or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold d/b/a Atlas Logistics*, WC 4-960-513-01, (ICAO Oct. 2, 2015).

Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if "special circumstances" exist that demonstrate a nexus between the injuries and the employment. *Id*. at 864. In ascertaining whether "special circumstances" exist, the following factors should be considered: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer's premises, (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a "zone of special danger" out of which the injury arose. *Id.* Whether meeting one of the variables, by itself, is sufficient to create a "special circumstance" warranting recovery depends upon whether the evidence supporting that variable demonstrates such a causal connection between the employment and the injury to bring the travel within the course and scope of employment. *Id*. The question of whether Claimant presented "special circumstances sufficient to establish the required nexus is a factual determination to be resolved by the ALJ based upon the totality of circumstances. *Anthony Morrison v. Rock Electric, Inc.*, W.C. 4-939-901-03 (ICAO February 22, 2016).

Here, neither the first, second, or fourth factors have been established. Claimant's accident arguably occurred outside working hours because Claimant was not being compensated while traveling and Claimant had completed her off-site job assignment for the day; it occurred off Employer's premises; and the obligations of employment did not create a special zone of danger. The primary issue is whether the travel in which Claimant was engaged at the time of her injury was contemplated by the employment contract.

In considering whether travel is contemplated by the employment contract, the critical inquiry is whether the travel is a substantial part of service to the employer. *Madden*, 977 P.2d at 865. Travel may be contemplated by the employment contract when the employer delineates the employee's travel for special treatment as an inducement to employment. *See Staff Administrators Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999). "Special circumstances" may also exist when the employee engages in the travel at the express or implied consent of the employer, and the employer receives a special benefit from the travel in addition to the employee's mere arrival at work. *See National Health Labs v. Indus. Claim Appeals Office*, 844 P.2d 1259, 1260 (Colo. App. 1992). The essence of the travel status exception is that when the employer requires the claimant to travel beyond a fixed location to perform his job duties the risk of travel become the risk of the employment. *Briedenbach v. Black Diamond, Inc.*, W.C. No. 4-761-479 (ICAP Dec. 30, 2009). Where a "temporary service requires the employee to travel to a fixed location, then dispatches the employee to another work site to perform services, the travel between the temporary service employer's premises and the remote site is an 'integral part of the employment." *Schutter, supra, citing* 1 *Larson's Workers' Compensation Law*, §14.03 (2001). "Thus, injuries sustained during travel between remote job sites and the

employer's premises have been found compensable." *Schutter v. Outsource Int'l/Tandem Staffing*, W.C. No. 4-520-338 (ICAO Feb. 21, 2003), citing *Benson v. Colorado Compensation Ins. Auth.*, 870 P.2d 624 (Colo. App. 1994); and *Tatum-Reese Develop. Corp. v. Indus. Comm'n*, 30 Colo. App. 149, 490 P.2d 94 (1971). Moreover, "an employee who is away from home on business remains under continuous workers' compensation coverage from the time of the departure until the employee returns home." *SkyWest Airlines v. Indus. Comm'n*, 487 P.3d 1267 (Colo. App. 2020).

Claimant has established by a preponderance of the evidence that the injuries she sustained as a result of the August 5, 2021 automobile collision arose out of the course of her employment with Employer. Employer's business contemplates that its Employees will travel to off-site job assignments as a condition of employment. Employee travel to off-site job assignments is the *sine qua non* of Employer's business. Absent such travel, Employer could not provide services to its clients. Thus, because of the nature of temporary employment, travel to and from remote job sites confers a benefit on Employer beyond the mere fact of arrival at work. Whether an employee traveled to an assignment in their own vehicle, in Employer's van, or with another co-worker does not alter the fact that Employer's contract contemplated employee travel to off-site assignments.

As found, on August 5, 2021, Claimant presented at Employer's office and received an assignment to work at a rental car agency at DIA. Claimant did not have her own transportation to the assignment, and rode to the assignment with two co-employees. Claimant worked that day as assigned by Employer. Claimant credibly testified that she returned to Employer's office each day after completing an assignment with the person who drove her to the assignment in the morning. Claimant was in the process of returning to Employer's office to submit her timecard in person, and sustained injuries in an automobile accident. Employer required employees to submit timecards as a precondition to payment. While no specific means of submitting timecards was required, the overwhelming majority of the time, Claimant submitted her timecards in person, and submitted them on the day she worked for the three weeks preceding August 5, 2021.

No credible evidence was admitted to demonstrate that Claimant was engaging in any distinct departure on a personal errand or that she was not returning to Employer's office. The ALJ concludes that Claimant was in "travel status" while traveling between Employer's office and the off-site job assignment. Claimant's travel status ended when she returned to the office at the end of the day.

Based on the totality of the evidence the ALJ concludes that Claimant has established by a preponderance of the evidence that she sustained injuries arising out of the course of her employment with Employer on August 5,2021.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and

necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has to establish that she sustained a compensable injury, Claimant is entitled to an award of general medical benefits for all authorized treatment that is reasonable, necessary and related to the injuries sustained as a result of the August 5, 2021 automobile accident.

ORDER

It is therefore ordered that:

1. Claimant sustained compensable injuries arising out of the course of her employment with Employer on August 5, 2021.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left shoulder surgery {as recommended by Dr. Norman Lindsay Harris) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 27, 2018 work injury.

FINDINGS OF FACT

1. The claimant suffered an injury at work on December 27, 2018. The body parts injured at that time were the claimant's neck and right shoulder. The respondents have admitted liability for the claimant's December 27, 2018 injury.

2. The claimant has undergone various surgical procedures during this claim.

3. On February 28, 2019, Dr. Norman Lindsay Harris performed an arthroscopic repair of the claimant's right rotator cuff. The claimant had a second right shoulder surgery on May 21, 2020. At that time, Dr. Harris performed biceps tenodesis.

4. On August 17, 2020, the claimant underwent surgery to his cervical spine. That surgery was performed by Dr. Wade Ceola. The procedure included C3-C4 anterior microdiscectomy, nerve root decompression, anterior interbody arthrodesis, cage placement with plating for stabilization. The surgical note identifies the use of Gardner-Wells tongs with ten pounds of traction.

5. The claimant testified that prior to the August 17, 2018 cervical surgery he had no left shoulder symptoms. However, immediately following the August 17, 2020 cervical surgery, the claimant began to experience pain in his left shoulder. The claimant also testified that he continues to have pain in his left shoulder.

6. The claimant testified that it is his understanding that during the cervical surgery additional traction was placed on his left shoulder. The claimant further testified that because he had recently undergone right shoulder surgery, more traction was placed on the left.

7. In a medical record dated October 9, 2020, Dr. Michael Campian identified a diagnosis of left rotator cuff tendinitis. At that time, Dr. Campaign recommended physical therapy for the claimant's left shoulder.

8. On February 2, 2021, a magnetic resonance image {MRI) of the claimant's left shoulder showed a high grade partial thickness articular sided tear, a partial

thickness tear of the mid and superior subscapularis tendon, moderate osteoarthritis of the AC joint, and a small subacromial spur.

9. On February 23, 2021, Dr. Harris reviewed the MRI results and recommended left shoulder surgery. Specifically, Dr. Harris recommended a diagnostic arthroscopy with rotator cuff repair.

10. On March 2, 2021, Dr. James Ferrari reviewed the request for left shoulder surgery. Dr. Ferrari opined that the requested surgery was reasonable and necessary to treat the condition of the claimant's left shoulder. However, Dr. Ferrari also opined that the condition of the claimant's left shoulder is not related to the work injury or to the August 2020 spine surgery. In his report, Dr. Ferrari noted that during the spinal surgery there was no traction on the claimant's left arm. Based upon Dr. Ferrari's opinion, the respondents denied the left shoulder surgery.

11. On March 9, 2021, Dr. Harris authored an appeal regarding the respondents' denial. Dr. Harris referenced that the claimant has experienced "migratory pain affecting his bilateral shoulders." Dr. Harris also noted the claimant's report that during surgery his left arm was held "with about 10 pounds of traction". Dr. Harris opined that the condition of the claimant's left shoulder could have been caused by the initial work injury and then worsened by the cervical spine surgery.

12. On March 19, 2021, Dr. Jon Erickson reviewed the request for a left shoulder surgery. Dr. Erickson opined that the claimant could not have suffered a left rotator cuff tear during the spinal surgery. It is Dr. Erickson's opinion that the MRI findings are degenerative in nature and secondary to age. Dr. Erickson further opined that the claimant's left shoulder was not injured on December 27, 2018 or on August 17, 2020. Based upon this opinion of Dr. Erickson, the respondents continued to deny the left shoulder surgery.

13. Subsequently, on November 15, 2020, Dr. Harris requested a repeat left shoulder MRI.

14. On November 22, 2021, Dr. Erickson reviewed the MRI request. Dr. Erickson recommended denial of the requested MRI. He also recommended denial of any treatment of the claimant's left shoulder

15. At the request of the respondents, Dr. Erickson conducted a review of the claimant's medical records. In his January 2022 report, Dr. Erickson opined that the abnormalities found in the left shoulder MRI are likely age-related and degenerative. Dr. Erickson reiterated his opinion that the claimant's left rotator cuff was not torn during the August 17, 2021 cervical spine surgery.

16. Dr. Erickson's testimony was consistent with his written reports. During his testimony, Dr. Erickson explained how a patient's shoulders are placed during an anterior cervical spine surgery. Specifically, a patient's shoulders are pushed down and then are held in position by wrapping their arms in a drape. Dr. Erickson also testified

that there is no traction applied to either arm during this type of surgery. Dr. Erickson further testified that the act of holding the claimant's arms during spinal surgery would not aggravate a pre-existing left shoulder condition to cause it to become symptomatic.

17. Natalie Arena, PA-C, testified by deposition. PA Arena was Dr. Ceola's assistant during the claimant's treatment, including the August 17, 2020 cervical surgery. PA Arena explained the standard process used in placing a patient for the type of spinal surgery the claimant underwent in August 2020. The patient is in the supine position (on their back) with their arms tucked at their sides. PA Arena explained that this is necessary to keep the shoulders down and away from the neck. The patient's arms are not held with traction. Rather they are wrapped in a sheet to the patient's sides. PA Arena also explained that Gardner-Wells tongs are used to hold the patient's cervical spine. The tongs are connected to the patient's skull and traction is used.

18. With regard to the spinal surgery, the claimant would have experienced the process as described by PA Arena. The claimant's arms and shoulders would have been placed in the same manner, regardless of the claimant's recent right shoulder surgery. PA Arena explained that it is necessary to place the arms the same way during this surgery to ensure that the cervical spine can be adequately reached. PA Arena further testified that it is her recollection that the claimant first reported left shoulder-related symptoms to her approximately two months after the surgery.

19. The ALJ credits the medical records, the testimony of PA Arena and the opinions of Drs. Ferrari and Erickson over the contrary opinions of Dr. Harris. The ALJ specifically finds that the claimant's arms, and therefore his shoulders, were placed in the same manner during the cervical spine surgery. In addition, there was no "traction" placed on either of the claimant's arms or shoulders during that surgery. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the left shoulder surgery recommended by Dr. Harris is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 27, 2018 work injury. The ALJ further finds that the claimant did not suffer an aggravation of a pre-existing left shoulder condition during the spinal surgery.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201,
C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights

of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the left shoulder surgery recommended by Dr. Harris is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 27, 2018 work injury. As found, the medical records, the testimony of PA Arena and the opinions of Ors. Ferrari and Erickson are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a left shoulder surgery (as recommended by Dr. Harris) is denied and dismissed.

Dated May 18, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained injuries in the course and scope of his employment on April 5, 2021.

ONLY IF THE CLAIM IS COMPENSABLE:

II. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to authorized, reasonably necessary medical benefits that are related to the alleged workplace injury of April 5, 2021.

III. Claimant's average weekly wage (AWW).

IV. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits from April 5, 2021 until terminated by law subject to offsets, if appropriate.

STIPULATIONS

The parties stipulated that, if the claim is found compensable and that Claimant was eligible for temporary disability benefits, Respondents are entitled to an offset for the time Claimant received unemployment insurance (UI) benefits. The ALJ approves and adopts this stipulation of the parties.

The parties also stated that, if the parties did not communicate with the ALJ that the issue of AWW had been resolved, this ALJ should make that determination.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was working for Employer as a window, glass, and shower door installer and technician for both commercial and residential projects. He had worked for Employer for over two years and had been doing the same kind of work for other employers for approximately 20 years. His job required both a mix of technical work, window and door delivery and installations. The job required lifting, pushing, pulling anywhere from one to 200 lbs., depending on the thickness of the product, type of window and depending on the job. They would sometimes have to carry the product up multiple flights of stairs, for blocks, or just a few feet.

2. Claimant had no prior issues with his back immediately before his work injury, other than a back injury approximately twenty years before. Claimant recalled that

the day before the alleged injury incident was Easter Sunday and he spent it with his family and had no issues. He did have a prior work related right knee injury that was feeling "pretty good," after his September 16, 2020 right knee surgery. He had returned to work full duty, full time as of January 2021. Claimant is 5'4".

3. On April 5, 2021 Claimant bent down to open a large garage bay door in order to load windows into the back of his box truck. The truck Claimant drove required a clearance of approximately twelve feet to fifteen feet high. Claimant bent down to yank the dock door up utilizing enough force and momentum to make the door go up above the catch lines at about two feet and eight feet. Claimant described the door as an older door, approximately ten feet wide and about twenty feet tall. The door was a manual door and did not open smoothly, that is did not glide up to the required twelve feet on its own. It would typically stop at approximately eight or nine feet high but that was not high enough for his box truck.

4. Claimant felt a pop in the right knee and immediate pain. Claimant's first concern was the right knee because he had surgery the previous year and was finally feeling better. Claimant waited for the knee pain to subside, which it did after resting a few minutes, though it did swell up, which worried him as well. Claimant started feeling pain in the low back after he got up from resting and he tried to lift a window to load onto his truck. He was unable to do it as he started having back spasms. This was approximately ten minutes after he opened the dock door. He had to have coworkers load his truck for him. Claimant did work the full day but only performed the driving and two other co-workers, one of whom does not have a drivers' license, went with him to unload the truck.

5. Claimant stated that he advised his supervisor when the initial accident happened and told him about his knee. Claimant did not initially mention the low back as he did not immediately perceive or understand the seriousness of his injuries. Then, when he started having spasms in the low back, he told his supervisor about that as well. He asked where he should go for care. His supervisor indicated he would contact the HR representative in Phoenix, where the company's main office was located. When Claimant returned from deliveries, his supervisor had still not heard back from HR about where Claimant should seek medical attention.

6. Claimant's back got worse throughout the day. Claimant followed up with his supervisor but did not receive any instructions about how to proceed with medical care. Claimant left work at approximately 4:15 p.m. that afternoon but after getting home he decided he required immediate medical attention because of the severe pain. The most concerning problem was that Claimant was having difficulty walking because he would take three to four steps and his back would immediately go into spasms.

7. Claimant went to the emergency room at North Suburban Medical Center and was attended that evening. He was treated and released. Before he was released, they took an MRI of his lumbar spine but did not provide him the results by the time he was released. Claimant stated he received a call the following day[1] and was instructed

[1] While Claimant stated that he was called the following day, he was actually called on April 6, 2021 in the afternoon, which was the same day he was released at 2:35 a.m. in the morning.

to return to the emergency department, which he did, as the pain in his back was severe whenever he put pressure on his leg or walked for more than a few steps.

8. Claimant stated that he texted his supervisor his statement regarding the injury as follows:[2]

> On 4/5/2021 I arrived to work about 7:00 am I clocked in, grabbed my paperwork and proceeded to locate my materials. I opened my box truck and lowered the ramp then came inside to lift the garage door. I bent and gave it a good hard yank trying to get it high enough to load my truck and immediately felt pain in my right knee. I was able to walk on it but it hurt. I waited for Braun to help load the large window and rested. When we pulled it from the rack and dragged it to the ramp I was unable to lift it and Bob, Lou or Dom and Braun finished loading. We were really shorthanded that day so I continued with my route knowing that Dom and Braun would do most of the physical work. Throughout the day my lower left back began to spasm and eventually I could only go a few steps before having to stop and let the pain subside. After we returned to the shop I asked Doug to contact HR to find out what I should do. After an hour or more I decided to have Doug call me at home when he heard something. Then eventually after no reply from HR, Doug and I decided that I would go to my own Dr.

9. Employer completed an Incident Report on April 6, 2021. The supervisor testified that he completed the report. He acknowledged that Claimant had notified him of the incident on April 5, 2021. He noted that the "Employee's Statement" was attached and that Claimant had a "[P]inched nerver." [sic.]. This ALJ infers that the above statement was the attached statement. The supervisor's statement says as follows:

> I was in the office and did not witness or see anything. He was worried he had hurt his knee. When he returned to the shop, he said it was also in his back now and he needed to see a doctor. I reached out to HR as we thought his was a continuation of his previous workers comp claim. Mario left at 4:15pm and apparantly [sic.] went to the emergency room that night.

The supervisor also noted that Claimant "initially thought he had hurt his knee and was limping. Later, he said his back hurt and was spasming." He noted that Claimant was taken to North Suburban for medical care by his wife.

10. Claimant was initially seen at North Suburban Medical Center on April 5, 2021 at 6:04 p.m. Claimant provided a history that he had had no trauma to the low back and that he had a history of a lumbar spine herniation 20 years before that resolved with physical therapy. Claimant presented to the emergency department complaining of acute onset low back pain, radiating down his left leg and that his left leg felt numb. The ED physician ordered an MRI to rule out possibility of epidural abscess and significant neurologic deficits. The differential diagnoses were cauda equina, epidural abscess, spinal stenosis, disc herniation, lumbar pain. Claimant was discharged with narcotic pain

[2] Respondents' Exhibit E, identifies this as Claimant's "statement regarding injury" on April 5, 2021. Original was texted to his supervisor. See April 13, 2022 Hearing Transcript p.30:4-12; p. 30:22-25 & p. 31:1.

medication on April 6 at 2:35 a.m. by PA Bryce Holland with instructions to see a neurosurgeon.

11. At approximately 8:40 p.m. on April 6, 2021 PA Holland reviewed the images and MRI report and added an addendum to her medical report stating that she called the patient to follow up. She noted that Claimant could take a few steps but was "exquisitely painful." She recommended that Claimant return to the ER if he was having worsening pain, foot drop or weakness. Claimant indicated that if he could he would wait until the following day to see the workers' compensation doctor.

12. The MRI read by Dr. Kevin O'Connor stated that Claimant had degenerative changes at L5-S1, resulting in impingement of the descending left S1 nerve roots and bilateral high-grade neural foraminal narrowing. He recommended the attending correlate the findings for a left S1 and/or L5 radiculopathy as the both the right and left foraminal narrowing was severe at the L5-S1 level with probable effacement of the descending left S1 nerve root.

13. Respondents, through the HR department authorized an appointment with the workers' compensation provider. Claimant was scheduled for Thursday, April 8, 2022 but Claimant never made the appointment.[3]

14. Claimant was re-admitted to the ED on April 6, 2021 at 10:02 p.m. by Dr. Simi Varanasi who took a history that Claimant was seen at the emergency room the day before for acute onset low back pain and presented to the ER for worsening pain and weakness in his left leg. He documented that Claimant developed symptoms after lifting a heavy door at work causing pain and weakness going from the low back, into the left buttock down the left leg, causing numbness from the knee down with some weakness. He stated that Claimant was able to make a virtual appointment with the neurosurgeon for the following Thursday and he was scheduled to see the Workmen's Comp. physician the following day but the pain was too severe for him to wait. Dr. Varanasi noted that Claimant was unable to walk due to the discomfort and the weakness in his left side and that he had foot drop. Dr. Varanasi stated Claimant was admitted due to significant findings from MRI and musculoskeletal findings. He consulted with Dr. Richard Kim of Colorado Brain & Spine Institute, who recommended steroid treatment and reevaluation the following morning.

15. On April 7, 2021 PA Stephanie Tu stated that Claimant was a 52 year old male with back pain and left lower extremity pain and weakness which started after lifting heavy two days prior. On neurologic exam she found left EHL/DF/PF[4] weakness, which was consistent with the MRI findings of acute disc herniation at the L5-S1 level. They discussed treatment options and concluded that Claimant should proceed with surgery scheduled for 5:00 p.m. with Dr. Kim given his weakness and intractable pain.

16. Claimant proceeded with the surgery on April 7, 2021 by Dr. Kim with a post-operative diagnosis of left L5-S1 herniated disc. He performed a microdiskectomy removing a large disc fragment and decompressed the nerve. During the procedure, Dr.

[3] April 13, 2022 Hearing Transcript, p. 37-38.
[4] Extensor Hallicus Longus (Big toe extension)/Dorsiflexion/Plantar Flexion weakness.

Kim stated that the "[T]he herniated disk was obvious." He also stated that they were "able to remove a large fragment of disk in a single piece" and decompress the nerve.

17. Upon discharge on April 8, 2021 Dr. Alexandra Grieb diagnosed Claimant with acute left lumbosacral radiculopathy status post left L5-S1 microlumbar discectomy with discharge instructions to follow up with Dr. Richard Kim, the neurosurgeon and his PCP, Dr. Sharry Veres.

18. Claimant was seen by Dr. Samantha Matney of Rocky Mountain Medical Group on April 13, 2021, who took the following history:

> 52 y/o male presenting for a new work comp injury. Pt states he was at work on 4/5/2021 loading his truck. Pt went to open the dock door open (sic) and he felt immediate pain in his right knee. Pt states he went to sit down for a little bit. Pt states he got up and his lower back started to spasm. Pt drove the rest of the day and did not lift anything. Pt states he could not get out of his truck by the end of the day. Pt went to the ER that evening. Pt states they did an MRI which he was told he had pinched L5-S 1. Pt was called back to the ER the next day and had surgery on his back. Pt states his left foot and leg is numb and he has pins and needles in his left leg. Pt states certain positions makes his symptoms worse. Pt does not have feeling in his toes. Pt has a hard time sleeping. Pt denies ant genital numbness, stool/urinary incontinence. Pt continues to have pain radiating down his left leg. Pt states the surgery helped a lot. Pt is taking ibuprofen as needed now. Pt has been doing hot and cold packs. Pt is not doing PT. Pt was advised to walk which he has been doing short walks. Pt is not working. Pt reports having a herniated disc about 20years ago. Pt denies any previous back surgery. Pt states his right knee is now fine.

19. Dr. Matney found an abnormal gait and sensation in left lower extremity, advised Claimant not to lift anything, avoid climbing and squatting, crawling and kneeling, advised Claimant to take Tylenol and ibuprofen and to follow up in three weeks after he saw the surgeon. She opined that the objective findings were consistent with the history and/or work related mechanism of injury.

20. On April 29, 2021 Dr. Matney noted that Claimant was having difficulty with sleeping due to pain, continued to have left leg pins and needles sensation with symptoms that continued to radiate down his left leg, for which he was taking OTC[5] medication. She diagnosed L5-S1 herniated disc s/p microlumbar diskectomy on 4/7/2021 and was improving as expected.

21. He followed up at the Rocky Mountain Medical Group workers' compensation (WC) clinic, where primary WC services were provided initially by Dr. Matney and currently by Dr. Ramaswamy. Dr. Matney continued to see Claimant from April through November 23, 2021. Claimant had a no lifting restriction as of April 13, 2021. She increased Claimant's restrictions to 10 lbs. lifting as of June 10, 2021,

[5] Over the counter medication.

increased to 20 lbs. on July 1, 2021, to 75 lbs. on July 28, 2021 and reduced lifting back to 50 lbs. on November 23, 2021.[6]

22. On April 13, 2021 Dr. Matney noted that Claimant was not working. On April 29, 2021 Dr. Matney noted that Claimant was working with restrictions, though noted that he was ambulating slowly, and had a slight difficult getting up out of the chair.

23. On October 26, 2021 Dr. Matney noted that Claimant had followed up with his surgeon who ordered an MRI. Claimant continued with left buttocks pain going down his left leg with occasional sharp stabbing pain. Dr. Matney noted that the October 20, 2021 MRI showed a recurrent disc extrusion at the L5-S1, thickening of the ligamentum flavum, severe bilateral recess stenosis, left worse than right foraminal stenosis at the L5-S1, as well as joint arthritis. She recommended that Claimant follow up again with the spine surgeon.

24. Despite the April 7, 2021 surgery and physical therapy, Claimant continued to experience low back and left leg pain, left leg numbness, and drop foot on the left. Claimant proceeded with a second surgical procedure on December 30, 2021 with Dr. James Stephen, of Colorado Brain & Spine Institute, when symptoms in his low back and left lower extremity did not improve. At some point, his claim was denied and he did not receive additional physical therapy after the second surgery. He stated he has follow-ups scheduled with both Dr. Stephen and Dr. Ramaswamy and would like to continue care with the workers' compensation providers.

25. Claimant underwent an independent medical evaluation (IME) at Claimant's request, with Dr. Anjmun Sharma on March 21, 2022. Dr. Sharma reported that Claimant stated he had been lifting heavy windows and shortly after he developed acute low back pain and sudden weakness in the left leg. Claimant provided Dr. Sharma a prior history that approximately 20 years before he herniated a disc that did not require surgery and resolved with physical therapy. Dr. Sharma reviewed the medical records. On exam he noted some left quad atrophy with intermittent ongoing radiculopathy but much better than prior to the surgical intervention. This was correlated to the findings on neurologic testing with slightly decreased anterior and posterior compartments of the left lower extremity.

26. Dr. Sharma took a history that after the last appointment with Dr. Matney, Claimant proceeded with a second surgery due to an extruded disc fragment. He indicated that Claimant had been working prior to the second surgery and that he returned to work on February 4, 2022, which Dr. Sharma noted should be done with caution not to lift anything heavy. Dr. Sharma opined that Claimant was injured due to heavy lifting, had no history of back pain in the intervening years after the initial back injury 20 years prior and continued to work for many years in the same kind of employment. He noted Claimant had a predisposition to injury and the heavy lifting at work caused the current need for medical care and the injury. He cited to a Spine I peer reviewed medical article that concluded that an inciting event is not necessary in order to develop a lumbar spine herniation, but rather that any event, even a common every day event may cause a herniation to become symptomatic. He specifically noted that, while the article cited to

[6] November 23, 2021 is the last report in the records presented to this ALJ from Dr. Matney.

specific events listed by injured individuals as inciting events tended to prolong the disability, but that here, Claimant returned to work very quickly after both surgeries.

27. Dr. Sharma noted that Claimant was not at maximum medical improvement as he continued to require physical therapy after his second surgery, as well as a functional capacity evaluation and impairment rating assessment. He recommended against releasing Claimant to heavy lifting over 50 lbs. Finally, he concluded that "greater than 51 % probability that the mechanism of injury is directly related to have caused the resultant work injury accident and activities the patient had been doing just prior to presentation to emergency department for emergency room evaluation."

28. Dr. Sharma testified at hearing as an expert in family medicine, occupational medicine and as a Level II accredited physician hired by Claimant. Dr. Sharma opined that as a cause of lifting something heavy, a door they had been having problems with in the past, in the normal course of Claimant's work activities Claimant began to have pain and back problems, which eventually required emergency surgery for the acute disc herniation. He explained that Claimant had an acute disc injury that took a little time to extrude and impinge on the nerve and that is why Claimant did not have immediate onset of back pain but it took a few minutes to cause the effect and the direct causally related act of lifting the door was the cause of Claimant's injury on April 5, 2021, and was not related to the chronic changes.

29. Dr. Sharma opined that the work related incident was the proximate cause of the Claimant's injury, it was the inciting event that caused the acute disc herniation. He further opined that the microdiscectomy performed on April 7, 2021 was reasonably necessary and related to Claimant's April 5, 2021 work related injury. Dr. Sharma stated that since the disc was an acute herniation, without the emergency surgery it was likely that Claimant would have had severe, debilitating, long-term issues, including bowel problems, bladder problems and difficulty ambulating. Dr. Sharma noted that, while Claimant had a preexisting degenerative changes in his spine, what occurred on April 5, 2021 was an acute disc herniation.

30. With regard to the need for the second surgery, Dr. Sharma specifically stated that:

> More likely than not, it was probably a fragment that may not have been completely removed when he had his first surgery. And so -- and because it was at a similar level, it is related to the first surgery because he didn't have symptoms anywhere else in his back.

He stated that Claimant, at the time of his examination, was much better compared to how he was doing right after the work injury. On exam he found good strength, no foot drop, no numbness or tingling, normal reflexes. He opined that the second surgery was also reasonably necessary and related to Claimant's work related injury of April 5, 2021, was not at maximum medical improvement yet, and he required physical therapy post surgically. Lastly, her recommended that a functional capacity evaluation be performed after the PT was accomplished, to determine permanent work restrictions, if any, are necessary.

31. Dr. John Burris was contracted by Respondents to perform an independent medical evaluation (IME). Dr. Burris issued two reports, the first was dated March 22,

2022. Dr. Burris reviewed the medical records and obtained a history consistent with Claimant's testimony at hearing. He opined that, based on the Claimant's history and the medical record review as well as following examination, he opined that Claimant's disc injury was causally related to the events of April 5, 2022.

32. On March 25, 2022 Dr. Burris issued a supplemental report following receipt of a video of the garage door. At that time, he changed his opinion based on viewing the video provided by Respondents, which showed the supervisor opening the large garage bay door. He stated that in his opinion the function of the garage door required only minimal effort and categorized it in the sedentary category or consistent with activities of daily living.

33. Dr. Burris testified at hearing in this matter as a board certified occupational medicine physician and as a Level II accredited provider hired by Respondents. He provided his procedures for conducting an IME. Dr. Burris stated that at the time he issued the original IME report, he opined that the described event, which was consistent with Claimant's testimony, was the proximate cause of Claimant's work related condition. However, viewing the video tape, he changed his opinion based on information he obtained from the Division that if an event was sedentary or consistent with activities of daily living, that it usually means that the event did not cause a work related condition. He also stated that the Claimant's action of opening the bay door was not a special hazard or condition on the workplace that would have caused or been the proximate cause of his condition. He stated that his opinion continued to be, based on the video that he saw, if that truly represented the nature of opening the garage door, his opinion to a reasonable degree of probability.

34. Dr. Burris acknowledged that he could not pinpoint the cause of Claimant's low back condition. He stated that Claimant's testimony at hearing was very consistent with what Claimant told him during the IME. He acknowledged that, considering Claimant's described serious foot drop that the need for the first surgery was likely necessary as well as the second surgery, when the first one failed to resolve the ongoing symptoms. He also conceded that Claimant required ongoing treatment, including physical therapy following the second surgery.

35. The wage records prior to the work injury are limited to one check for a week for pay period from March 28, 2021 through April 3, 2021 showing earnings in the amount of $1,207.36. The second check earnings record is for pay period from April 5, 2021 through April 10, 2021 for $1,144.36. Since Claimant was injured on April 5,2021, was admitted to the hospital on April 6, 2021 and had surgery on April 7, 2021, Claimant's wages for that time period cannot be used to calculate average weekly wage. As found, Claimant's AWW is $1,207.36.

36. Claimant was off due to his surgery from April 6, 2021. The wages for pay period ending (PPE) April 17, 2021 were reduced. There are no earnings for PPE April 24, 2021 and reduced earnings for PPE May 1, 2021 forward. PPE May 1, 2021 showed wages earned for 30.37 hours. Claimant stated that he returned to work as of April 29, 2021 with limitations but that his employer paid him his vacation time.[7] Dr. Matney noted

[7] April 13, 2022 Hrg Tr. p. 42:1-25 & p. 43:1-3.

that Claimant was not working on April 13, 2021 but by April 29, 2021 she noted that Claimant returned to work with limitations. As found, since the wage records show some earnings for PPE May 1, 2021 that Claimant has shown that he is entitled to temporary total disability benefits from April 6, 2021 through April 28, 2021 and temporary partial disability benefits from April 29, 2021 through December 29, 2021. This is supported by Claimant's testimony that he returned to modified work in the office filing, making copies and shedding, following his first surgery.

37. Claimant stated that he received his vacation pay while off due to his surgery. As found this vacation time off should be reinstated as Claimant was due temporary total disability benefits during this time.

38. Claimant also received some unemployment benefits from May 2021 through March 2022, which Respondents are entitled to offset pursuant to statute.

39. Claimant proceeded with physical therapy, following his first surgery, at Rocky Mountain Medical Group. However, when Claimant reached a point where he was not having any progress with physical therapy, around September, 2021, the therapist recommended Claimant return to the surgeon to be evaluated. Claimant returned to see Dr. Kim, who ordered a second MRI, which showed that there was still a fragment impinging on the sciatic nerve, causing pain running down his leg.

40. Claimant continued to work until his second surgery, which took place on December 30, 2021. Claimant was off work from December 30, 2021 until February 4, 2022, when he returned to work light duty. Claimant was working light duty at least to the date of the hearing. He is now assisting the shop manager and runs errands while on light duty.

41. Claimant also continued to see the workers' compensation providers through the date of the hearing. The last physician Claimant saw was Dr. Annu Ramaswamy at Rocky Mountain Medical Group on April 13, 2022. Claimant has not received physical therapy following his second surgery. He stated that he wished to continue with his workers' compensation providers to obtain the treatment he requires.

42. Claimant stated that he had lubricated the dock door but it still has some sticking points and that he believed the shop manager has done it as well. Now Claimant raises the door in a different manner, standing in the middle of the door, lifting with his arms, not his back. Now, when he is unable to reach he uses a stick to make the bay door go all the way up, instead of using force bending down and pushing it up.

43. Claimant's supervisor and the General Manager for Employer's Colorado location testified at hearing. He confirmed that Claimant reported the incident to him on April 5, 2021, including that while he was lifting the garage bay door he felt a pop in his knee. Claimant did not initially mention the low back. Claimant had help that day and the supervisor advised Claimant that he did not have to do anything that he was unable to do. The supervisor and Claimant speculated that the back condition was being caused by overcompensating due to the knee injury caused by the incident of opening the door.

The supervisor reached out to the HR representative in the corporate office in Phoenix, to clarify whether to send Claimant to the same providers he had previously seen for the knee claim or as a new claim.

44. The supervisor testified as to the conditions of the garage bay door, that it was functional and not difficult to operate. He had the shop manager take a video of him opening the garage bay door on April 12, 2021. To his knowledge no one had oiled or lubricated it between the day of the incident and the day of the video recording. After the recording took place, the garage door was mangled a little bit because a technician drove into the door, so it was not operating in the same manner as it did the day of the incident. He further stated that they do not normally open the door all the way every day.

45. Respondents submitted Exhibit I, which was a video of Claimant's supervisor opening the garage bay door. The supervisor was standing upright at the middle point of the door and lifted the door with ease. The supervisor only lifted the door to the height it would open without additional help.

46. Claimant testified that the supervisor is approximately six feet tall, compared to his five foot four. As his truck is over twelve-foot-tall, the door had to be open to that level in order for Claimant to back it up into the bay to have it loaded. This ALJ observed that, if the supervisor was approximately six feet tall, then each panel of the garage door was approximately two feet tall. When the supervisor raised the door, the video only showed that the door opened to approximately the fourth panel, which would mean it raised only to around eight-foot-tall and not the twelve-foot height required.

47. As found, the video is an inaccurate representation of how Claimant lifted the garage bay door by bending down, and raising the bay door by giving the garage door a good hard yank to get it high enough to load his twelve-foot plus box truck. While Claimant would likely not have injured himself if he had lifted the door in the same manner as his supervisor, that does not change the compensable nature of the work related injuries to Claimant given that Claimant bent down, and gave the garage bay door a good yank, causing injury to his low back by herniating his disc by this mechanism of injury. As found Claimant has proven the claim to be compensable.

48. As found, Claimant was attended at North Suburban Medical Center on an emergency basis on April 5, 2021 and was advised to return to the ER on April 6, 2021 after the ER physician reviewed Claimant's MRI films and communicated with Dr. Kim. Dr. Kim performed emergency surgery on April 7, 2021. All of this care was reasonably necessary and related to the injury. Claimant was sent to Rocky Mountain Medical Group where he was treated by Dr. Matney and Dr. Ramaswamy as well as for physical therapy. These providers are designated authorized providers within the chain of referral. As found Claimant obtained reasonably necessary and authorized care from these providers.

49. As found, Dr. Matney recommended Claimant continued to follow up with his neurosurgeon, especially in light of the October 20, 2021 MRI findings of a recurrent extruded disc and severe stenosis at the L5-S1 level. Claimant continued to have foot drop, neurological findings and symptoms in his low back as documented by Dr. Sharma

in his medical records review. Claimant returned to the surgeon and was attended by Dr. Stephen, who performed a second lumbar spine surgery on December 30, 2021. All of this care and treatment was related to the April 5, 2021 work injury as well as reasonably necessary and authorized.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seek medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the

conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Sec. 8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

The mere fact a claimant experiences symptoms while performing work activities does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a

coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

In *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014) the Supreme Court addressed whether an unexplained fall while at work satisfies the "arising out of" employment requirement of the Workers' Compensation Act and is thus compensable. The Court identified the following three categories of risks that cause injuries to employees: (1) employment risks directly tied to the work; (2) personal risks; and (3) neutral risks that are neither employment related nor personal. The Court determined that the first category encompasses risks inherent to the work environment and are compensable while the second category is not compensable unless an exception applies. *Id.* at 502-03. The Court further defined the second category of personal risks to encompass those referred to as idiopathic injuries. These are "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, and similar conditions. *Id.* at 503. The third category of neutral risks would be compensable if the application of a but-for test revealed that the simple fact of being at work would have caused any employee to be injured. *Id.* at 504-05.

As found, Claimant has established by a preponderance of the evidence that he suffered a compensable injury on April 5, 2021 during the course and scope of his employment with Employer. Claimant was at work when he bent down to lift the garage bay door. He credibly stated that he needed to use force to lift the dock door with sufficient impact to cause a herniated disc. Following the incident, he immediately had a swollen right knee that had popped during the incident. While the knee problems resolved, the impact on his low back did not resolve, causing him to report the injury to his employer. The written report to Employer credibly stated that Claimant bent and gave the garage door a good hard yank to get it high enough to load his twelve-foot height box truck. As found, Claimant's testimony is more credible with regard to the actions taken by Claimant while lifting the garage bay door than those presented by the video of the supervisor opening the door or the supervisor's testimony. As found, Dr. Sharma's testimony is credible in determining that Claimant's herniated disc was proximately caused by the actions by Claimant while opening the bay door. Dr. Burris testified that he relied on the mechanism of opening the door provided by Claimant before he changed his opinion. Dr. Burris' initial findings that the Claimant's injuries were causally related to and proximately caused by the events described by Claimant was credible.

Respondents' emphasis on the emergency room (ER) records is misplaced when determining a mechanism of injury. ER personnel are focused on identifying injuries and pain generators and stabilizing the patient. Causation is of secondary concern, as is the precise mechanism of injury, unless it helps to target a treatment modality. The patients are in varying degrees of distress, and ER personnel are often multitasking. Leading questions are sometimes asked, certain dots get [mis]connected, and things can get lost in translation in that environment. Further, this ALJ infers that PA Holland did not complete her paperwork until several days later and any statements made with regard to Claimant injuring himself two days before arriving at the ER are simply not credible.

Simply stated, Claimant herniated his disc at work, but his symptoms continued to worsen as the day went on, on April 5, 2021. His pain got progressively worse. The pain and symptoms going into his lower extremity became more prevalent. Immediate symptoms after the initial opening of the door are inconsequential as a herniated disc, as explained by Dr. Sharma, sometimes take some time to start impinging on the nerve. In this case, it only took approximately ten minutes for that to happen and this is the nexus that drives this ALJ to the conclusion that the inciting event was the cause of Claimant's injury and subsequent need for medical care. Claimant's inability to walk without substantial pain was noted by Claimant almost immediately. The fact that Claimant assumed the difficulty with walking was caused by his prior aggravated knee condition is for naught, as Claimant did not have the requisite medical knowledge to determine the cause of his lower extremity problems or that he had a herniated disc. The ALJ finds Claimant sustained an acute injury to his low back, left leg and left foot on April 5, 2021, while at work and performing the duties of his job. Claimant appropriately reported to the ER after he failed to receive instruction from his supervisor with regard to medical care. He was treated by a physician at the first opportunity, apparently not realizing the urgent significance of his condition, and was release. No such severe symptoms had ever befallen Claimant prior to April 5, 2021. Claimant's current condition is not the result of a natural progression of his (admittedly) preexisting condition and the inciting action that proximally caused the injury was Claimant's action of opening the large bay door.

Despite some inconsequential inconsistencies in the ER records, the ALJ actually finds that a more precise mechanism of injury can be described in the calm of a physician's office after the fact, and even more so while being forged in the crucible of cross-examination. This ALJ finds that there is no credible evidence in the record to suggest any material inconsistency by Claimant in describing how he was hurt, and how he felt on the date of his injury. Claimant has shown that the events of April 5, 2021 proximally caused his work injury and the claim is judged compensable.

C. Medical Benefits

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his

industrial injury. Claimant reported to North Suburban Medical Center on April 5, 2021 and returned on April 6, 2021 when Dr. Varanasi documented a history of Claimant developing symptoms after lifting a heavy door at work causing pain and weakness going from the low back, into the left buttock down the left leg, causing numbness, from the knee down, with some weakness. This is consistent with Claimant's credible testimony as well as other providers' documentation of the mechanism of the injury. Respondents' recitation of portions of the article submitted by Dr. Sharma as well as pointing to other inciting potential factors are not persuasive. Here, there was a specific incident that occurred to cause the herniation, which compressed the nerve and caused immediate symptoms affecting the lower extremity. Claimant's symptoms are closely tied to the event, even if Claimant did not necessarily understand what was causing the symptoms to occur. Despite other potential inciting events, as found, the specific incident of lifting the bay door while bent over and placing force behind the yanking of the door was the proximate cause of the disc herniation and compression of the nerve. Any evidence to the contrary is not persuasive.

As found, Claimant reported to his supervisor, immediately, that he had injured himself and required medical attention. Claimant sat down to rest for a few minutes, but when he got up to go help load the windows on his truck, he was unable to do so and coworkers proceeded to load his truck. Claimant did report to his supervisor that it was not only his right knee but had low back problems from the incident and requested medical attention. Claimant continued to work on April 5, 2021, only driving, but when he returned he asked his supervisor if he had heard anything from headquarters about medical care. When Claimant did not get any further instruction, he was seen on an emergent basis at North Suburban and his subsequent surgical treatment on April 7, 2021 by Dr. Kim is considered emergent care in light of his neurological findings including drop foot and severe pain related to the herniated disc.

D. Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim."

Bunch v. industrial Claim Appeals Office, 148 P.3d 381, 383 (Colo. App. 2006). Furthermore, W.C.R.P. 8-3(A) specifies that "[w]hen emergency care is no longer required the provisions of section 8-2 of this rule apply."

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020).

As found, Claimant has proven by a preponderance of the evidence that the providers at Rocky Mountain Medical Group (RMMG) as well as the neurosurgeons are authorized providers. Initially, on April 5, 2021 Claimant reported his injury to his supervisor. His supervisor prepared a report and provided no instructions with regard to what care Claimant should avail himself. Claimant appropriately sought emergent medical care at North Suburban and the neurosurgeon, Dr. Kim, proceed with emergent surgery. Claimant explained he kept his supervisor informed that he had been admitted to the hospital for surgery, and while the supervisor was surprised that the surgery took place so quickly, instructions regarding medical care follow up took some time. Claimant was supposed to see a workers' compensation provider at Rocky Mountain Medical Group the day following his surgery but he had not been released at that point. Claimant was first seen by Dr. Matney of RMMG on April 13, 2021. The preceding chronology reveals that Employer had some knowledge of the accompanying facts connecting Claimant's injury with his employment and the matter might involve a compensable claim.

As found, the ER providers, North Suburban, RMMG providers as well as the neurosurgeons seen by Claimant at North Suburban are authorized providers either seen for emergent medical care needs or seen within the chain of referral as designated by employer and are authorized providers that tendered reasonably necessary medical care related to the April 5, 2021 work related accident.

E. Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several

computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993).

The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007). Under section 8-40-201(19), C.R.S. the cost of health insurance coverage shall not be included in the Claimant's average weekly wage, so long as the employer continues to provide such health insurance coverage. Under Sec. 8-42-107(8)(d), C.R.S. the AWW *shall* include the amount of the employee's cost of continuing the employer's group health insurance plan upon termination. However, *Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991) holds that where there is ambiguity in the Act we should construe the entire statutory scheme in a manner that gives consistent, harmonious, and sensible effect to all its parts.

An AWW calculation is designed to compensate for total wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *Sec.* 8-42-102, C.R.S. An ALJ has the discretion to determine a claimant's AWW, including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008).

Claimant has shown by a preponderance of the evidence that his average weekly wage is $1,207.36 based on the wage records prior to the work injury submitted into evidence and is limited to one check for pay period from March 28, 2021 through April 3, 2021. Post-injury wage records were not considered in calculating the AWW as they included vacation pay and Claimant's return to modified part time work.

F. Temporary Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) or Temporary Partial Disability (TPD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont*

Toyota, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. The same is true in order to receive TPD benefits.

As found, Claimant's April 5, 2021 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. The records and testimony reveal that Claimant has established a causal connection between his work-related injuries and subsequent wage loss Specifically, Claimant suffered a complete inability to work or that work restrictions impaired his ability to effectively and properly perform his regular employment. Claimant has been unable to work his regular job since April 5, 2021 and has not reached Maximum Medical Improvement (MMI). Accordingly, Claimant is entitled to receive temporary disability benefits until terminated by statute.

As found, Claimant has established by a preponderance of the evidence that he is entitled to receive temporary total disability benefits for the period of April 6, 2021 through April 28, 2021. Claimant stated he returned to modified work as of April 29, 2021 and this was documented by his treating provider.

From April 29, 2021, Claimant was provided with modified duty in the office. Wage records show Claimant was earning substantially less than his AWW after his work injury. Claimant has shown by a preponderance of the evidence that he is entitled to temporary partial disability benefits from April 29, 2021 through December 29, 2021, as he had his second surgery on December 30, 2021.

Claimant has shown by a preponderance of the evidence that he is entitled to temporary total disability benefits from December 30, 2021 through February 3, 2022, which was his period of convalesce following the second surgery.

Claimant returned to modified work on February 4, 2022 through the date of the hearing. For the period February 4, 2022 until terminated by statute Claimant is entitled to temporary partial disability benefits.

Vacation and sick benefits paid to the claimant cannot be deducted from, or credited against, the temporary disability benefits to which the claimant is entitled. *See,* COLO. REV. STAT. § 8-42-124(2); *Pub. Serv. Co. of Colo. v. Johnson*, 789 P.2d 487, 489 (Colo. App. 1990). Section 8-42-124(2) of the Act "reflects a legislative determination that an injured employee should not be required to sacrifice earned benefits in order to obtain statutorily mandated workmen's compensation benefits. Indeed, it is generally recognized that vacation and sick pay are benefits earned by virtue of past services rendered and that, as such, these 'earned' benefits should not be impaired by the employee's work-related injury. *See* 2 A. Larson, *Workmen's Compensation Law* § 57.46 at 10–164.53 (1989)." *Pub. Serv. Co. of Colo. v. Johnson*, 789 P.2d 487, 489 (Colo. App. 1990) (discussing the former statute 8-52-107(2)&(4), with the same language as the current Section 8-42-124, C.R.S.). If the employer has charged the employee with any earned vacation leave, sick leave, or other similar benefit for any reason when the employee was entitled to receive an award of temporary partial or total disability, then the reduced benefits "shall be reinstated." Sec. 8-42-124(4), C.R.S.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant was injured in the course and scope of his employment on April 5, 2021 and the claim is compensable.

2. Respondents shall pay for all authorized, reasonably necessary and related medical benefits for the treatment of Claimant's lumbar spine, left lower extremity and foot injuries, including but not limited to North Suburban Medical Center, Dr. Richard Kim, Dr. James Stephen, Rocky Mountain Medical Group and other providers within the chain of referral.

3. Respondents shall pay temporary total disability (TTD) benefits for the period of April 6, 2021 through and including April 28, 2021. Respondents shall pay temporary partial (TPD) disability benefits from April 29, 2021 through December 29, 2021. Respondents shall pay TTD from December 30, 2021 through February 3, 2022. Respondents shall pay TPD from February 4, 2022 until terminated by law.

4. Employer shall reinstate any vacation credit, which was paid on or after April 5, 2021.

5. Respondents' are entitled to an offset for Claimant's receipt of any unemployment insurance benefits.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to Temporary Total Disability ("TTD") and Temporary Partial Disability ("TPD") benefits for the period February 2, 2021, ongoing.

II. Whether Claimant proved by a preponderance of the evidence medical treatment for her right hip, including the right hip surgery recommended by Dr. Omer Mei-Dan and Dr. James Genuario, is reasonable, necessary and causally related treatment for her July 29, 2020 work injury.

III. Whether Claimant proved Respondents are subject to penalties pursuant to §§8-43-304(1) and 305, C.R.S., and WCRP Rules 5-6(A) and 6-8.

FINDINGS OF FACT

1. Claimant worked for Employer as a Logistics/Inventory Manager.

2. Claimant sustained an industrial injury on July 29, 2020 when she was attacked during a robbery. One of the perpetrators twice struck Claimant with a shopping cart on her right side while another swung a machete at Claimant. The impact of the shopping cart pushed Claimant back approximately 10 feet into a glass wall.

3. Claimant first sought medical treatment on August 13, 2020 at AFC Urgent Care. Claimant reported that she was struck in the shins and right upper thigh with a shopping cart during a robbery. She was diagnosed with an abrasion and cellulitis of the left lower leg, bilateral lower leg contusions, and anxiety. No hip or low back complaints or examinations were noted.

4. Complaints of shin contusions and post-traumatic stress disorder ("PTSD") were noted at follow-up appointments on August 15 and August 20, 2020. The medical records from the aforementioned dates do not address hip or low back complaints or examinations.

5. On September 3, 2020, Claimant attended a follow-up examination with John Vermityen, NP at AFC Urgent Care. Claimant reported pain in her bilateral shins, right lower back and right hip, as well as anxiety. NP Vermityen noted Claimant had a history of lumbar spinal fusions four years prior but that Claimant reported her current back pain was of a different nature. On examination, NP Vermityen noted muscular tenderness to palpation of the lower right lumbar and upper buttock and right posterior and lateral hip. There was no external swelling, ecchymosis, erythema or rash. SLR was negative. There was bilateral mid-shin tenderness and a small scab on the left mid-shin. NP Vermityen diagnosed Claimant added diagnoses of right lower lumbar pain and strain and right hip

strain and referred Claimant for physical therapy. He remarked that Claimant's back and right hip pain were consistent with strain due to the injuries received to the lower extremities.

6. Claimant continued to attend follow-up appointments at AFC Urgent Care with multiple providers. Right hip pain, findings and/or a diagnosis of right hip strain are documented on September 17, 2020 and October 29, 2020. Claimant also attended multiple psychological evaluations with Gary Gutterman, M.D. as well as multiple physical therapy sessions.

7. On January 18, 2021, Claimant presented to authorized treating physician ("ATP") Henry Johnston III, M.D. at AFC Urgent Care with complaints of shin and leg pain. On examination, Dr. Johnston noted both legs had healed with no evidence of swelling or ecchymosis. Claimant was still tender in the right lower leg. No hip or back exam is noted. Dr. Johnston diagnosed Claimant with right shin pain and PTSD. He recommended Claimant complete physical therapy and follow-up with her psychologist. On the WC-164 form, Dr. Johnston noted Claimant's date of maximum medical improvement ("MMI") was unknown at the time because "In progress." (R. Ex. C, p. 54).

8. Dr. Johnston reevaluated Claimant on February 1, 2021, at which time Claimant reported low back pain. Dr. Johnston referred Claimant to a Level II physician for evaluation. He again noted Claimant's MMI date was unknown at the time.

9. On March 30, 2021, the parties attended a hearing before ALJ Peter J. Cannici on the issues of compensability, entitlement to temporary indemnity benefits, and Claimant's responsibility for termination from employment.

10. ALJ Cannici issued a Findings of Fact, Conclusions of Law and Order ("FFCL") on May 14, 2021, finding Claimant's July 29, 2020 work injury compensable. ALJ Cannici further found Claimant was not responsible for termination from her employment and that Claimant was entitled to TPD or TTD benefits from August 27, 2020 to February 1, 2021. ALJ Cannici determined that Claimant's entitlement to benefits ended on February 1, 2020, the day which he found Dr. Johnston placed Claimant at MMI. He noted no Level II impairment rating had been scheduled as of the date of the hearing had been held before him. The parties did not ask ALJ Cannici to address average weekly wage ("AWW"), as such, ALJ Cannici's order did not order a specific dollar amount to be paid to Claimant.

11. Respondents appealed ALJ Cannici's FFCL on June 3, 2021 prior to the issuance of any benefits to Claimant.

12. On May 6, 2021, Gary Gutterman, M.D. performed a permanent mental impairment rating, assigning Claimant 7% whole person mental impairment rating. Dr. Gutterman did not address MMI.

13. On May 19, 2021, David L. Reinhard, M.D. performed an impairment rating. Claimant reported persistent low back and right hip pain. Dr. Reinhard noted that Claimant walked with a limp on her right side due to pain around the right lateral hip extending into the right lower lumbosacral region. On examination, Dr. Reinhard noted decreased right hip range of motion; inguinal pain with passive rotation of right hip and positive Faber pain with range of motion; pain along the right lumbar paraspinal musculature and pain with lumbar flexion and extension. Dr. Reinhard assessed Claimant with a right hip contusion and sprain, right tibia contusion and PTSD. He deferred timing of MMI to Claimant's primary care physician, but opined that Claimant should undergo a right hip MRI and/or orthopedic evaluation to rule out intraarticular pathology. He gave a 21% provisional permanent impairment rating of the right hip.

14. Claimant returned to Dr. Johnston on June 4, 2021 with complaints of right hip and right shin pain. Dr. Johnston noted,

> Patient did acknowledge the shin and some right hip pain but not to the degree she is expressing now and was hardly mentioned in the previous WC visits prior to 1/27/21. She was experiencing PTSD from the event. Still complained of sensitivity to her right shin that was struck with a shopping cart. We were working on Level 2 evaluation for PTSD and then complains of all this pain and discomfort in right hip and shin no better than after the initial injury.

(R. Ex. C, p. 59).

15. Claimant reported to Dr. Johnston having right hip pain since last August, which was improving with physical therapy at end of December, but that she had missed appointments since 1/27/21. On examination, Dr. Johnston noted tenderness and abnormal range of motion in the hips and/or pelvis. Dr. Johnston's diagnoses were PTSD, right shin pain and right hip pain. He referred Claimant for a right hip MRI and orthopedic consultation. Dr. Johnston did not place Claimant at MMI.

16. On June 28, 2021, the parties entered into a stipulation regarding the payment of temporary indemnity benefits ordered in ALJ Cannici's May 14, 2021 FFCL. The parties agreed to an AWW of $1,486.00 (with a corresponding TTD rate of $990.67) for a total of $19,848.00 temporary disability benefits owed for the period August 27, 2021 through February 1, 2021, subject to applicable offsets and credits. The parties further agreed that the stipulation applied only for the temporary disability benefit period as ordered by ALJ Cannici (August 21, 2021 through February 1, 2021). The parties further stipulated that Claimant could still claim additional benefits for additional periods subsequent to February 1, 2021, if applicable, and Respondents reserved the right to claim all defenses or offsets that are applicable for any claimed additional disability period.

17. Claimant testified it was her understanding the stipulation was entered into because she had been placed at MMI due to the impairment rating appointments being scheduled with Dr. Gutterman and Dr. Reinhard. Claimant testified she has never seen a

medical report placing her at MMI, remains on work restrictions and continues to receive referrals and treatment from the ATP, Dr. Johnston.

18. ALJ Susan Phillips approved the stipulation in an order dated July 8, 2021.

19. On July 15, 2021, Insurer filed a General Admission of Liability ("GAL"), admitting for medical benefits and TPD from August 27, 2020 through February 1, 2021 totaling $19,848.00. Under the remarks section, Insurer stated, "MMI and impairment are yet to be determined." (Cl. Ex.11, p.172).

20. Respondents withdrew their appeal of ALJ Cannici's order on July 20, 2021.

21. Claimant subsequently received the payment(s) of temporary indemnity benefits for the period August 27, 2021 through February 1, 2021 in the amount of $19,848.00, as ordered by ALJ Cannici, stipulated to by the parties and admitted by the Respondents in the July 15, 2021 GAL. No evidence was introduced into the record regarding when Claimant received the payment(s).

22. Claimant underwent a right hip MRI on July 1, 2021. The radiologist's impression was: severe macerated degenerative tearing of the superior acetabular labrum of the right hip giving rise to a labral cyst along the superior lateral labral margin; mild peritendinitis involving the right hip abductors.

23. On July 2, 2021, Dr. Johnston referred Claimant for orthopedic evaluation of her right hip with James Genuario, M.D. He again indicated the MMI date was unknown at this time because "In progress." (R. Ex, C, p. 63). On July 8, 2021, Kara Carpino, NP indicated the MMI date was unknown at this time because "In progress." (Id. p. 66).

24. Dr. Genuario first evaluated Claimant on July 23, 2021. Claimant reported that she had experienced right hip pain since the work incident, with no hip pain prior to the work injury. Dr. Genuario physically examined Claimant and reviewed imaging. His impression was status post traumatic incident with acute injury superimposed on hip dysplasia with femoroacetabular impingement ("FAI"). He noted that Claimant had significant right hip dysplasia as well as a cam deformity on her right femoral neck and then had a severe traumatic episode which caused injury to her hip. Dr. Genuario referred Claimant for a CT scan and surgical evaluation with Omer Mei-Dan M.D.

25. On July 26, 2021, Claimant filed an Amended Application for Hearing endorsing, *inter alia*, penalties against Respondents under §8-43-304(1), C.R.S., §8-43-305, C.R.S., and WCRP Rule 5-6(A) from June 15, 2021, ongoing for Respondents alleged failure to issue benefits in a timely manner. Claimant also alleged penalties under §8-43, 304(1), §8-43-305, C.R.S. and WCRP Rule 6-8 beginning February 1, 2021 and ongoing, for Respondents alleged failure to comply with applicable rules which provide TTD benefits may not be suspended, modified or terminated except pursuant to the provisions of the WCRP rule, or an order from the Director or an ALJ.

26. On July 30, 2021, claimant returned to AFC and was seen by Michael Noce, M.D. Dr. Noce noted Claimant has a labrum tear in the right hip and both doctors wanted to proceed with surgery. Dr. Noce did not place Claimant at MMI, noting Claimant would be scheduled for right hip surgery soon.

27. On August 16, 2021, Dr. Genuario recommended injections and physical therapy as a conservative option, or hip preservation surgery.

28. Claimant presented to Dr. Mei-Dan on August 26, 2021. Claimant reported that she had been experiencing right hip pain since a work incident during which an individual drove a shopping cart into her right hip. Dr. Mei-Dan noted Claimant had a known history of hip dysplasia but reported no prior right hip pain. Based on his examination and imaging, Dr. Mei-Dan diagnosed Claimant with symptomatic right hip pain due to hip dysplasia. He recommended Claimant undergo a total hip replacement or periacetabular osteotomy ("PAO"). Dr. Mei-Dan explained Claimant's hip dysplasia condition and noted that a labral tear is rarely the root of the problem, and typically occurred secondary to an underlying abnormality in the shape and mechanics of the hip joint.

29. On September 10, 2021, Timothy O'Brien, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Claimant reported being struck on the right side with a shopping cart that pushed into her right hip and the front of her thighs. Based on his physical examination and review of the medical records, Dr. O'Brien concluded that the extent of Claimant's work-related injuries resulting from the work incident included bilateral shin contusions and abrasions, which had healed. Dr. O'Brien noted that Dr. Johnston's January 18, 2021 documented that Claimant's abrasions and contusions had healed as of that date with no swelling or ecchymosis on exam and normal range of motion. Dr. O'Brien opined that Claimant returned to her pre-injury level of function on or before January 18, 2021 and did not require further medical treatment as of that date.

30. Dr. O'Brien explained that his physical examination did not evidence any sequelae of the shin injuries, noting fully healed wounds, no swelling, and full range of motion of the knees and ankles. He noted normal exams of Claimant's legs, low back and hips. Dr. O'Brien opined that the medical documentation refutes Claimant's contention that she injured her low back and right hip, noting Claimant did not seek treatment for two weeks, and did not report back or hip complaints at her first or second examinations. Dr. O'Brien further opined Claimant's delayed onset of pain and low back and right hip complaints are a manifestation of her personal health and secondary gain. He concluded that Claimant's congenital hip dysplasia and labrum degeneration are pre-existing. Dr. O'Brien opined that it is "virtually impossible" Claimant tore her labrum as a result of the July 29, 2020 work incident and did not complain of pain. He further opined that the mechanism of injury would not have produced a labral tear. Dr. O'Brien opined Claimant reached MMI on or before January 18, 2021 with no permanent impairment.

31. On November 1, 2021, Dr. Johnston replied to a letter from Respondents' counsel inquiring about his opinion on Dr. O'Brien's IME assessment of Claimant's medical

history. Dr. Johnston opined that there could be a significant component of PTSD with Claimant's work injury, but agreed that her injuries as initially documented did not corroborate with her extensive hip pain and diagnosis of which she was referred for surgery.

32. Claimant continues to receive treatment from her ATP, Dr. Johnston. As of the date of hearing, there is no evidence Claimant has been placed at MMI an ATP.

33. Claimant credibly testified at hearing. Claimant testified that she had right hip pain when she presented to AFC on August 13, 2020. Claimant testified she was under the impression Dr. Johnston did not want to help her get better due to his poor bedside manner after the January 18, 2021 visit. Claimant testified that to her knowledge she has never been placed at MMI by any of her treating physicians nor has she ever seen a medical record indicating she is at MMI. Claimant testified she would like to proceed with the recommended surgeries so she can get back to work and get her life back. Claimant testified she stopped working for a different employer, on or around August 14, 2021. Claimant is not currently working. Claimant testified her unemployment benefits ended on September 2, 2021 and she is not currently receiving unemployment benefits.

34. Claimant has not received any TTD/TPD benefits for lost wages incurred on or after February 1, 2021.

35. Claimant testified she has not returned to her pre-injury level of function physically or mentally. Claimant testified she experiences anxiety, panic attacks, nightmares and is taking medication to deal with these symptoms. The medicine is being administered via the workers compensation carrier. Claimant has sensitivity issues in the right shin and her right hip is in constant pain.

36. No Final Admission of Liability, Application for Hearing, or DIME Application has been filed by Respondents.

37. Claimant proved by a preponderance of the evidence right hip treatment, including the right hip surgeries recommended by Drs. Genuario and Mei-Dan, is causally-related to her July 29, 2020 work injury and reasonably necessary to cure or relieve its effects. It is more probable than not the July 29, 2020 work injury aggravated, accelerated or combined with Claimant's pre-existing degenerative right hip condition, producing disability and the need for medical treatment.

38. Claimant proved by a preponderance of the evidence she is entitled to temporary indemnity benefits from February 2, 2021, ongoing. Claimant has yet to be placed at MMI for her July 29, 2020 work injury. Claimant's work injury, including injury to her right hip, resulted in disability, which caused Claimant actual wage loss.

39. Claimant failed to prove Respondents should be subject to penalties.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable for medical treatment that is causally-related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015). A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

As found, Claimant proved it is more probable than not medical treatment for her right hip, including the surgeries recommended by Drs. Genuario and Mei-Dan, is related to her July 29, 2020 work injury and reasonably necessary to cure and relieve Claimant of the effects of the work injury. Claimant did not solely report a mechanism of injury to her shins. At Claimant's initial evaluation on August 13, 2020, Claimant reported being struck with a shopping cart on her right side and upper right thigh. Although the next evaluation did not document hip complaints or examination, a subsequent evaluation on September 3, 2020 specifically documented right hip complaints and findings. At that time, Claimant was diagnosed with a right hip strain which was noted to be consistent with the injuries Claimant received to her lower extremities as a result of the work injury. While the right hip was not mentioned at each subsequent evaluation leading up to Dr. Johnston's initial evaluation on January 18, 2021, right hip complaints, findings and/or diagnoses were noted on at least two other evaluations prior to January 18, 2021. Level II physician Dr. Reinhard specifically noted right hip findings on his examination and credibly assessed Claimant with a right hip contusion and sprain. Dr. Reinhard recommended Claimant undergo a right hip MRI and/or orthopedic evaluation. He assigned a provisional 21% permanent impairment rating of the right hip, denoting his opinion that Claimant's right hip condition is work-related.

Although Dr. Johnston agreed with Dr. O'Brien that Claimant's injuries as initially documented did not corroborate with her current degree of hip pain and diagnosis, Dr. Johnston acknowledge there was some prior mention of right hip complaints. He did not place Claimant at MMI and instead ordered a right hip MRI and orthopedic evaluation. Dr. Genuario credibly opined that Claimant's work injury resulted in an acute injury superimposed on her pre-existing hip dysplasia. Dr. Mei-Dan assessed Claimant with symptomatic right hip pain due to hip dysplasia. There is no evidence Claimant was experiencing hip issues or limitations prior to the work injury. Claimant credibly testified that since the work injury, she has experienced consistent right hip pain and limitations. Claimant has required right hip treatment and received recommendations to undergo right hip surgery to relieve her pain. Claimant's pre-existing history of a degenerative right hip condition does not preclude a determination that her disability and need for treatment is not work-related. The credible and persuasive opinions of Drs. Reinhard, Genuario and Mei-Dan, as supported by Claimant's credible testimony and the medical records,

establish that it is more likely than not the work injury aggravated, accelerated, or combined with Claimant's pre-existing right hip condition, resulting in disability and the need for treatment. Accordingly, Respondents are liable for the recommended right hip surgeries and other causally-related, reasonably necessary medical treatment for the right hip.

Temporary Indemnity Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

Section 8-42-106(1), C.R.S., provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

As found, Claimant proved by a preponderance of the evidence she is entitled to temporary indemnity benefits from February 2, 2021 and ongoing. Claimant has continued to sustain wage loss since such time as a result of disability caused by the July 29, 2020 work injury. As of the date of hearing, there is no evidence Claimant has been placed at MMI by her ATP, nor is there evidence that any other circumstances resulting in termination of TTD or TPD have occurred. The stipulation entered into by the parties specifically provided that Claimant retained eligibility to receive future indemnity benefits if applicable. Claimant remains on work restrictions as a result of the work injury and sustained wage loss. As Claimant's work injury caused a disability lasting more than three work shifts, resulting in Claimant leaving work and sustain full or partial wage loss, Claimant is entitled to temporary indemnity benefits from February 2, 2021 and ongoing, until terminated by operation of law.

Penalties

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Section 8-43-305, C.R.S. provides that each day during which any employer or insurer fails to comply with any lawful order of an administrative law judge, the director, or the panel or fails to perform any duty imposed by articles 40 to 47 of this title 8 constitute a separate and distinct violation.

WCRP Rule 5-6(A) provides that benefits awarded by order are due on the date of the order. After all appeals have been exhausted or, in cases where there have been no appeals, insurers shall pay benefits within thirty days of when the benefits are due. WCRP Rule 5-6(B) provides that temporary disability benefits awarded by admission are due on the date of the admission and the initial payment shall be paid so that the claimant receives the benefits not later than five (5) calendar days after the date of the admission.

WCRP Rule 6-8(A) provides that temporary disability benefits may not be suspended, modified or terminated except pursuant to the provisions of Rule 6-8; or pursuant to an order from the Director or pursuant to an order of the Office of Administrative Courts.

As found, Claimant failed to prove Respondents are subject to penalties in this matter. ALJ Cannici ordered Claimant was entitled to temporary indemnity benefits from August 27, 2020 through February 1, 2021. Respondents were not required to pay the benefits ordered by ALJ Cannici at the time due to Respondents filing a timely appeal. During the appeal process and prior to any order issued on appeal, the parties entered into a stipulation regarding the amount of temporary indemnity benefits owed for the temporary disability period ordered by ALJ Cannici. Respondents then filed a GAL on July 15, 2021 admitting for the stipulated amount of temporary disability benefits for the period of disability ordered by ALJ Cannici. Respondents were required to begin paying Claimant such benefits no later than five calendar days after the date of GAL. Respondents subsequently withdrew their appeal of ALJ Cannici's order. Claimant received the payment of temporary disability benefits in the agreed upon amount for the disability period ordered by ALJ Cannici. Claimant did not specify when she received the payments, nor was any other evidence introduced into the record indicating Respondents were late in issuing such payments.

ALJ Cannici specifically ordered Claimant was entitled to benefits through February 1, 2021. No order or admission was offered as evidence indicating that, prior to this order, Claimant was awarded temporary disability benefits from February 2, 2021 ongoing. As discussed, Respondents properly paid Claimant the temporary indemnity benefits owed as ordered by ALJ Cannici, agreed upon by the parties, and admitted to by Respondents. The very issue of Claimant's entitlement to temporary indemnity benefits for February 2, 2021 and ongoing was endorsed as an issue for hearing before this ALJ and is addressed herein on its' merits. As, pursuant to the Act, WCRP, ALJ Cannici's order, the approved stipulation of the parties, and the GAL, Respondents' were not required to pay Claimant temporary disability benefits subsequent to February 2, 2021, their failure to do so does not constitute an improper suspension, modification or termination of benefits, or any other violation warranting penalties.

ORDER

1. Claimant proved by a preponderance of the evidence medical treatment for her right hip, including the surgeries recommended by Drs. Genuario and Mei-Dan, are causally-related to her July 29, 2020 work injury and reasonably necessary to

cure or relieve its effects. Respondents are liable for the costs of the recommended right hip surgery and other reasonably necessary and related right hip treatment.

2. Claimant proved by a preponderance of the evidence she is entitled to temporary indemnity benefits from February 2, 2021, ongoing until terminated by operation of law.

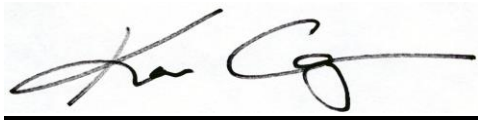
3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Claimant's claim for penalties against Respondents is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 23, 2022



Kara R. Cayce
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

WORKERS' COMPENSATION NO. 5-134-649-001

ISSUES

The issues set for determination were:

- Did Claimant prove by a preponderance of the evidence that her need for shoulder surgery is reasonable, necessary and causally related to her industrial injury.

PROCEDURAL HISTORY

A Summary Order was issued on July 23, 2021. Following a Status Conference that was held on July 27, 2021, an Amended Summary Order was issued on August 3, 2021. Pursuant to § 8–42–503(3), C.R.S. (2020), the Amended Summary Order issued by the ALJ ordered Respondents to pay for a review of the plain x-ray and MRI films by a board-certified radiologist, who was asked to prepare a written report. James Piko, M.D. was the radiologist who conducted the review and prepared the report. Claimant requested a full Order on or about August 16, 2021.

Dr. Piko subsequently issued a report with regard to the x-rays and MRI-s taken of Claimant's right arm and shoulder, which was filed with the Court on September 24, 2021. The record was then closed and this Order follows.

FINDINGS OF FACT

1. Claimant was sixty-seven (67) years old (D.O.B. 7/27/53) as of the date of injury.

2. Claimant's medical history was significant in that she was treated for right shoulder pain prior to the injury. On June 2, 2017, Claimant underwent a right scapula x-ray for distal medial scapular pain that had been going into her right shoulder in the past month with no known injury.

3. Claimant began working for Respondent-Employer in February of 2018. Her job duties included working in shipping and receiving, putting merchandise in order, stocking product.

4. On June 5, 2018, a right shoulder x-ray was taken after Claimant fell. The radiologist's impression was: mild superior migration of the humeral head with respect to the glenoid; subacromial space narrowing at 6 mm and mild acromioclavicular and glenohumeral degenerative changes. Claimant was noted to have swelling, pain, tenderness by Cristen Mazzella, M.D. at Kaiser Permanente.

5. Claimant was seen for a follow-up evaluation at Kaiser on February 21, 2019 for shoulder pain. She was noted to be doing home exercises and referred for physical therapy ("PT").

6. Claimant testified she injured her shoulder when she fell at work in November 2019. She testified that she did not pursue a workers' compensation claim because she could not afford to go on workers' compensation benefits and take time off. Claimant testified she advised her boss of the injury.

7. On December 5, 2019, Claimant was evaluated at Kaiser after she was injured when she fell on ice (two weeks before) while getting the mail. Claimant was evaluated by Pamela Clift, P.A. at Kaiser and noted in the questionnaire that this was not related to "third party liability-workers' compensation. The exact location of this fall was not identified, however, the ALJ concluded it was not at work.

8. An x-ray of her right shoulder revealed an articular fracture of the humeral head; mild osteoarthritis of the glenohumeral joint; unremarkable acromioclavicular joint, probable rotator cuff tear, with an associated small degenerative bone spur arising from the anterior inferior aspect of the acromium and degenerative subcortical systic and sclerotic bone changes in the superior aspect of the greater tuberosity. Claimant was prescribed oxycodone and a Fentanyl patch.

9. An x-ray was taken of Claimant's right shoulder on January 6, 2020, which showed no interval changes since the previous study (December 11, 2019). The x-ray showed osteoarthritis and narrowing of the subacromial space consistent with rotator cuff pathology and a probable tear. The ALJ found these x-rays were objective evidence of degenerative changes in the right shoulder.

10. Claimant returned to Kaiser on January 29, 2020 and February 20, 2020, related to the right shoulder fracture and reported ongoing shoulder pain and weakness. Claimant was working on her motion and trying to use her left arm as much as possible, instead of her right arm. The ALJ inferred that the osteoarthritis and rotator cuff tear shown in the x-rays were the cause of shoulder pain and weakness.

11. The ALJ found the records from Kaiser before August 2020 documented Claimant's treatment for pain in the right shoulder. The x-rays showed degenerative changes in Claimant's right shoulder, including a probable torn rotator cuff. The x-rays also showed an articular fracture which was the result of trauma from the fall which occurred in November 2019.

12. Claimant denied that she had problems with her shoulder 2-3 months before her work injury. The Kaiser records showed Claimant was complaining of pain in her shoulder six months before the work injury.

13. There was no evidence in the record that Claimant had restrictions related to her prior shoulder injury. Claimant testified she was able to perform all of her job duties before August 2020, including stocking and reaching overhead. No physician recommended shoulder surgery before August 2020.

14. On August 2, 2020, Claimant was injured while working as a sales associate for Employer. She was attacked by a shoplifter and thrown to the ground. Claimant landed on her right side between two flower beds. The ALJ found Claimant injured her neck, shoulder, hips and head. This was a significant injury. Claimant's Employer offered to take her to the emergency department, but Claimant declined to go because she feared catching COVID.

15. Claimant was evaluated by Tiffany Knudsen, P.A. in the Emergency Department at Kaiser Permanente on August 3, 2020. She was complaining of hip and shoulder pain. PA Knudsen noted a hematoma and tenderness to palpation along the IT band bilaterally, with no midline spinal tenderness. Claimant had tenderness to palpation on the right pelvis, as well as scapular winging. Tenderness to palpation was present on the proximal and distal humerus. X-rays taken of the right shoulder showed no acute osseous abnormality, but mild glenohumeral osteoarthritis was present. There was a loss of the acromial humeral distance consistent with a large rotator cuff tear.

16. On August 14, 2020, Claimant was evaluated by Diana Halat, N.P. at Concentra. She had pain in her neck, head, both thighs and right shoulder. On examination, Claimant's right shoulder had tenderness in the AC joint, with no crepitus and no warmth. NP Halat's assessment was: assault, cervical sprain, initial encounter; shoulder dislocation, right, initial encounter; sprain, lumbar, initial encounter; sprain hip/thigh, unspecified laterality, initial encounter. Claimant was prescribed acetaminophen and referred to Cary Motz, M.D. (orthopedic surgeon), as well as for PT. The report was countersigned by Sophia Rosebrook, D.O., who also signed the WCM 164.

17. Claimant was evaluated by Dr. Motz on August 18, 2020, who evaluated her right shoulder. Pain was noted when Claimant abducted and reached across her chest, with Dr. Motz noting significant crepitus in the shoulder. Claimant's range of motion ("ROM") was 100° forward flexion, 0° of abduction, 20° external rotation and 70° of abduction. Dr. Motz' impression was: rotator cuff tear; possible glenohumeral arthritis. Dr. Motz did not have Claimant's X-rays from Kaiser at the time of the evaluation and an MRI was ordered.

18. Claimant returned to Concentra on August 19, 2020 and was evaluated by Kathy Okamatsu, N.P. At that time, she had pain in the head, right shoulder, bilateral hips, both thighs, neck and lower back. Bruising was noted on her legs. N.P. Okamatsu's assessment was the same as the evaluation on August 14, 2020. Claimant was noted to have attended one PT visit and was not cleared for a return to work.

19. On August 21, 2020, Claimant underwent an MRI of the right shoulder. The films were read by Munib Sana, M.D., whose impression was: ruptured and retracted long head biceps tendon; complete tear of the supraspinatus tendon, with significant retraction; high-grade partial tearing of the subscapularis tendon, with severe muscle atrophy; moderate grade interstitial tearing of the interior half of the infraspinatus tendon; high riding humeral head with acromial remodeling; moderate-sized joint effusion with synovitis. Dr. Sana stated those findings were age indeterminate and the ALJ inferred Dr. Sana was offering no opinion as to whether the findings were acute v. chronic, but severe muscle atrophy was present.

20. Claimant returned to Dr. Motz on September 2, 2020. Dr. Motz reviewed the MRI, which he said showed a massive retracted supraspinatus and infraspinatus tear, with significant atrophy. (It was unclear whether Dr. Motz reviewed the actual MRI and x-ray films.) He stated there was a significant loss of the acromiohumeral distance with remodeling of the head and some degenerative changes of glenohumeral joint. Dr. Motz' impression was: acute-on-chronic right massive rotator cuff tear; rotator cuff arthropathy. This description was persuasive to the ALJ.

21. Dr. Motz opined that clearly Claimant had a long-standing rotator cuff tear given the significant remodeling that was noted on the MRI, which was exacerbated with this fall. Dr. Motz performed a subacromial steroid injection at that time. Dr. Motz also noted Claimant had begun PT to work on her function, but there would limitations due to the chronic rotator cuff tear and arthropathy.

22. On September 3, 2020, a General Admission of Liability ("GAL") was filed on behalf of Respondents. The GAL admitted for medical and temporary total disability benefits.

23. Dr. Motz re-evaluated Claimant on September 29, 2020, at which time she reported no significant change following the steroid injection. She was making progress with PT. Dr. Motz‘ impression was the same as the prior appointment. He believed that Claimant would need a reverse total shoulder arthroplasty and characterized this as a chronic issue. Dr. Motz opined that the need for surgery was not related to the work injury two months ago and released Claimant from his care. There was no evidence Dr. Motz saw Claimant after that time. The ALJ inferred that Dr. Motz' opinion was that the surgery was reasonable and necessary, but not related to the industrial injury.

24. Claimant was evaluated by Nathan Faulkner, M.D. on October 2, 2020. At that time, she complained of persistent pain in the right shoulder, especially reaching across her body. She had not worked since the injury and denied any antecedent shoulder pain or dysfunction. This was not an accurate report of her prior medical history by Claimant. There was no evidence Dr. Faulkner had Claimant's prior treatment records from Kaiser at this evaluation.

25. Dr. Faulkner noted the MRI of August 21, 2020 showed a full-thickness tear of the supraspinatus and anterior infraspinatus retracted to the glenoid. There was a high-grade partial thickness tearing of the subscapularis with a large effusion. Grade 2 atrophy of the supraspinatus and subscapularis was present. Dr. Faulkner opined Claimant would benefit from an arthroscopic rotator cuff repair, as she had already ruptured her proximal biceps. In this report, Dr. Faulkner did not offer an opinion on relatedness or causation.

26. A surgery request was made by Dr. Faulkner on or about October 6, 2020. Authorization was requested for a right shoulder arthroscopy with debridement, subacromial decompression, rotator cuff repair, possible subscapular repair.

27. Respondents denied the request for authorization of the surgery.

28. Claimant was examined by John Sacha, M.D. on November 23, 2020. At that time, Dr. Sacha reviewed the MRI of the cervical spine, which showed straightening of her cervical lordosis and some mild disc degeneration at C5-6. On examination, cervical paraspinal spasm was noted, along with segmental dysfunction in the mid to lower cervical spine on the right side, with pain on extension, as well as extension rotation to the right. The examination of the right shoulder showed diminished range of motion and pain with Hawkins and Neer testing.

29. Dr. Sacha's impression was: cervical facet syndrome; history of rotator cuff tear; anxiety with adjustment disorder. Dr. Sacha misidentified the surgery proposed for Claimant-reverse arthroplasty. Dr. Sacha was concerned that Claimant was still wearing a shoulder sling and there was a high risk of Claimant developing adhesive

capsulitis/worsening cervical symptoms due to prolonged use of a sling. Dr. Sacha was going to contact Dr. Faulkner to discuss discontinuing the sling.

30. Claimant returned to Dr. Sacha on December 14, 2020, at which time Claimant had cervical paraspinal spasm and segmental dysfunction was noted. Crepitus with ROM pain was noted with Hawkins and Neer testing. Dr. Sacha recommended right C4-7 facet injections.

31. On December 28, 2020, Dr. O'Brien performed an IME at the Respondents' request and concluded that Claimant had degenerative changes in her right shoulder, as evidenced by a high-riding humeral heard. Dr. O'Brien opined that this was an incurable condition, with symptoms of crepitus or pain that can wax and wane. These symptoms would progressively worsen until a reverse total shoulder arthroplasty is needed. Dr. O'Brien stated that the pre-injury MRI findings were consistent with a longstanding rotator cuff tear, including the findings of the high riding humeral head, re-mottling of the undersurface of the acromion, glenohumeral joint arthritic changes, moderate to severe subscapularis atrophy associated with fatty atrophy. He believed the August 2, 2020 assault was a temporary aggravation and she reached MMI on or before September 3, 2020, which was not a credible opinion to the ALJ.

32. Dr. O'Brien opined that the surgery Claimant required was a reverse total shoulder arthroplasty. This opinion about what procedure was required was consistent with Dr. Motz' opinion. Dr. O'Brien did not believe the arthroscopic surgery would succeed, which would potentially make a reverse total shoulder arthroplasty more difficult.

33. Sander Orent, M.D. was present as a medical chaperone during Dr. O'Brien's IME with Claimant. On January 5, 2021, Dr. Sander Orent drafted a Rebuttal to Dr. O'Brien's IME report. Dr. Orent disagreed with Dr. O'Brien's description of Claimant's functionality prior to the August 2, 2020 injury. Dr. Orent also disagreed with Dr. O'Brien's description of Claimant's current shoulder symptoms. Dr. Orent opined that Claimant suffered a major injury to her right shoulder on August 2, 2020 and that Claimant's need for right shoulder surgery was causally related to her injury on August 2, 2020. The ALJ noted Dr. Orent did not evaluate Claimant.

34. Dr. Faulkner testified by way of an evidentiary deposition that was taken on March 1, 2021. Dr. Faulkner was qualified as an expert in the field of orthopedic surgery and Level II-accredited. Dr. Faulkner testified that 60-70% of his practice is performing shoulder surgeries. Dr. Faulkner stated he reviewed the actual films of Claimant's right shoulder x-ray and MRI and noted that Claimant had a "full thickness tear of the supraspinatus, as well as infraspinatus and she had a high-grade partial tearing of her subscapularis, as well as proximal biceps rupture.

35. Dr. Faulkner said he believed that the findings were acute in a nature. However, Dr. Faulkner did not have Claimant's prior records from Kaiser Permanente to review and she denied any prior injuries when he evaluated her. Dr. Faulkner said that Claimant's rotator cuff tear was acute because she only had a mild amount of atrophy of the rotator cuff. Dr. Faulkner disagreed with the radiologist's reading of the August 21, 2020 MRI and stated the findings of severe muscle atrophy were wrong. Dr. Faulkner was well-qualified and his expertise in the area of shoulder surgery was persuasive to the ALJ. His opinion was hurt by his lack of review of the prior records from Kaiser.

36. Dr. Faulkner recommended Claimant undergo shoulder arthroscopy and rotator cuff repair surgery. Dr. Faulkner stated he recommended this type of surgery because of the acute traumatic nature of the rotator cuff tear and size. Dr. Faulkner said surgery was required to repair the structures in the shoulder. Dr. Faulkner also testified that Claimant had failed conservative treatment in the form of physical therapy and injections.

37. The ALJ found Dr. Faulkner did not discuss how potential contraindications would be addressed. Dr. Faulkner testified the criteria surgeons looked at to see if someone needed a replacement versus rotator cuff repair was the amount of humeral head subluxation versus how high-riding the humeral head was relative to the glenoid. He did not believe Claimant had mild humeral head migration. Dr. Faulkner agreed that in patients with more advanced cases of humeral head migration, these patients will not do well with rotator cuff repair that a reverse shoulder replacement was required.

38. Claimant testified the pain she felt in her right shoulder was worse after the August 2, 2020 fall. Claimant said she wanted to have the surgery recommended by Dr. Faulkner. Claimant was a credible witness when describing her pain.

39. On or about September 21, 2021, Claimant's medical images were reviewed by Dr. Piko, who prepared a report detailing his findings. Dr. Piko reviewed x-rays of the right shoulder from June 5, 2018 which showed osteopenia, a high-riding humeral head and acromial enthesophyte formation contributing to high grade subacromial arch stenosis; Impression-advanced osteoarthrosis. The December 5, 2019 x-ray showed persistent chronic osteoarthrosis and a high riding humeral head. The December 11, 2019 x-ray also showed persistent chronic osteoarthrosis and a high riding humeral head. The January 6, 2020 x-ray showed persistent chronic osteoarthrosis and a high riding humeral head; no acute fracture or dislocation.

40. Dr. Piko reviewed the films of the MRI of the right shoulder done on August 21, 2020, that showed a complete tear of the supraspinatus tendon, anterior infraspinatus tear, subscapularis tendon had diffuse partial thickness tearing, along with attenuated biceps tendon. In addition, the superior labrum at the biceps labral anchor tendon was

torn and the inferior axillary capsule had central disruption. The posterior banc of the inferior glenohumeral ligament was torn, consistent with a P-HAGL lesion. Low grade supraspinatus atrophy was present, along with fibrovascular marrow changes at the superior humeral head.

41. Dr. Piko concluded that Claimant had a chronic appearing rotator cuff tear. Cephalad migration of the proximal humeral head and high-grade subacromial arch stenosis was present, along with a large joint effusion and sub- deltoid/subacromial bursa fluid extravasation. A SLAP tear extended into the biceps tendon. While some fibers were present, this was essentially complete interstitial tear and the origin was indistinct. The subscapularis tendon had intermediate grade partial tearing.

42. Dr. Piko opined these findings appeared long-standing and the serial x-rays confirmed chronic rotator cuff tearing/insufficiency, as well as osteoarthrosis. Dr. Piko stated no significant changes over the course of these exams were present from before and after stated injury. Dr. Piko's opinion that Claimant's shoulder had no changes to the rotator cuff over the course of various x-rays and the MRI was persuasive to the ALJ.

43. Claimant proved surgery was required for her shoulder. Claimant did not prove that her need for arthroscopic shoulder surgery was reasonable and necessary and related to her work injury.

44. The ALJ concluded Claimant's need for surgery was the result of several factors, including her prior trauma, the preexisting degenerative changes in the right shoulder and the work injury of August 2, 2020.

45. The ALJ determined it was more probable than not that Claimant required a reverse total shoulder arthroplasty.

46. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the question of whether Claimant was entitled to medical benefits turned on the opinions offered by the expert witnesses.

Medical Benefits

In the case at bench, Claimant had the burden of proof to show that the surgery proposed by Dr. Faulkner was reasonable, necessary and related to the industrial injury. Claimant asserted the injuries sustained when she was assaulted aggravated the underlying condition of her shoulder and necessitated the surgery. Claimant relied upon the expert opinion of Dr. Faulkner to support her claim that the work injury caused the need for surgery. Respondents, while admitting that she was injured on August 2, 2020, averred Claimant's need for surgery was because of the degenerative changes in her shoulder. Respondents cited the opinions of Dr. Motz and Dr. O'Brien in support of their contentions. The question of whether Claimant proved by a preponderance of the evidence that they need for the arthroscopic surgery proposed by Dr. Faulkner was reasonable, necessary and related to her work injury required a review of her medical history, the trauma she sustained on August 20, 2020 and an evaluation of the respective opinions offered by the experts. The ALJ found Claimant did not meet her burden of proof that the surgery proposed by Dr. Faulkner was reasonable and necessary.

As a starting point, the ALJ found Claimant had degenerative changes in her right shoulder for which she required treatment before her August 2020 injury. As determined in Findings of Fact 2, 4-9, Claimant treated at Kaiser in 2017 and 2018 for right shoulder symptoms before her work-related injury. Claimant also required treatment in early 2019 and after a fall in November 2019, she treated in December 2019 and January 2020 at Kaiser for right shoulder issues. (Finding of Fact 7). The medical evidence in the record included x-rays taken in 2019 and 2020, in which the radiologist(s) noted the presence of a probable rotator cuff tear and osteoarthritis in the glenohumeral joint. (Findings of Fact 8-9). The ALJ concluded that these x-rays were objective evidence of degenerative changes in the right shoulder that were present before August 2020. No MRI was done before the 2020 injury.

Based upon the totality of the evidence, the ALJ found that the condition of Claimant's shoulder was the result of a combination of factors. (Finding of Fact 44). This included her degenerative changes and traumatic injury, as documented by the prior x-rays and need for treatment. *Id.* The ALJ also concluded Claimant suffered a significant injury on August 2, 2020 that caused an increase in her shoulder symptoms. (Finding of Fact 14). In this regard, the ALJ credited Claimant's testimony regarding her symptoms. (Finding of Fact 38). It is well-settled that a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* (Colo. App. 1990). Therefore, while Claimant's injuries on August 2, 2020 increased the symptoms in her shoulder, the objective evidence regarding damage to the structures of the shoulder showed that these were similar both before and after her injury. (Finding of Fact 42). As such, Claimant's need for surgery was the result of all of these factors.

In this regard, the ALJ concluded that the evidence admitted at hearing established that surgery was required for Claimant's right shoulder. (Finding of Fact 41). However, there was a conflict between the respective experts (Drs. Faulkner, Motz and O'Brien) as to what procedure needed to be performed and whether the condition of Claimant's shoulder was related to the industrial injury. There were issue with regard to all of these experts' credibility. Under the facts of this case, the ALJ concluded Claimant did not prove that an arthroscopic surgery was reasonable and necessary for her shoulder. The ALJ's reasoning was two-fold. First, the ALJ determined that the surgical procedure required by Claimant was a reverse total shoulder arthroplasty. This was based upon the opinions of Dr. Motz (Finding of Fact 23), as well as Dr. O'Brien (Finding of Fact 32). Both experts concluded that Claimant had a high riding humeral head and this was the surgery she required. *Id.* The ALJ found these opinions more credible as to what surgery Claimant required.

The ALJ's conclusion was further based upon Dr. Faulkner's deposition testimony in which he agreed that if Claimant had a higher riding humeral head, a total shoulder arthroplasty was the procedure she required. (Finding of Fact 36). The ALJ determined the objective radiographic evidence established Claimant indeed had a high riding humeral head. This determination was based upon the final expert opinion of radiologist, Dr. Piko who, after reviewing all the films taken of Claimant's shoulder found, as follows:

- June 5, 2018: a high-riding humeral head; advanced osteoarthrosis.
- December 5, 2019: persistent chronic osteoarthrosis; a high riding humeral head.
- December 11, 2019: persistent chronic osteoarthrosis and a high riding humeral head.

- January 6, 2020: persistent chronic osteoarthrosis and a high riding humeral head.
- August 21, 2020 MRI: complete tear of the supraspinatus tendon; anterior infraspinatus tear, diffuse partial thickness tearing of subscapularis tendon; torn superior labrum at the biceps; torn labral anchor tendon; central disruption of inferior axillary capsule; torn posterior banc of the inferior glenohumeral ligament.

Accordingly, because the medical evidence showed that Claimant had a high riding humeral head, the ALJ concluded the proposed arthroscopic surgery was not reasonable and necessary.

Second, the ALJ also considered the DOWC MTG when evaluating the proposed surgery. Dr. Faulkner recommended a right shoulder arthroscopy with debridement, subacromial decompression, rotator cuff repair possible subscapular repair. (Finding of Fact 25). The Colorado Workers' Division of Workers' Compensation Medical Treatment Guidelines ("DOWC MTG") address surgical indications and potential contraindications for the surgery at issue here:

"Shoulder Injury Medical Treatment Guidelines

10. ROTATOR CUFF TEAR:

a. Description/Definition:

Partial or full-thickness tears of the rotator cuff tendons, most often the supraspinatus, can be caused by vascular, traumatic or degenerative factors or a combination. Further tear classification includes: a small tear is less than 1cm; medium tear is 1 to 3cm; large tear is 3 to 5cm; and massive tear is greater than 5cm, usually with retraction. Partial thickness cuff tears usually occur in age groups older than 30. Full-thickness tears can occur in younger age groups; however, they are uncommon. Approximately 25% of asymptomatic patients over 60 have full thickness tears and between 40-60% have partial thickness tears. About 50% of those with asymptomatic full thickness tears will become symptomatic with tear progression in 2 years. This is more common with larger initial tears. Only about 10% of partial tears increase in size over time. Tendons do not repair themselves over time. The patient usually complains of pain along anterior, lateral shoulder or posterior glenohumeral joint."

…

"f. Surgical Indications:

"Goals of surgical intervention are to restore functional anatomy by re-

> establishing continuity of the rotator cuff, addressing associated pathology and reducing the potential for repeated impingement.
>
> **…**
>
> If no increase in function for a partial tear is observed after 6 to 12 weeks, a surgical consultation is indicated. For full-thickness tears, it is thought that early surgical intervention produces better surgical outcome due to healthier tissues and often less limitation of movement prior to and after surgery. Patients may need pre-operative therapy to increase ROM.
>
> Full thickness tears are uncommon in the 40-60 age groups. About 25% of asymptomatic patients over 60 will have a full thickness tear. Full-thickness tears greater than 1 cm, in individuals less than 60 should generally be repaired. Smaller tears appear to show less likelihood of progression (25%). Only about 10 percent of partial tears increase in size over time. The recovery rate for those with a full thickness tear without surgery is 60%. **In patients over 65 the decision to repair a full rotator cuff tear depends on the length of time since the injury, the amount of muscle or tendon that has retracted, the level of fatty infiltration and the quality of the tendon.** For patients with lack of active elevation above 90 degrees, arthroscopic biceps tenotomy may be effective in returning some elevation. The recurrence rate may be up to 50% in older patients with multiple tendon full-thickness tears. Pseudo paralysis or severe rotator cuff arthropathy are contraindications to the procedure." [Emphasis added]

The foregoing section of the DOWC MTG set forth the criteria to be evaluated in patients over the age of sixty-five when rotator cuff repair is being considered. The evidence in the form of the MRI revealed multiple structures within the shoulder joint, which had tears and degeneration. (Findings of Fact 19, 41-42). As found, Dr. Faulkner's testimony did not address these conditions in detail and also did not address the concern about atrophy, other than to say he disagreed with the radiologist's interpretation as to the degree of muscle atrophy. (Findings of Fact 35-36). Dr. Faulkner did not explicitly articulate how potential contraindications would be addressed. In fact, Dr. Faulkner stated he would have additional x-rays taken and agreed if Claimant had a high riding humeral head, a reverse shoulder arthroplasty was required. (Finding of Fact 36). The contraindications referenced by the DOWC MTG were not addressed and the conclusion that Claimant requires a different surgical procedure provide an additional basis for denial. Accordingly, Claimant's request for medical benefits will be denied.

ORDER

It is therefore ordered:

1. Claimant's request for payment of the arthroscopic repair of the torn rotator cuff in her right shoulder is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have overcome the opinion of the Division Independent Medical Examination (DIME) physician by clear and convincing evidence with respect to maximum medical improvement (MMI).

2. Whether Claimant has proven by a preponderance of the evidence that her total knee replacement is reasonable, necessary, and related to her work injury.

3. Whether Claimant has proven that she is entitled to temporary total disability (TTD) benefits from Respondent.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 64 year-old woman who worked for Employer in November 2019. Her job duties included, but were not limited to, stocking shelves, taking small appliances off of pallets, and handling sales as the cashier. Claimant's typical shift was eight hours, and she was on her feet approximately seven and a half hours per shift. (Tr. 29:9-30:9)

2. On November 25, 2019, Claimant sustained an admitted injury at work when she tripped over a cord and fell on her right knee. Following the fall, Claimant experienced pain and swelling in her right knee, and she had difficulty walking. (Tr. 16:16-24).

3. Claimant credibly testified that prior to her fall at work she had never experienced these symptoms in her right knee. Claimant had never sought medical treatment for her right knee, including never seeing a doctor and never having x-rays or an MRI taken of her knee. (Tr. 31:2-11).

4. Claimant first sought medical treatment two days after her fall, on November 27, 2019, at the emergency room at Lutheran Medical Center (Lutheran). Claimant was treated by David Leventhal, M.D. Claimant reported having steady, non-radiating pain (5/10) since the fall. The pain was worse with weight bearing, and she was having difficulty walking. (Ex. 5).

5. At Lutheran, unilateral x-rays (3 views) were taken of Claimant's right knee. The impression read: "1. Within limitations of osteopenia, no evidence of an acute fracture. 2. Medial compartment predominant osteoarthritis. 3. Moderate-sized joint effusion." Dr. Leventhal concluded that Claimant had "no obvious bone injuries," and he gave Claimant

a knee mobilizer and crutches. He told Claimant to follow-up with her doctor if she continued to have significant pain, and he prescribed her pain medications. (*Id.*).

6. That same day, November 27, 2019, Claimant went to Concentra and was seen by Meryl Wolff, PA-C.[1] Claimant reported her pain level was 2/10. Ms. Wolf diagnosed Claimant with a contusion of the right knee, and released her to full duty work. She advised Claimant to take Ibuprofen and use an Ace wrap. (Ex. B).

7. On Monday, December 2, 2019, Claimant had a follow-up appointment at Concentra. She reported right anterior knee and posterior knee pain after standing for two hours. The pain was worse with flexion of the right knee. Chelsea Rasis, PA-C examined Claimant and strongly recommended physical therapy if there was no improvement in the next few weeks. Claimant had no work restrictions. (*Id.*).

8. Claimant returned to Concentra on December 31, 2019, and reported that her right knee continued to bother her. She had pain in the anterolateral aspect of her right knee. The pain became worse after an hour of walking, or when trying to bend her knee. She experienced swelling in her right knee and distal calf after a normal day of working. Ms. Rasis ordered an MRI of Claimant's right knee. Claimant was restricted to modified duty, where she would be sitting 50% of the time. (*Id.*).

9. At her follow-up appointment on January 7, 2020, Claimant reported tolerating working modified duty. Claimant, however, was having difficulty going up and down stairs, and getting in and out of the shower. Ms. Rasis referred Claimant to physical therapy. Between January 13, 2020 and February 11, 2020, Claimant attended seven physical therapy sessions. (*Id.*).

10. Claimant had an MRI of her right knee on January 14, 2020. The impression read: 1) Severe arthritis of the medial compartment of the knee with full-thickness chondral loss and evidence of eburnation; 2) Diffuse tearing of the body and posterior horn of the medial meniscus and the remnant of the anterior horn is extruded from the joint; 3) Moderate arthritis of the lateral compartment of the knee; 4) Tendinosis of the popliteus tendon; 5) Degeneration of the fibular collateral ligament; 6) The anterior cruciate ligament (ACL) is diffusely torn, and may be a chronic injury as there is no tibial torsion-type bone injury; 7) Degeneration of the posterior cruciate ligament; 8) Arthritis of the patellofemoral joint; 9) Quadriceps and patellar tendinosis; and 10) A bone lesion in the medial femoral metaphysis consistent with an enchondroma. (Ex. 6).

11. Claimant's ATP, Dr. Villavicencio, referred her to an orthopedic specialist. Claimant saw John Papilion, M.D. on February 20, 2022 for a consultation. Dr. Papilion specifically noted that Claimant "tripped over a cord and fell directly on her right knee and had a ***twisting injury***." (emphasis added) He goes on to say Claimant "vehemently

[1] Authorized treating physician (ATP) Theodore Villavicencio, M.D. was the supervising physician.

denie[d] any previous problem with her right knee [and] she has no left-sided symptoms." (Ex. 8).

12. Dr. Papilion reviewed the MRI and explained it confirmed degenerative changes in the medial compartment of Claimant's right knee with a complex tear of the mid body and posterior horn of the medial meniscus with extrusion. He also noted the moderate degenerative changes in the lateral compartment and what appeared to be a complete tear of the ACL. Dr. Papilion's assessment was "likely acute anterior cruciate ligament tear, right knee, with probable complex medial meniscus tear and underlying moderately severe degenerative arthritis." He explained that injection therapy may provide temporary relief, but his recommendation was a right total knee arthroplasty (TKA). (*Id.*).

13. At her follow-up appointment with Dr. Papilion on February 27, 2020, Claimant explained she did not want to start with surgery, and instead opted for a Synvisc injection. (Ex. 8).

14. Respondents retained Adam Farber, M.D. to conduct a Rule 16 records review. Dr. Farber opined that "[b]ased upon a reasonable degree of certainty, there is no evidence of an acute ACL injury causally related to the industrial injury." He also opined that Claimant's "osteoarthritis represents a chronic, degenerative and pre-existing condition that is not causally related to the November 25, 2019 industrial injury." Dr. Farber concluded that right TKA surgery was not reasonable, necessary or causally related. (Ex. H). On March 3, 2020, Respondents denied authorization for a right TKA based upon Dr. Farber's Rule 16 review. (Ex. 13).

15. Claimant returned to Concentra for a follow-up appointment on March 6, 2020. She reported difficulty carrying anything weighing greater than five pounds, and pushing or pulling a heavy cart. Claimant reported that she had been wearing a brace as needed. Ms. Rasis advised Claimant to refrain from further physical therapy. (Ex. 7).

16. Claimant continued treating with Dr. Villavicencio. On March 29, 2020, Claimant was released to full work duty with no restrictions. (Ex. B).

17. Claimant credibly testified that Employer continued to accommodate her previous work restrictions up until the time she was laid off, even though she had been released to full duty work. Respondents presented no evidence to controvert Claimant's testimony. (Tr. 35:1-8)

18. On April 30, 2020, Dr. Papilion again recommended that Claimant undergo the right TKA, particularly in light of the fact that she was not responding to conservative treatment. He recommended, however, that Claimant obtain a second opinion. (Ex. 8)

19. Claimant received a Synvisc injection in her right knee from Dr. Failinger at Advanced Orthopedic and Sports Medicine Specialists on June 2, 2020. Claimant was also prescribed metformin, amlodipine, aspirin, Aleve, and Tylenol for the pain. (Ex. 9).

On June 30, 2020, Claimant saw Dr. Papilion and told him that she only received two weeks' worth of relief from the Synvisc injection. (Ex. 8).

20. Claimant saw William Ciccone, M.D., an orthopedic specialist, for a second opinion. Dr. Ciccone examined Claimant on July 21, 2020. Claimant again denied any issues or restrictions with her right knee prior to the industrial injury. Dr. Ciccone noted Claimant had significant degenerative changes within her knee joint, which he believed caused her symptoms. He further explained that it was difficult to tell from the MRI whether the ACL tear with meniscal tearing was acute or chronic. Dr. Ciccone opined "given the significance of these degenerative changes, I do not believe that any surgical intervention other than a knee replacement would be beneficial to the patient." (Ex. E).

21. Under diagnostic studies, Dr. Ciccone noted, "radiographs – standing views, AP lateral, Merchant, and Rosenberg views show significant degenerative changes in bilateral knees." (Ex. E).

22. Claimant continued treating with Dr. Villavicencio. At her September 25, 2020 appointment, Dr. Villavicencio noted in the medical record that he was unclear regarding the status of an approval for the right TKA, and would follow up with the adjuster. At Claimant's December 10, 2020 appointment, Dr. Villavicencio again noted that he tried to contact the adjuster. (Ex. B).

23. Dr. Villavicencio placed Claimant at Maximum Medical Improvement (MMI) on February 23, 2021, because "no further treatment options besides the TKA are indicated, therefore, she is at MMI" and he gave her a lower extremity impairment rating of 9%, which he converted to a 4% whole person impairment rating. (Ex. C).

24. Respondents filed a Final Admission of Liability on April 30, 2021, consistent with Dr. Villavicencio's report. (Ex. A)

25. Claimant requested a DIME, and Martin Kavelik, D.O., conducted the DIME on August 26, 2021. Under "Scope of Exam" Dr. Kavelik noted he was asked to "address her right knee and consider MMI, impairment and apportionment." (Ex. 4).

26. Dr. Kavelik reviewed Claimant's medical records, including the January 14, 2020 MRI. Dr. Kavelik examined ***both*** of Claimant's knees. He noted that Claimant could ambulate without the brace, but she strongly favored her right knee with a limp. Dr. Kavelik diagnosed Claimant with a right knee contusion, right ACL tear (unknown age), right meniscus tear (probable work relatedness), and right knee osteoarthritis. (*Id.*).

27. Dr. Kavelik opined that Claimant was not at MMI because a right TKA was necessary. He concluded that Claimant suffered an industrial injury that affected her ADLs. Dr. Kavelik further opined Claimant had severe underlying arthritis, "but the injury has pushed her to a point of permanent impairment with the only surgical option being a total knee replacement." Additionally, Dr. Kavelik stated, at the end of his MMI discussion that if Claimant "chooses not to have surgical intervention, she would be at MMI." Dr.

Kavelik issued a lower extremity rating of 5%, which he converted to a 2% whole person impairment rating. (*Id.*).

28. Claimant credibly testified that she wants surgical intervention, and wants to have a right TKA. (Tr. 33:24-34:2).

29. Sometime on or around October 22, 2021, American Freight, the entity that had purchased Employer, laid off Claimant. (Tr. at 39:19-40:11).

30. Claimant testified that she started received unemployment in the amount of $329.00 per week on or around December 6, 2021. (Tr. at 37:14-24). No wage records were submitted into evidence.

31. At the time Claimant was laid off, she had been released to work full duty without any restrictions since March 29, 2020. Claimant credibly testified, however, that from March 29, 2020 until October 22, 2021, she worked full duty and Employer accommodated her prior restriction of only standing 50% of the time. (Tr. at 35:1-25). She further testified that she could not do her original job because she cannot walk or stand for hours, and she cannot lift heavy objects. Claimant credibly testified that she could not have worked for employer without the accommodations. (Tr. 36:1-19).

32. Claimant credibly testified that she has not worked since the time she was laid off. (Tr. 37:14-16).

33. On January 14, 2022, Lloyd J. Thurston, M.D., performed an Independent Medical Examination (IME) of Claimant. In his January 26, 2022 IME report, Dr. Thurston concluded that Claimant reached MMI approximately six months after the fall with no permanent impairment. According to Dr. Thurston, Claimant had "severe tricompartmental osteoarthrosis of both knees." He concluded that Claimant's issues did not stem from her fall but instead resulted from other chronic and degenerative conditions. According to Dr. Thurston, Claimant's mechanism of injury was not consistent with the typical mechanism for an acute ACL tear or an acute medial meniscus tear because, at the time of the injury, Claimant was not weight-bearing on the right leg, and there was no associated torque or twist force applied through her knee. (Ex. J.)

34. Dr. Thurston had several disagreements with Dr. Kalevik's DIME report. Dr. Thurston noted that Dr. Kalevik seemed to be unaware of Claimant's advanced osteoarthritis in her left knee. He also criticized Dr. Kalevik for not reviewing the standing x-rays that Dr. Ciccone reviewed. (*Id.*).

35. Dr. Thurston testified consistent with his report. He emphasized that Claimant's mechanism of injury did not involve twisting, again revealing that it would not result in an injury to the ACL or meniscus that Claimant has sustained. (Tr. 14:4-12).

36. While the ALJ finds Dr. Thurston's testimony regarding the mechanism of injury to be credible, it is not persuasive. At Dr. Papilion's first consultation with Claimant he notes

in the medical record, “she tripped over a cord and fell directly on her right knee and had ***a twisting injury***.” (emphasis added) (Ex. 8).

37. Dr. Thurston also testified that Claimant suffered a temporary exacerbation of a pre-existing condition. He further testified that Claimant is at her baseline. (Tr. 22:17-23:9). The ALJ does not find this testimony persuasive as Claimant credibly testified that she never had knee problems prior to her fall at work. Furthermore, Claimant credibly testified that she cannot do the same work functions as she did prior to the fall.

38. Dr. Thurston further testified that standing x-rays are particularly important because they show the significance of an individual’s osteoarthritis. (Tr. 16:4-10). He testified that Dr. Kalevik did not seem aware of Claimant’s degenerative arthritis, or these x-rays, when he issued his DIME report. *Id.* Dr. Thurston testified that when a doctor focuses solely on an injured knee and attributes all of the degenerative effects to an injury without comparing to the other knee, the physician misses critical information that reveals the degenerative condition in both sides without the presence of the injury. (Tr. 20:20-21:9). The ALJ finds Dr. Thurston’s opinion to be speculative. While there is no evidence that Dr. Kavelik reviewed these x-rays, his DIME report details his examination of ***both*** of Claimant’s knees. Dr. Kavelik’s also noted in his DIME report that Claimant had severe underlying arthritis.

39. Respondents have failed to establish by clear and convincing evidence that Dr. Kavelik’s opinion that Claimant is not at MMI is incorrect. The ALJ finds that Claimant is not at MMI.

40. Claimant credibly testified that she had no known problems with her right knee prior to her fall at work on November 25, 2019. The ALJ credits the testimony of Drs. Papilion, Kavelik, Ciccone, and Villacencio who all agree that Claimant needs a right TKA. The ALJ finds that a right TKA is reasonable, necessary and related to Claimant’s work injury on November 25, 2019.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's MMI Finding

The Act defines MMI as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Based on the totality of the evidence, the ALJ concludes that Respondents have failed to establish, by clear and convincing evidence, that Dr. Kavelik's opinion that Claimant is not at MMI is incorrect. (Findings of Fact (FOF) ¶ 39). Respondent's expert, Dr. Thurston, disagrees with Dr. Kavelik's opinion for multiple reasons. Dr. Thurston believes Claimant's mechanism of injury is inconsistent with an ACL tear. (*Id.* at ¶ 35). Dr. Papilion, an orthopedic specialist, noted that Claimant had a twisting injury when she fell. (*Id.* at ¶ 11). A twisting injury is consistent with a torn ACL. Dr. Thurston also speculates that Dr. Kavelik did not examine both of Claimant's knees, nor did he acknowledge her degenerative arthritis. (*Id.* at ¶ 38). As part of the DIME, however, Dr. Kavelik examined ***both*** of Claimant's knees, not just her right knee as Dr. Thurston speculated. (*Id.* at ¶ 26). Dr. Kavelik also noted Claimant's severe underlying arthritis, but opined that her only surgical option is a right TKA. (*Id.*). Ultimately, Dr. Villavicencio and Dr. Kalevik agreed with both the surgeon, Dr. Failinger, and Dr. Ciccone that Claimant's torn ACL is related to her work injury, and that she will need surgical repair to reach MMI. (*Id.* at ¶ 40).

As found, Claimant lacked symptoms or any prior treatment to her right knee before the industrial accident. Dr. Thurston, however, disregards the temporal correlation of the injury and Claimant's subsequent symptoms. While Dr. Thurston's testimony was credible, it was not persuasive. Dr. Thurston has a conflicting medical opinion from Dr. Kavelik. The evidence does not demonstrate that Dr. Kavelik's DIME opinion is incorrect. Respondents have failed to establish by clear and convincing evidence that Dr. Kavelik's opinion that Claimant is not at MMI is incorrect.

Medical Benefits

Respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant must prove a causal relationship between the injury and the medical treatment for which she is seeking benefits. Even if a work-related injury is compensable, there can still be questions as to whether the claimant's medical treatment is causally related to the work injury, or if proposed treatment is reasonable and necessary.

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, *supra*. The claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

The ALJ credits the opinion of Dr. Kavelik that Claimant's current symptoms and need for a total right knee arthroplasty is a result of the work injury. (FOF at ¶ 40). The ALJ also credits Claimant's testimony that she never experienced any issues with her right knee prior to her fall at work. (*Id.*). Therefore, this ALJ concludes that Claimant has proved by a preponderance of the evidence that she is entitled to the recommended total right knee arthroplasty because it is related to her work injury, and is reasonable and necessary.

TTD Benefits

In order to establish eligibility for disability compensation including TTD benefits, a claimant must show a causal connection between a work-related injury and a subsequent wage loss. § 8-42-103(1), C.R.S.; *Loofbourrow v. Indus. Claims Appeals Office*, 321 P.3d 548, 555 (Colo. App. 2011). A claimant has the burden of showing that their injury contributed to a subsequent wage loss or termination. *See Warttman v. Colorado Springs*, W.C. No. 4-580-205 (April 2, 2004). When an employee returns to their job and the employer accommodates the work restrictions with no wage loss, a Claimant is not entitled to TTD. *See id.* Any subsequent loss of wages or employment must be shown to be a result of the injury. *Salgado v. The Home Depot*, W.C. No. 4-975-288-02 (June 28, 2016).

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that claimant left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* §§ 8¬42-103(a), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997).

As found, Claimant is not at MMI. (FOF at ¶ 39). American Freight purchased Employer, and subsequently laid off Claimant on October 22, 2021. (*Id.* at ¶ 29). No wage records were entered into evidence. Claimant credibly testified that she has not worked since her employment was terminated, and that she is unable to work without accommodations. (*Id.* at ¶ 32). The evidence shows that Claimant was returned to full duty work with no restrictions on March 29, 2020. Claimant credibly testified, however, that Employer, accommodated her work injury by allowing her to sit 50 % of the time. (*Id.* at ¶ 31). As found, this accommodation was in place until the day Claimant's employment was terminated. (*Id.*). Claimant also credibly testified that she is not able to perform her prior job without accommodations as she is not able to walk or stand for hours at a time, and she cannot lift heavy objects. (*Id.*). Claimant has not worked since October 22, 2021. She began receiving unemployment on December 7, 2021 and receives $329 per week. Respondents presented no evidence to controvert Claimant's testimony. (*Id.* at ¶ 30). The ALJ credits Claimant's testimony that employer accommodated her, and she has not been able to work since her termination on October 22, 2021.

As found, Claimant is not at MMI, and she will not be at MMI until she has a TKA. (*Id.* at ¶ 39). As found, the TKA is reasonable, necessary and related to Claimant's work injury. (*Id.* at ¶ 40). Claimant is entitled to TTD from October 23, 2021, and continuing until terminated by law. Any TTD is subject to offsets.

Disfigurement

Claimant endorsed the issue of disfigurement in their response to the Application for Hearing. The issue of disfigurement is reserved and held in abeyance.

ORDER

It is therefore ordered that:

1. Respondents have failed to overcome the DIME opinion of Dr. Kavelik regarding MMI by clear and convincing evidence.

2. Claimant has proved by a preponderance of the evidence that she is entitled to medical expenses for her total right knee arthroplasty.

3. Respondents shall pay for TTD benefits as of October 22, 2021, subject to applicable offsets.

4. The issue of disfigurement has been reserved pending surgical intervention of Claimant's knee.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 23, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reasonable medical treatment necessary to cure and relieve him from the effects of the work injury

3. The parties stipulated that the claimant's average weekly wage (AWW) is $673.08.

4. The parties also stipulated that the claimant has not suffered any wage loss.

FINDINGS OF FACT

1. The employer operates radio stations under the business name TM[Redacted]. The claimant began working for the employer on March 15, 2022. At all times relevant to the current claim, the claimant worked as an account executive in advertising sales at the employer's Grand Junction, Colorado location. The claimant's job duties included obtaining and maintaining advertising customers in the community. He was paid on a commission basis.

2. The claimant's supervisor is NR[Redacted], Market President and Chief Revenue Officer.

3. Latimer House is a shelter that provides emergency services and counseling for victims of domestic violence in Grand Junction, Colorado. Hilltop Community Resources operates Latimer House. Men in Heels is a community fundraising event for Latimer House. Funds collected from Men in Heels go to providing shelter services and case management.

4. The Men in Heels race involves teams of five men that participate in a relay type race while wearing high heels.

5. The employer is not affiliated with Hilltop Community Resources or Latimer House. The employer is not a sponsor of the Men in Heels race.

6. On August 17, 2021, an email was received by the employer from Hilltop Community resources about the 2021 Men in Heels race. Ms. NR[Redacted] relayed this

information to all employees at the employer's Grand Junction location. At that time, nine men worked at that location.

7. The claimant was one of four male employees that volunteered to participate in Men in Heels. The claimant also volunteered to be the "team captain". The claimant did not raise any funds for the fundraising portion of the Men in Heels event.

8. The team decided to dress as zombies for the race. On the day of the race (October 14, 2021), the claimant volunteered to go to a Halloween store and purchase supplies for the zombie theme. The employer provided a prepaid gift card to purchase these items.

9. On October 14, 2021, the claimant and his teammates donned their zombie costumes at the employer's offices and then traveled to the race location. The race was held at the local airport.

10. The claimant and his three teammates participated in their race. As their team had only four participants, the claimant opted to run an additional lap for the fifth leg of the race. By the time the claimant was to run the fifth lap, his team had already "lost" the race. Despite this, the claimant chose to run that fifth lap. When he was reaching the finish line, the claimant lost his balance and fell forward and sustained an injury to his right arm.

11. Video of the race was played during the hearing and entered into evidence as Exhibit H.

12. Ms. NR[Redacted] testified that the Men in Heels is a fun and voluntary event. Ms. NR[Redacted] also testified that the employer gained no benefit from the claimant's participation in the event. Ms. NR[Redacted] credibly testified that there was no pressure placed on the claimant, or any employee, to participate in Men in Heels. In addition, the claimant was not asked or expected to run the fifth and final lap.

13. The claimant testified that he did not feel comfortable participating in the Men in Heels race. The claimant further testified that as a new employee, he felt pressure to participate. The ALJ does not find the claimant's testimony to be credible or persuasive.

14. After his fall, the claimant was initially assessed by a physician that was also present at the race. The claimant was then transported to Community Hospital by Ms. NR[Redacted] and her spouse.

15. At Community Hospital, the claimant was seen by Dr. Rohn McCune. The claimant reported pain in his right elbow. The claimant also reported that he was "running in a race and tripped falling forward on outstretched arms."

16. The claimant was diagnosed with a coronoid fracture, radial head fracture, and dislocation of the right elbow. The claimant underwent surgery on October 15,

2021. Specifically, Dr. Duwayne Carlson performed an open reduction internal fixation (ORIF) procedure on the claimant's right elbow.

17. On October 18, 2021, the claimant began treatment with his authorized treating physician (ATP) Dr. Theodore Sofish, with Grand Valley Occupational Medicine. At that time, the claimant reported that he injured his right elbow when he was participating in a race for a local fundraiser.

18. On November 1, 2021, the respondents filed a Notice of Contest. The reasons listed for the respondents' contest/denial of the claim are identified as "[t]his is not a work related injury, the cause of injury is related to a voluntary participated event."

19. On February 10, 2022, the claimant returned to Dr. Carlson. At that time, the claimant reported he had started to return to his normal activities (including bowling and golf), which caused a flare of pain from his neck, down the shoulder, and to his elbow.

20. On April 14, 2022, the claimant underwent a second surgery. The purpose of that surgery was to remove hardware from his right elbow, to relieve his pain. The cost of the April 14, 2022 surgery was paid for by the claimant's private health insurance.

21. It is undisputed that the claimant suffered an injury at the Men in Heels race on October 14, 2021. The issue before the ALJ is whether the claimant's participation in that event constitutes "employment". The ALJ credits the testimony of Ms. NR[Redacted] over the contrary testimony of the claimant. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an injury arising out of and in the course and scope of his employment with the employer.

22. In reaching this conclusion the ALJ notes that the event, Men in Heels is a fundraising event for Latimer House. The employer is not affiliated with Latimer House or Hilltop Community Services. In addition, the employer did not sponsor the event. The ALJ also notes that the claimant volunteered to participate in the event, to be team captain, and to purchase items for the zombie themed costumes.

23. The event occurred off of the employer's premises and outside of the claimant's normal duties. As a commission employee, the claimant was not compensated for his time at the event. The claimant was not required to participate. The employer derived no benefit from the claimant's participation It was the claimant's decision to participate in the race, and to run the fifth lap.

24. The ALJ finds, as a matter of fact, that the claimant voluntarily participated in the Men in Heels race. The ALJ finds that the Men in Heels race is a voluntary and recreational event. The ALJ finds no persuasive evidence that the claimant was forced or coerced to participate in this voluntary event.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990).

5. Section 8-41-301(1)(b), C.R.S., provides that the right to compensation is subject to the condition that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." Section 8-40-201(8), C.R.S., provides that the term "employment" shall not "include the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." Similarly, Section 8-40-301(1), C.R.S., defines the term "employee" to exclude any person employed by an employer "while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment."

6. In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning as an activity that "has a refreshing effect on either the mind or the

body." Determining whether an activity is "recreational" depends on consideration of the circumstances including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity, and whether the employer stood to benefit from the employee's participation in the activity. The question of whether an activity was "recreational" is one of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (I.C.A.O. Oct. 29, 2003).

7. Determination of whether the claimant's participation in a recreational activity was "voluntary" requires consideration of the claimant's "motive" for participation in the activity. Compensability must be denied if participation in the activity was voluntary, even though the employer promoted, sponsored or supported the activity. When determining whether the claimant's participation was voluntary the ALJ may consider various factors. Those factors include: whether the activity occurred during working hours, whether the activity occurred on or off the employer's premises, whether the employer initiated, organized, sponsored or financially supported the activity[1], whether the employer derived benefit from the activity. *Dover Elevator* Co. *v. Industrial Claim Appeals Office,* 961 P.2d 1141 (Colo. App. 1998). Ultimately, the question of whether the claimant's participation in the recreational activity was voluntary is one of fact for determination by the ALJ. *Kvale v. Infinity Systems Engineering,* W.C. No. 4-588-521 (1.C.A.O. March 23, 2005).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer. The claimant was injured while participating in the voluntary and recreational Men in Heels race. As noted above, Section 8-40-201(8), C.R.S. specifically excludes voluntary recreational activities from employment.

ORDER

It is therefore ordered that the claimant's claim related to an October 14, 2021 injury is denied and dismissed.

Dated May 24, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414

[1] The current version of Section 8-40-201(8) C.R.S. specifically states that employment does not include participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program."

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his August 25, 2015 Workers' Compensation claim based on mistake or error, or change of condition pursuant to §8-43-303(1), C.R.S.

2. Whether Respondents have established by a preponderance of the evidence that additional medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's August 25, 2015 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a vehicle repossession agent. On August 26, 2015 he sustained an admitted bilateral arm injury while trying to lift a dolly bar out of a truck.

2. Claimant initially visited Concentra Medical Centers for bilateral arm pain. On November 29, 2016 Authorized Treating Physician (ATP) Albert Hattem, M.D. reported that Claimant had undergone a comprehensive course of conservative treatment including occupational therapy, massage therapy, acupuncture and injections.

3. On February 14, 2017 Dr. Hattem expressed concerns about Claimant's significant pain behaviors with minimal objective findings and recommended diagnostic testing for Chronic Regional Pain Syndrome (CRPS). Claimant ultimately was diagnosed with upper extremity CRPS after a March 16, 2017 thermogram and May 4, 2017 quantitative sudomotor axon reflex test (QSART) by George Schakaraschwili, M.D. were consistent with left greater than right CRPS. Dr. Schakaraschwili remarked that Claimant might benefit from bilateral stellate ganglion blocks, but Claimant declined them.

4. Dr. Hattem referred Claimant to psychiatrist Ronald Carbaugh, Psy.D. for perceived pain. On April 28, 2017 Dr. Carbaugh reported that Claimant was in an intense emotional state, had a tendency to catastrophize his injury and was angry because his CRPS diagnosis was "missed." Dr. Carbaugh diagnosed adjustment disorder. He recommended biofeedback and cognitive behavioral therapy. Claimant did not follow up with Dr. Carbaugh.

5. On May 24, 2017 Claimant visited John Sacha, M.D. for an examination. Dr. Sacha recommended a trial stellate ganglion block and, if Claimant declined the procedure, he would be placed at Maximum Medical Improvement (MMI). Claimant declined the block.

6. On July 13, 2017 Dr. Hattem placed claimant at MMI. He noted that Claimant was not interested in stellate ganglion blocks or psychological follow-up. Dr.

Hattem assigned a 15% whole person impairment rating and recommended six months of maintenance care to refill and taper Gabapentin.

7. On August 21, 2017 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Hattem's opinions. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

8. On January 17, 2018 Claimant underwent a DIME with David Yamamoto, M.D. Dr. Yamamoto determined that Claimant was not at MMI because he needed to undergo the following: an evaluation by a specialist familiar with spinal cord stimulators; a psychiatric evaluation to help with medication management; a second opinion by a psychologist to address depression and anxiety; and a functional capacity evaluation.

9. Based on Respondents' application to overcome the DIME, the parties conducted a hearing before ALJ Spencer on July 20, 2018. ALJ Spencer determined that Respondents overcame Dr. Yamamoto's opinion and Claimant reached MMI on July 13, 2017 for his physical injuries. He cited surveillance of Claimant from December 2017 noting that "[c]laimant's appearance in the video was incongruous and raises concerns that claimant may be exaggerating the severity of his condition." ALJ Spencer also found that Respondents failed to overcome Dr. Yamamoto's opinion that Claimant was not at MMI for his psychological condition. Even though Claimant had not followed through with Dr. Carbaugh's recommendations, ALJ Spencer gave Claimant the benefit of the doubt that he did not "connect" with Dr. Carbaugh.

10. On September 7, 2018 Respondents filed a General Admission of Liability (GAL), recognized that Claimant was not at MMI for his psychological condition and reinstated Temporary Total Disability (TTD) benefits.

11. ATP Dr. Hattem referred Claimant to psychiatrist Stephen Moe, M.D. and psychologist Joel Cohen, Ph.D. Both doctors recommended Cymbalta. On January 15, 2019, Dr. Moe reported that Claimant was not interested in psychiatric treatment apart from maintenance Cymbalta and had reached MMI for his psychological condition. Having complied with ALJ Spencer's Order and Dr. Yamamoto's DIME treatment recommendations to reach psychological MMI, Respondents returned Claimant to Dr. Yamamoto.

12. Partway through Claimant's treatment, Dr. Hattem changed medical facilities and became unable to treat Workers' Compensation claimants. On January 21, 2019, Dr. Hattem referred Claimant for a transfer of care to either John Sacha, M.D., Kathy McCranie, M.D., or Allison Fall, M.D. Claimant chose Dr. Sacha.

13. On February 6, 2019 Dr. Sacha noted that Claimant had a history of a mild Workers' Compensation repetitive motion injury of the upper extremity that developed into a mild case of CRPS. He also remarked that Claimant had significant psychological dysfunction and preexisting psychological issues. During this first and only visit, Dr. Sacha reported that Claimant became hostile in the office with him, nursing staff, and the office

administrator. Dr. Sacha remarked that Claimant was asked to leave and would not be allowed to return to the clinic.

