began to use the sling. Dr. Brown testified that Claimant's pain levels were higher than hoped for due to the fact that he was not tolerating use of the meloxicam, which caused Claimant an upset stomach. Dr. Brown further testified that Claimant's use of Cyclobenzaprine produced drowsiness.

34. Dr. Brown testified that as of the date of his deposition, Claimant had not been released by Dr. Vance or himself to do any increased activity beyond lifting at a paperweight level. Dr. Brown testified that he did not expect there to be a significant change in Claimant's work restrictions at his next scheduled evaluation.

35. Claimant testified he continues to experience pain and restricted range of motion, weakness, and lack of sleep as a result of his work injury. Claimant presented the testimony of Ms. I[Redacted] who lives with Claimant. Ms. I[Redacted] testified that Mr. [Claimant] continues to be limited around the house due to pain. Ms. I[Redacted] testified that the work injury has resulted in Claimant being unable to sleep as he would toss and turn at night following his injury.

36. Both parties argued in their position statement that in the twelve (12) weeks prior to Claimant's injury, Claimant earned $12,511.85 in wages from Employer. The ALJ therefore finds that Claimant's proper AWW is $1,042.65. Claimant's cost on continuing his health insurance ("COBRA") benefits effective June 1, 2022 was $188.61, increasing Claimant's AWW to $1,231.65.

37. Claimant argued at hearing that Claimant received a raise from Employer effective April 3, 2022 that increased his hourly rate from $20.70 to $21.48, an increase of 3.77%, which should be taken into account when calculating Claimant's AWW post April 3, 2022. The ALJ does not find that Claimant's post injury raise should be included in the AWW calculation under the facts of this case.

38. The mere fact that Claimant received a raise post-injury does not require that the AWW be increased for Claimant's claim based on the post-injury raise. The ALJ recognizes that an injured workers' post injury earnings may be used to calculate the Claimant's AWW, but declines the invitation to use the ALJ's discretion to raise the AWW based on post-injury earnings based on the facts presented in this case.

39. The facts in this case establish that following Claimant's work injury, he reported the injury to Employer and then sought medical treatment with his personal physician. Claimant's testimony that he reported the injury to Ms. L[Redacted] on the date of the injury was not rebutted by any credible evidence at hearing, and is supported by the Employer's First Report of Injury which indicates that the Employer was notified of the injury on December 6, 2021. Additionally, Claimant's testimony that he was not provided with a list of medical providers by Employer after reporting his injury to Employer on December 6, 2021 was not rebutted at hearing and is found to be credible.

40. Employer argues that they should not be responsible for the cost of Claimant's medical treatment with Dr. Budiman, despite the fact that there is no credible evidence that Employer properly referred Claimant to a medical provider in compliance with Section 8-43-404(5), C.R.S. Where the Employer fails to comply with Section 8-43-404(5), the choice of medical provider authorized to treat Claimant for his injury reverts to the injured worker. In this case, Employer failed to comply with Section 8-43-404(5), C.R.S. until Mr. S[Redacted] referred Claimant to Work Partners on or about December 20, 2021.

41. Based on the evidence presented in this case, the ALJ finds that Claimant's treatment with Dr. Budiman was authorized medical treatment necessary to cure and relieve the Claimant from the effects of the work injury. Respondents are therefore liable for the cost of the medical treatment provided by Dr. Budiman pursuant to the Colorado Medical Fee Schedule.

42. The ALJ further finds that Claimant's return to Grand Valley Primary Care in March and April 2022 was a result of his appointment with Work Partners being cancelled. Therefore, Claimant's treatment in March and April 2022 with Grand Valley Primary Care is likewise found to be authorized medical care related to Claimant's compensable work injury.

43. Claimant was taken off of work by Dr. Budiman from December 7, 2021 through December 12, 2021. Respondents argue that they are not responsible for TTD benefits during this period of time, even though Claimant was missing work as a result of his work injury. The ALJ is not persuaded.

44. Claimant was off of work pursuant to work restrictions from Dr. Budiman from December 7, 2021 through December 12, 2021. In order to prove entitlement to TTD benefits, an injured worker must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. In this case, Claimant's shoulder injury

resulted in a disability as evidenced by Dr. Budiman taking Claimant off of work for the period of December 7, 2021 through December 12, 2021. As found, that disability was related to Claimant's work injury.

45. After Claimant was evaluated by Dr. Fay at Work Partners, Claimant was provided with work restrictions that prohibited Claimant from performing his usual employment. The wage records entered into evidence establish that Claimant's earning after returning to work on December 13, 2021 were lower that his pre-injury earnings. Claimant testified at hearing that following his work injury, he was not provided with the same overtime hours he was prior to his work injury.

46. Mr. S[Redacted] testified at hearing that Claimant's lack of overtime hours after he returned to work was the result of a slow down in work that occurs after holidays. However, the wage records entered into evidence in this case demonstrate that Claimant was working less overtime hours after the work injury through the Spring than Claimant was working prior to his work injury. Therefore, the ALJ finds that Claimant has established that he is entitled to an award of TPD benefits for the period of December 13, 2021 through March 28, 2022 and from April 2, 2022 through May 16, 2022.

47. With regard to Claimant's missed time from work between March 28, 2022 and April 2, 2022, Claimant testified at hearing that he was having issues with regard to his stomach that was caused by his increased use of ibuprofen as a result of his work injury. Claimant's testimony in this regard is found to be credible and persuasive. This testimony was supported by the deposition testimony of Dr. Brown who referenced Claimant having reported having issues with regard to his medications following his work injury. The ALJ therefore finds that Claimant's missed time from work for the period of March 28, 2022 through April 2, 2022 is a result of Claimant's work injury and Claimant is entitled to an award of TTD benefits for this period of time.

48. Respondents argue that Claimant is not entitled to TTD benefits beginning May 17, 2022 because Claimant was responsible for his termination of employment. The ALJ is not persuaded that Respondents have established that Claimant was responsible for his termination of employment in this case.

49. In this case, Mr. S[Redacted] testified that Claimant was terminated from his Employment with Employer for violating the company policy with regard to sexual harassment. Mr. S[Redacted] testified that Employer has a zero tolerance policy with regard to sexual harassment. The incident in this case that was testified to by Mr. CR[Redacted] occurred in the Summer of 2021 according to Mr. CR[Redacted]'s testimony. Moreover, Mr. CR[Redacted] did not report the incident to Employer until May 2022. The written statement from Mr. E[Redacted] was corroborated by Claimant's testimony in this case. However, Claimant testified this occurred well before his work injury and was in relation to the nature of the employment. The ALJ therefore finds that Claimant would not reasonably be aware that such an action could lead to his termination of employment.

50. The other reported instances of sexual harassment in the written statements of "J[Redacted]" the co-employees is not found credible as it represents an out of court written statement that is not dated and not corroborated by other credible evidence at hearing.

51. Mr. S[Redacted]'s testimony that Employer has a zero tolerance policy with regard to sexual harassment is found to be not credible in light of the testimony regarding his striking Claimant in the genitals at the Christmas party in 2021.

52. Claimant's testimony with regard to the atmosphere at work among the employees is found to be credible. Claimant's testimony that employees would have "uncomfortable touch Tuesday" and would throw tools at the crotch of other employees is found to be credible. The ALJ does not condone the actions of Claimant in this case, but finds that the actions in this case were remote in time in relation to the work injury and represented actions by Claimant that he believed to be in the joking context of the employment situation with Employer.

53. Based on the foregoing, the ALJ finds that Respondents have failed to prove by a preponderance of the evidence that Claimant committed a volitional act that Claimant reasonably should have known would lead to his termination of employment with Employer.

54. Based on the finding that Claimant was not responsible for his termination of employment, the ALJ need not make a finding as to whether Claimant has proven that it is more likely than not that he sustained a worsening of his condition after his termination of employment, which would result in a new award of TTD benefits after the worsening.

55. The ALJ therefore finds Claimant is entitled to TTD benefits beginning May 17, 2022 through May 31, 2022 at an AWW of $1,042.65 and from June 1, 2022 through ongoing at a rate of $1,231.26.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. To prove entitlement to temporary total disability ("TTD") benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

4. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award of TTD benefits commencing December 7, 2021 through December 12, 2021 and March 29, 2022 through April 1, 2022 and May 17, 2022 through ongoing. As found, Claimant was taken off of work by Dr. Budiman on December 7, 2021 and Claimant's loss of wages during this period of time is found to be related to his December 6, 2021 work injury. As found, Claimant's testimony that he missed work from March 29, 2022 through April 1, 2022 due to stomach issues related to his use of ibuprofen to treat his shoulder injury is found to be credible. Therefore, Claimant is entitled to an award of TTD benefits for this period of time. As found, Claimant was off of work with restrictions related to his work injury starting May 17, 2022 and is entitled to an award of TTD benefits beginning May 17, 2022.

5. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

6. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award of TPD benefits beginning December 13, 2021 through March 28, 2022 and from April 2, 2022 through May 16, 2022. As found, Claimant was under work restrictions for most of these periods of time (with the exception of the vague work release from Grand Valley Primary Care on April 1, 2022 that was found to not represent a bona fide release to return to work without restrictions) and was earning less wages than prior to his work injury. Therefore, Claimant is entitled to an award of TPD benefits during these periods of time.

7. Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he or she precipitated the employment termination by a volitional act that he or she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

8. As found, Respondents have failed to prove by a preponderance of the evidence that Claimant committed a volitional act that led to his termination of employment. As found, Claimant's actions in exposing himself to new employees was consistent with the general nature of the employment setting in which Claimant worked. As found, this employment setting included co-employees mooning each other and employees tossing tools towards the crotch of other employees and actions such as "uncomfortable touch Tuesdays". Additionally, Mr. S[Redacted]'s testimony that Employer had a "no tolerance" policy for sexual harassment is found by the ALJ to be not credible based on Mr. S[Redacted]'s own actions in slapping Claimant in the testicles in an effort to avoid being hugged at the 2021 Christmas party.

9. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). The parties agreed in their position statements that Claimant's pre-injury AWW was $1,042.65. The ALJ therefore finds that the proper AWW is $1,042.65.

10. Claimant argued in his position statement that the AWW should be increased by 3.77% based on Claimant's post injury raises. As found, the ALJ is not persuaded that Claimant's AWW should be increased based on Claimant's post-injury raises. Notably, Section 8-40-201(19)(a), provides in pertinent part:

> "Wages" shall be construed to mean the money rate at which the services rendered are recompensed *under the contract of hire in force at the time of the injury*, either express or implied. (emphasis added)

11. The ALJ therefore determines that Claimant's AWW for purposes of this injury is properly calculated at $1,042.65 based on Claimant's earnings in the twelve (12) weeks prior to his industrial injury..

12. The parties further agree that Section 8-40-201(19)(b) provides that the AWW should be increased based on the employee's contribution for any COBRA benefits. The parties agree that the COBRA contribution for Claimant was $188.61 and became effective as of June 1, 2022. Therefore, Claimant's AWW increased to $1,231.26 effective June 1, 2022 to account for the COBRA contribution.

13. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

14. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion...." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

15. As found, Claimant reported his injury to Employer but was not initially provided with a list of physicians authorized to treat Claimant for his injury. The ALJ therefore finds that the treatment provided by Dr. Budiman and Grand Valley Primary Care is authorized medical treatment that was reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury based on Employer's failure to refer Claimant to a treating physician after Claimant reported his injury.

16. As found, Claimant's return to Grand Valley Primary Care in March and April, 2022 after Claimant's March 14, 2022 medical appointment with Work Partners is likewise found to be authorized as Claimant's treatment with Grand Valley Primary Care was the result of his medical care with Work Partners being cancelled after he filed a Workers' Claim for Compensation.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant TTD benefits based on an AWW of $1,042.65 for the period of December 7, 2021 through December 12, 2021 and March 29, 2022 through April 1, 2022 from May 17, 2022 through May 31, 2022.

2. Respondents shall pay Claimant TTD benefits beginning June 1, 2022 at an AWW of $1,231.26 based on the increased AWW due to Claimant being eligible for COBRA coverage.

3. Respondents shall pay for Claimant's medical treatment with Grand Valley Primary Care that is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury including the medical treatment with Dr. Budiman on December 7, 2021, March 16, 2022 and April 1, 2022.

4. Respondents shall pay statutory interest on all benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

DATED: October 28, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she sustained a low back injury in the course and scope of her employment on February 16, 2022.

IF CLAIMANT SUSTAINED A WORK RELATED INJURY, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that she established a refusal to treat for non-medical reasons and the right to select a physician passed to Claimant who selected Karin Gallup, N.P. at La Casa of Denver Health.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on May 2, 2022 on the issues of compensability, medical benefits, AWW and TTD benefits from February 21, 2022 ongoing.

Respondents filed a Response to Claimant's May 2, 2022 Application for Hearing on June 14, 2022. No additional issues were listed.

STIPULATIONS OF THE PARTIES

The parties stipulated that, if the claim was deemed compensable, then the average weekly wage was $800.00 based on $20.00 per hour, 40 hours a week. The temporary total disability benefits (TTD) rate would be $533.33.

The parties further stipulated that, if the claim was deemed compensable, then Claimant would be entitled to TTD from February 21, 2022 until terminated by law. The parties agreed that, if TTD was paid, Respondents were entitled to an offset for short-term disability benefits beginning February 21, 2022 through August 19, 2022 in the amount of $250.00 a week, which would result in a payment of TTD of $283.33 per week while the offset lasted.

The parties also agreed that Concentra was an authorized treating provider.

The stipulations of the parties are accepted by this ALJ and shall become part of the order in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 45 years old at the time of the hearing. Claimant was a machine operator for Employer since approximately August of 2021. She began her work through a temporary agency then was hired by Employer permanently in January 2022. She would fill the machine casings with molding powder. After the material was "cooked" she would take them out of the casings and trim the remnants of plastic parts with a tool that had a wood handle and a metal blade of approximately three to four inches long and about two inches wide. The blade was provided by her employer. She would generally start her work at 3:00 p.m. and work to 11:00 p.m.

2. Claimant had a slip and fall injury while at work for a prior employer, a hospital, where she performed housekeeping duties. She injured her low back, but not in the same way as in this case. It was higher up on her spine. She was prescribed a steroid that help her problem really well. The injury resolved and she was released from care.

3. On December 2, 2019 Claimant was seen at Denver Health for a UTI and complained of back pain. The provider suspected muscle strain but made no recommendations nor provided treatment.

4. In December 2020 she had a slip and fall on snow and injured her left foot. The fracture was reduced in the emergency department and she wore a cast for several weeks. She was again evaluated on December 17, 2020 for ankle pain but x-rays could not visualize any abnormality regarding the left ankle due to the cast obscuring details. There was no mention of a low back problem during this visit. Further, of note, there have been several left foot incidents as far back as September 12, 2017, including an old left fifth metatarsal fracture of unknown age.

5. Claimant was assessed by telehealth on January 8, 2021 due to complaints of lower back problems. However, those complaints clearly resolved by the next visit as there was no mention in the February 1 or February 2, 2021 follow ups and evaluations.

6. On September 17, 2021 Claimant injured her left knee injury, which occurred while working for the temporary agency, who had placed Claimant at Employer's business to perform work as a machine operator. She last treated for that claim on March 9, 2022 for the last time in follow up of a third viscosupplementation injection. Claimant has not sought any further care for that left knee injury.

7. While working for Employer, Claimant would take her breaks in her car because she would frequently be making personal phone calls on one of her 15-minute breaks and she did not like to do that in the breakroom. The employees were allowed to take their breaks anywhere on the Employer's premises. Claimant's car was required to be parked in the Employer's parking lot, which was enclosed by a fence.

8. On February 16, 2022, while working for Employer, Claimant was taking her break and she slipped on the snow, without warning. She landed hard on her buttocks. She had been going to her car when the fall happened. She has had pain in her lumbar region and her buttocks since that time and the pain seemed to be deep in the bone at the base of her spine or buttocks, causing pain to radiate to her low back and cause muscle spasms. She stated that she sat in her car a while on her break. She had her tool in her back pocket, which she generally takes out when she sits in her car. After her

break, she got out of her car to return to work, forgetting her blade. When she realized she left her blade in her car, she returned to get it to continue working.

9. Claimant testified she told the man, who was training her on the machine she was working at, about her fall while on break on February 16, 2022. She laughed it off but her pain slowly increased during her shift her. She mentioned her fall again, letting him know her back pain was getting worse, but he did not seem to care about the incident

10. As the days went on the pain in her buttocks and low back started to really get worse. Claimant called the HR Department to advise the HR representative about the injury and request medical attention. Claimant did not hear back from the HR representative on where Employer wanted her to go for care so she determined to go to an urgent care facility for treatment as her low back pain continued to worsen.

11. On February 22, 2022 Claimant presented at Federico F. Pena Family Health Center – Urgent Care at Denver Health for an evaluation of her low back pain, where she was treated by Amy N. Quinones, N.P. Nurse Quinones treated Claimant for "acute back pain" and took Claimant off of work from February 22, 2022 to February 24, 2022.

12. When Claimant took the note from Nurse Quinones to Employer, she was advised she could not return to work until she was fully recovered. Her Employer did not contact her after this conversation to follow up or provide her with a designated provider list.

13. On March 4, 2022 Claimant returned to Denver Health where she was evaluated by Alicen M. Nelson, M.D., whose assessment was that of "bilateral low back pain without sciatica occurring after a fall three weeks ago."

14. At the March 4, 2022 visit, Claimant had two trigger point injections in the low back area. The working diagnosis was that of chronic bilateral low back pain without sciatica.

15. On March 9, 2022 Employer filed a Workers Compensation "First Report of Injury or Illness" (FROI) stating that Claimant had injured herself on February 16, 2022, that the time of the injury occurred at approximately 6:00 p.m., and that Employer was notified on February 16, 2022 of the injury. The report documented that Claimant had "slipped on the snow, fell on her bottom, hurting her back." The report was filed by the HR manager and indicated that Claimant had reported the injury to another Employer representative (PC) on February 16, 2022.[1]

16. On March 11, 2022 Claimant had her first visit with authorized treating physician ("ATP") Theodore Villavicencio, M.D. at the Concentra Medical Centers in Lakewood where ATP Villavicencio took a history of injury as follows:

> Reason for Visit
> Chief Complaint: The patient presents today with new injury, slip and fall on 02/16/2022 injured back, reports that she has pain in back and night pain. Self reported.

[1] This ALJ infers that the trainer advised the HR representative despite Claimant's impression that he did not seem to care about the fall.

At that visit, Dr. Villavicencio assessed that Claimant had a lumbar contusion and a strain of the lumbar region. He started her on a muscle relaxer, and provided her work restrictions of lifting 10 lbs. and pushing/pulling up to 20 lbs. with no forward bending, noting that she should be working only sedentary office type work. He gave the opinion that Claimant's objective findings were "consistent with history and/or work-related mechanism of injury/illness." In fact, all the Work Status reports from March 11, 2022 through April 19, 2022 all show the same causation analysis. Dr. Villavicencio also indicated that MMI was unknown.

17. On March 16, 2022 Claimant started physical therapy at the Concentra offices in Lakewood with Christi Galindo, P.T. This was the first of six visits programed. She documented Claimant's back pain was 3/10 but could rise to about a 7. The impairments identified during the examination prevented Claimant from performing her standard activities of daily living and/or work activities. Ms. Galindo noted abnormal range of motion, pain, abnormal muscle performance and gait. She proceeded with therapeutic exercises, neuromuscular reeducation, manual therapy and therapeutic activities. The treatment was provided by Austin Lyons SPT under Ms. Galindo's supervision.

18. Respondents filed a Notice of Contest on March 18, 2022, stating that the injury or illness was not work related.

19. On March 25, 2022 Claimant returned to Concentra and this time was evaluated by ATP Autumn Schwed, D.O. who noted that Claimant indicated that physical therapy "is not helping, but got cupping which has helped" and that Claimant was 25% of the way to meeting the physical requirements of her job. Dr. Schwed referred Claimant to Dr. Samuel Chan, a physiatrist, for an evaluation.

20. Dr. Schwed referred Claimant for an MRI and noted that the indications were for back pain and sacrococcygeal disorder. It was performed on April 1, 2022. It was read by Dr. Scot E. Campbell as showing a disc bulge at the L3-4 level with left paracentral small extrusion, mild facet arthropathy, mild left subarticular recess stenosis, and mild right neural foraminal stenosis. He noted a central disc protrusion at L4-5 with mild facet arthropathy, mild right subarticular recess stenosis and mild right neural foraminal stenosis. He also noted a right paracentral protrusion at the LS-S1 level with mild facet arthropathy. Dr. Campbell concluded that Claimant had degenerative disc disease and facet arthropathy without high-grade stenosis or nerve root impingement.

21. Claimant was evaluated by Dr. Samuel Chan on April 12, 2022.[2] Claimant described pain in the low back spine as well as radiation into the groin but not the lower extremities. On exam, he noted that Claimant's pain was centered around the PSIS and the sacral sulci. Claimant was also positive for Patrick's, Gaenslen's, FABER's, and Yeoman's[3] testing. Dr. Chan concluded that Claimant's exam was most consistent with sacroiliac joint dysfunction and recommended sacroiliac joint injections should her symptoms persist. He also diagnosed lumbar contusion and strain of the lumbar region.

[2] Pages are missing from this report.

[3] Medical tests used to detect musculoskeletal abnormalities and inflammation of the lumbar vertebrae, but more commonly the sacroiliac joint.

He indicated Claimant was to return in four weeks. He also noted that objective findings were consistent with the work-related mechanism of injury.

22. On April 19, 2022 Claimant returned to Concentra where she was evaluated this time by Chelsea Rasis, PA-C. ATP Rasis noted that the muscle relaxer (flexeril) helped at night with the low back pain and that cupping therapy was also providing temporary relief, stating that Claimant had more sessions scheduled. ATP Rasis documented that Dr. Chan had offered Claimant cortisone injections and that Claimant was looking into the side effects. She ordered six visits of chiropractic care and six acupuncture sessions. She continued the prior sedentary restrictions.

23. Claimant's last visit with Concentra was on May 13, 2022, when Claimant was released from care by ATP Rasis to have her care and "work restrictions to be managed" by her primary care provider (PCP).

24. Claimant testified that Ms. Rasis advised Claimant to go to her PCP for further care as the claim had been denied by the Insurer. She did not allow Claimant to return to Concentra for further care. She further advised Claimant that her PCP would have to provide any further medical care, such as the injections, work restrictions and that she was being released to her PCP's care.

25. Claimant started physical therapy on June 9, 2022 at Select Physical Therapy pursuant to Karim Gallup's referral. Jon Baird, PT noted that Claimant had a slip and fall in February 2022 and landed on her "butt." He documented that Claimant had had lumbar back pain, left greater than right, ever since then. Mr. Baird noted that Claimant ambulated slowly with a stiff spine pattern, a slight flexed trunk and stands with an increased lumbar lordosis. He provided exercise education and training, as well as manual intervention modalities. He recommended ongoing therapy for a period of 3 months.

26. Claimant's return visit to Denver Health, documented in the evidence presented, was for June 23, 2022, following Concentra's refusal to continue to treat Claimant at Concentra Medical Centers. She was evaluated by Morris M. Askenazi, M.D. who indicated that Claimant continued to have significant pain and limitations and would be unable to work at that time. He ordered continued physical therapy for the following two months. He stated Claimant should be on work restrictions of no lifting more than 5 pounds overhead, no repetitive bending, limited reaching/stretching, and anticipated the limitations to continue for the following two months.

27. Following Concentra's refusal to treat, Claimant's counsel wrote to Respondents indicating that if Claimant could not get follow-up care at Concentra, Claimant was requesting to change physician to Karin Gallup, N.P. at La Casa--Denver Health, based upon that refusal to treat.

28. Claimant credibly testified that she had had previous episodes of back pain, which typically resolved quickly. As found, immediately prior to February 16, 2022 Claimant had no ongoing medical care for back pain and was symptom free.

29. As found, there was a medical record from Denver Health which references back pain on January 8, 2021 and resulted from the fall where Claimant injured her left ankle. At the follow-up visit on February 1, 2021, however, there was no reference to

back pain, but rather only to the old metatarsal fracture of Claimant's left foot. Claimant testified that she had no problems with her low back immediately prior to the work injury. Claimant is found credible and persuasive.

30. Claimant is found to be credible and persuasive. As found Claimant was injured in the course and scope of her employment when she slipped and fell in Employer's parking lot while on her break. This is specifically not considered a deviation as Claimant was allowed to take her breaks on any area of Employer's premises and the parking lot was within Employer's premises.

31. As found, Claimant injured her low back, coccygeal area as well as her SI joint, causing a need for medical care and disability.

32. From the documents in evidence, Claimant's last appointment at Denver Health was on July 19, 2022. She was advised that they anticipated proceeding with steroid injections into her lumbar spine. She was advised that she needed to await the scheduling of the injections but had not received a call back with the scheduled appointment to date. As found, Claimant continues to require medical attention.

33. Further, as found, Concentra refused to continue seeing her and Respondents have not provided a new designated provider willing to provide care for the work related injuries. Claimant has shown that the right to select a medical provider passed to Claimant, that Claimant selected Nurse Gallup at Denver Health and that the Denver Heath system, including Nurse Gallup are authorized treating providers.

34. Claimant has remained under temporary work restrictions which the employer could not accommodate, but have paid Claimant, as noted by the stipulation of the parties, Employer funded short-term disability benefits from February 21, 2022 through August 19, 2022. Claimant continued to be off work in accordance with documentation from the medical providers at Denver Health.

35. Any evidence or testimony not consistent with the above findings is specifically found not relevant, or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as

not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Sec. 8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question

of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014). The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008); *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008).

The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

Claimant's was credible and persuasive in her description of her injuries, symptoms and pain complaints cause by the February 16, 2022 slip and fall at work. The arguments made by Respondents regarding Claimant's veracity are not persuasive. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable low back injury during the course and scope of her employment with Employer on February 16, 2022 when she fell in the designated parking lot for employees and landed on her bottom. This is supported by the opinions of Nurse Quinones, Dr. Chan, Dr. Villavicencio and Dr. Schwed and the Work Status Reports covering March 11 through April 12, 2022 indicating that Claimant's objective findings were consistent with a history of work-related mechanisms of injury. It is even supported by the Employer's First Report of Injury of injury filed by Employer's HR representative on March 9, 2022.

Moreover, although the records reflect that Claimant suffered at times from back symptoms prior to February 16, 2022, those incidents did not cause the need for significant medical care and Claimant credibly testified that they were short lived symptoms that did not require the care that has been consistent since Claimant's injury of February 16, 2022. Accordingly, Claimant's work injuries were proximately cause by

the February 16, 2022 accident and aggravated, accelerated or combined with any pre-existing conditions to produce the need for medical treatment. Thus, Claimant suffered a compensable lumbar injury during the course and scope of her employment with Employer on February 16, 2022.

C. Authorized Medical Benefits

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. Sec. 8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006). Furthermore, W.C.R.P. 8-3(A) specifies that "[w]hen emergency care is no longer required the provisions of section 8-2 of this rule apply."

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the

respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020).

As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonably necessary and causally related medical benefits for her work related injuries cause by the fall of February 16, 2022, including for her low back, SI joint and sacrococcygeal injuries. Respondents noted that they had notice of the injury on February 16, 2022. However, there is no record that Respondents gave Claimant a designated provider list within the allowed seven days.[4] Claimant went to the Denver Health Medical Center (DHMC) --Urgent care and was evaluated by Nurse Quinones for acute low back pain on February 22, 2022[5], and Claimant provided the note to Employer. Claimant then followed up with DHMC on March 4, 2022 and was treated with injections by Dr. Nelson. Further, Claimant's care at Denver Health Urgent Care was reasonable and necessary emergent care. Claimant was not provided an appointment with Concentra until March 11, 2022.[6] Claimant eventually saw Dr. Villavicencio on March 11, 2022 at Concentra and he found that Claimant's mechanism of injury was work related and that she required medical care.

Claimant argued at hearing that Concentra's refusal to treat was for non-medical reasons, and thus the right to select a physician passed to Claimant. Claimant selected La Casa which operates under the auspices of Denver Health. Respondents argued at hearing and in their position statement that because the Claimant was under a denial of care there was no obligation to treat and that the designated provider remained designated, and thus they did not waive the right to select the medical provider. Sec. 8-43-404(5), C.R.S. implicitly contemplates that the Respondents will designate a physician who is willing to provide treatment. *See Ruybal v. University Health Sciences Center*, 768 P.2d 1259, 1260 (Colo. App. 1988). If the employer fails to timely tender the services of a physician, the right of selection passes to the claimant and the selected physician becomes an ATP. *See Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAO, Sept. 3, 2008). Whether the ATP refused to treat the claimant for non-medical reasons, whether the insurer received notice of the refusal to treat and whether the insurer "forthwith" designated a physician who was willing to treat the claimant are questions of fact for resolution by the ALJ*. Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAP, Sept. 3, 2008); *see Ruybal*, 768 P.2d at 1260. Here, it is specifically found that Ms. Rasis, as a Concentra representative, refused to treat Claimant. Claimant is credible and persuasive in her testimony that Ms. Rasis advised Claimant her claim was being denied and that Concentra would no longer treat her for her injuries. As found, Ms. Rasis in effect, advised Claimant to pursue care with her primary care provider (PCP).[7] Claimant's counsel sent a letter to Respondents that specifically notified

[4] Seven days from February 16, 2022 was February 24, 2022.

[5] The February 22, 2022 visit would normally be considered only an emergency visit.

[6] In fact, this ALJ considers that Respondents lost the right to designate a provider at all since Claimant was not sent to a provider until well after the date of injury and later than the seven day period required by statute. Claimant's choice of DHMC for the initial urgent care visit and all the follow up medical care at DHMC, indicated that DHMC should be an authorized treating provider.

[7] This, in effect, was a referral to her PCP.

Respondents of Concentra's refusal to treat. No other persuasive evidence that Respondents responded to the notice was within the records or evidence provided at hearing. Claimant identified her PCP to be the providers at Denver Health Medical Center and specifically Nurse Gallup. As further found, the refusal to treat and Respondents' failure to identify a provider that was willing to treat Claimant caused the right of selection to pass to Claimant and Claimant designated Nurse Gallup of DHMC, who is now Claimant's treating provider.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant has shown by a preponderance of the evidence that she sustained compensable work related injuries to her low back, coccyx and SI joint within the course and scope of her employment on February 16, 2022.

2. The Stipulations of the parties are approved and become part of this order.

3. Claimant's average weekly wage is $800.00.

4. Respondents shall pay temporary total disability benefits at the rate of $533.33 beginning February 21, 2022 until terminated by law.

5. Pursuant to the parties' stipulation, Respondents may take an offset due to payment of short-term disability benefits in the amount of $250.00 per week from February 21, 2022 to August 19, 2022.

6. Respondents shall pay interest at the statutory rate of eight percent (8%) on all benefits that were not paid when due.

7. Claimant is entitled to medical benefits that are reasonably necessary and related to the February 16, 2022 injuries to her low back, coccyx and SI joint. As stipulated by the parties, Concentra is an authorized treating provider. Further, Claimant's care at Denver Health Urgent Care was reasonable and necessary emergent care.

8. Claimant has shown by a preponderance of the evidence that selection of provider passed to Claimant due to a refusal to treat for non-medical reasons and that La Casa--DHMC and Nurse Gallup are now authorized treating providers.

9. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

PROCEDURAL HISTORY

A hearing took place on August 17, 2022. The parties were provided through September 21, 2022 to submit post hearing positions statements, briefs or proposed orders. The proposed Findings of Fact, Conclusions of Law and Order were timely filed. This ALJ issued Findings of Fact, Conclusions of Law and Order (FFCL) on September 22, 2022[1] with instructions to the parties to provide supplemental wage information, if the parties were unable to reach an agreement with regard to the issue of average weekly wage as the information provided during trial was insufficient to make a determination. The FFCL was an order on both the October 23, 2020 claim, WC 5-153-595-002 and the September 1, 2021 claim, WC 5-184-071-002.

On October 14, 2022 Respondents filed a Petition to Review the FFCL on multiple issues including objecting to a finding of this ALJ "that Claimant proved by a preponderance of the evidence that she sustained an occupational disease or injury in the form of carpal tunnel syndrome during the course and scope of her employment."

The parties communicated that they were unable to reach an agreement regarding average weekly wage and provided the records on October 26, 2022, now labelled as Respondents' Exhibit L, which were admitted into the record. This Findings of Fact, Conclusions of Law and Order is only to address the issue of average weekly wage and the calculation of benefits due and owing pursuant to the September 22, 2022 FFCL, regarding the September 1, 2021 claim, WC 5-184-071-002. All other issues before this ALJ were addressed in the prior FFCL issued by this ALJ on September 22, 2022.

ISSUE

I. Whether Claimant has proven by a preponderance of the evidence the amount of Claimant's average weekly wage (AWW) applicable to the compensable September 1, 2021 claim, W.C. No 5-184-071-002.

II. Calculation of Temporary Partial and Temporary Total disability benefits based AWW and prior award dated September 22, 2022.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a mechanical service technician for Employer since sometime in 2018 or 2019 and was 54 years old at the time of the hearing.

[1] Served on September 26, 2022.

2. On September 1, 2021, Claimant was working on the roof of a building, replacing a fan motor of a condenser. He climbed up to the roof by ladder. A portion of the roof was pitched (slanted slope) and then the condenser was on a flat part of the roof further up. When he was standing on the pitched portion of the roof with his left foot, in the process of stepping onto the flat portion of the roof with his right foot, Claimant twisted his left knee and felt a pop. At that point, his left knee twisted while his left foot was planted on the 8 or 9 pitched roof, which was approximately a 36 to 38 degree pitch, causing a popping in his left knee. He was carrying a condenser part and his tools at the time. Claimant stated that all his weight was on the left leg because he had lifted his right foot to step from the pitched area to the flat roof area.

3. Claimant stated that something snapped in his knee. Claimant did not feel immediate pain but by approximately 30 minutes later, the pain in his knee started to intensify on top of the knee as well as inside and on the outer portion of his knee. Initially he thought he might have pulled a muscle. Since he was on the last job of the day, Claimant went home, thinking he would sleep on it and see how he was feeling in the morning. But his knee continued to hurt and swelled up, with a horseshoe swollen area above the knee cap. He reported the injury the following day and was sent for a drug test that day at Concentra. This claim was found compensable in the Findings of Fact, Conclusions of Law and Order dated September 22, 2022. See prior order.

4. The wage records, Respondents' Exhibit L, show Claimant received a pay increase for pay period ending May 22, 2021 which includes wages beginning as of May 9, 2021. When considering wages earned from May 9, 2021 through August 28, 2021, the last complete pay period prior to the September 1, 2021 date of injury, Claimant earned a total of $13,844.78. As found, the total wages divided by the 16 week period renders an average weekly wage of $865.30.[2] This provides a temporary Total Disability rate of $576.87. This ALJ finds that this is the Claimant's fair approximation of his average weekly wage.

5. The September 22, 2022 FFCL ordered Respondents to pay either temporary partial or temporary total disability benefits beginning September 2, 2021, as Claimant had shown by a preponderance of the evidence that he was entitled to wage loss benefits related to the September 1, 2021 work related injuries. This ALJ is now able to calculate the benefits owed as the parties communicated that they could not reach an agreement.

6. Based on the wage records from pay period ending September 4, 2021 through pay period ending November 6, 2021 (10 weeks or 70 days), Claimant earned an average of $602.03. Claimant's AWW was $865.30. The difference is $263.27 per week for September 2, 2021 through November 7, 2021. Therefore, Claimant is owed a total of $1,657.26.70 in temporary partial disability benefits plus interests of $145.70, which is calculated as follows:

[2] The total wages of $13,844.78 divided by 112 days multiplied by 7 days a week and rounded to the closest decimal.

Calculate

Clear

When adding the $1,146.09 in interest due for TTD for pay period of November 7, 2022 through October 31, 2022 and the interest due for TPD for pay period from September 2, 2021 through November 6 2021 for the amount of $145.70, the total interest due for both periods is $1,291.79

CONCLUSIONS OF LAW

Average Weekly Wage

An ALJ may choose from two different methods set forth in Section 8-42-102, C.R.S. to determine a claimant's average weekly wage (AWW). The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." Sec. 8-42-102(2), C.R.S. The default provision in Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's

actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993); *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7,* W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). As found, the Claimant's fair approximation of actual wage loss and diminished earning capacity caused by the September 1, 2021 industrial injury is an average weekly wage of $865.30. This renders a temporary total disability rate of $576.87.

Temporary Disability Benefits

The September 22, 2022 FFCL ordered Respondents to pay either temporary partial or temporary total disability benefits beginning September 2, 2021, as Claimant had shown by a preponderance of the evidence that he was entitled to wage loss benefits related to the September 1, 2021 work related injuries. This ALJ was able to calculate the benefits owed as the parties communicated that they could not reach an agreement and provided this ALJ with records going back to April 2021 until Claimant lost his employment.

The parties submitted the wage records on October 26, 2022, which were admitted as Respondents' Exhibit L. Based on the wage records from pay period ending September 4, 2021 through pay period ending November 6, 2021 (10 weeks or 70 days), Claimant earned an average of $602.03. Claimant's AWW was $865.30. The difference is $263.27 per week for September 2, 2021 through November 7, 2021. Therefore, Claimant is owed a total of $1,657.26 in temporary partial disability benefits plus interests of $145.70.

Claimant is also owed temporary total disability benefits beginning the week of November 7, 2021 through the present and continuing until terminated by law. Neither party indicated that Claimant had been earning wages after November 7, 2021 and no further wage records were submitted after this date. For the period of November 7, 2021 through the date of this order, October 31, 2022 there is a period of 359 days, this day included. Claimant is owed TTD in the amount of $29,585.19.

Interest is due related to the benefits, which were not paid when due, in accordance with Sec. 8-43-410(2), C.R.S. in the total amount of $1,291.79.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant proved by a preponderance of the evidence that the Claimant's average weekly wage is $867.30. Temporary Total disability benefits shall be paid at the rate of $576.87.

2. Pursuant to the September 22, 2022 Findings of Fact, Conclusions of Law and Order, Claimant was awarded temporary disability benefits beginning September 2, 2021.

3. Respondents shall pay Temporary Partial Disability from September 2, 2021 through November 6, 2021 in the amount of $1,657.26.

4. Respondents shall pay Temporary Total Disability Benefits from November 7, 2021 through the present and continuing until terminated by law. Benefits are calculated from November 7, 2021 through October 31, 2022 in the amount of $29,585.19. Subsequent to this date, TTD shall continue at the rate of $576.87 per week.

5. Interests owed from September 2, 2021 through October 31, 2022 is $1,291.79. Entitlement to interest shall continue until payments are made in accordance with this order.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-124-222-001

ISSUES

1. Whether Claimant has established by clear and convincing evidence that the DIME physician incorrectly placed Claimant at maximum medical improvement (MMI) as of June 22, 2021.

2. If Claimant overcomes the DIME physician's MMI determination, whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits.

3. If Claimant is at MMI, whether Claimant established by a preponderance of the evidence that DIME physician's permanent partial impairment ratings were incorrect.

4. Whether Claimant has established by a preponderance of the evidence that her left upper extremity scheduled impairment rating should be converted to a whole person impairment.

FINDINGS OF FACT

1. Claimant was employed by Employer as a custodian. On November 19, 2019, Claimant sustained admitted injuries when she fell a sidewalk striking her forehead on the cement, landed on her left side. On November 21, 2019, two days after Claimant's November 18, 2019 injury, Claimant was seen at UC Health by Kelby Bethards, M.D., for evaluation of headaches, left shoulder pain, right knee abrasion, and a loose tooth. (Ex. G)

2. On November 29, 2019, Claimant began treatment at UCH Health Greeley workers' compensation clinic. Initially, she saw Micheal Deitz, PA-C, physician assistant for authorized treating physician (ATP) Oscar Sanders, M.D. Mr. Deitz diagnosed Claimant with a left shoulder strain with the possibility of left rotator cuff injury, fall with facial contusion with no loss of consciousness, and a loose tooth. LOC.

3. Over the next 19 months, Claimant saw Dr. Sanders or associated providers at UCH approximately twenty times between November 29, 2019 and June 22, 2021. During this time, Dr. Sanders referred Claimant for evaluations with multiple specialists. These included referrals to Christopher Kirkpatrick, M.D., for an ophthalmologic evaluation; Gregory Reichhardt, M.D., for electrodiagnostic testing and trigger point injections; orthopedic referrals to Joshua Snyder, M.D., and Dr. Heaston for evaluation of Claimant's left shoulder; neurology referral to Benjamin Miceli, PA-C, for evaluation of Claimant's head injury and headaches; and a

psychological referral to Majia Bruzas, Ph.D., for psychological evaluation and treatment.

4. In January 2020, Dr. Sanders diagnosed Claimant with a probable concussion with minimal post concussive symptoms, head pain, headaches, and left shoulder pain. On January 29, 2020, Dr. Sanders noted Claimant's left neck and upper extremity symptoms were unresponsive to conservative care, and ordered MRIs of Claimant's left shoulder, left elbow and cervical spine. Dr. Sanders also referred Claimant for an ophthalmologic evaluation with Dr. Kirkpatrick which was normal. (Ex. I, Ex. 12, p. 136).

5. The MRIs were performed on February 10, 2020. Claimant's left shoulder MRI showed low grade rotator cuff tearing and tendinopathy without a full thickness or high-grade tear. The cervical and elbow MRIs were normal. (Ex. J & 16).

6. On February 17, 2020, Dr. Sanders reviewed Claimant's MRIs and indicated Claimant's rotator cuff tendinopathy was likely pre-existing and not caused by her work injury, although it was possibly exacerbated. He concluded Claimant's symptoms were clinically most consistent with subacromial impingement. He referred Claimant to Dr. Snyder for evaluation and possible steroid injections, and to the UCH Neurology Clinic for evaluation for her headaches. Dr. Sanders considered neuropsychological testing, but declined to do so because Claimant's only post-concussive symptoms at that time were headaches. He also indicated he would continue to monitor Claimant for post-concussive symptoms. On March 2, 2021, Dr. Sanders indicated he would consider referring Claimant for a neuropsychological evaluation shoulder cognitive and memory issues persist. (Ex. 12)

7. On March 2, 2020, Claimant saw Benjamin Miceli, PA-C, at the UCH Neurology Clinic. He diagnosed Claimant with headaches as late effect of brain injury, hypersomnia, and cognitive dysfunction. He noted Claimant's cognitive dysfunction was reported to pre-date her November 19, 2019 injury, but was exacerbated with her head injury. He prescribed Amitriptyline for her headaches, and indicated that a neuropsychological evaluation was to be determined, because of no known Spanish language testing in the region. (Ex. K).

8. On May 13, 2020, PA Miceli noted that Claimant's headaches and cognitive issues were resolving, and he anticipated weaning Claimant off Amitriptyline. PA Miceli again indicated a neuropsychological evaluation was "TBD," because of no known Spanish language testing in the region. (Ex. K).

9. Claimant saw Dr. Snyder on March 5, 2020. Based on his examination and review of Claimant's MRI, he diagnosed Claimant with a partial thickness bursal-sided rotator cuff tear on the left. Claimant continued to experience pain despite physical therapy. Dr. Snyder performed a cortisone injection in Claimant's left shoulder and recommended she restart physical therapy. (Ex. 14) Claimant returned to Dr.

Snyder on May 1, 2020, reporting three weeks resolution of her shoulder pain before the pain returned. (Ex. H) In later follow ups on June 8, 2020 and August 10, 2020, Dr. Snyder indicated he did not see any indications for surgery, additional injections, or activity restrictions, and noted he believed Claimant's discomfort was myofascial in nature. (Ex. H).

10. In October 2020, Dr. Sanders referred Claimant for a second opinion regarding her shoulder to a Dr. Heaston. (No records from Dr. Heaston were offered or admitted into evidence). Dr. Heaston ordered a follow-up left shoulder MRI, which showed similar findings to the February 2010 MRI. Dr. Heaston performed a second left shoulder injection which provide relief, but did not recommend surgery. (Ex. 12 & O).

11. On October 20, 2020, Claimant began seeing psychologist Dr. Bruzas, on referral from Dr. Sanders. Dr. Bruzas diagnosed Claimant with pain disorder, adjustment disorder with mixed anxiety, and depressed mood. Claimant reported memory and concentration issues. Dr. Bruzas indicated she was aware of a Spanish-speaking neuropsychologist in Denver (Jose Lafosse, Ph.D.), who could see Claimant if her memory and concentration issues persisted. (Ex. 15).

12. At her visit with Dr. Sanders on November 25, 2020, Claimant was referred to Dr. Lafosse for a neuropsychological evaluation, and the referral is reflected on the WC 164 form associated with the visit. (Ex. 12). At visits on December 16, 2020 and December 28, 2020, Dr. Sanders counseled Claimant on the importance of completing the neuropsychological evaluation with Dr. Lafosse. The WC 164 form associated with the December 28, 2020 visit also reflects the referral to Dr. Lafosse. (Ex. 12).

13. Claimant continued to see Dr. Bruzas from October 20, 2020 through August 26, 2021. At the December 9, 2020 visit, Dr. Bruzas indicated Claimant was scheduled for neuropsychological testing with Dr. Lafosse. However, at Claimant's January 27, 2021 visit, Claimant indicated she had not received information on testing with Dr. Lafosse. After January 27, 2021, neuropsychological testing was not referenced in Dr. Bruzas' records. Claimant's last documented visit with Dr. Bruzas on August 26, 2021, was noted as the second of four maintenance visits. No credible evidence was presented that Claimant returned to Dr. Bruzas after August 26, 2021 to complete additional visits. (Ex. 15).

14. For reasons that are not apparent from the record, Claimant did not complete a neuropsychological evaluation with Dr. Lafosse or any other provider.

15. On February 10, 2021, Dr. Sanders completed a questionnaire submitted by Respondents' counsel regarding Claimant's status. He indicated Claimant was not at MMI, and that Claimant required further medical treatment, specifically an EMG and ophthalmology follow up examination. He also indicated once Claimant reached MMI, she would require maintenance care including coverage for

Cymbalta for headache treatment. Dr. Sanders did not reference a neuropsychological examination at that time. (Ex. 12).

16. On February 26, 2021, Dr. Sanders requested that Dr. Bruzas evaluate Claimant for a mental[1] impairment rating, indicating Claimant had TBI and adjustment disorder with depression. (Ex. 12).

17. On March 19, 2021, John Raschbacher, M.D., conducted an independent medical examination (IME) at Respondents' request. In his report (dated April 5, 2021), Dr. Raschbacher conflated a different April 18, 2019 injury[2] with Claimant's November 19, 2019 injury, and opined that Claimant reached MMI on April 1, 2020 for the November 19, 2019 injury. (April 1, 2020 was the date of MMI for Claimant's unrelated April 2019 injury to her right shoulder). Because many of Dr. Raschbacher's opinions are based on his conflation of Claimant's two injuries, the opinions expressed in his April 5, 2021 report are not persuasive or credible. Notwithstanding, based on his examination and measurements taken of Claimant's left shoulder, Dr. Raschbacher assigned Claimant an 11% left upper extremity permanent impairment rating. (Ex. N).

18. On April 19, 2021, Dr. Raschbacher issued a second report based on a "re-evaluation of previously reviewed records." In that report, Dr. Raschbacher opined that Claimant reached MMI for her November 19, 2019 injury on March 21, 2020. He further opined that Claimant did not have a ratable condition related to her November 19, 2019 injury, and Claimant required no further medical treatment. He offered no cogent explanation for reversing his prior 11% rating for Claimant's left upper extremity. (Ex. N). Dr. Raschbacher's opinions are not persuasive.

19. On June 22, 2021, Dr. Snyder placed Claimant at MMI, and provided a permanent impairment rating. The admitted records demonstrate that Dr. Sanders assigned a 6% impairment for Claimant's left upper extremity, which corresponds to a 4% whole person impairment. (Ex. 12, p. 4, and Ex. I, p. 247). Dr. Snyder also assigned a 6% mental impairment (Ex. I, p. 248-249; Ex. 12, p. 5-6). In the mental impairment rating worksheet, Dr. Sanders stated Claimant's "Total Whole Person Physical Impairment" was 9%. (Ex. I, p. 249), and assigned Claimant a 14% whole person impairment (combining mental and physical impairments). Dr. Sanders did

[1] Claimant's providers variously use the terms "psychiatric impairment," "psychological impairment" and "mental impairment" in reference to the assignment of a "mental impairment" rating permitted under § 8-41-301 (2)(a), C.R.S. Thus, for the sake of clarity, the ALJ has substituted the term "mental impairment," for "psychiatric" or "psychological" where appropriate.

[2] Claimant had a different work-related injury on April 18, 2019 when she fell sustaining injuries to her back, right shoulder, and back of her head. Claimant ultimately underwent surgery on her right shoulder, and returned to work approximately six weeks after the surgery. Over the course of the next year, Claimant received treatment for her right shoulder, until being placed at maximum medical improvement (MMI), on April 1, 2020. The injuries Claimant sustained on November 19, 2019 are separate and distinct from the injuries sustained on April 18, 2019 and are not the subject of the current dispute.

not indicate which body part or parts comprised the 9% whole person physical impairment rating, or why the "physical" impairment listed was greater than the 4% left upper extremity rating he assigned the same day. (See id.)

20. In a letter to Respondents' counsel dated June 29, 2021, Dr. Sanders opined that Claimant's had a 14% whole person impairment, and would require medical maintenance care consisting of coverage for Amitriptyline (for headaches) and psychotherapy for one year. He recommended no other medical maintenance care, and did not recommend a neuropsychological evaluation. (Ex. I).

21. On July 2, 2021, Respondents filed a Final Admission of Liability, admitting for a 6% left upper extremity impairment rating and for 12 weeks of benefits for her permanent mental impairment. (Ex. 8). Claimant timely requested a DIME and objected to the FAL. (Ex. 6 & 7).

22. On January 25, 2022, Claimant underwent a Division Independent Medical Examination (DIME) with Jade Dillon, M.D. Based on her examination and review of records, Dr. Dillon diagnosed Claimant with a partial thickness rotator cuff tear of the left shoulder, closed head injury with mild traumatic brain injury, and adjustment disorder with mixed anxiety and depressed mood. Dr. Dillon opined that each of these diagnoses are causally related to Claimant's November 19, 2019 work injury and were "ratable conditions." She placed Claimant at MMI, effective June 22, 2021 (the MMI date assigned by Dr. Sanders). She assigned Claimant a 12% left upper extremity impairment rating (which corresponds to a 7% whole person impairment), and a 2% mental impairment rating. Combined, the two impairment ratings correspond to a 9% whole person impairment. Dr. Dillon indicated apportionment was not applicable and that Claimant had no other ratable conditions. Specifically, she stated "With respect to the anatomical regions specified on the application for DIME, there is no other impairment related to the occupational injury in question." When discussing the rationale for her decision, Dr. Dillon indicated that Claimant's "degradation of memory and concentration" was addressed under the category of "thinking, concentration, and judgment," which, the ALJ notes, are components of the mental impairment rating. (Ex. O, p. 337). Dr. Dillon assigned a 10-pound left-hand lifting restriction, and no reaching or working overhead. Finally, Dr. Dillon opined that no specific maintenance care was required. (Ex. O).

23. On February 25, 2022, the Division confirmed the completion of Dr. Dillon's DIME report. (Ex. C).

24. On March 8, 2022, Respondents filed a Final Admission of Liability, admitting for a 12% scheduled left upper extremity impairment, and 2% mental impairment. (Ex. D).

25. On April 6, 2022, Claimant filed an objection to the FAL, and an Application for Hearing. (Ex. 4).

26. Dr. Raschbacher testified by deposition and was admitted as an expert in occupational medicine. He testified that he performed a second examination of Claimant on July 29, 2022, and reviewed Dr. Dillon's DIME report. Dr. Raschbacher agreed with Dr. Dillon's impairment rating for Claimant's left shoulder, and opined that she followed appropriate and correct methodologies in assigning Claimant's left upper extremity impairment rating, and opined that it should not be converted to a whole person impairment. He testified that the situs of Claimant's left upper extremity impairment is the left shoulder joint. Dr. Raschbacher also testified that he did not see any error in Dr. Dillon's determination of mental impairment.

27. Claimant testified that following her November 19, 2019 injury, she experienced headaches, left shoulder pain, and pain in her eye and tooth. Claimant returned to work the day of her injury, and went to work the following day but was sent home. Claimant has not worked since November 20, 2019. Claimant testified at hearing that she continues to experience memory issues, and problems with mental function, specifically, that she needs more time to think and forgets where she is going at times. She testified her left shoulder continues to hurt with movement. Claimant could not recall why she had not seen a specialist, from which the ALJ infers Claimant meant a neuropsychologist. She testified that Dr. Sanders released her from treatment, and that the last physician she recalled seeing for her injuries was the DIME physician, Dr. Dillon.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the

witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on MMI and Impairment

The Act defines MMI as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Indus. Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Serv.,* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.*, W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); *compare In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Indus. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

MMI

Claimant has failed to establish by clear and convincing evidence that the DIME physician's determination that Claimant reached MMI on June 22, 2021 was incorrect. As found, Dr. Sanders and Dr. Dillon assigned an MMI date of June 22, 2021. Given Dr. Sanders' extensive involvement in Claimant's case, including numerous examinations and visits over a period of approximately 19 months, the ALJ finds his date of MMI to be reasonable and appropriate. Dr. Dillon's adoption of Dr. Sanders' MMI date is also reasonable and appropriate under the circumstances. No physician has opined that Claimant was not at MMI as of June 22, 2021.

Claimant asserts Claimant's reports of headaches and cognitive issues, and the lack of a neuropsychological evaluation render a finding of MMI incorrect. The record indicates Dr. Sanders initially referred Claimant for a neuropsychological evaluation with Dr. Lafosse in December 2020. For reasons not apparent in the record, Claimant did not complete that evaluation. As the referring physician, the ALJ infers that Dr. Sanders was aware Claimant had not completed the evaluation when he placed Claimant at MMI, and when he recommended medical maintenance care, which did not include a neuropsychological evaluation. Although Claimant testified to ongoing memory and cognitive issues, the existence of these symptoms does not constitute clear and convincing evidence that the assignment of MMI by the DIME physician was incorrect. The evidence does not establish that Dr. Dillon's MMI opinion is highly probably incorrect.

Impairment

Claimant has failed to establish by clear and convincing evidence that the permanent impairment ratings assigned by the DIME physician are incorrect. Claimant's primary contention is that Dr. Dillon failed to assign Claimant a permanent impairment rating for a closed head injury. As found, Claimant's primary symptoms from her closed head injury, and for which a neuropsychological examination was recommended, were

memory and concentration. In the DIME report, Dr. Dillon indicated these issues were addressed under the category of "Thinking, Concentration, and Judgment" which are components of Claimant's mental impairment rating. Claimant presented no credible evidence indicating that Dr. Dillon's rating of these conditions as components of Claimant's mental impairment rating was incorrect or improper, or that Dr. Dillon failed to follow appropriate standards and guidelines when assigning permanent impairment ratings.

Temporary Total Disability

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). TTD benefits continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Once a Claimant reaches MMI, entitlement to TTD benefits terminates.

Because Claimant has failed to establish that the DIME physician's MMI rating was incorrect, Claimant reached MMI on June 22, 2021. Accordingly, Claimant is not entitled to further TTD benefits after June 22, 2021. Claimant's request for TTD benefits is denied.

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* § 8-42-107(8)(c), C.R.S.

The schedule includes the loss of the "arm at the shoulder." *See* § 8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO June 11, 1998). Because § 8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under § 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). For a shoulder injury, the question is whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora*, W.C. 4-452-408 (ICAO Oct. 9, 2002).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *In re Claim of Barnes,* 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has established by a preponderance of the evidence that her scheduled impairment rating for her left upper extremity should be converted to a whole person impairment. As found, Claimant reached MMI for the November 19, 2019 left shoulder injury on June 22, 2021. The DIME physician determined Claimant sustained a left partial thickness rotator cuff tear as a result of her November 19, 2019 injury. Dr. Dillon also determined Claimant had limitations in range of motion and required work restrictions limiting her ability to lift and use her left arm overhead. These limitations are not determinative of the "situs of functional impairment," but are, instead, manifestations of functional impairment. *See Garcia v. Terumo BCT*, W.C. No. 5-094-514-002 (ICAO, July 14, 2021).

Claimant's November 19, 2019, injury resulted in damage to the structures of the left shoulder, which are not surgical in nature. The ALJ credits Dr. Raschbacher's opinion that the situs of Claimant's impairment is her left shoulder. The ALJ concludes the Claimant's inability to fully use her left arm overhead and loss of range of motion are manifestations of an impairment of Claimant's left shoulder, beyond the arm. In other words, Claimant's shoulder does not function correctly. Accordingly, Claimant's left upper extremity impairment rating is converted from an 12% scheduled rating to a 7% whole person impairment.

ORDER

It is therefore ordered that:

1. Claimant reached maximum medical improvement on June 22, 2021.

2. Claimant's 12% scheduled left upper extremity rating is converted to a 7% whole person impairment.

3. Claimant failed to overcome the DIME's opinion regarding permanent impairment. Claimant sustained a 7% whole person impairment for her left upper extremity and a 2% mental impairment.

4. Claimant's request for temporary total disability benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

The issues set for determination included:

- Is Claimant entitled to reopen his claim?
- If the claim is reopened, is Claimant entitled to conversion of scheduled medical impairment to whole-person rating?
- Is Claimant entitled to additional permanent partial disability (PPD) benefits?

PROCEDURAL SUMMARY

The undersigned issued a Summary Order on May 11, 2020. Respondent filed a timely Request for Specific Findings of Fact and Conclusions of Law and Order ("FFCL&O") on May 20, 2020. Claimant filed amended proposed Findings of Fact and Conclusions of Law, which was received on May 22, 2020. The FFCLO was issued on June 23, 2020.

Respondent filed a timely Petition to Review. The Industrial Claims Appeals Office ("ICAO") affirmed the decision and Respondent appealed to the Court of Appeals.

On December 2, 2021, the Court of Appeals remanded this case to the Industrial Claims Appeals Office for additional findings to determine whether Claimant had established a basis for reopening the award. The ICAO remanded this matter to the Director or the ALJ on January 21, 2022.

On February 4, 2022, Claimant's counsel sent a letter to all parties requesting that the Director determine whether reopening in this case was appropriate as "Claimant [has] no additional evidence to present". [1]

No response was received from Respondent and in a March 3, 2022 Order, the Director stated Claimant noted in his letter that Respondents would not agree with his request. The Director also found that "while this letter is not structured as a Motion, it does appear to be a request to reconsider the Director's January 31, 2022 Order".

Claimant's Motion to Reconsider the Order referring this matter to the OAC was denied. The Director also noted that the referral to the OAC for a factual determination

[1] The letter was not filed at the Office of Administrative Courts. The information concerning the letter was taken from Director Tauriello's March 3, 2022 Order, which was lodged with the Court on September 16, 2022.

regarding the issues of closure and reopening remained in effect.

A merits hearing was held on April 11, 2022.

FINDINGS OF FACT

1. Claimant was employed by Employer as a Deputy Sheriff, a position he has held for thirteen years.

2. Claimant's medical history was significant in that he had complaints involving his neck, upper back, and left trapezius. On August 12, 2015, Claimant saw his chiropractor at Kaiser Permanente. Claimant complained of left neck and left arm numbness and pain.[2] These were his first complaints of left arm and neck numbness and pain. There was no evidence Claimant suffered a traumatic injury to his left shoulder or had work restrictions before January 2017.

3. On January 31, 2017, Claimant was injured in a courtroom altercation with an individual who was in custody. Claimant testified he jammed his left arm, including the elbow and shoulder.

4. Claimant received medical treatment for his left shoulder, including a course of conservative treatment. After conservative treatment failed to resolve Claimant's symptoms, he underwent a left shoulder MRI which showed a posterior labral tear without evidence of a rotator cuff tear.

5. An arthroscopic labral repair, subacromial decompression (bursectomy, resection of CA ligament with resection of 7mm anterior acromial spur) and superior labral debridement performed by Michael Hewitt, M.D. The post-operative diagnoses were: left shoulder posterior-inferior labral tear (3 o'clock to 6 o'clock); superior labral fraying (type I SLAP lesion); subacromial impingement.

6. Following surgery, Claimant had complaints of myofascial irritation involving the trapezius and levator scapulae. Claimant underwent trigger point injections administered by John Aschberger, M.D. with good results. The ALJ noted these complaints were beyond the shoulder joint.

7. Claimant was placed at maximum medical improvement on January 15, 2018 by Stephen Danahey, M.D. Dr. Danahey assigned Claimant a 6% scheduled impairment rating for the left upper extremity.

8. On May 31, 2018, Claimant underwent a Division of Worker's Compensation ("DOWC") Independent Medical Examination, which was performed by John Hughes, M.D. At the time, Claimant reported symptoms of a stretch in his left posterior trapezius, with right lateral flexion and rotation of the cervical spine. Dr. Hughes noted the right shoulder ranges of motion (ROM) were full and smooth. The left shoulder

[2] Exhibit N, p. 49.

motion was restricted with flexion and extension measured at 119° and 31°, respectively. Abduction and adduction were measured at 126° and 14°, with external and internal rotation measured at 78° and 41°.

9. Dr. Hughes' assessment was: work-related fall with left shoulder sprain/strain leading to development of a labral tear and glenohumeral instability; left shoulder arthritis post arthroscopic labral repair, subacromial decompression and debridement performed by Dr. Hewitt on April 25, 2017; cervicothoracic myofascial pain syndrome, with current findings similar to what was noted in the past.

10. Dr. Hughes agreed with the date of MMI and based upon the ROM findings, assigned an 11% scheduled impairment to the shoulder. He noted crepitation and assigned a 10% severity grade for crepitation, which yielded a 16% upper extremity rating that converted to a 10% whole person medical impairment. Dr. Hughes noted Claimant had asymmetric restriction in right lateral flexion and rotation of the cervical spine, which may have been due to myofacial hypertonicity of the left posterior trapezius stemming from Claimant's surgery. The ALJ concluded this was evidence of functional impairment beyond the shoulder.

11. Respondent filed a final Admission of Liability ("FAL") on June 22, 2018, based upon Dr. Hughes' rating. admitting for, among other benefits, permanent partial disability ("PPD") benefits based on a 16% scheduled impairment. Respondent paid PPD based upon the 16% scheduled impairment rating.

12. On June 29, 2018, Claimant filed a timely objection to the FAL, including an Application for a Hearing ("AFH"). This AFH sought additional PPD benefits, based upon conversion to the whole person impairment rating. Respondent was served a copy of the AFH.

13, The ALJ concluded Respondent had notice that the issue of PPD benefits was contested by Claimant by virtue of the filing of this AFH. No hearing was set on this AFH.

14. Claimant filed a second AFH on October 12, 2018. An Unopposed Motion to Set Hearing Outside of 120-Days was granted on November 8, 2018. The case was not set for hearing on this AFH. Respondent was served a copy of the second AFH.

15. The ALJ concluded Respondent had notice that the issue of PPD benefits was contested by Claimant by virtue of the filing of this AFH.

16. On June 14, 2019, Respondent filed a Motion to Close the case, citing no activity in the case. Respondent alleged Claimant had not taken any action in furtherance of prosecution of the claim since producing Answers to Interrogatories on December 3, 2018.

17. On July 1, 2019, the Director of the Division of Worker's Compensation (Paul Tauriello) issued an Order to Show Cause ("OSC"), which set a 30-day deadline for Claimant to respond or else the claim would be closed by operation of law. The Director had authority under § 8-43-218 (1), C.R.S. (2018) to issue such an Order.

18. The deadline for the response was July 31, 2019. Claimant received the Order to Show cause, but did not file a timely response to the Director's July 1, 2019 Order.

19. On August 30, 2019, Claimant filed a third AFH on the issues of PPD benefits and whole-person conversion.

20. The ALJ found Respondent had notice of that Claimant was seeking conversion of the medical impairment rating by virtue of the three AFH-s filed.

21. On September 9, 2019, Claimant filed a Motion for Reconsideration to Set Aside Order to Show Cause and to Permit Setting of the August 30, 2019 Application of Hearing. This Motion requested that the Director set aside his July 1, 2019 Order that closed Claimant's claim for failure to prosecute. As part of the Motion, Claimant's counsel affirmed that he did not have a copy of the July 1, 2019 Order in his file.

22. Claimant's counsel then filed a Supplemental Request for Reconsideration on September 17, 2019, acknowledging that both Claimant and Claimant's counsel's office received copies of the June 14, 2019 Motion to Close and the July 1, 2019 Order; however, Claimant's counsel alleged that his legal assistant never advised Claimant's counsel of the Motion or the Order. Claimant's counsel stated similar acts of omission/malfeasance were done by this legal assistant.[3] The ALJ inferred that the was the reason that no response was filed to the OSC.

23. On September 19, 2019, Respondent filed a Response to Claimant's Motion for Reconsideration. Claimant's counsel filed a Reply Brief on September 25, 2019. That same day, the parties attended a Prehearing conference on Respondent's Motion to Strike Claimant's AFH for Ripeness. In an October 2, 2019 Order, Prehearing ALJ Martinez Tenreiro found and ordered the following:

> Respondents have shown good cause to strike the Application for Hearing in this matter as the issues are closed pursuant to the July 1, 2019 order. Should the Director reverse the prior order, Claimant may refile for hearing on the issue of conversion other issues listed on the prior Applications for Hearing.

24. On October 7, 2019, Director Tauriello issued an Extension of Time to Show Cause. The Director found, in relevant part:

[3] Exhibit F, pp.15-16. Claimant's Supplemental Request for Reconsideration was a verified pleading, signed before a notary public

> "On September 11, 2019, Claimant's counsel requested that the Order to Show Cause be set aside. Originally, Counsel stated the motion and order were not in his file and he, therefore, had failed to timely respond. However, he has since learned that his former legal assistant was aware of and received a copy of the motion and order and failed to inform Claimant's counsel. . . . The Claimant has represented that there is a need for an extension of time to show cause why this claim should not be closed".

25. The Order provided that Claimant's claim may be closed unless, within 120 days of the Order, the parties either set and attended a hearing before an Office of Administrative Courts ALJ on any outstanding issues, obtained a further extension of time, or filed a stipulation.

26. The ALJ concluded that Claimant's counsel did not respond to the Motion to Close was because of an error or mistake.

27. The ALJ concluded that sufficient facts were shown to establish the claim should be reopened based upon error or mistake.

28. The parties went to hearing on January 22, 2020 on the issue whether the Director had authority to issue the October 7, 2019 or whether reopening was required.

29. Pursuant to the Court of Appeals decision, the Director did not have authority to issue an Order extending time for the Response to the Order to Show Cause. The case was closed upon the expiration of the July 31, 2019 deadline to respond to the OSC.

30. Claimant filed an AFH on October 11, 2019, requesting conversion to the whole person medical impairment rating. In its Response, Respondent endorsed the issue of appealing the Director's October 7, 2019 Order, seeking review of the Director's Order for an abuse of discretion. This hearing followed.

31. Claimant testified he experienced pain in the shoulder, as well as between his shoulder and neck. This has caused ongoing functional problems with his left shoulder that impacted sleeping, lifting with his left arm, carrying objects on his left shoulder and dressing. The ALJ found Claimant to be a credible witness.

32. Ronald Swarsen, M.D. testified as an expert witness. He has practiced in the area of Occupational Medicine since 1984 and since 1997 has been Level II accredited pursuant to the WCRP. Dr. Swarsen reviewed Claimant's medical records, but did not examine him. Dr. Swarsen opined Claimant's injury included part of the scapula, which was proximal to the shoulder. The surgery Claimant underwent also involved structures above the glenohumeral joint, including superior aspects of the superior labrum and these anatomic structures were outside of the shoulder. Dr. Swarsen stated Claimant's deltoid and trapezius muscles were impacted by the surgery. Dr.

Swarsen demonstrated on an anatomical drawing how these structures were affected, as well as noting that the shoulder was separate from the arm.[4]

33. Dr. Swarsen opined Claimant sustained a functional loss above the shoulder. The ALJ credited Dr. Swarsen's opinion and concluded Claimant sustained a functional impairment beyond the shoulder.

34. Respondent did not present evidence which contradicted Dr. Swarsen's conclusions.

35. Claimant met his burden of proof to establish he was entitled to conversion of the extremity rating to a whole person rating.

36. Claimant is entitled to additional PPD benefits based upon the whole person rating issued by Dr. Hughes.

37. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Reopening

[4] Exhibit 13.

As set forth in both of Procedural History and Findings of Fact sections, *supra*, this case had an extensive procedural history. The Director initially issued an Order to Show Cause and set a deadline of July 31, 2019 for Claimant's Response, which was not met. (Findings of Fact 16-18). As determined in Findings of Fact 19-22, Claimant then filed an AFH and a Motion for Reconsideration; to which Respondent objected. Respondent also filed Motion to Strike the AFH. The Director then extended the time for the Response to the OSC. (Finding of Fact 23-24). A hearing on the merits was conducted and Respondent appealed the Findings of Fact, Conclusions of Law and Order. The Industrial Claim Appeals Office affirmed the FFCL&O and Respondent appealed the Final Order to the Colorado Court of Appeals.

The Court of Appeals concluded the instance case was governed by the reopening statute, as it involved an award of PPD benefits in the FAL and then held that the case was closed by the terms of the original Order to Show Cause that was issued upon the filing of the Motion to Close. Judge Gomez, who noted there was tension between the statutory authority of the Director to manage claims and the statute governing reopening, wrote for the Court of Appeals:

> "We conclude that the language in the reopening statute is broad enough to encompass claimant's award, which granted benefits pursuant to the FAL and which became final when the claim was closed for failure to prosecute. Indeed, in a similar case, a division of this court held that a claimant's receipt of temporary disability benefits based on the employer's FAL constituted an "award" subject to the reopening statute, even though the claim had been closed for failure to prosecute when the claimant failed to attend a hearing he had requested. *Burke*, 905 P.2d at 2. Thus, when the claimant later sought additional benefits due to the worsening of his condition, the division held that the award could be reopened if he satisfied the criteria in the reopening statute. *Id.*
>
> Likewise, here, claimant received PPD benefits based on the [Employer]'s FAL. That receipt of benefits constituted an "award," which became final when the claim was closed for failure to prosecute and timely respond to the Director's show cause order. And once the award had been closed, claimant could pursue further benefits only if he satisfied the criteria in the reopening statute." *City and County of Denver v. ICAO*, 2021 COA 146, p. 12 (Colo. App. 2021).

Accordingly, the Court held the reopening statute applied in this case and Claimant was required to make a factual showing that reopening was warranted.

> "So, too, does the reopening statute constrain the Director's ability to issue procedural orders that have the effect of reopening a closed award. Accordingly, the Director couldn't belatedly extend the show cause deadline, reopen the award, and grant additional benefits unless claimant satisfied the criteria in the reopening statute." *City and County of Denver v. ICAO*, 2021 COA 146, p. 15 (Colo. App. 2021).

The Court of Appeals also considered the application of *Klosterman v. Indus. Comm'n of Colorado*, *673 P.2d* (Colo. App.), which Respondent argued was similar to the facts here.

In *Klosterman v. Indus. Comm'n of Colorado*, *supra*, 694 P.2d at 873, Claimant alleged she suffered an injury and informed her employer. The employer, who was uninsured, hired defense counsel upon learning of a workers' compensation claim. The defense counsel never filed an entry of appearance and the employer changed addresses without filing a notice of change of address with the DOWC. The employer contested liability, arguing that he was a partner, but not an active participant. The defense attorney determined that the claim should be filed against the corporation and said he would advise Claimant's attorney. He did not enter an appearance in the case and took no further action. Claimant then filed an AFH to pursue indemnity benefits. Neither the employer nor the defense counsel received notice nor appeared for the hearing. Claimant prevailed and was awarded benefits.

Employer filed his petition to reopen in March 1983, alleging error or mistake. At hearing, the officer found that "the error or mistake in this case is . . . [the employer's] neglect" because the employer had not followed up with his attorney. The hearing officer determined the failure by the employer to apprise the DOWC of its address and the failure to appear at the hearing was attributable to his own neglect. The hearing officer rejected the employer's request to reopen the claim. The ruling was upheld by the Industrial Commission.

The employer appealed, arguing that his neglect was excusable and that excusable neglect fell within the definition of "error or mistake". The Court of Appeals rejected the argument and Judge Berman concluded: "It is apparent here that the Commission did not consider Klosterman's inaction after he obtained counsel, including his failure to apprise the Division of a change of address, or at any time of an address for the registered agent of the corporate entity, to be the type of mistake which would entitle him to a reopening". This was not an abuse of discretion and the decision was affirmed. *Klosterman v. Indus. Comm'n of Colorado*, *supra*, 694 P.2d at 876.

In *City and County of Denver v. ICAO*, the Court of Appeals considered the question of whether the terms "error" or "mistake" encompassed excusable neglect and noted the division that decided Klosterman relied on the fact that, irrespective of whether Klosterman's conduct might be considered excusable neglect, the Industrial Commission had determined that it wasn't an error or mistake that warranted reopening The Court of Appeals stated:

> "We are not prepared to conclude, as a matter of law, that the facts of this case cannot support a finding of error or mistake. The City hasn't offered a definition of "error" or explained why the Director couldn't conclude that reopening was warranted on that basis. It's also not entirely clear that "mistake" has the same meaning in the reopening statute as in Rule 60(b)(1). After all, Rule 60(b)(1)

includes the terms “inadvertence,” “surprise,” and “excusable neglect” along with “mistake” as bases for ordering relief from a judgment, thus suggesting that, in that context, each term means something different”. *City and County of Denver v. ICAO*, 2021 COA 146, pp. 21-22 (Colo. App. 2021).

The Court went on to conclude that it was unable to determine whether Claimant satisfied the grounds for reopening on the grounds of error or mistake and the case was remanded for additional factual findings.

Thus, issue presented in case is governed by § 8-43-303, C.R.S. and the ALJ or Director has broad discretion to determine whether Claimant met [their] burden of proof. *Id.* The question framed in the case at bar is whether there was a sufficient showing to support reopening under these facts.

The reopening statute provides in pertinent part:

> **“Reopening.** (1) At any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment involving the circumstances described in section 8-42-113.5, an error, a mistake, or a change in condition, except for those settlements entered into pursuant to section 8-43-204 in which the claimant waived all rights to reopen an award; but a settlement may be reopened at any time on the ground of fraud or mutual mistake of material fact. In cases involving the circumstances described in section 8-42-113.5, recovery of overpayments shall be ordered in accordance with said section. If an award is reopened on grounds of **an error, a mistake, or a change in condition**, compensation and medical benefits previously ordered may be ended, diminished, maintained, or increased. Reopening does not affect the earlier award as to money already paid except in cases of fraud. Any order entered under this subsection (1) is subject to review in the same manner as other orders”. [Emphasis added.]

Claimant argued that reopening was warranted, specifically that the facts supported a finding of excusable neglect under C.R.C.P. Rule 60(b). This was based upon the beneficent purpose of the Workers’ Compensation Act (“Act”). Claimant asserted that the provisions of the Act was to be construed liberally to effectuate its remedial and beneficent purposes. *See ICAO v. Ray,* 145 P.3d 661 (Colo. 2006); *University of Denver v. Industrial Commission*, 335 P.2d 292 (Colo. 1959). This rule of liberal construction provides that an injured worker receives the benefit of doubt on close questions of law, i.e., issues which can be interpreted either way. See *Mountain City Meat v. Oqueda*, 919 P.2d 246 (Colo. 1996); *UAL v. ICAO*, 993 P.2d 1152 (Colo. 2002).

Claimant also asserted that doctrine of excusable neglect was addressed by the Supreme Court in *Buckmiller v. Safeway Stores, Inc.,* 727 P.2d 1112 (Colo. 1986) and applied in this context. The Court specified criteria to be considered when rleif was granted under C.R.C.P. 60(b), which included The trial court should base its decision on

the following three criteria: (1) whether the neglect that resulted in entry of judgment by default was excusable; (2) whether the moving party has alleged a meritorious claim or defense; and (3) whether release from the challenged order would be consistent with consideration of equity. More particularly, Claimant alleged that the criteria set forth in *Buckmiller v. Safeway Stores, Inc.*, *supra,* were met and showing of excusable neglect was made. The ALJ noted that none of the appellate decisions which followed *Buckmiller* have adopted "excusable neglect" as a basis for reopening in a workers' compensation case.

Claimant asserted that the ALJ had authority to reinstate the Director'sFinally, Claimant also averred that since the claim should be reopened, he sustained a functional impairment beyond the shoulder and was entitled to additional PPD benefits.

Respondent asserted that Claimant failed to make a showing that the claim should be reopened, pursuant to 8-43–303, C.R.S. and there were no facts which supported a finding of "fraud, an error, a mistake or change of condition" which justified reopening under these circumstances. Respondent argued that the mistake or error presented in the instant case was not the type of mistake that would justify re-opening. Specifically, Respondent argued that the closure was not based upon a mistake or error. Respondent contended that, in fact, the mistake or error was wholly extraneous to the factual and legal basis for closure. Respondent analogized this to the situation where Claimant failed to object to a FAL or Respondent failed to file a timely Petition to Review after a scheduled impairment rating was converted to a whole person rating. Respondent also contended that in this case, Claimant had taken no action to prosecute the claim in the six months before the Director issued the Order, which closed the Claim. On this point, Respondent asserted the concept of error or mistake for reopening was distinguished from what might be considered error or mistake in "common parlance".

Respondent also argued that excusable neglect was not a basis for reopening and that the standard differed than under C.R.C.P. 60(b). Respondent reviewed the statutory history of both the reopening statute and C.R.C.P. 60(b) and asserted "mistake" was not intended to have a broader meaning in the reopening statute than what it had in C.R.C.P. 60(b). Respondent posited that the Colorado Legislature must have deliberately omitted "inadvertence," "surprise," and "excusable neglect" as bases for reopening when the reopening statute was enacted.

Respondent pointed as support for this argument the fact that the reopening statute was originally enacted in 1919 under Chapter 210, § 110, of the Session Laws of Colorado. (S.B. 19-59.) It was codified as § 4484, Compiled Laws of Colo. (1921). It included "error," "mistake," and "change in conditions" as the three bases for reopening an award. At the same time, a separate statute, § 81 of the Compiled Laws of Colorado, provided that a party could be relieved of a judgment where it arose from "mistake," "inadvertence," "surprise," or "excusable neglect" in civil cases. This was the predecessor of C.R.C.P. 60(b). Respondent argued both statutes provided means to set aside a final judgment or award but established somewhat different standards for workers' compensation than what was established for civil matters. The General Assembly is

presumed to have been aware of § 81 at the time they enacted § 4484, and their decision to use a different standard should be assumed to be deliberate.

The ALJ considered the arguments of the parties and the Court of Appeals decision in this case and concluded that "excusable neglect", as that phrase has been construed in cases in which a party sought relief under C.R.C.P. 60(b) did not apply at the case at bar. However, after considering the totality of the evidence, the ALJ determined that Claimant made a showing for relief by demonstrating that the failure to respond to the OSC was based on error or mistake. (Findings of Fact 22, 27). Accordingly, Claimant was entitled to reopen the claim. The rationale for this decision was threefold; first under these circumstances the ALJ determined the failure to respond to the OSC was the result of an error or mistake. As Respondent correctly noted in its post-April 2022 hearing brief, error and neglect are not defined in the Act. The ALJ turned to the plain meaning of words error and mistake:

> Definition of error-
>
> "Error (noun):
>
> 1a**:** an act or condition of ignorant or imprudent deviation from a code of behavior; b**:** an act involving an unintentional deviation from truth or accuracy; c**:** an act that through ignorance, deficiency, or accident departs from or fails to achieve what should be done, an *error* in judgment."[5]
>
> Definition of mistake-
>
> "Mistake (noun):
>
> 1: a wrong judgment;
> 2: a wrong action or statement proceeding from faulty judgment, inadequate knowledge, or inattention".[6]

The definition of mistake is apposite here, as the evidence pointed to a wrong judgment or action; i.e. Claimant's failure to respond to the OSC. The ALJ concluded this occurred because of error or mistake. (Finding of Fact 22). The error or mistake directly led to no response and the claim was closed. The ALJ specifically considered Respondent's argument that Claimant's error or mistake was "wholly extraneous" to the legal and factual basis for the closure itself and therefore could not be a rational basis for reopening. No appellate court has taken such a circumscribed view of what constitutes error or mistake and the ALJ concluded that a sufficient showing for reopening was made when the plain meaning of those terms was considered.

In the context of workers' compensation cases where reopening was sought, "mistake" has been interpreted to include mistake of fact or mistake of law. Examples of

[5] Merriam-Webster Dictionary, Sixteenth Edition.

[6] Id.

mistakes of fact supporting reopening include cases where there were instances of misdiagnosis or a more detailed diagnosis which were discovered only after the claim had closed. *See, e.g., Berg v. Indus. Claim Appeals Office of State of Colorado*, 128 P.3d 270, 273 (Colo. App. 2005) [misdiagnosis discovered during post-MMI surgery was legally sufficient mistake for purposes of reopening] and *Standard Metals Corp. v. Gallegos*, 781 P.2d 142, 146 (Colo.App.1989) [misdiagnosis discovered later only after advancement in medical technology was legally sufficient mistake for purposes of reopening].

An award may also be reopened based on mistake of law where the Order closing the claim was inconsistent with subsequent judicial interpretation. *Renz v. Larimer County School Dist. Poudre R-1*, 924 P.2d 1177, 1180-81 (Colo.App.1996). In its opinion in the case at bench, the Court of Appeals noted the *Berg* and *Renz* decisions didn't "state that the term 'mistake' is limited to those particular circumstances, nor do they elucidate what might constitute an 'error' justifying reopening". *City and County of Denver v. ICAO*, 2021 COA 146, p. 18 (Colo. App. 2021).

Accordingly, the ALJ considered the plain meaning of error or mistake as used in the statute, as well as reviewing the factual underpinnings of this case, (including the fact that Claimant had diligently prosecuted the case up to the point the Motion to Close was filed) and found that the failure to respond was the result of an error or mistake.

Second, the Court of Appeals decision in this case expressly noted that it could not conclude as a matter of law that the facts cannot support a finding of error and or mistake. Respondent characterized this as dicta, however, the view expressed by the Court indicates that other reopening for error or mistake is not limited to misdiagnosis cases or those where the law changed. The ALJ considered the extensive procedural history of the case before the Motion to Close was filed, as well as the circumstances which led to the failure to respond and concluded the basis was an error or mistake.

Third and finally, the ALJ concluded that there were equitable considerations in determining whether this claim should be reopened. Chief among these was the fact that Respondent had notice of the dispute concerning benefits by virtue of the prior AFH-s which were filed by Claimant. As found, the AFHs were filed in a timely fashion and Respondent was on notice that the issue of PPD was disputed and Claimant requesting a conversion of the shoulder impairment rating. (Findings of Fact 12-15). In addition, a trial on the merits is generally favored over default, which in this case the OSC operated as when it closed the PPD issue. These considerations weighed in favor of reopening this claim under these circumstances.

Conversion to A Whole Person Impairment Rating

Having concluded that the case should be reopened, the next issue to be determined was Claimant's request for PPD benefits based upon the whole person

impairment rating. If Claimant sustains an injury not found on the schedule, § 8-42-107(1)(b), C.R.S., provides Claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes, the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996).

Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit Claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

The ALJ was persuaded Claimant met his burden of proof and established by a preponderance of the evidence he was entitled to PPD benefits based upon a whole person medical impairment rating. (Finding of Fact 35-36). The ALJ's conclusion was based upon the medical evidence in the form of treatment records which provided objective evidence that anatomical structures beyond the shoulder joint were involved. (Finding of Fact 6). Dr. Hughes' opinions within the DIME report also supported this conclusion. (Findings of Fact 9-10). In addition, Dr. Swarsen's expert testimony was persuasive on this subject, as well. (Findings of Fact 32-33). Claimant's testimony regarding the injury to his shoulder and its sequelae provided additional factual support for the ALJ's determination that he was entitled to a whole person rating. (Finding of Fact 31). The ALJ also found that Respondent presented no evidence to contravene the finding that structures beyond the shoulder joint were implicated. (Finding of Fact 34).

Based upon the totality of evidence presented at hearing, the ALJ determined Claimant showed he sustained functional impairment beyond the shoulder and was entitled to PPD benefits based upon a 10% whole person rating.

ORDER

It is therefore ordered:

1. Claimant's claim is reopened.

2. Respondents shall pay PPD benefits based upon Dr. Hughes 10% whole person rating. [$939.85 X .10 X 1.26 (Age factor-47 years of age) x 400 weeks= $47,368.44].

3. Respondent is entitled to a credit for PPD benefits previously paid.

4. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents have proven by a preponderance of the evidence that the doctrines of estoppel and latches apply to the claim.

II. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury on June 18, 2019.

IF THE CLAIM IS COMPENSABLE, THEN:

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to authorized, reasonably necessary and related medical benefits.

IV. Whether Claimant has proven by a preponderance of the evidence he is entitled to temporary partial disability benefits.

STIPULATIONS OF THE PARTIES

The parties stipulated that the issues of temporary total disability (TTD) benefits was withdrawn at the beginning of the hearing. In light of the stipulation, Respondents withdrew the issue of termination. Claimant agreed at the close of the evidence that the issue of temporary partial disability (TPD) was also withdrawn.

The parties further stipulated that, if the claim was found compensable, that Claimant's average weekly wage was $1,018.00, and that medical providers from Colorado Plains Medical Group and associated providers, Colorado Plains Medical Center, Colorado Rehabilitation and Occupational Medicine, Dr. Laurence Lesnak, as well as Morgan County Chiropractic, P.C., and Orthopedic and Spine Center of the Rockies were authorized treating providers.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a 44 year old cow hand at a dairy owned by Employer on June 18, 2019. His job included cleaning corrals, moving the cows from each corral and when necessary into the bottle neck in order to control the cow while performing the insemination, inseminating the cows, laying down bedding in the corrals and all other dairy jobs of a laborer.

2. Claimant stated that on June 18, 2019 he was corralling a cow into the chute in order to inject the cow (artificial insemination). At one point, two cows went towards him, one of the cows turned around pushing Claimant, and Claimant ended up against

the corral fence rails. Claimant stated, that when this happened he extended his left hand against the cow so he would not be shoved and his right side made contact with the rails of the fence. He alleged he injured his left arm, left rib, and shoulder and his right side, including his shoulder, arm and hand, and back.

3. Claimant was sent the next day to Colorado Plains Medical Group, where he was evaluated on June 19, 2019 by Tiffany Jorgensen, FNP. Nurse Jorgensen took a history as follows:

> 41-year-old male here with concerns of lower back pain, left forearm pain, left rib pain and lower shoulder pain in regards to being shooved [sic.] by a cow States that he was at work on 06/18/2019 when they were placing cows in a Corral in 1 cow with coming up fast and patient reports that he went to put his arms across to self to protect self and went to turn when the cow pushed him coming in contact with the cow on his rights side as he was turning to avoid the cow States that this happened about 8 00 a m In the morning States since then has had left forearm pain along with left shoulder pain left rib pain and left back pain

Claimant's physical exam was essentially normal other than the complaints of tenderness and complaints of pain with movement. She ordered x-rays of the lumbar spine, the left forearm, shoulder and ribs as well as the left ankle. Nurse Jorgensen also provided restrictions of no lifting more than 20 lbs. and no repetitive lifting, carrying, pushing, pulling, reaching overhead or reaching away from the body and prescribed a muscle relaxant. X-rays were all noted as normal findings.

4. Employer filed a First Report of Injury (FROI) on June 21, 2019 noting that they had notice of the claim on June 18, 2019, and stated that Claimant was moving cows and was pushed into the railings and had a contusion of the left hip.