14. Dr. Yamamoto performed a follow-up DIME and determined that Claimant reached MMI on March 4, 2019 with a 15% whole person permanent impairment. On April 3, 2019 Insurer filed a FAL consistent with Dr. Yamamoto's DIME opinion and acknowledging that Claimant was entitled to reasonable and necessary medical maintenance benefits. Claimant filed an application for hearing seeking to overcome Dr. Yamamoto's follow-up DIME opinion.

15. On June 17, 2019 Claimant visited George Schakaraschwili, M.D. for an evaluation. Dr. Schakaraschwili explained that CRPS can resolve over time and while diagnostic testing "could" be useful to see if Claimant still had CRPS, Claimant was at MMI "whether repeat testing is positive or not." Moreover, he remarked that "[i]f further testing were to confirm CRPS in either the upper or the lower extremities, this would justify maintenance treatment." On August 6, 2020 Dr. Schakaraschwili reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Claimant thus had no signs of lower extremity CRPS other than hypersensitivity to touch.

16. Surveillance video from July 11, 21, 26 and 27, 2019 shows Claimant opening the door with his right hand, opening the door of a car with his right and left hands, using his left arm to raise a water bottle to his mouth, putting on his seat belt, driving a vehicle with both hands, walking without any apparent difficulty, lifting his arm and bending his elbows and getting into a SUV without assistance. September 20, 2018, video shows Claimant walking back and forth with his hands in his pocket, holding a newspaper in his right hand and opening the front door of a house with his right hand.

17. On August 24, 2019 ALJ Turnbow conducted a hearing on Claimant's application to overcome Dr. Yamamoto's follow-up DIME opinion regarding MMI and medical benefits, including stellate ganglion blocks and additional CRPS testing. Claimant also sought reimbursement for prescription medication, including Lyrica and penalties against Insurer for dictating medical care by designating Dr. Raschbacher as the ATP when he accepted a transfer of care after Dr. Hattem left his practice. Claimant asserted that he has "never been at MMI" because on August 18, 2019, nine-days prior to the hearing, he changed his mind and was "willing" to undergo bilateral stellate ganglion blocks that he had declined when placed at MMI.

18. On January 23, 2020 ALJ Turnbow found that Claimant failed to overcome Dr. Yamamoto's DIME opinion that he reached MMI on March 4, 2019. She rejected Claimant's assertion that he was not at MMI because he had changed his mind and wanted to undergo the stellate ganglion blocks he had declined before reaching MMI. ALJ Turnbow noted that no ATP had recommended blocks since MMI. She also rejected Claimant's request for medical benefits including a spinal cord stimulator, CRPS testing and stellate ganglion blocks. ALJ Turnbow denied penalties and reimbursement for Lyrica because it was prescribed by unauthorized physicians outside of the claim. The Industrial Claims Appeals Office affirmed ALJ Turnbow's Order on January 27, 2021 and the claim closed except for maintenance benefits.

19. On August 18, 2020 Respondents filed another FAL. Respondents' acknowledged that Claimant was entitled to receive reasonable, necessary and related medical maintenance treatment.

20. On September 8, 2020 unauthorized physician Daniel Koontz, M.D. prescribed Lyrica to Claimant. However, he did not document why he prescribed Lyrica and made no reference to Claimant's work injury.

21. On October 1, 2020 unauthorized provider David R. Conway, M.D., who identified himself as Claimant's primary care physician, prescribed Lyrica and a wheelchair on October 1, 2020. He recommended that Claimant play billiards to help treat balance issues and anxiety.

22. Unauthorized provider Hani Saeed, DPM from the Red Rocks Foot and Ankle Center, evaluated Claimant on October 22, 2020 for soreness of both feet. Based on Claimant's self-report, Dr. Saeed documented that Claimant "has a history of CRPS of the whole body," "has been experiencing CRPS since 2015," and recently had a ganglion injection to help with his CRPS. He also documented Claimant's subjective claims of improvement. Dr. Saeed did not offer an opinion that Claimant's work-related condition objectively changed or improved.

23. Unauthorized physician Andrew Wendahl, D.O. is an anesthesiologist, trained in pain management, who saw Claimant and his mother on February 24, 2021 for evaluation of what "has been previously diagnosed as a severe spreading case of CRPS in all four extremities." Dr. Wendahl referred Claimant for physical therapy and bilateral staged lumbar stellate blocks for CRPS of the lower limb and to Mental Health Center of Denver for coping with pain.

24. Drs. Koontz, Conway, Saeed and Wendahl are not authorized treating physicians. None of them appear aware that Claimant's work-related diagnosis is mild CRPS of the upper extremities and that he has significant non-work related psychological issues. The preceding physicians did not report that they have reviewed any of Claimant's medical records, including negative CRPS testing for the lower extremities. Moreover, they did not document any of their own CRPS testing, did not discuss whether any treatment they provided was work related, did not contend that Claimant's work related condition has changed since MMI and have not requested authorization for any medical treatment from Insurer.

25. On November 9, 2021 Claimant underwent an independent medical examination with Scott Primack, D.O. After reviewing Claimant's medical records, considering surveillance video and conducting a physical examination, Dr. Primack determined that Claimant does not suffer from CRPS. He specified that a workup of Claimant did not reveal CRPS in the lower extremities and no physical diagnosis would correlate to Claimant's bizarre gait pattern on examination. He reasoned that Claimant suffers from significant psychological issues. In fact, Dr. Primack noted that Claimant has far more non-work-related psychiatric symptoms than work-related issues. He concluded that, "[w]ithout question, [Claimant] is still at MMI."

26. On January 14, 2022 the parties conducted the pre-hearing evidentiary deposition of John Raschbacher, M.D. Dr. Raschbacher noted that he became Claimant's ATP on June 10, 2019. He remarked that Claimant had a diagnosis of upper extremity CRPS at the time and had attained MMI. Although Claimant expressed concerns of spreading CRPS to his lower extremities at a June 11, 2019 visit, there was no evidence that CRPS was expanding. In reviewing CRPS testing performed by Dr. Schakaraschwili on August 6, 2020, Dr. Raschbacher reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Dr. Raschbacher agreed with Dr. Schakaraschwili and also noted that Claimant did not exhibit symptoms of lower extremity CRPS such as allodynia, swelling, abnormal skin coloration or shiny skin during his clinical examinations.

27. Dr. Raschbacher commented that, based on medical literature, most cases of CRPS are not permanent and resolve after 2-3 years. He discussed repeated CRPS testing with Claimant including the upper extremities. However, Dr. Raschbacher perceived that, if the testing was negative, it would not make a difference to Claimant. He testified that additional CRPS testing was not reasonable or necessary for Claimant's work injury because it was unlikely Claimant would accept the negative results. Moreover, Claimant would not let Dr. Raschbacher touch him due to self-reported pain to the slightest touch, but there were no objective findings to suggest a diagnosis of upper or lower extremity CRPS. He attributed Claimant's subjective complaints to pain behavior that could constitute malingering for secondary gain.

28. Claimant obtained two lumbar sympathetic blocks of his right side on February 5, 2021, a stellate ganglion block on his left side on April 9, 2021, and a stellate ganglion block on his right side on April 23, 2021. Dr. Raschbacher testified that none of the preceding blocks were related to Claimant's work injury. He summarized that Claimant's condition has not worsened and no additional medical treatment is reasonable, necessary, or related to the August 5, 2015 work injury.

29. Dr. Primack testified at the hearing in the present matter. He maintained that there has been no change in Claimant's condition since he reached MMI. He commented that Claimant's complaints cannot be correlated with the objective, negative CRPS testing for lower extremity CRPS. Dr. Primack explained that Drs. Saeed, Wendahl and Conway have not diagnosed CRPS based upon anything other than Claimant's subjective complaints and response to stellate ganglion blocks. However, a diagnosis of CRPS is based upon criteria including a clinical examination. He emphasized that Claimant has never been diagnosed with severe, complete body CRPS or lower extremity CRPS and 50% of CRPS conditions resolve over time.

30. Dr. Primack testified that no ATP has prescribed a stellate ganglion block for Claimant since 2017. Moreover, there is no need for a stellate ganglion block for Claimant's work injury and he is not a candidate for a spinal cord stimulator. More generally, Dr. Primack maintained that no further medical treatment is reasonable, necessary or related to Claimant's August 5, 2015 industrial injury and no ATP has recommended additional treatment.

31. Claimant testified at the hearing in this matter. He explained that he continually suffers pain that varies in intensity over time. Claimant noted that he also suffers psychologically in dealing with his intense pain and difficulties moving. He remarked that on April 23, 2021 he underwent stellate ganglion branch block injections regarding his upper extremities. He received some reduction in his CRPS pain symptoms and improved his arm movement. Claimant's father, Richard Laughlin, also commented that Claimant has suffered changing levels of pain since he was diagnosed with CRPS in 2017.

32. Claimant seeks to reopen his claim based on the mistake or error of ALJ Turnbow in denying his request to overcome Dr. Yamamoto's DIME opinion. Claimant claims that he was placed at MMI solely because he initially denied stellate ganglion branch blocks. However, he later stated he wanted to undergo the treatment. He asserts that ALJ Turnbow's determination constituted a mistake because he not only wanted the block, but underwent the procedure and it improved his condition. Claimant remarked that the April 23, 2021 block into his upper extremities reduced his CRPS pain symptoms and improved his arm movement. He thus contends that getting the block completely negated the sole reason he was placed at MMI.

33. On January 27, 2021 the Industrial Claim Appeals Office (ICAO) affirmed ALJ Turnbow's decision that Claimant had failed to overcome Dr. Yamamoto's DIME opinion. The ICAO noted that ALJ Turnbow found that no ATP had requested authorization for Claimant to undergo stellate ganglion blocks. Moreover, Dr. Yamamoto did not recommend stellate ganglion blocks, but instead determined that Claimant was at MMI.

34. ALJ Turnbow's determination did not constitute a mistake or error because neither any ATP nor the DIME physician had requested authorization for Claimant to undergo stellate ganglion blocks. Claimant's decision to subsequently obtain stellate ganglion blocks does not render ALJ Turnbow's determination erroneous. Claimant simply decided, after his claim closed, to pursue treatment outside of the Workers' Compensation system and proceed with stellate ganglion blocks.

35. In *Sadaghiani v. Impressive Cleaners & Laundry*, W.C. No. 4-133-911 (ICAO, Apr. 18, 1997), aff'd *Sadaghiani v. Impressive Cleaners & Laundry*, 97 CA 0820 (Colo. App., Nov. 13, 1997) (not selected for publication) an ATP placed the claimant at MMI after she had refused to appear for multiple medical appointments, A DIME physician agreed that the claimant had reached MMI. Subsequently, the claimant was willing to undergo treatment. However, the ALJ found that the claimant failed to overcome the DIME physician's opinion regarding MMI. The Panel and Court of Appeals, upheld the ALJ's conclusion that the DIME physician's opinion was not overcome by clear and convincing evidence. Regardless of whether further treatment "could have" improved the claimant's condition, the evidence supported the ALJ's finding that the claimant did not demonstrate a willingness to participate in the treatment until a significant time after the determination of MMI. Consequently, the Panel determined there was substantial evidence that the claimant was at MMI as determined by the DIME without regard to whether she needed additional treatment for her neck and psychological conditions.

36. Based on the reasoning of *Sadaghiani*, Claimant here reached MMI on March 4, 2019 regardless of whether he wished to pursue stellate ganglion blocks outside the Workers' Compensation system. Claimant could have chosen to undergo stellate ganglion blocks prior to reaching MMI, but instead waited a significant time after attaining MMI to undergo the treatment. Furthermore, Dr. Raschbacher testified that none of Claimant's blocks were related to his work injury. Drs. Raschbacher and Primack also agreed that no additional medical care, including stellate ganglion blocks, is reasonable, necessary or work related. Accordingly, ALJ Turnbow's decision did not constitute a mistake that justifies reopening Claimant's claim.

37. Claimant contends that his condition has worsened because his CRPS has spread to his lower extremities since he reached MMI on March 4, 2019. He also asserts that, following stellate ganglion blocks in 2021, his condition improved and opened the door to additional work-related treatment modalities. Despite Claimant's contentions', the record reveals that he has failed to demonstrate by a preponderance of the evidence that his condition has changed and he is entitled to additional benefits.

38. The record reflects that Claimant does not suffer from lower body CRPS. Initially, on August 6, 2020 Dr. Schakaraschwili reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Claimant had no signs of lower extremity CRPS other than hypersensitivity to touch. Dr. Raschbacher explained that, although Claimant expressed concerns of spreading CRPS to his lower extremities at a June 11, 2019 visit, there was no evidence that CRPS was expanding. In reviewing the CRPS testing performed by Dr. Schakaraschwili on August 6, 2020, Dr. Raschbacher reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Dr. Raschbacher agreed with Dr. Schakaraschwili and also noted that Claimant did not exhibit symptoms of lower extremity CRPS such as allodynia, swelling, abnormal skin coloration or shiny skin during his clinical examinations. Finally, Dr. Primack maintained that there has been no change in Claimant's condition since he reached MMI. He commented that Claimant's complaints cannot be correlated with the objective, negative CRPS testing for lower extremity CRPS.

39. Claimant obtained medical treatment from Drs. Koontz, Conway, Saeed and Wendahl. However, they are not authorized treating physicians. None of them appear aware that Claimant's work-related diagnosis is mild CRPS of the upper extremities and he has significant non-work related psychological issues. The preceding physicians did not report that they have reviewed any of Claimant's medical records, including negative CRPS testing for the lower extremities. Moreover, they did not document any of their own CRPS testing, have not discussed that any treatment they provided was work related, did not contend that Claimant's work-related condition has changed since MMI and have not requested authorization for any medical treatment from Insurer. Moreover, Dr. Primack explained that Drs. Saeed, Wendahl and Conway have not diagnosed CRPS based upon anything other than Claimant's subjective complaints and response to stellate ganglion blocks. However, a diagnosis of CRPS is based upon specific criteria including a clinical examination. He emphasized that Claimant has never been diagnosed with severe, complete body CRPS or lower extremity CRPS and 50% of CRPS conditions resolve over time.

40. Claimant remarked that on April 23, 2021 he underwent a stellate ganglion branch block injection involving his upper extremities. He received some reduction in his CRPS pain symptoms and improved his arm movement. However, Claimant's testimony that his symptoms subjectively improved after undergoing stellate ganglion blocks from an unauthorized physician outside of the claim is not reliable based on his history of pain behavior as documented in the record. Dr. Raschbacher specifically characterized Claimant's pain behavior as possible malingering for secondary gain. Dr. Primack noted that Claimant has far more non-work-related psychiatric issues than "work-related ones." Moreover, Claimant does not meet the criteria for stellate ganglion blocks. Dr. Primack testified that no ATP has prescribed a stellate ganglion block for Claimant since 2017. He also remarked that there is no need for a stellate ganglion block for Claimant's work injury. Dr. Raschbacher agreed that the blocks were not work-related.

41. Claimant has thus failed to establish that it is more probably true than not that his work related medical condition has changed since he reached MMI on March 4, 2019. The record reveals that his CRPS has not spread to his lower extremities and stellate ganglion blocks through unauthorized physicians have not changed his condition. As Dr. Primack summarized, "[w]ithout question, [Claimant] is still at MMI." Based on a review of the record and persuasive opinions of Drs. Schakaraschwili, Raschbacher and Primack, Claimant's condition has not changed since he reached MMI on March 4, 2019. Consequently, Claimant's request to reopen his claim is denied and dismissed.

42. Respondents have established that it is more probably true than not that additional medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's August 25, 2015 industrial injury. Initially, Insurer filed a FAL acknowledging that Claimant reached MMI on March 4, 2019 with a 15% whole person impairment rating and noting that he was entitled to reasonable and necessary medical maintenance benefits. Because Respondents now seek to terminate all of Claimant's medical maintenance care, they bear the burden of demonstrating that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's August 25, 2015 industrial injury or prevent further deterioration of his condition.

43. The medical records as well as persuasive opinions of Drs. Raschbacher and Primack reflect that additional medical maintenance benefits are no longer reasonable, necessary or related to Claimant's industrial injury. Dr. Raschbacher testified that, based on medical literature, most cases of CRPS are not permanent and resolve after 2-3 years. He discussed repeated CRPS testing with Claimant including the upper extremities. However, Dr. Raschbacher perceived that, if the testing was negative, it would not make a difference to Claimant. He testified that additional CRPS testing was not reasonable or necessary for Claimant's work injury because it was unlikely Claimant would accept the negative results. Moreover, Claimant would not let Dr. Raschbacher touch him due to the self-reporting of pain with the slightest touch, but there were no objective findings to suggest a diagnosis of upper or lower extremity CRPS. Dr. Schakaraschwili also explained that CRPS can resolve over time. Dr. Primack emphasized that Claimant has never been diagnosed with severe, complete body CRPS or lower extremity CRPS and 50% of CRPS conditions resolve over time. He testified that

there is no need for a stellate ganglion block for Claimant's work injury and he is not a candidate for a spinal cord stimulator. More generally, Dr. Primack maintained that no further medical treatment is reasonable, necessary or related to Claimant's August 25, 2015 industrial injury. Furthermore, no ATP has recommended additional treatment.

44. Notably, unauthorized physicians Drs. Koontz, Conway, Saeed and Wendahl did not appear aware that Claimant's work related diagnosis is mild CRPS of the upper extremities and he suffers from significant non-work related psychological issues. The preceding physicians did not document any of their own CRPS testing, have not discussed that any treatment they provided was work related, did not contend that Claimant's work-related condition has changed since MMI and have not requested authorization for any medical treatment from Insurer. The opinions of the unauthorized providers are thus not persuasive. The preceding chronology and persuasive opinions of ATP Dr. Raschbacher and Dr. Primack reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's work injury. Instead, Claimant's continuing symptoms are attributable to his subjective complaints that do not correlate with objective findings as documented in the medical records. Accordingly, Respondents' request to terminate Claimant's medical maintenance benefits as a result of his August 25, 2015 industrial injury is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Reopening

4. At any time within six years of the date of injury, an ALJ may reopen any award on the grounds of fraud, overpayment, error or mistake, or change in condition. §8-43-303(1) C.R.S. Claimant has the burden of proof in seeking to reopen a claim. *Richards v. Indus. Claim Appeals Off.*, 996 P.2d. 756, 758 (Colo. App. 2000).

Error or Mistake

5. Reopening of a closed claim may be granted based on any mistake of fact §8-43-303(1), C.R.S. Error or mistake refers to a mistake of law or fact that demonstrates a prior award or denial of benefits was incorrect. *Renz v. Larimer Cty. School Dist.,* 924 P.2d 1177 (Colo. App. 1996). When a party seeks to reopen based on mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Insurance Co. v. Indus. Comm'n*, 646 P.2d 399, 400 (Colo. App. 1981). When determining whether a mistake justifies reopening the ALJ may consider whether it could have been avoided through the exercise of available remedies and due diligence, including the timely presentation of evidence. *See Klosterman v. Indus. Comm'n*, 694 P.2d 873, 876 (Colo. App.1984). The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. *Cordova v. Indus. Claim Appeals Off.*, 55 P.3d 186, 189 (Colo. App. 2002).

6. As found, Claimant seeks to reopen his claim based on the mistake or error of ALJ Turnbow in denying his request to overcome Dr. Yamamoto's DIME opinion. Claimant claims that he was placed at MMI solely because he initially denied stellate ganglion branch blocks. However, he later stated he wanted to undergo the treatment. He asserts that ALJ Turnbow's determination constituted a mistake because he not only wanted the block, but underwent the procedure and it improved his condition. Claimant remarked that the April 23, 2021 block into his upper extremities reduced his CRPS pain symptoms and improved his arm movement. He thus contends that getting the block completely negated the sole reason he was placed at MMI.

7. As found, on January 27, 2021 the Industrial Claim Appeals Office (ICAO) affirmed ALJ Turnbow's decision that Claimant had failed to overcome Dr. Yamamoto's DIME opinion. The ICAO noted that ALJ Turnbow found that no ATP had requested authorization for Claimant to undergo stellate ganglion blocks. Moreover, Dr. Yamamoto did not recommend stellate ganglion blocks, but instead determined that Claimant was at MMI.

8. As found, ALJ Turnbow's determination did not constitute a mistake or error because neither any ATP nor the DIME physician had requested authorization for Claimant to undergo stellate ganglion blocks. Claimant's decision to subsequently obtain stellate ganglion blocks does not render ALJ Turnbow's determination erroneous. Claimant simply decided, after his claim closed, to pursue treatment outside of the Workers' Compensation system and proceed with stellate ganglion blocks.

9. As found, in *Sadaghiani v. Impressive Cleaners & Laundry*, W.C. No. 4-133-911 (ICAO, Apr. 18, 1997), aff'd *Sadaghiani v. Impressive Cleaners & Laundry*, 97 CA 0820 (Colo. App., Nov. 13, 1997) (not selected for publication) an ATP placed the claimant at MMI after she had refused to appear for multiple medical appointments, A DIME physician agreed that the claimant had reached MMI. Subsequently, the claimant was willing to undergo treatment. However, the ALJ found that the claimant failed to overcome the DIME physician's opinion regarding MMI. The Panel and Court of Appeals, upheld the ALJ's conclusion that the DIME physician's opinion was not overcome by clear and convincing evidence. Regardless of whether further treatment "could have" improved the claimant's condition, the evidence supported the ALJ's finding that the claimant did not demonstrate a willingness to participate in the treatment until a significant time after the determination of MMI. Consequently, the Panel determined there was substantial evidence that the claimant was at MMI as determined by the DIME without regard to whether she needed additional treatment for her neck and psychological conditions.

10. As found, based on the reasoning of *Sadaghiani*, Claimant here reached MMI on March 4, 2019 regardless of whether he wished to pursue stellate ganglion blocks outside the Workers' Compensation system. Claimant could have chosen to undergo stellate ganglion blocks prior to reaching MMI, but instead waited a significant time after attaining MMI to undergo the treatment. Furthermore, Dr. Raschbacher testified that none of Claimant's blocks were related to his work injury. Drs. Raschbacher and Primack also agreed that no additional medical care, including stellate ganglion blocks, is reasonable, necessary or work related. Accordingly, ALJ Turnbow's decision did not constitute a mistake that justifies reopening Claimant's claim. *See Indus. Claim Appeals Off. v. Cutshall*, 433 P.2d. 765 (Colo. 1967) (noting that ALJ may consider whether the mistake could have been rectified by the timely exercise of a party's rights prior to closure of the claim, not where it is used as a method of circumventing the ordinary adjudicative processes available prior to closure).

Change in Condition

11. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Off.,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Off.,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

12. As found, Claimant contends that his condition has worsened because his CRPS has spread to his lower extremities since he reached MMI on March 4, 2019. He also asserts that, following stellate ganglion blocks in 2021, his condition improved and opened the door to additional work-related treatment modalities. Despite Claimant's contentions, the record reveals that he has failed to demonstrate by a preponderance of the evidence that his condition has changed and he is entitled to additional benefits.

13. As found, the record reflects that Claimant does not suffer from lower body CRPS. Initially, on August 6, 2020 Dr. Schakaraschwili reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Claimant had no signs of lower extremity CRPS other than hypersensitivity to touch. Dr. Raschbacher explained that, although Claimant expressed concerns of spreading CRPS to his lower extremities at a June 11, 2019 visit, there was no evidence that CRPS was expanding. In reviewing the CRPS testing performed by Dr. Schakaraschwili on August 6, 2020, Dr. Raschbacher reported that a Thermogram, QSART and autonomic tests were all negative for lower extremity CRPS. Dr. Raschbacher agreed with Dr. Schakaraschwili and also noted that Claimant did not exhibit symptoms of lower extremity CRPS such as allodynia, swelling, abnormal skin coloration or shiny skin during his clinical examinations. Finally, Dr. Primack maintained that there has been no change in Claimant's condition since he reached MMI. He commented that Claimant's complaints cannot be correlated with the objective, negative CRPS testing for lower extremity CRPS.

14. As found, Claimant obtained medical treatment from Drs. Koontz, Conway, Saeed and Wendahl. However, they are not authorized treating physicians. None of them appear aware that Claimant's work-related diagnosis is mild CRPS of the upper extremities and he has significant non-work related psychological issues. The preceding physicians did not report that they have reviewed any of Claimant's medical records, including negative CRPS testing for the lower extremities. Moreover, they did not document any of their own CRPS testing, have not discussed that any treatment they provided was work related, did not contend that Claimant's work-related condition has changed since MMI and have not requested authorization for any medical treatment from Insurer. Moreover, Dr. Primack explained that Drs. Saeed, Wendahl and Conway have not diagnosed CRPS based upon anything other than Claimant's subjective complaints and response to stellate ganglion blocks. However, a diagnosis of CRPS is based upon specific criteria including a clinical examination. He emphasized that Claimant has never been diagnosed with severe, complete body CRPS or lower extremity CRPS and 50% of CRPS conditions resolve over time.

15. As found, Claimant remarked that on April 23, 2021 he underwent a stellate ganglion branch block injection involving his upper extremities. He received some reduction in his CRPS pain symptoms and improved his arm movement. However, Claimant's testimony that his symptoms subjectively improved after undergoing stellate ganglion blocks from an unauthorized physician outside of the claim is not reliable based on his history of pain behavior as documented in the record. Dr. Raschbacher specifically characterized Claimant's pain behavior as possible malingering for secondary gain. Dr. Primack noted that Claimant has far more non-work-related psychiatric issues than "work-related ones." Moreover, Claimant does not meet the criteria for stellate ganglion blocks.

Dr. Primack testified that no ATP has prescribed a stellate ganglion block for Claimant since 2017. He also remarked that there is no need for a stellate ganglion block for Claimant's work injury. Dr. Raschbacher agreed that the blocks were not work-related.

16. As found, Claimant has thus failed to establish by a preponderance of the evidence that his work related medical condition has changed since he reached MMI on March 4, 2019. The record reveals that his CRPS has not spread to his lower extremities and stellate ganglion blocks through unauthorized physicians have not changed his condition. As Dr. Primack summarized, "[w]ithout question, [Claimant] is still at MMI." Based on a review of the record and persuasive opinions of Drs. Schakaraschwili, Raschbacher and Primack, Claimant's condition has not changed since he reached MMI on March 4, 2019. Consequently, Claimant's request to reopen his claim is denied and dismissed.

Medical Maintenance Benefits

17. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to *Grover* they can seek to terminate their liability for ongoing maintenance medical treatment. *See* §8-43-201(1), C.R.S.; *Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.* However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn*, W.C. No. 4-754-838 (ICAO, Oct. 1, 2013); *see* §8-43-201(1), C.R.S. (stating that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.") Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. *See In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

18. As found, Respondents have established by a preponderance of the evidence that additional medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's August 25, 2015 industrial injury. Initially, Insurer filed a FAL acknowledging that Claimant reached MMI on March 4, 2019 with a 15% whole person impairment rating and noting that he was entitled to reasonable and necessary medical maintenance benefits. Because Respondents now seek to terminate all of Claimant's medical maintenance care, they bear the burden of demonstrating that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's August 25, 2015 industrial injury or prevent further deterioration of his condition.

19. As found, the medical records as well as persuasive opinions of Drs. Raschbacher and Primack reflect that additional medical maintenance benefits are no longer reasonable, necessary or related to Claimant's industrial injury. Dr. Raschbacher testified that, based on medical literature, most cases of CRPS are not permanent and resolve after 2-3 years. He discussed repeated CRPS testing with Claimant including the upper extremities. However, Dr. Raschbacher perceived that, if the testing was negative, it would not make a difference to Claimant. He testified that additional CRPS testing was not reasonable or necessary for Claimant's work injury because it was unlikely Claimant would accept the negative results. Moreover, Claimant would not let Dr. Raschbacher touch him due to the self-reporting of pain with the slightest touch, but there were no objective findings to suggest a diagnosis of upper or lower extremity CRPS. Dr. Schakaraschwili also explained that CRPS can resolve over time. Dr. Primack emphasized that Claimant has never been diagnosed with severe, complete body CRPS or lower extremity CRPS and 50% of CRPS conditions resolve over time. He testified that there is no need for a stellate ganglion block for Claimant's work injury and he is not a candidate for a spinal cord stimulator. More generally, Dr. Primack maintained that no further medical treatment is reasonable, necessary or related to Claimant's August 25, 2015 industrial injury. Furthermore, no ATP has recommended additional treatment.

20. As found, notably, unauthorized physicians Drs. Koontz, Conway, Saeed and Wendahl did not appear aware that Claimant's work related diagnosis is mild CRPS of the upper extremities and he suffers from significant non-work related psychological issues. The preceding physicians did not document any of their own CRPS testing, have not discussed that any treatment they provided was work related, did not contend that Claimant's work-related condition has changed since MMI and have not requested authorization for any medical treatment from Insurer. The opinions of the unauthorized providers are thus not persuasive. The preceding chronology and persuasive opinions of ATP Dr. Raschbacher and Dr. Primack reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's work injury. Instead, Claimant's continuing symptoms are attributable to his subjective complaints that do not correlate with objective findings as documented in the medical records. Accordingly, Respondents' request to terminate Claimant's medical maintenance benefits as a result of his August 25, 2015 industrial injury is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

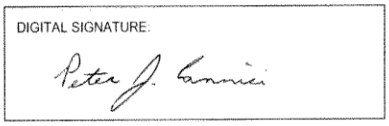
1. Claimant's request to reopen his August 25, 2015 Workers' Compensation claim based on mistake or error, or change of condition is denied and dismissed.

2. Respondents' request to terminate Claimant's medical maintenance benefits is granted.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 25, 2022.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the surgery he underwent with Kerry G. Perloff, M.D. at Kaiser Permanente on October 14, 2021 was authorized as emergency care.

2. Whether Claimant has established by a preponderance of the evidence that the follow-up care he received with Dr. Perloff at Kaiser was authorized.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to a disfigurement award for his left forearm pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant began working with Employer's police department during June 2016 and transferred to the fire department as a paramedic in January 2019. Shortly before the end of his shift on the morning of October 6, 2021 Claimant suffered an admitted industrial injury. While carrying two large medical kits he felt a "small pop" in his left elbow. Because his shift had ended for the week, Claimant did not immediately report the injury and decided to see if his condition improved during his time off. Claimant engaged in normal day-to-day activities during October 7-9, 2021.

2. On Sunday October 10, 2021 while working in his garage, Claimant extended his arm, lifted it and heard a loud pop that necessitated medical care. Claimant sought treatment at Kaiser Permanente at 2:11 p.m. The Kaiser records reflect that its urgent care department was not an emergency room, emergency department or hospital. The urgent care department characterized the acuity of Claimant's condition as "4 Non-urgent." He was examined by Donna M. Benton, PA. Claimant's examination revealed no edema, deformity, or bony tenderness and he displayed good grip strength, full extension of the elbow, and was neurovascularly intact. PA Benton diagnosed Claimant with left arm pain and a left biceps strain. He underwent an x-ray, received 12 tablets of oxycodone and was discharged to return home. PA Benton recommended "follow-up with the acute orthopedic clinic in the next week or so."

3. After Claimant left the Kaiser offices on October 10, 2021, he reported an on-the-job injury to his supervisor. On Monday, October 11, 2021 he completed a First Report of Injury for Employer.

4. On October 11, 2021 Claimant was evaluated by Employer's designated Authorized Treating Physician (ATP) Jennifer Briggs, PA, at Rocky Mountain Medical Group (RMMG). PA Briggs obtained a patient history and conducted a physical examination. She recommended an MRI of the left upper arm and elbow. PA Briggs assessed the injury as moderate, acute and uncomplicated.

5. On October 12, 2021 Claimant returned to Kaiser where Christopher R. Jockel, M.D. diagnosed a left distal bicep tendon tear. One of the indicators for the repair was whether the date of injury was less than 28 days. Dr. Jockel recommended an MRI to confirm whether the distal biceps tear was partial or complete. He noted "we discussed ongoing treatment options based on this injury including operative and non-operative care."

6. After his visit with Kaiser on October 12, 2021, Claimant had a 45 minute to one hour conversation with Respondent's adjuster BO[Redacted]. Claimant explained that Mr. BO[Redacted] informed him that he could not approve anything until he received medical records from Kaiser. Claimant testified that Mr. BO[Redacted] stated that if it was him "he would do surgery" and not wait for the Workers' Compensation system to determine compensability. Claimant told Mr. BO[Redacted] he had an MRI scheduled through Kaiser.

7. On October 14, 2021 Claimant underwent a repair of his left elbow distal biceps rupture with Kerry G. Perloff, M.D. at Kaiser.

8. Claimant testified that he was very unhappy with the care he had received from ATP Briggs at RMMG. His care was subsequently transferred to Annu Ramaswamy, M.D.

9. Claimant spoke with Mr. BO[Redacted] on October 21, 2021. Mr. BO[Redacted] informed him that his claim had been accepted.

10. On October 21, 2021 Claimant visited ATP Dr. Ramaswamy for an evaluation. He told Dr. Ramaswamy that an MRI had been ordered at RMMG on October 11, 2021. Claimant remarked that "he was told" that the repair had to occur quickly or might not be successful. Dr. Ramaswamy noted that Claimant decided to see Dr. Perloff "on his own." One week later, Dr. Ramaswamy noted Claimant "states that he will see Dr. Perloff probably in 2 weeks as he is noticing more pain."

11. On December 9, 2021 Dr. Ramaswamy noted "patient states the surgeon recommended an EMG which he will have on Monday 12-13-21." Dr. Ramaswamy concluded his notes with the observation that "the case has been a difficult [one] as the patient is treating with Kaiser and treating with our clinic."

12. On January 13, 2022 Dr. Ramaswamy placed Claimant on modified duty effective January 31, 2022 noting that he could return to full duty once he was "able to lift heavy weight without noticing significant neuropathic pain." On January 28, 2022 Dr. Ramaswamy tested Claimant's capacity to lift and determined he was safe to return to work.

13. On February 2, 2022 Claimant represented to Dr. Perloff that Dr. Jockel said he needed surgery to be completed within 10-14 days after the MRI. Claimant requested documentation of the conversation he had with Dr. Jockel. Dr. Perloff acquiesced to Claimant's request on February 7, 2022. The note specifically provides:

> [Claimant] was seen at Kaiser Orthopedics on October 12/2021. Exam and MRI at that time showed a left distal biceps tendon rupture. Recommendations were made with distal biceps tendon repair in the next week or 2 as the longer post injury 1 waits the more difficult the repair is as the tendon will retract proximally. Surgery was performed on 10/14/2021 with a distal biceps tendon repair.

None of the records submitted by the parties contain any statements from Dr. Jockel regarding the need for surgery within a specific time frame.

14. On March 31, 2022 Dr. Ramaswamy determined that Claimant had reached Maximum Medical Improvement (MMI). He recounted the following:

> The patient was concerned that treatment through the Worker's Compensation system was taking some time and he was concerned about a ruptured biceps tendon. The patient apparently was told that the repair has to occur quickly or the repair may not be successful. He indicates today that he was told that if the repair did not occur within 7-10 days, then he could lose 40% of his arm function. A graft would then have to be performed and he would never reach 100% functional level. Therefore, he started treating with Kaiser.

15. On April 15, 2022 the parties conducted the pre-hearing evidentiary deposition of Dr. Ramaswamy. Dr. Ramaswamy noted that he treated Claimant for a torn biceps tendon. He remarked that Claimant's torn biceps tendon was not a life-threatening, acute emergency. Dr. Ramaswamy commented that patients "rarely" visit an urgent care facility in an emergent situation. Instead, they tend to go directly to an emergency room.

16. Dr. Ramaswamy explained that a distal bicep rupture at the left elbow is not a life-threatening emergency that requires surgery at the moment it is diagnosed. Rather, surgery should be timely. When considering repairing a distal bicep rupture, the surgery should be performed within two to three weeks of the tear in order to prevent complete retraction of the tendon. Dr. Ramaswamy commented that Claimant was first diagnosed with a seven millimeter tendon retraction on October 12, 2021. Surgery should thus have been performed within two to three weeks of the October 12, 2021 diagnosis of the retraction. Even under a "conservative" estimate, surgery should have been performed within two to three weeks of the October 6, 2021 injury.

17. Dr. Ramaswamy testified that, if Claimant had followed through with RMMG, an MRI would likely have been obtained within one week. Surgery would likely have been performed within two to three weeks of the injury. A delay of two to three weeks between a bicep tendon rupture and surgical repair is "in that window of being reasonable to get a good result." Even if surgery had been delayed more than three weeks, the rupture could have been repaired using a different procedure.

18. Dr. Ramaswamy could have requested a stat MRI that would have been performed within 24 hours. Alternatively, an MRI could have been requested through normal channels with Respondent. In his experience, Respondent never gave him problems with delayed authorization and usually approved MRI requests within five days.

19. Dr. Ramaswamy explained that he never referred Claimant to a Kaiser physician. He wanted Claimant to continue following up with Dr. Perloff, but never made a formal referral. Dr. Ramaswamy specified that it did not make sense to refer Claimant to a different surgeon who did not perform the surgery. Furthermore, he would not defer to Dr. Perloff regarding physical therapy because of a potential lack of communication with the Kaiser system. Finally, assuming the presence of a medical emergency, Kaiser treatment would have ended with the surgery.

20. BO[Redacted] testified at the hearing in this matter. He has been employed by Respondent to handle Workers' Compensation claims for the last six years and has a total of 16 years of experience. Mr. BO[Redacted] recalled speaking with Claimant on the afternoon of October 12, 2021. Claimant was anxious to have surgery with Kaiser. Mr. BO[Redacted] said he understood Claimant's position, but advised that Kaiser was not an authorized provider for Respondent. He also noted that Kaiser does not handle Workers' Compensation injuries. According to Mr. BO[Redacted], Claimant said that he was proceeding with surgery and the attorneys could sort things out. He specifically recalled the statement because it is unusual for an injured worker to make a reference to litigation in the first call on a claim.

21. On October 12, 2021 Mr. BO[Redacted] also mentioned to Claimant that there was an MRI scheduled outside of Kaiser for October 16, 2021. Claimant told Mr. BO[Redacted] not to worry about it because he was proceeding with surgery at Kaiser. Mr. BO[Redacted] also told Claimant that surgery could be scheduled within one to two weeks, but Claimant replied that he wanted to continue with the Kaiser surgeon.

22. Mr. BO[Redacted] noted that Claimant's claim was not under a full denial, but was instead denied pending investigation. Under a denial pending investigation, conservative medical care, including MRIs, are usually paid. Mr. BO[Redacted] strives to respond to prior authorization requests within a few days.

23. Claimant testified that he was of the understanding and belief that the distal biceps tendon had to be repaired on a timely basis. Moreover, Claimant explained that he was never told by Mr. BO[Redacted] that his Kaiser treatment would not be covered, he never discussed retaining an attorney during the October 12, 2021 phone conversation, he took the effort to get the Kaiser records to Mr. BO[Redacted], and he was not notified until October 21, 2021 that the claim had been accepted.

24. Claimant underwent surgery to his left upper extremity on October 14, 2021. The upper extremity surgery resulted in a single, unraised, horizontal, thin white scar of between 2½ and three inches in length and approximately ¼ inch in width across the bicep. Despite much of Claimant's arm being covered in tattoos, the scar is visible and

constitutes serious permanent disfigurement about a part of the body normally exposed to public view. Claimant is thus entitled to a disfigurement award in the amount of $600.00.

25. Claimant has failed to demonstrate that it is more probably true than not that the surgery he underwent with Dr. Perloff at Kaiser on October 14, 2021 was authorized as emergency care. Initially, Claimant testified that he suffered an injury near the end of his work shift on October 6, 2021. He did not immediately report the injury and engaged in normal day-to-day activities at home on October 7-9, 2021. On October 10, 2021 Claimant extended his arm, lifted it and heard a loud pop, which necessitated medical care. Claimant did not visit an emergency room or hospital. Rather, he sought medical attention through a Kaiser urgent care facility. While Claimant reported pain and discomfort, the x-rays were negative, he displayed good grip strength, was able to fully extend his elbow, and had no physical signs of edema or deformity that suggested a need for medical care. Kaiser assessed his condition as "non-urgent."

26. After being discharged by PA Benton at Kaiser, Claimant documented and reported his injury to Employer. He then scheduled follow-up appointments with Kaiser, attended an initial appointment with PA Briggs at RMMG and had a lengthy conversation with Mr. BO[Redacted]. Claimant met with Dr. Jockel at Kaiser on October 12, 2021. Contrary to Claimant's testimony, Dr. Jockel noted that he discussed operative and non-operative treatment options. On October 14, 2021 Claimant underwent a repair of his left elbow distal biceps rupture with Dr. Perloff at Kaiser.

27. Based on the issue of timeliness in repairing his biceps rupture, Claimant asserts the existence of an emergency. Claimant specifically argues that surgery needed to be performed within 10-14 days from the date of injury. On February 2, 2022 Claimant represented to Dr. Perloff that Dr. Jockel said he needed surgery to be completed within 10-14 days after the MRI. Claimant requested documentation of the conversation he had with Dr. Jockel and Dr. Perloff acquiesced to Claimant's request on February 7, 2022. Claimant contends that, because he could not have had the surgery within 10-14 days of October 6, 2021 in the Workers' Compensation system, the Kaiser surgery was authorized under the emergency doctrine.

28. In contrast, Dr. Ramaswamy explained that a distal bicep rupture at the left elbow is not a life-threatening emergency that requires surgery at the moment it is diagnosed. Rather, surgery should be timely. When considering a distal bicep rupture repair, the surgery should be performed within two to three weeks of the tear in order to prevent complete retraction of the tendon. Dr. Ramaswamy commented that Claimant was first diagnosed with a seven millimeter tendon retraction on October 12, 2021. Surgery should thus have been performed within two to three weeks of the October 12, 2021. Even under a "conservative" estimate, surgery should have been performed within two to three weeks of the October 6, 2021 incident according to Dr. Ramaswamy.

29. Dr. Ramaswamy testified that, if Claimant had followed through with authorized provider RMMG, an MRI would likely have been obtained within one week. Surgery would then likely have been performed within two to three weeks of the injury. A delay of two to three weeks between a bicep tendon rupture and surgical repair is "in that

window of being reasonable to get a good result." Even if surgery had been delayed more than three weeks, the rupture could have been repaired using a different procedure.

30. On October 12, 2021 Mr. BO[Redacted] also mentioned to Claimant there was an MRI scheduled outside of Kaiser for October 16, 2021. Claimant told Mr. BO[Redacted] not to worry about it because he was proceeding with surgery at Kaiser. Mr. BO[Redacted] also told Claimant that surgery could be scheduled within one to two weeks, but Claimant replied that he wanted to continue with the Kaiser surgeon.

31. Although a claimant is not required to seek authorization before obtaining medical treatment from an unauthorized medical provider in a medical emergency, the record reveals that Claimant's need for biceps rupture repair surgery did not constitute a *bona fide* emergency. The medical records and persuasive testimony of Dr. Ramaswamy and Mr. BO[Redacted] reflect that Claimant did not immediately require surgery through Kaiser rather than proceeding through the Workers' Compensation system. In reviewing the particular facts and circumstances of the present claim, Claimant could have obtained surgery within two to three weeks of his injury by proceeding through authorized provider RMGG. Accordingly, because Claimant's surgery through Kaiser was unauthorized, his request for reimbursement for the costs of emergency treatment is denied and dismissed.

32. Claimant has failed to establish that it is more probably true than not that the follow-up care he received with Dr. Perloff at Kaiser Permanente was authorized. Dr. Ramaswamy testified that he did not refer Claimant to Dr. Perloff or any provider at Kaiser. He specifically sent Claimant for physical therapy with a provider outside the Kaiser network. Furthermore, Dr. Ramaswamy prescribed medication rather than leaving prescriptions to other providers. He also refused to defer to Dr. Perloff regarding physical therapy because of a potential lack of communication with the Kaiser system. In the absence of medical records from Kaiser, Dr. Ramaswamy exercised his independent medical judgment in terms of directing physical therapy and the imposition of work restrictions.

33. Dr. Ramaswamy acknowledged that he wanted Claimant to continue following up with Dr. Perloff, but never made a formal referral. He specified that it did not make sense to refer Claimant to another surgeon who did not operate on Claimant. Dr. Ramaswamy summarized the situation in his December 9, 2021 note when he stated "the case has been a difficult [one] as the patient is treating with Kaiser and treating with our clinic." The record thus reflects that Dr. Ramaswamy did not refer Claimant to Kaiser physicians for treatment.

34. Furthermore, Mr. BO[Redacted] recalled speaking with Claimant on the afternoon of October 12, 2021. Claimant was anxious to have surgery with Kaiser. Mr. BO[Redacted] noted he understood Claimant's position, but advised that Kaiser was not an authorized provider. He also remarked that Kaiser does not handle Workers' Compensation injuries. Although Claimant explained that he was never told by Mr. BO[Redacted] that his Kaiser treatment would not be covered, the persuasive testimony of Dr. Ramaswamy and Mr. BO[Redacted], as well as the medical records, reflect that Claimant's treatment through Kaiser was not authorized. Because Kaiser was not an

authorized provider, Claimant is not entitled to reimbursement for any expenses. Accordingly, Claimant's request for reimbursement for medical costs through Kaiser is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Benefits

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

Emergency Doctrine

5. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the ATP. However, medical services provided in a *bona fide* emergency are an exception to the requirement to obtain prior authorization. *Sims v. Indus. Claim Appeals Off.,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a *bona fide* medical emergency, it is dependent on the particular facts and circumstances of the claim. *In re Timko,* WC 3-969-031 (ICAO, June 29, 2005); *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004). Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 384 (Colo. App. 2006).

6. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the surgery he underwent with Dr. Perloff at Kaiser on October 14, 2021 was authorized as emergency care. Initially, Claimant testified that he suffered an injury near the end of his work shift on October 6, 2021. He did not immediately report the injury and engaged in normal day-to-day activities at home on October 7-9, 2021. On October 10, 2021 Claimant extended his arm, lifted it and heard a loud pop, which necessitated medical care. Claimant did not visit an emergency room or hospital. Rather, he sought medical attention through a Kaiser urgent care facility. While Claimant reported pain and discomfort, the x-rays were negative, he displayed good grip strength, was able to fully extend his elbow, and had no physical signs of edema or deformity that suggested a need for medical care. Kaiser assessed his condition as "non-urgent."

7. As found, after being discharged by PA Benton at Kaiser, Claimant documented and reported his injury to Employer. He then scheduled follow-up appointments with Kaiser, attended an initial appointment with PA Briggs at RMMG and had a lengthy conversation with Mr. BO[Redacted]. Claimant met with Dr. Jockel at Kaiser on October 12, 2021. Contrary to Claimant's testimony, Dr. Jockel noted that he discussed operative and non-operative treatment options. On October 14, 2021 Claimant underwent a repair of his left elbow distal biceps rupture with Dr. Perloff at Kaiser

8. As found, based on the issue of timeliness in repairing his biceps rupture, Claimant asserts the existence of an emergency. Claimant specifically argues that surgery needed to be performed within 10-14 days from the date of injury. On February 2, 2022 Claimant represented to Dr. Perloff that Dr. Jockel said he needed surgery to be completed within 10-14 days after the MRI. Claimant requested documentation of the conversation he had with Dr. Jockel and Dr. Perloff acquiesced to Claimant's request on February 7, 2022. Claimant contends that, because he could not have had the surgery within 10-14 days of October 6, 2021 in the Workers' Compensation system, the Kaiser surgery was authorized under the emergency doctrine.

9. As found, in contrast, Dr. Ramaswamy explained that a distal bicep rupture at the left elbow is not a life-threatening emergency that requires surgery at the moment it is diagnosed. Rather, surgery should be timely. When considering a distal bicep rupture repair, the surgery should be performed within two to three weeks of the tear in order to prevent complete retraction of the tendon. Dr. Ramaswamy commented that Claimant

was first diagnosed with a seven millimeter tendon retraction on October 12, 2021. Surgery should thus have been performed within two to three weeks of the October 12, 2021. Even under a "conservative" estimate, surgery should have been performed within two to three weeks of the October 6, 2021 incident according to Dr. Ramaswamy.

10. As found, Dr. Ramaswamy testified that, if Claimant had followed through with authorized provider RMMG, an MRI would likely have been obtained within one week. Surgery would then likely have been performed within two to three weeks of the injury. A delay of two to three weeks between a bicep tendon rupture and surgical repair is "in that window of being reasonable to get a good result." Even if surgery had been delayed more than three weeks, the rupture could have been repaired using a different procedure.

11. As found, on October 12, 2021 Mr. BO[Redacted] also mentioned to Claimant there was an MRI scheduled outside of Kaiser for October 16, 2021. Claimant told Mr. BO[Redacted] not to worry about it because he was proceeding with surgery at Kaiser. Mr. BO[Redacted] also told Claimant that surgery could be scheduled within one to two weeks, but Claimant replied that he wanted to continue with the Kaiser surgeon.

12. As found, although a claimant is not required to seek authorization before obtaining medical treatment from an unauthorized medical provider in a medical emergency, the record reveals that Claimant's need for biceps rupture repair surgery did not constitute a *bona fide* emergency. The medical records and persuasive testimony of Dr. Ramaswamy and Mr. BO[Redacted] reflect that Claimant did not immediately require surgery through Kaiser rather than proceeding through the Workers' Compensation system. In reviewing the particular facts and circumstances of the present claim, Claimant could have obtained surgery within two to three weeks of his injury by proceeding through authorized provider RMGG. Accordingly, because Claimant's surgery through Kaiser was unauthorized, his request for reimbursement for the costs of emergency treatment is denied and dismissed. *See Delfosse v. Home Services Heroes, Inc.*, WC 5-075-625 (ICAO, Apr. 26, 2021) (denying the claimant's request for authorization under the emergency doctrine because there was no persuasive evidence of acute issues or that the need for surgery was emergent and there was evidence that other treatment options were available and discussed between the patient and unauthorized provider); *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004) (determining that ALJ reasonably inferred the claimant failed to prove the need for treatment was so urgent that the claimant could not notify the employer of the injury before proceeding to emergency room for treatment).

Authorization

13. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Indus. Claim Appeals Off.,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized

treatment. *Town of Ignacio v. Indus. Claim Appeals Off.,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Off.,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. S*ee Yeck v. Indus. Claim Appeals Off.,* 996 P.2d 228, 229 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020).

14. As found, Claimant has failed to establish by a preponderance of the evidence that the follow-up care he received with Dr. Perloff at Kaiser Permanente was authorized. Dr. Ramaswamy testified that he did not refer Claimant to Dr. Perloff or any provider at Kaiser. He specifically sent Claimant for physical therapy with a provider outside the Kaiser network. Furthermore, Dr. Ramaswamy prescribed medication rather than leaving prescriptions to other providers. He also refused to defer to Dr. Perloff regarding physical therapy because of a potential lack of communication with the Kaiser system. In the absence of medical records from Kaiser, Dr. Ramaswamy exercised his independent medical judgment in terms of directing physical therapy and the imposition of work restrictions.

15. As found, Dr. Ramaswamy acknowledged that he wanted Claimant to continue following up with Dr. Perloff, but never made a formal referral. He specified that it did not make sense to refer Claimant to another surgeon who did not operate on Claimant. Dr. Ramaswamy summarized the situation in his December 9, 2021 note when he stated "the case has been a difficult [one] as the patient is treating with Kaiser and treating with our clinic." The record thus reflects that Dr. Ramaswamy did not refer Claimant to Kaiser physicians for treatment.

16. As found, furthermore, Mr. BO[Redacted] recalled speaking with Claimant on the afternoon of October 12, 2021. Claimant was anxious to have surgery with Kaiser. Mr. BO[Redacted] noted he understood Claimant's position, but advised that Kaiser was not an authorized provider. He also remarked that Kaiser does not handle Workers' Compensation injuries. Although Claimant explained that he was never told by Mr. BO[Redacted] that his Kaiser treatment would not be covered, the persuasive testimony of Dr. Ramaswamy and Mr. BO[Redacted], as well as the medical records, reflect that Claimant's treatment through Kaiser was not authorized. Because Kaiser was not an authorized provider, Claimant is not entitled to reimbursement for any expenses. Accordingly, Claimant's request for reimbursement for medical costs through Kaiser is denied and dismissed.

Disfigurement

17. Section 8-42-108 (1), C.R.S. states that if a claimant "is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view" he may receive a disfigurement award "in addition to all other compensation benefits provided in this article." As found, Claimant underwent surgery to his left upper extremity on October 14, 2021. The upper extremity surgery resulted in a single, unraised,

horizontal, thin white scar of between 2 ½ and three inches in length and approximately ¼ inch in width across the biceps. Despite much of Claimant's arm being covered in tattoos, the scar is visible and constitutes serious permanent disfigurement about a part of the body normally exposed to public view. Claimant has met his burden of proving entitlement to a disfigurement award in the amount of $600.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for reimbursement for the costs of emergency surgery through Kaiser is denied and dismissed.

2. Claimant's request for reimbursement for the costs of medical treatment through Kaiser is denied and dismissed.

3. Claimant shall receive an award of $600.00 in disfigurement benefits.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she is entitled to receive reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of her work-related injury or to prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (Colo. App. 1988).

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her back arising out of the course of her employment as a pre-school teacher with Employer on October 11, 2018.

2. Following her injury, Claimant underwent a variety of conservative treatments with her authorized treating physicians (ATPs) and others. Claimant's initial ATP was Bruce Cazden, M.D., at Workwell. (Ex. C). Claimant remained under his care until she transferred to UCH where James Rafferty, D.O., assumed the role of ATP in July 2019. (Ex. D). In September 2019, Dr. Rafferty referred Claimant to John Tobey, M.D., at Spine West for evaluation of her lower back pain. (Ex. E). Ultimately, Claimant was diagnosed with a lumbar strain and facet syndrome. Claimant received facet joint injections in March 2020, which gave immediate relief but without a lasting response. (Ex. E). Later, in August 2020, Dr. Tobey recommended facet joint medial branch blocks to assess candidacy for possible radiofrequency ablation (RFA) procedures. (Ex. E).

3. On September 24, 2020, Claimant underwent a radiofrequency ablation (RFA) procedure on her lower back performed by Dr. Tobey. Claimant initially did not have improvement with the RFA procedure during the first week, but reported significant improvement after approximately two months. (Ex. D).

4. On December 31, 2020, Claimant saw her ATP, Dr. Rafferty. Dr. Rafferty placed Claimant at MMI effective that date. On January 26, 2021, Dr. Rafferty performed range of motion measurements and assigned Claimant a 14% spinal impairment rating. When discussing maintenance care, Dr. Rafferty stated: "No need for scheduled maintenance care at this time although she may require repeat radiofrequency ablation in the future if her medial branches regenerate." Thus, while Dr. Rafferty did not recommend immediate and ongoing maintenance care, he did acknowledge that maintenance care would be reasonably necessary if the effects of Claimant's RFA subsequently abated.

5. Claimant testified that prior to undergoing the RFA, her back pain level was 7/10, and that she had difficulty with standing, sitting, bending, and lifting. Claimant credibly testified that after the RFA, her pain was reduced to a 3/10, and that the length of time she could stand and sit improved, that she could bend more easily and lift greater amounts. Although these activities were improved, they were not resolved. Claimant

credibly testified that the RFA relieved her symptoms as described, but that the effects were not permanent and "wore off" after approximately seven months. Claimant also believes that the RFA increased her range of motion. She testified that by the time Dr. Feldman performed the DIME, the effects of the RFA had worn off, and her back pain had increased. Claimant currently has difficulty bending, sitting, standing, which she testified are now similar to her condition prior to undergoing the RFA. Since being placed at MMI Claimant has self-referred to acupuncture, chiropractic care, and massage, to address her condition, and which she has paid for herself. Claimant testified that she would like to return to Dr. Rafferty to determine if any additional treatment or modalities could improve her condition.

6. On July 7, 2021, Claimant saw Alicia Feldman, M.D., for a DIME. Dr. Feldman placed Claimant at MMI and assigned Claimant a permanent impairment rating. Dr. Feldman agreed that Dr. Rafferty's assignment of December 31, 2020 as the date of MMI was correct. During the course of the DIME, Dr. Feldman conducted range of motion measurements. Dr. Feldman's range of motion measurements demonstrated that Claimant's lumbar flexion range of motion had decreased since her December 31, 2020 visit with Dr. Rafferty. Although her measurements resulted in a greater impairment rating, Dr. Feldman elected to use Dr. Rafferty's range of motion measurements when assigning Claimant's permanent impairment rating. Dr. Feldman indicated she believed Dr. Rafferty's rating was a true reflection of Claimant's physiologic impairment. Dr. Feldman did not indicate that the range of motion measurements she obtained were invalid, only that she felt Dr. Rafferty's measurements "more accurately reflect her impairment." She also indicated she did not believe Claimant's RFA was successful because Claimant should have experienced a decrease in symptoms within 2-3 weeks, rather than two months as she reported to Dr. Rafferty. Consequently, she indicated that she did not believe a maintenance care was needed.

7. On July 19, 2021, Respondents filed a Final Admission of Liability, in which they admitted for a 14% whole person impairment and medical. Respondents specifically denied liability for maintenance care after MMI.

8. Respondents presented the testimony of John Burris, M.D., by deposition. Dr. Burris was admitted as an expert in occupational medicine. Dr. Burris performed a Rule 8 independent medical examination of Claimant at Respondent's request on November 3, 2020. He opined that Claimant had non-specific low back pain and no objective findings on examination. He further opined that Claimant reached MMI on May 24, 2019, with no basis for an impairment rating. On March 1, 2022, Dr. Burris issued an addendum to his November 3, 2020 report addressing whether Claimant required any post-MMI care. Dr. Burris indicated in his report and testimony that he does not believe Claimant requires maintenance care. In expressing this opinion, Dr. Burris primarily relied on the fact that Dr. Feldman did not recommend maintenance care, and that Dr. Rafferty did not recommend immediate maintenance treatment. Dr. Burris' opinion regarding the need for maintenance medical care is not persuasive. He testified that after an RFA procedure, a patient's nerves may regenerate within six to twelve months after the procedure.

9. On March 15, 2022, Sander Orent, M.D., performed a record review at Claimant's request and issued a report. (Ex. 1). Dr. Orent opined that it would be reasonable for Claimant to continue chiropractic and massage treatments, and to have repeat RFA's available to her.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MEDICAL MAINTENANCE BENEFITS

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Ctr. v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002). "An award of Grover medical benefits is typically general in nature and is subject to the respondent's subsequent right to challenge particular treatment." *Trujillo v. State of Colorado*, W.C. 4-668-613-03 (ICAO Aug. 21, 2021).

There is no bright line test to distinguish treatment designed to cure an injury from treatment designed to relieve the effects of the injury. Surgery may be designed to cure an injury or may be maintenance treatment designed to relieve the effects or symptoms of the injury. Post-MMI treatment may be awarded regardless of its nature. *Corley v. Bridgestone Americas*, WC 4-993-719 (ICAO, Feb. 26, 2020).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover,* 759 P.2d at 710-13; *Stollmeyer v. Indus. Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, WC No. 3-979-487, (ICAO Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna*, 77 P.3d at 866; *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Ctr.,* 919 P.2d at 704.

Claimant has established by a preponderance of the evidence an entitlement to a general award of medical maintenance benefits. Claimant reached MMI on December 31, 2020, approximately three months after undergoing an RFA with Dr. Tobey on September 24, 2020. When he placed Claimant at MMI, Dr. Rafferty opined that Claimant may require maintenance treatment if the effects of the RFA abated and should be permitted to consult with Dr. Tobey to determine if additional RFAs would be appropriate. Both Dr. Rafferty and Dr. Burris acknowledged that the effects of the RFA could lessen if Claimant's nerves

regenerated. Dr. Burris credibly testified that this could occur approximately six to twelve months after an RFA. Claimant credibly testified that approximately seven months after undergoing the RFA (*i.e.*, approximately April 2021), her symptoms returned to the level she experienced prior to the RFA.

When Dr. Rafferty performed range of motion measurements in January 2021, (four months after the RFA) Claimant was still experiencing the benefits of the RFA. Approximately five months later, when Dr. Feldman evaluated Claimant, her range of motion measurements were valid and reflected a greater impairment than her condition at MMI. The credible evidence thus demonstrates that Claimant's condition deteriorated after January 25, 2021, more likely than not because the effects of the RFA lessened. Claimant also credibly testified that she continues to experience symptoms and that she has received acupuncture, massage, and chiropractic to help her back issues, although her condition has not improved significantly.

The pain relief and functional improvement Claimant experienced as a result of the RFA resulted in her being placed at MMI on December 31, 2020. When the effects of the RFA abated, Claimant's condition deteriorated to the same level as before the RFA. Moreover, Claimant credibly testified that she has benefited from the additional treatment she has procured on her own (*i.e*., acupuncture, chiropractic, massage, gym exercise). The evidence demonstrates it is more likely than not that additional medical treatment will aid in returning Claimant to the same functional status she experienced when she was placed at MMI, or to prevent further deterioration. The ALJ concludes that further medical treatment is reasonably necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of her condition.

Because no specific medical treatment has been requested by Claimant's ATP, the issue of whether any specific medical treatment should be authorized as medical maintenance benefits the ALJ is without jurisdiction to authorize any specific treatment. *See Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995). The ALJ makes no findings or conclusions regarding the reasonableness, necessity, or relatedness of any specific treatment.

ORDER

It is therefore ordered that:

1. Respondents shall pay for all authorized medical treatment that is reasonably necessary to relieve the effects of Claimant's October 11, 2018 industrial injury or to prevent further deterioration of her condition.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 27, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-005-672-002

ISSUES

The issues set for determination included:

- Did Claimant prove his condition worsened, which supported reopening his claim?
- Did Claimant prove by a preponderance of the evidence that he is entitled medical benefits, namely a L4-L5 decompression with fusion, requested by authorized treating physician Brian Reiss, M.D.

PROCEDURAL SUMMARY

A Summary Order was issued on March 16, 2022. Claimant requested a full Order on or about March 21, 2021. After an extension of time was granted, Respondents filed amended proposed Findings of Fact, Conclusions of Law and Order on April 5, 2022. This Order follows.

FINDINGS OF FACT

1. Claimant worked as a principal for Employer, a position he has held for four years.

2. Claimant's medical history was significant in that he had extensive treatment for lumbar pain. Prior to Claimant's admitted industrial injury in 2015, he received conservative treatment for low back pain from 2009-12. On November 3, 2009 Claimant was evaluated by C. Deno Pappas, M.D. at Denver Spine and reported a long history of back pain predating 2009 by many years. Claimant reported that two weeks prior to the evaluation he woke up with low back pain radiating into his right lower extremity with pain complaints at level 8-9/10. Dr. Pappas noted that Claimant's MRI of his lumbar spine revealed a large right sided L5-S1 disc extrusion and a bulge at L4-5. Dr. Pappas' assessment was: acute right S1 radiculopathy associated with large paracentral L5-S1 disc herniation.

3. Claimant had a follow-up evaluation with at Denver Spine with Gary Ghiselli, M.D. on September 3, 2010, at which time an injection was ordered for low back pain, that was performed on September 9, 2010. Dr. Ghiselli continued to follow Claimant, who received repeat injections in December 2010. Dr. Ghiselli recommended facet injections at the L4-5 and L5-S1 levels on December 7, 2011.

4. The ALJ found that the medical records reflected objective evidence of pathology at L5-S1, along with a disc bulge at L4-5 and degenerative changes at that level. Claimant reported bilateral lower extremity symptoms and received treatment for this pain.

5. Claimant continued to experience pain and Dr. Ghiselli's note on November 8, 2012 reflected increased symptoms in the lumbar spine. Dr. Ghiselli's assessments included: worsening back and bilateral posterior thigh pain; degeneration of lumbar or lumbosacral disc; lumbago; lumbosacral spondylosis without myelopathy; radiculitis.

6. An MRI of the lumbar spine done on November 15, 2012 showed interval development of a left-sided L5-S1 extrusion which contacted the left descending never roots in the subarticular zone. Samuel Scutchfield, M.D. compared the MRI films with the previous MRI and noted the previous right-sided disc herniation had subsided. Claimant had less degenerative changes at the L4-5 level.

7. Claimant underwent a L5-S1 right-sided microdiscectomy on December 5, 2012, which was performed by Dr. Ghiselli. The pre- and post-operative diagnoses were: herniated disc at the L5-S1 level; left-sided radiculopathy with associated weakness; right sided radiculitis and weakness.

8. Following the surgery, Dr. Ghiselli noted an improvement in symptoms, including that Claimant's right-sided extremity pain was gone. He initially had radiating pain in the left buttock and thigh, which was noted to have resolved in 2013. Claimant returned to Dr. Ghiselli on May 3, 2013, at which time Claimant reported his low back had intensified and significant degeneration was noted at L5-S1. Bilateral pain into both lower extremities was noted in Dr. Ghiselli's evaluation on December 12, 2013.

9. On January 11, 2014, Claimant underwent an MRI of the lumbar spine and the films were read by Vernon Chapman, M.D. Dr. Chapman's impression was: lower lumbar spine degenerative changes, which included posterior disc bulging and mild bilateral facet degenerative changes at L4-L5, with no significant central canal narrowing. The lateral recesses were partially effaced, with mild left and moderate right foraminal narrowing. Claimant had no residual disc protrusion at L5-S1, however, posterior disc bulging was present with endplate osteophyte formation and no significant spinal canal narrowing. Dr. Chapman stated the degenerative changes were most severe at L5-S1, with moderate to severe bilateral foraminal narrowing at that level; interval L5-S1 discectomy, no residual protrusion evident.

10. Claimant was evaluated by Dr. Ghiselli on January 14, 2014 for significant lower back pain and bilateral hip pain. Dr. Ghiselli's assessments were: status post L5-S1 microdiscectomy with complete resolution of leg pain-severe spondylosis at the L5-S1 level, with disk space collapse; degeneration of lumbar or lumbosacral intervertebral disc; lumbago; lumbosacral spondylosis without myelopathy; radiculitis, thoracic or lumbar sacral neuritis and radiculitis. Dr. Ghiselli recommended an anterior lumbar interbody fusion at L5-S1.

11. On January 22, 2014, Claimant underwent the anterior lumbar fusion, which was performed by Dr. Ghiselli. The pre- and post-operative diagnoses were the same: recurrent disc herniation at L5-S1; previous L5-S1 decompression; degenerative disc disease at L5-S1.

12. After the lumbar fusion surgery, Claimant initially had some pain in his right leg and then reported bilateral pain and weakness in his legs when he was evaluated at Kaiser on June 22, 2015. The MRI done on June 25, 2015 showed disc bulging above L4-5, as well as degenerative changes at L5-S1.[1] A CT scan confirmed that the fusion was intact. On October 8, 2015, Claimant underwent a lumbar epidural steroid injection at L4-5 to treat bilateral radicular pain. The medical records reflected a reduction in Claimant's symptom after the procedure, which led the ALJ to infer there was an anatomic basis for these complaints.

13. On December 14, 2015, Claimant suffered an admitted industrial injury while working for Employer and occurred when he was removing a disruptive student with another teacher. Claimant fell to the ground and felt pain in his low back. The ALJ found this injury was an aggravation of his pre-existing back condition.[2]

14. As a result of the injury, Claimant received conservative treatment for pain in his lower back, on both the left and right side that was documented in the medical records. Claimant testified the December 14, 2015 incident caused an increase of left-sided low back and leg symptoms.

15. Claimant underwent an MRI of the lumbar spine on January 22, 2016 and the indication was left-sided sciatica. The films were read by Kim Baker, M.D., whose impression was: post-operative changes at L5-S1 without evidence of complication; left paracentral disc protrusion with inferiorly extruded fragment at L4-5 that caused significant compression of the left L5 nerve root; no pathologic enhancement following contrast material. The ALJ found this MRI provided objective evidence of injury at the L4-5 level.

16. Following the MRI, Claimant was evaluated by Dr. Reiss on January 27, 2016. At that time, he was complaining of left-sided radiculopathy and numbness in his leg. Dr. Reiss noted the most significant finding on the MRI was a herniated disc at L4-5 centrally and left with an extruded fragment behind the body of L5, which affected the L5 nerve root. Dr. Reiss recommended an L4-L5 microdiscectomy on the left.

17. In the interim, Claimant was evaluated at Kaiser Permanente on April 26, 2016, at which a lumbar ESI, was recommended.

18. Dr. Reiss performed the microdiscectomy on June 7, 2016. The level of the surgery was L4-L5.

---

[1] Exhibit CC, pp. 96-97.

[2] The parties agreed the aggravation of Claimant's low back condition was compensable and entered into a Stipulation, dated June 10, 2016. The Stipulation specifically provided that the claim was limited to the herniated disc at L4-5 and Respondent agreed to authorize a microdiscectomy at this level with Dr. Reiss. [Exhibit A].

19. Claimant received rehabilitative treatment, including physical therapy ("PT") after the surgery.[3]

20. Tomm Vanderhorst, M.D., concluded Claimant reached MMI on March 13, 2017. At that time, Claimant was working his regular job, was increasing his level of activity and not taking medications. Claimant reported occasional aching in his left calf when he walked up hill. Dr. Vanderhorst's assessment was L4-5 disc rupture with L5 radiculopathy/myelopathy, status post L4-5 discectomy; prior L5-S1 discectomy with subsequent anterior interbody fusion; history of C6-7 discectomy with anterior fusion and intermittent cervicalgia; history of gout; history of exercise-induced asthma; prediabetes; hyperlipidemia.

21. Dr. Vanderhorst assigned a 23% whole person impairment for the lumbar spine, which included a Table 53 II (e) diagnosis and loss of range of motion. Dr. Vanderhorst recommended maintenance treatment, which included chiropractic manipulation and massage.

22. Although Claimant had significant improvement in his symptoms, there was no evidence in the record he was completely symptom-free from the date of MMI forward.

23. On April 13, 2017, a Final Admission of Liability ("FAL") was filed on behalf of Respondent. Respondent admitted to a 18% whole person impairment rating person pursuant to a Stipulation of the parties. Respondent admitted to post-MMI medical treatment, which was reasonable, necessary and related in accordance with Dr. Vanderhorst's report.

24. Claimant filed a response to the FAL on April 25, 2017, in which he accepted the *Grover* medical benefits admitted to in the FAL.

25. Claimant received treatment for low back pain and right sciatica at Kaiser on March 27, 2018. This note reflected increased symptoms after a motor vehicle accident in November 2017. Claimant was referred for PT. Claimant had increased right lateral hip and thigh, as well as low back pain. Neurosurgeon Christopher Kudron, M.D.'s assessment at the time of the May 21, 2018 evaluation was: lumbar spondylosis, arthropathy of lumbar facet and greater trochanteric pain syndrome. An MRI of the lumbar spine was done on June 7, 2018, which showed left hemilaminectomy post-surgical changes at L4-5, with a circumferential disc bulge with superimposed small left paracentral disk protrusion.

26. After MMI, Claimant was referred to Dr. Zimmerman for injections for low back symptoms. In the June 25, 2018 report, Dr. Zimmerman noted Claimant was allowed re-evaluation, chiropractic, epidural injections or other procedures as needed for the next

[3] Dr. Vanderhorst noted the Dr. Reiss' notes reflected that the surgery resolved Claimant's left lower extremity symptoms of pain weakness and parasthesias. Claimant had no work restrictions as of September 15, 2016. (Exhibit NN, p.127.)

five years. The ALJ inferred Dr. Zimmerman was of the belief Claimant would continue to require maintenance treatment for his low back related to the work injury.

27. Claimant received maintenance treatment in the form of massage therapy, chiropractic treatment and injections in 2018-2019. Dr. Zimmerman performed bilateral medial L4-5 medial branch block injections on July 3, 2018 and noted Claimant had a diagnostic response. Repeat bilateral L4-5 medial branch blocks of the facet joints were performed on August 1, 2018. The evaluation on August 6, 2018 noted a diagnostic response and Claimant reported no significant pain. The bilateral injections were evidence that Claimant required treatment on the right and left side. The ALJ inferred at least some of the treatment provided by Dr. Zimmerman was paid for by Respondent.

28. Dr. Zimmerman performed bilateral L4-5 radio frequency neurotomy on September 5, 2018, which resolved left-sided pain. Claimant had persistent right low back pain and radiation to the thigh and posterior calf. Dr. Zimmerman performed a right L5-S1 medial branch block of the facet joint, with no post-procedural pain and increased mobility documented in the report.

29. On or about June 14, 2019, ALJ Felter issued Findings of Fact, Conclusions of Law and Order for a hearing which took place on May 29, 2019. The issue was whether Claimant waived his right to seek medical benefits for treatment of his L5–S1 disc. ALJ Felter concluded Claimant did not waive his right to receive treatment in that area. ALJ Felter ordered Respondent to pay the cost of treatment recommended by ATP Rick Zimmerman, D.O.[4]

30. There was no evidence in the record that the June 14, 2019 Order was appealed.

31. Dr. Zimmerman performed radio frequency ablation of L4-5 and L5-S1 levels on July 29, 2019. The report said this procedure provided relief of Claimant's symptoms and was considered diagnostic.

32. On December 11, 2019, Claimant underwent a lumbar MRI. The films were read by Jeffrey Weingardt, M.D. Dr. Weingardt's impression was: multifactorial mild to moderate central canal stenosis at L4-L5, with lateral foraminal stenosis; slight retrolisthesis of L4 upon L5; moderately advanced spondylosis at L4-L5 with early changes of spondylolysis in the upper and mid lumbar spine as described; posterior paraspinous and psoas muscles atrophy; osseus interbody fusion at L5–S1.

33. Claimant returned to Dr. Reiss on February 19, 2020 at which time Claimant reported that most of his right lower extremity pain was relieved after the L4 injection (performed by Dr. Zimmerman on February 5, 2020) and with time his pain returned. Dr. Reiss stated Claimant could live with the situation or consider surgical intervention. The ALJ inferred Claimant did not have intractable pain at this point in time and did not provide

[4] Exhibit 3.

a rationale as to why the surgery was necessary at this time. The ALJ also inferred that the evaluation by Dr. Reiss was paid for by Respondent.

34. Dr. Reiss issued a report (WCM-164), dated February 20, 2020 in which he noted authorization would be sought for surgery. The ALJ found Dr. Reiss did not say surgery was required to maintain MMI or that Claimant was no longer at MMI. Dr. Reiss did not specify that how the proposed surgery would increase Claimant's level of functioning or reduce symptoms.

35. Based upon Claimant's post-MMI treatment with ATP-s Drs. Zimmerman and Reiss, the ALJ inferred at least some of the treatment was paid for by Respondent. The evidence is unclear that medical benefits were ever closed in this case.

36. Carlos Cebrian, M.D. completed a supplemental record review, dated March 13, 2020. Dr. Cebrian's diagnoses that were claim-related included: lumbar strain with new left paracentral disc protrusion at L4-5 with an inferiorly extruded fragment. The fragment extended downward 15 mm in the lateral recess and there was significant compression on the left L5 nerve root and the June 7, 2016 surgery was referenced.

37. Dr. Cebrian opined that Claimant's complaints were left-sided and secondary to a left-sided nerve root compression, which was treated surgically by Dr. Reiss. Dr. Cebrian stated Claimant had an intervening injury on November 20, 2017 in which he was rear ended and he had primarily right sided complaints, as documented in the Kaiser records. Dr. Cebrian stated that it was medically probable that Dr. Reiss' request for the L4-5 fusion, with decompression of the right sided L4 and L5 nerve roots should be denied as the right sided nerve roots were not causally related to the December 14, 2015 claim.

38. Dr. Cebrian testified as an expert at hearing. His testimony was consistent with the conclusions in his reports. Dr. Cebrian testified that the recommended surgery is an elective procedure and that it was not medically probable that the fusion will cure and relieve Claimant from his chronic back pain or to make him more functional. This particular opinion was persuasive to the ALJ. In support of his opinion that the fusion is not medically reasonable and necessary, Dr. Cebrian opined that the Claimant's pre-diabetic status and morbid obesity rendered him less likely to have a positive outcome from the fusion. He said Claimant's prior history of failed back surgeries was further evidence that the fusion is less likely to successfully relieve Claimant's pain complaints. Dr. Cebrian recommended that for the Claimant to relieve his back pain he should focus on weight loss, a directed exercise program and get his pre-diabetes under control. Dr. Cebrian testified that he would expect Claimant to experience some pain relief with weight loss.

39. On or about March 16, 2020, Respondent denied the requested authorization for surgery based upon the report of Dr. Cebrian.

40. Claimant was evaluated by Dr. Vanderhorst on June 11, 2020, at which time he reported persistent right radicular symptoms, as well as a recurrence of left radicular symptoms. At that time, Claimant sat with a good posture and moved with a normal gait. Increased pain was noted with extension and lateral flexion ROM testing. Dr. Vanderhorst's assessment was: lumbar facet joint pain; bilateral low back pain with bilateral sciatica; lumbar radiculopathy. Claimant was referred for massage/chiropractic treatments and the prescription for Gabapentin was refilled. Dr. Vanderhorst did not definitively state Claimant was no longer at MMI. Dr. Vanderhorst did not offer an opinion whether Claimant required additional treatment in the form of the proposed surgery.

41. Evidence of surveillance video taken of Claimant on August 1 and 2, 2020 was admitted into evidence. The video showed various activities in which Claimant sat at a table in a restaurant, performed various chores outside and rode an ATV. The video showed Claimant able to do the following:

- August 1, 2020 at 10:11 a.m.: kneeling, bending, working in yard.
- August 1, 2020 at 12:05 p.m.: walked around hardware store, carried box in right hand what appears to be hose or wire in left.
- August 1, 2020 at 12:40 p.m.: walking up a hill with bucket, kneeling.
- August 1, 2020 at 1:16 p.m.: working on fence, including pulling with pliers.
- August 1, 2020 at 1:32 p.m.: riding ATV, able to get off and on the ATV.
- August 2, 2020 at 8:38 a.m.: carrying a box taken out of truck bed.
- August 2, 2020 at 8:57 a.m.: casting a fishing pole with dog toy on end, throwing dog toy into pond.
- August 2, 2020 at 12:47 p.m.: walking around Costco, pushing cart.
- August 2, 2020 at 1:28 p.m.: walking around Walmart, carried plastic basket to truck.

42. The ALJ found Claimant was able to do the activities depicted in the surveillance video on August 1 and 2, 2020 without observable difficulty.

43. Claimant testified that he now uses an ATV more to get around his property because walking is more difficult due to increased pain. Claimant said he wants to undergo the fusion surgery.

44. Claimant did not prove that the proposed lumbar fusion surgery was reasonable and necessary.

45. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the question of whether Claimant was entitled to medical benefits turned on the opinions offered by the physicians in the case.

Reopening

Section 8-43-303(1), C.R.S. (2020), provides that an ALJ may reopen any award within six years on the grounds of error, mistake, or a change in condition. A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220, 222 (Colo. App. 2008) ["change in condition" refers either to a change in condition of original compensable injury or to change in claimant's physical or mental condition which can be causally connected to original compensable injury].

As determined in Findings of Fact 2-12, Claimant had an extensive history of treatment for his lumbar spine, including treatment for pain at the L4-5 and L5-S1 levels. The treatment Claimant received included a microdiscectomy performed by Dr. Ghiselli, on December 5, 2012 for a herniated disc at L5-S1 and radiculopathy with associated weakness. (Finding of Fact 7). Claimant underwent a lumbar fusion on January 22, 2014, also at the L5-S1 level. (Finding of Fact 11). Claimant treated for bilateral radicular pain and received a lumbar epidural steroid injection in October 2015. (Finding of Fact 12). The bilateral leg pain (post-surgery) was evidence from which the ALJ could infer there was an anatomic basis for these complaints. *Id.*

The admitted injury Claimant suffered to his low back on December 14, 2015 was superimposed on this complicated medical history. (Finding of Fact 13). The ALJ determined that the 2015 injury aggravated the condition of his low back, which required treatment. *Id.* The medical records admitted at hearing documented Claimant initially

received conservative treatment for this injury. (Finding of Fact 14). Clamant then underwent a microdiscectomy, which was performed by Dr. Reiss. (Finding of Fact 18).

As found, Claimant reached MMI in 2017 and Respondent admitted for *Grover* medical benefits in the FAL. (Findings of Fact 20, 23). The medical records admitted into evidence established Claimant had increased symptoms in the lumbar spine which required treatment after MMI. (Findings of Fact 25-32). The records admitted into evidence reflected Claimant continued to receive treatment in 2018-2019, which included bilateral medial L4-5 medial branch block injections. Evidence of symptoms on both the right and left side was found in Dr. Vanderhorst's June 11, 2020 report. (Finding of Fact 40). Although the record was not completely clear, the ALJ inferred that because Claimant continued to receive treatment from ATP-s in the worker's compensation claim, including Drs. Zimmerman and Vanderhorst, Respondent most probably paid for those benefits. (Findings of Fact 27, 33). Under the evidence in the record, it is more probable than not that the medical benefits portion of the claim was never "closed".

Even assuming *arguendo* the claim was closed, Claimant's ATP-s recommended the treatment he received for increased low back symptoms. (Finding of Fact 27-28). Claimant's testimony also supported this conclusion. To the extent the claim was closed, the ALJ concluded Claimant proved by the preponderance of the evidence that his condition worsened over time and he was entitled to additional maintenance treatment.

Medical Benefits

The question presented in this case was whether Claimant satisfied his burden of proof that the proposed surgery was reasonable and necessary, as well was related to the 2015 injury. Claimant argued his condition worsened and the request for the fusion at L4-L5 was related to the natural degeneration of Claimant's admitted December 14, 2015 injury. Claimant also asserted that he has had the same treating physician since 2015, was on medical maintenance care at the direction of ATP Vanderhorst and has been receiving injections through ATP Zimmerman. Claimant pointed to the fact it was a referral from ATP Zimmerman to ATP Reiss that resulted in the request for a fusion at L4-L5. On this basis, Claimant argued the surgery should be authorized.

Respondent contended that the proposed L4-5 fusion surgery was not reasonable, necessary and/or causally related for treatment of Claimant's December 14, 2015 work injury, which aggravated his low back condition. Respondent argued the December 14, 2015 industrial accident caused Claimant's L4-5 disc to suffer a left sided herniation and Claimant did not prove the left sided herniation to the L4-5 disc caused a resulting worsening resulting in the current need for the fusion surgery. Respondent relied upon Dr. Cebrian's opinion that the need for the fusion procedure was more likely causally related to the pre-existing fusion which has caused adjacent segment disease, pre-existing degenerative disc disease, and/or the intervening MVA, than to the December 14, 2015.

Respondent is liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. (2020); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When Respondent has admitted for maintenance treatment, it is may still contest liability for particular medical benefit. *Id.* Claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. *Grover v. Industrial Commission,* 759 P.2d 705, 721 (Colo. 1988).

In the case at bench, that ALJ determined Claimant did not meet his burden of proof to show the proposed fusion surgery was reasonable and necessary. (Finding of Fact 44). The ALJ's rationale was two-fold when concluding Claimant did not meet this burden. First, the medical records, including the report of Dr. Reiss did not establish that the surgery was reasonable and necessary at this time. (Findings of Fact 33-34). As found, Dr. Reiss did not provide explication or in detail as to why he believed Claimant required surgery at that point in time. *Id.* Nor was there evidence that Claimant's pain was intractable at that time. *Id.* The ALJ credited Dr. Cebrian's opinion on whether the surgery was reasonable and necessary. (Finding of Fact 38). In addition, Claimant had received injections and other treatment as part of maintenance, which provided symptom relief. In addition, there was evidence in the record that Claimant was able to perform different activities, including work around his property, which showed a level of functionality. (Findings of Fact 27, 33). On this basis, Claimant did not demonstrate the proposed surgery was reasonable and necessary.

Second, the ALJ reviewed the DOWC MTG when coming to this decision. The DOWC Medical Treatment Guidelines applicable to this procedure provide as follows:

> "G. THERAPEUTIC PROCEDURES – OPERATIVE
>
> In order to justify operative interventions, clinical findings, clinical course, and diagnostic tests must **all** be consistent resulting in a reasonable likelihood of at least a measurable and meaningful functional and symptomatic improvement. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathologic conditions and in most cases a specific site of nerve root compression, spinal cord compression, or spinal instability… [Emphasis in original].[5]
>
> 4. SPINAL FUSION (USUALLY COMBINED WITH DECOMPRESSION): a.
>
> Description: Use of bone grafts, sometimes combined with instrumentation, to produce a rigid connection between two or more adjacent vertebrae.
>
> …

[5] DOWC MTG Rule 17 Exhibit 1-Low Back Pain, p. 93. [The MTG in effect were Revised: February 3, 2014, Effective: March 30, 2014].

d. Diagnostic Indications: Diagnostic indications for spinal fusion may include the following:

i. Neural Arch Defect usually with stenosis or instability: Spondylolytic spondylolisthesis, congenital unilateral neural arch hypoplasia. It should be noted that the highest level of success for spinal fusions is when spondylolisthesis grade 2 or higher is present.

ii. Segmental Instability: Excessive motion, as in degenerative spondylolisthesis 4mm or greater, surgically induced segmental instability.

iii. Primary Mechanical Back Pain/Functional Spinal Unit Failure: Multiple pain generators objectively involving two or more of the following: (a) internal disc disruption (poor success rate if more than one disc involved), (b) painful motion segment, as in annular tears, (c) disc resorption, (d) facet syndrome, and/or (e) ligamentous tear. Because surgical outcomes are less successful when there is neither stenosis nor instability, the requirements for pre-operative indications must be strictly adhered to for this category of patients.

iv. Revision surgery for failed previous operation(s) if significant functional gains are anticipated.

v. Other diagnoses: Infection, tumor, or deformity of the lumbosacral spine that cause intractable pain, neurological deficit, and/or functional disability."

In this regard, the ALJ found Claimant did not prove that the proposed surgery would increase his functionality and reduce symptoms. (Finding of Fact 34). Claimant did not prove that he had severe symptoms due to lumbar stenosis and spondylolisthesis, specifically at the L4-5 level. *Id.* As found, Dr. Reiss' surgery recommendation did not establish that that surgery was necessary at that point in time, rather he left it up to Claimant. (Finding of Fact 33). The treatment records admitted at hearing showed that conservative treatment such as injections, provided relief to Claimant. Accordingly, the request for authorization of the proposed lumbar fusion and decompression will be denied.

ORDER

It is therefore ordered:

1. To the extent the claim was closed, it is reopened, pursuant to Section 8-43-303(1), C.R.S. (2020).

2. Claimant’s request for authorization of the proposed lumbar fusion with decompression is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-140-466-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that his low back condition, and spinal surgery, are causally related to his admitted September 3, 2020 industrial accident.

STIPULATION

After the hearing, the parties conferred and stipulated that Claimant's average weekly wage (AWW) is $1,423.76.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 45 year-old male who worked for Employer as a Water Distribution Operator, Level 2. His job duties included maintaining and repairing municipal and fire water systems, in commercial and residential buildings. Claimant's job was physically demanding, and it required a lot of lifting and bending.

2. Claimant suffered an admitted industrial accident on September 3, 2020. He was in a crawl space under a residential property repairing a water meter. Claimant testified he had finished repairing the meter and was "army crawling" out of the space when his left leg slipped causing him to twist. Claimant testified he heard a "pop" somewhere in his body. Claimant testified he immediately felt pain in his low back shooting down his left leg.

3. Claimant was able to get out of the crawl space on his own, and he immediately reported the incident to Employer. GD[Redacted] prepared a first report of injury that same day. The mechanism of injury in the report is recorded as, "Slipped in crawl space and twisted knee." The body part affected is listed as "L Knee." (Ex. E). Claimant's back injury is not listed in the report. Claimant credibly testified, however, that he notified Ms. GD[Redacted] that the industrial accident also affected his back.

4. Claimant was first treated at Memorial Regional Hospital (Memorial) Urgent Care, on September 3, 2020. Cameron Miller, PA-C treated Claimant. According to Claimant, he had left knee pain and low back pain with "shooting" pains down his left side. Claimant reported being on his hands and knees maneuvering over materials when he twisted to his left side. He initially felt a sharp pain in his knee. He also reported some low back pain after the injury. According to the medical record, Claimant has a "history of low back pain for which he had injections and PT in the past and feels as though this exacerbated the issue." (Ex. 15).

5. Mr. Miller diagnosed Claimant with a "left patella subluxation versus an MCL sprain." He also noted that Claimant's "low back pain resembles potential disc bulge given radicular symptoms and appears to be an acute exacerbation of a chronic issue he has been treated for prior." (Ex. 15).

6. Respondents have accepted liability for Claimant's knee injury, but dispute liability for his back condition. (Ex. G).

7. Claimant testified that he had low back issues and injuries prior to September 3, 2020. In the 1990's, Claimant fell off a ladder and injured his left leg and low back. In 2003, he suffered a slip and fall at work and injured his back. Claimant received a 10% permanent partial disability rating due to this injury, and attended physical therapy for over six months. Claimant testified he has received chiropractic treatment for his back since he was a teenager.

8. Claimant testified that prior to September 3, 2020, he would have flare ups that he primarily treated with chiropractic care. Claimant also had injections into his lower back in 2016 and 2019. Claimant testified that although he had low back pain and flare ups prior to September 3, 2020, he never had trouble performing his job duties and never missed work due to back pain. He was able to work full duty and was not on any physical restrictions.

9. Claimant returned to Memorial on September 9, 2020 for a follow-up appointment and was treated by Mr. Miller. Claimant report a worsening of his back pain, now with bilateral radicular symptoms. Mr. Miller referred Claimant to a spinal surgeon, and provided pain medication and muscle relaxers for muscle spasms. (Ex. 15).

10. On September 17, 2020, Claimant went to the Orthopedic Surgery Department at Memorial, and was evaluated by Jessica Nyquist, PA-C. Ms. Nyquist noted Claimant's past history of multiple back injuries. Claimant reported that in the past, he got better after his injuries, but this time he was getting worse. Ms. Nyquist examined Claimant and took X-rays. Ms. Nyquist suspected a herniated disk and ordered an MRI given the severity of Claimant's symptoms. They discussed the possibility of injections, but Claimant was hesitant to pursue this option. Ms. Nyquist and Claimant agreed to see the results of the MRI before making any decisions going forward. (Ex. J).

11. On September 24, 2020, claimant underwent an MRI of his low back. The radiologist's report documents "at L5-S1, there is a central disc extrusion abutting the descending S1 nerve roots" and a "broad based disc bulge at L4-5." (Ex. 19).

12. Claimant underwent a prior MRI of his low back in August 2016. According to the history in the 2016 medical record, Claimant reported having "lower back pain for 1 decade. Worsening pain and bilateral lower extremity pain, left greater than right." The radiologist's impressions were: 1) Mild, multilevel degenerative disc and hypertrophic facet changes throughout the mid and lower lumbar spine without central canal narrowing; 2) L5-S1 small paracentral disc protrusion with likely contact with the descending right

S1 nerve roots; 3) L4-L5 mild bilateral neural foraminal narrowing; and 4) L3-L4 mild left neural foraminal narrowing. (Ex. B).

13. Claimant was referred to Clint Devin, M.D., at Steamboat Orthopedics. Dr. Devin, an orthopedic surgeon, evaluated Claimant on October 19, 2020. As documented in the record, Claimant described his mechanism of injury. Dr. Devin reviewed Claimant's MRI and recommended a bilateral L5-S1 microdiscectomy and decompression. (Ex. 22).

14. At Claimant's request, Dr. Devin compared Claimant's 2016 MRI with his September 24, 2020 MRI. Dr. Devin opined, "[w]e were able to obtain an MRI of the lumbar spine from August 5, 2016 at Memorial Hospital. This shows a very mild L5-S1 disc bulge with equivocal contact to the descending S1 nerve roots. This is supported in the radiology reports as well. On both of these tests, the patient has had significant progression of the L5-S1 from a disc protrusion, not really contacting any nerve roots to now, a disc herniation with extruded disc material causing moderate bilateral recess stenosis in contact to bilateral S1 traversing nerve roots. It is our opinion that this is correlative with the patient's new onset of symptoms as that this likely herniated at the time of crawling within a crawl space at work on September 3, 2020. This mechanism does support the findings on this updated MRI". (*Id.*)

15. On November 2, 2020, Dr. Devin requested authorization of spine surgery, but Insurer denied the request. (Ex. 23). On February 8, 2021, Dr. Devin appealed the decision and again provided his opinion that Claimant's need for surgery is related to claimant's occupational injury on September 3, 2020. (Ex. 24). Insurer denied the request.

16. Claimant decided to proceed with the surgery using his own insurance. On April 7, 2021, Claimant underwent a bilateral L5-S1 microdiscectomy and laminar foraminotomy with Dr. Devin. (Ex. 26).

17. Tashof Bernton, M.D. conducted an Independent Medical Evaluation (IME) of Claimant on September 9, 2021. Dr. Bernton opined that Claimant suffered an occupational injury to his low back on September 3, 2020. In reaching this opinion, Dr. Bernton took into account Claimant's pre-existing history of lumbar complaints and a prior lumbar occupational injury with permanent impairment. Dr. Bernton, however, opined that the incident on September 3, 2020, was a work-related exacerbation of a pre-existing condition. Dr. Bernton noted the marked decline in Claimant's function, the increase in pain complaints, and the evidence of structural change in comparing the pre-injury and post-injury MRIs of claimant's lumbar spine. Dr. Bernton opined that the surgery required for Claimant's condition was reasonable and medically necessary treatment for his September 3, 2020, occupational injury. (Ex. 17).

18. Respondents sent Claimant to Kathleen D'Angelo, M.D., for an IME. Dr. D'Angelo evaluated Claimant on September 21, 2021. Dr. D'Angelo opined that she was unable to render an opinion as to whether claimant suffered a work-related low back injury on September 3, 2020 until she was able to obtain other medical records. (Ex. M).

19. Dr. D'Angelo was provided with additional medical records to review, and she authored an addendum to her IME report. Based on the additional records, Dr. D'Angelo opined that Claimant's ongoing low back complaints and need for surgery were not related to his September 3, 2020 work injury. Dr. D'Angelo opined that Claimant's ongoing low back issues and need for surgery were the natural progression of his prior low back problems, and not related to his September 3, 2020 injury. (Ex. N).

20. At the hearing, Dr. D'Angelo testified consistent with her report and addendum. Dr. D'Angelo acknowledged that after Claimant's injury on September 3, 2020 he was placed on restrictions that were not in place prior to the September 3, 2020 work injury. Dr. D'Angelo testified that prior to claimant's injury on September 3, 2020, there was no surgical recommendation. Dr. D'Angelo testified that the medical treatment on September 3, 2020 for claimant's low back was reasonable, but she disagreed that the herniation on the September 24, 2020 MRI is related to the September 3, 2020 work injury.

21. Dr. Bernton was also provided with additional medical records, and a copy of Dr. D'Angelo's addendum. On March 23, 2022, Dr. Bernton issued a rebuttal report. He disagreed with Dr. D'Angelo's opinion that Claimant's disc pathology on MRI was a natural progression of his disc pathology. Dr. Bernton again asserted that the evidence indicates that Claimant suffered a low back injury on September 3, 2020 and that the fact that Claimant had prior low back complaints does not mean the current low back symptoms are unrelated to the documented injury that occurred. Dr. Bernton opines that this particular situation "essentially defines an occupational/work related exacerbation of a pre-existing condition". (Ex. 35).

22. Claimant testified at the hearing, consistent with the medical records, that he sustained an injury to his low back and left knee in a residential crawl space while working for Employer. Claimant testified that prior to his injury on September 3, 2020, he had prior low back treatment that included chiropractic care, medications, and injections. Claimant testified that although he had some prior low back issues, he never had any difficulty during his regular job. He testified that prior to his injury on September 3, 2020, he was not on any restrictions and he did not need lumbar surgery. Claimant testified after his injury on September 3, 2020, everything changed. Claimant could not perform his regular job, was put on restrictions and lumbar surgery was recommended by Dr. Devin. Claimant also testified that the surgery by Dr. Devin helped with both the back pain and the left leg symptoms.

23. Claimant testified that he was terminated by Employer because there was not a light duty position available and Employer could not accommodate his restrictions.

24. The ALJ finds that Claimant has proved by a preponderance of the evidence that he sustained a compensable injury to his back in the course of his employment on September 3, 2020.

25. The ALJ finds that the L5-S1 microdiskectomy and laminar foraminotomy performed by Dr. Devin was reasonable, necessary and related to his industrial injury on September 3, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Act, he

was performing a service arising out of and in the course of his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). While a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment, the mere occurrence of symptoms at work does not require the ALJ to conclude that the industrial exposure caused the symptoms and consequent need for treatment, or that the industrial exposure aggravated or accelerated any pre-existing condition. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Rather, the occurrence of the symptoms may be the result of, or the natural progression of, a pre-existing condition that is unrelated to the employment, or may be attributable to some intervening cause. *See Owens v. Indus. Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Whether the claimant's condition is due to the natural progression of the pre-existing condition or a new industrial accident is a question of fact for resolution by the ALJ. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, Claimant suffered an admitted industrial accident on September 3, 2020, injuring his left knee and lower back. (Findings of Fact ¶ 2). Claimant has a long history of lower back pain. He injured his back in the 1990s and in 2003. (*Id*. at ¶ 7). Claimant credibly testified that he was able to manage any flare ups with primarily chiropractic care. (*Id*. at ¶ 8). The ALJ credits Claimant's testimony that even with his prior back issues, he was able to fully work, and had no restrictions, but he could not perform his regular job duties after the September 3, 2020 injury.

Both experts, Dr. D'Angelo and Dr. Bernton concluded that Claimant's surgery performed by Dr. Devin was reasonable. The experts have differing viewpoints, however, regarding the relatedness of the September 3, 2020 accident. Dr. D'Angelo conducted an IME and reviewed additional records regarding Claimant's past medical issues with his lower back. Dr. D'Angelo opined that Claimant's surgery was not related to the September 3, 2020 injury because Claimant's ongoing back issues were the natural progression of his prior back problems. (*Id*. at ¶¶ 19-20). While the ALJ finds her opinion to be credible, it is not persuasive. The ALJ credits Dr. Bernton's opinion that Claimant's September 3, 2020 injury exacerbated his back issues. (*Id.* at ¶ 17). Mr. Miller agreed with this position that Claimant's injury exacerbated his previous back problems. (*Id*. at ¶ 5). Dr. Bernton noted the marked decline in Claimant's function, the increase in pain complaints, and the evidence of structural change in comparing the pre-injury and post-injury MRIs of claimant's lumbar spine. As Dr. Bernton stated, this case "essentially defines an occupational/work related exacerbation of a pre-existing injury." (*Id*. at ¶¶ 17 and 21). Claimant had pre-existing back issues, but he had no problem performing his

job prior to the September 3, 2020 work injury. (*Id*. at ¶¶ 7 and 22). Claimant has proved by a preponderance of the evidence that he sustained a compensable injury to his back in the course of his employment on September 3, 2020.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that his low back condition is causally related to his admitted September 3, 2002 work injury.

2. Claimant's April 7, 2021 spine surgery was causally related to his September 3, 2020, admitted work injury.

3. Claimant has established by a preponderance of the evidence an entitlement to medical treatment that is reasonable, necessary and causally related to treat his low back condition.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 31, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his neck beginning in May 2021 and ongoing (including a cervical spine fusion recommended by Dr. Brian Witwer) is reasonable, necessary, and related to the admitted January 21, 2020 work injury.

Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits.

Whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant is responsible for the termination of his employment with the employer, thus ending his entitlement to TTD benefits.

FINDINGS OF FACT

1. The claimant worked for the employer as staff security at a community corrections "work release" facility in Rifle, Colorado. The claimant was paid $23.78 per hour and he worked on a full-time basis. The claimant's job duties included overseeing the delivery of food to the facility.

2. On January 21, 2020, the claimant suffered an injury[1] while on duty. Specifically, the claimant was overseeing the delivery of inmate meals. While food carts were being unloaded, one cart began to roll back off the delivery truck. The claimant reached out to grab the cart so that it would not fall three feet to the ground. As he did so, the claimant immediately felt a "snap" and pain in the right side of his neck. Subsequently, the claimant reported the incident to the employer and was provided with medical treatment for his neck.

Medical Treatment Prior to January 21, 2020

3. The claimant was involved in a motor vehicle accident (MVA) in 2007. Due to the injuries he suffered as a result of that MVA, the claimant underwent a cervical spine fusion that same year. That fusion was at the C6 and C7 levels The claimant testified that between the 2007 spine fusion and the injury in January 2021, he did not suffer any neck related symptoms.

[1] The issue of compensability was initially endorsed for the current hearing. At the hearing, the respondents stipulated that the claimant suffered an injury to his neck on January 21, 2020.

4. In the years following his fusion surgery, the claimant underwent treatment for chronic neck pain. Part of this treatment was the use of prescription narcotics.

Medical Treatment After January 21, 2020

5. On January 24, 2020, the claimant was seen in the emergency department at Grand River Medical Center. At that time, the claimant was seen by Chelsea Lawrenz, PA-C. The claimant reported dull and persistent pain, with extreme neck stiffness. PA Lawrenz recorded that the claimant "denies any distal numbness that is worse than his baseline from his prior vertebral injuries". On exam the claimant had limited range of motion in his neck, particularly to the right. The claimant was diagnosed with a cervical muscular strain. The claimant was prescribed cyclobenzaprine. In addition, the claimant was placed under work restrictions of no lifting, carrying, pushing, or pulling over five pounds; and no reaching overhead or away from the body.

6. Grand River Medical is the claimant's authorized treating provider (ATP) for this claim. On February 4, 2020, the claimant was seen at Grand River Clinic by Mark Quinn, PA-C. On exam, PA Quinn noted that the claimant's neck was tender with significant spasms on the right side. PA Quinn also noted that magnetic resonance imaging (MRI) of the claimant's cervical spine showed disc herniations at multiple levels. PA Quinn listed the claimant's diagnoses as cervical discogenic pain syndrome, cervical disc displacement, and cervical radiculopathy. PA Quinn prescribed methocarbamol in lieu of the previously prescribed cyclobenzaprine. PA Quinn also prescribed a five day course of prednisone "bursts". In addition, PA Quinn released the claimant to return to work with work restrictions of no lifting, pushing, pulling, or carrying over five pounds.

7. On February 6, 2020, the claimant was seen by his primary care provider, Natasha Ellwood, PA-C with Mountain Family Health. At that time, the claimant reported pain in his neck and shoulders following an injury at work. The claimant also reported that his chronic back pain was stable with the use of 10 milligrams of hydrocodone on a daily basis. However, due to his neck pain, he took "a couple extra pills".

8. On February 20, 2020, the claimant returned to PA Quinn. At that time, the claimant reported that the prednisone had relieved his radiating pain symptoms. PA Quinn referred the claimant to physical therapy and continued the temporary work restrictions.

9. Thereafter, the claimant attended a few physical therapy visits. However, between the appointment with PA Quinn on February 20, 2020, and July 26, 2021, he claimant did not attend any other medical appointments related to his work injury.

10. During that same period of time (February 2020 to July 2021) the claimant was seen multiple times at Grand River Medical Center. On June 13, 2020, the claimant was seen by PA Norwood, who noted a normal neck exam. Thereafter, the Grand River Medical Center medical records have no mention of neck pain or symptoms related to the work injury. However, these records do demonstrate the claimant's ongoing use of narcotics to address his chronic neck and back pain. Although the claimant's narcotic

prescription was increased following his work injury, by June 2021, his prescription/usage had returned to the claimant's baseline.

11. On July 26, 2021, the claimant was seen by PA Quinn. At that time, the claimant reported a sudden increase in his neck symptoms approximately two months prior. In addition, the claimant reported the new symptom of radiating pain down his left arm. PA Quinn noted a diagnosis of cervical radiculopathy and referred the claimant for a cervical spine MRI.

12. On August 24, 2021, the claimant underwent a cervical spine MRI. The MRI showed no issues related to the prior C6-C7 fusion, little change from the February 2, 2020 MRI, and a "slight increase" in anterolisthesis of the C5 over C6.

13. Subsequently, the claimant was referred to Dr. Giora Hahn for injections. On November 19, 2021, the claimant underwent bilateral facet injections at C4-C5 and C5-C6.

14. Following these injections, the claimant experienced numbness on the right side of his face. The claimant sought emergent care regarding this facial numbness. Thereafter, Dr. Hahn declined to administer additional injections.

15. On February 8, 2022, the claimant attended an independent medical examination (IME) with Dr. Douglas Scott. In connection with the IME, Dr. reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Scott noted that there was a gap in the medical records between March 26, 2020 and July 26, 2021. Dr. Scott opined that on January 21, 2020, the claimant probably suffered a strain of a neck muscle. In addition, Dr. Scott noted that the claimant's neck pain was addressed by prednisone burst, physical therapy, and medication. Dr. Scott opined that the claimant reached his baseline when he did not return to PA Quinn or physical therapy in March 2020. Dr. Scott opined that the onset of neck pain in May 2021 was the result of a new injury, and not causally related to the claimant's January 2020 work injury.

16. The claimant was ultimately referred for a surgical consultation. On February 23, 2022, the claimant was seen by Dr. Brian Witwer. At that time, Dr. Witwer identified the claimant's diagnoses as cervical spondylosis and radiculopathy. In addition, Dr. Witwer identified severe adjacent level disease at C5-C6 (above the prior C6-C7 fusion). Dr. Witwer recommended extending the fusion to the C5-C6 level. The respondents have denied authorization for this surgical request.

17. After receiving additional medical records, on March 27, 2022, Dr. Scott issued an addendum to his IME report. Specifically, Dr. Scott was provided with medical records during the period of March 26, 2020 and July 26, 2021. In his March 2022 IME addendum Dr. Scott noted that the claimant did not report neck related symptoms to his providers at Mountain Family Health during that time. At an appointment on June 30, 2020 at Mountain Family Health, the claimant had a normal neck exam. Then on July 1, 2021, the claimant reported to Dr. Percy that he was doing well, with no report of neck

issues. In the March 27, 2022 IME addendum, Dr. Scott opined that on January 21, 2020, the claimant suffered a temporary aggravation to his chronic neck condition, and that exacerbation was resolved by June 13, 2020. Dr. Scott further opined that the claimant's neck symptoms that he began to report in July 2021 are likely due to the natural progression of the pre-existing degenerative condition of his cervical spine. Dr. Scott reiterated his opinion that the claimant's 2021 neck symptoms are not causally related to the January 2020 work injury.

18. Dr. Scott's testimony was consistent with his written reports. Dr. Scott explained that following a spinal fusion, the levels above and below the fusion can become stressed, resulting in additional symptoms. Dr. Scott referred to this as progressive segmental dysfunction. In the claimant's case, the claimant's C5-C6 level (the level above his prior fusion) is likely the level with the most stress. Dr. Scott testified that trauma is not required to cause stress at the level above the fusion. It is Dr. Scott's opinion that the claimant's development of new symptoms in July 2021 is the result of the normal progression of progressive segmental dysfunction, and not his work injury.

19. The claimant continued working full-time between his injury in January 2020 and December 1, 2021, when his employment was terminated. The claimant asserts that following the injury he was unable to work overtime hours, resulting in lost wages. The ALJ is not persuaded by this argument. The ALJ finds that the claimant suffered no wage loss as a result of his work injury.

Employment Terminated

20. On June 19, 2021, the claimant was driving on I-70 when he was pulled over by law enforcement for speeding. During the traffic stop it was discovered that the claimant's drivers license was "under restraint" due to an unpaid traffic ticket. The claimant testified that the incident "escalated" and he was arrested and taken into custody.

21. While in police custody, the claimant agreed to undergo a blood test. The test results showed that the claimant had THC[2] and Percocet in his system. As a result, the claimant was charged with driving while ability impaired (DWAI). The claimant was released from custody the following day.

22. On Monday, June 20, 2021, the claimant was able to prove that he had paid the traffic ticket. However, the claimant was still required to go to court regarding the DWAI.

23. In approximately November 2021, the claimant pled guilty to the DWAI charge. On December 1, 2021, the claimant's employment was terminated. The claimant testified that he was terminated because he failed to report the traffic stop and related arrest to the employer within 72 hours. It is the claimant's understanding that the employer has a 72 hour "rule" or "code" that requires an employee to report any contact

[2] Tetrahydrocannabinol.

with law enforcement within that time frame. It is the claimant's understanding that his violation of that rule, resulted in the termination of his employment. The claimant testified that he was not aware of this 72 hour rule. The ALJ does not find the claimant's testimony on this issue to be credible or persuasive.

24. The ALJ credits the medical records and the opinions of Dr. Scott. The ALJ specifically credits Dr. Scott's opinion that the claimant's development of new symptoms in 2021 is the result of the normal progression of progressive segmental dysfunction, and not the work injury. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that neck symptoms that he began to report in July 2021 are causally related to the January 21, 2020 work injury.

25. The ALJ also finds that the respondents have successfully demonstrated that it is more likely than not that the claimant was responsible for the termination of his employment. The claimant knew, or reasonably should have known, that being cited for a DWAI was something to be reported to the employer. The ALJ further finds that the claimant knew, or reasonably should have known, that pleading guilty to a DWAI could result in the termination of his employment. The claimant exercised some degree and control over his decision to not disclose his arrest and charges to the employer. Therefore, the ALJ finds that the claimant was responsible for his termination of employment.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that his current neck symptoms and related medical treatment (including the surgical recommendation) are causally related to the January 21, 2020 work injury. As found, the medical records and the opinions of Dr. Scott are credible and persuasive.

6. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

7. As found, the claimant did not suffer a wage loss following his work injury. The claimant continued working full-time until his employment was terminated on December 1, 2021. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits.

8. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault"

applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

9. As found, the respondents have successfully demonstrated by a preponderance of the evidence, that the claimant is responsible for the termination of his employment.

ORDER

It is therefore ordered:

1. The claimant's request for additional medical treatment of his neck is denied and dismissed.

2. The claimant's request for a cervical spine fusion, as recommended by Dr. Witwer, is denied and dismissed.

3. The claimant's claim for TTD benefits is denied and dismissed.

4. All matters not determined here are reserved for future determination.

Dated June 1, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he was injured in the course and scope of his employment on November 17, 2021.

ONLY IF CLAIMANT HAS PROVEN COMPENSABILITY, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonably necessary, authorized medical benefits to cure and relieve the effects of that alleged injury that are related to the alleged work injury of November 17, 2021.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits as a consequence of the alleged work related injury.

IV. Whether Respondents have proven by a preponderance of the evidence that Claimant was terminated for cause or is responsible for his termination.

V. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to penalties for alleged violation of W.C.R.P. Rule 8-2(A)(1) , for failure to provide a designated provider list with four medical providers as required by statute and rule, and if so if Claimant may select Dr. Brian Beatty, a level II accredited provider.

PROCEDURAL ISSUES AND STIPULATIONS

Claimant filed an Application for Hearing on December 28, 2021 on issues that include compensability, medical benefits that are authorized, reasonably necessary and related to the November 17, 2021 work related injury, average weekly wage and temporary disability benefits. Claimant also listed multiple penalties for failure to designate a list of providers and failure to timely provide a copy of the claim file.

Respondents filed a Response on and Amended Response to AFH dated January 27, 2022 with issues stating Claimant failed to specify the grounds for any penalties with specificity as required by statute, reserving the right to cure as well as statute of limitations. The responses indicated that one of the defenses included that Respondents were alleging Claimant may have been under the influence of drugs or alcohol.

Respondents agreed that they no longer were alleging any involvement with alcohol or drugs following investigation of the claim and that these allegations were simply to preserve their right to this defense if any investigation showed any such involvement.

Claimant stipulated that he was withdrawing, with prejudice, the issue of penalties for failure to provide a copy of the claim file. This stipulation is approved and this ALJ enters this stipulation as part of the order in this matter.

Respondents stipulated that the issue of independent contractor and the defense of intoxication were withdrawn, with prejudice. This stipulation is approved and this ALJ enters this stipulation as part of the order in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is primarily a Spanish speaking, 22 year old, laborer that worked in construction for Employer. His hours were varied. He build wood homes, and generally performed heavy lifting duties. Claimant attended secondary school in Guatemala.

2. Claimant worked for Employer for several months. Claimant earned $26.00 per hour.

3. Claimant alleged he was injured in the course and scope of his employment on November 17, 2021. He testified he was carrying wood that was approximately 20 foot long by twelve inches wide and two inches thick, which weighed approximately 75 lbs. Claimant was carrying the wood overhead when it shifted and pulled him backwards, causing him to fall onto some wood that was on the ground. Claimant alleged that he landed on his right side, injuring his lumbar spine.

4. On the day of the accident, Claimant advised his supervisor of the fall but was not provided with a designated provider lists. Claimant completed his work shift. The following day, Claimant again advised his supervisor of the incident. His supervisor sent him home, advised him to use some cream but failed to provide a designated provider list.

5. On Friday, November 19, 2021 Claimant sent his supervisor a text advising that he needed to see a medical provider because of the pain in his low back at the waist. He also asked whether Employer had workers' compensation insurance. Again, Employer failed to provide a designated provider list. However, he did request that Claimant go to the job site to pick up his check. Claimant did not return to work for Employer.

6. Claimant did not carry health insurance and testified that he could not afford medical care.

7. Claimant filed a Workers' Claim for Compensation on December 1, 2021 describing the mechanism of accident. Respondents filed a First Report of Injury on December 28, 2021 stating that Employer was notified of the incident on November 17, 2021. Claimant filed an Application for Hearing on December 28, 2021 on issues of compensability, medical benefits, average weekly wage and temporary disability benefits.

8. Claimant returned to heavy duty work in construction/framing on January 3, 2022 without seeking medical care or urgent care services and had no medical restrictions at that time.

9. On January 11, 2022 Respondents filed a Notice of Contest stating that they had no documentation supporting a compensable injury.

10. Claimant was first seen by Mountain View Pain Center on February 4, 2022 with complaints of lumbar spine and hip pain. This was a full month after Claimant returned to regular work in heavy construction and framing.

11. Dr. John Raschbacher evaluated Claimant for an IME on March 18, 2022 at Respondent's request. Claimant primarily reported low back pain. Dr. Raschbacher performed a physical exam, which was unremarkable. Claimant had mild tenderness which was consistent with complaints of low back pain or with someone with no back pain. Dr. Raschbacher found no objective findings on physical exam.

12. Dr. Raschbacher testified by deposition on May 6, 2022. He stated that simply because an incident occurred at work, that does not mean that Claimant suffered an injury, that looking at Claimant's alleged injury where he did not seek treatment for several months after the incident, including urgent care or an emergency department, and resuming the same type of work in January, would suggest that Claimant did not actually have an injury or that it was resolved by that time. Further, Dr. Raschbacher opined that Claimant's return to work performing essentially the same job functions indicated that Claimant is was able to have normal function. This ALJ infers by this opinion that by January 3, 2022 Claimant had normal functions, even if there was an incident.

13. Dr. Raschbacher explained that he would expect someone who had, or thought they had, serious symptomatology to seek some medical care. Dr. Raschbacher also opined that if someone had a concern about having an injury and was going to resume the same type of functions, that person would have sought care and obtained a physical exam. Dr. Raschbacher's opinion is persuasive.

14. As found, Dr. Raschbacher's opinions and findings are more persuasive that Claimant's subjective complaints and testimony.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable

cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The question of whether Claimant has met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ*. City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v.*

Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment with Employer. As found, Claimant returned to full duty work as a construction laborer and framer on January 3, 2022 without seeking any medical attention, even from an emergency service provider or urgent care facility. Claimant first sought medical evaluation on February 4, 2022. As found, Dr. Raschbacher credibly testified that, on exam on March 18, 2022 Claimant had no objective signs of injury. This is finding and opinion is persuasive to this ALJ. Claimant's testimony was not persuasive in this matter. Claimant's claim is not compensable. Therefore, the remaining issues are moot.

[This space intentionally left blank.]

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for a work injury of November 17, 2021 is *denied* and *dismissed*.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 1st day of June, 2022.

Denver, CO 80203

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 19, 2020 until terminated by statute.

2. Whether Respondent has proven by a preponderance of the evidence that Claimant abandoned his position and was responsible for his termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

FINDINGS OF FACT

1. Claimant worked for Employer as an overnight stocker. His normal hours were from 10:00 p.m. to approximately 6:00 a.m.

2. On August 21, 2020 Claimant suffered an admitted left foot fracture while stepping over a pallet. Claimant initially sought medical treatment through the VA Medical Center. Imaging revealed a non-displaced fracture of the fifth metatarsal. He was non-weight-bearing and received a scooter and boot.

3. On September 14, 2020 Claimant received medical treatment through Authorized Treating Physician (ATP) Concentra Medical Centers. He was evaluated by Glenn D. Petersen, PA. Claimant reported the left foot injury while working as an overnight stocker. He noted that he continued to work following the injury while utilizing a foot boot and knee scooter. The report documented that Claimant had been in the foot boot, using the knee scooter and non-weight-bearing on the left lower extremity for four weeks. PA Petersen diagnosed Claimant with a non-displaced fifth proximal fracture and referred him to a foot specialist. PA Petersen assigned work restrictions of sedentary work only, with the left leg elevated, and continued use of the foot boot and knee scooter. Nevertheless, Claimant was permitted to work his entire shift and authorized to return to modified duty on September 15, 2020. Claimant's next scheduled appointment with Concentra was September 28, 2020.

4. On approximately September 19, 2020 Claimant attempted to return to work for his regular shift beginning at 10:00 p.m. He brought his knee scooter and wore his boot. Claimant explained that his supervisor directed him to proceed through certain aisles in the store and ensure items on the grocery shelves were facing forward for customers. Claimant further noted he was required to perform the work with his injured leg on the knee scooter and his non-injured leg on the ground. Although he was working on the middle shelves, he was required to get up and down from the knee scooter and could not keep his knee on the device. The activity caused intense pain in his left foot.

5. Approximately three-quarters of the way through his shift on September 19, 2020 Claimant told his supervisor that he was in too much pain to complete his shift and left Employer's facility. Claimant noted he was scheduled to work the following day, but did not return because he could not perform the job. He remarked that he subsequently left messages for his supervisor stating that he was unable to perform his job because of pain. Claimant commented that Employer never offered him a seated position consistent with his work restrictions. He subsequently received a letter from Employer terminating his employment. Claimant specified that he was terminated because he was no longer working scheduled shifts.

6. On September 22, 2020 Claimant returned to Concentra for a walk-in, non-scheduled visit. He was evaluated by Kathryn G. Bird, DO. As noted in the Concentra record, "[p]atient comes in for a walk-in visit today to see if he could get restrictions advanced." Claimant reported that he continued to work modified duty and was awaiting the referral to the foot specialist. He reported a 4/10 pain level in his left foot. Dr. Bird restricted Claimant to seated duty only and wearing his foot boot while awake. He was permitted to work his entire shift.

7. On October 6, 2020 Claimant returned to Dr. Bird at Concentra for a follow-up appointment. He remarked that he had not yet visited Michael Zyzda, DPM, but was scheduled for the following day. Claimant also reported no longer working for Employer because no light duty was available. He noted 2/10 pain in the left foot. X-rays revealed a two millimeter gap of the first metatarsal fracture line. Claimant's restrictions remained seated duty only and wearing his boot. He was permitted to work his entire shift.

8. On October 7, 2020 Claimant visited Dr. Zyzda at Concentra for an examination. Claimant reported the mechanism of injury and remarked that the VA had placed him in the foot boot with the use of a knee scooter. He remarked that he utilized the cast boot and scooter for the first four weeks and that over the last two weeks he felt great. Dr. Zyzda recommended smoking cessation and weight-bearing on the heel, but to avoid full weight utilization. Dr. Zyzda did not alter Claimant's work restrictions.

9. Claimant testified that, following his work shifts, he would babysit and take care of his granddaughter during the day. He commented that he never spoke with any claims adjuster throughout the duration of the claim. Nevertheless, Claimant recognized the name of the claims adjuster as SD[Redacted]. He denied ever telling Ms. SD[Redacted] that he could no longer work for Employer because his post-accident work shifts during the day conflicted with his babysitting duties.

10. On October 20, 2020 Claimant returned to Dr. Bird for an evaluation. Claimant reported "[n]ot working – let go." Dr. Bird noted that Dr. Zyzda had recommended use of a bone stimulator. Claimant reported 2/10 pain in the left foot. His work restrictions remained unchanged.

11. On January 21, 2021 Claimant returned to Dr. Bird for a telemedicine evaluation. The record specifies that "[h]e was scheduled for a demand visit today" but due to a fever and sore throat the visit was done telephonically. Claimant reported

continuing left foot pain. Dr. Bird remarked that Claimant had not been evaluated by either herself or Dr. Zyzda since October. Dr. Bird did not make any changes to Claimant's work restrictions.

12. On January 28, 2021 Claimant returned to Dr. Bird for an examination. Claimant reported continuing left foot symptoms. He recalled that a few weeks earlier "he was chasing his dog and his foot twisted sideways, he felt a pop and had worse pain on the lateral side of his foot." Dr. Bird commented that Claimant had not returned to Dr. Zyzda even though he had a scheduled appointment. She also remarked that Claimant was no longer wearing or utilizing the foot boot. Claimant reported 4/10 pain in the left foot. Dr. Bird continued to restrict Claimant to seated duty.

13. On March 29, 2021 Claimant again visited Dr. Bird for an evaluation. He reported 8/10 left foot pain but that his condition had not changed. Dr. Bird commented that Insurer had denied Dr. Zyzda's February 10, 2021 surgical request. She remarked that he had not reached Maximum Medical improvement (MMI). Dr. Bird again did not change Claimant's work restrictions.

14. On May 10, 2021 Claimant returned to Dr. Bird for an examination. Claimant reported that his left foot symptoms had increased and he was experiencing edema in his left lower leg. After conducting a physical examination, Dr. Bird determined that Claimant had reached MMI. She advised Claimant that he could advance his activities as tolerated. Dr. Bird assigned a 5% left lower extremity permanent impairment rating that converted to a 2% whole person impairment.

15. On September 2, 2021 Claimant underwent a Division Independent Medical Examination (DIME) with Sharon Walker, M.D. Dr. Walker reviewed Claimant's medical records and conducted a physical examination. She concluded that Claimant had not reached MMI. Dr. Walker reasoned that Claimant was only placed at MMI because requested treatment had not been authorized. She explained that Claimant was a surgical candidate and warranted evaluation for Chronic Regional Pain Syndrome (CRPS). Dr. Walker recommended temporary work restrictions of no crawling, kneeling, squatting or climbing. She also noted no lifting, pushing, pulling or carrying in excess of 15 pounds and using a foot boot as needed.

16. Claimant has proven that it is more probably true than not that he is entitled to receive TTD benefits for the period October 19, 2020 until terminated by statute. On August 21, 2020 Claimant suffered an admitted left foot fracture while stepping over a pallet. He initially obtained medical treatment through the VA Medical Center. Imaging revealed a non-displaced fracture of the fifth metatarsal. He was non-weight-bearing and received a scooter and boot. Claimant then worked for several weeks utilizing the foot boot and knee scooter. On September 14, 2020 Claimant began receiving treatment through ATP Concentra. He received work restrictions of sedentary work only, with the left leg elevated and continued use of the foot boot and knee scooter. Claimant was permitted to work his entire shift and authorized to return to modified duty work on September 15, 2020.

17. Claimant has not worked for Employer since approximately September 19, 2020 because of continuing pain and left foot symptoms. He was subsequently terminated from employment. The record reflects that Drs. Bird and Zyzda have not changed Claimant's work restrictions and he has been limited to seated duty only. Claimant has thus suffered medical incapacity based on the loss of bodily function and an impairment of wage earning capacity because of his inability to resume prior work. The August 21, 2020 accident impaired his ability to effectively and properly perform his regular employment. The record thus reveals that Claimant's industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Claimant has not reached MMI. Accordingly, Claimant is entitled to receive TTD benefits for the period October 19, 2020 until terminated by statute.

18. Respondent has failed to prove that it is more probably true than not that Claimant was responsible for his termination by abandoning his employment and is thus precluded from receiving TTD benefits. Initially, Claimant's work restrictions remained largely unchanged from when he began seeking treatment with ATP Concentra throughout the duration of the claim. Claimant was limited to seated or sedentary activities, with required use of the knee scooter starting on September 14, 2020. He was authorized to work his entire shift. However, the record reveals that Employer was unable to accommodate Claimant's work restrictions and his assigned duties caused significant pain.

19. On approximately September 19, 2020 Claimant attempted to return to work on his regular shift at 10:00 p.m. He brought his knee scooter and wore his boot. Claimant explained that his supervisor directed him to proceed through certain aisles in the store and ensure items on the grocery shelves were facing forward for customers. Claimant further noted he was required to perform the work with his injured leg on the knee scooter and his non-injured leg on the ground. Although he was working on the middle shelves, he was required to get up and down from the knee scooter and could not keep his knee on the device. The activity caused intense pain in his left foot. About three-quarters of the way through his shift Claimant told his supervisor that he was in too much pain to complete his job and left Employer's facility. Claimant noted he was scheduled to work the following day, but did not return because he could not perform the job. He subsequently received a letter from Employer terminating his employment.

20. Although Claimant ceased reporting to work after about September 19, 2020 the record reveals that he was unaware that he would be terminated from employment. Claimant remarked that he left messages for his supervisor after September 19, 2020 stating that he was unable to perform his job because of his pain. He commented that Employer never offered him a seated position consistent with his work restrictions. Claimant thus did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Respondent has thus not proven that it is more probably true than not that Claimant is precluded from receiving TTD benefits for the period October 19, 2020 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Indus. Claim Appeals Off.*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term “disability,” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the

employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAO, July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing his assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

6. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 19, 2020 until terminated by statute. On August 21, 2020 Claimant suffered an admitted left foot fracture while stepping over a pallet. He initially obtained medical treatment through the VA Medical Center. Imaging revealed a non-displaced fracture of the fifth metatarsal. He was non-weight-bearing and received a scooter and boot. Claimant then worked for several weeks utilizing the foot boot and knee scooter. On September 14, 2020 Claimant began receiving treatment through ATP Concentra. He received work restrictions of sedentary work only, with the left leg elevated and continued use of the foot boot and knee scooter. Claimant was permitted to work his entire shift and authorized to return to modified duty work on September 15, 2020.

7. As found, Claimant has not worked for Employer since approximately September 19, 2020 because of continuing pain and left foot symptoms. He was subsequently terminated from employment. The record reflects that Drs. Bird and Zyzda have not changed Claimant's work restrictions and he has been limited to seated duty only. Claimant has thus suffered medical incapacity based on the loss of bodily function and an impairment of wage earning capacity because of his inability to resume prior work. The August 21, 2020 accident impaired his ability to effectively and properly perform his regular employment. The record thus reveals that Claimant's industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Claimant has not reached MMI. Accordingly,

Claimant is entitled to receive TTD benefits for the period October 19, 2020 until terminated by statute.

8. As found, Respondent has failed to prove by a preponderance of the evidence that Claimant was responsible for his termination by abandoning his employment and is thus precluded from receiving TTD benefits. Initially, Claimant's work restrictions remained largely unchanged from when he began seeking treatment with ATP Concentra throughout the duration of the claim. Claimant was limited to seated or sedentary activities, with required use of the knee scooter starting on September 14, 2020. He was authorized to work his entire shift. However, the record reveals that Employer was unable to accommodate Claimant's work restrictions and his assigned duties caused significant pain.