5. In a follow up on July 8, 2019 Marshal Unrein, PA-C noted that Claimant did not have any obvious deformity or abnormality of the left shoulder but had mild point tenderness over the posterior aspect of the shoulder, a slightly decreased range of motion and strength of his left shoulder with resistance to flexion and abduction, and slightly decreased motion in the left arm compared to the right. He also found point tenderness over the right SI joint area, and an audible pop to the right hip area with flexion. He diagnosed strain of lumbar region, strain of left shoulder, and contusion of rib on left side. He continued muscle relaxant medications, provided restrictions of 10 lbs. and Claimant was to avoid repetitive bending of the lumbar spine.

6. By July 23, 2019 Claimant noted that he had improvement since the last visit but continued to have some low back pain with most of the pain over the right SI joint area. With regard to the left shoulder, he had some difficulty with range of motion but good strength. Mr. Unrein remarked that claimant had not started with physical therapy but was willing to for his low back symptoms. He documented that Claimant's left shoulder strain was essentially resolved and was asymptomatic regarding the rib contusion.

7. On August 22, 2019 Claimant reported he had seen good improvement over the past 2 weeks in regards to his low back pain. He reported decreasing pain in his low back. He also had decreasing pain down his right leg. He still had pain in his hips once in a while but was much better. He had been going to physical therapy 2 times a week.

Claimant reported he was pleased with progress and Mr. Unrein was hopeful that things would get better over the next 4-8 weeks. He continued taking ibuprofen, using ice and heat as well as following restrictions. On exam, Mr. Unrein found nothing remarkable but recommended continued physical therapy. After this visit Claimant continued to report improvements with physical therapy.

8. By September 27, 2019 Claimant started having worsening lumbar spine symptoms with left lower extremity radiation. Mr. Unrein recommended an MRI and prescribed continued physical therapy.

9. Claimant was unable to obtain an MRI due to his pacemaker and radiology recommended a CT scan of the lumbar spine with myelogram. Claimant continued to report radiating pain in the bilateral lower extremities, greater on the left than the right on October 24, 2019.

10. Claimant was evaluated by Nurse Jorgensen on November 1, 2019. She remarked that Claimant had another fall on dry alfalfa on October 30, 2019, injuring his bilateral arms and aggravating his low back pain. Claimant reported no numbness or tingling; just a slight hot-feeling, and thigh pain. Claimant stated he felt like his leg wanted to go out from under him. Claimant report his back was doing well, but since the fall had worsened. Ms. Jorgensen noted that Mr. Unrein had also referred Claimant to a neurosurgeon for an evaluation. She discontinued physical therapy until the neurosurgeon provided his opinion.

11. On November 6, 2019 Claimant's CT myelogram of the lumbar spine revealed only mild discogenic and facet related degenerative changes greatest at the L4-5 level without significant spinal canal or foraminal stenosis, as read by Dr. Eric Nyberg.

12. On November 12, 2019 X-rays of the ribs showed no evidence of fracture, displacement, or other acute deformity, uniform mineralization of the skeletal structures and no focal soft tissue deformity. X-rays of the left wrist and ankle were also negative.

13. Claimant reported that he had a slip and fall on ice on November 21, 2019, which aggravated his low back symptoms and was seen in the urgent care office, who took X–rays on November 21, 2019.[1] Mr. Unrein changed the referral from a neurosurgeon to a physiatrist for evaluation in light of the essentially normal CT and continuing complaints of Claimant's low back pain.

14. Claimant was evaluated by Dr. Lawrence Lesnak on December 13, 2019. Claimant, or rather his wife, provided a history of a slip and fall injury on ice on or about October 30, 2019, while at work, injuring his left side and causing low back and leg pain. He noted that he was seen at Colorado Plains clinic that day.[2] He stated that Claimant reported he had had multiple prior low back injuries, mostly at work. However, he was unable to provide Dr. Lesnak with any information regarding these multiple prior low back injuries. He stated that he had undergone significant treatments over the years as well but, again, could not state what or where.

[1] This ALJ infers that the date was a typographical error as x-rays were taken on November 12, 2019 so it is presumed that the fall happened on November 12, not November 21, 2019.
[2] Claimant was seen on November 1, 2019 with increased back pain.

15. Claimant complained to Dr. Lesnak of left greater than right low back pain, left buttock pain and less frequently left posterior leg pain extending into the left posterior heel. Dr. Lesnak made comment that Claimant was a very poor historian (multiple times throughout his report). He noted that Claimant appeared to have a flattened affect, and reported moderate to high level of somatic pain complaints, indicative of psychosocial facts affecting Claimant's symptoms, his recovery as well as his perceived function. He noted that Claimant exhibited multiple pain behaviors during his evaluation. He documented that gentle brushing of the skin overlying his left greater than right low back/superior buttock region reproduced at least a moderate amount of pain. However, there were no distinct trigger points or muscle spasms that were palpated throughout the patient's lumbar paraspinal musculature or gluteal musculature bilaterally. He recommended Claimant have an EMG test to determine whether radicular nerve injury was present.

16. Dr. Lesnak noted that the psychosocial evaluation was assessed utilizing the Distress and Risk Assessment Method (DRAM) evaluation which analyzed the Modified Zung Depression Index and the Modified Somatic Pain Questionnaire. The patient scored numerical values that placed him in the "at risk" category for psychosocial dysfunction. Dr. Lesnak further noted that Claimant reported a high level of depressive symptoms, as well as a moderate to high level of somatic pain complaints during the DRAM testing. A moderate to high level of reported somatic pain complaints suggested the presence of an underlying symptom somatic disorder/somatoform disorder and stated that patients who have these types of diagnoses frequently embellish/exaggerate their symptoms, thus causing their reported subjective complaints to be unreliable at best. Therefore, he cautioned evaluating/treating healthcare providers to rely primarily, if not solely, on reproducible objective findings in order to provide accurate medical diagnoses and especially accurate medical treatment recommendations.

17. On December 19, 2019 Claimant reported to Mr. Unrein that he continued to have low back pain with radiating pain down the left leg greater on the back than anteriorly and was scheduled for a lower extremity EMG for January 17, 2020.

18. Respondents filed a Notice of Contest on January 15, 2020 stating that the injury or illness was not work related and that they required a medical history and release returned by Claimant.

19. Claimant underwent EMG testing on January 17, 2020 which showed no electrodiagnostic evidence of left lumbar or sacral radiculopathies, plexopathies or peripheral nerve entrapments or neuropathies involving Claimant's left lower extremity or lumbar spine. He stated that given Claimant's significant past medical history, as well as his residual pain behaviors and nonphysiologic findings, Claimant did not appear to be a good candidate for any type of interventional treatments such as a trial of lower lumbar facet joint injections. However, he did recommend a brief trial of manipulative treatments, either osteopathic or chiropractic care.

20. Mr. Unrein noted that he had received the physiatrist's recommendation that Claimant be referred to a chiropractor, which he did on January 22, 2020.

21. On February 24, 2020 Mr. Unrein documented that Claimant had seen the chiropractor for six sessions without improvement and that Claimant continued with low

back pain that radiated down his left leg to his left heel areas. He stated that the symptoms wax and wane. Claimant was to finish two additional visits and then be seen by the physiatrist again.

22. Claimant returned to Dr. Lesnak on March 23, 2020 who noted he found Claimant to be at MMI without permanent impairment based on negative diagnostic workup and subjective complaints, and discharged him from care. Dr. Lesnak did not make any further recommendations for Claimant's non-objective somatic complaints.

23. On March 30, 2020 Claimant was placed at maximum medical improvement by Mr. Unrein as Claimant had exhausted all conservative care without resolution of his symptoms and diagnostic test failed to reveal any need for injections or surgical treatment. Mr. Unrein noted that Claimant had no permanent restrictions and could return to regular work. The M164 also indicated Claimant had no permanent impairment.

24. Claimant's counsel entered his appearance on July 9, 2020.

25. On July 29, 2020 a Workers' Claim for Compensation (WCC) was filed on Claimant's behalf noting he was injured on June 18, 2019, sustaining strain injuries to his upper back, low back, waist, and spine, while working for Employer.[3]

26. On February 1, 2021 Claimant presented to the emergency department at Colorado Plains with increased symptoms without any known mechanism of injury. Claimant reported it had started the day before attending the ED.[4] Claimant reported that he had pain that radiated to the right foot, left foot, right leg, and left leg. He had numbness, tingling, urinary retention, weakness, and was unable to have a bowel movement. He was examined, and he did have decreased sensation to light touch in the bilateral feet. He was complaining of weakness in his legs, although he was standing and walking around without difficulty. Following some discussion of whether he needed an MRI emergently and the facts that he was neurologically intact and was walking around, Dr. Matthew Garman determined proper course was to give him some medications and discharged him home.

27. Claimant filed an Application for Hearing on January 12, 2022 and, following an Unopposed Motion to Withdraw the Application for Hearing and an order dated June 7, 2022 allowing for the withdrawal without prejudice, filed a second Application for Hearing on July 8, 2022.

28. Claimant was seen by Dr. Alisson Fall at Respondent's request for an independent medical evaluation on April 6, 2022. She took a history which was consistent with Claimant's testimony and performed a record review. She examined Claimant, reporting Claimant had diffuse tenderness to palpation of the lumbar spine, self-limited range of motion secondary to complaints of pain, no radicular symptoms, negative straight leg raise and difficulty sitting up due to body habitus. She also found give-way weakness of the lower extremities but otherwise a negative testing. She assessed that Claimant was post left arm, ribcage, and hip contusion on June 18, 2019 which resolved. She also

[3] There was no mention of Claimant's left upper extremity or hip.
[4] Presumably meaning January 31, 2010.

noted the subsequent fall leading to low back pain and a reported fall on January 31, 2021 leading to acute back pain and leg symptoms.

29. Claimant's Supervisor with Employer testified that Claimant had quit his job in July, 2020, that he had simply stopped working. He also stated that Claimant was paid out his vacation time instead of Claimant taking any vacation time.

30. This ALJ reviewed the video footage found at Exhibit S. This ALJ concurs with Dr. Fall that, on the surveillance, Claimant could be seen easily bending to the ground to pick up a small item, getting in and out of a vehicle, and working under a Jeep including what appears to be changing a tire and even getting underneath, with prolonged squatting and awkward positions without hesitation or signs of discomfort. He was also ambulating fluidly without antalgic gait.

31. As found, Claimant admitted to having multiple subsequent falls to Dr. Lesnak when he saw him on December 13, 2019. He reported to Dr. Lesnak that he was injured on October 30, 2019. Claimant reported he had had multiple prior low back injuries, mostly at work, in the past. However, he was unable to provide Dr. Lesnak with any information regarding these multiple prior work-related low back injuries. This is borne out by the evaluation at the ED on November 1, 2019 that stated Claimant had an aggravation of his lumbar spine condition. Following this evaluation, Claimant continued to complain of worsening symptoms. However, Dr. Lesnak noted that Claimant appeared to have a flattened affect, and reported moderate to high level of somatic pain complaints, indicative of psychosocial facts affecting Claimant's symptoms, his recovery as well as his perceived function. He noted that Claimant exhibited multiple pain behaviors during his evaluation.

32. As found, the video surveillance shows that, while Claimant complained to providers and testified that he continued to have pain symptoms, he clearly is shown without visible or notable limitations while changing a tire in awkward positioning while squatted for a lengthy period of time. This ALJ was not convinced that there was an injury causing incident that occurred on June 18, 2019, as Claimant admitted to Dr. Lesnak that he had had multiple falls and multiple injuries to his low back with unknown dates of injury. While there are no records of those injuries before June 2019, Claimant's testimony was not persuasive. Further, even if there was an incident that cause some complaints on June 18, 2019 the records of August 22, 2019 persuasively indicated that Claimant's complaints were essentially resolved. Lastly, Respondents have shown that Claimant had multiple intervening events that likely caused aggravations of his lumbar spine condition, which are not related to the incident of June 18, 2019 but likely related to intervening events occurring on October 30, 2019, November 12, 2019 and January 31, 2020 or at other times of uncertain dates. Drs. Fall and Lesnak are found persuasive in this matter. Claimant has failed to show he has any injuries related to the June 18, 2019 events.

33. Testimony and evidence inconsistent with the above findings is not relevant, credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives

of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Doctrines of Latches and Estoppel

Respondents counsel argued that the claim was barred under the doctrine of latches and estoppel as supported *by Hickerson v. Vessels*, 316 P.3d 620 (Colo. 2014). That case deals with a promissory note and the promise to pay said note, when the statute of limitations would have barred the recovery action because the party made a payment after the statute of limitation had run, the underlying court determined that the statutory period began anew under the partial payment doctrine. The trial court reversed itself and made a determination that the laches defense applied and recovery was not permitted. The Court of Appeals reversed stating that laches was unavailable due to the separation of powers doctrine. The Supreme Court reversed the CA decision and remanded. They cited *Lombard v. Colorado Outdoor Educ. Ctr, Inc.,* 187 P.3d 565, 570 (Colo.2008) citing that "Where the interaction of common law and statutory law is at issue, we acknowledge and respect the General Assembly's authority to modify or abrogate common law, but only recognize such changes when they are clearly expressed." *Hickerson v. Vessels*, 316 P.3d 620 at 623 (Colo. 2014). Further stating that "Unless a conflict with the statute exists, the pre-existing common law continues to apply." See *Smith v. Exec. Custom Homes*, 230 P.3d 1186, 1192 (Colo.2010).

The statute of limitation under the Act states as follows:

> … the right to compensation and benefits provided by said articles shall be barred unless, within two years after the injury or after death resulting therefrom, a notice claiming compensation is filed with the division. This limitation shall not apply to any claimant to whom compensation has been paid or if it is established to the satisfaction of the director within three years after the injury or death that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced thereby,…"

The statute of limitations as denoted in the Act, very clearly expresses the parameters for the filing of a claim. There is no doubt in the mind of this ALJ that the statute of limitations in the Act is clear, concise and states the parties' rights with regard to the filing or pursuing of a claim.

The elements of laches are: (1) full knowledge of the facts; (2) unreasonable delay in the assertion of available remedy; and (3) intervening reliance by and prejudice to another. *City of Thornton v. Bijou Irrigation. Co.,* 926 P.2d 1, 73 (Colo.1996) (internal quotations omitted). Laches requires "such unreasonable delay in the assertion of and attempted securing of equitable rights as to constitute in equity and good conscience a bar to recovery*." Loveland Camp No. 83 v. Woodmen Bldg.,* 108 Colo. 297,116 P.2d 195, 199; *Keller Cattle Co. v. Allison*, 55 P.3d 257, 260 (Colo.App.2002) ("The doctrine of laches permits a court to deny a party equitable relief."); *Hickerson v. Vessels, supra* at 623.

The Supreme court analyzed that "Since the early days of statehood, we have recognized that laches is available as a defense in some circumstances to shorten the period for filing a claim, even though the claim has been timely filed within a legislatively prescribed statute of limitations period." *Great W. Mining Co. v. Woodmas of Alston Mining Co*., 14 Colo. 90, 23 P. 908, 911 (1890); *Hickerson v. Vessels*, *supra* at 624. They further stated that it is particularly "true where witnesses have died or their memories become dim or time and long acquiescence have obscured the nature and character of the [claim] or the acts of the parties or other circumstances give rise to presumptions unfavorable to its continuance." *O'Byrne v. Scofield*, 120 Colo. 572, 212 P.2d 867, 871 (1949). *Hickerson v. Vessels*, *supra* at 625.

What was not mentioned in case law, is that the Act clearly states the limitations for the filing of a claim. Nor is there mention of the Division's Rules of Procedure which provide another avenue for relief to Respondents, other than the statute of limitations or common law doctrines. Pursuant to D.O.W.C. Rule 7-1(C), Respondents may file a motion to close the claim for failure to prosecute at any time "when there is no activity in furtherance of prosecution has occurred in a claim for a period of at least six months."

In this matter, Respondents have failed to show that there was any significant prejudice to Respondents for Claimant's failure to proceed to hearing prior to the original Application for hearing dated January 12, 2022. Employer filed a First Report of Injury on June 21, 2019 and knew or should have known that Claimant had a right to file a Workers' Claim for Compensation within two years of the date of the alleged injury pursuant to statute.

An unknown individual,[5] filed a Workers' Claim for Compensation on July 29, 2020 on Claimant's behalf. Claimant filed an Application for Hearing on January 12, 2022 and, following an Unopposed Motion to Withdraw the Application for Hearing and an order dated June 7, 2022 allowing for the AFH withdrawal without prejudice, filed a second Application for Hearing on July 8, 2022. Respondents had the ability to find resolution of the claim. Respondents had to very reasonable steps to take. The first by filing a Motion to Close at any time six months after the date of the filing of the WCC. The second by filing an application for hearing to litigate the issue of laches or estoppel.

Further, Respondents had notice that Claimant had an attorney working on the case as of July 2020 when he entered his appearance. There was no credible indication that Respondents were prejudiced by the delay in Claimant's filing the AFH a year or so later. Respondents demonstrated no prejudice to Respondents when they did not oppose the withdrawal of the first AFH without prejudice. Neither did Respondents show they had relied on the fact that no AFH was filed before January 2022 by any particular actions taken by Respondents. No persuasive evidence was presented at hearing that "witnesses had died or their memories become dim or time and long acquiescence have obscured the nature and character of the [claim] or the acts of the parties or other circumstances give rise to presumptions unfavorable to its continuance." In fact, providers noted particular findings in the medical records. And Claimant's supervisor did not exhibit any lack of knowledge of the events which had occurred over three years prior

[5] This ALJ infers it was an individual at Claimant's counsel's office that filed the WCC on Claimant's behalf.

to the hearing before this ALJ. Here, the argument of latches simply does not apply. Respondents have failed to show that the doctrine of latches applies in this matter as no prejudice is found.

With regard to Respondents' argument that the doctrine of estoppel applies, equitable estoppel exists where the following criteria are met: (1) the party to be estopped must know the relevant facts; (2) the party to be estopped must also intend that its conduct be acted on or must so act that the party asserting the estoppel has a right to believe the other party's conduct is so intended; (3) the party asserting the estoppel must be ignorant of the true facts; and (4) the party asserting estoppel must detrimentally rely upon the other party's conduct. See *Johnson v. Industrial Commission*, 761 P.2d 1140, 1146 (Colo. 1988); *In re Claim of Hernandez*, WC No. 4-850-627-03, I.C.A.O. (September 20, 2013).

Respondents failed to show that Claimant's conduct was such that it incited Respondents to act in a certain manner. Claimant did not in any way show that they intended to relinquish the right to proceed to hearing on the issue of compensability. Claimant hired counsel and counsel filed an entry of appearance with opposing counsel and the court. This ALJ presumes that Claimant's counsel was gathering the facts and evidence necessary to proceed with the claim and any records obtained by Claimant's counsel should have been exchanged with Respondents pursuant to the rules. There is a lack of persuasive evidence that Claimant was doing nothing or that Claimant had all of the relevant and necessary facts at his disposal before filing the AFH. Respondents have failed to show that the doctrine of estoppel applies in this matter.

C. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999*); Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause and an "injury" is the result*. City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. E.g., *Montgomery v. HSS, Inc.,* W.C. No. 4-989-682-01 (August 17, 2016).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the

injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). The questions of whether Claimant met the burden of proof to establish a causal relationship between the industrial injury or a worsened condition are ones of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant failed to prove that it is more likely than not that he suffered a compensable injury to his lumbar spine on June 18, 2019. As an initial matter, it is not readily apparent how the accident described in testimony and medical records would have been sufficient to cause a lumbar spine injury. Furthermore, all diagnostic testing, including the CT scan, the EMG and nerve conduction study, the x-rays, the DRAM psychosocial evaluation as well as multiple examinations by multiple providers, including Mr. Unrein, Dr. Lesnak and Dr. Fall, failed to show any acute pathology of a lumbar spine injury. In fact the CT scan only revealed mild degenerative pathology at the L4-L5 level. Further, by Claimant's own admission, Claimant told Dr. Lesnak that he had had multiple falls that aggravated his lumbar spine condition, including one on October 30, 2019. The records of Nurse Jorgensen on November 1, 2019, Mr. Unrein on November 21, 2019 and Dr. Garman on February 1, 2021 identified a fall in the hay, a unknown mechanism as well as a slip and fall on ice. This ALJ concludes that it was more likely than not that Claimant had multiple incidents, including but not limited to dates on October 30, 2019, November 12, 2019 and and another on January 31, 2020. This ALJ specifically concludes that these were aggravations of the underlying degenerative process, which are considered intervening events, and not any injury caused on June 18, 2019. Claimant has failed to show that he had a compensable work related injury to the low back on June 18, 2019.

All other issues are moot in light of this finding and will not be addressed.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for workers' compensation benefits is *denied* and *dismissed*.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 2nd day of November, 2022.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she suffered an allergic reaction to the COVID-19 vaccine causing a need for medical care and thus a compensable injury.

II. If Claimant established that she suffered a compensable allergic reaction to the COVID-19 vaccine, whether she also established, by a preponderance of the evidence, that her emergency room visit on October 14, 2021 was reasonable, necessary, and related to that reaction such that Respondent must pay for the visit.

Because the ALJ concludes that Claimant failed to establish that she suffered a compensable injury, this order does not address issue II outlined above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a former correctional worker who contracted Covid-19 on September 25, 2021. She was taken off work as a consequence. She described the symptoms associated with her Covid infection as mild and lasting for approximately three (3) days. According to Claimant, her Covid symptoms consisted primarily of fevers and sinus congestion.

2. Upon recovery from her Covid infection, Claimant returned to full duty work in her usual capacity as a correctional officer on the graveyard shift on October 6, 2021. She testified that she resumed her duties completing rounds, counts and escorting inmates without difficulty. In conjunction with her duties, Claimant testified that she could be on her feet for six of her 8 hour shift.

3. On October 13, 2021, Claimant received a first dose of the Pfizer Covid-19 vaccine. She testified that she did not want to be vaccinated because she had underlying medical conditions[1] and was concerned about any associated interaction risks between the vaccine and her pre-existing conditions. She also felt that because she had recently recovered from a bout of Covid, that she had some natural immunity from the virus. However, the injection was mandatory and because she had already passed the compulsory date to be vaccinated, Claimant testified she was afraid that she would lose her job if she did not comply with Employer's directive to get vaccinated. Thus, Claimant presented for her required first dose of the vaccine as scheduled.

[1] Claimant has diabetes and thalassemia, an inherited blood disorder that is occasionally confused with cancer.

4. Following an injection to the left shoulder, Claimant waited 15 minutes without issue then drove home to rest before reporting for her work shift that evening. Claimant testified that while she was laying down she developed difficulty swallowing. According to Claimant, she got up and immediately noticed right sided facial swelling severe enough to prevent her from opening her right eye completely. After speaking with the pharmacist in the clinic where she received her vaccination, Claimant elected to proceed to the emergency room (ER) at Parkview hospital.

5. Claimant presented to the ER at 7:50 p.m. (1950) complaining of an "allergic reaction". (Resp. Ex. B, p. 8). She reported that she had received an injection of the Pfizer Covid-19 vaccine in her left arm and approximately 30 minutes later "noted an onset of [a] sore throat and swelling of her throat". *Id.* She also reported an onset of right sided facial swelling approximately one-hour post injection. *Id.* While in the ER, Claimant denied dysphagia (difficulty or discomfort swallowing), tongue swelling, stridor, nausea, vomiting, diarrhea, wheezing, difficulty breathing, rash, chest pain, palpitations or edema among other symptoms. However, she complained of a sore throat, nasal congestion, a mild dry cough and "lots" of left sided abdominal pain. *Id*. at p. 8-9.

6. Physical examination revealed a well-developed, well-nourished 21 year old female in no acute distress who was nontoxic in appearance. Her face was symmetrical on examination. (Resp. Ex. B, p. 9). There was no lip or tongue swelling noted; however, examination of the throat (oropharynx) was significant for "erythema and bilateral tonsillar swelling with exudates or tonsillar stones present in the left tonsil. *Id.* Claimant's lungs were clear to auscultation and she demonstrated no respiratory distress. Furthermore, she had a regular heart rate and rhythm with a pulse ox saturation of reading of 95%. *Id.* at p. 9-10.

7. Lab testing revealed a positive monoscreen and an elevated blood sugar (glucose) reading of 313. (Resp. Ex. B, p. 13). There was no "evidence of life-threatening allergic reaction". *Id*. at p. 14. Claimant was diagnosed with infectious mononucleosis as the most likely "etiology" for her symptoms. *Id.* Indeed, the ER doctor noted that this was "causing a degree of splenomegaly, leading to [Claimant's] onset of left-sided abdominal pain and tenderness to the left upper quadrant on exam". *Id*. at p. 14-15. Claimant was treated for her hyperglycemia and given IV Benadryl, Famotidine and Dexamethasone as a precaution to address any "possible allergic reaction" and to treat her pharyngitis. *Id*. Following her medical workup, Claimant was advised that her "symptoms [were] likely unrelated to Covid vaccine" and discharged home. *Id*. at p. 16. Based upon the evidence presented, specifically the objective findings on examination, the ALJ is convinced that Claimant's report of severe facial swelling was overstated. Moreover, the October 13, 2021 ER report supports a finding that Claimant's throat swelling and alleged difficulty swallowing were probably emanating from tonsillar swelling caused by her mononucleosis rather than an allergic reaction to her vaccine injection.

8. Claimant returned to the ER approximately 24 hours later. Indeed, she presented to the ER at Parkview on October 14, 2021 at 10:31 p.m. (22:31). (Resp. Ex.

B, p. 2). Upon presentation, Claimant's symptoms had evolved to include sharp chest pain radiating to the back. *Id.* Although she told the ER staff on October 13, 2021 that she had "difficulty swallowing/breathing", she denied any swelling of the throat or mouth during her October 14, 2021 ER visit. Rather, she reported that she woke on the morning of October 14, 2021 with "left-sided chest wall pain that went through to her back". *Id.* Even though the doctor had advised Claimant that her symptoms on October 13, 2021 were likely unrelated to her Covid-19 vaccine, Claimant's reported primary complaint was "allergic reaction". *Id.* In fact, Claimant persisted in reporting that she "might be having an allergic reaction" and that she was seen in the ER the day prior "for the same", despite being advised the day before that her "symptoms were likely unrelated to her Covid vaccine injection. *Id.* at p. 4.

9. During her October 14, 2021 ER encounter, Claimant denied any shortness of breath, her lungs were clear, she had a normal heart rate and rhythm and a pulse ox reading of 97-98%. (Resp. Ex. B, p. 3-4). Claimant's physical examination was noted to be completely normal except for pain with palpation of her left pectoralis muscle area. *Id.* at p. 3. The ER physician was unable to "appreciate any significant swelling at the injection site in her left deltoid region" and "[did] not appreciate any axillary or supraclavicular adenopathy" leading Claimant's provider to conclude that she was having "typical post vaccine muscle discomfort and malaise". *Id*. at p. 5. Nonetheless, a chest x-ray and an EKG were obtained. The x-ray demonstrated "no acute findings" and the EKG revealed a "[s]inus rhythm rate in the 70s, normal axis, normal conduction and no ST or T wave abnormality". *Id.* at p. 4. Claimant was diagnosed with "[a]cute muscle pain after Covid injection", which was felt to be a "normal reaction to the Covid vaccine" *Id*. Claimant was provided with a Toradol injection for her muscle pain and discharged home with instruction to take Motrin or Aleve as necessary. *Id.* p. 6.

10. On October 15, 2021, Claimant presented to UC Health for her third emergency visit in three days. There is no indication that the physician who evaluated Claimant during this encounter had access to the prior ER records from October 13 and 14th, 2021. Upon presentation, Claimant told the intake technician, Erik Waalkes that "[She] got the Covid shot and . . . has a rash that has developed on the back of her scalp". (Clmt's Ex. 6, p. 97). Claimant told the evaluating physician, Ian Tullberg that she "had [a] Pfizer Covid shot Wednesday and had a reaction". *Id*. at p. 95. Indeed, she told him that following her injection her "face and neck were swollen" and that she went to the ER for this and that she returned to the ER the next day for chest pain.

11. As noted, the content of Dr. Tullberg's record leads the ALJ to find that the he did not corroborate Claimant's allegations of having facial and throat swelling consistent with an allergic reaction by reviewing the ER records from October 13 and 14th. If he had, he would have noted that the ER records from October 13 and 14th are devoid of any objective indication that Claimant had swelling of her face, lips or tongue consistent with an allergic reaction. Furthermore, he would have discovered that Claimant had been diagnosed with infectious mononucleosis and that her oropharynx swelling was likely caused by tonsillar inflammation. Finally, he would have noted that two other ER

physicians opined that the most likely etiology for Claimant's symptoms was her mononucleosis and an expected response to the Covid vaccine injection.

12. Despite reporting no issues with her breathing while in the ER on October 13 and 14th and none being found on exam or through pulse ox monitoring, Dr. Tullberg reported, "[Claimant] states that she **still** has difficulty breathing." *Id.* at p. 95 (emphasis added). Regardless, Claimant's primary complaint while in the ER on October 15, 2021, was the presence of a "[d]iffuse pink blanching, macular rash on her back, otherwise her physical examination was completely normal. (Clmt's Ex. 6, p. 95-96). Following an inspection of her rash, Dr. Tullberg documented that Claimant's "symptoms" were consistent with allergic reaction, but he noted a differential diagnosis list that included but was not limited to "infection" and/or "contact dermatitis". *Id.* at p. 94. Claimant was sent home with a prescription for prednisone.

13. On October 20, 2021, Claimant presented to Family Care Specialists for a post ER appointment. (Resp. Ex. D, p. 2). She was evaluated by Physician Assistant (PA) Micaela Gale during this encounter. In contrast to Dr. Tullberg, PA Gale appears to have had access to and reviewed Claimant's prior ER records. Indeed, she repeatedly referred to specific diagnoses and quoted the records from October 13 and 14th as part of her medical report. *Id.* She noted Claimant's chest muscle pain had resolved, that she and Claimant discussed Claimant's prior ER course in full, and that mononucleosis and a normal post vaccine response were the likely cause of her complaints rather than an allergic reaction to the vaccine injection. *Id.* at p. 3. PA Gale completed FMLA paperwork for work missed "**due to mono**." *Id.* (emphasis added). Moreover, she advised Claimant that she could discontinue the Famotidine and Benadryl for purposes of possible allergic reaction. Finally, she did not include among her assessments a diagnosis of allergic reaction. *Id.*

14. On October 22, 2021, Claimant posted the following message to her social media page:

> Just got a call from my new doc that they received the er visit transcripts and found out that they edited the reason I was in there as having "mono" and I had never had an allergic reaction at all and that the ivs I was hooked up with was to lower my blood sugar when the discharge papers they gave me say something completely different. This vaccine is being covered up by the government and so are the allergic reactions I don't even know how legal it was of them to edit my diagnosis after the fact that has to be illegal". (Resp. Ex. F, p. 5).

15. The evidence presented persuades the ALJ that Claimant's allegation that her medical records were "edited" is unfounded. She did not provide the discharge papers that she claims were inconsistent and provide "something different" than what was documented in the medical records from her ER visits. Furthermore, she acknowledged during cross-examination that at the time she was discharged from the ER on October

13, 2021, she understood that she had symptoms associated with mono rather than any indication that she suffered an allergic reaction to the Pfizer vaccine. She also testified that the discussions she had with the ER physician gave her the impression that her symptoms were not related to the Covid vaccine. Finally, Claimant testified that she posted the October 22, 2021 Facebook statement out of emotional distress leading her to retract her accusation that her ER records were edited.

16. Claimant presented to the Walmart clinic on October 25, 2021, her fourth different provider for this condition within 12 days. (Resp. Ex. C, p. 7). Claimant was evaluated by PA Melanie McCoy for the purpose of addressing her "concerns and ongoing side-effects" from her Covid-19 vaccine. *Id*. Claimant advised PA McCoy that she went to the "ER for a **severe allergic reaction** that included many symptoms: SOB, body aches, HA, rash, and diffuse swelling." *Id.* (emphasis added). Claimant's physical examination was completely normal despite claims of shooting pains in her chest, shortness of breath, migraines, and muscle spasms. *Id.* During this appointment, Claimant also told PA McCoy, despite knowing it was untrue and without any basis in fact, that the ER doctor "changed the documentation to state that it was not an allergic reaction", which led to a dispute that caused her to change her PCP. Finally, Claimant advised PA McCoy that she worked for the DOC and that she was "being required to get her second vaccine next week" before adding that she continued to have "shooting chest pains on both side (sic) with muscle spasms in her neck and back along with shortness of breath (SOB) and migraine headaches. *Id.*

17. Based upon the content of the October 25, 2021 report of PA McCoy, the ALJ finds that Claimant was probably seeking an exemption from the clinic on October 25th to getting the second required Covid injection. Indeed, PA McCoy documented that she explained to Claimant that the clinic did not give vaccine exemptions (supporting a reasonable inference that Claimant asked for one); noting further that she would need to "follow up with her PCP for further evaluation and treatment". (Resp. Ex. C, p. 7). It is also reasonable to infer, based upon the totality of the evidence presented, that Claimant advised PA McCoy that her medical records had been edited in an effort to impress upon her that, contrary to the medical records, she and an allergic reaction to the first injection so as to improve her chances of securing an exemption from getting the second shot.

18. On October 28, 2021, Claimant sought a second opinion from the providers at Walmart. (Resp. Ex. C, p. 5). Although the medical record indicates that Claimant was seen at Family Care Specialists on October 27, 2021, for continued episodes of diffuse chest pain radiating into her back, it is not clear from the October 28, 2021 report why Claimant was seeking a second opinion. Nonetheless, she was evaluated by Nurse Practitioner (NP) Kathy Boyd. Again, Claimant reported, that she had suffered an "allergic reaction" with face and throat swelling and trouble breathing. *Id*. She complained of ongoing headaches and nausea and continued to propagate the narrative that her ER records had been edited by reporting that "[h]er mother was getting an attorney because they (ER) changed her medical records". *Id.* Claimant also made it clear that she did not want to take the second Covid injection but knew that failing to do so could mean losing her job. Claimant would go on to testify at hearing that she rejected the second injection

and was subsequently terminated from her employment after she exhausted her leave. The physical examination from this date of visit was normal. *Id*.

19. Claimant was seen by an unknown medical provider on November 9, 2021.[2] During this visit, Claimant reported shin pain and left leg swelling, migraine headaches and blurry vision. (Resp. Ex. A, p. 4). Claimant reported that she had recently returned to work and was walking "all" day. She was diagnosed with shin splints. *Id.* Claimant also reported that she had been under a lot of stress and had been in the hospital due to an "anaphylactic reaction" to her Covid vaccination. *Id.*

20. Claimant testified that having to submit to the injection or lose her employment was "quite stressful" for her. She acknowledged that she can get stress related rashes. Indeed, in a social media post from October 9, 2020, Claimant stated that she was "allergic" to stress and posted a picture of her arm with a rash that she claimed was stress hives "[a]fter everything [she] went through last month and all the stress [she] was put under". (Resp. Ex. F p. 6).

21. Claimant underwent an initial workers' compensation medical evaluation on November 16, 2021, with Dr. Lisa Baron. (Clmt's Ex. 4, p. 42). Once again, the history obtained reflects that Claimant told Dr. Baron that one hour after her vaccine, her throat and face started to swell and she went to the ER for treatment. The record from this date of visit also reflects Claimant's continued baseless reporting that her ER records were "altered to remove the allergic reaction diagnosis and leave only a mono diagnosis". *Id.* During this appointment, Claimant reported suffering from "intermittent chest pain (CP), palpitations [and] jerking muscles". *Id*. at p. 45. Despite her claim of shortness of breath, Claimant's oxygen saturation was 99%. *Id.* at p. 44. While Dr. Baron conducted a review of systems, the record from this date of visit is devoid of any indication that she completed a directed physical examination, yet she included "adverse effect of vaccine" among her assessments for Claimant's symptoms. *Id*. at p. 45. Concerning Claimant's palpitations, Dr. Baron noted that Claimant had a scheduled appointment with cardiology.

22. Claimant saw cardiologist, Dr. Alexander Simon Ross on November 22, 2021. (Clmt's Ex. 6, p. 104). During this appointment, Claimant reported having random sharp chest pains, palpitations, an elevated resting heart rate, and dyspnea at low workloads since her Covid-19 vaccination, which she "reported" caused an "anaphylactic reaction". *Id.* Claimant's physical examination was again normal. She also had a normal 12 lead EKG, a normal heart rate, and 1+ non-pitting edema in the left leg. *Id*. at p. 104-109. Dr. Ross recommended a 3 day zio patch (Holter) monitor, a metabolic panel and a Doppler study to exclude DVT, given her complaints of lower extremity swelling. *Id*. at p. 104. Dr. Ross stated, "Assuming these tests are unremarkable, I would presume this to be autonomic dysfunction. If that is the case, it should improve with conservative therapies including aggressive hydration and slowly increasing aerobic exercise." *Id.*

23. During cross-examination Claimant denied telling Dr. Ross that she had an anaphylactic response to the vaccine. Instead, she testified that she told Dr. Ross that

[2] See the Respondent requested medical records review report of Dr. Mogyoros. (Resp. Ex. A, p. 4).

she had an allergic reaction. During re-direct, Claimant admitted to knowing that an anaphylactic reaction meant a "severe, life-threatening reaction to an allergen". She again denied ever using the phrase anaphylactic reaction to any medical doctor and instead used only the terms "allergies" and "allergic reaction" when discussing her condition with her providers. She then testified that if any doctor wrote down "anaphylactic reaction" in the medical reports, that was their choice of words, not hers. The ALJ is not persuaded. Review of the content of Dr. Ross' medical records supports a finding that he attributed the terms "anaphylactic reaction" and "anaphylaxis" to verbal reports Claimant made to him about her condition after her October 13, 2021 injection. (See Clmt's Ex. 6, pp. 104-105). The ALJ credits the medical records of Dr. Ross to find that Claimant probably reported that she experienced an "anaphylactic reaction" to the Pfizer vaccine and was treated in the ER for "anaphylaxis" for several hours after her injection.

24. Claimant returned to Dr. Baron on December 13, 2021. (Clmt's Ex. 4, p. 58). During this encounter, Claimant reported continued "episodes of left sided chest pain, palpitations, shin-splint type lower leg pain, [and] lower leg swelling". *Id.* Claimant also reported seeing the cardiologist "who ordered a Holter monitor that she [was] to receive in the mail". Because Claimant had not received the Holter monitor, she indicated she would call her doctor's office to see if she could pick it up or have one re-mailed. *Id.*

25. Claimant attended a follow-up appointment at Concentra Medical Centers on January 17, 2022 where she was evaluated by NP Jennifer Livingstone. (Clmt's Ex. 4, p. 67). During this appointment, Claimant reported that she was able to complete her Holter monitor testing and send the monitor back for interpretation of the results. No results were available as of this appointment. Claimant reported continued frequent palpitations throughout the day and less frequent and random chest pain. She reported that her lowers legs felt swollen, but no appreciable swelling was noted on examination. She also expressed a desire to try Omega 3 and CoQ10 for her ongoing palpitations. Despite Claimant's report of having completed her Holter monitoring, she did not submit the results of such testing as evidence of her alleged arrhythmias.

26. Respondents sought an opinion from Dr. Daniel Mogyoros, a fellowship trained, Board Certified expert in the specialty of infectious diseases, regarding the likelihood that Claimant's vaccination caused her to experience an allergic reaction requiring medical treatment. Dr. Mogyoros completed a medical records review and issued a causality opinion on August 25, 2022. (Resp. Ex. A).

27. In analyzing causality, Dr. Mogyoros noted that Claimant had two "clusters" of symptoms, with one set occurring immediately after the vaccination and one occurring at least a couple of weeks after the injection. Moreover, he noted that these symptom clusters occurred in close temporal relation to three specific events, specifically a pre-vaccine Covid infection occurring around September 25, 2021, a mononucleosis infection and the administration of the Covid-19 vaccine on October 13, 2021. (Resp. Ex. A, p. 7). Thus, he opined that it was necessary to determine which symptoms Claimant began reporting after the administration of her vaccine correlate with which of the above noted events. *Id.*

28. In concluding that Claimant did not suffer an "allergic reaction" to her Pfizer Covid-19 vaccination injection, Dr. Mogyoros noted that the vaccine has multiple known "normal" side effects which do not constitute evidence of an allergic reaction. (Resp. Ex. A, p. 7). These include local reactions at the injection site, including pain, swelling, tenderness, warmth, and redness. *Id.* Additional normal systemic reactions include, headache, fatigue, chills, fever, joint pain, muscle aches and nausea. *Id.* Women were more likely to report adverse events than men by an odds ratio of 1.89%. *Id*. at p. 8.

29. Dr. Mogyoros noted that at the time of her initial ER visit on October 13, 2021, Claimant was diagnosed with infectious mononucleosis (mono), which is caused by infection from the Epstein-Barr Virus (EBV). (Resp. Ex. A, p. 8). Symptoms associated with mono include headache, fatigue, sore throat, abdominal pain, nausea, rash, fever, enlarged lymph nodes and enlarged liver and/or spleen. *Id.* Additional diagnostic findings consistent with mono include elevated liver function tests and white blood cell counts. *Id.*

30. As noted throughout the medical record, Claimant reported symptoms consistent with a normal response to the Covid vaccine, namely pain and tenderness with palpation to the left chest, body aches, malaise, headaches and chills following her injection on October 13, 2021. According to Dr. Mogyoros, these known normal vaccine reactions resolved in Claimant within days of her vaccine. (Resp. Ex. A. p. 8). Claimant also reported symptoms consistent with primary EBV infection causing mono while in the ER on October 13, 2021. These symptoms included a sensation of swelling in the throat, difficulty swallowing, a sore throat, nasal congestion, a mild dry cough and "lots" of left sided abdominal pain. As found above, physical examination of the oropharynx on October 13, 2021, was noteworthy for erythema and bilateral tonsillar swelling with exudates or tonsillar stones present in the left tonsil. Moreover, Claimant had a slightly elevated white blood cell count and an elevated liver enzyme consistent with an EBV infection. Accordingly, Claimant was tested for mono and her Monoscreen was later found to be positive. Based upon Claimant's reported symptoms, her ER findings and her medical progress, Dr. Mogyoros opined that all of Claimant's "symptoms in the first week (following her October 13, 2021, injection) can be explained by either normal vaccine adverse effects (not allergic reaction) or primary EBV infection". *Id*. at p.8.

31. Dr. Mogyoros defined "anaphylactic reaction" in accordance with the World Health Organization as a "[S]evere life-threatening systemic hyper sensitivity reaction characterized by rapid onset of potentially life-threatening airway, breathing, or circulatory problems, usually but not always associated with skin and mucosal changes". (Resp. Ex. A, p. 8). In order to qualify as an anaphylactic reaction, there must be an acute onset (minutes to hours) of illness with involvement of the skin, mucosal tissue or both. *Id*. This includes the generalized presence of hive, puritus or flushing and/or swelling of the lips-tongue or uvula. *Id.* Moreover, there must be accompanying respiratory compromise, including dyspnea, wheezing, bronchospasm, stridor reduced peak expiratory flow or hypoxemia or reduced blood pressure or associated symptoms of end organ dysfunction. Following review of the medical records, Dr. Mogyoros found no evidence to support a finding that Claimant met any of the criteria for anaphylaxis as she claimed. (Resp. Ex.

A, p. 9). The only evidence that Dr. Mogyoros found that could be compatible with a delayed allergic reaction was the presence of a rash, which he noted could be from her mono. *Id.* Noting that elevated eosinophil counts often accompany allergic reactions and these were normal for Claimant on both October 13 and October 20, 20121, Dr. Mogyoros concluded that there was "very little data in the medical record to support the notion that [Claimant] had an allergic reaction to the Covid vaccine" despite the presence of a rash. *Id.*

32. Based upon the evidence presented, the ALJ credits the opinion of Dr. Mogyoros to find that Claimant's rash, as described in the ER report from October 15, 2021, was probably caused by her mononucleosis or something other than an allergic response to her Covid-19 vaccination. Simply put, the ALJ is not convinced that the presence of a diffuse rash localized to Claimant's back provides sufficient evidence to support a finding/conclusion that she had an allergic reaction to her Covid-19 vaccination, especially in light of her mono diagnosis and her self-reported reactions to stress.

33. Dr. Mogyoros also addressed the cause of the new cluster of symptoms Claimant developed around October 27, 2021, which Dr. Baron referenced in her November 16, 2021 report. These symptoms include Claimant's diffuse chest pain, cardiac palpitations, leg swelling, jaw pain and uncontrolled muscle jerking. According to Dr. Mogyoros, these "symptoms are not described as adverse effects of the Pfizer vaccine", and the timing for their development was "much later than the expected timeframe for vaccine induced adverse events" i.e., side effects/symptoms). (Resp. Ex. A, p. 9). Dr. Mogyoros attributed these symptoms to Claimant's development of "long Covid" following her September 25, 2021 Covid infection. Long Covid can cause symptoms consistent with a condition known as autonomic dysfunction. According to Dr. Mogyoros, a reported manifestation of autonomic dysfunction includes a condition known as Postural Orthostatic Tachycardia Syndrome (POTS), which causes cardiac symptoms, including heart palpitations, chest pain, shortness of breath, and decreased exercise tolerance. It can also cause non-cardiac symptoms such as "mental clouding, headaches, lightheadedness, fatigue, muscle weakness, gastrointestinal symptoms, sleep disturbances, and chronic pain (including temporomandibular joint disorder). . ." *Id*. at p. 10. Dr. Mogyoros noted that while it is known that this syndrome is caused by acute Covid infection, it has also been reported "following infections with EBV, influenza, and Borrelia burgdoferi (Lyme disease)". *Id.* Based upon Claimant's clinical picture, Dr. Mogyoros agreed with Dr. Ross that Claimant likely had autonomic dysfunction but he disagreed that this was caused by an allergic reaction to the Covid-19 vaccine but rather by her initial September 25, 2021 Covid infection causing Long Covid or her subsequent EBV infection causing mono. *Id.* at pp. 10-11. He reiterated that there were no clinic "signs or symptoms" consistent with anaphylaxis and little information to suggest that she had an allergic reaction to the vaccine. Consequently, he opined that "other diagnoses predicated on the idea that [Claimant] had an anaphylactic reaction (to the vaccine), [were] incorrect". Id. at p. 9.

34. Dr. Mogyoros testified as an expert in infectious disease. He noted that vaccine reactions are part of his practice and that he was familiar with the Pfizer Covid-

19 vaccine and its expected side-effects. He noted that anaphylactic reactions rise very quickly, i.e. within minutes to hours and perhaps up to one day following exposure to an allergen and are dramatic in their presentation.

35. Dr. Mogyoros testified that Claimant did not give accurate information about her history to her providers on October 13, 2021. At no point during any of Claimant's treatment was facial swelling, throat or airway swelling, breathing difficulty, or a rapid heart rate found on examination. He also testified that Claimant was not having an allergic reaction upon presentation to the ER on October 13, 2021. Rather, he testified that Claimant presentation to and treatment in the ER on this date was related to her EBV infection and that she was given steroids, not for an allergic reaction but rather pharyngitis (sore throat). He reiterated his opinion that Claimant's muscle pain was an expected reaction to the vaccine injection and that her treatment, including a Toradol injection was palliative in nature. He opined that while Claimant's prior Covid infection may have resulted in "more pronounced" chest pain upon vaccination, that pain was no more dangerous and no longer lasting than someone who had not had Covid previously, and this response did not constitute an allergic reaction.

36. Regarding Claimant's October 15 back rash, Dr. Mogyoros testified that an allergic vaccine reaction is typically "diffuse" and "reacting throughout the body." As a result, he opined Claimant's rash was not typical of an allergic reaction and that with a vaccine reaction he would "expect a very different looking rash than what's described." He also said he would expect to see a vaccine rash sooner than the third day after the vaccine. He repeated his belief that Claimant's EBV infection, i.e. her mononucleosis or another cause was an equally (50/50) likely explanation of her rash. Supporting Dr. Mogyoros' opinions concerning Claimant's rash are the studies he cited to in his report. First, an analysis of the vaccine found that only around 2% of individuals developed a rash after their first injection (See Resp. Ex. A p. 6-7; Clmt's Ex. 7 p. 125), and that these reactions usually occurred within a day of the vaccination and only lasted 1-2 days. *Id.* In comparison, the mononucleosis study cited by Dr. Mogyoros demonstrated that rashes were present in 19% of positive patients – a rate nearly 10 times higher than that of the vaccine.

37. During his testimony, Dr. Mogyoros explained the lack of a causal connection between the myriad of symptoms Claimant reported and her Covid-19 vaccination. He testified that headaches in response to the vaccine typically appear within 24 hours, and are not the late onset, week in week out, migraines Claimant described. Therefore he concluded that Claimant's migraine headaches were not related to her injection. He added that leg/shin pain was more probably than not related to Claimant's return to work, deconditioning from her mono or a case of Long Covid rather than her October 13, 2021 injection. As explained in his medical records review report, Dr. Mogyoros reiterated his opinion that Claimant's jaw pain, muscle jerking, palpitations and alleged chest pain and fast heart rate were not related to her vaccine injection.

38. Dr. Mogyoros addressed Claimant's suggestion that because she had a "mild" case of Covid-19 preceding her vaccine she could not get a case of Long Covid.

He testified that Claimant's unsubstantiated argument that a mild case of Covid could not cause a case of Long Covid was incorrect. He explained that those who are fully vaccinated, unlike Claimant, are less likely to get Long Covid and while there have not been definitive studies, up to 25% of people infected with the delta variant, which Claimant presumably had due to the timing of her infection, suffer from Long Covid. Finally, he testified that it was typical for patients with Long Covid to get better and then for symptoms to reappear 4-6 week later, much as it did for Claimant.

39. Ultimately, Dr. Mogyoros testified that Claimant did not need any care related to her October 13, 2021 vaccine nor did she require any work restrictions in the first 72 hours after taking the vaccine. Further, he opined that the care she received during this time, i.e. Famotidine and Dexamethasone, Toradol, prednisone, Benadryl and IV fluids) did not change her outcome, and that without this care, she would have enjoyed the same outcome. Claimant did not present expert testimony or any medical opinion or theory explaining how her mixed bag of late onset symptoms is related to her injection. Rather, she seemingly relies on her claim that correlation is causation based on the timing of her symptoms in relationship to taking the vaccine.

40. The ALJ finds the opinions/conclusions of Dr. Mogyoros to be supported by the medical records and the materials cited. As noted, the ALJ credits the opinions of Dr. Mogyoros to find that the myriad of symptoms reported by Claimant following her October 13, 2021 injection are either expected responses to the injection and do not constitute an "injury" or are related to her mononucleosis diagnosis or a case of Long Covid. Based upon the evidence presented, the ALJ is not convinced that Claimant experienced an allergic reaction to her Covid-19 vaccination. Because Claimant failed to establish a causal connection between her symptoms and need for treatment and her October 13, 2021 injection, her claim for benefits must be denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that she is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor

of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Mogyoros are supported by the medical record and the available medical literature. He had the opportunity to draw conclusions after reviewing the entire medical record in this case; whereas, the evidence presented supports a finding that Dr. Ross and Dr. Baron did not. Rather, they seemingly accepted Claimant's statements that she had an allergic reaction and/or anaphylaxis in response to her October 13, 2021 injection at face value. Accordingly, the ALJ concludes that Dr. Mogyoros' opinions are credible and more convincing than those of Drs. Ross or Baron. While the ALJ is convinced that Claimant was experiencing symptoms on October 13, 2021, following her injection and after, the evidence presented persuades the ALJ that her symptoms and need for treatment were/are not related to an alleged allergic response to her Covid-19 vaccination.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I) (b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo.App. 48, 51, 552 P.2d 1033, 1036 (1976).

F. The "arising out of" element is narrower and requires Claimant to show a causal connection between her employment and the injury such that the injury has its origins in her work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001)*; Madden v. Mountain West Fabricators, 977 P.2d 861* (Colo. 1993). Specifically, the term "arising out of" calls for examination of the causal connection or nexus between the conditions and obligations of employment and Claimant's injury. *Horodysky v. Karanian, supra*. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Proof by a preponderance of the evidence requires the proponent to establish the existence of a "contested fact is more probable than its nonexistence." *Page v. Clark, supra.* Whether Claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

G. In this case, Claimant contends that she suffered an allergic reaction to the Covid-19 vaccination resulting in the need for emergency treatment on October 13, 14 and 15, 2021. Because she was healthy and allegedly asymptomatic prior to taking the Pfizer Covid-19 vaccination and she developed varied symptoms after her injection, Claimant contends that it is logical to conclude that there was "some kind" of injury due to the vaccine. Accordingly, Claimant urges the ALJ to conclude that she has established the requisite causal connection between her vaccination and the treatment in the ER and find the claim compensable. The ALJ is not persuaded.

H. When viewed in its totality, the ALJ concludes that the evidence presented supports Dr. Mogyoros' expert medical opinion that Claimant experienced a typical response to her Covid-19 vaccination, i.e. muscle pain and malaise. The ALJ is convinced that this response was not allergic in nature and did not cause Claimant's need for treatment. Rather, the ALJ concludes that Claimant's need for treatment is likely causally related to an EBV infection, i.e. mononucleosis causing symptoms, which Claimant and some of her providers have mistaken for an allergic response. Moreover, the ALJ is persuaded that Claimants continued symptoms, including her cardiac palpitations, chest pain, perceived shortness of breath, persistent headaches, fatigue,

and muscle jerking are more probably than not related to a case of Long Covid which Dr. Ross noted would improve with conservative therapies including aggressive hydration and slowly increasing aerobic exercise.

I. While it is possible that some of Claimant's more troublesome symptoms, e.g. her rash may be related to an allergic response to her Covid-19 vaccination, the ALJ credits the opinions and testimony of Dr. Mogyoros to find and conclude that Claimant's overall clinical picture and the more likely causes of her symptoms, including her rash, render it medically improbable. A coincidental correlation between a claimant's work and his/her symptoms does not mean there is a causal connection between his alleged injury and his work. *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), To the contrary, as noted by the Panel in *Scully* "correlation is not causation". In crediting the opinion of Dr. Mogyoros, the ALJ concludes that objective medical evidence is important to making an allergic reaction diagnosis. In this case there is a paucity of objective findings, outside of a diffuse rash, to suggest that Claimant had such a reaction. Indeed, Claimant appeared in no acute distress and was non-toxic upon presentation to the ER shortly after her injection. Her face was symmetrical and she had no lip or tongue swelling consistent with an allergic response. Moreover, she consistently had pulse ox readings greater than 90% and there was no wheezing, bronchospasm or stridor to suggest that she was suffering from anaphylaxis. Accordingly, the ALJ concludes that Claimant's subjective perception that she was having an allergic reaction to her vaccine, which was carried through in documentation in her subsequent appointments, was/is probably incorrect and fails to establish the necessary causal connection to establish that she suffered a compensable injury. Her reporting of symptoms consistent with an allergic response is even more questionable/unreliable when one considers the presence of a patent motivation to report such symptoms as support to secure an exemption from having to submit to the second injection.

J. In this case, the ALJ agrees with Respondents that the provision of medical care based on a claimant's report of symptoms does not establish an injury but rather, demonstrates only that Claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made (in this case to Dr. Baron) so that the Respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id*. Merely because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co*., Inc., W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off*., 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Because the objective medical evidence strongly supports a finding/conclusion that Claimant did not suffer an allergic

reaction to her vaccine injection she has failed to establish she suffered a compensable "injury" as defined by the aforementioned legal opinions. Consequently, her claim must be denied and dismissed and her remaining claim for medical benefits need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-198-798-002

ISSUES

1. Whether Claimant established by a preponderance of the evidence an entitlement to temporary disability benefits.

2. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Employer is a temporary labor staffing company. Claimant has been employed by Employer since 2018, performing primarily day-laborer work at a variety of locations. Employer's employees, including Claimant, are not obligated to work a set number of day, and instead request work from Employer on days of the employees' choosing. Employees are not guaranteed the ability to work on any given day or shift, nor are they guaranteed any hours, shifts, or rate of pay. The minimum pay Employer pays employees is one dollar per hour over minimum wage.

2. On January 1, 2022, Claimant sustained injuries to his hands arising out of the course of his employment with Employer. Specifically, Claimant sustained frostbite to his fingers while shoveling snow.

3. The following day, Claimant was seen at the Denver Health Emergency Department with finger swelling and pain, and diagnosed frostbite. Claimant was discharged with care instructions and no work restrictions. (Ex. F).

4. Claimant returned to work for a shift on or about January 3, 2022, and worked a position indoors. Claimant also worked a shift on January 10, 2022.

5. On January 9, 2022, Claimant was seen at the Longmont United emergency department due to increasing pain and tingling in both hands as a result of frostbite. Claimant was diagnosed with frostbite of fingers of both hands and discharged without work restrictions. (Ex. G).

6. On January 17, 2022, Claimant called Employer's office looking for work and spoke to "Nelson." Nelson told Claimant that due to the fact that he was still injured, he needed to see one of Employer's doctors and return with a doctor's note clearing him to work. Nelson instructed Claimant to go to a designated clinic, and return with a doctor's note before he could return to work. (Ex. J).

7. On January 19, 2022, Claimant was seen at Denver Health' Occupational Health, and reported continued pain and numbness in the fingers of both hands. Examination of Claimant's hands showed hardened skin and black discoloration of the right thumb tip, and the tips of his third through fifth fingers, with swelling, decreased sensation, and

decreased range of movement. On the left side, Claimant had discoloration of the left third finger, and hardened skin on the thumb and fifth finger with decreased sensation. He was diagnosed with frostbite with tissue necrosis of the right hand. Claimant was assigned work restrictions to include no use of the right hand, no use of power tools, no climbing, no push/pull of more than two pounds with the left hand, no work in cold environments, and indoor work only. (Ex. H).

8. Claimant's work restrictions remained in place until he was discharged at maximum medical improvement (MMI) on April 14, 2022 by authorized treating physician Douglas Scott, M.D. At discharge, Claimant was authorized to return to work at full duty. (Ex. H).

9. Given Employer's January 17, 2022 directive to Claimant that he could not work until being cleared by a physician, the ALJ finds Claimant became entitled to temporary disability benefits on that date, continuing until April 14, 2022.

10. Claimant returned to work for Employer on April 22, 2022, and worked approximately 46 days between April 22, 2022 and August 5, 2022, earning gross wages of $5,719.29.

11. Claimant's pre-injury employment records admitted into evidence cover the period from April 21, 2020 through December 31, 2021. The records demonstrate Claimant did not work a set schedule, and his hours, days and weeks worked were inconsistent and varied. During some periods, Claimant worked a full-time schedule (*i.e.*, 5 days per week). During other periods, Claimant worked one to four days, and other times Claimant did not work for Employer for several consecutive weeks. During 2021, Claimant worked all or part of 39 weeks, and did not work at all for Employer for 13 weeks interspersed throughout the year. Claimant worked the first 13 weeks of 2021, but after the week of March 27, 2022, Claimant did not work more than eight consecutive weeks, and did not work more than 4 days in any week. Based on Claimant's work history, the ALJ finds it more likely than not that had Claimant not been injured, he would likely would have worked 75% of the weeks between January 17, 2022 and April 14, 2022, consistent with his work history.

12. The ALJ finds it reasonable to base Claimant's average weekly wage at the time of injury on his wages earned during the entire calendar year 2021. During 2021, Claimant earned $14,778.97 in gross wages working for Employer. Claimant's AWW during 2021 was $284.21 ($14,778.97 ÷ 52 weeks = $284.21). This figure accounts for the intermittent nature of Claimant's employment, including the likelihood that Claimant would not have worked every week during the period of his disability.

13. Claimant is entitled to temporary total disability benefits for the period of January 12, 2022 until April 14, 2022.

CONCLUSIONS OF LAW
Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

TEMPORARY DISABILTY BENEFITS

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability

may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

Claimant has established by a preponderance of the evidence an entitlement to temporary disability benefits. The evidence demonstrates Claimant was medically incapacitated due to his work-related injury, and sustained a loss of earning capacity for more than three work shifts. The primary dispute in this matter is the period of time for which Claimant is entitled to temporary disability benefits. As found, on January 17, 2022, Employer instructed Claimant that he could not return to work until a physician medically cleared him. No credible evidence was presented that Claimant was unable to work prior to that date, as Claimant worked two shifts after his injury. The ALJ finds Claimant's entitlement to temporary disability benefits began on January 17, 2022, and continued until Claimant was placed at MMI and work restrictions were removed on April 14, 2022. Accordingly, the ALJ determines that Claimant is entitled to temporary total disability benefits from January 17, 2022 until April 14, 2022.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly, or other earnings. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Indus. v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where the Claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is

vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*.

As found, Claimant's AWW at the time of injury was $284.21. Due to the nature of Claimant's employment with Employer, including the variations in hourly wage, hours, days, and weeks worked, the ALJ concludes a fair approximation of Claimant's AWW is the total wages Claimant earned from Employer in 2021 divided by 52 weeks, (*i.e.*, $14,778.97 ÷ 52 weeks = $284.21). This accounts for the intermittent nature of Claimant's work shifts, variations in hours, and the likelihood that Claimant would not have worked every week between January 17, 2022 and April 14, 2022.

The ALJ notes that using 39 weeks *(i.e.*, the number of weeks Claimant worked in 2021) as the denominator for Claimant's AWW would not be a fair approximation of Claimant's AWW. Based on his work history, Claimant worked 75% of the weeks during 2021 (*i.e.*, 39/52 = 75%). The ALJ finds it more likely than not Claimant would have worked a similar pattern during the period of his disability, had he not been injured. Basing Claimant's AWW on the entire 52-weeks of 2021 incorporates and accounts for the 25% of the time Claimant would not likely have worked during his period of disability by including the weeks he earned no wages in his AWW. A calculation based on 39 weeks fails to account for the 25% of the weeks Claimant did not work, and results in artificially inflated AWW and TTD benefits.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage at the time of his January 1, 2022 work-related injury was $284.21.

2. Respondents shall pay Claimant temporary total disability benefits from January 17, 2022 to April 14, 2022 based on an average weekly wage of $284.21.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the platelet rich plasma (PRP) injection recommended by Dr. Tomas Pevny is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 21, 2021 work injury.

FINDINGS OF FACT

1. The claimant suffered an admitted injury to his right knee on April 21, 2021. The claimant initially underwent conservative treatment for his injury. On August 20, 2021, Dr. Tomas Pevney performed a right knee arthroscopy with partial medial meniscectomy.

2. The claimant testified that initially following the surgery he had relief of his right knee symptoms. However, approximately one month later, the pain returned.

3. On January 6, 2022, the claimant was seen by Dr. Pevny and reported persistent medial sided pain in his right knee. The claimant also reported pain with extension, when walking down stairs, and with driving. Dr. Penvy recommended magnetic resonance imaging (MRI) of the claimant's right knee.

4. On February 7, 2022, an MRI of the claimant's right knee was performed. The MRI showed, *inter alia,* a new area of mild subchondral marrow edema; an adjacent grade two chondral defect; post-surgical changes from the prior medial meniscal repair; a small region of fluid intensity signal along the undersurface of the medial meniscus at the posterior horn body, (which suggested a small recurrent undersurface tear).

5. On February 10, 2022, the claimant was seen by Dr. Pevny. At that time, the claimant reported intermittent pain on the medial aspect of his right knee. The claimant also reported tightness and pain with extension. Dr. Pevny recommended a platelet rich plasma (PRP) injection.

6. At the request of the respondents, on February 22, 2022, Dr. William Ciccone authored a report following his review of the claimant's medical records. In his report, Dr. Ciccone noted that PRP injections are generally not recommended in workers' compensation cases, with the occasional exception of treating osteoarthritis. Dr. Ciccone noted that the pain in the claimant's right knee is due to spontaneous osteonecrosis, which is not work related. Therefore, it was Dr. Ciccone's opinion that the recommended PRP injection is not appropriate treatment for the claimant. Based upon

Dr. Ciccone's report, the respondents denied authorization for the recommended PRP injection.

7. On March 10, 2022, the claimant was seen by Dr. Pevny. On that date, Dr. Pevny opined that the recent MRI showed a stress reaction of the medial femoral condyle. Dr. Pevny noted that if the claimant did not improve, he would be a candidate for a right knee arthroscopy and a possible PRP injection. On that same date, Dr. Pevny recommended and administered a corticosteroid injection.

8. On April 7, 2022, the claimant returned to Dr. Pevny and reported initial relief from the recent cortisone injection, but his pain returned after approximately three weeks. The claimant described his pain as being on the medial and posterior aspect of his knee and that the knee felt better overall since the injection. Dr. Pevny noted that although the claimant was not approved for the PRP injection, he continued to opine that it would be the best next step for the claimant. Dr. Pevny further noted that the claimant was not a surgical candidate at that time and referred the claimant to Dr. Mark Purnell for a second opinion.

9. On April 13, 2022, the claimant was seen by Dr. Purnell. The claimant reported to Dr. Purnell that after his August 2021 surgery, symptoms of locking and catching resolved, but he had persistent medial pain. The claimant also reported recurrent pain with prolonged ambulation, kneeling, and squatting. Dr. Purnell opined that the clamant has a recurrent tear of the undersurface of the posterior horn of the medial meniscus. Dr. Purnell opined that best option for the claimant would be to undergo a repeat arthroscopy and debridement of the recurrent tear.

10. Dr. Pevny examined the claimant again on April 18, 2022. Dr. Pevny assessed a recurrent tear of right knee medical meniscus and opined that a meniscectomy and arthroscopic revision meniscectomy[1] would be indicated. Dr. Purnell again stated that an intra-articular PRP injection would also be helpful to the claimant.

11. The ALJ credits the medical records and the opinions of Dr. Pevny over the conflicting opinions of Dr. Ciccone. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that the recommended PRP injection is reasonable, necessary, and related to the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after

[1] While it would appear that the claimant may benefit from an additional knee surgery as noted by Ors. Pevny and Purnell, that specific medical treatment is not currently before this ALJ.

considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that the PRP injection recommended by Dr. Pevny is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 21, 2021 work injury. As found, the medical records and the opinions of Dr. Pevny are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the platelet rich plasma (PRP) injection recommended by Dr. Tomas Pevny, pursuant to the Colorado Medical Fee Schedule.

Dated November 9th, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: {1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-119-993-002

ISSUES

I. Whether Claimant established by a preponderance of the evidence that her 11% scheduled impairment rating should be converted to a 7% whole person impairment rating.

II. Whether Claimant established that she is entitled to a disfigurement award, and if so, how much.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On July 1, 2019, Claimant suffered an injury to her right shoulder-rotator cuff-while lifting about 23 pounds of lances above shoulder height at work. (Ex. X, p. 12.)
2. On July 3, 2019, Claimant went to emergency department at Banner Health. At this appointment, she complained of right shoulder and arm pain as well as numbness in her arm going down to her 4th and 5th fingers.
3. On July 10, 2019, Claimant was seen at Workwell by Amber Payne, PAC, for continued right shoulder pain and numbness and tingling down her right arm.
4. On July 18, 2019, Claimant returned to Workwell where she also complained of some popping around her bicep tendon and sharp pain with reaching.
5. On July 18, 2019, Claimant started physical therapy and continued, without improvement, until August 22, 2019.
6. Because of ongoing shoulder pain, Claimant underwent an MRI on August 28, 2019. The MRI revealed, among other things, a full-thickness rotator cuff tear. The MRI showed the following:
    - moderate right supraspinatus tendinosis with a high grade articular surface tear of the tendon at the insertion measuring 7 mm AT diameter;
    - moderate infraspinatus tendinosis with a mild interstitial tear within the tendon 2 cm proximal to the insertion;
    - mild biceps tendinosis;
    - mild subacromial/subdeltoid bursitis;
    - lateral acromial downsloping and subacromial spurs which could predispose to subacromial impingement.

7. Based on the MRI findings, Claimant was referred to David Beard, M.D., an orthopedic surgeon. (Ex. K, p. 47.)
8. On September 10, 2019, Claimant saw Dr. Beard for an evaluation of her shoulder. At this appointment, Dr. Beard recommended surgery to fix Claimant's right shoulder full-thickness rotator cuff tear.
9. On October 21, 2019, Claimant underwent a right shoulder arthroscopy with arthroscopic acromioplasty and right shoulder mini open rotator cuff repair. (Ex. 5.)
10. After undergoing surgery, Claimant underwent physical therapy.
11. By November 15, 2019, Claimant was doing well and performing light duty, but was still using an immobilizer for her right arm. (Ex. K, p. 48.)
12. On December 4, 2019, Claimant had a follow up appointment with Dr. Beard. At this appointment, he discontinued her immobilizer and cautioned her about doing anything that might put her at risk for reinjuring her shoulder. (Ex. K, p. 48.)
13. Claimant continued with physical therapy through December 2019.
14. On December 31, 2019, Claimant complained of increased shoulder pain in the morning-after sleeping. Therefore, she was prescribed Lidoderm patches.
15. On January 2, 2020, Claimant returned to Dr. Beard. At this appointment, Dr. Beard noted that her range of motion was not where it should be. Therefore, he recommended additional physical therapy to reduce Claimant's shoulder symptoms and increase her range of motion. (Ex. K, p. 48.)
16. On January 14, 2020, Claimant was seen by Dr. Downs. Because of ongoing shoulder pain, he prescribed massage therapy. (Ex. 48, p. 49.)
17. On January 31, 2020, Claimant returned to Dr. Downs and reported slight improvement. (Ex. 48, p. 49.)
18. On May 15, 2020, Claimant followed up with Dr. Beard. At this point, it had been about 7 months since her shoulder surgery to repair her torn rotator cuff. Claimant still had limited range of motion of her shoulder and discomfort. At first, Dr. Beard considered manipulation under anesthesia, but based on her improvement, he did not recommend it. Nevertheless, his assessment at that time included postoperative adhesive capsulitis. (Ex. A, p. 4.)
19. On May 22, 2020, Claimant went to physical therapy. At this appointment, Claimant stated that her shoulder felt almost normal at work, except for some random bone pain. The physical therapist concluded that despite her improvement, Claimant still had limitations with her right shoulder range of motion, limitations in strength, and ongoing pain. The physical therapist noted that Claimant's functional goals included using her right arm to put her dishes away and reaching up overhead with her right arm since Claimant still needed help at work with overhead tasks. (Ex. B, pp. 6-8.)
20. On May 28, 2020, Claimant returned for additional physical therapy. At this appointment, it is noted that Claimant stated that she felt good and did not have any pain, but still did not feel like she had fully recovered since she rated her improvement at 80-85%. But, at this appointment, it was noted that Claimant had achieved 90% of her goals, which

included putting dishes away with her right arm and reaching overhead. (Ex. D, pp. 16, 17.)

21. On May 28, 2020, Claimant was evaluated by Dr. Luke, via a telemedicine appointment. At this appointment, her primary problem was sharp and throbbing pain located in her shoulder, which she rated at 2/10. Despite being a telemedicine visit it is noted that on physical examination, she had tenderness at the posterior deltoid, bicipital notch, and the AC joint. It was also noted that Claimant had normal range of motion, but there is no indication he actually measured her range of motion since this was a telemedicine visit. In the end, he recommended that Claimant return to regular duty-without restrictions and indicated that he would consider whether Claimant was at MMI in three weeks. (Ex. B, pp. 12-14.)

22. On June 15, 2020, Claimant returned to physical therapy. At this appointment, it is noted that Claimant "has no pain," but then indicates Claimant "did have some bone pain this weekend, but nothing more than usual."

23. On June 17, 2020, Claimant returned to Dr. Luke, via a telemedicine appointment, and was placed at MMI. At this appointment, Claimant still had "the same discomfort in flexion, abduction, and IR [internal rotation]." Claimant's pain continued to be in her right shoulder, and she rated her pain at this visit at 4/10. But, despite ongoing symptoms, Dr. Luke placed Claimant at MMI without any restrictions, and told her to finish her remaining physical therapy sessions. (Ex. F, p. 80.)

24. On June 19, 2020, Claimant underwent additional physical therapy. At this appointment, Claimant noted that her shoulder "is doing good" but with occasional pain at work. The remaining goals for therapy consisted of improving Claimant's right shoulder ROM and strength. (Ex. G, pp. 26, 27.)

25. On July 7, 2020, Claimant returned to physical therapy and stated that she felt her shoulder was about 85% better. At this appointment, Claimant had some random bone pain, but "no pain with a specific movement or activity," but she still had limited range of motion and was tight with shoulder flexion and external rotation. (Ex. H, p. 29.)

26. On July 14, 2020, Claimant saw Dr. Watson. At this appointment, her primary problem still consisted of aching, sharp, and throbbing pain in her right shoulder, which she rated at 3/10. Claimant also completed a questionnaire that had a pain diagram. Claimant noted that her right shoulder hurt, but she did not complete the pain diagram. On physical examination, Claimant had full range of motion of her cervical spine and did not have any neck pain that day. Dr. Watson performed an impairment rating and provided Claimant an 8% scheduled impairment rating, which converts to a 5% whole person impairment rating. (Ex. J, pp. 35-39.)

27. On December 23, 2020, Claimant underwent a Division Independent Medical Examination (DIME) with Bradley Abrahamson, M.D. In his report, Dr. Abrahamson noted that Claimant stated that she has occasional sharp pains across her right collar bone and tightness in her right trapezius that is causing migraines. Claimant stated that these migraines start in the shoulder and continue up into the right side of her neck and forward into her head, settling behind her eyes. Claimant stated that these migraines started around August 2020. Claimant also stated that she started to develop tingling down her

entire right arm to her fingers when lifting overhead and that these symptoms started around July 2020. Claimant also stated that she did not think she got much out of physical therapy. She complained that she often had different therapists and there was a lack of continuity. Claimant also stated that her sleep is still affected by her shoulder pain and it causes her to wake up a couple of times a night. Claimant also stated that her shoulder injury precludes her from making quilts, blankets, and comforters and also precludes her from picking up her grandson. Lastly, she stated that after working a 12-hour shift at work, she cannot do household chores due to shoulder discomfort. (Ex. K.)

28. Dr. Abramson performed a physical examination and measured Claimant's right shoulder range of motion and found decreased range of motion. He also concluded that Claimant developed a brachial plexopathy possibly due to tightness in the pectoralis minor post-operatively. He also concluded that Claimant' elbow disability is a side effect of the treatment for her work injury. (Ex. K.)

29. During the IME Claimant stated that she felt she could regain more shoulder function with better physical therapy. As a result, Dr. Abrahamson concluded that Claimant was not at MMI and recommended additional physical therapy in the form of:

> 1-on-1 PT with a DPT well-versed in movement-based therapy such as what would be seen in a gym-like setting. I estimate that she will need a course of focused PT twice a week until she reaches her plateau in therapy, at which time she could be at MMI.

(Ex. K.)

30. On February 24, 2021, Claimant returned to Dr. Luke. Based on his physical examination, he found the following: Tenderness at the posterior deltoid, bicipital notch, AC joint, medial scapular border, anterior deltoid, supraspinatus, and bicipital groove. He also noted that her range of motion was limited and that there was weakness with external rotation, flexion, and internal rotation. (Ex. K, pp. 58, 59.)

31. Based on Dr. Abrahamson's DIME, Claimant underwent eight additional physical therapy sessions from March 4, 2021, through April 5, 2021. Treatment focused on Claimant's chief complaints about her shoulder that consisted of:

- Awakening due to pain.
- Difficulty dressing.
- Loss of function.
- Loss of motion–pain.
- Loss of motion–stiffness.
- Swelling.
- Weakness.

(Ex. M, pp.61-63.)

32. After her additional physical therapy sessions, Claimant's shoulder pain ranged from 1/10 to 4/10. As for her functional status before and after her second round of physical therapy

Claimant's activities of daily living, dressing her upper body, recreational sports, sleeping, and work activities were limited by 50%, but after the new round of physical therapy each increased to 70% of normal. That said, even after undergoing additional physical therapy, Claimant still had functional impairment of her shoulder that consisted of weakness, loss of range of motion, and pain. (Ex. M, pp. 61-63).

33. On January 12, 2022, Claimant returned to Dr. Abrahamson for her follow up DIME. At this appointment, Claimant continued to have 3-5/10 pain around the anterior portion of her right shoulder when she wakes up each morning. Claimant also had an increase in symptoms during increased computer use. Dr. Abrahamson performed range of motion measurements of Claimant's shoulder and provided Claimant an 11% scheduled impairment rating which converts to an 7% whole person impairment rating.

34. On March 7, 2022, Respondents filed a Final Admission of Liability and admitted for an 11% scheduled impairment rating.

35. Claimant testified at hearing. Claimant testified that she continues to have pain across her collar bone, pain around her shoulder blade, and pain that goes into her neck and results in headaches. Claimant also testified that she continues to have tightness in her right trapezius. The ALJ finds Claimant's testimony to be credible and persuasive regarding her ongoing symptoms.

36. Based on Claimant's testimony, and the medical records submitted at hearing, it is found that Claimant's right shoulder injury, a torn rotator cuff, and subsequent surgery, has resulted in permanent sharp pain across her collarbone, tightness in her right trapezius and pectoralis, as well as pain around her shoulder blade, and pain into her neck and head. The injury to her shoulder-rotator cuff-has also caused a decrease in Claimant's range of motion of her arm due to the functional impairment of her shoulder. Moreover, the pain and limited range of motion limits and interferes with many of Claimant's activities of daily living, such as getting dressed, sleeping, and reaching overhead. These symptoms are manifestations of functional and medical impairment of Claimant's right shoulder injury and involve physiological structures that are beyond the proximal termination of the arm at the shoulder and extend into her shoulder, torso and neck. As a result, Claimant has functional and medical impairment that extends beyond the proximal termination of the arm at the shoulder and extends into the shoulder, neck, and torso. Consequently, Claimant has functional and medical impairment that is not on the schedule of listed impairments.

37. As a result of her work injury and subsequent shoulder surgery, Claimant has a visible disfigurement to the body that is normally exposed to public view consisting of surgical scars on her right shoulder. One scar is approximately 3 inches long and about 1/8th of an inch wide. Claimant also has an arthroscopic surgical scar that is approximately ¼ of an inch long and approximately 1/16th of an inch wide. The color of each scar is different from the surrounding skin.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that her 11% scheduled impairment rating should be converted to a 7% whole person impairment rating.

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in § 8-42-107(2), C.R.S. when a Claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether Claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether Claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ must thus determine the situs of Claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Based on Respondents' filing their final admission for an 11% scheduled impairment rating, there is no dispute about the extent of Claimant's impairment. The dispute is whether the 11% impairment rating should be converted to a 7% whole person impairment rating.

The ALJ finds and concludes that Claimant has established by a preponderance of the evidence that her right upper extremity rating should be converted to a whole

person impairment. Section 8-42-107(2)(a), C.R.S., provides that a loss of use of the "arm at the shoulder" is a scheduled impairment, but does not include the shoulder itself. In other words, section 8-42-107(2)(a) defines the anatomical extent of the arm. If an impairment extends beyond the proximal termination of the arm at the shoulder, Claimant is entitled to whole person impairment.

In this case, Claimant's medical records and her testimony establishes that due to her shoulder injury-rotator cuff injury-Claimant has the following symptoms and limitations that demonstrate the manifestations of Claimant's functional and medical impairment of her shoulder, portions of her torso, and neck. These symptoms and limitations include:

- Shoulder pain.
- Pain across her collarbone.
- Tightness in her right pectoralis.
- Tightness in her right trapezius.
- Tenderness of her right scapula.
- Pain into her neck.
- Trouble using her shoulder to move her arm, which has caused a decrease in her range of motion.
- Trouble getting dressed.
- Intermittent sleeping problems due to shoulder pain and discomfort.

Claimant's symptoms and limitations demonstrate the manifestations of Claimant's functional and medical impairment of her shoulder, portions of her torso, and neck. As a result, the ALJ finds and concludes that the situs of these functional and medical impairments extend beyond the arm at the shoulder, and extend into the shoulder, collar bone, trapezius, pectoralis, neck, and scapular areas. Thus, the ALJ finds and concludes that Claimant has impairment that is not on the schedule of listed impairments.

Accordingly, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that her scheduled right upper extremity permanent impairment rating should be converted from an 11% extremity rating to a 7% whole person impairment.

II. Whether Claimant established that she is entitled to a disfigurement award, and if so, how much.

As found, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. As found, Claimant has a visible disfigurement to the body that is normally exposed to public view consisting of surgical scars on her right shoulder. One scar is approximately 3 inches long and about 1/8th of an inch wide. Claimant also has an arthroscopic surgical scar that is approximately ¼ of an inch long and approximately 1/16th of an inch wide. The color of each scar is different from the surrounding skin.

As a result, the ALJ finds and concludes that Claimant is entitled to $1,200.00 in disfigurement benefits.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's 11% scheduled impairment rating is converted to a 7% whole person impairment rating.
2. Claimant is entitled to $1,200.00 in disfigurement benefits.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 9, 2022

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on June 7, 2022 listing issues of compensability, reasonably necessary medical benefits that are authorized, average weekly wage.

Respondents filed a Response to the Application for Hearing on June 8, 2022 listing as issues that the injury/illness did not occur in the course and scope of, or arise out of work, and that Claimant had a pre-existing condition. Further, Respondents alleged that there was an efficient intervening event. Issues listed but no longer being pursued by Respondents were apportionment, if applicable; responsibility for termination, if applicable; unrelated/unauthorized treatment; all applicable offsets including but not limited to SSDI, unemployment; STD/LTD, §8-42-112, and §8-42-112.5.

During the hearing Claimant sought to introduce a medical report provided by Claimant's ATP, which had not been previously exchanged in accordance with W.C.R.P. Rule 5-4(A)(5) nor pursuant to W.C.R.P. Rule 9-1(E). Claimant argued that Claimant's counsel was unaware that Claimant had such document in her possession, only received the medical record on the date of hearing and that it was relevant to the issues set for hearing. Respondents objected to the tendered exhibit as Respondents was unaware of the exhibit. After consideration of the parties' arguments, this ALJ sustained Respondents' objection and held that the sanction for failure to comply with the provisions of the rules was to not admit the medical record into evidence.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she was injured in the course and scope of her employment on October 26, 2021.

ONLY IF CLAIMANT HAS PROVEN COMPENSABILITY,

II. Whether Claimant has proven that she is entitled to reasonably necessary medical benefits related to the October 26, 2021 incident.

III. If medical benefits are reasonably necessary, whether Claimant has proven that the treatment she obtained was authorized within the chain of referral and/or by a provider on a designated provider list.

IV. Whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary disability benefits as a consequence of the injuries sustained.

V. Whether Respondents have proven by a preponderance of the evidence that there was an efficient intervening event.

STIPULATIONS OF THE PARTIES

The parties agreed that, should compensability be awarded and if Claimant is entitled to temporary partial disability benefits, the parties would calculate the amounts due and owing or litigate the issue at a further time. The Stipulation of the parties is approved and is part of the order, if applicable.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a 42 year old employee, working for Employer as a stocker for approximately 19 years. Claimant worked from approximately 4 a.m. to 12:30 p.m. The job required Claimant to stock various products and merchandize, including boxed products, to the show room throughout the store and unloading them to the appropriate display or shelving units on the sales floor. Claimant would utilize a jack which was loaded in the warehouse area and transported to the floor.

2. On October 26, 2021 Claimant was assigned to the furniture department. Claimant and her two co-workers went to the warehouse area and took a pallet of furniture with the pallet jack, taking it to the area where they needed to restock the floor. One of the co-workers was Claimant's sister. At approximately 4:10 a.m. the co-workers teamed up to lift a box containing a desk (unassembled) from the pallet. When the product shifted in the box, it caused Claimant to have to support a large portion of the weight of the desk. Claimant twisted and felt a strain in her low back. The boxed desk weighed approximately 80 lbs. She felt a pulling sensation in her low back. She told her coworkers right away and she rested for a few minutes then returned to work, despite the pain.

3. Claimant went home after a full day of work and took some Tylenol for the pain. She discussed the low back pain with her daughter but did not disclose the injury to Employer that day.

4. On October 27, 2021 she returned to work. During the 6:00 a.m. break, Claimant informed her supervisor about the injury she sustained, as the symptoms did not go away. She let him know she had been injured the prior day and was continuing to have pain in her low back. He did not send her to a doctor, but advised her that it would probably go away and to take it easy in the meantime.

5. Claimant had hoped that she would feel better with activities of daily living and work and did not demand medical evaluation at that time. As she continued to work, her back pain continued to worsen. Claimant told her supervisor that she continued have pain and had to take over the counter medications. Her supervisor did not provide her with any instructions. She reported the injury to her store manager a few days later, after he had returned from time away from work. The store manager advised Claimant that her symptoms would likely resolve in a few days. The manager instructed Claimant to take more OTC meds and continue working. Claimant felt ignored and sought medical attention on her own from her primary care provider (PCP). She contacted her physician,

scheduling an appointment, though she was not able to obtain any immediate appointments.

6. Claimant was first evaluated on November 9, 2021 by Dr. Joseph A. Murphy at the GME Bruner Family Medicine clinic for acute left-sided low back pain without sciatica, and IT band syndrome on the right. He noted that the IT band problem was atraumatic and started approximately three days before. He took a history that the lumbar spine problem was chronic with an acute flair several weeks before as Claimant had a physical job and later in his report stated it was three to four weeks prior, without numbness or tingling and no weakness.[1] On physical exam he found no edema, full strength, and normal range of motion, though tenderness to palpation on the left SI joint.

7. Claimant stated that she was scheduled for a follow up appointment at the Bruner clinic and provided with work restrictions. She stated that, following the November 9, 2021 appointment, Claimant took the work restrictions provided by Dr. Murphy, to her supervisor, who ignored the restrictions. When she could no longer stand the low back pain, she went to the HR department to advise them that she thought there was something seriously wrong with her. That is when she was sent to Concentra. She was seen at Concentra some days later.

8. Claimant first saw Dr. Autumn Schwed at Concentra Medical Center on December 1, 2021. Dr. Schwed noted that Claimant presented with the chief complaint of low back pain which started October 26, 2021 while at work. She was lifting a piece of furniture onto a shelf with a co-worker when it slipped back down and she caught it. She had pain in her left lower back, radiating into her thighs and described an aching sensation. She saw her PCP and was taking Diclofenac. Some days she felt better, some days worse and noted no prior occurrences. On physical exam, Dr. Schwed noted only the reported back pain. Dr. Schwed diagnosed a lumbar strain and started Claimant on medications[2], recommended physical therapy, provided light duty work restrictions, and set a follow up in one week.

9. Claimant followed up at the Bruner clinic with Brandon M**.** Teska, D.O., Ph.D., on December 3, 2021 for the acute left-sided low back pain, which he noted was likely secondary to her work injury. He particularly noted that Claimant presented "with a long history[3] of acute back pain. She was injured at work while moving a large item approximately 5 weeks ago." Dr. Teska noted that she was better since the injury and had no further injuries, however she discontinued the medicine that was prescribed at her last visit (diclofenac) as it had not been working. She still had occasional episodes of acute to severe pain with movements. She noted that flexing or extending her back were particularly painful. On exam she was tender to palpation in the bilateral SI joints, PSIS[4]

[1] Dr. Murphy made mention that Claimant worked cleaning houses. Claimant emphatically denied she had worked in housekeeping and denied she had a second job during the hearing and this ALJ found Claimant credible.

[2] Lidocaine patches, methocarbamol, and prednisone.

[3] This ALJ infers that the long history refers to the long account by Claimant not to the length of time Claimant has had acute back pain.

[4] This ALJ infers that the PSIS is the posterior superior iliac spine, immediately below the hip crest.

and lumbar paraspinals from L3-L5, as well as tender with extension, flexion and rotation with a positive straight leg test. Otherwise, her exam was within normal limits.[5]

10. Claimant was seen by Dr. Schwed on December 8, 2022. She presented for re-evaluation of low back pain and reported some worsening low back pain with radiating pain into her thighs, noting that the pain in the low back was greater on the left side, and worse with twisting and extension. She described it as cramping. The M-164 states that Claimant was able to return to modified activities, which included maximum 10 lbs. lifting, pushing/pulling up to 10 lbs., no forward bending and no squatting. She was to continue her therapy and rehabilitation as well as medications as prescribed. Dr. Schwed noted that the objective findings were consistent with the work related mechanisms of injury for October 26, 2021.