9. As found, on approximately September 19, 2020 Claimant attempted to return to work on his regular shift at 10:00 p.m. He brought his knee scooter and wore his boot. Claimant explained that his supervisor directed him to proceed through certain aisles in the store and ensure items on the grocery shelves were facing forward for customers. Claimant further noted he was required to perform the work with his injured leg on the knee scooter and his non-injured leg on the ground. Although he was working on the middle shelves, he was required to get up and down from the knee scooter and could not keep his knee on the device. The activity caused intense pain in his left foot. About three-quarters of the way through his shift Claimant told his supervisor that he was in too much pain to complete his job and left Employer's facility. Claimant noted he was scheduled to work the following day, but did not return because he could not perform the job. He subsequently received a letter from Employer terminating his employment.

10. As found, although Claimant ceased reporting to work after about September 19, 2020 the record reveals that he was unaware that he would be terminated from employment. Claimant remarked that he left messages for his supervisor after September 19, 2020 stating that he was unable to perform his job because of his pain. He commented that Employer never offered him a seated position consistent with his work restrictions. Claimant thus did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. Respondent has thus not proven that it is more probably true than not that Claimant is precluded from receiving TTD benefits for the period October 19, 2020 until terminated by statute.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is entitled to receive TTD benefits for the period October 19, 2020 until terminated by statute.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to additional Permanent Partial Disability (PPD) benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was previously employed by Employer as a janitor.
2. On July 16, 2020, Claimant suffered an injury to his right leg. Claimant's right leg was struck by a metal sign. The metal sign was sitting on top of a grocery cart and hit the lateral side of his right lower leg
3. Claimant passed away on or about December 9, 2021.
4. Before passing away, Claimant treated with Concentra Medical Center under the care of Kathryn Bird, D.O. Claimant began treatment on July 27, 2020. (CHE 4, pp. 18-21). At this evaluation, it was noted that Claimant was 5 feet 6 inches, weighed 208 pounds, with a BMI of 33. Claimant reported wearing jeans at the time of incident, where an ecchymotic lesion resulted at the point of impact. Upon examination, no drainage existed, and Claimant was diagnosed with cellulitis.
5. Claimant subsequently underwent four surgeries to address the resulting wound and cellulitis. On August 14, 2020, Claimant was operated on by Dr. Craig Lehrman for surgical debridement of the right lower extremity. (RHE F, p. 22). On September 15, 2020, Claimant was operated on by Dr. Lily Daniali who performed a skin graft of Claimant's right lower extremity wound. (*Id*.) On October 2, 2020, Dr. Daniali performed a surgical preparation of the wound with application of vacuum assisted closure. (*Id*.)
6. On March 3, 2021, Dr. Bird placed Claimant at maximum medical improvement (MMI). When she placed Claimant at MMI, she noted the skin on Claimant's right lower extremity had:
    - Significant, 1/8 of an inch, pitting edema below the knee.
    - Healed skin trauma over the distal leg.
    - A large scar that is depressed on the anterolateral distal right lower leg.
    - Shiny skin from being taught,
    - Healed wound with confluent skin and "only a [single] crusted area 3 mm in diameter."

RHE F, 23.

7. Dr. Bird issued a 10% lower extremity impairment for hematoma residual impairment, similar to a peripheral vascular disease under Table 52, Class 2, p. 79, of the AMA Guides. (RHE F, pp. 20-25).

8. On March 11, 2021, Respondent filed a Final Admission of Liability admitting to temporary total disability (TTD) benefits from August 11, 2020, through November 29, 2020, totaling $5,183.88, and permanent partial disability (PPD) benefits for the 10% scheduled lower extremity rating in the amount of $7,011.89. (CHE 2). These benefits have been paid in full.

9. On June 29, 2021, Claimant at his request, attended a DIME with Robert Mack, M.D. (RHE G). At the time of the DIME, Dr. Mack concluded that Claimant is not at MMI due to pitting edema of the right edema of the right leg and foot, persistent pain, and "*recurring skin lesions"* in the skin graft area of the right leg and need for additional treatment (emphasis added). Thus, at the time of the DIME, Claimant had additional skin lesions. Dr. Mack described the lesions as:

   - Three ½ inch circular scabbed-over lesions. Two were anteromedial and one was posterior. But no drainage was noted from any of the lesions.

   RHE G, pp. 35-36.

10. Dr. Mack also determined Claimant was not at MMI because he was "concerned with the amount of edema and skin lesions noted in the area of the skin grafted wound." RHE G, pp. 36.

11. Dr. Mack concluded that there was the potential for recurring infection next to a preexisting right total knee replacement. Dr. Mack also recommended that ongoing monitoring by a wound specialist and that the leg needed additional evaluation for circulation purposes. Although Claimant was not at MMI, Dr. Mack issued a provisional lower extremity impairment rating of 35% based on Table 52 Impairment to Lower Extremity due to Peripheral Vascular Disease, under class 2. Dr. Mack also indicated in his report that "[i]t should be noted as an orthopedic surgeon, I'm not experienced performing Impairment ratings of skin and soft tissue wounds such as this."

    RHE G, p. 36.

12. Therefore, at the time of the DIME with Dr. Mack, the ALJ finds that Claimant's skin condition was worse than at the time he was originally placed at MMI by Dr. Bird and provided a 10% impairment rating.

13. The ALJ further finds that the worsening of Claimant's skin condition at the time of the DIME, in which Claimant was found to not at MMI, resulted in Dr. Mack providing a higher provisional impairment rating of 35%. Therefore, the ALJ finds that the impairment rating provided by Dr. Mack is not an accurate assessment of Claimant's resulting impairment from his work-related condition. In other words, providing an impairment rating at a time when Claimant's skin condition is worse, and which might improve with additional treatment, makes it very difficult to

determine the extent of Claimant's impairment from his work-related condition based on Dr. Mack's assessment. Because Claimant's skin condition had gotten worse, and Dr. Mack concluded Claimant should return to Dr. Daniali to assess Claimant's edema and the recurring lesions, the provisional impairment rating provided by Dr. Mack is not found to be persuasive as it relates to Claimant's ultimate impairment from his work-related injury. As a result, the ALJ finds Dr. Bird's assessment of Claimant's impairment is found to be more credible and persuasive as to Claimant's permanent impairment due to his work-related injury.

14. On January 25, 2022, an Application for Hearing was filed endorsing solely the issue of PPD benefits.

15. On February 24, 2022, Respondent filed its Response to Application for Hearing also endorsing PPD benefits and overpayment or credits applied to any PPD award due to previous payment of indemnity benefits. Respondent also endorsed that Claimant was deceased.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197

P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to additional Permanent Partial Disability (PPD) benefits.

Pursuant to C.R.S. § 8-42-116(b), "[w]here the injury proximately caused permanent partial disability, the death benefit shall consist of the unpaid and unaccrued portion of the permanent partial disability benefit which the employee would have received had he lived. (emphasis added).

The term "unaccrued" is not defined in the statute. In *Nilsen v. Legacy Trucking, Inc.*, (ICAO – 2009 WL 1947270), it was determined that PPD benefits had accrued for purposes of the statute since respondents had admitted to said benefits. On October 23, 2007, claimant died for reasons unrelated to his industrial injury. However, the following day, respondents had filed a Final Admission of Liability admitting to the disputed PPD benefits. ICAO reasoned that even though the claimant had passed away one day prior, entitlement to PPD benefits had accrued given the opined impairment rating and most importantly, respondents' admission to those benefits before learning of the death.

MMI status is not dispositive of determining whether PPD benefits have been accrued. In *Singleton v. Kenya Corporation*, 961 P.2d 571 (Colo. App. 1998), the Court of Appeals determined that PPD benefit may have accrued before placement at MMI "upon proof that an industrial injury caused the deceased employee to suffer a permanent disability." As such the court reasoned that "the statute does not foreclose such posthumous proof when the employee dies of unrelated causes before reaching MMI."

Claimant's widow is seeking additional PPD benefits beyond which has already paid and accrued. Claimant's widow is seeking the scheduled lower extremity impairment issued by the DIME, Dr. Mack, at 35%.

The parties agree that PPD benefits for 10% lower extremity impairment has been paid in accordance with the Final Admission of Liability. The parties agree also that no additional PPD benefits have been paid beyond the admitted 10% lower extremity. At issue is whether an additional 25% of lower extremity impairment benefits have accrued.

First, given Claimant was not at MMI at the time of the DIME and the time of his death, combined with the recommendation of additional medical care, it cannot be found that additional PPD benefits have accrued. Dr. Mack concluded that MMI had not been reached. While MMI is unnecessary to have accrued PPD benefits at death, the fact that Dr. Mack was recommending additional medical care is persuasive that that additional PPD benefits had not accrued. Dr. Mack was concerned of needing additional treatment for ongoing edema, the potential for ongoing infections, and the need for ongoing monitoring additional evaluations to address the recurrent wound lesions and circulation

concerns. As a result, Claimant's medical status per the opinions of Dr. Mack was not stable for determination of permanent partial disability status and his opinion is not found to be persuasive as it relates to Claimant's permanent impairment from his injury.

Second, this case is different from the case in *Singleton*, where no previous PPD benefit had been admitted and paid. Instead, here Respondent has already admitted and paid for PPD benefits in the amount of $7,011.89 based on an opinion that Claimant had reached MMI and was provided an impairment rating. Thus, Respondent has already compensated Claimant for PPD benefits and provided PPD benefits under the statute based on Dr. Bird's rating.

Third, given that additional treatment was being recommended by Dr. Mack, it is speculative that the advisory rating issued by the DIME should be paid under the claim. Due to Claimant's unfortunate death, it is unknown if Claimant's placement at MMI would have residual impairment of an additional 25%. It is unknown if the additional treatment would have kept Claimant's residual impairment the same as found and opined by Dr. Mack. It also is unknown if the additional treatment would have improved Claimant's condition and residual impairment. Accordingly, it is thus speculative to require payment of additional PPD benefits given the unknown nature of the future impairment had death not transpired. In other words, it is only speculative to conclude that additional PPD benefits and increased impairment exists at the time of death.

Fourth, the additional impairment issued by Dr. Mack is not reliable. Dr. Mack admits in his own report that he is not qualified to assess skin and wound impairments. Consequently, Dr. Mack's own admission makes it even more problematic to conclude that additional impairment and PPD benefits have accrued at the time of death.

Fifth, the ALJ credits Dr. Bird's opinion regarding the extent of Claimant's permanent impairment. The ALJ credits Dr. Bird's opinion because she assessed Claimant's condition at a point when Claimant was at MMI and did not have the extensive pitting edema, did not have the additional lesions, and did not need additional treatment which might improve Claimant's condition and resulting permanent impairment.

As a result, Claimant has been compensated for PPD benefits as a result of the wound injury he suffered on July 16, 2020. Based on the totality of evidence and the circumstances of this case, the Claimant's widow has failed to establish by a preponderance of the evidence that additional PPD benefits have accrued at the time of Claimant's death and that additional PPD benefits are payable based on the 35% provisional impairment rating provided by Dr. Mack. Therefore, Claimant's widow's request for additional PPD benefits is denied.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The request for additional PPD benefits based on Dr. Mack's 35% scheduled impairment rating is denied.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-125-703-002

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the lumbar spine surgery recommended by Dr. Douglas Orndorff is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her March 13, 2019 work injury?

FINDINGS OF FACT

1. Claimant is employed with Employer as a certified nursing assistant ("CNA"). Claimant job duties included performing healthcare services in Employer's assisted living facilities and in the homes of patients and individuals. Claimant testified she was a "float team" member, and would work either in homes or in facilities as needed depending on other employees' schedules.

2. Claimant sustained an admitted injury to her lower back on March 13, 2019 when she was attempting to help lift an obese patient to a toliet. Claimant testified the felt a pop and felt what she described as a warm water balloon down the small of her back.

3. Claimant reported the injury to Employer and was referred to Peak Professionals for medical treatment. Claimant was initially evaluated by Physicians' Assistant ("PA") Dockins on March 15, 2019. PA Dockins works with Dr. Adams with Peak Professionals. PA Docking noted Claimant complained of acute right-sided low back pain with right-sided sciatica. Claimant provided a consistent accident history to PA Dockins of trying to help a patient use the restroom when she sustained the back injury. PA Dockins diagnosed Claimant with a right low back strain, sciatica with radiculopathy and provided Claimant with work restrictions and medications, including Percocet. PA Dockins referred Claimant for a magnetic resonance image ("MRI") of the lumbar spine due to decreased reflexes and a positive straight leg test on the right on physical examination.

4. The MRI was performed on April 3, 2019 showed a disc protrusion at L1-L2 and disc bulges at L4-L5 and L5-S1. .

5. Claimant was evaluated by PA Dockins on May 18, 2019. PA Dockins noted Claimant had increasing pain since she had to drive from Eckert from Ridgway for work. PA Dockins noted that Claimant needed to stand every 15 minutes due to her disc bulge and the driving had delayed Claimant's healing and caused Claimant to regress some. PA Dockins noted Claimant was having worsening radicular pain down both

thighs and needed opioid painkillers at night. PA Dockins referred Claimant to Dr. Faragher for consideration of an epidural steroid injection. ("ESI").

6. Claimant returned to PA Dockins on May 23, 2019. PA Dockins noted Claimant continued to have radicular pain down both thighs. PA Dockins recommended Claimant continue using Diclofenac, cyclobenzaprine, and Percocet as medications for her symptoms. PA Dockins noted Claimant needed to take standing breaks on her commute, and recommended she stop every 15 minutes for a standing break.

7. On June 13, 2019, PA Dockins noted Claimant had continued worsening pain from her lumbar disc bulges, including radicular symptoms now occurring in the left leg. PA Dockins discussed referring Claimant to St. Mary's Hospital Neurosurgery.

8. Claimant was evaluated by Dr. Faragher for consultation on August 13, 2019. Dr. Faragher noted decreased sensation in a right L5 pattern. Dr. Faragher diagnosed Claimant with low back pain, right-sided sciatica, multiple disc bulges, right L5-S1 foraminal stenosis, and possible right sacroiliac ("SI") joint pain and dysfunction. Dr. Faragher recommended conservative treatment, including a home exercise program, physical therapy, a TENS unit, and lumbar traction, as well as medications and potential L5-S1 epidural joint injections.

9. Claimant subsequently underwent a right-sided lumbar interlaminar L5-S1 ESI on September 5, 2019 under the auspices of Dr. Faragher. On September 26, 2019, the Dr. Faragher noted Claimant did not get any benefit from the injection. Dr. Faragher opined that Claimant may be having pain associated with the SI joint and, therefore, recommended a right-sided SI joint injection. Dr. Faragher noted Claimant had been diliegent with her home exercise program which included walking most days of the week. Dr. Faragher recommended Claimant continue her walking program and home exercise program and recommended physical therapy with a focus on lower extremity stretches, core strengthening, and spinal stabilization exercises.

10. Claimant underwent the right SI joint injection on October 21, 2019 under the auspices of Dr. Faragher. Claimant reported to Dr. Faragher on November 20, 2019 that she had no improvement with the SI joint injection. Dr. Faragher noted Claimant may have facet syndrome, and recommended bilateral L4-S1 lumbar facet injections.

11. Claimant underwent the L4-S1 bilateral facet injections on January 16, 2020 under the auspices of Dr. Faragher. Claimant reported 50% improvement after the injections when she returned to Dr. Faragher on February 4, 2020. Dr. Faragher recommended Claimant undergo a new lumbar MRI.

12. Claimant underwent the MRI on May 15, 2020. The MRI showed slightly increased disc protrusion at L1-2, and significantly processed L5-S1 degenerative facet changes with more distention of the right-sided facet with new fluid and distention of the left-sided facet. Levels L2-L5 showed moderate degenerative changes.

13. Claimant returned to Dr. Faragher on May 20, 2020. Dr. Faragher noted Claimant's MRI results, and Claimant's ongoing radicular symptoms. Dr. Faragher recommended bilateral SI joint injections with fluoroscopy. The bilateral SI joint injections were eventually performed on July 9, 2020.

14. Claimant returned to Dr. Faragher on August 11, 2020. Dr. Faragher noted Claimant would like to go forward with a right L5-S1 interlaminar epidural injection after the last bilateral SI joint injection did not help as much as intended.

15. Dr. Adams subsequently referred Claimant to Spine Colorado, a neurosurgery clinic. Claimant was evaluated by PA Byers on August 25, 2020. PA Byers diagnosed Claimant with low back pain and right greater than left radiculopathy into the lower extremities, to the dorsal side of the right foot. PA Byers noted decreased sensation on the lateral leg and dorsum of the foot. PA Byers noted that some of Claimant's symptoms were consistent with nerve compression at the L5-S1 level. PA Byers recommended an electromyelogram ("EMG") to further evaluate Claimant's radicular symptoms.

16. Claimant underwent EMG testing on October 14, 2020 with Spine Colorado. The EMG testing did not show evidence of a lumbar radiculopathy, a peripheral neuropathy or a compressive neuropathy. The EMG report noted Claimant's report of radicular symptoms and decreased sensation on the lateral right leg and dorsum of the right foot on examination. The report recommended Claimant be referred to Dr. Orndorff for surgical consultation.

17. Claimant returned to Spine Colorado on December 2, 2020 where Claimant was examined by physician access supervisor ("PASUP") Hamlin. PASUP. Hamlin noted Claimant had spondylolisthesis and significant facet arthropathy at L5-S1. PASUP Hamlin noted that Claimant continued to show decreased sensation on the right leg and foot on examination. PASUP Hamlin diagnosed Claimant with anterolisthesis and herniated nucleus pulposus at L5, bilateral S1 joint dysfunction, and facet arthropathy at L5-S1.

18. Claimant consulted with Dr. Orndorff at Spine Colorado on January 20, 2021. Dr. Orndorff noted Claimant had low back pain with bilateral leg pain, right worse than left with numbness in the right toes. Dr. Orndorff noted Claimant had undergone conservative treatment including physical therapy, anti-inflammatory medications, traction, narcotics, muscle relaxers, gabapentin, meloxicam, and injections. On examination, Dr. Orndorff noted tenderness in various parts of the spine and in the SI joint, pain with flexion and extension, decreased sensation on the right leg and right foot, diminished reflex in the right patella, and positive results on SI joint compression tests.

19. Dr. Orndorff reviewed extension X-rays, which demonstrated an L5-S1 hypermobile spondylolisthesis with 4.2 mm of translation with severe facet arthropathy. Dr. Orndorff reviewed Claimant's MRI scan and noted it showed a broad-based disc

bulge at L5-S1 and severe facet arthropathy and anterolisthesis of L5 on S1 that measured 3.2 mm. Dr. Orndorff opined Claimant had exhausted all forms of conservative options and recommended an anterior approach, LF-S1 laminectomy and posterior fusion surgery.

20. Respondents obtained an independent medical examination ("IME") with Dr. Reiss on March 17, 2021. Dr. Reiss noted Claimant reported she had low back pain that was between 5-7 out of 10, along with pain down the right leg and into the right toes. Dr. Reiss noted Claimant was engaging in a home exercise program. Dr. Reiss opined Claimant had not yet completed appropriate conservative care and indicated that Claimant's pain generator had not yet been necessarily identified. Dr. Reiss recommended Claimant pursue additional conservative care including core strengthening and aerobic conditioning aided by a physical therapy program.

21. After reviewing additional imaging studies, Dr. Reiss authored a second report on May 20, 2021. Dr. Reiss noted that there was no nerve compression and therefore there was no indication for any form of decompression. Dr. Reiss opined that no surgery is indicated at this time.

22. Dr. Orndorff produced another report on October 26, 2021 in which he opined that based on Claimant's complaints of pain and radiating symptoms, he felt the L5-S1 Gill laminectomy, L5-S1 posterior interbody fusion and autograft bone was reasonable treatment that was directly addressing the pathology and symptoms that were a result of Claimant's lifting injury.

23. On January 10, 2022, Dr. Adams noted Claimant was set to begin physical therapy as recommended by Dr. Reiss, but she was delayed due to contracting COVID-19. Dr. Adams noted Claimant's medication regimen was helping her symptoms, but not solving the symptoms Dr. Adams noted Claimant would continue with her home exercise program and re-initiate physical therapy.

24. Dr. Reiss testified at hearing consistent with his IME reports. Dr. Reiss testified that Claimant's spondylolisthesis could be a surgical lesion if it caused nerve compression or instability. Dr. Reiss opined, however, that Claimant's spondylolisthesis did not cause any nerve compression or instability. Dr. Reiss further opined that Claimant's spondylolisthesis and degenerative facet joints were preexisting conditions, but noted that these conditions were not symptomatic prior to the work injury. Dr. Reiss testified that if Claimant's spondylolisthesis was unstable, surgery may be an option for Claimant. Dr. Reiss testified, however, that there was insufficient evidence that the spondylolisthesis was unstable.

25. Claimant testified at hearing that she had engaged in frequent exercise at home since 2019 using a therapy ball, rubber bands, and hand weights along with core strengthening on her own at home. Claimant testified that since re-initiating physical therapy, she had been doing extra exercises at home focusing on the pelvic area. Claimant testified that she was delayed in beginning her most recent physical therapy

due to there being a waiting list and had only engaged in six sessions. Claimant testified that she had shooting pain down the small of her back to her tailbone. Claimant testified her pain radiates to the right hip and down the outside of the right leg, wrapping around the calf, and then to the first two toes on her right foot. She testified that she had occasional shooting pain in the left leg from the hip to the knee. Claimant testified these symptoms limit her ability to sit, stand, walk, sleep, drive, and perform activities of daily living and personal care activities. Claimant testified that her condition had worsened in the year since the surgery had been recommended by Dr. Orndorff.

26. Claimant testified that she would like to have surgery in order to resolve her symptoms and be able to return to work. Claimant testified that surgery was a last option, but felt as though she had exhausted all other options in the three years since the injury and wanted to improve her function. Claimant testified that she wanted to undergo the surgery.

27. The ALJ finds Claimant's testimony to be credible and persuasive.

28. The ALJ credits the opinions and medical records of Dr. Orndorff and Dr. Faragher over the contrary medical opinions of Dr. Reiss and finds Claimant has proven it is more likely than not that the proposed lumbar spine surgery is reasonable medical treatment necessary to cure and relieve Claimant's condition resulting from the industrial injury.

29. The ALJ recognizes the contrary opinions expressed by Dr. Reiss in his report and testimony, but finds the opinions expressed in Dr. Orndorff's records along with Claimant's testimony to be more credible and persuasive with regard to the issue of whether the proposed medical procedure would be reasonable medical treatment necessary to cure and relieve the Claimant from the effects of her industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2018. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the ALJ finds the testimony of Claimant with regard to her injury and treatment along with the reports from Dr. Orndorff and Dr. Faragher and finds that Claimant has proven by a preponderance of the evidence that the surgery recommended by Dr. Orndorff, an anterior approach, L5-S1 laminectomy and posterior fusion, is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her work injury of March 13, 2019.

6. Respondents' are therefore liable for the costs of the medical treatment recommended by Dr. Orndorff pursuant to the Colorado Medical Fee Schedule.

ORDER

It is therefore ordered that:

1. Respondents' shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of her industrial injury including the surgery recommended by Dr. Orndorff.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In**

addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

DATED: June 2, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-129-238-001

ISSUES

1. Whether Claimant timely objected to Respondents' November 10, 2021 Final Admission of Liability, and timely applied for a Division Independent Medical Examination.

FINDINGS OF FACT

1. Claimant sustained an admitted injury arising out of the course of her employment with Employer on November 26, 2019. (Ex. A). Employer filed a First Report of Injury on December 4, 2019. (Ex. D).

2. On January 7, 2020, [Third Party Administrator (TPA) for Insurer redacted], sent Claimant a letter identifying itself as Insurer's representative for Claimant's claim. (Ex. E). Respondents then filed a Notice of Contest on February 10, 2020. (Ex. G).

3. On August 26, 2021, Claimant's counsel, JP[Redacted], Esq., filed an entry of appearance with the Division of Workers' Compensation and served it on [TPA Redacted] and Employer. (Ex. 12).

4. On November 1, 2021, Claimant, through Mr. JP[Redacted], filed an Application for Hearing with the Office of Administrative Courts and served it on [TPA Redacted] and Employer. (Ex. 10).

5. On November 10, 2021, Respondents filed a Final Admission of Liability (FAL) related to Claimant's November 26, 2019 injury, admitting for medical treatment, and denying that Claimant sustained any permanent partial disability. Respondents mailed the FAL to Claimant at her address of record, Employer, and Respondents' counsel, JI[Redacted], Esq. Respondents neither listed Claimant's counsel, Mr. JP[Redacted], on the certificate of mailing for the FAL nor mailed him the FAL at that time. (Ex. A).

6. The parties stipulated that Claimant timely received the FAL after Respondents mailed it on November 10, 2021.

7. On November 15, 2021, Respondents' counsel, Mr. JI[Redacted] filed an Entry of Appearance with the Office of Administrative Courts and served it on Claimant's counsel, Mr. JP[Redacted]. (Ex. 8).

8. On December 15, 2021, Claimant filed a Hearing Confirmation with the OAC for the April 8, 2022 hearing in this matter and served it on Respondents' counsel, Mr. JI[Redacted]. (Ex. 8).

9. The parties stipulated that Mr. JP[Redacted] did not receive the FAL from Respondents until December 16, 2021. The following day, December 17, 2021, Mr.

JP[Redacted] filed Claimant's Objection to Final Admission ("Objection"), and a Notice and Proposal and Application for Division Independent Medical Examination ("DIME Application"). Claimant's counsel served both the Objection and the DIME Application on Respondents and Mr. JI[Redacted]. (Exs. 3 & 5).

10. Claimant did not file her Objection and DIME Application within 30 days of the date Respondents filed the FAL. But Claimant did file both documents within 30 days of Claimant's counsel receipt of the FAL.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

TIMELINESS OF CLAIMANT'S OBJECTION AND DIME APPLICATION

The material facts of the case are not in dispute. Respondents filed the FAL on November 10, 2021, and mailed a copy to Claimant but not to Claimant's counsel.

Claimant's counsel did not receive the FAL until 36 days later, on December 16, 2021. The following day, Claimant filed the DIME Application and Objection. Respondents contend that because Claimant received the FAL, and failed to file an objection or request a DIME within thirty days, her claim automatically closed. Claimant contends Respondents' failure to provide a copy of the FAL to her counsel tolled the period for response until Claimant's counsel received the FAL. For the reasons set forth below, the ALJ concludes that Claimant's Objection and DIME Application were timely filed.

Under the Act, when an insurer files an FAL the claimant must either object to the FAL and file an application for hearing, or request the selection of a DIME physician within thirty days. § 8-43-203(2)(b)(II)(A), C.R.S. The failure to file either an objection or a DIME application within thirty days results in the closure of all issues admitted in the FAL. *Id*. When a party is represented by counsel, W.C.R.P. Rule 1-4(A), requires that "[w]henever a document is filed with the Division, a copy of the document shall be mailed to each party to the claim and the attorney(s) of record, if any." Even in the absence of a specific rule or statute requiring service on counsel of record, procedural due process requires that both the party and counsel receive actual notice of critical determinations, such as an FAL. *Hall v. Home Furniture Co.*, 724 P.2d 94, 96 (Colo. App. 1986). Where counsel is not properly served and does not have actual notice of an FAL, the time limit imposed by § 8-43-203 (2)(b)(II)(A), C.R.S., does not begin to run until counsel receives notice. *Id*. The ALJ finds the Court of Appeal's decision in *Hall* to be dispositive. Contrary to Respondents' contention, *Hall* is not factually distinguishable from the present case.

In *Hall*, a worker's compensation insurer filed a special admission of liability and mailed a copy to the claimant but did not mail or otherwise serve it on claimant's then attorney of record. 724 P.2d at 95. The claimant took no further action on his claim until he filed a petition to reopen almost six years later. *Id*. Claimant's petition to reopen was originally granted, and later reversed by the Industrial Commission that concluded the petition to reopen was untimely. Claimant appealed, arguing the insurer's failure to provide a copy of the special admission to his attorney tolled the time limit for filing a petition to reopen. *Id*. The Court of Appeals agreed with the claimant and reversed the Commission's decision, finding "[c]laimant's due process rights were violated by claimant's attorney not being furnished with a copy of the admission of liability." *Id.,* at 96. "Under these circumstances, time limitations do not commence to run until claimant's attorney first received notification…that the admission of liability had been filed." *Id*.

The *Hall* court's decision relied on and is consistent with the Colorado Supreme Court's decision in *Mountain States Tel. & Tel. Co. v. Dept. of Labor, 520 P.2d 586 (Colo. 1974).* The *Mountain States* court held that procedural due process requires notice be given to a party's attorney of record even where no statute requires such notice. "This basic requirement flows from the attorney-client relationship by which the management, discretion and control of all procedural matters connected with the litigation is invested in the attorney. By virtue of such delegation of authority, the client is bound by the actions of his attorney." *Id*. at 589. Thus, "[i]f the attorney through no fault of his own is denied notice of the critical determination in the case, and by reason thereof fails to take procedural steps necessary to preserve his client's rights, fundamental unfairness results.

Procedural due process cannot be satisfied when counsel, upon whom a client is entitled to rely, is not notified of decisions affecting his client's interests." *Id*.

The evidence establishes that Mr. JP[Redacted] was counsel of record as of August 26, 2021, and had notified Respondents of his representation by virtue of the entry of appearance, and filing the November 1, 2021 application for hearing. Respondents did not initially provide Mr. JP[Redacted] the November 10, 2021 FAL, but provided it on December 16, 2021. Consequently, under both *Hall* and *Mountain States*, the time period for Claimant to contest the FAL or request a DIME did not commence until December 16, 2021. Claimant requested a DIME and filed her Objection on December 17, 2021, within 30 days of Mr. JP[Redacted]'s receipt of the FAL. Claimant has therefore established by a preponderance of the evidence that her Objection and DIME Application were filed within the thirty-day time limit of § 8-43-203(2)(b)(II)(A), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's December 17, 2021 DIME Application and Objection to the November 10, 2021 FAL were filed within the time limit imposed by § 8-43-203(2)(b)(II)(A), C.R.S.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 2, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-188-971-001

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §§ 8-42-105(4) and 8-142-103(1)(g), C.R.S., and thus his entitlement to temporary total disability (TTD) benefits should be terminated effective January 20, 2022.

2. Whether Respondents have established by a preponderance of the evidence that all TTD benefits paid after January 20, 2022 are an overpayment as contemplated by § 8-40-201 (15.5), C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant initially worked as a dockworker for Employer. In January 2021, Claimant began the training program to become a truck driver. In March 2021, he received his Commercial Driver's License and became an over-the-road truck driver for Employer. (Tr. 13:25-14:8).

2. On November 13, 2021, Claimant suffered a compensable industrial injury when he missed a foothold while exiting his truck and fell backward onto the pavement. (Ex. A).

3. Respondents filed a General Admission of Liability (GAL) on December 14, 2021, and began paying TTD benefits to Claimant as of November 13, 2021, at the weekly rate of $635.17. (Ex. B).

4. On January 12, 2022, Claimant notified Employer that he was cleared to return to work with modified restrictions. (Ex. L). As of January 17, 2022, Claimant's modified restrictions included: 20 lbs. maximum lifting; 10 lbs. repetitive lifting; 20 lbs. carrying, pushing, and pulling. Claimant was to use caution with ladders and stairs, but he was cleared for commercial driving. (Ex. M).

5. TH[Redacted], Director of Safety for Employer, testified that Employer has established drug testing policies, in compliance with the Federal Motor Carrier Safety Administration (FMCSA) and Federal Motor Carrier Safety Rules (FMCSR). One such policy is that if an employee is separated from employment longer than 30 days, the employee must undergo a drug test as a prerequisite to returning to work. (Tr. 14:15-16:3).

6. Claimant had been on medical leave for more than 30 days, so as a condition of returning to work, Claimant was required to undergo drug testing.

7. Mr. TH[Redacted] and AE[Redacted], Safety Manager for Employer, are trained and certified to administer drug tests per FMCSR. (Tr. 18:13-19:5 and 37:15-38:10). Either Mr. TH[Redacted] or Mr. AE[Redacted] administered the drug tests to employees for Employer. (Tr. 18: 8-12).

8. Claimant reported to Employer for modified duty on January 17, 2022, and underwent a urine drug screen (UDS) at Employer's location. Ms. AE[Redacted] administered Claimant's UDS test. Ms. AE[Redacted] had administered two UDS tests earlier that day before she administered Claimant's test. (Tr. 39:15-23).

9. Ms. AE[Redacted] testified as to the process she was trained to utilize when administering drug tests. Ms. AE[Redacted] credibly testified that she followed that same process with Claimant on January 17, 2022. (Tr. 38:14-39:11).

10. Ms. AE[Redacted] instructed Claimant to leave the specimen cup on the back of the toilet, and to not flush the toilet. When Ms. AE[Redacted] retrieved Claimant's sample from the back of the toilet, she immediately noticed the sample did not feel warm enough on her palm. (Tr. 41:4-14).

11. The specimen cups have a temperature strip already in place when they are delivered to Employer. Ms. AE[Redacted] testified that Claimant's UDS sample did not register on the temperature strip. The temperature strip registers at 90 degrees or higher. (Tr. 41:15-42:10).

12. Ms. AE[Redacted] told Claimant that his urine sample was not registering on the temperature strip, so he needed to provide another sample within three hours under observation, or she would have to count it as a refusal, if he failed to do so. (Tr. 42:11-43:24). Ms. AE[Redacted] testified that per FMCSA requirements and the Employer's policy, Claimant was not allowed to leave and come back later, or another day to retest. (Tr. 53:4-20).

13. Claimant testified that after he left the specimen on the toilet and came out of the restroom, Ms. AE[Redacted] spent five to ten minutes talking to him about on-line classes he needed to complete before she retrieved the specimen. (Tr. 61:12-62-2). Ms. AE[Redacted] testified that this was not accurate. She testified that it takes her seconds to collect the specimen from the back of the toilet. Further, she testified that there is a requirement, per her training and certification, that there is four-minute window from the time the sample is given and when it is tested. Ms. AE[Redacted] credibly testified that there was no delay in collecting Claimant's UDS sample as he asserted. (Tr. 74:3-22). The ALJ finds Ms. AE[Redacted]'s testimony to be more credible than Claimant's testimony, and finds that there was no delay in the collection of Claimant's UDS specimen.

14. Claimant testified that Ms. AE[Redacted] told him he could not leave. He further testified that he went outside to smoke a cigarette after she told him this. According to

Claimant, Ms. AE[Redacted] followed him outside and said that he could not leave her eyesight, so he followed her back inside to her office. (Tr. 62:16-63:16).

15. Claimant requested to speak with MB[Redacted], President of Operations. Ms. AE[Redacted] attempted to call Mr. MB[Redacted], but Claimant said, "I'm not doing it, I'm out," and he left and drove away. Ms. AE[Redacted] testified that she told Claimant not to leave, and that if he left she would have to count that as a refusal to take the test. (Tr. 44:2-20).

16. Ms. AE[Redacted] credibly testified that she followed Claimant as he left the building, and again told him if he left she would have to count that as a refusal to test. She told him repeatedly not to leave. Claimant got in his car and drove off. (Tr. 44:16-46:2).

17. Claimant testified that Ms. AE[Redacted] told him he could not leave, but he left nonetheless. Claimant testified that he only lived a few blocks away and told Ms. AE[Redacted] to call him when she was ready to administer the test again. He further testified that he had no idea he could be fired for leaving. (Tr. 62:16-63:21). The ALJ does not find this testimony credible. It is uncontroverted that Ms. AE[Redacted] told Claimant he could not leave. Claimant, however, chose to disregard Ms. AE[Redacted]'s admonition.

18. Ms. AE[Redacted] completed a Federal Drug Testing Custody and Control Form indicating, "[d] id not mark on the temp strip – Refused retest – left the building." After the first out-of-temperature test, but before he left Employer's office, Claimant signed the form. (Ex. K).

19. Ms. AE[Redacted] informed Mr. TH[Redacted] as to what had occurred with Claimant's out-of-temperature testing and his refusal to do another test. (Tr. 53:21-54:4).

20. It is undisputed that Claimant did not provide a second UDS sample on January 17, 2022. Mr. TH[Redacted] testified that Claimant's refusal to submit to a second test constituted a violation of Employer's drug testing policies and was grounds for immediate termination. Employer terminated Claimant's employment as of January 17, 2022. (Tr. 25:2-22).

21. Mr. TH[Redacted] testified that had Claimant not been terminated, Employer would have accommodated Claimant's modified duty restrictions on a full-time, full wage basis until such time Claimant was medically released to full duty. (Tr. 26:23-27:11).

22. Pursuant to the Employee Handbook, "[n]o driver shall refuse to take a required test." The Employee Handbook further provides, "[a]ny violation of this policy will result in discipline up to and including termination under Denney Transport independent authority, as provided for by the DOT." (Ex. J).

23. Claimant signed confirmation of his receipt of the Employee Handbook, and his understanding that his employment with Employer "is at-will." Claimant additionally signed the New Employee Orientation Checklist, wherein he confirmed he had "READ EMPLOYEE HANDBOOK." (*Id.*).

24. Claimant's drug test was reported as out of compliance due to his refusal to submit a second sample after the first sample was out of temperature. Mr. TH[Redacted] testified that a refusal to test is classified the same as a positive drug test result. (Tr. 22:18-25).

25. Claimant's actions in refusing to submit to a second drug test after the first out-of-temperature test, and then leaving the premises after explicitly being informed he could not do so, reflect a willful and knowing violation of Employer's drug policy.

26. The ALJ finds that Claimant was responsible for the termination of his employment with employer. The ALJ further finds that Claimant's TTD benefits should be terminated.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability Benefits/Termination for Cause

To prove entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that claimant left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *Colo. Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). In order to obtain TTD benefits, §8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restrictions of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Elec.,* 971 P.2d 641, 649 (Colo. 1999).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a-d), C.R.S.

Under §§8-42-105(4) and 8-42-103(1)(g), C.R.S. ("the termination statutes"), a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing his assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

As found, Claimant acknowledged receipt of all Employer's Handbooks and written policies regarding Employer's drug testing policies. Employer's policies clearly state that

"[n]o driver shall refuse to take a required test," and "[a]ny violation of this policy will result in discipline up to and including termination." (Findings of Fact ¶ 23). Claimant's first UDS specimen did not measure on the temperature strip, so per FMCSA and Employer policies, Claimant was required to provide a second UDS, this time observed, within three hours of his first test, or it would be counted as a refusal to test. (*Id.* at ¶ 12). Ms. AE[Redacted] credibly testified that she told Claimant, after his first UDS test, that he could not leave the premises. (*Id.*). Claimant confirmed in his testimony that Ms. AE[Redacted] told him he could not leave the premises, and despite this direction, he left the premises, got in his car and drove away. (*Id.* at ¶ 14). Claimant contends he was unaware that by leaving the Employer's premises, he would be subject to termination. (*Id.* at ¶ 17). The ALJ does find not Claimant credible. The ALJ credits the testimony of Ms. AE[Redacted] that she repeatedly informed Claimant he should not leave the premises until he submitted a second sample or she would have to indicate a failure to retest. (*Id.* at ¶ 16).

Claimant willfully and knowingly violated Employer's drug testing policies which, in turn, directly resulted in his termination. (*Id.* at ¶ 25). The ALJ credits the testimony of Mr. TH[Redacted], as supported by the Employer's Handbook, that Employer was ready, willing, and able to accommodate Claimant's modified duty restrictions until he was released to full duty. (*Id.* at ¶ 21). As such, Claimant's wage loss after January 17, 2022 is directly attributable to his termination for cause and not to his industrial injury. (*Id.* at ¶ 26).

Overpayment of TTD Benefits

The Act defines an overpayment as money received by a claimant that:

1) Is the result of fraud;
2) Is the result of an error due only to miscalculation, omission, or clerical error asserted in a new admission of liability filed within 30 days of the erroneous admission of liability;
3) Is paid in error or inadvertently in excess of an admission or order that exists at the time the benefits are paid to a claimant; or
4) Results in duplicate benefits because of offsets that reduce death or disability benefits.

§8-40-201(15.5)(a), C.R.S.[1] Respondents must prove their entitlement to an overpayment by a preponderance of the evidence. *Denver v. Indus. Claim Appeals Office,* 58 P.3d 1162 (Colo. App. 2002).

As found, Claimant's entitlement to TTD benefits terminated as of January 17, 2022 due to Claimant's termination for cause. Respondents argue that Claimant, received money he "was not entitled to receive" and this constitutes an "overpayment." Respondents, however, rely upon the prior statutory definition of "overpayment." As set forth in the Act, the current version of the statute is effective as of January 1, 2022.

[1] The definition is effective January 1, 2022.

Consequently, Respondents have not proven that TTD benefits paid to Claimant after January 17, 2022 are an overpayment pursuant to §8-40-201(15.5)(a), C.R.S. The TTD benefits paid to Claimant from January 17, 2022 to date were not paid in error, nor were they the result of fraud. Thus, the TTD benefits that Claimant received from January 17, 2022 forward are not an overpayment, and Respondents are not entitled to recover this money.

ORDER

It is therefore ordered that:

1. Respondents have proven by a preponderance of the evidence that Claimant's entitlement to TTD benefits terminated as of January 17, 2022 due to Claimant's termination for cause.

2. Respondents have failed to prove by a preponderance of the evidence that they are entitled to claim an overpayment of all TTD benefits paid on or after January 17, 2022.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 6, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Brian J. Beatty, D.O. that Claimant's left hip condition is causally related to her December 17, 2018 motor vehicle accident (MVA).

2. Whether Claimant has demonstrated by a preponderance of the evidence that additional medical benefits, including left hip trigger point injections and left hip bursa injections, are reasonable, necessary and causally related to her December 17, 2018 MVA.

STIPULATION

The parties agreed that Claimant is not currently at Maximum Medical Improvement (MMI) based on active treatment for her right lower extremity. Accordingly, the issue of permanent impairment as it relates to the left hip is not ripe for adjudication and is reserved for future determination.

FINDINGS OF FACT

1. Claimant is a 70 year-old female who suffered admitted industrial injuries on December 17, 2018 during a MVA. She was immediately transported to a hospital following the accident. Claimant was diagnosed with an abdominal wall hematoma, sternal fracture, distal fibula fracture on the right and a complex right calcaneal fracture. She ultimately underwent right ankle surgery.

2. Claimant has a significant history of pelvic and SI joint injuries related to a 2016 non-work related fall off a ladder in which she shattered her pelvis. She was out of work for almost one year because of the injury. Specifically, on October 12, 2016 Claimant underwent an open reduction and internal fixation symphysis (ORIF), closed reduction percutaneous iliosacral screw fixation and right sacral fracture. A second ORIF surgery was performed on January 12, 2017 due to pelvic nonunion with hardware failure and Claimant underwent an external fixation to the anterior pelvis. Despite the injuries, Claimant eventually made a full recovery and was released to work full duty.

3. On January 28, 2019 Claimant began medical care with Authorized Treating Physician (ATP) Cathy Smith, M.D. for her December 17, 2018 MVA. Dr. Smith took a detailed history of the mechanism of injury and noted that Claimant had undergone surgery. Claimant was then discharged to Fairacres Manor on January 24, 2019 for continued rehabilitative care. A physical examination revealed no pain with direct palpation or manipulation of the lower back, SI joints, buttocks or bilaterally at the hips. Claimant had equal bilateral hip range of motion. Her work-related diagnoses included

fracture of the right calcaneus and right tibia, fracture of the mid-sternum, abdominal hematoma and chest wall hematoma.

4. On May 29, 2019 Claimant returned to Dr. Smith at UC Health. Since becoming more active, Claimant noticed increased lower back pain that she attributed to her gait because of walking in a bent forward position. A physical examination revealed an extremely antalgic gait while walking without the use of a cane. Dr. Smith addressed proper cane usage with Claimant. They discussed that the onset of lower back pain in all medical probability was due to Claimant's significant gait disturbance. Dr. Smith thus recommended therapy for Claimant's lumbar discomfort while also receiving treatment for right ankle stiffness and pain.

5. On August 7, 2019 Claimant reported to Dr. Smith a sudden escalation in lower back discomfort that began four to five days earlier. Claimant was unsure what caused the increased pain, but noted that she had a physical therapy appointment the day before the pain escalated. Claimant reported no pain with direct palpation or manipulation bilaterally at the hips.

6. On September 3, 2019 Claimant returned to Dr. Smith at UC Health for an examination. Claimant noted significant difficulty walking due to back pain and radiation of the pain into her left groin, anterior thigh and lateral calf. Dr. Smith noted that Claimant's pain increased after attempting some physical therapy exercises where she was lying on her stomach and extending her left leg. Physical examination was positive for a "significant increase in triggers noted at the L5-S1 facet area and the upper SI joint." Dr. Smith remarked that range of motion in the lumbar spine was extremely tender. Moreover, Claimant reported pain with palpation "in the posterior lateral left hip" and pain with external rotation of the left hip.

7. On September 13, 2019 Claimant underwent a CT scan of the abdomen and pelvis. The impression included chronic healed fractures of the pubic rami and lower sacrum with internal fixation hardware across the superior pubic rami and right SI joint as well as bilateral SI joint osteoarthritis. A lumbar CT scan revealed extensive degenerative changes throughout the thoracic and lumbar spine. There was no evidence of any acute trauma or failure of Claimant's hardware.

8. Dr. Smith determined that the escalation of Claimant's symptoms was likely multifactorial in nature. She attributed the increase to a change in exercises and physical therapy combined with different activities at home and an attempt to return to work that required prolonged sitting. Dr. Smith thus referred Claimant to ATP Gregory Reichhardt, M.D. for a physiatric consultation.

9. On September 18, 2019 Claimant visited Dr. Reichhardt and reported significant pain over the left SI and gluteal area while doing prone hip extensions in physical therapy. Dr. Reichhardt noted the onset of left hip, groin, SI, and left leg pain while Claimant was undergoing physical therapy. He specified that within about a week of doing prone hip extensions, Claimant began experiencing significant pain over the left SI and gluteal area, the anterior aspect of the left thigh and the lateral aspect of the lower

leg. Dr. Reichhardt diagnosed possible SI joint involvement, possible trochanteric bursitis and myofascial pain, possible internal hip derangement and possible lumbar radiculopathy. After discussion, Dr. Reichhardt administered trochanteric bursa and trigger point injections.

10. By September 27, 2019 Claimant reported that she was doing 40% to 50% better following the trochanteric bursa and trigger point injections. However, because she continued to report SI gluteal area pain, Dr. Reichhardt recommended a hip MRI arthrogram.

11. Claimant subsequently underwent repeat trochanteric bursa and trigger point injections over time and generally obtained relief of her symptoms. She also received an SI joint injection and experienced pain relief.

12. On October 17, 2019 Claimant underwent a left hip MRI arthrogram. The impressions were: (a) limited arthrogram images of the left hip due to extensive metal susceptibility artifact from prior acetabulum fixation; (b) left greater than right trochanteric bursitis; (c) asymmetric atrophy of the left gluteus medius and gluteus minimus muscles when compared to the right side, likely sequela of a prior muscle injury or denervation change; and (d) degenerative disc disease of the lower lumbar spine.

13. Claimant returned to Dr. Reichhardt on October 18, 2019. He commented that the hip MRI confirmed Claimant had hip bursitis along with other pain generators. Dr. Reichhardt noted that it was difficult to determine whether Claimant had intra-articular hip involvement or SI involvement, but her examination was more prominent for the SI area.

14. Claimant subsequently underwent a left SI joint injection on January 3, 2020. On February 17, 2020 Claimant received a trochanteric bursa injection and trigger point injections to the gluteal area.

15. On October 21, 2020 Dr. Reichhardt placed Claimant at Maximum Medical Improvement (MMI). He diagnosed Claimant with a work-related MVA resulting in a sternal fracture, right calcaneal fracture and abdominal hematoma, status post ORIF for calcaneal fracture and lower back/left hip/SI area pain that included a "possible component of trochanteric bursitis, myofascial pain and possible non-work related L4 lumbar radiculopathy. With regard to the left hip, Dr. Reichhardt assigned a 14% lower extremity impairment rating that converted to a 6% whole person rating based on range of motion deficits. He recommended maintenance treatment for the left hip in the form of two trochanteric bursa injections per year and up to four sets of trigger point injections per year on an as-needed basis over the next four years.

16. On March 25, 2021 Claimant underwent a Division Independent Medical Examination (DIME) with Brian J. Beatty, D.O. Dr. Beatty reviewed Claimant's extensive medical records and conducted a physical examination. Claimant reported that she developed hip pain while doing "exercises" and then started to undergo therapy on her hip. Dr. Beatty's clinical examination revealed tenderness to palpation over the greater trochanteric on the left hip and limited range of motion. He diagnosed right calcaneal

fracture and left hip greater trochanteric bursitis. He agreed that Claimant reached MMI on October 21, 2020. With regard to the left hip, Dr. Beatty assigned a 33% extremity impairment rating that converted to a 13% whole person rating due to range of motion deficits. Dr. Beatty recommended two trochanteric bursa injections annually and up to four sets of trigger point injections annually, as needed, for four years.

17. Respondents filed an Application for Hearing to challenge Dr. Beatty's DIME determination. Specifically, Respondents asserted that Claimant had not sustained a ratable left hip condition related to her work injury.

18. On January 4, 2022 John Raschbacher, M.D. performed an independent medical examination of Claimant and testified at the hearing in this matter. Dr. Raschbacher reviewed Claimant's medical records and conducted a physical examination. He determined that Claimant sustained a sternum fracture, abdominal wall hematoma, right fibula fracture and a comminuted right calcaneus fracture as a result of her December 17, 2018 MVA. Claimant reported that she developed left bursa symptoms due to limping so badly that she had pain in her hip and left buttock during physical therapy in August 2019. However, Dr. Raschbacher reasoned that Claimant's left hip condition and symptomatology was not related to her MVA and inconsistent with the mechanism of injury.

19. Dr. Raschbacher remarked that left hip trochanteric bursitis is located outside of and lateral to the hip joint. He explained that the bursa is well outside the hip joint and bursitis is inflammation of the bursa. Even if related to the injury, bursitis would not produce a permanent impairment. Further, bursitis is a fairly common problem that can become symptomatic without trauma and is frequently idiopathic. Here, imaging revealed that bursitis was present in both hips. Dr. Raschbacher testified that it was unusual that bursitis was present radiologically on both sides, but only symptomatic on one side. He noted that bursitis typically involves point tenderness, not dysfunction at the hip joint causing loss of motion.

20. Assuming Claimant suffers symptomatic bursitis, Dr. Raschbacher reasoned that it would not likely produce permanent impairment or limitations of hip motion. Dr. Raschbacher reasoned that Dr. Beatty erroneously assigned an impairment rating for the left hip because the condition was not related to the initial mechanism of injury. There was no clear causal connection between the MVA and the development of hip symptoms. Dr. Raschbacher also noted that Dr. Beatty did not perform any causation analysis with regard to Claimant's left hip bursitis. He testified that a MVA typically involves strains, sprains and broken bones, but is not usually associated with bursitis. Dr. Raschbacher also noted it was unlikely that a physical therapist would recommend exercises that cause hip bursitis, and hip joint motion does not cause trochanteric bursitis.

21. Dr. Raschbacher testified that there were no medical records reflecting that Claimant sustained an acute hip or lower back injury as a result of her December 17, 2018 MVA. He noted that the left hip MRI clearly showed old muscle changes from the 2016 ladder injury. Further, trochanteric bursitis is not usually caused by an acute traumatic event, altered gait or other specific incident. Instead, the condition is common

and typically patients have no specific reason for the condition. Finally, while Dr. Raschbacher agreed that Claimant's symptoms of tenderness could be related to bursitis, range of motion limitations and pain in the hip joint with motion are not consistent with bursitis. Specifically, the bursa is not located within the hip joint and should not affect hip motion even when the condition is symptomatic and has not been injected.

22. Dr. Raschbacher also disputed that trigger point injections were causally related to any injuries sustained in the MVA. He noted that Claimant has prior pathology on the MRI related to the 2016 fall, and trigger point injections are not used to treat trochanteric bursitis.

23. On May 5, 2022 the parties conducted the post-hearing evidentiary deposition of ATP Dr. Reichhardt. Dr. Reichhardt disagreed with Dr. Raschbacher's causation assessment. He reasoned that Claimant developed hip pain as a result of her MVA. Specifically, she experienced muscle tightness because a gait deviation caused irritation of the bursa. Dr. Reichhardt also remarked that Claimant's symptoms developed while performing hip extension exercises that likely placed excessive stress on the bursa. He summarized that, while performing rehabilitation exercises for her right ankle injury and subsequent surgery, Claimant was extending her hip while lying prone and had an increase in symptoms. Based on Claimant's overall clinical course, her responses to injections and physical examination, Dr. Reichhardt concluded that the trochanteric bursa was her primary pain generator.

24. Dr. Reichhardt explained that, based on his physical examinations, Claimant had very prominent tenderness over the trochanteric bursa. Even though she had generalized tenderness over other areas including the SI joint and some of the muscles around the hip girdle region, she was particularly tender over the bursa. After performing various examinations and injections, Dr. Reichhardt was able to obtain a better understanding of Claimant's probable pain generators. Notably, he ruled out labral tears based on the hip MRI.

25. Dr. Reichhardt detailed that, although Claimant obtained some improvement after SI joint injections, she continued to experience symptoms over the lateral aspect of the hip. He thus wanted to repeat the trochanteric bursa injection. Dr. Reichhardt explained that Claimant's source of pain was emanating from the bursa and caused reactive changes in the muscles around the hip joint under the hip girdle.

26. Dr. Reichhardt noted that, while trochanteric bursitis and myofascial pain do not always produce impairment, Claimant clearly exhibited limited hip range of motion during exams over time and not merely on her date of MMI. Claimant had consistent range of motion and functional limitations in her left hip. Dr. Reichhardt explained that range of motion is affected because the muscles and tendons including the tensor fasciae latae and the iliotibial band cross the bursa. He thus commented that, when the hip joint is moved, the iliotibial band will move across the bursa and cause pain or irritation. The left trochanteric bursa was thus the primary pain generator and the MVA caused or substantially contributed to Claimant's condition. Dr. Reichhardt reasoned that, based on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)*

(AMA Guides) Claimant warranted an impairment rating for the left hip based on range of motion limitations. He thus concluded that DIME Dr. Beatty properly assigned an impairment rating for Claimant's left hip.

27. Dr. Reichhardt recommended maintenance treatment for the left hip in the form of two trochanteric bursa injections per year and up to four sets of trigger point injections per year on an as-needed basis over the next four years. He suggested treatment to the hip for a four-year period because injections either lose their benefit or people do not require them for functioning even if they still have symptoms. He summarized that Claimant's symptoms from the trochanteric bursa are affecting the myofascial girdle of the left hip. Moreover, because the altered gait could be contributing to Claimant's myofascial pain, Dr. Reichhardt recommended additional trigger point injections. Dr. Reichhardt thus reasoned that the need for the injections is causally related to Claimant's December 17, 2018 MVA.

28. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that Claimant's left hip condition is causally related to her December 17, 2018 MVA. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Beatty's causation determination was incorrect. Initially, Claimant suffered admitted industrial injuries on December 17, 2018 during a MVA. She was diagnosed with an abdominal wall hematoma, sternal fracture, distal fibula fracture on the right and a complex right calcaneal fracture.

29. Claimant received treatment for her injuries from ATP Dr. Smith. In a September 3, 2019 visit with Dr. Smith Claimant noted significant difficulty walking due to back pain and radiation of the pain into her left groin, anterior thigh and lateral calf. Dr. Smith noted that Claimant's pain increased after attempting some physical therapy exercises where she was lying on her stomach and extending her left leg. Physical examination was positive for a "significant increase in triggers noted at the L5-S1 facet area and the upper SI joint." After a CT scan of the abdomen and pelvis, Dr. Smith attributed the increase in pain to a change in physical therapy exercises combined with different activities at home and an attempt to return to work that required prolonged sitting. Dr. Smith thus referred Claimant to ATP Dr. Reichhardt for a physiatric consultation.

30. On September 18, 2019 Dr. Reichhardt noted the onset of left hip, groin, SI, and left leg pain while Claimant was undergoing physical therapy. He specified that within about a week of doing prone hip extensions, Claimant began experiencing significant pain over the left SI and gluteal area, the anterior aspect of the left thigh and the lateral aspect of the lower leg. Dr. Reichhardt diagnosed possible SI joint involvement, possible trochanteric bursitis and myofascial pain, possible internal hip derangement and possible lumbar radiculopathy. He then administered trochanteric bursa and trigger point injections. On October 17, 2019 Claimant underwent a left hip MRI arthrogram that revealed left greater than right trochanteric bursitis. After additional diagnostic testing and injections, Dr. Reichhardt determined that Claimant reached MMI on October 21, 2020 and assigned a 14% lower extremity impairment rating that converted to a 6% whole person rating based on range of motion deficits.

31. On March 25, 2021 Claimant underwent a DIME with Dr. Beatty. Dr. Beatty reviewed Claimant's extensive medical records and conducted a physical examination. Claimant reported that she developed hip pain while doing "exercises" and then started to undergo therapy on her hip. Dr. Beatty's clinical examination revealed tenderness to palpation over the greater trochanteric on the left hip and limited range of motion. He diagnosed right calcaneal fracture and left hip greater trochanteric bursitis. Dr. Beatty agreed that Claimant reached MMI on October 21, 2020 and assigned a 33% extremity impairment rating for Claimant's left hip that converted to a 13% whole person rating due to range of motion deficits.

32. After conducting an independent medical examination, Dr. Raschbacher reasoned that Dr. Beatty erroneously assigned an impairment rating for Claimant's left hip because the condition was not related to the initial mechanism of injury. There was no clear causal connection between the MVA and the development of left hip symptoms. Dr. Raschbacher also noted that Dr. Beatty did not perform any causation analysis with regard to Claimant's left hip bursitis. He testified that a MVA typically involves strains, sprains and broken bones, but is not usually associated with bursitis. Furthermore, trochanteric bursitis is not frequently caused by an acute traumatic event, altered gait or other specific incident. Instead, the condition is common and typically patients present no specific reason for the condition. Finally, while Dr. Raschbacher agreed that Claimant's symptoms of tenderness could be related to bursitis, range of motion limitations and pain in the hip joint with motion are not consistent with bursitis. Specifically, the bursa is not located within the hip joint and should not affect hip motion even when the condition is symptomatic and has not been injected.

33. Dr. Beatty did not engage in a detailed causation analysis connecting Claimant's left hip condition to her MVA. However, the persuasive opinion of Dr. Reichhardt supports Dr. Beatty's DIME determination that Claimant developed hip pain as a result of her MVA. Specifically, she experienced muscle tightness because a gait deviation caused irritation of the bursa. Dr. Reichhardt also remarked that Claimant's symptoms developed while performing hip extension exercises that likely placed excessive stress on the bursa. He summarized that, while performing rehabilitation exercises for her right ankle injury and subsequent surgery, Claimant was extending her hip while lying prone and had an increase in symptoms. Based on Claimant's overall clinical course, her responses to injections and physical examination, Dr. Reichhardt concluded that the trochanteric bursa was her primary pain generator.

34. Dr. Reichhardt noted that, while trochanteric bursitis and myofascial pain do not always produce impairment, Claimant clearly exhibited limited hip range of motion during exams over time and not merely on her date of MMI. Claimant had consistent range of motion and functional limitations in her left hip. Dr. Reichhardt explained that range of motion is affected because the muscles and tendons including the tensor fasciae latae and the iliotibial band cross the bursa. He thus commented that, when the hip joint is moved, the iliotibial band will move across the bursa and cause pain or irritation. The left trochanteric bursa was thus the primary pain generator and the MVA caused or substantially contributed to Claimant's condition. Dr. Reichhardt reasoned that, based on the *AMA Guides,* Claimant warranted an impairment rating for the left hip because of

range of motion deficits. He thus concluded that DIME Dr. Beatty properly assigned an impairment rating for Claimant's left hip.

35. Based on the medical records and persuasive opinion of Dr. Reichhardt, Dr. Beatty correctly assigned an impairment rating for Claimant's left hip condition. The contrary determination of Dr. Raschbacher is a mere differences of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Beatty's DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Beatty's determination that Claimant's left hip condition is causally related to her December 17, 2018 MVA is incorrect.

36. Claimant has demonstrated that it is more probably true than not that additional medical benefits, including left hip trigger point injections and left hip bursa injections, are reasonable, necessary and causally related to her December 17, 2018 MVA. Dr. Reichhardt determined that Claimant developed hip pain as a result of her MVA. Specifically, she experienced muscle tightness because a gait deviation caused irritation of the bursa. Dr. Reichhardt also remarked that Claimant's symptoms developed while performing hip extension exercises that likely placed excessive stress on the bursa. Based on Claimant's overall clinical course, her responses to injections and physical examination, Dr. Reichhardt concluded that the trochanteric bursa was her primary pain generator.

37. ATP Dr. Reichhardt recommended maintenance treatment for Claimant's left hip in the form of two trochanteric bursa injections per year and up to four sets of trigger point injections per year on an as-needed basis over the next four years. He summarized that Claimant's symptoms from the trochanteric bursa affect the myofascial girdle of her left hip. Moreover, because the altered gait could be contributing to Claimant's myofascial pain, Dr. Reichhardt reasoned that the need for the injections is causally related to Claimant's December 17, 2018 MVA. Similarly, DIME Dr. Beatty recommended two trochanteric bursa injections annually and up to four sets of trigger point injections annually, as needed, for four years.

38. In contrast, Dr. Raschbacher disputed that trigger point injections were causally related to any injuries sustained in the MVA. He noted that Claimant has prior MRI pathology related to the 2016 fall and trigger point injections are not used to treat trochanteric bursitis. Despite Dr. Raschbacher's determination, the medical records and persuasive opinion of ATP Dr. Reichhardt reflect that additional medical benefits, including left hip trigger point injections and left hip bursa injections, are reasonable, necessary and causally related to Claimant's December 17, 2018 MVA. Accordingly, Claimant is entitled to receive two trochanteric bursa injections annually and up to four sets of trigger point injections annually, as needed, for four years.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers

at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Indus. Claim Appeals Off.,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Indus. Claim Appeals Off.,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Indus. Claim Appeals Off.,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S. *See Yeutter v. Indus. Claim Appeals Off.*, 487 P.3d 1007, 1012 (Colo. App. 2019). The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether

the various components of the claimant's medical condition are causally related to the industrial injury. *See Eller v. Indus. Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590 (Colo. App. 1998). Consequently, when a party challenges a DIME physician's determination of MMI or impairment rating, the finding on causation is also entitled to presumptive weight. *Egan v. Indus. Claim Appeals Off.*, 971 P.2d 664 (Colo. App. 1998).

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc.,* 961 P.2d at 592. In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that Claimant's left hip condition is causally related to her December 17, 2018 MVA. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Beatty's causation determination was incorrect. Initially, Claimant suffered admitted industrial injuries on December 17, 2018 during a MVA. She was diagnosed with an abdominal wall hematoma, sternal fracture, distal fibula fracture on the right and a complex right calcaneal fracture.

9. As found, Claimant received treatment for her injuries from ATP Dr. Smith. In a September 3, 2019 visit with Dr. Smith Claimant noted significant difficulty walking due to back pain and radiation of the pain into her left groin, anterior thigh and lateral calf. Dr. Smith noted that Claimant's pain increased after attempting some physical therapy exercises where she was lying on her stomach and extending her left leg. Physical examination was positive for a "significant increase in triggers noted at the L5-S1 facet area and the upper SI joint." After a CT scan of the abdomen and pelvis, Dr. Smith attributed the increase in pain to a change in physical therapy exercises combined with different activities at home and an attempt to return to work that required prolonged sitting. Dr. Smith thus referred Claimant to ATP Dr. Reichhardt for a physiatric consultation.

10. As found, on September 18, 2019 Dr. Reichhardt noted the onset of left hip, groin, SI, and left leg pain while Claimant was undergoing physical therapy. He specified that within about a week of doing prone hip extensions, Claimant began experiencing significant pain over the left SI and gluteal area, the anterior aspect of the left thigh and the lateral aspect of the lower leg. Dr. Reichhardt diagnosed possible SI joint involvement, possible trochanteric bursitis and myofascial pain, possible internal hip derangement and possible lumbar radiculopathy. He then administered trochanteric bursa and trigger point injections. On October 17, 2019 Claimant underwent a left hip MRI arthrogram that revealed left greater than right trochanteric bursitis. After additional diagnostic testing and injections, Dr. Reichhardt determined that Claimant reached MMI on October 21, 2020

and assigned a 14% lower extremity impairment rating that converted to a 6% whole person rating based on range of motion deficits.

11. As found, on March 25, 2021 Claimant underwent a DIME with Dr. Beatty. Dr. Beatty reviewed Claimant's extensive medical records and conducted a physical examination. Claimant reported that she developed hip pain while doing "exercises" and then started to undergo therapy on her hip. Dr. Beatty's clinical examination revealed tenderness to palpation over the greater trochanteric on the left hip and limited range of motion. He diagnosed right calcaneal fracture and left hip greater trochanteric bursitis. Dr. Beatty agreed that Claimant reached MMI on October 21, 2020 and assigned a 33% extremity impairment rating for Claimant's left hip that converted to a 13% whole person rating due to range of motion deficits.

12. As found, after conducting an independent medical examination, Dr. Raschbacher reasoned that Dr. Beatty erroneously assigned an impairment rating for Claimant's left hip because the condition was not related to the initial mechanism of injury. There was no clear causal connection between the MVA and the development of left hip symptoms. Dr. Raschbacher also noted that Dr. Beatty did not perform any causation analysis with regard to Claimant's left hip bursitis. He testified that a MVA typically involves strains, sprains and broken bones, but is not usually associated with bursitis. Furthermore, trochanteric bursitis is not frequently caused by an acute traumatic event, altered gait or other specific incident. Instead, the condition is common and typically patients present no specific reason for the condition. Finally, while Dr. Raschbacher agreed that Claimant's symptoms of tenderness could be related to bursitis, range of motion limitations and pain in the hip joint with motion are not consistent with bursitis. Specifically, the bursa is not located within the hip joint and should not affect hip motion even when the condition is symptomatic and has not been injected.

13. As found, Dr. Beatty did not engage in a detailed causation analysis connecting Claimant's left hip condition to her MVA. However, the persuasive opinion of Dr. Reichhardt supports Dr. Beatty's DIME determination that Claimant developed hip pain as a result of her MVA. Specifically, she experienced muscle tightness because a gait deviation caused irritation of the bursa. Dr. Reichhardt also remarked that Claimant's symptoms developed while performing hip extension exercises that likely placed excessive stress on the bursa. He summarized that, while performing rehabilitation exercises for her right ankle injury and subsequent surgery, Claimant was extending her hip while lying prone and had an increase in symptoms. Based on Claimant's overall clinical course, her responses to injections and physical examination, Dr. Reichhardt concluded that the trochanteric bursa was her primary pain generator.

14. As found, Dr. Reichhardt noted that, while trochanteric bursitis and myofascial pain do not always produce impairment, Claimant clearly exhibited limited hip range of motion during exams over time and not merely on her date of MMI. Claimant had consistent range of motion and functional limitations in her left hip. Dr. Reichhardt explained that range of motion is affected because the muscles and tendons including the tensor fasciae latae and the iliotibial band cross the bursa. He thus commented that,

when the hip joint is moved, the iliotibial band will move across the bursa and cause pain or irritation. The left trochanteric bursa was thus the primary pain generator and the MVA caused or substantially contributed to Claimant's condition. Dr. Reichhardt reasoned that, based on the *AMA Guides,* Claimant warranted an impairment rating for the left hip because of range of motion deficits. He thus concluded that DIME Dr. Beatty properly assigned an impairment rating for Claimant's left hip.

15. As found, based on the medical records and persuasive opinion of Dr. Reichhardt, Dr. Beatty correctly assigned an impairment rating for Claimant's left hip condition. The contrary determination of Dr. Raschbacher is a mere differences of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Beatty's DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Beatty's determination that Claimant's left hip condition is causally related to her December 17, 2018 MVA is incorrect.

Medical Benefits

16. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

17. As found, Claimant has demonstrated by a preponderance of the evidence that additional medical benefits, including left hip trigger point injections and left hip bursa injections, are reasonable, necessary and causally related to her December 17, 2018 MVA. Dr. Reichhardt determined that Claimant developed hip pain as a result of her MVA. Specifically, she experienced muscle tightness because a gait deviation caused irritation of the bursa. Dr. Reichhardt also remarked that Claimant's symptoms developed while performing hip extension exercises that likely placed excessive stress on the bursa. Based on Claimant's overall clinical course, her responses to injections and physical examination, Dr. Reichhardt concluded that the trochanteric bursa was her primary pain generator.

18. As found, ATP Dr. Reichhardt recommended maintenance treatment for Claimant's left hip in the form of two trochanteric bursa injections per year and up to four sets of trigger point injections per year on an as-needed basis over the next four years. He summarized that Claimant's symptoms from the trochanteric bursa affect the myofascial girdle of her left hip. Moreover, because the altered gait could be contributing

to Claimant's myofascial pain, Dr. Reichhardt reasoned that the need for the injections is causally related to Claimant's December 17, 2018 MVA. Similarly, DIME Dr. Beatty recommended two trochanteric bursa injections annually and up to four sets of trigger point injections annually, as needed, for four years.

19. As found, in contrast, Dr. Raschbacher disputed that trigger point injections were causally related to any injuries sustained in the MVA. He noted that Claimant has prior MRI pathology related to the 2016 fall and trigger point injections are not used to treat trochanteric bursitis. Despite Dr. Raschbacher's determination, the medical records and persuasive opinion of ATP Dr. Reichhardt reflect that additional medical benefits, including left hip trigger point injections and left hip bursa injections, are reasonable, necessary and causally related to Claimant's December 17, 2018 MVA. Accordingly, Claimant is entitled to receive two trochanteric bursa injections annually and up to four sets of trigger point injections annually, as needed, for four years.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Beatty's determination that Claimant's left hip condition is causally related to her December 17, 2018 MVA is incorrect.

2. Claimant is entitled to receive reasonable and necessary additional medical benefits, including left hip trigger point injections and left hip bursa injections, for her December 17, 2018 MVA.

3. The issue of permanent impairment as it relates to Claimant's left hip is not ripe for adjudication and is reserved for future determination.

4. Any other issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **[Redacted]** Claimant, v. **[Redacted]** Employer, and **[Redacted],** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-091-771-005**

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

A hearing in the above captioned matter was held before Administrative Law Judge ("ALJ"), Richard M. Lamphere on March 2, 2022 and April 25, 2022. The March 2, 2022 hearing was convened in Courtroom 1 of the Office of Administrative Courts (OAC) in Colorado Springs and was digitally recorded between 1:00 and 2:40 p.m. The April 25, 2022 hearing was conducted via video teleconference and digitally recorded on the Google Meets platform between 9:00 and 9:36 a.m.

Claimant was present for both hearings and testified on her behalf. She is proceeding *pro se*, i.e. without counsel. Respondents were represented at both hearings by [Redacted], Esq. In addition to Claimant's testimony, the parties took the evidentiary deposition of Dr. Wallace Larson on April 5, 2022. The written transcript of Dr. Larson's deposition testimony has been lodged with the OAC and is admitted into evidence. The ALJ has also received and listened to the audio recording of Dr. Larson's April 5, 2022 deposition. The audio recording of Dr. Larson's deposition is also admitted into evidence. In addition to the aforemtnioned testimony, the ALJ admitted the following exhibits into evidence: Claimant's Hearing Exhibits 1-7 and Respondents' Hearing Exhibits A-E. Finally, the ALJ takes administrative notice of the contents of files identified as W.C. No. 5-091-771-004 and W.C. 5-091-771-004 maintained by the OAC.

The parties presented, closing arguments at the April 25, 2022 hearing. Because Claimant raised concerns regarding the accuracy of the written transcript of Dr. Larson's deposition testimony, the ALJ ordered any video of Dr. Larson's deposition be produced to Claimant and the OAC within ten days of the April 25, 2022 hearing. As part of his order, the undersigned gave Claimant ten days after receipt of the video of Dr. Larson's deposition to submit supplemental argument to the ALJ. Respondents were given five days after receipt of Claimant's supplemental argument to file a written response. After fifteen days from the production of the video, the ALJ indicated that the case would be

at issue and ready for an order.[1] The ALJ was subsequently notified that while Dr. Larson's deposition was conducted by Zoom Teleconference, no video was captured and preserved. Nonetheless, audio of Dr. Larson's deposition was available and sent to Claimant, Respondent's counsel and the ALJ for review.

On May 2, 2022, Claimant filed, what the ALJ considers, a Motion to Add an Issue for Hearing. In her motion, Claimant alleges that there were "Discrepancies" between the audio of Dr. Larson's deposition and the written transcript prepared by Mile High Court Reporting & Video. On May 11, 2022, Claimant submitted additional documentation to the OAC for consideration by the ALJ. This documentation included a May 3, 2022 statement from DJ[Redacted] outlining her personal perceptions concerning the testimony of Dr. Larson. On May 13, 2022, Respondent's counsel filed a motion to strike Ms. DJ[Redacted]' statement on relevancy and hearsay grounds. By order dated May 17, 2022, the undersigned struck Ms.DJ[Redacted]'s statement. In the May 17, 2022 Order, the ALJ advised the parties that the issue of the alleged inconsistencies between the written transcript and the audio recording of Dr. Larson's deposition would be addressed, along with the other issues before the ALJ, in a full order containing specific findings of fact and conclusions of law. Neither party submitted supplemental argument based upon the May 17, 2022 order. Consequently, the matter is ready for an order.

In this order, [Redacted] will be referred to as "Claimant." [Redacted] will be referred to as "Employer" and [Redacted] will be referred to as "Insurer." Employer and Insurer may be referred to collectively as Respondents. All others shall be referred to by name.

Also in this order, "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2018); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that her claim should be reopened based on an alleged worsening of condition related to her October 12, 2018 industrial injury.

II. If Claimant established that she is entitled to a reopening of her claim, whether she also established, by a preponderance of the evidence, that she is entitled to additional medical treatment, temporary total disability (TTD) benefits and a disfigurement award.

FINDINGS OF FACT

[1] See the April 26, 2022 order of ALJ Lamphere.

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's October 12, 2018 Industrial Injury and Treatment for the Same

1. Employer operates as a long term care facility housing residents who require various levels of help with activities of daily living (ADL) and management of chronic health conditions.

2. Claimant worked for Employer as the night shift nursing supervisor. She is a registered nurse (RN). In the early morning hours of October 12, 2018, Claimant was summons to a patient room by the nursing staff to assist in moving a resident to her bed for the night.

3. Claimant testified that the resident in question weighed 425 pounds and that when she arrived to the patient's room she found her dangling precariously from a Hoyer lift. Concerned that the resident was slipping out of the sling, Claimant ordered the staff to lower the patient to the floor so the sling could be repositioned and the resident safely lifted to her bed. According to Claimant, she placed pillows and blankets on the floor and cradled the patients head and neck from a kneeling position while the staff eased the resident to the floor. As Claimant stood back up, she experienced pulling and pain in her neck, shoulders and upper back. She completed an incident report and returned to work. Claimant tendered the incident report to her supervisor when she reported to work around 5:00 a.m. and went home after her shift, hoping that her pain would subside.

4. Once home, Claimant retired to bed but awoke around 2:00 p.m. with severe pain in her shoulders, upper back and lower back. She called her supervisor informing her she was going to take the evening off and went to the emergency department at Penrose Hospital where she was assessed with a strain of the left trapezius muscle.

5. Liability for Claimant's injuries was admitted and she began a course of conservative care[2], including physical therapy (PT) on October 21, 2018.

6. On November 26, 2018, Claimant returned to the emergency room at Penrose Hospital where she reported that she had been attending PT as part of her treatment plan for her work injury. Upon presentation to the ER, Claimant advised that her physical therapist had "felt something" concerning in her low back and that additional PT would be held until Claimant underwent an MRI. (Respondents' Exhibit (RE) C, p. 73). Claimant reported that she asked her authorized treating provider (ATP) under her workers' compensation claim for an MRI but none was ordered. (Id.). Claimant was in pain and tearful. (Id.). Accordingly, she was admitted to the hospital for observation and completion of an MRI of the thoracic and lumbar spine. (Id.). Imaging of the thoracic spine revealed "mild thoracic dextroscoliosis" and "mild

[2] Under the direction of Dr. Charles Patrick Higgins.

degenerative disc and facet joint changes but "[n]o significant spinal canal or neural foraminal compromise in the thoracic spine. (Id.) The C6-7 level of the cervical spine was also partially visible on the thoracic MRI and demonstrated "more advanced degenerative disc disease" along with a disc bulge or herniation was "partially demonstrated." (Id.). No MRI of the cervical spine appears to have been completed during Claimant's November 26, 2018 hospital admission.

7. On November 28, 2018, Claimant returned to Dr. Higgins for reevaluation. Claimant reported "ongoing and worsening pain in her neck that radiates down through her shoulders." Dr. Higgins erroneously documented that Claimant had an MRI of the cervical spine, which demonstrated a disc herniation at the C6-7 level. (RE C, p. 73). Claimant requested a neurosurgical referral and Dr. Higgins acquiesced to the same. (Id.).

8. On December 5th and 26th, 2018, Dr. Higgins again recommended that Claimant undergo both an orthopedic and neurology evaluation for her persistent symptoms and reported MRI findings. (RE C, p. 74).

9. Claimant sought additional care through the emergency room at Penrose Hospital on January 16, 2019. She reported that she was waiting for a workup with a spinal surgeon and was returning to the ER for continued pain. Spinal examination was entirely normal and non-tender to palpation. (Id.). Claimant requested a "steroid" injection, which was administered. She was also provided with valium and tramadol for use at home and discharged.

10. On February 4, 2019, Dr. Eric Ridings completed an Independent Medical Examination (IME) of Claimant at the request of Respondents. After completing a physical examination directed to the cervical spine, Dr. Ridings opined:

> My current impression is that the patient does not have a work-related cervical diagnosis, in that I do not see any examination evidence of abnormality that I would relate to the cervical spine. She does have at least a disc bulge at C6-7 seen on the thoracic MRI scan, but disc bulges are often asymptomatic as I suspect this one is at least currently, given the lack of findings or complaints in the cervical spine today.

(RE B, p. 67).

11. While Dr. Ridings did not believe Claimant had a work-related cervical diagnosis, he did conclude that Claimant had suffered a left greater than right shoulder strain that had become chronic causing myofascial pain and tightness. Nonetheless, Claimant's history of bilateral upper extremity paresthesia combined with the "poorly-visualized cervical disc abnormality on the thoracic MRI prompted Dr. Ridings to recommend that Claimant actually obtain a cervical MRI. (RE B, p. 67). He noted specifically that Claimant "did not have examination findings consistent with rotator cuff

injury or any other intra-articular pathology of either shoulder." (Id. at p. 66). Dr. Ridings completed an additional records review on March 26, 2019. (RE B, p. 56-59). Dr. Ridings concluded that the additional records contained "little" information and failed to change any of the opinions expressed in his February 4, 2019 IME report.

12. Claimant was referred to Dr. Kenneth Finn to assume/direct the care related to her October 12, 2018 industrial injury. (Re A, p. 18). Dr. Finn evaluated Claimant on April 11, 2019. (Id.). He noted mild positive impingement signs concerning the left shoulder along with decreased cervical range of motion. (Id.). He recommended MRI of the neck, additional PT and consideration of an MR/arthrogram of the left shoulder. (Id.).

13. On April 21, 2019, Claimant experienced an episode of syncope while grocery shopping. She was taken to the emergency room where an MRI of the cervical spine was performed. (RE A, p. 19). The MRI reportedly demonstrated a C4-5 right paracentral disc extrusion without significant cord compression or nerve root impingement. (Id.).

14. Claimant returned to Dr. Finn on May 3, 2019 in follow-up. (RE A, p. 19). Dr. Finn performed an electrodiagnostic study of the left upper extremity that he interpreted as falling within normal limits. (Id.). Because the left upper extremity was more affected than the right, testing of the right arm was deferred. (Id.). Dr. Finn noted that the recent cervical spine MRI demonstrated "multilevel spondylosis and disc extrusions which may be contributing to her symptoms . . ." (Id.). Consequently, he recommended a cervical epidural steroid injection (ESI).

15. Claimant underwent an IME with Dr. Lawrence Lesnak on May 24, 2019. (RE C). Following his medical records review and physical examination, Dr. Lesnak opined that Claimant might possibly have sustained a "mild soft tissue strain/sprain injury to her left suprascapular/scapular/upper trapezius musculature as a result of the 10/12/2018 reported occupational incident." (RE C, p. 79). He felt that Claimant's "expanding symptomatology" raised the specter for an underlying anxiety/personality disorder based on his conclusion that Claimant had no reproducible objective findings to support any of her ongoing complaints. (Id.). According to Dr. Lesnak, if Claimant had suffered a sprain/stain injury to her left suprascapular/scapular/upper trapezius musculature, this injury would have completed resolved within several weeks/months. (Id.). Consequently, he opined that Claimant had "no current diagnoses . . . that would correlate with her current subjective complaints that would be related in any way to the occupational incident of 10/12/2018." (Id.).

16. Claimant's symptoms continued unabated throughout the balance of 2019 and into 2020. She continued to treat with Dr. Finn and additional diagnostic testing to include repeat electrodiagnositc studies and an MR arthrogram of the left shoulder were performed. The potential for multiple sclerosis was raised and neurology consults were completed.

17. On May 27, 2020, Claimant was evaluated by Dr. Wallace Larson in an IME setting at Respondents request. (RE D). Dr. Larson was asked to provide opinions regarding Claimant's current diagnosis and what, if any, diagnosis were causally related to the October 12, 2018 work incident involving lowering the heavy resident in question to the floor. After taking a history, completing a records review and physical examination, Dr. Larson opined as follows:

> The patient does not have any objectively identified diagnosis or injury related to her reported incident at work 10/12/2018. Whether the claimed injury occurred from supporting the patient's head while she was in a kneeling position, or, as reported to me, as she was arising from a kneeling position, it is highly unlikely she sustained any injury at all. Her symptoms are not consistent with any anatomic injury. Clearly, arising from a kneeling position would not have caused injury that she describes as involving nearly her entire body.
>
> * * *
>
> Radiographic and MRI findings are clearly those of a pre-existing [condition]. There is no reasonable indication those conditions were aggravated by her occupational exposure.

(RE D, p. 100).

18. The ALJ finds the opinions of Drs. Ridings, Lesnak and Larson regarding the relatedness of Claimant's persistent shoulder and neck symptoms to the October 12, 2018 work incident involving the lowering a heavy resident to the floor are strikingly similar to one another.

19. On October 29, 2020, Claimant sought a neurosurgical evaluation with Dr. Paul Boone. (Claimant's Exhibit (CE) 2; see also RE A, p. 40). Dr. Boone noted that Claimant reported experiencing constant back pain with sensory disturbance and subjective weakness in her lower extremities. (Id. at p. 41). She also complained of intermittent neck pain and constant pain involving her upper extremities bilaterally which began after the October 12, 2018 work incident. (Id.). Dr. Boone reviewed the images of a cervical MRI obtained September 13, 2020. According to Dr. Boone, Claimant's September 13, 2020 cervical MRI demonstrated the "presence of mild diffuse spondylitic changes as manifested by the presence of some signal change within all cervical disc space segments." (RE A, p. 44). He also noted the presence of a disc bulge/osteophyte complex at C6-7, which resulted in "moderate right and moderate to severe left bilateral foraminal stenosis." (Id.). No other focal areas of significant cervical disc herniation or cervical spinal stenosis were identified on radiographic imaging. (Id.). Dr. Boone opined that Claimant's symptoms and associated findings on imaging did not warrant neurosurgical intervention. (RE A, p. 45). Instead, Claimant

was encouraged to pursue additional injection therapies and an evaluation by a pain management specialist to address her ongoing symptoms. (Id.).

20. On November 25, 2020, Claimant underwent an evaluation by Dr. David Weinstein with respect to her complaints of bilateral shoulder pain. During this encounter, Claimant reported, "diffuse pain throughout the shoulder girdles and arms." (RE A, p. 46). She reported having EMGs and suggested that she had carpal tunnel syndrome. (Id.). Following a comprehensive physical examination, Dr. Weinstein opined that Claimant's imaging (MRI scans) did not demonstrate any high-grade full or partial thickness rotator cuff or labral tears and that her persistent symptoms were consistent with "severe myofascial inflammation." (Id. at p. 49). He recommended additional physical therapy and suggested that Claimant was approaching MMI. (Id.).

21. Claimant was placed at maximum medical improvement (MMI) on November 25, 2020, by Dr. Thomas Higginbotham as part of a Division Independent Medical Examination (DIME) performed January 5, 2021. (RE A). In his DIME report dated January 10, 2021 and amended February 2nd and 4th, 2021, Dr. Higginbotham assessed Claimant with a strain injury involving the neck and shoulders along with "moderate cervical spondylosis without radiculopathy" and "bilateral shoulder impingement syndrome." (Id. at p. 32). Dr. Higginbotham assigned a 25% combined whole person impairment rating and indicated that surgery had not been "recommended for [Claimant's] neck or shoulders. (Id. at pp. 33-35). He noted further that additional injection therapy was not likely to improve her condition. He recommended a self-directed care program consisting of breathing techniques stretching, automassage, postural righting maneuvers, improved nutrition and a general strengthening and aerobic exercise program. (Id. at p. 35). Finally, Dr. Higginbotham recommended that Claimant avoid any further litigation associated with the workers' compensation system. (Id.).

22. Claimant testified that she experienced a worsening of her neck/upper extremity symptoms on February 1, 2021.

23. Respondents filed a Final Admission of Liability (FAL) on February 26, 2021 admitting to Dr. Higginbotham's assigned impairment rating. (RE A, p. 1) The FAL did not admit liability for maintenance care after MMI.

24. Claimant through her then attorney, [Redacted], Esq. filed an objection to Respondent's February 26, 2021 FAL. As part of her objection to the February 26, 2021 FAL, Claimant also filed an Application for Hearing (W.C. No. 5-091-711-004) endorsing Permanent Partial Disability and Overcoming the DIME opinions of Dr. Higginbotham as to impairment. The March 17, 2021 Application for Hearing did not endorse ongoing maintenance care as an issue for determination at hearing.

25. On March 11, 2021, Claimant returned to Dr. Boone for follow-up regarding her persistent neck pain. (CE 3). During this encounter, Claimant reported experiencing constant neck pain, which was exacerbated by head movement. (Id.).

With the exception of left greater than right upper extremity radicular type pain, Dr. Boone's diagnostic impression remained unchanged. (Id.). Non-operative and operative treatment options were discussed and after consultation, Claimant elected to proceed with surgical intervention directed to the C6-7 osteophyte complex causing severe bilateral foraminal stenosis. (Id.). Accordingly, Claimant was scheduled for C6-7 total disc replacement surgery. (Id.).

26. Although she did not include the C6-7 operative note in her exhibit packet, Claimant testified that she underwent a total disc replacement surgery for severe spinal stenosis. A follow-up IME report authored by Dr. Larson on April 29, 2021 indicates that Claimant presented with a well-healed left anterior cervical incision and reported that she underwent cervical disc replacement surgery on April 7, 2021. (RE D, p. 102).

27. In his April 29, 2021 IME report, Dr. Larson documents that Claimant was "uniquely" uncooperative with the IME by refusing to provide any meaningful history or allow any meaningful examination. (RE D, p. 108). He reiterated his opinion that Claimant had "no occupationally related diagnosis. (Id.). He opined further that Claimant need for a C6-7 disc replacement surgery was not related to her claimed October 12, 2018 industrial injury.

28. On June 4, 2021, Dr. Larson issued a brief report outlining a medical record authored by Dr. Richard Meinig following an April 20, 20921 visit with Claimant. (RE B, p. 101). Dr. Larson's June 4, 2021 report indicates simply that Claimant was evaluated by Dr. Meinig for bilateral shoulder impingement and that a left subacromial shoulder injection with Kenalog was administered. (Id.). The report also indicates that a recent MRI arthrogram demonstrated "some tendinosis changes and some type II acromion changes but no evidence of full-thickness cuff tearing." (Id.). Dr. Larson's summery of the content of Dr. Meinig's April 20, 2021 report is devoid of any mention concerning the need for shoulder surgery.

29. Claimant did not supply a copy of the April 20, 2021 report of Dr. Meinig or any other report opining that Claimant needs shoulder surgery and that the need for this surgery is causally related to Claimant's October 12, 2018 industrial injury.

30. On July 19, 2021, Claimant filed an Unopposed Motion with Withdraw her March 17, 2021 Application for Hearing with a request that she be permitted to file a successor application within 30 days of the order granting her motion. Claimant acknowledged that should she not refile an Application for Hearing within 30 days, her claim would close subject to the reopening provisions of the Workers Compensation Act. Claimant's motion was granted by order of ALJ William Edie on July 21, 2021. Claimant's counsel then moved to withdraw from the claim and the claim was closed by the Office of Administrative Courts.

31. As Claimant did not file an Application for Hearing within the 30 days prescribed by the July 19, 2021 Motion and the July 21, 2021 Order of ALJ Edie, the claim closed subject to reopening.

32. On November 16, 2021, Claimant filed an Application for Hearing endorsing among other issues, petition to reopen. This Application was designated as W.C. No. 5-091-711-005. Attached to her Application was a type written statement from Claimant indicating that she underwent spinal surgery as a consequence of her October 12, 2018 industrial injury and that she had been diagnosed with bilateral damage caused by her work injury which was worsening for which surgical intervention had been recommended.

Dr. Larson's April 5, 2022 Deposition Testimony

33. As noted, Dr. Larson testified by deposition on April 5, 2022. Claimant contends that the written transcript of Dr. Larson's deposition testimony is incomplete as the court reporter omitted material testimony from the record. In order to assess the accuracy of the written transcript, the ALJ ordered that the video tape of Dr. Larson's deposition be produced and forwarded to the Claimant and the ALJ for review. As referenced above, no video of the deposition was captured. Nonetheless, an audio recording of Dr. Larson's deposition had been preserved and the same was forwarded to Claimant and the ALJ for review.

34. The ALJ has listened carefully to the audio recording of Dr. Larson's deposition testimony. After thorough review of the audio recording, the ALJ is not convinced that any significant omissions in Dr. Larson's testimony were made by the court reporter. Rather, review of the audio recording reveals that on a couple of occasions a small error was made when transcribing the audio to text when preparing the written transcript of Dr. Larson's testimony. For example, during the audio recording Respondents counsel asked Dr. Larson whether there was "any objective medical evidence that these symptoms which Ms. Fieldgrove testified to had their onset on February 1 of 2021 *were due to* a natural progression and worsening of the work-related incident and its sequelae." (Audio Recording of Dr. Larson's April 5, 2022 deposition, Time Stamp, 8:49–9:09). This question was transcribed incorrectly as: "Is there any objective medical evidence that these symptoms which Ms. Fieldgrove testified to had their onset on February 1 of 2021 *would lead to* a natural progression and worsening of the work-related incident and its sequelae?" (Deposition Transcript of Dr. Larson, p. 8, lines 9-13)(emphasis added). While small errors in the transcription appear to have occurred during Dr. Larson's deposition, the ALJ finds Claimant's contention that wholesale omissions occurred in reducing Dr. Larson's testimony to written text unfounded.

35. Dr. Larson testified that Claimant's October 12, 2018 work incident did not cause or substantially and permanently aggravate Claimant's C6-7 spinal stenosis. (Deposition Transcript of Dr. Larson, hereinafter Depo. Trans., p. 7, ll. 18-25). He testified that spinal stenosis most commonly arises from the progression of the aging process which overtime results in bone spur formation, which causes impingement, and narrowing of the spinal contents around the neck, including the spinal nerves. (Depo. Trans., p. 10, ll. 8-12). According to Dr. Larson, Claimant's C6-7 spinal stenosis was

most probably caused by the natural age-related changes in her neck. (Id. at p. 10, ll. 20-23). He opined further that Claimant's need for surgical intervention at C6-7, as performed by Dr. Boone on April 7, 2021, was not related to worsening, as a natural progression of Claimant's work-related incident, but rather due to progression of the age-related changes in her neck. (Depo. Trans., p. 8, ll. 20-25 and pp. 9-10).

36. In support of his opinions, Dr. Larson testified that the evidence presented supported a conclusion that Claimant did not suffer an acute injury to the neck on October 12, 2018. (Depo. Trans., p. 11, ll. 1-7). Indeed, he suggested that the presence of "spondylitic changes" and the reference to an osteophyte complex and retrolisthesis in the medical record supports a conclusion that Claimant's spinal stenosis and need for surgery were caused by progressive age-related related degenerative forces rather than the incident of October 12, 2018. (Depo. Trans. Pp. 11-13).

37. Claimant challenged the opinions of Dr. Larson on the basis that he did not have her MRI report or the March 11 or April 7, 2021 reports of Dr. Boone at the time he completed his April 29, 2021 IME. Claimant's questions to Dr. Larson imply her belief that his opinions should be rejected because he was insufficiently educated as to the condition of her neck or the surgery performed. The ALJ is not persuaded. Dr. Larson testified that subsequent to his April 29, 2021 IME, he had an opportunity to review Dr. Boone's March 11, 2021 report. (Depo. Trans. P. 38, ll. 3-7). According to Dr. Larson, there was nothing in Dr. Boone's March 11, 2021 report that indicated that the Claimant's neck condition was occupationally related or related to trauma. (Id. at p. 39, ll. 3-8). Indeed, everything in the March 11, 2021 report of Dr. Boone supported his conclusion that the condition of Claimant's neck was "consistent" with degenerative change in the cervical spine and the recommendation for disc replacement surgery was to treat those degenerative changes. (Id.).

38. The totality of the evidence presented persuades the ALJ that Claimant has failed to establish that her bilateral shoulder condition has worsened since the October 12, 2018 work incident. Although Claimant asserted in her Application for Hearing and Petition to Reopen that the condition of her shoulders was worsening and she had received a recommendation for surgery, she failed to present evidence of the same. Indeed, the evidence presented supports a finding that since the October 12, 2018 work incident, Claimant has and continues to suffer from bilateral shoulder pain and paresthesia, which Dr. Weinstein concluded was consistent with "severe myofascial inflammation" and could not be treated surgically.[3] Based upon the evidence presented, it appears that the Claimant last treated for her shoulders on April 20, 2021, when she was seen by Dr. Meinig.[4] Similar to the opinions of Dr. Finn and Higginbotham, Dr. Meinig concluded that Claimant's primary diagnosis was impingement of both shoulders. Thus, it does not appear that Claimant's working diagnosis has changed by April 20, 2021. The ALJ is aware that Dr. Meinig's report was summarized by Dr. Larson. Nonetheless, that summery does not indicate that Claimant needs surgery and Claimant failed to present corroborating evidence that her

[3] See Dr. Weinstein's November 25, 2020 report, RE A, p. 49.
[4] See RE D, p. 101.

diagnosis, had changed, her symptoms were worse or that shoulder surgery was reasonable, necessary and related to the October 12, 2018 work incident.

39. Based upon the evidence presented, Claimant has failed to present sufficient evidence of a worsening shoulder condition that would warrant removing her from MMI and reopening the case for additional medical benefits. Rather, the evidence presented persuades the ALJ that Claimant's current subjective complaints of worsening shoulder pain are unreliable and that her current pain and paresthesia likely represent symptoms similar to those she was experiencing when he was placed at MMI.

40. Concerning her cervical spine complaints, the ALJ credits the opinions of Drs. Ridings, Lesnak and Larson to find that Claimant has failed to establish a causal connection between her C6-7 spinal stenosis and her need for disc replacement surgery to the October 12, 2018 work incident in question. While Claimant's belief that the October 12, 2018 incident lead to her neck symptoms and need for spinal surgery is sincere, the objective medical evidence, i.e. the MRI[5] and the deposition testimony of Dr. Larson support a finding that Claimant's C6-7 spinal stenosis was probably caused by the natural progression of age-related degenerative disc disease and the development of an osteophyte complex at this spinal level. The ALJ is convinced that the Claimant's degenerative disc disease and osteophyte complex caused associated stenosis at C6-7 by narrowing the tunnel for and pressing upon the spinal nerves exiting the facet joints which subsequently gave rise to Claimant's neck pain and subsequent need for surgery.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40- 101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the

[5] As commented upon by Dr. Boone on October 29, 2020 and March 11, 2021.

record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. As found above, Claimant's subjective reports of worsening shoulder pain and need for shoulder surgery are not supported by the evidence presented. Moreover, the evidence presented fails to support Claimant's contention that there is a causal connection between her neck pain and her need for surgery to the October 12, 2021 work incident. While the ALJ is convinced that Claimant's reports of neck pain were/are credible and that her disc replacement surgery was reasonable and necessary, the medical evidence persuades the ALJ that the need for such treatment was not causally related to the October 12, 2018 incident involving the lowing of a heavy resident to the floor as Claimant described.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from progressive age-related degenerative disc and spine disease, the natural progression of which probably resulted in her neck symptoms and need for treatment, including surgery at C-6-7.

Claimant's Request to Reopen Her Claim Based on a Change Condition

E. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based upon a change in condition which occurs after maximum medical improvement. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). In seeking to reopen a claim, the claimant shoulders the burden of proving his/her condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62

P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000).

F. The question of whether a claimant has proven a change in condition of the original physical or mental condition, which can be causally connected to the original compensable injury, is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12, P.3d 844 (Colo.App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004). In this case, Claimant contends that the evidence supports a conclusion that she has proven that her shoulder condition, an injury traceable to the original compensable injury has worsened since being placed at MMI by Dr. Higginbotham. As found, the ALJ is not convinced. Here, Claimant failed to present persuasive evidence that her shoulder symptoms have worsened with the passage of time or that she needs surgery to address that worsening. Rather, the credible evidence presented supports a conclusion that Claimant's principal diagnosis has not changed and she continues to experience symptoms similar to those she had when she was placed at MMI. As presented, the evidence supports a conclusion that Claimant likely suffers from persistent severe myofascial inflammation of the shoulders girdles, which is not amenable to surgery. Because Claimant has failed to present sufficient evidence of a worsening condition and because an authorized provider has not indicated that she requires additional treatment for her shoulders[6], Claimant's request to reopen her claim based upon a change in the condition of her shoulders must be denied and dismissed.

G. Claimant also contends that she is entitled to reopen her case based upon a change in the condition of her neck, which worsening ultimately caused her to undergo a C6-7 disc replacement and fusion procedure with Dr. Boone on April 7, 2021. Respondents contend that Claimant's neck pathology and her need for spinal surgery are unrelated to the October 12, 2018 incident wherein Claimant assisted in lowing a heavy resident to the floor. Indeed, Respondents contend that Claimant's persistent cervical symptoms and need for spinal surgery related to the natural progression of an underlying preexisting degenerative condition at C6-7. On this point, the ALJ agrees with Respondents. Here, the evidence presented supports a conclusion that Claimant failed to establish the requisite causal connection between her cervical condition and her need for surgery to the October 12, 2018 work incident in question.

H. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact, which the

[6] The ALJ is without authority to order an authorized treating physician to provide a particular form of treatment, which has been recommended only by a physician unauthorized to treat. *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAO May 4, 1995); *see also Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO May 15, 2018).

ALJ must determine, based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). As found, the ALJ credits the opinions of Dr. Larson to conclude that Claimant's C6-7 spinal stenosis and ultimately her surgery was probably caused by the natural progression of age-related degenerative disc disease and the development of an osteophyte complex at this spinal level. Moreover, the is not convinced that the described mechanism of injury (MOI), i.e. Claimant's employment related duties aggravated, accelerated or combined with this pre-existing condition to give rise to Claimant's disability or need for treatment. Rather, the evidence presented supports a conclusion that Claimant's neck pain and need for treatment, including surgery was, more probably than not, related to the natural age-related progression of her chronic pre-existing degenerative disc and spine disease.

I. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a pre-existing infirmity or disease to produce disability or the need for treatment for which workers' compensation is sought. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by employment related activities and not an underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

J. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, as asserted by Respondents, the occurrence of symptoms at work may represent the natural progression of a pre-existing condition that is unrelated to Claimant's employment or the incident occurring January 2, 2021. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found, the ALJ credits the opinions of Dr. Larson to find and conclude that Claimant's neck pain/dysfunction is probably related to and emanating from the natural progression of a pre-existing condition rather than the duties of her employment on October 12, 2018. While the ALJ commends Claimant's work ethic and devotion to her position, there simply is a dearth of forensic evidence to connect her current symptoms and neck pathology to the incident occurring on October 12, 2018. Accordingly, Claimant has failed to establish the requisite causal connection between her neck condition and need for surgery to her work activities on October 12, 2018. Because Claimant has failed to establish she suffered a compensable neck injury as defined by the aforementioned legal opinions, her request to re-open her claim based upon a worsening of this condition must be denied and dismissed. As Claimant has failed to carry her burden of proof to reopen her claim, the additional claims for

benefits, including her request for additional medical treatment, temporary disability benefits and disfigurement need not be addressed.

ORDER

It is therefore ordered:

1. Claimant's request to reopen her claim is denied and dismissed.

DATED: June 8, 2022

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

CERTIFICATE OF MAILING OR SERVICE

I hereby certify that I have served true and correct copies of the foregoing **FINDINGS OF FACT, CONCLUSIONS OF LAW, AND** ORDER by U.S. Mail, or by e-mail addressed as follows:

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable work related injury on April 8, 2021 within the course and scope of his employment with Employer.

IF CLAIM IS DEEMED COMPENSABLE, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits that are authorized and reasonably necessary to cure and relieve him of the effects of the injury.

III. Whether Claimant has proven by a preponderance of the evidence what was Claimant's average weekly wage.

IV. Whether Claimant has proven by preponderance of the evidence that he is entitled to temporary disability benefits from April 9, 2021 through the present.

V. Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of disfigurement.

VI. Whether Claimant has proven by a preponderance of the evidence that he is entitled to a penalty for Employer's failure to have workers' compensation insurance.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on issues of compensability, medical benefits, reasonably necessary and related, average weekly wage, and other compensation, including indemnity benefits for lost wages. The Office of Administrative Courts logged the AFH on January 24, 2022.

Attached to the AFH was an Employers' First Report of Injury dated December 18, 2021 purportedly completed by David Gallivan, Manager of Legislation on behalf of Corvel Corporation and Colorado Uninsured Employer's Board. Also attached were multiple forms completed by Claimant for Corvel.

Respondent Employer did not file a Response to the Application for Hearing.

A hearing was previously scheduled before ALJ Kara R. Cayce on April 14, 2022. Upon receiving the pro se (self-represented) advisement from the ALJ, Claimant indicated he wished to proceed. Employer moved for an extension of time to retain counsel. Claimant objected to the extension as he did not wish further delays. The ALJ found good cause for the extension and issued an order granting the extension of time to commence the hearing for up to 45 days. ALJ Cayce advised in the April 14, 2022 order that the

parties proceeding pro se were responsible for being familiar with and complying with the OAC policy, applicable rules and statutes.

At the rescheduled May 24, 2022 hearing both parties again appeared pro se. This ALJ also advised the parties that they were responsible to know the OAC policy and rules of procedure as well as the Rules of Evidence, the statutory and case law authority. Both Claimant and Employer indicated that they had made attempts to obtain counsel without success and that they wished to proceed with the hearing at this time.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Claimant's testimony of alleged injury

1. At the time of the hearing Claimant was sixty years old. Claimant worked for Employer as of January 2021 as a mechanic.

2. On April 8, 2021 Claimant was assigned the task of dismantling a Nissan pathfinder. Claimant stated that was using a socket wrench, attempting to loosen the screws that attached the motor to the chassis of the vehicle. One of the screws was not coming lose. He applied a lot of force to get it to loosen up. Claimant testified that, while he was exerting all the force he could, the screw broke and the right arm over extended in a jerky movement. He stated that it caught him by surprise and the posture change caused a wrenching of the right shoulder, and pop. He immediately felt an unbearable pain in the right shoulder. Claimant was in such extreme pain that all he could do in the moment was sit down on an adjacent tire.

3. Claimant testified that multiple individuals were in the shop when the accident happened and came over quickly. Claimant had to rest for a while before he went to report the injury to the shop manager. His coworkers advised him to seek medical attention right away. The owner of the shop was in Mexico at the time, but Claimant advised him of the accident when he returned.

4. Claimant stated he made an appointment at Denver Health Medical Center and was evaluated. He was provided with some care and he returned to work but not at the same level of activity or at full capacity. He was performing easy work. His shoulder problems did not improve and, following diagnostic testing, he was advised by the providers that he required surgery for the shoulder.

5. Claimant testified that his employer continued to pay him half of his wages for a while, but that it did not fully compensate him for his loss of earnings. He continued to work light duty, being paid his full salary until his August 24, 2021 surgery date and following the surgery he was not able to return to work as his physician did not authorize his return to work. His Employer stopped payments at that time. Employer called Claimant to advise him that he would no longer continue payments until he returned to work.

6. Claimant indicated that he has not returned to normal and does not have full strength or range of motion in the injured shoulder. He was not capable of returning to work at the time of the hearing as he believed the nerves and tendons were affected. This caused him significant depression and financial stress. He was forced to sell his vehicle to meet his essential expenses. He noted that he was unable to pay rent or meet his other needs for the last several months. He is scared that he will be evicted and he and his disabled wife will have nowhere to live. He also became depressed because of this situation where he was unable to work due to the injury.

7. Claimant's weekly wage was $1,200. He was paid $600.00 per week from August 25, 2021 until October 24, 2021. His employer asked that he convey to his physician he be allowed to return to his regular job but Claimant was unwilling to do so as he continued to have right shoulder problems.

8. His surgery took place on August 25, 2021 and he continues to have problems with his right shoulder. He showed this ALJ the five arthroscopic port scars on his right shoulder. Four were small incisions scars no larger than a dime. The fifth scar was approximately two inches long close to the armpit.

B. Employer's testimony

9. Employer, (owner) stated he had no workers' compensation insurance. He stated that he noted that he had a certain responsibility to Claimant but that other of his workers were complaining that he was paying Claimant and Claimant was not working. He also stated that Claimant failed to provide any medical reports or receipts. He stated that he paid Claimant for a while but then could no longer continue to do so as he saw no sign that Claimant could return to work.

10. Owner stated that he had been travelling on the date of the alleged injury but denied that the accident could happen in the manner Claimant stated. He was not provided with any broken bolts or any evidence that the accident happened. Owner believed Claimant for a while but then determined that he no longer did. He stated that he had been running his business for 14 years without any incidents or problems like this. Owner stated that Claimant should have been able to gage the amount of force to exert to remove the screw without any accidents.

C. Medical Records

11. Claimant was seen on April 9, 2021 at the Lowry Family Health Center for Denver Health by Daniel R. Wells-Prado, M.D. The records are unclear as to the diagnosis or history in this record as multiple of the records were in Spanish. However, the records show that Claimant was administered the Moderna COVID-19 vaccine at that time intramuscularly into the left deltoid muscle. The records also show that he had a screening for colorectal cancer, prediabetes and was noted to be at risk for heart disease.

12. On April 28, 2021 Claimant was seen by Raenna P. Simcoe, M.D. regarding acute onset of pain after fall the previous day onto the right shoulder. The history of present illness states “Yesterday slipped on water and fell onto R shoulder. Felt sharp pain from front to back, feels clicking, pain now 6/10, worse with lifting overhead, tried ibuprofen but did not last long, heat also helped, has some tenderness, no numbness or tingling.” Dr. Simcoe ordered x-rays.

13. On July 7, 20221 Nurse Stacy Morsch documented that Claimant was seen for a right shoulder trauma from “a fall a couple of months ago.” It also noted that x-rays showed no fracture and was positive for degenerative changes. On exam Claimant showed weakness with empty can test. He also showed tenderness of the anterior and bicep tendon, and decreased range of motion. Nurse Morsch order a right shoulder MRI to rule out ligament injury based on physical findings.

14. Claimant was seen at the Outpatient Medical Center Radiology/MRI Department on July 20, 2021. The MRI findings as read by Dr. Scott Tomsick showed a massive rotator cuff tear involving the supraspinatus, infraspinatus and subscapularis tendons, including muscle atrophy of the supraspinatus, glenohumeral joint synovitis and biceps tendinosis.

15. Claimant was initially evaluated by Jarrod T. King, M.D., an orthopedic surgery specialist, on August 19, 2021. They obtained a history of injury at work while working on removing an engine out of a vehicle, when he sustained a right shoulder injury. His impression was that Claimant was “right-hand-dominant 59-year-old auto mechanic with an acute traumatic large rotator cuff tear with pseudoparalysis of the right shoulder.” They assessed that Claimant was “indicated for early surgical intervention to prevent severe disability associated with the severe rotator cuff tear to the patient's dominant extremity.” He stated that there was no role for conservative care and Claimant was booked for surgery for an acute rotator cuff repair. He reviewed the diagnostic testing and found that the x-rays of the right shoulder revealed impingement related anatomy and the MRI arthrogram scan demonstrated full-thickness supraspinatus and a partial infraspinatus tear, which is retracted back to the glenohumeral joint line, with no significant atrophy of the supraspinatus or infraspinatus, they suspected some damage to the subscapularis. Claimant was immediately scheduled for surgery for the following Wednesday.

16. Claimant was seen on August 25, 2021 for a traumatic rotator cuff tear as an outpatient surgery patient by Dr. King and his PA Jamie Stambaugh. On exam they found Claimant’s right shoulder had loss of range of motion and that Claimant was catastrophically weak with external rotation and supraspinatus testing.

17. The operative report showed Dr. King performing arthroscopic double row rotator cuff repair of the subscapularis, and double row repair of the supraspinatus and infraspinatus tendons, as well as open subpectoral biceps tenodisis, arthroscopic subacromial and subcoracoid decompression with acromioplasty and coracoplasty, arthroscopic extensive glenohumeral debridement, and coplaning of AC joint.

18. Immediately following the surgery, Dr. Benjamin Lippert, at the surgeon's request, administered an upper extremity block with Marcaine.

19. Following surgery, Claimant was restricted from any lifting, sent home in a sling. Claimant was instructed to return to see Dr. King two weeks post-surgery and to start physical therapy within one to two weeks. The initial physical therapy visit was scheduled for September 1, 2021 wit the Outpatient Rehabilitation Services PT. The follow up with orthopedics was scheduled for September 9, 2021 with PA Jamie Stambough of the Orthopedic Department at DHMC.

20. There is a record by PA Stambaugh on December 1, 2021 for recheck and follow up of the right shoulder.

21. As found, Claimant has failed to show by a preponderance of the evidence that he was injured in the course and scope of his employment. While Claimant testified about an event on April 8, 2021, the medical records tendered at hearing fail to show that is the case. In fact, the medical records support that he was seen on April 9, 2021 for conditions unrelated to a right shoulder injury. The records persuasively note that Claimant had a slip due to water and fell onto his right shoulder causing injury on or about April 27, 2021. This is documented by Dr. Simcoe on April 28, 2021. It was at this time when the provider ordered an x-ray. The history is also documented by Nurse Morsch on July 7, 2021. As found, the Denver Health medical records are more persuasive than Claimant's account of events and testimony in this matter. Claimant is specifically found not credible.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is

not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

Here, as found, Claimant has failed to prove that he was injured in the course and scope of his employment with Employer. As found, the medical records are more persuasive than Claimant's testimony in this matter. On April 9, 2021 Claimant was seen

at Denver Health and there is no indication that Claimant complained of right shoulder injury. However, on April 28, 2021 Dr. Simcoe documented that Claimant had had a fall the previous day when he slipped on water and fell on his right shoulder. This is further documented on July 7, 2021 by Nurse Morsch. The documentation in the medical records do not support a determination of compensability in this matter. Therefore, Claimant's claim for compensation is denied and dismissed. The remaining issues are moot in light of this determination.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim with regard to an alleged injury on April 8, 2021 is *denied* and *dismissed*.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 10th day of June, 2021.

Denver, CO 80203

ISSUES

- Did Claimant prove he was Respondent's "employee" performing services under an express or implied contract of hire when he suffered injuries on July 2, 2020?
- If Claimant proved a compensable injury, the ALJ will address these additional issues:
- What is Claimant's average weekly wage?
- Is Claimant entitled to TTD benefits commencing July 2, 2020?
- Is Claimant entitled to reasonably necessary medical benefits to cure and relieve the effects of his injury?
- Is Respondent liable for penalties for failure to carry workers' compensation insurance at the time of Claimant's accident?

FINDINGS OF FACT

1. Respondent is an automotive repair shop in Manassa, Colorado. The company has been operated by [Redacted, hereinafter LH and DH respectively] as a sole proprietorship for over 40 years. Mr. LH performs all repair work, while Ms. DH primarily tends the books and other administrative tasks. The automotive repair work is performed out of a garage on a property immediately adjacent to Mr. and Ms. H's home. Respondent never had any employees other than Mr. and Ms. H prior to June 30, 2020.

2. On July 2, 2020, Claimant suffered severe injuries on Respondents' property when a trailer tongue accidentally dropped on his feet. Mr. H was backing up a pickup truck to connect the trailer and Claimant was standing next to the tongue. The trailer tongue was resting on a jack. The tongue dislodged from the jack and fell on Claimant's feet.

3. Claimant suffered multiple severe fractures from of the accident. Ms. DH drove him to the emergency department in Manassa. Claimant was airlifted to Memorial Hospital in Colorado Springs, where he was hospitalized for six days. He was discharged from the hospital on July 8, 2020.

4. Claimant had surgery on August 6, 2020 to fuse multiple joints in his left foot. Although the surgery was successful from a technical standpoint, Claimant continued to experience severe pain in his feet. He was subsequently diagnosed with complex regional pain syndrome (CRPS).

5. Claimant applied for Medicaid during his hospital stay. Medicaid has covered treatment related to the injury.

6. The medical records contain no persuasive evidence regarding whether Claimant was Respondent's employee at the time of the accident.

7. Claimant first met the LH and DH at their home on June 30 or July 1, 2022. The introduction was made by Chief Roman Marrufo of the Manassa Police Department. Chief Marrufo had brought Claimant to the H's home to inquire whether Respondent had any work available for Claimant. Chief Marrufo has known the Hs for many years because Respondent provides automotive repair services for the Town of Manassa.

8. Chief Marrufo could not recall the specific date on which he and Claimant went to the H's home.

9. Claimant testified Respondent hired him to work as a laborer and "shop hand" for $8 per hour. Claimant assumed he would be working 40 hours a week, "Monday through Friday," because he understood that to be Mr. H's work schedule. Claimant testified the initial meeting took place on "the last day of June 2020." He testified Mr. LH offered him a job and he was told to start work the next day. Claimant testified the offer and acceptance were purely verbal, and conceded there is no written documentation of an employment relationship. Claimant testified he worked for Respondent on July 1, 2020, helping to remove a transmission and other repair tasks.

10. There is no persuasive evidence Claimant ever sought or received pay for any work he allegedly performed before the July 2, 2020 accident.

11. Regarding the injury, Claimant testified he was helping Mr. LH hook up a trailer to a pickup truck when the accident occurred. Claimant was standing next to the trailer, "guiding" Mr. LH as he backed up the truck. The trailer dislodged from the jack and landed on Claimant's feet.

12. Ms. DH confirmed that Claimant and Chief Marrufo came to the house and ate lunch, although she could not recall the exact date. Claimant asked whether Respondent had any work. Claimant stated he had no experience as an automotive mechanic. Ms.DH testified that even if Respondent had offered Claimant a job, it would not have been "Monday through Friday" because the shop is closed on Friday. She recalled that Claimant had returned "the next morning and just kind of hung around out in the garage." It is unclear whether the "next day" to which she referred was the day of Claimant's injury, or the day before the injury. Ms. DH testified the trailer was parked at a different location than Claimant described in his testimony. She knew Mr. LH had backed the truck to hook up the trailer, but did not witness the accident itself. Ms. DH took Claimant to the hospital, but could not go in with him "because of COVID." Ms. DH testified she "didn't hear a whole lot about" Claimant's injuries after taking him to the hospital. Claimant later contacted Ms. DH and requested "gas money," and she gave him some cash. She disagreed that Respondent ever hired Claimant. She testified Respondent's

financial records contain no indication that Claimant was hired or paid any wages. Ms. DH confirmed Respondent had no workers' compensation insurance.

13. Mr. LH recalled meeting Claimant over lunch at his home. He agreed that Claimant asked whether Respondent had any work available. They briefly discussed Claimant's work experience, and Claimant indicated he had never done automotive repair work before. Mr. LH was unsure if or how Claimant could help, but he told Claimant to come back "tomorrow" and they could talk more about it. Mr. LH testified he told Claimant, "**if** I hired him, I could only pay $8 an hour." Mr. LH testified Claimant was injured "the day after" their initial conversation. He testified Claimant had been at the shop for less than an hour before the accident occurred. Mr. LH disputed Claimant's testimony he was working at the shop the day before the accident. He was adamant that the accident occurred "the next day" after Claimant and Chief Marrufo came to the house. Mr. LH testified he had merely discussed a possibility of employment with Claimant but never offered him a job.

14. Claimant's testimony is no more persuasive than Mr. and Ms. H's testimony.

15. Claimant failed to prove he was performing services for Respondent under a "contact of hire" at the time of his accident.

CONCLUSIONS OF LAW

It is undisputed that Claimant suffered severe injuries on July 2, 2020 when the trailer fell on his feet. However, to receive workers' compensation benefits, Claimant must prove he was an "employee" performing services under a "contract of hire" when the accident occurred. Section 8-40-202(1)(b). Even if Claimant was on Respondent's property to discuss a possible job, injuries suffered before a contract of hire comes into existence are not compensable. *E.g., Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991) (job applicant injured during a pre-employment physical was not entitled to compensation where employment was not guaranteed even if she had passed the test).

An "employee" is defined as an individual "who performs services for pay" under an express or implied "contract of hire." Sections 8-40-202(1)(b) and (2)(a). Contracts of hire are subject to the same rules as other contracts. *Aspen Highlands Skiing Corp. v. Apostolou*, 866 P.2d 1384 (Colo. 1994). A contract of hire may be found even though not every formality attending commercial contracts has been observed as long as the fundamental elements of contract formation are present. *Id*. at 1387. Claimant must prove he was Respondents' employee by a preponderance of the evidence. *Hall v. State Compensation Insurance Fund*, 387 P.2d 899 (Colo. 1963). No particular form of evidence is required, and the existence of a contract of hire must be determined based on the totality of evidence in the particular case. *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861, 864 (Colo. App. 1996).

As found, Claimant failed to prove he was an "employee" performing services under a "contract of hire" at the time of his accident. Because there is no documentary proof that Claimant was Respondent's employee, the evidence on this point consists

solely of testimony. Chief Marrufo confirmed that Claimant had asked about work at the initial meeting, but offered no testimony regarding any agreement to hire Claimant or whether Claimant actually performed any work for Respondent. The case thus comes down to conflicting testimony of interested witnesses. Claimant appeared a credible witness. But Mr. and Ms. H appeared credible too. Claimant's testimony was no more persuasive than the testimony offered by Respondent. It is possible that Claimant was "hired" by Respondent to work in the repair shop. It is at least equally likely that Claimant and Respondent were merely exploring the possibility of an employment relationship, but no offer or acceptance had actually occurred. Based on the evidence presented, the ALJ cannot say that one scenario is more likely than the other. Claimant has the burden of proof in this matter, and this evidentiary equipoise prevents Claimant from proving a contract of hire as "more likely than not."

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 10, 2022

Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-179-733-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that an L5-S1 laminectomy and transforaminal lumbar interbody fusion (TLIF) surgery recommended by Clint Devin M.D., is related to her admitted work injury.

FINDINGS OF FACT

1. Claimant is 49 years old, and has worked for employer for approximately five and one-half years as a dietary assistant and dietary manager. Employer operates a hospital and an assisted living facility, and Claimant's job duties have included meal preparation, general kitchen work, stocking products, and delivering meals.

2. Claimant has a history of chronic lower back issues dating to 2004 when she sustained an injury while working for a different employer. Since that time, Claimant has experienced intermittent issues with her lower back, including radicular symptoms in her right leg and foot. (Ex. C, D, E, F, and G). In May 2016, Claimant underwent a discectomy at the L5-S1 level, after which her symptoms improved. (Ex. F). In January 2018, Claimant underwent a second lumbar discectomy at the L5-S1 level for a recurrent disc herniation. (Ex. I). Claimant testified that following the 2018 surgery, she felt good and did not have any further radiating symptoms. Claimant testified that after her 2018 surgery, her back issues did not affect her ability to perform her job duties for employer.

3. On October 28, 2020, Claimant was transporting meals from the hospital to the assisted living facility. The meals were contained in two plastic totes with handles on each side of the tote. Claimant was carrying two totes in front of her torso when she slipped on an icy sidewalk. Although Claimant did not fall to the ground, her legs split apart, resulting in admitted injuries.

4. Later on October 28, 2020, Claimant saw Frank Tong, D.O., at the Middle Park Medical Center emergency department, reporting pain in her left shoulder and hip pain. Dr. Tong diagnosed Claimant with a left trapezius strain with radiculopathy, and a left hip strain. Claimant reported minimal hip pain, mild hip tenderness, and normal hip range of motion. Claimant did not report any issues with her lower back, and Dr. Tong found no lumbar spinal tenderness. (Ex. 4).

5. On November 3, 2020, Mark Wisner, D.O., at Middle Park Medical Center, saw Claimant for cervical pain, including radicular symptoms. Dr. Wisner diagnosed her with cervicalgia, cervical radiculopathy, and trapezius strain, with concerns for a possible cervical disc herniation. (Ex. 4). Claimant underwent a cervical MRI on November 31, 2020, which confirmed cervical disc issues at C5-6 and C6-7. (Ex. 10). Over the following nine months, Claimant received various evaluations and treatment for her cervical spine

symptoms, including physical therapy, massage, medications, and cervical epidural steroid injections. (Ex. 4, 5, 7, and 8).

6. Between October 28, 2020, and July 29, 2021, Claimant intermittently reported non-specific lower back pain. For example, on December 17, 2020, Claimant reported that she felt the positioning of her neck and arm bothered her lower back. (Ex. 4). Claimant also reported to physical therapy that she had chronic lower back pain that had worsened. (Ex. 5). When Claimant saw nurse anesthetist Kellie Marie Logue, CRNA, she reported "chronic low back pain" with an onset "years ago" and constant duration. (Ex. 8). Claimant's medical records do not document reports of lower back radicular symptoms, or specific treatment for lower back pain between the October 28, 2020 injury and July 29, 2021.

7. Claimant's first documented complaint of acute back pain following her work injury was on July 29, 2021, nine months after her injury. On July 29, 2021, Claimant reported to Dr. Wisner "new onset" back pain, with pain across the lower back including radiation and a rare stabbing sensation in the right buttock. On examination, Dr. Wisner noted lumbar spasms and tenderness, with decreased range of motion. Straight leg raise tests were negative on both the left and right. Dr. Wisner assessed that Claimant had a "new onset lumbar strain, likely related to compensation in movements due to neck pain and radiculopathy." (Ex. 4). Dr. Wisner offered no further explanation as to how compensation for Claimant's neck pain caused or contributed to a lumbar strain.

8. On August 2, 2021, Claimant saw Clint Devin, M.D., at Steamboat Orthopaedic & Spine Institute. Dr. Devin noted Claimant's two prior lumbar discectomies had left her with "saddle anesthesia and paresthesias in her right buttock and leg area," and these symptoms were "obviously concerning to her, but the neck is the more pressing issue at this point." Dr. Devin's record from August 2, 2021, does not note any specific examination of Claimant's lumbar spine or diagnosis related to her lumbar symptoms. (Ex. 7).

9. On August 31, 2021, Claimant underwent surgery on her cervical spine. (Ex. 7).

10. On September 30, 2021, Claimant reported to Dr. Wisner that she was experiencing post-surgical numbness in her right foot and lower back pain. Dr. Wisner indicated Claimant's right foot numbness was of uncertain etiology, stating: "question compressive neuropathy from surgical positions v spinal nerve compression from original [injury]." He ordered a lumbar x-ray to investigate Claimant's right foot numbness. (Ex. 4). The lumbar x-ray was interpreted as showing "increased moderate degenerative changes," compared to an October 9, 2017 MRI of Claimant's lumbar spine. (Ex. R).

11. On October 25, 2021, Claimant saw Dr. Devin and reported she had struggled with back pain for years, and that her back tended to be sore with activity, and could worsen with coughing or sneezing. Dr. Devin noted Claimant had symptoms consistent with nerve tension and radicular pain on the right and recommended an MRI and lumbar x-rays. (Ex. 7). The lumbar x-ray was interpreted as showing questionable static grade 1 anterolisthesis of L4 and L5 versus rotational artifact, and lower spine predominant disc

degeneration and facet arthropathy. (Ex. 10). Dr. Devin increased Claimant's previous prescription for gabapentin to address her lumbar symptoms. (Ex. 7).

12. On November 1, 2021, Claimant woke at approximately 3:00 a.m. with severe right-sided lower back pain with shooting pain down her right leg, and increased right foot numbness. Claimant was evaluated at the emergency department by Jason Stuerman, M.D., and provided medication for pain. She was advised to follow up with Dr. Wisner the following day. (Ex. 9).

13. The following day, November 2, 2021, Claimant saw Dr. Wisner, reporting pain across the right low back and down the back of her leg to her mid-posterior thigh, with new whole-foot numbness. (Claimant's foot numbness was previously limited to the outside of her foot.) Dr. Wisner indicated he suspected Claimant's condition was "related to original fall given complaint of hip pain at the time." (Ex. 4).

14. Claimant's lumbar MRI was completed on November 9, 2021, and showed a large (10 mm) right-sided disc herniation at L5-S1. (Ex. 10). Dr. Wisner then referred Claimant for s spine surgery consultation. (Ex. 4).

15. Claimant returned to Dr. Devin on November 15, 2021, for evaluation of her lumbar spine. Dr. Devin reviewed Claimant's MRI, and diagnosed Claimant with a recurrent L5-S1 lumbar disk herniation. He recommended a right L5-S1 laminectomy and TLIF (transforaminal lumbar interbody fusion) (Ex. 7).

16. Claimant continued to report right foot numbness and lower back pain in visits with Dr. Wisner on November 18, 2021, December 21, 2021, January 25, 2022, and February 25, 2022. At the December 21, 2021 visit, Dr. Wisner noted that Dr. Devin had unexpectedly passed away, and that Claimant required a new neurosurgical consultation. (Ex. 4).

17. On March 14, 2022, Claimant saw Alex Sielatycki, M.D., at Steamboat Orthopaedics. Dr. Sielatycki noted that Dr. Devin's proposed surgery was denied by workers compensation. Dr. Sielatycki noted that Claimant continued to have pain in the low back radiating down the right leg with right foot numbness and Claimant "reports the onset [of] this was the fall at work." He further noted that Claimant "had a history of discectomy prior to that number of years prior [sic], but it has not been a problem until the fall as she reports." Dr. Sielatycki diagnosed Claimant with lumbar recurrent disk herniation at L5-S1. In addressing causation, he wrote: "By her history and report of symptom onset at the time of her fall, I think it is reasonable to conclude that the fall contributed in part 50% or more to the recurrence of symptoms. I think it is also reasonable to pursue fusion as Dr. Devin had recommended right-sided approach L5-S1, facetectomy with fusion of L5-S1." (Ex. 7). Dr. Sielatycki's record from Mach 14, 2022 does not indicate that he reviewed Claimant's medical records in reaching his causation opinion. Given that Claimant's medical records do not indicate that Claimant experienced low back pain or radicular symptoms on or near October 28, 2020, the ALJ finds Dr. Sielatycki's causation opinion unpersuasive.