11. Dr. Schwed noted that Claimant presented for re-evaluation of low back pain on December 14, 2021. She noted that Claimant had been doing well with the work restrictions overall, but one supervisor forced her to work outside her restrictions, which caused increased pain in both sides of her lower back. Claimant reported difficulty sleeping due to pain, stated PT was helpful, especially with use of the TENS unit. Claimant had no numbness, weakness, or paresthesias on exam, but found that there was tenderness present in the left paraspinal and right paraspinal. Dr. Schwed provided the same work restrictions but noted that "If unable to accommodate those restrictions, patient must be sent home from work."

12. On December 16, 2021 Claimant was seen at Saint Joseph Hospital Emergency (Good Samaritan Medical Center) for acute low back pain. She provided a history that the original injury occurred at work on October 26, 2021 while carrying furniture. She reported intermittent paresthesias in the bilateral lower extremities, no weakness, incontinence, or other issues. Claimant reported she continued to work a very physical job and had periods where she was incapacitated by her pain. On exam PA Christopher North found paraspinous spasm with diffuse tenderness in a band-like region across the sacrum, no midline tenderness, decreased rotation, negative straight leg raise bilaterally, sensation was intact to light touch to the bilateral lower extremities with deep tendon reflexes symmetrical; good range of motion and no concerning findings. PA North ordered a CT of the lumbar spine and reviewed the results with Claimant. These notes were cosigned by Dr. Ryan Patterson.

13. Eric Wannamaker, M.D. Neuroradiologist of Diversified Radiology of Colorado, PC, noted that the CT of the lumbar spine from December 16, 2021 showed a disc bulge at the L3-L4 level, and a broad based disc bulge at the L4-L5 level with mild to moderate spinal canal stenosis with the thecal sac measuring 8.2 mm, and moderate left facet arthropathy resulting in mild to moderate neuroforaminal stenosis with possible contact extending into the exiting L4 nerve root. At the L5-S1 level it showed a shallow disc bulge, severe right sided facet arthropathy with moderate canal stenosis and a facet osteophyte contacting the right L5 nerve root. He recommended an MRI to more accurately assess the degenerative spinal canal and stenosis.

[5] The report does not mention Claimant's visit to Concentra. This ALJ does not give this any significant or relevant meaning as medical reports frequently do not report everything that is conveyed during an appointment.

14. Claimant was seen multiple times by Dr. Schwed including January 4, 2022, January 11, 2022, March 1, 2022, March 22, 2022, all of which read substantially the same.

15. On January 11, 2022 Samuel Y. Chan, M.D., a physiatrist, initially evaluated Claimant.[6] He noted a history consistent with Claimant's testimony. Dr. Chan documented the following:

> Despite 2-1/2 months of diagnostic and therapeutic intervention including physical therapy program, chiropractic care, the patient finds that the pain complaint continues to be rather significant, and examinations today shows that there is some listing noted in the lumbar spine area to left side. The concern is whether if there are any type of discogenic issues that might account for the patient's ongoing symptoms. Therefore, I am in agreement with Dr. Schwed that further imaging studies would be indicated at this juncture. By the patient's report , an MRI has been scheduled for the upcoming week. Thus, I would like to follow up with the patient after this is completed in order to review the MRI findings. Depending on the MRI findings, further treatment modalities and plan may then be developed. Meanwhile, for pain management, the patient is to continue with the use of anti-inflammatory medications that has been provided by Dr. Schwed's office. The addition of lidocaine patches may be of benefit as well, and hopefully, this will continue to maintain the patient's ongoing functional level and she is to continue with gentle core stabilization exercise program and thus she will follow through in current work status as per Dr. Schwed's office.

16. Claimant filed a Workers' Claim for Compensation on January 10, 2022. Claimant was stocking unassembled furniture boxes and when she was lifting a box with coworkers, the weight shifted to her and she injured her low back. She noted that she was first treated at SCL Health and then was transferred to Concentra.

17. The first notes showing Claimant was attended by Dr. Theodore Villavicencio were from January 11, 2022 at Concentra. Dr. Villavicencio assessed a lumbar strain and stated Claimant would see a specialist that day. He noted that objective findings were consistent with the mechanism of work related injury and ordered an MRI. He stated Claimant should return to modified work activities which included that Claimant must be sitting 50% of the time, and if restrictions could not be accommodated, then she should be sent home from work.

18. Claimant was seen by Dr. Teska on January 11, 2022 for a follow-up on her Graves disease due to her hyperthyroidism, which was being followed by an endocrinologist. Dr. Teska also noted Claimant had a probable impingement syndrome, of two to three weeks, on the left shoulder. On exam he documented that Claimant was tender palpation on the lateral aspect of the deltoid down into the mid upper arm, with a positive Neer's and Hawkins. He stated that Claimant was being treated with NSAID's, but he recommended steroid injections and physical therapy. He also listed an iron deficiency.

19. Claimant was evaluated by Dr. Chan on February 1, 2022. He took a history that three coworkers were moving a piece of furniture to place it on a shelf above shoulder height when it started to slip, and she tried to save it from falling. She pulled all the weight of the furniture herself, straining herself and had been dealing with pain complaints in the lumbar areas ever since. He noted Claimant continued to be symptomatic following

[6] Pages 22-25 of Claimant's Exhibit 8.

physical therapy and massage therapy. Claimant also was reporting radiating bilateral lower extremity complaints, numbness and burning sensation. Dr. Chan made the following findings:

> Lumbar Spine: Axial loading, trunk rotation, minimal skinfold did not exacerbate her tenderness. There is no tenderness to palpate about PSIS and sacral sulcus. Bilateral SI joints engaged symmetrically with lumbar forward flexion. Straight leg raising is somewhat positive in the seated and supine position at about 70 degrees. Patrick, Gaenslen, FABER's, Yeoman's are grossly positive bilaterally.
>
> Neurologic: Manual muscle testings are 5/5 throughout. Sensory is grossly intact to light touch and pinprick. Deep tendon reflexes 1+ throughout and downgoing toes bilaterally.
>
> DIAGNOSES:
>
> 1. Lumbosacral spine.
>
> a. Rule out discogenic disease.
>
> b. Essentially normal neurologic examination.
>
> c. Rule out bilateral sacroiliac joint dysfunction.
>
> d. There is no clinical evidence of facetogenic complaints.

Dr. Chan recommended the MRI as well and noted that, if the MRI findings were unrevealing, he would consider some SI joint injections, but that Claimant should continue with core stabilization exercises, isometric strengthening, range of motion exercises and refilled her lidocaine patches.

20. PA Chelsea Rasis attended Claimant at Concentra on February 15, 2022. He noted on exam that Claimant had abnormal range of motion of the lumbar spine as well as the thoracic spine but otherwise not remarkable. He documented that Claimant was not doing well, with pain worse with prolonged walking, better with sitting down, that she was going to PT, the MRI was still pending and that she saw Dr. Chan that day, who was recommending lumbar injections, pending authorization.

21. Dr. Chan reevaluated Claimant again on February 15, 2022 and, upon further examination, concluded Claimant did have bilateral sacroiliac joint disfunction but was not able to rule out discogenic issues as the MRI has not taken place yet. He recommended proceeding with SI joint injections. Dr. Chan also stated that objective findings were consistent with the history and/or work related mechanism of injury.

22. Respondents filed a Notice of Contest on February 25, 2022 for further investigation.

23. Claimant followed up with Dr. Chan on March 15, 2022 following a March 3, 2021 SI joint injection and he noted that Claimant had significant diagnostic and therapeutic benefits from the procedure. He recommended that Claimant continue with an active exercise routine and suspected that the majority of Claimant complaints were related to the SI disfunction vs. the discogenic component. Even though Claimant continued to complain of pain at 5/10 to 6/10, the pain was no longer constant in the region, she was able to obtain much better sleep pattern at night and was able to lift much greater weight. Claimant continued to use Celebrex as well as lidocaine patches.

24. The MRI was completed on March 21, 2022 pursuant to Dr. Chan’s referral and was interpreted by Chelsea Jeranko, D.O. at Diversified Radiologist. The MRI

showed findings consistent with the prior CT scan with the exception that the MRI read showed disc height loss with disc space unroofing due to anterolisthesis and superimposed canal zone disc protrusion at the L4-5 level. It also showed bone marrow edema on the left at this level in addition to the moderate to advanced facet arthropathy and bilateral facet joint effusion. It also showed mild paraspinal muscle atrophy was chronic and symmetric at the L5-S1 level with advanced facet arthropathy with ligamentum flavum thickening and bony hypertrophy.

25. The March 23, 2022 medical records from Bruner noted a motor vehicle accident on March 13, 2022. Claimant was complaining of neck pain since the accident with residual neck and upper back pain. Dr. Teska also noted that Claimant had chronic low back pain which may have had a slight flair up (0.2).[7] Radiographs of the neck and ribs were negative. Claimant had no tenderness to palpation of the cervical spine in the midline but had tenderness in the paraspinals bilaterally, and full range of motion but pain at extremes of range of motion. There was no examination of the lumbar spine. Dr. Teska diagnosed acute neck and upper back pain with diagnosis codes for cervicalgia and dorsalgia respectively.

26. On April 5, 2022 Claimant followed up with Dr. Chan. Given the positive response to the SI joint injection as being both diagnostic and therapeutic, he recommended a follow up injection. On the same day he sent a request for prior authorization.

27. Claimant reported to Dr. Gina Phillips on April 8, 2022 that she had improvement of the neck pain, was being controlled with Naproxen and stopped meloxicam. She found mild loss of ROM of the neck, with improvement.

28. Dr. Chan reevaluated Claimant on May 3, 2022. Dr. Chan reported that Claimant had repeat SI joint injections on April 22nd. Claimant described that when she left the surgery center, the pain complaint was 1/10. She noted that the pain complaint was slightly returning but had moments when she was actually pain free. On exam he found that Claimant had a negative straight leg test but Patrick's, Gaenslen's, Faber's and Yeoman's were positive bilaterally.[8] He had the chance to review the MRI which showed anterolisthesis at the L4-5 level, with facet arthrosis and bilateral facet effusions.

29. On May 10, 2022 Nurse Practitioner Jennifer Brown of Bruner, noted that Claimant continued to have neck and muscle pain since the MVA on March 13, 2022, with negative x-rays from the ED. Claimant was to follow up with physical therapy and continue with Tylenol and naproxen. On exam nurse Brown notice that she was positive for neck pain with tenderness in the cervical spine musculature. She mentioned associated symptoms included leg pain but nothing further to elucidate on this issue.

30. Dr. William M. Barreto, on May 18, 2022 indicated that lidocaine ointment was authorized on March 22, 2022 and that he found it not medically necessary based on the records he was provided as well as based on the Medical Treatment Guidelines, Rule 17, Exhibit B. There was a very short list of records provided to Dr. Barreto.

[7] This ALJ infers that this 0.2 is referencing a pain scale of 0-10, with a two decimal points of one on the scale, ergo the reference to the "slight flair."
[8] Patrick's, Gaenslen's, Faber's and Yeoman's are all tests confirming the SI joint involvement.

31. Dr. Nicole Huntress of Concentra assessed Claimant on May 31, 2022 stating that Claimant was returning for checkup, noting no improvement since the last visit, still had pain, moderate aching of the bilateral and central low back, exacerbated by most activities. She noted that Claimant continued with injections with Dr. Chan and was expecting a third SI joint injection, and continued with massage therapy, which had been helpful.

32. On June 28, 2022 Claimant reported to Dr. Megan Keane of Bruner Family Medicine that she had improvement with injections into the SI joint but that the pain returned. She was investigating the possibility that Claimant may have a component of fibromyalgia.

33. Claimant returned to Dr. Chan on June 28, 2022 with a rather excellent short term diagnostic response to SI injections. In light of the continued spine pain he recommended an L5 medial branch block and sacral lateral branch blocks. He stated that if these were successful, Claimant could then proceed with lateral branch radiofrequency ablations. Claimant was reporting increased pain radiating down into her hamstrings and some ankle swelling. She continued to use ibuprofen and lidocaine patches. Dr. Chan noted frustration that Insurer continued to deny the recommended injections, in light of Claimant's continued pain complaints.

34. On July 5, 2022 Dr. Chan requested authorization to proceed with bilateral L5 medial branch blocks and bilateral S1, S2 and S3 lateral branch blocks with lidocaine. The parties did not provide any information on whether this was authorized or not.

35. Dr. Siva Ayyar, issued a denial report on July 20, 2022 of both the bilateral L5 medial branch block and the bilateral S1, S2 and S3 lateral branch block with lidocaine. This was based on the records Dr. Ayyar was provided, which were limited to one medical report.

36. John Burris, M.D. conducted an independent medical evaluation at Respondents request on July 19, 2022. The mechanism of injury described by Dr. Burris was consistent with Claimant's hearing testimony. He obtained a history of medical care and reviewed medical records going back to 2018. Dr. Burris' ultimate opinion was as follows:

> [Claimant]'s clinical course has not followed a typical physiologic pattern associated with an acute injury on 10/26/2021, given random waxing and waning, and expanding complaints, which have not correlated with the passage of time and appropriately directed treatment. It is noted that her subjective complaints acutely worsened after the intervening 3/15/2022 MVA reported by her PCP (not acknowledged by the WC providers).
>
> Her subjective complaints today are out of proportion to her examination which exhibits no objective findings, and she exhibits clear psychosomatic overlay. Overall, her presentation is nonphysiologic. All examinations have documented intact range of motion and normal neurologic function, and all diagnostic testing has been negative for acute abnormalities. Based on the totality of the information provided, the described 10/26/2021 workplace event represents an incident without injury or need for treatment. Thus, no treatment within the WC system is reasonable, necessary, or related. [Redacted Claimant's name]'s subjective complaints today, 9 months after the reported workplace event, cannot be causally related to the described workplace event.

37. The last Work Status Activity form completed by Dr. Villavicencio was dated July 27, 2022 and showed the same sedentary work restrictions as previous.

38. On August 9, 2022 Claimant was evaluated by Dr. Huntress, returning for follow-up from specialist, Dr. Chan. She ordered Claimant to continue with the specialist, stated that objective findings were consistent with the history and mechanism of the work related injury and ordered continued restrictions in the sedentary to light work category, working only three days a week up to 4 hours a day. She noted that MMI was unknown at that time.

39. Dr. Burris also testified at hearing. He was accepted as an expert in occupational medicine and as a Level II accredited physician. His testimony was consistent with his report. He testified that Claimant did not have any objective findings on exam and that the diagnostic evaluations were consistent with preexisting pathology and not consistent with the mechanism of injury after so many months after the incident. Dr. Burris opined that Claimant's symptoms following her injury were unrelated to the October 26, 2021 incident.

40. Wage records provided showed Claimant was earning $23.00 per hour at the time of her injury.[9] The wage records are hard to understand and neither party provided testimony or arguments on how to calculate the appropriate average weekly wage. It is clear that the pay period ending (PPE) dates show that Claimant was paid every two weeks. However, the pay period ending October 2, 2021, shows Claimant earning $611.66 but working 87.3 hours, which would provide a pay rate of $7.28 per hour, and $21.36 per hour for the PPE July 10, 2021. Therefore, this ALJ determined that Claimant's fair approximation of her average weekly wage should be calculated by Claimant's total number of hours worked. Taking PPE October 31, 2020 through PPE October 16, 2021, a period of 52 weeks, Claimant worked 1,881.66 regular hours and 79.02 overtime hours. Which, when multiplied by her rate of pay, provides an average weekly wage of $884.73.[10]

41. The record shows that Claimant clearly was at work within the course and scope of her employment when she lifted the boxed desk with her coworkers and strained her low back when she twisted after the weight shifted to her. Claimant has injuries to her lumbar spine and sequelae causing radicular symptoms into her bilateral lower extremities. Medical providers have documented the strain, and the CT and MRI findings showed Claimant has disc herniations more likely than not caused by or aggravated by the work place injury. Claimant testified that she did not have problems with her lumbar spine or lower extremities before the accident on October 26, 2021. Claimant was credible and persuasive. Further, Drs. Teska, Schwed, Villavicencio and other Concentra providers noted that Claimant's injuries were consistent with the mechanism of injury and this ALJ infers from these statements that they were causally related to the October 26, 2021 work injury. These providers were credible and persuasive, over the contrary opinionw of Dr. Burris. Claimant has shown that the proximate cause of Claimant's

[9] The last pay period ending before Claimant's date of injury was October 16, 2021, showing that Claimant earned $560.05, which divided by the 24.35 hours worked, provides a rate of $23.00 per hour.
[10] Total regular hours of 1881.69 divided by 52 is 36.19 regular hours a week, which multiplied by $23.00 per hour results in $832.37 per week. Total overtime hours of 79.02 divided by 52 is 1.52 hours, which multiplied by $34.5, the overtime per hour rate, results in $52.44 per week. [$832.29+$52.44=$884.73]

injuries was the accident of October 26, 2021. Claimant's injuries arose from the accident at work in the course and scope of her employment on October 26, 2021.

42. The Claimant reported her injury to her supervisor and the store manager and they failed to designate a medical provider. Claimant finally chose her personal care providers at GME Bruner Family Medicine including Dr. Murphy and Dr. Teska. When Claimant's supervisor failed to follow the restrictions provided by her PCP, Claimant went to the Human Resources office to report what was happening. The HR office sent Claimant to Concentra Medical Center within two days, where Claimant was seen by multiple providers beginning December 1, 2021. Claimant continued with care at Bruner for her lumbar spine injury, as well as with Concentra. Claimant demonstrated her acquiescence to the change of provider to Concentra by continuing to treat with Concentra. As found, Bruner was authorized until December 1, 2021, at which time her care was transferred to Concentra. Bruner is was the authorized provider from until the change occurred.

43. Claimant has shown that she requires ongoing medical care that is reasonably necessary and related to the October 26, 2021 work injury, including the injections and medications, such as the lidocaine ointment, recommended by Claimant's providers, including Dr. Chan. Claimant has shown that she is entitled to reasonably necessary medical benefits that are authorized, including GME Bruner Family Medicine, Concentra, and medical providers within the chain of referral, as well as the lidocaine ointment and the bilateral L5 medial branch blocks and bilateral S1, S2 and S3 lateral branch blocks with lidocaine recommended by Dr. Chan.

44. Claimant has been provided with restrictions from her first medical visit with Dr. Murphy at Bruner and her providers have continued to note restrictions through on August 9, 2022, when Dr. Huntress stated that Claimant continued with restrictions in the sedentary to light work category, working only three days a week up to 4 hours a day. She noted that MMI was unknown at that time. Claimant has shown that she is entitled to temporary disability benefits, if she has lost wages. The parties stipulated that they would calculate any outstanding temporary disability and that stipulation is approved.

45. Any evidence or possible inferences contrary to the above findings, were specifically found not persuasive.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor

of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 199f5). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." Sec. 8-41-301, C.R.S.

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from an aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial*

Commission, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, based on the totality of the evidence, the medical records, Claimant's testimony, and the opinions of Drs. Teska, Schwed, Villavicencio and other Concentra providers are more persuasive than the contrary opinions of Dr. Burris. The record shows that Claimant clearly was at work, within the course and scope of her employment, when she lifted the boxed desk with her coworkers and strained her low back when the weight shifted to her. As found, Claimant injured to her lumbar spine and causing the sequelae of radicular symptoms into her bilateral lower extremities. Medical providers have documented the strain, and the CT and MRI findings show Claimant has disc herniations more likely than not caused by or aggravated by the work place injury. Claimant testified that she did not have problems with her lumbar spine or lower extremities before the accident on October 26, 2021. Claimant is credible and persuasive. Claimant has shown that the proximate cause of Claimant's injuries to her lumbar spine and bilateral lower extremities was the accident of October 26, 2021. Claimant's injuries arose from the accident at work in the course and scope of her employment on October 26, 2021.

C. Authorized, Reasonably Necessary Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that she is entitled to all reasonable and necessary medical care related to the injuries or aggravations of the preexisting condition. As found, Claimant reported her injury to her supervisor and the store manager and they failed to designate a medical provider. Claimant finally chose her personal care providers at GME Bruner Family Medicine including Dr. Murphy and

Dr. Teska. When Claimant's employer failed to follow the restrictions provided by her PCP, Claimant went to the Human Resources office to report what was happening. The HR office sent Claimant to Concentra Medical Center where Claimant has seen multiple providers. Claimant continued with care at Bruner for some time as well as Concentra. Claimant has shown that she requires ongoing medical care, including the injections and medications, such as the lidocaine ointment, recommended by Claimant's providers, including Dr. Chan. Claimant has shown that she is entitled to reasonably necessary medical benefits that are authorized, including GME Bruner Family Medicine through December 1, 2021, Concentra, and medical providers within the chain of referral, as well as the lidocaine ointment and the bilateral L5 medial branch blocks and bilateral S1, S2 and S3 lateral branch blocks with lidocaine.

D. Temporary Total Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Sec. 8-42-105(3)(a)-(d), C.R.S. Claimant alleges impaired earning capacity from October 27, 2021 through the present.

As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive temporary disability benefits. Claimant has been provided with restrictions from her first medical visit with Dr. Murphy at Bruner and restrictions have continued through at least August 9, by Dr. Huntress, who stated that Claimant continued with restrictions in the sedentary to light work category, working only three days a week up to 4 hours a day. She noted that MMI was unknown at that time. Claimant has shown that she is entitled to

temporary disability benefits, if she has lost wages. The parties stipulated that they would calculate any outstanding temporary disability and that stipulation is approved.

E. Average weekly wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). In calculating the fair approximation of Claimant's average weekly wage, wages were considered from pay period ending October 31, 2020 through October 16, 2021, a period of 52 weeks. Based on the average hours worked of 1881.69 regular hours and 79.02 overtime hours for the 52 week period, earning $23.00 per hour, provides an average weekly wage of $884.73. As found, the fair approximation of Claimant's average weekly wage is $884.73 per week.

F. Intervening Event

All results flowing proximately and naturally from an industrial injury are compensable. *See, Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970)*. However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. *Post Printing & Publishing Co. v. Erickson, 94 Colo. 382, 30 P.2d 327 (1934)*. "If the need for treatment results from an intervening injury or disease unrelated to the industrial injury, then treatment of the subsequent condition is not compensable. This…is a question of fact for resolution by the ALJ." *See Merrill v. Pulte Mortgage Corp.*¸ W.C. No. 4-635-705-02 (ICAO May 10, 2013) (citing *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002).

Here, it is clear from the persuasive medical records, that Claimant was involved in a motor vehicle accident (MVA) in March 2022. However, as found, Claimant only had a very slight temporary flair of her work related condition as noted by Dr. Teska. The Bruner records indicate that Claimant injured her neck in the MVA and she treated for that at Bruner. Respondents failed to show that Claimant had an intervening event that broke the causal link between the October 26, 2021 work related injury to her lumbar back and lower extremities and her need for treatment for those injuries.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a work related injury to her lumbar spine and lower extremities on October 26, 2021.

2. Respondents shall pay for the authorized care Claimant received at the Bruner clinic through December 1, 2021.

3. Respondents shall pay for the reasonably necessary and related medical care Claimant received from Concentra and the providers within the chain of referral.

4. The stipulation of the parties is approved and part of this order. Respondents shall pay temporary disability benefits from November 9, 2021 until terminated by law.

5. Claimant's average weekly wage is $884.73.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-120-768-004

ISSUES

1. Did Claimant prove by a preponderance of the evidence that his ongoing physical therapy appointments at Flicker Physical Therapy and ISU Physical Therapy are reasonable, necessary and related medical treatment for his October 17, 2019 work injury?

2. Did Claimant prove by a preponderance of the evidence that he is entitled to repayment for out-of-pocket expenses associated with the physical therapy he received at Flicker Physical Therapy and ISU Physical Therapy?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 24 year-old male who sustained a compensable work injury on October 17, 2019 while working for Employer in Wyoming. Claimant fell from a power line pole and sustained a compression fracture at L1 that progressed to a spinal cord infarction up to T6. Claimant has paraplegia at the T6 level and is confined to a wheelchair. Claimant has no sense of feeling in his lower extremities, but has full use of his upper extremities.

2. Prior to the accident, Claimant enjoyed outdoor activities including, camping, riding dirt bikes, and playing sports. Claimant testified that he is no longer able to engage in these hobbies due to his injury (Tr. 41:7-42:25).

3. Claimant underwent spine surgery at Wyoming Medical Center. He was subsequently transferred to Salt Lake City, Utah, where he participated in an in-patient rehabilitation program. Claimant then transitioned to an out-patient physical and occupational therapy program. In late December 2019, once he completed the program, Claimant was discharged and he returned to his parent's home in Blackfoot, Idaho.

4. On December 20, 2019, Gary Walker, M.D., a specialist in physical medicine and rehabilitation (PMR) and Claimant's authorized treating physician (ATP), evaluated Claimant. Dr. Walker noted that Claimant had been doing physical therapy daily. The recommendation from the University of Utah was for Claimant to continue with two hours a day with a combination of physical and occupational therapy. Dr. Walker noted Claimant had been working on strengthening, sitting and standing/balance in the frame. He noted Claimant's "biggest primary issue right now is outpatient physical therapy and occupational therapy," and he was trying to get approval for the therapy. (Ex. T pp. 203-206).

5. Claimant had a follow-up appointment with Dr. Walker on January 20, 2020. Dr. Walker noted Claimant was going to Idaho State University Physical Therapy (ISU), and working with Cindy Seiger, PT, on Tuesdays and Thursdays. Claimant was going to Flicker Physical Therapy (Flicker) on Mondays, Wednesdays, and Fridays, and working with Tim Flicker, PT. Claimant reported that he felt like he was getting a little bit stronger with the therapies. Dr. Walker ordered physical therapy five days a week, between the two locations, for an additional four weeks. (Ex. T pp. 207-208).

6. On February 20, 2020, Ms. Seiger wrote to Dr. Walker regarding Claimant's progress to date, and to request additional therapy through the end of October 2020. She explained "recovery of function 1-2 levels inferior to a complete SCI is possible for the first 6 months post injury and decreases from months 6 to 12." Ms. Seiger felt that Claimant's physical therapy frequency would decrease around the end of April 2020, and she encouraged community activity participation such as exercising at the gym. (Ex. 10 pp. 56-58). At Claimant's February 20, 2020 appointment, Ms. Seiger recommended Claimant exercise at the gym in his home town. She volunteered to go with Claimant to assist him in knowing what equipment to use. According to the medical records, Claimant was not interested, and wanted to continue with physical therapy. (Ex. GG p. 421).

7. At Claimant's February 25, 2020 appointment, Dr. Walker reviewed the progress notes from each of the physical therapists working with Claimant. According to the progress notes, Claimant showed subtle improvement. Further, each location and therapist was working on different modalities. Dr. Walker ordered additional physical therapy for Claimant for the next four weeks, and he requested progress notes and a Functional Independent Measure (FIM) score from the therapists. Dr. Walker and Claimant discussed a psychotherapy referral, and Claimant was receptive to the idea. (Ex. T pp.214-215).

8. Mr. Flicker prepared a progress note on March 9, 2020 after Claimant's 32nd visit. Mr. Flicker noted that Claimant had excellent upper body strength and range of motion, and he needed to work on his dynamic balance and transfers. Claimant's FIM score was 107. (Ex. HH p. 730).

9. On March 24, 2020, Dr. Walker rewrote prescriptions for physical therapy at Flicker and ISU. Claimant had met with psychologist, Donald Whitley, PHd, the previous day. Dr. Walker recommended that Claimant continue seeing Dr. Whitley and he wrote Claimant a prescription for weekly psychotherapy with Dr. Whitely for the next four to six weeks. (Ex. T p. 220).

10. Insurer denied authorization of additional physical therapy, and Dr. Walker appealed this decision on April 7, 2020. He explained that he reviewed the therapy notes and spoke with Mr. Flicker. Claimant had made very mild progress in physical therapy, but the goal was to get him more stable with balance and transfers to help him become more independent. Dr. Walker recommended four more weeks of physical therapy, three times a week. In light of the coronavirus pandemic, Dr. Walker recommended resuming physical therapy with Mr. Flicker in four to six weeks. Dr. Walker did not see a reason for Claimant to have telephysical therapy with ISU. (Ex. T p. 235).

11. Claimant continued to go to physical therapy at Flicker, three days a week for about an hour and a half to two hours each session. Dr. Walker continued to reorder physical therapy, and to appeal Insurer's decision to deny authorization. (Ex. T p. 242-243).

12. On June 29, 2020, Claimant saw Matthew Fackrell, D.O. for an evaluation. Dr. Fackrell is Claimant's family physician, and he cared for Claimant as he was growing up. The medical records note that Claimant was there "for a workman comp claim and is needing some referrals." Dr. Fackrell noted that Claimant was going to physical therapy and had been seeing Dr. Walker. He also noted that according to Claimant, Insurer had stopped paying for physical therapy, so Claimant was paying out-of-pocket for the therapy. Dr. Fackrell opined that physical therapy was medically necessary. (Ex. FF pp. 349-350).

13. Dr. Walker evaluated Claimant on July 2, 2020, via video. At the appointment, Claimant asked if his treatment could be transferred to Dr. Meyers, a physiatrist in Twin Falls, associated with St. Luke's Hospital. Dr. Walker said he would make a referral to change all care to Dr. Meyers, and no further follow up with him would be necessary. (Ex. T p. 254).

14. On July 24, 2020, Claimant's FIM score, per Mr. Flicker, was still 107. (Ex. HH p. 107)

15. On July 30, 2020, Dr. Walker provided an addendum to his July 2, 2020 medical record stating Claimant "is referred to Dr. Kevin Hill for long term physiatric/rehab. Dr. Matthew Fackrell." (Ex. 8 at 8-40). Claimant, however, had already seen Dr. Fackrell nearly a month prior to this addendum, and four days prior to July 2, 2020, when he asked that his care be transferred to Dr. Meyers.

16. Kevin Hill, M.D.[1] evaluated Claimant the morning of July 30, 2020. Dr. Hill noted in the medical record that Claimant had originally been referred to Dr. Walker, and he was not sure why Claimant did not want to continue treating with Dr. Walker. Dr. Hill suggested, however, that Claimant see a rehabilitation physician who was board certified in spinal cord injuries, as he was a generalist. Dr. Hill renewed Claimant's medications and wrote him several referrals. (Ex. Y and Ex. 17).

17. Insurer continued to deny any authorizations for physical therapy on the basis that the records showed "no significant long-term gains have been made." (Ex. Y p. 282).

18. On September 2, 2020, Claimant's FIM score, per Mr. Flicker, was still 107. (Ex. HH p. 906).

19. On October 26, 2020, Portneuf Medical Group notified Insurer that Dr. Hill was no longer in the group, and there was no other provider in the office to continue Claimant's care. (Ex. Y p. 284).

[1] Dr. Hill and Dr. Meyers were colleagues at Portneuf Medical Group, Neuroscience and Rehab Clinic/Physical Medicine and Rehabilitation.

20. Claimant was evaluated by Ahren O. Geilenfeldt, D.O.[2], on November 24, 2020. Dr. Geilenfeldt noted that Claimant was a year out from his injury and "recovery had slowed down." Claimant was doing physical therapy three times a week, but other than using a stander at home, Claimant did not have any other home exercise program (HEP). Dr. Geilenfeldt noted it was "reasonable to continue with therapy," but encouraged Claimant to work on establishing a regular HEP. Dr. Fackrell is listed in the medical record as Claimant's primary care physician. (Ex. T pp. 293-297).

21. After multiple cancellations, Claimant had a follow-up appointment with Dr. Geilenfeldt on February 16, 2021. Claimant was still going to physical therapy three times a week, and the therapy was prescribed by Dr. Fackrell. Claimant was not engaged in a HEP and he told Dr. Geilenfeldt he was not interested in doing one, but preferred to go to physical therapy for exercise. The medical record states that Claimant was "resistant to any short–term goal setting for physical activity which is concerning." In his plan, Dr. Geilenfeldt reported that he would defer management of ongoing therapy to the prescribing physician, Dr. Fackrell. (Ex. BB pp. 305-306).

22. Claimant testified that he does some at-home exercises. He uses his standing frame and an electric motor pedal system. When asked if he was following the recommendations of his providers with respect to at-home exercises, Claimant said "more or less, yes [but] they would encourage more." He also testified he gets depressed and secluded at home to a point he does not want to do anything. Going to physical therapy motivates Claimant. (Tr. 52:2-53:7).

23. Claimant is no longer seeing Dr. Whitley despite recommendations he do so. Claimant testified he gets more benefit out of going to physical therapy as opposed to a psychologist. (Tr. 56:4-57:23).

24. The ALJ finds that Claimant does some at-home exercises, but he is not participating in a formal HEP as recommended by his providers.

25. On March 3, 2021, Claimant had over 150 physical therapy visits with Mr. Flicker. Claimant's FIM score had not changed from what it was a year prior – it was still 107. (Ex. HH p. 1044).

26. On March 9, 2021, Dr. Fackrell wanted Claimant to continue physical therapy because it was a "medical necessity." Dr. Fackrell, did not elaborate but stated "as far as the paraplegia, spinal cord injury, and weakness that he has now, I do recommend continuing with both [in] physical therapy and a chiropractor." (Ex. FF pp. 361-362). Dr. Fackrell consistently recommended physical therapy for Claimant through March 2022, and referred to it as a medical necessity. (Ex 13, Ex. GG and Ex. HH).

27. On May 4, 2021, Claimant resumed physical therapy with ISU. (Ex. GG).

[2] In July 2020, Dr. Meyers recommended that Claimant schedule an appointment with Dr. Geilenfeldt. Claimant said he was going to think about it. Insurer had scheduled a new patient visit with D. Geilenfeldt on Claimant's behalf. (Ex. BB p. 291).

28. Claimant saw Clark Allen, M.D., a neurosurgeon, on August 30, 2021. Dr. Allen noted in the medical record that it was "obvious that [Claimant] is hopeful for return of function and is looking for improvement on the films as a sign of the possibility of function return." After reviewing the films and examining Claimant, Dr. Allen concluded Claimant was well decompressed and had a stable fusion. He told Claimant he did not see any options for intervention, and any change or improvements in his MRI scan really had no meaning for a return to function. Dr. Allen concluded that based on Claimant's clinical course and how far out he was from the injury, the return of any meaningful function was unlikely. (Ex. DD).

29. At Claimant's follow-up appointment with Dr. Geilenfeldt on September 7, 2021, Claimant reported Dr. Fackrell was still prescribing physical therapy four times a week. According to the medical record, Claimant told Dr. Geilenfeldt he was not doing a HEP, just physical therapy. Claimant was using his standing frame and electric motor pedal system. Dr. Geilenfeldt recommended that Claimant start a HEP. (Ex. BB pp. 317-318).

30. At Claimant's December 16, 2021 physical therapy visit at ISU, Claimant requested a letter of medical necessity for bilateral knee-ankle-foot orthoses (KAFOs). Ms. Seiger sent a letter to Claimant's doctor regarding the medical necessity for bilateral KAFOs. (Ex. 10 pp. 174-175).

31. Claimant stopped treating with Dr. Geilenfeldt because he wanted to establish care with a physiatrist closer to his home. Tyler Hedin, M.D., began treating Claimant on December 17, 2021. Dr. Hedin noted that Claimant continues to work with physical therapists at ISU and they are advocating for bilateral KAFOs to aid with functional tasks at home. Dr. Hedin believed "training with bilateral KAFOs to be reasonable given some mild motor return in the proximal hips according to PT." (Ex. EE. pp. 333-334).

32. On January 3, 2022, Dr. Hedin ordered custom fabricated bilateral KAFOs for Claimant. (Ex. EE p. 336).

33. Claimant had a follow-up appointment with Dr. Hedin on February 15, 2022. Dr. Hedin noted that Claimant had not yet received his KAFOs, but continued to work with his physical therapists at ISU and Flicker on transfers and gait. Dr. Hedin specifically noted that Claimant was to use the KAFOs in physical therapy to aid with standing. (Ex. EE p. 338).

34. Claimant testified that he goes to Flicker, two to three times per week, and to ISU about two times per week for physical therapy. Claimant pays out-of-pocket for the therapy because Insurer has denied authorization. (Tr. 43:23-21). Claimant testified that going to physical therapy helps him because it forces him to get out of the house. It gives him more of a social life, as well as improving his muscles, spinal cord, core muscles, hip flexors and balance. (Tr. 45:20-46:4).

35. Claimant has been diagnosed with depression, and he credibly testified that going to physical therapy has a positive effect on his depression. (Tr. 47:13-48:1).

36. Claimant credibly testified that physical therapy has also aided him in being able to get around generally. Therapy has helped strengthen his core and upper extremities, enabling him to get around the house, balance in his chair, transfer from his chair and balance in vehicles. Claimant testified he would be driving soon. (Tr. 48:2-19).

37. Due to the pandemic, Claimant did not attend physical therapy at ISU from March 24, 2020 to May 4, 2021. At the May 4, 2021 appointment, Ms. Seiger noted that Claimant's static balance, when compared to his previous course of treatment, demonstrated improved ability to maintain balance against resistance, suggesting recovery of some voluntary motor control of his trunk muscles. She also noted Claimant's goal to walk was unlikely without external devices or significant advances in medical treatment. The plan was for Claimant to attend therapy, one to two times a week, for 12 weeks. (Ex. GG pp. 495-496).

38. As of January 2022, Claimant has had over 90 physical therapy sessions at ISU. Claimant's ISU treatment records from May 4, 2021 to January 28, 2022, consistently state that Claimant is not interested in exercising at a gym. (Ex. GG).

39. Claimant consistently attended physical therapy at Flicker from December 30, 2019 to the time of hearing. As of March 2022, Claimant had attended over 287 sessions at Flicker. Throughout this time, Claimant's FIM remained at 107. (Ex. HH).

40. Rachel L. Basse, M.D. conducted an independent medical evaluation (IME) of Claimant on August 18, 2020, and issued a report on September 25, 2020. Dr. Basse is board certified in PMR as well as chronic pain, and is Level II accredited. With respect to Claimant's physical therapy, Dr. Basse noted that ISU seemed more familiar with spinal cord injury patients. At ISU, Claimant worked on core activation, hands and knees, very functionally based activities including balance, and mat activities. Flicker also worked on balance and strength, and they used a treadmill where Claimant was in a harness and cable suspension that held his weight. Dr. Basse opined that Claimant should have already transitioned to a HEP, and he did not require any further formal physical therapy sessions. Dr. Basse referenced Ms. Seiger's February 20, 2020 letter regarding the timeline for recovery of function with spinal cord injuries, and specifically that recovery of function is possible for the first six months post injury, but decreases six to 12 months out. (Ex. 10 pp.56-58). Dr. Basse noted that Claimant would require regular re-evaluations by a physical therapist with a specialty in spinal cord injuries to reassess Claimant's functional status. (Ex. O).

41. Dr. Basse issued a supplemental report the following year, on October 19, 2021, after reviewing extensive medical records. Dr. Basse explained that the medical records consistently noted that Claimant is resistant to any HEP, despite its benefit to his overall health and well-being. Dr. Basse referenced the opinion of Dr. Allen that the return of any function was unlikely. She opined that there was no documentation to demonstrate that the physical therapy Claimant had received resulted in any clear functional gains over the past year. In her opinion, Claimant should have transitioned to a HEP the year prior (2020). (Ex. O).

42. Dr. Basse testified at the hearing in accordance with her IME report and supplemental report. She credibly testified that Claimant's physical therapy records, as recent as January 2022, do not show any significant functional gains. Dr. Basse testified that for continued physical therapy to be deemed reasonably necessary, there needs to be documentation of functional gains, and that is not present here. (Tr. 103:1-104:4).

43. Dr. Basse was present throughout the hearing and listened to Claimant's testimony. When asked whether she had any concerns regarding Claimant's description of the role that physical therapy provides him, she responded: "[the] other concern I have is, back to your question to me about Mr. Worthington saying the physical therapy gets him out of the house; it forces him have a schedule; it gives him more of a social life. And that is just not really the role of a physical therapist. A physical therapist is a formal, trained health care provider. They are not there to be your friend. They are not there to be a personal trainer. And it is not how physical therapists are utilized." (Tr. 106:19-108:4). Dr. Basse further expressed concern that Claimant's use of ongoing regular physical therapy may be hindering his overall medical management and independence because some of his providers were not being completely forthright with respect to what was a reasonable and functional outcome, particularly regarding his gait. (Tr. 107:5-25).

44. Michael Miller, M.D., saw Claimant for a 24-month DIME on March 15, 2022. Dr. Miller opined that Claimant reached MMI on October 17, 2020, and gave him a 94% whole person impairment rating. Dr. Miller noted that Claimant's FIM score had been static at 107 since at least February 26, 2020, primarily due to the absence of home accommodations. He opined "functional gain is not dependent on changes in medical condition or additional rehabilitation, but rather is dependent on changes in [Claimant's] living environment." (Ex. N. pp. 100-101).

45. Dr. Miller noted that Claimant had been managed by four different physiatrists: Dr. Walker, Dr. Hill, Dr. Geilenfeldt, and most recently Dr. Hedin. He noted Claimant continues with physical therapy four times a week, and KAFOs had been ordered for Claimant, but were not available as of the time of the DIME. Claimant uses his standing frame for three to four hours a day, and his electric pedaling machine daily. Claimant's parents perform stretching exercises on his legs every evening. With respect to maintenance care, Dr. Miller opined that additional physical therapy would be upon the recommendation of Claimant's PMR specialist. Claimant's current PMR specialist is Dr. Hedin. (Ex. N).

46. Claimant's counsel deposed Dr. Miller on June 13, 2022. Dr. Miller was asked if he saw Claimant experiencing any functional gains based upon his review of the records. Dr. Miller testified that Claimant experienced functional gains early on, but at a certain point they seemed to plateau. (Dep. Tr. 12:23-13:4).

47. According to Dr. Miller, FIM is a measure that looks at 18 different items, including motor and cognitive subcategories, and rates each area of function on a seven point scale ranging from total assistance to total independence. (Miller Dep. Tr. 45:3-9). As of February 2, 2022, Claimant's FIM score was still 107, which is what is was approximately two years prior. (Ex. HH p, 1311).

48. Dr. Miller credibly testified that it "would be reasonable" for Claimant to have physical therapy specifically addressed to the KAFOs he is to receive. (Dep. Tr. 14:19-15:9). He opined, however, that Claimant going to physical therapy four to five times a week seemed excessive in the context of no demonstrable functional gains. (Dep. Tr. 48:1-9). Dr. Miller agreed with Dr. Basse that the physical therapy records from 2021 on do not document any clear functional gains for Claimant. (Dep. Tr. 35:10-15).

49. The ALJ finds the testimony of Dr. Basse and Dr. Miller to be credible and persuasive. The ALJ finds that Claimant has not demonstrated any clear functional gains from physical therapy from 2021 to present.

50. Debra Curfman is a complex claims representative for Insurer, and she has worked on Claimant's matter since the inception of his claim. Ms. Curfman credibly testified that Insurer authorized Claimant's physical therapy with ISU from January 9, 2020 through March 24, 2020. (Tr. 87:2-13). Ms. Curfman further testified that Insurer initially authorized and paid for Claimant's physical therapy at Flicker from December 19, 1999 through August 11, 2020, but after reviewing Dr. Basse's IME report and her recommendation for three more months of physical therapy, Insurer retroactively authorized physical therapy from August 11, 2010 through December 24, 2020. (Tr. 88:24-89:25).

51. Dr. Fackrell referred Claimant for physical therapy from July 24, 2020 to March 14, 2022. (Ex. FF, GG and HH). Dr. Fackrell is a family physician, and there is no evidence in the record that he has expertise in spinal cord injuries.

52. Ms. Curfman credibly testified that Dr. Fackrell, Claimant's family physician, is not an authorized treating physician in this case. (Tr. 88:5-14).

53. The ALJ finds that Dr. Fackrell is not Claimant's authorized treating physician.

54. Based on the totality of the evidence, the ALJ finds that Claimant's physical therapy with Flicker and ISU after December 24, 2020 was not reasonable, necessary or related to Claimant's admitted injury. The ALJ further finds that Claimant is not entitled to repayment of out-of-pocket expenses associated with physical therapy at Flicker and ISU.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of

the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. § 8-42-101, C.R.S.; *see Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S.

Since July 2020, Dr. Fackrell, Claimant's family physician, has referred Claimant to physical therapy at Flicker and ISU, and has said physical therapy is a medical necessity. As found, Dr. Fackrell is not Claimant's ATP in this case, and he does not have any specific expertise in spinal cord injuries. (Findings of Fact ¶¶ 51 and 53).

The ALJ finds the opinions and testimony of Drs. Basse and Miller are credible and persuasive. Dr. Basse credibly testified that the medical records do not show any evidence that Claimant has received any clear functional gains from physical therapy from 2021 to present. (Findings of Fact ¶ 42). Dr. Miller credibly testified that Claimant experienced functional gains early on, but at a certain point they plateaued. Dr. Miller noted that Claimant's FIM score has been has been static at 107 since February 26, 2020. (Findings of Fact ¶ 44). Since 2020, Claimant's PMR physicians and his physical therapists have encouraged him to utilize a HEP, but Claimant has repeatedly declined to engage in a formal HEP. Claimant uses his standing frame and electric motor pedal system at home regularly, but he prefers going to physical therapy as opposed to

engaging in a HEP. (Findings of Fact ¶ 22).

Claimant credibly testified that going to physical therapy helps with his depression, and it motivates him to get out of the house. (Findings of Fact ¶ 35). But as Dr. Basse credibly testified, this is not the role of physical therapy. (Findings of Fact ¶ 43).

As found, based on the totality of the evidence, Claimant failed to demonstrate by a preponderance of the evidence that physical therapy sessions with ISU from May 2021 through present, physical therapy sessions with Flicker from December 24, 2020 through present, and any ongoing formal physical therapy is reasonably necessary to cure and relieve Claimant from the effects of the October 17, 2019 work injury.[3] (Findings of Fact ¶ 54).

ORDER

It is therefore ordered that:

1. Claimant's request for retroactive authorization of physical therapy sessions with ISU from May 2021 through the present is denied and dismissed. Any request by Claimant for reimbursement of any out-of-pocket expenses associated with physical therapy at ISU during the time frame of May 2021 forward is likewise denied and dismissed.

2. Claimant's request for retroactive authorization of physical therapy sessions with Flicker Physical Therapy since December 24, 2020 through the present is denied and dismissed. Any request by Claimant for reimbursement of out-of-pocket expenses associated with physical therapy at Flicker Physical Therapy during this time frame is likewise denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

[3] Dr. Hedin, Claimant's ATP, who is also a PMR, found that Claimant will need physical therapy once he receives his KAFOs. Dr. Miller agreed that this limited type of physical therapy would be reasonable. The ALJ credits the opinion of Dr. Basse that Claimant will require regular physical therapy re-evaluations by a physical therapist with a specialty in spinal cord injuries to reassess Claimant's functional status.

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 15, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the Horizant medication recommended by authorized treating physician (ATP) Yusuke Wakeshima, M.D. is reasonable, necessary and causally related to Claimant's admitted November 29, 2017 work injury.

II. Whether Claimant proved by a preponderance of the evidence that the bilateral L4-L5 and L5-S1 facet joint injections recommended by Dr. Wakeshima are reasonable, necessary and causally related to Claimant's admitted November 29, 2017 work related injury.

III. Whether Claimant is entitled to an award of costs under Section 8-42-101(5), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer for approximately 9.5 years as a Principal Secretary.

2. Records from Claimant's primary care providers at Kaiser Permanente document Claimant's prior history of neck pain, left shoulder joint pain, and left hip joint pain in 2015. The records do not indicate Claimant was undergoing treatment to her left hip leading up to the work injury.

3. Claimant sustained an admitted industrial injury to her low back and right hip on November 29, 2017. Claimant tripped and fell forward onto her knees and hands, then rolled onto her back.

4. Claimant subsequently treated with authorized provider SCL Physicians and saw Elizabeth Harris, N.P. on December 1, 2017. Claimant reported bilateral knee and lower back pain. On examination, NP Harris noted tenderness to palpation to the right sacroiliac (SI) joint region. No left hip complaints or findings were documented. NP Harris assessed Claimant with acute right-sided low back pain, bilateral knee abrasions, and a left elbow abrasion. She referred Claimant for physical therapy.

5. Claimant presented to ATP Hiep Lelourdes Ritzer, M.D. on February 21, 2018. Claimant complained of low back, right hip and bilateral knee pain. The medical note contains no mention of left-sided complaints. On examination, Claimant was tender bilaterally over the SI joint. Dr. Ritzter referred Claimant to Samuel L. Chan, M.D. for evaluation.

6. Claimant subsequently underwent work-related SI injections, right hip intra-articular injections, and a right hip labral reconstruction in 2018.

7. On April 3, 2019 ATP Chan performed right L5 primary dorsal ramus percutaneous rhizotomy and right S1, S2 and S3 primary dorsal ramus percutaneous lateral branch radiofrequency rhizotomies for diagnosis of chronic low back pain and right sacroiliac joint dysfunction. Dr. Chan noted Claimant had a positive diagnostic and therapeutic response to SI injections in the past.

8. On April 8, 2019 Claimant presented to ATP Haley Burke, M.D. with complaints of ongoing discomfort mainly on the right side but also across the bilateral lumbosacral spine. Dr. Burke documented worsening symptoms and a new onset of numbness with history of diffuse right lower extremity pain, bilateral lumbosacral pain and bilateral lumbar pain affecting the right lower extremity after a recent SI joint radio frequency ablation performed within the last week. Dr. Burke remarked that Claimant's symptoms did not fit a dermatomal pattern and that Claimant did not have objective findings on exam. She nonetheless prescribed Claimant Gabapentin for post-procedure neuritis, which she stated is a commonly known occurrence after radiofrequency ablation (RFA). She cautioned Claimant regarding drowsiness and not to drive or pursue any potentially dangerous activities with the use of Gabapentin until Claimant knew how it affected her.

9. Claimant presented to ATP Yusuke Wakeshima, M.D. on April 16, 2019. She reported right greater than left low back pain and right lower extremity pain. Dr. Wakeshima noted that Dr. Chan performed a SI injection which reportedly only helped for a few days. He further noted that Claimant also underwent radiofrequency neurotomy by Dr. Chan on April 3, 2019, and that since then her SI pain profoundly worsened. Claimant reported that the Gabapentin medication was making her somewhat sedated but that she otherwise seemed to be tolerating her medication regimen. Dr. Wakeshima initially opined that Claimant's symptoms may be related to potential piriformis syndrome on the right after the SI joint radiofrequency neurotomy procedure. He continued Claimant on Gabapentin, increasing her dosage.

10. Dr. Wakeshima performed an EMG of Claimant's right lower extremity on May 6, 2019, which demonstrated peroneal motor neuropathy on the right distal to tibalis anterior. There was no evidence of lumbar radiculopathy or lumbosacral plexopathy on the right.

11. On August 27, 2019 Claimant reported to Dr. Wakeshima that she experienced no further improvements following her SI joint injections. Dr. Wakeshima concluded that Claimant's SI joint dysfunction is not her pain generator, as she did not demonstrate further benefit from the SI joint injections. Claimant reported that she experienced a big difference in her pain with the increase of Gabapentin, but also a significant increase in her sedation level. Claimant requested a change in her neuropathic medication to something that may not be as sedating. Dr. Wakeshima thus prescribed Claimant Horizant, noting, "We will therefore have patient undergo a trial of Horizant which is gabapentin enacarbil which is absorbed better than current gabapentin and also sustained release, and thus should cause less sedation, and achieve higher plasma levels than generic gabapentin." (Cl. Ex. 12, p. 76).

12. Claimant underwent a lumbar spine MRI on October 7, 2019. The radiologist's impression was:

> No significant change since 10/12/2018 in mild central canal stenosis at L4-L5, mostly due to bilateral facet and ligamentum flavum hypertrophic changes. Partial sacralization of left L5. Upper sacrum only incidentally imaged on sagittal sequences. Lower sacrum not included on this study. No MR evidence of right S1 nerve root impingement. Consider dedicated MRI of sacrum to evaluate lower sacral nerve roots.

(R. Ex. K, p. 90).

13. Claimant returned to Dr. Wakeshima on December 10, 2019 with complaints of continued right-sided low back pain and right posterior thigh and leg region pain symptoms. He continued Claimant on Horizant, which Claimant reported made her somewhat sedated. Claimant anticipated that she would begin to get used to the sedation.

14. On December 26, 2019 Claimant underwent a right hip arthroscopic labral repair versus reconstruction and femoral acetabular osteoplasty, performed by ATP Brian White, M.D.

15. On June 17, 2020 Claimant saw Dr. Ritzer with complaints of persistent chronic right hip and lower back pain with right leg numbness. She also reported persistent left hip pain.

16. On June 26, 2020 Dr. Wakeshima reviewed both the report and film from the October 7, 2019 lumbar MRI. He noted that the film demonstrated facet arthrosis not only at the L4-5 level, which was noted in the radiologist report, but also at level L5-S1, left greater than right, which was not mentioned in the radiology report. Dr. Wakeshima did not appreciate any L-5 foraminal stenosis or any nerve root impingement. Based on his review of the MRI film, Claimant's clinical presentation, and Claimant's lack of beneficial response from her previous SI joint injections, Dr. Wakeshima concluded that Claimant's pain generator was most likely bilateral L4-5 and L5-S1 facet arthropathy. He requested bilateral facet injections at L4-5 and L5-S1 to address Claimant's facetogenic low back pain.

17. At a follow-up evaluation on July 29, 2020 Dr. Wakeshima noted that the facet injections were on hold pending an Independent Medical Examination (IME) by Respondent. He explained,

> Patient clinical presentation still is most consistent with lumbar facet joint arthropathy. While she does demonstrate provocative sacral joint dysfunction, and tenderness over the sacroiliac joint region she has not demonstrated resolution of her pain symptoms after radiofrequency neurotomy of the sacroiliac joint. Her MRI studies did demonstrate facet arthrosis at the L4-5 and L5-S1 level.

(Cl. Ex. 16 at p. 98).

Dr. Wakeshima recommended additional chiropractic treatment and continued Claimant on Horizant.

18. Claimant underwent an MRI of her left hip on August 10, 2020 which revealed a nondisplaced linear contrast-filled tearing of the anterior left acetabular labrum with mild to moderate underlying anterior superior labral attenuation and fraying; high-grade attenuation and mild fraying of the superior posterior superior portions of the left labrum; and small areas of isolated high-grade chondral fissuring in the periphery of the superior left acetabulum without chondral delamination or subchondral edema.

19. On August 20, 2020 Carlos Cebrian, M.D. performed an IME at the request of Respondent. Dr. Cebrian concluded that Claimant did have left femoroacetabular impingement secondary to Cam type morphology with a labral tear, but that it was unrelated to Claimant November 29, 2017 work injury. He noted temporal delay in Claimant's development of left hip symptoms and disagreed that Claimant's gait abnormality aggravated or caused Claimant's pre-existing femoroacetabular impingement with labral pathology. Dr. Cebrian opined that Dr. Wakeshima's request for bilateral facet joint injections at L4-5 and L5-S1 should be denied as not reasonable, necessary or related. He explained that it was not probable Claimant would have a positive response to the facet injections. He noted that Claimant's initial lumbar spine findings after her injury were specific to the right SI joint and that she underwent SI joint injections with questionable responses with subsequent expansion of lumbar spine complaints. Dr. Cebrian opined that Claimant's examination was non-specific and not suggestive of facet-mediated pain. He further opined that Claimant reached maximum medical improvement (MMI) as of August 20, 2020 with a 12% whole person impairment. Dr. Cebrian concluded that Claimant did not require any medications as maintenance treatment, as the Horizant was being prescribed for non-claim related neuropathy.

20. On September 30, 2020 Dr. White noted that imaging showed left sided CAM and pincer-type femoroacetabular impingement with labral tear. He recommended that Claimant undergo a left hip arthroscopy with femoral and acetabular osteoplasty, and labral construction.

21. Dr. Wakeshima addressed his review of Dr. Cebrian's IME report in an October 6, 2020 medical note. He agreed with Dr. Cebrian that Claimant's peroneal neuropathy was not work-related. Regarding medication he stated,

> [h]owever her Horizant may be addressing a neuropathic component to her low back and right hip pain with subsequent surgeries not appreciated on electrodiagnostic study. We will try a weaning program on the Horizant at our next appointment to see if her pain about the hip or low back worsens with weaning down and off this medication.

(Cl. Ex. 17, p, 104).

Dr. Wakeshima noted that it was important Claimant be tapered off of the Horizant, instead of abruptly stopping it.

22. At a follow-up evaluation on October 26, 2020 Claimant reported to Dr. Wakeshima that Insurer did not authorize refills on Horizant per her last appointment. Claimant reported 4/10 pain level with pain in the low back radiating down right lower extremity, as well as hip pain. Dr. Wakeshima reiterated,

> …the Horizant was written more for addressing any neuropathic component to her low back and hip pain, rather than the peroneal neuropathy which was appreciated on her electrodiagnostic studies in the past, which appears to be the basis of Dr. Cebrian's denial of the Horizant (ie that the Horizant was to treat the peroneal neuropathy).

(Cl. Ex. 18, p. 110).

23. Dr. Wakeshima provided Claimant enough samples of Horizant to wean her off by the time of his next follow-up appointment. He explained,

> If she notices no change in her pain symptoms, this medication will then not be resumed. If, however, her low back pain, hip pain or radicular type symptoms reexacerbate being off the Horizant, then I would conclude that this medication is directly related to her work injury, and Dr. Cebrian was incorrect on his RIME in assuming that this was strictly for peroneal neuropathy, and should therefore be authorized for reinitiation and continuation. If she only notices worsening of her pain about her right lateral leg in the peroneal nerve distribution, then this will be related to peroneal neuropathy, and would need to be resumed and continued under her private health insurance.

(Id.).

24. On November 13, 2020 Claimant reported to Dr. Wakeshima that the weaning off Horizant was not well-tolerated, noting a profound increase in her overall pain. Dr. Wakeshima noted that Claimant had made a detailed pain log documenting her response to weaning off the medication from October 26 to November 9. He further noted that, during this timeframe, Claimant's pain increased not only in her back, but also in her bilateral lower extremities. By November 9, when off the Horizant, Claimant's pain increased from 4/10 at the beginning of the wean to 7/10. Dr. Wakeshima concluded that the tapering down and off of Horizant led to profound worsening of Claimant's pain in locations outside of the peroneal neuropathy region. He explained that this demonstrated that the medication was "helping more than just the peroneal neuropathy symptoms that was reported in her electrodiagnostic studies on the right lower extremity, that Dr. Cebrian incorrectly assumed that was the only reason why she was on the Horizant." (Cl. Ex. 19, p. 116). Dr. Wakeshima further explained that Horizant was to address Claimant's neuropathic pain as related to her work injury for her back and lower extremity and opined that it was medically appropriate and indicated to address Claimant's work-related neuropathic pain issues.

25. On November 23, 2020 Dr. Wakeshima prescribed Claimant Gabapentin instead of Horizant because Insurer had not yet authorized Horizant.

26. At a follow-up evaluation on December 10, 2020 Claimant reported to Dr. Wakeshima that the Horizant was finally authorized and had been helping with her pain symptoms. Claimant reported that she tried the generic Gabapentin and felt continuously sedated and tired and the Horizant was much better tolerated.

27. Claimant underwent a 24-month Division Independent Medical Examination (DIME) with Richard M. Gordon, M.D. on February 17, 2021. Dr. Gordon diagnosed Claimant with work-related right hip pain, right sacroiliac joint dysfunction, multilevel lumbar spondylosis and low back pain. He opined that Claimant's left hip pain was unrelated to the November 29, 2017 work injury. Dr. Gordon concluded that Claimant reached MMI on September 1, 2020. He assigned an impairment rating for Claimant's low back and right hip. For maintenance care, Dr. Gordon recommended that Claimant continue Horizant 600 mg BID for right lower extremity neuropathic type pain which he "feels is due largely to the above documented right L5-S3 ablation procedure. Expected duration of medication is indefinite." (R. Ex. Q, p. 241). He opined that further physical therapy, chiropractic care, massage therapy, acupuncture or other type of passive modality would not benefit Claimant. Dr. Gordon did not specifically address Dr. Wakeshima's recommendation for bilateral facet injections.

28. Respondent filed a Final Admission of Liability (FAL) on March 30, 2021 admitting for post-MMI maintenance treatment pursuant to Dr. Gordon's DIME opinion.

29. Claimant subsequently sought treatment for her left hip with her primary care providers at Kaiser Permanente.

30. At an April 7, 2021 evaluation at Kaiser Permanente, Claimant reported that she had confirmed left labral tearing and that she had not been able to obtain treatment for her left hip through the worker's compensation claim. Claimant was referred to a hip specialist at Kaiser Permanente.

31. On May 12, 2021 Dr. Wakeshima noted Claimant experienced another delay in receiving her Horizant. Claimant reported increased neuropathic, low back, and hip region pain while off of the medication. Dr. Wakeshima noted that the DIME physician placed Claimant at MMI. He continued Claimant on Horizant, remarking that it helped with the neuropathic component of Claimant's pain symptoms.

32. Dr. Wakeshima attended a telephone conference with Claimant's counsel on December 14, 2021 and issued a note on the same date. He explained that Claimant's mechanism of injury could have put force on her the lumbar facets and in turn caused facetogenic low back pain. Dr. Wakeshima reiterated that the MRI films showed L4-5 and L5-S1 facet arthrosis. He suspected that Claimant's pain generator was most consistent with L4-5 and L5-S1 joint arthropathy pain, which he stated would be in a similar location as the SI joint, and, at times, could potentially mimic SI joint symptoms. He noted that it appeared that Dr. Gordon and Dr. Cebrian reviewed the MRI report, but not the actual

MRI film. Dr. Wakeshima explained that, on his last physical examination, Claimant demonstrated left greater than right lumbar region pain and tenderness with pain greatest with lumbar extension and lumbar rotation. Dr. Wakeshima continued to opine that Claimant's current back pain complaints are more consistent with facetogenic low back pain based on her most recent MRI films as well as her clinical presentation. He resubmitted his request for authorization of therapeutic bilateral L4-5 and L5-S1 facet joint injection to address facetogenic low back pain.

33. On January 10, 2022 Dr. Wakeshima explained that he wrote Claimant a prescription for Gabapentin to hold Claimant over until the Horizant was again authorized. He noted that Claimant had tried generic Gabapentin in the past, which was too sedating for Claimant compared to Horizant.

34. On January 21, 2022 Claimant reported to Dr. Wakeshima that she had been tolerating the Gabapentin without any adverse side effects, but that it had not been as effective as the Horizant in controlling her neuropathic pain symptoms. Dr. Wakeshima continued Claimant on Gabapentin as it was currently being authorized by Insurer. Dr. Wakeshima noted that the bilateral facet joint injections had been denied by Insurer. He disputed Dr. Cebrian's argument that it is common for pain in the hip secondary to femoroacetublar impingement to present with lumbar spine complaints, again stating that Claimant has radiologic findings of facet joint arthrosis as well as clinical findings suggestive of facetogenic low back pain in clinical examination.

35. On March 16, 2022 Claimant reported to Dr. Wakeshima that the Gabapentin was making her very sedated. She complained of 8/10 low back pain and right posterior lateral thigh and leg region pain. Dr. Wakeshima noted that he would refill Claimant's Gabapentin and switch to Horizant when authorized by Insurer. He noted that the Gabapentin was not as effective as Horizant for the Claimant, but was better than having no neuropathic pain medication at all. Dr. Wakeshima opined that Horizant use is related to Claimant's work injury and should be continued indefinitely under maintenance care.

36. Claimant returned to Dr. Wakeshima on April 18, 2022 reporting increased sedation issues with the Gabapentin compared to the Horizant. Claimant requested that Dr. Wakeshima resubmit his request for bilateral facet joint injections. Dr. Wakeshima informed Claimant that his request was denied and that she should discuss it with her attorney. Dr. Wakeshima again stated he would switch Claimant back to Horizant if authorized by Insurer.

37. On June 28, 2022 Claimant complained to Dr. Wakeshima of some knee swelling. Dr. Wakeshima informed Claimant that the fluid retention may be related to the Gabapentin and, if so, he would decrease the dosage.

38. On June 30, 2022 Claimant was evaluated at Kaiser Permanente and described that her left hip pain limited her ability to exercise. Claimant's primary care provider noted that Claimant had received an injection in her left hip in August 2021 and that Claimant was supposed to have had a three-month follow-up, which was recommended to have

occurred ten months prior. Claimant's Kaiser physician discussed the role of orthopedic follow-up and noted that Claimant had longstanding issues with hip pain.

39. Dr. Cebrian reviewed additional medical records and issued a second IME report dated January 13, 2022. He specifically addressed whether the prescription for Horizant and the request for bilateral facet injections at L4-5 and L5-S1 are medically reasonable, necessary and related. Dr. Cebrian opined that the recommended bilateral facet injections are not reasonably necessary or related. He again explained that Claimant's initial lumbar spine findings after the injury were specific to the right SI joint, she had a questionable response to the SI joint injections, there was subsequent expansion of lumbar spine complaints, and that examination was non-specific and not suggestive of facet-mediated pain. Dr. Cebrian noted that, on examination, Claimant had more prominent left-sided lumbar spine pain, which she did not have after her initial injury. Since the injury, Claimant has developed left-sided hip pain which he concluded is not causally related to the injury. He explained that it is common for pain in the hip secondary to femoral acetabular impingement (FAI) to present with lumbar spine complaints. Dr. Cebrian further noted that DIME physician Dr. Gordon did not recommend any facet injections. Dr. Cebrian continued to opine that Horizant should also be denied as there is not a claim-related neuropathic lesion. He noted that Horizant was being prescribed to Claimant in 2020 for non-claim related peroneal neuropathy, and that there have not been any new claim-related conditions which warrant its utilization under this claim.

40. Claimant testified at hearing that, while both the Gabapentin and the Horizant work for her symptoms, the Gabapentin makes her significantly more sedated and lethargic compared to the Horizant. Claimant wants to continue to take the Horizant as recommended by Dr. Wakeshima and Dr. Gordon. Claimant also wants to undergo the bilateral lumbar facet injections recommended by Dr. Wakeshima. Claimant testified that she has continuing left hip symptoms for which she has treated with her primary care providers. Claimant has not undergone left hip surgery.

41. Dr. Cebrian testified at hearing on behalf of Respondents as a Level II accredited expert in occupational medicine. Dr. Cebrian testified consistent with his IME reports and continued to opine that the recommended bilateral lumbar facet joint injections and the Horizant medication are not reasonable, necessary and related to Claimant's November 29, 2017 work injury. Dr. Cebrian testified that it does not make sense to perform bilateral lumbar injections when Claimant's initial complaints were to the SI joint. He further stated that Claimant has significant left hip complaints and pathology. He explained that left hip FAI can present with low back pain, groin pain, and abdominal pain, and that Claimant's left hip condition would result in pain radiating form the left hip to the lumbar spine, further confusing Claimant's presentation. Dr. Cebrian testified that his examination of Claimant was not consistent with facet-mediated pain. He testified that the recommended injections would not improve Claimant's pain complaints, even if such complaints were due to facet-mediated pain, as Claimant's left hip would continue to cause Claimant pain.

42. Dr. Cebrian explained that Horizant is a slow-release form of Gabapentin used to address nerve pain. He opined that the recommendation for Horizant is not reasonable, necessary or related to Claimant's work injury. He explained that Claimant was on a low

dose of Gabapentin in September 2018 for nerve pain that did not help her symptoms. Dr. Cebrian testified that the neurotomy would not result in leg complaints, and that Claimant's symptoms instead correlate with the peroneal nerve issue that is unrelated to this claim. He stated that a May 2019 EMG demonstrated a peroneal nerve issue in the lower leg, not the back. Dr. Cebrian testified that Claimant's symptoms do not follow the correct nerve patterns. He further opined that Claimant's medical records did not adequately document any improved function with Horizant. Dr. Cebrian acknowledged that Gabapentin is usually more sedating than Horizant. Dr. Cebrian further testified that numerous medications Claimant takes outside of her worker's compensation claim, including Wellbutrin, Buspar, Effexor, Imitrex, Amitryptiline and Trazadone, can cause fatigue and drowsiness.

43. The ALJ finds the testimony of Claimant and opinions of Drs. Wakeshima, Burke and Gordon, as supported by the medical records, more credible and persuasive than the testimony and opinion of Dr. Cebrian.

44. Claimant proved it is more probably true than not the Horizant medication and bilateral L4-L5 and L5-S1 facet joint injections recommended by Dr. Wakeshima, are reasonable, necessary and causally related to Claimant's November 29, 2017 work related injury.

45. Claimant proved entitlement to reasonable costs incurred in pursuing the Horizant and bilateral L4-5 and L5-S1 facet joint injections recommended by ATP Wakeshima. Respondent contested the medical benefits by denying authorization of such medical maintenance treatment. As Claimant has not received the Horizant or bilateral facet joint injections, the treatment as of the date of hearing is unpaid.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002). There is no bright line test to distinguish treatment designed to cure an injury from treatment designed to relieve the effects of the injury. Surgery may be designed to cure an injury or may be maintenance treatment designed to relieve the effects or symptoms of the injury. Post-MMI treatment may be awarded regardless of its nature. *Corley v. Bridgestone Americas*, WC 4-993-719 (ICAO, Feb. 26, 2020).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once

a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

As found, Claimant proved it is more probably true than not that both the Horizant and the bilateral injections recommended by ATP Wakeshima are reasonably necessary and causally related to her industrial injury. Dr. Cebrian opined that Horizant is not reasonably necessary and causally related to Claimant's work injury because it is used to treat the symptoms of Claimant's peroneal injury, which is unrelated to the current claim. His opinion is credibly contradicted by ATPs Wakeshima and Burke, as well as DIME physician Gordon. The medical records document that Claimant reported increased low back and nerve pain after undergoing her work-related RFA procedure. Dr. Burke noted that experiencing neuritis after a RFA procedure is a common known occurrence, and prescribed Claimant Gabapentin to address the associated symptoms. Claimant was subsequently prescribed Horizant in lieu of Gabapentin to address those same symptoms. Dr. Gordon credibly opined that Horizant should be continued as maintenance medication for Claimant's right lower extremity neuropathic pain, which he felt was largely caused by the ablation procedure. Dr. Wakeshima specifically addressed Dr. Cebrian's IME report and credibly explained that the Horizant is being prescribed for Claimant work-related neuropathic pain. Dr. Wakeshima confirmed his conclusion by tapering Claimant off of Horizant, which ultimately resulted in a significant increase in Claimant's neuropathic pain.

Claimant consistently reported and credibly testified that, while effective for her pain at certain dosages, the Gabapentin has a significantly sedating effect. In comparison, the Horizant medication is as effective in treating her pain and has a less sedating effect on Claimant. Dr. Cebrian acknowledged that Gabapentin is usually more sedating than Horizant. While Dr. Cebrian noted that other medications Claimant is taking outside of the worker's compensation system can also have a sedative effect, there was no evidence that Claimant reported or experienced similar side effects from those medications when not taking the Gabapentin. Claimant demonstrated that she is able to identify the difference in the sedating effects of different medications, as she did with Gabapentin and Horizant. Dr. Wakeshima explained that he continues to prescribe Claimant Gabapentin for her work-related neuropathic pain specifically because Insurer ceased to authorize Horizant. As Horizant is used to address Claimant's work-related neuropathic condition and results in less severe side effects than Gabapentin, the preponderant evidence demonstrates that Horizant is reasonable, necessary and causally-related maintenance treatment.

The preponderant evidence also establishes that the bilateral L4-L5 and L5-S1 facet joint injections recommended by Dr. Wakeshima are reasonable, necessary and

causally-related maintenance treatment. Dr. Cebrian opined that the recommended injections are not reasonable, necessary or related due to Claimant's initial complaints regarding the SI joint, her current left hip complaints and pathology, and lack of exam findings. Dr. Wakeshima addressed these concerns, credibly disputing Dr. Cebrian's position. Claimant's initial complaints and treatment were focused on the SI joint and right hip. However, subsequent imaging revealed facet arthrosis at the L4-5 and L5-S1 levels, which was confirmed by Dr. Wakeshima's review of the MRI film. Contrary to Dr. Cebrian, who opined there were no findings of facet mediated pain on his examination, Dr. Wakeshima has credibly opined that, on his exam, Claimant had findings consistent with facet mediated pain. He credibly explained that L4-5 and L5-S1 joint arthropathy pain can potentially mimic SI joint symptoms, explaining why Claimant's initial complaints and treatment focused on the SI joint without much relief.

While, as stated by Dr. Cebrian, hip pain may present with lumbar spine complaints, the ALJ is persuaded by Dr. Wakeshima's credible opinion that the pain generator here is most likely bilateral L4-5 and L5-S1 facet arthropathy, for which there is objective evidence. Dr. Wakeshima has consistently recommended bilateral facet injections for therapeutic purposes as related to Claimant's work injury. Based on the totality of the evidence, bilateral L4-L5 and L5-S1 facet joint injections are reasonable, necessary and related treatment to relieve the effects of Claimant's work injury.

Costs Under Section 8-42-101(5), C.R.S.

Section 8-42-101(5), C.R.S. provides,

> If any party files an application for hearing on whether the claimant is entitled to medical maintenance benefits recommended by an authorized treating physician that are unpaid and contested, and any requested medical maintenance benefit is admitted fewer than twenty days before the hearing or ordered after application for hearing is filed, the court shall award the claimant all reasonable costs incurred in pursuing the medical benefit. Such costs do not include attorney fees.

Respondent argues that Claimant failed to prove entitlement to reasonable costs under Section 8-42-101(5), C.R.S. because Claimant did not submit any bills or testimony into evidence to substantiate that Respondent received medical bills for the requested treatment and denied these bills, or that the bills were received and not paid by Respondent.

Respondent relies on *Regina Van Meter v. Dillion Companies, Inc.*, WC No. 4-781-504-01 (ICAO, Aug. 17, 2017). In *Van Meter*, the Panel affirmed an order that denied Claimant's request for costs under Section 8-42-101(5), C.R.S. At hearing, the Claimant submitted unpaid medical bills from her authorized provider related to maintenance medical treatment that she had obtained in the claim. The ALJ found that the treatment was reasonable and necessary, but denied the payment of incurred costs. The panel

agreed with the ALJ, finding that the bills submitted at hearing by the Claimant did not prove that the benefits were unpaid and contested. First, there was no evidence that the bills were received by Respondents and denied. Second, the bills were not overdue yet, meaning that they had not yet been unpaid.

The circumstances here are distinguishable from *Van Meter* and more similar to those in *William Fox v. The Kroger Company*, WC 4-144-756-002 (ICAO, July 19, 2021). In *Fox,* the ALJ concluded that a stimulator and psychological evaluation were reasonably necessary and related medical treatment. The ALJ further concluded that, pursuant to §8-42-101(5), C.R.S., the claimant was entitled to costs incurred in pursuing a psychiatric evaluation associated with evaluation of the appropriateness of a stimulator. On appeal to the Panel, the respondent argued that the ALJ erred in awarding costs under § 8-42-101(5), C.R.S., since there were no findings of fact that the psychological evaluation was "unpaid" at the time of the hearing. The respondent contended that the ALJ made no findings that a bill had been submitted to it by a provider for the psychological evaluation or that the respondent had failed to timely pay any bills related to the psychological evaluation.

The Panel disagreed, reasoning that the ALJ implicitly found that the psychiatric evaluation was both "unpaid" and "contested" by the respondent. The Panel reasoned,

> Based on the respondent's denial for authorization of the psychiatric examination, however, we conclude that the ALJ reasonably could infer that the respondent would not pay for such examination. That is, when a self-insured employer or insurer refuses to authorize maintenance medical treatment, then it also is stating that it is refusing to pay for such treatment, thereby resulting in any such treatment being "unpaid." The statute does not expressly require the claimant prove that bills are "unpaid," as is argued by the respondent. To require the claimant to show an "unpaid" bill, as the respondent is arguing here, would be to force him to undergo the contested treatment at his own expense with the potential of never recovering such payment. Thus, while the claimant here could have proved "unpaid" maintenance medical benefits by introducing "unpaid" bills for such treatment, nowhere in the plain language of § 8-42-101(5), C.R.S., is this expressly required. Further, while § 8-42-101(5), C.R.S., clearly places the burden on the claimant in this case to prove that the medical maintenance benefits are "unpaid," to limit him to only doing so by introducing "unpaid" bills would be to frustrate the efforts of injured workers in quickly resolving disputes over maintenance medical benefits, contrary to the clear intent of the statute.

(Id.).

The Panel in *Fox* distinguished *Van Meter*, noting that in *Van Meter*, while the claimant presented invoices showing outstanding amounts owed, the invoices showed a date of April 27, 2016. The Panel in *Van Meter* thus ruled that if these bills were not

received until April 27, 2016, then payment was not due until 30 days after receipt of the bill pursuant to WCRP 16-12 (A)(2) and (3), which was after the May 3, 2016, hearing in that case. The Panel in *Van Meter* further noted that while the respondent contested the claimant's entitlement to future Oxycodone prescriptions, there was no evidence in the record that the respondent contested prior prescriptions or failed to timely pay for Oxycodone, since payment for the only prescription in dispute was not due until after the date of the hearing. The Panel in *Fox* distinguished *Van Meter*, reasoning that in *Fox,* the claimant never underwent the requested psychiatric evaluation because respondent would not authorize it.

Here, Dr. Wakeshima, an ATP, recommended Horizant and bilateral facet injections as medical maintenance treatment. The record establishes, and Respondent does not dispute, that such treatment was denied by Respondent. Accordingly, the medical benefits have been contested. Claimant has not yet undergone the bilateral facet injections or received the Horizant prescription, meaning such unperformed treatment is unpaid. *See Fox*, *supra* (§8-42-101(5), C.R.S. could reasonably include in the category of an "unpaid" maintenance medical benefit a procedure that had not yet been performed and an ALJ under certain circumstances could reasonably could infer that since the respondent would not authorize the psychiatric evaluation, then it also would not pay for such a benefit).

This analysis is in line with the legislative intent of §8-42-101(5), C.R.S., as discussed by the Panel in *Fox*,

> Similarly, based on the plain and ordinary meaning of the statutory language contained in § 8-42-101(5), C.R.S., its intent is to address or include disputes surrounding a common type of maintenance medical benefit that occurs due to a contest. For example, a maintenance medical procedure that is requested but denied through a respondent's contest typically will remain unperformed until the contest is resolved. It also is typical that a medical treatment that remains unperformed will not be subject to being paid. However, the respondent's proposed reading of § 8-42-101(5), C.R.S., attempts to exclude all such medical benefit contests of this type on the basis that because the medical procedure was not yet performed and, therefore, not billed, then it is not covered by the statutory reference to "unpaid." In such a circumstance, the respondent could proceed to contest requests for maintenance medical authorization with little need to worry over the "reasonable costs" referenced in the statute. In this regard, the legislative intent of § 8-42-101(5), C.R.S., would not be achieved.

(Id.).

Here, the preponderant evidence establishes that Claimant is entitled to the reasonable costs incurred in pursuing the Horizant medication and L4-5 and L5-S1 bilateral facet injections that are unpaid and contested by Respondent.

ORDER

It is therefore ordered that:

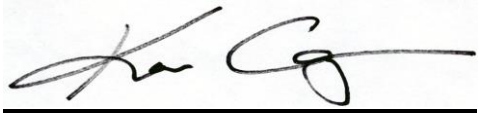
1. Respondents shall authorize and pay for the Horizant medication and bilateral L4-L5 and L5-S1 facet joint injections recommended by ATP Wakeshima.

2. Pursuant to §8-42-101(5), C.R.S., Claimant is entitled to reasonable costs incurred in pursuing the Horizant medication and L4-5 and L5-S1 bilateral facet injections. Claimant shall submit a bill of costs itemizing the incurred costs incurred within 30 days of the date of this order.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 16, 2022



Kara R. Cayce
Administrative Law Judge

ISSUE

- Whether Respondents proved by clear and convincing evidence that Dr. Bissell's impairment rating was incorrect with respect to non-scheduled impairment and by a preponderance of evidence with respect to scheduled impairment.

FINDINGS OF FACT

1. Claimant worked for Employer as a farm laborer/mill operator for Granada Feeders. The Employer operated a feedlot.

2. Claimant suffered an admitted injury to his left ankle on July 2, 2019 when he fell from a rotted building beam and fell 14 to 15 feet fracturing his left ankle. The Claimant also had low back pain immediately following the incident.

3. Claimant was taken by ambulance to Lamar emergency room where he had x-rays and scans showing a fracture of his ankle. He was then transferred to Parkview Hospital. He was diagnosed with a compression fracture of L-4 and a fracture of the talar head in his ankle.

4. He was seen by Dr. Moore, a podiatrist and put in a cast for three months. He then started physical therapy and utilized a walking cast.

5. Claimant came under the care of Dr. Hudson at High Plains Community Health Center. The initial records with Dr. Hudson are mostly illegible. However, in reviewing the later records from his office, they consistently document the compression fraction and the fracture in the ankle, which he treated with Diclofenac, 75 mg and physical therapy.

6. After conservative care failed, he ultimately underwent a subtalar joint arthrodesis on February 5, 2021, which was performed by Dr. Maurer.

7. On May 25, 2021, Dr. Mauer noted that Claimant had resumed physical therapy and he released him from care to follow up in one year, post-op. Claimant next saw Dr. Mauer on February 7, 2022. At that time, Claimant stated that he had improved 50% since the time of surgery. He experienced sudden sharp pains in his ankle had had swelling. At the time of the visit, he had pain of 2 out of 10.

8. With respect to Claimant's L4 compression fracture, he was seen by physician's assistant Andrew Glass at Parkview Neurological Services between September 11, 2019 and January 10, 2020. On January 10, 2020 it was noted that overall, the claimant was doing well. He did have a "small amount" of pain when leaning forward, otherwise he was largely asymptomatic. Mr. Glass did note that there was no radiating leg pain. He was discharged as of that date.

9. He was referred to Dr. Raschbacher for an IME on October 15, 2021 by Respondents. Dr. Raschbacher determined that Claimant was at MMI as of that date. He determined that his rating was 9% based on loss of range of motion impairment for the ankle. With respect to the lumbar range of motion, he determined that the measurements he took were non-physiologic and should not be including in the rating. He did assign a table 53 rating of 5% and he assumed a reasonable amount of loss of range of motion for the lumbar spine would be 1% for a total of 6% for the lumbar spine.

10. After review of Dr. Raschbacher's IME report, Dr. Hudson, in a questionnaire dated November 23, 2021, agreed with the MMI date that Dr. Raschbacher assigned. Since Dr. Hudson was not level II accredited, he was referred to Dr. Kurz for an impairment rating.

11. Dr. Kurz did a rating on December 30, 2021. He determined that his rating was 6% based on loss of range of motion impairment for the ankle. With respect to the lumbar range of motion, he determined since the Claimant had full range of motion in all directions, that he had no impairment for loss of range of motion. He did have a table 53, I. A. impairment based on the compression fracture in the category of 0% to 25% which equates to 5% whole person impairment. This part of the rating was based on the CT scan that was performed on July 2, 2019 that showed disc height loss of 20% to 30% of L4.

12. Dr. John Bissell performed a DIME on April 8, 2022. His ankle range of motion measurements were very different from Dr. Kurz. He noted that the Claimant was probably having a "bad day" on the date of the IME. He found that claimant had 17% for loss of range of motion. He also added on 5% lower extremity impairment for subtalar arthritis based on CDLE Impairment Rating Tips #11 for moderate subtalar arthritis. Combining the impairments he arrived at a 21% impairment rating for the lower extremity.

13. With respect to his back impairment, Dr. Bissell gave Claimant a 7% impairment for table 53 impairment instead of 5% for 0% – 25% compression fracture of L4. For this measurement, he references the CT scan for the abdomen and pelvis. However, in reviewing that CT scan, there is no specific reference to loss of disc height. (Claimant exhibit C, pp. 65 – 66). The accurate reference to the disc height is contained in the Lumbar CT scan. (Claimant's Exhibit 6, p. 61). The accurate reference in that report is 20% to 30% loss of height of L4. Instead of discussing this range, he utilized the higher end of the range, giving the Claimant a 7% impairment rating instead of a 5% impairment rating. He also gave him impairment for loss of range of motion of 14% for a total whole person rating of 20% for the lumbar spine. This is quite different than the normal range of motion measured by Dr. Kurz.

14. As testified by Dr. Raschbacher, Dr. Bissell did not explain why he accepted the very limited range of motion as compared to the range of motion as measured by Dr. Kurz. This was an error in the opinion of Dr. Raschbacher.

15. Similarly, there is a discrepancy between the range of motion measurements of the ankle taken by Dr. Bissell as compared to the measurements taken

by Dr. Hudson and Dr. Mauer, post-surgery. Dr. Hudson noted full range of motion of the ankle on February 23, 2022. (Respondents' Exhibit B, p. 59). Dr. Mauer also noted normal non-painful range of motion on February 7, 2022. (Respondents' Exhibit D, p. 119). Dr. Bissell instead found Claimant had 17% impairment due to abnormal motion of the hind food and an additional 5% for subtalar arthritis. (Respondents Exhibit A, p. 10). Dr. Bissell does not reconcile his findings with that of either Dr. Kurz or Dr. Raschbacher's range of motion findings. Nor does he explain why he applied the rating tip for arthritis impairment other than to note he was applying it to this rating. Without providing an explanation for inclusion of this additional impairment, the ALJ is unable to determine if it is appropriate. However, it light of the other deficiencies of Dr. Bissell's impairment determinations, the ALJ finds that Dr. Bissell's overall impairment determinations including the inclusion of arthritis pursuant to the rating tips are not credible.

CONCLUSIONS OF LAW

A. Burdens of Proof regarding impairment

Whether a Claimant's impairment represents a scheduled or whole person impairment is a threshold issue that must be addressed before one can determine the weight to be accorded to the DIME's rating. Section 8-42-107 sets forth two methods of compensating permanent medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides a DIME process for whole person ratings. The DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Conversely, scheduled impairment is a question of fact for the ALJ based on a preponderance. The Claimant did not assert that the ankle injury was a non-scheduled impairment and therefore any challenge to Dr. Bissell's ankle impairment is subject to a preponderance burden of proof.

The Claimant's lumbar spine impairment clearly is not on the schedule and Respondent's burden of proof to overcome the DIME impairment for the spine is by clear and convincing evidence.

B. Respondent overcame the DIME's whole person impairment rating.

A DIME's determinations regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

Respondents have met their burden to overcome DIME physician Dr. Bissell's opinions on Claimant's lumbar spine permanent impairment by clear and convincing evidence.

Respondents' evidence clearly establishes and proves that it is highly probable that Dr. Bissell erred in reaching his determination that the Claimant had a 20% whole person impairment rating. Dr. Bissell documented in his DIME report his review of the records for Dr. Hudson, Parkview Neurosurgical Services, Dr. Maurer, Dr. Raschbacher, and Dr. Kurz. Dr. Bissell acknowledges that his range of motion measurements are vastly different than those of Dr. Kurz. He also acknowledges that the range of motion measurements taken by Dr. Raschbacher were determined to be non-physiologic. He even acknowledges the opinion of Dr. Hudson that claimant is malingering. However, nowhere in his report does Dr. Bissell address or reconcile the differences in the findings of the authorized providers, who examined and treatment claimant on multiple occasions and following his healing progress from the date of injury through his placement at MMI, with the drastically different findings at the DIME appointment. Nor does Dr. Bissell provide any objective medical basis or reasoning to explain the dramatic difference, other than speculation that Claimant was having a "bad day" on the date of the Division IME and a "good day" when he was examined by Dr. Kurz. As testified to by Dr. Raschbacher, the loss of range of motion that he obtained as well as obtained by Dr. Bissell was non-physiologic. The ALJ find's Dr. Raschbacher's opinions to be credible and persuasive. Dr. Bissell's whole person impairment is clearly incorrect.

C. Respondents proved by a preponderance of evidence that the Claimant's scheduled impairment was accurately determined by Dr. Kurz.