18. On January 11, 2022, Robert Messenbaugh, M.D., performed a record review at Respondents' request. Dr. Messenbaugh was admitted as an expert in occupational medicine and orthopedics, and testified at hearing. He opined that Claimant's lumbar disc herniation and S1 nerve root compression shown on the November 9, 2021 were not causally related to her October 28, 2020 work injury. Consequently, he opined that the recommended lumbar surgery, although reasonable and necessary, was not causally related to her work injury.

19. Dr. Messenbaugh credibly testified Claimant's L5-S1 spinal level was compromised prior to October 28, 2020, due to her prior surgeries. He further opined it would not take a significant amount of force to result in a disc herniation due to her compromised state. He credibly testified that if Claimant had sustained a lumbar disc injury on October 28, 2020, one would expect symptoms to appear at that time. However, Claimant did not report significant low back symptoms or symptoms of lumbar radiculopathy until months after the initial injury. He also opined that the negative straight leg raise tests Dr. Wisner performed on July 29, 2021 indicated that "though [Claimant] might have been experiencing some low back pain, she was not showing physical examination evidence of having lumbar nerve root compression." (Ex. T). Dr. Messenbaugh credibly testified that the symptoms attributable to an L5-S1 disc protrusion would primarily affect the L5-S1 dermatome, and would result in radicular symptoms in the Claimant's foot and lower leg, and an absent ankle reflex.

20. Claimant credibly testified that prior to October 28, 2020, she was able to perform her job functions and did not have any radicular symptoms. She testified that from January 2021 through August 2021, she was experiencing a deep ache in her lower back, and occasional tingling sensations in her right leg. No credible evidence was admitted indicating that Claimant experienced radicular symptoms related to her lower back between October 28, 2020 and July 29, 2021.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has failed to establish by a preponderance of the evidence that the need for the surgery proposed by Dr. Devin (and later Dr. Sielatycki) is causally related to Claimant's industrial injury. The proposed surgery is intended to address the lumbar disc hernia shown on Claimant's November 9, 2021 MRI and the resulting symptoms. The evidence does not establish that either the lumbar disc hernia or the associated symptoms are causally related to Claimant's October 28, 2020 work injury. The ALJ finds credible Dr. Messenbaugh's opinion that if Claimant sustained a lumbar disc injury at the

time of her October 28, 2020 injury, symptoms would have begun shortly thereafter. The symptoms attributable to an L5-S1 disc protrusion would primarily affect the L5-S1 dermatome, and would manifest as radicular symptoms in the Claimant's foot and lower leg, and an absent ankle reflex. Claimant did not report any radicular symptoms until July 29, 2021, when she reported brief stabbing sensation into the right buttocks. Dr. Wisner performed straight leg raise tests at that time, which were negative for lumbar nerve root compression, suggesting that no disc herniation was present at that time. Claimant later reported radicular symptoms consistent with a disc herniation on leg on September 30, 2021, when she reported symptoms in her foot and leg, which became severe on November 1 2021.

Although Dr. Wisner and Dr. Sielatycki opined that Claimant's lumbar symptoms were causally related to her October 28, 2020 injury, neither persuasively explained how the emergence of radicular symptoms in either July 2021 or September 2021 was caused by or related to Claimant's injury nine to eleven months earlier. Moreover, neither physician credibly opined as to how Claimant's L5-S1 disc herniation was caused by or related to her work injury, other than the fact that Claimant's symptoms emerged after the injury. Dr. Sielatycki's opinion is based on the incorrect assumption that Claimant's lower back symptoms began at the time of her fall, and is thus not persuasive.

Given Claimant's history of lumbar surgery, the significant time gap between her injury and the first report of symptoms, and the fact that no physician has credibly opined that Claimant's lumbar disc herniation was caused by or aggravated by the October 28, 2020 injury, the ALJ finds that Claimant has failed to establish by a preponderance of the evidence a causal connection between her October 28, 2020 injury and the symptoms and anatomical pathology for which surgery is recommended.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of the L5-S1 laminectomy and transforaminal lumbar interbody fusion (TLIF) surgery recommended by Dr. Devin and Dr. Sielatycki is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 10, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that his low back condition is causally related to his October 7, 2020 work injury.

II. Whether Claimant proved by a preponderance of the evidence that his left knee anterior horn medial meniscus tear and need for surgery for that tear are causally related to his October 7, 2020 work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 32 years old at the time of the hearing in this matter. He worked for Employer as a painter.

2. Medical history was significant for preexisting complaints of lumbar spine pain. On December 10, 2019 Claimant was seen at Clinica Family Health by Britt Severson, M.D., who documented that Claimant was seen for shooting low back pain and gluteal pain that radiated to the dermatome anteriorly. On physical exam, Dr. Severson noted normal low back ROM[1] flexion, extension, lateral bending and rotation; no paraspinal muscle TTP[2], normal strength, sensation, normal gait and no edema in LE[3] bilaterally; negative straight leg raise bilaterally with visual overview of all four extremities as normal. Dr. Severson also noted normal inspection and range of motion of the cervical and thoracic spine. On review of systems he documented negative for back pain, joint pain, joint swelling and neck pain though he noted some muscle weakness. However, Claimant was assessed with acute left sided low back pain with left sided sciatica despite the normal exam. Dr. Severson suspected only a mild strain of the low back muscles.

3. Claimant was attended by Dr. Severson on April 16, 2020 and June 1, 2020 but without mention of a lumbar spine or sciatica condition, only hypertension as well as complaints of anxiety and dizziness.

4. Claimant was working for Employer on October 7, 2020. His supervisor requested that he paint the railings of the balconies of the apartments they were working on. He was using a boom or lift in order to reach to paint them. The boom would only go down to about four feet above the ground and Claimant would jump off to the ground. On October 7, 2020 he jumped off of the boom and felt immediate onset of pain in his left

[1] Range of Motion
[2] Tender to palpation
[3] :Lower extremities

knee. Claimant resumed painting but he had to lean to the right because of the left knee pain. Claimant then called his supervisor to advise that he could no longer continue painting due to the pain. His coworkers had to help him get off the lift. After consulting with his supervisor, they took him home, where he stayed for two days. Claimant stated that his knee swelled up and that he had swelling also in the thigh and lower leg. Claimant testified he remembered having problems with the left hip and low back from the date of the injury but they were not as severe as the left knee pain.

5. On October 9, 2020 PA-C Kelli Eisenbrown of AFC Urgent Care evaluated Claimant for left leg injury after Claimant jumped off of a lift on October 7, 2020 and reported left knee pain and an odd feeling in his left knee since the injury, including pain and instability. She documented that Claimant had an abnormal left knee, tender to palpation at the superomedial joint line and overlying the medial meniscus. She ordered x-rays and medication for pain. She also referred Claimant for an MRI, due to instability of the left knee and concerns with possible ACL tear, as well as to an orthopedic specialist. She stated that the objective findings were consistent with history and mechanism of injury and was to return to clinic following the orthopedic evaluation. Claimant was limited to sedentary work and no lifting.

6. Employer filed an Employer's First Report of Injury (FROI) on October 14, 2020 noting a left knee sprain at approximately 4:00 p.m. on October 7, 2020. The FROI notes that Claimant reported the injury on the date of incident.

7. On October 19, 2020 PA-C Chelsea Rasis of Concentra documented that the sprain to the left knee was a result of Claimant jumping down from a lift boom. He stated that the left knee worsened during the remainder of the day in the medial aspect of the left knee and that he had swelling in the medial joint for the first three days, which improved with a RICE regimen.[4] PA Rasis noted that the symptoms occurred constantly in the medial aspect of the left knee that was dull and associated with instability, stiffness, tenderness and painful walking. On exam he noted that the left knee was swollen, with tenderness diffusely over the anteromedial aspect of the left knee and over the medial collateral ligament. Claimant had abnormal range of motion of the left knee. He stated that the objective findings were consistent with history and mechanism of injury. PA Rasis instructed Claimant on gait, and the proper use of crutches while walking, sitting and navigating stairs safely. PA Rasis ordered physical therapy, an MRI and an interpreter as well as a brace for the left knee. Claimant was limited to modified work. The October 21, 2020 evaluation with PA Rasis appears to be a duplicate of the prior visit. In follow up visits he continues to mention that Claimant continues to have pain in the medial aspect of his left knee.

8. Claimant was attended by PA Rasis again on October 28, 2020. Rasis noted Claimant had a heavy poking pain that was constant in the left medial knee with tenderness over the anteromedial aspect of the left knee and over the medial collateral ligament as well as abnormal range of motion. Claimant was worse with bending of the left knee, squatting and walking. Claimant was using the brace and crutches and reported

[4] RICE stands for rest, ice, compression and elevation.

that he had swelling sometimes. Rasis documented that Employer had no light duty available so Claimant was not working.

9. On October 28, 2020 Respondents filed a General Admission of Liability admitting to medical benefits and temporary disability benefits, specifically noting that they were admitting liability for only the left knee injury.

10. An October 31, 2020 left knee MRI showed a small bone contusion of the anterior peripheral medial femoral condyle, a borderline shallow trochlear groove and edema within Hoffa's fat pad. The report was issued by Dr. Robert Leibold of Health Images. It did not document any problems with the menisci.

11. On November 18, 2020 Claimant continued to complain of pain in the medial aspect of the left knee. The symptoms of moderate pain occur constantly. Autumn Schwed, D.O. documented instability, stiffness, tenderness and painful walking with exacerbating factors of kneeling, squatting and walking. Dr. Schwed stated that the objective findings were consistent with history and mechanism of injury. Claimant continued with follow-up appointments at Concentra with multiple providers that documented the pain in the medial aspect of the left knee with anterior and lateral pain.

12. On January 6, 2021, Dr. Theodore Villavicencio took over as Claimant's primary treating physician at Concentra (the ATP), and he has remained in that role.

13. On February 1, 2021 Claimant started seeing Stephanie Best, P.T. She documented Claimant with pain in the left knee with medial side pain that feels swollen, and grabbing when trying to put weight through the leg, up/down stairs, squatting and kneeling. She stated that Claimant had mild limitation in hip rotation, was able to achieve full depth squat with notable effort and had multiple areas of myofascial trigger points present throughout the quadriceps, gastric and hamstring. She laid out a treatment plan for the following four weeks.

14. On February 9, 2021 Ms. Best noted that Claimant's lower extremity pain resolved with the prior trigger point dry needling and only had the familiar medial knee pain remaining.

15. Michael Hewitt, M.D. attended Claimant on February 15 2021 and found mild medial joint line tenderness of the left knee. He reviewed the MRI findings with Claimant and recommended and injected lidocaine into the anterolateral knee to decreased inflammation.

16. On February 16, 2021 Ms. Best stated that Claimant's pain had resolved with the injection the prior day though had some returning pain with squats but applied ice pack at the end of the PT session. Claimant continued to attend PT for strengthening and TDN with pain most notable along the medial aspect of the left knee. By March 25, 2021 Claimant reported he was riding a bike and treadmill to improve endurance and by April 12, 2021 he was able to try intermittent jogging with some soreness but doing well. However, by April 27, 2021 Claimant returned to work and started having leg pain again.

17. On April 16, 2021 Claimant was reporting some popping on his left knee to Dr. Villavicencio, who continued to document the pain in the medial aspect of the left knee with anterior and lateral pain with tenderness diffusely over the anterolateral aspect and

diffusely over the anteromedial aspect. Dr. Villavicencio also continued to state that objective findings were consistent with history and work-related mechanism of injury, providing Claimant work restriction.

18. On April 30, 2021 Claimant complained to Dr. Villavicencio that he had some stabbing pains that started in the left foot, going up to lower back that comes and goes. This is the first time that Dr. Villavicencio provided a diagnosis of lumbar spine strain and made a referral to physical therapy to start treating Claimant's lumbar spine. There is no apparent causation analysis or even examination of the spine in this document nor is there any mention of objective findings other than joint pain generally.

19. On May 4, 2021 Claimant complained to Ms. Best that he had occasional back pain since the injury but that the knee symptoms had been more prominent. He reported that the pain started in his foot up to his left low back and into his hip and buttocks, along the left side of his ribcage area, especially when using the foam roller. Claimant reported pain between the shoulder blades on May 10, 2021 that had been present for the last couple of days, as well as pain in the foot and calf while walking.

20. On May 14, 2021 Claimant reported that he had tried to carry a bucket at work, that was about 50 lbs., and had left sided back pain.

21. Claimant described feeling overall better on May 17, 2021, the pain in the back and leg was minimal, his knee was still sore and he was getting "sore" between the shoulder blades and spine, but not pain. However, following body weight squatting Claimant reported pain that initially felt like cramping in the left flank area, intensified to feel "like my nerve" was "angry" and shooting pain from the foot up into the left buttock, up the back and into the shoulder blade.

22. On May 18, 2021 Dr. Villavicencio noted that Claimant had a setback the prior day in physical therapy, noting leg and back complaints but also noted that Claimant was worse in the left medial aspect of the left knee with anterior and lateral pain in the left knee, noting that Claimant was in moderate distress. He specifically noted that the chief complaint was that "[T]he patient presents today with follow up LT knee pain/ discomfort, tightness medially after PT." Dr. Villavicencio ordered an MRI of the lumbar spine, referred Claimant to a physiatrist for evaluation of the lumbar spine and provided a "[W]ork status-modified -not able to return today due to increased pain."

23. On May 18, 2021 Dr Albert Hattem performed a medical records review and responded to Insurer's inquiry whether further physical therapy was justified as medically reasonable and necessary. He responded in the negative as he considered the knee injury to be minor and that Claimant had made sufficient gains to be able to proceed with a self-directed exercise program. Dr. Hattem also opined that Claimant's lumbar spine condition was not related to the claim.

24. On May 25, 2021, Claimant was evaluated by Dr. Chan anyway, who noted that Claimant was able to ambulate around the room without difficulty, but he displayed very visible pain symptoms and complaints on examination. Dr. Chan indicated Claimant was neurologically intact, and the majority of his issues with regard to his lumbar spine were likely due to an underlying deconditioning. Dr. Chan's assessment was that Claimant's lumbar, thoracic and cervical issues were diffuse myofascial complaints, most

consistent with a myelogenic complaint, and not related to his claim. Dr. Chan opined that further work-up was indicated, but it should be pursued outside of the workers' compensation system.

25. On the morning of June 9, 2021, Claimant returned to Dr. Villavicencio, reporting positional vertigo, and increased cervical pain with bilateral upper extremity paresthesias. Dr. Villavicencio reviewed Dr. Chan's opinion with Claimant concerning his spinal issues. He noted that Claimant understood he was to go to Denver Health to rule out other causes of his vertigo, bilateral upper extremity issues, cervical issues, and lumbar issues.

26. On the same day, Claimant went to Denver Health for an evaluation of his vertigo and other issues, but before he entered the facility the Denver Health staff found him on the sidewalk outside, suspecting Claimant had a syncopal episode. He was then treated at Denver Health ED for syncope, increased neck pain, and bilateral upper extremity paresthesias.

27. Claimant returned to Dr. Villavicencio on June 17, 2021. Claimant continued to complain of left knee pain. On exam Dr. Villavicencio noted that Claimant continued to have a similar exam as on previous exams including tenderness diffusely over the anterolateral aspect of the left knee and diffusely over the anteromedial aspect with minimal decrease from last visit including limited end range abnormal range of motion. Dr. Villavicencio referred him for a left knee MRI.

28. Claimant returned to Dr. Hewitt on June 21, 2021. Claimant reported that he had good benefit from the cortisone injection but the symptoms restarted while participating in therapy on May 17, 2021. On exam there was mild medial joint line tenderness. Following discussion of care options, Dr. Hewitt recommended a new MRI to confirm healing of the bone bruise.

29. The MRI on June 30, 2021, read by Dr. Frank Crnkovich, noted a probable anterior horn medial meniscus tear toward the midline. The lateral meniscus was intact. He also noted that the bony contusion had resolved.

30. On July 19, 2021 Claimant was again seen by Dr. Hewitt to review the MRI findings of minimal knee effusion, resolved medial femoral condyle bone bruise, and fraying of the anterior horn of the medial meniscus with a medial plica.[5] Claimant had persistent medial-sided knee pain and Dr. Hewitt recommended proceeding with arthroscopy of the left knee.

31. On July 29, 2021 Dr. Hattem issued another medical record review report opining that any further left knee complaints were not related to the work injury and that there was no documentation of increased left knee problems in physical therapy on May 17, 2021 that would justify approving the recommended arthroscopy.

32. On August 16, 2021, Dr. Villavicencio responded to a letter from Insurer requesting updated opinions on causation and MMI. Dr. Villavicencio indicated Claimant's low back condition was "due to compensating for gait", but claimant's low back condition should be at MMI. Dr. Villavicencio related Claimant's left knee meniscal tear to squatting

[5] Thin, intraarticular fold of the joint lining, or synovial tissue, over the medial aspect of the knee.

during therapy on May 17th, and he further indicated Claimant was not at MMI for his knee, as he needed surgery.

33. On September 23, 2021, Claimant received medical care for his low back at Denver Health. Claimant was complaining of multiple issues including his left upper back, shoulder, chest, and occasional numbness in his forearms and lower extremities. On October 1, 2021, a lumbar MRI obtained at Denver Health was read as showing a L4-5 left foraminal disc protrusion and annular tear impinging on the exiting left L4 nerve root, and moderate left neural foraminal narrowing secondary to the protrusion. On October 19, 2021, Claimant's Denver Health provider reviewed the lumbar MRI, and diagnosed the lumbar condition as chronic bilateral low back pain with left sided sciatica.

34. On December 7, 2021, Claimant was seen for an IME by Dr. F. Mark Paz at Respondents' request. Dr. Paz took a history from Claimant, reviewed Claimant's available medical records, examined Claimant, and then opined that Claimant's work related injury was a left knee femoral condyle contusion with bone bruise, and that Claimant's other issues (cervical, thoracic, lumbar spine, upper and lower extremity paresthesias) were not related to this claim.

35. On April 8, 2022, Stephanie Best, P.T., testified concerning Claimant's allegation that his low back condition and left knee anterior horn medical meniscus tear were causally related to squatting exercises he performed that occurred during physical therapy she provided. Ms. Best testified that it is not uncommon for physical therapy patients to experience soreness in areas other than those being treated, and that soreness does not equate to injury. She stated that she would not be surprised if a patient with a prior history of left sided low back pain with left-sided sciatica experienced soreness in those areas following a therapy session. During the course of the therapy she provided from February 1, 2021 through May 17, 2021, Claimant often complained of issues that would go beyond his left knee and she was aware that at times Claimant complained of pain traveling from his left foot up his leg, through his hip and buttock, up his low back and into his upper back and shoulder blade areas, which she associated to the common after effects of therapy. She opined that she did not believe that Claimant sustained a new injury to his low back, mid-back or neck as a direct result of therapy she provided.

36. Dr. Paz testified as an expert in general medicine, occupational medicine, and as a Level II physician. He indicated that after issuing his report, he was provided with Claimant's prior medical records from Clinica Family Health, additional records from Denver Health, and he reviewed Ms. Best's deposition testimony. He was also present during the hearing for claimant's testimony. Dr. Paz indicated that based upon his review, Claimant did not sustain a low back injury as part of this claim, whether during the initial injury, during therapy using a foam roller prior to May 17th, or during the May 17th therapy session. He also disagreed with Dr. Villavicencio's opinion Claimant's low back condition was related to compensating for gait, noting that claimant was able to return to walking, and to work, and records document a non-antalgic gait.

37. As found, Claimant has failed to prove that the lumbar spine (or any other spine condition) injury was related to the October 7, 2020 workplace injury or in any way related to the May 17, 2021 physical therapy exercises he performed. Dr. Chan, Dr.

Hattem and Dr. Paz are persuasive in this matter that Claimant was suffering from deconditioning.

38. As found Claimant has proven by a preponderance of the evidence that he sustained a work-related injury to the medial aspect of his left knee. Claimant was complaining of joint line tenderness and pain to the medial aspect of his left knee from the first visit with PA Eisenbrown on October 9, 2020. PA Rasis noted that the symptoms occurred constantly in the medial aspect of the left knee associated with instability, stiffness, tenderness and painful walking. On exam he noted that the left knee was swollen, with tenderness diffusely over the anteromedial aspect of the left knee and over the medial collateral ligament. On November 18, 2020 Claimant continued to complain of pain in the medial aspect of the left knee. Dr. Schwed documented instability, stiffness, tenderness and painful walking with exacerbating factors of kneeling, squatting and walking. Claimant continued with follow-up appointments at Concentra with multiple providers that documented the pain in the medial aspect of the left knee, including Dr. Villavicencio on February 10, 2021 and April 16, 2021. However, after the May 17, 2021 physical therapy visit, on May 18, 2021 Dr. Villavicencio noted that Claimant had a setback the prior day in physical therapy, complaining of worsened symptoms in the left medial aspect of the left knee with anterior and lateral pain in the left knee, noting that Claimant was in moderate distress. Dr. Villavicencio and Dr. Hewitt are persuasive in the matter of a worsening of the medial aspect of Claimant's left knee and the consequent medial meniscus injury. Claimant has proven that the surgery recommended by Dr. Hewitt is reasonable, necessary and related to the October 7, 2020 workplace injury.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is

not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296.

All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical treatment for this October 7, 2020 work related injury to his left knee. This was actually admitted to by Respondents in their General Admission of Liability dated October 28, 2020 and is not in dispute. However, the question remains whether Claimant injured his lumbar spine and if the medial meniscus arthroscopy is related to the October 7, 2020 admitted work related injury.

C. Causation of alleged lumbar spine injury

Claimant had two different theories with regard to his lumbar spine, thoracic spine and cervical spine complaints. First, that he had low back pain from the inception of the October 7, 2020 work injury but did not complain of them because his left knee complaints were so overwhelming. The medical records first documented lumbar spine pain on April 30, 2021, over six months following his original injury date. This is not persuasive. The second theory was that he aggravated both his left knee and his lumbar spine, thoracic spine and cervical spine, with attendant radicular symptoms into his upper and lower extremities, on May 17, 2021 during physical therapy.

Claimant had to prove by a preponderance of the evidence that the lumbar spine condition he was alleging as part of the work related claim was caused in the course and scope of his employment. Under the quasi-course of employment doctrine, injuries sustained during treatment of the industrial injury have been held compensable as a consequence of the industrial injury*. Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo.App. 1993). The doctrine is not restricted to injuries arising out of "authorized" treatment. *Schrieber v. Brown & Root, Inc*., 888 P.2d 274, 278(Colo.App. 1993). For instance, in *Excel Corp.,* the Colorado Court of Appeals held that injuries sustained while leaving a physical therapy session for treatment of the industrial injury were compensable. The Court reasoned that this is so because the employer is required to provide medical treatment, and the claimant is required to submit to medical treatment. Additionally, a claimant is obligated to cooperate with reasonable medical treatment designed to cure and relieve the effects of the industrial injury. See §8-43-404(3), C.R.S. In *Miller v. Progressive Driver Services, Inc.,* W.C. No. 4-318-241 (April 22, 1998), aff'd 98CA0902 (Nov. 27, 1998)(NSOP), the panel explained that "[a]s pointed out by Professor Larson, this includes treatment in the form of exercise. 1 Larson, Workers' Compensation Law § 13.22 & § 13.22(d)." Accordingly, the failure to compensate a claimant for the natural and proximate results of his rehabilitation efforts which are consistent with the "prescribed" treatment for the industrial injury could undermine a claimant's prompt and complete recovery. The question of whether a particular injury falls within the quasi-course of employment doctrine is essentially one of fact for determination by the ALJ. See *City of Durango v. Dunagan*, 939 P.2d 496 (Colo.App. 1997).

However, the lumbar spine was neither caused nor aggravated during physical therapy on May 17, 2021 while under the care of therapist Best. Medical records showed that Claimant had back pain approximately six months after the inception of the work injury on October 7, 2020 and as early as April 30, 2021, around the time when he complained of back pain to Dr. Villavicencio and his physical therapist. Claimant failed to show that the lumbar spine condition was aggravated or caused during physical therapy in the quasi course of employment.

D. Causation of alleged left knee condition and authorization for surgery

As found, PA Rasis of Concentra documented that the injury to the left knee was a result of Claimant jumping down from a lift boom on October 7, 2020. He stated that the left knee worsened during the remainder of the day in the medial aspect of the left knee and that he had swelling in the medial joint for the first three days, which improved with a RICE regimen. PA Rasis noted that the symptoms occurred constantly in the medial aspect of the left knee that was dull and was associated with instability, stiffness, tenderness and painful walking. On exam he noted that the left knee was swollen, with tenderness diffusely over the anteromedial aspect of the left knee and over the medial collateral ligament. As found, the problems with pain in the medial aspect of Claimant's left knee occurred from the very inception of the claim and the fact that the initial MRI did not show the fraying of the medial meniscus is not persuasive that there was no injury to the left medial meniscus.

As found, the persuasive medical evidence is that Claimant continued to have medial meniscus pain that continued from the date of the injury through the day in which Claimant had a worsening of his condition during physical therapy on May 17, 2021. As found, Claimant was performing squats that day, put pressure on the left meniscus and caused further injury and symptoms in the left medial meniscus. This is supported by the persuasive report of May 18, 2021 where Dr. Villavicencio documented the worsened left knee complaints in the medial aspect of the left knee, when he recommended an MRI of the left knee. Claimant followed up with Dr. Hewitt, the orthopedic specialist, who also recommended the MRI of the left knee. The MRI of June 30, 2021 radiologist suspected a medial meniscus tear and this was confirmed by Dr. Hewitt, who recommended the surgical repair. As found, Dr. Hewitt and Dr. Villavicencio are more persuasive in this matter, over the contrary opinions of other examining or evaluating medical providers. As found, Claimant has shown that it is more likely than not that the left knee medial meniscus tear was as a consequence of the aggravation sustained in the quasi course of employment, while receiving medical care related to the workplace injury of October 7, 2020. As found, Claimant has shown that the surgery proposed by Dr. Hewitt to treat the left medial meniscal tear was proximately caused by the injury arising out of and in the course of the employment. As found, Claimant has further shown that the surgery is authorized, reasonably necessary and related to the admitted workplace injury.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for authorization of treatment of the lumbar spine or other conditions is denied and dismissed as the lumbar spine or any other spine conditions are not proximately caused by the October 7, 2020 work related injury.

2. Respondents shall pay for the reasonable, necessary and related medical treatment for the left meniscal tear injury of October 7, 2020 including the authorized treatment proposed by both Dr. Villavicencio and Dr. Hewitt.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 13th day of June, 2021.

Denver, CO 80203

ISSUES

I. Deceased Claimant's average weekly wage.

II. Identification of any dependents.

III. If Older and Younger Minor Children are dependents pursuant to Sec. 8-42-501, et.al., what is the allocation of dependent benefits among the dependents.

IV. Are there any offsets.

PRELIMINARY MATTERS

None of the Claimants were represented by counsel. A *pro se* advisement was given before the commencement of testimony and parties agreed they wished to proceed as self-represented through their respective guardians and the Estate Representative.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer is a concrete contractor, contractor, excavator, demotion and trucking business. On September 23, 2021 Deceased Claimant was involved in a fatal accident while unloading a skid loader off a trailer. Claimant's coworker was in the skid steer moving the bucket upwards when he lost control of the bucket mechanism and Claimant was crushed by the bucket/plow, which fell on him while he was unchaining the skid steer. Deceased Claimant was working for Employer at the time of the accident.

2. Deceased Claimant suffered blunt force injuries to his chest, pelvis, and right lower leg. An autopsy report from John Carver, MD at the Jefferson County Coroner's Office identifies the cause of death as crush injuries of the right upper chest and pelvis. Deceased Claimant was 29 years old at the time of his death. His date of birth was February 28, 1992.

3. On September 28, 2021, the Division of Workers' Compensation sent a letter addressed to The Estate of Jonathan Martinez in an effort to ascertain whether the decedent left dependents who may be entitled to workers' compensation benefits. Copies

of Dependent's Notice & Claim for Compensation blank forms were enclosed. The letter was sent to 11471 Paris Court, Henderson, CO 80640.

4. Respondents filed a Fatal Case – General Admission of Liability on December 14, 2021 admitting to compensability due the work related accident. Respondents stated that dependent benefits were still to be determined.

5. A representative of the Division of Workers' Compensation and the claims representative from the Insurer communicated by email regarding the status of possible dependent benefits. For example, on December 28, 2021 the claims representative provided the following update to DOWC: "Hi William, The status of the dependent benefits is still pending. We are still awaiting the completed dependent claim forms from the respective parties, along with other ID documentation. I was in contact with the family representative recently and they were close to getting us the necessary paperwork. At least at last report. Please let me know if you need anything else."

6. In a subsequent email on January 10, 2021, the claims representative provided the following additional update: "Hi William, Of course, the main issue that based on information gathered thus far we believe the decedent had two minor children from different mothers and was not legally married to either. Under C.R.S. 8-41-505: 'A minor child of a deceased putative father is entitled to compensation when it is proved to the satisfaction of the director that the father, during his lifetime, has acknowledged the child as his and has regularly contributed to his or her support or maintenance for a reasonable period of time prior to his death.' Neither of the minor children or their respective mothers are currently represented, so we have been attempting to gather information as best we can from decedent's mother – whom he was living with on the date of the fatal accident. We need further information to confirm the decedent was actually contributing to the illegitimate children's support and maintenance – which is the missing link so far. I hope that helps but please let me know if you need any further information."

7. Decedent's mother testified at the time of the hearing as a representative of the Deceased Claimant's Estate. Deceased Claimant lived with her and her husband for the last several years, prior to his passing. Deceased Claimant was not married at the time of the accident. The Deceased would frequently leave the home for stretches at a time and would sometimes be visiting his Oldest Minor Child. Sometimes the Oldest Minor would visit him at his mothers' home and stay overnight. She was unaware of when and how often the Deceased Claimant would visit his children.

8. Deceased Claimant's mother's husband had hired Deceased Claimant to work for Employer in 2020, originally. He had been working for Employer at the time of the accident. Her husband was a minor partner in the Employer's business. She testified that her husband's cousin was the majority owner and the cousin was the one to provide her with the wage information, which she included on the Dependent's Notice and Claim for Compensation filed by each of the mothers of the two minor children in the amount of $580.00 per week. She prepared the initial claims, met with both of the mothers of the minor children to have them sign the claim forms before a notary public.

9. Deceased's mother stated that he was earning $17.00 per hour and worked approximately 34 hours a week based on what she knew of his coming and going from

the home and her consultation with the majority owner of Employer. Deceased's mother was asked about these wage records, including gaps in the wage history – such as a 4 month gap between mid-January 2021 and late May 2021. She explained that the business involves both excavation and cement work. The company was busier in the summer months. In addition to the seasonal nature of the work, she indicated that her son also had some significant personal difficulties in life including depression. Wage records showed the net earnings and multiple time periods that were blank or unreported on the Employee Quick Report, which was provided by Employer.

10. Deceased Claimant was unmarried at the time of his death.

11. Deceased Claimant was survived by two acknowledge children.

12. The Oldest Minor Child was born on March 17, 2010 and was twelve years and two months old at the time of the hearing. The birth certificate of the Oldest Minor Child showed that the father's name was that of the Deceased Claimant. Deceased Claimant's mother stated that he was 18 years old when the Oldest Minor Child was born. She confirmed that the Deceased was never married to the Oldest Minor Child's mother. She explained that the Child's mother does have four other children, but that only the Oldest Minor Child was Claimant's biological child. The Child would come to their house fairly often to spend time with Claimant and her grandparents.

13. The Oldest Minor Child was being paid for child support through the Colorado Family Support Registry and the Complete Disbursement Record showed payments made. However, the mother testified that the Deceased also contributed by paying for back to school supplies and clothing or other necessities that the Oldest Minor Child required and assisted her mother when necessary with additional funds occasionally.

14. The Youngest Minor Child was born on July 7, 2017 and was four years and 10 months old at the time of the hearing. The birth certificate of the Youngest Minor Child showed that the father's name was the Deceased Claimant. Deceased Claimant's mother testified that Claimant and the Youngest Minor Child's mother were never married, that the Deceased spent very limited time with the Younger Child and that she, herself, had not seen the Younger Child since she was a baby. When asked if Decedent paid child support for the Younger Minor Child, she explained that there was no formal child support order like with the Older Minor Child. However, if the Child's mother contacted the Decedent and said she could use help with something then Decedent would try to provide some funds.

15. Deceased's mother clarified for this ALJ that she was not alleging to have been financially dependent on her son at the time of his death.

16. Respondents filed an Application for Hearing on February 14, 2022 on the issues of AWW and Death Benefits. The Remarks section of the Application reflects: "Decedent was involved in a fatal accident on 9/23/21 within the course and scope of his employment. A GAL (Fatal Claim) was filed on 12/17/21. GAL noted that medical benefits and funeral expenses had been paid but that 'Dependent benefits are still to be determined.' Respondents believe that there may be two dependents. Decedent was not married, but did have two minor children" They further stated that "Respondents are

applying for hearing to obtain an order identifying any dependents and the status of those dependents (whole or partial); and allocation/apportionment of benefits among any dependents. AWW; Offsets (if applicable)…"

17. Decedent's mother was asked about the Dependent's Notice and Claim for Compensation forms filed on behalf of both minor children. When the claims representative from Pinnacol reached out to her and explained that he was trying to identify any potential dependents, Decedent's mother helped complete those forms with information regarding the two minor children and in assisting the children's mothers to sign each of the forms for their respective children.

18. The Youngest Minor Child's mother testified by phone at hearing. She stated that she had a child with Claimant in 2017 and confirmed that she and Claimant were never married. They did not live together. They did not file joint income tax returns together. The Youngest Child's mother indicated that there was no child support order or arrangement. She testified that Claimant did pay $100.00 on occasion and for other expenses such as for preschool supplies. She testified that she had primary custody of the Youngest Minor Child and that she is the one that supported her daughter. When asked how often she would talk with Claimant, she explained that it was very sporadic. There were times that they would talk for a couple of months and then Claimant would go "MIA" and she would hear nothing. She stated that she only recalled taking the Youngest Minor Child to her grandparents' house in Henderson to visit, where Claimant was also living, 1 or 2 times in 2018 or 2019 when she was a baby.

19. The Youngest Minor Child's mother confirmed that she had been provided with a set of the hearing exhibits from Respondents prior to hearing. She was asked about documents captioned "Parenting Plan" and "an Allocation of Parental Responsibilities" Order. The Youngest Minor Child's mother confirmed that she had provided those documents to Respondents' counsel. She explained that these documents were issued in 2018, when the Youngest Minor Child was only 1 year old. These documents represented her proposal at the time with respect to custody time and division of parental responsibilities. She explained, however, that Clamant did not end up showing up for any of the court dates so the judge ended up awarding her primary custody. The Youngest Minor Child's mother testified that she and Claimant did not ever end up actually sharing custody or dividing parental responsibilities as originally suggested in the documents.

20. The Youngest Minor Child's mother testified that the Youngest Minor Child had not yet received any benefits from the Social Security Administration since Claimant's death, such as social security survivor benefits. She explained that, since she did not have a copy of Claimant's death certificate, she had not been able to pursue anything with the Social Security Administration. However, it was her intention to apply for benefits for the Youngest Minor Child.

21. The Youngest Minor Child's mother confirmed for the ALJ that she does have a bank account and was the Youngest Minor Child's guardian.

22. The Oldest Minor Child's mother also testified at hearing confirming that she had had a child with Claimant in 2010, that they had never married and had never lived together. They did not file joint income tax returns together. She stated that there was a child support order in place, and that when Claimant was working then child support would

be paid to the Family Support Registry. She explained that she had provided the document, which is a disbursement record from the Family Support Registry with Child Support Services. The Oldest Minor Child's mother confirmed that this document reflected child support payments that Claimant had made for the Oldest Minor Child from 2017 through 2021. She testified that if he was working, he would generally pay around $200 per month. In addition to the child support payments, she confirmed he would also make other financial contributions such as helping pay for school supplies. She acknowledged that the Oldest Minor Child did refer to Claimant as her "dad." Decedent would sometimes visit the Oldest Minor Child at their house and that the Oldest Minor Child would also go to visit Claimant and her grandparents in their own home in Henderson.

23. The Oldest Minor Child's mother testified that she had not received benefits from the Social Security Administration, such as social security survivor benefits, on her daughter's behalf since Claimant's death. She said that this is something that she is still trying to figure out, and confirmed for the ALJ that it is her intention to apply for such benefits.

24. The Oldest Minor Child's mother confirmed for the ALJ that she does have a bank account and that she was the Oldest Minor Child's guardian.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the

industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

A. Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning

capacity. *Ebersbach v.United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

There is, admittedly, limited documentation upon which to calculate an AWW. The Employer's First Report indicates that Claimant was paid $17.00 an hour and this was also supported by the testimony of Decedent's mother, the Estate Representative. Her husband and his cousin operate Employer's business. She testified that she included an AWW figure of $580.00 on the two Dependents' Notices & Claim for Compensation. She indicated that this was based upon information that she received directly from the cousin. She did testify that the company's work with excavation and cement was somewhat seasonal. Claimant had lapses in his wage records due in part to the seasonal work, and in part due to some personal difficulties that Claimant had experienced over the years. Based on the totality of the evidence, the fair approximation of Decedent's average weekly wage, as found, is $580.00.

B. Dependents for Purposes of Death Benefits

Respondents seek a determination of any dependents in this matter. Pursuant to Sec. 8-41-501(1), C.R.S. the following persons shall be presumed to be wholly dependent (however, such presumption may be rebutted by competent evidence):

(a) Widow or widower, un less it is shown that she or he was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support…

(b) Minor children of the deceased under the age of eighteen years of age, including posthumous or legally adopted children;

(c) Minor children of the deceased who are eighteen years or over and under the age of twenty-one years if it is shown that:

(I) At the time of the decedent's death they were actually dependent upon the deceased for support; and

(II) Either at the time of the decedent's death or at the time they attained the age of eighteen years they were engaged in courses of study as full-time students at any accredited school. The period of the presumed dependency shall continue until they attain the age of twenty-one years or until they cease to be engaged in courses of study as full-time students at an accredited school, whichever occurs first."

In this case, Claimant was not legally married to either of the mothers of his two biological children. Claimant did not live with either of the children's mothers either, at the time of his death, nor is there any evidence that either of the mothers were alleging to have been common law spouses of Claimant. Further, neither took Claimant's last name nor did they file joint income tax returns with the Decedent.

Despite the lack of a marital relationship, Claimant's biological minor children may still potentially be deemed dependents for purposes of entitlement to death benefits. Section 8-41-505 provides: "***A minor child of a deceased putative father is entitled to compensation when it is provided to the satisfaction of the director that the father, during his lifetime, has acknowledged the child as his and had regularly contributed to his or her support and maintenance for a reasonable period of time prior to his death***."

Under the facts of this case, there are birth certificates supporting that Claimant was the biological father of the Older and Younger Minor Children. The question that then needs to be addressed is whether Claimant acknowledged the minor children as his **and** regularly contributed to his or her support for a reasonable period of time prior to his death.

The evidence and testimony supports that a child support order was in place for the Older Minor Child, and that child support payments were made to the Family Support Registry from 2017-2021. Claimant also contributed financially for school supplies for the Older Minor Child.

While the evidence for the Younger Minor Child is not as clear since there was no formal child support order in place, the Younger Minor Child's mother testified that Clamant would contribute $100 on occasion and that Claimant would help with her school supplies-such as for preschool. Further, she did file documents with the court with the intention of sharing custody with the Decedent but, since he failed to show to the proceedings, the judge awarded her custody, though not because he was not the father, as demonstrated by the Birth Certificate, as Decedent clearly was. This was acknowledged by Decedent's mother, who testified that both daughters were Decedent's biological daughters.

In response to queries by this ALJ, both of the Minor's mothers indicated that they hold accounts and are their daughters' guardians.

The Decedent's mother testified that she was not dependent on the Decedent and denied seeking any such dependent benefits.

As found, from the totality of the evidence, both the Older Minor Child and the Younger Minor Child are entitled to claim death benefits in this matter as dependent minor children of the deceased pursuant to Sec. 8-41-505(b), C.R.S. As found, there are no other dependents in this case.

C. Allocation

Respondents suggest that, if there was a determination that both minor children, qualify for benefits under § 8-41-505, the most equitable outcome would be an equal

50/50 allocation between the two minor children. This ALJ agrees with this assessment. Neither of the minor Children made any request for a division that was any different in this case. Therefore, as found, the equitable allocation of the dependent benefits is fifty percent (50%) to the Oldest Minor Child and fifty percent (50%) to the Youngest Minor Child.

Upon the Oldest Minor Child reaching the age of majority benefits shall continue only if the Oldest Minor Child shows that she continues schooling with an accredited school and only to the age of twenty-one. At the time the Oldest Minor Child's benefits terminate, the Youngest Minor Child shall be allocated one hundred percent (100%) of the death benefits until the Youngest Minor Child reaches the age of majority or shows she continues to be entitled to dependent benefits pursuant to Sec. 8-41-505(c)(II), C.R.S.

D. Offsets

Section 8-42-114, C.R.S. lays out what death benefits dependents may receive and states designates what reductions may be asserted against those death benefits as follows:

> In case of death, the dependents of the deceased entitled thereto shall receive as compensation or death benefits sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week for accidents occurring on or after July 1, 1989, and not less than a minimum of twenty-five percent of the applicable maximum per week. In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits.

In this matter, it is clear that, based on the testimony of both minor children's mothers, neither of the dependents have received social security death benefits at this point in time. At least the Youngest Minor Child's mother stated that she could not apply for benefits as they did not have the death certificate. In response to queries by this ALJ, both of the Minor's mothers indicated that they do intend to pursue the possibility of social security survivor benefits for their respective minor daughters. Should either or both minor dependents obtain social security dependent death benefits, their guardian shall provide the information to Respondents and Respondents shall be entitled to take an offset pursuant to statute. As found, at this time, no offset is appropriate.

[Remainder of this page intentionally left blank.]

ORDER

IT IS THEREFORE ORDERED:

1. Decedent's average weekly wage is $580.00 and dependent benefits shall be paid out at the maximum rate of $386.66 per week.

2. The Oldest Minor Child is entitled to 50% of the dependent death benefits in the amount of $193.33 per week until terminated by law.

3. The Youngest Minor Child is entitled to 50% of the dependent death benefits in the amount of $193.33 per week until terminated by law.

4. Respondents shall pay benefits as stated above, including interest at the rate of eight percent (8%) on all benefits that were not paid when due.

5. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

PROCEDURAL BACKGROUND

W.C. No. 5-143-435 involves an admitted injury claim with Employer and its insurance carrier at the time, Pinnacol Assurance ("the Pinnacol injury"). Employer subsequently changed workers' compensation carriers to Zurich American Insurance. W.C. No. 5-164-953 involves a contested claim filed with Employer during Zurich's policy period ("the Zurich injury"). The claims were consolidated for hearing in an order dated September 14, 2021.

ISSUES

- Did Claimant prove the Pinnacol claim should be reopened effective February 17, 2021 based on a change of condition?
- In the alternative, did Claimant suffer a new compensable injury on February 17, 2021 during Zurich's policy period?
- Did Claimant prove entitlement to medical benefits and TTD benefits commencing February 18, 2021?
- The parties to the Zurich claim stipulated to an AWW of $1,854.52.
- The parties to the Zurich claim stipulated that Dr. Emily Burns is the ATP, if the claim is compensable.

FINDINGS OF FACT

1. Claimant works for Employer as a Shop and Field Technician, repairing heavy equipment such as excavators, bulldozers, haul trucks, skid loaders, and crusher machines. The job requires long shifts with frequent heavy lifting, prolonged standing and walking, squatting, climbing, and crawling while working on and around equipment.

2. Claimant suffered an admitted injury to his left knee on July 6, 2020 when he jumped from the exit ladder of a bulldozer approximately four feet off the ground.

3. Claimant had had problems with his left knee since approximately 2011. He underwent arthroscopic surgery in September 2018 consisting of debridement, removal of loose bodies, and chondroplasties in the medial, femoral, and patellar compartments. Claimant recovered from the surgery and sought no treatment for his left knee from March 2019 until the July 2020 work accident. Claimant started working for Employer in February 2020, and performed the heavy work without difficulty or limitation. He also regularly participated in fitness activities such as running and weightlifting.

4. After the July 6, 2020 work accident, Employer referred Claimant to the UCHealth Occupational Medicine Clinic for authorized treatment. Claimant saw PA-C Zoe Call at his initial appointment on July 8, 2020. He disclosed the prior knee surgery but could not recall if the current injury felt similar to the prior injury. Ms. Call diagnosed a knee sprain, suprapatellar effusion, and osteoarthritis. She referred Claimant to Dr. Jordan Schaeffer, an orthopedic surgeon.

5. A left knee MRI on July 15, 2020 showed a medial meniscus tear and multi-compartmental degenerative changes.

6. On August 4, 2020, Dr. Schaeffer performed a left knee arthroscopy with partial medial meniscectomy, chondroplasty, and removal of loose bodies.

7. Dr. Kathryn Murray took over as Claimant's primary ATP on September 9, 2020. Claimant was still having significant swelling in his knee, and was using a crutch to assist with ambulation. He was awaiting clearance from Dr. Schaeffer to start therapy.

8. On September 17, 2020, Dr. Schaeffer noted Claimant's mechanical symptoms had improved but he was still having pain and swelling, "likely secondary to underlying degenerative changes." Dr. Schaeffer hoped to avoid a total knee arthroplasty, given Claimant's young age. He administered a cortisone injection and aspirated the knee.

9. Claimant's knee slowly improved over the next two months, but he continued to have some symptoms, particularly with activity. On November 23, 2020, Dr. Murray documented his knee would swell "if he is doing a lot of standing or walking." The physical therapist had recommended gradually increasing his walking rather than trying to progress too quickly. Claimant was worried about tolerating the physical demands of his regular work. Objectively, the examination findings were improved, with "minimal" swelling and discomfort with palpation along the medial joint line. Dr. Murray thought Claimant was approaching MMI, pending his next appointment with Dr. Schaeffer.

10. Claimant followed up with Dr. Schaeffer on December 16, 2020. Dr. Schaeffer noted, "surgery was done for acute medial meniscal tear in the setting of advanced medial and patellofemoral compartmental chondromalacia. He has had a slow recovery, but at this time he feels he is doing well with no recurrent swelling and controlled pain." Claimant felt ready to return to work. Physical examination showed no abnormalities other than reduced range of motion. Dr. Schaeffer opined Claimant was "doing well" and had reached MMI. He released Claimant to work without restrictions. Given his significant degenerative changes, Dr. Schaeffer opined Claimant might require a total knee arthroplasty in the future. He recommended follow-up as needed depending on the progression of knee pain as Claimant returned to normal work duties and activity.

11. Claimant saw Dr. Emily Burns for an MMI and impairment evaluation on January 7, 2021. She noted he was only performing seated tasks at work because Employer had not let him return to full duty. He still had some pain when walking up stairs, but was improving. The knee was not locking, catching, or giving out. He was back at the

gym doing his normal activities except for less lifting with the lower extremities. He was working up to his pre-injury 30-minute sessions on the stair mill. Claimant was wearing a knee brace occasionally but only for heavier activities "such as at the gym," and using ibuprofen on a "very occasional" basis. On examination, the knee was mildly tender to palpation along the medial joint line but otherwise nontender. There was no instability and meniscal testing was negative. Dr. Burns observed Claimant's gait to be "essentially normal." Dr. Burns assigned a 26% lower extremity rating based on the meniscal diagnosis and range of motion deficits. She released Claimant to full duty work. She opined no specific maintenance care was needed, although recommended Claimant be allowed to follow-up with orthopedics for any recurrent symptoms over the next year.

12. Claimant credibly testified that the surgery performed by Dr. Schaeffer was helpful and his knee was "good" when he was placed at MMI. He was getting around fine at home, going up and down the stairs multiple times per day, helping to care for his children, using a treadmill and elliptical machine, and exercising on his home gym.

13. Claimant returned to full duty work in the "shop" on the first workday after his impairment evaluation.

14. The work in the shop is physically demanding, although not as strenuous as working in the field, particularly regarding walking long distances on uneven terrain and climbing stairs.

15. [Adjuster redacted, hereinafter Ms. G] is a senior claim representative at Pinnacol who handled Claimant's claim. On January 14, 2021, Ms. G emailed and spoke with Claimant regarding her intent to file a Final Admission of Liability (FAL). Ms. G also advised Claimant of his right to contest the FAL, and encouraged him to advise Employer if he had further problems with his knee.

16. Pinnacol filed an FAL on January 15, 2021 admitting for Dr. Burns' rating. The FAL also admitted for medical benefits after MMI.

17. Claimant applied for a full lump sum on January 17, 2021. The Division issued an Order on January 20 approving the lump sum.

18. Claimant spoke with Ms. G by phone on January 20. He explained his knee felt sore after by the end of his shift and wondered, "what I should do? Should I go see a doctor?" Claimant understood soreness was normal after several months of sedentary activity and assumed it would resolve, but wanted to "make sure I was covering all the bases . . . and being straightforward about what was going on." Ms. G offered to schedule a maintenance care visit but Claimant wanted to wait "a week or so" and see how his knee progressed.

19. Claimant improved steadily over the next several weeks. The improvement was "especially" notable at work, but also at home. He was performing his physical therapy exercises daily, jogging on a treadmill, walking fast, and "doing it faster, longer."

20. By mid-February 2021, Claimant felt he had improved enough that he could return to the field. He was eager to resume the overtime that routinely comes with being out in the field, and felt "ready to rock."

21. Claimant was assigned to work at the mine in Cripple Creek on February 17, 2021. The facility is very large, which required extensive walking and climbing stairs while carrying heavy items. Claimant's primary task that day was to work on a large material press, which required him to crawl through a labyrinth of pipes and tubing to get inside the machine. At one point, his leg slipped and he felt a sharp, significant pain in his knee. A supervisor on site noticed him limping shortly thereafter and Claimant stated he had "tweaked" his knee. Claimant he limped for the remainder of the day while performing his duties, and the limping was noticeable enough that coworkers offered to help him with his work.

22. After his shift, Claimant texted his supervisor to report that his knee was "messed up" and he could not work the next day. The text messages were not introduced into evidence and Claimant could not recall exactly what he said. However, he agreed he mentioned "climbing up and down stairs all day" but did not describe specific incident climbing through the pipes.

23. When Claimant arrived home that evening, he removed his heavy work clothes and observed his knee was significantly swollen. He credibly testified, "there was fluid in places there wasn't before." He elevated and iced his knee that evening and took ibuprofen.

24. Claimant called Ms. G the next day. Claimant told Ms. G his knee pain increased after working 13 hours in the mine the day before going up and down the stairs. Claimant mentioned no specific incident, although Ms. G conceded she did not ask him if there was a specific event. Ms. G reminded Claimant he would probably need a total knee replacement in the future and advised that Pinnacol would probably not cover that under his claim. Nevertheless, Ms. Gills authorized Claimant to see Dr. Burns about his worsened symptoms.

25. Claimant saw Dr. Burns on February 25, 2021. Dr. Burns had a detailed discussion with Claimant regarding the condition of his knee since her last evaluation and the trigger for his increased symptoms. Dr. Burns documented,

> [H]e went back to work after he was closed and placed at MMI after his last visit here. He was feeling stronger—he was crawling, climbing, lifting, hopping without any pain at all but just soreness at the end of the day consistent with remaining re-strengthening. Last Thursday (2/18/2021) he went to the mine in Cripple Creek for his job duties that day—duties that they included lots of stairs, carrying buckets of bolts weighing 80-90 lbs, climbing in and out of machine. He had a specific incident while climbing out of material press – it is a little above his waist height with pipes and safety lines and he pulled his left leg up and over some of the pipes with his leg out behind him and he did have to push off of one of the pipes with his

> left leg and he felt immediate pain where the bubble of swelling was before and it got more swollen. After that later in the day he couldn't put full weight on the knee anymore. He has continued to have more swelling since then. He feels like he is "kind of" having more locking and catching especially with going down stairs when it actually feels a little unstable. He reports medial pain when he puts weight on it. He has iced and elevated, no work – it has improved a little but still significantly painful when he steps on.
>
> The day this injury happened, it then took him 3 hours to drive home – riding in a service truck and when he climbed out it was really stiff. When he got home it was more swollen. He had compression sleeves on at the time and when he took that off it was swollen on both the medial spot and lateral. He has been using his knee brace and that is not helping a whole lot.
>
> Before this event, he had almost no swelling and felt strong again and fully confident in the knee, no functional limitations over the past month. He was going to the gym and doing his normal athletic routine.

Inspection of the knee showed a focal area of swelling proximal to the medial joint line, and a smaller pocket of swelling over the lateral knee. The knee was significantly tender to palpation over the medial meniscus and the swollen area proximal to the medial meniscus. Claimant could "barely" get to full extension and had about 90° of flexion. His gait was "extremely antalgic" and he was using a cane. Dr. Burns opined,

> It does sound like he has had full functional recovery with maintaining that over about a month after being placed at MMI and then had the specific event. However, his pain and swelling and symptoms are very similar to what he had before. . . . At this point, I am inclined to consider this part of his previous injury unless we discover with an MRI later that a new significant injury has occurred.

26. Dr. Burns restricted Claimant to sedentary work only with the ability to elevate his knee "as needed." She referred him back to Dr. Schaeffer for reevaluation.

27. Ms. G credibly testified she initially did not think Claimant sustained a new injury based on their conversation of February 18, 2021. But she subsequently received Dr. Burns' report dated February 25, 2021, with the detailed description of the accident on February 17, 2021. The report changed Ms. G' opinion regarding the cause of Claimant's ongoing symptoms. Had Employer had still been a Pinnacol policyholder, she would have instructed Employer to file a new claim.

28. Claimant saw PA-C Jayme Eatough for an unscheduled appointment on March 1, 2021. Ms. Eatough noted that "since injury he has been icing and resting." Claimant had gone to work that morning, but simply going up and down stairs, driving his truck, and walking across the parking lot had severely aggravated his pain. He tried to elevate his leg while sitting in the chair at work "but it wouldn't stop throbbing." He could only stay at work a few hours before he left and came in for evaluation. A physical

examination confirmed swelling and “very limited” range of motion. Ms. Eatough observed an antalgic gait and recommended crutches if weight bearing was too painful. She amended Claimant’s restrictions to include “needs to be able to elevate knee with support above his heart at all times” and “use crutches at all times.”

29. Employer could not accommodate Claimant’s restrictions. Other than the aborted work attempt on March 1, 2021, he been off work since February 18, 2021.

30. On March 16, 2021, Zurich filed a notice of contest in W.C. No. 5-164-953.

31. A left knee MRI on March 18, 2021 showed moderate joint effusion, normal postoperative appearance of the prior partial meniscectomy, and high-grade cartilage loss with reactive marrow edema.

32. On March 19, 2021, Dr. Burns reviewed the new MRI and opined Claimant’s “symptoms are stemming from his underlying osteoarthritis within effusion that would suggest irritation.” She further opined, “he does not have a mechanism with this injury to cause significant new cartilage damage.” She stated she would “circle back on causality” after the orthopedic evaluation.

33. On April 16, 2021, Claimant was evaluated by Michael Sciortino, an orthopedic PA-C, who opined Claimant’s symptoms were due to “advanced degenerative changes within his medial femoral compartment.” Claimant and Mr. Sciortino discussed the possibility of a TKA, but Claimant opted against pursuing a TKA. Mr. Sciortino gave Claimant a corticosteroid injection.

34. Dr. Mark Failinger performed an IME for Pinnacol on September 2, 2021. Claimant told Dr. Failinger “he sustained a left knee injury in February 2021” while “pulling and pushing with the left leg off a pipe, [when] he felt pain in the left knee.” Claimant described limping after that accident and reporting the injury to a manager before the end of his shift. Claimant described texting his supervisor that same evening to express concern about his ability to work the following day. Upon returning home, he observed swelling, lumps, and bulges of fluid, which his spouse commented looked like “hamburger.” He also reported difficulty sleeping after the accident despite ice, elevation, and ibuprofen.

35. Dr. Failinger opined Claimant remains at MMI for the Pinnacol injury. Dr. Failinger did not think the Pinnacol injury accelerated the underlying degenerative joint disease, "although it might have caused further tearing of a preexisting meniscus tear.” Dr. Failinger opined the pathology caused by the Pinnacol injury was treated reasonably and Claimant was appropriately put at MMI in January 2021. He noted Claimant had no difficulties before the specific accident in February 2021, which created new symptoms. Dr. Failinger attributed Claimant’s recent increase in symptoms to the Zurich injury. For the new injury, Dr. Failinger recommended rest, a cortisone injection, and possibly viscosupplementation injections. He opined another arthroscopy is unlikely to improve Claimant’s symptoms. He believes a TKA or osteotomy will eventually be needed,

although “it would be difficult for an orthopedic surgeon to recommend a [TKA] at this time given his young age.”

36. On September 16, 2021, Dr. Burns responded to an inquiry from Zurich’s counsel regarding the cause of Claimant’s recurrent symptoms. Dr. Burns confirmed Claimant had no restrictions after being put at MMI. She noted he reported some soreness over the few weeks after returning to work, “but denied actual pain including with his work carrying bolts up and down stairs and crawling prior to the day he started experiencing significant symptoms again.” She indicated he “reported to [her] that it was the crawling that seem[ed] to trigger his recurrence of symptoms,” and had described his current symptoms as being “more severe than in the past.” Dr. Burns did not think the 2021 MRI showed any “significant change,” although she would “certainly defer to orthopedics for confirmation of this statement from the images.” She commented that causation “could certainly be argued either way,” but she was “inclined to connect” the recurrence to “his previous injury rather than attribute it to a new injury.”

37. Claimant saw Dr. Burns again on October 13, 2021, who opined that he should remain on sedentary work restrictions.

38. Dr. Failinger testified at hearing consistent with his report. Dr. Failinger opined any pathology caused by the Pinnacol injury was “cleaned up” during the 2020 surgery, and Claimant was appropriately placed at MMI for the Pinnacol injury. He saw no evidence to suggest Claimant’s recurrent symptoms are related to that injury. Dr. Failinger opined Claimant suffered a new knee injury in February 2021, when he “torqued” or twisted it while pushing off a pipe with his leg. Dr. Failinger testified that such a torqueing mechanism heightens the risk of a cartilage injury and Claimant’s description of the accident is consistent with a new injury. He explained that that Claimant’s post-accident dysfunction, swelling, symptoms, and new effusion (as demonstrated by the 2021 MRI) are also suggestive of a new injury: “[T]he reason we get swelling in arthritic situations like this is that cartilage gets knocked off . . . the body says, ‘I can’t have fragments in here,’ . . . In the fluid that’s made after these events, there are . . . enzymes that will break down to dissolve and disintegrate the floating cartilage, so that’s why we have swelling . . . In an arthritic knee when there’s cartilage that’s falling off . . . if it’s a . . . slow rate of falling off it doesn’t happen, but a sudden knocking off of cartilage will create this debris and then the knee swells . . .” Dr. Failinger testified there is a 99.9% chance that articular cartilage damage caused the new effusion. He considered Claimant a reliable historian and opined one would have to “completely discount” Claimant’s statements and testimony to conclude the Zurich injury was not responsible for the current symptoms.

39. Dr. Failinger’s opinions are credible and persuasive.

40. Claimant’s testimony was credible, including his description of the incident while climbing in the material press.

41. Claimant failed to prove entitlement to additional medical or indemnity benefits under the Pinnacol claim.

42. Claimant and Pinnacol collectively proved Claimant suffered a new injury at work on February 17, 2021. The new injury directly and proximately caused the worsening of Claimants' condition, leading to increased disability and a need for medical treatment.

43. Claimant proved he was disabled and suffered an injury-related wage loss from February 18, 2021 through February 28, 2021, and from March 2, 2021 ongoing.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen[1] any award on the grounds of error, mistake, or a change in condition. The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4). A "change in condition" refers to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that is causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The claimant suffers a "worsening" of a pre-existing condition if the change is the natural and proximate consequence of a prior industrial injury, with no contribution from a separate, intervening causative factor. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

Pre-existing disability from a prior industrial injury does not preclude recovery of workers' compensation benefits for a second compensable injury to the same body part. *Eastman Kodak Co. v. Industrial Commission*, 725 P.2d 85 (Colo. App. 1986).

A claimant suffers a compensable injury if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove a compensable aggravation. A purely symptomatic aggravation is sufficient for an award of benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). Pain is a typical symptom from the aggravation of a pre-existing condition. If the pain triggers the need for medical treatment or causes a disability, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949). However, the mere fact that a claimant experiences symptoms during or after work activities does not necessarily establish a compensable injury. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). Where, as here, the pre-existing condition results from a prior industrial injury, the ALJ must determine whether the recurrent pain is "a logical and recurrent consequence

[1]The indemnity portion of the Pinnacol claim is closed, and additional TTD benefits can only be awarded if the claim is reopened. The medical portion of the claim remains open pursuant to the January 15, 2021 FAL. Therefore, reopening is not a prerequisite to an award of additional medical benefits. Nevertheless, Claimant still must prove a causal nexus between the requested treatment and the original injury.

of the original injury," or a compensable "aggravation" giving rise to a new claim. *F.R. Orr Construction, supra,* at 968.

As found, Claimant and Pinnacol collectively proved Claimant suffered a new compensable injury to his left knee on February 17, 2021. The new injury proximately caused additional disability, a wage loss, and a need for medical treatment. Claimant's knee substantially worsened on February 17, 2021, as evidenced by his credible testimony and the contemporaneous medical records. The aggravation was caused by climbing and crawling in the material press. Before the new accident, Claimant was active, caring for his children at home, exercising, and successfully performing physically demanding work. After the accident, he could not bend the knee, had significantly more pain, and had a new "giant bubble" of fluid in the knee. Dr. Burns' documented new clinical findings on February 25, including multiple areas of swelling, range of motion loss, and an "extremely antalgic" gait. Dr. Failinger's causation analysis is credible and persuasive that Claimant's worsened condition on and after February 17, 2021 represents a new injury rather than a continuation of the Pinnacol injury.

Admittedly, Claimant's failure to mention a specific incident in his text message to his supervisor or his conversation with Ms. G conflicts with his later descriptions to Dr. Burns, Dr. Failinger, and at hearing. But the balance of persuasive evidence convinces the ALJ that Claimant's account of the incident with the material press is truthful. The probative value of the text message is diminished because it was not offered into evidence. Regardless, Claimant's primary intent was probably to advise his supervisor he aggravated the knee and would not be able to work the next day, rather than trying to provided a detailed description of the day's events. Similarly, when Claimant spoke with Ms. G, his main concerns were to let her know his knee was worse and inquire about seeing a doctor. Although Claimant volunteered no information about the incident with the material press, Ms. G did not ask him about any incident either. Dr. Failinger persuasively explained why the detailed discussion with Dr. Burns on February 25 is the most reliable source of information regarding the precipitating event. Claimant most likely gave Dr. Burns additional details because she specifically asked about it, and because he wanted her to understand what precipitated the sudden worsening of his condition to decide the best course of treatment. Moreover, reporting a new injury to Dr. Burns ran counter to Claimant's compensation-related self-interest by complicating his ability to obtain further benefits from his already-established Pinnacol claim. The ALJ is not persuaded by the argument Claimant fabricated the specific incident.

B. TTD benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Once commenced, TTD benefits continue until the occurrence of one of the events listed in § 8-42-105(3)(a)-(d). One enumerated terminating event is a return to regular or modified employment. Claimant was off work because of the injury from February 18 through February 28, 2021. His entitlement to TTD terminated on March 1, 2021 when he returned to modified duty. He then left work again because of the injury, and commenced a new period of disability on March 2, 2021. As of the hearing date, Claimant had not been placed at MMI, released to full duty work, or returned to work.

The parties stipulated to an AWW of $1,854.52. Two-thirds of the stipulated AWW exceeds the maximum compensation rate of $1,074.22 applicable to Claimant's date of injury. Accordingly, all TTD benefits are payable at the rate of $1,074.22.

C. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Claimant proved evaluations and treatment recommended by Dr. Burns are reasonably necessary and causally related to the February 17, 2021 accident covered under the Zurich claim.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen W.C. No. 5-143-435 for additional temporary disability benefits is denied and dismissed.

2. Claimant's request for medical benefits in W.C. No. 5-143-435 is denied and dismissed.

3. Claimant's claim in W.C. No. 5-164-953 for a February 17, 2021 injury is compensable.

4. Zurich shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury.

5. Claimant's AWW is $1,854.52.

6. Zurich shall pay Claimant TTD benefits at the maximum weekly rate of $1,074.22, from February 18, 2021 through February 28, 2021, and from March 2, 2021 until terminated by law.

7. Zurich shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to additional permanent partial disability (PPD) benefits.

FINDINGS OF FACT

1. On October 14, 2019, the claimant suffered an injury to his right shoulder while working for the employer. On October 25, 2019, the respondents filed a General Admission of Liability (GAL) regarding the October 14, 2019 work injury.

2. During this claim, the claimant has treated with providers a Roaring Fork Family practice.

3. On January 20, 2020, a magnetic resonance image (MRI) of the claimant's right shoulder showed, *inter alia*, a moderately sided acromial spur, mild infraspinatus tendinosis, a bursal tear of the mid distal fibers, an articular tear of the distal anterior fibers, moderate acromioclavicular joint osteoarthritis, and mild atrophy of the teres minor muscle.

4. On June 1, 2020, the claimant was seen by Dr. Ferdinand Liotta for a surgical consultation. Dr. Liotta noted that the claimant was a candidate for shoulder surgery. Thereafter, surgery was scheduled for July 7, 2020.

5. The claimant has Type 2 diabetes. On July 3, 2020, the claimant was seen by Ivy Chalmers, PA-C for a pre-operative appointment. On that date, it was noted that the claimant's hemoglobin A1c level was at 12.8. As a result, the recommended rotator cuff repair surgery was not performed. Dr. Liotta communicated to PA Chalmers that he will not perform the surgery until the claimant's A1c level is less than 8.

6. The claimant's primary care physician is Dr. Christopher Tonozzi. The medical records entered into evidence demonstrate that Dr. Tonozzi attempted to work with the claimant to lower his A1c levels. On July 20, 2020, the claimant's A1c level was 13.9. On December 8, 2020, it was 10.8. On January 19, 2021, the A1c level was 10.9. On March 31, 2021, it was at 9.3. On July 27, 2021, the claimant's A1c level was at 12.5.

7. These same medical records demonstrate that the claimant was not compliant with Dr. Tonozzi's instructions regarding insulin use. For example, on March 31, 2021, Dr. Tonozzi instructed the claimant to increase his insulin to 80 units in the morning and 50 units in the evening. However, on July 27, 2021, the claimant informed Dr. Tonozzi that he had not increased his insulin, and continued at 60 units in the morning, and 45 units in the evening. The claimant also reported that he "had heard lots

of insulin might do damage, so he actually decreased. Hoped tea he was taking would help." As noted above, the claimant's A1c level was 12.5 on that date.

8. On April 4, 2021, the claimant was seen by Dr. Andrew Gisleson. On that date, Dr. Gisleson noted that the claimant's diabetes was poorly controlled and he could not undergo surgery. Dr. Gisleson recommended that the claimant be placed at maximum medical improvement (MMI).

9. On June 14, 2021, Dr. David Lorah determined that the claimant reached MMI as of April 6, 2021. Dr. Lorah noted that although the claimant is a potential surgical candidate, he cannot undergo surgery until he is able to lower his hemoglobin A1c levels. Specifically, Dr. Lorah noted that the claimant's A1c would need to be less than 7 prior to undergoing surgery. Dr. Lorah rated the claimant's permanent impairment for his right upper extremity as nine percent (which converts to five percent whole person).

10. On September 10, 2021, the respondents filed a Final Admission of Liability (FAL) relying upon Dr. Lorah's June 14, 2021 report.

11. Following the FAL, the claimant requested a Division sponsored independent medical examination (DIME). On November 16, 2021, the claimant attended a DIME with Dr. Frank Polanco. In connection with the DIME, Dr. Polanco reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Polanco identified the claimant's diagnoses as a right shoulder strain, tendinosis with biceps tearing, and "subacute on chronic" quadrilateral space syndrome. Dr. Polanco opined that the claimant was not at MMI and needed additional treatment including physical therapy and surgery.

12. During his deposition testimony, Dr. Polanco stated that the claimant has adhesive capsulitis (also called "frozen shoulder"). Dr. Polanco recommends the claimant undergo manipulation under anesthesia. It is Dr. Polanco's opinion that this procedure would improve the claimant's function.

13. On January 26, 2022, the claimant attended an independent medical examination (IME) with Dr. Scott Primack. In connection with the IME, Dr. Primack reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his report, Dr. Primack opined that the claimant was at MMI. Dr. Primack noted that the claimant has adhesive capsulitis, secondary to diabetes. In addition, Dr. Primack opined that the treatment recommendation by Dr. Polanco would not address the claimant's condition. Dr. Primack assessed permanent impairment of 11 percent for the claimant's right upper extremity (which converts to whole person impairment of seven percent).

14. Dr. Primack's deposition testimony was consistent with his report. Dr. Primack explained that due to the claimant's diabetes, he has developed a diabetic shoulder. Specifically, the tendons and soft tissue in the claimant's shoulder have

thickened and created adhesions. Therefore, manipulation under anesthesia (as recommended by Dr. Polanco) would not work to improve the claimant's shoulder function. In fact, that procedure would likely worsen the rotator cuff tear.

15. The claimant testified that he would like to undergo the treatment recommended by Dr. Polanco. The claimant also testified that he has tried to reduce his blood sugar levels.

16. In the April 27, 2022 Findings of Fact, Conclusions of Law, and Order, the ALJ credited the medical records and the opinions of Drs. Gisleson, Lorah, Liotta, and Primack over the contrary opinions of Dr. Polanco. The ALJ found that the respondents had overcome the opinions of the DIME physician. The ALJ also found that the claimant was at MMI.

17. At the hearing, the claimant argued that if the ALJ found that the respondents had overcome the DIME physician's opinion on MMI, then the ALJ should order the claimant to return to the DIME physician for an impairment rating. The respondents argued that if the ALJ found that the respondents had overcome the DIME physician's opinion on MMI, then the issue of PPD benefits would become ripe for an order based on the evidence presented at the hearing. The ALJ has considered these arguments and finds that she has jurisdiction to determine the issue of PPD benefits, and that issue is ripe of an order at this time.

18. In this matter, there are two impairment ratings assessed for the claimant's right upper extremity Dr. Lorah's assessment of 9 percent and Dr. Primack's assessment 11 percent. The DIME physician, Dr. Polanco did not assess an impairment rating at the DIME. The ALJ credited Dr. Primack's opinions on the issue of MMI. The ALJ likewise credits Dr. Primack's assessment of an 11 percent impairment rating for the claimant's right upper extremity. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that he is entitled to an impairment rating of 11 percent for his right upper extremity.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

5. As found, the impairment rating assessed by Dr. Primack is credible and persuasive. As found, the claimant is entitled to an impairment rating of 11 percent for his right upper extremity.

ORDER

It is therefore ordered the claimant is entitled to an impairment rating of 11 percent for his right upper extremity.

Dated this 21st day of June 2022.

Cassandra M. Sidanycz
Administrative Law Judge

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and

OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Whether Respondents have overcome the opinions expressed by Dr. Mayer in her Division-Sponsored Independent Medical Examination ("DIME") report by clear and convincing evidence that the Claimant is not at maximum medical improvement ("MMI")?

- Has Claimant established by a preponderance of the evidence that the additional medical treatment recommended by Dr. Mayer is reasonable treatment necessary to cure and relieve Claimant from the effects of the industrial injury?

- If Respondents have overcome the DIME physician's opinion regarding MMI by clear and convincing evidence, what is Claimant's proper permanent impairment rating?

- Has Claimant proven by a preponderance of the evidence that she is entitled to additional temporary partial disability ("TPD") benefits for the period of June 1, 2020 through ongoing?

- Have Respondents proven by a preponderance of the evidence that Claimant was overpaid temporary disability benefits for which they are entitled to an offset against permanent partial disability ("PPD") benefits?

FINDINGS OF FACT

1. Claimant was employed by Employer as an Activity Assistant. Claimant contracted COVID-19 while employed with Employer in April 2020. Claimant reported to the emergency room on April 13, 2020 and was diagnosed with acute hypoxemic respiratory failure and was admitted to the hospital and put on oxygen.

2. Respondents filed a General Admission of Liability on October 8, 2020 admitting for temporary total disability ("TTD") benefits from April 5, 2020 through May 31, 2020 and temporary partial disability ("TPD") from June 1, 2020 through ongoing. Respondents admitted to an AWW of $717.58.

3. Following her release from the hospital, Claimant was referred to family nurse practitioner ("FNP") Caitlin Lawshe for medical treatment. FNP Lawshe evaluated Claimant on April 24, 2020. FNP Lawshe noted Claimant complained of low energy levels and low oxygen levels that required supplemental oxygen. Claimant returned to FNP Lawshe on May 11, 2020 and noted that she had tried to wean down the supplemental oxygen, but her saturation levels dropped below 90%. Claimant reported

being able to walk to her mailbox and do light duties around the house a 1-2L of oxygen.

4. FNP Lawshe eventually allowed Claimant to return to work up to four hours per day after her May 26, 2020 examination. FNP Lawshe noted Claimant required 2L of oxygen with activity and recommended Claimant get an O2 backpack to go to work with.

5. FNP Lawshe subsequently referred Claimant to Dr. Knutson, a pulmonologist, for medical treatment. Dr. Knutson initially examined Claimant on July 13, 2020. Dr. Knutson noted Claimant had been a smoker for 30 years. Dr. Knutson diagnosed Claimant with significant exertional hypoxemia. Dr. Knutson referred Claimant for a computed tomography ("CT") angiogram of the chest.

6. The CT angiogram of the chest was performed on July 16, 2020. The CT angiogram showed no definite pulmonary embolus, but it was noted that the evaluation of some of the pulmonary arterial branches was limited by suboptimal contrast bolus timing and some motion artifact. Atherosclerotic changes of the aorta and scattered atelectasis was also noted along with interlobular septal thickening and emphysematous changes.

7. Claimant underwent an echocardiogram on August 7, 2020 that revealed no significant abnormalities.

8. Claimant continued to treat with Dr. Knutson. Dr. Knutson noted on September 14, 2020 that Claimant was continuing to need supplemental oxygen at 2.5L with activity and up to 3L while at work.

9. Claimant returned to Dr. Knutson on March 22, 2021. Dr. Knutson noted Claimant reported using more oxygen recently, with 3L being needed while at work. Dr. Knutson noted Claimant likely has COPD and mild post COVID fibrosis which would explain her increased need for supplemental oxygen. Dr. Knutson recommended Claimant continue with pulmonary rehab and recommended no change in her work restrictions.

10. Claimant underwent a repeat chest CT scan on April 12, 2021. The CT scan showed no interval change in mild emphysema and mild interlobular septal thickening and chronic subpleural ground-glass changes in the lung base. Calcification in the tail of the pancreas were noted to probably reflect chronic pancreatitis.

11. Claimant was next evaluated by Dr. Knutson on April 26, 2021. Dr. Knutson noted Claimant had some benefit with her pulmonary rehab with treadmill activity at 3-4 L per minute of supplemental oxygen. Dr. Knutson opined that Claimant has reached maximum medical improvement from a standpoint of her pulmonary status. Dr. Knutson opined that Claimant would greatly benefit from a portable oxygen concentrator in order to maintain her mobility, activity tolerance, and conditioning as well

as her ability to work, albeit in shorter shirts. Dr. Knutson noted that Claimant's exercise oxygen needs would be chronic.

12. FNP Lawshe examined Claimant on June 2, 2021. FNP Lawshe noted Claimant reported having good days and bad days with oxygen requirements of 3L with rest and 4L with activity. Claimant reported she was working from 10:00 – 2:00 three days a week and 10:00 – 4:30 two days per week and would leave work exhausted. FNP Lawshe placed Claimant at MMI as of June 2, 2021 and continued her work restrictions for her current schedule. FNP Lawshe recommended an additional 24 weeks of pulmonary rehab along with the use of inhalers as maintenance medical treatment.

13. Claimant was referred to Dr. Adragna for the impairment rating by FNP Lawshe. Dr. Adragna performed testing on Claimant in association with her impairment rating and provided Claimant with an impairment rating of 25% whole person, placing Claimant in Class II Of Table 8, Classes of Respiratory Impairment, of the AMA Guides 3rd Edition, Revised.

14. Claimant underwent a Division-sponsored Independent Medical Examination ("DIME") with Dr. Mayer on October 13, 2021. Dr. Mayer reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with the DIME. Dr. Mayer noted Claimant reported not being on supplemental oxygen or medications prior to contracting COVID-19. Dr. Mayer noted Claimant's was discharged from pulmonary rehab on June 23, 2021, despite the recommendation from FNP Lawshe that she continue with the rehab for another 24 weeks as of June 2, 2021.

15. Dr. Mayer summarized Claimant's medical records in her DIME report, including the diagnostic testing performed by the physicians providing Claimant medical care. Dr. Mayer noted it was her medical opinion that Claimant's oxygen requirements for 6-minute walk have not been established. Dr. Mayer further noted that she was concerned that Claimant's supplemental oxygen requirements are out of proportion to her pulmonary physiology, which suggested there may be an additional cause of her hypoxemia that may be amenable to treatment reasonably expected to improve her condition. Therefore, Dr. Mayer opined that Claimant was not at MMI for her work injury.

16. Dr. Mayer opined that Claimant should undergo additional testing to determine if there was treatment that would reasonably be expected to improve Claimant's condition and functional status, and if identified and treated, decrease her oxygen requirements and allow her to resume more of her former work activities. Dr. Mayer recommended a V/Q scan of perfusion scan to evaluate possible chronic thromboembolic disease. Dr. Mayer also recommended an echocardiogram with agitated saline to evaluate possible pulmonary hypertension and right to left shunt. Lastly, Dr. Mayer recommended an oxygen desaturation test with arterial line, to establish 6-minut walking oxygen requirements and possible component of obesity

hypoventilation. Dr. Mayer recommended the oxygen desaturation test as soon as possible.

17. Dr. Mayer further opined that Claimant qualified for an impairment rating under Class IV of Table 8, Classes of Respiratory Impairment, of the AMA Guides 3rd Edition, Revised, and provided Claimant with an impairment rating of 65% whole person.

18. Respondents filed an Application for Hearing on November 22, 2021 to contest the finding of not at MMI by Dr. Mayer.

19. Respondents referred Claimant for an Independent Medical Examination ("IME") with Dr. Bernton on January 11, 2022. Dr. Bernton reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with the IME. Dr. Bernton diagnosed Claimant with persistent hypoxemia and noted Claimant would require ongoing oxygen following her COVID-19 infection. Dr. Bernton opined in his report that he agreed with Dr. Knutson that Claimant was at MMI.

20. Dr. Bernton opined that the fact that there are diagnostic evaluations which can be performed and could potentially determine that other conditions maintenance treatment may be required does not alter the fact that Claimant is at MMI at this point in time.

21. Dr. Bernton noted that he agreed with Dr. Mayer that performing a repeat echocardiogram would be appropriate as it has been over a year from Claimant's prior echocardiogram. Dr. Bernton noted that a finding of the presence of pulmonary hypertension is, unfortunately, not unlikely given Claimant's deasutration off of oxygen in the presence of pulmonary fibrosis. Dr. Bernton opined that if pulmonary hypertension were present, that might alter treatment but that would not the fact that Claimant is at MMI.

22. Dr. Bernton further opined in his report that a V/Q scan would be appropriate, but again opined that this could be done as maintenance care. Dr. Bernton opined that a congenital right-to left shunt was a low probability and would not be an issue unless Claimant did have pulmonary hypertension, which had not yet been established. Dr. Bernton further opined that there was little evidence for the presence of obesity hypoventilation. Dr. Bernton opined that testing exercise with an arterial line was not a necessary test.

23. Dr. Bernton agreed with Dr. Mayer that Claimant's prognosis was unfortunately for continued decline in pulmonary function due, at a minimum, to aging and possibly to progression of the past-COVID pulmonary fibrosis. Dr. Bernton noted other treatments may be required based upon the Claimant's condition in the future. Dr. Bernton further opined that Claimant's proper PPD rating was the 25% whole person rating provided by Dr. Adragna.

24. Dr. Bernton testified at hearing consistent with his IME report. Dr. Bernton testified that Claimant had been clinically stable for quite some time when she was placed at MMI. Dr. Bernton testified that while he agreed that additional testing may be reasonable, the recommended additional testing could be considered maintenance treatment.

25. Respondents referred Claimant for an additional IME with Dr. Schwartz on February 18, 2022. Dr. Schwartz reviewed Claimant's medical records, obtained a medical history and performed a physical examination with testing in association with his IME. Dr. Schwartz issued a report on March 2, 2022 and diagnosed Claimant with work related post-COVID pulmonary fibrosis, and non-work related COPD/emphysema lung conditions along with another non-work related, non-pulmonary condition, morbid obesity, that may contribute to her hypoxemia but more certainly contributes to her shortness of breath with exertion.

26. Dr. Schwartz opined in his report that the recommended V/Q scan was reasonable to evaluate Claimant for a pulmonary emboli. Dr. Schwartz opined that if this evaluation is performed and negative, an echocardiogram would be unnecessary as the previous echocardiogram in August 2020 showed no heart abnormality of any etiology.

27. Dr. Schwartz opined in his report that Claimant likely had COPD/ emphysema prior to her COVID pneumonia that was secondary to her 30 years of daily exposure to the toxic effects of cigarette smoke. Dr. Schwartz opined that Claimant's long-term need for inhaled bronchodilators is treatment for her pre-exiting COPD and patients with post-COVID pulmonary fibrosis do not have COVID-induced COPD for which they would benefits from chronic bronchodilator therapy. Dr. Schwartz opined in his report that Claimant likely developed COVID pneumonia in April 2020 secondarty to a workplace exposure, which left Claimant with longstanding, no-smoking-related pulmonary abnormalities, possibly fibrosis, and an impairment of oxygenation for which Claimant now requires, and likely will continue to require, long-term need for supplemental oxygen.

28. Dr. Schwartz opined that based on Claimant's stability over the past year and there being no treatment available to treat her post-COVID pulmonary condition other than maintenance therapy with supplemental oxygen, Dr. Schwartz concurred with the opinion that Claimant was at MMI.

29. Dr. Schwartz testified consistent with his report at hearing. Dr. Schwartz opined in his testimony that Claimant was at MMI as of April 26, 2021. Dr. Schwartz testified that Claimant may have other conditions that could affect her respiratory condition. Dr. Schwartz testified that the COVID-pneumonia was not actively being treated. Dr. Schwartz opined that Claimant having blood clots was unlikely, but the V/Q scan would be appropriate for determination of long term clots in Claimant's legs.

30. Dr. Knutson testified by deposition in this matter. Dr. Knutson testified that she had reviewed the DIME report from Dr. Mayer. Dr. Knutson testified she did not believe any addition testing was necessary. Dr. Knutson testified the chest CT angiogram was performed in July, 2020 and "was adequate to exclude the so-called diagnosis of chronic thromboembolic disease." Dr. Knutson testified that the ventilation perfusion scan (V/Q scan) does not generally contribute any additional information, so she felt that test would not be useful.

31. With regard to the echocardiogram, Dr. Knutson testified that this would be a test for a pre-existing problem which was not reflected based on Claimant's history, and would only be suggested when there is presence of pulmonary hypertension, which Dr. Knutson felt was not warranted.

32. The ALJ notes that Dr. Knutson's opinion that no further diagnostic treatment is necessary in this case is contradicted by Dr. Mayer, Dr. Schwartz and Dr. Bernton who all testified that at least some additional testing would be reasonable in this case. The opinions did not agree as to whether this testing would be considered maintenance care or was pre-MMI care, but they did agree that at least some of the testing was reasonable.

33. Dr. Mayer testified by deposition in this matter. Dr. Mayer testified that one of the most notable things about Claimant's condition that remains unresolved is how much oxygen she needs when she walks. Dr. Mayer noted that the CT scan report was relatively mild and less that what she would expect Claimant to have with the severe degree of problems with oxygenation.

34. Dr. Mayer testified that one of the problems with COVID infections is that it can predispose people to developing chronic thromboembolic disease. Dr. Mayer noted that the physicians in this case had very appropriately performed a CT angiogram of the chest to look for acute pulmonary embolism, which was negative, although there was some limitation in seeing some of the outer branches, but to not identify a major clot. Dr. Mayer explained that her concern was not that a blood clot had been missed, but that hypercoagulability, the tendency to clot, would remain an ongoing problem in the long COVID syndrome.

35. Dr. Mayer testified that Claimant's condition included having her oxygen going too low during the day and/or night. Dr. Mayer testified that this can lead to pulmonary hypertension. Dr. Mayer noted that according the physical therapy reports, when they were trying to have Claimant do pulmonary rehabilitation, and especially on the treadmill, Claimant's oxygen kept going low, even though the activities they were having her do were consistent with activities of daily living. Dr. Mayer testified she was concerned with the fact that if Claimant were spending a fair amount of time moving around at an oxygen saturation below 88 percent, it would increase her risk for pulmonary hypertension. Dr. Mayer opined that a repeat echocardiogram could evaluate for right ventricular systolic pressure, which shows an elevated pressure in the right ventricle, which is an estimate of the pressuring in the pulmonary arteries, i.e.

pulmonary hypertension. Dr. Mayer testified that the physical therapy records document that Claimant's oxygen saturation had not been adequate when doing things like walking at a relatively slow pace on the treadmill.

36. Dr. Mayer testified that the existence of a right-to-left shunt was unlikely, but as an alternative explanation for why Claimant's oxygen is dropping when they exercise is a right-to-left shunt. Dr. Mayer explained in her testimony that the basis for her recommendations was the fact that Claimant's degree of oxygenation problems she has is out of proportion both to the mildly reduced diffusing capacity and the relatively mild fibrosis in the lung. Dr. Mayer explained that the reason she suggested this test is that if Claimant was getting an echocardiogram, the right-to-left shunt is a very simple addition to add the agitated saline and would allow for a more complete exam.

37. With regard to the six-minute walk test, Dr. Mayer testified the test would be to determine how much oxygen Claimant would need to maintain adequate oxygen saturation during activity. Dr. Mayer explained that this would help determine how much oxygen Claimant would need to maintain adequate oxygen saturation and have an adequate level of oxygen for her to safely do her activities of daily living.

38. The ALJ finds the DIME report and testimony of Dr. Mayer to be credible and persuasive with regard to Claimant's current medical condition and recommendations for further testing and treatment.

39. Claimant testified at hearing in this matter. Claimant testified she would like to undergo the testing recommended by Dr. Mayer. Claimant testified she continues to try to work for Employer, but her shifts have had to be shorter. Claimant testified that while she used to work 40 hours per week, she is now working 22-24 hours per week. Claimant testified she started back at work in June 2020 working four hours per day. Claimant testified she is not earning the same amount of money now than she was before she contracted COVID. Claimant testified that since she returned to work in June 2020 she has received TPD every two weeks in the amount of $25.

40. The ALJ finds the testimony of Claimant to be credible and persuasive.

41. With regard to the issue of MMI, the ALJ finds that Respondents have failed to overcome the DIME physician's opinion that Claimant is not at MMI by clear and convincing evidence. The ALJ credits the opinions expressed by Dr. Mayer in her report and testimony and finds that the evidence establishes that additional testing is appropriate to determine if there is an additional condition, such as chronic thromboembolic disease or pulmonary hypertension, which could be improved with additional treatment.

42. Notably, if Claimant is found to have blood clots, or pulmonary hypertension, additional treatment could be necessary to treat those conditions. The ALJ notes that the opinions expressed by Dr. Bernton and Dr. Schwartz indicate that the testing is reasonable, but their opinion is that it should be considered maintenance

treatment as opposed to medical treatment designed to cure and relieve the Claimant from the effects of the industrial injury. The ALJ finds that this represents a difference of medical opinion regarding the issue of MMI and does not overcome the opinion of Dr. Mayer by clear and convincing evidence.

43. In this case, the ALJ credits the opinion expressed by Dr. Mayer that the additional testing, including the V/Q scan, the echocardiogram and exercise test are reasonable medical treatment necessary prior to Claimant being placed at MMI and finds that Respondents have failed to establish that the opinion of Dr. Mayer regarding MMI has been overcome by clear and convincing evidence.

44. Based on the finding that Respondents have not overcome the DIME opinion on MMI by clear and convincing evidence, the ALJ need not make a finding on permanent impairment as this issue is not yet ripe.

45. With regard to the issue of temporary partial disability ("TPD") benefits, the ALJ finds Claimant's testimony that she received only $25 every two weeks from Insurer to be credible and persuasive. This testimony is consistent with the indemnity logs from Insurer that were entered into evidence at hearing.

46. Additionally, Claimant's wage records that were entered into evidence at hearing in this matter. The wage records demonstrate that Claimant was only capable of working part time after she returned to work on or about June 10, 2020. Claimant was provided with temporary disability benefits from Insurer in the amount of $1,708.50 for the period of April 5 through April 29, 2020. Claimant was then provided with temporary disability benefits in the amount of $956.76 every two weeks for the period of April 30, 2020 through September 30, 2020. After Claimant was placed at MMI, Respondents provided Claimant with indemnity benefits in the amount of $25 every two weeks, despite the fact that no admission of liability had been filed reducing the amount of temporary disability benefits paid to Claimant until the October 8, 2020 general admission of liability which admitted for TTD benefits for the period of April 5, 2020 through May 31, 2020 at a rate of $478.38 per week. The GAL noted the full amount of TTD benefits amounted to $3,895.38.

47. According to the indemnity logs entered into evidence by Respondents, Claimant was paid $25 every two weeks for the period of October 1, 2020 through February 28, 2022 for a total of $9500.00 (the indemnity logs show two payments on March 14 and March 28, but the ALJ is only calculating TPD benefits through March 1, 2022 only go that far). The indemnity logs further establish that temporary disability benefits in the amount of $12,232.86 were paid for the period of April 5, 2020 through September 30, 2020.

48. The ALJ notes that Claimant's testimony with regard to her receipt of TPD benefits is consistent with the Claim Indemnity Payment Log from Insurer entered into evidence by both parties at hearing. Insofar as the testimony may be considered inconsistent with the indemnity log entered into evidence at hearing, the ALJ credits the

indemnity log and wage records entered into evidence at hearing. The ALJ notes that Claimant's wage records entered into evidence at hearing demonstrate that Claimant's earnings after she returned to work were consistently several hundreds of dollars less per week than her admitted average weekly wage and were not rectified by the bi-weekly $25 payments from Respondents.

49. However, the indemnity logs indicate that Claimant was paid temporary disability benefits in the amount of $956.76 every two weeks up through September 30, 2020. Claimant's disability benefits were then reduced to $25 per week through the date of hearing.

50. Section 8-42-106, C.R.S. provides that in cases of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. The ALJ credits Claimant's testimony that she was unable to continue to work full time as a result of her work injury and had to reduce her hours to be credible and persuasive. The ALJ finds that this testimony is consistent with the medical records entered into evidence in this case.

51. Claimant set forth in exhibit 15 documentation showing the amount of temporary disability benefits owed to Claimant and the amounts of temporary disability benefits paid to Claimant. According to exhibit 15, Claimant was entitled to temporary partial disability benefits in the amount $19,007.69 for the period of May 28, 2020 through the date of hearing. This is in addition to the $3,895.38 in TTD benefits Claimant was entitled to for the period of April 5, 2020 through May 31, 2020, for a total of $22,903.07. The indemnity logs establish that through the date of the hearing, Claimant was paid $13,182.86 which establishes an underpayment of $9,720.21 through March 1, 2022 ($22,903.07 - $13,182.86 = $9,720.21).

52. The ALJ credits exhibit 15 and finds that Claimant has established by a preponderance of the evidence that she is entitled to additional temporary disability benefits in the amount of $9,720.21 for the period of June 1, 2020 through March 1, 2022. Based on the finding that Claimant is entitled to ongoing TPD benefits, the ALJ finds that Respondents have failed to establish that there was an overpayment of temporary disability benefits in this case. Respondents request for an Order finding an overpayment of benefits is therefore denied.

53. Respondents shall pay Claimant TPD benefits for the period of June 1, 2020 and continuing until terminated by law based on the stipulated average weekly wage ("AWW") of $717.58. As found, Claimant's calculation of underpaid TPD benefits in the amount of $9,720.21 through March 1, 2022 is found to be credible and persuasive.

54. Respondents shall also pay statutory interest on the unpaid amount of temporary benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2018. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

5. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

6. As found, the ALJ finds the testimony of Dr. Mayer more credible and persuasive than the conflicting testimony of Dr. Knutson, Dr. Bernton and Dr. Schwartz. As found, Dr. Bernton and Dr. Schwartz both opined that the testing recommended by

Dr. Mayer was reasonable, but maintained that this was maintenance treatment. As found, the opinions by Dr. Bernton and Dr. Schwartz represent a difference of opinion regarding the nature of the treatment and do not rise to the level of clear and convincing evidence that Claimant is not at MMI.

7. The ALJ recognizes the opinions of Dr. Bernton and Dr. Schwartz that while some of the additional testing is reasonable, it would be more appropriately categorized as maintenance medical treatment. However, diagnostic procedures constitute a compensable medical benefit that must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition so as to suggest a course of further treatment. *Jacobson v. American Industrial Service/Steiner Corp.*, W.C. No. 4-487-349 (ICAO, April 24, 2007). In this regard, the ALJ credits the opinions expressed by Dr. Mayer to be more credible and persuasive than the contrary opinions expressed by Dr. Bernton and Dr. Schwartz.

8. Respondents' are therefore liable for the costs of the medical treatment recommended by Dr. Mayer pursuant to the Colorado Medical Fee Schedule.

9. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

10. As found, Claimant has established by a preponderance of the evidence that she is entitled to an award of temporary partial disability benefits for the period of May 31, 2020 through ongoing. As found, Claimant's testimony that she was unable to continue to work full time as a result of her work injury is found to be credible.

11. As found, the ALJ credits the indemnity logs entered into evidence along with Claimant's exhibit 15 and finds that Claimant was underpaid temporary disability benefits in the amount of $9,702.21 through March 1, 2022. As found, Claimant is entitled to ongoing TPD benefits until terminated by law or statute.

ORDER

It is therefore ordered that:

1. Respondents' shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of her industrial injury including the testing recommended by Dr. Mayer.

2. Respondents shall pay Claimant TPD benefits in the amount of $9,720.21 for TPD benefits through March 1, 2022.

3. Respondents shall pay ongoing TPD benefits to Claimant until terminated by law or statute.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-039-027-003

ISSUES

The issues set for determination included:

- Is Respondent precluded from litigating the issue of causation concerning Claimant's low back injury based upon the prior Order issued by ALJ Peter Cannici?

- Did Respondent overcome the opinions of the physician who performed the Division of Workers' Compensation Independent Medical Examination ("DIME") [David Yamamoto, M.D.] regarding permanent medical impairment by clear and convincing evidence?

PROCEDURAL STATUS

The undersigned ALJ issued a Summary Order on December 27, 2021, which was mailed on December 27, 2021. Respondents requested a full Order on January 5, 2022. This Order follows.

FINDINGS OF FACT

1. There was no evidence in the record that prior to February 2017, Claimant suffered an injury to his lumbar spine or required treatment for that area of the body.

2 On February 2, 2017, Claimant was injured when he slipped and fell on black ice while in the course and scope of his employment. Claimant injured his low back and right hip as a result of the fall. Claimant was transported by ambulance to the Emergency Department of Good Samaritan Hospital.

3. Claimant was hospitalized at Good Samaritan Hospital where x-rays showed he had a comminuted intertrochanteric and subtrochanteric fractures of the right hip with displacement and varus angulation.

4. On February 3, 2017, Claimant underwent surgery for the intertrochanteric and subtrochanteric fractures, which was performed by George Chaus, M.D. The surgery included open reduction internal fixation of the fractures with an intramedullary implant. Dr. Chaus noted the characterized the fracture was "significantly more difficult for fixation and reduction than a standard intertrochanteric or subtrochanteric hip fracture with significant deforming forces requiring an open reduction, cerclage cable wiring and advanced trauma techniques.

5. Claimant was hospitalized at Good Samaritan through February 6, 2017. Claimant was evaluated by ATP Dean Prok, M.D. at SCL Broomfield on March 10, 2017.

Claimant, who was using a wheelchair and cane, reported right upper/lateral leg pain. Dr. Prok diagnosed Claimant with right hip pain, right knee pain and acute intractable tension-type headaches.

6. Claimant was at a skilled nursing facility (Advanced Health Care) for approximately one month before he returned home.

7. The medical records admitted at hearing showed Claimant continued to use a wheelchair and a cane. On March 17, 2017, Claimant returned to Dr. Chaus. Claimant described weight bearing status as "toe touch weight bearing". Claimant did not report lumbar pain. Dr. Chaus also evaluated Claimant on April 18, 2017, who noted he was still using a wheelchair. Dr. Chaus said Claimant was to transition to weight bearing.

8. On April 11, 2017, Claimant returned to light duty work with Employer. He had restrictions of no lifting or carrying more than two (2) pounds, and no walking, crawling, kneeling, squatting, climbing, or driving. Claimant was directed to use the wheelchair for movement a maximum of 2-4 minutes per hour. X-rays taken on April 28, 2017 documented the fact that the hip fracture was healing well.

9. On May 19, 2017 Claimant returned to Dr. Prok for an examination. Claimant did not report any lower back pain. He utilized a walker instead of a wheelchair. Claimant advised Dr. Prok that he would be leaving soon for a one month-long vacation in the Philippians. Dr. Prok referred Claimant to Nicholas K. Olsen, D.O. for an examination.

10. On June 29, 2017 Claimant was evaluated by Dr. Olsen. Claimant mentioned the recent trip to the Philippines with his family. While in the water he was able to walk with a normal gait and significantly reduced pain. Claimant noted a marked increase of pain with a single-legged stance on the right lower extremity, difficulty walking upstairs and relief when sitting in a recliner or propping his leg up with pillows in bed. Dr. Olsen noted mild forward flexed posture and moderate range of motion deficits in both flexion and extension. He prescribed land-based physical therapy and pool therapy because of Claimant's good experience with water walking while in the Philippines.

11. Over the next four months, Claimant received treatment including physical therapy ("PT") and his treatment was overseen by Dr. Prok. Claimant's initial visit at CACC Physical Therapy was on July 10, 2017. He advised the therapist that his greatest difficulty was with walking; that dressing himself was a challenge, especially putting on his right sock and shoe; that sitting and driving for long periods aggravated his pain; and that he utilized a chair lift at home. The initial PT exam revealed deficits in strength, flexibility, and walking tolerance, which limitations restricted his ability to perform usual work and activities of daily living (ADL-s). Claimant received PT at CACC until August 31, 2017.

12. On August 24, 2017 Claimant visited Dr. Olsen for an examination. Claimant was using a straight cane mostly at work but less at home. He reported anterior

right groin pain when weight-bearing as well as pain in his right knee and hip. Claimant did not mention pain in his lumbar spine or SI joint. Dr. Olsen noted "neutral mechanics" in the lumbar spine and full range of motion ("ROM").

13. Dr. Prok saw Claim at regular intervals from September 22, 2017 through March 5, 2018. Claimant reported right knee pain and Dr. Prok included "acute pain of right knee" in his diagnoses. These records reflected Claimant's continued use of a cane.

14. On February 5, 2018 Dr. Olsen added, "acute deep vein thrombosis (DVT) of the distal vein of right lower extremity" to his diagnoses. He noted that Claimant's personal physician was managing the DVT with blood thinners.

15. Dr. Prok concluded Claimant reached MMI on March 5, 2018. At that time, Claimant was reporting right hip, right knee and right thigh pain. Claimant was using a cane to ambulate. Dr. Prok assigned Claimant a 21% lower extremity impairment and 20% for the implant arthroplasty, pursuant to Table 45 of the *AMA Guides*.

16. Respondent filed a Final Admission of Liability ("FAL") on March 22, 2018, admitting to Dr. Prok's impairment rating.

17. On September 7, 2018 Claimant underwent a DIME that was conducted by David Yamamoto, M.D. Claimant reported pain in the right hip, right leg, right knee and low back. Dr. Yamamoto determined that Claimant had not reached MMI. After reviewing Claimant's medical records and conducting a physical examination, Dr. Yamamoto diagnosed Claimant with the following: (1) right hip intertrochanteric fracture/subtrochanteric fracture with extension to the proximal right femur requiring an intramedullary implant; (2) antalgic gait requiring frequent use of a cane; (3) mechanical lower back pain secondary to the antalgic gait; and (4) DVT following the right hip fracture, lengthy immobilization and inactivity post-injury.

18. Dr. Yamamoto stated Claimant's continuing antalgic gait was secondary to his work injury, which resulted in persistent lower back pain and dysfunction that had not been formally treated. This conclusion regarding causation was persuasive to the ALJ. Dr. Yamamoto recommended a trial of physical therapy. However, if Claimant did not respond to treatment, Dr. Yamamoto suggested he be referred to a physiatrist for further evaluation and treatment.

19. After a hearing was conducted on February 7, 2019, ALJ Cannici issued Findings of Fact, Conclusions of Law and Order, dated March 19, 2019, which was mailed March 20, 2019.[1] More particularly, on the causation question, ALJ Cannici found: "[B]ased upon the medical evidence in the record, the ALJ determined Claimant suffered an injury to his lumbar spine as a result of his February 2, 2017 work injury". Judge Cannici found Respondent did not meet its burden of proof to overcome Dr. Yamamoto's opinion on MMI:

[1] This Order was admitted into evidence as part of Exhibit KK, pp. 350-360.

"Respondent has failed to demonstrate that Dr. Yamamoto improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant had not reached MMI. Although Dr. Cebrian disagreed with Dr. Yamamoto's determination that Claimant has not reached MMI, the conclusion was not clearly erroneous. The medical records and credible testimony reflect that Claimant was initially confined to a wheelchair after his industrial injuries, transitioned to a walker and then began using a cane. Claimant explained that he reported lower back pain to Dr. Prok sometime after he started occasionally walking with a cane. He had not suffered any lower back pain while using a wheelchair. Dr. Yamamoto reasoned that Claimant suffered an antalgic gait requiring frequent use of a cane that caused him to develop lower back pain. Dr. Cebrian's disagreement regarding Claimant's development of lower back pain does not undermine Dr. Yamamoto's reasonable reliance on Claimant's clinical history and credible reports".[2]

20. The ALJ determined the issues adjudicated at the February 7, 2019 hearing were different than those at the instant hearing. In particular, the first hearing involved the issue of MMI, while the latter concerned the question of Claimant's permanent medical impairment.

21. Respondent filed a General Admission of Liability ("GAL") on May 3, 2019, referencing Dr. Yamamoto's determination that Claimant was not at MMI, as well as ALJ Cannici's Order.

22. Claimant returned to Dr. Prok on May 24, 2019. It was noted he was working with permanent restrictions and used a cane for support. He reported low back pain above the hip, along with aching/burning in that area, as well as the right hip area. On examination, Dr. Prok noted Claimant reported pain in the hip, lower leg and knee areas diffusely. Pain was also present in the right low back, with tenderness to palpation in the right lumbosacral and thoracic region and SI area. Dr. Prok referred Claimant to Scott Primack, D.O. and for PT.

23. Claimant underwent seven treatment sessions at CACC Physical Therapy beginning on June 21, 2019, with modalities including deep tissue massage and neuromuscular treatments. The massage therapist who assessed Claimant found he had hypertonicity or tension in his quadratus lumborum, glutes, and lumbar paraspinals at each of the seven (7) visits. By the end of therapy on August 16, 2019, Claimant's left and right quadratus lumborum muscles were still hypertonic. The ALJ noted these treatments were in connection with low back pain and the physical therapist's findings of hypertonicity.

24. On July 12, 2019, Claimant was evaluated by Dr. Prok. His pain complaints were similar to the previous evaluation, including right low back, gluteal and hip pain. On examination, Dr. Prok noted mild decreased ROM at the hip, with minimal soreness in the knee and hip area. Right and left low back pain was present on movement at end range.

[2] Exhibit KK, p 356.

Dr. Prok's assessment was: S/P ORIF fracture; acute pain of right knee; pain and swelling of left lower leg; fall; closed fracture of the right hip with routine healing; chronic right-sided low back pain without sciatica; acute DVT of the distal vein of right lower extremity.

25. On July 19, 2019, Claimant was evaluated by Dr. Primack. He reported a 20% improvement in connection with his lumbar spine, with increased pain with sitting and improvement with walking. Dr. Primack noted on examination that Claimant had a Trendelenburg gait pattern without the cane, which was an issue of hip mechanics as compared to spine mechanics. The Trendelenburg gait pattern was still present with the cane, but less so. Dropping of the right pelvis was present, which was consistent with a gluteus medius level weakness. Lumbar flexion was 40°, extension was 20°, with some discomfort with extension noted. (The ALJ found these measurements showed restrictions in ROM). Right and left lateral side bending or within normal limits.

26. Dr. Primack's diagnoses were: pelvis and hip intertrochanteric and subtrochanteric hip fracture, which resulted in an intra-medullary implant, with a significant breaking the right proximal femur; Claimant had extensive PT and was followed by Dr. Prok, with no report of back pain. Claimant was referred to Dr. Olsen, who managed Claimant's recovery, with neutral mechanics were demonstrated at follow-up appointments; MMI by Dr. Prok on March 5, 2018; DIME on September 7, 2018; subjective symptoms as described. Dr. Primack did not foresee any permanent residual impairment at the level of the lumbar spine, but ordered a lumbar MRI.

27. Claimant underwent a lumbar MRI on July 26, 2019. The films were read by Eduardo Seda, M.D. Dr. Seda's impression was: L1-2 left paracentral extruded free disc fragment, with moderate dural sac narrowing and mild crowding of the cauda equina; degenerative disc joint changes at the other level without dural sac or root sleeve deformity. The ALJ found the MRI provided evidence of objective conditions within Claimant's lumbar spine.

28. Claimant returned to Dr. Primack on August 16, 2019, at which time the MRI was reviewed. On examination, Claimant had 18° of hip extension, 28° abduction, adduction was 20°, internal rotation was 26° and external rotation was 44°. Dr. Primack concluded Claimant was at MMI. He opined there was no specific work-related lumbar spine injury, but lumbar spondylosis was present. Dr. Primack concluded Claimant had a 16% impairment of the lower extremity.

29. On October 4, 2019, Dr. Prok placed Claimant at MMI and noted an impairment rating was previously assigned. Dr. Prok's diagnoses were: closed fracture of right hip with routine healing; chronic right-sided low back pain without sciatica; right hip pain; acute pain of right knee; S/P ORIF fracture; fall subsequent encounter. Dr. Prok stated Claimant had permanent restrictions of no running and use of cane, as needed. The record did not contain ROM testing worksheets for Claimant's hip or lumbar spine performed by Dr. Prok.

30. On November 15, 2019, Claimant returned to Dr. Yamamoto for the follow-up DIME. At that time, Claimant reported right hip, right lower back and right leg pain. Dr. Yamamoto noted decreased ROM in all planes and the left iliac crest was slightly lower than the right. Dr. Yamamoto observed that after the first DIME, the lower back was then marked on all the subsequent pain diagrams and the lower back pain was noted in the physical therapy that was done after the first DIME report.

31. Tenderness was found over the right paraspinal musculature. Decreased ROM of the right hip was found with the following measurements: flexion 90°, extension 20° degrees, abduction 40°, abduction 40°, internal rotation 24°, external rotation 36°. Dr. Yamamoto's diagnoses were: right hip inter-trochanteric fracture, sub trochanteric fracture with extension at right proximal right femur requiring an intramedullary implant; healthy gait requiring frequent use of cane; mechanical low back pain secondary to the antalgic gait; history of DVT following the right hip fracture, causation unclear.

32. Dr. Yamamoto concluded Claimant had a permanent medical impairment for the lumbar spine of 15%, which included 5% from Table 53, IIB of the *AMA Guides*, with 10% assigned for loss of ROM. For the right hip, he was assigned an ROM impairment of 14%, which converted to a 6% whole person impairment. Dr. Yamamoto included worksheets for the impairment rating and reviewed the reports of Dr. Olsen and Dr. Primack. Dr. Yamamoto disagreed that Claimant's low back was not related to the work injury and specifically commented on Dr. Cebrian's conclusions, as follows:

> "He (Dr. Cebrian) opined that through a large portion of the medical care, there was not documentation of any lumbar spine complaints. (*Comment: Mr. Heine states that he did mention the lower back pain on several occasions but it was not documented. The low back pain was not documented at all until after I performed the Division IME and when he returned to treatment the lower back pain was then documented and addressed.)*
>
> "He (Dr. Cebrian) opined on page 22 of his report that the lumbar spine complaints were not causally related to the claim. He noted that I indicated that Mr. Heine used a cane 80% of the time because of his gait abnormality. He stated that the purpose of a cane was to redistribute the weight from the lower leg that is weaker (or) painful and to improve stability by increasing the base of support and by utilizing a cane it takes additional for(ce) (off of) the spine and should lessen any muscular related soreness secondary to a gait abnormality. (*Comment: I certainly am aware of this but Dr. Cebrian also did not take into account the fact that the ongoing use (of) the cane clearly showed that his gait was not stable this would strongly indicate that he was having difficulty with pelvic stability which could in my opinion clearly was the cause of ongoing significant mechanical low back pain.)*
>
> "He (Dr. Cebrian) also stated that even if Mr. Heine had some lumbar muscular soreness as a result of the gait abnormality, the muscular soreness did not rise

to the level of permanent impairment. (*Comment: If this was muscular soreness, I would not expect it to persist for a period of over 2 years.)*[3]

Dr. Yamamoto articulated his rationale for including the lumbar spine as follows:

"With all due respect, I am not in agreement with the findings from Dr. Cebrian. Dr. Cebrian that the hip injury should be a scheduled impairment even though he noted that Mr. Heine required the use of a cane and that a Trendelenburg gait was documented clearly by Dr. Primack. This is clear evidence that the impairment extends above the right hip joint. Dr. Primack also noted back pain even though he did not a pine that this was readable and thought it was more muscular. I would argue that this is more than a muscular problem and rises to the level of a spine impairment. It is clear that the lumbar dysfunction is a chronic condition and is expected to improve. In regard to the DVT, I find it more than a coincidence that this happened on the same side that he had the severe hip fracture. There was a long period of time between the fracture and the DVT and it appeared that this was at least eight months although Mr. Heine reported that it was six months when I first saw him. He does have increased risk because of his age and obesity as Dr. Cebrian pointed out but in my opinion, this is more than coincidence. However, I did not have some of the records from Dr. Olsen, when I did the initial DIME. I will concede that there is not convincing evidence regarding the work relatedness of the DVT although I certainly am of the opinion that the right femur injury played a significant role. I have elected not to rate the DVT. I am strongly of the opinion that the mechanical low back pain is a result of the ongoing altered gait and again have included the lower back as part of the impairment. It is noted that there was a small herniated disc in a one-two which I believe to be an incidental finding".[4]

33. The ALJ credited Dr. Yamamoto's opinion and found it more persuasive than those offered by Dr. Cebrian and Dr. Primack.

34. There was no evidence in the record that Dr. Yamamoto's rating was invalid. The ALJ found that Dr. Yamamoto's conclusion that Claimant had a permanent medical impairment was supported by the medical evidence in the record.

35. On March 20, 2020, Carlos Cebrian, M.D. conducted a follow-up evaluation of Claimant, at the request of Respondent.[5] At that time, Claimant's complaints included:

[3] Ex. II, pp. 323-325.

[4] Ex. II, pp. 327-328.

[5] Dr. Cebrian's prior evaluation was November 29, 2018. In that report, he stated Claimant was at MMI. The ALJ noted Dr. Cebrian's subsequent report reiterated other opinions from the prior report, including his disagreement with Dr. Yamamoto concerning Claimant's date of MMI and whether his low back condition was causally related to the work injury.

limping while walking; swelling, right leg; pain, right hip; pain, lower back. On examination, Claimant's lumbar spine had no spasms, trigger points or atrophy. Straight leg raise was to 60°, with a negative FABER and Patrick signs. ROM with dual inclinometers was: 62° in flexion, 25° in extension, 25° in right lateral flexion and 25° and left lateral flexion. Dr. Cebrian's diagnosis that were claim-related included: right hip fracture, with surgery performed by Dr. Chaus.

36. Dr. Cebrian concluded Claimant's lumbar spine complaints were not causally related to the February 2, 2017 injury, reasoning that there was no documentation of lumbar spine complaints for an extended period of time after the injury. Dr. Cebrian also opined that Claimant's lower extremity DVT was not causally related to the February 2, 2017 injury. He disagreed with Dr. Yamamoto and opined Claimant had a medical impairment rating of his right hip totaling 18% lower extremity impairment, which converted to a 7% whole person impairment.

37. Dr. Cebrian testified at hearing and said his examination of Claimant revealed that when using a cane, Claimant's gait normalized. (The ALJ noted this differed from the opinion offered by Dr. Primack). Without the cane, Claimant had a Trendelenburg gait, which Dr. Cebrian explained occurred due to hip dysfunction, with one hip dropping lower than the other. When using a cane, Claimant's hips stabilized and this was why his impairment was limited to the hip. Dr. Cebrian testified that Claimant did not sustain an injury to the lumbar spine and had no permanent impairment to that area of his body.

38. The ALJ found Respondent failed to overcome the opinions of DIME physician, Dr. Yamamoto. The opinions expressed by Dr. Cebrian differed from Dr. Yamamoto, but did not establish an error.

39. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,*

5 P.3d 385 (Colo. App. 2000). The ALJ must make specific findings only as to the evidence found persuasive and determinative. An ALJ "operates under no obligation to address either every issue raised or evidence which he or she considers to be unpersuasive". *Sanchez v. Indus. Claim Appeals Office of Colo.*, 411 P.3d 245, 259 (Colo. App. 2017), citing *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, *supra*, 5 P.3d at 389.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Issue preclusion

Claimant argued that the doctrine of issue preclusion barred Respondent from contesting the issue of causation or relatedness, as this issue was previously litigated. Issue preclusion is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien,* 990 P.2d 78, 84-85 (Colo. 1999). The purpose of the doctrine is to relieve parties of the burden of multiple lawsuits, to conserve judicial resources, and to promote reliance upon and confidence in the judicial system by preventing inconsistent decisions. *Id*. Issue preclusion operates to bar the relitigation of matters that have already been decided as well as matters that could have been raised in prior proceedings. *Argus Real Estate, Inc. v. E-470 Pub. Highway Auth.*, 109 P.3d 604, 608 (Colo. 2005).

The doctrine of issue preclusion prevents relitigation of an issue when the following apply: (1) the issue sought to be precluded is identical to an issue actually determined in the prior proceedings; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Sunny Acres Villa, Inc. v. Cooper,* 25 P.3d 44 (Colo. 2001). All elements of issue preclusion were not met in the case at bench.

As found, there were not identical issues litigated at the February 7, 2019 and August 20, 2020 hearings, as the former hearing involved the question of MMI and the latter, medical impairment. (Finding of Fact 20). Even though the issue of causation was an intrinsic part of both hearings, the ultimate issues were different. Therefore, the doctrine of issue preclusion does not apply in the case at bar.

Overcoming the DIME

In resolving this issue concerning Claimant's impairment, the ALJ noted the question of whether Respondent overcame Dr. Yamamoto's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263

(Colo. App. 2004). These sections provide that the findings of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007). Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004).

In this case, Respondent disputed whether Claimant was entitled to a permanent medical impairment for his lumbar spine and contended the scheduled hip rating (14%) should be converted to the whole person impairment (6%) as an impairment not on the schedule. Respondents cited the opinions of Dr. Cebrian and Dr. Primack to support their argument. Claimant argued that insufficient evidence was introduced to overcome Dr. Yamamoto's opinions and that the clear and convincing evidentiary standard was not met.

There was no dispute about the underlying facts in the case. As determined in Findings of Fact 2-9, Claimant was injured at work on February 2, 2017 when he slipped and fell on icy concrete surface while checking fire extinguishers. He sustained comminuted intertrochanteric and subtrochanteric fractures of the right hip, with displacement and varus angulation. Claimant underwent surgery on February 3, 2017 and underwent an open reduction internal fixation procedure, with an intra-medullary implant performed by Dr. Chaus. Dr. Chaus noted Claimant had a significant break in the right proximal femur. *Id.*

Claimant was released from Good Samaritan Hospital and spent approximately one month in a skilled nursing facility. (Findings of Fact 5-6). Claimant was using a wheelchair and cane, as reflected in the medical records admitted at hearing. *Id.* When Claimant returned to light duty on April 11, 2017, he was using a wheelchair and then also using a walker. The evidence in the record reflected that Claimant continued to use the cane throughout this period of time. (Findings of Fact 9-13). As found, the medical records reflected Claimant did not report low back pain in the period of time after his surgery, but reported hip and groin pain. *Id.* Claimant's ATP Dr. Prok determined Claimant reached MMI on March 5, 2018. (Finding of Fact 15).

In the first DOWC-sponsored IME, Dr. Yamamoto concluded Claimant was not an MMI. (Finding of Fact 17). Claimant reported low back pain and Dr. Yamamoto opined that as a result of the work injury and resulting altered gait, Claimant had low back symptoms. (Finding of Fact 18). The ALJ credited this opinion. A hearing was held on the question of whether Claimant was at MMI and ALJ Cannici concluded Respondent had not overcome Dr. Yamamoto's conclusions by clear and convincing evidence. (Finding of Fact 19).

As determined in Findings of Fact 22-23, Claimant was evaluated by Dr. Prok and received additional treatment, including PT to address low back complaints. As found, in the subsequent evaluations by Dr. Prok and Dr. Primack, Claimant reported low back pain in pain diagrams following the first DIME and low back pain was included in the assessment by those physicians. *Id.* Dr. Prok then placed him at MMI on October 4, 2019. (Finding of Fact 29).

In the case at bar, the ALJ determined Respondent did not meet its burden of proof. The ALJ's rationale was twofold; first, there was no evidence that Dr. Yamamoto's conclusions were more probably erroneous or that his findings at the time of the DIME were in error. The ALJ found that Dr. Yamamoto's ROM measurements were valid at the time he performed the evaluation and the evidence submitted Respondent did not refute this fact. (Finding of Fact 34). In this regard, Dr. Yamamoto's conclusion that Claimant had a permanent medical impairment in his lumbar spine was supported by the fact that the records showed he had pain and qualified for such an impairment under the *AMA Guides*. (Findings of Fact 33-34).

In addition, Dr. Yamamoto concluded Claimant's mechanical back pain was related to his altered gait. (Findings of Fact 18, 32). As part of his reports for both evaluations, Dr. Yamamoto provided a detailed explanation as to the basis of this opinion. *Id.* In the second DIME report, Dr. Yamamoto specifically addressed the conclusions of Dr. Cebrian and expressed his disagreement. (Finding of Fact 32). Dr. Yamamoto explained his reasoning with regard to the etiology of Claimant's low back pain. *Id.* The ALJ found Dr. Yamamoto's opinion to be persuasive. (Finding of Fact 33).

Second, the evidence adduced by Respondents to contravene Dr. Yamamoto's opinion simply constituted a difference of opinion. Dr. Cebrian disagreed that Claimant had a medical impairment to his lumbar spine, however, the ALJ found Dr. Cebrian did not refute that Claimant's low back condition was causally related to the work injury or that Dr. Yamamoto's rating was valid. (Findings of Fact 36-38). The ALJ determined this did not constitute sufficient evidence to meet the clear and convincing evidentiary standard and Respondent is required to pay PPD benefits based upon Dr. Yamamoto's rating.

ORDER

It is therefore ordered:

1. Respondent did not meet its burden to overcome the DIME physician's findings with regard to Claimant's medical impairment rating by clear and convincing evidence.

2. Claimant sustained a 20% whole person impairment of his lumbar spine and a 14% scheduled impairment of his right hip as a result of his industrial injury.

3. Respondent shall pay PPD benefits based upon Dr. Yamamoto's medical impairment rating. Respondent is entitled to a credit for PPD benefits previously paid.

4. Respondent shall pay 8% statutory interest on all benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. 4-915-969-006

ISSUES

- Whether Claimant may proceed to hearing on her Application for Hearing when she refuses to allow the court to record the hearing via Google Meets?

FINDINGS OF FACT

1. Claimant filed an Application for Expedited Hearing on January 25, 2022 seeking a hearing on prior authorization for medical benefits. The matter was set for hearing on April 21, 2022 at 8:30 a.m. to proceed to hearing via Google Meets or in person in Glenwood Springs, Colorado. All parties appeared at the April 21, 2022 hearing via Google Meets.

2. Respondent submitted hearing exhibits to the court in advance of the April 21, 2022 hearing. The hearing exhibits were received by the court on April 12, 2022.

3. Prior to going on the record for the April 21, 2022 hearing, the ALJ inquired from Claimant whether she had received Respondent's hearing exhibits. Claimant maintained that she had not received the exhibits. Respondent confirmed that the hearing exhibits had been sent to Claimant's P.O. Box which was noted on the January 25, 2022 Application for Hearing to be Claimant's address. Respondent also noted that the hearing exhibits had been emailed to Claimant the morning of April 21, 2022. Claimant advised that she had not checked her P.O. Box since the previous Friday (April 15) and did not want to proceed to hearing without having an opportunity to have time to review Respondent's hearing exhibits.

4. The ALJ inquired at the April 21, 2022 hearing if Claimant would like an extension of time to commence the hearing and inquired as to how long Claimant would need in order to review the exhibits for the extension of time. The ALJ granted the request for the extension of time and the parties agreed to recommence the hearing on April 28, 2022 at 1:00 p.m. Discussion was had as to how the new hearing would proceed, specifically whether the parties were to use the same Google Meets link, and the ALJ advised the parties that a new Google Meets link would be sent by the court for the April 28, 2022 hearing.

5. No evidence was accepted into the record at the April 21, 2022 hearing and the only discussions involved whether Claimant had a chance to review the Respondent's exhibits that had been sent to her and whether she wished to have additional time prior to review the exhibits before going on the record and taking any evidence in the case. Additional discussion was had off the record as to whether

Respondent was required to provide the hearing exhibits to Claimant three business days prior to the hearing and if the hearing exhibits would not be allowed into evidence if the exhibits were not exchanged. The ALJ explained to Claimant that there was no statutory rule that required the exchange of exhibits three business days prior to hearing and that particular rule was used by the OAC office in Grand Junction to ensure that the court and all parties had the exhibits in advance of the hearing.

6. The court did not issue a new Notice of Hearing for the April 28, 2022 hearing as the hearing was continued at the prior hearing to a date agreed up by all parties. The court clerk did issue a new Google Meets link to the parties for the April 28, 2022 hearing to be used by the parties.

7. Shortly before the April 28, 2022 hearing, Claimant emailed the clerk of the Court and indicated that she wanted to show up at the hearing in person. The clerk advised Claimant that she could appear in person, but the hearing was to be held in the Grand Junction Office of Administrative Courts and not the Glenwood Springs location.

8. Prior to the April 28, 2022 hearing, Claimant filed two written motions with the OAC. The first motion sought a protective order pursuant to C.R.C.P. 26(c) and the second motion requested an extension of time for the hearing which indicated that Claimant wished to attend the hearing in person and wanted the hearing to be in Glenwood Springs.

9. The April 28, 2022 hearing was recorded via Google Meets and using the recording equipment in the courtroom in Grand Junction. At the outset of the hearing, the ALJ dealt with the outstanding motions from Claimant and allowed Respondent to verbally advise as to their position on both motions. Counsel for Respondent noted that Respondent objected to both motions.

10. With regard to the Motion for Protective Order pursuant to Colorado Rules of Civil Procedure ("CRCP) 26(c), Respondent's counsel advised the ALJ that no discovery was outstanding in this case. Claimant argued at the hearing that a protective order was necessary in this case in order to protect Claimant from the dissemination of her medical records to the public.

11. The ALJ orally denied the Motion for Protective Order at the hearing and noted that he would put reduce the denial of the Order to a written Order prior to the next hearing. The ALJ noted that CRCP 26(c) deals with a protective order that limits discovery. As no discovery was outstanding in this case, there was no basis for a protective order limiting discovery.

12. With regard to Claimant's request for a continuance in order to proceed to hearing in person in Glenwood Springs, the ALJ eventually granted this motion over Respondent's objection, and the parties were able to eventually agree to proceed to hearing in Glenwood Springs on June 9, 2022 at 10:30 a.m. Counsel for Respondent noted that he had another hearing set later in the afternoon on June 9, 2022 and

requested that he be allowed to appear virtually at the hearing in Glenwood Springs. The ALJ agreed to this request by Respondent.

13. An Order granting Claimant's Motion for Extension of Time and Request for In Person Hearing and Denying Claimant's Motion for Protective Order was issued on April 29, 2022. The April 29, 2022 written order set forth the ALJ's reasoning for granting the motion for extension of time and denying the request for protective order and is contained in the file, so it will not be rehashed in this Order. The Order noted that Respondent would be allowed to appear at the June 9, 2022 hearing virtually if they decided to do so, which was consistent with the discussion on the record at the April 28, 2022 hearing.

14. A new Notice of Hearing for the June 9, 2022 hearing was issued on April 29, 2022. The paralegal for Respondent's counsel confirmed on the same day that Respondent's counsel would be attending the hearing via Google Meets.

15. Respondent also filed a request for a copy of the April 28, 2022 Google Meets recording on April 29, 2022. Claimant objected to the Google Meets recording being disseminated and noted in her April 29, 2022 email that she did not consent to the recording and did not want the Respondent to have a video copy of the recording that they could spread around to the public.

16. On May 25, 2022, Claimant filed a Motion to Suppress Claimant's Medical Information and Records, Recall and Destroy the Unauthorized "Google Meets" Video Recordings of Hearings and for Change of Administrative Law Judge. Claimant argued in her Motion that the initial hearing was set for April 21, 2022 and provided the parties with the option of appearing either via Google Meets on in person, but did not state that the hearing would be recorded using Google Meets.

17. Claimant stated in paragraph 4 of her motion "Pursuant to the court's rules, hearing exhibits were required to be delivered at least 3 business days in advance of the hearing for video conference hearings. Respondent's hearing exhibits were not delivered in time. According to the Vail post office, they were sent via Certified Mail and did not arrive at the post office until sometime on April 18, 2022. Claimant did not receive notice of the mailing until several days after the April 28, 2022 hearing because she was out of town." Claimant stated in Paragraph 6 of her motion, "Because of the untimely delivery of the hearing exhibits, the court continued the Hearing to April 28, 2022. The court did not issue a Notice of Hearing for the hearing. The court did not state during the April 21, 2022 hearing that the reset hearing would only be via Google Meets...."

18. The ALJ would note that these statements made by Claimant in her motion are, at best, a misstatement of the procedural matters in this case. The April 21, 2022 hearing was not continued based on Respondents' untimely exchange of exhibits. In fact, by Claimant's own admission, the exhibits were timely exchanged as the post office delivered the exhibits via certified mail on April 18, 2022, three business days

prior to the April 21, 2022 hearing. Moreover, when the parties inquired whether they should use the same link for the April 21, 2022 hearing, the ALJ advised the parties that a new link would be sent to the parties. Claimant at no point prior to the eve of the April 28, 2022 hearing expressed a desire to appear in person. When Claimant did indicate that she wanted to attend the hearing in person, Claimant was provided with the appropriate information regarding attending the hearing in person in Grand Junction. It was Claimant who then objected to having to travel to Grand Junction for the hearing, even though that option was provided to Claimant prior to the hearing.

19. With regard to the Google Meets recording, Claimant argued in her motion that nothing in the rules provides for recording via Google Meets or any video recording of proceedings. Claimant therefore requested relief in the form of having any Google Meets recordings be destroyed and not provided to any of the parties.

20. Claimant also requested that the ALJ recuse himself from the case based on the argument that the ALJ decided the Motion for Protective Order against Claimant without requiring Respondent to respond to the motion. Claimant also argued the ALJ blamed Claimant for the first continuance of the hearing even though Respondent failed to provide hearings exhibits in a timely fashion, did not provide a Notice of Hearing for the April 28, 2022, did not record the procedural hearing on April 21, 2022 and recorded Claimant in an unauthorized manner at the April 28, 2022 hearing via Google Meets. Claimant argued that these actions showed bias and prejudice against Claimant and violated Claimant's substantive and procedural due process and privacy.

21. Respondent filed an objection to Claimant's motion on May 31, 2022. Respondent noted in the objection to Claimant's request that the Google Meets recording be destroyed that the OAC Rules and Polices use various terms to describe the recordings and the Workers' Compensation Act notes that the hearing be "electronically recorded". The objection further noted that the OAC Rules contemplate the use of video format in discussing having witnesses testify video videoconference.

22. Respondent further noted that the OAC issued emergency rules permitting video hearings on July 31, 2020 in response to the COVID-19 pandemic. In this notice, the OAC advised that all hearings would be conducted by telephone of video conference and advised that the OAC would utilize Google Hangouts for the recording of the telephone and video conference hearings. Respondent argued in their objection that Claimant's argument that the OAC's utilization of Google Meets is unlawful and prejudicial was not supported by law or fact, nor did it deny Claimant due process with regard to her right to proceed to hearing.

23. Notably, the July 31, 2022 notice involving the use of Google Meets in light of the COVID-19 pandemic, signed by Director and Chief Administrative Law Judge Matthew Azer, states in pertinent part:

> In light of the COVID-19 pandemic state of emergency and the existing Executive Orders from the Governor, as well as local municipalities, all at

the Office of Administrative Courts (Denver, Colorado Springs and Grand Junction) **shall be conducted by telephone or video conference** for the near future.

The OAC will consider allowing in person hearings but only in limited circumstances in late October 2020.

The OAC utilizes Google Hangouts[1] for the recording of the telephone and video conference hearings. Parties will received a Google Hangout calendar invite on the afternoon prior to the scheduled hearing, with the telephone conference number, as well as a pin number to join the scheduled hearing. Parties are responsible for telephoning that telephone number at the time and date of the hearing. The parties should also have available the telephone numbers of any witnesses participating in the hearing. The ALJ will conference in the witnesses to the Google Hangout hearing. The parties shall ensure that all witnesses have copies of any exhibits that will be referenced during the telephonic hearing. (emphasis in original)

24. With regard to Claimant's request for disqualification of the ALJ, Respondent properly noted that CRCP 97 provides that "any party may for such disqualification and a motion by a party shall be supported by affidavit." Respondent noted that this rules has been interpreted to require a verified affidavit setting forth factual allegations which, if true, would show bias or the appearance of bias and prejudice. Respondent further argued that lack of a verified affidavit is sufficient basis to deny a motion for recusal. *See Austin v. City and County of Denver*, 462 P.2d 600 (1980). Respondent argued that Claimant's failure to provide a verified affidavit in support of her motion should result in the denial of her motion.

25. Respondent further argued that mere opinions or conclusions that the judge is biased are insufficient for a judge to be recused from a case. Respondents also noted that adverse rulings alone do not support a conclusion of bias.

26. ALJ Sidanycz issued an Order on June 1, 2022 summarily denying Claimant's Motion to Suppress Claimant's Medical Information and Records, Recall and Destroy the Unauthorized Google Meets Video Recordings of Hearings and for Change of Administrative Law Judge.

27. Claimant then filed a "Forthwith Request for Clarification of Court's Order Dated June 1, 2022" on June 2, 2022. Because this motion was filed within 10 days of the June 9, 2022 hearing, and Respondent has 10 days to respond to the motion, Claimant was advised by the OAC clerk that this motion would be taken up at the June 9, 2022 hearing.

---

[1] The ALJ will use the terms Google Hangouts and Google Meets interchangeably in this Order as these reference the same technology utilized that the OAC to conduct hearings since at least July 31, 2020.

28. On June 3, 2022 Claimant filed "Claimant's Objection to Court's Order re: Delivery of Confidential Exhibits to Respondent in Advance". In this motion, Claimant maintained that because Respondent opposed her request for an order suppressing her confidential information from the public record, and the Court denied the motion, she could not provide advance copies of the hearing exhibits before the hearing. Claimant also argued in the motion that "Respondent should also be required to appear at the hearing in advance." At the conclusion of this motion, in bold type, Claimant stated, **"Finally, I object to and do not consent to any recording of the hearing or proceedings by any means other than the courtroom's official audio recording system."** (emphasis in original).

29. At the June 9, 2022 hearing, Claimant appeared in person in Glenwood Springs, Colorado along with the ALJ. Respondent's counsel appeared via Google Meets. The courtroom audio recording was started and the ALJ indicated to the parties that he would address Claimant's objection to recording the proceedings via Google Meets before starting the Google Meets recording.

30. Claimant noted that she could not hear or see Respondent's counsel on the video screen of the tablet at the bench. Claimant indicated that without being able to see Respondent's counsel, she would be unaware if Respondent's counsel were making faces or attempted non-verbal ex-parte communication with the ALJ.

31. Claimant had with her at counsel table a tablet and the ALJ invited Claimant to join the Google Meets hearing in order to be able to see Respondent's counsel. Claimant indicated that she was unable to join the WiFi network without providing additional information. The ALJ then turned up the volume on the tablet at the bench and turned the screen so it pointed away from the judge and towards Claimant.

32. The ALJ advised Claimant that Respondent was not required to appear live at the hearing based on our prior discussion at the April 28, 2022 hearing where the parties were attempting to find an agreeable date and Respondent's counsel had indicated that they had an afternoon hearing, but could appear in the morning if they were allowed to appear virtually. The ALJ reminded Claimant that the start time for the June 9, 2022 hearing had been set for 10:30 a.m. pursuant to her request that the hearing not start at 8:30 a.m. the ALJ further noted that the hearing confirmation for the June 9, 2022 hearing set forth that the matter was to proceed via Google Meets. Claimant maintained her objection to recording the hearing via Google Meets.

33. Upon inquiry from Claimant, the ALJ advised Claimant that the official recording for the hearing would be the Google Meets recording. The ALJ advised Claimant that the hearing had been noticed as a Google Meets hearing and Respondent had made arrangements to proceed to hearing virtually which was specifically allowed by the ALJ at the April 28, 2022 hearing in an effort to get this matter to hearing on a date and time agreeable to all parties.

34. Claimant continued to object to the Court proceeding with the hearing

being recorded via Google Meets. Claimant maintained that having a video of her at hearing was improper without her consent. The ALJ then offered to turn off the camera on the tablet which would effectively preclude any video of the Claimant at the hearing from appearing on the recording. Claimant would still not agree to this as a reasonable accommodation to allow for the court to record the proceedings via Google Meets.

35. The ALJ noted that if Claimant did not agree to have the matter recorded electronically in a manner in which the court had determined the hearing should be recorded, the ALJ would have no choice but to dismiss her application for hearing. Nonetheless, Claimant would not agree to allow the court to record the matter via Google Meets.

36. Claimant appeared to argue that the use of Google Meets to record the hearing, even with the camera turned off, violated her right to privacy and she should not be forced to proceed to hearing in this manner. Claimant offered no legal or factual basis for the claim that the recording of the hearing via Google Meets violated her right to privacy, and offered no rational explanation as to how her right to privacy would be infringed by having an electronic recording of the hearing take place via Google Meets.

37. The ALJ finds and determines that Claimant's objection to proceeding to hearing and having the matter recorded in the manner best determined by the ALJ, Claimant puts the court in a precarious position. Either the ALJ records the hearing over Claimant's objection to being recorded or the court must acquiesce to Claimant's demands for how the hearings should proceed. The court finds that such action is improper on the part of Claimant.

38. Claimant was issued multiple warnings by the ALJ at the June 9, 2022 hearing that if she did not consent to the recording, the ALJ would be forced to strike her application for hearing. The other option would be to have the ALJ record the Claimant without her consent in an administrative hearing in which she is seeking a benefit, or allow Claimant to dictate the terms of the recording of the hearing and the presentation of evidence. The court offered multiple accommodations to Claimant including having her join the Google Meets through her electronic device, turning the ALJ's tablet to face Claimant and/or turning off the camera so Claimant would not be recorded. Claimant summarily rejected having the matter recorded through Google Meets even with all of the accommodations offered to her and provided no reasonable basis for her continued objection to having the hearing recorded via Google Meets other than she did not want it to occur in that way because it violated her right to privacy. The ALJ finds that the Claimant's refusal to consent to the recording of the hearing via Google Meets is unreasonable under the circumstances of this case.

39. Notably, Claimant bears the burden of proof with regard to the issues endorsed on her Application for Hearing (medical benefits). Based on Claimant's refusal to allow the court to electronically record the hybrid hearing using Google Meets as set forth in the Hearing Notice for the April 21, 2022 and June 9, 2022 hearing, Claimant effectively blocked the court from initiating the hearing and taking evidence on

the matter. Because Claimant has the burden of proof on these issues, Claimant has failed, by her own actions in frustrating the process of getting the case to hearing, to present any evidence that she is entitled to medical benefits in this case. No evidence was entered at hearing and no testimony was taken. Therefore, Claimant has failed to meet her burden of proof to establish the right to any benefit under the Colorado Workers' Compensation Act.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2018. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Section 8-43-207(1) states in pertinent part:

> Hearings shall be held to determine any controversy concerning any issue arising under articles 40 to 47 of this title. In connection with hearings, the director and administrative law judges are empowered to:
>
> (h) Control the course of the hearing and the conduct of persons in the hearing room.

5. Section 8-43-213(1), C.R.S., provides: "All testimony and argument of all hearings held pursuant to Section 8-43-207 concerning any issue arising under article

40 to 47 of this title shall either be taken verbatim by a hearing reporter or shall be electronically recorded by the division."

6. In response to the COVID-19, the Office of Administrative Courts set forth Google Hangouts to allow for the recording of hearings held before the OAC. This was memorialized in a July 31, 2020 statement from Director and Chief Administrative Law Judge Matthew Azer. The July 31, 2020 statement specifically addresses that the video conference hearings will be recorded via Google Hangouts.

7. As found, in this case, the matter was noticed up for a Google Meets hearing on April 21, 2022. All parties appeared at the hearing via Google Meets. As found, the ALJ granted Claimant's request for a continuance at the hearing on April 21, 2022 in order to allow Claimant additional time to review the exhibits Respondents intended to present at hearing. As found, the parties agreed to reconvene the case for hearing on April 28, 2022 at 1:00 p.m. As found, the court advised the parties that a new Google Meets link would be sent to the parties for the April 28, 2022 hearing.

8. As found, prior to the April 28, 2022 hearing, Claimant advised the court that she would like to appear in person at the April 28, 2022 hearing. As found, Claimant was advised that if she wished to appear live, she would need to appear at the OAC office in Grand Junction, Colorado. As found, Claimant then filed a written motion for a protective order and a motion for an extension of time and request for an in person hearing.

9. At the April 28, 2022 hearing, the ALJ denied Claimant's motion for protective order under CRCP 26(c) as no discovery was outstanding. Over Respondent's objection, the ALJ granted Claimant's motion for a continuance and request for an in person hearing and set the case for hearing on June 9, 2022 at 10:30 a.m. in Glenwood Springs, Colorado. The ALJ further allowed Respondents to appear virtually at the June 9, 2022 hearing.

10. Claimant subsequently objected to any video recordings of the hearings in this case via Google Meets. Claimant argued that allowing the matter to be recorded using Google Meets violated her right to privacy. However, Claimant offered no legal or factual basis for this contention that electronically recording the proceedings via Google Meets violated her right to privacy.

11. Claimant's actions in this case in refusing to allow for an electronic recording of the hearing through Google Meets serves to frustrate the court's attempts to get the matter to hearing in an attempt to allow for the presentation of evidence.

12. As found, Claimant bears the burden of proof in this case by a preponderance of the evidence. Claimant's actions in this case in refusing to consent to the recording of the proceedings via Google Meets precludes the ALJ from taking evidence in this case and Claimant is unable to meet her burden of proof without

submitting evidence. Therefore, Claimant's request for benefits must be denied and dismissed.

13. As found, based on Claimant's refusal to consent to having the hearing in this matter recorded in the manner in which the court had determined was the most appropriate means of recording, specifically using the recording function through Google Meets which was being utilized by Respondent's to appear at the hearing, Claimant has frustrated the court's attempts to have this matter proceed to hearing. The ALJ finds that the appropriate remedy in this case based on Claimant's actions is that Claimant's Application for Hearing should be dismissed.

ORDER

It is therefore ordered that:

1. Claimant's application for hearing is hereby dismissed. Claimant's request for benefits is denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: June 22, 2022

ISSUES

- Did Claimant prove she suffered a compensable injury on July 5, 2021?
- Is Claimant entitled to TTD benefits from July 19, 2021 through September 7, 2021?
- Is Claimant entitled to ongoing TTD benefits commencing January 3, 2022?
- Did Respondents prove Claimant was responsible for termination of her employment on January 3, 2022, thereby precluding an award of TTD?
- The parties stipulated to an average weekly wage (AWW) of $282.79, with a corresponding weekly TTD rate of $188.53.
- If the claim is compensable, the parties stipulated that treatment provided by Concentra, Dr. Kenneth Finn, and UCHealth Urgent Care was reasonably necessary and authorized. Respondents also agreed to pay for the July 21, 2021 office visit to Peak Vista Community Health Center.
- If the claim is compensable, the parties stipulated to a general award of TPD benefits from September 8, 2021 through January 3, 2021. The parties agreed to reserve the exact amount of TPD owed to Claimant.

FINDINGS OF FACT

1. Claimant worked for Employer as a kitchen crewmember. Claimant had previously worked for Employer in the mid-2010s. She left for other employment but stayed in regular contact with her former manager, Jorge G[Redacted]. She was re-hired in November 2020.

2. When she was re-hired in 2020, Claimant made clear that she could only work Monday through Thursday because of child-care obligations. Claimant's husband shares custody of three young children with his ex-wife. The children stay with Claimant and her husband on Friday, Saturday, and Sunday. Claimant also has full custody of three children from a previous marriage. As a result, she cares for six children on Friday, Saturday, and Sunday. The children's ages range from 18 months to 13 years. Employer acknowledged Claimant's family obligations and only scheduled her to work on Monday through Thursday.

3. On July 5, 2021, Claimant noticed a pungent odor coming from one of the refrigerators. On further investigation, she discovered three boxes of spoiled chicken. Claimant contacted her supervisor, [Redacted, hereinafter Mr. G], and they agreed the bad chicken should be discarded.

4. Each box of chicken weighed approximately 40-50 pounds.

5. Claimant carried all three boxes (one at a time) approximately 50 feet to a rear door that exits to the alley. She then carried two boxes outside to the dumpster. She lifted the boxes above her shoulder and threw them into the dumpster. After lifting the second box into the dumpster, Claimant experienced pain in her low back.

6. Claimant did not report the injury to anyone that day, because she initially "didn't think it was something bad . . . I thought I was just tired [from] working a lot of hours." Claimant finished her shift and went home. She showered and took Tylenol for the pain.

7. Claimant testified that a few days after the accident, she told the shift leader, "[Redacted, hereinafter J," (sp?) that her back had been hurting "ever since I threw the chicken away." She also told co-workers [Redacted, hereinafter Ms. N] and "[Redacted, hereinafter Ms. S]" about her back pain. Ms. N[Redacted] confirmed that Claimant told her about the injury the day after the accident. Claimant also mentioned her back pain to Ms. N[Redacted] at other times over approximately the next 10 days. Neither J[Redacted] nor S[Redacted] were called as witnesses to dispute Claimant's testimony.

8. Claimant continued to work her regular shifts for ten day after the accident. Her back pain became progressively worse, particularly with lifting and bending at work. She did not report the injury to Employer or seek treatment because she hoped her back would get better on its own.

9. On Friday, July 16, 2021, Claimant's back pain become worse and "wouldn't go away." She struggled to participate in routine family activities over the weekend, and primarily rested. Claimant credibly testified she performed no activities outside of work during that time that could have caused a back injury.

10. Claimant sought treatment on July 19, 2021, at the urging of her parents. She texted her supervisor, Mr. G[Redacted], at 6:30 A.M. to advise that she could not make it into work and would have someone bring him a doctor's note later that day.

11. Claimant was seen at the UCHealth Urgent Care clinic on July 19. She complained of low back pain "x 2 weeks and recently worsening." The triage EMT documented, "she lifted a heavy box at work and has had progressive back pain since." Claimant told the treating ER provider that, "prior to onset of sxs she was throwing away a big thing of chicken at work and as she did she felt a bit of a twinge of pain but nothing unbearable. Pain became more constant afterward and was steady until 2 days ago when it began to significantly worsen." The pain was in her low back and radiated down both legs. She was having difficulty sitting, bending, and walking. Physical examination showed significant muscle spasm over the lumbar paraspinals and decreased lumbar range of motion. Claimant was diagnosed with acute low back pain and "sciatica." She was given a Toradol injection and prescriptions for a muscle relaxer and prednisone. The provider gave Claimant note stating could return to work on July 22 "as long as her symptoms have improved."

12. Claimant texted Mr. G[Redacted] later that evening that she could not come to work for several days. She said she would send him a copy of the off-work note as soon as she could.

13. Claimant saw her PCP at Peak Vista Community Health Centers on July 21, 2021. Claimant reported "low back pain starting x 2 weeks ago after throwing a heavy object into a trash can at work. States pain initially was not that bad, but has progressively worsened with time." The provider encouraged Claimant "to notify [her] supervisor of this injury at work."

14. Claimant texted Mr. G[Redacted] while she was at the Peak Vista clinic and asked if someone could report the injury "to the insurance to see if they can take care of this since it happened at work." Mr. G[Redacted] stated he would speak to his supervisor. Mr. G[Redacted] later texted Claimant that he needed "the date of when you carried the box of chicken outside." Claimant replied that the injury occurred on July 5 "when the chicken went bad." She said she was working with Margarita and Sarahi at the time.

15. Claimant and Mr. G[Redacted] exchanged text messages over the next several days regarding Claimant's injury and the procedures she needed to follow.

16. On July 29, 2021, Claimant texted the following to Mr. G[Redacted]:

> I am sorry. I just can't move because of my back. I went to the hospital and they told me I could not move for at least 3 days and could be more. It is because the day the chicken went bad, I went to go dump it at the dumpster and I got hurt. I didn't think it was that bad but with time it did start hurting more and more. This week it did get worsened since Friday, I was not able to move for nothing. I knew that I should have reported it, but I didn't think it was something serious. I do apologize.

17. Claimant saw Dr. Daniel Peterson at Concentra, Employer's designated provider, on August 2, 2021. She stated she "strained her low back on 7/5 throwing boxes of chicken wings that had gone bad into a dumpster. She felt mild pain that day and worked for 2 more weeks." Examination showed tenderness to palpation muscle spasms around the lumbar spine. Dr. Peterson diagnosed a lumbosacral strain and opined that Claimant's objective findings were consistent with the history and a work-related injury. Dr. Peterson prescribed muscle relaxers, ibuprofen, and referred Claimant to physical therapy. He imposed work restrictions including lifting no over 10 pounds and alternate sitting, standing, and walking. The work restrictions were incompatible with Claimant's regular job.

18. Employer sent Claimant a written modified job offer on September 2, 2021. The planned schedule was Monday through Thursday, from 5 P.M. to 10 P.M. Claimant accepted the job offer and returned to work on September 8, 2021.

19. Claimant underwent a lumbar MRI on November 4, 2021. It showed a right-sided disc herniation at L5-S1.

20. Claimant received conservative treatment through November 30, 2021. She stopped receiving treatment because Insurer had notified Concentra that the claim was denied and no additional treatment would be covered. Claimant's condition had partially improved but not fully recovered when she stopped treatment.

21. Claimant's description of the accident and the progression of her low back problems is credible and persuasive. Claimant's testimony is supported by the history of injury documented by multiple medical providers.

22. Claimant proved she suffered a compensable back injury on July 5, 2021.

23. Claimant proved she was disabled from her regular work and suffered an injury-related wage loss from July 19, 2021 through September 7, 2021.

24. Claimant worked modified duty from September 8, 2021 through January 2, 2022. She was terminated on January 3, 2022, and has not worked since that date.

25. Employer asserts Claimant was terminated for excessive "no call no shows" and unexcused call offs.

26. Employer's attendance policy requires all employees to provide "reasonable advance notice" of any absences, which is defined as three hours before the scheduled start of a shift. Employees are allowed only five "call-offs" in a rolling 12-month period. Absences exceeding that limit may result in disciplinary action "up to and including termination."

27. Employer identified the following days of missed work as the basis for the termination: "11/22/2021, 11/24/2021, 12/9/2021, 12/17/2021, 12/24/2021, 12/27/2021, 12/28/2021, 12/29/2021, and 12/31/2021."

28. Claimant was absent on November 22 and November 24 with approved PTO. The leave was verbally approved by Mr. G[Redacted] and approved in writing by the VP of operations on November 19, 2021.

29. Claimant missed work on December 9, 2021 because of illness. She notified Mr. G[Redacted] in the morning (more than three hours before the start of her shift) that she was vomiting and had a fever. Mr. G[Redacted] immediately replied "OK." She texted Mr. G[Redacted] again in the afternoon that she was feeling worse and still vomiting. Mr. G[Redacted] replied, "Okay, stay safe."

30. Also on December 9, unknown members of management completed a "Time Off Request Form" stating that Claimant missed work that day because of "No Day Care." Claimant later refused to sign the form because it was inaccurate.

31. In mid-December 2020, Employer changed Claimant's work schedule to include Fridays without discussing it with her. On December 13, 2021, Claimant noticed that she had been put on the schedule for Friday, December 17. Claimant was confused

because it had always been understood that she could not work on Fridays. Claimant had the following text exchange with Mr. G[Redacted] regarding the schedule:

> Claimant: Sir, I have a question. That schedule, did you schedule it just in case I come in or did they tell you I had to come in?
>
> G[Redacted]: That's what James asked me to do. Now that you can work 5 days and 25 hours.
>
> Claimant: But I cannot work on the weekends.
>
> G[Redacted]: I know, but that's what he said.
>
> Claimant: It is because I cannot do that, not because I don't want to. I lose more money in paying for a babysitter than what I make.
>
> G[Redacted]: I understand.

32. Claimant revisited the issue with Mr. G[Redacted] at work on December 13 or 14. Claimant reiterated her longstanding inability to work on Friday, Saturday, or Sunday. Mr. G[Redacted] acknowledged awareness of that limitation but said he had been instructed to put her on the schedule. Claimant testified Mr. G[Redacted] told her Employer was trying to get her to quit or create a basis for her termination.

33. Claimant did not work on Friday, December 17.

34. Claimant texted Mr. G[Redacted] on Monday, December 20 and asked if she was still on the schedule. She was concerned she might have been terminated because she could not work the previous Friday. Mr. G[Redacted] replied, "Yes, of course." Mr. G[Redacted] asked Claimant if she knew of anyone else looking for work. Claimant told Mr. G[Redacted] she might be able to work more hours, but reiterated she could only work Monday through Thursday.

35. Claimant did not work on Friday, December 24.

36. Claimant was absent from work on December 27, 28, 29, and 31. She had previously requested the week off because they were going to have her husband's children for the entire week. Claimant made this request at the same time she requested the time off in November. Claimant understood Mr. G[Redacted] to have approved the time off because he said there were enough people to cover her hours that week. Employer has a wall calendar in the kitchen to track at a glance when various employees will be off work. Claimant had marked herself out on the wall calendar after receiving approval from Mr. Go[Redacted].

37. Claimant reported to work on January 3, 2022, for what she believed to be her next scheduled shift. She was informed that she had been terminated.

38. Mr. G[Redacted] testified he first learned about Claimant's injury on July 19, 2021. He corroborated that Claimant had been approved for time off from November 19 to November 28. Mr. G[Redacted] agreed that Claimant's schedule before December 17 had always been Monday through Thursday, and he knew she could not work on Friday, Saturday, or Sunday. He conceded Claimant's absence on December 9 was excused because of illness. Mr. G[Redacted] disputed Claimant's testimony that he approved leave the week of December 27 through December 31. He did not recall Claimant asking for that week off, but testified he would have denied the request because that is typically a busy week at the restaurant. Mr. G[Redacted] denied telling Claimant that Employer was looking for an excuse to fire her.

39. Claimant's testimony regarding her missed work is credible and more persuasive than the contrary evidence offered by Respondents.

40. Claimant genuinely believed her request for time off the last week of December 2021 had been approved.

41. Claimant was still disabled and medically restricted from her regular job when she was terminated on January 3, 2022.

42. Respondents failed to prove Claimant was responsible for termination of her employment.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

As found, Claimant proved she suffered a compensable back injury on July 5, 2021. Claimant's testimony is credible and persuasive. She reported the injury and resulting back pain to co-workers within days of the accident. Any discrepancies regarding the exact timing of her conversations with co-workers in the 10 days after the accident are minor and do not appreciably detract from the persuasiveness of Claimant's testimony. Although Claimant agreed in hindsight she should have reported the injury to management immediately, her reasons for not doing so are plausible and reasonable under the circumstances. Claimant described the accident and progression of symptoms to multiple medical providers in a manner consistent with her testimony. Physical examinations at the urgent care and at Concentra showed muscle spasms in her low back, which objectively corroborates an injury. There is no persuasive evidence that Claimant had any low back problems before the work accident, nor persuasive evidence to suggest an alternate cause of the symptoms that started on July 5.

B. Claimant is entitled to TTD benefits from July 19, 2021 through September 7, 2021

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3).

As found, Claimant proved she was disabled from her regular job and suffered an injury-related wage loss from July 19, 2021 through September 7, 2021. Although she kept working for approximately 10 days after the accident, her condition worsened and she could no tolerate the standing, walking, and lifting associated with her job. Claimant is entitled to TTD benefits commencing July 19, 2021, first shift she missed because of the injury. Claimant remained off work until starting modified duty on September 8, 2021.

C. Claimant was not responsible for her termination

Claimant was disabled from her regular pre-injury work and Respondents stopped offering modified duty on January 3, 2022. Ordinarily, she would be entitled to TTD benefits under those circumstances. But Respondents argue they are not liable for TTD commencing January 3, 2022 because Claimant was responsible for termination of her employment.

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The “termination statutes” are an affirmative defense to liability for temporary disability benefits. The respondents must prove by a preponderance of the evidence the claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This requires proof that the claimant performed a “volitional act” or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of “volitional conduct” is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents failed to prove Claimant was responsible for termination of her employment on January 3, 2022. The ostensible basis for her termination—"excessive" absenteeism—is not supported by persuasive evidence. Her absence on December 9, 2021 was because she had a fever and was vomiting. Missing work because of illness is not a "volitional act" to justify termination, particularly in a food service position. Her absences on November 22 and 24, 2021 were covered by her pre-approved PTO leave. Regardless of whether it is within an employer's prerogative to terminate an "at will" employee for *excused* absences, the employee cannot reasonably be held "responsible" for their termination in such a circumstance. Claimant was a good worker with a longstanding positive relationship with her manager. No employee in similar circumstances would reasonably expect to be terminated for absences that were pre-approved and excused by their supervisor.

Admittedly, Claimant's absences on Friday, December 17, 24, and 31 were not excused. However, those absences are excluded from consideration as a basis for termination by § 8-42-105(4)(b). A claimant's refusal to work modified duty does not constitute responsibility for termination if the refusal was reasonable under the circumstances. Section 8-42-105(4)(b) references factors such as long-distance travel, unreasonable expense or financial hardship, or "any other reasons that would, in the opinion of the administrative law judge, make it impracticable for the claimant to accept the offer." Claimant had advised Employer from the start of her employment that she could not work on Fridays, Saturdays, or Sundays. She cares for six young children on those days, and it would have been impractical and cost-prohibitive to secure daycare so she could work one shift at her relatively low-wage job. Employer was fully aware of her family situation, and never scheduled her to work on those days until after her injury. And when Employer changed Claimant's longstanding work schedule, it did so without discussion or reasonable advance notice.

The final question is whether Claimant's absences on December 27, 28, 29 were excused. Claimant's testimony that Mr. G[Redacted] told her she could take the week of December 27 is credible. But even if she misunderstood Mr. G[Redacted], the ALJ is persuaded she genuinely believed the leave was approved, and she otherwise would not have skipped work without calling in.

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries on July 5, 2021 is compensable.

2. Insurer shall cover authorized medical treatment reasonably needed to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, treatment provided by Concentra, Dr. Kenneth Finn, the emergent visit to UCHealth Urgent Care on July 19, 2021, and treatment at Peak Vista Community Health Center on July 21, 2021.

3. Claimant's average weekly wage is $282.79, with a corresponding TTD rate of $188.53 per week.

4. Insurer shall pay Claimant TTD benefits from July 19, 2021 through September 7, 2021.

5. Claimant is entitled to a general award of TPD benefits from September 8, 2021 through January 2, 2022. The parties may request an additional hearing if they cannot agree on the specific amount of benefits due.

6. Respondents' defense that Claimant was responsible for termination of her employment on January 3, 2022 is denied and dismissed.

7. Insurer shall pay Claimant TTD benefits commencing January 3, 2022 and continuing until terminated according to law.

8. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

9. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 23, 2022

Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on August 6, 2021, he suffered an injury arising out of and in the course and scope of his employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he received for his back is reasonable and necessary to cure and relieve him from the effects of the work injury.

FINDINGS OF FACT

1. The employer operates a roofing company. The claimant worked as a roofer.

2. The claimant testified regarding three different incidents that occurred during his employment. The first incident occurred in June or July 2021. The claimant testified that at that time he was picking up trash and debris around a job site. When he lifted a trash container he felt a slight pain in his back.

3. The second incident occurred in August 2021. The claimant testified that he was cutting TPO plastic from rolls and needed to move one of the rolls. While attempting to lift the roll, the claimant felt a "hard pain" in the right side and center of his back.

4. The third incident occurred approximately one month after the August incident. At that time, the claimant was on a roof and carrying hoses for the nail guns. The roof was icy, and the claimant slipped and felt more pain in his back.

5. The incident at issue before the ALJ is the one involving moving rolls of plastic. This incident has been identified as occurring on August 6, 2021.

6. TS[Redacted] is the company president for the employer. On September 1, 2021, Mr. TS[Redacted] created the First Report of Injury or Illness form regarding the August 6, 2021 incident. In that document, the injury was reported to the employer on August 20, 2021 and is described as "While working in Aspen, employee picked up a roll of material. Straining Mid Back."

7. Mr. TS[Redacted] testified that TPO is a membrane used in the roofing process. Each roll weighs approximately 400 pounds. It is Mr. TS[Redacted]'s understanding that the claimant and some coworkers were competing to see who could pick up the roll of TPO. Upon learning of the August 6, 2021 incident, Mr. TS[Redacted] sent the claimant for medical

treatment. The claimant did not report injuries related to picking up trash or slipping on a roof to Mr. TS[Redacted].

8. Ater the August 6, 2021 incident, the claimant continued working for the employer. In addition, after reporting the incident on August 20, 2021, the claimant continued performing his normal job duties.

9. Mr. TS[Redacted] testified that the claimant's last day of work for the employer was in early or mid-September. After that time, Mr. TS[Redacted] contacted the claimant regarding returning to work. However, the claimant declined any work offered to him by Mr. TS[Redacted].

10. The claimant was first seen for the August 6, 2021 incident on September 2, 2021. At that time, the claimant was seen by Andrew Henrichs, PA-C at Roaring Fork Family Practice. The claimant described all three incidents mentioned above. The claimant also reported low back pain radiating up his back to the base of his neck. PA Henrichs opined that the claimant's pain was likely muscular and referred the claimant to physical therapy.

11. On September 15, 2021, the claimant returned to PA Henrichs and reported increased pain. PA Henrichs continued to recommend physical therapy. In addition, he prescribed hydrocodone/acetaminophen.

12. The claimant began physical therapy on September 16, 2021. At that time, the claimant reported that his worst pain[1] was 10, best pain was 2, and his current pain **was 4.**

13. The claimant was again seen by PA Henrichs on September 30, 2021. The claimant reported worsening symptoms, with the addition of pain radiating down his right leg. PA Henrichs ordered magnetic resonance imaging (MRI) of the claimant's lumbar spine.

14. On October 6, 2021, the claimant underwent an MRI of his lumbar spine. Dr. David Breland reviewed the MRI and on October 7, 2021 and noted normal alignment, no fracture, with normal discs and no canal stenosis at all levels. Dr. Breland identified the MRI as a "negative exam".

15. On October 14, 2021, the claimant returned to PA Henrichs. At that time, the MRI results were reviewed and PA Henrichs reiterated that the claimant's pain was likely muscular. The claimant was placed on light duty with work restrictions that included a lifting restriction of 10 pounds, and no kneeling, squatting, crawling, or climbing.

[1] Based upon a 10 point pain scale.

16. Subsequently, the claimant was referred for a surgical consultation. On October 20, 2021, the claimant was seen by Dr. Michael Campian at The Spine Center. Dr. Campian noted that the claimant's MRI was unremarkable and opined that the claimant's pain was myofascial. Dr. Campian recommended the claimant continue with physical therapy.

17. At a physical therapy appointment on October 26, 2021, the claimant reported his worst pain as 9, best pain as 6, and current pain as 9.

18. On February 11, 2022, the claimant attended an independent medical examination (IME) with Dr. J. Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In a questionnaire for the IME, the claimant reported that his current pain as 9, worst pain 10, and least pain 9. In his IME report, Dr. Raschbacher opined that the claimant did not suffer an injury at work. In support of his opinion, Dr. Raschbacher noted that the claimant's reported mechanisms of injury and subjective complaints are not supported by objective findings. Dr. Raschbacher also noted that the claimant's presentation at the IME was "remarkable for the nonphysiologic examination". Dr. Raschbacher further opined that the claimant does not need any permanent work restrictions.

19. On February 15, 2022, PA Henrichs determined that the claimant was at maximum medical improvement **(MMI)** and referred him for a functional capacity evaluation and an impairment rating.

20. The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the medical records, the opinions of Ors. Campian and Raschbacher, and the testimony of Mr. TS[Redacted]. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an injury to his back at work on August 6, 2021.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on August 6, 2021, he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, he medical records, the opinions of Ors. Campian and Raschbacher, and the testimony of Mr. TS[Redacted] are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim regarding an August 6, 2021 injury is denied and dismissed.

Dated June 24, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty {20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https:1/oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, It Is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-183-478-001

ISSUES

1. Whether Respondents have established by a preponderance of the evidence sufficient grounds for withdrawal of their General Admission of Liability.

2. Whether Claimant has established by a preponderance of the evidence that physical therapy recommended by Dr. Rizza is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

3. Whether Claimant has established by a preponderance of the evidence that a referral to Dr. Shoemaker is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

FINDINGS OF FACT

1. Claimant is a 52-year-old man who worked for employer as a delivery driver. Claimant's job duties included driving a delivery truck and delivering products to retail and grocery stores, stocking shelves, and loading and unloading the delivery truck.

2. On September 7, 2021, Claimant reported an injury to Employer arising out of the course of his employment with Employer. Specifically, Claimant indicated to that he has sustained an injury to his lower back while delivering product to a grocery store in Estes Park, Colorado while working his delivery route. Claimant testified that he was pushing a cart full of product into a grocery store when the cart abruptly stopped because one of the cart's wheels dropped into a gap in the pavement. Claimant testified the cart weighed approximately 300 pounds when loaded with product. Claimant weighed 180 pounds at the time. Claimant testified that he felt a pop in his left hamstring. Claimant completed his remaining two stops in Estes Park that morning, and the pain in his leg increased. Claimant did not complete the remaining stops on his route drove his truck back to Employer's warehouse in Fort Collins, Colorado.

3. Later that day, Claimant had a telehealth visit with physical therapist, Tonya Davis, at Sozo Physical Therapy. Claimant reported feeling a discomfort in his left hamstring while pushing a cart, continuing to work and then noticing discomfort in his left buttock while driving. Claimant continued to receive physical therapy at Sozo through September 29, 2021. (Ex. G).

4. Employer prepared a First Report of Injury on September 7, 2021. (Ex. A). On September 30, 2021, Employer filed a General Admission of Liability (GAL) with the Division of Workers' Compensation, admitting for medical benefits, and temporary total disability benefits. (Ex. B). On September 21, 2021, Employer provided Claimant with a Designated Provider List which included Workwell Occupational Clinic in Fort Collins, Colorado, among others. (Ex. D).

5. On September 22, 2021, Claimant saw Pamela Rizza, M.D., at Workwell in Fort Collins. Claimant reported pain and tightness in his left hamstring and irritation of the left sciatic nerve radiating to his calf. Claimant denied lower back pain. On examination, Dr. Rizza noted moderately limited extension of the lower back, with positive straight leg raising on the left, with an absent reflex in the left Achilles. Dr. Rizza also noted decreased sensation over the lateral and posterior thigh and lateral foot, with difficulty toe walking on the left with giveaway weakness. Dr. Rizza noted that Claimant's examination was consistent with an L5-S1 radiculopathy and referred Claimant for a lumbar MRI. (Ex. F).

6. The MRI, performed on September 28, 2021, showed a prominent left paracentral disc extrusion at L5-S1 causing significant left lateral recess stenosis, and likely posterior displacement and impingement on the descending left S1 nerve root. (Ex. 5).

7. On September 29, 2021, Claimant saw Dr. Rizza who reviewed Claimant's MRI, and indicated that the disc extrusion "appears acute on the MRI, and is consistent with his mechanism of injury and current symptomatology." Dr. Rizza referred Claimant for an evaluation with a physiatrist, Dr. Shoemaker, for the performance of a lumbar epidural steroid injection (LESI) for a diagnosis of intervertebral disc disorder with radiculopathy, and referred Claimant for six sessions of physical therapy. (Ex. F).

8. On September 30, 2021, Respondents filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability benefits. (Ex. B).

9. On October 13, 2021, Claimant again saw Dr. Rizza, who recommended that Claimant continue physical therapy. She also noted that Claimant's LESI was awaiting approval, and she would like it to be done urgently once authorized. Dr. Rizza also indicated that she anticipated Claimant would need ongoing physical therapy once the LES was completed. (Ex. F).

10. On October 14, 2021, Respondents sent a letter to Dr. Rizza (copying Claimant) recommending authorization ongoing physical therapy and physiatrist referral to Dr. Shoemaker for a left L5-S1 LESI. The letter indicated: "The medical provider, injured worker and workers' compensation claims adjuster have been notified that this specific service meets established criteria for medical necessity ONLY based on the information presented by the medical provider." The letter was authored by Jennifer Smith-Newsome, a case specialist for Sedgwick, which the ALJ infers was Insurer's third-party administrator for Claimant's claim. (Ex. F).

11. Claimant attended six sessions of physical therapy through Workwell from October 1, 2021 through October 18, 2021. (Ex. J).

12. Claimant returned to Dr. Rizza on October 27, 2021, noting there had been a slight improvement in range of motion, but Claimant still had "classic S1 radiculopathy findings on exam with an absent Achilles reflex and paresthesias in the L5-S1 dermatome." Ex. F. Dr. Rizza noted that "it continues to be my medical opinion that [it] is medically probable that the current injury is work related." Dr. Rizza also noted that "rehab care and LESI

referral pending case review by Sedgwick." (Ex. F). The ALJ infers that by "rehab care" Dr. Rizza was referring to physical therapy.

13. On November 30, 2021, Claimant was seen by John Burris, M.D., for a WCRP Rule 16 IME at Respondents' request. On examination, Dr. Burris noted that Claimant had numbness in the left leg S1 dermatome and an absent left ankle DTR (deep tendon reflex), which was consistent with a left S1 radiculopathy. He indicated that Claimant's diagnosis was a L5-S1 intervertebral disc disorder with left S1 radiculopathy. He indicated that Claimant's original "'hamstring injury' was likely the early manifestation of the S1 radiculopathy and not an actual hamstring injury, which is a common presentation for this condition." (Ex. E). Dr. Burris concluded that Claimant's mechanism of injury was inconsistent with his condition, therefore "from a medical causation standpoint, [Claimant's] low back condition cannot be causally related to the reported 9/7/2021 workplace event." In reaching this conclusion, Dr. Burris referenced the "AMA Guides to the Evaluation of Disease and Injury Causation," which indicated "there is insufficient scientific evidence to attribute the cause of lumbar disc herniation to any minor trauma or ergonomic risk factor. The cases in which there is just a temporal association between an event and the onset of sciatica from a disc herniation logically represent when the herniation occurs, but not why it occurs." The AMA Guides to the Evaluation of Disease and Injury Causation, cited by Dr. Burris were not offered or admitted into evidence. Dr. Burris testified that he believed Claimant sustained "minor trauma" which was insufficient to cause an injury. (Ex. E).

14. Dr. Burris was admitted as an expert in occupational medicine, and testified at hearing. He testified that Claimant's presentation, timing of reported symptoms, progression of symptoms and pain distribution were all consistent with an L5-S1 disc protrusion. Dr. Burris testified that he did not believe Claimant's injury was causally related to his work, because the is "insufficient evidence to associate disc herniations with minor trauma or ergonomic risk factors." Dr. Burris further testified that "up to 80 percent of the studies that have been done show that up to 80 percent of people have degenerative findings and are asymptomatic in [Claimant's] age group." Dr. Burris did not identify any specific study or studies upon which this testimony was based, and no such studies were offered or admitted into evidence.

15. Dr. Burris further testified that "Physical trauma is associated with approximately 1 percent of the appearance of disc herniations. It is much more likely that it's from a spontaneous event or from a natural progression of degenerative changes." Dr. Burris offered no cogent explanation for this opinion. He testified that over the past 25 years, that he has seen many injured workers who have had spinal herniations caused by exertional activity. Dr. Burris opinion that Claimant's disc injury is unrelated to the September 7, 2021 work incident is neither credible nor persuasive.

16. Claimant was not evaluated by a physiatrist, did not receive an LESI injection, and did not receive "rehab care" or physical therapy after November 30, 2021. Claimant testified that Insurer denied authorization for those treatments.

17. On January 18, 2022, Respondent's counsel sent a letter to Dr. Rizza asking if she agreed with Dr. Burris' opinion that Claimant's condition was unrelated to his September 7, 2021 workplace event. On February 18, 2022, Dr. Rizza responded "No," explaining "It is 75% medially probable that the mechanism described and a forceful push resulting in [illegible] lumbar hyperextension caused an acute disc herniation. The course of symptoms, onset, physical exam findings, and MRI imaging are all consistent w/acute S1 radiculopathy." (Ex. F).

18. At hearing, Respondents presented the testimony of KF[Redacted], one of Claimant's co-workers. Mr. KF[Redacted] is a relief driver employed by Employer who assisted Claimant with his route in Estes Park on September 7, 2021. Mr. KF[Redacted] did not ride in the same vehicle with Claimant and only assisted with Claimant's three stops in Estes Park that morning. Mr. KF[Redacted] testified he did not witness the incident Claimant asserts caused his injury, that Claimant did not complain of any injury to him, and he did not notice the Claimant exhibiting any signs of injury that day. After completing the Estes Park stops, Mr. KF[Redacted] did not see Claimant again that day. Mr. KF[Redacted] testified that he was the only person who transported product from the truck into the grocery store that morning, but that he was not constantly in Claimant's presence that morning.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a

matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WITHDRAWAL OF ADMISSION OF LIABILITY - COMPENSABILITY

When respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School Dist.*, W.C. No. 4-702-144 (ICAO June 5, 2012); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to § 8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hosp.*, W.C. No. 4-754-838-01 (ICAO Oct. 1, 2013). Respondents must, therefore, prove by a preponderance of the evidence that the Claimant did not suffer a compensable injury as defined under Colorado law. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

A compensable injury is one that arises out of the course and scope of employment with one's employer. § 8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). There must be a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics,* W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment

aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dept. Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the requisite causal connection exists is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Respondents have failed to establish by a preponderance of the evidence grounds for withdrawal of their General Admission of Liability. Claimant credibly testified that while performing his job duties, he felt a pop in his hamstring on September 7, 2021. Mr. KF[Redacted]'s testimony that he did not see the event occur or that he did not observe Claimant pushing a cart into the store does not contradict Claimant's testimony. Respondents have failed to establish by a preponderance of the evidence that the September 7, 2021 work incident did not occur as Claimant described.

Respondents have also failed to establish by a preponderance of the evidence that Claimant's lumbar disc herniation was not caused by the September 7, 2021 work incident. Both Dr. Rizza and Dr. Burris agree that Claimant's presentation, timing of reported symptoms, progression of symptoms, and pain distribution are consistent with an L5 disc protrusion. The ALJ credit's Dr. Rizza's opinion that Claimant's reported mechanism of injury is consistent with the injury sustained.

Dr. Burris' opinion that Claimant's injury was unrelated to the September 7, 2021 work incident, and more likely related to a "spontaneous event" or degenerative condition is neither credible nor persuasive. Dr. Burris relied primarily on unsupported statistics and an excerpt from an AMA text from which the context of the full statement could not be ascertained. No credible evidence was admitted from which the ALJ can assess the source from which Dr. Burris concluded that 80% of disc herniations are degenerative in nature or that only 1% of disc herniations are caused by "minor trauma." No credible evidence was admitted defining "minor trauma," or whether Claimant's injury fits into that purported category, beyond Dr. Burris' conclusory statements. Dr. Burris' admission that he has seen many patients with spinal herniations caused by exertional activities also contradicts his testimony. Nothing in Dr. Burris' testimony or written opinions or the other evidence presented established that it is more likely than not that Claimant's lumbar disc condition was not causally related to Claimant's September 7, 2021 work incident.

SPECIFIC MEDICAL TREATMENT

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals*

Office, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that Dr. Rizza's referral to Dr. Shoemaker for a lumbar epidural steroid injection is reasonably necessary to cure or relieve the effects of Claimant's industrial injury. As found, Dr. Rizza referred Claimant for a lumbar epidural steroid injection on September 29, 2021. The request was reviewed by Insurer's representatives and it was indicated that the treatment was approved as medically necessary. The evidence at hearing was insufficient to establish the reasons for which authorization was apparently denied. However, the basis for denial appears to be Dr. Burris' opinion that Claimant's injury was not work-related. The ALJ infers from Dr. Rizza's referral and the fact that it is undisputed that Claimant has a herniated lumbar disc, that the treatment is reasonably necessary to cure or relieve the effects of the injury. Claimant's request for approval of a referral to a physiatrist for the performance of a lumbar steroid injection is approved.

With respect to physical therapy, Dr. Rizza initially referred Claimant for six sessions of physical therapy on September 29, 2021. Claimant attended six sessions of physical therapy through Workwell from October 1, 2021 through October 18, 2021. Although Dr. Rizza indicated that additional physical therapy would be anticipated following performance of an LESI, the records do not indicate that a referral for additional physical therapy has been placed. Because no current request for authorization of physical therapy has been made, the ALJ lacks jurisdiction to authorize physical therapy at this time. *Potter v. Ground Services Co.*, W.C. No. 4-935-523-04 (ICAO Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAO May 4, 1995).

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their General Admission of Liability is denied.

2. Claimant's request for authorization of a referral to a physiatrist for an L5-S1 LESI is granted.

3. Claimant's request for authorization of physical therapy is not ripe for decision, and is therefore denied without prejudice.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 24, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on December 6, 2021, she suffered an injury arising out of and in the course and scope of her employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received for her back is reasonable and necessary to cure her from the effects of the work injury.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits.

4. If the claimant is eligible for TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant was responsible for the termination of her employment.

PROCEDURAL HISTORY

The current matter involves an alleged acute injury occurring on December 6, 2021. In October 2021, the claimant reported an occupational disease/cumulative trauma injury to the same employer. At hearing, the claimant agreed that the occupational disease/cumulative trauma claim is barred by the statute of limitations and she is not pursuing that claim. Therefore, the December 6, 2021 injury is the only injury at issue at this time.

FINDINGS OF FACT

1. The claimant was employed with the employer on a full time basis as a paraprofessional. The claimant's job duties included providing support needs for special education students.

2. The claimant testified that on December 6, 2021, she was assigned a special needs student "J". While walking with this student, the student tried to climb into her stroller. The claimant attempted to assist J into the stroller and felt spasms on the left side of her back. Following that incident, the claimant completed her work tasks for the day. The claimant also worked on December 7, 2021. However, the claimant was experiencing intense back pain and did not work December 8, 2021.

3. On December 8, 2021, the claimant sent an email to AB[Redacted], Principal at the school where the claimant worked. In that email, the claimant stated that her back was "out" and she planned to see a chiropractor the following day. The claimant also stated that it was possible that her back issues were due to her work with student J. When she was asked to clarify why the claimant believed her time with J was related to her back pain, the claimant replied that J's "needs were different" than her normally assigned student.

Back symptoms and treatment prior to December 6, 2021

4. The claimant has undergone chiropractic treatment for her back with chiropractor Eileen Macfarlane. In a medical record dated January 2, 2020, the claimant reported to Dr. Macfarlane that she felt stabbing pain in her ribs and back while lifting boxes. On January 27, 2020, the claimant reported neck pain, headaches, and a flu-like feeling. On February 8, 2020, the claimant reported to Dr. Macfarlane symptoms of neck pain. On February 15, 2020, the claimant reported neck pain, and pain in her upper thoracic spine. On February 22, 2020, the claimant reported low back pain. The claimant continued her treatment with Dr. Macfarlane throughout 2020 and 2021. At these visits the claimant reported waxing and waning neck and neck pain.

5. On April April 26, 2021, the claimant was seen via "telehealth" at Mountain Family Health Centers by Emily Borkovec, PA-C. On that date, the claimant reported that she had experienced low back pain "off and on for the past couple of years", however it has worsened over the last year. The claimant requested a letter from PA Borkovec regarding a "position change" at work. PA Borkovec identified the claimant's diagnosis as chronic bilateral low back pain without sciatica.

6. On August 23, 2020, the claimant reported to PA Borkovec that she had fluctuating, but persistent, low back pain. The claimant reported that she was picking up 50 pound toddlers at her workplace. PA Borkovec ordered lumbosacral x-rays and physical therapy.

7. On October 14, 2020, the claimant returned to PA Borkovec and reported worsening low back pain. At that time, PA Borkovec placed the claimant under work restrictions of "no lifting". The claimant testified that she understood that she was not to lift more than 10 pounds.

8. On October 18, 2021, x-rays of the claimant's lumbar spine showed multilevel degenerative facet arthrosis at the L3-L4 and L4-L5 levels, and most severe at the lumbosacral junction.

Treatment after December 6, 2021

9. On December 9, 2021, the claimant was seen by Dr. Macfarlane. At that time, the claimant reported a flare-up after she picked up a child at work. In a letter dated December 9, 2021, Dr. Macfarlane opined that the claimant reinjured her lumbar

sacral spine on December 6 and 7, 2021. Dr. Macfarlane recommended no lifting over 10 pounds.

10. On December 17, 2021, the claimant informed the employer that she was resigning from her position. The claimant testified that she resigned at that time because was not getting support from the employer.

11. On December 30, 2021, PA Borkovec took the claimant off of all work. In a letter of that same date, PA Borkovec opined that the claimant's pre-existing back condition was complicated by an injury on December 6, 2021.

12. In early January 2022, the claimant attempted to rescind her resignation. The employer declined to do so.

13. On January 19, 2022, the claimant was seen by Dr. Macfarlane. At that time, the claimant reported that her low back pain was seven out of ten after picking up boxes. On January 27, 2022, Dr. Macfarlane recorded that claimant alleged increased low back pain after driving and sitting at a computer for longer than an hour. On February 2, 2022 and February 15, 2022, the claimant reported to Dr. Macfarlane that her back pain was better. However, on February 21, 2022, the claimant reported to Dr. Macfarlane that her low back pain was five out of ten, after driving for several hours over the weekend.

14. The claimant testified that after the event of December 6, 2021, her pain was elevated from her baseline for roughly one month. The claimant also testified that she felt that she had returned to her baseline pain after 12 weeks of not lifting anything. The claimant denied reporting to Dr. Macfarlane that she had increased pain after driving or sitting at the computer.

15. On April 18, 2022, Dr. Albert Hattem performed a medical records review in this case. In his report, Dr. Hattem opined that the claimant has pre-existing lumbar spondylosis, which is not work related. Dr. Hattem explained that spondylosis is "a degenerative age related and genetically predisposed condition that typically causes waxing and waning low back pain that will worsen over time regardless of one's activities." Dr. Hattem noted that the claimant had regular treatment of her low back pain prior to December 6, 2021. Dr. Hattem further opined that the claimant's ongoing symptoms were a continuation of the ongoing waxing and waning back pain that she had been having for years.

16. The ALJ credits the medical records and the opinions of Dr. Hattem. The ALJ specifically credits Dr. Hattem's opinion that the claimant's ongoing symptoms were a continuation of the ongoing waxing and waning back pain that she had been having for years. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an acute injury to her low back on December 6, 2021. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not

that her pre-existing low back condition was aggravated or accelerated by her work activities on December 6, 2021.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. The occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the

employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Gotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, August 18, 2005). An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta, supra; Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988); *Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on December 6, 2021, she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her pre-existing low back condition was aggravated or accelerated by her work activities on December 6, 2021. As found, the medical records and the opinions of Dr. Hattem are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's claim for workers' compensation benefits related to a December 6, 2021 incident is denied and dismissed.

2. All remaining endorsed issues are dismissed as moot.

Dated June 24, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after

mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable left knee injury on June 24, 2021.

II. Whether Claimant proved by a preponderance of the evidence he is entitled to reasonably necessary and causally related medical benefits, including the left knee surgery he underwent on September 1, 2021.

III. Whether Claimant proved he is entitled to temporary total disability ("TTD") benefits from July 4, 2021, ongoing.

IV. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant has worked for Employer as a delivery driver for over six years. Claimant's job duties require unloading cases from a semi-truck and delivering the cases to various locations, which involves ascending and descending ramps and stairs.

2. Claimant's August 2017 medical records document a history of blood clots with left leg pain and swelling, as well as a lump and bruising behind his left knee. Claimant testified he was not experiencing any left knee issues or limitations leading up to the work incident.

3. Claimant sustained a work injury while making a delivery for Employer on June 24, 2021. Claimant testified at hearing that this particular delivery required making approximately four to five trips up and down 20 stairs carrying 200-300 pounds each trip. Claimant used a dolly to carry the product up the stairs. Claimant testified that on the last trip up the stairs he felt immense pressure on his left knee in the area of his knee cap. He testified it felt as though the muscle in that area was gone. Claimant testified he developed a bump in that same area. He further testified he had not previously felt a similar sensation in his knee nor did he previously have a bump on his knee in that area.

4. Claimant finished his delivery route for the day. Claimant testified the sensation in his knee worsened that evening. He reported the incident to Employer the following day and was referred to Concentra.

5. Claimant presented to David Kleberger, APN at Concentra on June 25, 2021. APN Kleberger documented, "…pt says yesterday his LT knee started to have a lot of pressure, no pain but a new bump right on the knee cap." (Cl. Ex. 4, p. 8). Claimant did not report experiencing a popping sensation at the time of the incident. APN Kleberger noted,

"[Claimant] denies any known workplace mechanism of injury including a trip, slip, fall, twist, trauma, hyperextension, hyperflexion or direct blow to his left knee. Says he thinks it might be from climbing stairs. Today says he has no left knee pain, but notice bump right over the patella." (Id.) Claimant reported a current pain level of 0/10 with pressure and stiffness. On examination of the left knee, APN Kleberger noted a callous over the patella. There was full range of motion with no tenderness, no crepitus, no clicking, no ecchymosis, and no instability. McMurray's test was negative. Claimant's gait was normal. X-rays of the left knee revealed no acute pathology or trauma. The radiologist noted findings of no joint effusion. APN Kleberger diagnosed Claimant with left knee pressure with no known work injury. He stated, "[b]ased on a careful exam of the patient, as well as the information obtained about their job duties and mechanism of injury, it does not appear that the presenting complaints arose out of their job duties in the course of the patient performing those duties." (Cl. Ex. 4, p. 11). APN Kleberger released Claimant to work full duty and discharged him from workers' compensation care. He advised Claimant to follow-up with his primary care physician.

6. Claimant testified he met with APN Kleberger for about five minutes. Claimant testified he advised APN Kleberger that he was moving a few hundred pounds of product up stairs and that he felt immense pressure on his knee when he got to the top of the stairs on his last trip. Claimant testified he had a bump on his left knee and that APN Kleberger felt the bump.

7. Claimant subsequently purchased a knee brace and returned to work. Claimant testified he attempted to work for four days but was unable to perform the work. Claimant testified he then contacted Insurer to attempt to schedule another evaluation with a workers' compensation provider but was denied. Claimant then made an appointment with his primary care physician.

8. On July 7, 2021 Claimant sought treatment with his primary care physician, Sara Buros, NP at West Physicians. Claimant reported that on June 24, 2021 he experienced an injury at work where he noticed pressure of the medial side of his knee and decreased strength. He reported experiencing some clicking and instability. On examination, NP Buros noted a positive medial McMurray test, cystic lesion over the anterior portion of the patellar tendon, mild tenderness to palpation over the medial patellar tendon and medial joint line, and decreased range of motion. NP Buros assessed Claimant with left knee pain. She referred Claimant for a left knee MRI.

9. Claimant underwent a left knee MRI on July 12, 2021. Frank Crnkovich, M.D. gave the following impression: "1. Menisci, cruciate ligaments, collateral ligaments, and chondral surfaces preserved. 2. Medial plica and some edematous change medial retinacular interface. Correlation with the patient's clinical exam for any signs and symptoms of medial plica syndrome suggested." (Cl. Ex. 6, pp. 28-29).

10. On July 15, 2021 Respondents filed a Notice of Contest.

11. On July 20, 2021 Claimant presented to Todd Wente, M.D. at Panorama Orthopedics & Spine Center for an orthopedic evaluation upon the referral of NP Buros. Claimant reported that his left knee symptoms began while lifting boxes up stairs and, at that time, he experienced immense pressure. Claimant reported that his left knee had since been clicking and locking with instability. On examination, Dr. Wente noted trace effusion and moderate to severe tenderness of the medial patella with rolling of medial infrapatellar plica. McMurray's test was negative. Dr. Wente reviewed Claimant's left knee x-rays and MRI, noting that the MRI revealed some edematous changes around a medial infrapatellar plica with no other significant internal derangement. He diagnosed Claimant with symptomatic left knee, medial infrapatellar plica.

12. Regarding treatment, Dr. Wente remarked,

> I had a long discussion with the patient today regarding his options. We discussed various non-operative treatment strategies ranging from various injections to physical therapy, to medications, etc. The patient at this point is a little unclear as to whether this represents a work-related injury or not. The pain certainly was brought about by work activities. I think we will leave that to him in terms of how he wants to manage it. I also did discuss arthroscopic intervention for a plica resection.
>
> I do believe that he is probably mostly symptomatic based on his exam today from the plica. We discussed that it is still possible to get this to calm down non-operatively. He is fairly confident he wants to move forward with the more definitive treatment, particularly in light of his very rigorous job demands. He is really unable at this point to do his job effectively and safely. We discussed arthroscopic intervention with a limited synovectomy. We discussed further assessment of the rest of the joint as well to confirm the MRI findings.
>
> (Cl. Ex. 6, p. 30).

13. Claimant elected to proceed with surgery for the synovial plica of his left knee. On September 1, 2021, Dr. Wente performed a left knee arthroscopy with limited synovectomy.[1]

14. Claimant developed calf pain and swelling post-operatively and was diagnosed with acute deep vein thrombosis, for which he underwent treatment.

15. Claimant continued to see Dr. Wente for follow-up visits and reported left knee stiffness and limited range of motion. On November 9, 2021, Dr. Wente noted Claimant's assessment as status post left knee patella chondromalacia, plica resection. He noted, "The more I am treating him, I think this is probably more of a patellofemoral problem particularly in light of the patella chondromalacia noted on his arthroscopy." (Cl. Ex. 7, p. 52). He recommended Claimant continue to undergo physical therapy.

[1] Dr. Wente's September 1, 2021 operative report was not offered as evidence.

16. On December 10, 2021, Mark S. Failinger, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Regarding the mechanism of injury, Dr. Failinger noted,

> He states he had a specific work event that occurred in late June 2021 while he was going up stairs using a two-wheeled dolly and was moving product. He was 12 to 15 steps up the stairs, and had already taken four or five loads up the stairs. On the last load, he states he was on the very last step at the top of the stairs, when he felt a 'pressure' and a popping that occurred on the inside of the knee. He states there was 'immense pressure,' and his muscle felt like it was 'deteriorating.'

(R. Ex. P, p. 1.)

17. Claimant reported to Dr. Failinger that he did not experience pain at the time of the incident. Claimant denied a prior history of left knee pain, injury, or treatment. Claimant reported he was not currently experiencing knee pain, but that the pain could reach 6/7-10 when going up and down stairs or hills. Dr. Failinger performed a physical examination and reviewed Claimant's medical records dating back to February 16, 2009. He did not have Dr. Wente's medical reports to review.

18. Dr. Failinger remarked that the mechanism of injury Claimant reported to him was different than that noted in APN Kleberger's report. Dr. Failinger concluded that, with no mechanism of injury, it was not medically probable a work injury occurred. Dr. Failinger noted that APN Kleberger specifically asked Claimant multiple questions to determine if any work injury did, or could have, occurred which would cause Claimant's symptoms, and that all questions were met with negative answers. He further noted that APN Kleberger found no positive findings on examination, with full knee range of motion and no tenderness. Dr. Failinger noted that, although Claimant reported pressure in his knee, no significant effusion was noted on APN Kleberger's examination, as would be expected if any actual pathology existed. Dr. Failinger opined there is no reasonable medical probability that the bump on Claimant's knee was work-related. He opined that the bump was likely due to a callus or pre-patellar bursitis, which does not occur unless there is repetitive kneeling onto the knee, or a direct blow to the knee. Dr. Failinger concluded that the imaging reports did not evidence any abnormalities except for possible evidence of medial plica. He opined there was "extremely low medical probability" any pathology was created in the June 24, 2021 work incident. Dr. Failinger explained that a plica is a developmental anatomical structure and not, by itself, a symptomatic nor pathological structure. He noted that, although it is rare and uncommon, plicas can became irritated, but that Claimant would have experienced immediate pain in such situation.

19. Regarding Claimant's left knee surgery, Dr. Failinger remarked,

> I do not have any follow-up clinic notes by the treating orthopedic surgeon, Dr. Wente. It is not known if Dr. Wente noted a specific and localized pain

> in the medial plica for which he determined that there was an inflamed plica as a reasonable diagnosis. It is unknown if the patient underwent any physical therapy or injections. Very few patients would require surgery for a medial plica syndrome, with the mainstay of treatment being first, relative rest, and physical therapy, as well as performing a possible cortisone injection. There are occasions when a plica syndrome exists, if diagnosed and corroborated by the physician examination, and the patient has ongoing pain for which surgery is performed. However, it would be uncommon for a plica syndrome to require surgery.

(R. Ex. P, p. 20).

20. Dr. Failinger ultimately opined that with no abnormalities found on June 25, 2021, and with no mechanism that would reasonably explain the possible occurrence of a work injury, it is not with reasonable medical probability that any work-related injury occurred on June 24, 2021.

21. Dr. Failinger testified at hearing on behalf of Respondents as a Level II accredited expert in orthopedic surgery. Dr. Failinger testified consistent with his IME report and continued to opine that Claimant did not sustain a work injury on June 24, 2021. Dr. Failinger explained that Claimant's MRI demonstrated a plica, which is a common vestigular remnant. He noted that there was no effusion indicating an acute injury. Dr. Failinger reiterated that the typical treatment for plica is conservative. However, he testified that if the pain is localized to the plica, per examination and injection, surgery may be reasonable. He testified that if Claimant underwent conservative treatment for six months and continued to experience issues, surgery might be considered. He explained that if the plica was indeed causing Claimant's issue, Claimant's condition would have quickly improved after surgery, which it did not. Dr. Failinger again opined that Claimant's plica was not work-related.

22. Claimant testified he remains on work restrictions as a result of the work injury and has not returned to work since on or about July 4, 2021.

23. Claimant earned $30.86/hour and was paid on a weekly basis. Claimant's wage records reflect that the number of hours Claimant worked per week varied. Claimant earned $2,213.90 for the pay period ending The pay period ending June 19, 2021. In the three months preceding the pay period ending June 19, 2021 (21 weeks – from pay period ending 1/30/2021 to 6/19/2021), Claimant earned a total of $47,343.94. Based on the wage records, a fair approximation of Claimant's AWW is $2,254.47.

24. Claimant's testimony is credible.

25. The ALJ finds the opinion of Dr. Wente, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinion of Dr. Failinger.

26. Claimant proved it is more probable than not he sustained a work injury that aggravated, accelerated or combined with a pre-existing condition, causing disability and the need for treatment.

27. Claimant proved it is more probable than not the left knee surgery performed by Dr. Wente was reasonable, necessary and causally related to his work injury, and that he is entitled to reasonable, necessary and causally related medical treatment for his left knee.

28. Claimant proved his industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Claimant is entitled to TTD benefits from July 4, 2021, ongoing.

29. Claimant's AWW is $2,271.84. This represents a fair approximation of Claimant's wage loss and diminished earning capacity based on his wage records.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the

testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Comm’n*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (ICAO, September 9, 2016). A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

As found, Claimant proved it is more probable than not he sustained a compensable work injury. While performing his job duties, Claimant experienced a sensation of immense pressure in his knee while moving a 200-300 pound load up multiple stairs, after doing so repeatedly. Dr. Wente opined that Claimant’s pain was caused by his work activities. Claimant’s work duties require going up and down multiple

stairs a day, handling hundreds of pounds of items. Claimant's left knee MRI demonstrated a medial plica with edematous changes. Symptomatic plica was found on Dr. Wente's physical examination. Dr. Wente subsequently also noted symptomatic patellofemoral chondromalacia. While August 2017 medical records indicate Claimant has a history of blood clots and a lump behind his left knee, there is no evidence Claimant was undergoing left knee treatment leading up to the work injury, or that he was experiencing similar symptoms he had subsequent to the work injury. Claimant credibly testified that leading up to the work injury he was not experiencing any left knee symptoms or limitations. Claimant was capable of performing physical work until the work injury. Subsequent to the work injury, Claimant was unable to perform his regular job duties and required medical treatment.

Dr. Failinger heavily relied on NP Kleberger's initial medical record in reaching his opinion that there was no mechanism of injury. NP Kleberger specifically noted Claimant denied any trip, slip, fall, twist, trauma, hyperextension, hyperflexion or direct blow, but did note that Claimant attributed his injury to climbing stairs at work. Claimant credibly testified he told NP Kleberger that he was moving a few hundred pounds of product up the stairs when the onset of symptoms occurred. Additionally, Dr. Failinger's analysis was limited as he did not review Dr. Wente's medical records. He specifically stated it was unknown to him if Dr. Wente noted specific and localized pain in the medial plica and if Claimant underwent any physical therapy or injections. The ALJ is persuaded Claimant's injury arose out of an employment risk and was precipitated by moving hundreds of pounds up and down multiple stairs. The onset of Claimant's symptoms was causally related to the performance of his work duties. The preponderant evidence establishes Claimant's work duties aggravated, accelerated or combined with his underlying asymptomatic condition, causing Claimant to become symptomatic, require medical treatment, and be placed on restrictions preventing Claimant from performing his regular job duties.

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant proved it is more probable than not he is entitled to reasonable, necessary and causally related treatment, including the left knee surgery performed by Dr. Wente. Dr. Wente initially opined that Claimant was likely mostly symptomatic from the plica based on his examination and MRI findings. Dr. Wente attempted conservative treatment in the form of injections prior to proceeding with surgery to relieve Claimant's symptoms. Dr. Wente subsequently also identified patellofemoral chondromalacia as a cause of Claimant's symptoms. While Dr. Failinger opined that it is uncommon to require surgery for medial plica syndrome, he acknowledged that surgery may be reasonable when the plica was identified as the source of pain and when conservative treatment failed. Here, Dr. Wente initially identified the plica as Claimant's source of pain, attempted

conservative treatment, and subsequently found it reasonable to proceed with surgery. The treatment Claimant received for the left knee, including the left knee surgery performed by Dr. Wente, was causally related to his work injury and reasonably necessary to cure or relieve the effects of the injury.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As found, Claimant proved he is entitled to TTD benefits from July 4, 2021, ongoing. As a result of Claimant's June 24, 2021 work injury, he was placed on work restrictions and was unable to perform his regular job duties. Claimant has not worked since July 4, 2021 as a result of the disability, resulting in actual wage loss to Claimant. As Claimant's industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss, Claimant has proven entitlement to TTD benefits.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

As found, an AWW of $2,254.47 represents a fair approximation of Claimant's wage loss and diminished earning capacity, based on his wage records.

ORDER

1. Claimant proved by a preponderance of the evidence that on June 24, 2021, he injured his left knee arising out of and in the course and scope of his employment with the Employer.

2. Claimant proved by a preponderance of the evidence that he is entitled to medical benefits, including the September 1, 2021 left knee surgery performed by Dr. Wente, that are reasonably necessary and causally related to his compensable, June 24, 2021 left knee injury.

3. Claimant is entitled to TTD from July 4, 2021, ongoing, until terminated by operation of law, subject to any applicable statutory offsets.

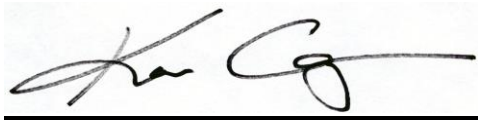
4. Claimant's AWW is $2,254.47.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 28, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable left knee injury on June 24, 2021.

II. Whether Claimant proved by a preponderance of the evidence he is entitled to reasonably necessary and causally related medical benefits, including the left knee surgery he underwent on September 1, 2021.

III. Whether Claimant proved he is entitled to temporary total disability ("TTD") benefits from July 4, 2021, ongoing.

IV. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant has worked for Employer as a delivery driver for over six years. Claimant's job duties require unloading cases from a semi-truck and delivering the cases to various locations, which involves ascending and descending ramps and stairs.

2. Claimant's August 2017 medical records document a history of blood clots with left leg pain and swelling, as well as a lump and bruising behind his left knee. Claimant testified he was not experiencing any left knee issues or limitations leading up to the work incident.

3. Claimant sustained a work injury while making a delivery for Employer on June 24, 2021. Claimant testified at hearing that this particular delivery required making approximately four to five trips up and down 20 stairs carrying 200-300 pounds each trip. Claimant used a dolly to carry the product up the stairs. Claimant testified that on the last trip up the stairs he felt immense pressure on his left knee in the area of his knee cap. He testified it felt as though the muscle in that area was gone. Claimant testified he developed a bump in that same area. He further testified he had not previously felt a similar sensation in his knee nor did he previously have a bump on his knee in that area.

4. Claimant finished his delivery route for the day. Claimant testified the sensation in his knee worsened that evening. He reported the incident to Employer the following day and was referred to Concentra.

5. Claimant presented to David Kleberger, APN at Concentra on June 25, 2021. APN Kleberger documented, "…pt says yesterday his LT knee started to have a lot of pressure, no pain but a new bump right on the knee cap." (Cl. Ex. 4, p. 8). Claimant did not report experiencing a popping sensation at the time of the incident. APN Kleberger noted,

"[Claimant] denies any known workplace mechanism of injury including a trip, slip, fall, twist, trauma, hyperextension, hyperflexion or direct blow to his left knee. Says he thinks it might be from climbing stairs. Today says he has no left knee pain, but notice bump right over the patella." (Id.) Claimant reported a current pain level of 0/10 with pressure and stiffness. On examination of the left knee, APN Kleberger noted a callous over the patella. There was full range of motion with no tenderness, no crepitus, no clicking, no ecchymosis, and no instability. McMurray's test was negative. Claimant's gait was normal. X-rays of the left knee revealed no acute pathology or trauma. The radiologist noted findings of no joint effusion. APN Kleberger diagnosed Claimant with left knee pressure with no known work injury. He stated, "[b]ased on a careful exam of the patient, as well as the information obtained about their job duties and mechanism of injury, it does not appear that the presenting complaints arose out of their job duties in the course of the patient performing those duties." (Cl. Ex. 4, p. 11). APN Kleberger released Claimant to work full duty and discharged him from workers' compensation care. He advised Claimant to follow-up with his primary care physician.

6. Claimant testified he met with APN Kleberger for about five minutes. Claimant testified he advised APN Kleberger that he was moving a few hundred pounds of product up stairs and that he felt immense pressure on his knee when he got to the top of the stairs on his last trip. Claimant testified he had a bump on his left knee and that APN Kleberger felt the bump.

7. Claimant subsequently purchased a knee brace and returned to work. Claimant testified he attempted to work for four days but was unable to perform the work. Claimant testified he then contacted Insurer to attempt to schedule another evaluation with a workers' compensation provider but was denied. Claimant then made an appointment with his primary care physician.

8. On July 7, 2021 Claimant sought treatment with his primary care physician, Sara Buros, NP at West Physicians. Claimant reported that on June 24, 2021 he experienced an injury at work where he noticed pressure of the medial side of his knee and decreased strength. He reported experiencing some clicking and instability. On examination, NP Buros noted a positive medial McMurray test, cystic lesion over the anterior portion of the patellar tendon, mild tenderness to palpation over the medial patellar tendon and medial joint line, and decreased range of motion. NP Buros assessed Claimant with left knee pain. She referred Claimant for a left knee MRI.

9. Claimant underwent a left knee MRI on July 12, 2021. Frank Crnkovich, M.D. gave the following impression: "1. Menisci, cruciate ligaments, collateral ligaments, and chondral surfaces preserved. 2. Medial plica and some edematous change medial retinacular interface. Correlation with the patient's clinical exam for any signs and symptoms of medial plica syndrome suggested." (Cl. Ex. 6, pp. 28-29).

10. On July 15, 2021 Respondents filed a Notice of Contest.

11. On July 20, 2021 Claimant presented to Todd Wente, M.D. at Panorama Orthopedics & Spine Center for an orthopedic evaluation upon the referral of NP Buros. Claimant reported that his left knee symptoms began while lifting boxes up stairs and, at that time, he experienced immense pressure. Claimant reported that his left knee had since been clicking and locking with instability. On examination, Dr. Wente noted trace effusion and moderate to severe tenderness of the medial patella with rolling of medial infrapatellar plica. McMurray's test was negative. Dr. Wente reviewed Claimant's left knee x-rays and MRI, noting that the MRI revealed some edematous changes around a medial infrapatellar plica with no other significant internal derangement. He diagnosed Claimant with symptomatic left knee, medial infrapatellar plica.

12. Regarding treatment, Dr. Wente remarked,

> I had a long discussion with the patient today regarding his options. We discussed various non-operative treatment strategies ranging from various injections to physical therapy, to medications, etc. The patient at this point is a little unclear as to whether this represents a work-related injury or not. The pain certainly was brought about by work activities. I think we will leave that to him in terms of how he wants to manage it. I also did discuss arthroscopic intervention for a plica resection.
>
> I do believe that he is probably mostly symptomatic based on his exam today from the plica. We discussed that it is still possible to get this to calm down non-operatively. He is fairly confident he wants to move forward with the more definitive treatment, particularly in light of his very rigorous job demands. He is really unable at this point to do his job effectively and safely. We discussed arthroscopic intervention with a limited synovectomy. We discussed further assessment of the rest of the joint as well to confirm the MRI findings.
>
> (Cl. Ex. 6, p. 30).

13. Claimant elected to proceed with surgery for the synovial plica of his left knee. On September 1, 2021, Dr. Wente performed a left knee arthroscopy with limited synovectomy.[1]

14. Claimant developed calf pain and swelling post-operatively and was diagnosed with acute deep vein thrombosis, for which he underwent treatment.

15. Claimant continued to see Dr. Wente for follow-up visits and reported left knee stiffness and limited range of motion. On November 9, 2021, Dr. Wente noted Claimant's assessment as status post left knee patella chondromalacia, plica resection. He noted, "The more I am treating him, I think this is probably more of a patellofemoral problem particularly in light of the patella chondromalacia noted on his arthroscopy." (Cl. Ex. 7, p. 52). He recommended Claimant continue to undergo physical therapy.

[1] Dr. Wente's September 1, 2021 operative report was not offered as evidence.

16. On December 10, 2021, Mark S. Failinger, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Regarding the mechanism of injury, Dr. Failinger noted,

> He states he had a specific work event that occurred in late June 2021 while he was going up stairs using a two-wheeled dolly and was moving product. He was 12 to 15 steps up the stairs, and had already taken four or five loads up the stairs. On the last load, he states he was on the very last step at the top of the stairs, when he felt a 'pressure' and a popping that occurred on the inside of the knee. He states there was 'immense pressure,' and his muscle felt like it was 'deteriorating.'

(R. Ex. P, p. 1.)

17. Claimant reported to Dr. Failinger that he did not experience pain at the time of the incident. Claimant denied a prior history of left knee pain, injury, or treatment. Claimant reported he was not currently experiencing knee pain, but that the pain could reach 6/7-10 when going up and down stairs or hills. Dr. Failinger performed a physical examination and reviewed Claimant's medical records dating back to February 16, 2009. He did not have Dr. Wente's medical reports to review.

18. Dr. Failinger remarked that the mechanism of injury Claimant reported to him was different than that noted in APN Kleberger's report. Dr. Failinger concluded that, with no mechanism of injury, it was not medically probable a work injury occurred. Dr. Failinger noted that APN Kleberger specifically asked Claimant multiple questions to determine if any work injury did, or could have, occurred which would cause Claimant's symptoms, and that all questions were met with negative answers. He further noted that APN Kleberger found no positive findings on examination, with full knee range of motion and no tenderness. Dr. Failinger noted that, although Claimant reported pressure in his knee, no significant effusion was noted on APN Kleberger's examination, as would be expected if any actual pathology existed. Dr. Failinger opined there is no reasonable medical probability that the bump on Claimant's knee was work-related. He opined that the bump was likely due to a callus or pre-patellar bursitis, which does not occur unless there is repetitive kneeling onto the knee, or a direct blow to the knee. Dr. Failinger concluded that the imaging reports did not evidence any abnormalities except for possible evidence of medial plica. He opined there was "extremely low medical probability" any pathology was created in the June 24, 2021 work incident. Dr. Failinger explained that a plica is a developmental anatomical structure and not, by itself, a symptomatic nor pathological structure. He noted that, although it is rare and uncommon, plicas can became irritated, but that Claimant would have experienced immediate pain in such situation.

19. Regarding Claimant's left knee surgery, Dr. Failinger remarked,

> I do not have any follow-up clinic notes by the treating orthopedic surgeon, Dr. Wente. It is not known if Dr. Wente noted a specific and localized pain

> in the medial plica for which he determined that there was an inflamed plica as a reasonable diagnosis. It is unknown if the patient underwent any physical therapy or injections. Very few patients would require surgery for a medial plica syndrome, with the mainstay of treatment being first, relative rest, and physical therapy, as well as performing a possible cortisone injection. There are occasions when a plica syndrome exists, if diagnosed and corroborated by the physician examination, and the patient has ongoing pain for which surgery is performed. However, it would be uncommon for a plica syndrome to require surgery.

(R. Ex. P, p. 20).

20. Dr. Failinger ultimately opined that with no abnormalities found on June 25, 2021, and with no mechanism that would reasonably explain the possible occurrence of a work injury, it is not with reasonable medical probability that any work-related injury occurred on June 24, 2021.

21. Dr. Failinger testified at hearing on behalf of Respondents as a Level II accredited expert in orthopedic surgery. Dr. Failinger testified consistent with his IME report and continued to opine that Claimant did not sustain a work injury on June 24, 2021. Dr. Failinger explained that Claimant's MRI demonstrated a plica, which is a common vestigular remnant. He noted that there was no effusion indicating an acute injury. Dr. Failinger reiterated that the typical treatment for plica is conservative. However, he testified that if the pain is localized to the plica, per examination and injection, surgery may be reasonable. He testified that if Claimant underwent conservative treatment for six months and continued to experience issues, surgery might be considered. He explained that if the plica was indeed causing Claimant's issue, Claimant's condition would have quickly improved after surgery, which it did not. Dr. Failinger again opined that Claimant's plica was not work-related.

22. Claimant testified he remains on work restrictions as a result of the work injury and has not returned to work since on or about July 4, 2021.

23. Claimant earned $30.86/hour and was paid on a weekly basis. Claimant's wage records reflect that the number of hours Claimant worked per week varied. Claimant earned $2,213.90 for the pay period ending The pay period ending June 19, 2021. In the three months preceding the pay period ending June 19, 2021 (21 weeks – from pay period ending 1/30/2021 to 6/19/2021), Claimant earned a total of $47,343.94. Based on the wage records, a fair approximation of Claimant's AWW is $2,254.47.

24. Claimant's testimony is credible.

25. The ALJ finds the opinion of Dr. Wente, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinion of Dr. Failinger.

26. Claimant proved it is more probable than not he sustained a work injury that aggravated, accelerated or combined with a pre-existing condition, causing disability and the need for treatment.

27. Claimant proved it is more probable than not the left knee surgery performed by Dr. Wente was reasonable, necessary and causally related to his work injury, and that he is entitled to reasonable, necessary and causally related medical treatment for his left knee.

28. Claimant proved his industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Claimant is entitled to TTD benefits from July 4, 2021, ongoing.

29. Claimant's AWW is $2,271.84. This represents a fair approximation of Claimant's wage loss and diminished earning capacity based on his wage records.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the

testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Comm’n*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (ICAO, September 9, 2016). A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

As found, Claimant proved it is more probable than not he sustained a compensable work injury. While performing his job duties, Claimant experienced a sensation of immense pressure in his knee while moving a 200-300 pound load up multiple stairs, after doing so repeatedly. Dr. Wente opined that Claimant’s pain was caused by his work activities. Claimant’s work duties require going up and down multiple

stairs a day, handling hundreds of pounds of items. Claimant's left knee MRI demonstrated a medial plica with edematous changes. Symptomatic plica was found on Dr. Wente's physical examination. Dr. Wente subsequently also noted symptomatic patellofemoral chondromalacia. While August 2017 medical records indicate Claimant has a history of blood clots and a lump behind his left knee, there is no evidence Claimant was undergoing left knee treatment leading up to the work injury, or that he was experiencing similar symptoms he had subsequent to the work injury. Claimant credibly testified that leading up to the work injury he was not experiencing any left knee symptoms or limitations. Claimant was capable of performing physical work until the work injury. Subsequent to the work injury, Claimant was unable to perform his regular job duties and required medical treatment.

Dr. Failinger heavily relied on NP Kleberger's initial medical record in reaching his opinion that there was no mechanism of injury. NP Kleberger specifically noted Claimant denied any trip, slip, fall, twist, trauma, hyperextension, hyperflexion or direct blow, but did note that Claimant attributed his injury to climbing stairs at work. Claimant credibly testified he told NP Kleberger that he was moving a few hundred pounds of product up the stairs when the onset of symptoms occurred. Additionally, Dr. Failinger's analysis was limited as he did not review Dr. Wente's medical records. He specifically stated it was unknown to him if Dr. Wente noted specific and localized pain in the medial plica and if Claimant underwent any physical therapy or injections. The ALJ is persuaded Claimant's injury arose out of an employment risk and was precipitated by moving hundreds of pounds up and down multiple stairs. The onset of Claimant's symptoms was causally related to the performance of his work duties. The preponderant evidence establishes Claimant's work duties aggravated, accelerated or combined with his underlying asymptomatic condition, causing Claimant to become symptomatic, require medical treatment, and be placed on restrictions preventing Claimant from performing his regular job duties.

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant proved it is more probable than not he is entitled to reasonable, necessary and causally related treatment, including the left knee surgery performed by Dr. Wente. Dr. Wente initially opined that Claimant was likely mostly symptomatic from the plica based on his examination and MRI findings. Dr. Wente attempted conservative treatment in the form of injections prior to proceeding with surgery to relieve Claimant's symptoms. Dr. Wente subsequently also identified patellofemoral chondromalacia as a cause of Claimant's symptoms. While Dr. Failinger opined that it is uncommon to require surgery for medial plica syndrome, he acknowledged that surgery may be reasonable when the plica was identified as the source of pain and when conservative treatment failed. Here, Dr. Wente initially identified the plica as Claimant's source of pain, attempted

conservative treatment, and subsequently found it reasonable to proceed with surgery. The treatment Claimant received for the left knee, including the left knee surgery performed by Dr. Wente, was causally related to his work injury and reasonably necessary to cure or relieve the effects of the injury.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As found, Claimant proved he is entitled to TTD benefits from July 4, 2021, ongoing. As a result of Claimant's June 24, 2021 work injury, he was placed on work restrictions and was unable to perform his regular job duties. Claimant has not worked since July 4, 2021 as a result of the disability, resulting in actual wage loss to Claimant. As Claimant's industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss, Claimant has proven entitlement to TTD benefits.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

As found, an AWW of $2,254.47 represents a fair approximation of Claimant's wage loss and diminished earning capacity, based on his wage records.

ORDER

1. Claimant proved by a preponderance of the evidence that on June 24, 2021, he injured his left knee arising out of and in the course and scope of his employment with the Employer.

2. Claimant proved by a preponderance of the evidence that he is entitled to medical benefits, including the September 1, 2021 left knee surgery performed by Dr. Wente, that are reasonably necessary and causally related to his compensable, June 24, 2021 left knee injury.

3. Claimant is entitled to TTD from July 4, 2021, ongoing, until terminated by operation of law, subject to any applicable statutory offsets.

4. Claimant's AWW is $2,254.47.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-181-109-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],
Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 9, 2022 and April 25, 2022, in Denver, Colorado. Both sessions of the hearing were recorded by Google Meets (reference: 3/9/22, Google Meets, beginning at 8:30 AM and ending at 12:10 PM. 4/25/22, beginning at 8:30 AM, and ending at 1:00 PM)

The Claimant was present in person, virtually, and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted],shall be referred to as the "Claimant." [Redacted], shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Claimant's post hearing brief (erroneously designated as "proposed findings of fact, conclusions of law and order) was filed on May 2, 2022. Respondents' answer brief was filed on May 9,

2022. No timely reply brief was filed and the matter was deemed submitted for decision on May 12, 2022.

ISSUES

The paramount issue to be decided concerns whether a work-related event of August 17, 2021 caused a compensable injury to the Claimant's right shoulder. If so, is the Claimant entitled to medical benefits and temporary total disability (TTD) benefits from August 18, 2022 through January 2, 2022?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The stipulations of the parties were approved and accepted by the ALJ, however, in light of the fact that the paramount issue of compensability is hereby being decided against compensability, resolution of these issues is moot.

2. The Claimant was employed by the Employer, a construction/home improvement company, as an installer/foreman. He began working for the Employer in February 2021. In his free time, the Claimant plays Frisbee golf, professionally. On March 19, 2021, the Claimant received his second waring of violation of company policy from his Employer. It was noted that he had arrived late and left early for assignments and that Claimant had stated that the job had been completed when it was not. The Claimant acknowledged these infractions when he signed the write-up on March 25, 2021 (Respondents'. Exhibit H, 1-5).

The Event

3. On August 17, 2021, the Claimant was assigned to complete a project at a home in Parker, Colorado. Tile needed to be reinstalled on a bath/shower unit. The day before, other crew members had prepped the tub to install the tiles and brought the Claimant the equipment he needed to perform the job. Installation of the tiles should have taken 20 minutes to half an hour. The tiles had to be retrieved from another site as a full box of tiles was not needed. Sufficient tiles were there for the Claimant.

4. The Claimant alleges that at around 10:30 AM, he was straddling a tub when he saw a tile fall out of the corner of his eye. He states that he reached backwards and caught the tile and then fell in the tub as he was facing the water well at the time that he saw the tile fall. There were no witnesses to this event, and the Claimant did not inform the homeowner that he had an injury. The Claimant picked up his tools, installed the tiles and left the job site shortly after 11:00 AM.

5. The Claimant contacted his Employer at 12:47 PM to report the injury. He was instructed to seek medical attention at the local urgent care. The Claimant was not seen at the first facility and drove six miles to the next facility off Parker Road in Aurora. The Claimant reported to TT[Redacted that he had tried to catch a falling tile and extend his right arm externally and that the tile weighed 20 pounds. On physically exam there was swelling, and deformities noted on the right shoulder. The following were listed as normal, that the neck was supple with good range of motion (ROM); there was no tenderness across the clavicle or the shoulder joint, the trapezius and deltoid were normal, the **biceps tendon and rotator cuff were normal, and that the arm, forearm, elbow hand and wrist were normal.** The radiologist noted on X-ray that there was no sign of fracture, but that there were degenerative changes and osteophytes and there was no acute abnormality. There is no mention in this report that the Claimant had been referred there by another facility or that he had fallen backwards. (Respondents' Exhibit D 2-6).

6. On August 19, 2021, the Claimant gave a recorded statement with TL[Redacted], of the insurance carrier. Claimant's height was recorded at 6 feet. Claimant informed TL[Redacted] that he had arrived at the job site at 9:00 AM and that the incident occurred at 10:30 AM. The Claimant described the job. He told TL[Redacted] that he was sitting on the edge of the tub near the water well when he noticed out of the corner of his eye a tile tipping over. He stated his arm was straight out a when he reached to catch the tile. TL[Redacted] clarified that he reached straight out. The Claimant informed TL[Redacted] that he caught the tile in a parallel manner. The Claimant confirmed that he reached out the length of the tub. The Claimant did not mention that he reached backwards or fell backwards into the tub but that he caught the tile (Respondents' Exhibit I 4-5). Later in the statement TL[Redacted] clarified that the Claimant was sitting on the edge of the tub towards the water well and that the tile weighed 13 pounds. Claimant confirmed this. TL[Redacted] specifically asked that while the Claimant was sitting on the edge of the tub out of his right (eye) that he noticed a tile tipping over and that he "reached out to catch it" and the Claimant stated "yes." The recorded statement continued:

> Q: And it was, you're sitting on the edge of the tile, so it's straight out from your body, you, you weren't reaching up or down, or anything?
>
> A: No, I reached straight out, straight, you know what I mean? And that, that's where I was, kind of, in an awkward position, that's where it...
> (Respondents' Exhibit I pg. 13-14).

7. Later that afternoon VO[Redacted] of the Employer went to the home to inspect. All the equipment was there including the wet saw. She took photographs of the tub. She noted that the tile was on the first level of the tub and had not fallen from a higher level. There was no damage to the tub. This inspection contradicts the Claimant's version of the event and calls his credibility into question.

Medical

8. The MRI (magnetic resonance imaging) showed that the A.C. joint was hypertrophic and had fluid. There was a septated cyst present. The rotator cuff had severe tendinopathy, but no sign of tear. There was grade 2 atrophy present in the subscapularis. The glenohumeral joint was normal but had mild synovitis. The right bicep was torn with tenosynovitis. The final diagnosis was bicep tear, severe rotator cuff tendinopathy, acromioclavicular joint tendinopathy with a septated cyst. (Respondents' Exhibit D. 31-32).

9. On August 25, 2021, the Claimant was seen by David Frank, M.D. On physical exam it was noted that the right bicep had a "Popeye sign". The Plan was a referral to Ortho One at Swedish Hospital and the Claimant was set for a return appointment on September 8, 2021. The Claimant failed to attend the appointment. (Respondents' Exhibit D-25-29).

10. The Claimant was seen by Steven Horan, M.D., an orthopedic physician on September 3, 2021. Under chief complaints, it was noted that the Claimant informed Dr. Horan that he had previously had a separated shoulder, but that this present pain was different than that. Dr. Horan noted the Claimant's medications and examined the patient. Dr. Horan's diagnosis was rotator cuff tendonitis, and bicep ruptured. Dr. Horan performed an injection and recommended that the Claimant return in six weeks if the Claimant needed another injection. Dr. Horan noted that the Claimant did not wish to proceed with a bicep repair surgery. The Claimant failed to keep the follow-up appointment (Claimant's Exhibit 1-2).

11. The Claimant applied for Unemployment benefits on November 1, 2021, and was awarded a weekly benefit of $600.00. He returned to employment with a new employer on January 3, 2022.

Appaji Panchangam, Ph.D., Biomechanical Engineering

12. The Respondents retained Dr. Panchangam of Rimkus Consulting to perform a biomechanical analysis of the incident. An exemplar tub was inspected by Scott J. Simmons, P.E., of Rimkus, on November 22, 2021. The tub was 59 inches long, 29 inches wide, and 20 inches high (**Photograph 3**). The inner dimensions of the tub were 43 inches in length, 24 inches in width, and 13 inches deep. An identical exemplar tile was inspected by Dr. Panchangam, on December 20, 2021. The tile was 12 inches by 24 inches and approximately 1/2 inch thick (**Photograph 4**). It was made of porcelain, and the weight of the exemplar tile was approximately 9 pounds.

13. Dr Panchangam reviewed the medical records in order to obtain the vital statistics and diagnosis of the injury and review the history. He reviewed the anatomy

of the shoulder and biceps and the reported mechanism of injury. He noted that the tears present would have to be caused by forced external rotation of the right arm and elbow. The force needed was a 90-degree flexion of the elbow. He concluded that the injury sustained by the Claimant is not consistent with the mechanism of injury taking into consideration the Claimant's height, the width of the tub, the weight of the tile, and the described mechanism of injury. He further elaborated on the issue of the bicep tendon tear and that given the Claimant's base strength and weight of the tile, the load on the arm. He noted the photos of the tub in question and generated several diagrams depicting the injury. His conclusion was that the Claimant's reported injury did not correlate with the medical findings and that the Claimant did not incur an injury on the date in question. (Respondent Exhibit E).

Claimant's Independent Medical Exam (IME) BY Jack Rook, M.D.

14. The Claimant underwent an IME with Dr. Rook on February 10, 2021. Dr. Rook noted that the Claimant incurred an acute injury on August 17, 2021. Dr. Rook's review did not include a review the Claimant's recorded statements. Such a review would have been critical for Dr. Rook to appreciate the mechanism of injury. Dr. Rook noted that the tile weighed 18-20 pounds. This contradicts the Claimant's estimate of 13 pounds and Dr. Panchangam's verified weight of nine pounds. Dr. Rook noted that the Claimant caught the tile while straddling the tub and that the weight of the tile forced him to fall backwards and that the Claimant landed on his back, and stayed on his back for several minutes due to the shoulder pain. Dr. Rook then repeated the histories in the medical records. In reviewing Dr. Horan's report, he noted that the Claimant denied having had prior shoulder separations. He took note that the claim was presently denied. He did not note that the Claimant was presently working. He noted that the Claimant is a professional frisbee golf player. Dr. Rook concluded that there was no prior injury to the shoulder in part due to his playing Frisbee golf. Dr. Rook concluded that the mechanism of injury was severe, and that the Claimant had no other explanation for his injury as there was no history of prior injury. Dr. Rook concluded that this was a new and acute injury (Claimant Exhibit 4). Dr. Rook's conclusions were based, in part, on the erroneous misconception that the Claimant had no prior shoulder injuries. This misconception undermines Dr. Rook's ultimate conclusion supporting a compensable industrial injury.

Respondents' IME by Lloyd Thurston, M.D.

15. Respondents requested claimant to undergo an IME with Dr. Thurston on February 3, 2022. Dr. Thurston reviewed the medical chart, recorded statements of both the claimant and VO[Redacted]. He also reviewed the photographs of the tub in question, and the report of Dr. Panchangam. He took a medical history from the Claimant as well as social and Employment history. Noting that the Claimant was now working full time for a new employer. He did not note that the Claimant was a

professional Frisbee golf player. He reviewed the X-Ray, and MRI. He performed a physical exam and continued taking a history. He noted at times that the Claimant was very accurate on his history, but at other times appeared vague, such as concerning the weight of the tile.

16. The Claimant reported to Dr Thurston that he arrived at the work site approximately 10:00 AM. He then set up for the job and reported that the injury occurred at 11:00 AM and that he called his Employer 15-20 minutes later. The Claimant informed Dr. Thurston that he had to go to the Employer's shop first to pick up materials and that he left the shop prior to arriving at the job site.

17. Dr. Thurston noted that the Claimant was sitting on the side of the bathtub and the work was at umbilical height (or below), no reaching "up." Dr. Thurston was of the opinion that the described mechanism of injury is very unlikely to cause biceps tendon tear or subscapularis partial tendon tear because the Claimant was not reaching above shoulder height, the distance the tile would have tipped/fallen was likely 10-12 inches, the tiles would have been somewhat below shoulder height, and the actual weight of the tiles was less than half the weight he told the Dr. Rook (9 pounds versus 20 pounds).

18. Dr. Thurston noted that the Claimant informed him that he had to pick up supplies and set up for the job. The other information provided, however, indicated that the materials were already there and that the prep had been done the day before. Dr. Thurston, in reviewing the initial medical report, noted that the Popeye sign was not present at the time of that exam. In his examiners note, Dr. Thurston noted:

> Examiner's Note: This is 6 days after the injury and with atrophy visible at this time it is my medical opinion this injury was more than one week old. I have no way of knowing if this partial subscapularis tendon tear was causing [Claimant]any symptoms. Asymptomatic rotator cuff tears are very common in [Claimant] age group. The subscapularis partial tear was likely chronic, asymptomatic, and pre-existing.

19. Dr. Thurston then went on to note several other inconsistencies in the Claimant's history on the day in question and noted that the ring doorbell showed the Claimant at the front door of the house at approximately 10:00 AM and that this differed from what the Claimant told TL[Redacted] about arriving at 9:00 AM and other issues. The Claimant told Dr. Thurston that Dr. Horan had recommended to him a complete shoulder replacement surgery, and Dr. Thurston noted there was no mention of this in Dr. Horne's report. This statement of the Claimant seriously undermines his credibility. Dr. Thurston concluded that there was a prior injury to the shoulder and that findings on the MRI were present prior to the injury and the date of the MRI. He noted that the bicep tear was not present on initial exam and that it more than likely occurred after the August 17th date of injury. Dr, Thurston explained that the findings on the MRI would

not be uncommon for the Claimant to have been asymptomatic (Respondents' Exhibit G).

Dr. Rook

20. Dr. Rook reviewed the above reports and disagreed with both conclusions. He stated that neither Dr. Panchangam nor Dr. Thurston had performed a causation analysis, however, based on Dr. Rook's reliance of the Claimant's erroneous history and Dr. Rook's misconception of the facts, the ALJ finds Dr. Rook's ultimate conclusions lacking in credibility.

Analysis of the Evidence

21. Claimant and Dr. Rook specifically deny/reject the proposition that the event of August 17, 2021 was an aggravation of a pre-existing condition. Claimant denies pre-existing issues and specifically testified that Dr. Horan was incorrect in noting he had prior shoulder separations. Dr. Rook went to great length in his report there was no prior injury and he was of the opinion that the findings on MRI were of an acute injury. Both the Claimant and Dr. Rook over-state the weight of the tile. It was not until the Claimant saw Dr. Rook did he mention that he was straddling the tub and that he fell backwards landing on his back. The Claimant had just seen Dr. Thurston the week before and did not make this assertion. He also did not inform TL[Redacted], TT[Redacted], Dr. Frank or Dr. Horan of this alleged mechanism of injury. Dr. Panchangam thoroughly explained even with this new mechanism of injury that the biomechanical forces are not present to support the injuries allegedly sustained by the Claimant. Dr. Thurston is of the opinion that given the findings on both diagnostics and the initial physical exam, that the Claimant had pre-exiting shoulder pathology and that the biceps tear was not incurred until after the injury. He also was of the opinion that given the multiple inconsistences in the Claimant's history that the Claimant was not credible a historian and that the injury was not work related. The Claimant is not credible in his reporting of the injury and description of the injury. This fact fails to support the compensability of the alleged event of Augustv17, 2021.

22. It is undisputed fact that on both X-Ray and MRI, there are findings of degenerative changes and pre-existing changes to the shoulder. Claimant had a prior history of not communicating properly with the Employer and exhibited those same behaviors in the reporting of this alleged incident.

23. Dr. Rook's opinion that neither Dr. Panchangam nor Thurston performed a causation analysis is incorrect. Dr. Panchangam, while he did not interview the Claimant directly reviewed the Claimant's recorded statement and that of VO[Redacted]. Dr. Rook did not review these statements even though these had been provided to the Claimant. Dr. Panchangam noted the Claimant's height and weight as a vital statistic in performing his calculations. He also reviewed the medical records to obtain the diagnosis and obtain the history of the mechanism of injury. He also used a version of the AMA Guides to the

Evaluation of Permanent Impairment, 3rd Ed., Rev. in formulating his report. Essentially, he testified that his report is a causation analysis.

24. Dr. Thurston also performed a causation analysis in his report. He reviewed the medical records and compared the initial report to the MRI and the second office visit and concluded thee bi-ceps rupture was not present on the alleged date of injury. He examined and interviewed the Claimant and reviewed all the various materials in coming to his conclusions. He also disagreed with Dr. Rook that he did not perform a causation analysis.

25. Dr. Rook's causation analysis is flawed. First, in his report he noted that the tile weighed 18-20 pounds even though the Claimant admitted that this was incorrect. Even after reading Dr. Panchangam' s report which showed the tile in question weighed 9 pounds, the Claimant testified that the tile weighed 13 pounds and used this during testimony. Dr. Rook also expressed the opinion that the MRI showed an acute finding of injury despite both the X-Ray taken the day of the incident and the MRI showing degenerative and pre-existing conditions within the shoulder. Dr. Rook testified that the Claimant had to reach several feet for the tile. The tub is 29 inches in width. Dr. Rook's criticism of the Drs. Panchangam and Dr. Thurston that they did not address causation is refuted. Dr. Pangenome explained that the basis of his report is to determine causation and Dr. Thurston, a Level II provider, reviewed the medical records and interviewed the Claimant and addressed the issue of the bicep tear.

26. Dr. Rook also accepted the Claimant's erroneous history in opining that the Claimant had no prior issues with the shoulder. Dr. Rook's explanation for the Claimant not having a prior shoulder injury was that Dr. Horan's notation of the Claimant having a prior separated shoulder was a "mistake". He also stated that the Claimant's ability to play Frisbee golf showed he had no prior issues. As Dr. Thurston explained in his testimony, Dr. Horan recorded that in his note that it was what the Claimant had told him. This is not a typo or misstatement of age; this is clearly the recording of a prior injury which is a standard question for a physician to ask of a new patient. Both the Claimant's testimony and Dr. Rook's opinion that this did not occur is not credible. Dr. Thurston explained in his analysis of the MRI, the cyst that is present is a clear sign of a shoulder separation and was it was caused by a prior shoulder separation. Dr. Rook does not explain these prior conditions.

27. The ALJ infers and finds that the Claimant tends to forget and exaggerate facts in his history. By increasing the weight of the tile and informing Dr. Rook that Dr. Thurston that Dr. Horan had recommended a complete shoulder replacement are compelling examples of this. Dr. Rook's opinions are based on the Claimant's inaccurate history.

28. The Claimant stated that he does not go to the doctor, and he has a high pain tolerance. Yet in his testimony, he admitted to two prior worker's compensation

claims, bi-lateral knee replacement and hip replacement. In his recorded statement he stated he that he had great health insurance and he also informed. TL[Redacted] in the recorded statement that when he was at the Urgent Care for the first visit, they wanted him to go see his regular doctor (Respondents' Exhibit I-9).

29. The Claimant is not credible on several facts for this claim, and thus Dr. Rook in supporting these assertions is also not credible. First, the weight of the tile. Claimant informed TT[Redacted], that the tile weighed 18-20 pounds. Dr. Rook noted this in his report. Claimant then changed the weight to 13 pounds when speaking with TL[Redacted]. VO[Redacted] reported that the tile weighed between 5-10 pounds and Dr. Panchangam' s testing revealed that the tile weighs 9 pounds. After seeing this result, Dr. Rook testified the tile weighed 13 pounds. This is not the case. While the size of the tile is not in dispute the weight is clearly less than what Dr. Rook relied upon for his conclusions.

30. Next, the Claimant's positioning in the tub is fraught with inconsistencies. The Claimant did not report straddling the tub until he saw Dr. Rook. Dr. Rook testified that the Claimant had to reach "several feet" behind him to catch the tile. If the Claimant was straddling the tub as Dr. Rook notes, this would place the Claimant's right arm and shoulder inside the tub thus decreasing the length of the width of the tub he would have to reach to catch the tile. Next, the Claimant has consistently stated that he saw the tile fall out of the coroner of his eye, (to his right), and then reached straight out to catch it. If he had to reach backwards to catch the tile as Dr. Rook testified, the tile *would have behind him and difficult to see if he was* forward as he is now postulating. As Dr. Thurston noted, the initial urgent care report not only does not record this alleged mechanism of injury, but there was no sign of injury to the Claimant's arm, neck back or head had he had fallen backwards. Dr. Panchangam demonstrated that even with this new reported mechanism the rotations and abductions of the elbow and shoulder are still not present to support the findings on MRI.

31. The Claimant's description of his exact duties for the day is inconsistent. VO[Redacted] credibly testified that the prep had been done the night before and that she had to retrieve the three tiles from a different client for the Claimant to replace the tiles. The simple application of the epoxy in order for the tile to stay in place once mounted would have to have been done the night before. Further, the Claimant informed TL[Redacted] that all the materials and tools were present when he arrived at the job site. This differs from what he informed Dr. Thurston and to what he testified. Dr. Thurston is correct in his report that the Claimant has multiple inconsistencies in his reporting's of the events leading up to and after the alleged event.

32. There is also the issue of the gap in time when the Claimant left the job site and when he was finally seen at Urgent Care. The Claimant left at approximately 11 AM. He contacted VO[Redacted] at 12:47 PM. His vital signs were taken at the Urgent Care at 3:30 PM. There is no mention of the Claimant having been seen at a prior facility. There is no explanation for the time gap in between the alleged injury 10:30-11 AM and the

Claimant's reporting of the alleged injury. The Employer had previously disciplined the Claimant for not being truthful as to his whereabouts, time of arriving at jobs and what had been performed. The Claimant's lack of time explanation and changing of what happen do not support his or Dr. Rooks assertions of what occurred on the alleged date of injury.

33. The Claimant denied that Dr. Frank set a third appointment for him. It is mentioned twice in the narrative report and is on the M-164. The Claimant also asserts that he did not inform Dr. Horan of a prior shoulder separation and that he was only to return to Dr. Horan if the injection worked. This is not what is stated in the report and the only mention of surgery was that the Claimant was not interested in bicep surgery. As Dr. Thurston noted in his report and testified to, the Claimant informed him that Dr. Horan recommended a shoulder replacement. This is not mentioned in Dr. Horan's report.

34. The recorded statement is the best evidence of what the mechanism of injury was at the time. It was only two-days after the alleged injury and the Claimant confirmed what was said on each occasion. The Claimant consistently stated he reached out with his arm and caught the tile. He never mentioned to TL[Redacted] of falling backwards or having to reach backwards. Dr. Panchangam was credible in his testimony in describing the flexion and abduction in both the described mechanism. Dr. Panchangam's conclusion is logically based in hat the forces are not present to cause injury as we have presently. He demonstrated the various angles and forces needed to cause the injuries found and concluded that neither mechanism coupled with the tile in question would generate the force needed to cause the structural damage found on the MRI.

35. Dr. Panchangam thoroughly explained that given that the tile was positioned on the edge of the tub the Claimant would only catch half the weight of the tile. The tub is simply not big enough for the Claimant to catch the full weight of the tile as Dr. Rook opines. Also given the Claimant's height of 5-11 to six feet, the elbow flexion and force are not present to sustain the type of injury, Dr. Panchangam also noted that the flexion/abduction motion of throwing a Frisbee would put wear and tear on a shoulder.

36. Dr. Thurston in his report and his testimony explained the multiple degenerative findings on X-Ray and exam. The osteophytes are an arthritic condition which was present well before the alleged date of injury. Dr. Thurston noted that the septated cyst forms over time, is not an acute injury and is a sign of prior shoulder operations. The tendinopathy represents micro tears from overuse and the joint deteriorates over time. The same applies to the arthropathy that is present on MRI. This is an arthritic condition which again develops over time. Dr. Thurston explained why Dr. Rook is incorrect that this was an acute injury.

37. Taken as a whole, there are too many inconsistencies in the Claimant's prior history, the mechanism of his injury, his whereabouts, activities, and what he actually did nor did not do on the date of injury. Dr. Thurston noted many of these inconsistences

in his reports including the mechanism of injury and the Claimant's reporting of the injury. He also noted the degenerative changes and the lack of physical finding on exam of the bicep tear initially. Dr. Panchangam is credible in his report and in his testimony that the force loads are not present in this claim to support the diagnosis. This is given both mechanisms of injury, the size and weight of the tile, Claimants height, and the size of the tub. Dr. Rook's report and in his testimony is wrong that this is an acute injury with no sign of pre-existing condition. The X-Ray and MRI simply do not support these conclusions. Claimant had a history with the Employer of miscommunication and not accurately reporting events. Given the Claimant's age, recreational activities and other factors, the Claimant has failed to prove a compensable event.

Ultimate Findings

38.. Based on the accuracy of the facts of the event relied upon by Dr. Pangangam and Dr. Thurston, the ALJ finds their ultimate conclusions more credible that Dr. Rook's ultimate conclusions, and Dr. Rook's ultimate conclusions do not support a compensable event nor do they support a compensable aggravation of a pre-existing condition.

39. Between conflicting histories and medical opinions, the ALJ makes a rational decision to accept the ultimate opinions of Dr. Pangangam and Dr. Thurston, and to reject the ultimate opinion of Dr. Rook.

40. The Claimant has failed to prove, by preponderant evidence, that he sustained a compensable injury or a compensable aggravation of a pre-existing condition on August 17, 2021, as alleged.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo.

App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Sec. 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of ALJ, *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the record. As found, based on the accuracy of the facts of the event relied upon by Dr. Pangangam and Dr. Thurston, the ALJ finds their ultimate conclusions more credible that Dr. Rook's ultimate conclusions, and Dr. Rook's ultimate conclusions do not support a compensable event nor do they support a compensable aggravation of a pre-existing condition.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of ALJ, *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the record. As found, between conflicting histories and medical opinions, the ALJ made a rational decision to accept the ultimate opinions of Dr. Pangangam and Dr. Thurston, and to reject the ultimate opinion of Dr. Rook. Based on the accepted medical opinions and the rejection of Dr. Rook's ultimate opinion, as well as the rejection of THE Claimant's version of the event of August 17, 2021, a compensable event or a compensable aggravation of a pre-existing is not supported by the evidence.

Compensability

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984), For an injury to be

compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Indus. Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." Compensable injury is one which requires medical treatment or causes a disability. It is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989). As found, the Claimant failed to prove, by preponderant evidence, that he sustained a compensable injury or a compensable aggravation of a pre-existing condition on August 17, 2021, as alleged.

Burden of Proof

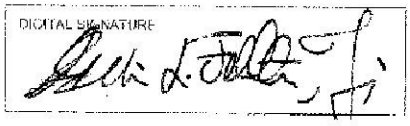
d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1). As found, the Claimant failed to sustain his burden of proof on compensability, thus, a determination of the other issues is moot.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this 30th day of June 2022.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Respondent prove it properly terminated TTD benefits effective January 24, 2022 because Claimant failed to begin modified duty approved by his ATP?

- Did Respondent prove TPD benefits should be terminated on March 15, 2022 because Claimant was responsible for termination of his employment?

- Did Claimant prove TTD benefits be reinstated at any time on or after January 24, 2022?

- Did Respondent prove Claimant's nonwork-related cardiac condition is an efficient intervening cause sufficient to terminate Claimant's eligibility for temporary disability benefits?

FINDINGS OF FACT

1. Claimant worked for Employer as an overnight grocery stocker. He suffered a compensable injury to his right shoulder on November 15, 2020. The claim was initially denied but was later found compensable in a final order dated October 25, 2021. The parties stipulated to an average weekly wage ("AWW") of $867.44.

2. Claimant performed modified light duty for approximately 10 weeks after the accident, primarily cleaning COVID-19 "hot spots." On February 4, 2021, Employer stopped offering light duty because the claim was denied. The assistant store manager, [Redacted, hereinafter Mr. C], advised Claimant that Employer would only provide modified duty for work-related injuries. Because Employer determined the injury was not work-related, Claimant would "need to be 100%" before he could work. Mr. C credibly testified Claimant was not terminated but was put on an unpaid medical leave of absence.

3. After the claim was found compensable, Respondent filed a General Admission of Liability ("GAL") admitting for TTD benefits commencing February 4, 2021.

4. In November 2021, Claimant's ATP, Dr. Hanson, recommended right shoulder surgery. The surgery was authorized and scheduled for January 28, 2022. However, a cardiac condition was discovered during preoperative workup, which prompted Dr. Hanson to postpone the surgery pending clearance from a cardiologist. Claimant underwent quadruple bypass surgery on April 26, 2022. Claimant's cardiac surgeon estimated it would take Claimant eight to 12 weeks to recover from that surgery.

5. On December 14, 2021, Respondent's adjuster wrote to Dr. Hanson about a modified duty position Employer had available for Claimant. A copy of the letter to Dr. Hanson was simultaneously sent to Claimant's counsel. The modified job consisted primarily of "pacing," which involved walking the store greeting customers, answering

customer questions, and escorting customers to merchandise within the store. The work primarily involved standing and walking and required minimal, if any, use of the right arm. Dr. Hanson approved the job on January 5, 2022.

6. On January 13, 2022, Respondent mailed Claimant a written offer of modified duty. At hearing, Claimant confirmed the mailing address used by Respondent is correct. The job offer was simultaneously mailed to Claimant's attorney. The job description and Dr. Hanson's written approval were included with the offer letter. Claimant was offered 40 hours per week, starting on January 24, 2022. He was to be paid $19.16 per hour.

7. Claimant would have earned $766.40 per week performing the modified job, which is less than the admitted AWW of $867.44. Therefore, Respondent would have owed TPD even if Claimant accepted the modified duty ($867.44 - $766.40 = $101.04 x 2/3 = $67.36).

8. Claimant did not report to work on January 24, 2022, or any day thereafter.

9. On January 24, 2022, Respondent filed an amended GAL stating "TTD is being terminated as of 01/23/22 per the attached Rule 6 letter." The GAL was mailed to Claimant and Claimant's attorney.

10. Respondent filed a second amended GAL on March 2, 2022, admitting for TPD benefits commencing January 24, 2022. The GAL states, "TTD is being terminated as of 01/23/22 per the attached Rule 6 letter. On light duty he can only work 40 hours so TPD might be owed." The amended GAL was mailed to Claimant and Claimant's attorney.

11. As of the hearing date, Respondent was still paying TPD based on the March 2, 2022 GAL.

12. Claimant conceded he knew about modified job offer in January 2022. He testified he did not respond or accept the offer because he "didn't think it was valid until I got the surgery and the therapy and the rehab." Claimant testified he disagreed with Dr. Hanson's decision to allow him to return to work "before I had the surgery on my shoulder."

13. Claimant conveyed his disagreement to Dr. Hanson and Dr. Hanson's staff. On March 3, 2022, Dr. Hanson discharged Claimant from his care "effective immediately." Dr. Hanson stated, "My professional opinion, as your treating workmen's compensation orthopedic physician, is the decisions I have made regarding your employment capability and future treatment are valid and will not be changed. Apparently, the medical care decisions have not met with your satisfaction. Also, multiple staff members of our clinic have felt harassed and unable to respond to your demand. Therefore, Hanson Clinic feels strongly that there is no longer a viable doctor-patient relationship in which to continue providing medical care."

14. Despite discharging Claimant from his practice, Dr. Hanson did not amend or rescind his approval of the modified job.

15. Respondent proved Claimant's TTD benefits were properly terminated effective January 24, 2022 because Claimant failed to begin modified employment. Respondent satisfied the statutory prerequisites for termination of TTD benefits under § 8-42-105(3)(d)(I). The offer was sent to Claimant's correct mailing address and to his attorney of record. Claimant conceded he knew of the offer but chose not to accept it because he disagreed with Dr. Hanson's assessment and did not believe he could perform the work. However, the ATP's determination regarding the suitability of modified work is dispositive, notwithstanding a claimant's own contrary self-assessment of their work capacity. The work required minimal to no use of Claimant's injured right shoulder, and was reasonably available to Claimant under an objective standard.

16. Employer required Claimant periodically to submit documentation to verify his ongoing disability while he was on leave. On February 26, 2022, Employer sent Claimant a letter asking him to complete a medical information form and obtain an updated certification from his doctor. Claimant was instructed to return the completed forms no later than March 12, 2022. If he did not do so, "the Company will reevaluate your employment status in light of the information that is available to it, which may result in a change in your status, and potentially the termination of your employment."

17. Claimant did not return the requested documents to Employer. He testified he received the February 26, 2022 letter, but he took no action. Claimant testified he was unsure who could complete the physician certification portion of the form, because Dr. Hanson had discharged him. Claimant did not contact Employer to discuss the matter.

18. Mr. C credibly testified about multiple unsuccessful attempts to reach Claimant by telephone, email, regular mail, and certified mail. Mr. C credibly testified he would have worked with Claimant had he requested additional time to complete the paperwork. Claimant conceded he knew Employer "was trying to get ahold of me" but he did not respond. Claimant conceded he disregarded voicemails from Mr. C and another store employee regarding his status.

19. Employer terminated Claimant on March 12, 2022. The letter stated, "You have been absent without leave for 40 days as of today. You have failed to respond to earlier letters requesting that you contact your Store Manager. [Y]our employment with King Soopers is being terminated due to your absence without leave."

20. Respondent proved Claimant was responsible for termination of his employment on March 12, 2022.

21. Claimant proved no material change in his injury-related condition or other relevant circumstances on or after January 24, 2022 that would support reinstatement of TTD.

22. Respondent filed a Petition to terminate Claimant's TPD benefits effective March 15, 2022. The Petition stated,

> Claimant has been absent without leave for 40 days as of March 9, 2022. Respondent offered claimant a modified job approved by his treating

> physician pursuant to Rule 6-1 (A) . . . but claimant did not return to work. Claimant has never contacted respondent to discuss his modified job. Claimant is therefore responsible for his termination and resulting wage loss, and his temporary disability benefits should be terminated.

23. Claimant timely objected to the Petition and stated,

> I have been awaiting authorization for my right shoulder surgery. During the mandatory pre-op appointment, I was informed that I had a severe blockage in my heart that will not allow me to safely proceed with the shoulder surgery. Obviously, my surgeon will not operate given my compromised cardiac problem. I am therefore scheduled for heart surgery. I have never refused nor been offered modified employment I was capable of doing.

24. Respondent failed to prove Claimant's TPD benefits should be terminated because of he was responsible for termination of employment. Claimant has been continuously disabled from his regular job since the date of injury. The only modified work offered by Employer paid less than his pre-injury AWW. Claimant would have suffered a wage loss of $101.04 per week irrespective of his termination.

25. Respondent failed to prove Claimant's nonwork-related cardiac issues are an intervening cause with respect to temporary disability benefits. Claimant was disabled by the work injury before he developed the cardiac issues. There is insufficient persuasive evidence to prove his disability would have otherwise resolved by any specific date had he undergone the shoulder surgery as originally scheduled. Moreover, there is no persuasive evidence that Claimant had any control over the postponement of his shoulder surgery or that he has delayed treatment needed to resolve the cardiac condition. Claimant's ongoing temporary wage loss remains at least partially attributable to his industrial injury.

CONCLUSIONS OF LAW

A. Termination of TTD benefits effective January 24, 2022

Although Respondent initially disputed the claim, it commenced TTD after the injury was found compensable. Once commenced, TTD benefits shall continue until one of the terminating events enumerated in § 8-42-105(3). Under § 8-42-105(3)(d)(I), TTD is terminated when the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. Termination of TTD benefits is mandatory if the requirements of § 8-42-105(3)(d)(I) are satisfied. *Laurel Manor Care v. Industrial Claim Appealss Office*, 964 P.2d 589 (Colo. App. 1988). The term "fails to begin" is defined as "a failure to start the modified employment in the first instance." *Liberty Heights at Northgate v. Industrial Claim Appeals Office*, 30 P.3d 872, 874 Colo. App.(2001). The term "modified employment" means employment within the restrictions established by the attending physician. *Flores-Arteaga v. Apple Hills Orchard Juice Co*., W.C. No. 3-101-024 (February 15, 1996). The modified work must be reasonably available to the claimant

under an "objective standard." *Ragan v. Temp Force*, W.C. No. 4-216-578 (June 7, 1996). An injured worker's subjective beliefs about their work capacity are legally irrelevant, and the ALJ has no authority to question the ATP's determination that the claimant could perform the work. *Burns v. Robinson Dairy*, 911 P.2d 661 (Colo. App. 1995).

As found, Respondent proved Claimant's TTD benefits were properly terminated effective January 24, 2022 because Claimant failed to begin modified employment. Respondent satisfied the statutory prerequisites for termination of TTD benefits under § 8-42-105(3)(d)(I). The offer was sent to Claimant's established mailing address and his attorney of record. The work required minimal to no use of Claimant's injured right shoulder, and was reasonably available to him under an objective standard. Claimant conceded he knew about the offer but chose not to accept it because he disagreed with Dr. Hanson's assessment, and did not think he could tolerate the work. However, the ATP's determination regarding the suitability of modified work is dispositive, notwithstanding a claimant's own contrary self-assessment of their work capacity.

B. Reinstatement of TTD on or after January 24, 2022

Once TTD benefits are terminated because a claimant fails to begin modified employment, they cannot be reinstated merely by showing a causal connection between the injury and a subsequent wage loss. *E.g., Laurel Manor Care v. Industrial Claim Appealss Office*, 964 P.2d 589 (Colo. App. 1988). Otherwise "an employer could never rely on § 8-42-105(3)(d) to terminate TTD benefits." *Id*. at 591. Additionally, Claimant's termination on March 12, 2022 creates a separate bar to an award of TTD. Assuming, *arguendo*, that § 8-42-105(3)(d)(I) does not create a permanent bar to receipt of TTD, Claimant must show a material change to his circumstances, such a worsening of condition. *E.g., Anderson v. Longmont Toyota, Inc*., 102 P.2d 323 (Colo. 2004). Here, there is no persuasive evidence of a worsened condition or any other material change that would support reinstatement of TTD on or after January 24, 2022.

C. Termination of TPD benefits based on Claimant's termination for cause

Respondent admitted for TPD benefits commencing January 24, 2022 to account for the difference between Claimant's AWW and the reduced wage he would have earned while working modified duty. Respondent now seeks to terminate TPD because Claimant was responsible for the termination of his employment.

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The "termination statutes" are an affirmative defense to liability for temporary disability benefits. The respondents must prove by a preponderance of the evidence the claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This requires proof that the claimant performed a "volitional act" or otherwise

exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of “volitional conduct” is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondent proved Claimant was responsible for termination of his employment on March 12, 2022. Claimant failed to communicate with Employer despite multiple attempts to reach him by phone, email, regular mail, and certified mail. Claimant conceded he knew Employer “was trying the get ahold of me,” but did not respond. No extrinsic factors impeded Claimant’s ability to reply, and his failure to communicate with Employer was volitional.

However, the finding that Claimant was responsible for termination is not dispositive of his eligibility for temporary *partial* disability benefits. Even though a Claimant may be ineligible for TTD benefits based on the termination statutes, he may still be entitled to an award of TPD benefits if the pre-termination job (or job offer) paid less than the preinjury wage. *See e.g., Garbiso v. Wal-Mart Stores, Inc*., W.C. No. 4-695-612 (March 10, 2008); *Minter v. Diesel Services of Northern Colorado,* W.C. No. 4-513-118 (September 10, 2002)*; Clevenger v. El Paso Glass* Co., W.C. No. 4-712-079 (April 29, 2008); *Tarman v. US Transport*, W.C. No. 4-981-955-01 (June 2, 2016); *Sparks v. Mattas Marine & RV*, W.C. No. 4-982-976-01 (September 26, 2016). These cases stand for the proposition that, to the extent a claimant’s AWW at the time of the termination is (or would have been) less than the AWW at the time of the injury, the difference remains attributable to the injury and does not “result” from the claimant’s termination.

Here, Claimant would have suffered a partial wage loss even if he had accepted the modified job and not been terminated. Claimant was disabled from his regular job, and the only modified work offered by Employer paid less than his pre-injury AWW. Claimant would have lost wages in the amount of $101.04 per week, irrespective of his termination. Thus, he remains entitled to TPD benefits.

D. Termination of temporary disability based on intervening cause

To receive temporary disability benefits, a claimant must establish a causal connection between a work-related injury and the subsequent wage loss. Section 8-42-103(1)(a). A claimant need not prove that the work-related injury was the *sole cause* of the wage loss. Rather, eligibility for temporary disability benefits requires only that the work-related injury contributes *“to some degree”* to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

Respondent seeks to terminate Claimant's ongoing eligibility for temporary disability benefits based on an "efficient intervening cause" that has severed the causal connection between the injury and the wage loss. *Roe v. Industrial Commission*, 734 P.2d 138 (Colo. App. 1986). The existence of an intervening cause is an affirmative defense that the respondents must prove by a preponderance of the evidence. *Atlantic and Pacific Ins. Co. v. Barnes*, 666 P.2d 163 (Colo. App. 1983). Because temporary disability benefits are payable if the injury contributes "to some degree" to a wage loss, Respondent must show that the injury no longer contributes *in any degree* to the claimant's wage loss. *E.g*., *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

Horton v. Industrial Claim Appeals Office, *supra*, is dispositive of Respondent's intervening event defense here. In *Horton*, the claimant was receiving TTD benefits and awaiting surgery when she suffered a non-injury related fall. The fall aggravated a pre-existing condition and necessitated postponement of the surgery. An ALJ concluded that the fall was an intervening event and suspended TTD benefits. The ICAO reversed the ALJ, and the Court of Appeals affirmed the ICAO. The following language is pertinent:

> [P]etitioners admitted liability for temporary total disability benefits and they did not contend that the claimant's disability abated prior to the fall . . . . Since the claimant was already totally disabled by the injury at the time of the alleged "intervening event," the subsequent wage loss was necessarily caused to some degree by the injury. Thus, the ALJ's findings establish that claimant's injury contributed in part to the subsequent wage loss. Therefore, under *PDM Molding* [ ], claimant was entitled to temporary disability benefits for the disputed period. *Id*. at 1211.

Similarly, in *Parks v. Ft. Collins Ready Mix, Inc*., W.C. No. 4-251-955 (March 31, 1999), the claimant had refused a recommended surgery, so the respondents requested termination of TTD benefits based on an "intervening event." The ICAO held the claimant's refusal to proceed with surgery was not an "efficient intervening event" because "benefits are only precluded when the industrial disability plays 'no part' in the wage loss." The Panel stated,

> [I]t is undisputed that the claimant was temporarily disabled at the time Dr. Thomas recommended additional surgery. Thus, the industrial injury contributed "to some degree" to the claimant's wage loss . . . . Under *PDM*, it was incumbent upon the respondents to show that some particular point, the injury no longer contributed in any degree to the claimant's wage loss. . . . Absent evidence that the claimant's temporary disability would have resolved by a specific time but for his delay in undergoing surgery . . . the delay is not an efficient intervening event.