As discussed above, Dr. Bissell's range of motion for the Claimant's ankle also differed greatly from Dr. Raschbacher's measurements, as well as Dr. Kurz'. There was no attempt to reconcile the differences in the discrepancies by Dr. Bissell. I conclude that the range of motion for the ankle was correctly determined by Dr. Kurz to be 6% of the lower extremity.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on Dr. Kurz' 5% whole person rating. Insurer shall also pay Claimant based on a scheduled rating of 6%. Insurer may take credit for any PPD benefits previously paid to Claimant on this claim.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to this order is the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to

OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Office of Administrative Courts

PROCEDURAL BACKGROUND

W.C. No. 5-153-633-003 involves an admitted injury claim for a date of injury of October 23, 2020 with the Employer. A Petition for Reopening was previously heard in this case by ALJ Lamphere on March 10, 2022. The Petition was denied by Order issued on April 13, 2022. (Respondent's Exhibit L). W.C. No. 5-202-731-001 involves a new claim for an injury to his right shoulder for a date of injury of April 7, 2022 when he turned his head to cover the speaker on his radio with his cheek and reached around his back to turn down the volume on the radio.The claims were consolidated for hearing in a prehearing order dated August 15, 2022.

ISSUES

- Did Claimant prove the claim 5-153-633 should be reopened based on a change of condition?
- In the alternative, did Claimant suffer a new compensable injury on April 7, 2022 in W.C. No. 5-202-731.
- Did Claimant prove entitlement to medical benefits including the surgery recommended by Dr. Weinstein?

FINDINGS OF FACT

1. Claimant works for Employer as a correctional officer. Claimant sustained an admitted injury on October 23, 2020 to his right shoulder. This is the subject matter of W.C. No. 5-153-633. The claim was admitted and the Claimant underwent an arthroscopic subacromial decompression and right rotator cuff repair with Dr. David Weinstein on January 2, 2021. The claim was closed by final admission on September 28, 2021.

2. Claimant applied for a hearing to reopen this claim and the hearing was held on March 10, 2022. The reopening was denied by order of Judge Lamphere dated April 13, 2022. (Respondent's Exhibit L). The ALJ concluded there was insufficient objective evidence to substantiate that Claimant had experienced a worsening of condition. This was based on the medical records of Dr. Weinstein and Dr. Bradley that it was well established that Claimant had popping in the right shoulder at the time he was discharged from Dr. Weinstein's care on June 2, 2022.

3. At the time of the prior hearing with Judge Lamphere, Dr. Castrejon had prepared an IME report dated February 2, 2022, which was submitted by Claimant. The report was considered by the ALJ. In that report Dr. Castrejon noted in the physical examination portion that there was a painful pop appreciated with elevation of the shoulder and internal or external rotation. Dr. Castrejon concluded that the Claimant was

experiencing a significant worsening. However, as noted above, the Administrative Law Judge did not find this opinion to be persuasive.

4. Dr. Castrejon also opined that the Claimant should be limited to no use of the right upper limb. (Respondent's Exhibit 1, p. 7).

5. Subsequent to the hearing with Judge Lamphere, Claimant was again evaluated by Dr. Castrejon on August 29, 2022, via telemedicine. (Claimant's Exhibit 1). In this new report, Dr. Castrejon, contrary to his opinion regarding the Claimant's worsening in February, opines that "In fact, over time the claimant admitted the popping was becoming less of a problem." (Claimant's Exhibit 1, p. 7). In this report, Dr. Castrejon now focuses on the new incident on April 7, 2022 when the claimant slightly elevated then internally rotated his right shoulder in order to reach the volume button on his two way radio an reported having experienced a substantially more prominent "pop" to the superior and anterior aspect of his right shoulder that was accompanied by severe pain. After analyzing the mechanism of injury, Dr. Castrejon stated "This movement resulting in an aggravation to the rotator cuff mechanism of the right shoulder that has left claimant with pain that is contributing to severe loss of function to the right upper limb". (Id. p. 8).

6. The Claimant testified at hearing that on April 7, 2022 he was performing his usual job duties, checking on inmates during the night, when a call came over his radio. It was very loud, so he covered the speaker with his cheek and reached behind his back with his right hand to turn down the volume on his radio. At that time he felt an immediate onset of pain and heard a pop in his right shoulder. He also testified that although he was in pain, he had a duty to complete his job duties and did so before he reported to lunch. At that time, Officer Casillas saw the Claimant and escorted him to Captain Vogan's office to report the injury.

7. He was seen at the ER at Parkview Health System on April 7, 2022. He gave a history to the doctor that he had an "ongoing "pop" in his shoulder when he lifts and move in certain ways. Tonight he states he moved to talk into his radio microphone and felt a pop in his R shoulder that has radiated to base of neck and R shoulder that has radiated to base of neck an R shoulder with numbness in arm/hand. He states this has happened several times but seems more intense than in the past." (Respondent's Exhibit B, p. 10).

8. After x-rays were taken, Claimant was reassessed by Dr. Ostrand. He was improved. He had increased range of motion, was able to abduct and adduct his shoulder and stated that his paresthesias were essentially gone.

9. Claimant was next seen by at Concentra on April 8, 2022 by Physician's Assistant Daniel Czarniawski. He took a history that Claimant had a new work injury to his right shoulder. Mr. Czarniawski states: "Wearing a radio and he turned his head towards his shoulder, reached behind his back and felt a pop in his shoulder. Severe pain. Limited ROM. Went to ED and XR done. Requested records. Has been off work since." (Claimant Exhibit 3, p. 17).

10. Claimant was seen by Dr. Jon Erickson for an IME at the request of Respondent. (Respondent's Exhibit C). Claimant reported that on April 7, 2022 he was working the midnight shift and attempted to adjust the volume on his belt radio, which was clipped over his right rear pocket. Claimant reported he twisted with his right arm and felt a pop with the onset of severe pain. Claimant reported that this is a maneuver he does frequently. Dr. Erickson opined that the overall conclusion of the April 19, 2022 MRI, was there was no evidence of any acute trauma and the noted pathology was mild. Dr. Erickson opined that "reaching behind one's back is a motion that most individuals likely do several times each day, most often during bathing or dressing. This motion does not require any significant tensile loads on the tissues of the shoulder and should not, under normal circumstances, cause an injury." Dr. Erickson stated he reviewed three surveillance videos of the alleged event and saw no incident where Mr. Romero suffered an incapacitating injury. (Ex. C, p. 28).

11. I find that the opinions of Dr. Erickson regarding the incident of April 7, 2022 to be more persuasive than the opinions of Dr. Castrejon as to whether the Claimant sustained a new injury to his right shoulder on that date. Based on Dr. Erickson's opinions I find that the Claimant did not sustain a new work injury on April 7, 2022.

12. I further find that the Claimant did not sustain a worsening due to the natural progression of his admitted and closed work injury of October 23, 2020 (W.C. 5-153-633). While Claimant may have experienced a temporary flare-up of his symptoms due to the "pop" that occurred on April 7, 2022, I find that Claimant's current symptoms/condition and restrictions are consistent with and similar to his symptoms/condition and restrictions as they existed at the time of the prior March 10, 2022 hearing. Claimant's symptoms on February 1, 2022 were documented to include mild atrophy of the supraspinatus, severe disabling "pops" followed by pain for days, with pain extending to his right side of his neck and into the shoulder blade, pain of 6-7/10 despite no use of his limb, shoulder girdle muscle weakness, positive impingement and drop arm testing. These symptoms and Claimant's examination resulted in a concern for internal derangement (retear) in February 2022, and resulted in Claimant being provided work restrictions of no use of his right upper limb and the recommendation for additional evaluation and treatment by Dr. Weinstein, to include probable surgery. This evidence was presented at and Claimant's complaints adjudicated at the prior March 10, 2022 hearing. As such, I find that Claimant has failed to prove a worsening of his condition.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Renz v. Larimer County, 924 P.2d 1091 Colo.App. 1996).* The party requesting reopening bears the burden of proof. Section 8-43-304(4). A "change in condition" refers to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that is causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The claimant suffers a "worsening" of a pre-existing condition if the change is the natural and proximate

consequence of a prior industrial injury, with no contribution from a separate, intervening causative factor. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

Pre-existing disability from a prior industrial injury does not preclude recovery of workers' compensation benefits for a second compensable injury to the same body part. *Eastman Kodak Co. v. Industrial Commission*, 725 P.2d 85 (Colo. App. 1986).

A claimant suffers a compensable injury if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove a compensable aggravation. A purely symptomatic aggravation is sufficient for an award of benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). Pain is a typical symptom from the aggravation of a pre-existing condition. If the pain triggers the need for medical treatment or causes a disability, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949). However, the mere fact that a claimant experiences symptoms during or after work activities does not necessarily establish a compensable injury. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). Where, as here, the pre-existing condition results from a prior industrial injury, the ALJ must determine whether the recurrent pain is "a logical and recurrent consequence of the original injury," or a compensable "aggravation" giving rise to a new claim. *F.R. Orr Construction, supra,* at 968.

Based on the opinions of Dr. Erickson, whose opinions are credible, there has been no change in Claimant's condition since MMI or since the time of the hearing before Judge Lamphere, due to the natural progression of Claimant's injury. As such, the request to reopen that claim is denied. Similarly, the Claimant has failed to sustain his burden of proof that he sustained a compensable injury on April 7, 2022 arising out of and in the course and scope of his employment.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen W.C. No. 5-143-435 for medical benefits is denied and dismissed.

2. Claimant's claim in W.C. No. 5-164-953 for a February 17, 2021 injury is denied and dismissed.

3. Claimant's request for surgery with Dr. Weinstein is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: November 18, 2022

/s/ Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant suffer a compensable injury arising out of employment on February 1, 2022?

- If the claim is compensable, was the treatment provided by Brendon Madrid, NP at Concentra on April 18, 2022 reasonably necessary and authorized?

FINDINGS OF FACT

1. Claimant worked as a parts sales manager at one of Employer's retail stores.

2. Claimant suffered multiple injuries in a fall at work on February 1, 2022. At the time of the accident, Claimant was unpacking inventory from a pallet of inventory items that had been delivered earlier that day.

3. The store receives weekly deliveries, typically consisting of 1-4 pallets of goods. Each delivery usually includes a mix of vehicle parts and other automotive-related items such as batteries, fluids, and cleaning supplies. Most items are packed inside a metal cage, but occasionally totes or boxes are stacked on top of the cage. Each cage and any associated items are wrapped with an industrial-strength plastic wrap and placed on a pallet.

4. Claimant is a veteran with a service-connected disability. She previously underwent a right leg above-the-knee amputation and now utilizes a prosthesis for ambulation. Claimant has had problems with the fit and function of the prosthesis and has been involved in a lengthy conflict with the Veterans Administration (VA) to have it corrected. A desire to obtain better treatment for the residual limb and prosthesis was a major factor in Claimant's decision to relocate to Colorado in 2021.

5. Employer provided job modifications to account for Claimant's physical limitations. The modifications were formalized on January 3, 2022 as follows: "no climbing ladders, needs to take a break when business allows, no lifting batteries." The store management informally provided similar accommodations before January 3, 2022.

6. There is no question Claimant fell at work on February 1, 2022 and suffered injuries. The dispute centers on whether the fall "arose out of" Claimant's employment.

7. The parties have substantially different theories about how the fall occurred. Claimant testified she was unpacking items from a pallet after a coworker had cut and removed the plastic wrap. Claimant reached for a box that was stacked atop the cage. When she tried to step forward on her right leg (the leg with the prosthesis), she "felt something pull" and fell. Claimant hit her head and briefly lost consciousness. She awoke

on the floor, surrounding by automotive parts. When she regained consciousness, her manager (Mr. B[Redacted]) was shaking her shoulder and asking if she was okay. Claimant tried to get up but "I felt my right leg get pulled again. And that's when I saw the plastic wrap, and I had to untangle my leg." Mr. B[Redacted] then helped Claimant get up and into a nearby chair. Claimant then noticed the foot on her prosthetic leg was angled inward.

8. Mr. B[Redacted] was working in an adjacent area of the store when Claimant fell. He heard "a big bang, like a bunch of totes hit the floor." Mr. B[Redacted] ran to the back of the store and saw Claimant "laying on the ground with a bunch of parts laying on the floor." An overturned chair was next to her. Claimant appeared unconscious. Mr. B[Redacted] quickly knelt down, shook Claimant's shoulder, and asked if she was okay. Claimant opened her eyes, and Mr. B[Redacted] helped her to the chair. Claimant mentioned her foot was twisted. Mr. B[Redacted] looked at Claimant's foot, which he had not noticed up to that point. Mr. B[Redacted] agreed it appeared twisted inward.

9. Mr. B[Redacted] testified he saw no plastic wrap on the floor or on Claimant's prosthesis after the accident.

10. Mr. B[Redacted] helped Claimant to her car so she could go to the VA clinic and have the prosthesis evaluated. He took photographs of Claimant's prosthesis, although they were not saved to his phone, for unknown reasons.

11. The store manager, JQ[Redacted], was on the road returning from another store at the time of the accident. Mr. B[Redacted] spoke with Mr. JQ[Redacted] about the accident after Claimant had left. Mr. JQ[Redacted] completed an Employer's First Report of Injury based on the information he received from Mr. B[Redacted]. The report described the accident as "The EE was in the back stock room pulling items off a pallet. [She] was found on the floor. [She] was unresponsive for approximately 20 seconds." Mr. JQ[Redacted] did not contact Claimant to discuss the accident.

12. Claimant was seen at the VA clinic in Pueblo the afternoon of February 1, 2022. He was referred to physical therapy and given temporary parts until the prosthesis could be fully repaired or replaced. In the meantime, the provider recommended Claimant limit any work duties involving standing and walking.

13. Claimant spoke to an adjuster with Insurer's TPA by telephone on February 2, 2022. The adjuster documented Claimant's description of the accident as: "Unloading the truck and the person prior who cut the wrap. He did not know wire[1] had wrapped around prosthetic. He fell with boxes and snapped knee joint and bruising of left hip." Claimant stated the VA was willing to treat his injuries, but the adjuster told Claimant "to hold at this time."

14. Claimant saw NP Brendon Madrid at Concentra on March 11, 2022. Based on documents completed at the initial appointment, the ALJ infers Concentra is a

[1] The term "wire" is probably a typographical error, as Claimant credibly testified he described plastic wrap rather than wire.

designated provider for Employer. When asked how the injury occurred, Claimant stated, "On 02/01/2022 was unloading a shipment when coworker took wrap off and then got caught up in [her] prosthesis [sic] leg. Fell with three boxes of auto parts and was knocked unconscious." Claimant reported ongoing injury-related symptoms including headaches, low back pain, and left wrist pain. Mr. Madrid took Claimant off work and made several referrals for evaluations and treatment.

15. Claimant saw Mr. Madrid again on April 18, 2022. Mr. Madrid maintained Claimant's work restrictions and scheduled a follow-up appointment after additional tests were completed.

16. Employer's store manager, JQ[Redacted], testified he observed Claimant fall on one prior occasion at work. Claimant actually started to fall but Mr. JQ[Redacted] caught her. Mr. JQ[Redacted] testified Claimant stated her prosthesis gave out. On rebuttal, Claimant testified her leg had become caught up on a floor mat, which caused the fall.

17. There was no persuasive evidence of another episode of Claimant's leg "giving out" or causing her to stumble or fall during her employment dating to May 6, 2021.

18. Employer's district manager, RC[Redacted], confirmed that Claimant's formal job duties include unpacking pallets of inventory. Because the only specific accommodations approved by HR were no lifting over 50 pounds and no ladders, Mr. RC[Redacted] "would expect [Claimant] to work truck other than 50 pounds and put things on ladders."

19. The persuasive evidence shows unloading pallets was a part of Claimant's job, notwithstanding the parties' disagreements about whether she "should" have been doing it or was "ordered" to do so.

20. Claimant proved the February 1, 2022 fall "arose out of" her employment. Claimant's description of the accident is generally credible. Specifically, the ALJ credits Claimant's testimony that a small piece of plastic wrap was on her prosthesis immediately after the accident. The credibility of Claimant's testimony is bolstered by her consistent description of being caught up in wrapping from the pallet of inventory, including to the adjuster the next day. Claimant's foot probably became tangled or she slipped on the plastic wrap, which caused her to fall. The ALJ by no means intends to suggest that Mr. B[Redacted]'s testimony was untruthful. Rather, the ALJ infers he simply did not notice the small piece of plastic wrap on Claimant's leg in the brief period while Claimant was lying on the floor and he was helping her up.

21. Respondents' argument that Claimant's fall was precipitated by a purely personal condition*, i.e.*, the defective prosthesis, is speculative and not probable based on the evidence presented.

22. Claimant proved the treatment provided by Brendon Madrid, NPC at Concentra was reasonably needed and authorized, including the April 18, 2022 appointment.

CONCLUSIONS OF LAW

A. Compensability

To establish a compensable claim, a claimant must prove they suffered an injury arising out of and in the course of employment. Section 8-41-301(1)(b); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The "course of employment" merely requires that an injury occur within the time and place limits of the employment and during an activity that had "some connection" with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The "arising out of" element is narrower, and requires a sufficient causal nexus between the injury and the job. An injury "arises out of" the employment when it originates in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employment contract. *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is not essential that the claimant be performing an obligatory job function or an activity that provides a specific benefit to the employer at the time of the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Rather, the question is whether the activity "is sufficiently interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996).

The mere fact that a claimant suffers an injury at work does not automatically mean the injury "arose out of" their employment. *City of Brighton*, *supra*. When an injury is precipitated by a pre-existing, nonwork-related condition, the injury is only compensable if a "special hazard" of employment combines with the pre-existing condition to cause or increase the degree of injury. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

Whether an injury arises out of and in the course of employment are questions of fact for the ALJ, based on the totality of circumstances. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998).

As found, Claimant proved the February 1, 2020 tissue accident "arose out of" her employment. Claimant's description of the accident is generally credible. Specifically, the ALJ credits Claimant's testimony that a small piece of plastic wrap was on her prosthesis immediately after the accident. The credibility of Claimant's testimony is bolstered by her consistent description of being caught up in wrapping from the load of inventory. Her foot probably became tangled or slipped on the plastic wrap, which caused her to fall. This is by no means intended to suggest that Mr. B[Redacted]'s testimony was untruthful. Rather, the ALJ infers he simply did not notice the small piece of plastic wrap on Claimant's leg in the brief period while Claimant was lying on the floor.

Respondents' theory that Claimant's fall was precipitated by a purely personal condition, *i.e.*, her prosthesis, is speculative and not probable based on the evidence presented. Accordingly, the "special hazard" rule is inapplicable.

B. Medical benefits

The respondents are liable for medical treatment from authorized providers reasonably needed to cure and relieve the effects of a compensable injury or occupational disease. Section 8-42-101. The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, Claimant proved the treatment received from Mr. Madrid at Concentra, including the April 18, 2022 office visit, was reasonably needed to cure and relieve the effects of the compensable injury. Mr. Madrid is also authorized, as Concentra is a designated provider for Employer.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits based for injuries sustained on February 1, 2022 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including the April 18, 2022 office visit with Brendon Madrid, NP at Concentra.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he injured his right elbow during the course and scope of his employment with Employer on August 10, 2021.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his August 10, 2021 industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period August 11, 2021 through March 15, 2022.

5. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period March 16, 2022 through May 4, 2022.

6. Whether Employer has demonstrated by a preponderance of the evidence that Claimant was responsible for his termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

7. Whether Insurer is a proper party for Claimant's claim based upon the effective coverage date of the Workers' Compensation insurance policy with Employer.

8. Whether Employer is subject to penalties pursuant to §8-43-408(1), C.R.S. for failing to carry Workers' Compensation insurance on August 10, 2021.

FINDINGS OF FACT

1. Claimant worked for Employer as a Delivery Driver of medical marijuana. On July 27, 2021 Claimant suffered an infection in his right elbow and visited the emergency department. He underwent treatment for cellulitis, but was not diagnosed with any fracture. Claimant received an antibiotic in the form of cephalexin.

2. On August 10, 2021 Claimant planned to use a power washer to clean vans at Employer's warehouse in preparation for the following day's deliveries. Claimant remarked that he had to pull a cord to start the power washer. He commented that he has consistently had trouble starting the machine without assistance. Claimant pulled the cord

numerous times but could not start the equipment. On his final attempt he "gave a real big pull" and heard a loud pop in his right elbow.

3. Claimant mentioned the incident to a warehouse employee named Colin and went to the SCL Emergency Room for treatment. He was diagnosed with a closed fracture of the olecranon process of the right ulna. On August 10, 2021 Dr. Stackpool at SCL Health permitted Claimant to return to work on August 11, 2021. He assigned restrictions of "no right arm work until cleared by ortho or work comp."

4. Claimant sent a text message to his manager JG[Redacted] stating that he had broken his elbow at work. He inquired whether Employer had Workers' Compensation insurance coverage. Mr. JG[Redacted] directed Claimant to contact Employer's Human Resources employee VD[Redacted] about the matter.

5. On August 11, 2021 Claimant reported his right elbow injury to Ms. VD[Redacted]. She directed him to Dee Jay Beach, D.O. at Colorado Occupational Medicine Physicians. Claimant reported to Dr. Beach that he was pulling a cord in an attempt to start a power washer when he heard a pop in his right elbow. After a physical examination, Dr. Beach diagnosed Claimant with a displaced fracture of the olecran process of the right elbow. He limited Claimant to modified duty work with no use of the right upper extremity. Dr. Beach recommended an MRI and referred Claimant to surgeon Lucas G. Schnell, D.O. for a consultation.

6. On August 11, 2021 Claimant also completed an Incident Report for Employer. He reported that he was pulling a cord to start a power washer in an attempt to clean his work van. As Claimant pulled the cord, he experienced a pop in his right elbow. The Incident Report specified that Claimant contacted Mr. JG[Redacted] and went to an emergency room for treatment.

7. On August 18, 2021 Claimant visited Dr. Schnell at the Center for Spine & Orthopedics. Dr. Schnell assigned restrictions of "desk work only." He ordered an MRI of Claimant's right elbow. On the following day, Dr. Beach concurred with the assigned work restrictions.

8. On August 21, 2021 Claimant underwent an MRI of his right elbow. The MRI revealed "complete to near complete detachment of the triceps tendon from its olecranon insertion with 4mm proximal retraction."

9. On August 23, 2021 Claimant visited Dr. Schnell for an examination. Dr. Schnell reviewed Claimant's MRI and conducted a physical examination. He diagnosed Claimant with a right complete distal triceps tendon insertion rupture. Dr. Schnell recommended surgery in the form of a left open distal triceps tendon repair. He prohibited Claimant from using his right arm until after surgical intervention.

10. On September 2, 2021 Dr. Beach noted that Dr. Schnell recommended surgical repair of Claimant's torn right triceps tendon. However, insurance had not authorized the surgery and was contesting the claim. Dr. Beach continued Claimant's

work restrictions of "computer/desk work only." He also directed Claimant to continue wearing a right arm sling.

11. On September 14, 2021 Insurer filed a Notice of Contest denying Claimant's Workers' Compensation claim. The denial was based on "pre-existing active condition same body part."

12. Claimant was unable to obtain coverage for the surgery recommended by Dr. Schnell. He thus procured Medicaid through the Colorado Department of Health Care Policy & Financing.

13. Subsequent to the Notice of Contest, Employer provided modified work for Claimant. However, Claimant explained that some of his duties exceeded the medical restrictions that essentially required desk work. Employer decreased Claimant's work hours.

14. On September 15, 2021 Dr. Beach advised Claimant to continue his current work restrictions. He noted there would be no follow-up appointments until Insurer approved the claim.

15. On November 2, 2021 Dr. Schnell performed an open distal triceps repair on Claimant's right upper extremity. Dr. Schnell noted that Claimant had suffered a work-related injury to his right elbow in August, 2021. An MRI had confirmed a small, full-thickness tear of the distal triceps.

16. On November 29, 2021 Claimant began receiving physical therapy through Select Physical Therapy for his right upper extremity. The notes reflect that Claimant was using a power washer "that requires you to start like a lawn mower" and suffered immediate sharp pain in his right elbow. He was assessed with a spontaneous rupture of other tendons of the right elbow. The record reveals that Claimant continued to undergo physical therapy through May 3, 2022. Select Physical Therapy received some payments from Medicaid, but still asserts a balance due of $567.00.

17. On January 19, 2022 Dr. Schnell's assistant, Kandace Hudson, PA-C continued Claimant's medical restrictions of light duty with no pushing, lifting or carrying greater than five pounds with his right arm for an additional six weeks. On March 2, 2022 Dr. Schnell ordered an additional four weeks of physical therapy and modified Claimant's restrictions to no lifting in excess of 25 pounds.

18. On March 15, 2022 Employer terminated Claimant's employment. Employer explained that on March 14, 2022 it had received an official complaint of sexual harassment from a client (Coda Signature). After conducting an investigation, Employer determined that one or more female employees wanted to file charges against Claimant. Claimant allegedly contacted a female employee of Coda after business hours on a matter unrelated to Employer's business.

19. In response, Claimant explained that he complimented a woman at Coda, whom he regularly met in the course of business, on her custom finger nails. He remarked

that he contacted her one time after business hours to inquire about her latest nail fashion and obtain a picture of her nails. However, he did not receive a response or proceed any further. Claimant generally denied the truth of the allegations in Employer's Termination Letter and stated that he has not been pursued by any person from Coda with charges of sexual harassment.

20. Since his termination, Claimant has not sustained regular employment. He remarked that he is still limited by his right arm because it is less functional than it was before his work injury.

21. On May 4, 2022 Dr. Beach issued a closing report regarding Claimant's right elbow injury. Although he noted that he had released Claimant to full duty work on April 12, 2022 with no restrictions, there is no written release dated April 12, 2022 in the record. Dr. Beach also discharged Claimant from care and determined that he reached Maximum Medical Improvement (MMI) on May 4, 2022 with a 1% right upper extremity permanent impairment rating.

22. Medicaid paid for Claimant's surgery with Dr. Schnell and otherwise financed his treatment. The Colorado Department of Health Care Policy & Financing thus has a lien on its payments. The lien covers the period from Claimant's initial emergency department visit through the conclusion of physical therapy and totaled $6,725.83 as of August 16, 2022.

23. For the 16-week period from April 23, 2021 through July 30, 2021 Claimant earned total wages of $12,124.62. Dividing $12,124.62 by 16 yields an Average Weekly Wage (AWW) of $757.79.

24. For the 32-week period from August 13, 2021 through March 11, 2022 Claimant earned total wages of $18,839.70. Dividing $18,839.70 by 32 yields an AWW of $588.74. Subtracting $588.74 from Claimant's 757.79 AWW prior to his August 11, 2021 work injury yields a loss of $169.05 per week. The period August 13, 2021 through March 11, 2022 totals 216 days or 30.857 weeks. A wage loss of $169.05 per week times 30.857 weeks equals $5216.38. Indemnity benefits of $5,216.38 at a TPD rate of 66.66% totals $3479.33.

25. Multiplying an AWW of $757.79 by the seven-week period from March 16, 2022 through May 4, 2022 yields a total of $5304.53. Indemnity benefits of $5304.53 at a TTD rate of 66.66% equals $3538.12 for the period.

26. Workers' Compensation Program Manager for Insurer MC[Redacted] also testified at the hearing in this matter. He explained that the bulk of his job duties involve providing oversight of the Third-Party Administrators (TPA's) that handle Insurer's Workers' Compensation claims. Mr. MC[Redacted] remarked that Employer had a Workers' Compensation policy with Insurer for the period August 11, 2021 through August 11, 2022. However, no policy was in effect on Claimant's August 10, 2021 date of injury.

27. Based on a review of the policy number for the period August 11, 2021 through August 11, 2022, Mr. MC[Redacted] verified that Employer did not have a prior

Workers' Compensation insurance policy through Insurer. Mr. MC[Redacted] detailed the implications of the Workers' Compensation insurance policy number for the policy effective August 11, 2021 through August 11, 2022. Specifically, Mr. MC[Redacted] explained that the policy's middle numbers "00" (full policy number NXTTFMO6MK-00-WC) have a special significance because the characters in an insurance coverage policy through Insurer reflect the policy's status as the first of its kind issued to an individual or entity. If a prior policy had been renewed, the August 11, 2021 through August 11, 2022 policy would not have begun with the designation "00." Mr. MC[Redacted] also explained that Employer currently has, and previously had, a general liability insurance policy through Insurer. However, general liability policies specifically exclude Workers' Compensation coverage.

28. Claimant has established that it is more probably true than not that he injured his right elbow during the course and scope of his employment with Employer on August 10, 2021. Claimant's testimony and the persuasive medical records reveal that Claimant injured his right elbow while working for Employer. Initially, Claimant credibly testified that on August 10, 2021 he was using a power washer to clean vans. He remarked that he had to pull a cord to start the power washer. After pulling the cord numerous times without starting the machine, he "gave a real big pull" and heard a loud pop in his right elbow.

29. On August 11, 2022 Claimant reported to Dr. Beach that he was pulling a cord in an attempt to start a power washer when he heard a pop in his right elbow. On the same day, Claimant completed an Incident Report in which he stated that, while pulling a cord to start a power washer, he experienced a pop in his right elbow.

30. Dr. Beach diagnosed Claimant with a displaced fracture of the olecran process of the right elbow. He recommended an MRI and referred Claimant to surgeon Dr. Schnell for further evaluation. Dr. Schnell diagnosed Claimant with a right complete distal triceps tendon insertion rupture and performed an open distal triceps repair on Claimant's right upper extremity. Subsequent notes from Select Physical Therapy reflect that Claimant was using a power washer "that requires you to start like a lawn mower" and suffered immediate sharp pain in his right elbow.

31. Based on Claimant's credible testimony and a review of the medical records, Claimant suffered a right elbow injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable right elbow injury at work on August 10, 2021.

32. Claimant has demonstrated that it is more probably true than not that he is entitled to reasonable, necessary and causally related medical benefits for his August 10, 2021 industrial injury. Claimant initially visited the SCL emergency room for medical treatment and was diagnosed with a closed fracture of the olecranon process of the right ulna. He subsequently obtained care through Dr. Beach and underwent right elbow surgery with Dr. Schnell. Because Claimant was unable to obtain coverage for the surgery

recommended by Dr. Schnell, he procured Medicaid through the Colorado Department of Health Care Policy & Financing. On November 2, 2021 Claimant underwent right elbow surgery with Dr. Schnell. He subsequently received physical therapy from Select Physical Therapy for the period November 29, 2021 through May 3, 2022. Dr. Beach ultimately discharged Claimant from care and determined that he reached MMI on May 4, 2022 with a 1% right upper extremity permanent impairment rating.

33. Medicaid paid for Claimant's surgery with Dr. Schnell and otherwise financed his care. The Colorado Department of Health Care Policy & Financing thus has a lien on its payments. The lien covers the period from Claimant's initial emergency department visit through the conclusion of physical therapy and totals $6,725.83 as of August 16, 2022. Moreover, Select Physical Therapy received some payments from Medicaid, but still asserts a balance due of $567.00. The record reveals that all of Claimant's medical treatment for his right elbow injury was reasonable, necessary and related to the August 10, 2021 industrial incident. Employer is thus financially responsible for the payment of Claimant's medical expenses, including the outstanding lien from the Colorado Department of Health Care Policy & Financing and any balance due to Select Physical Therapy. Combining the outstanding lien and the Select physical therapy balance yields total medical payments due of $7,292.83.

34. Employer's wage records reflect that for the 16-week period from April 23, 2021 through July 30, 2021 Claimant earned total wages of $12,124.62. Dividing $12,124.62 by 16 yields an AWW of $757.79. Applying the default provision yields a fair approximation of Claimant's wage loss and diminished earning capacity.

35. Claimant has proven that it is more probably true than not that he is entitled to receive TPD benefits for the period August 11, 2021 through March 15, 2022. The record reveals that Claimant was limited to modified duty after his August 10, 2021 work injury until his termination on March 15, 2022. Specifically, on August 10, 2021 Dr. Stackpool at SCL Health permitted Claimant to return to work on August 11, 2021, but assigned restrictions of "no right arm work until cleared by ortho or work comp." On August 11, 2021 Dr. Beach diagnosed Claimant with a displaced fracture of the olecran process of the right elbow and restricted him to modified duty work with no use of the right upper extremity. By September 2, 2021 Dr. Beach continued Claimant's work restrictions of "computer/desk work only." He also directed Claimant to continue to wear a right arm sling. On November 2, 2021 Claimant underwent right elbow surgery with Dr. Schnell. By January 19, 2022 PA-C Hudson continued Claimant's medical restrictions of light duty with no pushing, lifting or carrying greater than five pounds with his right arm for an additional six weeks. Finally, on March 2, 2022 Dr. Schnell ordered an additional four weeks of physical therapy and modified Claimant's restrictions to no lifting in excess of 25 pounds.

36. For the 32-week period from August 13, 2021 through March 11, 2022 Claimant earned total wages of $18,839.70. Dividing $18,839.70 by 32 yields an AWW of $588.74. Subtracting $588.74 from Claimant's 757.79 AWW prior to his August 11, 2021 work injury yields a loss of $169.05 per week. The record thus reveals that Claimant's work restrictions because of his right elbow injury decreased his ability to earn wages.

Claimant has established that his August 10, 2021 injury caused the disability and consequent partial wage loss. Accordingly, Claimant is entitled to receive TPD benefits for the period August 11, 2021 through March 15, 2022. The period totals 216 days or 30.857 weeks. A wage loss of $169.05 per week times 30.857 weeks equals $5216.38. Claimant's indemnity benefits of $5,216.38 at a TPD rate of 66.66% total $3479.33.

37. Claimant has established that it is more probably true than not that he is entitled to receive TTD benefits for the period March 16, 2022 through May 4, 2022. The record reveals that Claimant worked modified duty and earned reduced wages until he was terminated on March 15, 2021. Claimant explained that subsequent to the termination he has been unable to sustain regular employment. Notably, he is still limited by his right arm because it is less functional than it was before his August 10, 2021 work injury. The record thus reveals that Claimant's right elbow injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Although Dr. Beach issued a closing report on May 4, 2022 and noted that he had released Claimant to full duty work on April 12, 2022 with no restrictions, there is no written release dated April 12, 2022 in the record. Claimant's TTD benefits thus continued until Dr. Beach determined that he reached MMI on May 4, 2022 with a 1% right upper extremity permanent impairment rating. Claimant is entitled to TTD benefits for the period March 16, 2022 through May 4, 2022. The period totals 49 days or seven weeks. An AWW of $757.79 times seven weeks equals $5304.53. Indemnity benefits of $5304.53 at a TTD rate of 66.66% total $3538.12.

38. Employer has failed to demonstrate it is more probably true than not that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Employer contends that Claimant is not entitled to receive TTD benefits because he was responsible for his March 15, 2022 termination from employment. Employer noted that on March 14, 2022 it had received an official complaint of sexual harassment from a client (Coda Signature). After conducting an investigation, Employer determined that one or more female employees wanted to file charges against Claimant. Claimant allegedly contacted a female employee of Coda after business hours on a matter unrelated to Employer's business.

39. in response to Employer's assertion, Claimant credibly explained that he complimented a woman at Coda, whom he regularly met in the course of business, on her custom finger nails. He remarked that he contacted her one time after business hours to inquire about her latest nail fashion and obtain a picture of her nails. However, he did not receive a response or proceed any further. Claimant also stated that he has not been pursued by any person from Coda with charges of sexual harassment. Although Claimant acknowledged that he contacted a woman at Coda after business hours, the record reveals that he did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Employer has thus not proven that it is more probably true than not that Claimant is precluded from receiving TTD benefits for the period March 15, 2022 until he reached MMI on May 4, 2022.

40. Employer did not have an active Worker's Compensation insurance policy with Insurer effective on or prior to Claimant's August 10, 2021 date of injury. The Workers' Compensation policy obtained by Employer through Insurer became effective on August 11, 2021 or one day after Claimant's date of injury.

41. Mr. MC[Redacted] detailed the implications of the Workers' Compensation insurance policy number for the policy effective August 11, 2021 through August 11, 2022. Specifically, Mr. MC[Redacted] explained that the policy's middle numbers "00" (full policy number NXTTFMO6MK-00-WC) have a special significance because the characters in an insurance coverage policy through Insurer reflect the policy's status as the first of its kind issued to an individual or entity. If a prior policy had been renewed, the August 11, 2021 through August 11, 2022 policy would not have begun with the designation "00." Mr. MC[Redacted] also explained that Employer currently has, and previously had, a general liability insurance policy through Insurer. However, general liability policies specifically exclude Workers' Compensation coverage.

42. The record reveals that Claimant's date of injury preceded the effective date of Employer's Workers' Compensation insurance coverage through Insurer. Claimant's August 10, 2021 injury is thus not subject to coverage under the policy. Insurer had no insurance relationship or contract with Employer that would properly warrant Insurer's inclusion in the present matter. As a result, Insurer is not a proper party to this claim and is dismissed with prejudice.

43. Employer was not insured on Claimant's August 10, 2021 date of injury. Based on the preceding sections of the present Order, Employer is required to pay Claimant $3479.33 in TPD benefits and $3538.12 in TTD benefits. The total compensation awarded thus equals $7017.45. Twenty-five percent of $7017.45 is $1754.36. Accordingly, Employer shall pay $1754.36 in penalties to the Colorado uninsured employer fund created in §8-67-105, C.R.S.

44. This Order awards no ongoing benefits, so the present value equals the total benefits awarded. The Order awards medical benefits of $7,292.83, indemnity benefits of $7,017.45, and penalties of $1,754.36, for total compensation of $16,064.64. Employer is thus required to pay the trustee of the Division a total amount of $16054.64. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by a surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has established by a preponderance of the evidence that he injured his right elbow during the course and scope of his employment with Employer on August 10, 2021. Claimant's testimony and the persuasive medical records reveal that Claimant injured his right elbow while working for Employer. Initially, Claimant credibly testified that on August 10, 2021 he was using a power washer to clean vans. He remarked that he had to pull a cord to start the power washer. After pulling the cord numerous times without starting the machine, he "gave a real big pull" and heard a loud pop in his right elbow.

8. As found, on August 11, 2022 Claimant reported to Dr. Beach that he was pulling a cord in an attempt to start a power washer when he heard a pop in his right elbow. On the same day, Claimant completed an Incident Report in which he stated that, while pulling a cord to start a power washer, he experienced a pop in his right elbow.

9. As found, Dr. Beach diagnosed Claimant with a displaced fracture of the olecran process of the right elbow. He recommended an MRI and referred Claimant to surgeon Dr. Schnell for further evaluation. Dr. Schnell diagnosed Claimant with a right complete distal triceps tendon insertion rupture and performed an open distal triceps repair on Claimant's right upper extremity. Subsequent notes from Select Physical Therapy reflect that Claimant was using a power washer "that requires you to start like a lawn mower" and suffered immediate sharp pain in his right elbow.

10. As found, based on Claimant's credible testimony and a review of the medical records, Claimant suffered a right elbow injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable right elbow injury at work on August 10, 2021.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a

factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

12. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

13. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his August 10, 2021 industrial injury. Claimant initially visited the SCL emergency room for medical treatment and was diagnosed with a closed fracture of the olecranon process of the right ulna. He subsequently obtained care through Dr. Beach and underwent right elbow surgery with Dr. Schnell. Because Claimant was unable to obtain coverage for the surgery recommended by Dr. Schnell, he procured Medicaid through the Colorado Department of Health Care Policy & Financing. On November 2, 2021 Claimant underwent right elbow surgery with Dr. Schnell. He subsequently received physical therapy from Select Physical Therapy for the period November 29, 2021 through May 3, 2022. Dr. Beach ultimately discharged Claimant from care and determined that he reached MMI on May 4, 2022 with a 1% right upper extremity permanent impairment rating.

14. As found, Medicaid paid for Claimant's surgery with Dr. Schnell and otherwise financed his care. The Colorado Department of Health Care Policy & Financing thus has a lien on its payments. The lien covers the period from Claimant's initial emergency department visit through the conclusion of physical therapy and totals $6,725.83 as of August 16, 2022. Moreover, Select Physical Therapy received some payments from Medicaid, but still asserts a balance due of $567.00. The record reveals that all of Claimant's medical treatment for his right elbow injury was reasonable, necessary and related to the August 10, 2021 industrial incident. Employer is thus financially responsible for the payment of Claimant's medical expenses, including the outstanding lien from the Colorado Department of Health Care Policy & Financing and any balance due to Select Physical Therapy. Combining the outstanding lien and the Select physical therapy balance yields total medical payments due of $7,292.83.

Average Weekly Wage

15. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). The preceding method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the

injured or deceased employee was receiving at the time of injury." *Benchmark/Elite, Inc. v. Simpson* 232 P.3d 777, 780 (Colo. 2010). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82.

16. As found, Employer's wage records reflect that for the 16-week period from April 23, 2021 through July 30, 2021 Claimant earned total wages of $12,124.62. Dividing $12,124.62 by 16 yields an AWW of $757.79. Applying the default provision yields a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Partial Disability Benefits

17. Section 8-42-106(1), C.R.S. provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between a claimant's AWW at the time of injury and earnings during the continuance of the disability. Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (TPD benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Section 8-42-106(2), C.R.S. provides that TPD benefits shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

18. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TPD benefits for the period August 11, 2021 through March 15, 2022. The record reveals that Claimant was limited to modified duty after his August 10, 2021 work injury until his termination on March 15, 2022. Specifically, on August 10, 2021 Dr. Stackpool at SCL Health permitted Claimant to return to work on August 11, 2021, but assigned restrictions of "no right arm work until cleared by ortho or work comp." On August 11, 2021 Dr. Beach diagnosed Claimant with a displaced fracture of the olecran process of the right elbow and restricted him to modified duty work with no use of the right upper extremity. By September 2, 2021 Dr. Beach continued Claimant's work restrictions of "computer/desk work only." He also directed Claimant to continue to wear a right arm

sling. On November 2, 2021 Claimant underwent right elbow surgery with Dr. Schnell. By January 19, 2022 PA-C Hudson continued Claimant's medical restrictions of light duty with no pushing, lifting or carrying greater than five pounds with his right arm for an additional six weeks. Finally, on March 2, 2022 Dr. Schnell ordered an additional four weeks of physical therapy and modified Claimant's restrictions to no lifting in excess of 25 pounds.

19. As found, for the 32-week period from August 13, 2021 through March 11, 2022 Claimant earned total wages of $18,839.70. Dividing $18,839.70 by 32 yields an AWW of $588.74. Subtracting $588.74 from Claimant's 757.79 AWW prior to his August 11, 2021 work injury yields a loss of $169.05 per week. The record thus reveals that Claimant's work restrictions because of his right elbow injury decreased his ability to earn wages. Claimant has established that his August 10, 2021 injury caused the disability and consequent partial wage loss. Accordingly, Claimant is entitled to receive TPD benefits for the period August 11, 2021 through March 15, 2022. The period totals 216 days or 30.857 weeks. A wage loss of $169.05 per week times 30.857 weeks equals $5216.38. Claimant's indemnity benefits of $5,216.38 at a TPD rate of 66.66% total $3479.33.

Temporary Total Disability Benefits

20. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

21. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TTD benefits for the period March 16, 2022 through May 4, 2022. The record reveals that Claimant worked modified duty and earned reduced wages

until he was terminated on March 15, 2021. Claimant explained that subsequent to the termination he has been unable to sustain regular employment. Notably, he is still limited by his right arm because it is less functional than it was before his August 10, 2021 work injury. The record thus reveals that Claimant's right elbow injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Although Dr. Beach issued a closing report on May 4, 2022 and noted that he had released Claimant to full duty work on April 12, 2022 with no restrictions, there is no written release dated April 12, 2022 in the record. Claimant's TTD benefits thus continued until Dr. Beach determined that he reached MMI on May 4, 2022 with a 1% right upper extremity permanent impairment rating. Claimant is entitled to TTD benefits for the period March 16, 2022 through May 4, 2022. The period totals 49 days or seven weeks. An AWW of $757.79 times seven weeks equals $5304.53. Indemnity benefits of $5304.53 at a TTD rate of 66.66% total $3538.12.

Responsible for Termination

22. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Indus. Claim Appeals Off.*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, the respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

23. As found, Employer has failed to demonstrate by a preponderance of the evidence that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Employer contends that Claimant is not entitled to receive TTD benefits because he was responsible for his March 15, 2022 termination from employment. Employer noted that on March 14, 2022 it had received an official complaint of sexual harassment from a client (Coda Signature). After conducting an investigation, Employer determined that one or more female employees wanted to file charges against Claimant. Claimant allegedly contacted a female employee of Coda after business hours on a matter unrelated to Employer's business.

24. As found, in response to Employer's assertion, Claimant credibly explained that he complimented a woman at Coda, whom he regularly met in the course of business, on her custom finger nails. He remarked that he contacted her one time after business hours to inquire about her latest nail fashion and obtain a picture of her nails. However, he did not receive a response or proceed any further. Claimant also stated that he has not been pursued by any person from Coda with charges of sexual harassment. Although Claimant acknowledged that he contacted a woman at Coda after business hours, the record reveals that he did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Employer has thus not proven by a preponderance of the evidence that Claimant is precluded from receiving TTD benefits for the period March 15, 2022 until he reached MMI on May 4, 2022.

Insurance Coverage

25. Every employer subject to the provisions of the Workers' Compensation Act shall carry Workers' Compensation insurance. §8-44-101, C.R.S. As found, Employer did not have an active Worker's Compensation insurance policy with Insurer effective on or prior to Claimant's August 10, 2021 date of injury. The Workers' Compensation policy obtained by Employer through Insurer became effective on August 11, 2021 or one day after Claimant's date of injury.

26. As found, Mr. MC[Redacted] detailed the implications of the Workers' Compensation insurance policy number for the policy effective August 11, 2021 through August 11, 2022. Specifically, Mr. MC[Redacted] explained that the policy's middle numbers "00" (full policy number NXTTFMO6MK-00-WC) have a special significance because the characters in an insurance coverage policy through Insurer reflect the policy's status as the first of its kind issued to an individual or entity. If a prior policy had been renewed, the August 11, 2021 through August 11, 2022 policy would not have begun with the designation "00." Mr. MC[Redacted] also explained that Employer currently has, and previously had, a general liability insurance policy through Insurer. However, general liability policies specifically exclude Workers' Compensation coverage.

27. As found, the record reveals that Claimant's date of injury preceded the effective date of Employer's Workers' Compensation insurance coverage through Insurer. Claimant's August 10, 2021 injury is thus not subject to coverage under the policy. Insurer had no insurance relationship or contract with Employer that would properly warrant Insurer's inclusion in the present matter. As a result, Insurer is not a proper party to this claim and is dismissed with prejudice.

Penalties for Employer's Failure to Carry Worker's Compensation Insurance

28. Prior to July 1, 2017 §8-43-408(1), C.R.S., provided that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits payable to the claimant were to be increased by fifty percent. However, effective

July 1, 2017 §8-43-408, C.R.S. was amended and the language regarding a fifty percent increase in benefits was removed. The version of §8-43-408(5), C.R.S. in effect at the time of Claimant's August 10, 2021 injury provides,

> In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

29. The penalty for failure to insure only applies to indemnity benefits and does not encompass medical benefits. *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc*., W.C. No. 4-155-231 (ICAO, Feb. 13, 1998). Statutory interest is not properly considered "compensation or benefits" within the meaning of §8-43-408(5), C.R.S. Interest is a statutory right intended to secure claimants the present value of benefits to which they are entitled by creating an equitable remedy for the lost time value of money during the accrual period. *Subsequent Injury Fund v. Trevethan*, 809 P.2d 1098 (Colo. App. 1991).

30. As found, Employer was not insured on Claimant's August 10, 2021 date of injury. Based on the preceding sections of the present Order, Employer is required to pay Claimant $3479.33 in TPD benefits and $3538.12 in TTD benefits. The total compensation awarded thus equals $7017.45. Twenty-five percent of $7017.45 is $1754.36. Accordingly, Employer shall pay $1754.36 in penalties to the Colorado uninsured employer fund created in §8-67-105, C.R.S.

Payment to Trustee or Posting of Bond

31. Under §8-43-408(2), C.R.S. Employer must pay to the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Alternatively, "employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado."

32. As found, this Order awards no ongoing benefits, so the present value equals the total benefits awarded. The Order awards medical benefits of $7,292.83, indemnity benefits of $7,017.45, and penalties of $1,754.36, for total compensation of $16,064.64. Employer is thus required to pay the trustee of the Division a total amount of $16054.64. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by a surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

1. Claimant suffered a compensable right elbow injury on August 10, 2021 during the course and scope of his employment with Employer.

2. Employer is financially responsible for payment of Claimant's reasonable and necessary medical expenses for the treatment of his right elbow injury.

3. Claimant earned an AWW of $757.79.

4. Claimant shall receive TPD benefits for the period August 11, 2021 through March 15, 2022 in the amount of $3479.33.

5. Claimant shall receive TTD benefits for the period March 16, 2022 through May 4, 2022 in the amount of $3538.12.

6. Employer has failed to establish that Claimant was responsible for his termination from employment.

7. Insurer is not a proper party to the matter and is thus dismissed with prejudice.

8. Employer shall pay $1754.36 in penalties to the Colorado uninsured employer fund created in §8-67-105, C.R.S.

9. In lieu of payment of the above compensation and benefits to Claimant, Employer shall:

a. Deposit the sum of $16054.64, adding 4% per annum, with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Trustee; or

b. File a bond in the sum of $16,054.64 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Employer shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

10. Employer shall pay statutory interest at the rate of 8% per annum on benefits not paid when due.

11. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or order authorizing distribution provides otherwise.

12. Pursuant to §8-42-101(4), C.R.S., any medical provider or collection agency shall immediately cease any further collection efforts from Claimant because Employer is solely liable and responsible for the payment of all medical costs related to Claimant's work injury.

13. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-867-720-002

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the medial branch blocks and the radiofrequency ablations (a/k/a rhizotomies) for his lumbar spine are reasonable, necessary, and related to his industrial injury.

II. Whether Claimant has proven by a preponderance of the evidence that the referrals for medical treatment for his posttraumatic nasal deformity, nasal obstruction, septal deviation, and breathing problems are reasonable, necessary, and related to his industrial injury.

III. Whether Claimant has proven by a preponderance of the evidence that the Botox injections to the TMJ area of his jaw are reasonable, necessary, and related to his industrial injury.

IV. Whether Claimant has established that he is entitled to his preferred nurse case manager.

STIPULATIONS

- Respondents agreed to authorize the right knee injections as recommended by Dr. Mason.[1]
- The parties stated at the beginning of the hearing that the feeding tube issue was not before the court. Therefore, the ALJ has not addressed that issue.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Claimant Assaulted and Sustained Numerous Injuries

1. On September 28, 2011, Claimant suffered a work-related accident in the form of an assault that resulted in numerous injuries. At the time of the assault, Claimant was providing security for Employer. On the night of the assault, there was a concern that one of the building alarms had not armed. As a result, Claimant went to investigate why the alarm was not arming. While investigating the problem, Claimant was attacked by an unknown person or persons and was severely beaten.

[1] Pursuant to Claimant's proposed order, the parties have reached an agreement regarding the knee injections.

2. Because of the assault, Claimant suffered fractures to multiple body parts, the most significant and severe injuries were to his face, nasal passages, jaw, and right knee. (Exhibit 2 #33). The fractures included the following:

    a. Right condylar fracture, right comminuted body mandibular fracture.

    b. Comminuted left angle fracture and left condylar fracture.

    c. Fracture of the right zygoma, LeFort fracture.

    d. Fracture of the left zygoma.

    e. Midline palatal fracture.

    f. Nasal septum fracture with deviation.

Ex. X, p. 18.

3. Due to his facial, nasal, and jaw injuries, Claimant has undergone multiple reconstructive surgeries to his jaw (including temporomandibular joint) (TMJ), mouth, face, and nasal area. (Ex. 4, p. 78 review of medical records Dr. Mason—outlining the multiple staged dental procedures that were being recommended)

4. Along with his facial, nasal, and jaw fractures, Claimant also suffered additional injuries, which included, but were not limited to, his hands, right knee, and back. He was diagnosed in the emergency room as suffering from:

    a. Right fifth metacarpophalangeal dislocation.

    b. Right fourth proximal PIP dislocation.

    c. Right patellar [kneecap] fracture.

    d. Left fifth metacarpal fracture.

    e. Bilateral lung contusion.

    f. Acute kidney injury.

    g. Abrasions to his back.

<u>Low Back / Medial Branch Blocks / Radiofrequency Ablations</u>

5. On September 28, 2011, while in the emergency room and being treated for multiple injuries, it was also noted that Claimant suffered trauma to his back which was evidenced by abrasions on his back. (Ex. 2, p. 2; Mason Dep. 23)

6. Due to his numerous injuries, which included a fractured kneecap, Claimant was not very mobile after the accident. (Mason Dep. 27)

7. As time went on, Claimant became more mobile. But due to his knee injury, Claimant was wearing a knee brace and using a cane, which caused him to walk with a limp. (Mason Dep. 27)

8. Once he became more mobile, his back injury started becoming more symptomatic.

9. Once Claimant began walking with a limp, the limping aggravated his lumbar facets and caused the facets, in his low back, to become more symptomatic and require medical treatment. (Mason Dep. 23, 27)

10. In January 2012, and due to ongoing back pain, Claimant was evaluated by Dr. Ladley O'Brien. Because of Claimant's ongoing back pain, Dr. O'Brien referred Claimant to a chiropractor. (Mason Dep. 9-10; Ex. 2, p. 35)

11. In February 2012, and due to continuing back pain, Dr. O'Brien ordered an MRI of Claimant's lumbar spine. The MRI showed some mild posterior disk bulging at L2-3, some mild disk bulging at L3-4, and disk protrusion toward the right with neuroforaminal narrowing at L4-5. (Mason Dep. 10; Ex. 4, p. 77)

12. In March 2012, it was noted that Claimant continued to walk with the assistance of a cane. (Ex. 4, p. 77)

13. Sometime in 2012, Dr. O'Brien referred Claimant to Dr. Kristen Mason and Claimant came under the care of Dr. Mason. (Ex. 2, p. 44)

14. In January 2013, Dr. Mason performed an initial evaluation. At this evaluation, Claimant complained of back pain as well as pain in his hip and knee. Claimant also marked those areas on his pain diagram. (Mason Dep. 9-10; Ex. 2, p. 35)

15. Dr. Mason ultimately diagnosed Claimant with facet arthropathy that had become symptomatic due to the assault and his altered gait. (Mason Dep. 27)

16. Due to his facet arthropathy, Dr. Mason referred Claimant for medial branch blocks.

17. In September 2014, Claimant underwent his first medial branch block, and then another one in December 2014, which reduced his back pain by 80%. The blocks were thus considered diagnostic. (Mason Dep. 25)

18. In January 2015, and due to the diagnostic response of the medial branch blocks, Claimant underwent a radiofrequency ablation. (Ex. 15, p. 555)

19. In April 2015, Dr. Mason noted Claimant's range of motion had improved since having the radiofrequency ablation. (Ex. 4, p. 209) Then, in May 2015, Dr. Mason noted that Claimant's lumbar back pain had decreased since having the radiofrequency ablation. (Ex. 4, p. 213) The benefits of the radiofrequency ablation lasted for approximately 15-18 months. Based on Claimant's response, Dr. Mason concluded he had excellent results from the procedure. (EX. 4, pp. 260, 267)

20. Sometime in 2015, Claimant stopped using a cane.

21. Around August 2016, the effects of the first radiofrequency ablation started to wear off. Therefore, Claimant underwent another radiofrequency ablation in August of 2016. (Ex. 4, p. 270) As before, the results of the radiofrequency ablation were good. (Ex. 4, p. 275) The benefits provided from this radiofrequency ablation lasted about 13 months. (Ex. 4, p. 284)

22. In October 2017, Claimant underwent another medial branch block and then another radiofrequency ablation in December 2017. (Ex. 5, p. 402). Like the prior radiofrequency ablations, the December 2017 procedure started wearing off about 15 months later, in Mach 2018.

23. In July 2019, Claimant underwent another medial branch block and then a radiofrequency ablation in September 2019. The results from the ablation were excellent. The ablation increased Claimant's lumbar range of motion and decreased his back pain. (Ex. 4, p. 331)

24. In June 2021, about 18 months after the last ablation, the effects from the procedure started to wear off. (Ex. 4, #358) In July and August 2021, Claimant underwent additional radiofrequency ablations. (Ex. 4, pp. 362, 364)

25. Around March or April 2022, Claimant thought that the last radiofrequency ablation was starting to wear off since he had increased back pain and decreased range of motion. (Ex. 4, pp. 378, 382) Due to his prior radiofrequency ablation wearing off, Dr. Mason referred Claimant back to Dr. Olsen for a repeat procedure.

26. On May 20, 2022, Respondents denied authorization for Dr. Olsen to see Claimant and repeat the radiofrequency ablation. (Ex. 4, p. 388)

27. Dr. Mason testified that the radiofrequency ablations are reasonable and necessary to treat Claimant from the effects of his work injury. Dr. Mason testified that Claimant's facets in his low back were most likely injured during the assault and then aggravated by Claimant's altered gait. Dr. Mason also testified that the medial branch blocks and radiofrequency ablations are reasonable and necessary to treat Claimant from the effects of his work injury because they have increased his range of motion-function- and decreased his pain.

28. The ALJ finds Dr. Mason's opinions about the need for the medial branch blocks and radiofrequency ablations to be credible and persuasive for many reasons. First, Dr. Mason's opinions are supported by the Claimant's statements to medical providers regarding his pain relief. For example, the decrease in pain and increased range of motion noted on examination supports a finding that the treatment is effective. Second, Dr. Mason's opinions are supported by the medical records. For example, Dr. Mason testified that Claimant has had good pain relief from the radiofrequency ablations, and the medical records support such a finding. Third, the Colorado Medical Treatment Guidelines support the use of radiofrequency ablations–but not exceeding twelve. To date, Claimant has only received about 5 radiofrequency ablations.

29. Dr. Fall also testified. Dr. Fall testified that she does not think Claimant's back injury relates to the assault or his altered gait. She also testified that even if his back condition were caused by his work injury, the radiofrequency ablations are still not reasonably necessary. Part of her opinion is based on her contention that Claimant did not have a diagnostic response to the medial branch blocks. But Dr. Mason credibly testified that Claimant did. The medical records also document that Claimant obtained substantial and sustained relief from the radiofrequency ablations. This relief included a decrease in back pain and an increase in his range of motion. Moreover, to the extent Claimant had sustained relief from the treatment, Dr. Fall wants to characterize the relief as a placebo effect, and not due to the treatment itself. Based on the medical records and opinions of Dr. Mason, such a rationale for the effectiveness of the past radiofrequency ablations seems to be an attempt to disregard evidence that goes against her ultimate conclusion. In other words, she seems to be

cherry-picking the data to support her opinion. As a result, the ALJ does not find the opinions of Dr. Fall to be persuasive.

30. The ALJ finds that Claimant suffered a back injury during the assault. The ALJ further finds that his back condition was aggravated by his altered gait that was caused by the work injury to his knee. The ALJ also finds that the initial back injury and aggravation have necessitated the need for medical treatment. Lastly, the ALJ finds that the medial branch blocks and radiofrequency ablations are reasonable and necessary to treat Claimant from the effects of his work-related back injury.

Nasal Injury and Referral to a Specialist

31. When Claimant was assaulted, he suffered a nasal septum fracture with deviation that resulted in a nasal obstruction.

32. In May 2012, Claimant underwent a septoplasty to repair his posttraumatic nasal deformity, nasal obstruction, and septal deviation. (Ex. 4, p. 77)

33. In February 2013, Claimant presented to Dr. Alan Lipkin, an ENT, for his ongoing nasal obstruction problems that were present after his nasal septal reconstruction surgery. Dr. Lipkin recommended Claimant use nasal saline irrigation for the consequences of his work injury, which included Claimant's nasal obstruction. (Ex. 6, pp. 477-481)

34. In September 2013, Claimant presented to Dr. Jannuzzi. At this appointment, it was noted that there was obstruction involving Claimant's right sinus. But, at this appointment, it was not known whether the obstruction might be due to maxillary sinusitis or nasal intubation. (Ex. 3, p. 53)

35. As part of his treatment for his facial injuries, Claimant was prescribed a mouthguard. While using his mouthguard at night, Claimant noticed that he was having a lot of difficulty breathing through his nose.

36. In February 2022, Dr. Mason noted that Claimant was having problems breathing through his nose.

37. On April 15, 2022, Dr. Mason noted that Dr. Millam concluded that Claimant was suffering from some collapse of one of his nostrils. (Ex. 4, p. 382)

38. Other than the work-related assault, which caused a nasal septum fracture with deviation that resulted in nasal obstruction that required surgery, there is no credible evidence indicating Claimant has suffered any other nasal injuries since the assault.

39. Dr. Mason testified that she believes Claimant's current problem of breathing through his nose needs to be assessed by a specialist as part of his work injury because (1) Claimant had incurred significant trauma to his nose and face in the form of a nasal fracture, (2) he had reconstructive surgery, and (3) there does not seem to be a new and unique diagnosis.

40. The ALJ finds Dr. Mason's opinions about the need for a referral to a nasal specialist to be credible and persuasive. Her opinion is found credible and persuasive because it is consistent with, and supported by, Claimant's underlying medical records that demonstrate prior trauma to his nasal area, prior surgery to his nasal area, and a prior

collapse of his nasal area. The ALJ also finds her opinion credible because she is not saying that any nasal condition that he has will be work related, but that under the circumstances, it is reasonable to have Claimant assessed by an expert, or experts, as part of his workers' compensation claim. Had Claimant not suffered any trauma to his face or nasal area, then a referral to an expert would not be reasonably necessary to assess and treat Claimant from the effects of his work injury. But those are not the facts here.

41. Dr. Fall basically testified that because specific treatment has not been recommended for his nasal problems, there must not be a problem that requires treatment. But the issue is whether a referral and assessment by an expert, or experts, is reasonably necessary to assess Claimant's symptoms, determine whether they are work related, and then recommend treatment, if any. Therefore, Dr. Fall's contention that because no treatment or surgery has been recommended, without the assessment of an expert, puts the proverbial cart before the horse.

42. Dr. Fall also testified that due to the temporal relationship between Claimant's current breathing complaints and the initial assault, any condition is most likely not related. But Dr. Fall fails to acknowledge the limitations of her expertise. She is not an expert in nasal issues, but yet ventures out into that specialized area and renders an opinion that is beyond her expertise. It is as if she is missing the point as to what a qualified expert does. They apply their expertise to make an assessment that she cannot do, due to her lack of expertise in that field. As a result, the ALJ does not find her opinions about Claimant's lack of need for additional treatment in the form of an assessment, or assessments, to address his nasal complaints to be persuasive.

43. A referral to a nasal specialist has a reasonable prospect of defining the extent of Claimant's nasal condition that was caused by the assault and the extent of future treatment.

44. Based on the facts of this case, a referral to an expert, or experts, to assess Claimant's nasal and breathing complaints is reasonable and necessary medical treatment to treat Claimant from the effects of his work injury. Thus, the referral is reasonable and necessary medical treatment that is meant to cure and relieve Claimant from the effects of his work injury.

TMJ and Botox Injections

45. Because of the assault, Claimant sustained several facial injuries that included a broken jaw and injury to his TMJ. (Ex. 2, pp. 26, 40) At first, Claimant underwent various facial and jaw surgeries that resulted in his jaw being wired shut.

46. Then, on September 19, 2012, Claimant underwent surgery that was performed by Dr. Jannuzzi. The surgery included the removal of hardware as well as a left TMJ arthroplasty with an autogenous bone from his iliac crest, and exploration of his right parasymphysis fracture. (Ex. 3, p. 53)

47. On February 12, 2013, Claimant presented to Dr. Alan Lipkin and he found Claimant's TMJ deviated to the left and had limited mobility on the left. (Ex. 6, p. 479)

48. In March 2016, Claimant returned to Dr. Jannuzzi, the surgeon for the TMJ reconstruction surgery, to obtain an assessment for his ongoing left TMJ pain and facial pain. Dr. Jannuzzi concluded that from a surgical standpoint, Claimant was doing very well. But Dr. Jannuzzi explained to Claimant that the artificial TMJ will not function as a regular TMJ and that the difference in function will cause discomfort. The plan at that time included following Claimant as needed, as well as Claimant continuing with orthodontic care and dental care that included dental implants. (Ex. 3, pp. 58-60)

49. In June 2021, Claimant returned to Dr. Jannuzzi for a re-evaluation of his TMJ due to muscle spasm and pain regarding his TMJ. Then, Claimant's TMJ pain was 6/10 and he could not keep his mouth open wide enough to get his restorative dental work done. Therefore, to reduce Claimant's TMJ muscle spasm, increase his range of motion so he could open his mouth and continue with his dental treatment, and decrease his pain, Dr. Jannuzzi injected Botox into Claimant's superior masseter. (Ex. 3, pp. 62, 63)

50. In July 2021, Claimant returned to Dr. Mason. At this appointment, it was noted that the Botox was working significantly well and resulted in Claimant opening his mouth more and also improved his ability to bite and chew more efficiently. (Ex. 4, pp. 360, 362)

51. In December 2021, Claimant returned to Dr. Mason. At this appointment, it was noted that Dr. Waguespack, another dentist, was recommending repeating the Botox injections because he thought the recurring muscle spasm was causing Claimant's bite to not line up properly. Since it had been 6 months since his last Botox injection, and Botox injections typically last 90 days, Dr. Mason referred Claimant back to Dr. Jannuzzi for repeat Botox injections. (Ex. 4, p. 370)

52. At some point, the repeat Botox injections were denied. Then, in January 2022, Claimant returned to Dr. Mason. At this appointment, she concluded that the Botox injections were reasonably necessary to treat Claimant's jaw problems and she did not understand why the Botox injections were denied since Claimant needs the Botox to treat his TMJ. (Ex. 4, pp. 373, 376) Ultimately, in March 2022, the Botox injections were authorized, and Claimant had the injections. (Ex. 4, pp. 379, 386)

53. In April 2022, Dr. Mason stated that Claimant had been having the Botox injections about every 6-8 weeks, but they were no longer being authorized, despite the Botox injections helping "tremendously" with his left jaw and facial pain. (Ex. E, pp. 30, 31)

54. Claimant returned to Dr. Mason in May 2022. At this appointment it was noted that while the most recent Botox injections were not as helpful as the last ones, it did give Claimant about 75% pain relief but did not help entirely with his bite problems. (Ex. 4, p. 386)

55. Dr. Fall issued a report, dated April 28, 2022. In her report, she concluded that she did not find an indication for ongoing Botox injections. She did, however, indicate that "if there were an indication, clearly documented in the medical records and supported by evidence-based medicine, the Botox injections would be appropriate under maintenance care." (Ex. E, p. 42)

56. The ALJ finds that the medical records establish that the Botox injections reduce Claimant's TMJ/jaw pain and increase his range of motion. They also, to some extent, improve his bite. Therefore, the Botox injections relieved Claimant from the effects of his work injury.

57. Dr. Mason testified about the reasonableness and necessity of the Botox injections. She stated that Botox causes a temporary paralysis of the affected muscles, thereby reducing the spasm and pain. Thus, she concluded that the injections are reasonable and necessary because they reduced Claimant's spasm and associated pain coming from Claimant's TMJ and the muscles used for mastication. The ALJ finds Dr. Mason's opinions and conclusions to be credible and persuasive regarding the reasonableness and necessity of the Botox injections to treat Claimant from the effects of his work injury. Her opinion is found credible and persuasive because it is consistent with the underlying medical records, and Claimant's statements, that demonstrate Claimant gets pain relief and functional improvement from the Botox injections.

58. The ALJ does not find Dr. Fall's opinions about the Botox injections to be persuasive because the medical records document Claimant obtains consistent, albeit temporary, pain relief and increased jaw mobility from the Botox injections.

59. The ALJ finds that the Botox injections reduce Claimant's jaw pain and increase the function of his jaw by allowing him to open his mouth wider.

60. The ALJ finds that the Botox injections are reasonable and necessary medical treatment to cure and relieve Claimant from the effects of his work injury.

Claimant's Request for a Specific Medical Case Manager

61. Claimant has had a complicated course of medical treatment. There have been stops and starts with authorization issues of medical care throughout the claim. Early in the claim a medical case manager, Annette Carter, RN, was selected by the workers' compensation carrier and assigned to the claim. She assisted with the coordination and authorization of the complex medical authorizations, treatment, and payment issues that were needed to provide reasonable and necessary medical care as part of the claim. (Ex. 2, pp. 42, 44; Ex. 3, pp. 58, 61) (*See also* her written reports. Ex. 4)

62. From about 2012, through December 2021, Ms. Carter was the primary medical case manager for Claimant's care. As noted in the records, Ms. Carter started attending medical appointments with Claimant while he was treating at Denver Health in 2012. She also attended appointments with Claimant and Dr. Mason, over an approximate 8-year period. Besides attending appointments and managing care for Claimant with Dr. Mason, Ms. Carter also managed and coordinated care with Drs. O'Brien, Waguespack, Benson, Wells, Levine, Jannuzzi, and probably others.

63. Along with Ms. Carter being a medical case manager, Ms. Anita Solano, who is also an RN, also became a medical case manager and helped manage Claimant's care.

64. On January 13, 2022, Dr. Mason's office was advised that the longtime medical case manager, Ms. Carter, had been removed from Claimant's case by the workers' compensation adjuster. Dr. Mason requested the Insurer reconsider the decision. She

stated Claimant had an extremely complicated and prolonged course of care and was still not at MMI. She noted that there are several remaining items that need to be coordinated, such as the ENT evaluation and the finalization of his dental work. She also noted that her office was not equipped to assist him adequately with these needs. (Ex. 4, p. 375)

65. Dr. Mason stated that in November, she was projecting MMI in a three-month period, but was uncertain regarding MMI because of the authorization issues. She also said that Claimant would require nurse case management services from MMI through a structuring of maintenance care. Dr. Mason stated that Claimant had been through fluctuations in his depression and anxiety recently, and in the past had been severely depressed to the point of suicidality. She was concerned that his delicate emotional state would deteriorate substantially with the change and not to have the services of nurse case manager would delay MMI.

66. Dr. Mason, since the termination of the prior medical case managers, has advocated for the return and retention of the longtime nurse case managers (which were basically two people) because the long-term institutional knowledge of the claim, and the trust developed with Claimant over the period of the claim. According to Dr. Mason Claimant has trust and other issues, and Dr. Mason stated that their continuing involvement was necessary to assist her with obtaining referrals, authorization, and payment for the medical care that is necessary. (Mason Dep. p. 19)

67. The medical case managers over the period of the claim had developed a trusting relationship with Claimant. They helped coordinate Claimant's appointments, handled communication with the carrier and authorization issues for recommended medical care. The long-term and trusting relationship Claimant developed was with the two people that work for the same company. Because of the complexity of the claim, the time the claim had gone on and because of his emotional problems and psychologic state, which has always been somewhat fragile during the period of time Dr. Mason treated him, in Dr. Mason's opinion, required their specific continued involvement.

68. According to Dr. Mason, at a baseline, Claimant is not a very trusting person. Claimant has paranoia from time to time, most of it directed toward the insurance company. This is in addition to an ongoing concern that he still does not know who attacked him or why. So when Claimant does form therapeutic alliances, which he has with most of his providers, and develops a level of trust it is important to his recovery. Claimant had that trusting relationship with the prior nurse cases managers. She testified that he trusted them to act in his best interest. At this point in the claim, there is not any other nurse case manager that would be as beneficial for him because of that established relationship. (Mason Dep. 22)

69. Dr. Mason specifically conveyed that the identification of a different telephonic medical case manager who was an employee of the insurance company, which was suggested at one point, would just add a layer of complication and not be helpful. (Mason Dep. 20)

70. Dr. Mason testified that the case manager also helps her make sure that she has all the information from all the other providers, which does not always happen automatically. So it is a benefit to her to help provide medical care in a timely and

informed position. As a result, Dr. Mason believed that ongoing involvement of Case Med Solutions as nurse case manager are reasonable and necessary now. (Mason Dep. 20)

71. Dr. Mason testified that the services should be available to her and Claimant through MMI and after for a time period. She also concluded that after 11 years, the eventual end of active care will be difficult for Claimant psychologically. Claimant will have a lot of change imposed on him and the ongoing involvement will help ease that transition. She also stated that Claimant is someone who has had frequent suicidal ideations, severe depression, including mood swings, anger, and irritability. He does not have a good support system. As a result, she concluded that having somebody allied to assist with that transition to a less active phase of care would be beneficial and would probably save time, energy, and money that would be spent on other things if his depression and anxiety get any worse. (Mason Dep. 21; Mason Dep. Volume 2, 8)

72. The ALJ finds Dr. Mason's opinions regarding the need for a medical case manager to be credible and persuasive for many reasons. First, Claimant's injuries and need for treatment has been extensive. Second, Claimant's care is being provided by numerous providers and Claimant has established the need for someone to help manage his care with all of the providers involved. Third, the case managers involved in Claimant's case have helped Claimant obtain the treatment he needs for his work-related injuries.

73. The ALJ finds that the need for a specific medical case manager, Ms. Carter, or Ms. Solano, is reasonable and necessary for several reasons. First, because of the time spent managing Claimant's care, each nurse case manager has a significant amount of knowledge regarding Claimant's medical needs and the doctors involved. Second, Claimant has trust issues and is comfortable working with Ms. Carter or Ms. Solano. Third, Dr. Mason believes working with a new case manager would be difficult for Claimant psychologically.

74. The medical case managers here are providing administrative and communication functions designed to coordinate the medical treatment and insure proper care is being provided to Claimant.

75. Respondents have removed the prior medical case managers and replaced them by offering a new medical case manager. Respondents have therefore offered and provided medical case management, and continue to offer medical case management, by offering a medical case manager – of their choice – to help manage Claimant's care.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that the medial branch blocks and the radiofrequency ablations (a/k/a rhizotomies) for his lumbar spine are reasonable, necessary, and related to his industrial injury?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the Claimant proved treatment is reasonable and

necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

The ALJ finds and concludes that Claimant's lower back was injured during the assault, and that his back condition was aggravated and became more symptomatic, i.e., painful with limited range of motion, when he became more mobile and started walking with a limp shortly after the assault. The ALJ further finds and concludes that the back injury, and aggravation, necessitated the need for medical treatment, and Claimant has undergone various treatment for his back.

As also found, Claimant has undergone a number of medial branch blocks and radiofrequency ablations which have been beneficial. As found, the treatment has reduced Claimant's pain and increased his range of motion. But the benefit from each treatment has varied from approximately 12-18 months. Because the treatment is usually not permanent, the treatment must be repeated. In this case, Claimant has had about 5 radiofrequency ablations. As testified to by Dr. Mason, the Colorado Medical Treatment Guidelines suggest that radiofrequency ablations should be limited to 12 over a person's lifetime. At this time, Claimant has not had 12.

Dr. Mason credibly and persuasively testified that the medial branch blocks and radiofrequency ablations are reasonable and necessary to treat Claimant from the effects of his work injury. Her opinion is supported by the underlying medical records, which document an injury to Claimant's back right after the assault, additional back pain due to his altered gait, combined with the relief each medial branch block and radiofrequency ablation has provided Claimant over the years.

The ALJ has also considered the opinions of Dr. Fall. Overall, the ALJ does not find Dr. Fall's opinions to be persuasive. Dr. Fall testified that she does not think Claimant's back injury relates to the assault or his altered gait. This is even though the emergency room records establish Claimant had abrasions on his back after the assault and was referred for chiropractic treatment after Claimant started walking and became more mobile after the assault. She also testified that even if his back condition were caused by his work injury, the radiofrequency ablations are still not reasonably necessary, in part, because she contends Claimant did not have a diagnostic response to the medial branch blocks. Her alternative theory is that any positive effect of the ablations is due to a placebo effect. As found above, the ALJ rejects such a conclusion and finds that portion of her opinion to be evidence of rejecting data that does not support her conclusions, i.e., cherry-picking. On the other hand, Dr. Mason credibly and persuasively testified that Claimant did have a diagnostic response to the medial branch blocks and the radio frequency ablations. The medical records also document that Claimant obtained substantial and sustained relief from the radiofrequency ablations. This relief included a decrease in back pain and an increase in his range of motion. As a result, the ALJ does not find the opinions of Dr. Fall to be persuasive.

Thus, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the medial branch blocks and radiofrequency ablations are reasonably necessary and related to treat Claimant from the effects of his work injury.

II. Whether Claimant has proven by a preponderance of the evidence that the referrals for medical treatment for his posttraumatic nasal deformity, nasal obstruction, septal deviation, and breathing problems are reasonable, necessary, and related to his industrial injury?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Moreover, the cases suggest that medical "treatment" encompasses both diagnostic and curative medical procedures. *See Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949) (exploratory surgery held compensable even where it revealed non-industrial condition); *Public Service Co v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999) ("The record must distinctly reflect the medical necessity of any such treatment and any ancillary service, care or treatment as designed to cure or relieve the effects of such industrial injury."); *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001) (reasonable diagnostic procedures are a prerequisite to MMI if they have reasonable prospect for defining Claimant's condition and suggesting further treatment).

Because of the assault, Claimant suffered significant facial trauma, which included a nasal septum fracture with deviation that resulted in a nasal obstruction.

As found, in May 2012, Claimant underwent a septoplasty to repair his posttraumatic nasal deformity, nasal obstruction, and septal deviation. In February 2013, Claimant presented to Dr. Alan Lipkin, an ENT, for his ongoing nasal obstruction problems that were present after his nasal septal reconstruction. At that time, Dr. Lipkin recommended Claimant use nasal saline irrigation for the consequences of his work injury, which included Claimant's nasal obstruction.

In September 2013, Claimant presented to Dr. Jannuzzi. At this appointment, it was noted that there was obstruction involving Claimant's right sinus. But, at this appointment, it was not known whether the obstruction was due to maxillary sinusitis or nasal intubation.

As part of his treatment for his facial injuries, Claimant was prescribed a mouthguard. While using his mouthguard at night, Claimant noticed that he was having a lot of difficulty breathing through his nose and brought it up with Dr. Mason in February 2022. Soon after, in April 2022, Dr. Mason noted that Dr. Millam concluded that Claimant was suffering from some collapse of one of his nostrils.

Other than the work-related assault, which resulted in a nasal septum fracture with deviation, and a nasal obstruction that required surgery, there is no credible evidence that Claimant has suffered any other nasal injuries since the assault.

Moreover, Dr. Mason testified that she believes Claimant's current problem of breathing through his nose and need for an assessment is because (1) Claimant incurred significant trauma to his nose and face in the form of a nasal fracture, (2) he had reconstructive surgery, and (3) there does not seem to be a new and unique diagnosis.

The ALJ finds Dr. Mason's opinions regarding causation of Claimant's nasal problems and need for a referral to a specialist to be credible and persuasive. Her opinion is found credible and persuasive because it is consistent with, and supported by, Claimant's underlying medical records that demonstrate prior trauma to his nasal area, prior surgery to his nasal area, and a prior collapse of his nasal area.

The ALJ has considered Dr. Fall's opinion. Her opinion is basically that too much time has elapsed from the date of injury for any nasal problems to be related. But she is not an expert in these matters. Moreover, her opinion is inconsistent with Claimant's underlying medical records that demonstrate trauma to his nasal passage, collapse to his nasal passage, and surgery.

As found, a referral to a nasal specialist, or specialists, has a reasonable prospect for defining the extent of Claimant's nasal condition and the extent of future treatment that is needed due to the assault. As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the need for medical treatment from a nasal specialist, or specialists, to evaluate Claimant's nasal breathing problems is reasonably necessary and related to his work injury.

III. Whether Claimant has proven by a preponderance of the evidence that the Botox injections to the TMJ area of the jaw are reasonable, necessary, and related to his industrial injury?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, the assault fractured Claimant's jaw and damaged his left TMJ. As a result, Claimant underwent a left TMJ arthroplasty in 2012. Due to his injuries, and the TMJ surgery, Claimant has developed muscle spasms involving his TMJ. The muscle spasms reduce his range of motion, i.e., ability to open his mouth, and also cause facial pain.

As found, the Botox injections reduce Claimant's pain and increase his range of motion. As a result, the Botox injections relieve Claimant from the effects of his work injury.

Dr. Mason testified about the reasonableness and necessity of the Botox injections. She stated that Botox causes a temporary paralysis of the affected muscles, thereby reducing the spasm and pain. Thus, she concluded that the injections are reasonable and necessary because they reduced Claimant's spasm and associated pain coming from Claimant's TMJ and the muscles used for mastication. The ALJ finds Dr. Mason's opinions and conclusions to be credible and persuasive regarding the reasonableness and necessity of the Botox injections to treat Claimant from the effects of his work injury. Her opinion is found credible and persuasive because it is consistent with the underlying medical records that demonstrate Claimant gets temporary pain relief and functional improvement from the injections.

Dr. Fall, in her April 28, 2022, report concluded that she did not find an indication for ongoing Botox injections. But the ALJ found that the Botox injections reduced Claimant's pain and increased his function. Therefore, the ALJ rejects Dr. Fall's opinion that the Botox injections are not reasonable and necessary.

The ALJ finds and concludes that Claimant established by a preponderance of the evidence that the Botox injections are reasonable and necessary to treat Claimant from the effects of his work injury.

IV. Whether Claimant has established that he is entitled to his preferred nurse case manager?

The Act requires that Respondents offer medical case management. "Every employer or its insurance carrier shall offer at least managed care or medical case management…" § 8-42-101(3.6)(p)(II). The Act defines case management as "a system developed by the insurance carrier in which the carrier shall assign a person knowledgeable in workers' compensation health care to communicate with the employer, employee, and treating physician to assure that appropriate and timely medical care is being provided." § 8-42-101(3.6)(p)(A).

> It is now well established that the term "shall" refers to a mandatory act. *Salazar v. Industrial Claim Appeals Office*, 10 P.3d 666 (Colo. App. 2000). Further, the term "assign" is defined in Webster's II New College Dictionary, (1995) as the action of selecting, appointing and designating. Thus, by its plain language § 8-42-101(3.6)(p)(I)(A) requires the insurer to select the case manager.

Muir v King Soopers, W.C. No. 4-350-892, 4-5 (May 23, 2003).

Respondents fulfilled the requirements by selecting and assigning a new case manager. The Act does not require the same or preferred case manager, but only a "person" who is "knowledgeable in workers' compensation health care." Pursuant to the Workers' Compensation Guide, this could be '"a highly skilled nurse who specializes in managing workers' compensation injuries, whether it is a catastrophic injury or an injury that requires surgery." Workers' Compensation Guide § 2:14, Westlaw (database updated Apr. 2018)." *Macaulay v. Villegas*, 6 (Colo. App. April 7, 2022).

Respondents possess exclusive authority to designate the case manager who will be providing medical case management. Respondents are not required to assign Claimant's preferred or requested case manager. Instead, Claimant's recourse is his right to refuse the presence of a case manager at the Claimant's medical appointment. § 8-43-203(3)(b)(IV).

Moreover, as set forth in *Muir*:

> § 8-42-101(3.6)(p) contains no such procedure whereby the Claimant may seek the services of a case manager other than the one selected by the respondent, and we may not read non-existent provisions into the statute. *See Arenas v. Industrial Claim Appeals Office*, 8 P.3d. 558 (Colo. App. 2000). Under these circumstances we are compelled to conclude the General Assembly intended to vest

> the respondent with the exclusive authority to designate the person to provide case management services.

Muir v King Soopers, W.C. No. 4-350-892, 6 (May 23, 2003).

Respondents are not required to designate requested nurse case managers, even if recommended by an authorized medical provider:

> Relying on the decision in *Muir v King Soopers*, W.C. No. 4-350-892 (May 23, 2003), the ALJ concluded the statute specified 'case management' is to be a system "developed by the insurance carrier" and the insurance carrier "shall assign" the person to fulfill that role. A recommendation by a medical provider had no significance in that regard.

April Tatman v. Morgan County, W.C. No. 5-090-379 (September 8, 2022).

Likewise, nurse case management is not a medical benefit. Thus, a medical provider's opinion that only specific nurse case managers are reasonable, necessary, and related, is irrelevant as to who selects the Nurse Case Manager:

> Accordingly, the services of a case manager that are interchangeable with those of the guardian described in *Nanez*, would fail to qualify as a medical benefit…The ALJ's finding the recommendation of [requested nurse case manager] to be reasonable and necessary notwithstanding, we find the ALJ's determination he is without authority to authorize a case management provider does not represent error.

April Tatman v. Morgan County, W.C. No. 5-090-379 (September 8, 2022).

Claimant contends that the analogy of the designation in the first instance of a nurse case manager resembles the designation of an authorized treating physician in the first instance. Once a specific treating physician is authorized, there is no way for the Respondents to deauthorize that specific treating physician, unless done through a utilization process. Thus, Claimant contends that once a case manager is authorized, there is no way for Respondents to deauthorize the case manager. See *Granger v. Penrose Hosp.*, W.C. No. 4-351-885 (July 20, 1999); *Chapman v. The Spectranetics Corp*., W.C. No. 4-162-568 (May 30, 1997).

But based on a review of the statute, the ALJ does not concur that the analogy is appropriate. The Act requires the insurer to offer "medical case management." The Act then defines "case management" as "a system developed by the insurance carrier in which the carrier shall assign a person knowledgeable in workers' compensation health care to communicate with the employer, employee, and treating physician to assure that appropriate and timely medical care is being provided." Section 8-42-101(3.6)(p)(A).

A strict reading of the relevant statutory provisions leads this ALJ to conclude that the provision of "medical case management" is not the provision of medical treatment. Thus, the fact that a nurse, RN, is providing medical case management does not convert the medical case management service into medical treatment. The benefit at issue is "medical case management" and the insurer only has to provide a person who is

"knowledgeable in workers' compensation health care to communicate with the employer, employee, and treating physician to assure that appropriate and timely medical care is being provided." Thus, a person who is knowledgeable in workers' compensation health care could be an adjuster. Thus, merely assigning the task to a nurse, or even a physician, does not convert the medical case management service, an administrative function, into medical treatment governed by the same statutes and laws regarding the authorization of a physician. In other words, it is the type of service being provided pursuant to statute that dictates who gets to control the provision of that service, and not the type of person providing the service.

The ALJ is mindful that changing the medical case manager might result in consequences that are medical in nature. For example, a new medical case manager might cause Claimant to need additional medical treatment due to increased anxiety or depression. But again, the consequence of changing the medical case manager does not change the administrative, and non-medical, nature of the service being provided under the statute.

As a result, the ALJ finds and concludes that Respondents fulfilled their obligation by first offering and assigning case managers, who were nurses, at the beginning of the claim. Then, Respondents exercised their right to select a new medical case manager and assigning that new nurse case manager to Claimant. Claimant's statutorily granted recourse, if he was dissatisfied with the selected medical case manager, is to exercise his right of refusal. Claimant does not have the right pursuant to statute or case law to select a specific medical case manager of his choice. Moreover, pursuant to statute and case law, Respondents' liability does not require Respondents to accommodate Claimant's request for a prior medical case manager.

Claimant has thus failed to establish that he is entitled to ongoing medical case management services with a specific, or prior, case manager of his choosing.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for reasonable and necessary medical treatment for Claimant's low back, which shall include medial branch blocks and radiofrequency ablations.
2. Respondents shall pay for Claimant to undergo Botox injections to treat Claimant's facial injuries, which includes the area involving his TMJ.
3. Respondents shall pay for the referrals for Claimant to be evaluated by a specialist, or specialists, to evaluate Claimant's nasal and breathing problems.
4. Claimant is not entitled to his preferred nurse case manager, even if it is a prior case manager.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 21, 2022

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on February 12, 2022.

2. On April 16, 2022, Respondents filed an Amended General Admission of Liability admitting for medical benefits and temporary total disability (TTD) benefits from February 13, 2022 through March 18, 2022 (4 6/7 weeks). Respondents admitted for an AWW of $304.20 at a TTD rate of $202.80, totaling $985.03 of TTD paid to Claimant. Respondents admitted AWW was based on the wages of a different employee.

3. Claimant's paystubs demonstrate that she earned the following wages during the following pay periods leading up to her work injury.

Pay Period	Gross Wages
11/5/2021-11/18/2021	$869.26
11/19/2021-12/2/2021	$922.72
12/3/2021-12/16/2021	$872.80
12/17/2021-12/30/2021	$1,083.68
12/31/2021-1/13/2022	$952.96
1/14/2022-1/27/2022	$283.52
1/28/2022-2/10/2022	$548.16
Total:	**$5,533.10**

4. Based on the above gross wages, Claimant's AWW is $395.22 ($5,533.10 divided by 14 weeks = $395.22). The corresponding TTD rate with an AWW of $395.22 is $263.48 ($395.22 multiplied by 66 2/3 = $263.48). A TTD rate of $263.48 multiplied by 4 4/7 weeks = $1,279.76.

5. Based on Claimant's AWW, Claimant is owed $294.73 in TTD ($1,279.76 minus $985.03).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and

medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82.

Claimant's paystubs provide an accurate basis for determining Claimant's actual gross earnings leading up to her work injury. As found, an AWW of $395.22, based on the average of Claimant's gross wages in the 14 weeks prior to her industrial injury, is a fair approximation of Claimant's wage loss and diminished earning capacity. As Respondents paid Claimant TTD based on a lower AWW ($304.20) and, thus, lower TTD rate ($202.80), Claimant is owed TTD in the amount of $294.73, per the calculations set forth in Findings of Fact #4-5.

ORDER

It is therefore ordered that:

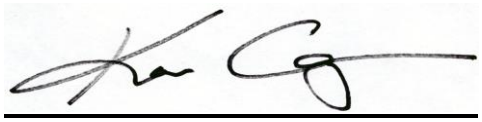
1. Claimant's AWW is $395.22, with a corresponding TTD rate of $263.48.

2. Respondents shall pay Claimant $294.73 in TTD owed to Claimant, based on Claimant's AWW and corresponding TTD rate determined herein.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she is an employee of Respondent pursuant to a contract of hire.

II. Whether Claimant proved by a preponderance of the evidence she sustained a compensable industrial injury arising out of and in the course of her employment.

III. Whether Claimant proved by a preponderance of the evidence she and/or her health insurance carrier is entitled to reimbursement of reasonable, necessary and related medical expenses.

FINDINGS OF FACT

1. Claimant is 64 years of age. Claimant retired from her last paid employment approximately 15 years ago.

2. Respondent is a food bank serving southern Colorado.

3. Claimant credibly testified at hearing. She testified that she had personally been using the services of Respondent, then subsequently decided to volunteer for Respondent at a particular market.

4. Claimant provided volunteer services for Respondent beginning in approximately May 2021. Initially, there was no particular onboarding process for Claimant as a volunteer. Respondent subsequently required volunteers to complete volunteer paperwork online, including a "Volunteer Waiver and Release of Liability" form. The form repeatedly and solely refers to the signatory as a "Volunteer." The form states, in part,

> 1. Release and Waiver. Volunteer does hereby release and forever discharge and hold harmless [Respondent] and its successors and assigns from any and all liability, claims, and demands of whatever kind or nature, either in law or equity, which arise or may hereafter arise from Volunteer's activities with [Respondent]. Volunteer understands that that this release discharges [Respondent] from any liability or claim with respect to any bodily injury, personal injury, illness, death, or property damage that may result from the Volunteer's activities. Volunteer understands that [Respondent] does not assume any responsibility for or obligation to provide financial assistance or

other assistance, including but not limited to medical, health, or disability insurance in the event of injury or illness.

2. Medical Treatment. Volunteer does hereby release and forever discharge [Respondent] from any claim whatsoever which arises or may hereafter arise on account of any first aid, treatment, or services rendered in connection with the Volunteer's activities with [Respondent].

3. Assumption of the Risk. The Volunteer understands that the activities/work may be hazardous to the Volunteer, including, but not limited to lifting, loading and unloading, and other warehouse activities. Volunteer hereby expressly and specifically assumes the risk of injury or harm and releases [Respondent].

(R. Ex. L, p. 82).

Claimant testified that she did not specifically remember completing the form, although she remembered going online to fill out documentation. She acknowledged that the electronic signature on the form (her email address) dated June 28, 2021 was her correct information.

5. Claimant did not receive, nor was there any agreement between the parties that Claimant was to receive, any type of remuneration for her volunteer services. Claimant was not paid any wages and did not receive any fringe benefits for her volunteer services.

6. Claimant had access to free groceries at the market as did non-volunteer individuals. Claimant testified that, as a volunteer, she was able to for groceries at the market after her volunteer shift, resulting in her having first pick at the best foods on display. She further testified that, as a volunteer, the market did not watch her for food limits as they did for non-volunteers.

7. Claimant chose how many hours she wanted to volunteer per week, and signed up for the desired volunteer shift online. Claimant typically performed her volunteer services for 1-3 hours per week.

8. Claimant was supervised by Respondent's Market Manager, RS[Redacted]. As the Market Manager, Ms. RS[Redacted] was responsible, in part, for instructing the volunteers as to the tasks to be performed and overseeing the work of the volunteers. Claimant testified that she would arrive for her volunteer duty and be assigned a task, such as loading or unloading a pallet, cleaning the bathroom, or checking the refrigerator. Claimant testified that she was required to take directions from RS[Redacted] on what tasks to do and how to do them. Claimant testified that she would be reprimanded by RS[Redacted] if she did not do her work task according to RS[Redacted]'s standards. Claimant testified that RS[Redacted] was in control of her work tasks while she was at the market. Claimant testified that RS[Redacted] had the

authority to terminate volunteer employment, did terminate another volunteer in Claimant's presence on one occasion.

9. Claimant alleges she sustained an industrial injury while performing services for Respondent on November 4, 2021. Claimant testified that she was assigned to unload a pallet of Thanksgiving canned food, then stock the leftover boxes in the storage room. She testified that while performing this task she felt a back spasm in her shoulder blades.

10. Claimant testified that she did not immediately seek medical treatment and instead obtained a back brace on her own. Claimant testified that she contacted her rheumatologist, who prescribed her a course of steroids, which did not improve Claimant's symptoms. Claimant testified that she subsequently sought additional medical treatment when the pain worsened to the point she was having difficulties with mobility and performing activities of daily living.

11. Claimant presented to the emergency department at Parkview Medical Center on November 15, 2021 with complaints of low back pain radiating into her left buttock and throughout the entirety of her right leg. Claimant underwent a CT of the lumbar spine, for which Charles Westin, M.D. noted revealed acute fractures of the sacrum and no acute fracture or traumatic subluxation of the lumbar spine. It was suspected that osteoporosis likely contributed and there was a possible insufficiency fracture. CT imagining was also suggestive of neuroforaminal narrowing and spinal stenosis.

12. On November 16, 2021 Claimant underwent a neurosurgical consultation at Parkview Medical Center with Ali K. Murad, M.D. and Thomas J. Scruton, P.A. Claimant reported that her symptoms began after lifting some heavy boxes when she was volunteering about two weeks prior. Claimant reported that she experienced lower back pain at the time that evolved to radiating pain in the left buttock and right lower extremity. Dr. Murad noted that evaluation demonstrated lumbar degeneration, particularly at L4-5, and sacral fractures. He further noted that Claimant's past medical history was notable for osteoporosis, rheumatoid arthritis, and peripheral neuropathy. Dr. Murad gave the following assessment: Right L5 radiculopathy of unclear etiology; L4-5 changes on CT: Degenerative, infectious or autoimmune (very unlikely) differential; sacral insufficiency fractures; suspect severe osteoporosis; rheumatoid arthritis on leflunomide; peripheral neuropathy." (R. Ex. H, p. 36).

13. Claimant underwent a lumbar spine MRI on November 17, 2021 which revealed moderate central spinal stenosis L4-5; extensive degenerative disc disease with evidence of small posterior annual tear of L4-5 discs; mild grade 1 anterolisthesis of S1 upon S2 and slight anterior angulation of S1 with compression fracture of S1, with no evidence of cord or nerve root compression. PA Scruton documented, "Patient with acute minimally displaced fractures of the bilateral sacral alae likely insufficiency in setting of osteoporosis, no reported trauma. Likely secondary to chronic osteoporosis." (Cl. Ex. 000018.) PA Scruton noted, "She thinks her sacral fractures may actually be quit old and associated with a sacrococcygeal fracture she sustained in her 20s.

Notably she had no pain in palpation/percussion of the sacrum on exam yesterday. She has no lower back pain at this time." (Id. at p. 39).

14. Claimant underwent epidural steroid injections on November 19, 2021 from which she reported significant benefit. It was noted that Claimant's fractures appeared subacute versus chronic in nature. No surgical intervention was recommended at the time.

15. On November 29, 2021 Claimant presented to Eric Bernauer, M.D. at Physician Anesthesia of Pueblo. She reported that she experienced signification relief from the epidural steroid injection but continued to experience some persistent pain.

16. On January 26, 2022, Claimant returned to the emergency department at Parkview Medical Center after falling on pavement and fracturing her nose. She reported that she had been experiencing numbness in her right leg since November 2021, which resulted in occasional falls.

17. Claimant returned to performing her volunteer services for Respondent in approximately mid-January 2022 and continued to volunteer for Respondent for approximately 1-2 hours per week until April 21, 2022.

18. On April 25, 2022, SW[Redacted], Direct Services Manager, emailed Claimant and requested that she cease her volunteer work with Respondent until she resolved her legal matters (the alleged work injury).

19. Claimant testified that, despite referring to herself as a volunteer in correspondence with Respondent, she "feels like" she was an employee of Respondent due to the "setup."

20. Claimant further testified that, prior to the incident on November 4, 2021, she did not have prior back issues or difficulties performing activities of daily living. She testified that she continues to experience weakness in her right leg and tingling in her toes. Claimant testified that she cannot bend like she used to, has difficulties on inclines, and walks with a cane. Claimant stated that she has received medical bills in excess of $50,000. Claimant has private health insurance. Claimant testified that her doctors have recommended surgery for her back injury.

21. Mr. SW[Redacted] credibly testified at hearing on behalf of Respondent. Mr. SW[Redacted] testified that volunteers go online to sign up and sign a waiver. Mr. SW[Redacted] testified that volunteers are not paid or compensated in any manner, nor are they provided any fringe benefits. He further testified that there are managers who oversee the volunteers. Mr. SW[Redacted] explained that volunteers are given food safety training, while employees are provided additional training not given to volunteers. He testified that volunteers are not given any preferential access to the groceries offered at the market.

22. ZE[Redacted], Chief Financial Officer, credibly testified at hearing on behalf of Respondent. Mr. ZE[Redacted] testified that volunteers do not receive any wages,

benefits or other form of compensation. He explained that there is an onboarding, but no hiring process, for volunteers. Mr. ZE[Redacted] testified that volunteers dictate the number of hours they work. He further testified that Respondent does not carry workers' compensation insurance for volunteers.

23. Claimant failed to prove it is more probably true than not a contract of hire existed between Claimant and Respondent. Accordingly, there was no employer-employee relationship subjecting the parties to the provisions of the Act.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Employer-Employee Relationship

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Workers' Compensation Act, he was performing service arising out of and in the course of his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The term "employer" is defined to include every person, firm or corporation "who has one or more persons engaged in the same business or employment, except as expressly provided in articles 40 to 47 of this title, in service under any contract of hire, express or implied." §8-40-203(1)(b), C.R.S. The term "employee" is defined as any person in the service of any person or corporation "under any contract of hire, express or implied." §8-40-202(1)(b), C.R.S.

An employer-employee relationship is established when the parties enter into a "contract of hire." §8-40-202(1)(b), C.R.S.; *Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991). A contract of hire may be express or implied, and it is subject to the same rules as other contracts. *Denver Truck Exchange v. Perryman*, 134 Colo. 586, 307 P.2d 805 (Colo. App. 1957). The essential elements of a contract are competent parties, subject matter, legal consideration, mutuality of agreement and mutuality of obligation. *Aspen Highlands Skiing Corp. v. Apostolou*, 866 P.2d 1384 (Colo. 1994); *Martinez Caldamez v. Schneider Farm*, WC 4-853-602 (ICAO, July 16, 2012). A contract of hire may be formed even in the absence of every formality attending commercial contracts. *Rocky Mountain Dairy Products v. Pease*, 161 Colo. 216, 422 P.2d 630 (1966); *In re Ritthaler*, WC 4-905-302-02 (ICAO, May 7, 2014).

Claimant argues that she was an employee of Respondent pursuant to an implied contract to perform work. She contends that the volunteer "hiring process" and the Volunteer Waiver and Release of Liability constitute a contract for hire as an agreement between parties regarding Claimant's services, containing mutual agreements and obligations between the parties.

As found, the preponderant evidence does not establish that an express or implied contract of hire existed between Claimant and Respondent. Respondent- had all volunteers execute the Volunteer Waiver and Release of Liability form, which specifically refers to claimant therein as a volunteer and does not contain any provision regarding any remuneration. That the waiver addresses some obligations on behalf of the volunteer (i.e. release of liability) does not constitute a contract for *hire*. Neither the waiver, nor the nature of the volunteer relationship between Claimant and Respondent, indicate there was any mutual agreement or meeting of the minds that Claimant would be providing services for remuneration.

Claimant strictly performed services for Respondent in a volunteer capacity without receiving, or any agreement to receive, remuneration. As a volunteer, Claimant had the ability to shop for groceries at the market just as other non-volunteer members of the community did. Mr. SW[Redacted] credibly testified that volunteers are not compensated in any manner, not provided any fringe benefits, and are not given any preferential treatment with respect to access to the groceries. That Claimant may have been able to pick her groceries first by virtue of being present in the market earlier than others due to her chosen volunteer shift, or that the market did not strictly enforce food limits, does not in these circumstances constitute remuneration sufficient to establish a contract of hire. There is no evidence Claimant volunteered with the expectation of remuneration. *See Aspen Highlands Skiing Corp. v. Apostolou*, 854 P.2d 1357 (Colo. App 1992), *aff'd*, 866 P.2d 1384 (Colo. 1994) (where the court, citing *Hall v. State Compensation Insurance Fund*, 154 Colo. 47, 387 P.2d 899 (1963), noted that if the services are volunteered without any expectation of compensation in return, the fact that the alleged employer may provide some benefit on a gratuitous basis will not convert a volunteer into an employee). The evidence demonstrates Claimant provided services for Respondent solely as a volunteer. Claimant understood and acknowledged that she was a volunteer and Respondent did not obligate itself to provide any compensation or other benefit to Claimant in return for Claimant's volunteer services.

Claimant further argues that she was an employee because she was under direction and control of Respondent, who also had the right to terminate the relationship without liability. These factors are relevant to the determination of whether Claimant was an employee or independent contractor. See §8-40-202(2)(a) & (b), C.R.S. (any individual who performs services for pay for another shall be deemed to be an employee unless the person is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent business related to the service performed). An analysis of whether Claimant was an employee or independent contractor occurs when it has first been established that there was an employer-employee relationship subjecting the parties to the provisions of the Act. As the ALJ determined herein that Claimant was not performing services for pay and there was no contract of hire, the distinction between employee and independent contractor, as well as determination of whether any injury arose out of and in the scope of employment, are moot.

ORDER

It is therefore ordered that:

1. Claimant's claim is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Did Claimant prove entitlement to medical benefits for treatment to his groin and hips are due to his admitted work related back injury?

FINDINGS OF FACT

1. Claimant works for Employer as a mechanic. He sustained an admitted low back injury on February 24, 2020. He injured himself using a 3" pipe lever to straighten a bent snowplow mount.

2. He treated with Dr. Lakin who referred him for x-rays and a MRI scan. The MRI scan showed L4-5 stenosis and degenerative disc disease. Dr. Lakin treated him with medications and returned him to light duty. He was referred to Dr. Sparr for back injections.

3. After conservative care did not help, he was seen in August 2020 by Dr. Kang who recommended consideration of an anterior lumbar interbody fusion at L4-5.

4. An IME was performed by Dr. Elfenbein on October 8, 2020 and he indicated that the pain generator was his right hip osteoarthritis. He indicated that this needed to be addressed before any further treatment for Claimant's lumbar spine.

5. The Claimant was referred by Dr. Sparr to Dr. Miner for evaluation of his hip. Claimant saw Dr. Miner on November 11, 2020. Dr. Miner diagnosed bilateral advanced hip osteoarthritis and recommended bilateral hip arthroplasty. He also noted in the history that the pain was isolated to the bilateral groin region. On December 10, 2020, he underwent bilateral total hip arthroplasty with Dr. Miner. Following the surgery, Dr. Miner noted on January 20, 2021 that Claimant's hip and groin pain had resolved.

6. Claimant returned to Dr. Miner on March 8, 2021. In his chart note, he states "Unfortunately patient sustained a large femoral DVT approximately 2 weeks ago . . . He states that he started developing symptoms in the groin 2 weeks prior to the clot itself and then noticed increasing leg swelling he called our office and we informed him to go to the emergency room for an evaluation and ultrasound." (Respondents Exhibit D-14 – 15). Dr. Miner questioned whether the pain was due to the DVT or psoas tendonitis. Dr. Miner evaluated Claimant virtually on April 12, 2021 and Claimant reported that his preoperative groin and thigh pain had essentially resolved.

7. The Claimant continued to have low back pain and he eventually underwent an anterior lumbar interbody fusion on May 27, 2021 with Dr. Kang.

8. Claimant's authorized treating provider for his occupational injury is Dr. George Johnson. He reported in his May 10, 2022 chart note that Claimant "had some PT following the surgery but discontinued due to his L groin pain which has been present since the surgery." Dr. Johnson stated Claimant needed additional work up for the left groin pain as it was uncertain if the current condition was due to the non-work related hip condition or his work related low back. (Respondents' Exhibit B page 2). Without explanation or new medical evidence to support his conclusions, Dr. Johnson stated in his July 14, 2022 report that it was his professional opinion "that Claimant's groin pain is due to his back surgery and, as it did not start until he had his back surgery, it should be covered by work comp.". (Claimant's Exhibit 4, page 35).

9. On June 13, 2022, Claimant was evaluated at UC Health by Dr. Finn. Dr. Finn stated that Claimant presented for ongoing left groin pain that began 6 days after the ALIF procedure. Dr. Finn opined that "His pain is somewhat atypical." Dr. Finn further stated "I do not know this is the result of the L4-5 fusion. It certainly would be an unusual result that I have not seen before." (Respondents' Exhibit E page 1)

10. Claimant was seen at UC Health by Andrew Donovan, MD (Resident) Neurological Surgery. Claimant had been evaluated post ALIF surgery with worsening left groin pain. The pain would shoot down the inside of his leg from the groin and extinguishing at the knee (nondermatomal pattern). After exam, Claimant was encouraged to follow up with Sports Hernia Clinic as the pain does not appear to be from his spine surgery in etiology. (Respondents Exhibit E, page 2).

11. The Claimant was evaluated by Dr. Lee and Dr. Rothchild on August 3, 2022. The possibility of a hernia was ruled out. Imaging and clinic exam did not show a hernia in the left groin. Extensive work up including CT, US, MRI and EMG were all unremarkable. The timing of it didn't make sense for a sports hernia as Claimant was recovering in bed after his spine surgery when he developed pain with left leg flexion. (Respondents' Exhibit F).

12. Respondents obtained an IME with Dr. Wallace Larson. In his September 28, 2022 report, Dr. Larson stated that "[a]t this time his left groin pain has not been definitely diagnosed but is most likely iliopsoas tendinitis either as an idiopathic condition or related to his total hip arthroplasty…it is not like related to his anterior lumbar fusion." Dr. Larson recommended "CT-guided iliopsoas injection with contrast material to document the precise location of the injection but that would be outside his occupational claim". Dr. Larson observed that "[a]lthough many entries in the medical records indicate his groin pain began only after the spine surgery, the note from Dr. Todd Miner of 3/8/2021 indicates left groin pain with a suspicion of iliopsoas tendinitis at that time." Dr. Larson opined that the request for physical therapy "is not likely to be beneficial and is not occupationally related." Dr. Larson further opined Claimant has reached MMI for his February 24, 2020 work injury as of the date of the IME. (Respondents' Exhibit G).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101,*et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

D. Once a claimant has established the compensable nature of his work injury, he is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d

448 (Colo. 1949); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra.*

E. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). In this case, the Claimant has failed to sustain his burden of proof that his hips or groin symptoms are related to his admitted work injury. I am persuaded by the opinions of Dr. Larson, whom I find to be credible, that these symptoms are not related to the Claimant's work injury. I am unpersuaded by Dr. Johnson's opinions to the contrary since they are conclusory without any reported analysis supporting his opinions.

F. Claimant alternatively argues that the medical care for an unrelated condition is covered under a claim where such treatment optimizes recovery for the compensable injury. Claimant relies on *Price Mine Service v. Industrial Claim Appeals Office*, 64 P.3d 936 (Colo. App, 2003) and *Gardea v. Express Personnel Professionals*, W.C. 4-650-961 (I.C.A.O, 2011) for this proposition. However, I find that the Claimant has failed to sustain his burden of proof that treatment for the Claimant's hips are groin were or are necessary in order for him to receive optimum treatment of the industrial injury.

ORDER

1. The Claimant's request for medical treatment for his groin or hips is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

NOTICE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email

address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Respondents are precluded from challenging the impairment rating provided by the Division Independent Medical Examiner (DIME) per the July 30, 2020 stipulation of the parties.

- If Respondents are not precluded from challenging the DIME opinions concerning impairment, whether Respondent presented sufficient evidence to overcome the February 7, 2022 DIME opinion of Dr. Karl Larsen regarding permanent impairment.

- Whether Claimant has proven, by a preponderance of the evidence, that she is entitled to maintenance medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background

1. Claimant sustained a work injury to her left shoulder on March 28, 2019. There was initial confusion as to which shoulder Claimant allegedly injured; however, during the discovery process the parties determined that Claimant actually injured her left shoulder rather than the right shoulder as referenced in many of her medical reports.

2. On July 30, 2020, the parties filed a Stipulation and Motion for Approval wherein Respondents agreed to file a medical benefits only General Admission of Liability (GAL) admitting that Claimant injured her left shoulder on March 28, 2019. (Clmt's Ex. 2, p. 5-6). As part of this stipulation, Claimant agreed that she was not alleging an injury to the right shoulder or the left foot/ankle as a result of the March 28, 2019 incident. *Id*. at p. 6. She also stipulated that she was not seeking temporary total disability (TTD) benefits as a consequence of her left shoulder injury; however, the stipulation did not contain any terms/agreements concerning permanent impairment. *Id.* The Stipulation effectively retracted a September 20, 2019 "Notice of Contest" which denied liability for an alleged injury to the left shoulder. *Id* at p. 5. The stipulation was approved by an order of ALJ William Edie issued August 4, 2020. *Id*. at p. 8-9.

Claimant's Initial Post-Injury Treatment

3. Following her left shoulder injury, Claimant presented to the Parkview emergency room (ER) on April 8, 2019. While in the ER, Claimant complained of a left

upper injury two to three weeks prior while at work. She was moving while cleaning and may have over stretched her shoulder. Claimant had full range of motion. (Resp. Ex. H, p. 145-146).

4. Claimant saw Dr. Likes for the first time on April 11, 2019, nearly two weeks after the work incident. (Resp. Ex. G, p. 46). She underwent conservative medical care.

5. Claimant had an MRI of her left shoulder on May 29, 2019. It demonstrated anterior and superior rotator cuff tendinopathy with partial thickness tearing; mild to moderate AC joint arthrosis and subacromial subdeltoid bursitis. (Resp. Ex. G, p. 45). A second MRI of the left shoulder was obtained on November 16, 2020. It continued to demonstrate moderate subscapularis tendinosis. (Resp. Ex. G, p. 62).

Dr. Miguel Castrejon's Independent Medical Examination

6. Claimant underwent an independent medical examination (IME) with Dr. Miguel Castrejon at the request of Claimant's counsel on June 25, 2020. (Clmt's. Ex. 4). She reported to Dr. Castrejon that she experienced pain in her left shoulder while cleaning a bathtub. (Clmt's. Ex. 4, p. 48). She reported having been sent for an MRI of the left shoulder that revealed a tear. *Id.* As of the June 25, 2020 examination, Claimant was reporting ongoing, constant pain in her left shoulder that she reported had not been addressed through treatment. *Id.* Dr. Castrejon had few medical records and did not have a copy of Claimant's imaging report(s). *Id.* 49. Based on the available records and Claimant's reported history, Dr. Castrejon determined that Claimant had a compensable injury to her left shoulder. *Id.* He diagnosed her with a left shoulder rotator cuff strain with clinical findings of impingement and rotator cuff weakness. He also recommended that internal derangement be ruled out and noted that Claimant appeared to have an element of left shoulder girdle myofascial pain. *Id.* Dr. Castrejon opined that he would want to review the entire file before determining whether additional care was needed for the left shoulder, and if not, then to determine her impairment rating. *Id.* at 50.

Dr. William Ciccone's Independent Medical Examination

7. Respondents requested an IME with Dr. William Ciccone. Dr. Ciccone evaluated Claimant on August 4, 2021. Dr. Ciccone noted that Claimant was wiping down a bathtub when she experienced pain and clicking in her shoulder. She denied any fall on or impact to her shoulder. (Resp. Ex. F, p. 26). He attempted a physical exam prompting Claimant to report increasing pain. Consequently, he stopped the examination. (Resp. Ex. F, p. 28). Dr. Ciccone noted that Claimant demonstrated guarding during the examination and reported diffuse myofascial pain with palpation to the left shoulder. (Resp. Ex. F, p. 35). He commented further that Claimant's pain appeared to be worsening with treatment, which would be unusual. (Depo. Tr. p. 8:23-25). Dr. Ciccone noted that Claimant's range of motion initially was nearly full but a few months later was significantly restricted. (Depo. Tr. p. 9:2-8).

8. Dr. Ciccone opined that Claimant suffered a minor sprain/strain to the left shoulder. (Resp. Ex. F, p. 34). He explained that Claimant's mechanism of injury (MOI) was not substantial enough to cause a significant injury, including a rotator cuff tear. (Depo. Tr. p. 7:4-7, 23-25; 8:1). He noted that Claimant had a click in her shoulder and increased pain but there was no impact on the shoulder, no fall and no lifting injury. (Depo. Tr. p. 9:14-19). He opined further that there were no objective findings of a shoulder injury that would limit Claimant's range of motion. (Resp. Ex. F, p. 34). Finally, Dr. Ciccone explained that Claimant's MRI did not reveal an acute injury, but rather chronic degenerative changes. He clarified that tendinosis is a common natural aging process wherein the tendons degenerate as people age and that tendinopathy is not usually associated with trauma. (Resp. Ex. F, p. 34; Depo. Tr. p. 12:9-13-13:1-5). Finally, Dr. Ciccone noted that Claimant's rotator cuff was degenerated and undergoing tendonotic changes. Accordingly, he opined that there was no acute rotator cuff pathology seen on the MRI scans. (Depo. Tr. p. 12:12-23). Based on the MRI reports, Dr. Ciccone indicated that he would diagnose Claimant with tendinosis of the rotator cuff – which he concluded was a personal non work-related degenerative condition. (Depo. Tr. p. 22:16-18).

9. Dr. Ciccone opined Claimant was at maximum medical improvement (MMI) around May 23, 2019. (Resp. Ex. F, p. 39). He did not issue work restrictions or assign an impairment rating. (Resp. Ex. F, p. 36-37).

Respondents' Request for a 24-month Division Independent Medical Examination (DIME)

10. Respondents ultimately requested a 24-month DIME pursuant to the Workers' Compensation Act in order to determine whether Claimant had reached MMI and if so, whether she sustained permanent impairment. Dr. Karl Larsen was selected as the DIME examiner and he evaluated Claimant on January 31, 2022. Dr. Larsen issued a DIME report outlining his opinions concerning causation, MMI and impairment on February 7, 2022. (Resp. Ex. E, pp. 19-21).

11. During her 24 month DIME, Claimant reported "unremitting" shoulder pain since March 2019. She also told Dr. Larsen that she was working as a housekeeper cleaning a hotel bathtub when she felt a "pull" in her left shoulder. According to Dr. Larsen, Claimant noticed increasing pain afterwards while cleaning the walls of the tub. Claimant was able to keep working but noticed persistent pain at the end of her workday. While she reported the incident to her supervisor, Claimant did not obtain medical treatment until April 8, 2019 – about three or four weeks after the incident. (Resp. Ex. E, p. 19, see FOF ¶ 3).

12. At the outset of her physical examination, Dr. Larsen noted that Claimant was sitting comfortably but when asked to engage in "any sort of motion or examination of the shoulder, [she] winces and grimaces . . . a lot". (Resp. Ex. E, p. 20). According to Dr. Larsen's DIME report, Claimant demonstrated so much pain behavior; he asked if he needed to stop the examination. *Id*. He went on to note that Claimant's pain behavior

was out of proportion to the exam stresses, which he felt was compromising Claimant's range of motion measurements. *Id.*

13. In his February 7, 2022 DIME report, Dr. Larsen commented that Claimant had left shoulder pain secondary to rotator cuff tendinopathy that was part of the naturally progressive aging process. While Claimant became symptomatic at work, Dr. Larsen explained that the work injury was not of sufficient magnitude to produce a rotator cuff tear. He opined that Claimant's shoulder pain was related to the natural progression of her underlying degenerative process and not the result of a work injury. (Resp. Ex. E, p. 20).

14. Dr. Larsen opined that Claimant would benefit from treatment, but this treatment should be pursued outside of workers' compensation. He recommended physical therapy. (Resp. Ex. E, p. 20).

15. Dr. Larsen indicated that the conception of Claimant having reached MMI was "not really applicable . . . as [he] did not hold the opinion that [Claimant suffered] a work-related condition. Nonetheless, if he were "forced" to pick a date for MMI, Dr. Larsen indicated that he would fix it as of January 26, 2021, the date of her last appointment with Dr. Likes. (Resp. Ex. E, p. 21). Dr. Larsen stated no maintenance care was required, but again, this was premised on his statement that Claimant did not sustain a compensable left shoulder injury.

16. Regarding impairment, Dr. Larsen noted:

> ". . . I do not think an impairment rating related to her work injury is appropriate as her condition is not due to her work activities, but again due to the natural process of aging. That being said, I did take the measurements appropriately to generate an impairment rating. If one were to use those numbers to generate an impairment rating her range of motion deficits would leave her with a 14% upper extremity impairment which converts to an 8% whole person impairment rating.

(Resp. Ex. E, p. 21).

17. On February 18, 2022, the Division Independent Medical Examination (DIME) Unit sent a letter to Dr. Larsen asking him to provide a rationale for his stated impairment rating in light of his comment that Claimant's condition was not caused by her work activities. (Resp. Ex. D, p. 12). Indeed, the DIME Unit noted as follows: It is unclear why an impairment rating was assigned for the left shoulder if the injury was deemed to be non-work [related] that occurred on 03/28/2019". *Id.* Dr. Larsen did not timely respond to the inquiry. Consequently, on April 15, 2022, the DIME Unit issued a "DIME Process Concluded" notice to the parties. In the notice letter, the DIME Unit indicated that they previously issued an Incomplete Notice to the physician and the physician's response was not received. Accordingly, the DIME Unit advised the parties that they considered

the DIME process complete. Respondent Insurer was informed that they had 20 days from the date of the notice to admit liability consistent with the DIME report or file an application for hearing challenging the opinions of Dr. Larsen. (Resp. Ex. B, p. 6).

18. Respondents elected to file an Application for Hearing to overcome the DIME opinion regarding impairment on May 5, 2022. (Resp. Ex. C).

Dr. Larsen's Supplemental DIME Report

19. The parties engaged in discovery to prepare for hearing. When Claimant failed to timely respond to interrogatories, the parties proceeded to a prehearing conference before Prehearing Administrative Law Judge (PALJ) John Sandberg on July 29, 2022. During that prehearing, the parties learned that Dr. Larsen had issued a supplemental DIME report on April 23, 2022, which was sent to the DIME Unit only. PALJ Sandberg sent the supplemental DIME report to the parties at which time it was discovered that Dr. Larsen, per the DIME Unit's request for clarification regarding the degree of Claimant's work-related impairment, had issued a 0% impairment rating. The parties agreed to vacate and continue a hearing that was set for August 25, 2022. (Resp. Ex. D).

20. In his April 23, 2022 supplemental DIME Report, Dr. Larsen apologized for the confusion his original DIME report may have caused, noting that he was "simply attempting to provide information regarding what an impairment rating WOULD be *if* the injury were work-related". (Resp. Ex. E. p. 24)(Emphasis added). He then reiterated his "opinion that it [was] more likely than not that [Claimant's] shoulder condition was not the result of her work injury but is the result of the natural process of aging and degeneration over time". *Id.* Accordingly, and per the Division IME Unit's request for clarification, Dr. Larson completed a "new attached examiner's summary" reflected that Claimant had a 0% impairment rating for Claimant's left shoulder condition. *Id.*

Dr. Ciccone's Post DIME Records Review & Deposition Testimony

21. Dr. Ciccone issued a supplemental medical records review following the DIME on August 1, 2022. (Resp. Ex. F, p. 41). Dr. Ciccone's opinion did not change from his original report. Dr. Ciccone stressed that Claimant did not suffer a significant trauma to the shoulder; she just had pain with activities. (Resp. Ex. F, p. 42).

22. Dr. Ciccone commented that there was no basis for Dr. Larsen to issue an impairment rating based on his initial report. (Resp. Ex. F, p. 43).

23. Dr. Ciccone testified via deposition on September 28, 2022. He testified as a board certified, level II accredited expert in orthopedic medicine. (Depo. Tr. p. 6:11-14).

24. Dr. Ciccone testified that based upon the MOIs described by Claimant

there was insufficient force directed to the shoulder to cause a rotator cuff tear. (Dep. Tr. p. 7:1-25, p. 8:1). He concluded that Claimant suffered a "minor sprain or strain, but nothing serious. (Depo. Tr. p. 9:9-23). He indicated further that Claimant would have been at MMI between six and eight weeks following her March 28, 2022 injury. Id. at p. 11:7-17.

25. Dr. Ciccone reiterated his opinions that Claimant's left shoulder condition was related to tendinosis, which he noted is the natural degeneration of tendons that occurs with aging and that this opinion was supported by the objective evidence visualized on MRI. (Depo. Tr. p. 12:9-25; p. 13:1-23). According to Dr. Ciccone, Claimant's shoulder pain was caused by these degenerative changes. (Depo. Tr. p. 22:19-25).

26. Dr. Ciccone also agreed with Dr. Larsen that Claimant did not require medical maintenance treatment. He explained that Claimant did not suffer a significant injury that would require any maintenance treatment or work restrictions. (Depo. Tr. p. 15:17-25; p. 16:1-7).

27. Dr. Ciccone explained that Dr. Larsen's addendum DIME report was the more accurate opinion of his (Dr. Larsen's) opinion concerning impairment and that Claimant would not have any ratable impairment caused by a minor sprain/strain injury. (Depo. Tr. p. 17:10-25; p. 18:1-12). When asked if simply having an incident at work would automatically mean that a person suffered an injury, Dr. Ciccone noted: "No, you can have pain at work all the time and not have an injury". (Depo. Tr. p. 18:13-17). He also noted that merely because a person suffers an accepted work injury does not mean they are automatically entitled to an impairment rating. (Depo. Tr. p. 18:18-21). Finally, Dr. Ciccone noted that the AMA Guidelines do not require the assignment of an impairment rating in every case. Rather, an impairment rating should be assigned when there is a "work-related injury that [has] resulted in a loss of function [to] an extremity directed related or causally related to that injury". (Depo. Tr. p. 19:4-11).

28. The evidence presented persuades the ALJ that Dr. Larsen's true opinion regarding impairment is explicitly articulated in his April 23, 2022 DIME Addendum Report. The ALJ credits the content of this report to find that Claimant suffered no impairment, i.e. 0% as a result of her March 28, 2019 work injury. In fact, the ALJ finds that Dr. Larsen tried to articulate the same in his February 7, 2022 report; however, his choice of verbiage created ambiguity and confusion surrounding the issue prompting the DIME Unit to request clarification regarding the degree of Claimant's work-related impairment. (See generally, Resp. Ex. D, pp. 12-14). Indeed, the DIME Unit noted as follows: "It is unclear why an impairment rating was assigned for the left shoulder if the injury was deemed to be non-work [related] that occurred on 03/28/2019". Id. at p. 12-13. Because Dr. Larsen did not respond to the request for clarification promptly, the DIME Unit considered the "DIME Process Concluded" and notified the parties on April 15, 2022, that Respondent-Insurer had 20 days from the date of the notice to admit liability consistent with the DIME report or file an application for hearing challenging the opinions of Dr. Larsen. (Resp. Ex. B, p. 6). As noted above, Respondents then elected to file an

application for hearing to challenge the 14% scheduled impairment rating decision from Dr. Larsen's February 7, 2022 DIME report.

29. The ALJ credits the opinions of Dr. Larsen and Dr. Ciccone that Claimant's MOI was minor and would not have resulted in rotator cuff pathology or a significant injury as support for the finding that Claimant suffered 0% work injury related left shoulder impairment. Indeed, both Dr. Ciccone and Dr. Larsen noted that there was insufficient force to cause anything more than a minor sprain/strain to Claimant's left shoulder. Moreover, the imaging (MRI) in this case revealed an absence of acute rotator cuff pathology to support a finding that Claimant sustained a traumatic injury to the left shoulder on March 28, 2019. To the contrary, Dr. Ciccone noted that Claimant's rotator cuff was degenerated and undergoing tendonotic changes, which he opined was a personal non work-related degenerative condition. Similarly, as part of his independent medical examination, Dr. Larsen noted:

> The injury onset she describes is not likely to have caused her condition, specifically her MRI findings. Indeed, the first and second MRIs seem to demonstrate progression of the tendinosis to involve the infraspinatus as well as changes involving the subscapularis despite the fact that she was no longer working in the capacity of a housekeeper. This would make sense with a naturally occurring progressive condition.

(Resp. Ex. E, p. 20).

30. Based upon the evidence presented, the ALJ finds that Respondents have proven that Dr. Larsen's assignment of 14% scheduled impairment, as articulated in his February 7, 2022 DIME report was probably incorrect.

31. Claimant has failed to establish that she is entitled to maintenance medical treatment.

32. Based upon the evidence presented, the ALJ is not convinced that Respondents are precluded from challenging the impairment rating assigned by Dr. Larsen as referenced in his February 7, 2022 DIME report.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals*

Office, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

The Parties July 30, 2020 Stipulation and Motion for Approval

B. Parties in workers' compensation proceedings frequently waive, by words or actions, various legal rights and stipulate to certain facts. See, *e.g., Jordan v. Black Gold Asphalt Co*., W.C. No. 4-562-913 (September 28, 2004) (parties stipulated to AWW), affd on other grounds, Colo. App. No. 05CA0198, Aug. 25, 2005 (NSOP). It is well settled that a party may stipulate away valuable rights so long as it is not a violation of public policy. *Cherokee Metropolitan Dist. v. Simpson*, 148 P.3d 142, 151 (Colo. 2006); *USI Properties East, Inc. v. Simpson*, 938 P.2d 168, 173 (Colo. 1997). Moreover, it has been recognized that "[a] party's participation in a stipulation incorporated into a decree precludes that party from advancing legal contentions contrary to the plain and unambiguous terms contained therein." *USI Properties East, Inc. v. Simpson*, 938 P.2d at 173. In this case, Claimant contends that Respondents are precluded from challenging the impairment rating initially provided by Dr. Larsen as part of his February 7, 2022 DIME report because they had entered into a stipulation regarding the compensable nature of Claimant's left shoulder injury. Indeed, Claimant urges the ALJ to "[find] that Respondents are bound by the July 30, 2020 stipulation as it pertains to advancing any legal theory contrary to the plain and unambiguous terms therein". Although the stipulation in question unambiguously states that Respondents are accepting liability for the "left shoulder injury" that occurred on March 28, 2019, it does not contain any terms/agreements concerning permanent impairment. Indeed, the stipulation contains no reference to impairment at all. Nonetheless, Claimant contends that by agreeing to accept liability and file a medical benefits only General Admission of Liability (GAL), Respondents agreed to accept any impairment associated with Claimant's compensable injury. The ALJ is not persuaded.

C. Careful review of the language comprising the stipulation persuades the ALJ that Respondents did not waive their right to challenge any impairment that may be associated with the stipulated compensable injury in this case. Rather, the stipulation only addressed Respondents agreement to "accept the left shoulder injury that occurred March 28, 2019 for medical benefits" by filing a General Admission of Liability. In this case, the ALJ is not convinced, as argued by Claimant, that the stipulation extends to matters beyond liability for the injury, e.g. impairment that may arise after treatment for the admitted injury in complete. Because Respondents challenge to Dr. Larsen's February 7, 2022 impairment rating does not advance any legal theory contrary to the plain and unambiguous terms of the stipulation, the ALJ concludes that Respondents are not precluded from disputing the rating.

Overcoming the DIME Opinion of Dr. Larsen Regarding Permanent Impairment

D. A DIME physician's findings concerning causation and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-

42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment the party challenging the DIME must demonstrate that the physicians determination in this regard is highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo.App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. While a DIME physician's opinions are entitled to special weight on issues of MMI and whole person impairment, they are not entitled to any special weight when it comes to extremity ratings. §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. Indeed, in *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998), the Court of Appeals explained that the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries, i.e. whole person impairment. Consequently, where permanent impairment is limited to a portion of the body included on the list of scheduled ratings in C.R.S. § 8-43-107(2)(a) a DIME opinion merely has to be rebutted by a preponderance of the evidence to be overcome. *Delaney v. Industrial Claims Appeals Office,* 30 P.3d 691, 693 (Colo.App. 2000). In this case, it is clear that Dr. Larsen assigned 14% scheduled impairment to Claimant's left upper extremity per his February 7, 2022 DIME report. Accordingly, the ALJ concludes that Claimant's injuries involve body parts listed on the schedule and Respondents, as the challenging party, carry the burden of overcoming Dr. Larsen's scheduled rating opinion by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indeminity Care ESIS Inc*., WC 4-777-882 (ICAO, Nov. 5, 2010); *see also, Morris v. Olson Heating & Plumbing Co.,* WC 4-980-171 (ICAO, May 20, 2019)(whether the claimant sustained a whole person or extremity impairment is one of fact for the ALJ and the DIME opinion on the issue is not entitled to any enhanced weight).

F. In this case, Respondents assert that the opinions of Dr. Larsen concerning impairment are ambiguous and that a threshold determination of what his actual impairment rating opinion is must be resolved before the question of whether Respondents overcame his opinions can be addressed. Based upon the evidence presented, the ALJ agrees. If the DIME physician offers ambiguous or conflicting opinions concerning impairment, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5* P.3d 385 (Colo.App. 2000); *Stephens* v. *North and Air Package Express Services,* W. C, No. 4-492-570 (February 16, 2005), *aff'd, Stephens* v. *Industrial Claim Appeals Office* (Colo.App. 05CA0491, January 26, 2006) (not selected for publication).

In this case, it is clear that a conflict exists between Dr. Larsen's February 7, 2022, DIME report and his subsequent April 23, 2022 addendum requested by the DIME Unit. After careful review of the reports in question, the ALJ concludes that Dr. Larsen's true opinions concerning Claimant's work related impairment are those expressed in his DIME addendum report issued April 23, 2022. As noted therein, Dr. Larsen opined that Claimant had 0% impairment as a result of the work incident.

G. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo.App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo.App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo.App. 1998). After considering the totality of the evidence presented, the ALJ concludes that Respondents have produced unmistakable evidence establishing that Dr. Larsen's assignment of 14% upper extremity impairment per his February 7, 2022 DIME report was probably in error. In fact, the April 23, 2022 addendum to Dr. Larsen's February 7, 2022 DIME report persuades the ALJ that his original assignment of impairment in this case was highly probably incorrect.

H. As found, support for the conclusion that Dr. Larsen's February 7, 2022 impairment-rating opinion has been overcome, rests in the opinions of Dr. Larsen and Dr. Ciccone when they explained that there was insufficient force to cause anything more than a minor sprain/strain to Claimant's left shoulder and the imaging (MRI) in this case, which revealed an absence of acute rotator cuff pathology to support a finding that Claimant sustained a traumatic injury to the left shoulder on March 28, 2019 upon which a work injury impairment rating can be based. Accordingly, the ALJ credits Dr. Larsen's DIME addendum where he credibly explained why Claimant had 0% work related impairment to conclude that his prior February 7, 2022 impairment-rating opinion has been overcome.

Claimant's Entitlement to Maintenance Medical Benefits

I. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical

treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

J. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the record evidence persuades the ALJ that Claimant has failed to prove she is entitled to medical maintenance care. None of her authorized treating physicians have recommended that she undergo maintenance care. Indeed, then only opinions presented concerning medical maintenance treatment in this matter come from Dr. Larsen and Dr. Ciccone and Claimant did not testify. In Dr. Larsen's original January 2022 DIME report, he did not recommend medical maintenance treatment for Claimant. Rather, Dr. Larsen stated that no maintenance care was required. He specifically stated that any further care for Claimant's left shoulder should be pursed outside of workers' compensation. Similarly, Dr. Ciccone opined that Claimant did not require medical maintenance treatment under workers' compensation.

K. The evidence presented supports a conclusion that Claimant has failed to present any recommendations from a treating provider that she requires further medical treatment that is reasonable, necessary or related under workers' compensation to cure and relieve her of the effects of her work related left shoulder sprain/strain. Accordingly, Claimant's request for medical maintenance treatment must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Respondent's request to set aside the 14% scheduled person impairment rating associated with Claimant's left shoulder injury is granted. Claimant is at MMI without permanent impairment per the April 23, 2022 supplemental DIME report.

2. Claimant's request for maintenance medical treatment benefits is denied and dismissed

3. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 23, 2022

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-188-805-002

ISSUES[1]

1. Whether Claimant proved by a preponderance of the evidence that he suffered an injury on October 6, 2021, in the course and scope of his employment.

2. Whether claimant is entitled to medical benefits rendered related to his October 6, 2021 injury.

3. Whether Claimant should be awarded Temporary Total Disability (TTD) benefits, and if so, what was Claimant's Average Weekly Wage (AWW)?

4. Whether Claimant proved by a preponderance of the evidence that he is entitled to penalties pursuant to § 8-43-408(5), C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 29 year-old male who injured his right foot on October 6, 2021. Claimant suffered a displaced fracture of the medial cuniform. (Ex. 1).

2. Employer is an automotive repair shop with two locations in Colorado. JC[Redacted], one of the owners, appeared on behalf of Employer at the hearing. Mr. JC[Redacted] is also Employer's registered agent. (Ex. 17).

3. Claimant credibly testified that sometime in early October 2021, he saw a sign located in the back of a green pickup at Employer's south Broadway location that read "mechanic wanted". (Ex. 6).

4. Claimant testified that he went to Employer's office and applied for the mechanic position because he wanted a career change. Claimant was working for a locksmith company at that time, and he arrived at Employer's office in his locksmith van. Claimant testified he had previous experience as a lead mechanic, but he is not ASE certified.

5. Claimant credibly testified that he filled out an application and met with Mr. JC[Redacted] about a job as a mechanic. Claimant further testified that Mr. JC[Redacted] "hired him on the spot."

[1] Claimant's counsel raised the issues of disfigurement and permanent partial disability in the position statement submitted to the Court. These issues were not before the ALJ at the hearing. Claimant filed a brief withdrawing the issue of permanent partial disability on August 1, 2022, and stated at the beginning of the hearing that disfigurement was not an issue for the hearing.

6. Robin Freeman worked for Employer for approximately 45 days between September and October 2021 at the main office. Ms. Freeman testified that she put together employee files and handled general office work.

7. Ms. Freeman testified that Claimant applied for a mechanic position with Employer. She credibly testified that Claimant and Mr. JC[Redacted] spoke in the front lobby of the main building, and Claimant was hired as a mechanic to work at Employer's other location. Ms. Freeman testified that she compiled an employee file for Claimant that included his application and copies of his social security card and ID. Ms. Freeman did not know Claimant's rate of pay. Ms. Freeman credibly testified that she was terminated because she fell asleep at work.

8. Claimant testified that he quit his locksmith job to work for Employer. He further testified that he began working at Employer's south location on October 3, 2021. Claimant used his own tools, and was given direction as to what car to work on, and what to do. Claimant had not been given a uniform.

9. Claimant testified that between October 3 and October 6, 2021 he worked on the carburetor in Mr. C[Redacted]'s race car; he worked on a toe hitch lock; he worked on a couple of cars; he unplugged a hybrid battery on a Lexus RX 300, because he was supposed to work on the car; and he cleaned up around the shop.

10. Claimant testified that on October 6, 2021, Jack Walsh, who also worked for Employer, asked Claimant to help him move some oil tanks. Claimant testified that the three, 100 gallon tanks, were stacked on each other but they were crooked. The tanks began to fall. Even though Claimant tried to run, one tank hit him and injured his foot.

11. Mr. Walsh called Mr. JC[Redacted] and told him about the accident. Mr. JC[Redacted] came to the shop and took Claimant to Urgent Care. Claimant credibly testified that he did not have any health insurance.

12. Claimant went to Rocky Mountain Urgent Care on October 6, 2021. Jennifer Briggs, P.A. evaluated Claimant, and x-rays were taken of his ankle and foot. The only record regarding this visit submitted into evidence is an October 10, 2021 billing statement. (Ex. 13).

13. Claimant was evaluated at Orthopedic Centers of Colorado on October 12, 2021. Claimant testified that SC[Redacted], Mr. JC[Redacted]'s wife who also works for Employer, provided this referral for Claimant. Claimant was diagnosed with a displaced medial cuneiform fracture. (Ex. 11).

14. On October 20, 2021, Claimant had surgery on his right foot. A right foot cuneiform open reduction and internal fixation was performed. The medical records state that Claimant "injured his right foot in a work-related incident." (Ex. 1).

15. Claimant had follow-up appointments at Orthopedic Centers of Colorado on November 2, 2021 and November 23, 2021. At the November 23, 2021 appointment, Claimant was still in a boot and doing well. He was to follow up in four weeks and get

more x-rays. (Ex. 11). There is no evidence in the record that Claimant attended this follow-up appointment or received additional x-rays.

16. Claimant testified that it has been six to seven months since he has seen a doctor. Claimant further testified that he believed his surgeon recommended therapy. There is nothing submitted into evidence, however, indicating that therapy was recommended for Claimant.

17. A "Visit Charge Detail" from Mile High Surgicenter LLC, for Claimant's October 20, 2021, surgery was admitted into evidence. (Ex. 2). According to this document, the total billed charges were $29,624.05, and there is a balance due of $3,621.50. Claimant testified that Employer paid for part of his surgery. Mrs. SC[Redacted] wrote a check in the amount of $8,443.00 to Mile High Surgery Center, and the notation reads "Adrian Santa Rosa's surgery." (Exs. 15-16). An $8,443.00 payment is referenced on Exhibit 2. There is no credible evidence in the record as to whether Claimant paid any of the billed charges, nor is there any credible evidence in the record as to what amount, if any, is outstanding.

18. An "Account Inquiry" from Orthopedic Centers of Colorado was admitted into evidence. (Ex. 11). According to the document, there is an outstanding balance of $3,105.00. There is no credible evidence in the record, however, as to what amounts, if any, Claimant paid to Orthopedic Centers of Colorado.

19. An "Account Summary" from Englewood Rocky Mountain Urgent Care was admitted into evidence. (Ex. 13.). According to the document, there was a "patient payment" of $150.00, and an outstanding balance of $80.00. There is no credible evidence in the record indicating if Claimant paid the $150.00, and if $80.00 is still outstanding.

20. A bill from DJO, LLC, for crutches, in the amount of $53.12, was admitted into evidence. (Ex. 14). Claimant testified that this amount is outstanding and has not been paid.

21. The ALJ is unable to determine what amounts if any, Claimant has paid for his medical care to date. Similarly, the ALJ is unable to determine what medical expenses are still outstanding.

22. Other than the initial application, Claimant never completed any other paperwork for Employer. Additionally, Claimant never received a paycheck from Employer.

23. Following the accident on October 6, 2021, Claimant and Mr. JC[Redacted] exchanged multiple text messages. Mr. JC[Redacted] expressed concern over Claimant's injury and in one message wrote "like I've said several times I own my part . . . either way you need to be taken care of and I will own my part." (Ex. 23).

24. Mr. JC[Redacted] testified that he never hired Claimant, and Claimant was never an employee. Mr. JC[Redacted] testified that Claimant hung around the shop and made friends with the guys, but he was not supposed to be there, and he had not hired him. Mr.

JC[Redacted] testified that he paid some of Claimant's bills because he was trying to help someone who was hurt. The ALJ does not find this testimony credible.

25. On October 6, 2021, Claimant received an email from Tekmetric Shop Management System. The email read "JC[Redacted] has invited you to join Autolab 4000. Clink the link below to activate your account and start using Tekmetric Shop Management System." (Ex. 25). Claimant credibly testified that Tekmetric is an application that records what vehicle a person is working on.

26. The ALJ finds, based on the totality of the evidence, Claimant had been hired by Employer, Claimant was an employee, and Claimant suffered a compensable injury in the course and scope of his employment on October 6, 2021. The ALJ further finds that Claimant's surgery and related medical appointments were reasonable, necessary and related to his October 6, 2021 work injury.

27. Claimant testified that he was not able to work for six months because of his foot injury. This testimony was uncontroverted.

28. Claimant testified that he was supposed to earn $25 per hour working for Employer, and this was the standard rate in the industry. There is no evidence in the record to controvert this testimony. Claimant testified he currently works 10 hours per day as a mechanic. There is no evidence in the record, however, to demonstrate that Employer hired Employee to work any time over eight hours a day, or 40 hours per week.

29. The ALJ finds that Claimant's AWW at the time of his injury on October 6, 2021 was $1,000.00 per week ($25.00/per hour * 40 hours). The ALJ further finds that Claimant is entitled to TTD from October 6, 2021 through April 6, 2022.

30. Claimant endorsed the issue of penalties based on § 8-43-408(1),[2] C.R.S., specifically, Employer's failure to have workers' compensation insurance at the time of Claimant's injury. Mr. JC[Redacted] testified that Employer has workers' compensation insurance through Pinnacol Assurance, and he has no idea why he would not have had insurance coverage at the time of Claimant's injury. Mr. JC[Redacted] testified that Claimant was not an employee, so workers' compensation would not be triggered. Claimant presented no credible evidence to support the assertion that Employer does not have workers' compensation insurance.

31. The ALJ finds that Claimant did not prove by a preponderance of the evidence that Employer did not have workers' compensation insurance on October 6, 2021.[3]

[2] The applicable statute is § 8-43-408(5), C.R.S.
[3] The ALJ is not making a finding as to whether Employer has workers' compensation insurance.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

The ALJ credits the testimony of Claimant and Ms. Freeman that Mr. JC[Redacted] hired Claimant to work as a mechanic. Further, Mr. JC[Redacted] knew Claimant was at the shop, and he invited Claimant to join Autolab on the Tekmetric Shop Management System. As found, based on the totality of the evidence, Claimant proved by a preponderance of the evidence that he was an employee on October 6, 2021. (Findings of Fact ¶ 26).

An injury must arise out of, and in the course of, Claimant's employment to be compensable. § 8-41-301(2)(b)(c), C.R.S. As found, Claimant was working for Employer on October 6, 2021, when an oil tank fell and injured Claimant's right foot. According to the Act, an employer must pay for medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury." C.R.S. § 8-42-101(1)(a). The

determination as to whether claimant's treatment is reasonable and necessary is one of fact for resolution by the ALJ. *Durango v. Dunagan*, 939 P.2d 496, 499 (Colo. App. 1997). In *Durango*, the ALJ determined the employer was liable for claimant's treatment because claimant's physician "agreed that surgery was a reasonable treatment for claimant's condition." *Id*. As found, Claimant's surgery and related medical appointments were reasonable, necessary and related to his work injury.

The ALJ, however, was unable to determine what amounts if any, Claimant has paid for his medical care. Similarly, the ALJ is unable to determine what medical expenses are still outstanding. (Findings of Fact ¶ 21).

AWW

Claimant's AWW is based upon his wages at the time of injury. §8-42-102(2), C.R.S. (2001). The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. §8-42-102(3), C.R.S.; *Campbell v. IBM*, 567 P.2d 77 (Colo. App 1993); *Vigil v. Indus. Claim Appeals Office*, 841 P.2d 335 (Colo. App. 1992). As found, Claimant's AWW was $1,000.00. (Findings of Fact ¶ 29).

TTD

To prove entitlement to TTD, Claimant must prove (1) that the industrial injury caused a disability lasting more than three work shifts; (2) that he left work as a result of the disability and; (3) that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs v. Indus. Claim Appeals office*, 954 P.2d 637 (Colo. 1997). As found, Claimant became temporarily and totally disabled for six months, during which time he was unable to work because of his injury. (Ex. 12 and Ex. A). Claimant is entitled to TTD because his disability caused him to leave work, and to miss more than three regular working days. Claimant is entitled to TTD benefits beginning October 6, 2021 and ending April 6, 2022. (Findings of Fact ¶ 29).

Penalties

Section 8-43-408(5), C.R.S. provides for a twenty-five percent increase in compensation where the employer, at the time of an injury, has not complied with the insurance provisions of the Act. Here, Claimant is seeking penalties pursuant to 8-43-408(5), C.R.S. Claimant bears the burden of showing that Employer did not maintain workers' compensation insurance at the time of the injury. *Maldanado v. Nirbhao, Inc.,* WC 5-122-747-001 (ICAO May 7, 2021) (claimant bears the burden of proof to justify penalty based on lack of insurance coverage); *McManus v. Oil Tools,* WC 4-481-926 (ICAO Apr. 29, 2002); *Smedley v. Calcomp/Access Graphics Tech.,* WC 4-210-382 (ICAO Oct. 3, 1995). Mr. JC[Redacted] testified that Employer has workers' compensation insurance, and he did not file a claim because Claimant was not an employee. Claimant presented no credible evidence to controvert Mr. JC[Redacted]'s testimony. As found, Claimant failed to prove that Employer did not have workers' compensation insurance on October 6, 2021. (Findings of Fact ¶ 31).

ORDER

It is therefore ordered that:

1. Claimant established by a preponderance of the evidence that he was an employee and he suffered a compensable injury on October 6, 2021, in the course and scope of his employment.

2. Respondent shall reimburse Claimant for his medical expenses. Since the ALJ was unable to determine Claimant's medical expenses, Counsel for Claimant and Respondent shall confer regarding the medical expenses. If the parties are unable to reach an agreement, either Claimant or Respondent may file an Application for Hearing on this issue.

3. Claimant's average weekly wage is $1,000.00.

4. Claimant has shown that due to his injury he was out of work from October 6, 2021 through April 6, 2022. He is entitled to TTD based on an AWW of $1,000.00.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 23, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove entitlement to permanent total disability ("PTD") benefits?

- At the outset of the hearing, the ALJ determined that the endorsed issues of average weekly wage and TTD were closed by the June 14, 2021 Final Admission of Liability (FAL), which was only contested with respect to permanent total disability.

- The endorsed issue of "medical benefits" is not necessarily closed because the June 14, 2021 FAL admitted for medical benefits after MMI. Medical benefits after MMI remain open, subject to Respondents' right to contest reasonable necessity, causation, or authorization of any specific treatment. However, at hearing Claimant could not identify any specific medical benefits recommended by an ATP that are disputed or denied. Accordingly, all issues related to medical benefits after MMI are reserved for future determination, if necessary.

FINDINGS OF FACT

1. Claimant worked for Employer as a cleaner. She suffered admitted injuries to her head, neck, and back in a slip and fall accident on December 3, 2019.

2. Claimant was referred to Concentra Medical Centers for authorized treatment. She was diagnosed with a head contusion, lumbar, thoracic and cervical strains, and adjustment reaction. Claimant underwent primarily conservative treatment, including PT, chiropractic, massage therapy, medications, injections, and a TENS unit. She required no surgery for the injuries.

3. Cervical and brain MRIs were normal, as was an upper extremity EMG.

4. A lumbar MRI on March 31, 2020 showed multilevel degenerative changes and a disc extrusion at L5-S1, possibly impinging the left S1 nerve root. Claimant had an epidural steroid injection (ESI) that did not help.

5. Claimant was referred to Dr. Kathy McCranie, a physical medicine and rehabilitation specialist. On July 27, 2020, Dr. McCranie noted Claimant "is now complaining of multiple and expanding symptomatology. . . . Her pain diagram shows nearly total posterior body pain, excluding only the right arm and leg, and top and posterior head." Similarly, on August 17, 2020, Claimant reported symptoms with in multiple areas including her face, forehead, bilateral knees, bilateral legs, low back, and left arm. Dr. McCranie saw nothing on the MRIs to explain Claimant's widespread symptoms.

6. To investigate Claimant's "expanding symptomatology," Dr. McCranie recommended a psychological evaluation to evaluate a somatic disorder. Dr. McCranie opined Claimant was a poor candidate for any type of surgery, "considering her multiple

and diffuse symptoms that do not follow specific pathology. She was also noted to have several positive Waddell findings on today's examination, indicative of a psychological component to her pain."

7. A repeat lumbar MRI on October 7, 2020 showed improvement of the L5-S1 disc extrusion.

8. On October 29, 2020, Dr. Reinsma, Claimant's primary ATP at Concentra, documented complaints of "pain to bilat LE with primary, localization to the front of her knee. Worse after rest. This is inconsistent with radicular pain as well as inconsistent with the MRI findings."

9. Claimant saw Dr. Andrew Castro for a surgical evaluation on November 4, 2020. Dr. Castro noted the disk herniation was significantly smaller and improving on its own. He suggested another ESI but saw no indication for surgery.

10. Claimant had a repeat ESI on November 24, 2020.

11. On November 30, 2020, Claimant told Dr. McCranie the second ESI provided no benefit. Claimant said she had felt "paralyzed" over the past two days with difficulty walking and doing basic chores. But physical examination showed normal gait, normal strength and sensation, and no evidence of neurological deficits.

12. Dr. McCranie determined Claimant was at MMI on December 14, 2020. She assigned an 18% whole person impairment rating for soft tissue injuries to the lumbar and cervical spines. Dr. McCranie deferred formal work restrictions to Dr. Reinsma but opined, "Based on my examination of the patient, her improvement, and objective pathology, I would anticipate that she would be able to work at least within the light work category."

13. On December 21, 2020, Dr. Reinsma agreed Claimant was at MMI on December 14, and adopted Dr. McCranie's impairment rating. Dr. Reinsma provided permanent restrictions of no lifting over 20 pounds and occasional bending and rotating at the waist.

14. Claimant underwent a DIME with Dr. James Regan on May 28, 2021. Dr. Regan diagnosed lumbar, thoracic, and cervical strains. He agreed Claimant reached MMI on December 14, 2020. Dr. Regan assigned a 23% whole person rating for the lumbar, thoracic, and cervical spines. Regarding work restrictions, Dr. Regan opined Claimant should "minimize bending at the waist [and] . . . avoid any lift[ing] over 25 pounds."

15. Respondents filed a Final Admission of Liability (FAL) based on Dr. Regan's DIME report. The FAL also admitted for al medical benefits after MMI. Claimant timely objected to the FAL and requested a hearing on the sole issue of permanent total disability.

16. Claimant participated in a Functional Capacity Evaluation (FCE) on June 8, 2021 with Sherry Young, OTR. Ms. Young concluded Claimant can lift up to 20 pounds occasionally, and tolerate occasional bending at the waist. She further opined Claimant

can sit on a frequent basis and stand or walk on an occasional basis. She can tolerate 60-90 minutes of continuous sitting or 10-30 minutes of continuous standing or walking. She opined Claimant needs a 5-10 minute break every 30-45 minutes. Mr. Young concluded Claimant can work four hours per day, five days per week within the aforementioned restrictions.

17. CatalystRTW investigated employment opportunities for Claimant, and identified a full-time Market Research Associate position with Solomon Group. This is a sedentary job that involves contacting businesses and consumers by telephone to gather, verify, and update survey information. The daily schedule was flexible and allowed for breaks and postural changes as needed.

18. In June 2021, Dr. Reinsma reviewed the job description and demands and opined Claimant could perform the work on a full-time basis. He reaffirmed that opinion in July 2022.

19. Katherine Harris performed a vocational evaluation for Respondents. She interviewed Claimant in January 2022 and wrote a report dated September 29, 2022. Ms. Harris testified at hearing consistent with her report. Ms. Harris noted Claimant was born and raised in Mexico and immigrated to the United States in 1999. Claimant is a US citizen. She completed the sixth grade in Mexico, with no other formal education. Claimant's primary language is Spanish, with limited ability to communicate in English. Her work history includes unskilled and semi-skilled occupations, including packing, food production, bread-making, housekeeping, and janitorial work. Ms. Harris interviewed Claimant, reviewed medical records, and performed labor market research regarding work opportunities in the Spanish-speaking labor market in the Denver metro area. She specifically considered jobs that offer training, and part-time, full-time, or flexible schedules. She also referenced free resources to help Claimant find and secure suitable work. She testified employers have become increasingly flexible and willing to accommodate workers with limitations over the past few years because of the tight job market and low unemployment. Ms. Harris opined Claimant is competitively employable in a variety of unskilled sedentary or modified-light occupations including food service, cashier, companion, sewing operator, counter clerk, hostess, hand packager, retail sales, usher, ticket taker, and lobby attendant.

20. After the injury, Claimant continued to work for Employer in a modified position until she voluntarily resigned in August 2021 for non-disability-related reasons. Before the accident, Claimant's job duties included cleaning machines, "proof" boxes, process mixers, and tables, sweeping floors and removing trash. After the injury, Employer provided modified duty consistent with the restrictions from Claimant's ATPs. The modified tasks included working on labels and sorting product.

21. Employer continued to provide modified duty after Claimant was put at MMI. There is no persuasive evidence Employer intended to terminate Claimant had she not resigned. Employer's General Manager, Mr. G[Redacted], credibly testified Claimant was a good worker and he would hire her "tomorrow" if she wanted to return to work. He credibly testified Employer would pay the "prevailing rate" and accommodate any restrictions currently in place.

22. Claimant testified to limitations that interfere with her ability to sustain basic activities, including routine activities of daily living. Claimant does not believe she can consistently sustain activity at a level required of competitive employment.

23. The severe limitations described by Claimant are not supported by the medical records or other persuasive evidence.

24. Dr. Reinsma, Dr. McCranie, and Dr. Regan's opinions regarding Claimant's permanent restrictions and work capacity are credible and persuasive.

25. Ms. Harris' vocational analysis and opinions are credible and persuasive.

26. Claimant can work and earn wages in a variety of occupations at the sedentary and modified-light levels.

27. Claimant failed to prove is permanently and totally disabled.

CONCLUSIONS OF LAW

A claimant is considered permanently and totally disabled if they cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of "human factors." *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant's physical condition, mental abilities, age, employment history, education, training, and the "availability of work" the claimant can perform within her commutable labor market. *Id*. Another human factor is the claimant's ability to obtain and maintain employment within their limitations. *See Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. *See e.g., Case v. The Earthgrains Co*., W.C. No. 4-541-544 (September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (January 16, 1997). If the evidence shows the claimant cannot "sustain" employment, the ALJ can find they cannot earn wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001). A claimant is not required to present expert medical or vocational evidence to establish permanent total disability, but can rely on any admissible evidence to support their claim. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Nevertheless, the presence or absence of expert opinion evidence is a legitimate factor to consider when evaluating the preponderance of persuasive evidence. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

As found, Claimant failed to prove she is permanently and totally disabled. While the ALJ does not doubt that Claimant suffers residual pain and associated limitations from the work injury, the question is whether those limitations are severe enough to render her totally disabled as opposed to merely partially disabled. There is insufficient persuasive evidence to support a finding of permanent total disability under the applicable "any wages" standard. As Ms. Harris persuasively explained, Claimant can sustain

employment in a variety of occupations at the sedentary or modified-light level. Additionally, Claimant remains employable with Employer and could still be working had she not voluntarily resigned for non-disability-related reasons. The opinions of Drs. Reinsma, McCranie, and Regan regarding Claimant's restrictions and work capacity are credible and persuasive. Claimant's description of limitations that would preclude all competitive employment is unsupported by medical records or other persuasive evidence. Although a claimant is not required to present expert medical or vocational evidence to establish permanent total disability, the presence or absence of expert opinion evidence is a legitimate factor to consider when evaluating the preponderance of persuasive evidence. *E.g., Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). Even though Claimant's permanent restrictions, education, limited English proficiency, and work experience significantly narrow the range of work she can perform, there are still numerous jobs in the competitive economy consistent with Claimant's limitations.

ORDER

It is therefore ordered that:

1. Claimant's request for permanent total disability benefits is denied and dismissed.

2. All issues not decided herein and not previously closed by operation of law are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the bilateral hip arthroscopy surgery recommended by Dr. Michael Ellman is reasonably necessary and related to the admitted August 15, 2019 work injury.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on June 14, 2022 listing the issues of medical benefits that were reasonably necessary and related to the August 15, 2019 work injury, specifically noting that a hip arthroscopy was denied.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 24 years old at the time of the hearing in this matter but only 21 years old at the time of the admitted incident. Claimant worked for Employer as an operation assistant for approximately five years before the accident starting in approximately 2014. The job required Claimant to lift cases of alcohol, food, moving kegs around, pushing heavy equipment. He also needed to walk extensively throughout the venues to do set ups and would typically walk 10,000 to 20,000 steps a day on concrete floors, going up and down stairs.

2. Claimant was injured in the course and scope of his employment with Employer on August 15, 2019 when he was taking a full liquor cage off of a box truck. The box truck had a raising platform gate that moved up and down in order to unload the cage. Claimant was taking the liquor cage off the box truck in order to set up a bar at a concert venue. The cage was a large enclosure that holds multiple liquor boxes locked up for security purposes. This cage was made of stainless steel approximately six feet tall, five feet wide and approximately two to three feet deep. The cage was full of cases of liquor bottles. Claimant stated that the full cage probably weighed approximately 500 to 600 lbs., including the cage weight.

3. Claimant was originally in the box car and wheeled the cage onto the lift gate platform. He stepped off of the lift platform in order to move it down. The cage started to wheel off of the lift gate and Claimant stepped in front of it to stop it from falling and damaging the contents. Claimant was unable to stop the cage's trajectory, and the cage fell off the lift gate, which was approximately four feet high, onto Claimant, who was

slammed[1] by the cage full of liquor, onto the ground. Claimant fell onto his back with the cage pinning him to the dirt floor. Claimant's lower body was centered directly underneath the cage. The top of the cage ended up right above his belly button, and his lower half was completely under the cage, with both of his legs and feet pointed to the left. His arms were free from the cage.

4. One coworker came to Claimant's aid to get the cage off of him but was unable to shift the heavy cage on his own, so he called two other coworkers to help him. Claimant observed they had to use all their strength to lift the cage. Then Claimant was able to extricate himself from under the cage with their help. Claimant estimated that the coworkers were approximately 6 feet, 150 pounds; 6 feet, 220 pounds; and 6 feet, 300 pounds. Claimant noted that he was accustomed to estimating weight because he had to do it on a daily basis.

5. Claimant was light-headed and felt pain and numbness in his lower extremities immediately after the cage fell on him. In the weeks following the injury, he experienced pain in the front of his body, right at his beltline, all the way across. The pain was on both sides of his hips, on both sides on his body, and in his groin area. The center of his groin area just below his beltline was tender to palpation. Claimant stated he was sent to Concentra by Employer. He assured that even though he was provided with some medical care, it was minimal, and he continued to have bilateral abdominal pain that extended across his hip, despite him being released to full duty. He continued to work despite the pain but required assistance with lifting heavy items. Further, he did not feel that Concentra left the door open to address his continuing problems. He was laid off for a couple a month, then, during COVID, his place of employment was converted to a homeless shelter and his duties were very light, serving meals and sitting around. In approximately November, he returned to his regular job, which was when the pain increased again with heavy lifting.

6. On the day of the accident, August 15, 2019, Claimant was taken to Concentra Medical Center and was evaluated by Karen Larson, M.D. within about an hour of the accident. Dr. Larson took a history that

> He was standing on the ground at the tail of a box truck with the with [sic.] the cage on the lift gate of box truck. Unfortunately, the cage slid off the lift gate an on top of him, pushing him down and pinning him to the ground. Lift gate was raised up to his waist, but cage is 5 feet tall. 150-200 lb. approx.[2]
>
> It knocked him to the ground and pinned him down onto his L side, twisted at the torso with the torso facing up and the legs facing sideways. It struck him in the side of the head, R shoulder, R wrist and hand, R hip, R knee, and L lower leg. Coworkers lifted the cage off him.

Claimant reported that he had pain over the right side of the scalp and jaw, the right shoulder, the right hip and groin pain radiating to the right low back pain, and lesser pain on the left low back. On exam, Dr. Larson noted evidence of trauma to the right parietal

[1] The hearing transcript states "slanted down" (Tr. p. 12:10) but this ALJ's notes reflect "slammed down." This ALJ determines that the transcription was incorrect.

[2] This ALJ infers Claimant was describing the weight of the empty cage, as he testified that the cage full of liquor was approximately 500-600 lbs.

scalp with a 4 cm abrasion that was tender with a tender right jawline. She noted that Claimant had joint pain, back pain, joint swelling, joint stiffness and limping. Dr. Larson observed that Claimant had a large abrasion on the right shoulder with some swelling over the superolateral aspect, and tenderness over same area, a small abrasion on the dorsum of the right wrist and hand.

She noted tenderness over the lateral right hip, right groin, low back, and buttock. He was unable to stand with full weight on the right leg and had an antalgic gait. He had pain in the right low back on back flexion, He had right lateral hip, groin, and back pain on left bending and R rotation. He had right low back pain with right straight leg raise. He had an abrasion and swelling over the right anterior knee. The left lower leg had a medial distal calf abrasion with some swelling. Claimant had a past medical history of right shoulder surgery. She ordered x-rays for the right shoulder and right hip, which she interpreted as normal. She also took Claimant off work and was instructed to return to modified duty on August 19, 2019 with restrictions of lifting/pushing/pulling a maximum of 15 lbs., could do limited bending, standing, and walking but could not squat or kneel.

7. On August 19, 2019 Claimant followed up at Concentra, and was evaluated by Dr. Karen Hill. The "History of Present Illness" was copy and pasted from the initial visit. On exam Dr. Hill noted all normal findings, but pain with range of motion. She expanded the work restrictions to 25 lbs. but otherwise kept the prior restrictions. Claimant was also seen by therapist Marcin Swiderski who noted Claimant had bilateral groin pain and right hip pain on manual muscle testing (MMT).

8. Claimant underwent five sessions of physical therapy at Concentra. His therapists noted "B groin pain 4+ /5"[3], worse on the right, in addition to stating Claimant had "soreness in lower abdomen TTP right inguinal lig, R pubic ramus tender and superior, lower abdomen tender" after trunk extension on August 19, 2019. The therapists made similar comments on August 22, 26, and 29, 2019, and September 4.

9. Dr. Larson attended Claimant on August 27, 2019 and noted that Claimant continued to heal his abrasions and was improving except for the right groin, hip, and inner thigh and that he continued to walk with a mild limp. She advanced his work activities to 35 lbs. and stated he could squat and knee occasionally. The therapist noted on August 29, 2019 that hip pain and limitations were less on days when he did not work, because at work he was constantly standing or walking.

10. On September 6, 2019 Dr. Larson noted Claimant's right hip was approximately 70% better except for pulling and tenderness in the groin right thigh and abdomen, and pain in his left toe with activity. She noted Claimant reported that he was wanting to ensure nothing was wrong with his toe. Dr. Larson recorded that Claimant was ready to try full duty work as he continued working with restrictions. She had the left toe x-rayed but preliminary findings were normal. She returned Claimant to full duty.

11. Dr. Larson placed Claimant at maximum medical improvement on September 20, 2019. She indicated that Claimant's injuries had resolved except for the abdomen pulling pain, right hip, and thigh pain with range of motion and tenderness. Claimant was released from care without impairment, restrictions, or maintenance care.

[3] This ALJ infers that "B groin pain" indicated that Claimant was complaining of bilateral groin pain.

12. Claimant was evaluated by PA-C Sarah Steele of SCL Health on November 17, 2020. Claimant was complaining of hip pain. She took a history as follows:

> 22 y/o male here today for physical.
>
> He has been having right hip pain, off/on since injury occurred last year at work. He had a heavy metal cage full of alcohol land on him, his initial xrays [sic.] were normal, negative for fracture, he underwent PT, was d/c'd. He has continued to stay active, doing regular stretching. He will occasionally not[e] (sic.) popping, at times this can be painful, "stop me in my tracks", Pain tends to be worse with activity.

They discussed his hip pain, recommended baseline x-rays in light of the previous years' mechanism of injury. On musculoskeletal examination, only right hip joint pain was noted. The radiologist, Jennifer Kemp, M.D., noted an "old fracture healed in deformity involving pubic symphysis. Ms. Steele suggested that they could try physical therapy again, but she suspected Claimant had a hip flexor strain. She noted that if pain persisted she would consider an MRI evaluation. She recommended rest, avoidance of aggravating activities/exercises, antiinflamatories as needed and regular stretching.

13. On November 17, 2020 Dr. Jennifer Kemp read the right hip x-rays from Touchstone Imaging. She noted a bone cyst intertrochanteric of the right femur measuring 1.5 cm and a bony deformity at the pubic symphysis greater on the left consistent with remote trauma. Dr. Kemp stated that the findings were consistent with an old fracture healed in deformity involving the pubic symphysis.

14. Sarah Steele, PA-C wrote Claimant a note on November 19, 2020 stating that the hip x-ray showed an old fracture to the pubic symphysis that had healed in 'deformity.' and recommended evaluation with a specialist.

15. Claimant had a "One Time Eval" on December 17 2020 with Dr. Patrick Antonio at Concentra. He documented that:

> Within the past two months, the patient states that the discomfort has been worsening without any known cause. He was seen by his PCP and new imaging of the pelvis performed on November 17, with the impression "old fracture healed in deformity involving pubic symphysis." He is concerned that the constant discomfort and recent worsening discomfort might be correlated to the injury in August 2019. He denies any new injuries to this area or activities that may have exacerbated the symptoms.

On exam he found mild tenderness to deep palpation at the medial to bilateral anterior superior iliac spine (ASIS), minimal discomfort over the pubic symphysis area and full extension and flexion of the hip. He stated that Claimant had joint pain and muscle pain. He diagnosed right hip contusion and strain, and ordered a re-read of the original pelvic x-ray as well as a physical therapy evaluation. He specifically noted that, while he had some doubts about the relatedness to the August 15, 2019 work injury, that the objective findings were consistent with the history and work-related mechanism of injury.

16. Claimant was attended by Ms. Swiderski on December 17, 2020, who documented that Claimant reported that a 500-600 lbs. liquor cage fell on his right hip and thighs. Claimant reported that the shooting pelvic pain became more frequent approximately two months prior, as well as bilateral ASIS pain.

17. Dr. Sheldon Feit, a radiologist from New York performed an independent radiologic document review. He stated that the film for the right hip from August 15, 2019 showed no evidence of fracture and a probable bone cyst within the right femur. He also reviewed the film of the pelvis on November 17, 2020 which showed an irregular fracture within the pelvis around the symphysis pubis and a plain film of the right hip, which showed the right pubic bone fracture. He also noted that there was evidence of a small cyst within the intertrochanteric region of the femur. Dr. Feit opined that since the initial films failed to show any lesion or fracture that the subsequently viewed fracture was unrelated to the August 15, 2019 work injury. [4]

18. Claimant had an MRI of the right hip performed on April 14, 2021 which was read by Dr. Vincent Herlihy and compared it to the November 17, 2020 radiographs. He noted that there was an osseous bump at the anterior right femoral head neck junction with a resulting 69 degrees right femoral alpha angle. Cam morphology of the right proximal femur with a 69 degrees alpha angle predisposes the patient to cam-type femoral acetabular impingement. There was a nondisplaced detachment of the anterior superior right acetabular labrum between the 2:00 and 3:00 positions. There was mild grade 2 and 3 chondromalacia in the right hip with physiologic joint fluid. There was mild to moderate arthrosis of the pubic symphysis with posttraumatic capsular hypertrophy and ossification. There was bilateral inferior capsular stripping which undermined the bilateral adductor longus origins. Those findings could be seen with a sports hernia/athletic pubalgia. There was a 15 mm chondroid lesion in the medullary bone of the anterior intertrochanteric right femur without aggressive features, most likely representing an enchondroma. There was a separate well-defined 20 mm STIR hyperintense lesion with a sclerotic rim in the posterior aspect of the right greater femoral trochanter which was visible on the comparison radiographs. No aggressive features were identified and differential considerations for this benign-appearing lesion included a fibroxanthoma, fibrous dysplasia, or a unicameral bone cyst.

19. On May 11, 2021 Claimant was evaluated at Next Level Physical Therapy. They took a history consistent with the August 15, 2019 injury noting that Claimant has continued to have intermittent bilateral hip pain. They noted that Claimant had a diagnosis of bilateral hip femoroacetabular Impingement as well as labral tears and had been referred for physical therapy for conservative care by Dr. Genuario. They also documented that Claimant's pain is mostly always through his anterior hip and is there throughout the day, however, is made worse with sitting for long periods of time, working out, and with various quick movements. Since the time of onset, his pain has slightly progressed. Claimant continued with physical therapy through June 2021 with continued bilateral hip irritation.

20. Claimant was seen by Dr. Genuario on May 20, 2021 regarding left knee pain and bilateral hip pain. At that time Dr. Genuario reviewed the left leg MRI and found that Claimant had a ruptured bucket handle meniscus tear with large meniscal displaced flap in the intercondylar space. He recommended knee surgery and did not make any

[4] Dr. Feit failed to state that the pelvis around the symphysis pubis bone was even shown on the original x-ray and this ALJ declines to make that leap.

comments with regard to the bilateral hip problem. On August 19, 2021 PA Jeremy Bradley noted that Claimant was progressing well regarding his left knee arthroscopy.

21. Dr. Michael Ellman of Panorama Orthopedics and Spine Center evaluated Claimant on January 7, 2022 noting the following regarding Claimant.

> His pain started when he was working in August of 2019 and a heavy cage full of liquor fell on top of him. He was subsequently found to have a pubic symphyseal fracture that has since healed. Unfortunately, he continues to struggle from a hip pain standpoint. His pain Is worse on the right over the left, getting up to a 6/10 in terms of rating in the c-type distribution. He has tried formal physical therapy for over a year as well as rest, activity modification, and anti-inflammatories. He Is quite frustrated with the amount of pain he Is In. He did get bilateral hip MRIs from Touchstone as well as x-rays from Touchstone

Claimant presented for a second opinion of his continued, daily bilateral hip pain with the right worse than the left in a "c-type" distribution across the abdomen. He described it as aching and sharp pain, occurring daily and rated it as 6/10, with associated symptoms of tenderness, exacerbated by activities for an extended period of lime, lifting, sports and twisting/turning, and alleviated by rest and stretching. He diagnosed bilateral hip strains and joint disorders. Dr. Ellman reviewed the x-ray images from November 17, 2020 that demonstrated equal and symmetric joint space throughout with no significant arthritic changes. He had evidence of a notable Cam deformity with an alpha angle on the right of 72 degrees and on the left an alpha angle of 68 degrees. He had Tonnis grade 1 changes, but no evidence of dysplasia.

Dr. Ellman reviewed the April 14, 2021 bilateral hip MRIs without contrast from Touchstone Imagine. He noted that the Images demonstrate evidence of bilateral anterior superior labral tears, with the right worse than the left. He noted that Claimant had some early chondromalacia, worse on the right than the left, but no other significant abnormalities. He did note that he had a chondral lesion on the medullary bone on the anterior right inner trochanteric region without aggressive features consistent with an enchondroma.

Dr. Ellman stated Claimant had evidence consisted with bilateral hip Cam predominant femoroacetabular impingement (FAI) syndrome with labral tears bilaterally. He had some early chondromalacia, worse on the right over the left but no advanced arthritic changes. Dr. Ellman emphasized that Claimant was a surgical candidate and that the plan was to proceed with the right hip arthroscopy, labral repair, Cam and pincer osteochondroplasty and capsule repair. He planned on staging Claimant's left hip surgery three months later.

22. On January 12, 2022 Dr. Ellman request authorization to proceed with a right hip arthroscopy with femoroplasty and labral repair and ordered a right hip abduction brace.

23. Dr. Mark Failinger, an orthopedic surgeon, performed an independent medical examination on March 19, 2022. He obtained a history which was consistent with the accident reported by Claimant involving the liquor cage falling on his abdomen and lower extremities. He reported he had pain in the hips and legs and multiple scrapes, following which he was treated at Concentra, where x-rays were taken, and he performed

physical therapy for a couple of months. Claimant stated he was approximately 60-75% back to normal but continued with continuous pain in both hips on the front, which would decrease and increase depending on exertion. Claimant informed Dr. Failinger that the pain in his bilateral hips increased over time, until approximately one year after the accident. He was attended by his primary care physician (PCP) but was directed back to the workers' compensation provider at Concentra, where he proceeded with another two months of physical therapy. He was eventually released, and Claimant returned to his PCP. He was sent to UCHealth where he was treated by Dr. Genuario for the hips. He was again sent to physical therapy at Next Level PT for several months with only a little improvement. Claimant then went on his own to Dr. Ellman for a second opinion regarding the hips. Dr. Ellman recommended surgery.

Dr. Failinger documented that Claimant continued to have bilateral hip pain and that the severity would depend on his level of activity. He would occasionally take ibuprofen and frequently do stretches or exercise. On exam, Dr. Failinger noted no pain behavior but groin pain with squats. On pain diagram Claimant noted anterior groin pain bilaterally with stabbing and aching pain, with a pain level of 3/10. Dr. Failinger specifically opined that Claimant's current complaint were not related to the August 15, 2019 accident. He opined that Claimant never reported any discomfort or pain in the left hip at the time of the injury, only in the left lower leg and right hip in addition to multiple abrasions to other body parts, which resolved.

Dr. Failinger opined that Claimant "was noted to have early groin pain and right-sided hip pain, which reasonably could have occurred with either a labral tear or with a pubic ramus fracture or even a pubic symphysis injury. The patient's symptoms were consistent with injury in those areas." However, he went on to state that because Claimant returned to his regular work within three weeks of the work injury, that it was not medically probable that Claimant's injuries to his right hip were caused by the August 15, 2019 work injury, especially since he was on his feet all day doing heavy physical lifting. He stated that "[R]ather, it is medically probable that the patient's symptoms are due at this time to bilateral femoroacetabular impingement." He goes on to state:

> It is not reasonable that the patient had left hip symptoms all along, but that such was never reported in the records. Similar to the right hip, [Claimant's name redacted]'s left hip femoroacetabular impingement has created hip labral symptoms for which the patient has ongoing discomfort and is seeking treatment at this point under the Workers' Compensation claim. Based on the above, the hip symptoms at this point are not medically reasonable or probable as being due to the work incident of August 15, 2019.
>
> …
>
> …it is not medically probable the patient could have returned to full duty in a manual labor job of being on his feet all day if, in fact, he had fractured his pubic ramus or had sustained a significant symphysis strain or had torn a labrum.
>
> …
>
> The x-rays and the MRIs that were performed when the patient sought treatment in November of 2020 are consistent with a developmental deformity called femoroacetabular impingement, of which he has a CAM variant. These

> are classically known to create labral tearing, which appears to have occurred in [Claimant's name redacted]'s case. For the reasons explained above, it is with high medical probability that the patient's current symptoms are due to the CAM deformity, which was not created by the work incident of August 15, 2019. That is a developmental phenomenon which causes labral tears and, in a fair number of patients, hip symptoms. However, that is not related in any way to the work incident of August 15, 2019.