The ALJ perceives no meaningful distinction between *Horton*, *Parks,* and Claimant's case. Although *Horton* and *Parks* involved TTD rather than TPD, the rationale applies equally well to Claimant's situation. Claimant's ongoing temporary wage loss remains attributable, at least in part, to his industrial injury. Claimant was disabled by the industrial injury before he developed the cardiac issues, and there is no persuasive

evidence to prove his disability would have resolved by any specific date had he undergone the shoulder surgery as originally scheduled. Moreover, there is no persuasive evidence that Claimant had any control over the postponement of his shoulder surgery or that he has delayed treatment needed to resolve the cardiac condition. The ALJ is persuaded Claimant will proceed with the shoulder surgery as soon as he is medically cleared to do so. Accordingly, Respondent did not prove an intervening event sufficient to terminate Claimant's TPD benefits.

ORDER

It is therefore ordered that:

1. Respondent properly terminated TTD benefits effective January 24, 2022 because Claimant refused a written offer of modified employment.

2. Claimant's request to reinstate TTD benefits on or after January 24, 2022 is denied and dismissed.

3. Respondent's request to terminate Claimant's TPD benefits effective March 15, 2022 is denied and dismissed.

4. Respondent's intervening event defense is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 30, 2022

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he injured his left shoulder and neck during the course and scope of his employment with Employer on April 21, 2021.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period May 24, 2021 until terminated by statute.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits including the proposed surgery recommended by Authorized Treating Physician (ATP) Michael J. Rauzzino, M.D.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage of $700.00.

FINDINGS OF FACT

1. Claimant is a 53-year-old male who worked for Employer as an order selector/forklift operator. His job duties involved pulling orders from shelves, unloading trucks and operating a forklift in Employer's warehouse.

2. Claimant testified that he began working on April 21, 2021 at around 5:00 a.m. He received a final written warning for a forklift incident and ongoing attendance issues. Claimant was also prohibited from driving a forklift. He was advised that, if he did not improve, he would be terminated.

3. Claimant explained that on April 21, 2021 he was moving approximately 25-30 metal trays from a chest height shelf to rest on his left shoulder. He specified that, as he pulled the materials with both hands, he felt sharp pains in his neck and back. Claimant did not turn or rotate during the incident. He summarized that he experienced pain in his neck, back, hip and shoulder.

4. JH[Redacted] was Employer's warehouse coordinator on the date of the accident. Mr. JH[Redacted] testified that he was standing about 20 feet away from Claimant on April 21, 2021 when he heard a loud crash and a yell. He approached Claimant within seconds. He observed metal on the ground and Claimant grasping his shoulder.

5. Claimant reported the incident to Employer's production supervisor/warehouse manager MC[Redacted]. Ms. MC[Redacted] testified that she was pulled out of a meeting and met with Claimant in the break room after the incident.

Claimant told Ms. MC[Redacted] that he was pulling trays when he felt a pop in his shoulder and pain in his shoulder blade. Employer directed Claimant to Authorized Treating Physician (ATP) Concentra Medical Centers for treatment.

6. On April 22, 2021 Claimant visited Concentra for an evaluation. He reported pain on the left side of his neck, left shoulder and back. After a physical examination, Deana Halat, NP diagnosed Claimant with a sprain of the left shoulder girdle and a strain of the left trapezius muscle. She directed Claimant for a left shoulder x-ray and physical therapy.

7. Employer completed a First Report of Injury on April 23, 2021. The report specified that the affected body parts were the upper extremity and shoulder. The document noted that Claimant felt a pop in the shoulder while carrying materials.

8. On April 26, 2021 Claimant returned to Concentra for an examination with Carol Dombro, M.D. Dr. Dombro assessed Claimant with a sprain of part of the left shoulder girdle and a strain of the trapezius muscle. She concluded that her objective findings were consistent with a work-related mechanism of injury. Dr. Dombro noted that Claimant could return to modified duty work on April 28, 2021.

9. On May 3, 2021 Claimant returned to Dr. Dombro for an examination. Claimant reported pain in the left lateral neck and left trapezius. He described the pain as moderate and aching in nature. Dr. Dombro assessed Claimant with an acute strain of the neck muscle. She recommended MRIs of the left shoulder and cervical spine. Dr. Dombro noted that Claimant had developed cervical radiculopathy. She determined that her objective findings were consistent with a work-related mechanism of injury.

10. Claimant underwent an MRI of the cervical spine on May 6, 2021. The MRI showed severe spinal canal stenosis with an abnormal cord signal at C4-C5 that was worrisome for the development of myelomalacia. The imaging also revealed severe bilateral foraminal stenosis at the same level.

11. On May 10, 2021 Claimant again visited Dr. Dombro for an examination. A physical examination revealed normal motor strength and no neurological symptoms. Dr. Dombro referred Claimant to neurologist Michael J. Rauzzino, M.D. based on the stenosis and myelomalacia in the MRI report. She restricted Claimant from working.

12. On May 11, 2021 Claimant visited Dr. Rauzzino for an evaluation. Dr. Rauzzino noted that Claimant had a markedly positive Spurlings maneuver, weakness of the hand-wrist bilaterally, diminished sensation in the left C6 and C5 distribution, moderate difficulty with tandem gait, and weakness of his left biceps and deltoid. He commented that Claimant was asymptomatic prior to his April 21, 2021 work injury. Dr. Rauzzino noted that an MRI of the cervical spine revealed a central left-sided disc protrusion al C4-C5 with significant central and foraminal stenosis. There also appeared to be a signal change in the spinal cord at the same level. Claimant also had similar disease at C5-C6, but to a lesser degree. Because of Claimant's progressive neurologic deficits and severe radicular symptoms, Dr. Rauzzino recommended surgery. He explained that the proposed surgery was designed to protect the spinal cord as well as

regain some motor and sensory functions. Dr. Rauzzino commented that conservative treatment in the form of injections and physical therapy was not indicated and Claimant would "benefit from decompression of neural elements."

13. On May 20, 2021 Claimant returned to Dr. Dombro for an examination. Dr. Dombro noted that an MRI of the cervical spine revealed C4-C5 severe spinal stenosis, bilateral foraminal stenosis and myelomalacia. Dr. Rauzzino thus recommended neck surgery. An MRI of the left shoulder showed post-surgical changes and one centimeter low grade interstitial tearing of the supra/infraspinatus. Dr. Dombro determined that providers needed to repair Claimant's neck and allow time for his left shoulder to heal. She remarked that a return to work was on hold until Claimant completed the requested surgery. Dr. Dombro thus noted that Claimant would remain off work from May 20, 2021 until June 20, 2021.

14. On June 8, 2021 Claimant returned to Dr. Rauzzino for an examination. Dr. Rauzzino noted that Claimant presented for a follow-up visit based on a surgical request in the form of an anterior cervical decompression at C4-C5 and C5-C6 that was denied by Insurer. He could not understand Insurer's denial of the surgical request because he had no evidence Claimant exhibited symptoms prior to the occupational injury, Claimant immediately reported his symptoms, two supervisors witnessed the incident, the mechanism of injury was appropriate and imaging was consistent with Claimant's neurological deficits. On physical examination, Dr. Rauzzino noted markedly positive Spurlings, weakness in Claimant's left hand and wrist, diminished sensation in the left C5 distribution and the first two digits of the left hand, moderate difficulty with tandem gait, and weakness in the left biceps and deltoid. Dr. Rauzzino cautioned that delaying surgery placed Claimant at increased risk for permanent neurological deficits.

15. Through July-August 2021 Claimant visit Dr. Dombro for treatment. Claimant continued to report neck pain that radiated into his left shoulder. Dr. Dombro noted that an MRI of Claimant's neck reflected C4-C5 severe spinal stenosis with bilateral foraminal narrowing including possible early myelomalacia. She assessed Claimant with an acute strain of the neck muscle, cervical radiculopathy at C5, herniated nucleus pulposis at C4-C5 and C5-C6, and neuroforaminal stenosis of the cervical spine. Dr. Dombro continued to restrict Claimant from working until the proposed surgery was completed.

16. On September 15, 2021 Claimant returned to Dr. Dombro for an examination. Dr. Dombro continued to prohibit Claimant from working. She specified that Claimant was unable to work from May 20, 2021 until November 30, 2021. Claimant testified that he has not sought any medical treatment since he last visited Dr. Dombro.

17. Claimant testified at the hearing in this matter. He explained that he continued to perform light duty work for Employer until he ceased working on May 24, 2021 after he was advised he required surgery. Claimant spoke with Ms. MC[Redacted] and she informed him that he would be unable to return to work until he completed his medical treatment.

18. The record reveals that Claimant has a history of prior cervical spine complaints. On November 5, 2016 Claimant sustained a work-related injury to his right shoulder and cervical spine. Claimant sought treatment through Workwell with Paul Ogden, M.D.

19. On April 4, 2017 Claimant underwent an MRI of the cervical spine. The imaging revealed degenerative disc and joint changes superimposed on a borderline narrow spinal canal with mild right paracentral cord indentation and mild right chronic myelomalacia at C4-C5.

20. On September 8, 2017 Claimant visited Barry A. Ogin, M.D. for an examination. Dr. Ogin noted that he was concerned about the spinal cord stenosis with evidence of mild right chronic myelomalacia at C4-C5. He recommended a surgical consultation. Dr. Ogin felt that a decompression would be required based on Claimant's stenosis and cord changes.

21. On November 10, 2017 Claimant underwent a repeat MRI of the cervical spine. The imaging revealed multilevel stenosis with signal alteration posteriorly and to the right of the midline at the C4-C5 level.

22. On December 28, 2017 Claimant was evaluated by Dr. Ogden. Dr. Ogden placed Claimant at MMI with 15% whole person impairment of the cervical spine. He recommended follow-up care with Bryan Andrew Castro, M.D. every six months for two years. Dr. Ogden noted that Claimant would likely need a follow-up MRI and Dr. Castro remarked that, if there was worsening of the myelopathic symptoms, there would be a chance for surgery.

23. On October 4, 2021 Claimant underwent an independent medical examination with Brian Reiss, M.D. Dr. Reiss also testified as an expert in orthopedic medicine in a post-hearing evidentiary deposition conducted on May 25, 2022. Claimant told Dr. Reiss that he was pulling material from about shoulder height onto his left shoulder when he developed sharp pain in the left side of his neck and left suprascapular area.

24. Dr. Reiss remarked that Claimant was reporting a high level of cervical symptomatology for more than a year by the time he reached MMI on December 28, 2017. He noted that Claimant's pain complaints at the time of MMI were the same as his current symptoms. Moreover, Dr. Reiss commented that Claimant's cervical stenosis and spinal cord changes were present in 2017.

25. Dr. Reiss detailed that the 2017 MRI reports showed significant degeneration and stenosis at the C4-C5 and C5-C6 levels. Although the 2021 MRI scan was a little more involved, it would be expected from degeneration over four years. Dr. Reiss explained that myelomalacia generally reflects some damage to the spinal cord. He testified that myelomalacia does not usually go away and there was damage to the spinal cord in 2017. Dr. Reiss commented that he reviewed the 2021 MRI films and there was no evidence of an acute injury including a disc herniation.

26. Dr. Reiss noted that, based on his interview and physical examination, Claimant was not experiencing any weakness, Spurlings was negative, and his tandem gait was normal. Claimant had no complaints of fine motor difficulty and there was no clumsiness or gait disturbance. Dr. Reiss testified that there were no signs of symptoms of myelopathy. He concluded that there did not appear to be any progressive neurologic symptomatology and surgery was not indicated for Claimant's primary complaint of neck pain. He summarizes that the surgery recommended by Dr. Rauzzino would be considered a prophylactic procedure based upon Claimant's pre-existing condition. The need for surgery was thus not caused, exacerbated or related to the April 21, 2021 work incident.

27. On May 24, 2022 the parties conducted the post-hearing evidentiary deposition of Michael J. Rauzzino, M.D. Dr. Rauzzino remarked that Concentra providers referred Claimant in a semi-urgent condition because of significant neurological findings and an enlarged herniated disc. He noted that the mechanism of injury involved a falling object that struck Claimant and caused him to jerk his head. He then felt pain in his neck and left arm as well as progressive neurologic symptoms. Claimant discussed his prior neck injury, but commented that he had been asymptomatic prior to his April 21, 2021 work injury. Notably, Claimant's prior industrial injury on November 5, 2016 involved right-sided symptoms while his current symptoms are located on his left side.

28. Dr. Rauzzino disagreed with Dr. Reiss that Claimant's condition has not changed since his April 10, 2017 MRI. He commented that Claimant primarily suffered right-sided symptoms. Providers in 2017 remarked that Claimant had the congenital condition of spinal stenosis, or narrowing of the space surrounding the spinal cord, that predisposed him to injury. Dr. Rauzzino noted that Claimant could have undergone prophylactic surgery to address his condition but chose not to in 2017.

29. Dr. Rauzzino explained that an April 10, 2017 MRI revealed a subtle T2 hyperintensity on the right side that was much different from Claimant's 2021 MRI. The 2021 imaging showed a significant disc herniation on the left side with compression of the spinal cord. Although Claimant still has cervical radiculopathy, it is now located on the left side because of the disc change. Moreover, there has been a significant change in the spinal cord as reflected by the whiteness in the center of the cord that was much more pronounced in 2021 than it was in 2017. Dr. Rauzzino reasoned that Claimant likely bruised his spinal cord during the April 21, 2021 work incident.

30. Dr. Rauzzino concluded that, because Claimant was asymptomatic prior to his work accident, he suffered an acute injury that exacerbated his symptoms and warranted surgery. He also remarked that Claimant's mechanism of injury was consistent with his symptoms, he immediately reported the event, and underwent an emergent cervical MRI that revealed radiculopathy. Claimant's condition thus warranted surgery in the form of an anterior cervical decompression at C4-C5 and C5-C6. Delaying surgery placed Claimant at increased risk for permanent neurological deficits. Dr. Rauzzino recommended that Claimant not work until his spinal condition is surgically repaired.

31. Claimant has established that it is more probably true than not that he injured his left shoulder and neck during the course and scope of his employment with

Employer on April 21, 2021. Initially, Claimant explained that on April 21, 2021 he was moving approximately 25-30 metal trays from a chest height shelf to rest on his left shoulder. He specified that, as he pulled the materials with both hands, he felt a sharp pain in his neck and back. Claimant summarized that he had pain in his neck, back, hip and left shoulder. Mr. JH[Redacted]'s testimony is consistent with Claimant's account of his injury. Mr. JH[Redacted] testified that he was standing about 20 feet away from Claimant on April 21, 2021 when he heard a loud crash and a yell. He approached Claimant within seconds. He observed metal on the ground and Claimant grasping his shoulder. Furthermore, Claimant immediately reported the incident to Ms. MC[Redacted]. Claimant told Ms. MC[Redacted] that he was in the aisle pulling some trays when he felt a pop in his shoulder and pain in his shoulder blade. Employer then completed a First Report of Injury on April 23, 2021. The document noted that Claimant felt a pop in the shoulder while carrying material. The preceding chronology reflects that Claimant suffered an accident while moving materials at work on April 21, 2021.

32. Respondents assert that Claimant's left shoulder and neck symptoms constituted pre-existing conditions that only surfaced in response to a disciplinary action. However, the medical records reveal a sufficient nexus between Claimant's work activities and his symptoms to establish that he suffered compensable injuries to his left shoulder and neck. during the course and scope of employment on April 21, 2021. On April 26, 2021 Dr. Dombro assessed Claimant with a sprain of part of the left shoulder girdle and a strain of the trapezius muscle. She concluded that her objective findings were consistent with a work-related mechanism of injury. At a follow-up appointment on May 3, 2021 Dr. Dombro assessed Claimant with an acute strain of the neck muscle and noted that Claimant had developed cervical radiculopathy. She recommended MRIs of the left shoulder and cervical spinal canal. Dr. Dombro reiterated that her objective findings were consistent with a work-related mechanism of injury.

33. Through July-August, 2021 Claimant continued to report neck pain that radiated into his left shoulder. Dr. Dombro noted that an MRI of Claimant's neck reflected C4-C5 severe spinal stenosis with bilateral foraminal narrowing including possible early myelomalacia. She assessed Claimant with an acute strain of the neck muscle, cervical radiculopathy at C5, herniated nucleus pulposis at C4-C5 and C5-C6, and neuroforaminal stenosis of the cervical spine. Moreover, Dr. Rauzzino summarized that there was no evidence Claimant exhibited symptoms prior to the occupational injury, he immediately reported his symptoms, two supervisors witnessed the incident, the mechanism of injury was appropriate and imaging was consistent with his neurological deficits. Accordingly, the bulk of the persuasive medical records reflect that Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant thus suffered compensable injuries to his left shoulder and neck during the course and scope of his employment with Employer on April 21, 2021.

34. Claimant has proven that it is more probably true than not that he is entitled to receive TTD benefits for the period May 24, 2021 until terminated by statute. On May 20, 2021 Dr. Dombro noted that an MRI of the cervical spine revealed C4-C5 severe spinal stenosis, bilateral foraminal stenosis and myelomalacia. Dr. Rauzzino thus recommended neck surgery. Dr. Dombro remarked that Claimant could not return to work

until the recommended spinal surgery was completed. Dr. Dombro specified that Claimant would remain off work from May 20, 2021 until June 20, 2021. Through July-August, 2021 Claimant continued to report neck pain that radiated into his left shoulder. Dr. Dombro assessed Claimant with an acute strain of the neck muscle, cervical radiculopathy at C5, herniated nucleus pulposis at C4-C5 and C5-C6, and neuroforaminal stenosis of the cervical spine. She continued to restrict Claimant from working until the proposed surgery was completed. On September 15, 2021 Dr. Dombro specified that Claimant was unable to work from May 20, 2021 until November 30, 2021. Finally, Dr. Rauzzino recommended that Claimant not return to work until his spinal condition was surgically repaired.

35. Claimant testified that he continued to perform light duty work for Employer until he was advised on May 24, 2021 that he required surgical intervention. Ms. MC[Redacted] informed Claimant that he would not be able to return to work until he completed his medical treatment. Claimant has thus not worked since May 24, 2021. Claimant noted that he has not sought any medical treatment since he last visited Dr. Dombro on September 15, 2021. The record thus reveals that Claimant's April 21, 2021 work accident caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant has not reached MMI or been released to full duty employment. He is thus entitled to receive TTD benefits for the period May 24, 2021 until terminated by statute.

36. Claimant has demonstrated that it is more probably true than not that he is entitled to reasonable, necessary and causally related medical benefits including the proposed surgery recommended by ATP Dr. Rauzzino. On May 3, 2022 Dr. Dombro assessed Claimant with an acute strain of the neck muscle. She recommended MRIs of the left shoulder and cervical spine. Dr. Dombro also noted that Claimant had developed cervical radiculopathy. Dr. Dombro subsequently referred Claimant to ATP Dr. Rauzzino based on the stenosis and myelomalacia in the MRI report. Dr. Rauzzino noted that the MRI of the cervical spine revealed a central left-sided disk protrusion al C4-C5 with significant central and foraminal stenosis. There also appeared to be a signal change in the cord at the same level. Claimant also had similar disease at C5-C6 to a lesser degree. Because of Claimant's progressive neurologic deficits and severe radicular symptoms, Dr. Rauzzino recommended surgery in the form of an anterior cervical decompression at C4-C5 and C5-C6.

37. Dr. Rauzzino explained that an April 10, 2017 MRI revealed a subtle T2 hyperintensity on the right side that was much different from Claimant's 2021 MRI. The 2021 imaging showed a significant disc herniation on the left side with compression of the spinal cord. Although Claimant still has cervical radiculopathy, it is now located on the left side because of the disc change. Moreover, there has been a significant change in the spinal cord as reflected by the whiteness in the center of the cord that was much more pronounced in 2021 than it was in 2017. Dr. Rauzzino reasoned that Claimant likely bruised his spinal cord during the April 21, 2021 work incident.

38. Dr. Rauzzino concluded that, because Claimant was asymptomatic prior to his work accident, he suffered an acute injury that exacerbated his symptoms and warranted surgery. He also remarked that Claimant's mechanism of injury was consistent with his symptoms, he immediately reported the event, and underwent an emergent

cervical MRI that revealed radiculopathy. Claimant's condition thus warranted surgery in the form of an anterior cervical decompression at C4-C5 and C5-C6. Delaying surgery placed Claimant at increased risk for permanent neurological deficits.

39. In contrast, Dr. Reiss detailed that the 2017 MRI reports showed significant degeneration and stenosis at the C4-C5 and C5-C6 levels. Although the 2021 MRI was a little more involved, it would be expected from degeneration over four years. Dr. Reiss commented that there was no evidence of an acute injury including a disc herniation. He explained that there has not been any evolution of Claimant's neurologic complaints. Dr. Reiss summarizes that the surgery recommended by Dr. Rauzzino would be considered a prophylactic procedure based upon Claimant's pre-existing condition. The need for surgery was thus not caused, exacerbated or related to the April 21, 2021 work incident.

40. Despite Dr. Reiss' comments, the persuasive opinions of Drs. Dombro and Rauzzino reflect that Claimant's medical treatment and the proposed anterior cervical decompression surgery is reasonable, necessary and causally related to his April 21, 2021 industrial accident. Claimant's medical care through Concentra addressed his acute cervical strain that caused a significant disc herniation with compression of the spinal cord and warranted surgery. Dr. Rauzzino disagreed with Dr. Reiss that Claimant's condition has not changed since his April 10, 2017 MRI. He commented that Claimant previously suffered primarily right-sided symptoms. The 2021 imaging showed a significant disc herniation with compression of the spinal cord. Claimant now suffers from a different condition than he did in 2017 involving a disc herniation on the left side. Accordingly, Claimant shall receive reasonable, necessary and causally related medical benefits, including the surgery recommended by ATP Dr. Rauzzino for his April 21, 2021 work injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997)

("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has established by a preponderance of the evidence that he injured his left shoulder and neck during the course and scope of his employment with Employer on April 21, 2021. Initially, Claimant explained that on April 21, 2021 he was moving approximately 25-30 metal trays from a chest height shelf to rest on his left shoulder. He specified that, as he pulled the materials with both hands, he felt a sharp pain in his neck and back. Claimant summarized that he had pain in his neck, back, hip and left shoulder. Mr. JH[Redacted]'s testimony is consistent with Claimant's account of his injury. Mr. JH[Redacted] testified that he was standing about 20 feet away from Claimant on April 21, 2021 when he heard a loud crash and a yell. He approached Claimant within seconds. He observed metal on the ground and Claimant grasping his shoulder. Furthermore, Claimant immediately reported the incident to Ms. MC[Redacted]. Claimant told Ms. MC[Redacted] that he was in the aisle pulling some trays when he felt a pop in his shoulder and pain in his shoulder blade. Employer then completed a First Report of Injury on April 23, 2021. The document noted that Claimant felt a pop in the shoulder while carrying material. The preceding chronology reflects that Claimant suffered an accident while moving materials at work on April 21, 2021.

9. As found, Respondents assert that Claimant's left shoulder and neck symptoms constituted pre-existing conditions that only surfaced in response to a disciplinary action. However, the medical records reveal a sufficient nexus between Claimant's work activities and his symptoms to establish that he suffered compensable injuries to his left shoulder and neck. during the course and scope of employment on April 21, 2021. On April 26, 2021 Dr. Dombro assessed Claimant with a sprain of part of the left shoulder girdle and a strain of the trapezius muscle. She concluded that her objective findings were consistent with a work-related mechanism of injury. At a follow-up appointment on May 3, 2021 Dr. Dombro assessed Claimant with an acute strain of the neck muscle and noted that Claimant had developed cervical radiculopathy. She recommended MRIs of the left shoulder and cervical spinal canal. Dr. Dombro reiterated that her objective findings were consistent with a work-related mechanism of injury.

10. As found, through July-August, 2021 Claimant continued to report neck pain that radiated into his left shoulder. Dr. Dombro noted that an MRl of Claimant's neck reflected C4-C5 severe spinal stenosis with bilateral foraminal narrowing including possible early myelomalacia. She assessed Claimant with an acute strain of the neck muscle, cervical radiculopathy at C5, herniated nucleus pulposis at C4-C5 and C5-C6, and neuroforaminal stenosis of the cervical spine. Moreover, Dr. Rauzzino summarized that there was no evidence Claimant exhibited symptoms prior to the occupational injury, he immediately reported his symptoms, two supervisors witnessed the incident, the mechanism of injury was appropriate and imaging was consistent with his neurological

deficits. Accordingly, the bulk of the persuasive medical records reflect that Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant thus suffered compensable injuries to his left shoulder and neck during the course and scope of his employment with Employer on April 21, 2021.

Temporary Total Disability Benefits

11. To prove entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

12. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period May 24, 2021 until terminated by statute. On May 20, 2021 Dr. Dombro noted that an MRI of the cervical spine revealed C4-C5 severe spinal stenosis, bilateral foraminal stenosis and myelomalacia. Dr. Rauzzino thus recommended neck surgery. Dr. Dombro remarked that Claimant could not return to work until the recommended spinal surgery was completed. Dr. Dombro specified that Claimant would remain off work from May 20, 2021 until June 20, 2021. Through July-August, 2021 Claimant continued to report neck pain that radiated into his left shoulder. Dr. Dombro assessed Claimant with an acute strain of the neck muscle, cervical radiculopathy at C5, herniated nucleus pulposis at C4-C5 and C5-C6, and neuroforaminal stenosis of the cervical spine. She continued to restrict Claimant from working until the proposed surgery was completed. On September 15, 2021 Dr. Dombro specified that Claimant was unable to work from May 20, 2021 until November 30, 2021. Finally, Dr. Rauzzino recommended that Claimant not return to work until his spinal condition was surgically repaired.

13. As found, Claimant testified that he continued to perform light duty work for Employer until he was advised on May 24, 2021 that he required surgical intervention. Ms. MC[Redacted] informed Claimant that he would not be able to return to work until he completed his medical treatment. Claimant has thus not worked since May 24, 2021. Claimant noted that he has not sought any medical treatment since he last visited Dr. Dombro on September 15, 2021. The record thus reveals that Claimant's April 21, 2021 work accident caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant has not reached MMI or been released to full duty employment. He is thus entitled to receive TTD benefits for the period May 24, 2021 until terminated by statute.

Medical Benefits and Proposed Surgery

14. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

15. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

16. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits including the proposed surgery recommended by ATP Dr. Rauzzino. On May 3, 2022 Dr. Dombro assessed Claimant with an acute strain of the neck muscle. She recommended MRIs of the left shoulder and cervical spine. Dr. Dombro also noted that Claimant had developed cervical radiculopathy. Dr. Dombro subsequently referred Claimant to ATP Dr. Rauzzino based on the stenosis and myelomalacia in the MRI report. Dr. Rauzzino noted that the MRI of the cervical spine revealed a central left-sided disk protrusion al C4-C5 with significant central and foraminal stenosis. There also appeared to be a signal change in the cord at the same level. Claimant also had similar disease at C5-C6 to a lesser degree. Because of Claimant's progressive neurologic deficits and severe radicular

symptoms, Dr. Rauzzino recommended surgery in the form of an anterior cervical decompression at C4-C5 and C5-C6.

17. As found, Dr. Rauzzino explained that an April 10, 2017 MRI revealed a subtle T2 hyperintensity on the right side that was much different from Claimant's 2021 MRI. The 2021 imaging showed a significant disc herniation on the left side with compression of the spinal cord. Although Claimant still has cervical radiculopathy, it is now located on the left side because of the disc change. Moreover, there has been a significant change in the spinal cord as reflected by the whiteness in the center of the cord that was much more pronounced in 2021 than it was in 2017. Dr. Rauzzino reasoned that Claimant likely bruised his spinal cord during the April 21, 2021 work incident.

18. As found, Dr. Rauzzino concluded that, because Claimant was asymptomatic prior to his work accident, he suffered an acute injury that exacerbated his symptoms and warranted surgery. He also remarked that Claimant's mechanism of injury was consistent with his symptoms, he immediately reported the event, and underwent an emergent cervical MRI that revealed radiculopathy. Claimant's condition thus warranted surgery in the form of an anterior cervical decompression at C4-C5 and C5-C6. Delaying surgery placed Claimant at increased risk for permanent neurological deficits.

19. As found, in contrast, Dr. Reiss detailed that the 2017 MRI reports showed significant degeneration and stenosis at the C4-C5 and C5-C6 levels. Although the 2021 MRI was a little more involved, it would be expected from degeneration over four years. Dr. Reiss commented that there was no evidence of an acute injury including a disc herniation. He explained that there has not been any evolution of Claimant's neurologic complaints. Dr. Reiss summarizes that the surgery recommended by Dr. Rauzzino would be considered a prophylactic procedure based upon Claimant's pre-existing condition. The need for surgery was thus not caused, exacerbated or related to the April 21, 2021 work incident.

20. As found, despite Dr. Reiss' comments, the persuasive opinions of Drs. Dombro and Rauzzino reflect that Claimant's medical treatment and the proposed anterior cervical decompression surgery is reasonable, necessary and causally related to his April 21, 2021 industrial accident. Claimant's medical care through Concentra addressed his acute cervical strain that caused a significant disc herniation with compression of the spinal cord and warranted surgery. Dr. Rauzzino disagreed with Dr. Reiss that Claimant's condition has not changed since his April 10, 2017 MRI. He commented that Claimant previously suffered primarily right-sided symptoms. The 2021 imaging showed a significant disc herniation with compression of the spinal cord. Claimant now suffers from a different condition than he did in 2017 involving a disc herniation on the left side. Accordingly, Claimant shall receive reasonable, necessary and causally related medical benefits, including the surgery recommended by ATP Dr. Rauzzino for his April 21, 2021 work injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant injured his left shoulder and neck during the course and scope of his employment with Employer on April 21, 2021.

2. Claimant shall receive TTD benefits for the period May 24, 2021 until terminated by statute.

3. Claimant earned an AWW of $700.00.

4. Claimant shall receive reasonable, necessary and causally related medical benefits, including the surgery proposed by Dr. Rauzzino, for his April 21, 2021 industrial injuries.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

WORKERS' COMPENSATION NO. 5-020-610-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that her condition has worsened and that her case should be reopened.

II. Whether Claimant is entitled to change physicians to surgeon Dr. Joshua Ariel Metzl if her claim is reopened.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant worked for Employer as a firefighter.
2. On July 9, 2016, Claimant suffered a compensable injury involving her left leg. The injury occurred while Claimant was driving a golf cart to get some medical supplies. While driving the cart, Claimant had her left leg hanging off the side of the cart. While driving the cart with her left leg off the cart, Claimant ran into a gate and crushed the lower portion of her left leg and ankle. Claimant was immediately taken to the emergency room where she was diagnosed with a compartment syndrome fracture. Claimant underwent surgery, with Dr. Fuller, on the day of the accident. Dr. Fuller performed a double fasciotomy. (Ex. B, p. 20.)
3. By December 14, 2016, Claimant was doing well. She had no limitations at work and was working full duty. She would, however, develop pain after running for about 5 minutes in the posterior portion of her left lower leg. It was Dr. Fuller's opinion that she might have pain while running for quite some time. (Ex. B, p. 25.)
4. On January 11, 2017, Claimant was evaluated by Dr. Sharon O'Connor. At this visit, Claimant had continued to improve and had no significant symptoms. Her exercise tolerance was getting better, and she was working full duty without any problems. Her only symptoms at that time included some continued discomfort in the medial aspect of her lower leg as well as some numbness and tingling she had in the immediate area of her scars and a small area where the crush injury occurred. Dr. O'Connor placed Claimant at MMI, released Claimant to fully duty, and concluded that Claimant did not suffer any permanent impairment. (Ex. A, p. 8.)
5. On May 11, 2018, Claimant underwent a Division of Workers' Compensation Independent Medical Examination (DIME) that was performed by Dr. Brian Beatty. At this visit, Claimant stated that overall, her symptoms have not changed. She stated that she has radiation of pain from her ankle into her leg. She also stated that her pain is intermittent and that she has some numbness and tingling around the surgical site. On a scale of 0-10, Claimant rated her daily pain as a 3. Claimant also stated that her symptoms were aggravated by standing for more than one-half hour, walking for more than one-half hour,

lifting 50-75 pounds, and during any type of sports or exercise. Lastly, she noted moderate morning stiffness. (Ex. B, p. 26.) Regarding her activities, she noted that running and lifting are restricted when performed for extended periods of time. (Ex. B, p. 26.) She did not state that her heel hurt at that time. Dr. Beatty agreed that Claimant reached MMI on January 11, 2017, and provided Claimant a 6% scheduled impairment rating. Ex. B, p. 27.)

6. Claimant kept working for Employer, [Redacted], through December 31, 2018. Beginning January 1, 2019, Claimant began working for SM[Redacted[.

7. Around September 2020, Claimant started developing symptoms from her heel up to the medial aspect of her ankle. These symptoms did not, however, cause Claimant to seek medical treatment at this time. (Ex C, p. 31.)

8. On May 19, 2021, Claimant presented to the SM[Redacted]. At this visit, Claimant stated that her left heel had been bothering her for the past six months with increasing pain over the last two months-which Claimant associated with increased activity. Claimant described her increased activity to include running and wearing her "bunker boots," i.e., work boots. At this visit, she was told to purchase a heel cup/pad and to only bike for exercise.

9. On September 16, 2021, more than three years after being placed at MMI, and while working for SM[Redacted], Claimant presented to Erik Thelander, D.P.M. (Exhibit C, p. 39.) Claimant stated that she had been mostly asymptomatic until about one year ago. She also stated that during the last month, the pain became worse. At the time of her appointment, her pain level was 8/10. (Ex. C, p. 35.) That said, Claimant's pain was in a different location than her prior injury. Her pain at this time radiated from her heel up to the medial portion of her ankle. Claimant stated that she was usually asymptomatic while wearing tennis shoes and not working–and symptomatic while working and wearing her work boots. For example, Claimant was on vacation for five weeks and did not wear her work boots but wore tennis shoes. During this time, Claimant was largely asymptomatic. (Ex. C, p. 31.) Dr. Thelander noted that it was odd that Claimant was largely asymptomatic after her surgery for years and is only now having symptoms. He thought that perhaps Claimant's work boots and job had caused compression, overuse and inflammation around her prior scar tissue which caused Claimant's nerve pain and symptoms. (Ex. C, p. 33.) Based on Claimant's pain complaints, and Dr. Thelander's assessment, he ordered an EMG of Claimant's left lower extremity to assess Claimant for possible tibial nerve neuropraxia. (Ex. C, p. 30.)

10. On September 21, 2021, Claimant returned to the SM[Redacted] Clinic. At this appointment, Claimant stated that she took six weeks off for vacation and that her heel was doing well until she returned to work. Claimant stated that her heel was doing well until she ran her METS test and then had a call where she was in her work boots for about three hours. At this point, Claimant was walking with an antalgic gait. (Ex. E, p. 73.)

11. On October 4, 2021, Claimant sought medical treatment at the CU Steadman Hawkins Clinic Denver with Dr. Metzl, when she again repeated that she "was fine" for a "couple years but over the last year she has developed more more [sic] pain." (Exhibit D, p. 60.)

12. On October 28, 2021, Dr. Metzl concluded that Claimant's "discomfort dates back to her prior injury and she would benefit from partial plantar fascial release with tarsal tunnel release. fasciitis is a result of her prior work injury." Dr. Metzl's opinion on causation, however, is mostly conclusory. He did not discuss in detail how he concluded Claimant's current condition was causally related to her 2016 work injury.

13. Claimant's testimony that her complaints that emerged at the end of 2020 while working for SM[Redacted] were persistent and related to the injury she suffered on July 9, 2016, while working for Respondent Littleton are contradicted by the consistent and repeated history of being predominately "asymptomatic" (Ex. C, p. 31), "doing well" (Ex. E, p. 73), and "was fine" (Ex. D, p. 60) for years after leaving employment with Employer Littleton.

14. Claimant repeatedly attributed her left lower extremity problems to her work duties for SM[Redacted], associating her pain "post running, in bunker boots, and duty boots" (Ex. E, p. 73), the requirement "to wear work boots" (Ex. C, p. 31), and running a "METS test and then had call where she was in boots for ≈ 3 hours" (Ex. E, p. 73.)

15. Although Claimant did not assert a Workers' Compensation Claim against SM[Redacted], the medical reports establish that the July 9, 2016, injury suffered while working for Respondent [Employer Redacted] had resolved years before Claimant suffered a new injury to her left lower extremity.

16. On February 10, 2022, Paul Stone, D.P.M, performed an IME. Dr. Stone credibly and persuasively concluded that Claimant "developed injury to the left plantar fascia with swelling and overlying compression of the branches of the posterior tibial nerve in the porta pedis which is unrelated to the 2016 injury and resultant compartment decompression." (Ex. F, p. 80.)

17. Dr. Stone, through his report and testimony, credibly and persuasively concluded that Claimant's history of symptoms related to running and wearing work or bunker boots is consistent with plantar fascia and tarsal tunnel release surgery on December 6, 2021, completed by Dr. Metzl, and that this surgery treated a separate, distinct, and different anatomical problem and area from the 2016 injury that required a four-compartment release surgery. (*See also* Ex. F, p. 80.)

18. Dr. Stone concluded that Claimant's plantar fasciitis and tarsal tunnel symptoms were not caused by her July 9, 2016, work injury. Dr. Stone credibly and persuasively concluded Claimant suffered from a new injury.

19. The ALJ finds Dr. Stone's opinions and conclusions to be credible and persuasive because his testimony is consistent with Claimant's underlying medical records related to the timing of the onset of her pain after being placed at MMI, the location of her new pain, and the conditions for which she was treated via surgery. And such opinions were explained and supported through the demonstrative exhibits presented at hearing and discussed during Dr. Stone's testimony.

20. Claimant's condition and need for additional medical treatment after being placed at MMI did not flow proximately and naturally from the July 9, 2016, work injury.

21. Claimant's July 9, 2016, industrial injury did not leave Claimant's body in a weakened condition that played a causative role in producing additional disability or the need for

additional medical treatment. As a result, Claimant's disability and need for medical treatment do not represent compensable consequences of the industrial injury.

22. The ALJ finds that Claimant's July 9, 2016, condition has not worsened since being placed at MMI. The ALJ further finds that Claimant's need for medical treatment is unrelated to her July 9, 2016, work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact-finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that her condition has worsened and that her case should be reopened.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The Claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the Claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether the Claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

The ALJ found Dr. Stone's opinions and conclusions to be credible and persuasive because they are consistent with Claimant's underlying medical records related to the timing of the onset of her pain after being placed at MMI, the location of her new pain, and the conditions for which she was treated via surgery. And such opinions were credibly and persuasively explained and supported through the demonstrative exhibits presented at hearing and discussed during Dr. Stone's testimony.

As found, Claimant's condition and need for additional medical treatment after being placed at MMI did not flow proximately and naturally from the July 9, 2016, work injury.

As also found, Claimant's July 9, 2016, industrial injury did not leave Claimant's body in a weakened condition that played a causative role in producing additional disability or the need for additional medical treatment. As a result, Claimant's disability

and need for medical treatment do not represent compensable consequences of the industrial injury.

As a result, the ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that her condition caused by the July 9, 2016, industrial accident has worsened since being placed at MMI and that her claim should be reopened. Thus, the ALJ further finds and concludes that Claimant has failed to establish by a preponderance of the evidence that the need for medical treatment is causally related to her July 9, 2016, work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's petition to reopen is denied. Thus, Claimant's request for additional benefits is denied.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 1, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts

Denver, CO 80203

ISSUES

Have the respondents overcome, by clear and convincing evidence, the opinions of the Division sponsored independent medical examination (DIME) physician regarding causation, maximum medical improvement (MMI), and/or permanent impairment?

FINDINGS OF FACT

1. The claimant worked for the employer as a real estate agent and property manager. On January 23, 2020, the claimant sustained a work related injury when she slipped on ice while responding to an HOA complaint. The claimant reported this incident to her supervisor and friend, Deborah Sanderson.

2. On January 24, 2020, Ms. Sanderson completed a First Report of Injury or Illness. In that document, the incident was described as "[the claimant] fell on ice and hit head". The body part identified as injured was the claimant's skull, and the injury was identified as a "contusion".

Medical Treatment Prior to January 23, 2020

3. Prior to January 23, 2020, the claimant has a lengthy medical history for insomnia, anxiety, depression, multiple closed head injuries, and spinal issues. In addition, the claimant has a history of alcohol abuse, domestic violence, and interactions with law enforcement.

4. On January 25, 2016 the claimant sought treatment for head and neck issues with Dr. Bruce Lipmann. The claimant reported that her symptoms began after she was walking up some stairs when she tripped and fell backwards hitting her head. However, the claimant testified that she was not honest with Dr. Lipmann or law enforcement regarding her injuries. The incident occurred when her boyfriend threw her down a flight of stairs.

5. On February 13, 2016, claimant was seen by Dr. Karen Locke regarding a concussion that the claimant sustained when she struck her head against a wall. The claimant was experiencing headaches, mental fogginess, irritable mood, insomnia, and low back pain.

6. On July 21, 2016, claimant sought chiropractic treatment with Dr. Steven Peltzman. At that time, the claimant reported pain in her neck, mid-back, and low back. The claimant also reported occasional headaches. Dr. Peltzman recorded that the claimant symptoms began when she fell down stairs while carrying a table.

7. During 2017, 2018, and 2019, the claimant continued her treatment with Drs. Locke and Peltzman. These medical records identify the claimant's symptoms and conditions included headaches, severe anxiety, moderately severe depression, insomnia, nausea, vomiting, back pain, and neck pain.

8. On April 15, 2019, the claimant was seen by Dr. Locke. At that time, the claimant reported suffering a concussion while in Michigan one month prior. The claimant also reported increased anxiety, vomiting, headaches, nosebleeds, low appetite, mental fogginess, rhinitis and dizziness. Dr. Locke opined that the claimant's symptoms were most likely due to the concussion.

9. On June 12, 2019, the claimant returned to Dr. Peltzman and reported increased neck pain and headaches. The claimant also reported that she had experienced a fall approximately eight weeks prior. On June 19, 2019, the claimant reported neck pain of six out of ten. On June 26, 2019, she reported her neck pain ranged from six to nine out of ten.

10. On February 12, 2018, February 13, 2018, February 17, 2019, May 27, 2019, and June 1, 2019, officers with the New Castle Police responded to incidents involving the claimant. In each instance alcohol was identified as being involved.

Medical Treatment After January 23, 2020

11. The first medical treatment the claimant sought following her fall on January 23, 2020, was on January 24, 2020. On that date, the claimant was seen in the emergency department (ED) at Valley View Hospital. At that time, the claimant described her work injury as falling on ice, hitting the back of her head, and falling onto her back. On exam, Dr. David Hile noted that the claimant's head was "normocephalic atraumatic" and the claimant was neurologically intact. There is no reference to any lacerations, swelling, bruising, or broken teeth. A cervical spine computed tomography (CT) scan was read as negative. Dr. Hile diagnosed post-concussive syndrome, and a thoracic spine muscle spasm. The claimant did not report her prior history for falls, head injuries, or neck symptoms.

12. On January 29, 2020, claimant began treatment at Grand River Clinic[1] and was seen by Mark Quinn, PA-C. On that date, the claimant's description of the January 23, 2020 was different from that on the First Report of Injury and the report at the ED on January 24, 2020. The claimant told PA Quinn that she was struck on the top of her head by a very large icicle (two feet wide, and three to four feet long), causing her to fall and strike her forehead on pavement, but she did not lose consciousness. The claimant also reported returning to work following her fall. At the time of the January 29, 2020 exam, the claimant reported headaches, light sensitivities, and feeling of being off balance. The claimant denied prior head injuries, neck pain, or back pain.

[1] The providers at Grand River Clinic, including PA Quinn have been the claimant's authorized treating providers (ATPs) for this claim.

13. On his examination, PA Quinn noted that the claimant was alert and oriented, her head was completely normal to inspection, her hearing was normal, she had a normal facial exam, her teeth and dentition were normal, her vision was normal, her neck was normal with full range of motion, and her skin examination revealed no wounds, lesions, or rashes. PA Quinn diagnosed a concussion without loss of consciousness.

14. On January 31, 2020, the claimant was seen by Chrisitina Maenle, NP at Valley View Hospital related to a pre-existing diagnosis of vertebral artery calcifications. The claimant mentioned sustaining a migraine on January 24, 2020. NP Maenle noted that the claimant's "history is a little vague". The claimant denied having back pain and NP Maenle noted the claimant's neck examination was normal.

15. On February 4, 2020, the claimant returned to PA Quinn and reported vomiting, feeling off balance, sleeping a long time, blurry vision, and that bright lights were causing headaches. The claimant also reported that she had suffered a concussion three years prior, when she was pushed down some stairs. The claimant denied any other head injuries. The claimant continued to deny neck and back pain. On exam, PA Quinn noted that the claimant's head, face, teeth, and neck were all normal, and she had full range of motion of her neck.

16. On February 12, 2020, the claimant was seen by PA Quinn and reported improvement. PA Quinn noted that the claimant's head, teeth, and neck were normal, and she had no skin wounds. The claimant had full range of motion to her neck and she continued to deny back pain. PA Quinn released the claimant to modified duty.

17. On February 24, 2020, the claimant was seen in the ED at Grand River Medical Clinic after she fell and hit her head. Chelsea Lawrenz, PA-C recorded that the claimant was improving after a prior fall until the current fall three days prior. The claimant reported that after falling she experienced exacerbation of her dizziness, headache, photophobia, nausea, back and neck pain. PA Lawrenz noted a healing laceration on the claimant's lower lip, and tenderness over the midline and bilateral lateral cervical areas.

18. On February 27, 2020, the claimant was seen by PA Quinn. In the medical record of that date, PA Quinn identified a fall on February 21, 2020 when the claimant slipped on ice and struck her head. PA Quinn noted the claimant has experienced a "significant decrease in her functionality following the second fall" and he made a referral for a neurological consultation.

19. On March 13, 2020, the claimant was seen by neurologist Dr. Mitchell Burnbaum. The claimant reported that her second fall involved slipping as she exited her bedroom, and hitting the right side of her head on tile. In his report, Dr. Burnbaum noted that although the claimant had not yet reached her baseline, she had improved following her fall in January 2020, and was "much worse" after the second fall.

20. On March 28, 2020, the respondents filed a General Admission of Liability (GAL) admitting for the January 23, 2020 injury, medical treatment, and temporary total disability (TTD) benefits.

21. On May 7, 2020, the claimant was seen by Louis Passariello, LCSW, for a mental health examination. On that date, the claimant reported that when she was injured on January 23, 2020, she suffered extensive bruising on her head and face. The claimant did not reference her fall on February 21, 2020.

22. On June 10, 2020, the claimant was seen by Dr. Dale Bowen for a neuropsychological evaluation[2]. With regard to the work injury, the claimant told Dr. Bowen that she slipped on ice, but did not mention being struck by an icicle. In addition, the claimant did not mention her second fall in February.

23. On June 10, 2020, PA Quinn released the claimant to work three days per week, working six to eight hours each day.

24. On August 10, 2020, PA Quinn released the claimant to full duty, with no work restrictions. In that same medical record, PA Quinn opined that the claimant would likely reach maximum medical improvement in the next month.

25. On September 8, 2020, the claimant reported to PA Quinn that she was working full time and doing well. On examination, PA Quinn noted that the claimant had bruising in various stages of healing, as well as a hematoma on her head. The claimant first reported that she fell at home and lost consciousness. She then described becoming injured when her dog jumped on her as she exited her car. However, PA Quinn continued to question the claimant about her injuries and he noted:

> Upon further questioning she states that her hematoma on her scalp and bruising was not from a fall as initially stated and that this was from a domestic violence incident. States she was grabbed and thrust up against a wall in her home, states she had a [loss of consciousness]. States that she reported this incident to the police and has since changed all the locks in her house. States that she is working on a restraining order against the offender and that she now feels safe in her home.

Mr. Quinn noted that he would address maximum medical improvement (MMI) in two weeks. The claimant remained working at full duty without restrictions.

26. On September 12, 2020 and September 13, 2020, the New Castle Police documented additional incidents involving the claimant. On September 19, 2020, the claimant contacted that department about obtaining a restraining order. These ALJ finds

[2] Although Dr. Bowen's report was not submitted as evidence, the report is described in the reports of Drs. Orent, Moe, and D'Angelo.

that these records substantiate the domestic violence history PA Quinn identified on September 8, 2020.

27. On September 23, 2020, the claimant returned to PA Quinn. At that time, the claimant reported that most of her symptoms had resolved. PA Quinn recommended additional care through November 23, 2020, at which time he anticipated placing the claimant at MMI.

28. On September 25, 2020, the respondents filed a GAL terminating TTD benefits as of August 10, 2020 because the claimant was released to full duty.

29. On October 2, 2020, claimant was seen in the ED at Grand River Medical Clinic regarding a foot injury. On examination, the claimants' cervical spine was identified as normal.

30. On February 12, 2021, the Rifle police transported the claimant to the ED at Grand River Medical Center because she was hallucinating. The claimant was seen by Dr. Ruth Pitts at that time. Dr. Pitts noted that the claimant was experiencing confusion, tremulousness, and tachycardia. When the claimant was unable to provide a history, Dr. Pitts obtained information from the claimant's father. The claimant's father reported that the claimant had a history of excessive alcohol consumption. Dr. Pitts opined that the claimant was experiencing alcohol withdrawal symptoms.

31. The claimant was hospitalized from February 12, 2021 through February 18, 2021. The medical records indicate that during this time the claimant was combative, agitated, confused, disheveled, lacking insight, and exhibiting poor judgment with delayed cognition. The claimant was also noted to be experiencing delirium tremens as a result of severe acute alcohol withdrawal. The claimant was instructed to pursue alcohol rehabilitation.

32. On February 22, 2021, the claimant returned to PA Quinn. At that time, PA Quinn noted that the claimant had been hospitalized because of acute psychosis. The claimant reported that she had been laid off and traveled to Michigan for approximately one month. During that time, she drank heavily and stopped taking her mental health medications. The claimant reported that upon her return to Colorado she was hospitalized with hallucinations, alcohol dependence, with withdrawal deliriums.

33. On February 25, 2021, PA Quinn ordered magnetic resonance imaging (MRI) of the claimant's brain and made a referral for neuropsychological testing.

34. On March 11, 2021, law enforcement was contacted regarding a domestic violence incident in the claimant's home. The claimant reported to officers that she was thrown down stairs by her boyfriend, which resulted in injuries to her head and hand. The claimant was transported to Valley View Hospital ED. Dr. Charlie Abramson noted that the claimant had a head abrasion and bruising on her palms.

35. On March 15, 2021, the claimant sustained a gunshot wound to her left hand. While undergoing medical treatment at Valley View Hospital, the claimant reported that her boyfriend shot her in the hand during an argument. It was noted that the claimant was heavily intoxicated upon arrival, was shaking, and difficult to control.

36. On March 22, 2021, the claimant was transported to Grand River Medical Center for admission into an alcohol recovery program. The claimant reported that she had been drinking an average of one drink per hour for four days, and she had to wake up three to four times each night to drink alcohol to prevent withdrawal symptoms. The claimant's friend was instructed to transport the claimant straight to a detox in Grand Junction.

37. On April 1, 2022, the claimant was seen by PA Quinn. On that date, PA Quinn noted that the claimant had been working until her gunshot wound and related surgery. The claimant reported occasional headaches, but the majority of her concussion symptoms were quite good.

38. On May 3, 2021, the claimant returned to PA Quinn. At that time, the claimant had full range of motion of her neck.

39. At the request of the respondents, the claimant was scheduled to attend an independent medical examination (IME) with Dr. Douglas Scott on May 16, 2021. The claimant did not appear for the IME and Dr. Scott issued a report of his review of the claimant's medical records. In his May 16, 2021 report, Dr. Scott opined that the claimant suffered a work injury involving a slip and fall, followed by a non-work related fall at her home. Dr. Scott further opined that the claimant's second fall exacerbated her post-concussion symptoms and caused new post-concussion symptoms. With regard to MMI, it was Dr. Scott's opinion that the claimant reached MMI sometime between February 12, 2020 and February 21, 2020 when she fell at home and her current symptoms were not related to her work injury. He also opined that the claimant did not need maintenance medical treatment, or a permanent impairment rating.

40. On June 3, 2021, the claimant was seen by PA Quinn. At that time, PA Quinn referenced Dr. Scott's IME report and stated that he agreed that the claimant's symptoms that were related to her work injury had resolved. PA Quinn also agreed with Dr. Scott that the claimant's fall at home in February 2020 was the cause of her current symptoms.

41. On June 23, 2021, PA Quinn and his supervising physician at Grand River Health, Dr. Bonnie Walsh, authored a letter in which they stated their agreement with Dr. Scott. Specifically, they agreed that the claimant reached MMI somewhere around February 12, 2021 and February 21, 2021.[3] The letter further stated that the claimant was placed at MMI as of June 3, 2021, with no permanent impairment, and no

[3] The ALJ infers that this is a typographical error, as Dr. Scott identified the dates of MMI as occurring between February 12, 2020 and February 21, 2020.

maintenance care. On August 23, 2021, PA Quinn identified the date of MMI as February 12, 2021.

42. On August 5, 2021, the respondents filed a Final Admission of Liability (FAL) consistent with Dr. Walsh and PA Quinn's report of MMI with no impairment.

43. On August 17, 2021, the claimant applied for a Division sponsored independent medical examination (DIME). Dr. Sander Orent was selected to perform the DIME.

44. On November 2, 2021, the claimant attended the DIME with Dr. Orent. In connection with the DIME, Dr. Orent obtained a history from the claimant and performed a physical examination. In addition, he reviewed medical records beginning on January 24, 2020, (the day after the claimant's injury). At the DIME, the claimant denied prior neck issues, and denied using alcohol since college. With regard to her mechanism of injury on January 23, 2020, the claimant reported to Dr. Orent that she was struck in the head by an icicle. The claimant denied that she struck her head on February 21, 2020. She also denied suffering an injury to her head in September 2020. Dr. Orent accepted the history provided by the claimant as true, specifically noting that he was giving her "the benefit of the doubt".

45. Dr. Orent noted that the claimant's case involved a variety of issues including psychological symptoms, possible alcohol withdrawal syndrome, and at least three closed head injuries. Dr. Orent noted that prior to the second fall February 2020 fall the claimant was improving, and experienced worsened conditions thereafter. However, Dr. Orent ultimately opined that the claimant was not at MMI and recommended repeat neuropsychological testing, and a psychiatric IME. With regard to the claimant's cervical spine condition, Dr. Orent diagnosed a cervical strain, and provided a provisional impairment rating of 22 percent, whole person. Dr. Orent explained that he assessed this rating because of deficiencies in range of motion, (even though he noted the claimant's range of motion was substantially better upon his direct observation).

46. On December 7, 2021, the respondents filed an Application for Hearing (AFH) on the issues of overcoming the DIME opinions of Dr. Orent, pre-existing and unrelated conditions, intervening accidents/injuries/conditions. The current hearing resulted.

47. At the request of the respondents, the claimant attended a psychiatric IME with psychiatrist, Dr. Stephen Moe. In connection with this IME, Dr. Moe reviewed the claimant's medical records, and conducted an interview with the claimant. In his January 10, 2022 IME report, Dr. Moe opined that the claimant recovered from her January 23, 2020 work related concussion prior to her February 21, 2020 at-home non-work related concussion. He further opined that no further treatment was necessary for the work injury (including a repeat neuropsychological assessment). In reaching his opinions, Dr. Moe noted that the claimant's report that her conditions worsened after the work injury did not meet the medically expected outcome following a mild concussion.

Dr. Moe also noted a number of inconsistencies in the claimant's reports to various providers and to her recitation of events at the psychiatric IME. Dr. Moe also opined that alcohol use disorder is the likely cause of the claimant's symptoms.

48. On January 24, 2022, Dr. Moe issued an addendum to his IME report after reviewing additional records. In that addendum, Dr. Moe stated that the additional records did not change his opinion that claimant reached MMI, with no permanent psychiatric impairment, no need for additional evaluations or treatment, and no need for restrictions.

49. Upon his review of Dr. Moe's reports, PA Quinn authored a letter dated January 26, 2022. In his letter, PA Quinn agreed with all of Dr. Moe's conclusions. In addition, PA Quinn opined that on January 23, 2020, the claimant injured her head, and that she recovered from that injury prior to the February 21, 2020 fall at home.

50. Thereafter, the claimant attended an IME with Dr. Kathleen D'Angelo. In connection with the IME, Dr. D'Angelo reviewed medical records from before and after the claimant's work injury, interviewed the claimant, and performed a physical examination. In an IME report dated February 26, 2022, Dr. D'Angelo opined that the claimant was at MMI as of February 12, 2020, and the claimant was appropriately released by PA Quinn without maintenance treatment, impairment ratings, or permanent work restrictions. Dr. D'Angelo further opined that Dr. Orent erred in performing his causation analysis, which in turn resulted in errors with regard to his opinions on MMI, impairment, work restrictions, and the need for maintenance care. Dr. D'Angelo noted that Dr. Orent did not appear to have reviewed the claimant's pre-injury medical records.

51. Dr. D'Angelo's testimony was consistent with her written report. Dr. D'Angelo testified that the history portion of her interview of claimant was difficult, because claimant has selective memory and confabulation. Dr. D'Angelo testified that it is her opinion that the claimant confabulates her medical history because of Korsakoff Syndrome[4] (which is secondary to the claimant's chronic alcohol abuse).

52. During her testimony, Dr. D'Angelo reiterated her opinion that Dr. Orent erred with respect to his causation, MMI, and impairment rating opinions. She further testified that this error was not just a mere difference of medical opinions, but a clear contradiction to what is supported by claimant's records. Dr. D'Angelo noted that Dr. Orent essentially deferred his own opinion on the neuropsychological/mental issues to a psychiatric IME, and Dr. Moe's subsequent psychiatric IME clarified that the claimant is at MMI for those issues, with no impairment, and without need for further evaluation or treatment. With regard to the claimant's cervical spine, Dr. D'Angelo testified that between the date of the claimant's work injury and the date of her February 2020 at-home accident, the claimant had multiple evaluations, and during each evaluation she denied cervical pain, she had no positive findings on cervical exam, and she had full cervical range of motion. Additionally, after claimant's fall at home in February 2020, she reported to PA Quinn that she had dramatically worsened after the fall at home, with

[4] Also referred to as chronic Wernicke's encephalopathy.

a significant increase in dysfunction. D'Angelo testified that an accurate prior medical history is essential to a competent forensic causation evaluation. In the current matter, Dr. D'Angelo noted that Dr. Orent had an inaccurate understanding of the claimant's prior cervical history, which caused his cervical causation evaluation to be erroneous.

53. The claimant testified at the hearing. The claimant's testimony was inconsistent, confusing, disjointed, and at times argumentative. The claimant testified that on January 23, 2020, she was struck in the head by a falling icicle, resulting in a fall and a loss of consciousness. The claimant further testified that as a result of her fall she broke her glasses, chipped her teeth, bruised the side of her head, and cut off the tip of her thumb. In addition, at the location where she was struck on her head, she developed a bald spot. The claimant could not explain why the January 24, 2020 ED report did not identify damage to her teeth, lacerations to her head, or thumb. The claimant testified that she had suffered a traumatic brain injury approximately five years ago, and she had fully recovered from that prior injury. The claimant repeatedly denied striking her head on February 21, 2020. During her testimony, the claimant admitted that she lied to a number of her medical providers including Dr. Lipmann, Dr. Locke, and Dr. Peltzman.

54. The ALJ does not find the claimant's testimony to be credible or persuasive.

55. The ALJ credits the medical records, the testimony and opinions of Dr. D'Angelo, and the opinions of PA Quinn, Dr. Scott, and Dr. Moe over the contrary opinions of Dr. Orent. The ALJ finds that Dr. Orent received incomplete records, and an incomplete and inaccurate history from that claimant, and he relied on that history in providing his ultimate opinions regarding diagnosis, MMI, and impairment. For those reasons, the ALJ finds that the respondents have demonstrated by clear and convincing evidence that Dr. Orent's opinions are erroneous. The ALJ concludes that the claimant reached MMI on February 12, 2020 with no permanent impairment.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. A DIME physician is required to rate a claimant's impairment in accordance with the AMA Guides. § 8-42-107 (8) (c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). The questions of whether the DIME physician has correctly applied the rating protocols, and ultimately whether the rating itself has been overcome by clear and convincing evidence, are questions of fact for the ALJ. *McLane Western Inc. v. Industrial Claim Appeals Office,* 996 P.2d 263 (Colo. App. 1999*); Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 2002 (Colo. App. 2000); *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

6. As found, the respondents have overcome, by clear and convincing evidence, the opinions of Dr. Orent. The ALJ concludes that there is more than a mere difference of opinions in this matter. Specifically, the ALJ concludes that Dr. Orent erred in finding that the claimant is not at MMI. As found, the opinions of Dr. D'Angelo and PA Quinn are credible and persuasive on this issue. The ALJ concludes that the claimant reached MMI on February 12, 2020.

7. The ALJ further concludes that Dr. Orent erred in assigning a permanent impairment rating to the claimant's cervical spine. As found, the opinions of Dr.

D'Angelo and PA Quinn are credible and persuasive on this issue. The ALJ concludes that the claimant reached MMI with no permanent impairment.

ORDER

It is therefore ordered:

1. The claimant reached MMI for all aspects of her work injury on February 12, 2020.

2. The claimant is not entitled to permanent partial disability (PPD) benefits under this claim.

3. All matters not determined herein are reserved for future determination.

Dated July 5, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-186-645-001

ISSUES

I. The parties seek an order allocating death benefits/dependency benefits between Dependent-Claimants, Dependent-Claimant surviving spouse, Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter.

II. Respondents seek an order finding that Respondents are entitled to take an offset for social security survivor benefits against death benefits/dependency benefits owed to Dependent-Claimants.

STIPULATIONS

Prior to hearing, the parties entered into stipulated facts that are referenced below and memorialized within a document identified as "Dependent-Claimant and Respondents' Stipulated Facts for Hearing." (Resp. Ex. H) Dependent-Claimant surviving spouse indicated at hearing that she in fact signed the Stipulated Facts for Hearing document on May 24, 2022, and that remained in agreement with those stipulated facts.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Decedent passed away on October 21, 2021, in the course and scope of his duties as a fire fighter for Employer. (Resp. Ex. H, Stipulated Fact #1, bn 023; Resp. Exs. A-B)
2. Dependent-Claimant surviving spouse married Decedent on December 22, 2012, and Decedent and Dependent-Claimant remained married as of October 21, 2021. (Resp. Ex. H, Stipulated Fact #2, bn 023; Resp. Ex. G, bn 020)
3. In addition to Dependent-Claimant surviving spouse, when he died Decedent also left behind two biological children he had with Dependent-Claimant surviving spouse: Dependent-Claimant surviving son OS[Redacted] (D.O.B. 05/27/16), and Dependent-Claimant surviving daughter KS[Redacted] (D.O.B. 05/20/20). (Resp. Ex. H, Stipulated Facts #3-4; Resp. Ex. G, bn 021-022)
4. Dependent-Claimant surviving spouse is the mother and legal guardian of Dependent-Claimant surviving son and Dependent-Claimant surviving daughter. (Resp. Ex. H, Stipulated Fact #5, bn 023)
5. A Dependents' Notice and Claim for Compensation was filed by Dependent-Claimant surviving spouse on behalf of herself, Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter. (Resp. Ex. C)

6. Dependent-Claimant surviving spouse, and Respondents, have no knowledge of any other possible dependents of Decedent as of the date of Decedent's death. (Resp. Ex. H, Stipulated Fact 12, bn 024)

7. On December 21, 2021, Insurer filed a General Admission-Fatal, admitting to death benefits/dependency benefits, and allocating those benefits equally (1/3 each) between Dependent-Claimant surviving spouse, Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter. (Resp. Ex. D) Dependent-Claimant surviving spouse testified that she believes this to be a fair and equitable distribution of death benefits/dependency benefits, and she testified that she is in agreement to this allocation.

8. Dependent-Claimant surviving spouse received a one-time $255 award for Social Security Survivor Benefits (herein "SSS Benefits"). She has not received any additional SSS Benefits, and she is not currently receiving SSS Benefits. (Resp. Ex. H, Stipulated Fact #7, bn 024)

9. Dependent-Claimant surviving son received $3,680 in SSS Benefits on January 18, 2022, for money due between October 2021 and December 2021, and he began receiving $1,274 in monthly SSS Benefits beginning in February 2022. (Resp. Ex. H, Stipulated Fact #9, bn 024)

10. Dependent-Claimant surviving daughter received $3,680 in SSS Benefits on January 18, 2022, for money due between October 2021 and December 2021, and she began receiving $1,274 in monthly SSS Benefits beginning in February 2022. (Resp. Ex. H, Stipulated Fact #11, bn 024)

11. On February 16, 2022, Respondents applied for hearing on issues that included obtaining an order regarding proper distribution of death benefits between dependents, SSS Benefit offsets, and/or any other applicable offsets.

12. The parties entered into a written set of stipulated facts on May 24, 2022. (Resp. Ex. H)

13. Dependent-Claimant surviving spouse testified that she works as a 4th grade schoolteacher, and she earns $3,500/month before taxes. She has health insurance for herself through her job and that Dependent-Claimant surviving son and Dependent-Claimant surviving daughter are covered for health insurance by Colorado Health Plan for Children Medicare/Medicaid. She owns her own home, and her mortgage payments were forgiven under a Tunnels to Towers Foundation Benefit award. She has a car payment of $460/month.

14. In addition to the one-time $255 award in SSS Benefits, Dependent-Claimant surviving spouse received $135,000 in widow's/survivor benefits from Provident Insurance, $75,000 from a life insurance policy through her work on Decedent's death, and $250,000 from American Income Life Insurance through Decedent's work.

15. Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter did not testify at the hearing.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

1. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).
2. Section 8-42-121, C.R.S,. 2021, provides in pertinent part that death benefits "shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable."
3. Respondents seek an order affirming the current allocation of death benefits being paid to Dependent-Claimant surviving spouse, Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter, at equal amounts of 1/3 each, to try to help protect the dependent children's workers' compensation benefits for their future needs.
4. As found, based on a review of the evidence and the statements and testimony of Dependent-Claimant surviving spouse at hearing, the ALJ finds that an apportionment of the death benefits between Dependent-Claimant surviving spouse, Dependent-Claimant surviving son, and Dependent-Claimant surviving daughter, in a 1/3 split before offsets are applied, is equitable and fair. Respondents seek an order affirming this allocation to ensure that the benefits owed to Dependent-Claimant children, who are currently 6 years old (Owen), and 2 years old (Keiley), are clearly identified, with a stated desire to have that those benefits placed in separate bank accounts, and protected, for each child's future needs. It is noted that Dependent-Claimant surviving spouse has a regular salary, she recently received $460,000 in widow's survivor benefits from three non-social security based sources, she had her mortgage assumed by a beneficent source, and she does not identify any other large current expenses beyond her monthly car payment.
5. An argument can be made to provide a greater allocation of the death benefits to the dependent children, to provide more money for them in the future for education and/or other personal expenses. Such an allocation would lessen the impact of the dependent children's SSS Benefit award offset against their death benefits. Supporting this argument is that the dependent children's entitlement to workers' compensation death benefits will end by no later than each child's 21st birthday, meaning each has a known limited window within which to receive such benefits, and as each child's entitlement to such benefits ends, the allocation of benefits will be modified (each time increasing Dependent-Claimant surviving spouse's allocation), ultimately with all workers' compensation death benefits allocated to Dependent-Claimant surviving spouse (so long as she is living, and does not remarry). Moreover,

as found, Dependent-Claimant surviving spouse has received $460,000 in other widow benefits, which when coupled with her salary, and when considering her limited expenses, theoretically supports a distribution more heavily in favor of the dependent children.

6. While the above argument could be made, the ALJ has no reason to believe Dependent-Claimant surviving spouse does not have her children's best interests in mind, or reason to believe she will not protect her children's workers' compensation benefits to the greatest extent possible for their future. As such, it is the ALJ's determination that the fairest and most equitable distribution of workers' compensation death benefits continues to be an equal division of those benefits of 1/3 to each Dependent-Claimant before application of offsets. This is the allocation currently in place, and this is the allocation the Dependent-Claimant surviving spouse indicated she would like to have continued. Given the above, the ALJ finds and concludes that an equal allocation of death benefits among the three identified Dependent-Claimants if fair and equitable.

7. Section 8-42-114, C.R.S., (2021), states that "In case of death, the dependents of the deceased entitled thereto shall receive as compensation or death benefits sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week for accidents occurring on or after July 1, 1989, and not less than a minimum of twenty-five percent of the applicable maximum per week. In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits." (Emphasis added)

8. By virtue of 8-42-114, C.R.S. (2021), Respondents are entitled to take a SSS Benefit offset against death benefits paid to each Dependent-Claimant. Dependent-Claimant surviving spouse does not contest Respondents' entitlement to SSS Benefit offsets, and there is no known factual or legal basis to deny Respondents' request to take SSS Benefit offsets.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall continue to apportion workers' compensation death benefits with 1/3 of the benefits being paid to be allocated to Dependent-Claimant surviving spouse, 1/3 being paid to be allocated to Dependent-Claimant surviving son, and 1/3 being paid to be allocated to Dependent-Claimant surviving daughter.

2. Respondents are entitled to take SSS Benefit offsets against death benefits paid to Dependent-Claimants, to be calculated consistent with statute and caselaw.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2022.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues set for determination included:

- Did Claimant overcome the opinions of the physician who performed the Division of Workers' Compensation Independent Medical Examination ("DIME") [Eric Shoemaker, D.O.] regarding permanent medical impairment by clear and convincing evidence?

- Did Respondents prove by a preponderance of the evidence that they are entitled to recover the overpayment?

FINDINGS OF FACT

1. On January 6, 2020, Claimant suffered an admitted industrial injury while working for Employer. Claimant testified she was sweeping the floor when she fell on her left side. She suffered injuries to her arm and low back.

2. Claimant testified she received treatment through the providers at Concentra, who were ATP-s for Claimant's treatment. Claimant was initially evaluated by Richard Shouse, PA-C at Concentra on January 7, 2020, who noted pain in Claimant's lower back, right knee and right arm, as well as the sacrum. Claimant was given work restrictions and x-rays were taken, which were negative for fracture and dislocation. In the follow-up evaluation on January 9, 2020, Lacey Esser, PA-C, who noted Claimant fell on her back and who documented physical findings that correlated with her symptoms.[1]

3. From January 2020 through September 2020, the Concentra records reflected consistent pain in Claimant's lower back, including loss of range of motion ("ROM"). Claimant received physical therapy ("PT"), as well as chiropractic treatment.[2] The ALJ found these records were evidence of Claimant's continued pain complaints, as well as objective findings on examination that were documented by her ATP-s .

4. Claimant was referred to John Sacha, M.D. on or about September 15, 2020. Claimant reported persistent pain in her low back. Dr. Sacha' report noted the MRI of the lumbar spine showed mild disc bulging and facet spondylolysis, with borderline foraminal narrowing from L3 to S1. Dr. Sacha recommended injections and the ALJ inferred that Claimant's low back symptoms were the basis for this treatment recommendation.

[1] These records were summarized in Dr. Shoemaker's DIME report. [Exhibits 4 and D].

[2] *Id.*

5. On October 30, 2020, Dr. Sacha administered a staged L5-S1 intra-laminar epidural injection, staged left L3-4 intra-articular facet injection, staged left L4-5 intra-articular facet injection and staged left L5-S1 intra-articular facet injection; all of which were done with fluoroscopic guidance and conscious sedation. Claimant's diagnoses by Dr. Sacha were: lumbosacral facet syndrome and lumbosacral radiculopathy.

6. Claimant returned to Dr. Sacha on November 20, 2020. He noted she did not have short term relief with either the lumbar epidural or lumbar facet injections. On examination, Dr. Sacha noted Claimant had lumbar paraspinal spasm, pain with forward flexion, extension and extension rotation. She had a negative straight leg raise and equivocal neural tension test bilaterally. Dr. Sacha's impression was: lumbosacral radiculopathy. Dr. Sacha concluded Claimant was at MMI.

7. Dr. Sacha noted that, although he did not know what Claimant's pain generator was or where the symptoms were from, she had been consistent with complaints and he recommended impairment rating. Dr. Sacha concluded Claimant sustained a 5% whole person impairment, using the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition revised. Claimant had 0% permanent impairment based upon loss of range of motion ("ROM"). Dr. Sacha completed the ROM testing and the sheets were attached to his report. Dr. Sacha's rationale for assigning an impairment rating was persuasive to the ALJ.

8. The medical records admitted at hearing documented more than six months of pain in the lumbar spine for which Claimant received treatment. At the time Dr. Sacha concluded Claimant was an MMI, Claimant had received treatment for her low back pain for more than ten (10) months.

9. The ALJ took judicial notice of portions of the *AMA Guides* governing the evaluation of permanent impairment-lumbar spine, pp.78-81.[3]

10. On November 23, 2020, Claimant returned to Concentra and was evaluated by Jonathan Claassen, D.O. At the time, Claimant reported he was having difficulty sleeping due to discomfort and pain, as well as a tingling sensation in the left leg. Dr. Classen's report documented Claimant had received physical therapy, chiropractic, dry needling and medication management for her injuries. Dr. Classsen did not make specific findings with regard to Claimant's lumbar spine, but concurred she was at MMI. His assessment was: sacral contusion and lumbar contusion. Dr. Classen completed a WCM 164 at this time.

11. A Final Admission of Liability ("FAL") was filed on behalf of Respondents on December 21, 2020. The FAL admitted for the 5% medical impairment rating issued by Dr. Sacha. The total PPD award to which Claimant was entitled was $12,329.58.

[3] C.R.E. 201.

12. MR[Redacted] testified on behalf of Respondents. She is employed by Respondent-Insurer. Ms. MR[Redacted] testified that the previous claims handler before was the one who filed the December 21, 2020 FAL.

13. Ms. MR[Redacted] testified she was familiar with the case, including the pleadings that were filed. She confirmed that the PPD benefits admitted to in the December 21, 2020 FAL were paid out completely. The PPD paid out totaled $12,236.10. Ms. MR[Redacted] testified there were three checks issued. Two were sent to Claimant's attorney in the respective amounts of $663.42 and $9,906.52 and then one check was mailed directly to Claimant in the amount of $1,666.16.

14. An attorney disbursement sheet, dated January 24, 2021, was admitted into evidence. That sheet documented a gross recovery of $10,569.94, less attorney's fees in the amount of $2,465.91; with a net to Claimant of $8,104.03. $1,175.00 in costs were expended, leaving a net paid to Claimant of $6,929.03. Copies of checks in those amounts were also admitted into evidence.[4]

15. Claimant testified that she received and cashed the check mailed to her by her attorneys.

16. On May 4, 2021, Dr. Shoemaker performed the DOWC IME. At that time, Claimant reported pain in her low back on the left side. She stated her pain got worse with sitting and decreased with changes in position. She described her pain as 7/10. Dr. Shoemaker stated Claimant had no pain behaviors during their discussion, but had dramatic displays of pain during very superficial palpation on the left lumbar paraspinals from L2 to the sacrum.

17. Dr. Shoemaker described Claimant's lumbar ROM as full and she was able to touch her toes, though she described pain. There was no evidence that Dr. Shoemaker tested Claimant's lumbar ROM with dual inclinometers. No ROM worksheets were attached to the report. Dr. Shoemaker said Claimant had significant reproduction of pain with simulated maneuvers including axial roll and axial load.

18. Dr. Shoemaker concluded Claimant did not qualify for an impairment rating. Dr. Shoemaker said she did not meet Desk Aid 11 criteria for the use of Table 53, as there was no objective pathology. He respectfully disagreed with Dr. Sacha that disc bulging was present and with Dr. Cox that facet arthropathy or effusion was present.

19. Dr. Shoemaker opined that Claimant's pain was far too superior to be considered emanating from the sacroiliac joint. Dr. Shoemaker stated Claimant's physical examination demonstrated four out of five signs of symptom magnification which suggested a non-physiologic/non-organic component to her symptoms. He concluded Claimant's subjective complaints did not correlate with objective findings. Dr. Shoemaker said Claimant had no permanent impairment.

[4] Exhibit F.

20. Claimant testified she was not sure whether an interpreter was present during the evaluation with Dr. Shoemaker.

21. The ALJ determined a Spanish interpreter was present for the DIME appointment.[5]

22. Dr. Shoemaker testified as an expert medical doctor with board certifications in Physical Medicine and Rehabilitation, Sports Medicine and Pain Medicine. He is Level II accredited pursuant to the W.C.R.P. Dr. Shoemaker testified he received extensive training in reviewing MRI-s of the lumbar spine. During fellowship, he trained at Washington University in the Mallinckrodt School-Institute of Radiology in the Department of Radiology reviewing spine MRI-s. He reviewed the MRI and determined that the disc heights were well-preserved. He opined the canal lateral recesses and foramen widely patent and the facet joints were unremarkable with no degenerative changes. No effusion was present and Dr. Shoemaker described the lumbar MRI to be unremarkable.[6]

23. Dr. Shoemaker testified he relied on the Desk Aid 11 when deciding whether Claimant qualified for an impairment under Table 53. He said that in order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualified for a numerical impairment rating of greater than zero under Table 53. Dr. Shoemaker opined Table 53, II B did not apply in because it referred to the presence of an intervertebral disc or other soft tissue lesions. He said Claimant had no identified objective findings to support the presence of intervertebral disc or other soft tissue lesion. Dr. Shoemaker said in this circumstance, Claimant didn't consider 6 months of medically documented pain and rigidity unless you qualify for an impairment under II. He described Section B as "a subset" to II. [7]

24. Dr. Shoemaker testified Claimant demonstrated four out of five signs of symptom magnification during the DIME which suggested a nonphysiologic, nonorganic component to her symptoms. He noted she also demonstrated 2 out of the 5 Waddell's signs during Dr. Sacha's evaluation. Dr. Shoemaker stated Claimant's subjective complaints of significant pain through a large area of her spine and the reproduction of pain with certain maneuvers did not correlate with what was seen structurally in her spine on advanced imaging and response to injections. Dr. Shoemaker did not believe there were objective findings to support her subjective complaints. The ALJ concluded this opinion concerning Waddell's signs was too limiting when evaluating impairment.

25. Dr. Sacha authored a letter, dated November 11, 2021, in which he reviewed the report issued by the DIME physician. Dr. Sacha opined that Dr. Shoemaker

[5] Exhibit G.

[6] Exhibit E, p. 23: 3-25.

[7] Exhibit E, pp. 37:18-38:18.

did not follow the Division of Workers‘ Compensation Level II accreditation course in making his determination of no permanent impairment. Dr. Sacha stated Claimant clearly qualified for an impairment, as “she had a specific mechanism of injury that fit ongoing symptoms, had consistency of complaints in the low back for greater than six months and although she was very somatic in nature, she qualified for the 5% whole person impairment for the lumbar spine”.[8] Dr. Sacha concluded Dr. Shoemaker did not follow the Level II accreditation course or the *AMA Guides* when finding Claimant sustained a 0% impairment. The ALJ inferred that Dr. Sacha concluded Claimant was entitled to a medical impairment rating, as she met the criteria for such a rating, despite the fact she was somatic.

26. Dr. Sacha noted Claimant had specific complaints, consistency of complaints, mechanism of injury and objective findings on exam. The ALJ concluded the presence of exaggerated physical complaints did not obviate Claimant’s entitlement to a medical impairment rating in this case. Dr. Sacha’s opinion supported this conclusion and was persuasive to the ALJ.

27. The ALJ found Dr. Shoemaker’s report failed to address the question of whether Claimant would be entitled to Table 53 impairment even with a normal MRI. Dr. Shoemaker’s testimony indicated his opinion that Claimant would not qualify for an impairment with an unremarkable MRI, despite the presence of six months of pain/rigidity and the treatment related to same. Dr. Shoemaker failed to confirm Claimant’s lumbar ROM by testing with a dual inclinometer. These were errors.

28. Claimant overcame Dr. Shoemaker’s opinions by clear and convincing evidence.

29. The ALJ found Dr. Sacha’s calculation of Claimant’s impairment was correct.

30. Since Respondents paid PPD benefits based upon Dr. Sacha’s rating, no overpayment exists.

31. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers’ Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted

[8] Exhibit 1, p. 5.

neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). In the case at bench, there was conflicting medical evidence, including by the physicians who evaluated Claimant for permanency.

Overcoming the DIME

The question of whether Claimant overcame Dr. Shoemaker's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the findings of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician*. Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004). In the case at bar, the ALJ determined Claimant met the elevated burden of proof to overcome the DIME physician's' opinion on impairment.

As determined in Findings of Fact 1-2, Claimant suffered an injury at work on January 6, 2020 and received medical treatment provided by authorized providers at Concentra. The medical records from these providers documented the presence of objective findings, including spasm. (Finding of Fact 3). Claimant received conservative treatment and was referred to Dr. Sacha, as she had continued symptoms in the low back. *Id.* Dr. Sacha administered injections, which did not ameliorate Claimant's low back pain. then concluded Claimant was at MMI. Dr. Sacha assigned a medical impairment rating, pursuant to Table 53 II B. (Findings of Fact 7, 25-26).

The *AMA Guides* provide the basis for calculation impairment in the lumbar spine. More particularly, the *AMA Guides* provide in pertinent part:

"Evaluation of impairment of the spine involves both diagnosis-related factors, such as structural abnormalities, and musculoskeletal or neurologic factors that require physiologic measurements.[9]

[9] *AMA Guides*, page 78.

Table 53 II applied to Claimant's injury in the case at bench and provides:

"Intervertebral discs or other soft tissue lesions:

…

B. Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to-minimal degenerative changes on structural tests".

The ALJ reasoned that a plain reading of the aforementioned section of the *AMA Guides* provided for the assignment of a medical impairment rating in this case, even when Waddell's signs were present and there was a question as to the presence of degenerative changes in Claimant's lumbar spine. The medical evidence reflected the fact that Claimant had medically documented injury, along with at least ten months of medically documented pain and rigidity. (Finding of Fact 8). As found, Dr. Sacha cited this specific provision of the *AMA Guides* when concluding Claimant was entitled to a 5% medical impairment. (Finding of Fact 25). In this regard, the ALJ concluded that Dr. Sacha considered the question of Claimant's symptom exaggeration when he performed ROM testing and applied the validity criteria. *Id.* Dr. Sacha's reasoning that Claimant was entitled to a Table 53 medical impairment rating was credible to the ALJ. (Finding of Fact 26).

The ALJ determined Dr. Shoemaker made factual errors in assessing impairment, starting with the failure to address the objective findings in Claimant's lumbar spine which were documented in the medical records. (Finding of Fact 27). Dr. Shoemaker also did not perform ROM testing with dual inclinometers. *Id.* The ALJ also viewed Dr. Shoemaker's construction of the pain and rigidity requirement of Table 53 to be too circumscribed, in that he concluded Claimant's had no permanent impairment because of the presence of Waddell's signs and what he described as nonorganic pain complaints. (Finding of Fact 24). Dr. Shoemaker, while disagreeing with Dr. Sacha and Dr. Cox regarding the MRI, did not believe Claimant would qualify for a Table 53 impairment, despite meeting the plain language of Table 53 II B. The AJ determined Dr. Shoemaker's opinions were erroneous and that Claimant qualified for a permanent medical impairment (and PPD benefits) in these circumstances.

The ALJ considered Respondents' argument that Dr. Sacha and Dr. Shoemaker were simply expressing different opinions and the mere difference of opinion did not constitute unmistakable evidence that the DIME was wrong. [citing *Vega-Arreola v. Buxman Dairy & Farms*, W.C. 4-889-919, February 25, 2014]. The ALJ found Dr. Shoemaker made errors with regard to his conclusions about impairment and accordingly his opinions were overcome by clear and convincing evidence.

Overpayment

In light of the ALJ's findings with regard to permanency, no overpayment exists. The remaining issue with regard to overpayment, specifically Respondents' request that Claimant repay the overpayment is moot.

ORDER

It is therefore ordered:

1. Claimant met her burden to overcome the DIME physician's findings with regard to her medical impairment rating by clear and convincing evidence.

2. Claimant sustained a 5% whole person impairment of her lumbar spine as a result of her industrial injury.

3. Respondents shall pay PPD benefits based upon 5% medical impairment rating. Respondents are entitled to a credit for PPD benefits previously paid.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. 5-136-634-002

ISSUES

The issues set for determination included:

- Did Claimant prove by a preponderance of the evidence that his upper extremity scheduled rating for his arm at the shoulder should be converted to a whole person rating?

- Are Respondents entitled to reimbursement of the cancellation fee incurred as a result of Claimant's last-minute cancellation of his Independent Medical Examination ("IME")?

PROCEDURAL HISTORY

The undersigned issued a Summary Order on June 8, 2022. Respondents requested a full Order on June 15, 202, which was received on June 16, 2022. This Order follows.

FINDINGS OF FACT

1. Claimant, who was 20 years old on the date of injury (D.O.B. April 15, 1999) worked as an HVAC technician for Respondent-Employer.

2. On April 13, 2020, Claimant suffered an admitted industrial injury when he fell while he was working 15 to 20 feet in the air at a job site. Claimant testified the work space was dark and he fell through the ceiling tile. Claimant fell on his left side, hurting his left knee and shoulder. He said he felt his left shoulder dislocate, but it went back into place.

3. Claimant was a minor when he was injured at work on April 13, 2020.

4. Claimant was taken by ambulance by the Castle Rock Fire and Rescue Department to Castle Rock Adventist Hospital. The records reflected Claimant complained of left knee and left shoulder pain to the EMS personnel.

5. At the Castle Rock Adventist Hospital Emergency Department, Claimant underwent a head and cervical CT scan. X-rays were also taken of the left knee, tibia/fibula and left shoulder. The CT scans were negative for an intracranial hemorrhage or major abdominal pelvic visceral injury, hemoperitoneum, or acute fracture. Claimant was evaluated by Derrick Morford, D.O., whose clinical impression was fall, initial encounter; acute pain of left knee.

6. On April 14, 2020, Claimant was evaluated by Troy Manchester, M.D. at Concentra and was complaining of left knee, as well as left shoulder pain. On examination, Claimant's left knee and tenderness diffusely over the anterior knee and mild flexion caused medial pain. Claimant's cervical and thoracic spine had no tenderness and full range of motion ("ROM").

7. Dr. Manchester's assessment was: fall from height of greater than 3 feet; contusion of left shoulder and left knee; abrasion lower left leg, initial encounter; other internal derangement of left knee; shoulder dislocation, left, initial encounter. Claimant was prescribed hydrocodone, ibuprofen and an MRI was ordered for the left knee.

8. On April 15, 2020, Claimant underwent an MRI of the right knee and the films were read by Clinton Anderson, M.D. Dr. Anderson's impression was: grade 1 MCL injury; small joint effusion; small popliteal cyst.

9. Claimant had telemed appointments with Dr. Manchester on April 16 and 30, 2020, at which time he reported continued pain in both the left knee and left shoulder. A course of physical therapy ("PT") was ordered, which Claimant received at Concentra.

10. On April 29, 2020, Claimant underwent an MRI of the left shoulder and the films were read by Robert Leibold, M.D. Dr. Leibold's impression was: non-displaced tear of the inferior glenoid labrum extending from approximately the 5:00 to 9:00 position, with posterior decentering of the humeral head; recommend clinical correlation with posterior instability; intact rotator cuff.

11. Mark Fallinger, M.D. evaluated Claimant for an orthopedic consult on April 30, 2020. Dr. Failinger's impression was: left shoulder status post apparent dislocation event with persistent voluntary instability and increased posterior translation on exam. Dr. Failinger referred Claimant to Carry Motz, M.D for shoulder surgery.

12. On May 19, 2020, Claimant was evaluated at Concentra by Dr. Motz, M.D., who discussed the possibility of performing a left shoulder arthroscopy with posterior labral repair and capsulorrhaphy. Claimant requested the surgery.

13. On July 6, 2020, Claimant underwent surgery on his left shoulder, which was performed by Dr. Motz. Dr. Motz performed a left shoulder arthroscopy, with posterior labral repair and capsulorrhaphy, using ConMed Y-Knot flex 1.8 mm. double–loaded anchors times two. The preoperative diagnosis was: left shoulder posterior instability, with the post-operative diagnosis: left shoulder grade II posterior instability. The operative report noted the posterior labrum had a tear, which was non-displaced; also was frayed and worn.

14. Dr. Motz evaluated Claimant on July 14, 2020, at which time Claimant reported continued symptoms. Claimant returned to Dr. Manchester for an evaluation on August 6, 2020 and August 20, 2020. At the August 6th appointment, Dr. Manchester noted pain in Claimant's axilla (i.e., armpit) upon physical exam. At the August 20

appointment, Dr. Manchester noted that Claimant reported persistent neck and mid-back pain.[1] It is also noted in the Review of Systems that Claimant was experiencing neck pain and pain in his axilla upon physical exam.

15. Claimant received underwent PT after the surgery with Courtney Spivey, PT beginning on July 24, 2020. Overall, he attended 12 post-operative PT visits. At all 12 sessions, Claimant complained of pain in his left scapula and underwent scapula therapy. At nine of the sessions, beginning on August 5, 2020, Claimant complained of left upper trapezius pain and underwent therapy to his trapezius. The ALJ found these records reflected evidence of post-surgery pain in anatomic structures beyond the shoulder joint.

16. Claimant was evaluated on April 13, 2021 by Brian Beatty, D.O. Dr. Beatty noted Claimant underwent surgery on July 4, 2020 and received PT on both his knee and shoulder thereafter. He also experienced some neck and upper back pain. Claimant had worked modified duty with limitations of 10 pounds lifting and no climbing ladders and gradually transitioned to full duty.

17. Dr. Beatty, concluded Claimant was at MMI on April 13, 2021 and assigned a 7% scheduled impairment, which converted to a 4% whole person impairment. The impairment rating was based upon loss of ROM at the shoulder.

18. On June 3, 2021, a Final Admission of Liability ("FAL") was filed on behalf of Respondents, admitting for Dr. Beatty's 7% scheduled impairment for the right shoulder. The FAL reflected an overpayment of TTD in the amount of $1,530.95.

19. Respondents requested an IME with Robert Messenbaugh, M.D., which was scheduled for September 29, 2020. Claimant did not attend the IME.[2]

20. Claimant testified that he missed the IME because due to the death of his best friend.

21. There was no evidence in the record that Claimant refused to attend the IME or that his failure to attend the IME was willful.

22. There was no Court Order compelling Claimant's attendance at the IME with Dr. Messenbaugh.

23. Claimant's IME with Dr. Messenbaugh was rescheduled and took place on November 16, 2021.

[1] Exhibit 5, pp. 61-63.

[2] The written request for the IME was not admitted into evidence.

24. Dr. Messenbaugh concluded that he agreed with Dr. Beatty's opinion that Claimant had a 7% upper extremity impairment rating. Dr. Messenbaugh also stated there was "no justification to convert [Claimant's] 7% upper extremity impairment rating into a whole person impairment rating based on Mr. Oline's cervical spine complaints". [3] He said Dr. Beatty did not mention any cause of Claimant's neck and back discomfort and did not indicate that these complaints were related to Claimant's left shoulder injury. Dr. Messenbaugh opined that if Dr. Beatty found that Claimant had impairment issues related to his cervical spine, Dr. Beatty would have provided Claimant with a cervical impairment rating in addition to the upper extremity impairment rating. Dr. Messenbaugh testified as an expert at hearing and his testimony was consistent with his report

25. Dr. Messenbaugh testified as an expert at hearing. He stated that he did not see any evidence of muscular instability when he evaluated Claimant.[4] Dr. Messenbaugh emphasized the critical importance of the lack of any reports of the type of pain that Claimant suddenly complained of in his hearing testimony and to Dr. Beatty on April 13, 2021. Dr. Messenbaugh said that he thought "if someone who has a workers' compensation injury such as this, were to have lingering issues that were of a significant concern, they would have contacted their primary treating physician and would have sought evaluation and treatment, which . . . he did not do". Dr. Messenbaugh opined that there was no evidence or objective findings that Claimant's site of functional impairment extends beyond the shoulder.[5]

26. Claimant testified that he still has pain in his left shoulder, trapezius, scapula and neck. In his job, Claimant has to frequently reach overhead, which causes discomfort. He testified that when he is doing overhead work, he experienced pain in his left shoulder that involves "burning and fatigue" in his "back muscle by the shoulder blade" Claimant stated he has changed his body mechanics in order to protect his left shoulder. The ALJ credited Claimant's testimony regarding his residual complaints and this was evidence of impairment beyond the shoulder joint.

27. The ALJ finds Claimant's injury affected structures beyond the glenohumeral joint and had a functional impairment beyond the shoulder.

28. The ALJ concluded Claimant sustained a permanent impairment beyond the shoulder joint and is entitled to a whole person impairment.

29. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Conversion of Impairment Rating

As determined in Findings of Fact 1-8, Claimant was injured at work when he fell through a ceiling. Claimant suffered an injury to his left shoulder and knee, requiring emergency treatment, as well as treatment through his ATP-s at Concentra. *Id*. As found, Claimant's ATP's concluded he required a left shoulder arthroscopy, with posterior labral repair and surgery was performed on July 6, 2020. (Findings of Fact 11–12).

After surgery, Claimant underwent PT and the ALJ found he reported left trapezius and scapular pain. (Finding of Fact 15). As found, Dr. Beatty, noted neck and upper back pain in the evaluation conducted on April 13, 2021. (Finding of Fact 16). Dr. Beatty placed Claimant at MMI that day, assigning a 7% scheduled impairment, which converted to a 4% whole person impairment. (Finding of Fact 17). Respondents admitted for Dr. Beatty's medical impairment rating, filing an FAL on June 3, 2021. (Finding of Fact 18).

On the question of whether Claimant was entitled to a whole person impairment rating, the ALJ noted the inquiry starts with § 8-42-107(1)(a), C.R.S. The statute provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)". When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

The issue was whether Claimant sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). To make this determination, the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Id.* Pain and

discomfort that limit Claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

The ALJ concluded Claimant met his burden of proof for conversion of the impairment rating and his rationale was two-fold. First, in the medical records admitted at hearing, Claimant described pain in his right upper extremity following his surgery, which extended beyond the shoulder joint, including the scapula and trapezius. As found, Claimant also reported pain in the mid back, neck and axilla following the surgery. (Finding of Fact 14). The involvement of these structures beyond the glenohumeral joint was borne out in the medical records, including the post-surgery PT records. (Finding of Fact 15). Second, the ALJ found Claimant also had a loss of function in that he had to self-limit his activities at work. (Finding of Fact 26). Claimant's testimony persuaded the ALJ that Claimant experienced pain and discomfort which constituted functional impairment beyond the shoulder joint itself. (Finding of Fact 27). Therefore, Claimant's testimony regarding the injury to his shoulder and its sequelae, provided additional factual support for the ALJ's determination that he was entitled to a whole person rating.

The ALJ considered Respondents' argument that Claimant's impairment was limited to the scheduled impairment rating. Respondents argued Claimant's impairment involve the only the glenohumeral joint and did not extend beyond that. Respondents pointed to the fact Claimant did not have complaints of neck pain immediately after his fall and relied upon Dr. Messenbaugh's expert testimony in support of this argument, as well. Respondents also cited *Newton v. Broadcom Inc.*, W.C. No. 5-095-589-002 (July 8, 2021); *Lovett v. Big Lots*, WC 4-657-285 (Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (Dec. 28, 2006).

The ALJ credited Claimant's testimony, as well as the references in the medical records which established Claimant's impairment was beyond the glenohumeral joint. The ALJ also noted that the result in *Newton v. Broadcom Inc., supra,* where the Claimant also had pain in the scapula and trapezius supports the conclusion here.

Based upon the evidence admitted at hearing, the ALJ concluded Claimant met his burden of proof to show an entitlement to PPD benefits for the whole person medical impairment rating issued by Dr. Beatty. (Finding of Fact 28). Respondents are therefore liable to pay said benefits.

Payout Rate

"Where an employee is a minor and the disability of such minor is permanent compensation to said minor shall be paid at the maximum rate of compensation payable under said articles at the time of the determination of such permanency". § 8-42-102(4), C.R.S.; See also *Casa Bonita v. ICAO,* 677 P.2d 344 (Colo. App. 1983). "At the time of injury" refers to the date of the employee's accident. § 8-42-102(5). A minor is an individual who has not attained the age of twenty-one. The maximum wage rate on April 13, 2021, the date of Claimant reached MMI, is $1,074.22. § 8-42-105, C.R.S.

As found, Claimant was a minor on the date of injury. (Finding of Fact 3). Accordingly, Claimant has proven by the preponderance of the evidence that the maximum pay rate at the time of MMI ($1,074.22) must be used when calculating the value of Claimant's whole person impairment. The Order will require Respondents to pay PPD benefits at pursuant to § 8-42-102(4), C.R.S.

Sanctions

Respondents argued that because W.C.R.P. Rule 8-8, required Claimant to submit for an independent medical examination, pursuant to § 8-43-404, C.R.S., they were entitled to sanctions for Claimant's failure to appear on September 29, 2020. Respondents averred that because Claimant failed to attend the examination, Employer can recover the costs incurred for that cancellation. Respondents also argued that while the statute was silent on the issue of what costs shall be reimbursed, C.R.C.P. 37 established that the Court can impose sanctions upon a party who fails to cooperate in discovery, including reasonable expenses caused by the failure of an individual to attend an Independent Medical Examination. C.R.C.P. 37(b)(2)(E).

§ 8-43-404(3), C.R.S. provides in pertinent part:

> "So long as the employee, after written request by the employer or insurer, refuses to submit to medical examination or vocational evaluation or in any way obstructs the same, all right to collect, or to begin or maintain any proceeding for the collection of, compensation shall be suspended. If the employee refuses to submit to such examination after direction by the director or any agent, referee, or administrative law judge of the division appointed pursuant to section 8-43-208(1) or in any way obstructs the same, all right to weekly indemnity which accrues and becomes payable during the period of such refusal or obstruction shall be barred".

This section provides a remedy for Claimant's refusal to attend an evaluation. In the case at bar, there was no evidence presented that Claimant refused to attend the IME or that the failure to attend the appointment with Dr. Messenbaugh was willful. (Finding of Fact 21).

The ALJ concluded that Respondents did not establish a factual basis for the request that Claimant reimburse them for the cancellation fee for the appointment with Dr. Messenbaugh. As found, there was no Court order compelling Claimant's attendance

at this appointment. (Finding of Fact 22). The ALJ determined there was insufficient evidence to show Claimant's failure to attend the appointment was willful, warranting sanctions under CRCP 37. Specifically, CRCP 37(b)(2)(E) does not provide for the imposition of sanctions under these circumstances where there was no Court Order.

ORDER

It is therefore ordered:

1. Respondents shall pay PPD benefits based upon the 4% whole person rating. The benefits shall be paid pursuant to § 8-42-102(4), C.R.S.

2. Respondents shall pay 8% interest on all benefits not paid when due and owing.

3. Respondents' request that Claimant reimburse them for the cost of the IME appointment cancellation on September 29, 2020 is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty percent.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $505.03.

FINDINGS OF FACT

1. Employer is a national moving and storage company based in Carrolton, Texas with an office located in Colorado Springs, Colorado. At the outset of employment, all new employees receive Employer's *Employee Safety Commitment*. New employees also review Employer's *Policies and Safety Manual*. The *Policies and Safety Manual* details Employer's safety philosophy, rules and procedures.

2. Employer's *Policies and Safety Manual* specifically addresses drivers. The *Manual* outlines "Driving and Stopping Rules," including avoiding driving too fast for highway conditions, only driving at speeds that allow the driver to maintain control of the vehicle at all times and under all conditions, and always avoiding excessive and unnecessary lane changes. The section further mandates that "responsible, safe and efficient and courteous drivers not only follow [Employer's] rules in conjunction with federal, state, and city driving and stopping rules, they also demonstrate their professionalism as drivers," including utilizing defensive driving behaviors, such as "seeing and being seen," having "heightened awareness," and "managing speed and space."

3. Claimant applied for employment with Employer on or about April 2, 2021. On April 2, 2021 Claimant received, reviewed and acknowledged his understanding of Employer's *Employee Safety Commitment* and *Policies and Safety Manual*. On April 19, 2021 Claimant began working as a moving "helper." In his capacity as a moving helper Claimant rode as a passenger to various job locations where he loaded and/or unloaded trucks. In late June of 2021 Claimant applied for a driver position with Employer. He had 8-10 years of prior driving experience and training in driving military vehicles of 31 feet or less in length.

4. Employer has additional safety protocols that focus specifically on drivers. All prospective new drivers must separately apply for a driver position. Employer considers each applicant's prior driving experience and training. Each driver applicant

reviews and acknowledges Employer's *Company Vehicle Policy*. Furthermore, all applicants receive and review *Entry Level Training Guide for Drivers*, which provides that it is "Drivers responsibility to comply with safety regulations." The *Guide* provides that each driver is responsible for the safe operation of Employer's vehicles and must operate them in accordance with the laws, ordinances, and regulations in the appropriate jurisdiction and with the Federal Motor Carrier Safety Administration. Finally, each driver applicant must pass a written test and an "on road" driving examination focused on Employer's driver-based safety rules. Notably, during the road portion, each driver is tested on safe passing procedures, including allowing sufficient space for passing and only passing in safe locations.

5. Claimant reviewed and acknowledged understanding Employer's *Company Vehicle Policy* on June 29, 2022. On the same day he received Employer's *Entry Level Guide for Drivers* and passed a written driver safety quiz. On July 2, 2021 Claimant passed Employer's on-road test.

6. Employer's National Safety Director RB[Redacted] testified that when an applicant is hired as a driver, he must regularly attend driver safety meetings and review safety training materials. He remarked that Employer enforces its safety rules after a violation. Mr. TB[Redacted] commented that Employer has a detailed enforcement process that involves a range of consequences for each violation, from coaching, to escalating suspensions, to removal from a driver position.

7. In late July 2021, Employer assigned Claimant a moving job that required transport of a quarter-full size load of small household items and boxes from Crestone, Colorado to El Prado, New Mexico. The load was small compared to most jobs and the largest item was a computer desk.

8. Operations Manager of Employer's Colorado Springs office MC[Redacted] explained that Employer assigned Claimant its smallest truck for the job. The vehicle was a 2020 Isuzu Box Truck with limited horsepower and a governor that regulated its top speed to 65 mph. Mr. MC[Redacted] noted that Claimant drove the truck on 60% of his jobs since becoming a driver, it was his primary truck and he was very familiar with the truck's capabilities and limitations.

9. On July 21, 2021 Claimant and his helper for the job, MB[Redacted], loaded the box truck in Crestone, Colorado. They then drove to Alamosa, Colorado and spent the night. The next morning, Mr. MC[Redacted], who was monitoring their progress on a tele-track system, noticed they were late getting started. Mr. MC[Redacted] called and asked them to get on the road. Claimant and Mr. MB[Redacted] left Alamosa at 8:34 a.m. mountain standard time and arrived in El Prado around 11:58 a.m. They began downloading the truck at 12:16 p.m. Claimant and Mr. MB[Redacted] started driving back towards Colorado Springs at 1:59 p.m.

10. On the drive to Colorado Springs, Claimant made a scheduled stop for gas, and two unscheduled stops for snacks. During the second stop, Mr. MC[Redacted] called Claimant, inquired why he stopped again, and told him to get back on the road. Mr.

MC[Redacted] did not tell Claimant to speed or otherwise engage in unsafe driving. He simply directed Claimant to cease taking unscheduled stops.

11. Mr. MC[Redacted] continued to monitor Claimant's progress. After again noticing the box truck had stopped, he called Claimant. A state patrol officer picked up Claimant's phone and told Mr. MC[Redacted] there had been a motor vehicle accident. Mr. MC[Redacted] then drove to the crash site where he personally observed the area of the accident.

12. Claimant's route back to Colorado Springs proceeded north to Alamosa, where he turned east on US 160 towards I-25. The route traverses La Veta Pass and is one lane in both directions in certain areas. As claimant approached Fort Garland, he found himself directly behind a semi-truck that was behind a pick-up truck pulling a long livestock trailer. Claimant entered the westbound lane, while heading east, with the intent to pass both of the slower vehicles. His truck had not even cleared the semi-truck when he realized a car was coming directly at him from the opposite direction. He swerved to avoid a collision, drove his truck off the highway, and ultimately crashed into a ditch. Claimant suffered catastrophic injuries to his spine and is paralyzed from the waist down as a result of the accident.

13. The parties stipulated at the hearing that Claimant was in a legal passing zone at the time of the accident. Moreover, he was not exceeding the speed limit when the accident occurred on July 22, 2021.

14. A State of Colorado Traffic Crash Report completed by Corporal Roybal on August 1, 2021 described the crash as follows: "[v]ehicle #1 was eastbound Colorado 160 237' west of MP 271. Vehicle #1 attempted to pass, proceeded into the westbound lane which was occupied by a westbound vehicle. Vehicle #1 went off the left side of the roadway, collided with a ditch and continued eastbound." Corporal Roybal's accident diagram illustrated that Claimant was coming around a bend while attempting to pass. However, Corporal Roybal mistakenly believed Claimant was trying to pass a single smaller vehicle before the accident. The accident occurred at 4:10 p.m. during daylight hours. Claimant was ticketed for careless driving causing bodily injury.

15. On July 23, 2021 Employer completed a First Report of Injury. On August 5, 2021 Insurer filed a General Admission of Liability (GAL). Respondents took a 50% safety rule offset under §8-42-112, C.R.S.

16. The box truck Claimant drove on the date of his accident was equipped with a Netradyne camera system consisting of a total of four cameras. The system included a forward facing camera. After the accident, the Netradyne system was sent to the manufacturer to obtain videos of the accident. In January 2022, MP4 video files provided clips from several minutes before and during the accident. The videos begin with Claimant following four or five vehicles. Each of the vehicles is following a long semi-truck that is directly behind a pick-up truck pulling a long livestock trailer. The section of highway includes numerous curves and bends. The terrain on the sides of the highway is elevated,

with areas of foliage limiting visibility. Vehicles can be seen traveling in the opposite direction in the westbound lane prior to the accident.

17. As the video progresses, the four or five vehicles in front of Claimant's truck each find an opportunity to pass the semi and the pick-up truck pulling the livestock trailer. Claimant's box truck is then directly behind the two vehicles. The highway then curves to the left, and, because of the slightly elevated terrain and foliage on the west side of the road, visibility of westbound traffic is limited. At that moment, Claimant entered the westbound lane to attempt to pass both the semi-truck and the pick-up truck pulling the livestock trailer. However, while the box truck was still in the process of passing the semi, a westbound vehicle can be seen coming into view. Both Claimant's box truck and the oncoming vehicle swerve off the road to avoid a head on collision. Claimant's truck continues into a field and ultimately crashes into a ditch.

18. Respondents hired Adam Michener, M.S., P.E., ACTAR, to perform a forensic accident reconstruction evaluation and provide an expert opinion regarding the cause of the accident. Mr. Michener examined the truck, available records, and the video. In his report Mr. Michener noted the limitations of Claimant's vehicle. Specifically, the box truck was a class 5 truck with only 210 horsepower, limited acceleration ability and a speed governor. He also mentioned the long length of the two vehicles Claimant was trying to pass, the curves in the road, and the limited visibility. Based on his forensic analysis Mr. Michener explained that Claimant needed approximately double the amount of time, or more, to achieve the attempted pass of the semi and the pick-up truck pulling the livestock trailer. Mr. Michener concluded that the July 21, 2021 accident was a direct result of Claimant's attempted unsafe pass with insufficient time and space to complete the maneuver. He maintained his opinions when he testified at the hearing in this matter.

19. Mr. TB[Redacted] testified that Claimant's attempt to pass under the circumstances violated several company safety policies, including avoiding unnecessary lane changes, failing to see and be seen, not engaging in defensive driving, not allowing sufficient space and time for passing, and failing to pass in a safe location. Furthermore, Mr. TB[Redacted] remarked that Claimant's decision to pass under the circumstances did not reflect the common sense required of all Employer drivers.

20. Employer's Colorado Spring's office assistant operations manager LO[Redacted] reviewed the video from the events preceding Claimant's accident. She explained that Claimant violated numerous safety rules in attempting to pass the vehicles. Ms. LO[Redacted] noted that Claimant was trying to pass on a curve but lacked the visual range to pass safely. She also remarked that Claimant violated Employer's safety rules because he did not have sufficient time and space for passing and was attempting to pass in an unsafe location.

21. Mr. MC[Redacted] testified that he drove to the accident location on July 22, 2022. He observed that the section of US 160 in which the accident occurred is winding, mountainous, contains foliage, and includes blind spots. Visibility is thus difficult. Mr. MC[Redacted] subsequently visited Claimant at the hospital in Denver and they

discussed the incident. During the conversation Claimant acknowledged his responsibility for the accident and did not blame other factors.

22. After the data from the box truck was converted to video in January 2022, Mr. MC[Redacted] reviewed the footage. Based upon his observations and considering the circumstances of the accident, he concluded that Claimant violated numerous Employer safety rules. Among the rules Claimant violated were "seeing and being seen" in which a driver must be able to see clearly around the vehicle he is passing, where he is going to be passing and ensuring he is visible to other drivers. Claimant also violated the safety rule regarding managing time and space. Mr. MC[Redacted] remarked that Claimant further violated the safety rule regarding having heightened awareness of surroundings. Specifically, Claimant did not have sufficient time to make the attempted pass and compromised safety. Mr. MC[Redacted] noted that the box truck had limited capabilities, Claimant attempted this pass around a corner with limited visibility, and he was trying to pass two long vehicles. He summarized that Claimant's pass attempt violated Employer's safety protocols and rules with respect to defensive driving, avoiding excessive and unnecessary lane changes, allowing sufficient space to pass, and only passing in safe locations.

23. MB[Redacted] testified that he worked for Employer as a helper for 3-4 months in 2021. He was Claimant's co-worker and passenger in the truck on the date of the accident. Mr. MB[Redacted] remarked that as they drove up La Veta Pass there was "a semi" in front of them. Clamant attempted to pass the vehicle, but neither he nor Claimant saw the car coming from the opposite direction. Claimant then swerved off the road and crashed. Mr. MB[Redacted] summarized that the accident occurred because "neither of us saw the car coming." He acknowledged that the section of US 160 where the incident occurred had curves with foliage on the sides of the road. Mr. MB[Redacted] also remarked that, before Claimant attempted the pass, he inquired whether he should attempt the maneuver. From Mr. MB[Redacted]'s vantage point in the passenger seat, he could not see the truck pulling the long livestock trailer or the vehicle traveling in the opposite direction around the curve.

24. Claimant acknowledged he was trying to pass both the semi-truck and the pick-up truck pulling the long livestock trailer. He testified he did not believe he was driving recklessly or that his pass attempt was unsafe. Nevertheless, Claimant admitted he was approaching a bend and there was foliage on the sides of the roads in the area of the accident. In fact, he could not see the car coming in the opposite direction because of the bend and foliage. Claimant also recognized that on July 22, 2021 he was driving a box truck with a governor limiting the truck's maximum speed that had poor acceleration. Claimant attempted the pass because the vehicles were going slower than normal. He commented the cause of the accident was human error, "which is on me." Finally, although Mr. MC[Redacted] told him to get going while he was stopped for a break, he was not directed to forgo safety or drive recklessly.

25. Respondents have proven that it is more probably true than not that Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty

percent. Initially, Claimant asserts his accident was not willful because he did not intend to make an unsafe pass and break a safety rule. He contends the accident occurred due to human error because he simply could not see the vehicle coming in the opposite direction. However, he attempted to pass both a semi-trailer truck and a pickup truck pulling a long stock trailer around a curve. Importantly, Claimant was driving a box truck with limited horsepower and a speed governor. Based on the obvious danger presented by the attempted pass, as well as the persuasive testimony of Employer's witnesses and Mr. Michener, Claimant acted with deliberate intent in violating Employer's reasonable rules regarding safe driving.

26. The record reflects that Employer has adopted reasonable safety rules regarding safe driving and passing while operating a company vehicle. Safety protocols include several general rules, such as defensive driving, driving at speeds that allow the driver to maintain control of the vehicle at all times and under all circumstances, driving with heightened awareness, managing space and speed, and assuring the driver is able to "see and be seen." Employer also has specific safety rules, including avoiding unnecessary lane changes, allowing sufficient space to pass, and only passing in safe locations. Employer's safety rules are unambiguous, definite, and non-conflicting.

27. Claimant was aware of Employer's reasonable safety rules for drivers. Employer expressed the rules to Claimant through its safety manual, safety training, and safety testing. Notably, Claimant reviewed and acknowledged understanding Employer's *Company Vehicle Policy* on June 29, 2022. On the same day he received Employer's *Entry Level Guide for Drivers* and passed a written driver safety quiz. On July 2, 2021 Claimant passed Employer's on-road test.

28. The record reflects that Employer enforces its safety rules. Notably, Mr. TB[Redacted] testified that when an applicant is hired as a driver, he must regularly attend driver safety meetings and review safety training materials. He remarked that Employer enforces its safety rules any time there is a noted violation. Mr. TB[Redacted] commented that Employer has a detailed enforcement process that involves a range of consequences for each violation that proceeds from coaching, to escalating suspensions, to removal from a driver position.

29. The record reveals that Claimant willfully violated Employer's safety rules. Claimant decided to pass under unsafe conditions. He lacked clear vision of vehicles coming in the opposite direction due to terrain and the curve in the road. Although passing was not prohibited in the area, Claimant was attempting to pass both a semi-truck and a pick-up truck pulling the livestock trailer while driving a box truck limited by a speed governor. Mr. Michener persuasively explained that Claimant's box truck was a class 5 truck with only 210 horsepower, limited acceleration ability and a speed governor. He also mentioned the long length of the two vehicles Claimant was trying to pass, the curves in the road, and the limited visibility. Based on his forensic analysis, Mr. Michener concluded that Claimant needed approximately double the amount of time, or more, to achieve the attempted pass of the semi and the pick-up truck pulling the livestock trailer. He determined that the July 22, 2021 accident was a direct result of Claimant's attempted unsafe pass with insufficient time and space to complete the maneuver.

30. Mr. MC[Redacted] persuasively concluded that Claimant violated numerous Employer safety rules by attempting to pass both the semi-truck and the pick-up truck pulling the livestock trailer on July 22, 2021. Among the rules Claimant violated were "seeing and being seen" in which a driver must be able to see clearly around the vehicle he is passing, where he is going to be passing and ensuring he is visible to other drivers. Claimant also violated the safety rule regarding managing time and space. Mr. MC[Redacted] remarked that Claimant further violated the safety rule regarding having heightened awareness of surroundings. Specifically, Claimant did not have sufficient time to make the attempted pass and compromised safety. Mr. MC[Redacted] noted that the box truck had limited capabilities, Claimant attempted this pass around a corner with limited visibility, and he was trying to pass two long vehicles. He summarized that Claimant's pass attempt violated Employer's safety protocols and rules with respect to defensive driving, avoiding excessive and unnecessary lane changes, allowing sufficient space to pass, and only passing in safe locations.

31. In contrast, Claimant testified that the reason he attempted to pass the other vehicles on July 22, 2021 was because they were moving slower and other vehicles in front of him were passing. He explained that, when he attempted to pass the vehicles, he believed that he had enough room to safely make the pass. Claimant remarked that at the time of the accident he was neither driving recklessly nor taking a risk he would not normally have taken. He remarked that he would never intentionally violate any of Employer's safety rules. Nevertheless, Claimant acknowledged he was trying to pass both the semi-truck and the pick-up truck pulling the long livestock trailer. Moreover, he admitted he was approaching a bend and there was foliage on the sides of the roads in the area of the accident. He thus could not see the car coming in the opposite direction. Claimant also recognized that on July 22, 2021 he was driving a box truck with a governor limiting the truck's maximum speed that had poor acceleration. Claimant summarized the cause of the accident was human error, "which is on me."

32. Respondents have satisfied their burden of proof to establish that Claimant acted with deliberate intent in violating Employer's reasonable rules regarding safe driving. Under the circumstances, Claimant's pass attempt specifically violated Employer's safety rules including "seeing and being seen," avoiding excessive and unnecessary lane changes, allowing sufficient space to pass and only passing in safe locations. The record reflects that Claimant was aware of Employer's safe driving rules but deliberately attempted to pass two long vehicles while driving a box truck in an area of limited visibility. Accordingly, Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty percent.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Off.,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003).

5. The willful violation of a safety rule may be established without direct evidence of the claimant's state of mind at the time of the injury because "it is a rare case where the claimant admits that the conduct was the product of a willful violation of the employer's rule." *Gargano v. Metro Wastewater Reclamation District*, W.C. No. 4-335-104 (ICAP, Feb. 19, 1999). Instead, willful conduct may be inferred from circumstantial evidence including the frequency of warnings, the obviousness of the danger, and the extent to which it may be said that the claimant's actions were the result of deliberate conduct rather than carelessness or casual negligence. *Bennett Properties Co. v. Indus. Comm'n*, 165 Colo. 135, 437 P.2d 548, 550 (1968); *Miller v. City and County of Denver*. W.C. No. 4-658-496 (ICAP, Aug. 31, 2006).

6. Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.* 907 P.2d at 719.

7. Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAP, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, §35.04.

8. As found, Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty percent. Initially, Claimant asserts his accident was not willful because he did not intend to make an unsafe pass and break a safety rule. He contends the accident occurred due to human error because he simply could not see the vehicle coming in the opposite direction. However, he attempted to pass both a semi-trailer truck and a pickup truck pulling a long stock trailer around a curve. Importantly, Claimant was driving a box truck with limited horsepower and a speed governor. Based on the obvious danger presented by the attempted pass, as well as the persuasive testimony of Employer's witnesses and Mr. Michener, Claimant acted with deliberate intent in violating Employer's reasonable rules regarding safe driving.

9. As found, the record reflects that Employer has adopted reasonable safety rules regarding safe driving and passing while operating a company vehicle. Safety protocols include several general rules, such as defensive driving, driving at speeds that allow the driver to maintain control of the vehicle at all times and under all circumstances, driving with heightened awareness, managing space and speed, and assuring the driver is able to "see and be seen." Employer also has specific safety rules, including avoiding unnecessary lane changes, allowing sufficient space to pass, and only passing in safe locations. Employer's safety rules are unambiguous, definite, and non-conflicting.

10. As found, Claimant was aware of Employer's reasonable safety rules for drivers. Employer expressed the rules to Claimant through its safety manual, safety training, and safety testing. Notably, Claimant reviewed and acknowledged understanding Employer's *Company Vehicle Policy* on June 29, 2022. On the same day he received Employer's *Entry Level Guide for Drivers* and passed a written driver safety quiz. On July 2, 2021 Claimant passed Employer's on-road test.

11. As found, the record reflects that Employer enforces its safety rules. Notably, Mr. TB[Redacted] testified that when an applicant is hired as a driver, he must regularly attend driver safety meetings and review safety training materials. He remarked that Employer enforces its safety rules any time there is a noted violation. Mr. TB[Redacted] commented that Employer has a detailed enforcement process that involves a range of consequences for each violation that proceeds from coaching, to escalating suspensions, to removal from a driver position.

12. As found, the record reveals that Claimant willfully violated Employer's safety rules. Claimant decided to pass under unsafe conditions. He lacked clear vision of vehicles coming in the opposite direction due to terrain and the curve in the road. Although passing was not prohibited in the area, Claimant was attempting to pass both a

semi-truck and a pick-up truck pulling the livestock trailer while driving a box truck limited by a speed governor. Mr. Michener persuasively explained that Claimant's box truck was a class 5 truck with only 210 horsepower, limited acceleration ability and a speed governor. He also mentioned the long length of the two vehicles Claimant was trying to pass, the curves in the road, and the limited visibility. Based on his forensic analysis, Mr. Michener concluded that Claimant needed approximately double the amount of time, or more, to achieve the attempted pass of the semi and the pick-up truck pulling the livestock trailer. He determined that the July 22, 2021 accident was a direct result of Claimant's attempted unsafe pass with insufficient time and space to complete the maneuver.

13. As found, Mr. MC[Redacted] persuasively concluded that Claimant violated numerous Employer safety rules by attempting to pass both the semi-truck and the pick-up truck pulling the livestock trailer on July 22, 2021. Among the rules Claimant violated were "seeing and being seen" in which a driver must be able to see clearly around the vehicle he is passing, where he is going to be passing and ensuring he is visible to other drivers. Claimant also violated the safety rule regarding managing time and space. Mr. MC[Redacted] remarked that Claimant further violated the safety rule regarding having heightened awareness of surroundings. Specifically, Claimant did not have sufficient time to make the attempted pass and compromised safety. Mr. MC[Redacted] noted that the box truck had limited capabilities, Claimant attempted this pass around a corner with limited visibility, and he was trying to pass two long vehicles. He summarized that Claimant's pass attempt violated Employer's safety protocols and rules with respect to defensive driving, avoiding excessive and unnecessary lane changes, allowing sufficient space to pass, and only passing in safe locations.

14. As found, in contrast, Claimant testified that the reason he attempted to pass the other vehicles on July 22, 2021 was because they were moving slower and other vehicles in front of him were passing. He explained that, when he attempted to pass the vehicles, he believed that he had enough room to safely make the pass. Claimant remarked that at the time of the accident he was neither driving recklessly nor taking a risk he would not normally have taken. He remarked that he would never intentionally violate any of Employer's safety rules. Nevertheless, Claimant acknowledged he was trying to pass both the semi-truck and the pick-up truck pulling the long livestock trailer. Moreover, he admitted he was approaching a bend and there was foliage on the sides of the roads in the area of the accident. He thus could not see the car coming in the opposite direction. Claimant also recognized that on July 22, 2021 he was driving a box truck with a governor limiting the truck's maximum speed that had poor acceleration. Claimant summarized the cause of the accident was human error, "which is on me."

15. As found, Respondents have satisfied their burden of proof to establish that Claimant acted with deliberate intent in violating Employer's reasonable rules regarding safe driving. Under the circumstances, Claimant's pass attempt specifically violated Employer's safety rules including "seeing and being seen," avoiding excessive and unnecessary lane changes, allowing sufficient space to pass and only passing in safe locations. The record reflects that Claimant was aware of Employer's safe driving rules but deliberately attempted to pass two long vehicles while driving a box truck in an area of limited visibility. Accordingly, Claimant willfully failed to obey a reasonable safety rule

in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty percent.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on July 22, 2021 and his non-medical benefits should thus be reduced by fifty percent.

2. Claimant earned an AWW of $505.03.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant established by a preponderance of the evidence that a left total hip arthroplasty, as requested by Authorized Treating Physician (ATP) Jeremy Kinder, M.D., is causally related to Claimant's admitted March 5, 2020 work injury.

FINDINGS OF FACT

1. On March 5, 2020, Claimant sustained an admitted injury to his right hip arising out of the course of his employment with Employer. On that date, Claimant tripped and fell directly onto his right lateral hip while performing his job duties for Employer.

2. Following his March 5, 2020 injury, Claimant was initially seen by physician assistant Andrew Hildner, PA-C, at SCL Health Medical Group on March 18, 2020. Claimant saw Mr. Hildner four additional times from March 25, 2020 to June 16, 2020. Claimant did not complain of issue with his left hip during these visits. At his initial visit, Mr. Hildner noted that Claimant had a significant limp. At later visits, on May 4, 2020 and May 26, 2020, he characterized Claimant's gait as a "very slight antalgic gait." At his June 16, 2020 visit, Mr. Hildner noted in his examination note "minimally right antalgic" which the ALJ infers is a description of Claimant's gait. (Ex. 4).

3. Claimant also had consults with Joseph Hsin, M.D., at Cornerstone Orthopedics and Sports Medicine on March 10, 2020, and Michael Ellman, M.D., at Panorama Orthopedics for evaluation of his right hip. During those visits, Claimant did not complain of issues with his left hip. At his visit, Dr. Ellman a normal examination of Claimant's left hip, including negative Patrick's (FABER) and impingement (FADIR) tests. (Ex. B and 5)

4. On July 7, 2020, Claimant reported to Mr. Hildner experiencing left hip and low back pain. Mr. Hildner attributed to the new symptoms to his right hip pain which he indicated was affecting his gait. On examination, he noted a mildly positive FADIR test for hip impingement, but no other objective findings. (Ex. 4). Claimant also reported left hip and low back pain at his July 27, 2020 visit with Mr. Hildner. (Ex. 4).

5. On July 30, 2020, Claimant was evaluated by Barbara Wright, P.A., at Panorama Orthopedics. Ms. Wright noted that Claimant reported "over the last month or two, his left hip and lumbar spine have also been causing significant pain for him due to compensation." Ms. Wright did not document an examination of Claimant's left hip or otherwise comment on Claimant's left hip in the medical record. (Ex. 5).

6. On August 4, 2020, Respondents filed a General Admission of Liability, admitting for medical benefits related to the Claimant's right hip. (Ex. 3)

7. On August 6, 2020, Claimant saw Jeremy Kinder, M.D., at Panorama for evaluation of his right hip. Dr. Kinder recommended a total hip arthroplasty to replace Claimant's right hip. Claimant's left hip was not evaluated at this visit. (Ex. 5).

8. On September 2, 2020, Claimant saw Jon Erickson, M.D., for an independent medical examination (IME) at Respondents' request. Dr. Erickson documented that Claimant reported chronic, severe pain in the right hip and "gait related low back and left hip pain." Dr. Erickson did not address Claimant's left hip in his IME report. Dr. Erickson raised concerns that Claimant's right hip pain was not related to his hip joint but may have related to a sports hernia or insufficiency fracture in his pubic ramus region. (Ex. 7).

9. Over the next two months, Dr. Ellman evaluated Claimant to determine if Dr. Erickson's hypothesis related to the source of Claimant's right hip pain was correct. During these visits, Claimant did not report left hip symptoms. (Ex. 4, 5). Based on Dr. Erickson's IME, Dr. Ellman referred Claimant to Dr. Robert MacDonald for evaluation of a potential sports hernia. Ultimately, Dr. MacDonald ruled out a sports hernia and noted that he suspected Claimant's right hip issues were "all hip pathology." (Ex. C).

10. Claimant's next reported left hip pain when he returned to Mr. Hildner on November 18, 2021. Mr. Hildner noted that Claimant's left hip pain was "likely compensatory from [right] hip pain with likely underlying chronic [osteoarthritis]," and noted that Claimant had a significant right antalgic gait. Claimant also reported bilateral knee pain which Mr. Hildner also characterized as "probably also compensatory with underlying [osteoarthritis]." Mr. Hildner indicated that Claimant's knees are "not worker's comp related. (Ex. 4).

11. On December 3, 2020, Dr. Kinder evaluated Claimant. Claimant reported left hip pain at the same severity as his right hip pain. Claimant also reported right knee pain, difficulty walking, and symptom aggravation with activity. Left hip x-rays taken on December 3, 2020 demonstrated a progression of arthritis and moderate joint space narrowing in the right hip. Claimant's left hip arthritis was characterized as "moderate." Dr. Kinder opined that hip replacements were the only treatment likely to help Claimant significantly. Claimant elected to proceed with a right hip arthroplasty, and Dr. Kinder requested authorization for the procedure. Dr. Kinder's request for authorization for right hip was approved on March 2, 2021. (Ex. 5).