24. On May 24, 2022 Respondents filed a General Admission of Liability stating that the claim was a medical only case with no lost time. Respondents further noted that they were admitting for liability for the contusion of the right hip only.

25. Claimant deposed Dr. Ellman on October 7, 2022. Dr. Ellman was accepted as an expert, board certified orthopedic surgeon at Panorama, in the field of orthopedics. A great majority of his practice involved treating hips.[5] Dr. Ellman testified he understood that a heavy cage fell on Claimant and created a lot of trauma around his pelvic region. He diagnosed Claimant with, and is treating him for, bilateral hip labral tears. He described the labrum as "a little gummy worm or fibrous tissue that lives around the socket and can peel off the bone and tear." Dr. Ellman explained that labral tears can be acute or chronic, and it is difficult to assess causality. More than 50% of people have labral tears. Some of them cause pain, some of them do not. Dr. Ellman stated that Claimant has symptomatic labral tears, and the pain he has described was consistent with labral tears. The pain typical would start in the hip and radiated to the anterior aspect or front of the hip, or in the groin.

26. Dr. Ellman stated that Claimant's mechanism of injury with the cage likely caused the traumatic tears of his labrums. He stated that "[A]s you rotate the hip, you can impinge that area of bone against the labrum. The labrum can peel off the bone…with any impact to the pelvis where that piece of bone just impinges against the pelvis, and it hits against it and the labrum peels off the bone." He stated the impact of the cage of bottles falling on Claimant with his legs to the side was consistent with the impact that would be sufficient to tear the labrums. Dr. Ellman explained that if Claimant had acutely torn his labrums on his date of injury, he would still be able to function. "The vast majority of patients with labral tears can lead a functional life, can walk, can run, can cut, can pivot. But...it kind of creates what I call a toothache of the hip, where you have… aching, sore-type pain deep in the hip that a lot of patients just deal with..."

27. Dr. Ellman stated that if Claimant had undiagnosed, asymptomatic torn labrums before his work injury, the injury with the cage aggravated the tears causing them to be symptomatic and in need of treatment. He explained that labral erythema, or bruising of the labrum, is a red inflammatory tissue seen inside the labrum on symptomatic tears. Dr. Ellman stated it is medically probable that Claimant's work injury either caused, accelerated, or exacerbated his bilateral labral tears. Dr. Ellman stated that Claimant's mechanism of injury, with both hips rotated and pelvis getting a direct impact on top of it, certainly supports an injury to both hips and both labrums.

28. Dr. Ellman stated that it is reasonable for Claimant's symptoms to wane and wax after the injury, based upon the amount of inflammation going on with the labrum at

[5] Dr. Ellman testified that 98% of his practice was treating hip complaints.

that time that can create pain. The nociceptor, or pain receptors, in the labrum can be triggered with certain activities and cause pain. It is reasonable that Claimant's symptoms could have improved after his date of injury with conservative treatment, and then worsen without a subsequent intervening injury. It is not improbable that Claimant could return to a physically demanding job four weeks after the injury. It is not unreasonable for symptoms to wane for 15 months. Dr. Ellman has "seen just about everything in the book" with hip symptom waning and waxing.

29. Dr. Ellman stated that the fact that Dr. Larson released Claimant to full duty on September 20, 2019 had no effect on his opinion that Claimant needs further treatment under this claim. Dr. Ellman opined that through no fault of his own, Claimant went to work a little early and did not allow everything to heal and aggravated his hips and pelvis. He personally would not have released a patient back to full activities until at least 8-12 weeks post-injury.

30. Dr. Ellman explained Claimant's finding of a Cam-type femoroacetabular impingement (FAI). Claimant has a bump on the ball of his hip joints. This is a "common finding" in the general population. Dr. Ellman stated that Claimant's finding of a Cam-type femoroacetabular impingement (or FAI), has no effect on his opinion about the causation or the acceleration of the labral tears being related to the work injury. "Again, he had no symptoms before. He had symptoms after. To me, in my head, it's pretty simple, CAM lesion or no CAM lesion."

31. Dr. Ellman explained Claimant's finding of a pubic ramus fracture. The pubic ramus is the part of the pelvis where two pelvic rings come together in the front. This finding demonstrates the significance of the trauma to Claimant's pelvis; it broke his bone. The fracture signifies a direct front to back impact of the pelvis. Dr. Ellman stated that he would expect Claimant's pubic ramus fracture to heal in three to eight weeks.

32. Dr. Ellman's requested surgery is a minimally invasive procedure where he goes in through a couple of "poke holes," fixes the labrum, and reattaches it to the acetabular rim. He will re-sculpt the ball and socket to take away any impingement. Claimant can expect three weeks on crutches and three to four months before full activities. Dr. Ellman expects full, permanent return to function for the hips following the surgery. Dr. Ellman stated the surgery is medically necessary. Claimant has tried therapy, anti-inflammatories, and non-operative treatment for three years. Dr. Ellman did not expect him to get much better without surgery and the labrums were not likely to heal or reattach themselves without surgery. Dr. Ellman stated that Claimant's need for labral repair of both right and left hips was medically probably related to his work injury. Dr. Ellman stated there is nothing medically unreasonable about moving forward with surgery. His diagnosis is very clear. Diagnostic injections are not necessary, and cortisone injections are bad for the hips, long-term, especially in young, active patients.

33. Dr. Ellman saw nothing on exam, review of diagnostic studies or patient discussion that indicated a subsequent intervening injury to Claimant's hips. Dr. Ellman assessed his patients' credibility, as there were no situations where the description of the injury and/or development of symptoms did not make sense or gave him pause on how to move forward with regard to surgeon. He found Claimant credible.

34. Claimant identified the picture of a liquor cage, similar to the one that fell onto him, but stated that the photographed one was not as full as the one that fell on him. The picture showed a cage containing multiple shelves holding full boxes of liquor, at least five cases wide per shelf, holding approximately two cases tall on the top shelf and at least one tall on the two other shelves. Claimant testified that the full cage weighed approximately 500 to 600 lbs. when full.[6]

35. Claimant stated that he continued to work for Employer after the work-related injury and did not incur any other injuries since the work-related injury of August 15, 2019. Further, he had no hip problems prior to the trauma of August 15, 2019.

36. Claimant continued to have constant pain, which continued since the work injury. It was throbbing and aching and involved some numbness as well. He learned to push through the pain and keep working. However, he had to ask for help to perform some of the activities he used to perform on his own, such as heavy pushing, pulling, and lifting at work. There was a period, during COVID, when he was laid off. However, when he returned to his regular work in November 2020, the pain increased. He went to his personal provider to ask for further care. After he had the MRI, his PCP told him to reach out to Insurer as his problems were related to the work injury, and that is when they authorized the one-time visit with Concentra. He stated that he could no longer tolerate the symptoms and wished to proceed with the surgery recommended by Dr. Ellman in order to move forward and heal. He stated he had completed at least six months of physical therapy without lasting relief.

37. Following his release from Concentra, he stated he continued to exercise and work out at the gym, though he was limited in what he was able to do. He specifically stated he could not perform leg presses or squats. He also attempted running, jumping jacks and rope jumping without success.

38. Claimant explicitly noted that he did not have any difficulties with his hips, pelvis, or groin before the work-related crush injuries. Prior to his work injury, he played with his nephew, played slow-pitch softball, and worked out at the gym. He was able to squat, deadlift, leg press, treadmill, and stair climber with no issues due to hip, groin, or pelvic pain. Claimant played catcher for four years of high school baseball before his injury. He had no problems being in a deep squat due to hip or groin pain.

39. Claimant stated that PA Steele referred Claimant to Dr. Joseph Hsin, who in turn referred Claimant for the MRI of the right hip, which took place on April 14, 2021. Ms. Steele also referred Claimant to Dr. Genuario at UCHealth for evaluation regarding his bilateral hip and abdomen/pelvis pain.

40. Respondents deposed Dr. Failinger on October 19, 2022, after the hearing, a Board-Certified physician in orthopedic surgery and sports medicine as well as a Level II accredited physician retained by Respondents to perform an independent medical examination (IME) of Claimant. He stated that fifty percent of his income was for performing IMEs, at the rate of two to three IMEs per week. Dr. Failinger did not recall

[6] This ALJ noted that a typical case of liquor weighs between 30 and 40 lbs., which multiplied by fifteen cases per cage, could indicate a weight of between 500 to 600 lbs., including the weight of the cage itself, which probably weighed between 100 to 200 lbs.

Claimant, nor did he remember Claimant's face. Dr. Failinger's surgery practice was limited to knee and shoulders, not hips. Dr. Failinger performed no hip surgeries. Dr. Failinger opined that the surgery proposed was for Claimant's hip FAI, and not a traumatic injury. Dr. Failinger testified, "There was multiple things that hurt, but the right hip was focused, and it was the last thing to resolve."

41. Dr. Failinger testified that labral tears can wax and wane. If Claimant had symptoms for months and it kind of got better and worse, it's more reasonable that he could have accelerated or extended his pre-existing tearing. Dr. Failinger testified several times that Claimant requested to go back to work and to full duty. However, Dr. Failinger testified that Claimant did not report during the IME that he had asked to go back to work. He testified Claimant only told him he worked the entire time, and only missed the day after the injury. He testified that he asked Claimant no questions about his job duties. He did not base his description of Claimant's "very heavy job" on anything that came from Claimant, but on his general knowledge of the type of job Claimant had. Dr. Failinger testified that it was his "understanding, he did return back to full duty, but he still had ongoing symptoms. It's consistent with the [medical] records."

42. Dr. Failinger testified that he was unaware that as soon as COVID hit, the Employers locale turned into a homeless shelter, and Claimant's only job was to stand/ sit around serve dinner. He first testified that this could change his opinion, then stated that it would not change his opinion because Claimant continued to perform his regular job for six months before COVID hit. Dr. Failinger testified that "the most reliable thing of what actually occurs is not patient history, but the actual medical records."

43. Dr. Failinger testified he placed a lot of significance on that fact that Dr. Larson released Claimant to full duty in September 2019 and that Dr. Larson did not have a reason or motive to close a case if Claimant was symptomatic. Dr. Failinger testified that Dr. Larson's records focused right-sided hip pain were significant to him.

44. Dr. Failinger opined, consistent with his report, that it's not medically probable that Claimant's admitted injury involving a crush trauma by a metal cage filled with glass and liquid accelerated/ exacerbated or caused a need of treatment of Claimant's labral tears. However, he stated that impact activities, torquing and twisting activities could have accelerated the labral tearing that occurs with a Cam lesion causing a worsening.

45. Dr. Failinger testified, consistent with his report, that there was a significant discrepancy in the reported initial weight of the cages in the Concentra note and what was later reported as the weight of the cages, yet, in terms of causation, the weight was not really a factor in this case as far as he was concerned. He stated that, even if the cage was only 150-200 pounds, that weight falling on the front of Claimant's hips could cause trauma to his labrums. He testified that he received no information that employer was refuting Claimant's demonstrative photo of a similar but less-stocked cage, or that it took three men to remove the cage from Claimant. He testified that, with his life experience of the weight of metal, glass, and liquid, is it was not probable that the cage only weighed 150 pounds.

46. As found, Dr. Failinger's opinion that the cage did not have a significant impact on Claimant's injuries to his bilateral hips is not credible. The cage full of liquor

and mixes, fell off of the lift gate, which was four feet in the air, and onto Claimant, pinning him to the ground. One co-worker alone could not shift the cage to move it off of Claimant. Three large workers exerted all of their strength to shift the cage off of Claimant so he could get out from underneath it. Further, Dr. Failinger heavily relied on Dr. Larson's September 5 and September 20, 2019 notes as stating that Claimant was recovered. This ALJ does not read those records in the same manner. Dr. Larson, in fact noted Claimant continued to have tenderness across his abdomen with exertion or range of motion. In light of Claimant's youth, his failure to understand his right to request ongoing care related to the workers' compensation injuries and his testimony that he continued to have problems after he was released as well as the reasoning behind his failure to insist on medical care for his work-related injuries, Claimant's testimony is credible and persuasive over the opinions of Dr. Failinger.

47. As found, Claimant was injured in the course and scope of his employment when the very heavy cage fell four feet onto Claimant's hips and lower extremities. This crush injury caused an aggravation or acceleration to the Cam deformity, which in turn caused the labral tears. He continues to have ongoing pain across his abdomen, and the bilateral labral hip tears for which he requires medical care, including the surgery recommended by Dr. Ellman.

48. As found, Claimant and Dr. Ellman are more persuasive than the contrary opinions and testimony proffered by Dr. Failinger or Dr Feit. Dr. Ellman persuasively addressed the issue of causation in this matter that the traumatic events of August 15, 2019 caused the aggravation of the Cam deformity and the labral tears. Claimant has shown that it is more likely than not that the continued bilateral hip conditions were caused or aggravated by the work injury. Claimant has shown that it is more likely than not that the continuing need for treatment of the bilateral hips is due to the work-related accident of August 15, 2019.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal

relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Causation of Left Hip Condition

This is an admitted case. On May 24, 2022 Respondents filed a General Admission of Liability stating that the claim was a medical only case with no lost time. Respondents further noted that they were admitting for liability for the contusion of the right hip only. Therefore, before determining medical benefits in this matter, the issue of causation of the left hip condition must be assessed and determined.

Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work-related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant has shown that the aggravation of the Cam deformity and the bilateral labral tears was proximately caused by the August 15, 2019 work related accident when the heavy liquor cage fell off the lift gate directly onto Claimant's hips and legs and more likely than not the cause for the need for further medical care as recommended by Dr. Ellman. Dr. Ellman persuasively explained that hip labral tears are very different from meniscal tears, for example. This ALJ infers from Dr. Ellman's testimony that many individuals, especially young athletes, continued working out, playing sports, and doing demanding activities despite having hip labral tears caused by trauma, while they likely could not continue with those demanding activities if, for example, they had a tear in the knee joint. Further, this ALJ specifically finds that the records of Dr. Larson are somewhat repetitive or duplicative of prior visits and that the Concentra physical therapists records that note Claimant has bilateral hip pain with exertion to be more accurate. Lastly, this ALJ does not find Dr. Failinger's opinion provided in his report or through testimony persuasive. Dr. Failinger's expertise centers on orthopedics of the

knees and shoulders, and not specifically with regard to hips. Dr. Ellman is persuasive and convincing over the contrary testimony and opinions of Dr. Failinger.

As found, Dr. Failinger's opinion that the cage did not have a significant impact on Claimant's injuries to his bilateral hips is not credible. Claimant's testimony is credible and persuasive. The cage full of liquor and mixes, fell off of the lift gate, which was four feet in the air, and onto Claimant, pinning him to the ground from the hips down. One co-worker alone could not even shift the cage to move it off of Claimant. Three large workers exerted all of their strength to shift the cage off of Claimant so he could get out from underneath it. Further, Dr. Failinger heavily relied on Dr. Larson's September 5 and September 20, 2019 notes as stating that Claimant was recovered. This ALJ does not read those records in the same manner. Dr. Larson, in fact noted Claimant continued to have tenderness across his abdomen with exertion or range of motion. In light of Claimant's failure to understand his right to request ongoing care related to the workers' compensation injuries following his release, his testimony that he continued to have problems after he was released and continued to work through the pain, as well as the reasoning behind his failure to insist on medical care for his work-related injuries, Claimant has persuasively explained the delay in obtaining care. And Dr. Ellman's opinions and testimony were also more persuasive and credible over the opinions of Dr. Failinger.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that it is more likely than not that he requires reasonable and necessary medical treatment for these bilateral labral tears. As found, Claimant was injured when the very heavy cage fell four feet onto Claimant's hips and lower extremities, which cause the crush injury to his hips,

aggravating or accelerating to the Cam deformity, which in turn caused the labral tears. He continues to have ongoing pain across his abdomen from the bilateral labral hip tears for which he requires medical care, including the surgery recommended by Dr. Ellman. As found, Claimant and Dr. Ellman are more credible and persuasive than the contrary opinions and testimony proffered by Dr. Failinger or Dr Feit. Dr. Ellman persuasively addressed the issue of causation in this matter that the traumatic events of August 15, 2019 caused the aggravation of the Cam deformity and the labral tears. Claimant has shown that it is more likely than not that the continued bilateral hip conditions and pain were caused or aggravated by the work injury. Claimant has shown that it is more likely than not that the continuing need for treatment of the bilateral hips is due to the work-related accident of August 15, 2019.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay for Claimants' continuing need for reasonable, and necessary medical care for the aggravation of the Cam deformity and bilateral labral tears as recommended by Dr. Ellman, caused, or aggravated by the traumatic work-related accident of August 15, 2019.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-185-498-001

STIPULATIONS

The parties stipulated that if the claim is reopened that Claimant would not be entitled to TTD after September 26, 2022, the date he began his new employment.

ISSUES

- Did Claimant prove the claim 5-185-498 should be reopened based on a change of condition?
- Did Claimant prove entitlement to medical benefits including treatment for herniated discs in his neck?
- Did Claimant prove entitlement to temporary total disability benefits prior to September 26, 2022?

FINDINGS OF FACT

1. Claimant worked for Employer as a Client Care Aide. Claimant sustained an admitted injury on September 25, 2021 to his neck when he was involved in a patient restraint. The Claimant was initially seen at the Emergency Department on September 26, 2021 at 11:56 p.m. by Dr. Honig. The ED notes indicate that he had pulled a muscle in his neck while at work and then after the incident, he was taking ibuprofen for the pain and he tossed his head back to swallow the pills and heard a pop in his neck and had worsening pain along his left trapezius region. A CT angiogram scan was performed on this date, which was interpreted as "unremarkable". Dr. Honig noted that the CT was negative for vertebral artery injury or other obvious injury. He felt it was appropriate for Claimant to undergo outpatient treatment of cervical sprain.

2. The Claimant was next seen by Nurse Practitioner Brendon Madrid at Concentra on September 27, 2021. Mr. Madrid's diagnosis was neck strain. The claim was admitted and treatment was provided. Claimant was referred to Dr. Donald Dressen for chiropractic treatment.

3. The Claimant was placed at maximum medical improvement on November 19, 2021. The Claimant was released to return to work full duty at that time. The claim closed by final admission on December 27, 2021. At the time of MMI, Mr. Madrid made the following notations: "No pain today. Feeling better. Chiro with Dr. Dressen completed. No numbness or tingling." He was assigned no permanent impairment. (Claimant Exhibit 5, pp. 87 – 92).

4. The Claimant did not object to the final admission of liability or request a Division IME.

5. The Claimant testified at hearing that after he was placed at MMI he continued to experience headaches.

6. The Claimant later developed tingling from his shoulder down to his pinky on his left arm. He also has constant aching going up from the neck to the left side of his skull.

7. He returned to Parkview Medical on January 16, 2022 when he had neck pain when he slept wrong and woke up with worsening neck pain. Dr. Rogers noted that the pain in his neck did not radiate and Claimant denied arm or leg weakness or numbness. Claimant requested that an MRI be performed. However, Dr. Rogers did not think that an emergent MRI was required given his otherwise reassuring exam and recent normal CT.

8. Claimant returned to Concentra on February 3, 2022 for a one time examination for increased neck pain. He was seen by Brendon Madrid. He reported constant pain and had pain of 9 out of 10. He reported that he was diagnosed with COVID-19 on January 1, 2022. When he had COVID, he had hard coughing episodes. These coughing episodes resulted in increased neck pain. Although Mr. Madrid did not feel the second event, namely the coughing episode was work related, he would order an MRI.

9. The MRI was taken on February 22, 2022. The MRI showed a circumferential bulge with broad based posterior herniation at C3-4, C6-7 causing bilateral neural foraminal stenosis. It also showed circumferential bulge with broad based posterior and left foraminal herniation at C4-5 causing moderate left and mild right neural foraminal stenosis The MRI also showed circumferential bulge with broad based posterior herniation at C5-6 causing moderate bilateral neural foraminal and mild central canal stenosis.

10. Claimant stopped working on April 22 or 25, 2022[1] because he could no longer perform his job duties to work on the floor. He was asked to sign a document that he had restrictions for a non-work related condition on June 25, 2022.[2] When he refused to sign that document, he was terminated.

11. Claimant had an epidural steroid injection into his neck after a referral from Brandon Madrid. Following the injection, he felt better for about a month. After the month, he developed pain again. This includes constant headaches and constant tingling down his left arm when he holds things too long.

[1] According to the Employment records, (Claimant Exhibit 13, p. 309) the Claimant had restrictions of no takedowns and no over head work over 20 lbs. on April 19, which approximately coincides with his testimony.

[2] Although not critical to this order, the date of separation is documented as 6/24/2022. (Claimant Exhibit 13, p. 309).

12. Claimant currently works at a family support center for autism as a registered behavioral technician. He works with children on the spectrum. He started this job on September 26, 2022.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Renz v. Larimer County, 924 P.2d 1091 Colo.App. 1996).* The party requesting reopening bears the burden of proof. Section 8-43-304(4). A "change in condition" refers to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that is causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The claimant suffers a "worsening" of a pre-existing condition if the change is the natural and proximate consequence of a prior industrial injury, with no contribution from a separate, intervening causative factor. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

Whether a particular condition represents a natural progression of the industrial injury or is the result of an efficient intervening cause is one of fact for determination by the ALJ. *Lutgen v. Teller County School Dist. No. 2*, WC No. 3-846-454 (ICAO June 12, 1986), *aff'd*, *Teller County School Dist. No. 2 v. Indus. Claim Appeals Office*, (Colo. App. No. 96CA1194, December 27, 1996) (not selected for publication).

I find that the Claimant has failed to sustain his burden of proving that his worsened condition is due to the natural progression of his work injury. While he sustained a compensable neck strain, that neck strain resolved November 19, 2021. It was not until he contracted COVID-19 and had bouts of hard coughing that he developed pain again that prompted the taking of an MRI that showed the disc disease at multiple levels of his cervical spine. The Claimant has provided no credible evidence that the pathology of the spine as evidenced on the MRI was caused by the work related incident or was symptomatic due that incident. It was not until the Claimant developed the COVID induced hard coughing bouts that the Claimant had increased symptomatology in his neck that resulted in him obtaining medical treatment.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen W.C. No. 5-185-498 for medical benefits is denied and dismissed.

2. Claimant's request for medical treatment for his neck is denied and dismissed.

3. Claimant's request for temporary disability is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: November 30, 2022

/s/ Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on May 18, 2022 on issues that included medical benefits and denial of surgery. On August 17, 2022 Claimant moved, before PALJ Susan Phillips, to endorse the issue of compensability, which was granted.

The parties attended a hearing on September 1, 2022. Respondents moved for a continuance of the hearing as counsel for Respondents had been hired the prior day, was unable to appropriately prepare for hearing, and had not submitted any pleadings. This ALJ granted Respondents' motion for a continuance for good cause shown, over Claimant's objection, and the matter was rescheduled for September 30, 2022. This ALJ further allowed Respondents to submit responsive pleadings. Finally, this ALJ granted Claimant's motion to add the issues of temporary total disability benefits and average weekly wage, and Respondent's issue of termination for cause to the issues set for hearing.

This ALJ also modified the record exchange deadline pursuant to W.C.R.P. Rule 9-1(A) and allowed the parties to exchange medical and employment records by no later than 10 days prior to the continued hearing. Discovery in the matter was frozen as of the September 1, 2022 hearing.

STIPULATIONS OF THE PARTIES

The parties stated that medical benefits had been paid to date, with the exception of the surgery pursuant to Dr. Pehler's request for prior authorization. The parties agreed, if the claim was found compensable, that medical providers to date, including but not limited to Occupational Medical Partners, Dr. Matthew Lugliani, Dr Robert Broghammer, Dr Zachary Jipp, Patricia Dockter PT, as well as the referral physicians, Dr. Do Long Vu, Dr. Scott Primack, PA Maria Kaplan, and Dr. Stephen Pehler, were all within the chain of referral and authorized treating providers. Respondents continued to deny the surgery in light of the W.C.R.P. Rule 16 report issued by David H. Elfenbein, M.D. on March 30, 2022. The stipulation of the parties is approved by this ALJ and becomes part of this order.

The parties stipulated that, if Claimant proved compensability, Claimant was a maximum wage earner, and his temporary total disability benefits rate is $1,158.92. This stipulation of the parties is approved by this ALJ and becomes part of the order.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant sustained an injury in the course and scope of his employment with Employer on September 17, 2021.

IF THE CLAIM IS FOUND COMPENSABLE:

II. Whether Claimant has shown by a preponderance of the evidence that he is entitled to medical benefits that are reasonably necessary and related to the injury including surgery per Dr. Pehler recommendations.

III. Whether Claimant has shown by a preponderance of the evidence he is entitled to temporary disability benefits related to the work injury of September 17, 2021.

IV. If Claimant has proven he is entitled to temporary disability benefits, whether Respondents have shown by a preponderance of the evidence that Claimant was responsible for his termination and not entitled to temporary disability.

V. Whether Claimant has proven by a preponderance of the evidence what his average weekly wage is.

FINDINGS OF FACT

Based on the evidence presented in this matter, the ALJ enters the following findings of fact:

1. On September 17, 2021, Claimant was employed as a biomechanical services specialist III for Employer for approximately eight years, since he was hired on July 9, 2013. His job involved maintenance of multiple machines at different Employer locations, including dialysis machines and equipment, water treatment equipment, as well as training nurses and ancillary staff on the use of the equipment. He also trained new hires for biomechanical services. The job included a lot of pushing, pulling, moving and lifting very heavy equipment including water tanks, carbon tanks or reverse osmosis industrial machinery that could weigh a couple hundred pounds. They would try to have other staff available to lift the heavier equipment but sometimes Claimant would have to do the lifting independently.

2. On Friday, September 17, 2021 Claimant was servicing a dialysis machine when one of the hoses or blood tubes was stuck under the wheel of the machine. Claimant bent down to lift the machine to untangle the hose. While trying to disentangle the hose, his back popped, which caused immediate pain and spasming as well as numbness going down his lower extremities. He felt the pop, not just heard it. At the time, he was tilting the middle section of the heavy machine to get the quarter inch tubing out from under it. He could not stand up immediately, so he slowly crept back in a bent down position and sat on a chair to see if the pain eased. He realized that something serious had happened to his back. He slowly made his way out to his vehicle and noticed that his lower legs and feet had a numbness and tingling feeling. He sat in his car for a while before going home. Claimant contacted his supervisor by email, as he was not onsite, to let him know what had happened to him. They discussed the injury and agreed to have Claimant wait until the following Monday to see if he continued to have symptoms, before going to the workers' compensation provider. Claimant felt that the injury, while serious, was not life threatening, so he did not go to an emergency room.

3. Claimant was initially seen by Dr. Robert Broghammer on September 21, 2021. Dr. Broghammer noted Claimant went to pick up a dialysis machine a little bit to get the thing caught underneath the wheels and he strained is back. Dr. Broghammer noted no pain behaviors on exam. He found no particular exam concerns but referred Claimant to physical therapy. He stated that "[T]he worker's history is consistent with a work-related injury." But that he considered it to be "an exacerbation of the chronic pre-existing condition."

4. Respondents filed an Employer's First Report of Injury (FROI) noting a work-related injury on September 16, 2021 at approximately 11:28 a.m., which was reported to Employer the same day. It also noted that Claimant was picking up the machine when he "tweeked" [sic.] his back and they referred Claimant to Dr. Robert Broghammer for treatment at Occupational Medical Partners. Lastly, it noted that Claimant sought medical treatment on September 20, 2021.[1] The FROI was completed by Claimant's supervisor on September 23, 2021.

5. Claimant testified that he had a back injury when he was approximately 20 years old, which resolved with conservative care, such as physical therapy and one injection. He stated that he did not have any problems with his back since then and specifically in the last five to ten years. Claimant was 41 years old at the time of the hearing. Claimant stated that he would not have been able to carry out his job in biomechanical services for the last eight years if he had ongoing back problems because of all the heavy lifting required. He also stated that he had been very active, doing his job and things like biking, without difficulty. He stated that he had not had any treatment in the last twenty years related to his back and that his providers took down incorrect histories if they mentioned otherwise. Lastly, Claimant stated that he had no limitations on his work or outside activities or in any way missed any work due to physical problems prior to the back injury. Claimant was credible and persuasive.

6. Claimant explained that he never had problems with numbness and tingling in his legs like he has now and did not understand where the providers obtained the information, but it was not from him. He has had numbness and tingling since his work injury from the calf down to his foot. When he was twenty years old, he had sciatica pain, which included pain in the buttock area going down his leg to right above the knee but that it resolved with treatment. He denied he told providers that he had "chronic pain" in his low back at any time immediately before this injury, as he did not use the word chronic, and vehemently denied that he told his providers he had pain continuously since he was 20 years old. He was able to perform his heavy work and his recreational activities without any problems with either his back or his lower extremities. Claimant was credible.

7. Claimant returned to see Dr. Broghammer on September 28, 2021 but had had no improvement yet, as he had just started physical therapy. Dr. Broghammer noted that Claimant was in too much pain to return to his work and his supervisor had told him 'to not come in' to work. The provider also noted Claimant continued to have back pain

[1] The Employer's First Report of Injury states September 16 and September 20, 2021. However, the medical records show that the first appointment was on September 21, 2021, so this ALJ infers, Employer was simply off by one day and should have noted September 17, 2021 and September 21, 2021 respectively.

and bilateral foot numbness and tingling. He stated that "the worker will continue modified activities and physical therapy." Work restrictions were lifting up to 10 lbs., carrying 10 lbs., push/pull 20 lbs., no prolonged standing or sitting and should change positions as necessary.

8. Claimant was evaluated by Patricia Dockter, P.T. on September 28, 2021. She noted as follows:

> 40 yo male with c/o's LBP. B feet N/T after he was bending over to pick up dialysis machine to free up a piece of tubing from underneath the machine. Pt experienced he felt a 'sharp pain in my lower back. area.".
>
> Pt has history of chronic LBP since he was 20 years old. No history of surgery. Pre-injury pain baseline levels: symptom free, except for in B feet after a couple hours of standing, walking. Pt works as a biomedical technician for DaVita. N/T Per pt, he repairs, maintains dialysis equipment. AGG factors: standing>5min increases B feet N/T, Wearing flip flops or barefoot increases N/T B feet. Sitting> 5min increases his back pain. Sitting/driving in his car, L/R S/L increases back pain. Difficulty with lower body dressing. Alleviating factors: sitting helps get rid of B N/T feet but he has increased pain from pressure at his coccyx with sitting. Lying in prone 'seems to open it (back) up". Pt reports that squatting "all the down helps the back pain, B foot N/T".

9. On October 14, 2021 Dr. Broghammer reported that Claimant had not made progress and ordered an MRI of the lumbar spine. Restrictions were similar but added no crawling, kneeling, squatting or climbing and no bending or twisting. He noted that the objective findings were consistent with the work-related mechanism of injury, diagnosing low back strain.

10. Claimant underwent a lumbar spine MRI on October 23, 2021 at Health Images. The images were read by Dr. Saidmunib Sana, who stated that there was:

> Central disc herniation at L4-5 causing mild bilateral subarticular zone narrowing. This may be irritating the bilateral L5 nerve roots.
>
> Right paracentral disc herniation at L5-S1 which mildly posteriorly displaces the right S1 nerve root.
>
> Severe L5-S1 spondylosis where there are prominent type I endplate changes. There is moderate to severe bilateral foraminal narrowing at this level.

11. On October 25, 2021 Insurer filed a Notice of Contest, for further investigation.

12. Dr. Broghammer referred Claimant to physical medicine and rehabilitation (PMR) specialist, Dr. Scott Primack, on October 27, 2021, after reading the MRI report.

13. Claimant consulted with Do Long Vu, DO, on November 3, 2021. Dr. Vu noted that Claimant had loss of range of motion of the lumbar spine but otherwise a negative exam. Claimant complained of low back pain and numbness and tingling of the lower extremities. His assessment was as follows:

> Patient has signs and symptoms consistent with discogenic low back pain due to the lumbar disc extrusion at L5-S1 on the MRI of the lumbar spine as noted above. He also does have type I Modic endplate changes at L5-S1. The symptoms he feels in his legs the tinging numbness paresthesias likely neuritis from the inflammation of the disc extrusion. He does not have weakness on exam today though he does feel unsteady in his on his feet at times. He is concerned that he may trip and fall If he returns to work at this time.

Dr. Vu also stated that he thought Claimant "would benefit greatly from lumbar epidural steroid injection for the discogenic low back pain and inflammation from the disc extrusion."

14. Claimant was transferred to Dr. Matthew Lugliani and the Claimant saw him on November 16, 2021 for the first time. Under "Chief Complaint" Dr. Lugliani has the identical history, wording and poor grammar as Dr. Broghammer.[2] Under "subjective" Dr. Lugliani noted that Claimant had worsening symptoms with ongoing mid and low back pain, numbness and tingling in the bilateral feet. Under "Review of Systems" Dr. Lugliani noted back pain and difficulty walking. He noted that inspection of the back revealed scoliotic posture, a left anterior hip rotation and elevation, SI tenderness. Back range of motion was limited with positive facet loading maneuvers in all planes. He noted Claimant was seeing a PMR specialist and was awaiting injections. He further ordered chiropractic and massage therapy, as well as referred Claimant to Dr. Vu.

15. Zachary Jipp, D.C., evaluated Claimant on December 9, 2021 noting a history as follows:

> His injury occurred on 9/17/21. At the time he worked for [Employer] kidney dialysis company. He bent over to pick up something heavy and immediately felt a sharp pain in his lower back. He does report a history of chronic back pain from an injury that occurred 20 years ago. He received a couple injections for this previous injury. Regarding this most recent work-related injury, his low back pain continues. If he sits for too long or stands for too long both of his feet will go numb but he denies radiating leg symptoms. He no longer works with a company. Prolonged sitting, standing aggravate his pain. He also reports disturbed sleep due to pain. He has tried physical therapy with minimal relief. He has been referred for an epidural but that is awaiting insurance approval. Recent MRI findings show disc herniations at L4-L5 and L5-S1. He denies bowel/bladder incontinence. saddle paresthesia.

16. Dr. Lugliani saw Claimant on December 17, 2021 but the report will not be summarized here as it is a duplicate chief complaint from Dr. Broghammer's report of September 21, 2021 and the exam is exactly, word for word, with errors and everything, the same from his November 2021 report. The only remarkable statement is his concern regarding Claimant not getting recommended EMG and injections authorized.

17. On January 5, 2022 Claimant was evaluated by Dr. Primack, who obtained the following history:

> [Claimant] is a 40-year-old right-handed male presents for a comprehensive electrodiagnostic consultation of his ongoing back pain with rating symptoms going into the right lower extremity as well as the left lower extremity. He works at [Employer]. He remembers that he was doing well up until 9/17/2021. While working in the capacity as a biomedical technician, hosing was stuck underneath 1 of the wheels of a dialysis machine. He bent over to lift up to to dislodge the low hose by moving the machine. He had sudden severe back pain. In time, he did begin to have radiating symptoms going into his right lower extremity as well as his left lower extremity.

Dr. Primack determined that, considering the "clinical examination as well as the imaging studies," the injections with Dr. Vu were considered reasonable, appropriate, part of the injury. He diagnosed intervertebral disc degeneration of the lumbar region and

[2] This ALJ infers that this was just a copy and paste job.

spondylosis without myelopathy or radiculopathy of the lumbar region and stated that they would go forward with the EMG/NCS.[3]

18. Dr. Lugliani noted on January 26, 2022 the same copied chief complaint, which is not credible. He noted that Claimant had a 70% improvement from the epidural lumbar injections with decreased pain and increased range of motion. The exam was also almost identical to the prior report, with the exception of stating that the spine curvature resolved, hips were aligned, and Claimant had minimal tenderness to palpation in the paralumbar area. He noted that back range of motion was full with mild facet loading maneuvers. He decreased work restrictions at this point to 30 lbs. lifting.

19. By February 16, 2022 Claimant reported to Dr. Lugliani that the benefit of the injections had decreased, and his low back pain and lower extremities increased exponentially. He noted a left anterior hip rotation with scoliotic curvature of the spine, paralumbar tenderness and positive facet loading maneuvers. Dr. Lugliani referred Claimant to Dr. Pehler for an orthopedic evaluation.

20. On February 17, 2022, Claimant treated with Dr. Vu and reported that he had more than 80% relief of his back and leg pain/symptoms following the January 14, 2022 injection. Dr. Vu maintained Claimant's treatment plan and recommended a second injection. On March 11, 2022, Dr. Vu performed a bilateral S1 transforaminal lumbar epidural steroid injection.

21. Claimant was attended by Dr. Lugliani on March 22, 2022, who noted that the second ESI was not of benefit and Claimant continued to have increasing lumbar spine and lower extremity complaints, especially in his bilateral feet.

22. Claimant was first evaluated at Dr. Stephen Pehler's office by physician assistant Maria Kaplan of Orthopedic Centers of Colorado on March 23, 2022. PA Kaplan took a history of present illness consistent with Claimant's testimony. She recommended surgical intervention due to Claimant's continued pain despite physical therapy, anti-inflammatories, rest, two lumbar epidural steroid injections and noted that the surgery would be a bilateral L4-5 microdiscectomy as well as L5-S1 lumbar disc replacement.

23. On March 28, 2022 Dr. David H. Elfenbein issued a report stating that pathology was not limited to one level as required by CO guidelines for artificial disc replacement. He stated that it was unclear what the pain generator was. He stated that because Claimant did not respond to ESIs, it was unclear if the L4-L5 disc was a source of his complaints. He recommended further injection therapy (i.e., selective facet injections, possible discogram) would be appropriate to help define the pain generator. Therefore, he recommended denial of the request for bilateral L4-L5 microdiscectomy and L5-S1 lumbar disc replacement as not medically necessary.

24. On March 30, 2022 Insurer sent a denial of the request for prior authorization.

25. Dr. Pehler attended Claimant on April 1, 2021 and noted that at this point in time, Claimant had attempted multiple rounds of conservative treatment including physical therapy as well as epidural steroid injections, anti-inflammatory medicines, and

[3] EMG/NCS are electromyography and nerve conduction studies.

rest without significant symptomatic relief. He noted Claimant had a spondylosis at L5-S1 with bilateral neuroforaminal stenosis and a central disc protrusion with central stenosis at L4-5. Dr. Pehler's recommendation continued to be for bilateral L4-5 hemilaminotomy with microdiscectomy and L5-S1 lumbar disc arthroplasty, because Claimant was a young healthy patient, they would like to preserve his motion and a bilateral L5-S1 hemilaminotomy with foraminotomy would only address his neurocompression element and would not address his low back pain component of his clinical symptoms.

26. On April 22, 2022 Dr. Pehler wrote a letter to Insurer in response to the denial of surgery based on Dr. Elfenbein's peer review. Dr. Pehler specifically disagreed with Dr. Elfenbein opinion as there was clear indication for surgery. He specifically opined that the MRI images of the mid sagittal cut clearly showed severe collapse at the L5-S1 and central protrusion of the L4-5. The next two images of the parasagittal cuts going from the right to the left showed severe compression of the L5-S1 nerve root and an active lumbar radiculopathy. He went on to describe additional images that show the central protrusion and lateral recess stenosis and disc protrusion of the L4-5 compressing the descending roots bilaterally and at the L4-S1 levels that demonstrate bilateral recess stenosis. He stated that his recommendation for a lumbar disc replacement at the L5-S1 and bilateral microdiscectomy/decompression at the L4-5 level was reasonable, supported, and medically indicated. The L5-S1 disc replacement would address Claimant's severe collapse at the L5-S1 and severe bilateral foraminal stenosis. The L4-5 bilateral discectomy/decompression would address the compression at the L4-5 and allow Claimant to preserve the motion of his spine. Lastly, he indicated that this surgery was appropriate as it would address Claimant's ongoing complaints that have not been addressed by conservative care, allowing Claimant to have long term relief and be able to return to work.

27. On June 21, 2022 Dr. Lugliani stated that Claimant's symptoms had persisted and not changed, with low back pain and radiating symptoms into his bilateral feet. Dr. Lugliani specifically stated that he agreed with the Orthopedic Spine specialist regarding surgical intervention. He also made a referral to Dr. Disorbio, a psychologist due to Claimant's ongoing extra stress associated with the injury and other biopsychosocial factors. Dr. Lugliani's last report is for August 9, 2022 which specifically states that Claimant was to continue with self-directed exercise and massage therapy, to follow up in six weeks and the same restrictions. The M-164 form stated that Claimant was not at maximum medical improvement, which was unknown.

28. Claimant testified that he would like to proceed with the surgery recommended by Dr. Pehler because he would like to get better. He specifically stated as follows:

> Q Okay. And, I mean, you want to go forward with the surgery, correct?
>
> A Yeah. Uh-huh.
>
> Q Okay. And why?
>
> …
>
> A You know, number 1, for the last 20 years, I've been working in dialysis, taking care of patients. It's what I do. You know, it's a big part of my life. And I want to get back to doing that. This last year, not being able to work and do what I do, which is save lives, take care

> of people, it's been really hard, especially coming off of the COVID pandemic. You know, things were pretty intense right there, and it was pretty awesome to help people out. So after the COVID pandemic, to hurt my back and be out for a year like this, it's really difficult. And then just, you know, getting back some quality of life. I'd love to get back on my bicycle again and lose this weight. So it's not good for my health, you know?

29. Claimant credibly testified that he continued to have pain, sometimes aching and sometimes stabbing sensations, in the low back, which was especially painful when he was sleeping, and the pain wakes him up. He stated that "sleeping is horrible" for him. He generally had about four hours of restful sleep before the pain becomes intolerable. He also continued to have problems with his lower extremities. When he walks, his legs get numb and sometimes causes him to have to drag his legs, like the leg has gone to sleep. He does do yoga, which helps somewhat, giving him temporary relief.

30. Claimant testified that he reviewed his 2021 tax return for wages he earned from Employer. From January 1, 2021 through his last day working, on September 17, 2021, Claimant earned $68,723.00. Employer was his only employment at that time. No other evidence regarding wages was submitted and Respondents did not contradict or challenge Claimant's testimony. Claimant is found credible. September 17 is the 260th day of the year. Claimant's average weekly wage if found to be $1,850.61

31. Claimant stated that he was terminated from his employment with Employer but did not recall receiving anything documenting that termination. He never received any offer of light duty employment, though his supervisor briefly discussed the possibility of some light duty but never confirmed if any was available nor received an offer letter. He further stated he was not aware of any work policy changes that were to take effect by the end of September 2021.

32. Claimant was more persuasive in his testimony and explanations that he did not have any problems following his back injury when he was in his twenties. He testified that he reported the old injury in the spirit of disclosure, and never reported that the problems continued following his care many years ago. Claimant had been working at heavy duty job for Employer, performing maintenance on heavy equipment and dialysis machines which he had to lift or move around in order to do his job. He was very persuasive in his testimony that he had no limitations or problems with either his back or his lower extremities until the September 17, 2021 lifting incident at work, when he heard his back pop and felt immediate debilitating pain and subsequent numbness and tingling in both his lower legs/feet. Claimant has shown by a preponderance of the evidence that he sustained work related injuries to his low back and lower extremities on September 17, 2021.

33. Respondents designated Dr. Broghammer and the parties stipulated that the providers in this matter were authorized. Claimant sustained a work-related injury on September 17, 2021 for which he required care. The care provided by the authorized treating providers to date has been reasonably necessary and related to the compensable injuries to Claimant's low back and lower extremities. Further, Claimant has already tried multiple types of conservative care that would likely provide Claimant relief without success and now requires more aggressive care in the form of surgery as recommended by Dr. Pehler and that Dr. Lugliani agreed was a proper course of care. The opinions of Dr. Pehler and Dr. Lugliani are more persuasive than the contrary opinion of Dr. Elfenbein.

Claimant has shown by a preponderance of the evidence that he is entitled to receive the recommended bilateral L4-5 hemilaminotomy with microdiscectomy and L5-S1 lumbar disc arthroplasty (artificial disc replacement).

34. Claimant had an acute injury on September 17, 2021. He was so incapacitated by the pain to the lumbar spine on that day he could not straighten up and had to sit down. He slowly made his way to his vehicle and went directly home, where he contacted his offsite supervisor. While he waited through the weekend, the following Monday he requested medical care and was seen on September 21, 2021 and thereafter by the designated providers who provided restrictions. These restrictions were incompatible with Claimant's described job duties as they were sedentary to light duty and Claimant's job included lifting and moving heavy equipment. Claimant continued to have restrictions and was likely not able to perform his regular job. His ATPs have not stated that Claimant is at MMI. Claimant has shown by a preponderance of the evidence that he is entitled to temporary total disability beginning on September 18, 2021, which should continue until terminated by law.

35. Further, Claimant was not provided an offer of modified employment, and has now been terminated from employment with Employer. Claimant provided credible and persuasive testimony that he could not perform his regular duties and that, while he discussed tangentially with his supervisor the possibility of returning to work, the persuasive evidence is that Claimant was not at fault for his termination. Respondents failed to show that Claimant participated in a volitional act in this matter which caused his loss of employment.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant

presents evidence of circumstances indicating with reasonable probability that the condition for which they seek medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); see also, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. Id.;

Aragon v. CHIMR, et al., W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." Sec. 8-41-301, C.R.S.

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

Claimant was within the course of his employment as he was engaged in performing maintenance on a dialysis machine for Employer. This job required Claimant to perform various tasks including testing the machine that was being repaired. This involved making sure that all the parts were working appropriately. Claimant was in the process of doing just that when he noticed that one of the blood tubes was under the wheel of the dialysis machine and he was bent over and lifted the dialysis machine to get the tubing out from under the wheel. That is when Claimant felt the pop in his low back and the immediate onset of pain that caused him to be unable to straighten out and had to scooch backwards in order to sit down. Claimant knew it was a serious injury and reported it the same day to his supervisor. They both agreed that he should wait it out during the weekend to see if the problem would resolve on its own. The following Monday, Claimant requested to see a provider and was sent to Dr. Broghammer. Claimant credibly testified that, while he had a prior injury to his low back at the age of 20, that problem had resolved, and Claimant was able to carry out his heavy-duty job for Employer for over eight years without limitations or restrictions. It is specifically found that the providers spun Claimant's notification that he had had a prior back injury into his having a chronic low back problem. It is also found that the providers were incorrect in this assumption. This ALJ finds Claimant to be credible in this matter. Claimant has shown that he sustained compensable work-related injuries to his low back and bilateral lower extremities in the course and scope of his employment as a biomechanical services specialist for Employer that are proximately cause by the incident of September 17, 2021.

Respondents argued that Claimant had a preexisting condition which was the cause of Claimant's ongoing low back pain. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work-related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption

that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

Based on the MRI findings showing the underlying genetic abnormality of a small ventral canal and the underlying degenerative disc disease, it is clear that Claimant had some preexisting condition. However, Claimant credibly testified that he was asymptomatic from the time he was hired by Employer to the date of the accident of September 17, 2021. This is supported by the fact that he was able to perform the requirements of his job, which involved moving and lifting heavy machines on a daily basis. The fact that multiple medical providers copied and pasted the same medical history is not persuasive to this ALJ. The multiple providers even used the same language and grammatical errors. Claimant has shown that it is more likely than not that the mechanism of injury, the lifting of the dialysis machine while bent over to stretch to reach the blood tube stuck under the dialysis machine wheel, did, in fact, cause the injuries and aggravation of the asymptomatic degenerative condition. Claimant has shown that the specific accident that happened on September 17, 2021 caused the injury or aggravation of the underlying degenerative condition causing both disability and the need for medical care which are the proximate result of the work-related accident.

C. Medical Benefits

The Workers' Compensation Act (Act) imposes upon every employer the duty to furnish such medical treatment "as may reasonably be needed at the time of the injury ...and thereafter during the disability to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S. That duty includes furnishing treatment for conditions representing a natural development of the industrial injury, as well as providing compensation for incidental services necessary to obtain the required medical care. *Employers Mutual Insurance Co. v. Jacoe,* 102 Colo. 515, 81 P.2d 389 (1938); *Country*

Squire Kennels v. Tarshis, 899 P.2d 362 (Colo. App. 1995). Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 11 (Colo. App. 2004). A Claimant may be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease to "produce the disability for which workers' compensation is sought." H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's preexisting condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). An injury, nevertheless, must be 'significant' in that it must bear a direct causal relationship between the precipitating event and the resulting disability. See *Colorado Fuel & Iron Corp. v. Industrial Commission*, 152 Colo. 25, 380 P.2d 28 (1963). A claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

Here, Claimant was initially seen by providers that were designated by Employer and those within the chain of referral. Claimant was diagnosed with an acute injury on September 17, 2021 to the lumbar spine. The MRI imaging show both degenerative and congenital conditions as well as the acute herniated discs at two levels (L4-5 and L5-S1). Claimant did not have any symptoms or restrictions prior to his injury or during the eight years he worked for Employer performing a heavy job, which included lifting and moving heavy machinery. Even if some of the underlying conditions are not work related, it is found that Claimant had an aggravation of those congenital and degenerative conditions which caused the immediate symptoms following the lifting incident on September 17, 2021. This accident caused the underlying condition to require medical care. Claimant has shown by a preponderance of the evidence that the work-related accident of straining his low back while lifting was the direct causal event that precipitated the need for medical care in this matter. Claimant has shown that the medical care that he obtained from the

authorized treating providers was reasonably necessary medical care and related to the September 17, 2021 work-related injury.

It is further found that, but for the work-related injury Claimant sustained on September 17, 2021, Claimant would not have required the surgical care recommended by Dr. Pehler. Dr. Pehler is both credible and persuasive, in light of the MRI findings, and the fact that Claimant has failed conservative care, that the proposed two-level surgery is reasonably necessary and related to the accident of September 17, 2021. Claimant has proven that it is more likely than not that the need for the proposed surgery was proximately caused by the September 17, 2021 work related accident.

D. Temporary Disability and Responsibility for Termination

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbios* Logic, 952 P.2d 831 (Colo. App. 1997). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has established by a preponderance of the evidence that he is entitled to TTD benefits from the date following his September 17, 2021 injury until terminated by law. Claimant sustained work related injuries and aggravation of the underlying preexisting disease on September 17, 2021 that caused a disability lasting more than three work shifts and caused him to leave work and lose wages. Claimant was continued to be incapacity at the time of the hearing, causing continued wage loss. Claimant has not been placed at maximum medical improvement by an authorized treating provider nor has he returned to modified or regular employment. Claimant has shown that it is more likely than not that Claimant was disabled and is entitled to receive indemnity benefits as a cause of the work injuries.

Respondents argue the affirmative defense of Claimant's responsibility for termination as a defense to payment of TTD benefits. The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002), the Colorado Court of Appeals held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault." Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. "Fault" requires that the claimant must have performed some volitional act or exercised a

degree of control over the circumstances resulting in the termination. See *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). Whether the claimant is responsible for the termination of his employment must be based upon an examination of the totality of circumstances. *Id.* The burden to show that the claimant was responsible for his discharge is on the Respondents. See *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008). Therefore, Respondents bear the burden of proof to establish the applicability of these provisions. *Witherspoon v. Metropolitan Club,* W. C. No. 4-509-612 (Dec. 16, 2004). Respondents averred at hearing that Claimant's statements that he was in too much pain to return to work showed his complicity in failing to return to work or accept a light duty job, and therefore, was a volitional act that merits termination of temporary disability benefits. Respondents also argued that Claimant admitted he was not vaccinated for COVID-19 and that Employer had a new policy, which Claimant was not aware of, that all employees had to be vaccinated, and alluding to Claimant's knowledge that his employment would be at an end because of his position regarding vaccination. However, the question of whether Claimant acted volitionally or exercised a degree of control over the circumstances of the termination is one of fact for the ALJ. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

Here, as found, the evidence at hearing was not sufficient to persuade this ALJ. Claimant clearly was under significant restrictions from the injuries as he was having problems both standing or sitting for extended periods of time. Claimant described his job as heavy as he had to move and lift dialysis equipment, water tanks, carbon tanks and other equipment and materials and there was no persuasive evidence that a job within Claimant's limitations was available. Respondents did not submit any persuasive evidence that Respondents tendered a light duty job offer, nor that Claimant knew or how Claimant should have known about a policy instituted by Employer. Respondents have failed to show that Claimant's indemnity benefits should be denied under the termination statute.

E. Average Weekly Wage

An ALJ may choose from two different methods set forth in Section 8-42-102, C.R.S. to determine a claimant's average weekly wage (AWW). The first method, referred to as the " default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." Sec. 8-42-102(2), C.R.S. The default provision in Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993); *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7,* W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). In calculating the fair approximation of Claimant's average weekly

wage, wages were considered from January 1, 2021 through his date of injury on September 17, 2021, his last day of employment. Claimant testified that his tax return showed wages earned from Employer were $68,723.00. Employer was his only employment for 2021. His earnings divided by 260 days results is an average weekly wage of $1,850.37.[4] As Claimant was earning in excess of the maximum wage, Claimant's temporary total disability benefits are limited as of July 1, 2021 by statute to the maximum rate, which was $1,158.92.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained compensable work-related injuries to his lumbar spine and causing lower extremity sequelae on September 17, 2021 within the course and scope and arising out of his employment with Employer.

2. Respondents shall pay for Claimant's reasonably necessary and related medical benefits as provided by the stipulated authorized treating providers, including the lumbar spine surgery recommended by Dr. Pehler.

3. Claimant's fair approximation of his average weekly wage is $1,850.37.

4. Respondents shall pay for temporary total disability benefits as of September 18, 2021 at the maximum rate of $1,158.92 per week until terminated by law. Respondents failed to show Claimant was responsible for his termination.

5. Respondents shall pay interest at the statutory rate of eight percent on all amounts not paid when due.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when

[4] January 1, 2021 through September 17, 2021 is 260 days. 260 days divided by 7 days a week is 37.14 weeks, which when you divide $68,723 by 37.14 is a total of $1,850.37. This divided by 2/3 would equal $1,233.58, which is in excess of the maximum TTD benefits any Claimant injured after September 7, 2021 but before July 1, 2022 could receive.

filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-074-200-007

ISSUES

1. Whether Respondents established by a preponderance of the evidence that Claimant received an overpayment of indemnity benefits for which Respondents are entitled to repayment.

2. Claimant's entitlement to disfigurement benefits.

FINDINGS OF FACT

1. Claimant sustained an admitted work-related injury on April 5, 2018 when a brake rotor fell out of a box and landed on her left foot while working for Employer.

2. After substantial treatment, Claimant was diagnosed with complex regional pain syndrome. Claimant was placed at maximum medical improvement (MMI) on January 19, 2019, and assigned a 25% permanent impairment rating by her authorized treating physician. Respondents requested a Division Independent Medical Examination (DIME), which was performed by Justin D. Green, M.D., on April 29, 2019. Dr. Green initially assigned Claimant a 25% whole person impairment, and agreed with the ATP's MMI date of January 19, 2019. (See Ex. D).

3. Respondents then filed an application for hearing challenging the DIME's impairment rating. Claimant filed a response to the application for hearing seeking permanent total disability benefits. Respondents obtained surveillance video of Claimant on multiple dates in November 2018, December 2018, January 2019, and June 2019. taken in November which showed Claimant standing and walking for hours with no apparent difficulty. The surveillance video was inconsistent with Claimant's representations to her treating providers and the DIME physician related to her ability to walk and stand, and her representations that she required the constant use of a cane. Respondents took Dr. Green's deposition on April 28, 2020, after he had the opportunity to review the surveillance videos. After reviewing the available information, Dr. Green amended his permanent impairment rating, and assigned Claimant a 10% whole person impairment rating. (See Ex. D).

4. Following a hearing on Respondents' application for hearing, ALJ Patrick Spencer issued an Summary Order dated December 20, 2020, in which Respondents' request to set aside the DIME's 10% whole person impairment rating was denied. He ordered Insurer to pay Claimant's PPD benefits based on a 10% whole person impairment rating, and permitted Insurer to take credit for any temporary disability benefits paid after Claimant reached MMI on January 9, 2019. ALJ Spencer also denied Claimant's claim for permanent total disability benefits. (Ex. E).

5. On December 23, 2020, Respondents filed a Final Admission of Liability (FAL) consistent with ALJ Spencer's Order, and asserted an overpayment in the amount of $23,189.22. (Ex. C).

6. On December 27, 2020, the ALJ issued a full Findings of Fact, Conclusions of Law, and Order (FFCL), consistent with his December 20, 2020 Summary. (Ex. D)

7. Claimant was entitled to receive temporary total disability benefits from April 6, 2018 through May 31, 2018 in the amount of $3,844.40, and temporary partial disability benefits from June 1, 2018 through January 8, 2021, in the amount of $12,086.69. Based on her 10% whole person impairment rating, Claimant was entitled to permanent partial disability benefits in the amount of $19,222.00. Respondents paid Claimant indemnity benefits in the amount of $58,342.31. Thus, Claimant received an overpayment of $23,198.22 representing benefits to which she was not entitled.

8. Claimant is 72 years-old and currently unemployed. Her sole source of income is monthly social security benefits, paid at the rate of $1,782.00 per month. Claimant lives with her adult son and his family in South Carolina. Claimant testified her monthly expenses total approximately $1,650 per month. Claimant testified that her monthly expenses include $625 and $175-$200 in utilities she pays to her son.

9. Claimant submitted Exhibits 13 and 14, which are her bank statements from October 2021 through August 2022. Claimant's bank statements are consistent with her testimony, with several notable exceptions. Specifically, Claimant's bank statements do not reflect rent and utility payments she testified she pays to her son. Claimant's bank statements show no direct payments to her son and reflect cash withdrawals from ATMs averaging $302.00 per month . Although Claimant testified she gets cash from Walmart when she makes purchases to pay her son, the amounts spent at Walmart and her ATM withdrawals are not sufficient to cover Claimant's rent and utilities, and also the $140 per month she testified she spends at Walmart. Claimant's bank statements show she spends an average of $510.00 per month at Walmart. The ALJ finds, more likely than not, that Claimant does not pay rent or utilities in the amounts she to which she testified. Claimant has approximately $660.00 in monthly expenses for credit cards, insurance, cell phone, and health expenses. In addition, based on her testimony, Claimant incurs expenses for food, fuel, and other necessities on a monthly basis of approximately $350.00. The ALJ does not find credible Claimant's assertion that she would be required to forego basic necessities such as health care, food, fuel, or transportation if she were required to make repayment of any amount.

10. As the result of her injury, Claimant has sustained disfigurement of her left foot, including a visibly lower arch, visible atrophy and visible discoloration of her left foot compared to her right. The condition of Claimant's left foot is a disfigurement sustained as a direct and proximate result of her April 5, 2018 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Disfigurement

Section 8-42-108(1), C.R.S., provides that a claimant is entitled to additional compensation if she is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained disfigurement as a direct and proximate result of her April 2018 work injury. Claimant is awarded $850.00 for disfigurement.

Overpayment

Pursuant to § 8–43–303(1) C.R.S., upon a *prima facie* showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In relevant part, the Colorado Workers' Compensation Act defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive. § 8-40-201 (15.5), C.R.S. (2021).[1] An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Section 8-42-113.5 (1)(c), C.R.S., authorizes insurers to seek and order for repayment of an overpayment, and ALJs are authorized to conduct hearings to require such repayments. § 8-43-207 (q), C.R.S. Respondents may retroactively recover an overpayment of benefits, and such recover is not limited to duplicate benefits. *In re Wheeler*, W.C. No. 4-995-488-004 (ICAO Apr. 23, 2019); *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

Respondents bear the burden of proof to establish, by a preponderance of the evidence, that a claimant received and overpayment, and that respondents are entitled to recovery of that overpayment. *City & Cty. of Denver v. Indus. Claim Appeals Off.*, 58 P.3d 1162, 1164-1165 (Colo. App. 2002); See *In the Matter of the Claim of Robert D. Scott, Claimant*, W.C. No. 4-777-897, (ICAO Oct. 28, 2009). Respondents have established by a preponderance of the evidence that Claimant received $23,189.22 in disability benefits to which she was not entitled. Accordingly, Respondents are entitled recover from Claimant the overpayment of $23,189.22.

Repayment

Under § 8-43-303 (1), C.R.S., upon a finding of an overpayment, an order of repayment is mandatory. When the parties are unable to agree upon a repayment schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994).

---

[1] The General Assembly amended § 8-40-201 (15.5), C.R.S., effective January 1, 2022, removing the phrase "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive " from the definition of "overpayment." However, the matter before the ALJ is based on an Application for Hearing filed on December 13, 2021, and payments and events that occurred prior to January 1, 2022, consequently the operative, applicable statute is the Worker's Compensation Act in effect prior to January 1, 2022. *See Stark v. Zimmerman*, 638 P.2d 843 (Colo 1981) (repeal of a statutory provision does not operate retroactively to modify vested rights or liabilities); *Martinez v. People*, 484 P.2d 792 (Colo 1971) (repealed statutory provisions remain in force as far as pending actions, suits and proceedings are concerned).

Respondents may offset their liability for Claimant's disfigurement award against the existing overpayment. Claimant contends, without support, that "[d]isfigurement benefits are identified as medical benefits," and as such may not be offset against an overpayment of indemnity benefits. Claimants are entitled to medical benefits to "as may reasonably needed at the time of injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury." §8-42-101(1)(a), C.R.S. In contrast, disfigurement compensation is "additional compensation" available to injured employees who are "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, and are in addition to all other compensation benefits …." § 8-42-108 (1), C.R.S. Thus, medical benefits and disfigurement compensation are available to claimants under different circumstances and are thus separate and distinct. Consequently, "a respondent may offset their liability for [a] disfigurement award … against [an] existing overpayment." *In re Claim of Peoples*, W.C. No., 4-819-262-113 (ICAO Oct. 24, 2018).

As found, Claimant is awarded $850.00 for her disfigurement. Respondents may offset this amount against the overpayment Claimant received, leaving a balance of $22,339.22 (*i.e.*, $23,189.22 - $850.00 = $22,339.22).

As found, Claimant's monthly income is $1,782.00 per month, and derived solely from social security benefits. Claimant's argument that she would be forced to forego food, fuel, transportation, or medical care if required to make repayment is unavailing. Claimant's monthly expenses, as documented in her bank statements average $1,781 per month. Of this amount, Claimant has fixed monthly expenses for car insurance, cell phone, credit card payments and loans totaling $659.95 per month. Claimant also spends an average of $510.51.65 at Walmart, and incurs approximately $150 per month in bank "safety net" charges and ATM service charges. Claimant's testimony that she pays $625.00 per month in rent to her son, and pays $175-200 per month in utilities is not credible, given that such payments cannot be accounted for in her bank statements.

Nonetheless, the ALJ concludes requiring Claimant to make substantial payments would impose a financial hardship. The ALJ concludes that Claimant is able to make monthly payments of $50 per month without sustaining significant financial hardship.

ORDER

It is therefore ordered that:

1. Claimant is awarded disfigurement in the amount of $850. Claimant's disfigurement award is credited against Respondents' overpayment of $23,198.22.

2. Claimant received an overpayment in the amount of $23,189.22, after credit for Claimant's disfigurement award, Respondents are entitled to repayment of $22,339.22.

3. Claimant shall repay the overpayment balance of $22,339.22 at the rate of $50.00 per month.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 1, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-210-972-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer on Jun 24, 2022.

2. Whether Claimant established by a preponderance of the evidence an entitlement to a general award of medical benefits reasonable and necessary to cure or relieve the effects of an industrial injury.

3. Whether Claimant established by a preponderance of the evidence that medical treatment received on June 29, 2022 and June 30, 2022 at UC Health and Advanced Medical Imaging was reasonable and necessary to cure or relieve the effects of an industrial injury.

FINDINGS OF FACT

Procedural History

1. The ALJ takes judicial notice of the following procedural history based on Office of Administrative Courts records and files. See *Habteghrgis v. Denver Marriott Hotel*, W.C. No. 4-528-385 (ICAP, March 31, 2006) ("A court can take judicial notice of its own records and files."):

   a. On July 29, 2022, Claimant filed an Application for Hearing in this matter, identifying as issues for consideration compensability, medical benefits, authorized provider, reasonably necessary and temporary disability benefits. The Application for Hearing was mailed to Employer at 390 Union Blvd., Lakewood, CO 80228. The Application for Hearing was not served on insurer because Employer had not identified an insurer. Respondents did not file a Response to the Application for Hearing.

   b. On August 11, 2022, the Office of Administrative Courts mailed a Notice of Hearing to Employer at 390 Union Blvd., Lakewood, CO 80228, which advised the parties that hearing was scheduled for November 17, 2022, at 1:30 p.m.

   c. Respondents did not respond to the Notice of Hearing, and have not appeared or otherwise filed any documents with the Office of Administrative Courts.

2. On July 19, 2022, Claimant, through counsel, submitted a Worker's Claim for Compensation and counsel's entry of appearance to the Division of Workers' Compensation. (Ex. 2, p. 9-12).

3. On September 6, 2022, Insurer sent Claimant a letter listing Employer, the alleged date of injury (6/24/22), a claim number assigned to Claimant's claim, and identifying an insurance carrier. (Ex. 2, p. 5).

4. Also on September 6, 2022, the Division of Workers' Compensation sent a letter to the identified insurance carrier notifying the carrier that a position statement either admitting or denying liability was required to be filed within 20 days of the Division receiving notice of Claimant's claim. (Ex. 2, p. 6).

5. On November 3, 2022, Claimant, through counsel, sent a letter to Insurer providing a copy of Claimant's Worker's Claim for Compensation dated July 19, 2022; Claimant's July 29, 2022 Application for Hearing, Claimant's Hearing Confirmation Notice, the August 11, 2022 Notice of Hearing, and copies of medical bills. (Ex. 2, p. 8).

6. On November 11, 2022, Claimant, through counsel, filed her Case Information Sheet in this matter, and served a copy on Insurer at P.O. Box 6569, Scranton, PA 18505-6569. (Ex. 5, p. 32).

7. Respondents did not appear for hearing on November 17, 2022.

Relevant Historical Facts

8. On June 24, 2022, while working as a security guard for Employer, Claimant was involved in an accident when a deer collided with her work vehicle. The collision caused the airbags in the vehicle to deploy, striking Claimant.

9. As a result of the June 24, 2022 accident, Claimant sustained injuries to her neck, upper back, and lower back. Claimant timely reported the accident and her injuries to her supervisor at Employer. Claimant's injuries arose out of the course of Claimant's employment with Employer and are, therefore compensable.

10. When Claimant's symptoms did not improve, Claimant sought medical treatment at UC Health on June 29, 2022. Claimant's treatment included evaluations at UC Health and an MRI. As a result of the treatment, Claimant incurred medical bills of $4,752.67 for treatment at UC Health on June 29, 2022, $16,408.22 at UC Health on June 30, 2022, and $564.00 at Advanced Medical Imaging on June 30, 2022. (Ex. 1).

11. The medical treatment Claimant received was reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

12. Respondents have not paid for Claimant's medical treatment.

13. Claimant credibly testified at hearing that she sustained injuries to her neck, upper back, and lower back as the result of the June 24, 2022 accident, and that she received

medical treatment at UC Health and an MRI on June 29, 2022 and June 30, 2022. Claimant further credibly testified that she has incurred the medical expenses identified above as the result of her industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

<u>Compensability</u>

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is

narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, WC 4-898-391-01, (ICAO Aug. 25, 2014).

Claimant has established by a preponderance of the evidence that she sustained injuries to her neck, upper back, and lower back arising out of the course of her employment with Employer on June 24, 2022 when she her work vehicle collided with a deer causing the airbags to deploy. Claimant's testimony was credible and unrebutted.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits designed to cure or relieve the effects of her industrial injury. Claimant credibly testified that she sustained injuries arising out of her June 24, 2022 work accident, and that she has received medical treatment directed at those injuries.

Claimant has further established by a preponderance of the evidence that the treatment she received at UC Health and Advanced Medical Imaging, on June 29, 2022 and June 30, 2022, was reasonable and necessary to cure or relieve the effects of her industrial injury. Respondents shall pay the outstanding medical expenses incurred pursuant to the workers' compensation fee schedule.

ORDER

It is therefore ordered that:

1. Claimant sustained compensable injuries to her neck and back arising out of the course of her employment with Employer on June 24, 2022.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's June 24, 2022 injuries.

3. Respondents shall pay the medical expenses incurred by Claimant for treatment at UC Health and Advanced Medical Imaging on June 29, 2022 and June 30, 2022, pursuant to the workers' compensation fee schedule.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 5, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-161-321-003

ISSUES

1. Whether Claimant established by a preponderance of the evidence grounds for reopening her claim.

2. If Claimant established grounds for reopening, whether Claimant established by a preponderance of the evidence an entitlement to temporary disability benefits and medical benefits.

FINDINGS OF FACT

1. On December 27, 2020, Claimant sustained admitted injuries arising out of the course of her employment with Employer while assisting a nursing home resident that slipped and fell.

2. On January 4, 2021, Claimant began treatment with David Frank, M.D., for a sprain of the lumbar spine and pelvis. Dr. Frank's evaluation and treatment included a lumbar MRI, and physical therapy. The lumbar MRI, performed on February 4, 2021, showed degenerative disc disease at L5-S1, mild facet arthrosis at L4-5, and L5-S1, an no spinal canal or neuroforaminal stenosis. (Ex. A). On February 10, 2021, Dr. Frank reviewed the MRI and characterized it as showing "no major pathology." Between February 45, 2021 and March 26, 2021, Claimant attended multiple physical therapy visits to address back pain until. (Ex. B).

3. On April 21, 2021, Claimant underwent an MRI of the cervical spine which showed no disc herniation, no significant disc degeneration, spinal canal or foraminal stenosis. (Ex. A).

4. On May 24, 2021, Dr. Frank placed Claimant at maximum medical improvement (MMI), indicating Claimant had sustained no permanent impairment, did not require permanent work restrictions, and did not require maintenance medical treatment. (Ex. B).

5. After being placed a MMI, Claimant saw a Dr. Pehler on June 14, 20221. Dr. Pehler's impression was spondylosis with radiculopathy of the lumbar region and bilateral neck pain. He indicated Claimant's clinical findings were out of proportion to imaging findings and there was no evidence of significant neural compressive pathology to the cervical or lumbar spine. He noted a very mild disc herniation at the L4-S1 level, but no evidence of cervical pathology. Dr. Pehler referred claimant to physical therapy and for steroid injections. The record does not reflect whether Claimant received either additional

physical therapy or steroid injections. (Ex. A).[1] No evidence was presented to indicate that Dr. Pehler was an authorized treating physician or a referral from an authorized treating physician.

6. On July 12, 2021, Claimant underwent a lumbar MRI which showed an L5-S1 left paracentral disc protrusion with annular fissure, no central stenosis, and L5-S1 facet arthropathy producing minimal bilateral neuroforaminal narrowing. (Ex. A).[2] No credible evidence was admitted indicating any physician attributed Claimant's MRI findings to her December 27, 2020 work injury.

7. On November 4, 2021, Claimant underwent a Division Independent Medical Examination (DIME), performed by Kathy McCranie, M.D. Dr. McCranie agreed with Dr. Frank that Claimant was at MMI on May 24, 2021, and that Claimant did not qualify for an impairment rating of the cervical, thoracic, or lumbar spine. She opined that although Claimant continued to report symptoms after being placed at MMI, there was no clear objective basis for her continued symptoms, and the findings at her DIME examination were inconsistent and out of proportion to the objective findings of every provider. She noted that although a lumbar MRI showed some minor findings, there was no indication the pathology shown on the MRI was the cause of her symptoms. Dr. McCranie further noted that Claimant did not require maintenance care or work restrictions. (Ex. A).

8. On December 29, 2021, Respondents filed a Final Admission of Liability (FAL), admitting for medical treatment only and consistent with Dr. McCranie's DIME report (*i.e.*, MMI date of May 24, 2021, and no impairment rating). (Ex. F). Claimant did not seek to overcome Dr. McCranie's DIME opinion.

9. Claimant testified at hearing that she is seeking to reopen her case to obtain medical care and temporary disability benefits. She testified that she has continued pain in her back, neck and from her head to her feet. Claimant did not offer any credible evidence that her condition has changed or worsened since being placed at MMI.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of

[1] No records from Dr. Pehler were offered or admitted into evidence. The only evidence of his examination of Claimant is the summary contained in the DIME physician's report. (Ex. A).
[2] The only record of the MRI offered or admitted into evidence is the summary contained in the DIME physician's report. (Ex. A).

the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING FOR CHANGE IN CONDITION

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Indus. Comm'n*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Constr. Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO July 19, 2004).

Claimant has failed to establish by a preponderance of the evidence that she sustained a change in condition causally connected to her original work injury of December 27, 2020. Claimant's claim was closed pursuant to the Final Admission of Liability filed on December 29, 2021. Claimant presented no credible evidence establishing her condition has changed. Claimant testified she wished to reopen her claim to obtain temporary disability benefits and additional medical care, but offered no credible evidence in support of that claim, other than stating that she continues to experience pain throughout her body. Because Claimant has failed to meet her burden of establishing a change in condition causally related to her December 27, 2020 work injury, the ALJ finds no basis for reopening Claimant's claim.

Because Claimant has failed to establish a basis for reopening her claim, her claims for temporary disability benefits and medical benefits are denied as moot.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her workers' compensation claim based on a change of condition is denied and dismissed.

2. Claimant's request for temporary disability benefits and medical benefits are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-200-690-001

ISSUES

1. Whether Respondents established by a preponderance of the evidence that Claimant did not sustain an injury arising out of the course of his employment with Employer on or about February 17, 2022.

2. If Claimant's injury is compensable, whether Claimant has established by a preponderance of the evidence entitlement to temporary disability benefits.

3. If Claimant's injury is compensable, determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant worked for Employer as a courier delivering packages from Denver International Airport to end customers. As part of his job responsibilities, Claimant was required to sort packages of varying weights, with occasional packages weighing up to seventy pounds. Claimant was then required to load packages into his delivery vehicle, and deliver the packages to end customers.

2. On February 17, 2022, Claimant was performing his normal job duties for Employer. That morning, Claimant clocked in at 8:02 a.m., and clocked out at 9:02 a.m. Employer's records for that day include a notation that Claimant "went home with back pain." (Ex. 7). No evidence was offered to establish who placed the notation in Employer's records. That day, Claimant informed his supervisor, [Redacted, hereinafter KR], that he was experiencing back pain, but did not communicate to KR[Redacted] that he sustained a work-related injury, or that the back pain was the result of lifting a package at work. Claimant was not provided with a list of designated providers and Employer did not initiate the process of starting a workers' compensation claim.

3. Later that day, Claimant saw chiropractor David Estis, D.C. Dr. Estis' record (Ex. J) for February 17, 2022, states:

February 17, 2022

S: The patient states that a mild pain in the lower back region is present today with knots and tightness in the muscles around the neck, shoulders, and back area. Symptoms are consistent with the patient's chief complaint.
O: Decrease range of motion is noted in multiple areas of the spine along with edema and hyper tonicity of the surrounding soft tissue and musculature.
A: The patient had restrictions in the cervical, thoracic, and lumbar spine causing nerve pressure which results in today's reported complaints.
P: The patient received a chiropractic adjustment to the cervical, thoracic, and lumbar spine with mechanical traction as well as manual traction of the occiput. The purpose of the adjustment is to reduce subluxation and segmental dysfunction throughout the spine. The traction helps the patient to sustain their chiropractic adjustment as well as restoring range of motion while decompressing the spine. Heat therapy was recommended for 15-20 minutes at home to help increase circulation to provide protein, nutrients, and oxygen to aid in healing.

4. During the evening of February 17, 2022, Claimant sent a text message to his supervisor KR[Redacted], stating: "Yea my back is really hurt I'm gonna be off tomorrow to see my doctor if you can pls give me ur email so i can send u the proper paperwork." (Ex. 8).

5. Claimant returned to Dr. Estis on February 18, 2022, and five additional times until March 7, 2022. Dr. Estis SOAP notes for Claimant's seven visits from February 17, 2022 and March 7, 2022, are identical with two exceptions. On February 24, 2022, and March 3, 2022, in addition to repeating the identical SOAP note for February 17, 2022, Dr. Estis included a second "SOAP" note which states:

February 24, 2022

S: low back px
O: Tx i n erectors, qls, hamstrings and gastrocs, adhesions along iliac crest, gastrocs, qls, hamstrings

A: deep tissue, injury work, stretcehd legs, fbm

P: 3-4 wsk

The additional SOAP note entry for March 3, 2022 is identical to the February 24 ,2022 note, and includes the same typographical errors and misspellings. (Ex. J).

6. Although Dr. Estis' February 24, 2022 and March 3, 2022 records include the words "injury work" in the "assessment" section of his notes, no credible evidence was admitted explaining the meaning of the entry.

7. Claimant had previously seen Dr. Estis thirty-three times for vaguely defined back pain between January 4, 2019 and November 14, 2019. As with his notes in 2022, Dr. Estis' records during 2019 contain little to no specific information regarding Claimant's condition, and consist of a few different boilerplate templates for each section of the SOAP notes repeated multiple times throughout his thirty-three visits without modification.

8. With the exception of including the second "SOAP" note on February 24, 2022 and March 3, 2022 records, Dr. Estis' records for Claimant's treatment on and after February 17, 2022 are verbatim repetitions of Claimant's treatment note from September 25, 2019.

The ALJ finds Dr. Estis' records to be of little evidentiary value, other than reflecting Claimant attended chiropractic visits for ill-defined back issues.

9. On February 20,2022, Claimant texted KR[Redacted] again, stating: "I sent u the X-rays and the doctors note I won't be in until I'm cleared I'm getting another X-ray Wednesday to see the progress but I will be going in tomorrow to fill out any paperwork I need to for workers comp." (Ex. F). KR[Redacted] responded: "I got the letter sending to the head office." (Ex. F). (No credible evidence was offered or admitted identifying the "letter" referenced in KR[Redacted]'s text).

10. On February 22, 2022, Claimant texted KR[Redacted] again stating: "Hey I wanna go in today to fill out any paperwork I need to for the workers comp what time u think would be good for me to head over that u guys aren't too busy?" (Ex. F). KR[Redacted] responded: "Between 1pm and 2pm." (Ex. F).

11. On February 22, 2022, Claimant provided Employer with "Courier Statement of Accident," in which he described his injury and accident as follows:

> During the morning sort I attempted to load a package, that was labeled as 26kg, onto my van. As it was an oversized package I did my best to pick it up using a proper posture but as I lifted the item up I felt a jolt of pain run down my leg. At that point I set it back down and informed my supervisor that it was too heavy to lift." (Ex. E).

12. Also on February 22, 2022, Employer's operations manager, [Redacted, hereinafter MA] completed an Accident Report, in which it is stated: "He says it was due to picking up heavy packages[.] That statement is disputed by the supervisor who says he was told previously by [Claimant] that he hurt his back helping his mother-in-law on his time off of work." (Ex. E).

13. On March 8, 2022, Claimant saw Kristina Robinson, M.D., at Concentra. Claimant reported he was at work and lifted a heavy box into his van resulting in a back injury. Clamant reported that he felt pain and numbness into his left knee, and that his symptoms had not improved. He denied any further numbness or tingling in his extremities. Dr. Robinson documented tenderness in the left paraspinal muscles, full range of motion with painful flexion, and an equivocal straight leg raise test. She diagnosed Claimant with lumbar strain. She and prescribed a muscle relaxant. In addition, Dr. Robinson referred Claimant for physical therapy. Dr. Robinson assigned Claimant work restrictions including limiting lifting to twenty pounds. (Ex. 3).

14. On March 15, 2022, Claimant, through counsel, submitted a Workers' Claim for Compensation, indicating Claimant had sustained a low back injury on February 15, 2022, while "lifting heavy boxes off a truck and felt pain in back." (Ex. A).

15. Claimant returned to Concentra on March 16, 2022, and saw Paul Schadler, M.D. Claimant reported he had been attending physical therapy and noted a "marked reduction in pain and improved function," although he was stiff and had intermittent pain after activating. He reported pain in the left posterior buttocks shooting into his posterior leg at

times, without numbness, tingling or weakness. Dr. Schadler's only relevant objective finding was tenderness in the left paravertebral muscle and SI joint. He revised Claimant' work restrictions to include a 30-pound lifting limit, no kneeling, squatting, or climbing. (Ex. G).

16. Claimant saw Dr. Schadler again on March 23, 2022, reporting he felt he had pulled a muscle while doing stretches. Claimant reported that he had been pain free, gut after a physical therapy session he had a flare of pain with radicular symptoms. Dr. Schadler diagnosed Claimant with a lumbar strain and lumbar radiculitis. (Ex. G).

17. On April 12, 2022, Respondent filed a General Admission of Liability, admitting for medical treatment only. (Ex. 1).

18. On June 13, 2022, Claimant saw Kristin Mason, M.D., at Rehabilitation Associates of Colorado. Claimant reported he had injured his back while trying to lift a package from the ground that was heavier than he expected, and felt sharp pain in his lower back which shot into his left leg. Claimant indicated that he continued to work that day, and eventually contacted his supervisor after the pain started to radiate more significantly. Claimant reported his care to date had been through Concentra and that he had no prior history of low back injury or pain, (omitting his history of seeing Dr. Estis). Claimant reported that he was working for Employer doing alternate duty sorting packages, but indicated the conveyor belt was "a little too low for him." Dr. Mason performed a physical examination, and opined that Claimant's reported mechanism of injury and exam were most suggestive of a discogenic pain generator, most likely L5-S1. Dr. Mason recommended Claimant see a different non-Concentra physical therapist, and continue chiropractic care within Concentra with Dr. Mobus. (No records from Dr. Mobus were offered or admitted into evidence). She also referred Claimant for a lumbar MRI. She assigned work restrictions to include a 40-pound lifting/carrying limit, and repetitive lifting to twenty-five pounds. (Ex. 4).

19. On June 17, 2022, Claimant had an MRI at SimonMed Aurora. The MRI showed a focal age-indeterminate disc protrusion at the L5-S1 level, compressing the left S1 nerve root. (Ex. I).

20. Claimant returned to Dr. Mason on August 4, 2022, reporting a pain level of 2./10, and that his back was much better with chiropractic care and physical therapy. He reported only experiencing pain in the left buttock. Dr. Mason indicated Claimant remained off work at that time, but was still subject to the same work restrictions (i.e., 40-pound lifting/carrying; 25-pound repetitive lifting; 60-pound pushing/pulling; no crawling, kneeling, squatting, or climbing). (Ex. H). No credible evidence was offered to determine whether Claimant's work restrictions have been further modified since August 2022.

21. KR[Redacted] was Claimant's supervisor and testified at hearing. KR[Redacted] testified that Claimant phoned him the week before February 14, 2022 and reported that he injured his back while out of town at his mother's house, and that he would not be able to come to work because he needed to rest his back. KR[Redacted] could not recall the date of the conversation, and indicated that Claimant later texted him an informed him

that he could not work due to a fever. He credibly testified that Claimant informed him on February 17, 2022 that his back hurt, but did not indicate that the injury was work-related. KR[Redacted] credibly testified that had Claimant notified him of a work-related injury on February 17, 2022, he would have investigated the claim by taking a picture of the package and shown it to his manager, and also would have provided Claimant with workers compensation paperwork before Claimant left that day.

22. Claimant texted KR[Redacted] on Monday February 14, 2022 indicating he had a fever and would not be coming to work. (Ex. F). On February 15, 2022, Claimant again texted KR[Redacted] and informed him that he would be returning to work on February 16, 2022. (Ex. F).

23. At hearing, Claimant testified that he injured his back attempting to load a package into a van. Claimant testified that he informed both KR[Redacted] and another supervisor, [Redacted, hereinafter DR], that he was injured on February 17, 2022. In rebuttal testimony, Claimant testified that although he hurt his back, he continued to load his truck and made two deliveries before returning to Employer's facility. Claimant's testimony was not consistent with his time records showing he worked one hour on February 17, 2022.

24. Claimant testified that following his injury, he was placed on a modified duty job, working as a dock worker. Claimant testified that he was told not to return to work for Employer after July 3, 2022. At some point, Claimant began a part-time job as a "promoter" handing out pamphlets and t-shirts at Broncos games earning $25.00 per hour, but has not returned to full-time employment. Claimant did not testify as to the date he began such work.

25. Claimant provided interrogatory responses indicating he had traveled to Florida from late February 11, 2022 until late on February 14, 2022. Claimant testified that his interrogatory responses were not accurate, that he had traveled during February 2022, but was not sure of the weekend he traveled. Claimant testified he assumed he traveled from February 11 to 14, and assumed that was why he was not at work on February 14 and 15. Claimant's testimony was not credible. Exhibit E is Claimant's time record for February 1, 2022 to February 17, 2022, and shows Claimant did not have two consecutive days off prior to February 11, 2022, during which travel to Florida would have been feasible. (See Ex. E). Notwithstanding, even if Claimant did travel to Florida, the timing of his Florida trip is inconsistent with KR[Redacted] testimony that Claimant contacted him the week before February 14, 2022 and reported he injured his back while out of town.

26. Claimant testified that he did sustain an injury to his shoulder helping his mother move a chair, but that the injury occurred in December 2021, and he missed two days of work due to that injury.

27. MA[Redacted] is employer's station operation manager who oversees Employer's operations at its Denver location. MA[Redacted] testified that his first interaction with Claimant after February 17, 2022 was between February 20 and 22, 022. He testified that Claimant informed him on February 22, 2022 that he injured is back picking up a package on the job. MA[Redacted] provided Claimant with a list of designated providers.

MA[Redacted] prepared the February 22, 2022 Accident Report based on information provided by Claimant and KR[Redacted]. MA[Redacted] testified that Claimant was provided with modified duty based on the restrictions provided by his doctors, and that Claimant performed modified duty for a couple of months. Claimant has not returned to full duty work with Employer.

28. [Redacted, hereinafter JH] is Employer's general manager, and he oversees Employer's operations at multiple locations in eleven states. JH[Redacted] testified that in on July 12, 2022, he recommended that Claimant "go home and convalesce" and that he did not see any benefit to providing Claimant with additional light duty work. He testified that Claimant's final date of employment with Employer was on July 12, 2022.

29. The parties stipulated that if Claimant's average weekly wage at the time of injury was $947.91.

30. Following his injury, Claimant continued to work for Employer in a modified capacity at reduced hours until July 12, 2022. For the twenty weeks from February 18, 2022 until July 12, 2022, Claimant earned $6,499.87 in wages. Claimant's AWW for this twenty-week period totals $18,958.20, resulting in a wage loss of $12,458.33. Claimant is entitled to temporary partial disability (TPD) benefits during this period of $8,305.55. After JH[Redacted] terminated Claimant's modified duty position, Claimant began working as a promoter earning $25.00 per hour. The evidence is insufficient to determine the date Claimant began such work, the dates Claimant worked, or the wages earned as a promoter.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the

witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Withdrawal of Admission

When respondents attempt to modify an issue previously determined by an admission, they bear the burden of proof for the modification. § 8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School Dist.*, W.C. No. 4-702-144 (ICAO June 5, 2012); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to § 8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hosp.*, W.C. No. 4-754-838-01 (ICAO Oct. 1, 2013). Respondents must, therefore, prove by a preponderance of the evidence that the Claimant did not suffer a compensable injury as defined under Colorado law. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

A compensable injury is one that arises out of the course and scope of employment with one's employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The question of whether the requisite causal connection exists is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc.,* W.C. No. 4-588-675 (ICAO Sept. 1, 2006

Respondents have failed to establish by a preponderance of the evidence sufficient grounds to withdraw their General Admission of Liability. Claimant's contemporaneous time records from February 17, 2022 document that Claimant left work complaining of back pain. When Claimant saw an ATP at Concentra, he was diagnosed

with a lumbar strain, and consistent with the mechanism of injury Claimant reported. Claimant's reports to providers were generally consistent, in that he reported back pain with pain shooting down his left thigh while loading a package onto a truck. Although some providers documented slightly different descriptions of the mechanism of injury, the ALJ finds that such discrepancies are trivial in nature and do not establish that Claimant did not sustain an injury or aggravate a pre-existing condition.

It is undisputed Claimant reported to KR[Redacted] that he was experiencing back pain on February 17, 2022. However, more likely than not Claimant did not advise KR[Redacted] the injury was work-related until February 22, 2022, when he completed the accident report. While the failure to immediately report the injury as work-related casts some doubt on the veracity of Claimant's claim, it does not make it more likely than not that Claimant did not sustain an injury or aggravate a pre-existing condition.

KR[Redacted]'s testimony that Claimant reported injuring his back while helping his mother-in-law while off work is insufficient to establish by a preponderance of the evidence that Claimant did not sustain a work-related back injury. KR[Redacted] testified that he spoke to Claimant the week before February 14, 2022, reported injuring his back, and indicated he would be missing time from work to recover. If, as Respondents contend, Claimant injured his back while in Florida from February 11 to 14, 2022, KR[Redacted] conversation with Claimant would have occurred before that trip. Thus, the ALJ finds the issue of whether Claimant traveled during that period to be irrelevant. Even assuming *arguendo*, Claimant traveled to Florida from February 11, 2022 to February 14, 2022, no credible evidence was admitted indicating Claimant sustained a back injury during that trip.

Alternatively, Respondents speculate that Claimant sustained an injury to his back sometime earlier in February. However, Claimant's employment records are inconsistent with a back injury sufficient to prevent Claimant from working. Claimant's work records with Employer shows Claimant worked each day from Monday February 7, 2022 through Friday, February 11, 2022, averaging 9.2 hours per day during this time.

Although Claimant had vaguely-defined back issues in 2019 and saw Dr. Estis for something related to his back, no credible evidence was admitted establishing Claimant had any complaints of, or received any care for lower back issues between November 2019 and February 17, 2022. Dr. Estis' records are too vague to establish that Claimant's current back condition is the same condition as in 2019. Nor does a remote history of back pain establish that Claimant did not sustain a lumbar strain two years later.

Respondents, not Claimant, bear the burden of proof to establish that Claimant did not sustain a compensable injury on February 17, 2022. The ALJ finds that Respondents have failed to meet this burden.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to temporary disability benefits, Claimant must prove his industrial injury caused a disability lasting more than three work shifts, he left work as a

result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD or TPD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) Temporary disability benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), or § 8-42-106 (2), C.R.S. The existence of disability is a question of fact for the ALJ. No requirement exists that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Temporary disability benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. § 8-42-105(3), and § 8-42-106(2) C.R.S.

Claimant's authorized treating provider (ATP) assigned Claimant work restrictions which precluded Claimant from performing his full duties as a courier for Employer. Employer did accommodate Claimant's work restrictions until July 12, 2022. At that point, JH[Redacted] made the decision to end Claimant's light duty work based on his personal observation that he did not see any benefit to providing light duty work to Claimant. No credible evidence was presented to establish that Claimant was responsible for the termination of his light duty work. Moreover, no credible evidence was admitted establishing the work restrictions provided by Dr. Mason on August 4, 2022 have been modified since that time. Claimant has engaged in some work, but has not returned to full-time employment. Claimant has established an entitlement to temporary disability benefits continuing until terminated pursuant to statute.

As found, Claimant is entitled to TPD benefits during for the period ending July 12, 2022 in the amount of $8,305.55. Claimant is entitled to TPD benefits after July 12, 2022 considering the amounts earned as a promoter, until terminated pursuant to statute. The evidence is insufficient to determine the time period or calculation of Claimant's TPD (or TTD) benefits after July 12, 2022. The parties shall confer concerning benefits after July 12, 2022 to determine any benefits to which Claimant is entitled.

AVERAGE WEEKLY WAGE

As found, the parties have stipulated that Claimant's average weekly wage at the time of injury was $947.91.

ORDER

It is therefore ordered that:

1. Respondents request to withdraw their General Admission of Liability is denied and dismissed.

2. Claimant's average weekly wage at the time of injury was $947.91.

3. Respondents shall pay Claimant TPD benefits for the period ending July 12, 2022 in the amount of $8,305.55.

4. Claimant is entitled to temporary disability benefits beginning July 13, 2022, and continuing until terminated pursuant to statute in an amount to be determined by the parties.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-169-078-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that the left shoulder surgery performed by Dr. Black was reasonable and necessary to cure or relieve the effects of Claimant's April 3, 2021 work injury.

FINDINGS OF FACT

1. Claimant sustained admitted injuries arising out of the course of his employment with Employer as a ski instructor. On April 3, 2021, Claimant fell while working as a ski instructor and sustained fractured ribs, and a left shoulder injury. At the time of his injury, and Claimant also worked for [Redacted, hereinafter US] as a package handler, loading delivery trucks.

2. Claimant did not seek care on April 3, 2021 because the occupational health clinic was not open. The following day, April 4, 2021, Claimant was seen at St. Anthony's in Frisco, Colorado, with complaints of pain in his left posterior ribs in the infrascapular area. (Ex. D).

3. Claimant was then seen at CCOM on April 9, 2021, where he reported rib, left flank, and left shoulder pain. On evaluation of Claimant's left shoulder, he was noted to have decreased range of motion, but additional evaluation was deferred because Claimant's rib pain made it too uncomfortable to do a proper assessment of his left shoulder. Claimant was diagnosed with contusions of the left wall of the thorax, lower back and pelvis, and a sprain of the left shoulder. (Ex. E).

4. On April 12, 2021, Claimant underwent x-rays which showed fractures of multiple ribs, and negative for left shoulder fractures or bony abnormalities. (Ex. G).

5. On April 26, 2021, Claimant reported clicking in his left shoulder and that he had not been using his left arm much due to rib pain. (Ex. I). Dr. Graham ordered an MRI of Claimant's left shoulder. (Ex. I).

6. On May 3, 2021, claimant was evaluated by Taryn Barrette, PA-C, at CCOM. Ms. Barrette noted Claimant had normal range of motion of the left shoulder, but a loud click with abduction and posterior rotation. She diagnosed Claimant with a sprain of the left shoulder and rib fractures. (Ex. J).

7. On May 7, 2021, Clamant had a MRI of the left shoulder which was interpreted as showing a tear of the posterior superior glenoid labrum decompressing into a 2.6 mm para labral cyst, tendinopathy of the supraspinatus and infraspinatus tendon, and AC joint arthropathy. (Ex. FF).

8. On May 19, 2021, Claimant saw Aaron Black, M.D., at Panorama Summit Orthopedics. Dr. Black reviewed Claimant's MRI and diagnosed Claimant with a superior glenoid lesion of the left shoulder. Dr. Black completed a Physician's Report of Worker's Compensation Injury ("WC 164") in which he indicated that the findings were consistent with Claimant's mechanism of injury, and that Claimant's work-related medical diagnoses were a left shoulder SLAP tear and multiple rib fracture. He recommended physician therapy for biceps and rotator cuff strengthening and scapular stabilization, and advised Claimant to follow up in six weeks. Dr. Black also indicated Claimant could return to work with lifting restrictions "as tolerated" noting Claimant "should never left anything that causes pain. No formal lifting restrictions but pt might limit weight temporarily." (Ex. N).

9. In June 2021, approximately two months after his injury, Claimant returned to work at US[Redacted] working full duty. He did not return to work for Employer at that time because of the seasonal nature of his employment, but he did return to work for Employer in the winter of 2021-22. Claimant testified that his left shoulder had improved, but that he was continuing to experience clicking, pain and weakness in his left shoulder.

10. Claimant returned to Dr. Black on June 25, 2021, reporting that his shoulder range of motion and stability had improved, although he continued to report joint pain, soreness, and "crunchy" movement of his shoulder. Dr. Black's examination showed tenderness over the bicipital groove, a positive O'Brien's test and a positive load and shift test. Dr. Black advised claimant to continue with physical therapy, but that if he did not continue to improve over the next 3-6 months, they would consider a biceps tenodesis surgery to address the clicking in his shoulder. (Ex. U).

11. Claimant saw Dr. Black again on August 6, 2021, reporting improving left shoulder pain, exacerbated by lifting. On examination, Dr. Black noted tenderness over the biceps tendon. He also found full range of motion, strength, and stability of Claimant's left shoulder with negative Hawkins', O'Brien's, and Speed's tests. Claimant was advised to continue with physical therapy and to follow up with Dr. Black in six weeks. (Ex. X).

12. On September 17, 2021, Claimant saw Dr. Black, noting his shoulder had been improving and that he felt he had plateaued, and was nearing 100%. Claimant continued to have tenderness over the bicipital groove, and had a normal examination, with the exception of positive Hawkins and O'Brien's tests. Dr. Black recommended six to eight weeks of additional physical therapy. (Ex. BB). Claimant testified, credibly, that Dr. Black advised that if his shoulder worsened, he would consider surgery.

13. Claimant attended additional physical therapy from September 21, 2021 through October 21, 2021. During these visits, Claimant reported continued left shoulder pain with movement, and that his work for US[Redacted], primarily repetitive lifting, aggravated his left shoulder. Claimant did not report any distinct new injury to his left shoulder during this period. (Ex. M).

14. On March 21, 2022, Claimant saw Janet Graham, NP, at CCOM. Claimant reported that he was continuing to experience left shoulder pain with certain movements,

and he was having difficulty sleeping at night due to his pain. Claimant indicated he would like to proceed with SLAP surgery. Ms. Graham referred Claimant back to Dr. Black for evaluation. (Ex. DD).

15. On April 4, 2022, Respondents filed a General Admission of Liability, admitting for medical benefits, and temporary disability benefits through June 10, 2021. The GAL noted that Claimant had returned for treatment on March 21, 2022. (Ex. 1).

16. Claimant saw Dr. Black on April 11, 2022, noting that he continued to have shoulder pain exacerbated by overhead and reaching activities. Dr. Black indicated Claimant had done five months of physical therapy and was not working his normal job delivering packages due to his shoulder pain. Dr. Black noted positive Hawkins, Neer's, O'Brien's, Speed's and Yergason's tests. He reviewed Claimant's May 7, 2021 MRI, and noted that it showed an obvious SLAP tear, and with tendinopathy of the supraspinatus and infraspinatus tendons, with AC joint arthropathy. He indicated Claimant had failed extensive conservative measures and would benefits from shoulder surgery, including biceps tenodesis with possible labral repair. (Ex. EE). On April 12, 2022, Dr. Black submitted to Insurer a request for authorization of an open repair of the left biceps tendon, and included a WC 164 form indicating that Claimant's left shoulder SLAP tear was work related, and that his need for surgery was related to his April 3, 2021 injury.. (Ex. FF).

17. On April 20, 2022, Insurer submitted Claimant's request for surgery to Timothy O'Brien, M.D., for a medical record review. Dr. O'Brien opined that the only injury Claimant sustained as the result of his April 3, 2021 work accident was left rib fractures. He further opined Claimant's left biceps tendon was a "new onset" pain that occurred after a six-month gap in treatment and was unrelated to his work injury. Thus, he opined, the surgery recommended by Dr. Black was not work related. Dr. O'Brien's opinion is not credible or persuasive. Contrary to Dr. O'Brien's report, Claimant's biceps tendon issues were not new onset symptoms in March 2022. Claimant's records show he was experiencing biceps tendon issues in May 2021, when Dr. Black referred him for physical therapy for biceps and rotator cuff strengthening. Dr. Black had also noted the possibility of a biceps tenodesis in June 2021. (Ex. B).

18. Based on Dr. O'Brien's report, Insurer denied authorization for the surgery recommended by Dr. Black. (Ex. 3).

19. On July 25, 2022, Dr. O'Brien performed an independent medical examination (IME) of Claimant at Respondent's request. Based on his examination, Dr. O'Brien indicated Claimant's shoulder exam was normal for his age. He reiterated his opinion that Claimant's April 3 2021 work incident resulted in an isolated left chest wall contusion and rib fractures. He opined "The work incident did not result in a left shoulder injury of any kind." As with his April 20, 2022 report, the opinions expressed in Dr. O'Brien's July 25, 2022 report are neither credible nor persuasive. (Ex. A).

20. Dr. O'Brien was admitted as an expert in orthopedic surgery and testified at hearing. Dr. O'Brien testified consistent with his reports, and opined that Claimant's May

7, 2021 MRI demonstrated significant degeneration in the soft tissue and bone, that the MRI did not demonstrate an acute tear of tissue, and characterized Claimant's left shoulder as functional but "diseased." Dr. O'Brien testified Claimant's left shoulder has no surgical indications, but to the extent Claimant requires surgery, the need for surgery is unrelated to his April 3, 2021 work injury. He further opined that Claimant's US[Redacted] job duties have the potential to aggravate Claimant's shoulder. Dr. O'Brien reiterated his opinion that he does not believe Claimant sustained any shoulder injury and his only work-related injury was to his rib cage. Dr. O'Brien's opinions were not persuasive.

21. On October 5, 2022, Claimant underwent an IME with Gary Zuehlsdorff, M.D. Dr. Zuehlsdorff did not testify, but his report was admitted into evidence as Exhibit 4. Dr. Zuehlsdorff opined that Claimant left shoulder injury is causally related to his April 3, 2021 ski accident, and that Claimant had no evidence of a pre-existing left shoulder condition. He agreed with Dr. Black's treatment approach of conservative care, and surgery after the failure of conservative measures. (Ex. 4).

22. On October 10, 2022, Claimant had a second MRI of the left shoulder, but with contrast. The MRI showed a 270-degree labral tear including a significantly large SLAP tear with evidence of shoulder instability. (Ex. 7).

23. On October 14, 2022, Dr. Black issued a report (Ex. 7) in which he opined:

> I do believe that [Claimant] has a significantly large SLAP tear with 270 degrees of extension. I further believe that this almost certainly happened at the time of his initial injury as the forces that are involved are reasonable for this. This would have been very difficult to assess when he had multiple broken ribs sustained from his initial injury as those are quite painful. He was initially assessed as having at least a SLAP tear if not more labral pathology and the full diagnosis was significantly limited by the fact that his initial MRI was non-contrast without intra articular gadolinium. The patient attempted extensive nonsurgical management in attempt to avoid surgery including rest, activity modification, NSAID usage, and physical therapy, but none have provided relief and his symptoms have actually worsened over time.

24. Dr. Black indicated he believed it was reasonable to proceed to an arthroscopic labral repair and biceps tenodesis. (Ex. 7). Claimant testified he had the surgery on October 25, 2022.

25. Claimant credibly testified he had begun to approach full recovery by September 2021, but was not yet at 100% when released from care by Dr. Black. He continued to experience pain, weakness, and limitations of range of motion, but not so severe that he could not function or work. He credibly testified that Dr. Black informed him if he was not fully recovered within six months after discharge, they would revisit the potential of surgery on his shoulder. Between the end of October 2021 and March 2022, Claimant

testified his shoulder did not return to baseline. He credibly testified that before the April 3, 2021 accident, he had no issues with his left shoulder, no clicking, no pain, and no weakness. Between October 2021 and March 2022, Claimant worked for both Employer and US[Redacted]. He testified he did not sustain any other injury while working as a package handler for US[Redacted], although he did have pain after working, and that he never woke up "pain free." Claimant's testimony was consistent with his medical records, and was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Specific Medical Benefits At Issue

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Diagnostic testing which is reasonable and necessary for treatment of a work-related injury is compensable. *Beede v. Allen Mitchek Feed and Grain*, W.C. No. 4-317-785 (ICAO Apr. 20, 2000). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the left shoulder/biceps surgery performed by Dr. Black was reasonably necessary to cure or relieve the effects of Claimant's April 3, 2021 injury. The evidence established that Claimant sustained a left shoulder injury as the result of his April 3, 2021 work accident, including a left shoulder SLAP tear, as diagnosed by Dr. Black and MRI. Dr. Black initially discussed the possibility of performing a biceps tenodesis in June 2021, if conservative treatment did not resolve Claimant's complaints. Claimant then underwent significant conservative treatment to arrive at a point in September 2021 where his shoulder felt near normal, although not fully recovered. Claimant continued physical therapy through October 21, 2021, and continued to report left shoulder symptoms during this period. Although Claimant had a four-month gap between his last physical therapy appointment and returning for evaluation with Ms. Graham in in March 2022, no credible evidence was admitted indicating Claimant sustained a second injury to his shoulder. Although Claimant's work with US[Redacted] aggravated his shoulder symptoms, no credible evidence was admitted indicating Claimant's shoulder pathology, or the need for surgery was caused by his work at US[Redacted]. The ALJ finds the opinions of Dr. Black and Dr. Zuehlsdorff that Claimant sustained a left shoulder injury and that the left shoulder surgery was causally related to the April 3, 2021 accident credible and persuasive. Dr. O'Brien's opinions that Claimant's only work-injury was left rib fractures, and that shoulder surgery was not work related are not credible or persuasive.

ORDER

It is therefore ordered that:

1. The surgery performed by Dr. Black on Claimant's left shoulder and biceps was reasonably necessary to cure or relieve the effects of Claimant's April 3, 2021 work injury.

Respondents shall pay the cost of Claimant's left shoulder/biceps surgery according to the workers' compensation fee schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 29, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-201-695-003

ISSUES

- Did Claimant prove he suffered a compensable injury arising out of, and in the course and scope of, his employment on March 3, 2022?
- Did Claimant prove entitlement to reasonably necessary medical benefits?
- What is Claimant's average weekly wage (AWW)?
- Did Claimant prove entitlement to temporary total disability (TTD) benefits?
- Did Claimant prove Employer should be penalized for failure to admit or deny liability pursuant to § 8-43-203(2)(a), C.R.S.?[1]

PROCEDURAL HISTORY

On June 15, 2022, Claimant filed an Application for Hearing endorsing: compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, disfigurement, TTD, PPD, and PTD. Claimant also endorsed a claim for penalties pursuant to §8-43-203(2), C.R.S. A hearing was set for October 6, 2022. On June 30, 2022, Claimant filed an Application for Expedited Hearing based on there being an urgent need for a prior authorization of healthcare services. On August 10, 2022, Claimant filed an Amended Application for Expedited Hearing and plead, "***Respondents*** have filed a Notice of Contest within the previous 45 days on ***May 5, 2022***, and the Claimant requests an expedited hearing on compensability and medical benefits." (emphasis added). The Notice of Contest attached to Claimant's Amended Application for Expedited Hearing, however, is dated ***August 12, 2022***, and it is signed by ***Claimant's counsel***. ALJ Spencer ordered the June 15, 2022 and August 10, 2022 Applications for Expedited Hearing stricken, and "[a]ll issues endorsed on Claimant's June 30 and August 10 expedited applications shall be consolidated with the June 15 application and shall be heard of October 6, 2022."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 32 year-old man who worked for Employer as an installation technician. Claimant testified he was hired by [Redacted, hereinafter RS] in October 2019.

[1] In his position statement, Claimant argues for the imposition of penalties pursuant to § 8-43-409(1), C.R.S., but that specific claim for penalties was not endorsed on Claimant's Applications for Hearing.

2. RS[Redacted] is the sole owner of Employer, and was Claimant's supervisor. He and Claimant were the only employees in March 2022.

3. Claimant testified he did not have a set daily schedule. RS[Redacted] would text him each morning and direct his work for the day. Claimant's work included such things as installing speakers, installing cameras, hanging televisions, and wiring a house for electronics.

4. On March 3, 2022, Claimant was repairing a surveillance camera on the side of a house at a residential property in Franktown, Colorado. Claimant testified he fell from a ladder to the ground, landed on his heels, and shattered both heel bones. It is uncontroverted that Claimant was injured in the course and scope of his employment.

5. The homeowners drove Claimant to Castle Rock Adventist Hospital where he was evaluated and treated for his injuries. Claimant was diagnosed with bilateral calcaneal fractures, which required surgery. (Ex. 1).

6. RS[Redacted] was notified of Claimant's injury. Employer never referred Claimant to a physician for treatment. The right to select a physician passed to Claimant.

7. Claimant underwent an open reduction internal fixation of the bilateral calcaneus fractures on March 5, 2022. Jeremy Christensen, DPM, of Rock Canyon Foot & Ankle, performed the surgery. (Ex. 1).

8. Claimant spent approximately a week after surgery at a rehabilitation center participating in occupational therapy and physical therapy so he could go home. He was not weight bearing for approximately four months following surgery.

9. Claimant testified he was unable to put any weight on his feet or heels for approximately four months after surgery. Claimant further testified he had to wear casts on each leg for two and a half months following surgery, and then he used walking boots on each leg.

10. Claimant continued to receive follow-up medical treatment from Dr. Christensen, and other providers, following his surgery. Claimant continues to see Dr. Christensen and to engage in physical therapy. According to Dr. Christensen, Claimant will require ongoing medical treatment to address his work-related injury. (Ex. 4).

11. Claimant testified he received bills for medical treatment related to the March 3, 2022, injury. He further testified that Employer did not pay for any of the medical treatment. Claimant testified he has incurred medical expenses of approximately $300,000.00. Multiple invoices and bills were admitted into evidence (Ex. 1 pp 1-7-124). It is unclear from the evidence in the record, however, what amounts have been paid, and what amounts are outstanding.

12. Claimant testified Employer terminated him in April 2022. On April 5, 2022, RS[Redacted] e-mailed Claimant and said "[s]orry to say this but until we figure what claim is that you made against [Redacted, hereinafter SD] to the State of Colorado all payroll

checks have stopped. We have paid you up to date for all your payroll and you made a claim that you have not received your normal payroll. We will continue paying for the medical visits until we get the Insurance claim worked out. Once we get the State of Colorado resolved we can look at back payroll. You might want to look at short term disability until then." (Ex. 3). Claimant testified he received paychecks until the last one in April.

13. Claimant's medical records from Castle Rock Adventist Hospital indicate under "Social History" that Claimant utilizes marijuana daily. (Ex 1, page 19). RS[Redacted] testified that Claimant's marijuana use, per his medical records, would have been a basis for termination. RS[Redacted] testified, however, that he did not terminate Claimant, but stopped paying him since he was not working.

14. Claimant credibly testified he was not under the influence of marijuana at the time of his work-related injury on March 3, 2022.

15. The ALJ finds that RS[Redacted] terminated Claimant on April 5, 2022.

16. Employer does not currently maintain a workers' compensation insurance policy, nor did Employer have workers' compensation insurance on March 3, 2022. RS[Redacted] testified that the policy lapsed in November 2021. RS[Redacted] testified that Covid and supply chain issues forced Employer to restructure and reorganize, and this was why he allowed his policy to lapse.

17. RS[Redacted] testified that as of April 5, 2022, he was aware Claimant filed a Workers' Claim for Compensation, and received copies of everything that was filed.

18. The ALJ finds that RS[Redacted] was aware Claimant filed a Workers' Claim for Compensation on April 5, 2022. RS[Redacted] had until April 25, 2022 to file a notice admitting or denying liability. The ALJ finds that RS[Redacted] did not file any notice with the Division admitting or denying liability.

19. Claimant filed a Notice on Contest on August 12, 2022, but plead on the Amended Application for Expedited Hearing that Respondent filed the Notice of Contest on May 5, 2022.

20. At the time of Claimant's injury, Employer paid Claimant $2,020.60 every two weeks, after taxes. (Ex. 2). There is no evidence in the record of Claimant's pre-tax wages. The ALJ finds that Claimant's Average Weekly Wage (AWW) at the time of his injury was $1,101.30 ($2,020.60 / 2). This equates to a weekly TTD rate of $734.20 and a daily rate of $104.88.

21. Employer paid Claimant through April 15, 2022. (Ex. 2).

22. Claimant proved he is entitled to TTD benefits commencing April 16, 2022 and ongoing. Claimant has not returned to work, has not been released to full duties, and has not been put at MMI.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

An individual who performs services for another in exchange for compensation shall be deemed an employee unless such individual is free from direction and control in the performance of the service and is customarily engaged in an independent trade, occupation, profession, or business related to the service performed. § 8-41-202(2)(a), C.R.S. If the claimant establishes he performed services for pay, the burden shifts to the

employer to prove the claimant was an independent contractor. *Stampados v. Colorado D & S Enterprises*, 833 P.2d 815 (Colo. App. 1992); *Almanza v. W.Y.B. d/b/a What's Your Beef*, W.C. No. 4-489-774 (April 16, 2002).

As found, Claimant proved he suffered a compensable injury out of and in the course of his employment on March 3, 2022. The injury resulted from Claimant falling from a ladder and fracturing both heals. The onset of disability occurred on March 3. 2022 when he could no longer continue working. There is no persuasive evidence Claimant was free from direction and control in the performance of service to Employer or was customarily engaged in an independent trade or business.

Medical Benefits

The employer is liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101, C.R.S. The employer has the right to choose the claimant's treating physician "in the first instance." § 8-43-404(5)(a)(I)(A), C.R.S. If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

As found, the right to select a treating physician passed to Claimant, and after receiving emergency treatment at Castle Rock Adventist Hospital, he selected Dr. Christensen. Employer is liable for the emergency treatment Claimant received, and reasonably necessary treatment from Dr. Christensen and his referrals to cure and relieve the effects of Claimant's industrial injury.

Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But section 8-42-102(3), C.R.S. gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

At the time of his injury, Claimant was earning $2,020.60 every two weeks after taxes. There was no objective evidence of Claimant's wages before taxes. As found, Claimant's AWW at the time of his injury was $ 1,010.30.

Temporary Disability Benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity

evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Elec.*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once commenced, TTD benefits continue until the occurrence of one of the factors enumerated in § 8-42-105(3), C.R.S.

The persuasive evidence shows Claimant was disabled by his injury and could no longer work following his injury on March 3, 2022. Claimant has not returned to work since then. There is no persuasive evidence Claimant has been released to regular duty or been put at MMI by an authorized treating physician. Accordingly, Claimant is entitled to TTD benefits commencing April 16, 2022 and continuing until terminated by law. The TTD rate is $734.40 per week ($1,101.30 x 2/3 = $734.20). Employer must pay statutory interest of 8% per annum on all benefits not paid when due. § 8-43-410(2), C.R.S.

Penalties for Failure to Admit or Deny

Claimant seeks a penalty under § 8-43-203, C.R.S. The employer must admit or deny liability within 20 days after it learns of an injury that results in "lost time from work for the injured employee in excess of three shifts or calendar days." § 8-43-203(1)(a). An employer "may become liable" to the claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division. The maximum penalty for failure to admit or deny liability cannot exceed "the aggregate amount of three hundred sixty-five days' compensation." Fifty percent of any penalty shall be paid to the claimant and fifty percent to the Subsequent Injury Fund. § 8-43-203(2)(a), C.R.S.

The phrase "may become liable" means the imposition of a penalty under § 8-42-203(2)(a), C.R.S. is discretionary. *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of the requirement to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colo. Civil Rights Comm'n*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Assoc. Bus. Prod. v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Indus. Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant must prove circumstances justifying the imposition of a penalty under § 8-43-203(2)(a), C.R.S. *Pioneer Hosp. v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

As found, Employer knew Claimant filed a Workers' Compensation Claim on April 5, 2022, so the deadline to admit or deny liability was April 25, 2022. Employer has never filed an admission or denial of liability regarding Claimant's injury. But Claimant's August 10, 2022, Amended Application for Expedited Hearing asserted that Respondents filed a

Notice of Contest on May 5, 2022. The Notice of Contest attached to the application was filed by Claimant on ***August 12, 2022***, and references and attaches RS[Redacted]'s ***April 5, 2022*** email.

Claimant's hearing took place on October 6, 2022. Claimant's case has not been delayed, nor prejudiced, by Employer's failure to admit or deny liability. Claimant's multiple filings, including the Notice of Contest, have created procedural challenges in this case with respect to Claimant's penalty claim.

The ALJ finds Employer should be penalized $ 1,048.80, for failure to admit or deny liability from April 25, 2022 to May 5, 2022. The allowable penalty is mitigated by the procedural irregularities in this case and Claimant's assertion that a Notice of Contest was filed on May 5, 2022. This penalty is based upon 10 days at the daily compensation rate of $104.88. The penalty of $ 1,048.80 is sufficient to penalize Employer's violation of the law and encourage future compliance without being excessively punitive. Fifty percent (50%) of this penalty shall be paid to Claimant and fifty percent (50%) to the Subsequent Injury Fund.

ORDER

It is therefore ordered that:

1. Claimant's injury on March 3, 2022 is compensable.

2. Dr. Christensen in an authorized provider.

3. Employer shall cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's injury, including the emergency treatment Claimant received at Castle Rock Adventist Hospital.

4. Employer shall reimburse Claimant for any medical expenses related to his March 3, 2022 injury. Since the ALJ was unable to determine Claimant's medical expenses, Counsel for Claimant and Respondent shall confer regarding the medical expenses. If the parties are unable to reach an agreement, either Claimant or Respondent may file an Application for Hearing on this issue

5. Claimant's average weekly wage is $ 1,101.30.

6. Employer shall pay Claimant TTD benefits from April 16, 2022 and continuing until terminated by law.

7. Employer shall pay statutory interest of 8% per annum on all TTD owed on or after April 16, 2022, not paid when due.

8. Employer shall pay $ 1,048.80 in penalties for failure to admit or deny liability. Fifty percent of the penalty shall be paid to the Claimant, and

fifty percent of the penalty shall be paid to the Subsequent Injury Fund. The check for the Subsequent Injury Fund shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Did Claimant prove by a preponderance of the evidence that he suffered compensable injuries to his back and right arm on August 10, 2021?

- Did Claimant prove by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits?

- What is Claimant's average weekly wage (AWW)?

- Did Claimant prove by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits for the period of August 10, 2021 through August 20, 2021 and ongoing?

STIPULATIONS

At the beginning of the hearing, Respondents acknowledged that Claimant suffered a compensable injury to his right arm, and Claimant missed ten days of work because of the injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 49 year-old male who worked for Employer as a siding installer. On August 10, 2021, around 10:30 a.m., Claimant was installing siding and fell from the scaffolding. Claimant testified that he felt pain in his lower back after falling. Claimant testified he grabbed a pole as he was falling to try to catch himself, and he lacerated his right arm as he fell. Claimant estimated the scaffolding was 10 to 12 feet high. When Claimant fell, he landed in a standing position. (Tr. 15:18-16:24).

2. [Redacted, hereinafter RC], Claimant's co-worker, witnessed Claimant's fall. RC[Redacted] credibly testified Claimant landed on his feet, and did not seem to land hard. Claimant's right arm, however, was bleedings profusely. RC[Redacted] wrapped Claimant's arm with a shopping bag and he made a tourniquet. RC[Redacted] took Claimant to the Emergency Department at Banner Health McKee Medical Center (Banner). (Tr. 29:6-30:14).

3. The emergency triage note from Banner indicated Claimant had a right arm laceration from sheet metal. The medical record noted that Claimant was working at a construction site and throwing away trash when a piece of sheet metal inadvertently tore into his right forearm, lacerating him. (Ex. A, p. 30).

4. Claimant speaks Spanish and communicated with the English-speaking staff at Banner through a screen monitor that served as a translation device. (Tr. 16:14-18). Claimant credibly testified he did not tell anyone at Banner that he lacerated his arm when throwing away trash, but that he lacerated his arm when he fell from the scaffolding. (Tr. 17:23:18-4).

5. The ALJ finds that Claimant fell from scaffolding while working, and injured his right arm.

6. In the emergency room, Claimant rated his pain as 2 out of 10. The medical record noted Claimant's injury was not head or spine related. (Ex. A, p. 36). Claimant testified that while he was in the emergency room, he did not report any injuries to, or problems with, his back. (Tr. 16:19-22).

7. Claimant's laceration was cleaned, irrigated, and sutured. Claimant was provided discharge instructions solely for a laceration, and these were provided in English and Spanish. (Ex. A, pp. 1-15).

8. Claimant was restricted to modified duty from August 10 to August 20, 2021. Claimant was to not use his right arm, and keep the laceration clean and covered. The work-related diagnosis listed on the August 10, 2020, WC 164 form was a right arm laceration. There is no mention of any back injury. (Ex. A, p. 58).

9. On August 18, 2021, Claimant filed a Worker's Claim for Compensation. On the form, Claimant asserted he fell seven feet from scaffolding, and injured his right arm and back. The nature of the injury is listed as laceration and sprain. (Ex. 1).

10. Claimant returned to Banner on August 20, 2021, to have his sutures removed. Claimant reported no pain and none was suspected. (Ex. A, p. 78). Claimant's clinical assessment was a laceration of the anterior right arm. (Ex. A, p. 84).

11. Claimant testified he reported his back issues at the time he had his sutures removed. (Tr. 16:19-25). But there is no objective evidence in the medical records that Claimant reported any injury to his back or any back pain.

12. Claimant testified Employer terminated him because he went to the emergency room for treatment. (Tr. 19:11-16). This testimony was uncontroverted.

13. Claimant testified he continues to have pain in his lower back, which he did not have prior to the fall, and has not worked since August 10, 2021. (Tr. 19:23-20:6). He further testified the physicians released him from care on August 20, 2021, and no physician has kept him off of work. (Tr. 22:5-23:12).

14. When questioned on direct examination, Claimant testified it was possible that the translation system at the hospital did not record correctly his mechanism of injury or the body parts involved. (Tr. 18:15-19: 3). While some details may be lost in translation, it is not credible that Claimant's alleged complaints regarding his low back would have been misinterpreted or not recorded.

15. Claimant testified he has not seen a doctor for his low back pain because he does not have insurance. (Tr. 22:1-3). The ALJ finds Claimant's testimony to be credible, but there is no objective medical evidence to support Claimant's complaints of back pain, and his alleged inability to work.

16. Claimant was restricted to modified duty from August 10, 2021 until August 20, 2021. It is uncontroverted that Employer terminated Claimant on August 10, 2021. Further, Claimant testified he was released to return to work on August 20, 2021.

17. The ALJ finds that Claimant is entitled to TTD from August 10, 2021 through August 20, 2021.

18. Claimant testified he earned $30.00 per hour and worked 35 to 45 hours per week, which equates to an average of 40 hours per week. Claimant submitted a copy of "check history" from [Redacted, hereinafter MT] (Ex. 13). The most recent check from Employer dated August 6, 2021, was in the amount of $1,400.00. This would equate to 46 plus hours of work. As Claimant's work hours were variable, it is reasonable to calculate Claimant's AWW based on a 40 hour workweek.

19. The ALJ finds that Claimant's AWW at the time of his injury on August 10, 2021 was $1,200.00. This is based on a 40 hour workweek at $30.00 per hour.

20. Based on the totality of the evidence, the ALJ finds that Claimant failed to prove by a preponderance of the evidence that he suffered an injury to his back on August 10, 2021 when he fell from the scaffolding.

21. The ALJ finds that the medical care Claimant received for the laceration on his right arm was reasonable, necessary and related to his work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts

in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

An individual who performs services for another in exchange for compensation shall be deemed an employee unless such individual is free from direction and control in the performance of the service and is customarily engaged in an independent trade, occupation, profession, or business related to the service performed. § 8-41-202(2)(a), C.R.S. If the claimant establishes he performed services for pay, the burden shifts to the employer to prove the claimant was an independent contractor. *Stampados v. Colorado D & S Enterprises*, 833 P.2d 815 (Colo. App. 1992); *Almanza v. W.Y.B. d/b/a What's Your Beef*, W.C. No. 4-489-774 (April 16, 2002).

As found, Claimant proved he suffered a compensable injury to his right arm in the course of his employment on August 10, 2021. The injury resulted from Claimant falling from scaffolding and lacerating his right arm. As found, there is no persuasive evidence that Claimant injured his back in the fall. Based on the totality of the evidence, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury to his back.

Medical Benefits

The employer is liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101, C.R.S. Claimant received emergency treatment at Banner. This treatment was reasonable, necessary and related to Claimant's injury to his right arm. Employer is liable for the emergency treatment Claimant received.

Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But section 8-42-102(3), C.R.S. gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

At the time of his injury, Claimant was earning $30.00 an hour, and he worked 35-45 hours a week. As found, Claimant's AWW at the time of his injury was $ 1,200.00.

Temporary Disability Benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Elec.*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once commenced, TTD benefits continue until the occurrence of one of the factors enumerated in § 8-42-105(3), C.R.S.

The persuasive evidence shows Claimant was disabled by his injury and was restricted to modified duty. Claimant could not return to work because Employer terminated him. The doctors released Claimant to full duty work on August 20, 2021. Accordingly, Claimant is entitled to TTD benefits from August 10, 2021 through August 20, 2021.

ORDER

It is therefore ordered that:

1. Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury to his back on August 10, 2021.

2. Claimant sustained a compensable injury to his right arm on August 10, 2021.

3. Employer shall cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's

injury, including the emergency treatment Claimant received at Banner.

4. Employer shall reimburse Claimant for any medical expenses related to his compensable injury on August 10, 2021. Counsel for Claimant and counsel for Respondents shall confer regarding the medical expenses. If the parties are unable to reach an agreement, either Claimant or Respondent may file an Application for Hearing on this issue

5. Claimant's average weekly wage is $ 1,200.00.

6. Employer shall pay Claimant TTD benefits from August 10, 2021 through August 20, 2021.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-162-468-004

ISSUES

I. Whether Claimant has shown by a preponderance of the evidence he sustained a work related injury in the course and scope of his employment with Employer on April 30, 2020.

IF COMPENSABAILITY IS PROVEN, THEN:

II. Whether Claimant has shown by a preponderance of the evidence that Claimant is entitled to medical benefits that are reasonably necessary and related to the injury.

III. Whether Claimant has shown by a preponderance of the evidence who is the authorized treating physician.

IV. Whether Claimant has shown by a preponderance of the evidence he is entitled to a change of physician.

V. Whether Claimant has shown what is his average weekly wage.

VI. Whether Claimant has shown by a preponderance of the evidence that he is entitled to temporary disability benefits from May 27, 2020.

STIPULATION

The parties stipulated that Claimant's average weekly wage was $1,041.40. The stipulation of the parties is approved and incorporated in the Order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 68 years old at the time of the hearing. Claimant was the head of public works for Employer and started working there in 2019. He would care for the grounds, performing maintenance of machinery and park maintenance. He had multiple different duties including maintenance of equipment and machinery, including a tractor, street sweeper (which was the biggest piece of equipment), dump truck, motor grader, and pickup with a plow. He was the only public works employee for Employer.

2. On or about April 30, 2020, it was springtime in the area and he had to sweep the streets, to get rid of the stones and debris that had accumulated on the streets during the winter months. He was not certain of the exact day but within a day or so on either side of April 30, 2020 is when the accident happened.

3. He was very familiar with the sweeper, which picked up the sand and dirt left over from the winter snow treatment of the roads. He had to do maintenance checks and adjust each machine before use and had to make sure the sweeper was ready to do the street sweeping. He had to perform preventative maintenance on the sweeper, including on the chains that held up the attachment, or hopper. Several parts needed lubrication because it had dried up over the winter, caused by the sand and dirt in the hopper (stores the sand and dirt). He also had to spray water on it to clear the filter of the clogged hoses. The sweeper would barely fit through the shop 12 foot doors. He would have to get on the ground to get under it, had to sit on the ground because it was too big to use a mechanical lift to get to the underside.

4. On or about April 30, 2020, he likely right before lunch, when he was getting up from servicing the chain, he struck his head. He was on his side under the machine, had just fastened the chain, and he tried to get up, from underneath. He struck his head on the metal bar of the car lift just proximal to the sweeper, about 1 foot away from the sweeper. It was a very solid strike, as he immediately had a headache, felt goofy, and dizzy. When he stood up, he was wobbly and could not walk in a straight line, feeling the pain. He was not paying attention to how he was walking. He sat for one or two minutes. But he had a lot of work on his schedule to do, so he pushed forward to get everything done despite the headache. At the time he said some curse words, but no one was in the shop to hear him. He worked alone.

5. He struck his head on the temple, right above his right ear. He thought he was wearing regular glasses, not his protective goggles, because they were bifocal, and he could not see without them. The glasses did not fall off of him. The area on his head felt bruised for one to two (1-2) days following the incident. He continued working the complete day because he had a long list of machinery maintenance to complete but had problems completing the work.

6. Following this accident, he started to have cognitive issues, difficulty with memory, word search problems. He did not notice right away, as he was by himself most of the time, but at the end of day he would go into the office around quitting time. He did not recall reporting the injury to anyone but did mention it to his wife who worked for Employer. After this accident, he would get dizzy and feel fuzzy, and had memory problems. The medical records mentioned cognitive issues, problems with cognition and memory. He first noticed the cognition problems because he was told by family members. Then he started seeing small things that he would normally do but he did not recall doing them.[1]

7. In the days following the accident Claimant would notice himself that he had continual problems remembering things at work and at home. For example, he had to perform a sprinkler system job and could not work out how to get it done, though it was something he was very familiar with completing. He knew the controller wiring was off. He was also very frustrated that he could not get to the wires he needed to work on because his hands would tremble excessively. This was also after the accident but he could not remember exactly when after the work incident when he hit his head.

---

[1] The ALJ infers from tis that he would complete everyday tasks and have no recollection of actually performing the tasks.

8. Claimant ended up going to the hospital on May 26, 2020. The office manager and Town Administrator[2] had sent him home because of the memory problems and the shaking. He remembered he had only wanted to go to his primary care provider at Franktown Family Health, but his wife took him to the emergency room (ER) at Parker Adventist instead.

9. Claimant knows he had a craniotomy. Now he cannot drive safely anymore, anywhere. He lives in a community of approximately 600 people, and few residents drive the roads. He had been driving to the store, but he had the shakes, sometimes severely, though some days were better than others. A lot of the time he simply went with his wife everywhere. His symptoms were multiple, such as his limbs shaking, right hand worse than the left; balance issues, would drag his left foot; serious attention issues, it is hard to focus and to stay focused; memory issues, he would forget what he would be doing on a regular basis and fail to complete tasks. Claimant emphasized that there was no way that he could return to work. He continued working after April 30, 2020, but from May 26, 2020 he stayed at home after his surgery. He did not recall what happened for some months following the surgery. He was frequently fatigued and would sleep a lot. He has not returned to work.

10. Claimant and his wife reported to the emergency room personnel that there were three potential incidents that they specifically recalled involving his head. The first incident was at work, when he was getting up from the ground and hit his head on the metal bar of the car lift. (Work incident) the month prior. The second one was approximately one week before going to the hospital, when he scraped his head on the door frame of his shed, which was approximately one inch shorter than he was. It scrapped his forehead at about the hair line. He had had the shed for 20 years and never hit or scraped his head before that time. The scrape on his head was not very serious, just surprising. He did not recall exclaiming in pain, cursing or bleeding from the scrape but he did mention it to his wife. (Shed incident). The third incident occurred the day before he was hospitalized. He was in the boat, in the process of getting out. He had one foot over the rail, or side of the boat, and felt very weak, he could barely get the other foot over. He recalled he was holding onto the side of the boat, could not push himself up, so he got kind of stuck. He had a grip on the edge of the boat and as he had a foot on the ground and could not stay up though he thought he had a firm grip on the side of the boat. He did not recall hitting his head but thought he might have hit his head on the ground. (Boat incident). Of the three incidents, the injury at work was a lot more serious. He had never had shaky hands before the April work incident. He had not suffered from any cognitive issues before, and no prior problems with memory issues, loss of focus or attention.

11. There were no other significant incidents that he could recall. He stated that he had hit his head a work before, but it was a long time ago, long before he started working for Employer. There was certainly nothing in the last 5 years before this work incident. He had never been diagnosed with a hematoma before May 26, 2020.

12. He did not recall immediately reporting the incident to Employer and did not think it had been immediately after the accident. If he did, he certainly did not complete

[2] The title of Town Administrator is noted on the unsigned designated provider list, Exhibit K.

any formal report himself. He did mention the incident to the Town Administrator but never received a list of doctors to see. His wife also worked for Employer and may have also mention the incident to the Town Administrator.

13. Claimant stated that he was foggy when he was admitted to the hospital, and he noted that his wife likely answered a good portion of the questions he was asked. He was having problems with thought process. He went to look for a bathroom in the hallway and was disoriented and urinated on himself. He was dragging his left foot too.

14. Claimant's wife (Wife) testified at the hearing. She noted that she and Claimant had been married for 33 years. She was employed by Employer as a Utility Clerk at the Town Hall, working part time, and part time as a realtor. Outside of work she would spend a significant amount of time with Claimant, and occasionally had lunch with Claimant, while at work. She stated that she did not recall that Claimant reported the incident to Employer. Around the beginning of May, 2020, she noted that Claimant was having shaking in his left arm. She noted that other strange things were happening to Claimant, such as he could not open a bag of chips. This ALJ infers that he did not have any problems doing that activity before. He could not find the light switch in the bedroom, and he was doing everyday things in a slow-motion kind of way.

15. Claimant's wife stated that Claimant, prior to the injury at work, was very strong, and had a very high work ethic. They had to remove their windmill, as Claimant was unable to pound the stakes into the ground, implying that it was an activity that he would perform frequently before. She journaled everything and put a timeline together of things that Claimant would not remember. She became very alarmed by what was happening to her husband as he had problems remembering things he had done or said. He had weakness of his limbs. On one occasion, they were out to breakfast with one of their daughters and his arm kept shaking so hard that it caused him to slam a glass full of juice on the table and it splashed everywhere. On the day that Claimant went to the emergency room, she had spoken with the Town Administrator and was advised that Claimant had been sent home because she had noticed Claimant not doing well, was dragging his left foot, and was alarmed by the symptoms he was displaying. Wife thought that Claimant was having a stroke or something because his speech was impaired. She personally witnessed the boat incident and denied that Claimant hit his head that day.

16. The day Claimant was admitted to the hospital, Wife spoke with several people about the claim, including the Town Manager and the Town Attorney, who mentioned she should consider filing a claim on behalf of Claimant. She did not see any designated provider list and she did all the paperwork for Claimant as he was dealing with memory loss problems. Claimant continued to see his personal providers and the providers referred by the emergency room providers. She stated that Claimant attempted to return to work, but it was not successful. He was prohibited from driving, and she had to spend all her time with Claimant as he needed supervision. She had to quit her job because of Claimant's impairments and need for help.

17. Wife noted that she now had to go behind Claimant and finish his tasks because he was unable to focus and complete tasks. Even simple things like, flushing the toilet after going to the bathroom. She stated that Claimant was very good with math and now could not do math without help. She testified that Claimant, after the surgeries,

would sleep a lot and was advised that it was because his brain was trying to heal. She also stated she took Claimant to all his medical appointments and none of the providers had suggested that alcohol had anything to do with the SDH.

18. Claimant assumed that there would be a time of recovery, that would allow an occasional drink, but he had not had any alcohol since the hospitalization and brain surgery. Claimant stated he did not continue having his evening drinks after the initial admission to the hospital.

19. The parties submitted over 2,200 pages of records in this matter, which are summarized below only in pertinent part, addressing only those records that might be relevant to the issues to be addressed in this matter.

20. Employer issued a First Report of Injury (FROI) completed by an administrative assistant for Employer on January 28, 2021. The FROI specifically noted that Claimant had reported the incident on April 30, 2020. It also noted that Claimant was inspecting the brushes of the street sweeper and that he was wearing a helmet. He was getting up off the floor when he stood up, striking the right temple against the "A frame" steel dual post car lift.

21. Claimant stated that he was working for Employer as a salaried employee. He thought he was earning around $50,000.00 per year. The FROI indicated that Claimant was earning an average weekly wage of $1,014.40.

22. Claimant filed a Workers' Claim for Compensation on February 4, 2021. It noted that, as he was standing up after leaning over to repair a chain, he hit his head on a car lift and reported it to the Town Administrator. It noted that Claimant was being treated at Franktown Family Medicine.

23. Employer issued a February 9, 2021 document entitled Employer's First Report of Injury.[3] This document also stated that Employer was notified on April 30, 2020 and that Claimant's disability began on May 26, 2020. This form also lists Insurer's information and notes that Insurer received notice of the claim from Employer on January 28, 2021.

24. Employer submitted Exhibit K, with a designated provider list (DPL), and a cover letter dated February 11, 2021 from Respondents' counsel to Claimant's counsel. The DPL was undated and unsigned.

25. Insurer filed a Notice of Contest on February 11, 2021, denying that Claimant's injuries were work related.

26. Claimant was attended by Reiner Kremer, PA-C of Franktown Family Medicine, LLC, (supervised by Paula Castro, M.D.) beginning October 14, 2015 for multiple conditions including cardiology issues, cervical spine issues, dizziness, myalgias and cervicalgia. On April 2, 2020 Claimant was seen for a regular follow-up. PA Kremer assessed hypercholesterolemia, hypertension, lumbalgia, hip pain, coronary arteriosclerosis, and aortic arteriosclerosis. Other prior records indicate maintenance and

[3] Not a Division of Workers' Compensation standard form.

cardiology concerns as well as lifestyle concerns such as weight, regular exercise, diet and proper sleep.[4]

27. Claimant was admitted to Parker Adventist emergency room on May 26, 2020 with a history of headaches for the last week in the right parietal and base of his neck. The medical records highlighted that Claimant's wife noted that Claimant had bilateral arm weakness that was fairly equivalent and left leg weakness which was most prominent. She noted that over the last 3 days he would be dragging his left foot toward the end of the day though seems to be better in the morning. He had had some difficulty walking because of this. She noted that his speech was slow, and he seemed to be moving in "slow motion." Claimant denied vertigo or imbalance, but his wife reported his complaints of a sensation of lightheadedness and his tendency to fall towards the left. Claimant reported that he would drink two beers and one shot of whiskey daily but denied any withdrawal symptoms or seizures, and upon discharge, there was no evidence of alcohol withdrawal. Claimant and his wife were cautioned with the risk of alcohol withdrawal which could dramatically complicate the course of his SDH. The records noted that "In hindsight," Claimant and wife noted that Claimant had an injury at work "3 months ago" but did not make anything of it. Then a week ago "he had (sic.)[5] his forehead on the door of the shed." Symptoms may have started shortly thereafter. Then the day prior to admission, he rolled out of their boat, falling, one foot to the ground and hit the left side of his head but denied associated loss of consciousness (LOC).

28. Dr. Michael Rauzzino performed a right craniotomy for evacuation of a subdural hematoma with microscopic technique on May 26, 2020. He stated that indications for the surgery were Claimant's right sided headaches and altered mental status. He noted that diagnostics showed a large right sided holohemispheric subdural hematoma with significant mass effect and midline shift without any unresolved problems. Claimant also had a speech and language evaluation as Claimant reported confusion when he awoke from a brief nap, not knowing where he was. He was able to reorient himself after a couple minutes. His wife noted slower processing than normal. Upon assessment of the Montreal Cognitive Assessment (MoCA) screening, Claimant had mild cognitive deficiencies overall with most significant deficits noted with immediate and delayed recall, verbal fluency, and calculations. During his stay, therapists noted that Claimant demonstrated decreased insight into deficits and mild impulsivity.

29. Claimant was discharged from Parker Adventist on May 29, 2020. The primary diagnosis was acute on chronic intracranial subdural hematoma, daily consumption of alcohol, coronary artery disease, tobacco use disorder, Class 1 obesity with a body mass index (BMI) over 32, benign prostatic hyperplasia and prediabetes. The discharge addressed in-hospital care, including physical therapy and occupational therapy evaluations with gait training and lower extremity strengthening, range of motion exercises and neuromuscular reeducation. Upon discharge and the records from admission through discharge, there was no persuasive evidence of alcohol withdrawal.

---

[4] There was no mention of dizziness issues by April 2, 2020.

[5] There are several possibilities regarding this mistake, it could mean that a word was missing like "he had scrapped/hit/struck his forehead" or that that there was a typo as in "he scrapped/hit/struck his forehead." This ALJ declines to make any assumptions in this regard like Dr. Morgenstern in his report.

30. The discharge note described the findings of the at least five CT scans performed while in the care of Parker Adventist. The comparison from the CT performed on May 26, 2020, which showed a large mixed attenuation nearly holohemispheric right convexity SDH with areas that may reflect acute on chronic hemorrhage. Near the cranial vertex it measured 3.2 cm. Substantial mass-effect and right hemisphere with sulci that were effaced, right lateral ventricle was effaced, approximately 1.2 cm right greater than left midline shift (MLS). While the CT post craniotomy and evacuation of the SDH on May 26, 2020 showed smaller than on prior diagnostics, measuring 15 mm, there was increased acute hemorrhage within the collection anteriorly. The May 29, 2020 CT showed a decreased mass-effect with left MLS down to 7 mm with residual mixed density right hemispheric subdural collection measuring 1.3 cm in thickness with 7 mm subfalcine midline shift, which was an improvement from the prior day's head CT, with no new intracranial hemorrhage, cortical infarct, mass or other new or acute intracranial pathology. He was discharged with multiple recommendations for outpatient PT/OT/SLP, and medications.

31. Claimant returned to the emergency room and was readmitted on May 30, 2020 with left arm movement suspicious for secondary focal seizure. The CT on readmission showed a recurrent SDH with new loculation of acute SD blood along the anterior and superior margins of the prior craniotomy, with a 13 mm defect. Overall, the size of the residual mixed right SDH was unchanged, measuring 14 mm. Not change in the 9 mm MLS. They assessed that Claimant had a "recurrent subdural hematoma for which he had craniotomy 4 days ago by Dr. Rauzzino." Dr. Rauzzino was consulted, and he wanted Claimant to be admitted to the hospital. After he reviewed the CT scam, Dr. Rauzzino would see him in the morning to decide if any other interventions were needed.

32. On June 2, 2020 Claimant was prepped for surgery as following the prior procedure he had done well but after a week, he had worsening symptoms. Diagnostics indicated that Claimant had a recurrent subdural and epidural[6] hematoma. Dr. Rauzzino proceeded with a revision right craniotomy with evacuation of epidural hematoma and recurrent subdural hematoma. The head CT postoperatively on June 3, 2020 showed a right mixed density smaller SDH with maximum thickness 0.7 cm (compared to 1.4 cm), showed less mass-effect, decreased leftward MLS, now only 0.5 cm (compared to 0.9 cm) and a decreased overall size of right posterior falx SDH with maximum thickness 0.4 cm. By discharge Claimant was showing cognitive linguistic skills within functional limits.

33. Claimant was evaluated by Derrick Winckler, PA-C from Dr. Rauzzino's office, on June 8, 2020 at Front Range Spine and Neurosurgery. PA Winckler took a history and noted that Claimant continued to have tingling in the fingertips of his left hand, but otherwise improved since the craniotomy. He had some drainage at the site of a staple. It was replaced and the drainage stopped. He was advised to return the following week for a wound check.

34. On June 11, 2020 PA Kremer noted Claimant's recent release from the hospital with subdural bleed that was repaired twice by Dr. Rauzzino. PA Kremer noted

[6] Epidural hematoma is a blood accumulation between the dura and the skull, while subdural hematoma means a bleed between the dura and brain matter.

Claimant's use of a cane and that he was on short term disability (STD). It noted a referral to neurology for further evaluation. Claimant's physical exam was unremarkable.

35. Claimant started physical therapy with Fyzical Therapy & Balance Centers on June 16, 2020. They noted complaints of balance and residual left sided strength deficits, with limited ambulation outside the home and with an assistive device. He was discharged on November 24, 2020 due to Claimant's inability to get to his appointments as he was having increased cognitive therapy visits.

36. He returned to Dr. Rauzzino's office on June 17, 2020. Claimant no longer had issues with tingling extremity sensations but continued to ambulate with a cane and continued with his seizure medications. On July 16, 2020 Claimant reported to PA Winckler that he had taken a turn for the worse with worsening headaches and problems with confusion and lethargy. PA Winkler noted that the July 2, 2020 CT scan showed no recurrent hemorrhage and only a small residual subdural hygroma.[7]

37. Pamela Kinder, M.D., a neurologist, first saw Claimant on August 4, 2020 for evaluation and continued seizure medications management, which were increased after his June 2, 2020 admission. The headaches had abated but he continued having fatigue and increased symptoms with stress. Dr. Kinder noted that Claimant would frequently drink nightly except that since his first hospitalization, he had stopped that altogether. Neurological exam was essentially within normal limits except for gait, as Claimant had a tendency to sway to the left. Dr. Kinder noted that Claimant would not be able to drive for approximately one year, recommended a change in medication and gradual exposure to aggravating factors. On August 24, 2020 Claimant indicated to Dr. Kinder that he had almost immediate change in mood with the new medication. She diagnosed localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset without status epilepticus and traumatic subdural hemorrhage without loss of consciousness.

38. At a follow-up on September 21, 2020 PA Stephen Ladd of Dr. Rauzzino's office, noted that Claimant was recovering fairly well still with complaints of fatigue and shakiness towards the end of the day, but improving strength. Claimant also reported that towards the end of the day he had increasing speech difficulties. PA Ladd recommended continued follow up with the neurologist for control of seizure medications and continued physical therapy. He also reviewed the last CT scan.

39. On October 29, 2020 Dr. Kathryn Polovitz, M.D. conducted an EEG with a finding of persistence of amplitude asymmetry with overlying frequencies appreciated throughout the right frontoparietal region consistent with a breath rhythm, seen in the setting of skull manipulation or underlying skull defect, as well as mild intermittent focal slowing appreciated in the right frontoparietal region suggestive of a mild focal dysfunction in the region. Claimant followed up with Dr. Kinder who noted that Claimant suffered a significant injury to his brain, his studies were still reflecting ongoing impairment at his right frontal/parietal area that could cause confusion, risk of accident and could impair his judgement.

[7] A hygroma is a collection of spinal fluid without blood.

40. The CT of the head and brain from December 31, 2020, as read by David Solsberg, M.D., showed a nearly isodense subdural fluid collection deep to the craniotomy site, that measured 4 mm. There were no mass effects or acute hemorrhage or progression of the hemorrhage since the prior study. Dr. Solsberg noted, at this time, some cerebral atrophy.[8]

41. On January 25, 2021 Claimant was readmitted to Parker Adventist after suspicion of a seizure. EEG and EKG were normal without indication of continued seizures. CT showed an acute 4 mm right frontoparietal subdural hemorrhage with no midline shift. Dr. Rauzzino, from neurosurgery, was notified, he reviewed the films then called back and stated that he felt this was likely old. However, after discussion with the patient's family and wife, they were more comfortable with Claimant staying overnight for evaluation, therefore he was admitted to the medicine service unit. He was discharged and was recommended further neurologist evaluation with Dr. Kinder as well as continued with antiseizure medications.

42. Dr. Kinder reevaluated Claimant on February 1, 2021 noting he was alert but could not recall recent events, had a slightly ataxic gait and immediately lost his balance with eye closure. Dr. Kinder again explained to both Claimant and his wife the extent of the brain injury, that blood had "clotted", but remained an irritant to his brain, noting that both Claimant and his wife only now comprehended the extent of the Claimant's disability, finally realizing Claimant would not be fit to drive or work for some time. Dr. Kinder also stated that Claimant should be on long-term disability as he was not able to meet the demands of his job.

43. On February 24, 2021 Claimant followed up with PA Kremer who noted that Claimant continued to follow up with neurology and was disabled as a result of the brain hemorrhage. He was enrolled in a cognitive rehabilitation program in Parker, Colorado. He complained of left sided shoulder problems as well as right sided headaches. PA Kremer ordered a new CT to evaluate whether there were any new brain bleeds. In addition to his prior diagnosis, he was diagnosed with shoulder pain and right sided headaches. Prior exams were also similar and provided no other insightful notations other than Claimant had frequent lab workups.

44. Dr. Bruce L. Morgenstern performed a medical records review independent medical evaluation (IME) at Respondents' request on April 28, 2021. He did not examine Claimant. The records provided to Dr Morgenstern included Dr. Rauzzino's at Front Range Spine, Franktown Family Medicine, FROI, Neurology of the Rockies and Parker Adventist. Dr. Morgenstern specifically associated use of alcohol as a possible cause of the subdural hematoma in Claimant as alcohol consumption or abuse leads to both atrophy of the brain, which stretches the bridging cerebral vein tissue and may lead to increased risk of SDHs, and risks of falls due to intoxication. Dr. Morgenstern heavily relied on discrepancies regarding whether the work incident occurred one month or three months prior to the May 26, 2020 admission. He, erroneously, assumed that Claimant filled out the FROI instead of Employer's representative. Dr. Morgenstern stated that "[I]n summary, significant discrepancies exist both in the documented time course as well as

[8] This was the first CT report to document any atrophy.

the severity of any associated work-related injury," questioning Claimant's credibility as a historian in his final analysis and opinion.

45. Dr. Rauzzino wrote a letter dated January 31, 2022. He stated as follows:

> I treated Mr. [Claimant] directly including having performed surgery and having assessed the hematoma. I have also looked at the images at length. This was a large hematoma, mostly chronic and likely present for at least one month. It is not something that would have occurred from an injury five days earlier. The vast majority of the hematoma, or perhaps all of it, was relatable to the event that occurred one month earlier. There were chronic membranes found at the time of surgery; these membranes take time to develop over the course of weeks, not a few days. It is therefore my opinion as a level II accredited physician that the etiology of his hematoma and the need for surgery had to have been caused by an event that had occurred at least one month prior to his presentation. If he struck his head at work and if this can be documented, it would be my opinion that this was an occupational injury and not related to the minor trauma that may have occurred one week prior to his presentation.

46. Dr. Michael Rauzzino testified as an expert in neurosurgery and as a Level II accredited physician by deposition on October 17, 2022 on behalf of Claimant, as a treating provider. Dr. Rauzzino was Claimant treating neurosurgeon since his first admission in May 2020, when he treated Claimant at Parker Adventist Hospital. Dr. Rauzzino first evaluated Claimant in the emergency room at Parker Adventist, where Claimant was complaining of headaches, left sided weakness, trouble with thinking, and diagnosed Claimant with an "acute on chronic subdural hematoma." This was based on the CT study of Claimant's head. The CT showed a large fluid collection on the right side of his head compromising or compressing the right side of the brain down. Dr. Rauzzino explained that a subdural hematoma is a blood clot or an area of bleeding between the skull and the dura, and the brain. He could tell that it was acute on chronic because of the size of the hematoma. The brain would not have been able to tolerate an acute hematoma the size Claimant had, because it was several centimeters, comprised of the whole side of the brain. The radiologist measured it at 3 centimeters and noted that the brain had shifted approximately one centimeter pushing the brain to the middle. All of which lead Claimant to have a neurologic deficit.

47. Dr. Rauzzino testified that Claimant's symptoms were consistent with a subdural hematoma, he recommended surgery and performed the surgery. Claimant then had recurrence of blood clotting, so Dr. Rauzzino performed a second surgery to clean out the recurrent clot. Dr. Rauzzino noted that most (greater than 90%, nearly 100%) subdural hematomas are caused by trauma to the head. To assess the causality of the hematoma, he would normally take a history, generally traumatic, viewed the imaging, looking for color and size of the hematoma, and reviewed past records.

48. In this case, Dr. Rauzzino took a history from Claimant that he struck his head at work, which was consistent with the history Claimant provided at hearing, of an incident where he was getting up after working on the sweeper and had a solid hit on his head on a car lift bar. Dr. Rauzzino stated that this type of hit was more than sufficient to have caused the subdural hematoma, even if Claimant had been wearing a helmet. He stated of the three incidents Claimant had, the one the day before had no probability

of causing the hematoma of the size Claimant had because not enough time had transpired. The one where Claimant scrapped his head on the frame of the shed, could not have caused it either, because the type of hematoma noted was older than a week prior. Dr. Rauzzino stated that "the only of those three incidents, the only one that had the potential to have caused this was the one that occurred about a month prior." He went on to state:

> Having an injury about a month prior would have been enough time for the bleeding to occur, the hematoma to expand, and the blood to have lysed. So while I try -- you know, very rare in life you can say absolutely, a hundred percent, I can actually say a hundred percent that the injury didn't occur a week prior, and it didn't occur a day prior.
>
> The analogy that I would give you is if you took an oyster and you dropped it to the ground and the pearl rolled out, we know that that pearl didn't develop just from hitting the ground, and it didn't develop a week prior. It takes time for a pearl to develop. It starts with a grain of sand, it grows, and you know, that sort of thing. The hematoma he had was like that. That is something that took weeks to develop, you know, to occur. So I can say with surety that of those three incidents, the one that is most plausible is -- or the only one that is plausible would be the injury he described at work.

49. Dr. Rauzzino noted that it takes time for a subdural hematoma to grow and individuals don't always present with symptoms right away because it takes time for the blood clot to form, to a point where the brain can no longer tolerate the change. At the beginning, right after the head trauma, Claimant could not have expected to have any symptoms other than the fact that he hit his head.

50. Dr. Rauzzino opined that individuals, generally, that abuse alcohol, have a tendency to fall and suffer trauma to the head, but Claimant did not provide a history of alcohol abuse to Dr. Rauzzino or any other history separate from the three instances, the shed, the boat and the work incident. Dr. Rauzzino noted that alcohol can cause the brain to shrink and atrophy but not to create a subdural hematoma. Further, in this case, Claimant's brain showed no signs of shrinkage. Also, when performing the brain surgery to remove the clot, Dr. Rauzzino noted a chronic membrane which had encased the blood and stated that chronic membranes take several weeks to form, not just a week or days.

51. Dr. Rauzzino also noted that the color of the blood on CT showed that most of the blood was isodense, meaning that it had already broken down after clotting and showed as a gray color. He noted that there was only very little blood that showed any acute findings, as a very white color. He noted that:

> …someone with a chronic subdural hematoma, they can have bleeds into it and, you know, sometimes it happens spontaneously. That is how a subdural hematoma develops. You have a little bit of bleeding.
>
> I don't know if Dr. Morgenstern went through this. But there are veins on the surface of the brain that connect to the dura. And if you have an injury and you shear one of those veins, blood will start to ooze out. And as the blood oozes out, it presses against the brain, and since it can't push the skull out, it pushes the brain down, and as the brain gets pressed down, other veins can stretch and they can tear and they can bleed.

> So sometimes you can catch it right after one of the other veins has gone, started the bleed, you will see acute blood on top of the other blood, which is more chronic in nature.

52. Dr. Rauzzino stated that within a week after the head trauma, an individual could show signs of weakness, confusion. But as time passes, the symptoms become more pronounced as the subdural hematoma continues to grow over the next weeks. "People hit their head, they don't realize how hard they hit it, they shake it off, they just go about things, and they didn't realize they started a process which is going to lead, you know, to potential death, which is what happens if these things aren't treated."

53. Dr. Rauzzino testified that while the patient was suffering from symptoms of the SDH that his mind could be cloudy but once he had been treated, his mind would have cleared from the effects of the SDH and may have been able to provide a more detailed or accurate history of the trauma. He stated that "it is hard to get an accurate history when your brain is under so much pressure."

54. Dr. Rauzzino stated that Claimant "almost died. His brain was so compressed that he was having neurologic symptoms, and to ask him to give an accurate history is difficult in that situation." Dr. Rauzzino noted that following the surgery, when Claimant was recovering, he obtained a history of the three incidents and that of the three, his opinion was that Claimant's injury at work more likely than not, caused the initial bleed, which started the hematoma and that it continued to bleed up until he was seen in the hospital emergency room. At that time, the hospital called him in as they had detected a large, acute on chronic intracranial subdural hematoma.

55. On November 7, 2022 Respondents deposed Dr. Bruce L. Morgenstern, a Board-Certified expert in neurology who conducted a record review. Dr. Morgenstern noted that most SH are caused by trauma and that it was rare for a SH to be spontaneous or not have a history of trauma. He explained as follows:

> The -- the blood forms, as we said, between the · inter table of the skull below a membrane called the dura and the brain. So it basically squeezes the brain between the skull and the brain.· When one leads (sic.) acutely certainly into the brain, or around the brain, blood has iron in it. And on a CAT scan, iron is white.· So acute blood looks hyperdense or white.
>
> After about three days, the blood begins to deteriorate.· So it goes from bright to kind of gray, which we call isodense.· It's about the same color -- same shade of the brain itself.· And then beginning about a week or so after that, the blood further deteriorates and becomes hypodense or dark.· So we have acute blood, which is white; subacute blood, which is isodense, so sort of gray; and chronic blood, which is dark.
>
> Mr. -- on his CAT scan, Mr. [Claimant] had a combination of -- of hypodense, that is, dark blood, which was chronic, but also areas of acute blood, which were bright white. So it was interpreted as acute superimposed upon chronic.

56. Dr. Morgenstern testified that there were multiple possible causes for Claimant's SH, including excessive alcohol consumption which could have caused a fall,

such as the “shed incident:” and the “boat incident” or shrinking of the brain which could have sheered the blood vessels leading to the skull. He also noted that three months as noted in the ER visit report was the outside limit for symptoms to occur from a SH. He also criticized Claimant’s change in reports from the ER visit of three months to the FROI report of approximately one month. Lastly, he noted that because Claimant was wearing a helmet, it was less likely the cause of the SDH, that “it would blunt the injury.” The ALJ infers from this statement that it was also his opinion that it could occur.

57. Dr. Morgenstern questioned Claimant’s credibility because of the three-month notation taken during the May 26, 2020 emergency room visit. He stated that individuals with SHs can suffer or develop cognitive difficulties as a result of the SDHs and that Claimant was reporting cognitive issues, and that he had presented to the ER with a history of headaches for the last week in the right parietal side.

58. As found, Dr. Rauzzino’s opinions are more credible and persuasive than the opinions of Dr. Morgenstern. Dr. Rauzzino was the one to perform the craniotomies in this case and found that there was no brain atrophy present at the time of the craniotomies. He studied the CT imaging, not just the reports from the radiologists, both prior to surgery and after surgery. Dr. Rauzzino credibly explained that Claimant was under the influence of the SDH, that showed a midline brain shift, which caused brain damage, affecting cognitive awareness, memory, and speech. He noted specifically that the SDH could not have been caused by the boat incident because the imaging showed isodense, hypodense and hyperdense. This combination of blood deterioration indicated to Dr. Rauzzino that the shed incident, which occurred approximately one week before the May 26, 2020 admission was not the cause of the SDH. Lastly, he opined that whether the work accident was one month or three, that the CT scan indicated that it was greater than two weeks old but certainly could have been up to three months old due to the isodense blood (degradation of the blood). Dr. Rauzzino’s opinion established that the head trauma was probably caused by the work injury. Dr. Rauzzino’s opinions are more persuasive over the contrary opinion of Dr. Morgenstern. As found, the fact that Dr. Rauzzino viewed the actual CT scans, not just the reports, as well as performed the surgeries on Claimant’s brain and viewed firsthand the condition of the SDH and the surrounding brain tissue showed that it was more likely than not that the SDH was caused by an incident greater than one week before the admission, any time around three weeks to three months. Lastly, Dr. Rauzzino spoke with Claimant in person and obtained a history from Claimant after the surgeries took place, consistent with Claimant’s testimony at hearing, noting that any history of present illness taken on the date of admission, would have likely not been fully reliable, not because Claimant was not credible, but because Claimant had a large SDH deforming his brain matter, which was causing brain injury, causing both physical and cognitive deficits.

59. Further, as found, Claimant’s testimony was credible and persuasive. Claimant described the incident which occurred on or about April 30, 2020, where he was getting up after working on the sweeper’s chains and hitting his head on the car lift that was immediately adjacent to the sweeper and described it as a “very solid hit.” The incident was so traumatic that he immediately had a headache, felt goofy, and dizzy. When he stood up, he was wobbly and could not walk in a straight line, feeling the pain. He sat there for one or two minutes. But he had a full schedule so pushed forward to get

everything done. At the time he said some curse words, but no one was in the shop to hear him. While the medical records documented that Claimant "did not think anything of it," as found, Claimant did not have the experience or expertise to recognize that the significant hit to the head would or could cause trauma or injury to his blood vessels sufficient enough to cause bleeding in his brain and causing the midline shifting of the brain. As found, Claimant's detailed description of the work incident was not casual or transient or fleeting but was very memorable, which in and of itself is very persuasive. Claimant has proven by a preponderance of the evidence that it was more likely than not that the traumatic event at work caused the SDH and brain injury. This is in conjunction with Dr. Rauzzino's opinion that the SDH, which was isodense upon admission to the ER, was probably caused by the trauma at work.

60. The fact that Claimant did not specifically take notice of or write down the particular date of the injury was not unexpected, as, while he had a solid hit to his head, he was able to continue working, though with some difficulty. As stated previously in this analysis, Claimant did not have the expertise to know that there was a cerebral brain vein that was bleeding in his head. Claimant was persuasive in explaining that the accident at work would have been on or about April 30, 2020 because it was springtime and he needed to do maintenance on the sweeper in order to be able to use it to pick up all the debris on the roads from the winter road maintenance.

61. As found, Respondents had notice of the work injury, as the FROI established that Claimant advised his employer of the work incident on April 30, 2020. Respondents failed to designate a medical provider in this matter and Claimant selected his provider, Franktown Family Medicine, and PA Kremer as his authorized treating physician. Further, any provider within the chain of referral were also authorized. PA Kremer referred Claimant to the neurologist, Dr. Kinder, as well as to the neurosurgeon that performed the craniotomy for follow up. PA Kremer also made referrals to multiple other providers, including physical therapy and speech therapy. These providers are authorized.

62. Claimant received appropriate care in this matter. Claimant sought treatment, after the initial emergency care, with Franktown Family Medicine. They referred Claimant to multiple other providers, back to his neurosurgeon, Dr. Rauzzino, for neurologic consultation with Dr. Kinder, for physical therapy with Fyzical Therapy, and to a speech therapist. All these are reasonably needed care to address the work-related subdural hematoma and the sequelae of the SDH, including possible seizure disorder and care. Claimant has shown that the medical treatment was authorized, reasonably necessary and related to the injury. Claimant has failed to show that a change of provider is proper in this matter as no persuasive testimony was tendered on this issue, a new physician identified or a plausible reason for requesting a change of physician.

63. Lastly, Claimant has shown by a preponderance of the evidence that he was disabled due to the work-related injury, SDH and the diagnosed seizure disorder and was unable to return to work from May 26, 2020 to the present. Claimant is entitled to temporary disability benefits. This is supported by Dr. Rauzzino, Dr. Kinder and PA Kremer's opinions as set forth above.

64. Any evidence or possible inferences contrary to the above findings, were specifically found not persuasive or not relevant.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 199f5). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." Sec. 8-41-301, C.R.S.

As found, based on the totality of the evidence, the medical records, Claimant's testimony, and the opinions of Dr. Rauzzino, Dr. Kinder, and PA Kremer are more persuasive than the contrary opinions of Dr. Morgenstern. The record shows that Claimant clearly was at work, within the course and scope of his employment, when he hit his head on the metal bar of the car lift, which was immediately adjacent to the large industrial sweeper. Regardless of whether Claimant had a helmet on or not, the hit was sufficient to cause the trauma and damage to a vein in his brain, which in turn caused bleeding and the subdural hematoma. Claimant and his wife started to notice the effects and symptoms of the SDH shortly after this incident, including changes in speech, slowness of reactions or actions, memory loss and loss of function in his upper extremities. Clearly, even the Town Administrator noticed that something was not right as she was the one to send Claimant home the day he was admitted to the emergency room at Parker Adventist. It was not until a CT of his head was performed at the ER that they realized that Claimant had a SDH causing midline shift of the brain, which was significant and life threatening. Dr. Rauzzino was also persuasive and credible in stating that the two incidents one week before being admitted to the ER and one day before (shed incident and boat incident respectively) were probably not the cause of the SDH

and the incident at work, whether he was using a helmet or not was the probable cause of the trauma to Claimant's head and the proximate cause of the subdural hematoma and subsequent seizure disorder. Claimant credibly testified that he was immediately dizzy and had an immediate headache. The fact that he continued working was only a sign that he had a great work ethic, as his wife testified. Dr. Rauzzino's testimony that because most of the blood was not bright white (hyperdense), it was actually isodense and some that was hypodense was extraordinarily persuasive. Dr. Rauzzino's opinions were credible and persuasive. Claimant has shown that the proximate cause of Claimant's injuries to his head and brain was the work-related accident of April 30, 2020. Claimant's injuries arose from the accident at work in the course and scope of his employment on April 30, 2020.

C. Authorized Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Pursuant to Section 8-43-404(5) (a) (I) (A) the employer or insurer must provide "a list of at least four physicians or four corporate medical providers …in the first instance, from which list an injured employee may select the physician who attends the injured employee." Pursuant to W.C.R.P. Rule 8-2 (A) "[w]hen an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers from which the injured worker may select a physician or corporate medical provider." Further, pursuant to Rule 8-2(A)(1) "[a] copy of the written designated provider list must be *given to the injured* worker in a verifiable manner within seven (7) business days following the date the employer had notice of the injury." (*Emphasis added*.) Pursuant to Rule 8-2(E) "[I]f the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing."

Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical care related to the injuries. As found, Respondents had notice of the accident on April 30, 2020 as established by the completed Division

form, the Employer's First Report of Injury. Also, the Town Administrator and Town Attorney had notice at least by May 26, 2020 when Claimant's wife contacted them to advise Claimant was I the hospital and likely injured in the accident when he hit his head on the car lift. The Town Attorney actually mentioned to Claimant's wife that Claimant could file a claim to that effect. Further, Employer failed to designate the medical providers in a verifiable manner in order for Claimant to choose a provider. Both Claimant and his wife credibly testified that they had never received a designated provider list. Lastly, the DPL that was in evidence failed to show that it was sent to Claimant within seven day following notice to Employer of the work injury or potential work injury.

D. Change of Physician

A claimant can obtain a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider many factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ need not approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant failed to establish a basis for a change of physician. Franktown Family Medicine and PA Kremer were authorized treating providers when Claimant initially selected the providers and by choosing to continue to receive treatment through them. Now Claimant is requesting a change in medical provider but provided no persuasive testimony to support a change in provider nor provided an alternative medical provider. Claimant's request for a change of provider is denied.

E. Temporary Total Disability benefits

To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he

left work as a result of the disability, and the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Sec. 8-42-105(3)(a)-(d), C.R.S.

Claimant alleges impaired earning capacity from May 26, 2020 through the present. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive temporary disability benefits. Claimant credibly testified that he would be unable to drive to and from work or drive the equipment needed to perform his work. Further, PA Kremer and Dr. Kinder have both addressed that Claimant continues to be disable from work as he would not be capable of engaging in work activities. Dr. Kinder specifically stated that Claimant should be on long-term disability as he was not able to meet the demands of his job. Claimant was first disabled when he was admitted at Parker Adventist and was not able to return to work beginning May 27, 2020 to the present.

There is some mention in the medical records that Claimant volunteered to assist training the new head of public works for Employer and Claimant's wife also mentioned that Claimant attempted to return to work without success. Therefore, Respondents may take credit for any money paid by Employer to Claimant from May 27, 2020 to the present. Further, there is mention of short-term and long-term disability benefits. If Claimant received either type of benefit or Respondents paid for any portion of the disability benefits policies, they are entitled to an offset in the appropriate proportion.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a work-related injury to his head on April 30, 2020 in the course and scope of his employment.

2. Respondents shall pay for all authorized, reasonably necessary, and related medical benefits including but not limited to treatment at Parker Adventist, Dr. Rauzzino, Front Range Spine and Neurosurgery, Franktown Family Medicine, Fyzical Therapy & Balance Centers, Neurology of the Rockies and Dr. Kinder as well as any other provider within the chain of referral to treat the SDH and seizure disorder.

3. Claimant has failed to show he is entitled to a change of physician.

4. The stipulation of the parties is approved and granted. Claimant's average weekly wage is $1014.40.

5. Respondents shall pay temporary total disability benefits beginning May 27, 2020 until terminated by law. Respondents are entitled, in accordance with the law, to offset any benefits paid.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-191-066-002

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a work-related injury on November 8, 2021.

II. Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits related to a November 8, 2021 work accident, specifically Concentra and Physical Medicine of the Rockies.

PROCEDURAL HISTORY

Claimant filed an Application for hearing on June 28, 2022 on issues that included compensability, medical benefits that were authorized, reasonably necessary and related to the injury, average weekly wage, temporary total and partial disability benefits beginning November 8, 2021 until terminated by law.

Respondents filed a Response to the June 28, 2022 Application for Hearing on July 28, 2022 on issues that included temporary total disability benefits, pre-existing condition; apportionment, if applicable; natural progression of unrelated condition; causation; termination of temporary disability benefits pursuant to 8-42-105(3)(a-d), and 8-42-106(2)(a-b); C.R.S. 8-43-404(7), termination for cause and/or voluntary resignation; insurer not liable for unauthorized medical care; idiopathic injury; unexplained injury; intervening injury; SSDI, unemployment, income from other employment, and/or any other offsets or credits; medical benefits sought not reasonable, necessary, or causally related.

STIPULATIONS OF THE PARTIES

The parties stipulated that Claimant's average weekly wage would be $760.00, if the claim was found compensable. The parties also stipulated that the only issues that needed to be heard were compensability and medical benefits. They stipulated that the parties would negotiate, at a later time, the remaining issues, if the claim was found compensable.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 42 years old at the time of the hearing. He was working as a foreman for a landscape maintenance crew for Employer, and performed general ground maintenance alongside his crew.

2. On November 8, 2021 Claimant was working, trimming bushes when he started to have low back pain. He reported the incident to Employer on the same day.

Respondents filed an Employer's First Report of Injury on November 9, 2022 which stated Claimant was trimming the bushes all day and it was a heavy week. He thought it started hurting when he bent down or from bending down all day from trimming the bushes.

3. Claimant had a well-documented history of chronic low back pain stemming from the work-related injury which occurred on November 10, 2016.

4. A lumbar MRI was completed on December 16, 2016. It showed a small left subarticular protrusion and annular fissure at the level of L5-S1 with contact and mild displacement of the left descending S1 nerve and no evidence of spinal or foraminal stenosis at any level.

5. On February 23, 2017, Claimant was seen by Dr. Roberta Anderson-Oeser from Ascent Medical Consultants, who was authorized treating provider (ATP) in the 2016 claim. The record documents "stabbing/aching pain in his low back and right lower extremity, which is worsened with lifting and bending and improved by massage and physical therapy." Dr. Anderson-Oeser reviewed Claimant's lumbar MRI and noted "no evidence of nerve root compression on the right. He does have a disc protrusion at L5-S1 – off to the left. It is unclear as to what is causing his right lower extremity symptoms."

6. Nerve conduction studies were performed on August 22, 2017. The EMG/NCS testing was normal. Dr. Anderson-Oeser noted that there was no electrophysiological evidence of a right or left lumbar radiculopathy, lumbosacral plexopathy or peripheral nerve entrapment neuropathy. On October 312, 2017 Dr. Anderson-Oeser noted that Claimant had two surgical evaluations and both surgeons advised he was not a surgical candidate but recommended facet injections, which she performed on November 27, 2017. The bilateral L4-5 and L5-S1 facet joint steroid injections, which Dr. Anderson-Oeser documented were not diagnostic as they provided minimal change in his pain levels and was very temporary. She stated that a psychological evaluation was necessary.

7. Claimant was seen by Dr. William Boyd of Ascent Medical Consultants, who diagnosed Claimant with depression, anxiety, and adjustment disorder due to the chronic pain. He recommended psychological testing.as well as cognitive therapy.

8. On April 23, 2018, Dr. Otten, an ATP, from US HealthWorks placed Claimant at MMI. Dr. Otten documented that the FCE was "self-terminated" by the patient. Dr. Otten noted that Claimant continued to take medications including Lyrica and stated that "[h]e has undergone injections without much relief. He has been deemed not a surgical candidate by two spine surgeons…. He is frustrated that the case is being closed, but he does understand that we have exhausted all the options." Dr. Otten assigned a 17% whole person permanent impairment for the lumbar spine and assigned permanent work restrictions of maximum lifting of 40 pounds, and repetitive lifting of 30 pounds.

9. Claimant returned to see Dr. Anderson-Oeser for maintenance though he was weaned off of all his medications due to poor liver functions. However, by September 26, 2018, he was back on multiple medication including cyclobenzaprine, Lyrica and Lexapro. Dr. Anderson-Oeser noted that he continued to have a 5/10 on the pain scale with 7/10 at its worst and 4/10 at its best.

10. On July 19, 2018, Dr. John Hughes preformed an IME on Claimant's behalf. Dr. Hughes stated Claimant "presents with a perplexing medical history. What is perplexing is his lack of improvement over a course of multiple therapies and spinal injections." He agreed with the ATP that claimant was at MMI. Dr. Hughes went on to note that "I agree as well that he has been left with permanent impairment involving both his cervical and lumbar spine regions." Dr. Hughes assigned a 20% whole person permanent impairment for the lumbar spine.

11. On August 6, 2018, a DIME physician, Dr. Frederick Scherr he did not to assign an impairment rating with respect to Claimant's lumbar spine condition. In support of his decision, Dr. Scherr stated that Claimant's "imaging and bone scan did not indicate any acute process of lumbar spine injury per review by both Dr. Gerlach and Dr. Castro spine surgeons. An EMG performed on his LE's was found to be normal." He noted that Claimant continued with pain in his low back coupled with the paresthesia of the right lower extremity with no objective findings. His examination indicated mostly subjective complaints with minimal objective findings and since he did not believe that there was a Table 53IIB diagnosis (AMA Guides, 3rd Edition Rev.), Claimant did not qualify for an impairment of the lumbar spine. He also relied on the Division's Impairment Rating Tips, which stated there must be objective pathology for a spinal rating.

12. On December 31, 2018, Dr. Anderson-Oeser documented that Claimant "has stabbing, aching, numbing pains in the low back, burning and aching in the right buttocks, aching in the left buttocks and pins and needles sensation in his feet." And that "despite all of his treatment to date, his symptoms have not resolved." At that time, Dr. Anderson-Oeser prescribed methocarbamol to address his muscle spasms, lidocaine 5% topical pain cream for his chronic pain, escitalopram (Lexapro) for his depression, and Lyrica to address neuropathic pain.

13. On January 31, 2019, claimant returned to Dr. Anderson-Oeser. The record documents "low back pain, bilateral lower extremity pain and paresthesias." Pain severity documented at 6/10, worst was 7/10. Dr. Anderson-Oeser recommended that Claimant increase his Lyrica for better control of his neuropathic pain. She encouraged Claimant "to remain diligent with his independent range of motion, stretching and exercise program." Dr. Anderson-Oeser also recommended massage therapy, which took place at Ascent Medical Consultants form February 8, 2019 through March 15, 2019 in part to address his lumbar spine flare up.

14. Claimant testified at hearing that he settled his 2016 workers compensation claim in April of 2019 on a full and final basis, so he did not return to see Dr. Anderson-Oeser under this claim.

15. On September 18, 2019, Claimant was seen at the Salud Family Health Centers by Daniel Norton PA-C. The record documents: "Chronic low back pain since work related injury 3 years ago." PA Norton goes on to note "case with workmen's compensation has closed. The patient was now requesting Salud to provide his care. Most bothersome was ongoing right sided sciatica symptoms." Claimant advised that Lyrica had been the most helpful of everything he had been previously taking for his lumbar spine complaints. He also continued to report depression and PA Norton prescribed Lexapro again. Claimant continued to complain of right sided sciatica symptoms and low back problems on October 16, 2019 and January 18, 2022, and they

continued both his Lyrica and Lexapro medication. On December 11, 2019 Claimant continued to report he was taking both medications as well. This continued on April 6, 10, and 13, 2020.

16. On January 21, 2021 PA Norton again documented Claimant's current medications included Lyrica and Lexapro but he recommended Claimant taper off the Lexapro and replace it with Wellbutrin (bupropion). On May 4, 2020, February 22, 2021, March 10, 2021, March 24, 2021, August 2, 2021 both of those medication continued to be listed and noted that the "[m]edication [l]ist reviewed and reconciled with the patient." Also, on May 4, 2020, the record documented "chronic sciatica" and on February 22,2021 both depression and right sided sciatica were diagnosed.

17. Claimant made a claim for date of injury of July 29, 2021 for a bilateral inguinal hernia against Employer, for which he received medical care from Concentra Medical Centers and Dr. Lori Long Miller. He was placed on light duty restrictions. Dr. John Weaver evaluated Claimant on August 5, 2021 and ordered ultrasounds. On September 16, 2021 Dr. Weaver stated that the ultrasound did not reveal any evidence of bilateral inguinal hernias. Claimant also participated in physical therapy from September 22, 2021 through at least October 7, 2021. By October 11, 2021, Claimant continued to complain of improving groin pain but also complained of hip pain. On November 1, 2021 Claimant was still under modified duty restrictions and was to return to Concentra within a month.