12. Between December 16, 2020 and April 14, 2021, Claimant saw Mr. Hildner five times and continued to report left hip symptoms. On March 3, 2021, Mr. Hildner indicated Claimant was "developing additional symptoms – particularly lumbar paraspinal spasm – and worsening of other joint pain due to antalgic gait and compensatory movements/positioning." Mr. Hildner documented Claimant's left hip pain at these visits, and described Claimant's gait as slow and antalgic on the right. (Ex. 4).

13. Dr. Kinder performed a right hip arthroplasty surgery on April 22, 2021. (Ex. 5).

14. On May 6, 2021, Claimant saw Dr. Kinder and reported he was experiencing pain in his left hip and was placing all his weight on the left side. On examination, Dr. Kinder

noted pain with internal rotation in both flexion and extension. Dr. Kinder found a positive impingement sign and recommended an MRI of Claimant's left hip to evaluate for a potential labral tear and to evaluate the severity of his arthritis. (Ex. 5).

15. On May 19, 2021, Claimant saw Mr. Hildner, who noted Claimant's right hip pain had improved following surgery. Mr. Hildner stated "the improving right hip pain has made his left hip and bilateral knee pain feel much worse." (Ex. 4).

16. On June 3, 2021, Claimant saw Dr. Kinder for a post-surgical evaluation of his right hip. Claimant's left hip was not evaluated at this visit. (Ex. 5).

17. On October 4, 2021, an MRI of Claimant's left hip was performed. The MRI showed a nondisplaced tear of the left acetabular labrum, and slight narrowing of the ischiofemoral distance, which the radiologist indicated can "predispose to ischiofemoral impingement." (Ex. 5).

18. Claimant saw Dr. Kinder on October 7, 2021, reporting improving left hip pain, although with stabbing pain and symptoms exacerbated by weight bearing. On examination, Dr. Kinder noted there was no crepitus or tenderness to palpation over the greater trochanteric region. He further noted mild pain with range of motion. Claimant's MRI showed a labral tear in the left hip, and recommended a cortisone injection. Dr. Kinder also recommended a second opinion from Daniel Haber, M.D., to determine if Claimant would benefit from a hip arthroscopy vs. a total hip replacement. Claimant had the left hip injection on October 15, 2021. The hip injection provided complete short-term relief of Claimant's left hip pain, but the pain returned within two weeks. (Ex. 5).

19. On October 28, 2021, Claimant saw Daniel Haber, M.D., for a second opinion. Dr. Haber reviewed Claimant's MRI images and interpreted the images as showing a non-displaced degenerative appearing labral tear with moderate chondrosis in the weight bearing aspect of the acetabulum. He also noted that Claimant had a moderate cam deformity. Dr. Haber diagnosed Claimant with primary osteoarthritis of the left hip and "other articular cartilage disorders." Dr. Haber indicated that he did not believe Claimant would benefit from an arthroscopy. He opined "I believe that this labrum is degenerative in nature as a consequence of having mild to moderate osteoarthritis. (Ex. C).

20. On November 11, 2021, Claimant returned to Dr. Kinder. Dr. Kinder noted that Claimant had moderate osteoarthritis of the left hip with a cam lesion and labral tear. He indicated Claimant's arthritis disqualified him from arthroscopic surgery and that Claimant requires a hip replacement. (Ex. 5). Dr. Kinder requested authorization for Claimant's left hip arthroplasty through Insurer. Insurer denied authorization on November 22, 2021. (Ex. 1).

21. From November 16, 2021 through March 14 2022, Claimant saw Mr. Hildner four additional times. During this time, Claimant continued to report various levels of left hip pain. On November 16, 2021, Mr. Hildner noted that Claimant's gait "appears to be a mix of right hip weakness and left hip antalgia, but overall fairly normal and much improved

from previous exams." At the December 28, 2021 visit, Claimant reported tearing pain in his left groin" when performing right hip flexion stretches. (Ex. 4).

22. On June 13, 2021, Robert Messenbaugh, M.D., performed an independent medical examination of Claimant at Respondent's request. Dr. Messenbaugh testified at hearing and was admitted as an expert in orthopedic surgery. In his report, Dr. Messenbaugh opined that Claimant had no actual left hip complaints, and that the areas Claimant identified on examination with pain were indicative of a strain of his left hamstring. He further opined that Claimant did not require surgery on his left hip. The ALJ finds neither of these opinions credible or persuasive. At hearing, Dr. Messenbaugh testified that he reviewed Claimant's MRI from October 4, 2021, and that the MRI showed arthritis and an abnormal hip anatomy identified as a congenital "cam" deformity. Dr. Messenbaugh testified that a cam deformity can lead to labral tearing, fraying and degeneration, and can create degenerative arthritis. Dr. Messenbaugh further opined that Claimant's work injury did not accelerate or permanently alter Claimant's left hip. Dr. Messenbaugh opined that Claimant's left hip symptoms were most likely caused by degenerative changes, and that the labral tear was likely caused by Claimant's congenital cam deformity. While the ALJ finds credible Dr. Messenbaugh's opinion that the pathology in Claimant's left hip was not caused by his work injury, he offered no credible explanation why Claimant's left hip symptoms emerged only after Claimant spent four months walking with an altered gait caused by his right hip injury. He testified that Claimant's weight increased the risk for development of hip pain, but no credible evidence was admitted to indicate that Claimant experienced a significant weight gain following his injury which would have caused his hip pain. Dr. Messenbaugh's opinion that Claimant's left hip symptoms are unrelated to his work-related injury is unpersuasive.

23. At hearing, Claimant testified that he had no issues with his left hip prior to his March 5, 2020 work injury. Claimant has worked performing body work on automobiles for most of his adult life and was able to perform his job duties without restrictions. Claimant credibly testified that after his work injury, he walked different and felt as if he was putting more weight on his left side to keep weight off of his right hip. He further testified that after his left hip pain began, it did not resolve, and presently exists.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the left hip total arthroplasty recommended by Dr. Kinder is reasonably necessary to cure or relieve the effects of Claimant's industrial injury. Claimant's initial injury was directly to his right hip. As a result of this injury, Claimant developed an altered, antalgic gait. The ALJ finds credible PA Hildner's opinion that the altered gait resulted in pain to Claimant's hip

approximately four months after the initial injury. Beginning in July 2020, Claimant began reporting hip pain which was documented in the records of multiple providers. The ALJ further finds credible Claimant's testimony that his left hip pain did not resolve.

Following the emergence of his left hip pain, Claimant's primary treatment was focused on his right hip, despite reports of continued left hip symptoms. In December 2020, Dr. Kinder evaluated Claimant's left hip, reviewed left hip x-rays and opined that hip replacements were the only procedure likely to help Claimant significantly. The ALJ infers from this statement that Dr. Kinder's opinion was that hip replacement would be the only treatment likely to relieve Claimant's reported hip pain. After the December 3, 2020 visit with Dr. Kinder, Claimant continued to report left hip pain and exhibit an altered gait. Ultimately, in November 2021, Dr. Kinder sought authorization from Insurer for a left hip total arthroplasty, which was denied.

No credible evidence was admitted to suggest a plausible alternative cause for the emergence of his left hip symptoms in July 2020. Prior to May 2020, Claimant had no left hip symptoms, and the symptoms only developed after four months of walking with an altered gait and compensating for his right hip pain. The ALJ does not find credible Dr. Messenbaugh's opinion that Claimant's hip pathology was not aggravated or exacerbated by his altered gait. Similarly, Respondents' contention that Claimant's non-work-related knee pain could be an equally likely cause of his left hip pain is not persuasive because Claimant did not report knee pain until approximately four months after he developed left hip pain.

Based on the totality of the evidence, the ALJ concludes that it is more likely than not that Claimant's right hip injury resulted in an altered gait which caused the emergence of symptoms in his left hip. The Claimant has pre-existing arthritis and a degenerative labral tear which were asymptomatic until he spent approximately four months walking with an altered gait and compensating for his right hip pain. Although Dr. Kinder's recommended surgery is to address the pre-existing pathology of Claimant's left hip, but for the pain caused by Claimant's altered gait and compensation for his right hip injury, treatment of Claimant's left hip would not have been necessary. Consequently, the need for a left hip arthroplasty is causally related to Claimant's May 5, 2020 work injury.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of the left hip total arthroplasty is GRANTED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 7-8-2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-588-918-010

ISSUES

The issues set for determination included:

- Did Respondents overcome the conclusions of Kathie McAlpine, M.D., who performed the twenty-four month Division-sponsored Independent Medical Examination ("DIME"), by clear and convincing evidence?

- Did Claimant proved by a preponderance of the evidence that the proposed surgery for the right knee was reasonable necessary and related?

- Does the doctrine of issue preclusion preclude Claimant from litigating the issue of whether Respondents should be responsible for his right shoulder surgery?

- Did Claimant prove by a preponderance of the evidence that the proposed surgical evaluation for the right shoulder was reasonable necessary and related?[1]

PROCEDURAL STATUS

At the close of Respondents' case in chief, Claimant made an oral Motion for Directed Verdict, asserting that Respondents had not adduced sufficient evidence to meet the clear and convincing evidentiary standard to overcome the DIME physician's opinions.

The matter was taken under advisement and the ALJ concluded that the Motion should be denied. Respondents introduce sufficient evidence to controvert the opinions of Dr. McAlpine to defeat the Motion for Directed Verdict. However, as noted *infra*, Respondents did not overcome Dr. McAlpine's opinions by clear and convincing evidence.

A Summary Order was issued on June 9, 2022. On June 14, 2022, Respondents submitted a "Request for Specific Findings of Fact, Conclusions of Law and Order". The Claimant and Respondents filed Proposed Orders on June 22, 2022. A Full Order was served on July 13, but had a typographical error in the case number. This Order corrects that.

[1] At the outset of the hearing, counsel for Claimant requested that the issues of permanent total ("PTD") and permanent partial disability ("PPD") benefits be deferred and counsel for Respondents agreed PTD benefits issue would be deferred. Respondents' counsel stated that because Claimant had received an excess of the statutory cap in TTD benefits, he would not be entitled to PPD benefits.

FINDINGS OF FACT

1. On July 22, 2003, Claimant was injured while working for Employer. The injury occurred when his truck rolled back after he parked it and he rolled his left ankle as he was trying to chase after it.

2. Claimant suffered a peroneal tear and underwent multiple surgeries on the left ankle, including multiple attempts at an ankle fusion. Claimant required extensive treatment following the surgeries, as he developed complications with infections.

3. Claimant underwent a below knee amputation on May 12, 2012. Claimant was treated by multiple physicians after the amputation surgery.

4. On June 4, 2012, a General Admission of Liability was filed on behalf of Respondents. The GAL admitted for medical and wage benefits (TTD). The GAL reflected that fact that Claimant was paid TTD benefits from January 28, 2005 to the present, with reduction for the receipt of SSDI benefits beginning on June 1, 2012.

5. Following the amputation surgery in 2012, Claimant testified that his balance was affected and he has fallen down a number of times.[2]

7. The medical records admitted at hearing reflected treatment following the surgery, as well as the fact that Claimant sustained injuries as the result of falls. Claimant sustained a tear of the quadriceps tendon in right knee after a fall in 2012. That required a surgical repair and rehabilitation treatment. The ALJ concluded this fall affected the condition of Claimant's right knee. There was evidence in the record that Claimant required treatment for injuries Claimant sustained when he fell.

8. At a hearing conducted on September 26, 2019, ALJ Cannici considered the issue of medical benefits, specially the request for authorization of a right shoulder arthroplasty. In the Findings of Fact, Conclusions of Law and Order issued by ALJ Cannici on or about October 29, 2019, the request for a right shoulder arthroplasty was denied and dismissed. ALJ Cannici credited Nicholas Olsen, M.D.'s testimony that Claimant's right shoulder condition (end-stage osteoarthritis) was familial and the result of the natural progression of age-related arthritis.[3]

9. On October 31, 2019, Claimant was evaluated by Jeremy Kinder, M.D, at which time Claimant was reporting right knee pain. Dr. Kinder referred Claimant for an MRI.

10. Claimant underwent an MRI of the right knee on December 9, 2019. The MRI showed postsurgical changes of the distal quadriceps tendon without acute tear;

[2] Hearing Transcript ("Hrg. Tr.") p. 65:2-8.

[3] Exhibit SS, pp. 2112-2120; Exhibit 12, pp.141-148.

postsurgical changes affecting the patellar tendon without acute injury; extensive chronic degenerative changes at the patellofemoral articulation which could indicate chronic patellofemoral tracking; moderate sized horizontal tear of the medial meniscus mid body and posterior horn with associated 2 mm. medial extrusion; mild degenerative changes in the medial lateral compounder of articular surfaces; collateral ligaments and cruciate ligaments remained intact.[4]

11. On January 2, 2020, Claimant was evaluated by Dr. Kinder. At that time, pain was present in the medial and lateral aspect of his right knee. On examination, tenderness was noted on the medial and lateral joint line, but no varus valgus instability was present. Dr. Kinder noted Claimant had "continued downfall' since the quadriceps tear. Dr. Kinder noted the MRI (December 9, 2019) showed a horizontal tear with some extrusion, with some chronic changes, as well as some arthritic changes underneath the patellofemoral joint. Dr. Kinder administered a cortisone injection to Claimant's right knee.

12. Claimant returned to Dr. Kinder on January 22, 2020 and it was noted Claimant fell on his right knee the day before and had significant pain. Claimant reported he did not have relief with the cortisone injection. Dr. Kinder's diagnosis was: tear of medial meniscus of right knee, unspecified tear type and he was of the opinion that viscosupplementation would not help. Dr. Kinder recommended an arthroscopy for the medial meniscal tear, including possible meniscectomy and Claimant wanted to proceed with the surgery. The ALJ credited Dr. Kinder's opinion that Claimant needed surgery for the right knee.

13. Claimant was evaluated by Dr. Olsen, on February 5, 2020, at the request of Respondents. Claimant reported right knee pain which had gotten worse. Claimant advised Dr. Olsen that he had had several falls, the last of which was approximately January 21, 2020. Claimant said he did not know the dates of each of these falls and did not go to the doctor each time he fell.

14. On examination, Claimant's right knee demonstrated mild atrophy in the quadriceps mechanism, with full extension and 150° of flexion. Moderate tenderness along the medial joint line was present with palpation. The McMurray's maneuver was positive for medial joint line pain, with Apley's compression positive for medial joint line pain. The anterior drawer sign and Lachman's maneuver were negative no evidence of instability in the collateral ligaments with testing was found.

15. Dr. Olsen reviewed the right knee MRI and noted that Claimant had an equal chance of improving with rehab and viscosupplementation as he did from a partial meniscectomy of the right knee. Dr. Olsen stated he was unable to relate Claimant's knee condition to the work injury that occurred on July 22, 2012 (sic) and unable to relate it to the fall that occurred on October 10 or 12, 2012 when he ruptured the quadriceps tendon. The MRI did not show fraying or chronic degeneration that would have been

[4] Exhibit A, pp. 9–10.

seen with a long-standing tear and Dr. Olsen, believe the MRI findings were new. Dr. Olsen, agreed that viscosupplementation would be appropriate for the right knee, but it was not related to Claimant's work injury.

16. The ALJ concluded that to the extent that Claimant fell in January 2020 and it was related to his loss of balance, the tear would be related to the original work injury.

17. On August 14, 2020, Claimant underwent a Division Independent Medical Examination, which was performed by Dr. McAlpine. Claimant testified that he met with Dr. McAlpine over three days. Claimant's current symptoms included: left knee weakness, as well as right knee weakness and constant pain (6/10). Claimant also had what he estimated to be 50% of the strength and mobility in his left shoulder since reverse replacement surgery was performed on July 13, 2018. He said his shoulder pain was 5/10 nightly. Claimant described constant pain (5/10) in his right shoulder, which spiked when lifting or moving his right arm. Claimant advised Dr. McAlpine that his right shoulder deteriorated after using crutches.

18. On examination, Claimant's left shoulder had restricted range of motion ("ROM") and mild atrophy was present in the right knee quadriceps. The McMurray's maneuver was positive for medial joint line pain, with the drawer sign and Lachman's maneuver both negative. No evidence of instability was present in the collateral ligaments.

19. Dr. McAlpine's diagnoses were: Below the knee amputation, left; left ankle-diagnoses prior to left BKA: peroneal tendon dislocation; 715.17: osteoarthrosis and allied disorders: osteoarthrosis, localized, primary ankle and foot; 733.82: non-union of fracture; bilateral osteoarthritis of the knees; S/P right quadriceps tendon repair; right quadriceps tendon tear; S/P left knee patellofemoral arthroplasty; S/P left shoulder reverse total replacement; left shoulder rotator cuff tear; right shoulder osteoarthritis; medial meniscus tear, right knee. The DIME report indicated Claimant was at MMI as of the date of the evaluation. However, Dr. McAlpine opined that if surgery were recommended on either the knee or shoulder that Claimant was not at MMI.[5]

20. Dr. McAlpine further amplified her opinions when she provided expert testimony on October 6, 2020. Dr. McAlpine testified as an expert and stated opined that the condition of the right knee was caused or to the sequelae of the work injury that the condition of Claimant's right knee was related to the work injury and its sequalae. Dr. McAlpine noted:

> "So part of it, it has to be qualified. I agree that there was a significant incident that caused trauma to the right leg, including the knee and where he tore his quadriceps at that time. I also – the statement I made before, probably in a

[5] Exhibit 7, p. 44.

logical way there has been increased pressure on that leg after injuring the left, you know, leg on 7/22/2003.

The physics and the biomechanics of it, it probably had increased strain for that whole time. But there was a significant incident that occurred on the date that you – you know, I don't have the date right in front of me. I'd have to look at that." [6]

21. Dr. McAlpine acknowledged there was question whether the tear noted in the December 2019 MRI was "acute" because the radiologist did not describe it as such. However, Dr. McAlpine noted Claimant had multiple falls any one of which could have caused the tear.[7] Dr. McAlpine agreed that a torn medial meniscus would cause pain, but here where Claimant had multiple falls, the degree to which it was torn would impact the degree of pain he felt, as well as his pain tolerance. Claimant advised her that he was having pain and swelling in October 2019 at the time he was using a recumbent bike. Dr. McAlpine also testified that when Claimant subsequently fell (after December 2019), he could have torn the medial meniscus more. This opinion was persuasive to the ALJ.

22. The rationale provided by Dr. McAlpine showed she considered the issue of relatedness and causation with regard to the condition of Claimant's right knee. Dr. McAlpine opined that additional pressure was put on the right leg after the injury to the left leg and that, coupled with trauma from various falls (including January 2020) led to the need for surgery. Dr. McAlpine's testimony led the ALJ to conlude she considered multiple causes of the condition of Claimant's right knee. Dr. McAlpine believed the condition of Claimant's knee was related to the work injury. Her reasoning was persuasive to the ALJ.

23. Dr. McAlpine testified that she reviewed the research on the biomechanics of crutches and canes (citing the Journal of Biomechanical Engineering, as well as other sources). The studies indicated that recurrent use of crutches and straight canes would probably increase the progression of underlying degenerative disease. She believed this would increase the pressure and cause more extension type problems with the shoulder. Dr. McAlpine said long term use of crutches can create changes in the loading of the elbow/shoulder joints. Dr. McAlpine also testified that her opinion was based upon general principles of biomechanics.[8] This was the basis of her recommendations that Claimant be evaluated by a surgeon. Dr. McAlpine opined the condition of Claimant's shoulder was related to the work injury.

24. Dr. Olsen performed four independent medical evaluations of Claimant, at the request of Respondents. The first evaluation took place on May 7, 2014 and the

[6] Exhibit 8 (Dr. McAlpine's testimony), pp. 68-69.

[7] Exhibit 8 (Dr. McAlpine's testimony), p. 20:2-8.

[8] Exhibit 8 (Dr. McAlpine's testimony), pp. 103:6-16, 104:1-8; 106:20-22, 108:12-16.

second evaluation was on May 1, 2017. The next evaluation took place on June 19, 2019 and the last evaluation occurred on February 5, 2020. Dr. Olsen also testified as an expert at the most recent hearing, as well as the hearings in which ALJ Cannici, ALJ Felter and ALJ Jones presided.

25. Dr. Olsen testified as to the general accepted types of tears of a meniscus. Dr. Olsen stated that there are two kinds of medial meniscus tears-acute tears and chronic tears. Dr. Olsen said that an acute tear of the meniscus on MRI will show a bright white signal indicating that there is a tear from one edge of the meniscus to the other edge of the meniscus. Dr. Olsen testified that the meniscus tear, as shown on the December 9, 2019 MRI, was an acute tear and not a chronic tear. Dr. Olsen opined that Claimant's need for knee surgery was not related to the work injury, rather it was the result of the degenerative process in the knee. The ALJ concluded Dr. Olsen was expressing a different opinion with regard to the cause of Claimant's knee condition.

26. Dr. Olsen disagreed with Dr. McAlpine that Claimant's shoulder issues were related to use of crutches. He said Claimant described his crutch use as intermittent and would switch back and forth between using crutches and the wheelchair. In the June 19, 2019, report Dr. Olsen opined that, at best, Claimant only suffered a temporary aggravation of his right shoulder while he was using his crutches. Dr. Olsen opined Claimant's crutch use did not cause a permanent aggravation of the underlying osteoarthritis in his right shoulder.[9] Dr. Olsen said this was the natural progression of the underlying osteoarthritis is that, as one ages, the osteoarthritis simply gets worse.

27. Dr. Olsen also testified at the September 26, 2019 hearing as follows:

> "Mr. Robbins is using the crutches and wheelchair alternatively and on an intermittent basis. And, he is rarely mobile. And when he is mobile, he can switch between one mode of ambulation [with] the other depending on his symptomology. There is simply not enough documented time to result in a permanent deviation of a natural progression of his familial age-related osteoarthritis. Now, the crutches could cause a temporary increase in his symptoms as it did in 2013 for a period of months, but it was not great enough to affect the underlying progression of his osteoarthritis".[10]

28. At the hearing on July 8, 2021, Dr. Olsen testified the studies upon which Dr. McAlpine relied were based on uninterrupted crutch use. Dr. Olsen disagreed that Claimant's shoulder condition was related to his work injury. The ALJ concluded Dr. Olsen was expressing a different opinion with regard to the etiology of Claimant's shoulder condition.

[9] Exhibit A, p. 26.

[10] Exhibit QQ, p. 2086.

29. Respondents did not meet their burden of proof to show Dr. McAlpine's opinions concerning Claimant's knee and shoulder were more probably wrong.

30. The ALJ found it was more probable than not that Claimant requires surgery in the right knee because his balance was altered as a result of his industrial injury and this led direct to falls, which aggravated and accelerated the condition of his right knee.

31. The doctrine of issue preclusion does not apply with regard to the treatment proposed for Claimant's shoulder. The ALJ finds that a different issue was presented at this hearing, namely overcoming the DIME opinions. The ALJ also finds the burden of proof on this issue was different.

32. Based upon the totality of the medical evidence, the ALJ found that it is reasonable and necessary for Claimant to undergo an evaluation of his right shoulder. Respondents are required to pay for an evaluation of the shoulder. The ALJ makes no findings what treatment Claimant requires for the right shoulder at this time.

33. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). In the case at bench, there was conflicting medical evidence, including by the physicians who evaluated Claimant on the issue of MMI.

Overcoming the DIME

As determined in Findings of Fact 1-3, Claimant was injured on July 22, 2003 when a vehicle rolled back on his ankle. Claimant suffered a peroneal tear and underwent

multiple surgeries when his doctors attempted to fuse the ankle after his injury. On May 12, 2012, Claimant underwent a below the knee amputation. *Id.* After his amputation Claimant testified his balance was affected and he has fallen on multiple occasions since that time. (Finding of Fact 4). Claimant's testimony was credible to the ALJ. *Id.*

As a result of one of his falls, Claimant suffered a tear of the quadriceps tendon in his right knee in 2012. (Finding of Fact 7). Claimant required extensive treatment after that time. Respondents requested a 24-month DIME and Dr. McAlpine performed the evaluation on August 14, 2020. (Finding of Fact 16). Dr. McAlpine concluded Claimant was not at MMI with regard to his right knee and right shoulder. (Finding of Fact 18). Respondents then filed an AFH to contest these findings. Claimant requested treatment, including surgery for the right knee and right shoulder.

The question of whether Respondents overcame Dr. McAlpine's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the findings of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004). Respondents had the burden of proof to overcome Dr. McAlpine's conclusion on MMI. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

As found, Respondents did not meet their burden of proof to show that Dr. McAlpine's conclusions that Claimant was not at MMI with regard to his right knee and right shoulder were more probably wrong. (Finding of Fact 29). As determined in Findings of Fact 19-22, Dr. McAlpine reviewed Claimant's treatment records and concluded that he was not an MMI and required treatment for the right knee. In this regard, while recognizing the complex issues involved in Claimant's lengthy course of treatment, Dr. McAlpine opined that the cause of the medial meniscus tear was weakness resulting from the original injury, as well as the falls Claimant experienced. Dr. McAlpine noted there was a question as to whether the meniscus tear shown in the MRI was acute and then offered an opinion as to why the right knee was related. *Id.* The ALJ credited this opinion.

Likewise, Dr. McAlpine concluded Claimant was not an MMI for the right shoulder because of extensive use over time with crutches. Dr. McAlpine opined that the cause of

Claimant‘s shoulder symptoms was the result of the use of crutches. The ALJ determined that what was offered into evidence on the both the right knee and right shoulder was a differing expert opinion (Dr. Olsen), who disagreed with the opinion offered by Dr. McAlpine. (Findings of Fact 25 and 28). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician.

In summary, Respondents did not adduce sufficient evidence to overcome Dr. McAlpine’s opinions as to whether Claimant was at MMI, specifically with reference to the right knee and right shoulder.

Medical Benefits

Turning to the question of medical benefits, the ALJ reviewed the extensive medical records adduced on behalf of the parties and determined that the proposed surgery for the right knee was reasonable and necessary, as well as related to the industrial injury in 2003. Claimant is entitled to such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” Section 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). Respondetns are liable to provide such treatment provided it is reasonable, necessary and related to the work injury. In the case at bench, the ALJ credited the opinion of Dr. Kinder, who was an ATP, on Claimant’s need for right knee surgery. (Finding of Fact 12).

The ALJ concluded the doctrine of issue preclusion did not apply in this case. *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44 (Colo. App. 2001). The issue regarding Claimant‘s shoulder surgery, despite having previously gone to hearing is subject to a different burden of proof, as the issue being adjudicated concerns Respondents’ attempt to overcome the conclusions of the DIME physician. (Finding of Fact 31). *Holcombe v. FedEx. Corp.*, W.C. 4-828-259 (ICAO March 24, 2007).

With regard to the potential shoulder surgery, the record was less clear. Based upon the most recent medical records, the record did not clearly establish surgery was being recommended for Claimant‘s right shoulder at this time. However, the ALJ determined the proposed evaluation of Claimant‘s right shoulder was reasonable and therefore, Respondents will be ordered to provide this treatment. (Finding of Fact 32).

When making the determinations with regard to the shoulder and knee, the ALJ considered Respondents‘ argument that Claimant‘s symptoms were the result of a degenerative condition in his knee and the natural progression of this condition. The ALJ found that despite the time that had elapsed since the industrial injury, it was the initiating event, which constituted the cause of Claimant‘s need for treatment. The ALJ considered Respondents‘ assertion that Claimant’s shoulder condition was not related to the work injury. After considering Dr. McAlpine’s opinion, as well as those offered by the ATP-s,

the ALJ found Claimant met his burden of proof to show that the condition of his shoulder and knee were related to the July 22, 2003 injury.

ORDER

It is therefore ordered:

1. Claimant's Motion for Directed Verdict is denied.

2. Claimant is not at MMI and Respondents shall provide medical benefits to Claimant, including the proposed surgery on the right knee.

3. Respondents shall provide medical benefits to Claimant, including an orthopedic evaluation of Claimant's shoulder.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that this claim should be reopened pursuant to Section 8-43-303, C.R.S., due to fraud.

If the claim is reopened, whether the respondents have demonstrated, by a preponderance of the evidence, that they are entitled to recover benefits paid to the claimant in the amount of $16,364.90.

FINDINGS OF FACT

1. On June 4, 2019, the claimant suffered a work injury while employed with the employer. The body parts injured at that time included the claimant's neck and back.

2. On July 8, 2019, the respondents filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits. The claimant's TTD benefits were paid at a rate of $558.80 per week.

3. The claimant's authorized treating physician (ATP) for this claim has been Dr. Larry Kipe. Beginning on June 20, 2019, Dr. Kipe restricted the claimant from all work.

4. On August 20, 2019, the claimant was seen by Dr. Kipe. At that time, the claimant reported that he had not returned to work and "does not feel he can work." The claimant also reported constant neck pain, paresthesia down his arms, and pain in his lumbar spine. Based upon the statements made by the claimant on that date, Dr. Kipe continued to restrict the claimant from all work.

5. On August 21, 2019, the claimant attended a Department of Transportation (DOT) medical examination for purposes of obtaining a commercial driver's license (COL) medical certificate. The medical examination was performed by Noel K. McKey, DC.

6. In preparation for the DOT examination, the claimant completed a Medical Examination Report Form. In that form, the claimant reported that he had no neck or back problems. The claimant also reported no bone, muscle, joint, or nerve problems. On exam, Dr. McKey noted that the claimant's back and spine were normal. The claimant was cleared to receive a two year medical certificate.

7. On December 4, 2019, the claimant returned to Dr. Kipe. At that time, the claimant reported problems with pain and an inability "to get around". Dr. Kipe continued to restrict the claimant from all work. On that same date, Dr. Kipe authored a letter in which he stated that the claimant should remain off of work "indefinitely".

8. On January 30, 2020, Dr. Kipe issued a report in which he determined that the claimant reached maximum medical improvement **(MMI)** on January 28, 2020. Dr. Kipe also noted that the claimant could return to full duty work, with no permanent impairment.

9. Based upon Dr. Kipe's January 30, 2020 report, on January 31, 2020, the respondents filed a Final Admission of Liability (FAL). The FAL was amended on February 12, 2020 to accurately reflect the amount of TTD paid to the claimant.

10. Dr. Kipe testified that each time he restricted the claimant from all work he did so based upon the claimant's subjective reports that he could not work. Dr. Kipe testified that he relied upon the statements made by the claimant in determining whether the claimant had any work restrictions. Upon learning of the August 21, 2019 DPT examination and the statements made by the claimant as part of that examination, Dr. Kipe determined that the claimant had reached **MMI,** was released to full duty, with no permanent impairment.

11. MV[Redacted], Senior Resolution Manager with the insurer was the individual that filed the FALs in January and February 2020. Ms. MV[Redacted] testified that the claimant's TTD benefits were terminated on January 28, 2020 because the claimant had reached MMI with no permanent impairment rating.

12. Ms. MV[Redacted] also testified that between August 20, 2019 and January 28, 2020, the respondents paid the claimant $16,364.90 in TTD benefits.

13. The ALJ credits the medical records, the DOT examination records, and the testimony of both Dr. Kipe and Ms. MV[Redacted]. The ALJ finds that it is more likely than not that the claimant intentionally misled Dr. Kipe regarding his inability to work. This is evidenced by the contradictory information he provided Dr. McKey on August 21, 2019. The ALJ finds that the claimant was kept off of work by Dr. Kipe because of the claimant's subjective report that he could not work. However, it is clear that the claimant was capable of working as evidenced by his report to Dr. McKay.

14. Based upon the evidence and testimony presented, the ALJ finds that the claimant did engage in fraud in this matter. In reaching this determination, the ALJ finds the following. 1) The claimant's claim that he could not work was a false representation of a material fact. 2) The claimant knew that he was not providing Dr. Kipe with accurate information when he continued to report he was unable to work. 3) Dr. Kipe relied upon the claimant's false representations. 4) The claimant knew that Dr. Kipe would continue to restrict him from all work based upon his false representations. 5) The respondents relied upon the reports of Dr. Kipe and continued to pay TTD benefits to the claimant,

resulting in damage to the respondents. The ALJ infers that the claimant also knew that his false representations would result in continued TTD payments.

15. The ALJ also finds that the respondents have successfully demonstrated that they are entitled to recover amounts paid to the claimant between August 20, 2019 and January 28, 2020. The ALJ finds that the amount overpaid as a result of the claimant's misrepresentations to Dr. Kipe totals $16,364.90.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.$. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.$. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1,* 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos,* 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers,* W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim.

Berg v. Industrial Claim Appeals Office, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission,* 646 P.2d 399 (Colo. 1981).

5. In the present case, the respondents seek to reopen the claim on the basis of fraud. The elements of fraud or material misrepresentation are well-established in Colorado law. The elements are: (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; (5) Action based on the representation or concealment resulting in damage. *Arczynski v. Club Mediterranee of Colorado, Inc.,* W.C. No. 4-156-147 (ICAO, Dec. 15, 2005), *citing Morrison v. Goodspeed,* 68 P.2d 458, 462 (Colo. 1937). "Where the evidence is subject to more than one interpretation, the existence of fraud is a factual issue for resolution by the ALJ." *Arczynski, supra*

6. The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.,* W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

7. As found, the respondents have successfully demonstrated, by a preponderance of the evidence, that the claim should be reopened pursuant to Section 8-43-303, C.R.S. on the basis of fraud. The elements of fraud identified above are found to exist in the present matter. Specifically:

- The claimant's claim to Dr. Kipe on August 20, 2019 that he could not work was a false representation of a material fact.
- The claimant knew that he was not providing Dr. Kipe with accurate information when he reported he was unable to work.
- Dr. Kipe relied upon the claimant's false representations.
- The claimant knew that Dr. Kipe would continue to restrict him from all work based upon his false representations.
- The respondents relied upon the reports of Dr. Kipe and continued to pay TTD benefits to the claimant, resulting in damage to the respondents.

8. As found, the respondents are entitled to recover $16,364.90 from the claimant for benefits paid to him between August 20, 2019 and January 28, 2020.

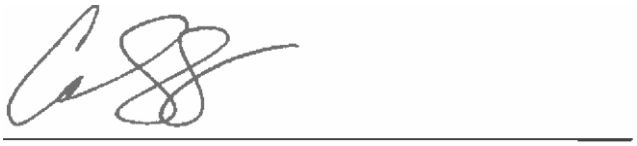
ORDER

It is therefore ordered:

1. The claim is reopened pursuant to Section 8-43-303, C.R.S. on the basis of fraud.

2. The respondents are entitled to recover $16,364.90 from the claimant for benefits paid to him between August 20, 2019 and January 28, 2020.

Dated this 13th day of July 2022.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **DELIA CARTER,** Claimant, v. **LANDVEST CORPORATION,** Employer, and **ACCIDENT FUND INSURANCE COMPANY OF AMERICA,** Insurer, Respondents.	**COURT USE ONLY** **CASE NUMBER:** **WC 5-175-275-001** **5-179-157-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

A VIDEO HEARING in the above captioned matter was held on May 3, 2022, before Administrative Law Judge (ALJ), Richard M. Lamphere.

Claimant was present and represented by Gordon J. Heuser, Esq. Respondents were represented by Eliot J. Wiener, Esq. The proceeding was digitally recorded on the Google Meets platform between 1:00 and 3:05 p.m.

Claimant testified on her behalf. In lieu of his live testimony, Respondent lodged a transcript of the April 26, 2022, deposition of Dr. William Ciccone, II. The deposition testimony of Dr. Ciccone is admitted into the evidentiary record. In addition, to the aforementioned testimony, the parties submitted hearing exhibits which were admitted into the evidentiary record as follows: Claimant's Exhibits 1-22 and Respondents Hearing Exhibits A-K.

At the conclusion of the hearing, the ALJ granted the parties' request to hold the record open through May 27, 2022, to allow counsel time to file position statements with the ALJ in lieu of closing argument. The deadline to submit the position statements was subsequently extended to June 9, 2022. The parties' position statements have been received. Consequently, the matter is ready for an order.

In this order, Delia Carter will be referred to as "Claimant"; Landvest Corporation will be referred to as "Employer" and Accident Fund Insurance Company of America will be referred to as "Insurer". Employer and Insurer will be referred to as "Respondents". All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2015); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

CERTIFICATE OF MAILING OR SERVICE

I hereby certify that I have served true and correct copies of the foregoing **FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER** by U.S. Mail, or by e-mail addressed as follows:

Court Clerk

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained a work related injury to her right knee on May 20, 2021 (W.C. No. 5-175-275-001), July 29, 2021 (W.C. No. 5-179-157-001), December 15, 2021 (W.C. No. 5–194–727) or January 6, 2022 (W.C. No. 5–194–728)?

II. If Claimant established that she suffered a compensable right knee injury, whether she also established, by a preponderance of the evidence, that the medial meniscus repair and/or partial medial meniscectomy recommended by Dr. David Walden is reasonably necessary and causally related to the compensable claim.

III. If Claimant established that she sustained a compensable injury, did she also prove that she is entitled to an award of temporary total disability (TTD) benefits from July 30, 2021 through October 3, 2021?

STIPULATIONS

At the commencement of hearing, the parties stipulated to an Average Weekly Wage (AWW) of $1,127.98. The stipulation is approved. Claimant's counsel also noted that the December 15, 2021 and January 6, 2022 claims represented temporary exacerbations of Claimant's condition caused by either the May 20, 2021 or July 29, 2021 injuries.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Ciccone, the ALJ enters the following findings of fact:

Background and Claimant's Alleged May 20, 2021 Injury

1. Claimant works as a General Manager for Employer who operates a storage unit facility. She has been worked for Employer since November 26, 2018. Claimant's job duties include performing inspections several times a day to ensure safety, security, and cleanliness of the facility and storage units. In performing such inspections, Claimant is required to walk up and down hallways where the storage units are located. Claimant's job duties also require her to perform administrative tasks such as renting storage units, monitoring the front office, and doing paperwork.

2. Claimant testified that on May 20, 2021, she was performing an inspection on the second floor of the storage facility when she developed pain in her right knee.

According to Claimant, she had walked the length of a hallway and turned her body to the left to view a storage unit. She then turned back to the right to continue with her rounds. When turning, Claimant testified that she did not move (turn) her feet. As noted, Claimant felt pain in her right knee as she pivoted back to the right to continue with her rounds.

3. Claimant finished her rounds and returned to her desk. Claimant testified that her right knee hurt the rest of the day and she could not find a position of comfort. Upon completing her shift and leaving the office, Claimant testified that she stepped awkwardly off a curb and experienced sharp pain in her right knee while walking to her car in the employee parking lot.

4. Claimant did not report the alleged injury or seek medical care on May 20, 2021. Rather, Claimant proceeded to a previously scheduled massage and after that, massage went home for the evening.

5. When Claimant got home following her massage, she testified that she was having sharp right knee pain when going upstairs and was forced to set off her car alarm to alert her children that she needed help to get into her home.

6. During cross-examination, Claimant testified that she completed a manager's incident report. She testified that she wrote that she had experienced discomfort in her knee that day and when she stepped off a curb at the end of the day the pain got worse. Claimant testified that she explained to Dr. Wu what had happened at work and that she had explained it to Dr. Bisgard as well. The incident report in question does not indicate that Claimant twisted her knee while making rounds. (See CHE 14, p. 216). Claimant testified that she did not put down the details of twisting her knee on the incident report because she was trained to keep information on the form brief.

7. Claimant testified that she presented to presented to UCHealth Emergency Department (ED) on the morning of May 21, 2021 with complaints of right knee pain. The ER note from this visit indicates that the onset of right knee pain was yesterday evening and that Claimant was walking down some stairs when she started feeling sharp right knee pain, which worsened when straightening her leg. Claimant denied injury. Physical exam revealed medial lateral joint line tenderness to palpation of the right knee with full range of motion. There was noted a positive McMurray's sign with mild joint effusion. The ED physician's clinical impression was a potential meniscus injury of the right knee. The ED report does not contain a history that Claimant's injuries were work-related. It was recommended that Claimant follow up with her primary care physician and consider using an OTC knee sleeve for support in conjunction with Ibuprofen and Tylenol for pain. (CHE 3, pp. 81-82, 87-88).

8. The Claimant was seen by Physician Assistant (PAC) Jayme Eatough at UCHealth Urgent Care on May 24, 2021. Claimant completed a patient intake form at that time, reporting a mechanism of injury (MOI) of "stepping off curb" (CHE 4, p. 107). PAC Eatough reported:

> She felt leg pain in the front when she was sitting at her desk doing computer work. The pain was mild … When she went to leave she stepped off a curb and felt shooting pain. She did not fall or have any trauma to the leg … she then went and got her massage which didn't help. She then drove home and had a hard time using the gas and brake pedal … to get in the house you have to go down and upstairs. She had sharp pain with both going up and down. She set off the car alarm to get her kids to come out and help.

Id. at p. 108-109.

9. Physical exam was positive for an inability to fully straighten the right knee, an inability to bear weight enough to perform a Thessaly test, significant decreased strength in the right quadriceps and hamstrings when compared to the left, and some swelling on the lateral inferior aspect of the right knee. X-rays of the knee did not reveal any acute abnormalities although a patellar enthesophyte at the quadriceps insertion was found. PAC Eatough diagnosed “Acute pain of right knee” and “Sprain of right knee, unspecified ligament, initial encounter”. The Claimant was provided with a knee brace, told to use crutches in conjunction with rest, ice, NSAIDs, and elevation to help with pain. She was also assigned physical restrictions of “sitting/sedentary work only”. (Id. at p. 111). As part of this encounter, Dr. Elizabeth Bisgard signed a WC-164, which indicated that the relatedness of the objective findings on examination to the described MOI was undetermined. Indeed, Dr. Bisgard noted: “Causality unsure”. (Id. at p. 120).

10. On June 4, 2021, Claimant presented to Emily Burns, M.D. with continued complaints of right knee pain, which becomes sharp with extension. The worst pain was along the bottom of the kneecap. Dr. Burn’s note indicated that she reviewed the claimant’s MOI. The mechanism reported was that the Claimant had a mild tweak from walking down the hall and turning down the hallway to the left. Dr. Burns reported the Claimant was just walking and had a clipboard in her hand. At the end of the day, the Claimant stepped off a curb and had a sharp pain. Dr. Burns reported that the Claimant did not fall and categorized the injury as minor. Dr. Burns reported, “It is unclear if this is a true work-related injury. However, given the minor mechanism we would certainly expect improvement by now and she is still requiring crutches for ambulation." Dr. Burns was most suspicious for either patella chondromalacia/cartilage injury versus lateral meniscus injury. She recommended an MRI with continued use of crutches as needed. (CHE 3, pp. 99-101).

11. A MRI performed on June 14, 2021 was read as being normal. (CHE 6, p. 128).

12. Claimant returned to Dr. Burns on June 15, 2021 with throbbing pain in her right knee, which was shooting mostly underneath and along the lower side of the right

kneecap. Dr. Burns advised the Claimant that her MRI findings were normal. Physical exam was similar to that performed at the previous appointment with Dr. Burns, except for mild atrophy of the right quadriceps was noted when compared to the contralateral side. Dr. Burns diagnosed right knee pain and recommended home exercises and sitting work only. Dr. Burns reported that because Claimant did not have a significant work injury and had a completely normal MRI, she could not say with greater than 50% certainty that the Claimant's current symptoms were caused by a work-related mechanism. (CHE 3, pp. 102-105).

13. Respondents filed a Notice of Contest denying liability for the May 20, 2021 injury on July 26, 2021 (Respondents' Hearing Exhibit (RHE) F, pp. 88-89).

14. Claimant presented to Penrose St. Francis Primary Care on July 7, 2021 with reports of persistent right knee pain. She reported that she developed "sharp right knee pain" while walking down some stairs, which was worse with straightening the right knee out. Claimant requested an orthopedic referral. (RHE D, p. 53).

Claimant's Alleged July 29, 2021 Injury

15. Claimant contends she sustained a second work-related right knee injury on July 29, 2021, while maneuvering/scooting a wheeled chair she was sitting in to get a better view of an on-site incident involving a motor vehicle and an overhead door at the storage facility. Claimant's work area is covered by a security camera and there is video tape of the alleged July 29, 2021 injury.

16. Claimant testified that on this date (July 29, 2021), she was sitting in a rolling chair at her workstation when she reinjured her right knee. According to Claimant, she noticed a customer running into the loading bay door. In order to get a better look at what was happening; Claimant testified that while sitting down, she used her right leg, with "quite a bit" of pressure to push her chair to the left side of the desk. Claimant testified that as she pushed her wheeled chair to the left with her right leg, she experienced immediate severe pain in her right knee, which she would subsequently describe as sharp and throbbing. (CHE 7, p. 133).

17. The ALJ has carefully reviewed the aforementioned video recording of the July 29, 2021 incident contained at RHE J, p. 127. The video recording is 15 minutes 37 seconds in length. Review of security video shows the Claimant at her desk, completing paperwork and generally attending to a customer. She is sitting in a wheeled rolling chair placed on a hard surface floor, which she maneuvers side to side and front to back by pushing her feet on the floor. In the video, Claimant uses both the right and left leg to move her chair short distances within her work area. She wears a knee brace on the right leg. (RHE J).

18. At approximately 3 minutes and 43 seconds into the video, Claimant's attention is drawn to the garage bay directly in front of her desk. In order to get a better

view what is transpiring in the garage bay, Claimant grabs the left side of her desk with her left hand and pulls herself past the left side of her desk. She is not observed to push the chair to the left by using her right leg with "quite a bit of pressure" as she testified. Indeed, the movement is primarily accomplished with use of the left arm. At best, there is minimal use of the right leg as Claimant moves her rolling chair to the left side of her desk. (RHE J).

19. From 3:44 to 4:04 of the video, Claimant is observed to be sitting in her chair located just beyond the left side of her desk looking into the garage bay. There are no outward signs of injury. Indeed, Claimant appears to sit comfortably in her chair at the left side of her desk until the 4 minute and 5 second mark of the video, at which time she scoots her chair back under her workstation by using both legs to propel the chair forward. She then resumes her duties without any obvious signs of pain, injury or difficulty.

20. From 4:06 to 15:37, Claimant works on completing the paperwork for the customer who is standing directly in front of her desk. She briefly interacts with co-workers and occasionally scoots her chair from side to side and backward to reach for documents on a printer tray located behind her. Again, she gives no indication that she sustained an injury or is in discomfort during the remainder of the video. (RHE J).

21. Claimant filed two additional right knee claims with dates of injury on December 15, 2021 and January 6, 2022. At hearing, the Claimant testified that these two claims represented nothing more than temporary exacerbations of the injuries she sustained on May 20, 2021 and/or July 29, 2021.

22. The Claimant did not return to UCHealth in connection with her July 29, 2021 claim, but instead went to see Dr. George Johnson at Concentra Medical Centers (Concentra) on July 29, 2021. Dr. Johnson reported that the mechanism of injury occurred when the Claimant was scooting in her wheeled office chair at work. Dr. Johnson reported the Claimant did have a prior May 2021 injury when she was walking at work, and that the Claimant's condition had not improved over the past two months. (RHE E, p. 55). Physical examination of the right knee, which revealed swelling and tenderness over the medial joint line along with limited range of motion in all planes. (Id. at p. 57). Dr. Johnson's assessment was internal derangement of the right knee. (Id. at p. 54). He opined that Claimant's objective examination findings were "consistent with history and/or work-related mechanism of injury/illness." (Id.) Dr. Johnson recommended a knee brace, medications, and X-rays. Claimant was also given restrictions to include lifting, pushing/pulling up to 2 pounds, walking for 1 hour a day, standing for 1 hour per day, continuous use of crutches and wearing a brace or splint on her right knee for at least eight hours per day. (Id.) Dr. Johnson did not review the video of the July 29, 2021 incident that gives rise to this claim.

23. X-rays of the right knee performed on July 29, 2021 were read as normal. (RHE B, p. 19).

24. An August 12, 2021 note from Dr. Johnson indicates that Claimant's right knee symptoms were unchanged and that Claimant was not working due to restrictions. (RHE E, p. 58).

25. Claimant testified that Dr. Johnson imposed restrictions on her to include not being allowed to drive. She testified that she worked up until July 30, 2021, albeit in a modified capacity. She also testified that she was not told by her employer when she could return to work. Claimant stated that she was told by her employer that she had to wait for the insurance company for further direction on return to work. Claimant testified and the evidence presented supports a finding that she returned to work on October 4, 2021.

26. On August 23, 2021 Claimant presented to orthopedic surgeon Janie Friedman, M.D. According to Dr. Friedman's note, Claimant had had several years of off/on knee pain, which "got acutely worse after two incidents of twisting her knee at work on 5/19/21 (sic) and 7/29/21." At the time of Dr. Friedman's evaluation, Claimant was having pain primarily on the medial aspect of her knee without radiation. Her symptoms were reportedly unchanged after the second incident at work. Physical exam was positive for decreased range of motion. Dr. Friedman felt that Claimant's history and exam are consistent with a knee sprain. Dr. Friedman ordered x-rays, which demonstrated "well maintained joint spaces with no osseous abnormalities." She also reviewed Claimant's June 14, 2021 MRI, which she opined was "normal with no pathology noted." Dr. Friedman advised Claimant to "stop relying" on the brace and crutches as she felt they may be "hindering" her recovery. She administered a steroid injection and told Claimant if she didn't improve in 6-8 weeks, consideration would be given for a repeat MRI. (RHE E, pp. 78-80).

27. A repeat MRI performed on September 10, 2021 revealed the following:

- Subtle horizontal cleavage tear of root of medial meniscus without detachment measuring 4.5 mm.

- The cruciate ligaments, collateral ligaments, and extensor apparatus are all within normal limits. No osseous abnormalities.

- Focal prepatellar subcutaneous edema could reflect low-grade subacute soft tissue contusion status post history of trauma.

- Tri-compartmental low-grade partial-thickness articular cartilage loss most prominently involving the patellofemoral compartment.

(RHE B, p. 21).

28. Claimant returned to Dr. Johnson on September 16, 2021, with bilateral knee and back pain. Dr. Johnson noted that the September 10, 2021 MRI revealed a medial meniscus tear. Dr. Johnson also noted that Claimant was experiencing

compensatory left knee and back pain. Dr. Johnson assigned Claimant work restrictions of no driving the company vehicle, no lifting over 10 pounds, walking, and standing up to 2 hours per day, and referred Claimant to orthopedic surgeon David Walden, M.D. for further workup. (CHE 9, pp. 156-159).

29. Claimant was evaluated by Dr. Walden on October 4, 2021. According to his note, Claimant told Dr. Walden that she had a normal right knee until May 2021 when she was checking some units and twisted her right knee. Later that day, she stepped off a curb, causing further injury. The knee pain increased to the point where Claimant needed crutches. This note further indicates that Claimant re-injured herself in a second work-related incident on July 29, 2021, when she "got up quickly to check on a client who had pulled into the overhead door." Physical exam revealed decreased range of motion, diffuse tenderness of the medial lateral facets of the patella, medial lateral tissues with confluence of the medial facets of the patella, tibia, and femur. There was medial joint line tenderness, slight lateral joint line tenderness, and posterior mild pain. McMurray maneuvers were noted as equivocal. Dr. Walden reviewed the June 14, 2021 and September 10, 2021 MRIs which he interpreted as normal and with a possible medial meniscal tear respectively. Dr. Walden recommended conservative care including physical therapy to improve Claimant's range of motion for what he assessed was a flexion contracture of the right knee due to arthrofibrosis. He also administered a second steroid injection. There is no indication that Dr. Walden reviewed the aforementioned video tape of the July 29, 2021 incident during which Claimant alleges to have reinjured her knee. (CHE 12, pp. 207-209).

30. Based upon the content of his October 4, 2021 report, the ALJ finds Dr. Walden's understanding of the mechanism of injury alleged to have caused re-injury inconsistent with the July 29, 2021 security video tape. Indeed, there is no indication that Claimant "got up quickly" at any point during the incident in question to check on a client who had "pulled into the overhead door."

31. On December 22, 2021 Claimant was seen for a follow-up evaluation of her right knee. Dr. Walden noted that she had six visits of PT without lasting relief. Claimant was not convinced that the condition of her knee was improving and "wanted to discuss possible surgical intervention." Examination of the right knee revealed, in part, reports of pain along the medial joint line, which was exacerbated by medial McMurray testing. Dr. Walden's diagnoses on this day were acute meniscus tear and arthrofibrosis of the right knee. Dr. Walden opined that Claimant's symptoms correlated with the MRI findings of a medial meniscus tear. He also, without specifying which incident, noted that the mechanism of injury also could have produced this. Dr. Walden recommended arthroscopic surgery. (CHE 9, pp. 195-196; see also RHE E, p. 77).

Dr. Ciccone's Independent Medical Examination and Subsequent Testimony

32. At Respondents' request Claimant was evaluated by orthopedic surgeon William Ciccone II, M.D. Claimant gave Dr. Ciccone a history that on May 20, 2021, she

injured her right knee turning around while checking the storage units and noticed pain. This pain increased while leaving work when she had to “step down some stairs quickly.” According to this note, Claimant also alleged that she injured her knee further on July 29, 2021, while she was leaning around a desk to see out the window to watch a truck back into a door. Claimant also relayed to Dr. Ciccone that she injured her right knee again in December 2021 while watching video footage at work when, while pulling her chair forward, she hit her knee on the handle of the desk. She had a similar incident about a week later while stepping quickly to get to her phone. Dr. Ciccone’s report indicated that Claimant has most of her pain in the anteromedial and anterolateral aspect of her right knee, which gets worse with walking and stairs. (RHE A).

33. Dr. Ciccone opined that he did not believe the Claimant sustained a work-related injury to her knee, but that she may have suffered “increased pain with work activities.” He agreed with Dr. Burns who, on June 4, 2021, questioned whether this was a true work-related injury, and who on June 15, 2021, reported that she could say with greater than 50% certainty that Claimant's current symptoms were caused by a work-related injury. Moreover, Dr. Ciccone did not believe that the July 29, 2021 mechanism would cause a work-related injury. He reported that while the September 10, 2021 MRI may have revealed a subtle meniscal tear, Claimant did not have examination findings consistent with an acute meniscal tear. Dr. Ciccone was not provided the MRI imaging for review. (RHE, A).

34. Dr. Ciccone testified by evidentiary deposition on April 26, 2022 as an expert in orthopedic surgery. Prior to his deposition, Dr. Ciccone reviewed additional materials to include Claimant’s discovery responses, the June 14, 2021 MRI and the aforementioned July 29, 2021 security camera video.

35. After reviewing the additional information, Dr. Ciccone reiterated his previous opinion that Claimant did not suffer a work-related injury to her knee because the mechanisms of injury were not ones that he associated with acute meniscal pathology. (Depo. Trans. p. 10, lines 1-7). Dr. Ciccone then testified that he did not review the September 2021 MRI, but assuming that a meniscal tear was present, it may be degenerative in nature and unrelated to any injury, including the July 29, 2021 or May 20, 2021 incidents. (Depo Trans. p. 12, lines 7-25, p. 13, lines 1-21).

36. While he agreed that Dr. Walden documented an examination that correlated with an acute meniscal tear, Dr. Ciccone noted that Dr. Walden’s examination was inconsistent with all other providers who had examined the right knee. (Depo. Trans. p. 15, lines 10-22).

37. Dr. Ciccone testified that he disagreed with Dr. Walden’s recommendation for surgery because Claimant did not have a mechanism of injury likely to cause meniscal tearing and because Claimant would not likely benefits from surgery because her “knee pain is not consistent with meniscal pathology”. (Depo. Trans. p. 17, lines 8-19).

38. During cross-examination, Dr. Ciccone explained that the presence of a subchondral cyst and "scattered, low-grade partial thickness cartilage loss on imaging represents findings consistent with degenerative change. (Depo. Trans. p.p. 21-23, see also RHE B, p. 20-21). He also explained that the phrase "mild attenuation of the medial meniscus" as used in the September 10, 2021 MRI meant that the meniscus was "a little thinner" in appearance than normal. (Depo. Trans. p. 25, lines 5-8). He testified that "attenuation" is not synonymous with a tear. (Id. at p. 25, lines 9-10). He also explained that as used in the September 10, 2021 MRI, the phrase "mild attenuation of the medial meniscus towards the root favored subtle horizontal tear" meant:

> . . . that it's not clearly a tear. It means that it could be a tear, may be a tear. In the setting of early degenerative change, it may mean nothing as far as injury. It may just be part of the degeneration that is occurring within the knee.

(Depo. Trans. p. 25, lines 11-20).

39. Dr. Ciccone clarified that the word subtle meant that there may or may not be a meniscal tear present on the September 10, 2021 MRI. (Depo. Trans. p. 37, lines 16-24). According to Dr. Ciccone, MRI is very sensitive in discerning meniscal tearing and in MRIs that are read as "normal" it is unlikely there is any meniscal tearing. (Depo. Trans. p. 38, lines 14-22). Dr. Ciccone explained that in this case, the radiologist reading the September 10, 2021 MRI noted an abnormality in the medial meniscus, which he felt "might" be a tear. (Depo. Trans. p. 38, lines 14-19). Dr. Ciccone was then asked to assume that there was a meniscal tear by the time of the September 10, 2021 MRI that was not present by MRI obtained on June 14, 2021. Assuming this to be the case, Dr. Ciccone was asked whether the July 29, 2021 incident would have caused the tear present on the September 10, 2021 MRI. In response, Dr. Ciccone testified: "By work-related mechanism, I think it's unlikely that that (July 29, 2021 incident) would have caused a tear." (Depo. Trans. p. 39, lines 5-14).

40. The ALJ has carefully considered the reports of Dr. Walden and the expressed opinions of Dr. Ciccone and has weighed them against the balance of the competing evidence. Based upon the totality of the evidence presented, the ALJ finds Dr. Ciccone's opinions credible and more persuasive than those of Dr. Walden.

41. The evidence presented, persuades the ALJ that Claimant has failed to prove that she suffered an acute tear of the medial meniscus as a direct consequence of either the May 20, 2021 or July 29, 2021 alleged injurious incidents. To the contrary, the evidence presented persuades the ALJ that Claimant's meniscal tear is, more probably than not, degenerative in nature and precipitated by her underlying, osteoarthritis rather than by pivoting on her feet, ascending/descending stairs, stepping off a curb or pushing a rolling chair on a hard surface with her right foot as she claims. Consequently, Claimant has failed to prove by a preponderance of the evidence that she sustained a work related injury arising out of her employment on May 20, 2021 or July 29, 2021.

42. Even if Claimant had established a causal connection between her right medial meniscal tear and her work related functions, on May 20, 2021 or July 29, 2021, she failed to prove by a preponderance of the evidence that the surgery recommended by Dr. Walden is reasonable or necessary. To the contrary, the ALJ is persuaded by Dr. Ciccone's testimony that the recommended surgery is unlikely to result in any benefit. Accordingly, the ALJ finds the recommendation for surgery unreasonable.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). As found, the ALJ concludes the testimony of Dr. Ciccone to be credible and more persuasive than the contrary opinions of Dr. Walden.

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence

or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

D. To recover benefits under the Worker's Compensation Act, the Claimant's injury must have occurred "in the course of" and "arise out of" employment. *See* § 8-41-301, C.R.S.*; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish compensability. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, the evidence presented supports a conclusion that Claimant's alleged injuries occurred in the course of her employment. Nonetheless, Claimant must also establish that her alleged injuries arose out of her employment before the claim(s) can be found compensable.

E. The term "arises out of refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* As noted above, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2014. Here, Dr. Ciccone persuasively testified that the pain and suspected medial meniscal tear in Claimant's right knee is probably emanating from and related to the natural progression of degenerative arthritis in the knee rather than any activity or condition associated with Claimant's employment, i.e. walking, pivoting, ascending/descending stairs, stepping up onto and down from a concert curb or scooting in a rolling chair. The record evidence, including the physical examinations of Dr. Burns and the evaluation of Dr. Friedman support Dr. Ciccone's opinions. Based upon the evidence presented, the ALJ is convinced that the condition of Claimant's right knee, including her suspected meniscus tear are unrelated to either the May 20, 2021 or July 29, 2021 incident occurring at work.

F. The question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and her need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d

786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that she sustained a work-related injury or occupational disease. An incident which merely elicits pain symptoms without a causal connection to industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). In this case, Claimant has failed to establish a causal connection between her employment related duties and the resulting condition for which medical treatment benefits are sought. Here, the origin of Claimant's pain and the cause of her suspected medial meniscus tear, more probably than not, is progressing degenerative change within the right knee rather than any activity associated with her job. Consequently, her claims must be denied and dismissed.

G. Although Claimant is not alleging that her meniscal tear was "precipitated" by a pre-existing condition and instead by a discrete injury, the ALJ finds and concludes, that Respondents are suggesting, among other things, that Claimant's meniscal tear is a likely consequence of a pre-existing condition (degenerative arthritis) brought by Claimant to the workplace. Consequently, the ALJ has also analyzed the compensable nature of this case pursuant to the decision announced by the Colorado Supreme Court in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014) and the "special hazard" rule announced by the Court of Appeals in *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

H. In *City of Brighton*, the Colorado Supreme Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. The second category includes risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to her employment. Idiopathic conditions have been defined to mean, "self-originated." *Id.* at 503. Purely idiopathic personal injuries generally are not compensable unless an exception applies. *Id.* at 503. One exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Referred to as the "special hazard rule", the Colorado Court of Appeals held that a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of the pre-existing weakness and a hazard of employment." *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the

employment and the injury. *See Ramsdell v. Horn, supra.* In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered. *Id.* Courts have previously held that hard level concrete floors, concrete stairs, and curbs are not special hazards of employment. *Id.; Alexander v. ICAO*, No. 14CA2122 (Colo. App. June 4, 2015); *Gaskins v. Golden Automotive Group, LLC*, W.C. No. 4-374-591 (ICAO Aug. 6, 2009). There is no requirement that the pre-existing condition is symptomatic prior to the injury in order for the special hazard rule to apply. *Alexander v. Emergency Courier Services, supra*. Here, Claimant did not testify that any particular flaw in the curb caused her right knee injury. As presented, the evidence supports a finding that the curb in this case is not a special hazard of employment but rather a ubiquitous condition, which Claimant could have encountered off the job. Moreover, as found, the record evidence supports a conclusion that Claimant's meniscal tear was precipitated by her pre-existing osteoarthritis. Consequently, the ALJ concludes that Claimant bore the burden to establish that there was a concurrence of a pre-existing weakness and a hazard of employment to result in a compensable work injury to Claimant's right knee under any claim that stepping off the curb caused her injury. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); See *also Ramsdell v. Horn*, *supra.* Here Claimant failed to establish that a special hazard of employment combined with her pre-existing condition to cause the injury in question. Accordingly, her claim for benefits based upon an injury suffered while stepping off a curb must be denied and dismissed.

I. As Claimant failed to establish that she sustained a compensable, work related injury on May 20, 2021 or July 29, 2021, her alleged exacerbations of these injuries occurring on December 15, 2021 and January 6, 2022, must also be denied and dismissed. Because Claimant has failed to carry her burden to establish that she sustained compensable work-related injuries, this order does not address her claims to medical and lost wage benefits.

ORDER

It is therefore ordered that:

1. Claimant's claims for worker's compensation benefits alleged to have occurred from injuries sustained on May 20, 2021 and July 29, 2021 are denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the

above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-179-248-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered an injury from a motor vehicle accident, on June 17, 2021, while in the course and scope of his employment with Employer.

2. Whether Claimant is entitled to medical benefits for services rendered related to the June 17, 2021 motor vehicle accident.

3. Whether Claimant should be awarded TTD benefits from June 18, 2021 to January 9, 2022. If so, what was Claimant's AWW?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Employer is in the business of sanitizing hog farm facilities. CS[Redacted] is the owner of Employer, and he lives in Yuma, Colorado. The registered address for Employer is 313 S. Main Street, Yuma, Colorado 80759 (Ex. S). Employer's "office" is in Yuma, Colorado.

2. Mr. CS[Redacted] testified that Seaboard Farms was Employer's only client in June 2021. Seaboard Farms had several locations, each housing pigs at different stages of their preparation for slaughter. All of the locations were in Holyoke, Colorado. Holyoke is approximately an hour from Yuma, by car.

3. Claimant began working for Employer in February 2020. Claimant testified that he earned $13 an hour plus bonus, and his job was to power wash and sanitize facilities at various hog farms.

4. Claimant credibly testified that on approximately six occasions prior to June 17, 2021, he traveled to Yuma, Colorado to work for Employer. Claimant testified that he cleaned up the yard and pulled weeds at Mr. CS[Redacted] 's house, the "other" house, and also at the "office". Claimant's pay for this work was a part of what he would earn as an employee of Employer. Claimant presented no evidence to support these payments.

5. MG[Redacted] also worked for Employer. Mr. MG[Redacted] credibly testified that on approximately three occasions he worked at Mr. CS[Redacted] 's home in Yuma. Mr. MG[Redacted] testified that the first time he worked at Mr. CS[Redacted] 's house he cleaned the yard, hung sheet rock, and took tools to the "office." Mr. MG[Redacted] testified that his pay for this work was part of his regular paycheck.

6. The ALJ finds that Claimant's employment included performing work for Employer in Yuma at Mr. CS[Redacted] 's personal residence, the other house and the office. Claimant traveled to Yuma at the express or implied direction of Employer, and conferred a benefit to Employer.

7. Employer and Seaboard Farms had a fee dispute. On June 14, 2021, Claimant and other employees were told by Employer to report to the hog farm owned by Seaboard Farms, and begin removing the equipment. On June 14, 2021, Claimant helped remove Employer's equipment off the hog farm.

8. Claimant's timecard for June 14, 2021, reflects 10 hours of work that day. The 10 hours of work is hand-written on the time card. (Ex. D). According to Mr. CS[Redacted] , Claimant did not punch his time card that day, but Employer paid him for 10 hours of work.

9. Mr. MG[Redacted] testified that on June 14, 2021, he moved Employer's equipment from the farm to a garage in another location. Employer also paid Mr. MG[Redacted] for 10 hours of work that day even though he did not punch his time card.

10. Employer was not able to remove all of its equipment on June 14, 2021. There is conflicting testimony as to what other day or days the equipment was removed.

11. Claimant testified that he did not work on June 15, 2021 because he had the day off, but on June 16, 2021, he continued to remove equipment from Seaboard Farms for Employer.

12. Mr. CS[Redacted] 's brother, JSV[Redacted], testified that he is not employed by Employer. Mr. JSV[Redacted] further testified that he helped Claimant and Mr. MG[Redacted] remove equipment on June 14 and 15, 2021. Mr. JSV[Redacted] testified that he helped Claimant move personal things on June 16, 2021. Claimant testified that Mr. JSV[Redacted] used the "company truck" to help him move furniture on either June 15 or 16, 2021.

13. Mr. CS[Redacted] testified that Employer was no longer in business as of June 15, 2021 because all of the equipment had been pulled from the hog farm. Mr. CS[Redacted] , however, was not present in Holyoke when the equipment was removed.

14. The ALJ finds that on at least two days between June 14 and June 16, 2021, Claimant helped remove Employer's equipment from the hog farms with Mr. JSV[Redacted] 's assistance.

15. There is no evidence that Employer paid Claimant for any work he performed after June 14, 2021.

16. Mr. CS[Redacted] testified that he asked his brother, Mr. JSV[Redacted] , to tell Claimant and the other employees that there was no more work for them.

17. Claimant credibly testified that even though Employer's equipment was removed from the hog farm, he did not realize there was no more work for him with Employer.

Claimant further testified that no one from Employer told him there was no more work, and specifically, Mr. JSV[Redacted] never told him there was no more work with Employer.

18. Mr. MG[Redacted] corroborated Claimant's testimony. He testified that even though Employer's equipment was removed from the hog farm, he did not realize there was no more work for him with Employer. He further testified that no one from Employer told him there was no more work, and specifically, Mr. JSV[Redacted] never told him there was no more work with Employer.

19. Mr. CS[Redacted] testified that in June 2021, he had health issues and had them "for a while." Because of his health issues, Mr. CS[Redacted] , did not spend much time in Holyoke, near the hog farms. Mr. JSV[Redacted] assisted his brother with personal and employment issues.

20. The ALJ finds that even though Mr. JSV[Redacted] was not technically employed by Employer, he was an agent of Employer, and specifically acted on behalf of Mr. CS[Redacted] and Employer.

21. Mr. JSV[Redacted] lived in Holyoke and had a social relationship with Claimant and Mr. MG[Redacted] .

22. Claimants credibly testified that Mr. JSV[Redacted] regularly picked them up and drove them to and from the specific hog farms where they worked each day. Claimants did not know where they were needed for work on any given day. They relied upon Mr. JSV[Redacted] to communicate where they would be working, and to transport them to and from the location for work. Claimants further testified that when they worked for Employer in Yuma, Mr. JSV[Redacted] drove them to Yuma from Holyoke.

23. It is uncontroverted that Mr. CS[Redacted] relied upon his brother, Mr. JSV[Redacted] , to communicate with the employees, including Claimant, on his behalf.

24. Mr. JSV[Redacted] testified that he went to Yuma on June 17, 2021, to "help" his brother, Mr. CS[Redacted] . That morning, Mr. JSV[Redacted] picked up Claimants in a truck owned by Employer. A man by the name of JV[Redacted] and Mr. JSV[Redacted] 's dog were also in the truck.

25. Claimant testified that on June 17, 2021, he went to Yuma with Mr. JSV[Redacted] to clean Mr. CS[Redacted] 's yard, and other properties he owned, just as he had done in the past. Mr. MG[Redacted] corroborated this testimony. Both Claimant and Mr. MG[Redacted] credibly testified that they had each been to Yuma on previous occasions to work for Employer by cleaning the yard and doing odds and ends.

26. Mr. JSV[Redacted] testified that Claimant and Mr. MG[Redacted] were his friends and they wanted to go for a ride with him on June 17, 2021. The ALJ does not find this testimony credible. The ALJ finds that Claimants had not been informed that their employment ended on June 15, 2021. Claimants believed they were going to work for Employer in Yuma on June 17, 2021, and they expected to be paid by Employer for this

work. The ALJ infers that neither Claimant nor Mr. MG[Redacted] would voluntarily go to Yuma to clean the yard of Mr. CS[Redacted] if they knew their employment ceased on June 15, 2021, as Mr. CS[Redacted] testified.

27. Claimant and Mr. JSV[Redacted] testified that they when they got to Yuma, they went to the "other house" to pick up tools. Claimant cleared weeds and cleaned the area behind Employer's office. Claimant testified that he also picked weeds at Mr. CS[Redacted] 's house.

28. Mr. JSV[Redacted] drove Claimants back to Holyoke. When close to Holyoke, Mr. JSV[Redacted] lost control and rolled the truck. Claimant was ejected and the truck landed on top of him. (Ex. 1). Mr. MG[Redacted] wanted Mr. JSV[Redacted] to call 911, but he declined and called his brother, Mr. CS[Redacted] . Mr. MG[Redacted] and Mr. JV[Redacted] lifted the truck and pulled Claimant out from under it.

29. Claimant called his girlfriend, who came and took him to Melissa Hospital in Holyoke. Claimant was transferred by helicopter to Swedish Medical Center in Englewood. The medical reports show that Claimant suffered neck pain, a C5 fracture, and a left wrist styloid fracture. (Ex. 6). Claimant testified he remained hospitalized for approximately four days.

30. Claimant testified that one week after he was released from the hospital he called Mr. JSV[Redacted] to ask when he could return to work, and Mr. JSV[Redacted] told him that there was no more work. Claimant testified that this was the first time he learned there was no more work with Employer. The ALJ finds Claimant's testimony credible.

31. Claimant credibly testified that he has received extensive medical bills that remain unpaid to date, including the helicopter transportation from Melissa Hospital to Swedish Medical Center, diagnostic testing and additional treatment. Bills for these services were not presented at hearing.

32. Claimant filed a Workers' Claim for Compensation on August 4, 2021. (Ex. R). Respondents' filed a First Report of Injury on August 11, 2021, and a Notice of Contest on August 27, 2021, claiming that further investigation was needed. (Ex. N).

33. Employer objected to Claimant's claim on the basis that Claimant was not on the payroll on that date, and that "it [Employer] quit June 15, 2021." (Ex. D).

34. The ALJ finds that on June 17, 2021, Claimant was an employee of Employer, was performing work on behalf of Employer in Yuma, Colorado at the express or implied direction of Employer, and this work conferred a benefit on Employer.

35. Claimant's gross earnings from January 1, 2021 to June 14, 2021 (164 days or 23.42 weeks) were $15,627. (Ex. 7). Based on this information, Claimant's AWW was $667.25.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Employment Status

In order for an injury to qualify under the Act, there must be an employer/employee relationship at the time of the injury. §§ 8-40-202(b) and 8-40-203(b) C.R.S. The ALJ credits Claimants' testimony that the alleged termination of work was not communicated to either of them prior to the accident on June 17, 2021. Both Claimant and Mr. MG[Redacted] credibly testified that neither Mr. CS[Redacted] nor Mr. JSV[Redacted] told them that Employer no longer had work for them until several days after the June 17, 2021 accident. Claimant and Mr. MG[Redacted] both credibly testified that neither of them understood that Employer did not have any more work for them on the hog farms at the time they helped remove the equipment between June 14 and June 16, 2021. As found, Claimant has proven by a preponderance of the evidence that he was working for Employer on June 17, 2021, and he conferred a benefit on Employer.

Course and Scope

An injury must arise out of, and in the course of, the Claimant's employment to be compensable. § 8-41-301(2)(b) and (c), C.R.S. Injuries sustained by employees going to and from work are usually not compensable. *Berry's Coffee Shop, Inc. v. Palomba*, 423 P.2d 2 (Colo. 1967). One exception, however, to the coming and going exclusion is when "special circumstances" create a causal relationship between the employment and the travel beyond the employee's arrival at work. *Madden v. Mountain W. Fabricators*, 977 P.2d 861, 863 (Colo. 1992); *Monolith Portland Cement v. Burak*, 772 P.2d 688 (Colo. 1989). Where Claimant is injured while on travel status, under certain circumstances that injury is compensable. *SkyWest Airlines, Inc. v. Indus. Claim Appeals Office*, 487 P.3d 1267 (Colo. App. 2020).

The *Madden* Court identified several factors to be evaluated to determine whether special circumstances exist. These factors include, but are not limited to: (1) whether the travel occurred during working hours; (2) whether the travel occurred on or off the premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger" in which the injury arose. 977 P.2d at 865. The question of whether Claimant presented "special circumstances" sufficient to establish the required nexus is a factual determination to be resolved by the ALJ based upon the totality of circumstances. *Anthony Morrison v. Rock Elec.,* W.C. 4-939-901-03 (ICAO February 22, 2016). The *Madden* Court reasoned that "the going to and from work rule is such a fact-specific analysis that it cannot be limited to a predetermined list of acceptable facts and circumstances. . . . the proper approach is to consider a number of variables when determining whether special circumstances warrant recovery under the Act." 977 P.2d at 864.

The Colorado Supreme Court applied the *Madden* factors in *Staff Adm'rs, Inc. v. Reynolds*, 977 P.2d 866, 867 (Colo. 1999). In that case, Claimant was injured in a motor vehicle accident as he was driving to a temporary construction site operated by Employer-Armendariz Construction Company. Claimant did not meet with other workers at a service station in Grand Junction, Colorado, where Employer customarily paid for the cost of fuel and employees carpooled. The ALJ concluded that the employer expected claimant to travel as part of his job and he performed services at a substantial distance from his home. The ALJ's decision that the claim was compensable was affirmed by the ICAO, the Court of Appeals and the Colorado Supreme Court. The Court stated:

> Applying these variables to the facts of this case, we find that there is no evidence that Reynolds' injury occurred during working hours or that it occurred on his employer's premises. In addition, there is no evidence in this case that Reynolds' injury occurred within a zone of special danger warranting recovery. However, there is sufficient evidence to support the ALJ's finding that travel was contemplated by Reynolds' employment contract with his employer, Armendariz Construction Company, to warrant recovery under the Workers' Compensation Act of Colorado.

Id. As the Court in *Staff Adm'rs,* recognized, even where not all of the *Madden* factors were present, it was possible that an employee's injuries arose out of his/her employment.

The *Madden* Court cited several cases where compensability was found because travel by an employee was at the express or implied request of the employer, or the travel conferred a benefit on the employer beyond the sole fact of the employee's arrival at work. 977 P.2d at 864-65 (citations omitted). Such travel is contemplated by the employment contract even if the advantage to the employer may have been slight. *Berry's Coffee Shop,* 423 P.2d at 5.

When considering the role travel played, the ALJ determined Claimant's travel to and from Yuma was at Mr. JSV[Redacted] 's request, and as found, Mr. JSV[Redacted] was an agent of Employer. (Findings of Fact ¶ 20). Thus, Claimant's travel was at the express or implied request of Employer. Additionally, as found, Claimant's travel to Yuma conferred a benefit on Employer as he performed work for Employer on June 17, 2021. (Findings of Fact ¶ 34). In addition, the evidence in the record showed that Mr. JSV[Redacted] regularly drove Claimant to and from work assignments. (Findings of Fact ¶ 22). The ALJ credits Claimant's testimony that he had been paid for work he performed for Employer in Yuma on previous occasions, and he expected to be paid for the work on June 17, 2021. (Findings of Fact ¶ 26). The ALJ concludes there was a causal connection between Claimant's travel to various locations, including, but not limited to, Yuma and his employment. *Loffland Brothers v. Baca*, 651 P.2d 431, 432-433 (Colo. App. 1982); *Cf. Lewis Essary v. General Dynamics,* W.C. 5-117-912 (ICAO December 1, 2020) *aff'd, Colo. Ct. App, 10CA2103,* August 12, 2021, *unpublished*. The ALJ concludes that Claimant proved by a preponderance of the evidence that his injury arose out of the course and scope of employment, and Claimant's June 17, 2021 injury, is compensable under the Act.

AWW

Claimant's AWW is based upon his wages at the time of injury. §8-42-102(2), C.R.S. (2001). The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. §8-42-102(3), C.R.S.; *Campbell v. IBM*, 567 P.2d 77 (Colo. App 1993); *Vigil v. Indus. Claim Appeals Office*, 841 P.2d 335 (Colo. App. 1992). As found, Claimant's AWW was $667.25. (Findings of Fact ¶ 35).

TTD

To prove entitlement to TTD, Claimant must prove (1) that the industrial injury caused a disability lasting more than three work shifts; (2) that he left work as a result of the disability and; (3) that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs v. Indus. Claim Appeals office*, 954 P.2d 637 (Colo. 1997). As found, Claimant became temporarily and totally disabled as of June 17, 2021 through January 9, 2022, during which time he underwent medical care. (Ex. 5 and 6). Claimant

is entitled to TTD benefits beginning June 18, 2021 and ending January 9, 2022. Claimant is entitled to TTD because his disability caused him to leave work, and to miss more than three regular working days.

Medical Benefits

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Indus. Claim Appeals Office*, 797 P.29 777 (Colo. App. 1990). "Authorization" refers to the provider's legal status to treat the injury at the Respondent's expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Whether or not a provider is an authorized treating provider is generally a question of fact for the ALJ that must be upheld if supported by substantial evidence in the record. *See Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996). Substantial evidence is probative evidence that would warrant a reasonable belief in the existence of facts supporting a particular finding, without regard to the existence of contradictory testimony of contrary inferences. See *F.R. Orr Constr. v. Rinta*, 171 P.2d 965 (Colo. App. 1985).

The evidence established that at no time following the auto accident of June 17, 2021, did Employer refer Claimant for medical care. He received emergency medical care from Melissa Hospital, as well as Swedish Medical Center, including a flight for life helicopter flight from Holyoke to Denver. The precise amounts of the bills outstanding remains to be determined. Claimant's care at Melissa Hospital and continued care at Swedish Medical Center are compensable. *See Sims v. ICAO*, 797 P.2d 777 (Colo. App. 1990) (emergency care is compensable).

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he suffered a compensable injury on June 17, 2021 in the course and scope of employment.

2. Claimant's treatment at Melissa Hospital and Swedish Medical Center is reasonable and necessary.

3. Claimant's AWW at the time of his injury was $667.25.

4. Claimant has shown that due to his injury he was out of work from June 18, 2021 through January 9, 2022. He is entitled to a weekly TTD rate based on an AWW of $667.25.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered an injury from a motor vehicle accident, on June 17, 2021, while in the course and scope of his employment with Employer.

2. Whether Claimant is entitled to medical benefits for services rendered related to the June 17, 2021 motor vehicle accident.

3. Whether Claimant should be awarded TTD benefits, and if so, what was Claimant's AWW?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Employer is in the business of sanitizing hog farm facilities. CS[Redacted] is the owner of Employer, and he lives in Yuma, Colorado. The registered address for Employer is [Redacted], Yuma, Colorado 80759 (Ex. S). Employer's "office" is in Yuma, Colorado.

2. Mr. CS[Redacted] testified that Seaboard Farms was Employer's only client in June 2021. Seaboard Farms had several locations, each housing pigs at different stages of their preparation for slaughter. All of the locations were in Holyoke, Colorado. Holyoke is approximately an hour from Yuma, by car.

3. Claimant could not recall exactly when he began working for Employer, but thought it was in February or March of 2021. The earliest payroll record for Claimant is from March 8, 2021. (Ex. D.) Claimant testified that he earned $13 an hour plus bonus, and his job was to power wash and sanitize facilities at various hog farms.

4. Claimant credibly testified that on approximately three occasions prior to June 17, 2021, he traveled to Yuma, Colorado to work for Employer. Claimant testified that the first time he worked at Mr. CS[Redacted] 's house he cleaned the yard, hung sheet rock, and took tools to the office. Claimant testified that his pay for this work was part of his regular paycheck. Claimant presented no evidence to support these payments.

5. OR[Redacted] also worked for Employer. He credibly testified that on approximately six occasions prior to June 17, 2021, he traveled to Yuma to work for Employer. He cleaned up the yard and pulled weeds at Mr. CS[Redacted] 's house, the "other" house, and also at the office. Mr. OR[Redacted] 's pay for this work was a part of what he would earn as an employee of Employer.

6. The ALJ finds that Claimant's employment included performing work for Employer in Yuma at Mr. CS[Redacted] 's personal residence, the other house and the office. Claimant traveled to Yuma at the express or implied direction of Employer, and conferred a benefit to Employer.

7. Employer and Seaboard Farms had a fee dispute. On June 14, 2021, Claimant and other employees were told by Employer to report to the hog farm owned by Seaboard Farms, and begin removing the equipment. On June 14, 2021, Claimant helped remove Employer's equipment off the hog farm.

8. Claimant's timecard for June 14, 2021, reflects 10 hours of work that day. The 10 hours is handwritten on the time card. (Ex. D). According to Mr. CS[Redacted] , Claimant did not punch his time card that day, but Employer paid him for 10 hours of work.

9. Mr. OR[Redacted] testified that on June 14, 2021, he helped remove Employer's equipment from the farm. Employer paid Mr. OR[Redacted] for 10 hours of work that day even though he did not punch his time card.

10. According to Mr. CS[Redacted] 's brother, JSV[Redacted], Employer was not able to remove all of its equipment on June 14, 2021. Mr. JSV[Redacted] testified that he helped Claimant and Mr. OR[Redacted] remove equipment on June 14 and 15, 2021. Mr. JSV[Redacted] further testified that he is not employed by Employer.

11. Mr. CS[Redacted] testified that Employer was no longer in business as of June 15, 2021 because all of the equipment had been pulled from the hog farm. Mr. CS[Redacted] was not present in Holyoke when the equipment was removed.

12. The ALJ finds that Claimant helped remove Employer's equipment from the hog farms with Mr. JSV[Redacted] 's assistance on June 14 and 15, 2021.

13. There is no evidence that Employer paid Claimant for any work he performed after June 14, 2021. The ALJ finds that Employer did not pay Claimant for his work on June 15, 2021.

14. Mr. CS[Redacted] testified that he asked his brother, Mr. JSV[Redacted] , to tell Claimant and the other employees that there was no more work for them.

15. Claimant testified that even though Employer's equipment was removed from the hog farm, he did not realize there was no more work for him with Employer. Claimant further testified that no one from Employer told him there was no more work, and specifically, Mr. JSV[Redacted] never told him there was no more work with Employer.

16. Mr. OR[Redacted] corroborated Claimant's testimony. He testified that even though Employer's equipment was removed from the hog farm, he did not realize there was no more work for him with employer. He further testified that no one from Employer told him there was no more work, and specifically, Mr. JSV[Redacted] never told him there was no more work with Employer.

17. Mr. CS[Redacted] testified that in June 2021, he had health issues and had them "for a while." Because of his health issues, Mr. CS[Redacted] , did not spend much time in Holyoke, near the hog farms. Mr. JSV[Redacted] assisted his brother with personal and employment issues.

18. The ALJ finds that even though Mr. JSV[Redacted] was not technically employed by Employer, he was an agent of Employer, and specifically acted on behalf of Mr. CS[Redacted] and Employer.

19. Mr. JSV[Redacted] lived in Holyoke and had a social relationship with Claimant and Mr. OR[Redacted] .

20. Claimants credibly testified that Mr. JSV[Redacted] regularly picked them up and drove them to and from the specific hog farms where they worked each day. Claimants did not know where they were needed for work on any given day. They relied upon Mr. JSV[Redacted] to communicate where they would be working, and to transport them to and from the location for work. Claimants further testified that when they worked for Employer in Yuma, Mr. JSV[Redacted] drove them to Yuma from Holyoke.

21. It is uncontroverted that Mr. CS[Redacted] relied upon his brother, Mr. JSV[Redacted] to communicate with the employees, including Claimant, on his behalf.

22. Mr. JSV[Redacted] testified that he went to Yuma on June 17, 2021, to "help" his brother, Mr. CS[Redacted] . That morning, Mr. JSV[Redacted] picked up Claimants in a truck owned by Employer. A man by the name of JV[Redacted] and Mr. JSV[Redacted] 's dog were also in the truck.

23. Claimant testified he went to Yuma on June 17, 2021, with Mr. JSV[Redacted] to clean Mr. CS[Redacted] 's yard, and other properties he owned, just as he had done in the past. Mr. OR[Redacted] corroborated this testimony. Both Claimant and Mr. OR[Redacted] credibly testified that they had each been to Yuma on previous occasions to work for Employer by cleaning the yard and doing odds and ends.

24. Mr. JSV[Redacted] testified that Claimant and Mr. OR[Redacted] were his friends and they wanted to go for a ride with him on June 17, 2021. The ALJ does not find this testimony credible. The ALJ finds that Claimants had not been informed that their employment ended on June 15, 2021. Claimants believed they were going to work for Employer in Yuma on June 17, 2021, and they expected to be paid by Employer for this work. The ALJ infers that neither Claimant nor Mr. OR[Redacted] would voluntarily go to Yuma to clean the yard of Mr. CS[Redacted] if they knew their employment ceased on June 15, 2021, as Mr. CS[Redacted] testified.

25. Mr. JSV[Redacted] testified that Claimant did no work at all on June 17, 2021. Mr. JSV[Redacted] testified that Claimant drank beer while they drove to Yuma, and that he smoked marijuana later in the day while there. Mr. CS[Redacted] testified that Claimant smoked marijuana that day, but later testified he never actually saw Claimant do this.

26. Claimant testified that he worked at Mr. CS[Redacted] 's house and cleaned the outside of the office. Claimant also testified that he smoked marijuana that day, but he denied drinking beer. Mr. OR[Redacted] testified that he saw Claimant working and using the wheelbarrow that day. Mr. OR[Redacted] further testified that he never saw Claimant smoke marijuana, and while he saw a beer bottle, he never saw Claimant drink any beer.

27. The ALJ credits the testimony of Claimant and Mr. OR[Redacted] . The ALJ finds that even though Claimant smoked marijuana at some point while in Yuma on June 17, 2021, Claimant performed work for the benefit of Employer, at the express or implied direction of Employer.

28. Mr. JSV[Redacted] drove Claimants back to Holyoke. When close to Holyoke, Mr. JSV[Redacted] lost control and rolled the truck. (Ex. 1). Mr. OR[Redacted] was ejected and the truck landed on top of him. Claimant wanted Mr. JSV[Redacted] to call 911, but he declined and called his brother, Mr. CS[Redacted] . Claimant and Mr. JV[Redacted] lifted the truck and pulled Mr. OR[Redacted] out from under it.

29. Mr. OR[Redacted] called his girlfriend, who came and took Mr. OR[Redacted] and Claimant to Melissa Hospital in Holyoke. Claimant was hospitalized with a contusion of his lung, a fracture to his sternum and multiple abrasions. Claimant was kept overnight for observation. (Ex. 12 and Ex. A).

30. Claimant was discharged on June 18, 2021. Dr. Harris gave Claimant a release to work that said Claimant had a fractured sternum, his expected healing was six to eight weeks, and that he would be able to gradually return to work after that time. Dr. Harris recommended Claimant see his primary physician to be cleared and his restrictions determined. (Ex. 12 and Ex. A).

31. Claimant testified that to date, he has not undergone follow-up care. Without employment, Claimant returned home to Thornton. Claimant lacked the ability and means to get follow up care. Thus, he has not had any medical care since being discharged from Melissa Hospital post-accident.

32. Claimant filed a Workers' Claim for Compensation on August 4, 2021. (Ex. P). Respondents' filed a First Report of Injury on August 10, 2021, and a Notice of Contest on August 27, 2011, claiming that further investigation was needed. (Ex. Q).

33. Claimant testified that he contacted Mr. JSV[Redacted] , about four days after his discharge, via the What's Up app, to see when he could return to work. Claimant testified that this was the first time he learned there was no more work with Employer. The ALJ finds Claimant's testimony credible.

34. Employer objected to Claimant's claim on the basis that Claimant was not on the payroll on that date, and that "it [Employer] quit June 15, 2021." (Ex. D).

35. The ALJ finds that on June 17, 2021, Claimant was an employee of Employer, was performing work on behalf of Employer in Yuma, Colorado at the express or implied direction of Employer, and this work conferred a benefit on Employer.

36. Claimant's gross earnings from March 8, 2021, to June 14, 2021 (98 days or 14 weeks) were $8,973.47. (Ex. 7). Based on this information, Claimant's AWW was $640.96.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Employment Status

In order for an injury to qualify under the Act, there must be an employer/employee relationship at the time of the injury. §§ 8-40-202(b) and 8-40-203(b) C.R.S. The ALJ credits Claimants' testimony that the alleged termination of work was not communicated to either of them prior to the accident on June 17, 2021. Both Claimant and Mr. OR[Redacted] credibly testified that neither Mr. CS[Redacted] nor Mr. JSV[Redacted] told them that Employer no longer had work for them until several days after the June 17, 2021 accident. Claimant and Mr. OR[Redacted] both credibly testified that neither of them understood that Employer did not have any more work for them on the hog farms at the

time they helped remove the equipment between June 14 and June 16, 2021. As found, Claimant has proven by a preponderance of the evidence that he was working for Employer on June 17, 2021, and he conferred a benefit on Employer.

Course and Scope

An injury must arise out of, and in the course of, the Claimant's employment to be compensable. § 8-41-301(2)(b) and (c), C.R.S. Injuries sustained by employees going to and from work are usually not compensable. *Berry's Coffee Shop, Inc. v. Palomba*, 423 P.2d 2 (Colo. 1967). One exception, however, to the coming and going exclusion is when "special circumstances" create a causal relationship between the employment and the travel beyond the employee's arrival at work. *Madden v. Mountain W. Fabricators*, 977 P.2d 861, 863 (Colo. 1992); *Monolith Portland Cement v. Burak*, 772 P.2d 688 (Colo. 1989). Where Claimant is injured while on travel status, under certain circumstances that injury is compensable. *SkyWest Airlines, Inc. v. Indus. Claim Appeals Office*, 487 P.3d 1267 (Colo. App. 2020).

The *Madden* Court identified several factors to be evaluated to determine whether special circumstances exist. These factors include, but are not limited to: (1) whether the travel occurred during working hours; (2) whether the travel occurred on or off the premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger" in which the injury arose. 977 P.2d at 865. The question of whether Claimant presented "special circumstances" sufficient to establish the required nexus is a factual determination to be resolved by the ALJ based upon the totality of circumstances. *Anthony Morrison v. Rock Elec.,* W.C. 4-939-901-03 (ICAO February 22, 2016). The *Madden* Court reasoned that "the going to and from work rule is such a fact-specific analysis that it cannot be limited to a predetermined list of acceptable facts and circumstances. . . . the proper approach is to consider a number of variables when determining whether special circumstances warrant recovery under the Act." 977 P.2d at 864.

The Colorado Supreme Court applied the *Madden* factors in *Staff Adm'rs, Inc. v. Reynolds*, 977 P.2d 866, 867 (Colo. 1999). In that case, Claimant was injured in a motor vehicle accident as he was driving to a temporary construction site operated by Employer-Armendariz Construction Company. Claimant did not meet with other workers at a service station in Grand Junction, Colorado, where Employer customarily paid for the cost of fuel and employees carpooled. The ALJ concluded that the employer expected claimant to travel as part of his job and he performed services at a substantial distance from his home. The ALJ's decision that the claim was compensable was affirmed by the ICAO, the Court of Appeals and the Colorado Supreme Court. The Court stated:

> Applying these variables to the facts of this case, we find that there is no evidence that Reynolds' injury occurred during working hours or that it occurred on his employer's premises. In addition, there is no evidence in this case that Reynolds' injury occurred within a zone of special danger warranting recovery. However,

> there is sufficient evidence to support the ALJ's finding that travel was contemplated by Reynolds' employment contract with his employer, Armendariz Construction Company, to warrant recovery under the Workers' Compensation Act of Colorado.

Id. As the Court in *Staff Adm'rs,* recognized, even where not all of the *Madden* factors were present, it was possible that an employee's injuries arose out of his/her employment.

The *Madden* Court cited several cases where compensability was found because travel by an employee was at the express or implied request of the employer, or the travel conferred a benefit on the employer beyond the sole fact of the employee's arrival at work. 977 P.2d at 864-65 (citations omitted). Such travel is contemplated by the employment contract even if the advantage to the employer may have been slight. *Berry's Coffee Shop,* 423 P.2d at 5.

When considering the role travel played, the ALJ determined Claimant's travel to and from Yuma was at Mr. JSV[Redacted] 's request, and as found, Mr. JSV[Redacted] was an agent of Employer. Thus, Claimant's travel was at the express or implied request of Employer. Additionally, as found, Claimant's travel to Yuma conferred a benefit on Employer as he performed work for Employer on June 17, 2021. (Findings of Fact ¶¶ 27 and 35). In addition, the evidence in the record showed that Mr. JSV[Redacted] regularly drove Claimant to and from work assignments. (Findings of Fact ¶ 20). The ALJ credits Claimant's testimony that he had been paid for work he performed for Employer in Yuma on previous occasions, and he expected to be paid for the work on June 17, 2021. (Findings of Fact ¶ 24). The ALJ concludes there was a causal connection between Claimant's travel to various locations, including, but not limited to, Yuma and his employment. *Loffland Brothers v. Baca*, 651 P.2d 431, 432-433 (Colo. App. 1982); *Cf. Lewis Essary v. General Dynamics,* W.C. 5-117-912 (ICAO December 1, 2020) ***aff'd,*** *Colo. Ct. App, 10CA2103,* August 12, 2021, *unpublished*. The ALJ concludes that Claimant proved by a preponderance of the evidence that his injury arose out of the course and scope of employment, and Claimant's June 17, 2021 injury is compensable under the Act.

AWW

Claimant's AWW is based upon his wages at the time of injury. §8-42-102(2), C.R.S. (2001). The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. §8-42-102(3), C.R.S.; *Campbell v. IBM*, 567 P.2d 77 (Colo. App 1993); *Vigil v. Indus. Claim Appeals Office*, 841 P.2d 335 (Colo. App. 1992). As found, Claimant's AWW is $527.85. (Findings of Fact ¶ 37).

TTD

To prove entitlement to TTD, Claimant must prove (1) that the industrial injury caused a disability lasting more than three work shifts; (2) that he left work as a result of

the disability and; (3) that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs v. Indus. Claim Appeals office*, 954 P.2d 637 (Colo. 1997). As found, Claimant became temporarily and totally disabled for eight weeks, during which time he was restricted from working. (Ex. 12 and Ex. A). Claimant is entitled to TTD benefits beginning June 18, 2021 and ending August 13, 2021. Claimant is entitled to TTD because his disability caused him to leave work, and to miss more than three regular working days.

Medical Benefits

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Indus. Claim Appeals Office*, 797 P.29 777 (Colo. App. 1990). "Authorization" refers to the provider's legal status to treat the injury at the Respondent's expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Whether or not a provider is an authorized treating provider is generally a question of fact for the ALJ that must be upheld if supported by substantial evidence in the record. *See Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996). Substantial evidence is probative evidence that would warrant a reasonable belief in the existence of facts supporting a particular finding, without regard to the existence of contradictory testimony of contrary inferences. See *F.R. Orr Constr. v. Rinta*, 171 P.2d 965 (Colo. App. 1985).

The evidence established that at no time following the auto accident of June 17, 2021, did Employer refer Claimant for medical care. He received emergency medical care from Melissa Hospital. The precise amounts of the bills outstanding remains to be determined. Claimant's care at Melissa Hospital is compensable. *See Sims v. ICAO*, 797 P.2d 777 (Colo. App. 1990) (emergency care is compensable).

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he suffered a compensable injury on June 17, 2021 in the course and scope of employment.

2. Claimant's treatment at Melissa Hospital was reasonable and necessary.

3. Claimant's AWW at the time of his injury was $527.85.

4. Claimant has shown that due to his injury he was out of work from June 18, 2021 through August 13, 2021. He is entitled to a weekly TTD rate based on an AWW of $527.85.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Has the claimant demonstrated, by a preponderance of the evidence, that the lumbar spine surgery recommended by Dr. Kirk Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 24, 2020 work injury?

FINDINGS OF FACT

1. On February 24, 2020, the claimant was working as a teacher in the severe needs classroom. On that date, the claimant and two other employees were injured by an autistic student. This student was at least 16 years old and approximately six feet tall. The student became agitated to the point that he grabbed the claimant by her hair and roughly shook her "like a rug". During this interaction, the claimant's head struck a metal door frame, and her head was pulled down toward the floor.

2. The claimant's coworkers testified at the hearing and corroborated the events of February 24, 2020. The claimant and her two coworkers were transported by the school psychologist to the emergency department (ED) at Community Hospital.

3. Immediately following the incident, the claimant had pain in her head and neck. She had blurred vision, nausea, and dizziness. In addition, the claimant vomited twice between the time of the incident and arriving at the ED for treatment.

Low back treatment prior to February 24, 2020

4. In 2017, the claimant sought medical treatment for low back symptoms. On July 13, 2017, the claimant was seen by Jason Bell, PA-C, at Rocky Mountain Orthopaedic Associates. At that time, the claimant reported experiencing about a week of severe and acute low back pain, with leg pain (right greater than left). Lumbar spine x-rays taken on that date showed no evidence of any acute injury. The x-rays also showed some minor narrowing at the L5-S1 level. PA Bell ordered magnetic resonance imaging (MRI) of the claimant's lumbar spine.

5. On July 17, 2017, a lumbar spine MRI was performed and showed a large right paracentral disc extrusion at the L5-S1 level causing severe foraminal stenosis.

6. On July 27, 2017, the claimant returned to Rocky Mountain Orthopaedic Associates and was seen by Dr. Kirk Clifford. On that date, the claimant continued to report low back pain, with right greater than left leg symptoms. Given the MRI results, Dr. Clifford recommended right sided L5-S1 and S1-S2 transforaminal epidural steroid

injections (TFESIs). These injections were administered by Dr. Clifford on August 10, 2017.

7. On September 13, 2017, the claimant was seen by PA Bell and reported "pretty good relief" from the injections. The claimant asked about repeat injections.

8. On September 14, 2017, Dr. Robert Frazho administered ESIs at the right L5-S1 and S1-S2 levels.

9. The claimant returned to Dr. Frazho on November 15, 2018, and reported "good relief" from the September 2017 injections. Dr. Frazho noted that the claimant's pain was not bilateral. In addition, Dr. Frazho recommended core strengthening, weight loss, and bilateral L5-S1 ESIs. Dr. Frazho administered the recommended injections on that same date.

10. On December 6, 2018, the claimant was seen by Dr. Frazho. At that time, the claimant reported that the most recent injection provided some relief. Dr. Frazho noted that the claimant continued to have axial pain, with possible facet pain. He recommended bilateral L5-S1 facet injections. Dr. Frazho also identified medial branch blocks and/or surgery as potential future treatment. On January 10, 2019, Dr. Frazho administered bilateral L5-S1 facet injections to address the claimant's diagnosis of lumbar spondylosis.

Medical treatment beginning February 24, 2020

11. In the ED at Community Hospital on February 24, 2020, the claimant's initial symptoms were listed as headache, nausea, tenderness at the left temple, with her greatest pain in the right side of her neck and right shoulder. Lynda Steinbach, FNP noted that the claimant's back was normal on examination, with full range of motion. FNP Steinbach listed the claimant's diagnoses as neck strain and head contusion.

12. The claimant testified that she does not recall whether her back was examined at Community Hospital. At that time, her focus was on her head related symptoms.

13. On February 28, 2020, the claimant sought treatment in the ED at St. Mary's Hospital because of ongoing headaches. At that time, the claimant was seen by Jacob Cimolin, PA-C. On examination, PA Cimolin noted midline cervical tenderness. The medical record of that date noted "no midline tenderness to palpation" of the claimant's back. PA Cimolin opined that the claimant suffered a concussion and recommended computed tomography (CT) scans of the claimant's head and neck.

14. The CT scans were performed on that same date. The head CT was negative for any intracranial abnormalities. The CT of the claimant's cervical spine showed a disc protrusion at the C6-C7 level which was causing moderate canal stenosis.

15. On March 2, 2020, the claimant was seen by her authorized treating provider (ATP), Dr. Craig Stagg. On that date, the claimant reported ongoing headaches with photophobia. The claimant also reported pain in her cervical spine and lumbar spine. On examination, Dr. Stagg noted that the claimant was tender to palpation over the right sacroiliac (SI) joint. Dr. Stagg listed the claimant's diagnoses as closed head injury with post concussive symptoms; disc protrusion at the C6-C7 level; and a lumbar strain. Dr. Stagg ordered a lumbar spine x-ray and an MRI of the claimant's cervical spine. Dr. Stagg made a referral to Dr. Clifford for a orthopedic evaluation; a referral to Dr Joel Dean for a neurological evaluation; and to Dr. Dale Bowen for a neuropsychological evaluation. In addition, the claimant was taken off of all work.

16. On March 5, 2020, the claimant returned to Dr. Stagg and reported ongoing headaches and numbness into her left leg. Dr Stagg made a referral to physical therapy.

17. On March 12, 2020, the claimant was seen by Dr. Clifford. The purpose of that appointment was to address the claimant's neck[1] related symptoms. The claimant reported to Dr. Clifford that since her injury, she had noticed pain in the posterior aspect of her left leg.

18. The claimant was also seen by Dr. Stagg on March 12, 2020. At that time, the claimant reported pain in her low back with numbness into her left leg. Dr. Stagg noted that the claimant's lumbar spine had mild diffuse tenderness, with a positive straight leg raise on the left. He recommended an MRI of the claimant's lumbar spine.

19. On April 7, 2020, a lumbar spine MRI showed a loss of disc space height at the L5-S1 level, with a mild posterior disc bulge. There was no significant spinal stenosis. It was noted that the neural foramen did appear somewhat narrowed bilaterally due to bony overgrowth. The MRI also showed that the prior large herniated disc had resolved.

20. The claimant continued treating with Dr. Stagg. The claimant reported improvement of her headaches. However, she continued to report low back pain with radicular symptoms.

21. On June 8, 2020, the claimant returned to Dr. Clifford. At that time, the claimant reported pain across her lumbar spine, into her left buttock, left posterior thigh, left calf, and left foot. Her back pain was at a six out of ten, while her leg pain was a five out of ten. On examination, Dr. Clifford noted that range of motion for the claimant's lumbar spine was restricted by fifty percent on flexion, extension, and lateral bending. Dr. Clifford recommended a left sided L5-S1 (TFESI) for therapeutic and diagnostic

[1] The ALJ recognizes that the claimant has undergone a number of treatment modalities related to her cervical spine. However, as the claimant's cervical spine (and related treatment) is not at issue at this time, the ALJ does not recite all cervical spine treatment in this order.

purposes. On July 15, 2021, Dr. Clifford administered the recommended left L5-S1 TFESI.

22. On July 28, 2020, the respondent filed a General Admission of Liability (GAL) regarding the February 24, 2020 injury.

23. On October 7, 2020, the claimant was seen by Dr. Clifford. With regard to the recent injection, the claimant reported 100 percent relief for two days, but no relief after that. The claimant continued to report pain across her lumbar spine, into her left buttock, left posterior thigh, left calf, and left foot. Her back pain was at four out of ten, and her leg pain at 5 out of ten. At that time, Dr. Clifford recommended core strengthening and stretching.

24. On January 18, 2021, the claimant returned to Rocky Mountain Orthopaedic Associates and was seen by Todd Ousley, PA-C. The claimant reported one to two months of relief from the October 2020 injection. As of the time of the appointment, the claimant's left sided symptoms had returned. PA Ousley recommended left L5-S1 and S1-S2 TFESIs. He also noted that the claimant was a candidate for an L5-S1 anterior lumbar interbody fusion (ALIF). On February 17, 2021, Dr. Clifford administered left L5-S1 and S1-S2 TFESIs.

25. On April 8, 2021, the claimant was seen by PA Ousley. In the medical record of that date, PA Ousley noted that the claimant's pre-existing L5-S1 foraminal stenosis and disc degeneration was "exacerbated by an injury at work". PA Ousley further noted that injections had provided the claimant with "some good temporary relief" of her symptoms. Surgical options were discussed, including a fusion at the L5-S1 level, or an artificial disc replacement. In the interim, facet joint injections at the L5-S1 level were recommended. Bilateral L5-S1 facet injections were performed by Dr. Clifford on May 26, 2021.

26. On August 11, 2021, the claimant was seen by PA Bell. At that time, the claimant reported "modest temporary relief" from the facet injections. PA Bell noted that the claimant's symptoms were "consistent with degenerative disc disease, with acute exacerbation during a work related injury." PA Bell further noted possible surgical intervention involving an anterior approach L5-S1 disc replacement.

27. On November 9, 2021 a request for an L5-S1 disc replacement was sent to the respondent for authorization.

28. At the request of the respondents, on December 17, 2021, the claimant attended an independent medical examination (IME) with Dr. Michael Rauzzino. In connection with the IME, Dr. Rauzzino reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Rauzzino opined that the claimant does not have a left sided foraminal disc herniation at the L5-S1 level. Dr. Rauzzino further opined that the requested disc replacement surgery is not reasonable, necessary, or related to the claimant's work injury. In support of this opinion, Dr. Rauzzino noted that the claimant suffered minimal

direct injury to her lumbar spine on February 24, 2020. Therefore, it is his opinion that any treatment of the claimant's lumbar spine would not be work related. Dr. Rauzzino further opined that the claimant has reached maximum medical improvement (MMI).

29. Based upon Dr. Rauzzino's report, the respondent denied authorization for the lumbar surgery.

30. On March 14, 2022, the claimant was seen by PA Ousley. The denial of the surgical request was discussed at that time. PA Ousley recommended repeat L5-S1 and S1-S2 TFESIs. PA Ousely noted that these same injections had previously provided the claimant with relief.

31. On March 15, 2022, Dr. Albert Hattem reviewed the request for epidural injections to the claimant's lumbar spine. Dr. Hattem recommended denial of the injections. In support of this opinion, Dr. Hattem noted that the Colorado Medical Treatment Guidelines (MTG) provided that repeat ESIs are indicated if the initial injection resulted in an 80 percent improvement of symptoms. Dr. Hattem noted that the claimant underwent injections on February 17, 2021 and on March 17, 2021 reported that she did not receive significant relief of her symptoms.

32. Based upon Dr. Hattem's report, the respondent denied authorization for the requested injections.

33. On May 2, 2022, Dr. Hattem authored a report after performing a review of the claimant's medical records. In that report, Dr. Hattem opined that the claimant did not suffer a temporary or permanent aggravation of her pre-existing lumbar spine condition on February 24, 2020. In support of this opinion, Dr. Hattem noted that on the date of the injury, the medical records indicate that the claimant's lumbar spine had normal range of motion. In addition, on February 28, 2020, the claimant identified her symptoms as headache, neck pain, and shoulder pain. Dr. Hattem further noted that the first report of lumbar spine pain was documented on March 2, 2020. As it is his opinion that the claimant's lumbar spine was not injured on February 24, 2020, it is also Dr. Hattem's opinion that the requested surgery is not causally related to the work injury. Dr. Hattem identified the claimant's date of MMI as December 29, 2020, as this was the date she was released to full duty.

34. Dr. Rauzzino's deposition testimony was consistent with his written report. Dr. Rauzzino reiterated his opinion that the claimant did not injure her lumbar spine on February 24, 2020. If the claimant did suffer an injury to her lumbar spine on that date, Dr. Rauzzino posits that it was a soft tissue injury and/or a possible irritation of the nerve that did not cause any permanent injury. It continues to be his opinion that the claimant's symptoms are related to her pre-existing degenerative disc disease at the L5-S1 level. Dr. Rauzzino agrees that the surgery is reasonable to treat the claimant's symptoms. However, it is not causally related to her work injury.

35. Dr. Clifford testified via deposition. In his testimony, Dr. Clifford addressed his prior treatment of the claimant. Specifically, Dr. Clifford testified that in 2017 he did not recommend the claimant undergo disc replacement surgery. Dr. Clifford further testified that in 2017, the claimant was improving without surgical intervention. In comparison, Dr. Clifford noted that the claimant's 2017 symptoms were right sided, whereas her current post-injury symptoms are left sided. With regard to the April 2020 lumbar spine MRI, Dr. Clifford testified that he saw resolution of the prior disc herniation. He also noted left more than right sided neural foraminal stenosis. Dr. Cliffor testified that it is his opinion that the claimant's work injury exacerbated her pre-existing low back condition. Dr. Clifford reiterated that he has recommended the claimant undergo an L5-S1 artificial disk replacement. With regard to the request for injections, Dr. Clifford explained that since the claimant could not get the recommended surgery, the injections would be intended to provide some relief of her symptoms.

36. The claimant testified that her current symptoms include persistent nerve type pain down her left leg, with throbbing down the leg and into her knee. The claimant further testified that she has only experienced this pain since the work injury. She described the pain as being "relentless" for the past two years. The claimant has undergone various treatments since her injury, including massage, acupuncture, dry needling, and chiropractic treatment. Nothing has resolved these back and left leg symptoms.

37. The claimant testified that her prior back symptoms were short term "bouts" of pain, nothing persistent. The claimant testified that following the injections in 2017, her back symptoms resolved.

38. The ALJ credits the claimant's testimony regarding the nature and onset of her low back symptoms. The ALJ is persuaded that the claimant's low back was symptomatic immediately following the work injury. The ALJ is also persuaded that initially the injuries to the claimant's head and neck were the primary focus of the claimant and her medical providers, as those body parts caused the most pain and discomfort.

39. The ALJ also credits the medical records and the opinions of Dr. Clifford over the contrary opinions of Dr. Rauzzino.The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that the February 24, 2020 work injury resulted in an aggravation/exacerbation of the claimant's pre-existing lumbar spine condition, resulting in the need for medical treatment. The ALJ also credits the testimony of Dr. Clifford and finds that the recommended lumbar spine surgery is reasonable, necessary, and related to the claimant's work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section

8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has demonstrated, by a preponderance of the evidence, that her lumbar spine was injured during the admitted February 24, 2020 work injury. Specifically, the claimant has demonstrated, by a preponderance of the evidence, that her pre-existing low back condition was aggravated by the work injury. As found, the claimant has demonstrated, by a preponderance of the evidence, that treatment of her lumbar spine, including disc replacement surgery as recommended by Dr. Clifford, is reasonable medical treatment necessary to cure and relieve the claimant from the

effects of the work injury. The claimant's testimony, the medical records, and the opinions of Dr. Clifford are found to be credible and persuasive.

ORDER

It is therefore ordered:

1. The respondent shall pay for reasonable and necessary medical treatment of the claimant's lumbar spine, pursuant to the Colorado Medical Fee Schedule.

2. The respondent shall pay for the recommended L5-S1 disc replacement surgery, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined here are reserved for future determination.

Dated July 14, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES[1]

- Whether Claimant proved by a preponderance of the evidence that she sustained a compensable occupational disease.

- If compensable, whether Claimant proved by a preponderance of the evidence she required medical care that was authorized and reasonably necessary to cure and relieve from and related to the occupational disease.

- If compensable, whether Claimant proved by a preponderance of the evidence she was entitled to temporary indemnity benefits.

- If compensable, determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 33-year-old, right hand dominant female. Claimant worked for Employer as a phlebotomist from June 2019 to December 6, 2021. Claimant's job duties included performing check-ins, assessing vital signs, and typing.

2. Claimant's work involved manually pumping a blood pressure cuff. Claimant testified that she would pump the bulb 12 to 15 times per patient, and that she often took vitals signs multiple times per patient.

3. Claimant worked three 12-hour shifts per week. Claimant's standard two-week work hours totaled 72 hours.

4. Claimant testified that she began working substantial overtime during the COVID-19 pandemic, starting around October 2020. Claimant testified that during the COVID-19 pandemic the number of patients per day almost tripled by the end of 2020 – up to 80 to 100 patients per day. Claimant's wage records indicate Claimant occasionally worked an extra 1-3 hours in addition to her standard 72-hour work week per two-week around this time period.

[1] In his position statement, Claimant also endorsed the issue of "Whether Claimant is entitled to an award of costs pursuant to § 8-43-315(1), C.R.S. (ALJ can order witness fees and costs where need to call a subpoenaed witness arose out of 'the raising of any incompetent, irrelevant, or sham issues by the other party')." This issue was not endorsed on any Application for Hearing, Case Information Sheet, nor at either hearing. Evidence was not offered at hearing and Respondents did not brief the issue. Accordingly, the ALJ does not address the issue in this Order.

5. Claimant began experiencing right forearm pain in late December 2020, with subsequent loss of grip strength. She reported this problem to her Employer and was sent to Concentra.

6. Claimant first presented to Jonathan Claassen, D.O. at Concentra on January 14, 2021 with complaints of bilateral forearm and hand pain, mostly on the right, which she felt resulted from repetitive motion. Claimant reported the onset of symptoms began approximately two weeks prior with the pain gradually increasing. Claimant further reported an inability to grip with her right hand. On physical examination, Dr. Claassen noted diffuse tenderness along the extensor muscles of the right forearm and full range of motion, tenderness in the carpal tunnel of the right wrist and decreased sensation of touch of the ulnar nerve distribution on palpation with full range of motion and generalized hypertonicity. Dr. Claassen assessed Claimant with right radial tunnel syndrome and referred Claimant to a hand specialist and for an EMG. He placed Claimant on temporary restrictions until 1/15/2021 of no repetitive lifting or carrying above two pounds; no gripping/pinching/squeezing with the right hand; no pronating/supinating; and no keyboard/mouse use. Dr. Claassen completed a WC-164 form indicating his findings were consistent with a work-related mechanism of injury/illness.

7. Dr. Claassen testified that David M. Bierbrauer, M.D., a hand surgeon, happened to be staffing the Concentra office where Claimant was seen on January 14, 2021, and Dr. Bierbrauer also examined Claimant. He testified he relied on Dr. Bierbrauer's expertise when diagnosing Clamant with radial tunnel syndrome.

8. Kathy McCranie, M.D. performed an EMG of Claimant's right upper extremity on February 1, 2021. Claimant reported that she began experiencing pain and weakness in her right upper extremity around early January 2021 that gradually worsened. Dr. McCranie noted Claimant was unsure of the cause, but "I attributed it to repetitive motion." (Cl. Ex. 2, p. 20). Dr. McCranie opined that the EMG was within normal limits. She concluded that Claimant's physical examination was more consistent with epicondylitis and forearm tendinitis and recommended that Claimant follow-up with Dr. Claassen and Dr. Bierbauer.

9. Dr. Bierbauer reexamined Claimant on February 4, 2021. Dr. Bierbauer opined that Claimant has right radial tunnel syndrome, which he noted was "notoriously difficult" to find on nerve conduction testing, noting several studies suggested that upward of 80% of people with such condition will have a negative nerve test. He stated that Claimant's clinical exam was fairly uncontroversial and pointed towards radial tunnel syndrome. Dr. Bierbauer administered a cortisone injection to Claimant and provided a shoulder sling.

10. On February 15, 2021, Claimant reported to Dr. Claassen that her symptoms had worsened since receiving the cortisone injection. Claimant reported that her elbow was now popping and that she was experiencing pain in her hand. Dr. Claassen referred Claimant for physical therapy.

11. Claimant began physical therapy with Heather Markus, D.P.T. on February 17, 2021 and underwent a total of four sessions of physical therapy prior to her follow-up appointment with Dr. Bierbauer on March 4, 2021.

12. On March 4, 2021, Dr. Bierbauer opined that Claimant continued to experience persistent right radial tunnel syndrome symptoms despite injections and therapy. He discussed surgical intervention with Claimant, who declined at that point. Dr. Bierbauer recommended Claimant resume use of her right upper extremity as tolerated and return for follow-up as needed. Dr. Bierbauer completed a WC-164 form indicating his objective findings were consistent with a work-related mechanism of injury/illness.

13. Dr. Claassen reexamined Claimant on March 9, 2021. Claimant reported her pain was the same but that her grip strength was slowly improving. Claimant was working modified duty.

14. Claimant testified at hearing that she returned to work abiding by her restrictions performing modified duty from 3/1/21 through 12/6/21, when she and the Employer essentially agreed she would separate her employment because she could not perform her phlebotomist duties.

15. Claimant continued to undergo physical therapy with Dr. Markus until her next visit with Dr. Claassen on March 17, 2021. Dr. Claassen recommended continuing physical therapy, which Claimant did until her authorization for PT visits ended. As of her last (11th) visit with Markus, DPT, Claimant was only 30-40% towards recovery.

16. On February 25, 2021, Jill Adams, C.R.C., performed a Job Demands Analysis and Risk Factor Analysis ("JDA"). Ms. Adams issued a report on March 1, 2021. Due to Claimant's restrictions, Ms. Adams observed other workers performing Claimant's job duties for the purpose of her evaluation. Ms. Adams interviewed Claimant by telephone. Ms. Adams noted Claimant's job schedule consisted of three 12-hour shifts per week, during which time Claimant rotated every three to four hours to perform medical screenings. Ms. Adams categorized Claimant's job duties in eight essential functions:

1) Machine setup comprising of 1-3% of job tasks.
2) Labeling comprising of 1-5% of job tasks.
3) Medical screening comprising of 25-30% of job tasks. (Including use of blood pressure cuff to obtain blood pressure and removal of cuff).
4) Phlebotomy comprising of 25-30% of job tasks. Ms. Adams noted it was typical to process at least 20-25 phlebotomy procedures per work shift, which took 1-3 minutes at most, with the entire process taking 10-15 minutes.
5) Donor disconnects comprising of 10-15% of job tasks.
6) Lab work comprising of 10-15% of job tasks.
7) Packing/shipping comprising of 1-5% of job tasks.
8) Ice comprising of 1-5% of job tasks.

17. Ms. Adams determined no primary or secondary risk factors were present per the MTG.

18. On August 9, 2021, Jonathan L. Sollender, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Sollender reviewed Claimant's medical records dated June 22, 2020 through March 24, 2021, including the JDA conducted on February 25, 2021. Claimant reported to Dr. Sollender that her daily tasks depended on her assignment. If assigned for the day as a technician, she reported spending 5-10 minutes registering patients typing and taking vital signs. If drawing blood, she reported she would inflate, deflate, and reinflate a blood pressure cuff and insert a needle. Dr. Sollender noted that, at the time of her work incident, was working three 12-hour shifts and would rotate positions every three hours, with two blocks of technician work and two blocks of drawing blood. He further noted that the blood pressure cuff in the technician room was automated, and thus did not require manual pumping of air by the technician. The blood pressure cuff in the blood drawing area was manual. Dr. Sollender noted Claimant could not tell him how many patients she would see, but estimated 15 patients in a three-hour period as a technician, and 8 patients in three-hour period when drawing blood. Based on the numbers estimated by Claimant, Dr. Sollender calculated that Claimant saw approximately 25 patients per day over a six-hour period at four patients per hour. Claimant reported that it would take 7-10 pumps to inflate the manual blood pressure cuff over a period of 5-10 seconds, twice per patient. He calculated this to total 80 seconds of pumping the blood pressure cuff per hour. Dr. Sollender further calculated Claimant was subject to eight minutes of potential exposure in a shift (noting that, a 12-hour shift alternating technician and blood drawing duties with six potential hours of 80 seconds/hour of exposure, totaled 480 seconds or eight minutes). Dr. Sollender concluded that such exposure was neither repetitive nor forceful under the MTG.

19. Dr. Sollender's impression was: mild bilateral medial epicondylitis, mild left radial tunnel syndrome moderate right radial tunnel syndrome, and right cubital tunnel syndrome. Dr. Sollender outlined the steps for a causation analysis under the MTG and analyzed Claimant's case with respect to each step. He concluded that Claimant's condition is unrelated to her work, and that Claimant did not have exposure to any occupational risk factor to cause, contribute, or aggravate an underlying condition to establish her condition is the result of an occupational disease. He remarked that the JDA was objective, unbiased and took into consideration all work flow performed by Claimant at her job. He noted that Claimant's description of her job duties to him did not vary to any significant degree from the JDA. Dr. Sollender concluded that Claimant's work did not include any sufficient exposure to repetition, awkward posture, application of force, mouse use, cold or vibration exposure as required for a primary or secondary risk factor under the MTG. Dr. Sollender determined from the job analysis and Claimant's job description as provided to him by Claimant at the IME, that Claimant's upper extremity complaints, medial epicondylitis, bilateral radial tunnel syndrome and right cubital tunnel syndrome were not caused by her employment with Respondent Employer. In his IME report, Dr. Sollender described Claimant's job duties, frequency and exertional levels

consistent with the Job Analysis and the information Claimant provided to Dr. Sollender during the IME.

20. Dr. Claassen testified at hearing on behalf of Claimant. Dr. Claasen obtained Level II certification approximately one month prior to hearing in this matter, and was not Level II certified at the time he diagnosed and treated Claimant. Dr. Claasen did not specifically review the MTG or perform a causation analysis pursuant to the MTG in Claimant's case. Dr. Claassen testified that prior to seeing Claimant, he saw only four or five patients with radial carpal tunnel syndrome and that he relied on Dr. Bierbauer for his diagnoses. Dr. Claasen opined that Claimant's radial tunnel syndrome is work-related. He further testified he did not discuss Claimant's non-work activities with her, despite acknowledging that a patient's non-work activities are relevant in making a causation opinion. Dr. Claassen testified he did not know how many pounds of pressure was required to operate a blood pressure cuff.

21. On January 21, 2021, Claimant reported to Insurer that Claimant continued to work out at the gym at her apartment complex and in her home. Claimant reported she worked out every day, and worked out with weights five days per week.

22. At hearing, Claimant denied she did anything outside of work at the time she reported her symptoms to Respondent Employer (in January 2021) that involved using her arms heavily like at work. Claimant testified she did not perform any weight lifting exercises between June 2020 and December 2020. Claimant testified she only had resistance bands at her home which she did not use during this time because she did not have the space to use them. Claimant denied having any barbells, dumbbells or curl bars at her home. Claimant testified she participated in paddle boarding a few years prior. She denied paddle boarding in 2019 and in the summer of 2020. Claimant's boyfriend purchased a paddle board for her for her birthday in July 2020. Claimant denied ever having used the paddle board her boyfriend purchased for her.

23. Since the denial of her claim by Respondents, Claimant has been treating with Daniel L. Masters, M.D. at Boulder Orthopedics.

24. The ALJ credits Dr. Sollender's opinion, as supported by the records, and testimony over the opinion of Dr. Classen and Claimant's testimony and finds that Claimant failed to prove it is more probable than not she sustained a compensable occupational disease.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Occupational Disease

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The “rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability.” *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo.App. 1991). The standard for determining the onset of disability is when “the occupational disease impairs the claimant’s ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity.” *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005).

Claimant failed to prove it is more probable than not she sustained an occupational disease as a result of her work activities. Claimant argues that the JDA fails to take identify gripping and squeezing the blood pressure bulb as part of Claimant’s duties, and failed to consider the increase in the number of patients Claimant saw at the end of 2020. Ms. Adams’ JDA notes she took into consideration that firm grip was frequently required. To the extent Ms. Adams did not note or consider the increase in patients in her analysis, Dr. Sollender performed a detailed and thorough causation analysis in which performed his own calculations based on Claimant’s reports of an increased number of patients. Dr. Sollender thoroughly detailed Claimant’s reports to him of her job duties, including the use of the blood pressure cuff. He conducted a detailed causation analysis pursuant to the MTG, and ultimately determined that Claimant’s exposure was neither repetitive or forceful under the MTG. Dr. Sollender’s opinion is more credible and persuasive than that of Dr. Claasen, who did not perform a causation analysis under the MTG, did not discuss Claimant’s non-work related activities, or consider the pounds of pressure used. The preponderant evidence does not establish Claimant’s condition was proximately caused by her work activities. As Claimant failed to prove she sustained a compensable occupational injury, the remaining issues are moot.

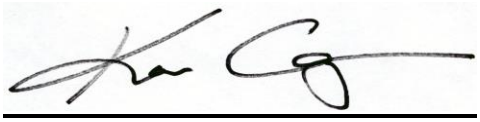
ORDER

1. Claimant’s claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 14, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-010-900-002

ISSUES

The issues set for determination included:

- Is Claimant entitled to maintenance medical treatment?

PROCEDURAL STATUS

A Summary Order was issued on February 9, 2022. On February 28, 2022, Claimant filed a timely Request for Specific Findings of Fact, Conclusions of Law and Order. However, the case was inadvertently closed at the Office of Administrative Courts. This Order follows.

FINDINGS OF FACT

1. Claimant worked for Employer as a janitor. On March 18, 2016, Claimant sustained an admitted industrial injury when he hurt his low back while lifting a carpet.

2. Claimant received medical treatment at Concentra for the injury, including conservative treatment which included physical therapy and chiropractic treatment, as well as injections.

3. Claimant also underwent right–sided L4 and L5 medial facet joint nerve branch RF neurotomy procedures on November 10, 2017.[1]

4. The parties reached a Joint Stipulation that resolved the issues of average weekly wage and PPD, which was approved by the Order issued by ALJ Broniak on April 9, 2018. In particular, Respondents agreed to increase Claimant's AWW based upon his concurrent employment. The Stipulation provided Claimant reached MMI on January 17, 2018 (as determined by ATP Stephen Danahey, M.D.) and Respondents agreed to admit for the 9% medial impairment rating provided by Robert Kawasaki, M.D. (also an ATP). As part of the Stipulation, the parties agreed that it would never be reopened, except on the grounds of fraud or mutual mistake of material fact.