18. Claimant was evaluated by Dr. Long Miller on November 11, 2021 with complaints of low back pain and radiation to the left gluteal area. The record noted that Claimant was engaged in heavy labor using a trimmer. She noted that Claimant had been with Employer for approximately two years and that he had recently changed from residential work to commercial jobs. Dr. Long Miller documented that Claimant had a prior low back claim in 2016, not treated at Concentra, for which Claimant had an MRI, injections, an impairment (though not from the DIME physician and from which he had only recovered approximately 50%. Dr. Long Miller noted that Claimant's symptoms were a result of repetitive activity as the pain was caused "without trauma or incident."

19. On November 18, 2021, Claimant returned to Concentra for recheck with Jennifer Thomas, NP. The record noted bilateral low back pain and no radiation. The record documents that "he stated that he feels about 80% improved." He had lifting restrictions of 20 pounds, and he requested they be increase to 30 pounds. He was in physical therapy and stated that it was helping tremendously.

20. On December 6, 2020, Claimant returned to Concentra complaining of low back pain with bilateral radicular symptoms down to his toes. Symptoms also included back stiffness and decreased spine range of motion, but no lower extremity numbness, no lower extremity tingling and no lower extremity weakness. Exacerbating factors included bending, lifting, sitting, standing, twisting and walking. Relieving factors included physical therapy. On exam, Dr. Long Miller noted that the spinal alignment exhibited a loss of normal lordosis, so she ordered an MRI. Dr. Long Miller reviewed his MRI from 2016 which showed a small disc protrusion but was unable to obtain the US HealthWorks records.

21. On December 22, 2021, a lumbar MRI was completed at Health Images Boulder. Dr. Virginia Scoggins Young reviewed the 2021 lumbar MRI, compared it to the prior 2016 lumbar MRI and stated Claimant had "mild lumbar spondylosis, not significantly changed when compared to 12/16/16."

22. On December 28, 2021, Claimant was evaluated at Concentra. Dr. Lori Miller documented "constant bilateral low back pain and intermittent radiation of pain to bilateral upper thighs." Exam showed tenderness present in the left paraspinal, but not lumbar spine and not right paraspinals. Palpation revealed no bilateral muscle spasms, though he had limited range of motion but normal motor strength. The neurologic exam showed that sensation was intact to light touch in all dermatomes tested, muscles tested displayed no weakness nor muscle atrophy.

23. Claimant disclosed to Dr. Long Miller, for the first time, he had continued being prescribed Lyrica since the 2016 injury as maintenance together with a home exercise program. Dr. Long Miller reviewed the MRI and noted that there was no change from the December 2016 lumbar MRI. Dr. Long Miller referred claimant to Dr. Shoemaker for further evaluation.

24. Respondents filed a Notice of Contest on January 10, 2022 denying that the Claimant was injured and or that any injury was work related.

25. On January 11, 2022, Claimant was seen by Dr. Eric Shoemaker, D.O., at Physical Medicine of the Rockies. The record documents that Claimant's symptoms began on November 8, 2021 noting that "[T]here was no trauma or incident." The record goes on to state that "[i]n November of 2016 at work in which he had multiple injuries including lumbar spine and had multiple injections. After this case was closed his low back continued to bother him. His pain is similar to his chronic baseline, but it is just worse. He has been taking Lyrica since 2016."

26. Dr. Shoemaker reviewed the two lumbar MRI's (from 2016 and 2021) and stated "[t]his was compared to prior MRI dates 12/16/16 and there is no significant change. Indeed 2016 MRI does describe left subarticular protrusion at L5-S1. In comparison to these imaging I agree similar findings." With respect to pain levels, Claimant reported to Dr. Shoemaker "worse pain in the last few weeks was a 6 out of a 10." Dr. Shoemaker noted "chronic axial extension based right greater than left low back pain since work-related polytrauma in 2016 which became worse without particular trauma or incident while just trimming bushes on 11/8/21." Dr. Shoemaker noted Claimant had a "[p]ain disability questionnaire score is 94 consistent with moderate to severe disability which seems somewhat out of proportion to objective findings."

27. On January 18, 2022 Claimant was seen at the Salud Clinic. The record documents "on Lyrica since work accident several years ago." The record goes on to note "he plans to see a physiatrist in near future for ongoing pain."

28. On March 4, 2022, Dr. Albert Hattem, M.D., performed a Physician Advisor review for the claim regarding the low back complaints. Dr. Hattem reviewed medical records and issued a report. Dr. Hattem stated that Claimant did not sustain a work injury on November 8, 2021. In support of his conclusion, Dr. Hattem noted that Claimant denied a specific injury or any trauma to the spine to both Dr. Shoemaker and Dr. Long Miller. Ne opined that in the absence of a specific work injury, it would have to be a

repetitive type condition which would be guided by the Medical Treatment Guidelines (MTG) pertaining to low back conditions and Claimant did not meet the threshold under the MTGs for a cumulative type low back condition. Dr. Hattem stated that Claimant clearly had a pre-existing history of chronic low back pain since 2016 where he received years of various treatments. He noted that on January 11, 2022, Claimant informed Dr. Shoemaker his current pain was similar to his chronic baseline pain, just worse and that he had continued to take Lyrica since 2016. Dr. Hattem highlighted that on January 31, 2019, Claimant had returned to Dr. Anderson Oeser complaining of low back pain and rated his pain at 6/7 out of 10, then eight months later, on September 18, 2019, he returned to the Salud Clinic complaining of chronic low back pain since 2016. Dr. Hattem opined that there was no objective evidence to support that an injury occurred on November 8, 2021. In fact, Dr. Hattem noted that the two MRI's that were done (one in 2016 and one on December 22, 2021) showed findings that were essentially unchanged. Dr. Hattem further noted that Claimant's subjective report that his pain was worse compared to his chronic baseline pain is not supported by the contemporaneous records, that on January 31, 2019, Claimant rated his pain to Dr. Anderson Oeser at 7/10, and then gave the same pain rating to Dr. Shoemaker two and a half years later. Dr. Hattem opined that Claimant's current pain complaints were due to his pre-existing chronic pain disorder and that there were behavioral factors contributing to his subjective pain complaints.

29. Dr. D'Angelo, M.D., testified at the hearing on November 17, 2022. Dr. D'Angelo was admitted as an expert in occupational medicine and had previously prepared an IME report on behalf of Respondents on October 18, 2022. Dr. D'Angelo testified consistent with her report. Dr. D'Angelo opined that there was no traumatic incident or physical trauma to the spine on November 8, 2021, that Claimant had a long-standing history of low back pain with radicular symptoms dating back to his 2016 workers compensation injury and that Claimant's reported symptoms from the November 8, 2021 incident at work were virtually identical to his symptoms that are well documented from his 2016 workers compensation claim. Dr. D'Angelo stated that the location of Claimant's symptoms from the November 8, 2021 incident at work are virtually identical to the location of his symptoms from his 2016 workers' compensation claim. She opined that his lumbar MRIs from December 16, 2016 and December 21, 2021 were read as unremarkable and virtually identical. She stated that there was no objective evidence that an acute injury occurred on November 8, 2021 based on the recent lumbar MRI. She noted that Claimant's subjective pain levels after the November 8, 2021 incident at work were virtually identical to the pain levels, he was reporting following the 2016 workers compensation injury. She observed that Claimant had ongoing, well documented low back pain and radicular symptoms in 2016, 2017, 2018, 2019, 2020, and 2021, and that she has no indication in the records or from her examination that Claimant's pain suddenly dissipated just prior to the November 8, 2021 incident. Rather, the evidence demonstrated the opposite, that Claimant continued to have low back pain and radicular complaints since 2016 and any reduction in his medical visits after he settled his 2016 claim in April of 2019 were most likely due financial considerations, a deterrent to obtaining treatment.

30. Dr. D'Angelo opined that trimming trees on or about November 8, 2021 did not permanently aggravate and/or accelerate, or cause the need for medical treatment,

rather, Claimant's symptoms were the direct result of his long standing 2016 industrial injury. She also reviewed Dr. Hattem's report and agreed that Claimant would not meet the criteria for a cumulative trauma condition according to the Medical Treatment Guidelines. Dr. D'Angelo was not surprised that Claimant had symptoms after doing physical labor at work on November 8, 2021 given his pre-existing history and the fact that he reported to her that physical activity in general hurts his back. However, she opined that having symptoms following physical activity at work does not medically equate to being injured and that Claimant acknowledged to her that his level of back pain is directly tied to his level of physical activity. Dr. D'Angelo agreed with other providers that Claimant had a somatoform disorder and pain out of proportion to objective findings. She explained that somatoform disorder is not in any way suggesting that Claimant is lying about his symptoms. Yet, she opined that it is not sound medical judgment to rely solely on Claimant's subjective report of pain and symptoms.

31. As found, Claimant has failed to show that it was more likely than not that he was injured in the course and scope of his employment with Employer. The history, medical records and documentation is rife with Claimant's continued care for his lumbar spine injury of 2016. What was particularly persuasive was that Claimant was on multiple medications including methocarbamol to address his muscle spasms, lidocaine 5% topical pain cream for his chronic pain, escitalopram (Lexapro) for his depression, and Lyrica to address neuropathic pain from Dr. Anderson-Oeser as of one of the lasts visits Claimant had prior to settling his 2016 claim. He followed up with his personal provider to request ongoing medication. However, he only requested prescriptions to address the neuropathic pain and depression, not for any muscle spasms or the topical chronic pain medication. This ALJ is persuaded by both Dr. Hattem and Dr. D'Angelo that Claimant did not suffer a new injury, an aggravation of his preexisting condition nor sustained an occupational repetitive injury. Claimant clearly required all of his maintenance care for his ongoing lumbar spine problems from his prior 2016 work related injury. He continued to have similar symptoms and complaints as when he was treating for the 2016 work related injury and this ALJ perceives no difference in the symptoms or complaints as documented by his providers in the 2021 claim.

32. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d

6 (Colo. App. 199f5). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." Sec. 8-41-301, C.R.S.

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work-related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, based on the totality of the evidence, the medical records, Claimant's testimony, and the opinions of Drs. Hattem and D'Angelo, Claimant has failed to show that it was more likely than not that he suffered work related injuries to his lumbar spine and right lower extremity due to either a specific incident or an occupational injury. Here, it is clear from the records that Claimant had a work related back injury in 2016 to the same or similar body parts that Claimant claimed in this matter. Claimant was prescribed a maintenance program for his 2016 claim that Claimant failed to continue after he settled his claim despite ongoing lumbar spine pain as documented by the Salud clinic. Here, there is little persuasive evidence that Claimant showed it was more likely than not that any mechanism of injury, specifically using the trimmer and performing repetitive bending caused an injury or an aggravation of the prior injury. The above facts show a pattern that Claimant required ongoing maintenance care from his 2016 claim not that he needed treatment for any 2021 claim. The proximate cause of Claimant's need for treatment were his ongoing symptoms from the 2016 work related injury and the direct and natural consequence of the pre-existing condition.

This ALJ declines to address the issue of medical benefits as Claimant failed to show that he had a November 8, 2021 work related injury.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim of November 8, 2021 is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 8th day of December, 2022.

By: Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that Claimant sustained an occupational disease with an onset date of December 19, 2020 and/or January 5, 2021.

IF CLAIMANT PROVED COMPENSABILITY THEN:

II. Whether Claimant proved by a preponderance of the evidence that he is entitled to medical benefits that are authorized, reasonably necessary and related to the occupational disease and that the surgery proposed by Dr. Pehler is reasonably necessary and related to the injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a 71-year-old ramp agent for Employer at the time of the hearing. He was rehired by Employer on June 4, 2007 and continues working for Employer. Between 1984 and 2007 he worked for other employers as an account manager. From 1976 through 1984 he had been previously employed by Employer as a ramp agent.

2. As a ramp agent Claimant would load and unload bags from airplanes, lift and carry bags from one area to another within the airport, loading and unloading belt loaders, carts and containers to put the baggage in and out of the airplanes, drove a tractor or tug and, and between flights he occasionally had down time when he will sit down to rest. He would be required to lift up to 70 lbs. and sometimes up to 100 lbs. if the bags were tagged as heavy. The job required the agents to lift while bending and twisting to perform the job.

3. The Employer's Functional Job Description of a Hub Station Ramp worker included resource, receiving inbound aircraft, dispatching outbound aircraft, unloading inbound aircraft, loading outbound aircraft, product sort equipment runner, product sort pier worker, product sort matrix, cargo, ramp operation control and station operation center. The resource tasks included receiving assignments from the board lead, secure tractor and rolling stock, attaching rolling stock to tractor if needed, which required up to 65 lbs. push/pull, drive tow motor to gate. It included a notation that the tow motors have little to no suspension and whole-body vibration was common. Agents received bags and small package deliveries from five to ninety-nine lbs. with an average of 45 lbs. They loaded and sorted baggage as needed according to delivery location, drive to delivery locations and unload bags onto a cart, belt loader or baggage system conveyor at each location, then stored the rolling stock in designated areas by disconnecting the hitch and

lifting the tongue to apply break, which required up to 85 lbs. of push. They were required to open the baggage compartments of the aircraft, position loaders at the aircraft doors, enter the aircraft and unload the cargo onto the loader, then receive the cargo at the bottom of the loader and load the baggage onto the carts or carriers. The positional requirements were sitting in tow motors or standing and walking frequently on concrete. The job included frequent bending, stooping, squatting, crouching, kneeling, and forward reaching.

4. Claimant stated that he would perform these activities on a daily basis and was required to perform them for up to eight hours a day, since he returned to the job in 2007, but at least for six hours a day. He performed the lifting, bending and twisting for the most part greater than seven hours per week and greater than 9.5 years since he went back to work with Employer.

5. Claimant has had previous injuries to his low back. Once was in 2013 when he had an onset of low back pain with lower extremity radiculopathy which was not job related. He had an MRI performed on August 6, 2013, according to Dr. Khan, which included a notation of a developmentally small central canal. Claimant underwent conservative treatment at that time with therapy, and epidural steroid injections at the Spine One Surgery Center on September 9 and 23, 2013 by Dr. Hahim Khan, which alleviated his back pain as documented by Shaun Gabriel, M.D. on October 21, 2013.

6. On June 2, 2015 Claimant had a recurrence of the low back pain, specifically back pain that radiated to his right buttocks. Dr. Fredric Sonstein noted on exam that extension of the thoracolumbar spine induced severe low back pain and ordered a repeat MRI. Dr. Sonstein diagnosed severe lumbar stenosis at L4-L5 in a patient who presented with back pain and neurogenic claudication.[1]

7. Claimant underwent a bilateral L3-S1 laminal foraminotomies for decompression of the lumbar spine with Bradley Duhon, M.D. due to severe "lateral recess stenosis." The surgical report dated October 28, 2015 noted that Claimant had severe bilateral buttock and leg symptoms, worse with being upright and walking. It went on to state:

> When he sits and rests, symptoms abate. MRI reveals severe stenosis at L3-4, L4-5, and, to a lesser extent, L5-S1 with severe foraminal stenosis on the left side L5-S1. He tried an epidural injection which gave him some relief for a period a time. Other therapies and anti-inflammatories were helpful, but he was not able to go to work and carry on his job successfully without significant pain due to this intractable claudication.

Dr. Duhon specifically noted that the L4-5 disc appeared quite solid. His post-operative diagnosis was lumbar stenosis with neurogenic claudication.

8. Claimant testified that the surgery was successful in relieving his symptoms and he was released to return to full duty as a ramp baggage handler in 2016. Claimant testified that after surgery, he felt great relief and did well. He had no further problems

[1] This ALJ understands neurogenic claudication as the symptoms that occur from pressure on the spinal nerves as a result of stenosis and disc herniations, causing pins and needles, tingling or weakness into the lower extremities.

with his low back except a temporary aggravation of low back pain on March 25, 2020, while at work.

9. The March 25, 2020 Concentra record by NP Allison Haldien documented that Claimant had an onset of low back pain that radiated to his left hip, groin and testicle after bending over repeatedly picking up pieces of paper. He was diagnosed with a lumbar strain and strain of the left iliopsoas muscle.

10. The therapist, Jessica McAlee, P.T., of Concentra, documented on March 30, 2020 that since being slower at the airport (related to COVID), supervisors would have the ramp agents pick up debris off the ground. Claimant reported that ramp agents were given dippers but they ran out, so Claimant was not provided one and resulted in him having to do a lot of repetitive bending to pick debris up, after which he noticed some gradual onset of low back pain especially when he stood up after the break, experiencing some sharp pins and needles sensation on the left side of low back.

11. Claimant underwent a course of physical therapy and was released full duty with no restrictions on April 20, 2020 by Dr. Amanda Cava. Claimant advised Dr. Cava he had no significant ongoing low back problems, radiculopathy, numbness or tingling at that time and requested to be returned to full duty.

12. On December 19, 2020, while waiting to punch out at the time clock, Claimant felt sudden numbness going into his legs, he fell backwards and was caught by one of his fellow coworkers. This was the first time he had ever had this kind of situation happen to him. He stated that he had never experienced numbness or weakness in his legs like he did on that occasion. The experiences he had previously were more like pain in his left hip that radiated down his leg and up through his scrotum area. He did not know if this was or not work related because he did not have an instantaneous onset of pain.

13. Claimant contacted his personal provider the following day but was not able to obtain an appointment until January 5, 2021. Claimant was seen by Jeffrey Amundson, M.D. of Colorado Physician Partners, Garrison Family Physicians on January 5, 2021. He noted Claimant had complaints of leg numbness with worsening symptoms of pain radiating down his posterior buttocks and thighs to the knees. Claimant did not identify a particular trigger other than standing and walking when he had the onset of the leg numbness. On exam he found the low back nontender, with normal leg strength and a mildly positive Phalen's sign. He assessed bilateral low back pain with sciatica and spinal stenosis.

14. Dr. Amundson documented that Claimant could not stand continuously for greater than 15 minutes at a time, so he had to alternate sitting and standing. The standing caused his legs to go numb, and have pain going down his leg with weakness, and it caused him to have to bend over to alleviate the numbness. The pain concentrated in his buttocks, his thighs and the back of his legs. He did not have back pain. He noted that Claimant had not performed any strenuous activities at home or away from work. He differentiated the type of symptoms he had with his prior 2015 complaints because they had affected his hip, and leg that radiated down to his toes and up through his scrotum. Those were not the symptoms he had at the time of the exam.

15. Claimant stated that Dr. Amundson ordered an MRI of the lumbar spine. Once he had the results, Claimant was referred to Dr. Pehler, who advised him that he had problems with the discs and spine and recommended surgical repair. At the time of the hearing Claimant had not yet had the surgery performed and had not missed any work related to his low back condition. However, following his consultation with the surgeon, Dr. Pehler, Claimant undoubtedly believed that his heavy work with Employer had caused the problems with his discs and the need for surgery.

16. The MRI of January 13, 2021 was read by Eric Lyders, M.D., from Diversified Radiology, a fellowship trained neuroradiologist with Certificate of Added Qualifications. His impressions were as follows:

> 1. Disc bulging with right paracentral extrusion and facet arthropathy at L4-L5 contributing to severe central spinal stenosis, right greater than left lateral recess stenosis, and moderate bilateral foraminal narrowing.
>
> 2. Disc bulging with left extraforaminal protrusion and facet arthropathy at L3-L4 contributing to severe central spinal stenosis, left greater than right lateral recess stenosis, as well as moderate bilateral foraminal narrowing.
>
> 3. Other multilevel lumbar spondylosis, detailed above. There is moderate central spinal stenosis at L2-L3 with mild central spinal stenosis at L5-S1. There is scattered lateral recess stenosis with severe foraminal narrowing bilaterally at L5-S1.

17. Maria Kaplan, PA at Orthopedic Centers of Colorado noted on February 2, 2021 that the MRI demonstrated multilevel lumbar spondylosis, L2-3 through L5-S1 spinal stenosis, with severe spinal stenosis at L3-4 and L4-5 due to disc herniation. She noted that it greatly reduced his quality of life due to not being able to stand or walk for more than 10 minutes at a time and recommended surgery from L2 to pelvis for lumbar decompression and fusion.

18. Stephen Pehler, M.D. also of Orthopedic Centers of Colorado, wrote a letter to Dr. Amundson on February 2, 2021 emphasized that Claimant had a severe spinal stenosis at L3-4 and L4-5 due to disc herniation.

19. Dr. Pehler examined Claimant on February 15, 2021, who documented that Claimant continued to have significant buttock and leg pain, with progressive difficulties with any standing and extension, noting that this was following a work-related event. Claimant reported that his symptoms were affecting his quality of life as well as his ability to work. On exam he documented back pain with numbness, unsteadiness and weakness. Dr. Pehler opined that, considering Claimant's severe and almost critical levels with spinal stenosis most significantly at the L4-5 level, a dynamic spondylolisthesis as well as a slight underlying spinal deformity that proceeding with L2 to pelvis lumbar decompression and fusion surgery was recommended in this matter, as isolated decompression would lead to instability.

20. Dr. Pehler submitted a request for prior authorization on March 3, 2021 to Insurer for the spine laminectomy, decompression and fusion from L2-S1 with interbody titanium cage. The record is devoid of any exchange of designated provider list or response to the request for prior authorization.

21. Despite the issues that Claimant was having with the leg numbness and pain with standing and walking Claimant has continued to work while waiting for the approval for the low back surgery.

22. Claimant was evaluated by Dr. Brian Reiss, an orthopedic spine surgeon, on March 16, 2022. He noted that he had received 127 pages of medical records to review. Following review of the January 5, 2021 records he specifically opined that

- More likely than not there was no actual work injury.
- More likely than not his symptoms are not related to his work activity.
- Having pain while being active at work is not equivalent to a work injury.
- More likely than not this symptomatology represents a recurrence of his chronic pre-existing condition combined with the natural history of progression of that condition.
- This is not a work-related condition.
- His symptoms and treatment thereof should be considered non-work related

23. Dr. Reiss reviewed the MRI films directly stating that the images were extremely grainy and opined that "[a]ll the findings probably represent degeneration and postoperative changes with no acute pathology." With regard to the March 2020 lumbar spine claim, Dr. Reiss commented that the flare up was not likely work related and that Claimant should "find another job that does not create low back soreness." Lastly, he opined that "the proposed surgical intervention is for treatment of a chronic preexistent multilevel degenerative condition unrelated to any effects of the work situation. The proposed treatment is not work-related," and that the multilevel decompression and fusion was not indicated pursuant to the Medical Treatment Guidelines because the pain generator had not been clearly identified.

24. Claimant testified that he wished to proceed with the L2-S1 decompression and fusion recommended by Dr. Pehler. He understood from Dr. Pehler that he has herniated discs for which he required the surgery. He continued to have the numbing sensation going into his bilateral legs, which was somewhat relieved by sitting.

25. Dr. Reiss testified at hearing as a Level II accredited, board certified orthopedic spine surgeon and consistent with his report. Dr. Reiss explained that stenosis is a narrowing of the spinal canal and that claudication is simply a descriptor for the symptoms one gets from that kind of problem, including causing lower extremity symptoms, numbness, tingling, and pain. Dr. Reiss noted that Dr. Pehler described in his report that Claimant had moderate to severe narrowing of the canal or the foramina, and which was possible but not clear from the available studies. Dr. Reiss stated that Claimant's diagnosis were "pretty much the same" as Clamant had in 2015 before his surgery. He stated that Claimant had a developmentally small central canal and that, as he aged, the structures around the canal thickened and took ups space to narrow it further and caused compressed nerves.

26. The W.C.R.P. Rule 17, Medical Treatment Guidelines, Exhibit 1, Table 5 state that there is "Good Evidence: Trunk flexion, rotation, and lifting in the workplace cumulatively is associated with low back pain." It further stated that there is "Good Evidence: Work related factors, such as lifting and bending of the trunk or bending and twisting of the trunk, increase a workers' risk of developing lumbosacral radiculopathy." Lastly, the MTGs state that there is some evidence that

> Cumulative exposure to lifting in the workplace is associated with the development of low back pain. Exposures of 7 hours per week or greater, over more than 9.5 years, is associated with low back pain in an apparent dose-response relationship. The effects of lifting may only become apparent when considered in combination with other work exposures.

27. As found Claimant's testimony was credible and persuasive with regard to the nature and onset of his symptoms. The ALJ credits the medical records, the opinions of Ms. Kaplan and Dr. Pehler and finds that Claimant has demonstrate that it is more likely than not that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with Employer. A fact that was particularly persuasive was that Dr. Duhon noted in 2015 that the L4-5 disc appeared quite solid. The 2021 MRI, as noted by both PA Kaplan and Dr. Pehler, showed severe spinal stenosis at L3-4 and L4-5 "due to disc herniation." After review of the MRI reports of August 6, 2013, and June 11, 2015, the stenosis as described in those reports appears to be less significant, and less affected by disc herniations as described in those reports when compared to the MRI study of January 13, 2021.

28. Dr. Reiss' opinion that Claimant had a history of similar complaints and symptoms related to the congenitally small spinal canal and stenosis as the cause of his current symptoms is not persuasive. Claimant had the stenosis addressed by surgery in 2015. Claimant returned to work in 2016 and continues to work to this date in a heavy job, moving luggage that weighs an average of 45 lbs. from one area to another, including from inside the airplanes onto the belt loaders and then from the belt loaders to carts. He would lift, push and pull heavy weight in excess of 70 lbs. as noted by the job description, and pushed in excess of that to hook and unhook the carts from the tractors. While Claimant may have had a predisposition of a small spinal canal, Claimant had an aggravation of his preexisting condition, including disc herniations, which resulted directly form the work he performed for Employer. The aggravation was proximately caused by the type of work he performed and as a result of the heavy nature of the employment, that required Claimant to continuously lift, push, pull, twist, bend and reach. Further, the aggravation caused him to require medical attention. Claimant was not exposed to the same type of conditions outside of his work environment, including at home or non-work activities. Claimant credibly testified that he did not perform the same kind of activities outside of work. Claimant has shown that the onset of Claimant's occupational disease was December 19, 2021, when his symptoms caused by the aggravation, resulted in the need for medical care. Claimant scheduled an appointment for the first available time he was able to obtain.

29. The ALJ is persuaded by Ms. Kaplan's opinion and Dr. Pehler's opinion Claimant requires surgery to address the occupational injuries to his lumbar spine which cause the claudication symptoms including numbness, tingling and pain into his lower extremities.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The claimant must also prove by a preponderance of the evidence that that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment or working conditions. *See, Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993).

The Act imposes additional requirements for compensability of a claim based on an occupational disease. A compensable occupational disease must meet each element of the four-part test mandated by Section 8-40-201(14), C.R.S. that defines "occupational disease" as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "equal exposure" element, the "peculiar risk" test, which requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The employment must expose the claimant to the risk causing the disease "in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The conditions of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*. *Id*. at 824. If the condition resulted from multiple or concurrent causes, the respondents may mitigate their liability by proving an apportionment of benefits. *Id*. If the claimant proves that the hazards of employment caused, intensified, or aggravated the disease process "to some reasonable degree," the burden shifts to the respondents to prove the existence of nonindustrial causes and the extent to which they contribute to the disability or need for treatment. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992); *Vigil v. Holnam, Inc*., W.C. No. 4-435-795 & 4-530-490 (August 31, 2005).

The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008).

The Colorado Workers' Compensation Medical Treatment Guidelines (MTGs) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTGs "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

The Division has adopted the MTGs to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. W.C.R.P. Rule 17, Exhibit 1 effective as of April 30, 1993 and most recently updated effective January 30, 2022. Under Sec. 8-42-101(3)(b) and WCRP 17-2(A), medical providers must use the MTGs when furnishing medical treatment. The ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining if requested medical treatment is reasonably necessary or work-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTGs are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive).

As found Claimant's testimony was credible and persuasive with regard to the nature and onset of his symptoms as well as the nature of his job. The ALJ credits the medical records, the opinions of Ms. Kaplan and Dr. Pehler and finds that Claimant has demonstrated that it is more likely than not that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with Employer.

As found, Claimant returned to work in 2016 and continues to work to this date in a heavy job, moving luggage from one area to another, including from inside the airplanes onto the belt loaders and then from the belt loaders to carts. He would lift, push and pull heavy weight in excess of 70 lbs. as noted by the job description of having to hook and unhook the carts from the tractors. It is also of note that the tugs have little suspension and likely caused further aggravation to Claimant's condition. He clearly met the criteria

as laid out in the Medical Treatment Guidelines under W.C.R.P. Rule 17, Exhibit 1, Table 5 as Claimant performed heavy lifting on a daily basis for greater than ten years. While Claimant had a preexisting small spinal canal, the work he perform for Employer more likely than not caused significant disc damage, including herniated discs and proximately cause further aggravation of the stenosis and accelerated his preexisting condition causing him to require medical attention. In other words, but for the work performed by Claimant for Employer as a ramp agent, Claimant would likely not have needed the medical care he now requires. Claimant was not exposed to the same type of conditions outside of his work environment, including at home or non-work activities. Claimant was a credible witness and was persuasive in his descriptions of the type of work he performed. Claimant was also credible that he did not perform the same kind of activities outside of work. As found, Dr. Duhon noted in 2015 that the L4-5 disc appeared quite solid but both PA Kaplan and Dr. Pehler noted that the 2021 MRI showed severe spinal stenosis at L3-4 and L4-5 "due to disc herniations." PA Kaplan and Pehler's opinions were credible and persuasive over the contrary opinions of Dr. Reiss. As found, Claimant had the stenosis address by surgery in 2015 and the continued heavy lifting, twisting, reaching of heavy bags that weighed an average of 45 lbs. caused disc herniations and aggravation of Claimant's underlying stenosis. Claimant has shown that he sustained an occupational disease to his lumbar spine with an onset of Claimant's occupational disease on December 19, 2021, when his symptoms caused by the aggravation, resulted in the need for medical care.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

30. Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical treatment for the occupational diseased with a date of onset of December 19, 2021 which caused work related injury and need for medical care. As found, Claimant was attended by Dr. Amundson, who in turn referred Claimant to Dr. Pehler. As found, after examining Claimant and reviewing diagnostic results, Dr. Pehler and PA Kaplan recommended the five level decompression and fusion

of the lumbar spine from L2 through S1 due to the significant damage cause by the combination of the herniated discs and stenosis at L2-3 and L4-5, which significantly aggravated the severe spinal stenosis. The stenosis is causing claudication, which is causing Claimant to have symptoms into the lower extremities, including weakness, pins and needles, and tingling sensations. Claimant has proven by a preponderance of the evidence that the need for spine surgery proposed by Dr. Pehler was causally related to the December 19, 2021 work related occupational disease and injury. As further found, Dr. Pehler's opinion that the five level surgery is necessary as "isolated decompression would lead to instability," so anything less than the five level fusion would place Claimant at risk for further complications. Therefore, as found, Claimant has shown that the proposed surgery to address the occupational injuries to his lumbar spine which cause the claudication symptoms including numbness, tingling and pain into his lower extremities is authorized, reasonably necessary and related to the occupational disease.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained occupational injuries to his lumbar spine with a date of onset of December 19, 2021.

2. Respondents shall pay for the reasonably necessary and related medical care including the surgery as recommended by Dr. Pehler.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 22nd day of December, 2022.

ISSUES

I. Whether Claimant has shown by a preponderance of the evidence that the surgery recommended by Dr. Arthur was reasonably necessary and related to the admitted June 19, 2021 work-related trauma.

STIPULATIONS

The parties stipulated that the New West Physician records were exchanged late but that they waived the 20-day deadline in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 68 years old at the time of the hearing. At the time of the admitted work-related injury, on June 19, 2021, Claimant was working for two separate employers. Claimant's first job was working for Employer for the prior seven years as a ramp agent, primarily in the "makeup" area transporting transfer travelers' luggage to carts that would then be transported to the appropriate plane. The second job was as a shuttle driver for a hotel chain, where he was picking up and dropping off passengers from the airport to the hotel. He had been performing this job for approximately one and a half years.

2. Claimant was seen by Aedine Prummer, PA-C at New West Physician on March 4, 2020, with a primary complaint of low back pain, which had persisted for the prior three months. Claimant described symptoms as an ache with aggravating factors of sitting and alleviating factors as running. PA Prummer ordered x-rays of the lumbar spine. She provided a diagnosis of low back pain, which was a diagnosis previously provided by Dr. Kevin Scott on November 16, 2018, when he ordered an MRI of the lumbar spine.

3. Claimant was seen at New West for an annual physical exam by Dr. Scott on June 1, 2020, who noted Claimant was an athletic healthy age-appropriate male. He indicated that Claimant was maintaining an exercise regime of 30 minutes a day. Claimant had complaints of pain in his hips and hands as well as his low back. Dr. Scott noted that an MRI was denied by Insurance. He assessed that the low back pain was chronic but stable and that physical therapy provided him no relief. He also assessed arthralgia that was chronic and progressive, and suspected osteoarthritis from an athletic life and increasing age. Dr. Scott ordered a rheumatoid factor, labs, and pelvic x-rays, but the record reflected that Claimant had had diffuse arthralgia, worse in hands and hips.

4. On May 5, 2021, PA Prummer examined Claimant for a primary complaint of right hip pain. She took a history that:

> Patient is a 66 y/o M here with a complaint of R hip pain. He cannot remember when pain first started. but it has at least been 1 year. The pain comes and goes. Sometimes the pain is felt in his R groin. He feels like his hips are weaker than before. The pain is worse with leaning on the R side when he is sitting. The pain is better with Aleve. He works at the airport and lifts a lot of bags. He wants to make sure his hips are okay before retiring. He has a past medical history of degenerative disc and joint disease in lumbar spine seen on x-ray in 3/2020.

On physical exam Ms. Prummer noted that Claimant's left hip strength was 5/5 but the right hip strength was only 4/5. Claimant specifically requested x-rays of both hips and she assessed his condition as chronic and was considering a diagnosis of osteoarthritis. She stated Claimant should continue with ibuprofen and would consider ordering physical therapy once the x-ray results were known.

5. Claimant stated that the pain in the hip would come, stay a few days and then resolve. He noted that it just happened to be bothering him on the day he was in to see the doctor on another health issue.

6. On June 19, 2021 Claimant was moving a military bag, which Claimant testifies weighed between 60 to 80 pounds, twisted, and felt a pop in his right hip. Following this incident, his hip problem never subsided or went away. Claimant stated that he was seen at Concentra four days later and was provided with work restrictions, which continued through the day of the hearing.

7. On June 23, 2021 Claimant was seen at Concentra by Lea Johansen, M.D. who took a history as follows:

> Patient reports he was lifting heavy bags and injured his low back, shoulders and R groin on Saturday. Called off work the next day and then had Mon and Tues off work. Today he called off and came in for evaluation. Tried tylenol [Sic.] w/o relief. Rest is helping. Shoulder and lumbar pain worse on R and worse with lifting. No radiculopathy. Denied R groin bulge or lump. No scrotal swelling or hernaturia. No h/o hernias in past. *Does have a h/o[1] lower back pain and shoulder injury a few years ago* but has been working as a ramp agent since then w/o problems. PE does not suggest a R hernia; appears to be a groin strain. Will hold off imaging with US[2] for now but discussed at length signs to watch for hernia. Patient endorsed understanding. Will start PT, diclofenac, and methocarbinal [Sic.]. f/u Monday. (*Emphasis added.)*

On physical exam, Dr. Johansen found tenderness in the anterior shoulder and in the lateral shoulder including with palpation and limited range of motion. Claimant was tender to palpation over the deep anterior hip flexor, inferior to ASIS,[3] and had abnormal range

[1] This ALJ infers that h/o means "history of."
[2] This AlJ infers that US is an ultrasound of the abdomen, a diagnostic tool frequently used to identify hernias.
[3] This ALJ infers ASIS is the anterior superior iliac spine.

of motion with pain.[4] She assessed that Claimant had a lumbar strain, repetitive strain injury of the bilateral shoulders and a groin strain on the right.

8. Claimant immediately started physical therapy at Concentra on June 23, 2021. Zachary Fox, P.T. took a history that Claimant had right sided low back pain felt achy, sore, and stiff. He did not have any proximal or distal pain, but pain did wrap around the right side to the front of his hip. Mr. Fox noted abnormal range of motion, positive FADIR, positive FADER, positive piriformis test, was significantly tender to palpation along the right hip gluteus medius, minimus, piriformis, and TFL.[5] P.T. included therapeutic exercises, therapeutic activities, manual therapy, neuromuscular reeducation, and dry needling.[6] Therapy with Mr. Fox continued through October 12, 2021, with some interruptions.

9. Also on June 23, 2021, Claimant attended an appointment at New West Physicians for an annual exam. The list of conditions being assessed, primarily consisted of an annual exam, and there was no mention of a work-related injury on June 19, 2021. However, the list of current, active problems lists the lumbar spine pain, lumbar degenerative disc disease, radicular pain, pelvic pain and hip pain.

10. Claimant was evaluated and treated by multiple Concentra providers, including PA Valerie Skvarca on June 28, 2021, on July 6, 2021, and July 20, 2021. The history is clearly a cut and paste job as it is repeated verbatim on each of the medical records. On the last date Claimant was reported having right hip pain and groin pain, in addition to the shoulder pain and low back pain. It noted that the reason for the visit was lower back pain, bilateral shoulder problems as well as groin pain and minor aches in the groin and 'left' hip (not the right one). Ms. Skvarca ordered x-rays and had Claimant on modified duty restrictions. On exam both hips had normal appearance, with no deformity or tenderness and had normal strength. Claimant returned to Concentra on August 11, 2021 and was then evaluated by PA Kathryn Miller, for continued hip complaints but an essentially normal exam, with only tenderness in the gluteus maximus and gluteus minimums.

11. Deana Halap, NP attended Claimant on August 31, 2021 and recommended MRIs of the lumbar spine and hip in order to identify the cause of the right hip and groin pain. Claimant returned with PA Miller on September 15, 2021 for reevaluation, and she referred Claimant to an orthopedic specialist for the right hip strain as he had a focal tear of the right hip labrum.

12. The September 14, 2021 MRI, as read by Adam Williams, M.D. of Invision Sally Jobe and provided an impression that Claimant had a focal chondrolabral separation located anteriorly, mild thickening of the gluteal tendons bilaterally without evidence of a tear; and mild advanced L5-S1 degenerative disc disease. He did note that there was no

---

[4] Unfortunately, Dr. Johansen failed to document specific tests to assess right hip labral integrity, such as FABER/Patrick's test.

[5] This ALJ infers that TFL is the tensor fasciae latae, a muscle that is proximal to the anterolateral thigh, between the superficial and deep fibers of the iliotibial (IT) band, and works in conjunction with the gluteus maximus, gluteus medius, and gluteus minimus to perform hip movements, including flexion, abduction, and internal rotation.

[6] There are multiple comments by physicians that state Claimant had acupuncture treatment but this ALJ only found evidence in the record of dry needling.

evidence of any substantial joint effusion. Of note, the left hip was also visualized in the imaging and showed marginal osteophyte formation at the superior acetabular rim undermining the left acetabular labrum.

13. On September 15, 2021 PA Miller made referrals to both Dr. Nathan Faulkner for the hip complaints and to Dr. Brian Castro for lumbar spine issues.

14. Claimant was first evaluated by Nathan Faulkner on October 1, 2021 at the Concentra facility. Dr. Faulkner took a history as follows:

> …he was lifting some heavy bags onto a cart when he felt pain initially in his back. He subsequently noticed pain in his hip when leaning to the right and has had persistent pain over the lateral aspect of the hip and groin since that time. The pain is sharp in nature. He has noticed painful popping over the lateral aspect of his hip since the injury and *denies any antecedent right hip pain or dysfunction*. He has tried 3 months of physical therapy, which has helped with his strength, but not his pain. He has not had any previous injections and has tried ibuprofen without relief. He has also tried ice, heat, lidocaine patches, and acupuncture. He denies any numbness/tingling in the right leg. He has been off work for the past 2 weeks as he completed 3 months of light duty. (*Emphasis added).*

Dr. Faulkner noted on exam that Claimant had a mildly positive Trendelenburg sign (indicative of hip abductor weakness in the gluteus medius and minimus) but otherwise a slightly abnormal hip exam, including range of motion, mildly positive McCarthy and extension/adduction/internal rotation test, positive Patrick test with negative FABER test, normal strength, flexors and abductors with some pain and normal neurovascular exam. He reviewed the hip x-rays and the MRI, which showed moderate hip DJD with circumferential femoral head osteophytes and degenerative labral tear. Dr. Faulkner provided two proposed treatments, the first was a steroid injection into the right hip under ultrasound, the second a total hip replacement. Dr. Faulkner stated that Claimant was not eligible for any other kind of surgery in light of the significant degenerative condition of the hip, and that he should be seen by Dr. Arthur for the arthroplasty of the hip.

15. Respondents filed a General Admission of Liability on October 6, 2021, admitting for temporary total disability benefits beginning on September 13, 2021. Respondents did not specify what conditions they were admitting to in filing the GAL.

16. Claimant was seen by Dr. Bryan Castro, an orthopedic specialist. After reviewing records, Dr. Castro noted that Claimant appeared to have sustained a work related right hip injury on June 19, 2021. However, the history taken was not specific nor focused on preexisting conditions. Dr. Castro specifically opined that

> Dr. Faulkner has already recommended a right hip joint injection under ultrasound. Dr. Castro discussed with the patient that would be reasonable to go ahead with the hip injection. We discussed that this may help significantly with his pain symptoms, but it would also be a diagnostic injection. If he gets temporary resolution of his symptoms, then his hip *is* likely the main source of his pains. If he gets no benefit from a hip joint injection, then we could consider a right-sided transforaminal epidural steroid injection at L5 for diagnostic and therapeutic purposes.

17. PA Miller noted on October 7, 2021 that Claimant was concerned with the recommended steroid injections into the hip and lumbar spine as he was under the care of an eye specialist for retinal changes caused by his uncontrolled diabetes and was aware that there are higher risks for patients with diabetes. PA Miller stated that:

> After a lengthy discussion about plan of care and timeline of PCP today and eye dr in 1 month, then FU w/ us in 4-6 weeks, pt was at checkout and began asking back office staff for referral to Dr. Arthur to discuss THA . I interveined (Sic.) and stated that we had discussed he would talk w/ PCP and eye doc about steroid injections but he states he has changed his mind and would like to persue (Sic.) surgical consultation at this time. I will place ortho referral to DR. Arthur for R THA consult as recommended by DR. Faulkner should pt NOT want steroid injection

18. Also, on October 7, 2021 Claimant was evaluated again by PA Prummer. She took a history that Claimant was complaining of chronic hip pain. She specifically noted that:

> He cannot remember when pain first started. but it has at least been 1 year. He was last seen for this in 5/2021. *The pain comes and goes.* Sometimes the pain is felt in his R groin. He feels like his hips are weaker than before. The pain is worse with leaning on the R side when he is sitting. The pain is better with Aleve. He works at the airport and lifts a lot of bags. He has a past medical history of degenerative disc and joint disease in lumbar spine seen on x-ray in 3/2020. Last x-ray was done in 5/2021, which revealed *symmetric bilateral hip osteoarthritis*. He is was [Sic.] seeing an orthopedist through workman's comp who suggested he receive steroid hip injections. He requests a referral to a different orthopedist today.
>
> He is also here to follow up on diabetes. His home glucose levels have been around 200s, fasting. He requests a referral to an endocrinologist as he would like to make sure his sugars are well-controlled prior to initiating steroid injections for his hip.

19. Claimant continued seeing the providers at Concentra. He saw Dr. Cava on November 5, 2021 who stated that Claimant was not working as he ran out of light duty time. He continued with complaints of unchanged hip pain in the right lateral hip, and groin with associated symptoms of gait disturbance, decreased range of motion, hip stiffness and a click inside of hip when bending over. The exacerbating factors included crossing legs, stair climbing and exercise like elliptical. Relieving factors included nonsteroidal OTC anti-inflammatories. Claimant discussed with Dr. Cava during this visit his hesitancy to proceed with steroid injections due to side effects that might be caused by his uncontrolled diabetes, which he also discussed with PA Miller on December 1, 2021. He also discussed with Dr. Cava on January 21, 2022 that he definitely wished to proceed with surgery instead of steroid injections which could cause serious side effects due to his uncontrolled diabetes. Dr. Cava noted that Claimant was not at maximum medical improvement as he was awaiting surgery.

20. On November 17, 2021 Claimant was evaluated by Jeffrey Arthur, D.O. of Orthopedic Centers of Colorado. He noted the following assessment:

> Patient is a pleasant 67-year-old male who presents today for second opinion regarding his right hip evaluation and options. We had a lengthy discussion regarding the options based on his current situation. *He had no issues with this hip prior to this injury.* He felt a pop and now has evidence of a labral tear. He had

> seen a hip arthroscopy specialist who per the patient's report said that he would not do a hip arthroscopy. But would refer him for hip replacement. … *Do not feel that going straight to hip replacement is the next reasonable option.* Do feel that if there was more evidence of arthritis and/or chronicity to this issue then would be more open to going straight to hip replacement. *I was very honest with the patient and that I do perform injections and hip replacements routinely and that based on his overall clinical evaluation and imaging would still want to start with injection.* This would also be for diagnostic and therapeutic purposes. Explained the reasoning for this. He was somewhat more interested in hip replacement and just getting everything done. (*Emphasis added.)*

21. Claimant returned to Dr. Arthur's office and was seen by PA Rachel Sauvageau on December 17, 2021. Claimant advised he really did not want to proceed with a steroid injection "as he feels this is more of a Band-Aid than anything." Claimant stated he wanted to have the total hip replacement/arthroplasty (THA) surgery and requested that a request for authorization be completed and sent to Insurer. Dr. Arthur's office submitted the request for authorization for the on January 11, 2022.

22. Claimant complained to Dr. Cava on February 11, 2022 that his right hip continued to get worse. Dr. Cava also noted that the delay in proceeding with the hip surgery was due to a pending independent medical examination (IME). Claimant continued to follow-up with the providers at Concentra while awaiting the IME.

23. Claimant was evaluated by Stephen Pehler, M.D., an orthopedic surgeon, at Respondents' request on March 18, 2022. He issued a report on April 4, 2022. From the fax trace, the report was not actually sent to the Insurer adjuster until May 11, 2022. He noted that he reviewed the medical records provided, took a history from Claimant and completed an examination. Claimant reported prior low back and shoulder injuries several years prior to the admitted work injury of June 19, 2021, but did not disclose any complaints of prior hip pain or injuries and Dr. Pehler denied the receipt of any records documenting symptoms or pain related to the hip condition immediately prior to the work injury. Dr. Pehler noted it was possible that Claimant suffered a permanent exacerbation of his degenerative hip arthritis and degenerative lumbar spondylosis at L5-S1. However, Claimant needed to have a diagnostic injection before making that determination. He noted that there were concerns for diabetes management in the setting of a steroid injection. As a result, he stated that it would be reasonable to perform a local-only based injection of his right hip and assess his clinical response to determine if Claimant's pain and symptoms were coming from the hip or a referred pain from his severely compressed L5 nerve root. A local-only injection of the lumbar spine could then be performed on the right at L5-S1 to assess Claimant's clinical response. Dr. Pehler noted that Claimant may ultimately be a candidate for a THA. However, there would first need to be some, even limited, clinical response to a local-only injection. He noted that Claimant would not be at MMI until the injection was done and the pain generator was clarified.

24. On April 29, 2022 he had no change in symptoms of the right hip and groin but reported that symptoms increased with walking and performing twisting activities like sweeping or cleaning floors. PA Skvarca noted that it was unknown if Claimant had reached MMI as they were awaiting Dr. Pehler's IME results.

25. He still had not been provided the IME by June 6, 2022, as noted by Eric Chau, M.D, who finally discussed the results of the IME with Claimant on July 7, 2022, noting that Claimant would schedule a follow up appointment with Dr. Faulkner for a diagnostic local injection. The records noted that Claimant had provided histories of diabetes, hypertension, repetitive bilateral shoulder problems, right trapezius muscle strain and thoracic myofascial strain. It is not clear from the record whether this information was derived from Claimant because in one section of the report it showed that Claimant was not working and in the same report, it showed that he was currently working. He did, however, inform Dr. Chau that he was willing to proceed with the injection without steroid in order to proceed with the surgery.

26. On July 22, 2022 Claimant was evaluated by Dr. Faulkner, who documented a history of groin and lateral hip pain with a 7/10 on a pain rating scale, on average. He was working as a baggage handler when he injured his right hip on June 19, 20221, while lifting some bags into a cart. He continued to have intermittent popping over the lateral aspect of his hip. His pain was refractory to several months of physical therapy as well as ice, heat, lidocaine patches, acupuncture, and NSAIDs. He has not worked for several months. Dr. Faulkner reviewed x-rays which showed mild hip degenerative joint disease, with a lateral acetabular osteophyte and medium cam deformity. He also had advanced L5-S1 degenerative disk disease with grade l L4-L5 spondylolisthesis. He noted that the MRI images of the right hip dated September 24, 2021 were reviewed, which show moderate chondromalacia of the hip joint with small circumferential femoral head. Dr. Faulkner discussed the pros and cons of steroids versus platelet rich plasma (PRP) injections, and considering that Claimant did not have his diabetes under control, PRP was the better recommendation. He noted that if Claimant failed to respond to the PRP injection, that he would continue to recommend a total hip replacement, given Claimant's arthritis and age.

27. On September 23, 2022 Dr. Faulkner prescribed PRP and proceeded to perform a PRP injection of the right hip on September 25, 2022, in light of both Dr. Arthur and the IME recommending injections before proceeding with a THA.

28. Claimant testified at hearing that he had had right hip pain off and on for approximately one year before the June 19, 2021 work related injury. He also agreed that he had groin pain before and after the admitted injury. The difference was that before it was off and on and now it was constant groin pain.

29. Claimant stated that he was never asked if he had had prior problems with his hip by the ATPs in this case. Had he been asked, he would have advised that he had intermittent times when he would have pain in his right hip but it would only last for a few days and then go away. He stated that after the June 19, 2021 incident when he was lifting a heavy military bag and heard the popping in his right hip and his low back, he has had continuous pain and problems. He also stated that he had never had problems with crossing his leg, for example, and now just trying to do that, caused him more pain. He stated that immediately before the incident of June 19, 2021 he was not having any pain in his hips at all until he heard the popping.

30. Claimant stated that he never advised his workers' compensation providers about his prior problems with his hip. He did comment about his diabetes, hypertension,

prior back and shoulder problems, but never commented about his prior hip problems because those would come and go and did not think that his prior hip problems were relevant, despite providers including Dr. Arthur, Dr. Faulkner and Concentra providers stating in their records that Claimant had no prior problems with his hip.

31. In fact, when Claimant answered interrogatory No. 8, which stated “Please indicate whether you have ever had any symptoms or injuries to your back or any other body part you allege is work-related prior to June 19th, 2021." Claimant failed to state he had prior back or hip problems, even though it is clear from the June 1, 2020 and May 5, 2021 New West Physician records that Claimant had both. He only disclosed that he had had a prior shoulder injury in 2018 and thought the question only related to work-related injuries.

32. Claimant stated that he had the injection that Dr. Faulkner recommended and it provided no relief of his right hip pain. Claimant requested leave to proceed with the THA, as recommended by Dr. Arthur now that the PRP injection was not successful.

33. Dr. Stephen Pehler, a Board Certified orthopedic surgeon with a fellowship in spine surgery, testified at hearing on behalf of Respondents. He explained that Claimant had wear and tear of the component of cartilage in the hip joint that allows the joint to move, causing the degenerative labral tear. Dr. Pehler also explained that Claimant has a cam deformity that caused additional wear and tear of the hip joint. Claimant also has a chondrolabral separation where the cartilage and the labrum itself can, during the degenerative or wearing process, become separated from the attachment to the bone. He explained that the radiological MRI report specifically identifies that Claimant has a pattern of joint degeneration and there was no evidence of the hip having a traumatic event such as a flipped cartilage into the joint. He specifically noted that the findings on the MRI were consistent with pathology as identified on May 5, 2021 by PA Prummer. Dr. Pehler stated:

> … sometimes people that have labrum degeneration or even if it's a labral tear, it can present with groin pain as opposed to isolated buttock. You can have just literally primary osteoarthritis of the hip, which can present with groin pain. So you can have groin or buttock, some people can have leg, there are several presentations you can have clinically when it comes to a symptomatic right hip, and this is certainly one of them.

Dr. Pehler went on to state that groin pain is consistent with a degenerative labral tear as well as consistent with the symptoms he was having when he saw PA Prummer at New West Physicians. Considering Claimant’s ongoing diabetes, Dr. Pehler recommended a lidocaine injection to anesthetize the hip or the low back to better identify the situs of the symptoms, identify what is driving Claimant’s clinical symptoms coming from the back or the hip. He stated that since the PRP did not provide any results he opined that Claimant continued to need the anesthetic injection to pinpoint the condition that needs to be treated given Claimant’s ongoing symptoms and the mild to moderate labral pathology and the very real lumbar spine pathology. Dr. Pehler’s expert opinion was that Claimant had a preexisting degenerative pathology in the hip that likely sustained an acute exacerbation and that the total hip arthroplasty was not related to the work-related event though may be, eventually reasonably necessary, after the anesthetic injection. It was more patent to Dr. Pehler that Claimant has a legitimate and severe pathology in the spine

that might be causing the hip symptoms and that is why he heartily recommended the anesthetic injection before embarking on any surgery.

34. Dr. Pehler also stated that:

> [Claimant] did not have any other presentations for his hip other than the couple of months before this event and before his work related injury, and there is a distinct and now sustained and permanent change in his symptoms and quality of life since that event, then we have to go with it was a permanent injury.
>
> In my opinion, there's still more diagnostic work that should be done before he has a surgery, but at least based on [Claimant]'s presentation to now multiple providers that he's continued to have symptoms, that was a different pattern and a different cadence before this event.
>
> In my clinical opinion, doing a PRP injection, for his right hip, if that did not work, it points more towards a degenerative condition. Whereas if a PRP injection works, it points more towards a traumatic condition. That's not absolute, that's not crystal clean, there's a heck of a lot of gray there. But it's at least a piece of data that helps kind of push you one way or another.
>
> Right, so you're not going to scope [Claimant]'s right hip for a degenerative labral tear, because that'd be the wrong procedure, in your 60s. You would get a total hip replacement, it's 100 percent the right call. It's just my opinion that you should just at least try to figure out what's -- what's driving what. I don't think that a total hip replacement is the wrong answer, it very well could help him a lot, but there's still more pathology and at least one more step that should be done before he has surgery.
>
> …
>
> *I think he likely sustained an acute injury that exacerbated a preexisting condition. (Emphasis added.)*

35. As found, the fact that Claimant reported a prior history of low back and shoulder problems but failed to disclose that he had seen Dr. Scott and PA Prummer on June 1, 2020 and May 5, 2021, respectively, complaining about a history of problems with his hips and/or groin for approximately one year, prior to the May 5, 2021 visit, including that his provider had ordered x-rays of the hips, were significant and relevant facts. These were not provided to his Concentra ATPs, Dr. Faulkner, Dr. Castro, or Dr. Arthur for their consideration. Neither were they provided to the IME, Dr. Pehler until after he wrote his report. As found, Dr. Pehler noted that they were important facts to the causation analysis of the claim. Here, it is clear that Claimant has a preexisting condition and that it was not disclosed. However, it is also clear that Claimant had an aggravation of the preexisting condition. The ATPs in this case had access to diagnostic testing, including x-rays and MRIs that showed Claimant had a clear underlying condition, yet they continued to state that Claimant was not at MMI because he continued to await surgery for the hip.

36. The question here is what was the extent of the aggravation that Claimant sustained, and this is answered by Dr. Pehler who explained that it was an acute injury that exacerbated the preexisting condition. As found, it is more likely than not that Claimant sustained an aggravation of a preexisting condition. As further found, Dr.

Pehler's testimony was more credible and persuasive than Claimant's testimony. Claimant, in fact denied that he was ever asked by anyone, including medical providers, Insurer or Respondents' attorney, about prior history of his hip condition and this ALJ doubts the accuracy of Claimant's explanations.

37. As found, Claimant sustained an exacerbation of his preexisting hip degenerative condition on June 19, 2021 when he lifted the heavy military bag and twisted, feeling a pop in his lumbar spine and right hip. This is supported by Claimant's ATPs medical records, his PCP and the IME physician, Dr. Pehler.

38. As further found, Claimant has failed to show that the surgery proposed by Dr. Arthur, a total hip arthroplasty, is reasonably necessary at this point in time, as anesthetic injections to both the right hip and the lumbar spine are required to properly assess Claimant's pain generator. This is supported by Dr. Pehler's credible testimony that it was more likely than not that Claimant required this diagnostic tool to assess the true pathology that needs to be treated in this matter. This is also supported by Dr. Arthur's opinion that he did not feel that going straight to hip replacement was the next reasonable option.

39. Testimony and evidence inconsistent with the above findings are either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity oairf any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the

industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Reasonably Necessary and Related Medical Benefits

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Therefore, in a dispute over medical benefits that arises after the filing of a general

admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the work injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A panel of the ICAO also addressed these issues in *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012). The panel stated:

> [The *Snyder*] principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury.

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Claimant alleged that surgery recommended by Dr. Arthur for the right total hip arthroplasty was reasonably necessary and related to the admitted work injury of June 19, 2021. Respondents argued that while it may be reasonably necessary it is not related to the June 19, 2021 injury as they alleged the hip condition was a preexisting or degenerative chronic condition.

However, a preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004).

As found here, Claimant sustained an aggravation or exacerbation of his underlying degenerative hip condition as explained by Dr. Pehler, Respondents' expert witness.

However, as further found, Claimant failed to show that the proposed surgery, the THA, is reasonably necessary at this point in time. Claimant has two specific conditions. The first is a mild to moderate aggravation of a right hip labral tear. The second is a more significant pathology of the lumbar spine that is serious, as explained by Dr. Pehler. While Claimant is understandably unable to undergo steroid injections to assess and appropriately diagnose Claimant's true clinical pathology causing symptoms due to his uncontrolled diabetes, he is able to undergo anesthetic injections into the hip and the spine, without the steroid component, to identify the pain generator in this matter, also explained by Dr. Pehler. Claimant's request for authorization to proceed with the THA is denied at this time.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained an aggravation of his underlying right hip labral tear.

2. Claimant's request for a determination that the total hip arthroplasty prescribed by Dr. Arthur on January 22, 2022 is reasonably necessary is denied at this time, subject to further diagnostic work-up with anesthetic injections into the lumbar spine and right hip.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-204-072-001

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on April 12, 2022 he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that the left knee surgery performed by Dr. Christopher George on July 11, 2022 was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that the left knee surgery performed by Dr. Christopher George on July 11, 2022 was authorized medical treatment.

4. The parties stipulated that the claimant's average weekly wage (AWW) for this claim is $704.82.

5. At hearing, the parties agreed to reserve the remaining endorsed issues (temporary total disability (TTD) benefits; temporary partial disability (TPD) benefits, and whether the claimant was responsible for the termination of his employment) pending a ruling on the issue of compensability.

FINDINGS OF FACT

The ALJ has considered all evidence and testimony presented at hearing and finds the following to be true:

1. The employer operates a hospital. The claimant worked for the employer as a dishwasher in the hospital cafeteria. On April 12, 2022, the claimant clocked in at 6:12 a.m. and clocked out at 7:51 a.m.

2. Executive Chef [Redacted, hereinafter SM] was the claimant's direct supervisor on April 12, 2022. [Redacted, hereinafter RD] is the employer's Director of Food and Nutrition Services. RD[Redacted] oversees the department in which both SM[Redacted] and the claimant worked.

3. On April 12, 2022, RD[Redacted] met with the claimant regarding his continued failure to park in employee designated parking. RD[Redacted] typically arrives at work by 8:00 a.m. The April 12, 2022 meeting with the claimant occurred close to 8:00 a.m.

4. Shortly after meeting with RD[Redacted], the claimant informed SM[Redacted] that his knee hurt and he needed to go home. The claimant did not indicate to SM[Redacted] that he hurt his knee while at work.

5. Prior to going to the ED, the claimant met with [Redacted, hereinafter CG], Workers' Compensation and Employee Health Case Manager. The claimant informed CG[Redacted] that he was walking in the kitchen and felt pain in his knee. The claimant specifically denied carrying any items at the time he felt pain. CG[Redacted] sent the claimant to the employer's emergency department (ED) for treatment. CG[Redacted] also scheduled the claimant to see Dr. Julie Cohen as his authorized treating provider (ATP).

6. The claimant was seen in the ED at 8:06 a.m. on April 12, 2022. The ED triage assessment portion of that medical record includes the following: "patient states he was walking and felt [pain to] inside left knee" and that "patient took ibuprofen 600 mg at 0700". Dr. Benjamin Peery noted in that same medical record that the claimant "was walking in hospital cafeteria when he felt pain inside the left knee". Dr. Peery also noted that the claimant "did take ibuprofen this morning prior to coming to work".

7. Dr. Peery ordered x-rays of the claimant's left knee. The x-rays showed no acute abnormalities. Dr. Peery diagnosed the claimant with a mild sprain of his medial collateral ligament (MCL). He recommended use of a knee brace, anti-inflammatory medication, ice, and elevation. The claimant was excused from work for one week.

8. On April 14, 2022, the claimant spoke with [Redacted, hereinafter BC] Senior Claims Specialist with the insurer. During a recorded statement, the claimant told BC[Redacted] that the Monday prior he was "walking around" and "twisted wrong" and felt pain in his knee. The claimant also reported that the following day it was sore and he went to the ED. After completing the recorded statement, BC[Redacted] informed the claimant that it sounded as if he had suffered an idiopathic injury, which would not be work related. At that point, the claimant changed his story to state that he was carrying dishes when he felt pain.

9. On April 14, 2022, the claimant was first seen by his ATP, Dr. Cohen. The claimant told Dr. Cohen that he was walking around the kitchen at work and felt a pop in his left knee. Dr. Cohen opined that the claimant suffered an MCL tear or strain. Dr. Cohen released the claimant to return to work as of April 19, 2022 with restrictions of no crawling, crouching, or kneeling.

10. The claimant returned to work on April 19, 2022 and continued to work his normal job duties until he resigned from his position on June 2, 2022.

11. On May 19, 2022, the claimant was seen by Daniel Greene, PA-C at Valley View Ortho. At that time, the claimant reported to PA Greene that he injured his knee at work. Specifically, the claimant stated that he "was lifting something and pivoted, felt a pop/pain". PA Greene diagnosed internal derangement of the left knee and ordered magnetic resonance imaging (MRI) of the claimant's left knee.

12. The claimant was not referred to Valley View Ortho by Dr. Cohen or CG[Redacted]. BC[Redacted] testified that the insurer did not receive a request for authorization regarding treatment with PA Greene or Valley View Ortho. Nor did the insurer receive a request for authorization of a left knee MRI.

13. The recommended left knee MRI was performed on May 19, 2022. The MRI showed a high grade radial tear of the medial meniscus at the junction of the posterior horn and body; a grade 2 sprain of the MCL; advanced chondromalacia of the patellofemoral compartment; and a nondisplaced subarticular insufficiency fracture of the weight bearing medial femoral condyle.

14. On May 20, 2022, the claimant returned to PA Greene to discuss the MRI results. At that time, PA Greene noted that the claimant had a medial meniscus tear and a subchondral medial condyle fracture. PA Greene recommended surgical intervention that would include a left knee arthroscopy with partial medial meniscectomy.

15. On May 24, 2022, the claimant returned to Dr. Cohen and reported that he had undergone an MRI and left knee surgery was recommended by orthopedics. Dr. Cohen recommended physical therapy, but the claimant declined that treatment. Dr. Cohen noted that the claimant was working without restrictions and that the claimant "does not want restrictions at this time".

16. On June 1, and June 2, 2022, the claimant contacted the Department of Veterans Affairs (VA) and requested an orthopedic referral to address a torn meniscus.

17. On June 7, 2022, the claimant was seen at the VA by Dr. Carla Tillery. The claimant reported that he "was at work when he developed knee pain" and "felt a pop". On that date, Dr. Tillery reviewed the MRI results and made a referral for an orthopedic evaluation.

18. On July 11, 2022, Dr. Christopher George performed a left knee arthroscopy with partial medial meniscectomy.

19. On August 5, 2022, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton obtained a history from the claimant and performed a physical examination. With regard to the mechanism of injury, the claimant told Dr. Bernton that while "lifting 'big pots for the soup' " at work, he turned and felt a pop in his left knee. In his IME report, Dr. Bernton noted that the only medical record he was provided was the May 24, 2022 record of the claimant's visit with Dr. Cohen in which Dr. Cohen referenced the claimant's meniscal tear and MCL tear. Dr. Bernton opined that the claimant's

description of the incident was consistent with a medial meniscus tear and/or an injury to the MCL. Based upon the information he had at that time, Dr. Bernton opined that the claimant suffered a work related injury to his left knee.

20. On September 23, 2022, Dr. Bernton authored an addendum to his IME report after receiving additional medical records for his review. Specifically, Dr. Bernton was provided with records from the VA as well as the May 19, 2022 MRI report. Dr. Bernton noted that the records from the VA were not related to a left knee condition. With regard to the MRI, Dr. Bernton noted that the report indicated a high grade radial tear of the medial meniscus; a grade 2 sprain of the MCL; and a "nondisplaced subarticular insufficiency fracture". Based on this additional information, Dr. Bernton opined that the medial meniscus tear and MCL tear are work related. He further opined that the insufficiency fracture is not work related.

21. After reviewing additional medical records, on October 3, 2022, Dr. Bernton authored a third report. At this time, Dr. Bernton was provided with the April 12, 2022 ED report. Based upon his review of these additional records, Dr. Bernton changed his opinion regarding the work relatedness of the claimant's left knee condition. Specifically, Dr. Bernton noted that the mechanism of injury recited in the ED record is that the claimant was "walking into work" when he felt pain in the inside of his knee. Dr. Bernton opined that this mechanism of injury is not consistent with a work injury. Dr. Bemton opined that the claimant appears to have suffered an injury to his left knee while simply walking.

22. Dr. Bemton testified consistent with his October 3, 2022 report. Dr. Bemton explained why his opinion changed regarding whether the claimant suffered a work injury.

23. The claimant testified that he did not report feeling left knee pain while walking into work. Rather, he felt pain in his left knee while he was walking at work.

24. The ALJ does not find the claimant's testimony regarding the nature and onset of his left knee symptoms to be credible or persuasive. The ALJ credits the medical records and the testimony of RD[Redacted], SM[Redacted], and BC[Redacted], regarding the sequence of events on April 12, 2022 and thereafter. The ALJ credits Dr. Bernton's opinion as expressed in his October 3, 2022 report and his testimony at hearing. The ALJ finds that it was reasonable for Dr. Bernton's opinion to change once he had access to the ED records. Additionally, the statement the claimant gave to BC[Redacted] is indicative of the claimant feeling pain while engaging in the ubiquitous act of walking. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that on April 12, 2022 he suffered an injury arising out of and in the course and scope of his employment with the employer. The ALJ finds that the claimant felt pain in his left knee while simply walking.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page V. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. V. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse V. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on April 12, 2022 he suffered an injury arising out of an in the course and scope of his employment with the employer. As found, the testimony of RD[Redacted], SM[Redacted], and BC[Redacted] is credible and persuasive. As found, Dr. Bernton's testimony and the opinions expressed in his October 3, 2022 report are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim regarding an April 12, 2022 date of injury is denied and dismissed.

Dated December 12, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on January 27, 2020 she suffered an injury arising out of and in the course and scope of her employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment she has received from Lake Chiropractic beginning on January 28, 2020 was reasonable, necessary, and related to her work injury.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that the bilateral total hip arthroplasties performed by Dr. Brinceton Phipps were reasonable, necessary, and related to her work injury.

FINDINGS OF FACT

1. The claimant works for the employer as a front counter employee. The claimant testified that when she reported to work on January 27, 2020, she slipped on a patch of ice in the employer's parking lot. She further testified that both of her feet went out from under her, causing her to fall to the ground. It is the claimant's testimony that her left elbow struck the ground first, followed by her buttocks/low back area. The claimant testified that she immediately felt pain in her left elbow and low back.

2. On January 27, 2020, the claimant notified her direct supervisor, [Redacted, hereinafter JL], of her fall. JL[Redacted] instructed the claimant to notify human resources. The claimant notified [Redacted, hereinafter AB] with the employer's human resources office that same day.

Medical Treatment Prior to January 27, 2020

3. On January 23, 2018, the claimant began treatment with chiropractor, Dr. Andrew Lake at Lake Chiropractic. At that time, Dr. Lake identified the claimant's issues as: chronic posterior cervical and upper thoracic complaints; chronic lumbar, left and right SI joint complaints; and chronic bilateral thumb complaint. The claimant continued regular treatment with Dr. Lake throughout 2018 and 2019. The claimant was seen three times by Dr. Lake in December 2019. The claimant testified that she considers this to be "maintenance treatment".

Medical Treatment After January 27, 2020

4. On January 28, 2020, the claimant was continuing to have pain. As a result, AB[Redacted] instructed the claimant to seek treatment with Dr. Lake. The claimant was seen by Dr. Lake on January 28, 2020. The medical record of that date lists the claimant's complaints as pain in her lumbar area, left and right sacroiliac (SI) joints. In that same record, the claimant described her January 27, 2020 fall as "slipping on the ice and landing on her buttock and left elbow".

5. The claimant was seen by Dr. Lake ten times between January 28, 2020 and March 2020. In March 2020, Dr. Lake's office was closed due to COVID-19 restrictions. Dr. Lake's office reopened to patients in approximately July 2020. The claimant returned to Dr. Lake on July 23, 2020 and continued to seek treatment from him weekly throughout the remainder of 2020 and into 2021.

6. In 2021, the claimant continued to have pain in her low back and hips. On April 29, 2021, Dr. Lake referred the claimant to Animas Orthopedic Associates for consultation.

7. On June 3, 2021, the claimant was seen at Animas Orthopedic Associates by Dr. Brinceton Phipps. At that time, the claimant reported bilateral hip pain with weakness, stiffness, and instability. The claimant reported that she fell onto her right hip when she fell in early 2020. The claimant also reported that the pain was greater in her left hip. Following x-rays, Dr. Phipps diagnosed the claimant with bilateral osteoarthritis of the hip. Specifically, the June 3, 2021 x-rays showed: "moderate to advanced hip arthritis on the right side with near bone-on-bone contact and associated osteophyte formation. On the left side, [h]er joint space narrowing is more mild to moderate with some minor osteophyte formation."

8. As the claimant reported a fall onto her right hip, but greater pain in her left hip, Dr. Phipps ordered magnetic resonance imaging (MRI) of the claimant's left hip.

9. On June 16, 2021, an MRI of the claimant's pelvis "with attention to left hip" was performed. Dr. Brett Englund reviewed the MRI and issued a report. In that report, Dr. Englund identified extensive marrow edema involving the left femoral head and neck, with edema involving the acetabulum with subarticular cysts. In addition, there was focal flattening of the superior medial aspect of the femoral head "consistent with sequela of previous avascular necrosis or advanced cartilage loss and osteoarthritis". Dr. Englund also noted degenerated acetabular labrum and left hip joint effusion and synovitis. With regard to the claimant's right hip, Dr. Englund noted mild reactive marrow edema involving both sides of the right hip joint with moderate effusion, synovitis, and labral tear.

10. On June 23, 2021, the claimant returned to Dr. Phipps to discuss the MRI results. Dr. Phipps noted that the claimant's right hip is more arthritic, but her left is more painful. Dr. Phipps recommended bilateral hip arthroplasty. The claimant requested the left hip surgery first.

11. In July 2021, the claimant reported to the employer that she would need to undergo surgery. At the direction of the company owner, on July 19, 2021 AB[Redacted] prepared a First Report of Injury regarding the January 27, 2020 incident. The injured body part was identified as "hip". In addition, the nature of the injury was described as "[d]islocation - [p]inched nerve, slipped/ruptured herniated disc, sciatica, HNP subluxtion (sic), MD dislocation".

12. On July 27, 2021, the respondents filed a Notice of Contest regarding the January 27, 2020 incident.

13. On July 30, 2021, Dr. Phipps performed a left total hip arthroplasty.

14. On November 23, 2021, Dr. Phipps performed a right right total hip arthroplasty. Following her surgeries, the claimant attended physical therapy for approximately one year.

15. The claimant testified that prior to the January 27, 2020 incident, she was very active. The claimant engaged in activities such as hiking, hunting, skydiving, scuba diving, and horseback riding. The claimant further testified that since January 27, 2020, she has not been able to engage in any of these activities.

16. At the request of the respondents, on July 19, 2022, the claimant attended an independent medical examination (IME) with Dr. John Burris. In connection with the IME, Dr. Burris reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. At the IME, the claimant described her January 27, 2020 fall. Specifically, she reported to Dr. Burris that she slipped on ice, both of her feet slipped from beneath her and she struck the ground with her left elbow and low back/buttocks. Dr. Burris opined that as a result of the January 27, 2020 fall, the claimant suffered a left elbow contusion and a lumbar/buttock contusion. In addition, Dr. Burris identified the claimant's date of maximum medical improvement **(MMI)** for those contusions as March 16, 2020. It is Dr. Burris's opinion that the claimant's bilateral end stage hip osteoarthritis was not caused by the January 27, 2020 fall on ice. In addition, Dr. Burris opined that the January 27, 2020 fall did not accelerate or aggravate the claimant's pre-existing bilateral hip osteoarthritis.

17. On August 12, 2022, the claimant attended a virtual IME with Dr. Sander Orent. Dr. Orent also reviewed the claimant's medical records and obtained a history from the claimant. Due to the virtual nature of the IME, he did not perform a physical examination. The claimant described her January 27, 2020 fall as both feet going out from under her, and falling on to her left elbow, low back, sacrum, and pelvis. It is Dr. Orent's opinion that the claimant's January 27, 2020 fall aggravated the preexisting and asymptomatic osteoarthritis in her bilateral hips. In support of this opinion, Dr. Orent

noted that the claimant engaged in a number of physically demanding activities prior to her fall, and she is now unable to engage in those same activities. Dr. Orent also opined that the avascular necrosis present in the claimant's hips occurred between the time of her 2020 fall and her 2021 diagnosis. Therefore, it is Dr. Orent's opinion that the need for bilateral hip arthroplasties is directly related to the claimant's January 27, 2020 slip and fall.

18. Dr. Burris's testimony was consistent with his IME report. Dr. Burris reiterated his opinion that the claimant's January 27, 2020 fall resulted in soft tissue contusions to her left elbow and low back. He further testified that these contusions have resolved. Dr. Burris also testified that the claimant's fall in January 2020 was not the cause of her hip condition. Nor did the fall aggravate or accelerate the pre-existing condition of the claimant's hips. It is Dr. Burris's opinion that pre-existing end stage osteoarthritis is what led to the need for bilateral hip replacements. Dr. Burris explained that avascular necrosis is a condition where the bone begins to die because of a lack of blood flow.

19. Dr. Orent's deposition testimony was consistent with his IME report. Dr Orent testified that it continues to be his opinion that the claimant's need for bilateral hip replacements is related to her fall on January 27, 2020. Dr. Orent reiterated his reasoning with regard to the claimant's previously asymptomatic hip condition became symptomatic with the January 2020 fall. Dr. Orent also testified that since the onset of the COVID-19 pandemic, he meets with patients virtually because his spouse is immunocompromised. That is why the claimant's IME was conducted virtually. It is Dr. Orent's opinion that lack of a physical examination of the claimant does not impact his opinions.

20. The ALJ credits the medical records and the opinions of Dr. Burris over the conflicting opinions of Dr. Orent. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that she suffered an injury while at work when she slipped and fell on January 27, 2020. The ALJ credits the opinions of Dr. Burris and finds that on January 27, 2020, the claimant slipped and fell while at work, resulting in a left elbow contusion and lumbar/buttock contusion. The ALJ further finds that this injury resolved by March 2020, as opined by Dr. Burris. The ALJ also finds that the claimant has successfully demonstrated that it is more likely than not that her first ten visits with Dr. Lake for chiropractic care beginning January 28, 2020 and into March 2020 was reasonable, necessary, and related to the claimant's work injury.

21. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that treatment in 2021 of her hips is reasonable, necessary, and related to the work injury. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that her need for bilateral hip replacements was related to the work injury. While it is clear to the ALJ that bilateral hip replacements were reasonable and necessary in treating the claimant's condition, those surgeries were not related to the work injury. The ALJ finds that the claimant's fall on January 27, 2020 did not cause the end stage osteoarthritis or avascular necrosis in the claimant's hips. Nor did the

January 27, 2020 work injury aggravate or accelerate the claimant's pre-existing hip conditions to necessitate total hip replacements.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H* & *H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H* & *H Warehouse v. Vicory, supra.*

5. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that on January 27, 2020 she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the medical records and the opinions of Dr. Burris are credible and persuasive on this issue.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

7. As found, that the claimant has successfully demonstrated, by a preponderance of the evidence, that as a result of her January 27, 2020 fall at work, the first ten treatments with Dr. Lake beginning January 28, 2020 and into March 2020 were reasonable, necessary, and related to the work injury. As found, the medical records and the opinions of Dr. Burris are credible and persuasive on this issue.

8. As found, that the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of her bilateral hips, including bilateral hip replacement is related to the work injury. The claimant has failed to demonstrate by a preponderance of the evidence, that the fall at work caused the end stage osteoarthritis or avascular necrosis in her hips. In addition, the claimant has failed to demonstrate, by a preponderance of the evidence, that the January 27, 2020 work injury aggravated or accelerated the end stage osteoarthritis or avascular necrosis in her hips. As found, the medical records and the opinions of Dr. Burris are credible and persuasive on this issue.

ORDER

It is therefore ordered:

1. The claimant suffered a compensable work injury on January 27, 2020.

2. The respondents shall pay for the first ten visits with Dr. Lake (beginning with January 28, 2020), pursuant to the Colorado Medical Fee Schedule.

3. The claimant's request for payment of her medical treatment of her bilateral hips, including bilateral hip replacements, is denied and dismissed.

4. All matters not determined here are reserved for future determination.

Dated December 16, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-124-750-003

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that his claim should be reopened pursuant to Section 8-43-303, C.R.$., due to a change in condition.

2. If the claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that the denied medical treatment (consisting of lumbar spine **MRI;** physical therapy; consultation with Dr. Lewis for injections; consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal); is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 29, 2019 work injury.

3. If the claim is not reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that the denied medical treatment (consisting of lumbar spine **MRI;** physical therapy; consultation with Dr. Lewis for injections; consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal}; is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

FINDINGS OF FACT

1. On November 29, 2019, the claimant suffered an admitted work injury when he slipped on ice and fell, resulting in pain in his right knee. During this claim the claimant treated with Dr. Craig Stagg as his authorized treating physician (ATP).

2. On June 12, 2020, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. Dr. Raschbacher opined that the claimant had reached maximum medical improvement **(MMI)** for his right lower extremity as of the date of the IME. Dr. Raschbacher also assessed a permanent impairment rating of three percent for the claimant's right lower extremity, (which converts to one percent whole person). Dr. Raschbacher recommended that the claimant continue with a home exercise program and avoid crawling, kneeling, and squatting. With regard to the claimant's reports of hip and back symptoms, Dr. Raschbacher opined that those symptoms are not work related. In support of this opinion, Dr. Raschbacher pointed to the claimant's prior history of chronic back pain. In addition, he noted that if the claimant had injured his left hip and low back at the time of the fall, he would have experienced immediate symptoms.

3. On August 27, 2020, the parties proceeded to hearing before ALJ Sidanycz on the issue of whether treatment of the claimant's left hip and low back complaints constitutes reasonable, necessary, and related medical treatment. On October 13, 2020, ALJ Sidanycz issued Findings of Fact, Conclusions of Law, and Order (FFCLO). In that order, treatment of the claimant's low back and left hip was found to be reasonable, necessary, and related to the work injury.

4. On February 26, 2021, the Industrial Claim Appeals Office affirmed the October 13, 2020 FFCLO.

5. On October 22, 2021, the claimant was seen by Dr. Stagg and reported that his knee was "basically the same". With regard to his back, the claimant reported that he received some relief from prior injections, but was continuing to have low back pain. On that date, Dr. Stagg placed the claimant at maximum medical improvement (MMI) and assessed whole person permanent impairment of 13 percent. This was based on a nine percent impairment for the claimant's right lower extremity (which converts to four percent whole person), and a nine percent whole person impairment for the lumbar spine. With regard to maintenance medical treatment, Dr. Stagg recommended three to four follow•up visits.

6. On October 27, 2021, the respondents filed a Final Admission of Liability relying upon Dr. Stagg's October 22, 2021 report.

7. The claimant contested the FAL, and a Division sponsored independent medical examination (DIME) was scheduled with Dr. Caroline Gellrick. The claimant attended the DIME with Dr. Gellrick on February 3, 2022. In connection with the DIME, Dr. Gellrick reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her February 23, 2022 DIME report, Dr. Gellrick agreed with the MMI date of October 22, 2021. In her report, Dr. Gellrick listed the claimant's work related diagnoses as right knee contusion; lumbosacral pain; left hip pain; and right ankle pain. Dr. Gellrick assessed a scheduled impairment rating of 22 percent for the claimant's right lower extremity[1], specifically the right knee.

8. Dr. Gellrick opined that the November 26, 2019 work injury did not result in permanent impairment to the claimant's left shoulder. In support of this opinion, Dr. Gellrick noted that the claimant had prior bilateral shoulder injuries, but no current shoulder injuries. Dr. Gellrick further opined that the November 26, 2019 work injury did not result in permanent impairment to the claimant's lumbar spine. Specifically, Dr. Gellrick stated "[i]mpairment [r]ating of the [lumbar]-spine is questionable in the mind of this examiner and determined not to be ratable with further VA Hospital/Clinic records review." Dr. Gellrick went on to note that it was reasonable for Dr. Stagg to find a causal connection between the need for physical therapy and lumbar spine evaluation as a result of gait issues arising from the claimant's knee surgery.

[1] This converts to a whole person impairment rating of nine percent.

9. In the DIME report, Dr. Gellrick listed a number of maintenance medical treatment modalities for the claimant. Those recommendations included four follow up maintenance appointments with Dr. Stagg; access to Dr. Pevny; knee brace replacement; a lumbar spine TFESI with Dr. Campion (as recommended by Dr. Ceola); and access to a gym program once COVID-19 restrictions were lifted.

10. On March 9, 2022, the respondents filed an FAL which relied upon Dr. Gellrick's DIME report. Specifically, the DIME identified the claimant's date of MMI of October 22, 2021 and a scheduled impairment rating of 22 percent for the claimant's right lower extremity.

11. Initially, the claimant objected to the FAL and filed an Application for Hearing (AFH) on the issues of overcoming the DIME and permanent partial disability (PPD) benefits. The parties did not proceed to hearing on those issues.

12. On March 24, 2022, the claimant left a message with Dr. Stagg's practice indicating that his back was "completely out" and he was unable to lift his right leg. The claimant was instructed to seek treatment in the emergency department.

13. On March 29, 2022, the claimant was seen by Dr Stagg. On that date, the claimant reported significant pain and requested "his third injection". The claimant also reported that over the last several months he had experienced more pain in his back with radiation into both lower extremities. Dr. Stagg opined that the claimant's condition had worsened and recommended magnetic resonance imaging (MRI) of the claimant's lumbar spine. Dr. Stagg also referred the claimant to Dr. Lewis for injections, to Dr. Ceola for consultation, and physical therapy. The respondents denied authorization for these recommended treatment modalities.

14. On April 15, 2022, the claimant filed an Application for Hearing (AFH) on the issues of reopening; authorized provider, reasonably necessary; average weekly wage **(AWW),** temporary total disability (TTD) benefits; and temporary total disability (TPD) benefits. In addition, under "other issues" on the AFH, the claimant included change of physician and "not at MMI". The April 15, 2022 AFH is at issue in the present case.

15. The claimant testified that his condition has worsened since he was placed at MMI. He further testified that his current symptoms include burning pain in the center of his back, his left hip "goes out", and his right ankle swells.

16. On May 4, 2022, Dr. Rashbacher issued a report following his review of the claimant's medical records. In his report, Dr. Raschbacher stated that his opinions have not changed. In addition, Dr. Raschbacher stated that he agrees with the opinions of the DIME physician, Dr. Gellrick.

17. Dr. Raschbacher's deposition testimony was consistent with his written reports. Dr. Raschbacher testified that he agrees with the impairment rating issued by Dr. Gellrick and reiterated his opinion that the claimant's only work related impairment is to his right knee. Dr. Raschbacher further testified that the claimant is not entitled to an impairment rating for any other body part. Dr. Raschbacher testified that there is no evidence of anatomic disruption or any objective finding that would attribute the claimant's hip or low back issues to his knee injury. Dr. Raschbacher noted that Dr. Stagg has not rescinded MMI or stated that the claimant is no longer at **MMI.** It is Dr. Raschbacher's opinion that the claimant could be seen at the VA for his low back.

18. The ALJ credits the medical records and the opinions of Dr. Gellrick and finds that the claimant has failed to demonstrate that it is more likely than not that he has suffered a worsening of his condition. Therefore, the claimant has failed to demonstrate that his claim should be reopened.

19. Although the claim shall not be reopened at this time, the ALJ must now determine if the medical treatment denied by the respondents constitutes reasonable maintenance medical treatment necessary to maintain the claimant at MMI.

20. In Colorado workers' compensation cases, the opinions of a DIME physician are given great deference. As a result, as a general matter, a party attempting to overcome the opinions of a DIME physician bears the greater burden of proof of clear and convincing evidence. The claimant has not sought to overcome the opinions of the DIME physician in the present case. However, the ALJ finds that the opinions of Dr. Gellrick, in her role as the DIME physician in this case must be given consideration in the present matter.

21. Therefore, the ALJ credits the opinions and recommendations of Dr. Gellrick. Specifically, Dr. Gellrick recommended that the claimant receive maintenance medical treatment as follows: four follow up maintenance appointments with Dr. Stagg; access to Dr. Pevny; knee brace replacement; a lumbar spine TFESI with Dr. Campion (as recommended by Dr. Ceola); and access to a gym program once COVID-19 restrictions were lifted.

22. The ALJ credits Dr. Gellrick's recommendations for maintenance medical treatment. However, the modalities identified by Dr. Gellrick are not the same as the denied modalities at issue in the present case. The denied medical treatment before the ALJ are: a lumbar spine MRI; additional physical therapy; a consultation with Dr. Lewis for injections; a consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal. With regard to these medical treatments, the ALJ credits the opinions of Dr. Gellrick and the testimony of Dr. Raschbacher and finds that the claimant has failed to demonstrate that a lumbar spine MRI; additional physical therapy; a consultation with Dr. Lewis for injections; a consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal; constitute reasonable medical treatment necessary to maintain the claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.$. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.$. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1,* 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos,* 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers,* W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Travelers Ins.* Co. *v. Industrial Commission,* 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen

an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he has experienced a worsening of his condition. Therefore, the claimant has failed to demonstrate, by a preponderance of the evidence that his claim should be reopened pursuant to Section 8-43-303(1), C.R.S. As found, the medical records and the opinions of Dr. Gellrick are credible and persuasive on this issue.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

8. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

9. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that recommended maintenance medical treatment (specifically a lumbar spine MRI; additional physical therapy; a consultation with Dr. Lewis for injections; a consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal) is reasonable and necessary to maintain the claimant at MMI. As found, the opinions of Dr. Gellrick and Dr. Raschbacher's testimony are credible and persuasive on this issue.

ORDER

It is therefore ordered:

1. The claimant's claim shall not be reopened at this time.

2. The claimant's request for denied maintenance medical treatment (specifically a lumbar spine MRI; additional physical therapy; a consultation with Dr. Lewis for injections; a consultation with Dr. Ceola; and a neurosurgery evaluation with Dr. Agrawal) is denied and dismissed.

Dated December 27, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.