5. On April 25, 2018, Respondents filed a Final Admission of Liability ("FAL") for a 9% whole person impairment rating, based upon the aforementioned Stipulation. The FAL admitted for post-MMI medical treatment provided by the authorized treating physician that was reasonably necessary and related to the compensable injury.[2]

[1] Exhibit J, p. 59.

[2] Exhibits 2, A.

6. There was no evidence that Claimant received medical treatment following the filing of the FAL through January 2019.

7. On January 15, 2019, Claimant underwent an independent medical evaluation ("IME") that was performed by Hugh Macaulay, M.D. at the request of his attorney. Claimant's chief complaint was low back pain to the right side, which he said sometimes was "stabbing" and to the right side. At that time, he was working for two employers, performing janitorial work.

8. On examination, Claimant had pain in the right sacroiliac joint and right hemipelvis, as well as right piriformis. Dr. Macaulay opined that Claimant continue to have right sacroiliac dysfunction. Dr. Macaulay stated Claimant was not at MMI. He thought Claimant would respond favorably to osteopathic manual therapy, as he had a mechanical issue in the sacroiliac joint. Dr. Macaulay's opinion was not as persuasive as the opinions offered by Dr. Danahey and Dr. Kawasaki.

9. Claimant filed a Petition to Reopen on or about October 25, 2019.[3] The stated basis for reopening was change in medical condition. Claimant subsequently withdrew this issue, which was confirmed by Order issued by Prehearing ALJ John Sandberg on May 6, 2020.

10. Claimant was evaluated by Dr. Danahey on February 19, 2020. At that time, he complained of pain in the right lower back/gluteal area with radiation to the right hip, along with right toe pain. He described the pain as being worse, but stated he had suffered no new injury. On examination, Dr. Danahey noted tenderness in the level L5 right paraspinal, right sciatic notch and right sacroiliac joints. Claimant had full range of motion ("ROM") in his lumbar spine.

11. Dr. Danahey's assessment was: lumbosacral strain, initial encounter; sacroiliac dysfunction. Dr. Danahey opined Claimant remained MMI, but agreed that osteopathic manipulation was appropriate. He also recommended a reevaluation with Dr. Kawasaki, along with possible repeat SI injection and/or repeat rhizotomy. Dr. Danahey did not believe Claimant's pain in the great right toe was related to the work injury.

12. On May 18, 2020, Claimant returned to Dr. Kawasaki for a follow-up evaluation. Claimant stated he continued to have pain in the right low back and buttock region, which he described as 8/10. On examination, Dr. Kawasaki noted tenderness to palpation in the right lower lumbar segments and the lumbosacral junction, the lumbar paraspinal musculature and over the gluteus. Claimant was able to forward flex and nearly touch his toes, but had pain on lumbar extension that was more than flexion. Claimant's neurologic exam showed 5/5 strength and intact sensation.

13. Dr. Kawasaki's impression was: lumbar spondylosis; status post lumbar rhizotomy procedure, with no long-term relief. Dr. Kawasaki reiterated Claimant was at

[3] Exhibit 3.

MMI as of January 2018. Dr. Kawasaki said he would not recommend repeating rhizotomies, as Claimant did not have expected relief for the first set of rhizotomies.[4] He did not believe there was be any significant treatment option for this patient which would alter his situation. The ALJ credited Dr. Kawasaki's opinion as to Claimant's need for maintenance treatment.

14. Claimant underwent an independent medical evaluation on February 13, 2020, which was performed by Lawrence Lesnak, D.O. at the request of Respondents. Claimant complained of constant central/midline lower lumbar pain with constant radiation to his right superior buttock region. Claimant related that the pain had remained the same since his date of injury.

15. On examination, Claimant was able to forward flex at the waist to 80–90°, with reproduction of mild to moderate central/midline lower lumbar pains. Backward bending was accomplished to 30° without reproduction of any symptoms. Sitting straight leg raising maneuvers were negative bilaterally at 90°. Supine straight leg raising maneuvers on the left at 70° reproduced no symptoms and on the right at 70° he reported some mild central/midline lower lumbar pains. Claimant's muscle strength was 5/5.

16. Dr. Lesnak stated Claimant had chronic midline/central lower lumbar pains extending into his right superior buttock region and occasional symptoms radiating to his right lateral thigh. He believed Claimant remained at maximum medical improvement and there was no evidence of a worsening of his condition. Claimant reported that his symptoms had essentially been the same since the date of injury and he continue to work full-time at two jobs with no restrictions. Dr. Lesnak opined that the recommendation of osteopathic manipulative treatment was not reasonable or necessary, given Claimant's clinical course.

17. Dr. Lesnak testified as an expert at hearing and his opinions were consistent with his written report. Dr. Lesnak is a board-certified physiatrist and Level II accredited pursuant to the W.C.R.P. He has been licensed to practice medicine since 1990 and 1996 in Colorado.

18. Dr. Lesnak reviewed his evaluation of Claimant which took place on February 13, 2020. Dr. Lesnak described this as a fairly normal exam. At that time, Claimant complained of constant central midline lower lumbar pains with constant radiation of pain into his right superior buttock, occasional pain radiating into his right lateral thigh occasional right great toe irritation. Claimant told Dr. Lesnak these symptoms were exactly the same as when he originally hurt his back in March of 2016. Dr. Lesnak testified there was no change or worsening of condition, but rather a continuation of his ongoing symptoms.[5]

[4] "Rhizotomy" and "RF neurotomy" are used interchangeably in this Order, as these describe the same procedure.

[5] Dr. Lesnak deposition, p. 18:5-18.

19. Dr. Lesnak noted Claimant was working in excess of sixty hours per week without restrictions. Dr. Lesnak reviewed Claimant's records from Kaiser and noted he had normal ROM of the lumbar spine. Dr. Lesnak stated that pursuant to the DOWC Medical Treatment, repeat rhizotomy procedures were not warranted because Claimant had a nondiagnostic response to the rhizotomies performed by Dr. Kawasaki. Dr. Lesnak said Claimant had not lost any function since reaching MMI. Dr. Lesnak opined Claimant remained at MMI and did not require maintenance medical treatment.[6]

20. On or about June 17, 2020, Dr. Danahey responded to a letter authored by Respondents' counsel, which referenced Dr. Kawasaki's May 18, 2020 evaluation. Dr. Danahey opined Claimant did not require maintenance treatment. The ALJ credited Dr. Danahey's opinion as to Claimant's need for maintenance treatment.

21. Dr. Kawasaki issued a report in a response to letter authored by Claimant's counsel on or about July 6, 2020. Dr. Kawasaki reiterated that he did not believe Claimant required any maintenance treatments. Dr. Kawasaki also noted that although an interpreter was not present, Claimant spoke English and the communication was sufficient. Dr. Kawasaki said he had no problem seeing Claimant back with an interpreter, but was doubtful that his opinion would change. Dr. Kawasaki respectfully disagreed with Dr. Macaulay's opinion that osteopathic manipulation would substantially change Claimant's symptomatology. This opinion was persuasive to the ALJ.

22. Claimant testified that because of the pain he feels, he is only able to do a single staircase per day and is very tired at the end of the day. He said it is very hard for him to carry the heavy items and he continues to have pain in his low back. He wishes to have additional treatment, as he wants his pain to be at the same level as when he stopped receiving treatment. Claimant was credible when describing his pain.

23. Based upon the totality of the medical evidence, the ALJ determined Claimant failed to meet his burden of proof to show he was entitled to maintenance medical benefits.

24. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be

[6] Lesnak deposition, p. 22:2-13.

interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Grover Medical Benefits

As determined in Findings of Fact 1-3, Claimant suffered an admitted injury at work on March 18, 2016 in which he injured his low back. Claimant received conservative treatment, as well as right sided L-4 and L5 medial facet joint nerve branch RF neurotomy procedures that were performed by Dr. Kawasaki. *Id.* The rhizotomy procedures did not provide pain relief to Claimant. Claimant reached MMI on January 17, 2018 and was assigned a 9% whole person impairment rating by Dr. Kawasaki. (Finding of Fact 4). Respondents filed a FAL on April 25, 2018, which admitted for maintenance medical benefits provided by an ATP that was reasonably necessary and related to it the injury. (Finding of Fact 5).

In the case at bench, there was conflicting medical evidence on the issue of maintenance medical treatment. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant presents evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Comm'n of Colorado,* 759 P.2d 705, 711-712 (Colo. 1988). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

The ALJ concluded Claimant did not meet his burden of proof to show he was entitled to receive maintenance treatment. (Finding of Fact 23). Based upon the medical records admitted at hearing, the ALJ concluded Claimant did not require maintenance treatment to maintain MMI or prevent deterioration of his condition. More particularly, Dr. Danahey evaluated Claimant on February 19, 2020 and considered the recommendations made by Claimant's IME physician, Dr. Macaulay. At that time, Dr. Danahey stated Claimant remained at MMI and thought osteopathic manipulation was appropriate. He believed Claimant should be reevaluated by Dr. Kawasaki. (Findings of Fact 10-11).

Dr. Kawasaki evaluated Claimant on May 18, 2020 and opined he did not have significant treatment options and was not a candidate for repeat rhizotomy procedures. (Finding of Fact 13). On or about June 17, 2020, Dr. Danahey stated Claimant did not require maintenance treatment. (Finding of Fact 20). On July 6, 2020, Dr. Kawasaki stated that he did not believe osteopathic manipulation would change Claimant's symptoms. (Finding of Fact 21). Accordingly, the ALJ credited the opinions offered by ATPs, Dr. Kawasaki and Dr. Danahey, both of whom concluded Claimant did not require

maintenance treatment. The ATP-s conclusions were buttressed by the opinions expressed by Respondents' expert, Dr. Lesnak. (Findings of Fact 16-19). On balance, these opinions were more persuasive than those offered by Dr. Macaulay. (Finding of Fact 8).

Since Claimant failed to meet his burden of proof to show he was entitled to maintenance medical benefits, the claim for those benefits will be dismissed.

ORDER

It is therefore ordered:

1. Claimant did not establish by a preponderance of the evidence that he is entitled to *Grover* medical benefits under the Colorado Workers' Compensation Act.

2. The claim for maintenance medical benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she is entitled to reopen her claim due to a change or worsening of condition.

II. If Claimant proves she is entitled to reopen her claim, whether Claimant established by a preponderance of the evidence that she is entitled to temporary indemnity benefits.

FINDINGS OF FACT

1. Claimant is a 62-year old woman who has worked for Employer since 2001.

2. Claimant sustained an admitted industrial injury on November 19, 2016. While Claimant was scanning a 65-inch television in a shopping cart, the television tipped and struck Claimant on the head. Claimant fell to her knees and testified she "saw stars," became nauseated, and experienced blurred vision and dizziness.

3. Claimant was taken to North Suburban Medical Center the day of the injury with complaints of headache, lightheadedness, nausea and vomiting, upper neck pain and photophobia. CT scans of the head and cervical spine revealed degenerative changes with no evidence of a traumatic intracranial injury.

4. Claimant continued to complain of headache, neck pain, and numbness and tingling in her hands and upper back. Claimant underwent medical treatment including physical therapy, massage therapy, chiropractic treatment and acupuncture.

5. On July 27, 2017, Dr. Sacha performed right C4-7 intra-articular facet injections. On August 18, 2017, Dr. Sacha noted Claimant had 100% relief from the injections but then returned to baseline.

6. Claimant underwent a brain MRI on October 11, 2017 which revealed a single small FLAIR hyperintensity in the white matter bilaterally, nonspecific, which was noted might be a sequelae of chronic small vessel ischemic disease, small areas of gliosis from prior brain insult or chronic migraine headaches.

7. On October 12, 2017, Dr. Sacha performed right C4-7 medial branch blocks. Again, Dr. Sacha indicated Claimant had 100% temporary relief with the medial branch blocks. He recommend radiofrequency neurotomies.

8. Dr. Sacha proceeded with C5-7 radiofrequency neurotomies on November 30, 2017. At the next visit with Dr. Sacha on December 12, 2017, Claimant complained of postoperative pain, neuritis and burning since the radio frequency neurotomies.

9. On December 26, 2017, Claimant described minimal improvement from the rhizotomies.

10. On January 8, 2018, Dr. Sacha opined Claimant reached maximum medical improvement ("MMI") with an 8% whole person impairment to the cervical spine. Claimant reported that her headaches were nearly gone and that she had better neck range of motion, but still experienced pain. Dr. Sacha's impression at the time was cervical facet syndrome, occipital neuralgia, and adjustment disorder. He released Claimant to work full duty. He recommended maintenance care in the form of a gym and pool pass, six more visits of physical therapy, and medication maintenance program for 6-12 months.

11. On June 13, 2018, Dr. Machanic performed an independent medical examination ("IME") at the request of Claimant. Claimant complained of daily headaches, bilateral neck pain, blurred vision and problems focusing, dizziness, difficulty with memory, anxiety and depression. Claimant reported that the rhizotomy performed by Dr. Sacha was unsuccessful and injections only helped temporarily. Claimant disagreed she was at MMI as she felt she still had problems that had not been properly addressed. Claimant indicated she awakes in the morning with headaches. Up to two times per week the headaches cause her to become nauseated and eventually lead to vomiting, photophobia and sonophobia which cause her to need to go to bed. Claimant stated she has headaches and neck pain every day. Dr. Machanic assessed Claimant with posttraumatic mixed headaches and chronic daily migraines. He opined Claimant was not at MMI. Dr. Mechanic recommended potential medications to treat the headaches and referral to a headache specialist.

12. On August 1, 2018, Claimant underwent a Division Independent Medical Examination ("DIME") with Linda Mitchell, M.D. Claimant complained of daily headaches described as a pressure sensation in the frontal region bilaterally. She indicated the headaches were "like a rod pressing on the top of her head." She also described pain from the back of her head to the retroorbital areas. The pain was worse with sleeping and caused sleep disturbances. The headaches also caused blurred vision and tearing and caused her to miss work. The headaches also affected her daily living. Claimant also complained of neck pain and soreness, numbness in the right upper trapezius.

13. Dr. Mitchell diagnosed Claimant with a mild traumatic brain injury, cervical strain with underlying spondylosis and facet arthropathy, cervicogenic headaches and adjustment disorder with anxious mood. She noted Claimant had underlying degenerative changes of the cervical spine. Dr. Mitchell opined Claimant reached MMI as of January 26, 2018 with 13% whole person impairment for the cervical spine and 1% psychological impairment.

14. Dr. Mitchell noted Claimant had a very thorough course of treatment but had persistent cervicogenic headaches. Dr. Mitchell recommended Claimant continue to see a physiatrist for chronic headache management as maintenance care. She noted Claimant had not sustained relief from the rhizotomies and thus did not recommend further invasive cervical procedures. She opined that Claimant could continue medications and an independent exercise program and attend 10 sessions with a psychologist if needed.

15. On September 10, 2018, Respondents filed an Final Admission of Liability ("FAL") consistent with the DIME. Respondents admitted for two days of temporary total disability ("TTD") benefits, and a 13% whole person impairment rating and medical benefits after MMI based upon the report from Dr. Mitchell.

16. Claimant filed an Application for Hearing to overcome the DIME.

17. Claimant continued to see Dr. Sacha for maintenance care. On January 7, 2019, Claimant stated she was seeing headache specialist Dr. McCranie and taking headache medication. But she described ongoing significant headaches. Claimant requested a TMJ referral, to which Dr. Sacha opined was unrelated to the work injury. Dr. Sacha recommended that Claimant undergo an ultrasound guided occipital nerve block. He discharged Claimant to the maintenance medication program and follow-ups and cleared Claimant for light duty.

18. Dr. Sacha performed the bilateral occipital nerve block on January 17, 2019.

19. On January 21, 2019, Claimant saw Dr. McCranie for a follow up of her headaches. Claimant stated she felt the same and rated her pain at a 6. Claimant reported no improvement following the occipital nerve block with Dr. Sacha. Dr. McCranie continued to see Claimant under maintenance care.

20. On March 9, 2019, Dr. Sacha recommended chiropractic and acupuncture as maintenance care. On March 11, 2019, Dr. Sacha noted Claimant had light duty restrictions that were permanent in nature.

21. On April 26, 2019, Claimant presented to Dr. McCranie for a follow up of her headache. Claimant stated she was doing the same and rated her pain at 6. Claimant described ongoing daily headaches with severe headache occurring once a week. Claimant was to follow up as needed.

22. Rather than proceeding to hearing on Claimant's application to overcome the DIME, the parties stipulated to a 16% whole person impairment for the cervical spine, 1% psychological impairment, and that Claimant's TMJ was unrelated. Respondents filed an Amended FAL pursuant to the stipulation on May 15, 2019. The FAL reflects an admitted average weekly wage of $973.78 and a corresponding TTD rate of $649.19 per week.

23. Claimant subsequently filed an Application for Hearing to reopen Claimant's claim.

24. On July 15, 2019, Dr. Sacha ordered chiropractic and acupuncture under maintenance care which was pending. He completed FMLA records.

25. On May 1, 2020, Claimant told Dr. Sacha she wanted to restart chiropractic and acupuncture to which he agreed. Claimant's work status was unchanged. Dr. Sacha specifically noted Claimant remained at MMI. He referred Claimant for six to eight visits of chiropractic care and acupuncture.

26. On November 12, 2020, Claimant reported to Dr. Sacha experiencing an increase in neck pain and headaches. He remarked, "At this point, we are going to get a repeat MRI of the cervical spine as the symptoms do seem somewhat different than prior symptoms, but I cannot rule out the possibility of doing a repeat neurofrequency procedure." (Cl. Ex. 8, p. 110).

27. On February 1, 2021, Claimant returned to Dr. Sacha with complaints of left-sided neck pain and headaches. Claimant was working her full duty job. Dr. Sacha recommended left C2-4 facet injections. Dr. Sacha noted that Claimant had recently undergone radiofrequency neurotomy and it was starting to wear off resulting in increased pain. Dr. Sacha noted different treatment options including more chiropractic care and acupuncture, repeat facet injections and occipital nerve blocks, or a repeat radiofrequency procedure. Claimant wanted to proceed with an injection and medication.

28. On April 6, 2021, Claimant reported to Dr. Sacha an increase in headaches on the left side. Dr. Sacha noted Claimant likely has some hypersensitivity or neuritis of the 3rd occipital nerve after the radiofrequency procedure, which he noted was noted uncommon.

29. Claimant returned to Dr. Sacha on April 26, 2021 with a flare in her left-sided occipital nerve with headaches. She also reported some increased ringing in the left ear and increased neck pain. Dr. Sacha performed a left occipital nerve block.

30. On May 10, 2021, Dr. Sacha noted he was seeing Claimant for a maintenance follow-up. Claimant's work status was unchanged. Claimant described no lasting relief with the nerve block. Dr. Sacha discussed with Claimant that her symptoms may or may not improve. He noted that Claimant appeared to have radicular pain, likely due to stenosis. Dr. Sacha recommended a one-time cervical epidural but not any more aggressive or interventional care. Claimant was to return in one month under maintenance program.

31. Claimant returned to Dr. Sacha for maintenance follow up on June 8, 2021. He noted Claimant was awaiting authorization for the cervical epidural.

32. On September 13, 2021 Dr. Sacha noted that the cervical epidural and cervical MRI were denied. He noted that he was unsure if the cervical injection would be enough to determine if it is facet pain causing Claimant's ongoing symptoms versus radiculopathy

pain. He reordered an MRI, injection and a medical branch block for diagnostic and therapeutic purposes.

33. On November 4, 2021, Dr. Sacha performed bilateral C2-5 medial branch blocks and a C7-T1 interlaminar epidural injection.

34. Respondents obtained surveillance of Claimant taken November 3, 9, 21, 28, 30, 2021. Claimant is observed turning her head, bending over, using her bilateral upper extremities to carry items, wipe frost from a car window, pull herself into a truck, and open a truck door. Claimant is also observed firing a large rifle attached to a stand with the butt of the rifle against her left shoulder.

35. At a follow-up appointment on December 6, 2021, Claimant Dr. Sacha noted Claimant had diagnostic responses to both the medial branch blocks and the epidural injection. He further noted that Claimant has both a facet pain generator causing her neck pain and headaches as well as a discogenic or radicular pain causing the radiating pain down the arm. Claimant reported ongoing neck and headache pain. Dr. Sacha noted that the MRI revealed significant straightening of her cervical lordosis and canal stenosis from C4-5 down to C6-7. He recommended radiofrequency neurotomy in the cervical spine.

36. On December 8, 2021, Michael Striplin, M.D. performed a medical record review at the request of Respondents. He reviewed and summarized Claimant's medical records since the DIME with Dr. Mitchell. He was asked whether Claimant suffered a worsening of her condition that would justify reopening of her workers' compensation claim. He noted Dr. Sacha recommended repeat cervical epidural steroid injections and cervical medial branch blocks even though Dr. Mitchell explicitly recommended no further invasive cervical procedures. Dr. Striplin noted Claimant had continued subjective complaints that had not substantially changed. The cervical MRI scan performed on 11/11/2021 only showed slight worsening compared to the one done five years earlier and were due to the natural progression of her underlying disease. Dr. Striplin opined that the treatment recommended by Dr. Sacha could be done under maintenance care.

37. Claimant testified at hearing that her symptoms began to worsen in 2020. Claimant testified she experienced headaches of longer duration that were more debilitating as to her functioning. She testified that the pain in her neck and arms with numbness affected her ability to grasp and hold objections and were more intense, causing the Claimant to have to miss work more often. Claimant testified she was unable to do "regular stuff" that she normally did. Claimant testified that the frequency and duration of her symptoms worsened. Claimant testified that her symptoms in 2020 were by far worse than those she had in 2017-2019.

38. Claimant missed work and incurred wage loss as a result of her worsened condition, as outlined in Claimant's Exhibit 5.

39. Dr. Sacha testified at hearing on behalf of Claimant as an expert in physical medicine and rehabilitation. Dr. Sacha testified that patients with cervical facet syndrome,

such as Claimant, often return for follow-up treatment. He testified that he recommended a follow-up MRI based on worsening and different symptoms and clinical findings noted at his November 12, 2020 evaluation. Dr. Sacha explained that he found worsening segmental dysfunction, forward head and shoulder posture, as well and firm endpoints to range of motion. Dr. Sacha confirmed that all of the Claimant's objective findings on MRI and other objective clinical exam findings were a natural progression of the work-related injury. Dr. Sacha testified that Claimant also presented with subjective symptoms supporting the objective findings, including worsening headaches, dizziness, ringing in the ears, light sensitivity, jaw pain, and arm numbness.

40. Regarding the MRI results, Dr. Sacha testified that there was straightening of the cervical lordosis as well as worsening of the canal and foraminal narrowing, consistent with Claimant's symptoms. He explained that it is not unusual for patients who have undergone radiofrequency ablation ("RFA") to experience a return of symptoms when the nerves grow back. He testified that in Claimant's case, she had additional symptoms, including arm numbness and paresthesia--that represented a "clinical red light." (Tr. Hearing at 53:8-19). Dr. Sacha further testified that Claimant now has symptoms of compressive pathology from the narrowing of the joints and bone being laid down. Dr. Sacha opined that the Claimant's condition was objectively worse both on inspection and examination, as well as radiographically on the MRI. He explained that another RFA procedure would help some of Claimant's symptoms but would not treat the compressive symptomatology. Dr. Sacha testified that Claimant needed a staged epidural steroid injection to address the compressive symptomatology. Dr. Sacha explained that diagnostic medial branch blocks were also needed to see if the RFA procedure would be effective. Dr. Sacha confirmed that the compressive pathology was new and a progressively worsening problem, and the recommended injections would be to treat Claimant's symptoms.

41. Dr. Sacha clarified that, to the extent his records refer to maintenance care, it is done for billing purposes. Dr. Sacha opined that Claimant is clearly and objectively worse and requires additional care. He testified that Claimant has symptoms she did not previously have that are consistent with the progression of the disease, requiring treatment not just to maintain Claimant's prior condition. Dr. Sacha disagreed with Dr. Striplin's opinion that Claimant's continued subjective complaints have not substantially changed.

42. The ALJ finds the opinion and testimony of Dr. Sacha, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinion of Dr. Striplin.

43. Claimant proved it is more probable than not she sustained a worsening of condition entitling her to reopening her claim as of November 12, 2020.

44. Claimant proved she is entitled to temporary indemnity benefits from November 12, 2020 and ongoing.

45. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by

a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

As found, Claimant met her burden to prove she sustained a change in condition entitling her to reopen her claim. Claimant credibly testified her condition changed and worsened in 2020. There is no evidence Claimant sustained an any sort of intervening injury subsequent to being placed at MMI. Having treated Claimant over the course of multiple years, Dr. Sacha is familiar with Claimant's condition and course of treatment. Dr. Sacha was the first to place Claimant at MMI in 2018. Subsequently, Dr. Sacha continued to treat Claimant and had the opportunity to observe any changes in her condition. In November 2020, Claimant reported increased neck pain and headaches and Dr. Sacha noted that Claimant's symptoms appeared somewhat different than her prior symptoms. He credibly testified that Claimant has experienced worsening and different symptoms, which are supported by objective findings on examination and imaging. Dr. Sacha credibly testified that Claimant's worsening condition is related to the work injury. Dr. Sacha further credibly testified that Claimant required medial branch blocks and cervical injections to treat her new and worsening symptoms. The surveillance video showing Claimant participating in activities does not persuade the ALJ that Claimant has not sustained a change in her condition. The preponderant evidence establishes Claimant has sustained a change in her condition causally related to the original work injury, and thus is entitled to reopen her claim.

Temporary Indemnity Benefits

City of Colorado Springs Disposal v. Industrial Claim Appeals Office, 954 P.2d 637 (Colo. App. 1997) stands for the proposition that a worsening of condition after MMI may entitle a claimant to additional temporary disability benefits if the worsened condition caused a "greater impact" on a claimant's temporary work capacity than existed at the time of MMI. *Root v. Great American Insurance Company*, W.C. No. 4-534-254 (April 15, 2009). ICAO has previously ruled that *City of Colorado Springs* does not require a claimant to establish an "actual wage loss" where, for example, a claimant was not working immediately before the worsened condition. *Moss v. Denny's Restaurants*, W.C. No. 4-440-517 (September 27, 2006). As ICAO stated in *Lively v. Digital Equipment Corporation*, W.C. No. 4-330-619 (June 14, 2002): "[a]s we read *City of Colorado Springs*, in order to establish entitlement to additional temporary disability benefits the claimant must show the worsened condition resulted in increased physical restrictions (over those which existed on the original date of MMI), and that the

increased restrictions caused a 'greater impact' on the claimant's temporary 'work capability' than existed at the time of MMI."

In *Kreimeyer v. Concrete Pumping Inc.*, W.C. No. 4-303-116 (March 22, 2001), ICAO concluded that the critical issue in cases controlled by *City of Colorado Springs* is not whether the worsened condition actually resulted in additional temporary wage loss, but whether the worsened condition has had a greater impact on the claimant's temporary work "capacity." *See also El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993); *Ridley v. K-Mart Corp.*, W.C. No. 4-263-123 (May 27, 2003). The question of whether a claimant proved increased disability, as measured by actual wage loss or a reduction in her capacity to earn wages, is a question of fact for the ALJ's determination. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

As found, Claimant has established both actual wage loss and loss of earning capacity. Her actual wage loss and loss of earning capacity is greater since November 12, 2020 than it was at the time of MMI. Although Claimant had prior periods of absences, the medical and testimonial evidence establishes her entitlement to additional temporary disability benefits from November 12, 2020 for the hours missed in Claimant's Exhibit 5, pages 52-53 and continuing. The FAL reflects an admitted average weekly wage of $973.78 and a corresponding TTD rate of $649.19 per week. The temporary disability rate is $16.23 for each hour missed ($649.19/40). Respondents shall pay the Claimant at that rate for each hour or partial hour missed by the Claimant. Temporary disability benefits begin on November 12, 2020 for the missed hours set forth in Claimant's Exhibit 5, pages 52–53 and continue after that until terminated by operation of law.

ORDER

1. Claimant proved she sustained a change in condition entitling her to reopen her claim as of November 12, 2020.

2. Respondents are liable for Dr. Sacha's medical treatment beginning November 12, 2020 as medical treatment designed to cure and relieve Claimant as a result of her work-related injury and no longer as maintenance medical treatment.

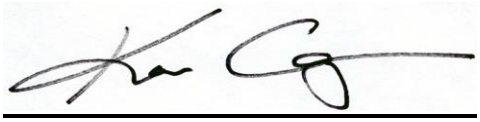
3. Respondents shall pay temporary disability benefits at the rate of $16.23 per hour for each hour or partial hour missed set forth in Claimant's Exhibit 5, pages 52-53 beginning on November 12, 2020 and continuing until terminated by operation of law.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 14, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-195-283-001

ISSUES

I. Whether Claimant's temporary total disability benefits were properly terminated due to his failure to accept an offer of modified employment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On January 25, 2022, Claimant suffered a compensable injury. Claimant was injured when he slipped on ice and fractured the left distal radius of his left arm.
2. On January 26, 2022, Claimant underwent surgery in which a left sided "ORIF" procedure was performed as well as a "C.T.R." of the left wrist.
3. On February 1, 2022, Claimant was evaluated at Denver Health Occupational Health by Douglas Scott, M.D. Dr. Scott returned Claimant to restricted duty. The restrictions precluded Claimant from using his left hand and arm. Claimant was also restricted from driving. (Ex. C, pp. 10-12)
4. Claimant kept treating with Dr. Scott. As a result, Dr. Scott was Claimant's attending physician.
5. On February 9, 2022, Employer, through TB[Redacted], wrote to Dr. Scott to see if he would approve Claimant performing a modified job. In the letter, Ms. TB[Redacted] stated that Claimant's restrictions included no left hand use and no driving. Ms. TB[Redacted] also stated that they identified a sedentary job for Claimant to perform. (EX. E, p. 41)
6. On February 10, 2022, Dr. Scott reviewed and approved the modified employment described by Employer–which consisted of sedentary work. (Ex. E, p. 41)
7. On February 10, 2022, Employer wrote to Claimant and offered Claimant modified employment which was to start no later than February 16, 2022. The letter also stated that Claimant's failure to start the modified employment would result in the termination of his temporary disability benefits. The letter provided:

> This will confirm that as of **Thursday, February 10, 2022**, the Employer[Redacted] has offered you a temporary modified duty assignment that must begin no later than February 16, 2022 (emphasis in original). Your temporary modified duty assignment will consist of sedentary work at the DOTI Leaf Drop Booth. Your shifts will be Monday thru Thursday from 6:30 a.m. to 5:00 p.m.

> The most recent restrictions recommended by the authorized treating physician include the following: no driving. No use of the left-hand or arm.
>
> Attached is correspondence signed by Dr. Scott from the Center for Occupational Safety and Health. He reviewed the modified duty assignment and restrictions as stated above and concurs that the temporary assignment is within your restrictions.
>
> . . .
>
> You will continue to receive your regular wages according to Career or Civil Service rules and statutory requirements while on modified duty. Pursuant to Workers' Compensation Rule of Procedure 6–1(A)(4), if you do not accept and begin this offer of modified duty, your wage continuation and/or temporary indemnity benefits will be terminated.

(Ex. E, pp. 39-40)

8. Since Claimant could not drive, he looked into alternative means of transportation to and from work. Claimant looked into taking public transportation – the bus – to and from work. Claimant contends that he did not want to take the bus because the weather was bad and he was afraid he might slip and fall while walking to and from the bus stop.

9. It took Claimant about 30 minutes to drive to work. Taking the bus to and from work would have taken Claimant about 1 hour and 15 minutes each way. At hearing, Claimant did not contend that the time to travel to and from work was unreasonable.

10. Claimant also looked into taking Uber and Lyft to work. Claimant, however, stated that using Uber or Lyft would cost approximately $23.00 each way to work and was cost prohibitive since he only made $23.00 per hour.

11. Because Claimant did not want to take the bus to work, and thought Uber or Lyft was too expensive, Claimant did not accept the offer of modified employment.

12. On February 23, 2022, Respondent filed a General Admission of Liability. Respondents admitted for a closed period of temporary total disability benefits (TTD). Respondent admitted for TTD from January 26, 2022, through February 15, 2022.

13. Despite Claimant being unable to drive due to his work injury, Claimant had access to public transportation to and from the modified job.

14. The ALJ finds that Claimant had reasonable access to public transportation and could have taken public transportation to and from work each day. Claimant, however, chose to not use it. The ALJ further finds that taking public transportation to and from work was a reasonable option for Claimant to get to work. Therefore,

the ALJ finds that the modified employment was reasonably available to Claimant under an objective standard.

15. Claimant failed to present credible and persuasive evidence that the weather conditions created an undue risk of falling while walking to and from the bus stop. As a result, Claimant's contention that walking to and from the bus stop was not a safe option and made accepting the modified employment impractical is neither credited nor found persuasive. Depending on the weather each day, Claimant could have also used a combination of Uber, Lyft, or the bus. Therefore, the ALJ finds, under an objective standard, Claimant's reason for refusing to accept the offer of modified employment was unreasonable. The ALJ finds that Claimant had reasonable access to public transportation – the bus - to get to work and chose not to use it. Thus, the modified employment was reasonably available to Claimant.

16. In this case, Dr. Scott, the attending physician, gave Claimant a written release to return to modified employment, approved the modified job, the modified job was reasonably available to Claimant and offered to Claimant in writing, and Claimant failed to begin the job. Moreover, Claimant's reason for refusing the offer of modified employment, which was reasonably available to Claimant, was not reasonable. Thus, Claimant's TTD benefits were properly terminated.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and

credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant's TTD benefits were properly terminated due to his failure to accept an offer of modified employment.

Section 8-42-105(3)(d)(I), C.R.S., authorizes the termination of TTD benefits when "the attending physician" gives the claimant a "written release to return to modified employment, such employment is offered in writing, and the employee fails to begin such employment." Where the employers seek to terminate benefits under this statute, they bear the burden of establishing the factual predicate for its application. *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008); *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P.3d 790 (Colo. App. 2000). It is a question of fact for the ALJ to decide whether a claimant has been released to return to work. *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo. App.2016). There may be more than one "attending physician." *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274, 1276 (Colo. App. 2008); *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328, 330 (Colo. App. 2005). If there is a conflict between the attending physicians concerning whether or not the claimant is able to perform modified employment, the ALJ must resolve the conflict as a question of fact. *See Imperial Headware, Inc. v. Industrial Claim Appeals Office*, 15 P.3d 295, 296 (Colo. App. 2000).

The offered modified employment must be reasonably available to the claimant under an objective standard. *Willhoit v. Maggie's Farm*, WC 5-054-125-01 at 4 (ICAO, July 26, 2018). A claimant's rejection of offered modified employment does not constitute responsibility for termination. The ALJ should consider the consequences of the industrial injury, the financial hardship that would be imposed on the claimant by accepting the modified employment and "[a]ny other reasons that would, in the opinion of the administrative law Judge, make it impracticable for the claimant to accept the offer of modified employment." § 8-42-105(4)(b)(II). Failure to inform the claimant of the modified employment starting date can be characterized as a reason for which it was "impracticable for the claimant to accept the offer." *Mccloud v. Progressive Insurance*, WC 4-980-200-01 (ICAO. Apr. 1, 2016); *see Aguilera v. Valley Nissan Subaru, LLC*, WC 5-112-736 (ICAO, Dec. 1, 2020) (the termination of temporary disability benefits is not contingent on a claimant's responsibility for termination because the termination of disability benefits requires the employer to comply with the statute and rules governing modified duty job offers).

As found, Claimant refused an offer of modified employment due to transportation issues caused by the injury. As further found, Claimant's work injury precluded Claimant from driving to and from work. On the other hand, Claimant had available public transportation – the bus - and chose not to use it. As also found, Claimant contended that he did not use the bus because he was afraid he might fall and reinjure himself. While the ALJ has considered such factor, Claimant failed to present sufficient credible and persuasive evidence to establish that the weather created an undue risk of walking to and from the bus stop and that the job was therefore not reasonably available. For example, Claimant presented no photographs documenting the bad weather conditions which he contends precluded him from taking the bus. Nor did Claimant call Employer to discuss his concerns about taking the bus to work on a particular day due to the weather. Therefore, the ALJ finds and concludes that Claimant's refusal to take the bus to get to work was not reasonable under the circumstances. Thus, the ALJ finds and concludes that the offer of modified employment was not too impractical to be considered a legitimate job offer.

As a result, the ALJ finds and concludes that Respondents established by a preponderance of the evidence that Claimant was released to modified employment, the Employer offered Claimant modified employment that was approved by his attending physician, the employment was reasonably available to Claimant under an objective standard, and Claimant failed to start the employment. Thus, the ALJ finds and concludes that Claimant's TTD was properly terminated.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's TTD was properly terminated as of February 15, 2022.
2. Claimant's claim for additional TTD is denied and dismissed.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 15, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that his 7% scheduled lower extremity impairment rating should be converted to a 3% whole person rating.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to a disfigurement award for his left ankle pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. On January 29, 2020 Claimant suffered an admitted industrial injury to his left ankle during the course and scope of his employment with Employer. Specifically, Claimant was on his way into Employer's building when he stepped in a crack with his left foot and fell to the ground.

2. Claimant began receiving treatment with Blake Hines, D.P.M. on February 5, 2020. Dr. Hines assessed a closed fracture of the base of the fifth metatarsal bone of the left foot and a sprain of the anterior talofibular ligament of the left ankle.

3. On November 6, 2020 Dr. Hines performed a left ankle arthroscopy with debridement, a modified Brostrom-Gould procedure and a synovectomy. His preoperative and postoperative diagnoses were left ankle anterior talofubular ligament tear, lateral ankle instability, chronic ankle pain and synovitis. Claimant subsequently received additional physical therapy and steroid injections.

4. As a result of the surgery, Claimant has four scars and a slight limp. He specifically has a long scar along his left ankle measuring approximately 2 and 1/4 inches long by ½ inch wide. The scar is a bit raised and brownish in color. Moreover, Claimant has two small circular scars and one scar that is approximately 1/2 inch in length. Claimant also exhibited a noticeable limp while walking.

5. By June 7, 2021 Dr. Hines determined that Claimant's structures were stable and his left ankle was solid. He noted that Claimant's return to full activities would not disturb the surgical correction. Dr. Hines felt Claimant was nearing Maximum Medical Improvement (MMI). He recommended Claimant return to work as he was able and suggested follow-up on an as-needed basis.

6. On June 22, 2021 Claimant visited Authorized Treating Physician (ATP) Carlos Cebrian, M.D. for an evaluation. Claimant reported discomfort in his left ankle with extended activity. He described the pain as mild. Dr. Cebrian determined that Claimant had reached MMI. He concluded Claimant had a 7% left lower extremity impairment rating for loss or range of motion. The 7% extremity rating converted to a 3% whole person rating. Dr. Cebrian did not recommend maintenance medical care or impose permanent work restrictions.

7. On August 2, 2021 Insurer filed a Final Admission of Liability (FAL) acknowledging an MMI date of June 22, 2021, medical benefits previously paid, and Permanent Partial Disability (PPD) benefits for an impairment rating of 7% of the leg at the hip pursuant to Dr. Cebrian's report. The FAL also denied liability for maintenance care after MMI because it was not reasonable, necessary or related. The admitted PPD benefits totaled $4,672.30 (208 x $320.90 x .07), to be paid from June 22, 2021 through October 4, 2021.

8. On April 12, 2022 Claimant underwent an independent medical examination with John Burris, M.D. Dr. Burris agreed with Dr. Cebrian that Claimant reached MMI on June 22, 2021. He assigned a 6% lower extremity impairment rating for range of motion loss that converted to a 2% whole person rating. Dr. Burris noted there was no evidence of functional impairment beyond the site of Claimant's left ankle. There was thus no medical reason for conversion. Moreover, Dr. Burris determined Claimant did not require permanent work restrictions or maintenance medical care. He concluded that no further treatment was reasonable or necessary for the January 29, 2020 work accident.

9. Dr. Burris testified at the hearing in this matter. He explained that there was no objective evidence that Claimant required any form of care to maintain MMI from the effects of his industrial injury. He remarked that it was Claimant's responsibility to improve his conditioning and endurance through a home exercise program.

10. Dr. Burris reiterated that Claimant's injury was limited to his left ankle region. Notably, at the independent medical examination Claimant only reported left ankle pain. Claimant did not have subjective complaints beyond the ankle and there were no other impaired areas on examination.

11. Claimant testified at the hearing in this matter. He explained that he has difficulties ascending and descending stairs because his left leg. Claimant commented that standing for more than three hours results in so much pain in his leg that he is not able to walk for the rest of the day. He has changed careers and is working as a tattoo artist because his new profession allows him to change positions and does not require static standing. Claimant remarked he has difficulties functioning at home and performing chores because of the need to rest his leg. He also commented that he is unable to participate in sports and hobbies because of his left leg. He summarized he has trouble standing for long periods of time, showering, walking long distances, climbing up and down stairs, lifting heavy weight, engaging in recreational activities, and performing household chores such as sweeping and lawn work. Claimant seeks physical therapy and pain medication for his continuing symptoms.

12. Claimant has failed to prove that it is more probably true than not that his 7% scheduled lower extremity impairment rating should be converted to a 3% whole person rating. Initially, on January 29, 2020 Claimant suffered a closed fracture of the base of the fifth metatarsal bone of the left foot and a sprain of the anterior talofibular ligament of the left ankle while working for Employer. Claimant subsequently underwent left ankle surgery.

13. Claimant testified that he has a number of difficulties functioning at home and performing chores because of pain and discomfort associated with his left leg. He summarized he has trouble standing for long periods of time, showering, walking long distances, ascending and descending stairs, lifting heavy weight, engaging in recreational activities, and performing household chores such as sweeping and lawn work. However, the record reveals that Claimant's functional limitations pertain to his left leg and do not extend to portions of his body beyond the schedule of impairments.

14. The medical records reveal that Claimant's industrial injury is limited to his left lower extremity. At a June 22, 2021 evaluation with ATP Dr. Cebrian Claimant reported discomfort in his left ankle with extended activity. He described the pain as mild. Dr. Cebrian determined that Claimant had reached MMI. He concluded Claimant had a 7% left lower extremity impairment rating for loss or range of motion. Respondents subsequently filed a FAL noting an impairment rating of 7% of the leg at the hip pursuant to Dr. Cebrian's report.

15. Dr. Burris reasoned that Claimant warranted a 6% lower extremity impairment rating for his left ankle based on range of motion loss. He remarked there was no evidence of functional impairment beyond the site of Claimant's left ankle. There was thus no medical reason for conversion. Dr. Burris reiterated during his hearing testimony that Claimant's injury was limited to his left ankle region. Notably, at the independent medical examination Claimant only reported left ankle pain. Claimant did not have subjective complaints beyond the ankle and there were no other impaired areas on examination.

16. The preceding medical records reflect that Claimant's functional disability is limited to his left leg. Both Drs. Cebrian and Burris persuasively determined that Claimant's June 29, 2021 industrial injury warranted an extremity rating based on loss of range of motion. As Dr. Burris remarked, Claimant's injury was limited to his left ankle region. Moreover, Claimant's testimony reveals that the primary catalyst for his pain is using or standing on his left leg. The record reflects that Claimant's pain does not extend to a portion of the body beyond the schedule of impairments. The situs of Claimant's functional impairment is thus in his left lower extremity. Specifically, Claimant's left lower extremity symptoms are limited to his leg and do not extend into a portion of his body beyond the schedule of impairments at the hip. Accordingly, Claimant's request to convert his 7% left lower extremity scheduled impairment to a 3% whole person rating is denied and dismissed.

17. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Claimant seeks physical therapy and pain medication for his continuing symptoms. However, the record reveals that Claimant does not require medical maintenance benefits to relieve the effects of his industrial injury or maintain his condition.

18. In his June 22, 2021 MMI report Dr. Cebrian did not recommend maintenance medical care or impose permanent work restrictions. Dr. Burris also determined Claimant did not require permanent work restrictions or maintenance medical care. He concluded that no further treatment was reasonable or necessary for the January 29, 2020 work accident. Dr. Burris specifically testified that there was no objective evidence that Claimant required any form of care to maintain MMI from the effects of his industrial injury. He remarked that it was Claimant's responsibility to improve his conditioning and endurance through a home exercise program. The persuasive medical opinions of Drs. Cebrian and Burris reflect that Claimant has failed to demonstrate that he is entitled to receive medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Accordingly, Claimant's request for maintenance medical benefits is denied and dismissed.

19. Claimant has established that it is more probably true than not that he is entitled to a disfigurement award for his left ankle pursuant to §8-42-108, C.R.S. On November 6, 2020 Claimant underwent left ankle surgery as a result of his January 29, 2020 admitted industrial injury. As a result of the surgery, Claimant has four scars and a slight limp. He specifically has a long scar along his left ankle measuring approximately 2 and 1/4 inches long by ½ inch wide. The

scar is a bit raised and brownish in color. Moreover, Claimant has two small circular scars and one scar that is approximately 1/2 inch in length. Claimant's surgical scarring is visible and constitutes serious permanent disfigurement about a part of the body normally exposed to public view. Furthermore, Claimant exhibited a noticeable limp while walking. Based on Claimant's surgical scarring and limp, he is entitled to a disfigurement award in the amount of $1,800.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Left Lower Extremity Conversion

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the "loss of a leg above the foot including the ankle." *See* §8-42-107(2)(w.5), C.R.S. However, when an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

5. The dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). The question of whether a claimant has sustained a scheduled "injury" compensable under §8-42-107(2)(w.5), C.R.S. or a whole person impairment compensable under §8-42-107(8)(c), C.R.S. depends on whether the claimant sustained "functional impairment" beyond the leg at the hip. *See* §8-42-107(2)(w), C.R.S. Whether a claimant has suffered the "loss of a leg above the foot including the ankle" under §8-42-107(2)(w.5) , C.R.S. or a whole person medical impairment is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

6. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO, Apr. 13, 2006). The situs of the functional

impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson–Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

7. Under the functional impairment test, neither the situs of the injury nor the anatomical distinctions found in the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)* controls the issue. *Garcia v. Terumbo BCT*, W.C. No. 5-094-514 (ICAO, July 30, 2021). Rather, the ALJ must consider all relevant evidence and determine the parts of the body that have been functionally impaired. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996). Even if the claimant proves tissue damage and pain in structures beyond the schedule, the ALJ may still find a scheduled injury. *Strauch,* 917 P.2d at 367-68.

8. As found, Claimant has failed to prove by a preponderance of the evidence that his 7% scheduled lower extremity impairment rating should be converted to a 3% whole person rating. Initially, on January 29, 2020 Claimant suffered a closed fracture of the base of the fifth metatarsal bone of the left foot and a sprain of the anterior talofibular ligament of the left ankle while working for Employer. Claimant subsequently underwent left ankle surgery.

9. As found, Claimant testified that he has a number of difficulties functioning at home and performing chores because of pain and discomfort associated with his left leg. He summarized he has trouble standing for long periods of time, showering, walking long distances, ascending and descending stairs, lifting heavy weight, engaging in recreational activities, and performing household chores such as sweeping and lawn work. However, the record reveals that Claimant's functional limitations pertain to his left leg and do not extend to portions of his body beyond the schedule of impairments.

10. As found, the medical records reveal that Claimant's industrial injury is limited to his left lower extremity. At a June 22, 2021 evaluation with ATP Dr. Cebrian Claimant reported discomfort in his left ankle with extended activity. He described the pain as mild. Dr. Cebrian determined that Claimant had reached MMI. He concluded Claimant had a 7% left lower extremity impairment rating for loss or range of motion. Respondents subsequently filed a FAL noting an impairment rating of 7% of the leg at the hip pursuant to Dr. Cebrian's report.

11. As found, Dr. Burris reasoned that Claimant warranted a 6% lower extremity impairment rating for his left ankle based on range of motion loss. He remarked there was no evidence of functional impairment beyond the site of Claimant's left ankle. There was thus no medical reason for conversion. Dr. Burris reiterated during his hearing testimony that Claimant's injury was limited to his left ankle region. Notably, at the independent medical examination Claimant only reported left ankle pain. Claimant did not have subjective complaints beyond the ankle and there were no other impaired areas on examination.

12. As found, the preceding medical records reflect that Claimant's functional disability is limited to his left leg. Both Drs. Cebrian and Burris persuasively determined that Claimant's June 29, 2021 industrial injury warranted an extremity rating based on loss of range of motion. As

Dr. Burris remarked, Claimant's injury was limited to his left ankle region. Moreover, Claimant's testimony reveals that the primary catalyst for his pain is using or standing on his left leg. The record reflects that Claimant's pain does not extend to a portion of the body beyond the schedule of impairments. The situs of Claimant's functional impairment is thus in his left lower extremity. Specifically, Claimant's left lower extremity symptoms are limited to his leg and do not extend into a portion of his body beyond the schedule of impairments at the hip. Accordingly, Claimant's request to convert his 7% left lower extremity scheduled impairment to a 3% whole person rating is denied and dismissed.

Medical Maintenance Benefits

13. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). An award for *Grover*-type medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Indus. Claim Appeals Off.,* 992 P.2d 701,704 (Colo. App. 1999); *Stollmeyer v. Indus. Claim Appeals Off.,* 916 P.2d 609 (Colo. App. 1995). Nonetheless, the claimant must show medical record evidence demonstrating the "reasonable necessity for future medical treatment." *Milco Constr. v. Cowan,* 860 P.2d 539, 542 (Cob. App. 1992). The care becomes reasonably necessary where the evidence establishes that, but for a particular course of medical treatment, the claimant's condition can reasonably be expected to deteriorate so that he or she will suffer a greater disability. *Id.;* see *Hanna v, Print Expediters Inc.,* 77 P.3d 863, 865 (Colo. App. 2003). Once a claimant has established the probable need for future treatment, he or she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna,* 77 P.3d at 866. Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center,* 992 P.2d at 704.

14. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Claimant seeks physical therapy and pain medication for his continuing symptoms. However, the record reveals that Claimant does not require medical maintenance benefits to relieve the effects of his industrial injury or maintain his condition.

15. As found, in his June 22, 2021 MMI report Dr. Cebrian did not recommend maintenance medical care or impose permanent work restrictions. Dr. Burris also determined Claimant did not require permanent work restrictions or maintenance medical care. He concluded that no further treatment was reasonable or necessary for the January 29, 2020 work accident. Dr. Burris specifically testified that there was no objective evidence that Claimant required any form of care to maintain MMI from the effects of his industrial injury. He remarked that it was Claimant's responsibility to improve his conditioning and endurance through a home exercise program. The persuasive medical opinions of Drs. Cebrian and Burris reflect that Claimant has failed to demonstrate that he is entitled to receive medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Accordingly, Claimant's request for maintenance medical benefits is denied and dismissed.

Disfigurement

16. Section 8-42-108(1), C.R.S. states that if a claimant "is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view" he may receive a disfigurement award "in addition to all other compensation benefits provided in this article." As found, Claimant has established by a preponderance of the evidence that he is entitled to a disfigurement award for his left ankle. On November 6, 2020 Claimant underwent left ankle surgery as a result of his January 29, 2020 admitted industrial injury. As a result of the surgery, Claimant has four scars and a slight limp. He specifically has a long scar along his left ankle measuring approximately 2 and 1/4 inches long by ½ inch wide. The scar is a bit raised and brownish in color. Moreover, Claimant has two small circular scars and one scar that is approximately 1/2 inch in length. Claimant's surgical scarring is visible and constitutes serious permanent disfigurement about a part of the body normally exposed to public view. Furthermore, Claimant exhibited a noticeable limp while walking. Based on Claimant's surgical scarring and limp, he is entitled to a disfigurement award in the amount of $1,800.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to convert his 7% left lower extremity scheduled impairment to a 3% whole person rating is denied and dismissed.

2. Claimant's request for maintenance medical benefits is denied and dismissed.

3. Claimant shall receive a disfigurement award in the amount of $1,800.00.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-197-384-001

ISSUE

1. Did Claimant prove by a preponderance of the evidence that he suffered a compensable work injury on February 3, 2022?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 57 year-old man who is a Lieutenant with the Denver Fire Department. Claimant has worked for Employer for 17 years. Claimant credibly testified that Employer requires him to work out one hour per shift.

2. On February 3, 2022, Claimant was walking on the elliptical machine at the firehouse. About eight minutes into his workout, Claimant felt a pain in his chest above his heart. Claimant's colleague checked his blood pressure and it was 166/110, so the paramedics were called. When the paramedics arrived, Claimant's blood pressure had gone up to 178/120. The paramedics recommended that Claimant go to the emergency room because of his elevated blood pressure.

3. The paramedics transported Claimant to Denver Health. According to the Emergency Department report, Claimant had "left-sided exercise-induced chest pain with radiation to left shoulder." Claimant told the physicians that over the past few months his blood pressure had been "slowly creeping up." According to the Emergency Department record, Claimant's chest pain resolved after 10 minutes of rest. In the ambulance he received 324 mg Aspirin and 0.4 mg nitroglycerin. The Emergency Department noted Claimant had no prior history of chest pain, a normal ECG, normal blood work (troponin protein), and no evidence of a pulmonary embolism. (Ex. B).

4. The hospital discharged Claimant and instructed him to see his primary care physician to coordinate outpatient cardiology follow up and cardiac risk stratification. (Ex. B).

5. Claimant testified that on-the-job injuries are to be reported via the City of Denver's OUCH line. Right after being discharged, Claimant contacted the OUCH line to report his injury for workers' compensation purposes. Claimant explained that he was not able to call the OUCH line prior to seeking treatment because the paramedics took him to the Emergency Room. Claimant reported that he was "walking on the elliptical machine to start [his] morning workout . . . and [he] started experiencing tightness and pain in [his] chest and around [his] heart." Claimant was advised to see one of the following doctors at COSH: Koval, Pula, Mankowski, or Keen.

6. Claimant saw ATP, Joan Mankowski, M.D. at COSH that same day. Dr. Mankowski diagnosed Claimant with chest pain, unspecified. Dr. Mankowski noted that based upon the history Claimant provided, his chest pain occurred while walking on the treadmill, and there was no unusual exertion. She further noted "[c]hest pain is a symptom, etiology unclear, as is cause of his HTN. His symptoms while manifested at work, are not necessarily work related." Given Claimant's hypertension, Dr. Mankowski instructed Claimant to contact his primary care physician for further evaluation, and work clearance. (Ex. C).

7. Claimant testified that he told his immediate supervisor he was not cleared to work. This was reported to Captain Erik Haag who recommended that Claimant see Dr. Koval. Claimant testified that he saw Dr. Koval on February 8, 2022, and she recommended multiple tests. Claimant testified that he followed the recommendations of Dr. Koval since she was one of names given by the OUCH line, and she was recommended by Captain Haag. Dr. Koval, however, is not Claimant's primary care physician.

8. Claimant testified that he has returned to work and has had no similar incidents.

9. The ALJ finds that Claimant did not have a diagnosed injury. At the time Claimant experienced chest pains, he had just begun his workout by walking on the elliptical. There is no evidence that this form of exercise required any unusual exertion.

10. The ALJ finds that Claimant did not suffer a compensable work injury on February 3, 2022.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among

other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

For an injury to be compensable it must arise out of, and in the course of, employment. § 8-41-301(1)(c) C.R.S. These are two separate requirements that create a two-pronged test for compensability. "In the course of" refers to the time, place and circumstances under which a work-related injury occurs. *Wild West Radio, Inc. v. ICAO*, 905 P.2d 6 (Colo. App. 1995). "Arising out of" deals with the casual connection between the employment and injury. *Gen. Cable Co. v. ICAO*, 905 P.2d 6 (Colo. App. 1995). The "arising out of" element requires that an injury have its origin in the employee's work-related functions and be sufficiently related to those duties to be considered part of the employee's service to the employer. *Price v. ICAO*, 919 P.2d 207 (Colo. 1996).

Claimant has the burden of proving by a preponderance of the evidence that his injury arose out of the course and scope of his employment. §8-41-301(1), C.R.S.; see *Younger v. Denver*, 810 P.2d 647 (Colo. 1991) and *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier of fact, after consideration of all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). Claimant also maintains the burden of proof to establish that the disability and need for treatment is proximately caused by the injury or occupational disease arising out of and in the course of employment. *Id*. citing *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985).

Here, claimant was in the course of his employment when he experienced chest pain and high blood pressure. The question that must be resolved is whether Claimant is able to prove the "arising out of" prong of the compensability test. Arising out of requires a connection between the employment and the injury. Here, there is no diagnosed injury, only Claimant's chest pain and high blood pressure, both of which resolved. Without an injury, the arising out of prong cannot be satisfied. Even if experiencing chest pain and high blood pressure is considered an injury for the purposes of a compensability determination, the medical records, the quick resolution of the chest pain, and Claimant's

own statement that his blood pressure has been increasing over time, show there is no connection between the underlying condition and Claimant's employment.

The mere fact that a claimant experiences symptoms at work, does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury." *See also F.R. Orr Constr. v. Renta*, 717 P.2d 965 (Colo. App. 1995) (the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment).

In this case, Claimant did not sustain an injury in the workplace. Claimant experienced a symptom (chest pain and high blood pressure) at work and sought treatment through Employer. The symptoms were preexisting and underlying. Both the treating physician and the Emergency Department physicians could find no relation between the symptoms and Claimant's employment, nor could they diagnose any injury or illness. In this case, Claimant's condition was the natural progression of a pre-existing condition that was not altered by his employment and therefore cannot be found to have arisen out of employment.

Because there was no injury, only the natural progression of a pre-existing condition, this claim cannot be found compensable and must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits under the Act is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 15, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant overcame Dr. Hughes' DIME opinion on maximum medical improvement ("MMI") and permanent impairment by clear and convincing evidence.

II. Whether Claimant proved she is entitled to additional temporary indemnity benefits.

III. Whether Claimant proved additional medical treatment is reasonable, necessary and related to her work injury.

FINDINGS OF FACT

1. Claimant is a 73-year-old female who worked for Employer as a housekeeping attendant.

Prior History

2. Claimant's pre-existing conditions include endocrine disease, hypothyroidism, hyperlipidemia, GERD, musculoskeletal disorder, fibromyalgia, arthritis, high cholesterol, sinusitis, ear trouble, IBS, and headaches.

3. On June 17, 2009 Claimant reported to her primary care physician ("PCP") at Kaiser Permanente that she had an MRI of her head/ears approximately two years prior.

4. On February 9, 2010 PCP records note Claimant saw an ear, nose and throat ("ENT") specialist in 2007. Claimant reported that she wakes up every day with a headache that is gone by 10am for which she sometimes takes Advil. She reported that every day her entire body hurt, complaining that "everything hurts." Claimant reported feeling ear, mouth and nose problems. The PCP noted that Claimant was "Asking to be evaluated for disability – hurts too bad, is too fatigued to do job in housekeeping." (R. Ex. A, p. 8).

5. On May 19, 2010, Claimant reported complaints of arthritis to her PCP. She reported that she stopped taking arthritis medications because could not sleep and was so tired and got dizzy at work. Claimant complained of pain in her back, hips, knees, ankles, elbows, shoulders and hand. She requested a lung x-ray for tingling and numbness. She was assessed with fibromyalgia.

6. On August 30, 2010 Claimant presented to her PCP reporting “more and more problems.” (R. Ex. A, p. 18). Claimant reported that her right eye teared for two days in the morning and that she had a bit of headache on that eye and could not see the same out of the eye. She further reported severe pain in her neck and head and requested a CT scan or MRI of her head. She was quoted in the medical note as saying, “I want to get SSI and stop working – will you do the disability forms or write a letter to support me stopping working.” (Id.)

7. On December 2, 2011, Claimant reported having problems with her right eye. She reported that every day her vision worsened and that her right eye was blurry. Claimant was taking medication for depression.

8. July 25, 2012 Claimant complained of a stabbing pain in her left ear and ongoing headaches.

March 6, 2013 Work Injury

9. On March 6, 2013 Claimant sustained an admitted industrial injury when she tripped over a power cord and fell, striking her head on the concrete floor.

10. Claimant was taken to the emergency room at St. Anthony Hospital that same day. She reported falling backwards and hitting her head on the floor. Claimant complained of a slight headache and some neck soreness, but denied loss of consciousness, blurry vision, dizziness and weakness of her extremities. PA Mary Stults noted Claimant was not displaying any signs of symptoms of a concussion at the time. On neurological examination, Claimant was alert and oriented with no focal neurological deficits and was ambulatory with no problems. A CT scan of the head revealed a small to moderate right parietal subgaleal hematoma with no evidence of acute bony or acute intracranial injury, mass lesion, extra-axial fluid collection or acute hemorrhage, or acute ischemia or infarction. Incidental benign right basal ganglia calcification was noted. A cervical spine x-ray revealed facet arthrosis with no evidence of an acute fracture or subluxation. Claimant was diagnosed with closed head injury, subgaleal hematoma, and cervical sprain. She was prescribed Tylenol, discharged from care, and ordered to follow-up with her primary care physician.

11. A Kaiser note dated March 6, 2013 indicates Claimant’s daughter called Kaiser from the St. Anthony Hospital emergency room regarding the injury. It was noted Claimant was not having significant symptoms at the time other than a mild headache.

12. Claimant subsequently underwent evaluation and treatment at Concentra. On March 7, 2013, Claimant presented to Matt W Slaton, PA-C with complaints of pain in the head, upper right back, right shoulder and neck. Claimant reported falling backwards and hitting the back of her head and right side. On examination, PA Slaton noted decreased neck range of motion with pain on the posterior occipital temporal area and palpable muscular tenderness bilateral trapezius through the scapular region. Neurologic exam was normal. There was limited range of motion in the trunk. Palpation of the spine was

positive for pain at C7-T9 on the right. Cervical range of motion was decreased with pain. A large “goose egg” was noted over the occipital temporal area. PA Slaton gave the following assessment: concussion with no loss of consciousness, contusion of the thorax, trapezius strain, thoracic strain, and cervical strain. He prescribed Claimant Skelaxin and tramadol and removed Claimant from work.

13. Claimant returned to PA Slaton on March 11, 2013 reporting improvement in back pain but continuing stiffness and soreness in her neck. Claimant reported feeling better and that her symptoms were improving. PA Slaton referred Claimant for physical therapy and released Claimant to modified duty with restrictions of no lifting more than 20 lbs., no walking or standing more than 45 minutes per hour, no reaching over shoulder height, and sitting 25% of the time.

14. On March 13, 2013 Employer offered Claimant modified duty within her temporary restrictions.

15. On March 25, 2013 Claimant sought treatment at the emergency department of Lutheran Medical Center with complaints of headaches and dizziness and memory loss. Memory and speech were noted as normal. Claimant was diagnosed with post-concussion syndrome and a cervical strain and referred back to her workers’ compensation provider.

16. Later on March 25, 2013 Claimant saw Gary A. Landers, M.D. at Concentra reporting dizzy spells and periods of confusion. A CT scan of the brain with no contrast was obtained. The impression was: 1. No acute intracranial abnormality detected. No evidence for skull fracture or acute intracranial hemorrhage; and 2. Suspect changes of mild chronic microangiopathic ischemic disease. X-rays of the cervical spine revealed multilevel sclerotic facet arthrosis with no fractures. Dr. Landers assessed post-concussion syndrome and increased Claimant’s restrictions to no standing or walking for more than four minutes per hour.

17. A physical therapy note from Concentra dated April 10, 2013 notes Claimant had thus far attended seven sessions. Claimant was reporting throbbing and tingling on the right side of her head, neck pain, and dizziness.

18. On April 11, 2013 Claimant again presented to the emergency department at Lutheran Medical Center with complaints of dizziness. Claimant felt as though the muscle relaxants she was taking might be too strong. Examination of the neck revealed normal range of motion and her head was atraumatic. A CT scan of the head was obtained and compared to the March 25, 2013 CT scan. No significant intracranial abnormalities were noted. The emergency department physician opined Claimant was likely suffering from post-concussion syndrome but may also be feeling dizzy due to muscle relaxers. Claimant was diagnosed with dizziness and dehydration and discharged.

19. On April 12, 2013 Claimant presented to Julie Parsons, M.D. at Concentra with complaints of dizzy spells, increased forgetfulness and emotion, anxiety, depression, and

continued head and neck symptoms and balance issues. On examination Dr. Parsons noted an antalgic gait and positive Romberg's test. Dr. Parsons further noted Claimant could not do finger-to-nose without overshooting dramatically, trouble with diadochokinesis, and an inability to walk heel-to-toe. Dr. Parsons assessed Claimant with a closed head injury, concussion, and cervical strain. She restricted Claimant to working 100% seated duty and instructed Claimant to stop physical therapy. Dr. Parsons referred Claimant to John Burris, M.D., a physical management specialist. Dr. Burris is Level II accredited.

20. Claimant presented to Dr. Burris on May 14, 2013. Regarding the mechanism of injury, Claimant reported striking her back and the back of head on the floor, losing consciousness, and waking up while seated in a chair. Claimant complained of 8/10 throbbing pain and burning sensation throughout her head and neck, dizziness, and difficulty ambulating. Dr. Burris noted Claimant appeared very somatically focused and displayed moderate pain behaviors. On examination, Dr. Burris noted Claimant appeared to be somewhat unsteady on her feet. Her head was atraumatic and neck displayed full range of motion. Neurologic exam was grossly intact. Dr. Burris diagnosed Claimant with a cervical strain and scalp contusion. He recommended Claimant undergo an ear, nose and throat ("ENT") evaluation to assess her vestibular system, as well as a neurologic evaluation. Claimant's work restrictions of 100% seated work continued.

21. On May 16, 2013, Stanley H. Ginsburg, M.D. performed a neurological Independent Medical Examination ("IME") at the request of Respondents. Dr. Ginsburg is Level II accredited. Claimant reported falling backwards and hitting her head on concrete and being rendered unconscious. Claimant complained of headache on the posterior right with pounding/tingling/burning, neck discomfort, poor balance, and difficulty ambulating. Dr. Ginsburg noted,

> When I asked the patient to ambulate, she staggered even with casual ambulation and staggered even more prominently when I asked her to tandem or assume a Romberg position. This occurred in a way that would cause her to fall if her balance were not good. I believed that her gait disturbance is, from my observation, not organic.

(R. Ex G, p. 116).

22. Dr. Ginsburg reviewed Claimant's medical records, including a CT scan of Claimant's brain and cervical spine imaging. He documented that motor examination was unremarkable except for finger-to-nose testing which demonstrated some marked abnormalities that were corrected when Claimant's eyes were open, which he felt was nonorganic. Dr. Ginsburg diagnosed Claimant with a work-related minor closed head injury and a cervical strain with minor radicular symptomatology. He noted that he was unsure if Claimant was rendered unconscious as a result of the fall, so it may be regarded as post-concussion syndrome. He further noted there were complaints of memory issues that were not expressed frequently, so he was unsure of the significance. Dr. Ginsburg concluded that there was no evidence of myelopathic process and the restriction of

Claimant's neck movement was variable and not accompanied by neurological abnormalities on examination with some degree of pain behavior. He opined, "Clearly her gait disturbance is not organically based, according to my observations, but one cannot rule out the possibility she has post-concussion vertigo, which would probable (*sic*) ear related rather than brain related." (Id. at p. 118). Dr. Ginsburg recommended performing an MRI with careful posterior fossa views. He stated that if the MRI results were negative, he recommended obtaining an opinion from ENT consultant due to Claimant's persistent symptoms and possible consideration of some vestibular therapy. He recommended Claimant continue conservative therapy for her cervical strain.

23. On May 23, 2013, Claimant presented to Level II accredited Alan Lipkin, M.D. for an ENT evaluation. Claimant reported to Dr. Lipkin falling and hitting the right side of her head on the concrete floor and losing consciousness for an unspecified amount of time. Claimant reported that she began noticing dizziness about a week after the incident. She also complained of occasional right-sided ringing tinnitus. On examination, Dr. Lipkin noted Claimant walked using a walker with wide-based station and unsteady without lateralization. Dr. Lipkin performed a series of tests that revealed bilaterally symmetrical sensorineural hearing loss, but concluded that the test findings revealed that it was unlikely Claimant sustained a catastrophic vestibular injury. He diagnosed Claimant with vertigo, tinnitus, dizziness and giddiness, and cerumen impaction. Dr. Lipkin recommended that some additional vestibular testing be completed on a later date and that Claimant return after the testing had been completed.

24. Claimant underwent a neurological evaluation with Level II accredited Eric K. Hammerberg, M.D. on June 20, 2013. Claimant reported losing consciousness during the work incident. Her major symptoms were dizziness and light-headedness. Claimant complained of having trouble walking using a cane and that her head had a hot and burning sensation. Dr. Hammerberg's impression was: post-traumatic headache with cervical strain and post-traumatic vertigo. He recommended Claimant take analgesic medication as needed and continue physical therapy for the cervical spine. He opined that Claimant's major problem at the time appeared to be post-traumatic vertigo and stated he would defer to Dr. Lipkin for further evaluation and treatment in that regard.

25. On June 26, 2013, Claimant underwent a vestibular evaluation by Cara Fiske, Au.D. Dr. Fiske noted the following tests were performed: video onystagmogram; fistula test; brainstem evoked response; electrocochleography; spont nystag test with eccentric gaze fixation; nystag with red; positional nystag test, minimum of 4 positions; with red optokinetic nystag test; biodirectional foveal/peripheral stimulation, with red oscillating tracking test. All testing could not be completed due to Claimant's inability to stand without assistance and her keeping her eyes open. Dr. Fiske noted all gaze, positional and fistula tests were within normal limits. The right Dix-Hallpike was within normal limits, however the left could not be completed due to neck pain. Saccades and pendular tracking were abnormal. Bilateral bithermal air caloric stimulation revealed robust and symmetric labyrinthine function. Claimant was to follow-up with Dr. Lipkin regarding the test results.

26. On July 2, 2013, Claimant saw her PCP Heather Shull, M.D., at Kaiser for an annual exam. Claimant presented without acute complaints. It was noted Claimant stopped taking citalopram and her pain and depression were feeling better.

27. On July 23, 2013, Claimant returned to Dr. Lipkin, who reviewed the recent balance tests. He noted the Brainstem Auditory Evoked Response test and electrocochleography were normal. The electronystagmography was limited testing due to mobility and neck issues. Dr. Lipkin noted that symmetrical calorics and tracking problems could suggest central issues. Audiometrics showed symmetrical sensorineural loss. Dr. Lipkin's assessment continued to be vertigo, tinnitus, dizziness and giddiness, and sensorineural hearing loss. He again opined that it was unlikely Claimant sustained a catastrophic vestibular injury. He noted that if Claimant's problems persisted, the next step would be vestibular rehabilitation/physical therapy.

28. From August 20, 2013 through March 25, 2014 Claimant attended multiple sessions of vestibular rehabilitation/physical therapy at Select Physical therapy. From August 20, 2013 through March 25, 2014 Claimant presented for vestibular rehabilitation/physical therapy for a total of eighteen (18) visits. Rehab/therapy consisted of: Gait Training, Active Assistance Range of Motion Activities, Active Range of Motion Activities, Adaptive Equipment Education, Client Education, Home Exercise Program, Manual Range of Motion Activities, Manual Therapy Techniques, Neuromuscular Re-Education, Passive Range of Motion Activities, Proprioceptive/Closed Kinetic Chain Activities, Soft Tissue Mobilization Techniques, Stretching/Flexibility Activities, Therapeutic Activities, and Therapeutic Exercise. The physical therapist noted, "Pt seems to ambulate with less unsteadiness and less need for support when unaware that she is being observed versus requiring contact guard when observed." (R. Ex. J, p. 149). As of March 25, 2014, Cliamant was demonstrating slight improvement with decreased dizziness and improved balance and was discharged from care.

29. Dr. Burris reexamined Claimant on August 27, 2013. He noted that an August 12, 2013 brain MRI was essentially normal, but did identify some nonspecific white matter changes with no evidence of acute abnormalities. MRI of the cervical spine obtained on August 12, 2013 showed some degenerative changes with a small shallow disk protrusion at C6-7, but no clear evidence of foraminal stenosis. Dr. Burris noted that the most recent diagnostic testing was somewhat indeterminate as to why Claimant continued to have the severity of her reported symptoms. He opined that it may be possible Claimant has whiplash syndrome from the work injury, which could attribute much of her complaints, including dizziness. Dr. Burris recommended Claimant undergo an evaluation with an interventional spine specialist and noted she may be a candidate for facet injections or medical branch blocks. He referred Claimant to John T. Sacha, M.D. Dr. Sacha is Level II accredited.

30. Claimant first presented to Dr. Sacha on September 16, 2013. Dr. Sacha noted complaints of right neck pain, right-sided headaches, and mild dizziness. He noted there were no problems with concentration, memory or following directions. On examination, Dr. Sacha documented moderate to severe pain behaviors and a non-physiologic antalgic

gait. Dr. Sacha's impression was: cervical facet syndrome with headaches and reactive depression that is multifactorial. He opined there was no evidence of a closed-head injury at this point. He agreed with Dr. Burris that Claimant has cervical facet syndrome and dizziness secondary to that, which he noted happens frequently with whiplash syndrome. Dr. Sacha recommended Claimant take antidepressants and undergo a trial of cervical facet injections.

31. At a follow-up evaluation on October 7, 2013, Dr. Sacha noted Claimant decided not to proceed with the facet injections and thus was likely at MMI. He noted moderate pain behaviors and that Claimant's gait was normal when using her cane. Dr. Sacha remarked that Claimant was now seven months into her injury and had less than 10% improvement in her overall symptoms by her own report. Dr. Sacha's final impression was cervical facet syndrome with headaches and dizziness secondary to that. He discharged Claimant from his care and noted facet injections could be performed as maintenance treatment in the event Claimant chose to proceed with the injections at some future point.

32. On October 8, 2013, Claimant saw Dr. Burris and reported improvement with therapy. Dr. Burris noted that Claimant appeared to be responding to change of medicines and conservative measures directed at her neck. Work restrictions were changed to sitting 90% of the time.

33. Dr. Burris placed Claimant at MMI at a follow-up evaluation on November 19, 2013. Claimant reported improvement in her symptoms with no new complaints. She continued to note some dizziness when looking up and 3/10 neck pain and mild headaches. Dr. Burris noted, "Dr. Sacha describes (*sic*) all of her symptoms to cervical facet syndrome and therefore to avoid duplication of impairment, only a cervical spine impairment will be performed." (R. Ex. D, p. 77). Using the AMA Guides, Dr. Burris assigned a total 10% whole person impairment, comprised of 4% impairment under Table 53(II)(B) and 6% for range of motion deficits. He opined Claimant reached MMI as of November 19, 2013 for her work-related neck injury. Permanent work restrictions were assigned to limit overhead activities that cause an extension of the neck and exacerbation of symptoms. Claimant was to sit 25% of the time. As maintenance care, Dr. Burris recommended finalizing her remaining physical therapy sessions, medication management for three to six months, and injections within the next six months if Claimant changed her mind and wished to proceed with the injections. He noted no other maintenance care was otherwise required.

34. On January 9, 2014, Employer provided Claimant with modified duty within her temporary restrictions.

35. On June 5, 2014, Claimant underwent a DIME with Ronald J. Swarsen, M.D. Dr. Swarsen gave the following assessment: trip and fall; closed head injury with concussion without loss of consciousness; dizziness, likely vestibular in origin-partially treated; neck sprain with persistent pain; persistent head pain and point of impact; and symptoms magnification, depression with anxiety. He opined that Claimant was not at MMI with respect to her head and neck injuries. He provided a provisional impairment rating of 24%

whole person of the cervical spine (consisting of 21% for range of motion deficits and 4% for cervical specific disorder). He noted he did not provide a provisional mental impairment rating as Claimant was not at MMI and he did not have the applicable records for review. Dr. Swarsen recommended Claimant complete vestibular therapy and undergo a follow-up ENT evaluation. He noted Claimant's symptoms likely included a psychological component that had not yet been addressed comprehensively, and recommended Claimant undergo evaluation with a Spanish-speaking psychologist and at least six to eight sessions of counseling. He further recommended a one-time consultation with an ophthalmologist. Dr. Swarsen noted future medical needs of physical therapy twice a week for two months, medication for the next three to six months, and facet injections in the next six months.

36. On July 21, 2014, Claimant had declined to return to modified duty, but was still considered an employee of Employer.

37. On September 5, 2014, Claimant again declined to return to modified duty and voluntarily resigned from Employer.

38. On September 16, 2014, Claimant sought treatment at Swedish Medical Center with complaints of dizziness, headaches, unsteady gait and memory loss. CT scans of the head and neck revealed of the head revealed coarse calcification within the inferior aspect of the right basal ganglia with differential diagnosis and atherosclerotic disease without hemodynamically significant stenosis. There was atherosclerotic disease without hemodynamically significant stenosis.

39. On September 29, 2014, Stephen A. Moe, M.D. performed a psychiatric IME at the request of Respondents. Dr. Moe is board certified and Level II accredited. Based on his interview of Claimant and review of Claimant's records, Dr. Moe concluded that Claimant's current complaints suggesting multiple disabling neurological problems could not be explained by the physical injuries from the March 6, 2013 work injury. Dr. Moe explained that the available data was insufficient to either definitively determine or rule out a concussion, but that if Claimant did suffer a concussion, it was at the mildest end of the spectrum of severity, given that the impact did not result in loss of consciousness and it resulted in no more than a very brief period of a change in her cognitive functioning. Dr. Moe opined that Claimant's injury could not account for the problems to which Claimant attributes her disability. He opined that any probable neck injury was mild and not likely to cause significant pain or a sense of dizziness that persists for 18 months post-injury. He noted that, while vestibulopathy has not been definitively ruled out, if present, it was likely mild.

40. Dr. Moe noted Claimant reported multiple symptoms in the absence of any particular illness or injury, that her subjective experience of symptoms at times involved unusual characteristics, that a number of her pre-injury complaints were similar to those that have been her focus since the work injury, and that Claimant has previously expressed the desire to be declared disabled. He opined that Claimant suffered a mild work-related injury that subsequently grew into widespread symptoms and severe

disability, which represented an idiosyncratic, rather than normative, outcome. He opined that a reaction to a return to work and anxiety about her symptoms resulted in the transformation from symptoms that were limited in scope and expected to be time-limited to a presentation suggestive of profound disability.

41. Dr. Moe further opined that Claimant does not suffer from a psychiatric disorder manifested in overt depressive or anxiety symptoms. He noted that the contribution of non-injury factors to Claimant's current symptoms and impairment is great. He concluded that Claimant's current complaints are not caused by the work injury and strongly doubted that any interventions are likely to be of benefit so long as Claimant's claim remains unresolved. He disagreed with Dr. Swarsen that Claimant's condition is related to the work injury, opining that her symptoms were largely the product of reversible psychological factors.

42. On November 12, 2014, Douglas C. Scott, M.D. performed an IME at the request of Respondents. He assessed Claimant with a closed heard injury with possible post concussive syndrome; subgaleal hematoma without skull fracture, intracranial hemorrhage, or intracranial space occupying lesion with residual skin sensitivity; cervicothoracic muscle strain; and possible post traumatic vertigo with balance issues. He opined that Dr. Swarsen did not err in finding Claimant was not MMI or in his provisional impairment rating.

43. On November 21-22, 2014 surveillance video was obtained of Claimant. Claimant is observed at times walking without assistance and at other times using a cane, wall or shopping cart for assistance.

44. Dr. Sacha reviewed the video surveillance of Claimant as well as Dr. Swarsen's DIME report and issued a report dated April 29, 2015. He noted that on the surveillance video, Claimant had "quite good gait pattern was able to bend and twist without difficulty and hold balance." (R. Ex. K, p. 166). Dr. Swarsen remarked that Claimant's presentation in the surveillance video was clearly different than when he saw Claimant on April 22, 2015. He concluded, "This patient clearly has a significant nonphysiologic presentation in the office compared to what is viewed on the surveillance video. The patient clearly has no evidence whatsoever of any problems with balance or difficulty standing or walking, and it calls into question many of this patient's complaints." (Id.) He opined that "there is unlikely any organic or objective issues at this point related to this Worker's Compensation claim." (Id. at 168).

45. On June 11 and June 30, 2015, Claimant presented to Lupe Ledezma, Ph.D. for a Spanish-speaking psychological evaluation, per the referral of Dr. Sacha. Dr. Ledezma wrote a report dated June 30, 2015. Claimant's chief complaints included depression, anxiety, cognitive issues, and physical symptoms. Dr. Ledezma noted that Claimant was very unsteady and swayed while standing or walking and held onto furniture or walls when walking. She was able to recall 3/3 words on immediate recall. After 30 minutes, she remembered 1/3 words with two intrusions. She was unable to perform simple or complex mental calculations. Her judgment abilities and abstraction abilities were poor. Her short-

term memory skills were fair, but her mental control skills were poor. She was able to follow simple and multiple-step commands well. Dr. Ledezma further noted that on the physical symptoms scale Claimant scored in the 94th, 97th and 90th percentile indicating that she focuses mainly on her subjective pain complaints and deems them the most limiting factor in her life. Depressive and anxiety scales were also high, showing lack of motivation and fear of further pain. Her dependency score was in the high range. She noted Claimant is pessimistic about her future and feels she is incapable of managing her problems and looks to others for help. She is passive and unassertive. Dr. Ledezma wrote that, of greater concern, is that Claimant may be passive in her approach to her recovery and functioning, leaving it to others to "cure" her. She lacks trust in her providers and does not feel they are acting in her best interest. She noted significant psychological overlay to Claimant's physical issues. Dr. Ledezma diagnosed Claimant with major depression, moderate; generalized anxiety disorder; and psychological factors affecting other medical conditions. She recommended Claimant undergo psychotherapy, continue antidepressant medication, and undergo neuropsychological testing in Spanish to determine the presence of a neurocognitive disorder and provide treatment recommendations.

46. On June 25, 2015, Dr. Sacha issued an addendum after reviewing Claimant's medical records, Dr. Swarsen's DIME report, and video surveillance of Claimant. He opined, "there is unlikely any organic or objective issues at this point related to this Worker's Compensation claim." (R. Ex. K, p. 170). He agreed that Dr. Burris provided appropriate care at all points. Regarding whether he agreed or disagreed with Dr. Swarsen's DIME conclusion, Dr. Sacha stated "I wholly disagree with Dr. Swarsen, and my guess is that Dr. Swarsen did not have all the medical records or did not pick up that the patient has such a non-physiologic presentation, and he may not have seen the surveillance video on this patient." (Id. at 171). Dr. Sacha concluded Claimant was at MMI and did not require further medical care, including any further vestibular physical therapy and rehabilitation.

47. Claimant continued to see Dr. Ledezma on July 23, September 1, September 17, and October 8, 2015. She continued to report headaches, dizziness and cognitive issues, with intermittent improvement. Dr. Ledezma continued with her same recommendations.

48. On November 3, 2015, Dr. Hughes performed a follow-up DIME, as Dr. Swarsen had retired in the interim. A Spanish interpreter was present at the evaluation. As part of his evaluation, Dr. Hughes reviewed Claimant's medical records, including, *inter alia*, the March 6, 2013 emergency room report, Concentra records, Dr. Lipkin's May 23, 2013 report, the neurological reports of Drs. Ginsburg and Hammerberg, Dr. Burris' reports, Dr. Swarsen's DIME report, Dr. Moe's report, Dr. Scott's report, Dr. Sacha's reports and Dr. Ledezma's June 30 and July 23, 2015 reports. Regarding the mechanism of injury, Claimant reported tripping and falling over computer cables and having progressive symptoms of hearing voices but not being able to see. Claimant continued to report right-sided 4/10 head pain, balance issues, depression and anxiety. Dr. Hughes noted Claimant reported to him having no past history of traumatic injuries, headaches, neurological conditions or depression. He remarked Claimant's history understated the

severity of her preexisting conditions, which included active problems of depression, fibromyalgia, and headache disorder.

49. On physical examination, Dr. Hughes noted Claimant had a flat affect and neutral mood but did not exhibit word-finding difficulties, bizarre thought process or flights of ideas. Claimant reported tenderness to palpation over her right temporal head. Regarding the cervical spine, Dr. Hughes noted,

> There is a rather remarkable amount of discrepancy between informally observed and formally measured cervical spine ranges of motion, with formal measurements being fairly consistent with those obtained by Dr. Swarsen, using dual inclinometers, with cervical spine flexion and extension maximally 32 and 28 degrees, right and left lateral flexion 26 and 25 degrees, right and left rotation of the head and neck 37 and 34 degrees. Informally, I observed full right and left rotation of the head and neck as well as full flexion chin to chest.

(R. Ex. O, p. 236).

50. He further noted bilateral finger-nose testing was intact, and Romberg testing was grossly abnormal with Claimant demonstrably unable to stand without her cane. Under general appearance, Dr. Hughes noted, “She ambulates with a cane in her right hand, lurching back and forth and nearly falling in the clinic. This is quite variable from observed ambulation out to her car, although she had the assistance of a young female who walked with her.” (Id.)

51. Dr. Hughes reviewed surveillance video of Claimant from November 21 and November 22, 2014, noting the video showed ambulation without difficulties and without a cane to mailbox, and ambulation using a cane and then in the store walking briskly without cane while holding onto her cart. He remarked that he did not observe Claimant demonstrating any problems with balance while getting items off shelves and putting them into the cart without use of her cane.

52. Dr. Hughes gave the following assessment:

> (1) Past medical history of a depressive disorder, on citalopram, as documented in Kaiser notes. (2) Past medical history of headaches. (3) Work-related fall with multiple injuries sustained on March 6, 2013. (4) Closed head injury, secondary to #3, with documented symptoms consistent with a post-concussive syndrome, but without objective evidence of residuals of traumatic brain injury. (5) Cervical spine sprain/strain, resolved. (6) Progressive balance problems of unclear etiology with psychiatric features that suggested to Dr. Moe that she had a conversion disorder. (7) Hypothyroidism.

(Id.)

53. Noting "[Claimant] presents with a perplexing medical history that contains inconsistencies and non-documentation of persistent organic pathology," Dr. Hughes agreed with Dr. Sacha that residuals of all of Claimant's injuries reached MMI by April 29, 2015. (Id.) He opined that Claimant's previous cervical spine impairment had resolved, as there was no mention of cervical spine pain in recent medical records, during his interview of Claimant or on Claimant's pain diagram completed for his evaluation. He added, "This is further clouded by rather extreme inconsistencies between informally observed and formally measured cervical spine ranges of motion." (Id.)

54. Dr. Hughes stated he could not provide a medical explanation for Claimant's progressive balance problems. He wrote,

> I agree with Dr. Moe that findings are "bizarre" and perhaps consistent with a conversion disorder. I am not sure if a permanent impairment rating can be assigned for a conversion disorder, as it is virtually indifferentiable in many cases from exaggeration of signs and symptoms for the purpose of secondary gain. I would leave this up to a board certified psychiatrist to sort out. It does not appear that Dr. Moe felt that [Claimant] had sustained a permanent psychiatric impairment as a result of her injuries of March 6, 2013.

(Id. at 237)

55. Dr. Hughes concluded that Claimant sustained no permanent impairment as a result of the March 6, 2013 work injury. He reiterated that Claimant's headaches and depression were well-documented pre-existing problems, and "I really cannot objectify any changes in her condition that [Claimant] has sustained as a result of her injuries of March 6, 2013." (Id.) Dr. Hughes stated he agreed with Dr. Ledezma's recommendations for further counseling, but explained that the need for such psychological treatment was not attributed to the March 6, 2013 work injury. He noted that although much of Claimant's treatment appeared to be reasonable, it did not appear to be related to Claimant's March 6, 2013 work injury.

56. On November 12, 2015 Respondents filed a Final Admission of Liability ("FAL") admitting for $25,186.20 in temporary benefits ending April 28, 2015, but zero percent rating for permanent impairment benefits. Claimant objected to the FAL and applied for a hearing to challenge the DIME.

57. Claimant returned to Dr. Ledezma on December 14, 2015 Ledezma reporting decreased neck pain and stiffness but poor mood and increased depressive symptoms. Claimant feared she would worsen in the near future. Dr. Ledezma continued to recommend neuropsychological and follow-up, pending authorization of continued treatment.

58. Claimant continued vestibular rehabilitation through her personal health insurance with Heather Campbell, P.T. and other therapists. Claimant began treating with PT Campbell on May 5, 2016. Ms. Campbell's impressions included impairment in deceleration of head, adversely affecting gait stability; suggestion of otolithic impairment and central organization impairment; persistent recurrent right head scalp dysesthesia and headache with balance challenges due to co-contraction of neck musculature. Claimant presented for physical therapy on May 12, May 26, June 2, June 6, and June 16, 2016.

59. On September 16, 2016 PT Campbell issued a written report at the request of Claimant's daughter. PT Campbell reviewed records provided to her by Claimant's daughter, as well as Dr. Benson's reports, an IME report of Dr. Moses, and surveillance video of Claimant. She noted that Claimant's findings are consistent with reported head impact injury resulting in balance, oculomotor and processing disorders. She opined that Claimant's significant emotional overlay does not negate the underlying physical and functional impairments. PT Campbell concluded that the four months of physical therapy with her had resulted in improvements in various areas. She opined that Claimant remains impaired in deceleration of head, adversely affecting gait stability, suggesting otolithic impairment and central organization impairment; scalp dysesthesia and headache with balance challenges. PT Campbell recommended continued vestibular rehabilitation therapy. She noted that she observed the surveillance video of Claimant and Claimant's gait pattern and reliance on touch or support from a cane or grocery cart was the same gait pattern she observed in her clinic.

60. On June 9, 2016, Randall Benson, M.D. performed a neurological IME at the request of Claimant. He later issued a report. Dr. Benson reviewed Claimant's medical records and conducted an advanced MRI including Susceptibility Weighted Imaging (SWI), Gradient Echo (GE), Quantitative Diffusion Tensor Imaging (DTI), and Fractional Anisotrophy (FA). Claimant reported issues with memory, depression, increased anxiety, balance issues, light aversion, occasional tinnitus, and sleeping issues. Dr. Benson concluded that Claimant sustained traumatic brain injuries and continues to experience symptoms as a direct result of the work injury. He outlined five specific areas in support of his conclusion:

1) Biomechanical information along with the immediate alteration in sensorium. Dr. Benson summarized initial medical reports which noted complaints of blurry vision, dizziness, cervical spine pain, and memory loss, which he stated were characteristic of a TBI.

2) Post-traumatic symptoms, including those that are now permanent. Dr. Benson noted that Claimant endorsed various cognitive, psychological and physical symptoms including, *inter alia*, lower thought processes, issues with memory and multitasking and focus, fatigue, increased irritation, depression, balance issues, ringing in her ears, changes in vision, and gait disturbances.

3) Neurobehavioral findings on examination. Dr. Benson noted exam findings of decreased cognitive efficiency, mild PTSD, poor balance with retropulsion, and tremor, along with evidence of right hemisphere damage such as decreased empathy, social interaction and general change in personality.

4) Dr. Perrillo's August 26, 2016 neuropsychological assessment.

5) Neuroimaging. Dr. Benson opined that the combined findings of the imaging showed an acceleration/deceleration-induced closed head injury resulting in diffuse vascular and diffuse axonal injury to the bilateral cerebral hemispheres.

61. On June 23, 2016, Richard J. Perrillo, Ph.D. performed a neuropsychological IME at the request of Claimant. Dr. Perrillo issued a report dated September 19, 2016. Part of the assessment was conducted with an interpreter. Claimant's results were compared with updated "NeuroNorma" norms for Spanish-speaking individuals. Dr. Perrillo diagnosed Claimant with: mild/moderate brain dysfunction and damage with significant changes in white matter affecting efficient brain connectivity and some aspects of prefrontal and frontal functioning consistent with the effects of brain damage and inconsistent with baseline compared to normal brain at Claimant's age. He noted that Claimant gave optimal or adequate effort on neuropsychological measures. Dr. Perrillo opined that Claimant is 100% disabled on both a neuropsychological and psychological level. He explained that loss of consciousness is not a clinical requirement to establish a concussion. Dr. Perrillo opined that the radiological scans as performed by Dr. Benson as well as the previous MRI are positive and consistent with Claimant's functional brain impairment results as revealed by her current neuropsychological test data. He concluded that, by all neuropsychological and neurological standards of definition, Claimant continues to suffer from mild brain damage, which does not appear to be resolving with persisting mild/moderate organic brain dysfunction and changes as evidenced by the objective neuropsychological test results. Dr. Perrillo noted that Claimant's scores showed Claimant has "accelerated aging" with a significant risk for early dementia. He opined that Claimant's brain functioning is worse than the average 70 year-old with normal brain functioning.

62. Dr. Perrillo noted that there was nothing in Claimant's background that would have predicted such cognitive changes other than her brain injuries and the overlapping effects of aging. He further noted that the accident parameters, as well as the current comprehensive examinations and the results from the various scans including DTI as performed by Dr. Benson were consistent with the effects of axonal shearing, axonal bundling and cellular disturbances leading to 'slowness' of response times and information processing speed. Dr. Perrillo opined that Claimant should start with neuroexercise as soon as it is reasonable, as well as psychological intervention for moderate anxiety and depression including PTSD.

63. On August 24, 2016, X.J. Ethan Moses, M.D. performed an IME at the request of Claimant. Claimant reported to Dr. Moses that she fell and struck the right side of head on ground and lost consciousness for maybe 10-15 minutes. She reported that she could

hear people around her at the time but could not see them, and that she could not remember much regarding what happened for the next three hours or so. Claimant complained of 4/10 head pain with burning and tingling sensations, memory loss, blurry vision in the right eye, and a balance disorder. Dr. Moses reviewed medical records, physically examined Claimant and gave Claimant a psychological assessment and functional assessment. His assessment was: head contusion resulting in occipital neuralgia; mild traumatic brain injury resulting in diffuse axonal injury noted on MRI with DTI causing memory loss, vertigo and emotional disturbances; cervical sprain aggravating pre-existing facet arthrosis; and symptom magnification, likely a combination of culturally normative expressions of loss and function, psychological factors adversely affecting recovery, and a pre-existing desire to discontinue working.

64. Dr. Moses opined that, while it was clear some symptom magnification was present, Claimant was inadvertently magnifying her symptoms in order to receive the care she believes she needs. He noted that surveillance video provided clear evidence of Claimant's need for assistance with ambulation at all times and showed Claimant stumbling several times in precisely the same way she stumbled during his evaluation. Dr. Moses agreed with Dr. Ledezma that Claimant is experiencing psychological distress due to physical limitations and pain, which he noted presents a psychological barrier to recovery and is likely heightened by her emotional disturbance due to her traumatic brain injury and possibly compounded by her desire to discontinue working.

65. Regarding the reliance on MRIs with DTI, Dr. Moses noted that the current MTG for traumatic brain injuries do not currently recommend MRIs with DTI to diagnose mild traumatic brain injuries because there were no studies validating their clinical use to differentiate with mild traumatic brain injury patients with cognitive deficits from those without. Dr. Moses noted, however, that the MTG were last revised November 2012, and since that time there have been multiple studies demonstrating the usefulness and effectiveness of MRIs with DTIs in diagnosing and stratifying the severity of mild TBI. He opined that the MRI with DTI performed by Dr. Benson provides significant evidence of the physiological basis for Claimant's reported symptoms. He remarked that the opinions of Dr. Moe and Dr. Hughes may have been different if they had access to these results, and if a neuropsychological evaluation had been accomplished.

66. Dr. Moses concluded that Claimant's current functional deficits are proximately related to the March 6, 2013 work injury. He opined that Claimant likely reached MMI for her aggravated cervical facet arthrosis, unless Claimant desired to undergo the injections previously recommended. He further opined that Claimant was not at MMI for her other conditions and recommended additional evaluation and treatment in form of a consultations with a neuro-ophthalmologist, a physical medicine and rehabilitation specialist with traumatic brain injuries, neuropsychological testing, and a functional capacity evaluation. He assigned a 24% whole person provisional impairment rating consisting of 15% for the cervical spine and 10% for loss of function due to the brain injury.

67. On September 15, 2016, Dr. Benson performed a neurobehavioral evaluation. Claimant reported hitting her head and her first memory being waking up in a chair with people around her. Claimant reported she could not see for the first 4-5 minutes and when her sight returned it was blurry. Dr. Benson noted that his examination revealed decreased cognitive efficiency; mild PTSD; evidence of hemorrhage in an area of brainstem (lack of balance/retropulsion); evidence of R-hemisphere (frontal/parietal) damage (decreased empathy, decreased social interaction/communication, general change in personality); and binocular visual dysfunction caused by the head trauma. He recommended that Claimant undergo a neuro-optometric evaluation and prescription for prism lenses, as well as a trauma protocol MRI.

68. On October 27, 2016, Dr. Benson issued a comprehensive medical report after reviewing Claimant's medical records. Dr. Benson opined that Claimant sustained a traumatic brain injury and continues to experience symptoms as a result of that injury, as evidenced by biomechanical information, post-traumatic symptoms, neurobehavioral findings, neuropsychological findings, and neuroimaging. Regarding biomechanical information, Dr. Benson explained that the medical records documented evidence of symptoms characteristic of a traumatic brain injury including, but not limited to, headache, blurred vision, dizziness, extremity weakness, cervical spine pain and reduced cervical range of motion, a 2 centimeter "goose egg" over the occipital area, and memory loss. He noted Claimant endorsed most cognitive, psychological and physical symptoms consistent with a traumatic brain injury. With respect to neurobehavioral findings. Dr. Benson noted examination findings included decreased cognitive efficiency, mild post-traumatic stress disorder, poor balance with retropulsion, tremor and evidence of right hemisphere(oval/parietal) damage manifested by increased empathy, social interaction/communication in general change in personality. Dr. Benson summarized and relied on Dr. Perrillo's neuropsychological assessment and his own neuroimaging findings.

69. On January 18 & 20, 2017, board certified Jose M. Lafosse, Ph.D. performed a neuropsychological IME at the request of Respondents. Dr. Lafosse issued a report dated February 7, 2017. Dr. Lafosse, a native Spanish-speaker, conducted the IME of Claimant entirely in Spanish. Claimant reported to Dr. Lafosse being rendered unconscious after falling backwards and hitting her head. Claimant complained of memory issues, depression, lack of motivation and socialization, and difficulty sleeping. She reported not having much difficulty with concentration or slower thinking speeds. Physical complaints included headache, dizziness, disequilibrium, neck pain and blurry vision. Claimant advised Dr. Lafosse that she had no difficulties with activities of daily living. Dr. Lafosse reviewed Claimant's records and identified several perceived issues with Dr. Perrillo's June 23, 2016 report. He noted Dr. Perrillo is not board certified in clinical neuropsychology, only used an interpreter for portions of the evaluation, and did not adequately consider Claimant's status as an older Spanish-speaking Latina female from Mexico with only six years of formal education in a very small farming community school in Mexico. He further noted that Dr. Perrillo provided tests to Claimant in English and had them interpreted by a person rather than using the available testing documents in her native language of Spanish. Further inadequacies noted by Dr. Lafosse included

comparing Claimant's test results to individuals with more and better quality education than Claimant to determine she had lower ability. Dr. Perrillo gave Claimant multiple computer-based tests, requiring the Claimant to respond quickly when she had no previous experience with such technology via computer, gaming system, TV interface or joystick usage.

70. Dr. Lafosse conducted 26 tests, all in Spanish. He performed seven performance validity tests, of which Claimant failed all seven. Dr. Lafosse explained that failure of two or three performance validity tests could indicate malingering and lack of effort. Dr. Lafosse noted that 93% of patients with dementia scored higher than Claimant did, which he opined supports the likelihood of malingering. He opined that Claimant's behavior during testing was disingenuous, with a lot of exaggerated shrugging, opinging of her hands, facial gestures and confused looks. He noted that Claimant's speech was normal and fluid on the first day of testing but markedly slower and more confused on the second day of testing. Dr. Lafosse concluded that Claimant was clearly not performing to her true capability.

71. Dr. Lafosse noted that on language tests conducted in her native language, Claimant was very slow to respond; however, in her normal daily conversation she did not show any signs of word-finding difficulty, nor did she report any word-finding difficulty in her everyday life, which would be expected with the severely impaired score she received on the examination. Claimant failed to even complete the NeSBHIS Block Design test that required her to manually manipulate blocks to create a particular spatial pattern, however she scored in the average range when performing the test for Dr. Perrillo. Dr. Lafosse noted that, when Claimant was aware he was observing her walking, she leaned on the wall with her hand and walked in a cautious manner. When Claimant was unaware he was behind her, she appeared to walk normally with a good and rhythmic pace, then when she became aware he was observing her, she began walking more slowing and her movements became more irregular.

72. Dr. Lafosse concluded that Claimant's premorbid level of intellectual ability is estimated to be in the low average range. Within this context, her current level of cognitive functioning is at least within normal limits as compared to Spanish-speaking Latina women of similar age and education. In light of the empirical evidence of underperformance the Claimant normal range performance may well be an underestimate of her actual ability level. The findings from this evaluation are inconsistent with Claimant's numerous cognitive complaints, and in fact, contradict them. Dr. Lafosse concluded that Claimant may have suffered a concussion, but at almost four years since the date of injury, would no longer be suffering symptoms. He stated several factors that could account for Claimant's prolonged complaints, including depression, somatic symptom disorder, "cognitive and emotional vulnerabilities" mentioned by Dr. Perrillo, pre-existing history of fibromyalgia, iatrogenic effects creating an expectation for prolonged symptomology and litigation. He opined that Claimant demonstrates cognitive functioning within normal limits and at least in the same range as her premorbid cognitive abilities.

73. On July 27, 2017, Dr. Hammerberg issued an addendum report after reviewing additional medical records. Dr. Hammerberg disagreed with the determinations of Drs. Perrillo and Benson. He explained,

> …Dr. Perrillo attributed all of Claimant's neurological symptoms to a traumatic brain injury, apparently believing that the increased T2 signal in the MRI scans represented axonal sheering rather than chronic microvascular ischemia secondary to the patient's hyperlipidemia; he apparently also believed that Dr. Benson had conclusively documented brain injury on the basis of diffusion tensor imaging (DTI). However, diffusion tensor imaging has not gained wide acceptance in the neurological community because, when it comes to evaluation individual patients in whom mild traumatic brain injury is suspected, it cannot distinguish adequately normal from abnormal. It fact, this case is an excellent example of why DTI studies are not helpful – Dr. Benson has apparently convinced himself that the patient has a traumatic brain injury, when in fact she's merely psychiatrically ill.

(R. Ex. U, pp. 22-23)

74. Dr. Hammerberg noted that DTI can have both false positives and false negative results and that the medical community has not embraced the medical studies outside of a research setting. He opined that none of the requests for additional treatment, including traumatic brain injury therapy, vestibular therapy, imaging, and lifetime maintenance and meds, are reasonable or necessary. Dr. Hammerberg opined Claimant did not suffer a traumatic brain injury, she has returned to her pre-injury condition, and her current complaints are not causally related to the March 6, 2013 work injury. He noted that individuals with traumatic brain injuries have cognitive symptoms immediately and then usually slowly improve, especially when the initial imaging studies are entirely normal. He explained that Claimant, to the contrary, has exhibited progressive worsening of her condition with bizarre highly variable symptoms and findings. Dr. Hammerberg stated that Claimant is at MMI without impairment consistent with the opinion of Dr. Hughes.

75. On October 16, 2017, Dr. Moe issued a supplemental report after reviewing additional records, including Claimant's IME reports and Dr. LaFosse's report, and surveillance video. He opined that the breadth, severity, duration and/or treatment-resistance of Claimant's complaints are grossly in excess of what is reasonably ascribed to the injury in question. Dr. Moe explained that such extensive symptomatology argues strongly against a medical explanation and instead to the influence of noninjury factors. He opined that Dr. Benson, Dr. Perrillo and PT Campbell ignore Claimant's transition from one with mid, episodic postural dizziness and a subjective sense of cognitive impairment in the weeks following the injury to someone who has subsequently reported significant balance problems, a dramatically abnormal gait, and severe cognitive deficits. Dr. Moe pointed out Claimant's inconsistent reporting of information i.e. loss of consciousness and loss of vision. He further noted that Claimant's gait was independently judged to be non-

physiological by Drs. Sacha, Ginsburg, himself, Dr. Hughes and Dr. Moses. He also noted that physical therapists commented on various inconsistent behaviors.

76. Dr. Moe explained that DTI research remains at a preliminary research level of understanding, and the papers referenced by Dr. Moses in support of using DTI implicitly or explicitly acknowledge that DTI as applied to concussions remains investigational rather than clinically applicable. Dr. Moe referred to two recent papers that he noted substantiate the reason that DTI is not an accepted diagnostic measure in assessing injured workers in Colorado. Dr. Moe opined that the DTI technique cannot be used diagnostically as of yet, and currently is only an investigational tool with no clinical utility at this time. He stated,

> In brief, whereas DTI is a sensitive measure for detecting changes in the structure of white matter tracts, the findings are highly nonspecific, insofar as all manner of causes can result in such changes, including non-medical conditions such as depression, PTSD, and low socioeconomic status. Hence the interpretation of positive DTI findings following a possible or confirmed concussion remains to be determined.
>
> ***
>
> Dr. Benson has sought to use DTI to detect at-most subtle microscopic structural changes to the axons in the brain ostensibly due to a concussion in the presence of grossly-apparent, pre-existing macroscopic axonal damage. Such a mission is impossible.

(R. Ex. W, p. 103)

77. Dr. Moe noted that Claimant's 8/12/2013, 9/17/2014, and 6/9/2016 MRIS were consistent in revealing the presence of white matter hyperintensities, and opined that it was probable the brain MRI findings are due to microvascular disease that resulted in grossly-apparent damage of the white matter. He opined that there is no evidence to support Dr. Benson's claim of evidence of hemorrhage in the brain stem. He disagreed with PT Campbell's assessment that Claimant lacked ability to perceive acceleration when she walked, noting that Claimant invariably is able to sense her movement in space and take appropriate corrective actions when she is about to fall. Dr. Moe again opined that Claimant's current complaints were not caused by the work injury. He concluded that Claimant has no incentive to recover as she would then be expected to return to work, and that her symptoms are largely the product of reversible psychological factors.

78. On November 28, 2017, board certified neuroradiologist Eric Nyberg, M.D. performed an independent medical record review at the request of Respondents. Dr. Nyberg concluded that there was no evidence of TBI on the initial CT scan of March 6, 2013, nor on the several subsequent CT scans and conventional MR examinations. He opined that there was no evidence of TBI or diffuse axonal injury (DAI) on subsequent conventional MR imaging performed by Dr. Benson on June 9, 2016, and that the MR

diffusion tensor imaging (DTI) study by Dr. Benson does not demonstrate evidence of TBI or DAI. Dr. Nyberg stated that the points elucidated by Dr. Benson failed to demonstrate evidence of a TBI in general, DAI in particular, and that his conclusions that perceived findings on the DTI to Claimant's fall is misguided. He opined that the methods used by Dr. Benson are seriously misguided, have no support in the scientific literature, and have no basis in clinical practice. He noted that the neuroradiology community has explicitly warned against the misuse and misinterpretation of the DTI data as committed in Dr. Benson's analysis.

79. On July 6, 2018, Dr. Hammerberg issued an addendum report after reviewing Dr. Nyberg's November 28, 2017 report and Dr. Moe's October 16, 2017 report. He agreed with the conclusions of both Dr. Nyberg and Dr. Moe, noting Claimant's presentation is indistinguishable from someone who is malingering.

80. On August 18, 2018, Dr. Nyberg issued a response to Dr. Benson's response regarding his initial opinion. Dr. Nyberg opined that there is no evidence of TBI on either the clinical MRI performed in 2013, or on the MRI performed by Dr. Benson in 2016. He noted that subcortical changes are highly characteristic for changes related to high blood pressure and high cholesterol, both of which Claimant has had for years. Dr. Nyberg explained that DTI will always pick up abnormalities found in a FLAIR image, as DTI magnifies at a greater scale than FLAIR – meaning if it is on the FLAIR it will show in a DTI – but not necessarily the other way around. Dr. Nyberg noted that calcification was evident, but not edema; without both, there is no evidence of a hemorrhage.

81. Surveillance video of Claimant's was taken September 1-3, 2019 and was viewed and discussed at hearing. Claimant is observed by the ALJ no longer exhibiting retropulsion in her walk. She is exhibit a wide stance when standing or walking. Claimant is observed walking without assistance, shopping by herself for groceries, bending over, looking up, reaching up, and picking up objects. Claimant is observed walking stairs and babysitting. Claimant is observed occasionally using a shopping cart for assistance and on one occasion is accompanied by her cane.

Testimony of Claimant's Experts

Heather Campbell, PT

82. PT Campbell testified at hearing on behalf of Claimant as an expert in physical therapy with a specialization in vestibular rehabilitation. She testified that she saw Claimant on 23 occasions, and Claimant saw someone else at the same clinic on 11 more occasions. A Spanish interpreter was present. PT Campbell testified that she did not see evidence that Claimant's vision and motor skills to control eye balls was evaluated. She acknowledged that Dr. Lipkin performed two tests for the eyes (saccades and smooth pursuit), which were abnormal, but there was no follow-up on Dr. Lipkin's tests. She testified that Dr. Lipkin did not perform a vestibular evoked myogenic potential test – which is a test different from those others administered by Lipkin to test particular function vestibular systems.

83. PT Campbell further testified that Dr. Hughes did not have access to a clinical vestibular testing, gait testing, ocular motor testing and intervention at the time he issued his DIME opinion. She opined that Dr. Hughes erred in failing to have Claimant undergo a neuropsychological evaluation before placing Claimant at MMI. She stated that Claimant's presentation in the November 2014 surveillance video was the same as it was in her clinic. She stated that Claimant's gait presentation is one of the many types of abnormal presentations TBI patients may demonstrate, including retropulsion. She testified that she performed eight tests on Claimant, all industry standard, at which Claimant provided valid effort and provided objective evidence explaining Claimant's gait disorder. She testified that none of the other providers administered the complete battery of tests that she did. PT Campbell opined that her findings are consistent with the reported head impact resulting in balance, oculomotor and processing disorders.

84. PT Campbell stated that Claimant did experience improvement from vestibular rehabilitation, including increased neck range of motion, better response to balance changes, improved gait and walking pattern. She reviewed the September 2019 surveillance and observed Claimant consistently demonstrating a wide base of support, abnormally short stride, swaying. She testified that the video showed Claimant walking unsupported for no longer than about four or five feet, and need about 10 meters for comprehensive and useful actual gait analysis. She opined that Claimant did not have proper physical therapy before she began treating Claimant, as Claimant's gait had not changed in three years. She opined that Claimant did not have adequate and consistent physical therapy before being placed at MMI. On cross-examination, PT Campbell acknowledged that Claimant did not have catastrophic loss of vestibular function although she was displaying catastrophic symptoms.

X. Ethan Moses, M.D.

85. Dr. Moses testified at hearing on behalf of Claimant as an expert in occupational medicine. Dr. Moses is Level II accredited, including teaching courses on how to rate neurologic impairment ratings. Dr. Moses disagreed with Dr. Hughes that there is no objective evidence of residuals of a TBI. He testified that the medical records revealed multiple specialists have found organic findings and the DTI MRI showed diffuse axonal injury which provides clear organic physiological evidence for Claimant's symptoms. Dr. Moses explained that, while the current MTG do not recommend DTI MRI for diagnostic purposes, he believes they will in the future based on his review of the medical literature.

86. Dr. Moses opined that Claimant suffered an acceleration/deceleration-induced closed head injury. He testified that Dr. Hughes erred by not having Claimant undergo neuropsychological testing, explaining that the MTG state that a neuropsychological evaluation should occur in such circumstances. Dr. Moses testified that, even if Dr. Hughes was relying on Dr. Moe's statement regarding a conversion disorder, he would still be required to perform neuropsychological testing for a differential diagnosis. Dr. Moses explained that conversion disorder can be assigned an impairment rating, and opined that if the conversion disorder was proximately related to Claimant's work injury it

therefore could be rated under the AMA Guides using the DOWC worksheet that allows physicians to classify what level of impairment a person suffers as a result of a psychiatric disorder. He clarified that he does not believe Claimant has conversion disorder and further treatment would not be helpful for Claimant. Dr. Moses disagreed the November 2014 surveillance footage showed Claimant walking normally. On cross-examination Dr. Moses testified that Claimant case is atypical in that the normal progression of TBI is "worst first", with the vast majority of symptoms resolving within three days to six weeks, and that very few individuals have residual symptoms beyond that time.

Richard Perrillo, Ph.D.

87. Dr. Perrillo testified at hearing on behalf of Claimant as an expert in clinical and neuropsychology. Dr. Perrillo disagreed with Dr. Hughes' determination that there is no objective evidence of residuals of TBI, noting that Dr. Hughes' ultimate determination was inconsistent with Dr. Hughes' prior statement that there are documented symptoms consistent with post-concussion syndrome. Dr. Perrillo testified that the MTG provide that you need to collect neuropsychological data if there is a differential diagnosis and to determine if the work event has affected the individual's memory, spatial relations, processing speed or reaction time. He disagreed with Dr. Hughes' statement that Claimant's balance problems are of unclear etiology. Dr. Perrillo testified that the etiology was clear based on the radiological findings of Dr. Benson and the neuropsychological data. He further disagreed that Claimant has conversion disorder.

88. Dr. Perrillo explained that because there is no normative data from Mexico, used neurotrauma norms from Spain. He testified that he was satisfied that the language difference was not a barrier to proper administration of his tests. Dr. Perrillo testified that he administered multiple validity tests and that there was no evidence of suboptimal effort, malingering, negative or positive impression management or bias. He stated that his testing revealed issues with Claimant's working memory, processing speed and cognitive proficiency, selective attention deficits, simple focus and immediate recall and auditory recall. There were no impairments in fine and gross motor ability or verbal fluency. Dr. Perrillo testified that his neuropsychological test data demonstrates Claimant's brain experienced axonal shearing along with metabolic and cellular imbalances. He remarked that the age of someone who sustains a TBI is important to the outcome, noting that older individuals have less time and capacity to heal. Dr. Perrillo opined that Dr. Benson's DTI results corroborate his neuropsychological findings. He testified that the November 2014 surveillance video shows imbalance, and retropulsion.

89. Dr. Perrillo opined that Dr. Hughes erred because he did not refer Claimant for a neuropsychological evaluation before placing Claimant at MMI. He explained that the MTG state that individuals with a TBI warrant neuropsychological evaluation, and that it is necessary when there is a differential diagnosis, for proper cognitive rehabilitation and to rule out exaggerating or malingering.

90. Dr. Perrillo disagreed with Dr. LaFosse that a Spanish speaker is required to administer the tests. He stated that Dr. LaFosse was incorrect in his assessment that he

only used an English language test developed in the United States for English-speakers with at least 12 years of education. He explained that he used tests that assumed an education level of 8 years or less. Dr. Perrillo testified that because Claimant has lived in United States for at least 25 it was more appropriate to use neuronorma norms that he used in his testing. Dr. Perrillo testified that, for at least one test, Dr. Lafosse used an African American norm instead of Caucasian norm, which was inappropriate. He testified that Claimant actually passed two of the seven validity tests given by Dr. Lafosse, and at least three were not internally reliable. Dr. Perrillo explained that there are numerous articles that dispute the theory of "worst first." He opined that both his and Dr. LaFosse neuropsychological evaluation demonstrated cognitive impairment and brain damage. On cross-examination Dr. LaFosse stated that he did not take into consideration that before the work injury Claimant had twice requested that her personal doctors determine her disabled because she did not want to work anymore. He testified that such behavior could fit the definition of malingering.

Randall Benson, M.D.

91. Dr. Benson testified at hearing as expert in functional MRI and DTI MRI and susceptibility weight imaging. Dr. Benson testified that he was able to diagnose Claimant with a TBI based on neurological evaluation alone. Dr. Benson explained that the video he took of Claimant in his office shows Claimant lurch backwards when she stops and when she turns. Claimant was videotaped with her knowledge. He stated Claimant's gait was plodding, which is a typical response to the type of neurological problem in Claimant's case. Dr. Benson testified that his observations of Claimant on surveillance footage were virtually identical to her gait at his examination.

92. Dr. Benson explained that DTI-MRI is an imaging test used to identify alteration in axonal structure and is able to detect microscopic changes in white matter constitution. He testified that standard, conventional MRIs do not identify microscopic changes, but rather visible, macroscopic changes in the structure of the brain. DTI scans look at water diffusion at the microscopic level, which is associated with axonal change, an indicator of brain damage. Dr. Benson opined that the findings on various scans revealed: an acceleration/deceleration-induced closed head injury resulting in diffuse vascular and diffuse axonal injury to the bilateral cerebral hemispheres; diffuse axonal injury; evidence of a deep hemorrhage in the brain in an area called the basal ganglia, which is an area of the brain that is critical for motor function; and significant damage to the right hemisphere of Claimant's brain. He opined that there is objective evidence of permanent residuals due to the TBI suffered by Claimant.

93. Dr. Benson testified that CT scans obtained after the industrial injury will not reveal the same findings of the DTI images because CT scans are not sensitive enough to identify the deep hemorrhage or to alteration in the white matter. Dr. Benson testified that there are clinical manifestations of the injury including loss of cognitive efficiency, alteration in Claimant's emotional processing, and motor dysfunction. He stated that the objective data obtained from radiological scans demonstrated "three different hits to the center of the brain", a bleed in the basal ganglia, an area of DTI abnormality of the

cerebellum right side, and an abnormality in the visual fibers the occipital lobe close to where Claimant fell. He opined that these three issues resulted in the movement disorder or motor problem that Claimant has. Dr. Benson testified that Clamiant's movement pattern, including retropulsion, was bizarre, but organically based. He testified that he conducted a thorough examination of Claimant in which he found similar findings that were organic, including the cerebellar tremor that she had, one of the right side left side, which is consistent with the ipsilateral (on the same side) lesion that she had in the cerebellum; her gait exam was very internally consistent with no deviation, embellishment, emotion or histrionics; and her eye movements were consistently abnormal, meaning that her right gaze was very abnormal. Dr. Benson opined that Claimant's condition is not consistent with a congenital disorder, early dementia or something other than TBI because clearly Claimant's symptoms began after the work injury and she was able to work before the injury. He testified that a congenital problem would have manifested earlier in life, and that Claimant does not have a degenerative problem because she is not necessarily getting worse.

94. Dr. Benson testified that his findings correlate with those of Dr. Perrillo. He opined that Dr. Hughes erred by concluding that Claimant's balance problems were of unclear etiology because we know the etiology. He believes that the battery of tests he administered for identification of motor dysfunction were helpful for his diagnosis, and he determined that Claimant had cerebellar problems and that she most likely had a basal ganglia lesion to explain the retropulsion that she had. He stated he did not witness any symptom magnification. Dr. Benson testified that, while the actual course of recovery after a TBI is improvement, in the short term many patient's concussions get worse over the ensuing days to even a few weeks. He explained that a pituitary injury and symptoms secondary to a pituitary injury can manifest in the delayed fashion and can be progressive; people with brain injuries often develop maladaptive strategies that can cause problems down the road; and TBIs are associated with ongoing inflammation that accelerates the aging process. Dr. Benson opined that Dr. Hughes erred in is conclusion that there are documented symptoms consistent with a post-concussive syndrome without objective evidence of residuals of TBI, as he and PT Campbell found objective signs and symptoms consistent with an organically based injury. On cross-examination Dr. Benson acknowledged that Claimant's case is not the norm in terms of expected recovery time, and that if Claimant did not have gait disturbance right after the fall, would not expect her to suddenly develop gait disturbance three years later.

Testimony of Respondents' Witnesses

95. Dr. Hammerberg testified at hearing on behalf of Respondents as a Level II accredited expert in neurology and electromyography. Dr. Hammerberg testified that medical literature establishes DTI should not be used by neurologists to determine whether someone has suffered a TBI. He explained that Dr. Benson's MRI revealed tiny spots at three different levels of the scan, which are not seen in TBI and are common spots resulting from microvascular ischemia caused by high blood pressure and/or high cholesterol, of which Claimant has a history. Dr. Hammerberg further explained that the calcification evidenced on Claimant's CT scan was pre-existing and chronic and had no

bearing on whether there was a TBI. Dr. Hammerberg opined that Claimant did not sustain any brain injury. He testified that Claimant could have a problem with her balance mechanism of the ear, but that Claimant does not truly have a neurological problem causing imbalance. He agreed Claimant's abnormal gait presentation was not organic, which he stated suggests a psychological problem. Dr. Hammerberg offered two possible explanations for Claimant's condition: psychosomatic or malingering, stating that he believes both are occurring. He testified that Claimant's ongoing fear regarding imbalance is not malingering, but that her exaggerated lurching appears to be.

96. Dr. Hammerberg testified that the Select Physical Therapy records indicating Claimant ambulated with less unsteadiness and less need for support when unaware she is being observed was consistent with his opinion in regard to his observations of Claimant's behavior in the September 2019 surveillance video. Dr. Hammerberg also discussed the difference in Claimant's presentation in the surveillance video taken at the store versus taken in Dr. Benson's office, noting the former showed much better ability. Dr. Hammerberg testified that neuropsychological testing would assess the cognitive and emotional problems at the time of testing and that, in the total context of the case where there is no TBI, it would not likely have changed Dr. Hughes' opinion. He opined that Dr. Hughes was not in error for failing to refer Claimant for a neuropsychological evaluation under the MTG because the MTG are merely guidelines. He explained that, while a neuropsychological evaluation may have been helpful prior to the follow-up DIME, it would not be related to the work injury because there was no TBI.

97. Dr. Hammerberg greed with Dr. Hughes that Claimant is at MMI with zero impairment and no need for further treatment as related to the work injury. He testified that Claimant's current conditions are not causally related and that her ongoing issues are the result of a psychiatric illness that is not related to her work injury. He explained that Dr. Hughes only should have deferred for a psychiatric evaluation if the thought the psychiatric problem was caused by the closed head injury, which both Dr. Hughes and Dr. Hammerberg concluded was not related. He testified that Dr. Hughes did defer to a psychiatric evaluation when he incorporated into his own opinion that of Dr. Moe. Dr. Hughes had it as a separate category from the workers' compensation injury indicating it was not related.

Stephen Moe, M.D.

98. Dr. Moe testified at hearing on behalf of Respondents as an expert in psychiatry. Dr. Moe explained the concept of "worst first," stating that the clinical course of mild TBI is that symptoms are worse closest to the injury. He testified that this was not the case for Claimant. Dr. Moe testified that, if Claimant does have conversion disorder, it is not related to the work injury. He explained that preexisting factors and "very idiosyncratic" features of Claimant's presentation are the two overriding reasons why the conversion disorder is not work-related. He opined that Claimant did not sustain a TBI and that Claimant's continuing symptoms are not the result of TBI. Dr. Moe reiterated his opinion that Claimant is at MMI with no impairment. He testified that the collective information at the time of the follow-up DIME indicated more information is not needed to arrive at a

conclusion about the reason for Claimant's gait problems. He explained that Dr. Hughes had determined the symptoms were not work related. Dr. Moe testified that it was very clear to him that Dr. Hughes did not believe any additional psychiatric or neurological evaluations were needed as a result of the work injury.

99. On cross-examination, Dr. Moe testified that the most likely cause of Claimant's symptoms is functional neurological symptom disorder, formerly called conversion disorder. He testified that Dr. Hughes could have recommended a neuropsychological evaluation and referred Claimant to a vestibular expert if he so chose. He explained that the mental evaluation worksheet would not be used in this case to rate conversion disorder as it is not work related. He testified that if Dr. Hughes was unable to rate the conversion disorder, could have referred the task out to someone board certified in psychiatry and Level II accredited.

Eric Nyberg, M.D.

100. Dr. Nyberg testified at hearing on behalf of Respondents as an expert in neuroradiology. Dr. Nyberg testified that there was no evidence of TBI on the initial CT scan of March 13, 2013 or the several subsequent CT scans and conventional MRIs. He explained that the first CT scan showed abnormalities in the white matter which were chronic and commonly from vascular risk factors. He explained that the abnormalities shown on the DTI were the same abnormalities resulting from the pre-existing chronic vascular risk factors, not a TBI. Dr. Nyberg testified that calcification was already present as of the first CT scan. He explained that calcification occurs as a result of hemorrhage and takes months to develop, indicating that the calcification was not the result of the work fall. Dr. Nyberg testified that diffused axonal injury (DAI) is an imaging pattern that can be seen in the setting of moderate to severe brain injury and sometimes be seen in the setting of mild TBI as well. He concluded that there was no evidence of brain injury on the imaging studies. He acknowledged on cross-examination that the absence of objective evidence on radiological imaging does not prevlude the possibility of a concussion.

Jose LaFosse, Ph.D.

101. Dr. LaFosse testified at hearing on behalf of Respondents as an expert in neuropsychology. Regarding Dr. Perrillo's testing, he testified that Dr. Perrillo would have difficulty applying the appropriate tests for the applicable population group because Dr. Perrillo does not read or speak Spanish or know how to conduct the tests that were in Spanish. He opined that Dr. Perrillo should have referred Claimant to a Spanish-speaking neuropsychologist. Dr. LaFosse testified that the tests used by Dr. Perrillo were inappropriate for Claimant because they were English language tests developed in the United States for evaluating English speakers. Dr. Perrillo stated that, in contrast, the norms he used took into account Claimant's age, gender, level of education and were developed in the border region between Mexico and the United States. He testified that neuropsychology professional standards require that, when evaluating Spanish speaking individuals, that the evaluator be Spanish-speaking and appropriate Spanish norms be

used when testing, including testing conducted in Spanish and the test be created for Spanish speakers. He opine that Dr. Perrillo used a "completely inappropriate" battery of tests to evaluate Claimant, noting Claimant is from Mexico and had six years of education, whereas Dr. Perrillo's tests were more appropriate for someone from Spain with 13 years of education.

102. Dr. LaFosse testified that Claimant failed all seven of his tests of performance validity, explaining that Claimant did worse on the validity tests than people with dementia and severe brain injuries, which is unexpected for the nature of Claimant's injuries. He testified that Claimant failing all seven validity tests indicate that the likelihood of Claimant's tests being accurate indicators of her level of cognitive functioning is not trustworthy. He opined there was a high probability Claimant was not putting her best efforts forward on the tests. He explained that, generally, two failures indicate that the likelihood of an individual not putting in good effort is higher than 90%, and that three failures indicates about 99%. Dr. LaFosse testified that the kind of responses Claimant provided are scientifically extremely improbable. Dr. LaFosse testified that Dr. Perrillo applied standards from cognitive testing to validity testing.

103. Dr. LaFosse further testified that in one observation, Claimant on the first day of testing had normal cadence and speed of speech fluency, but on the second day she was – speaking much more slowly, much more deliberately, much more cautiously that represented a pretty significant departure from the way she communicated with him on the first day. In another observation of behavior Dr. Lafosse recounted that he and Claimant were walking from the parking lot to his office building – he approached her from behind and saw her walking normally. But then as he caught up to her and said hello, she suddenly started walking in a very awkward manner - suddenly appearing unstable in her gait.

104. Dr. LaFosse opined that Claimant not have a TBI or any cognitive impairment. He stated that there is a possibility Claimant may have had a concussion, but that there is not a significant amount of support for that in the records. On cross-examination, Dr. LaFosse testified that neuropsychological evaluation should come as early as possible in cases when there is a differential diagnosis. He agreed with Dr. Hammerberg that it is a good idea as a part of treatment to make referrals for neuropsychological evaluation when there's a question about diagnosis. Dr. LaFosse testified that he does not think there is a diagnosis of conversion disorder in this case and there is strong empirical basis for the possibility of malingering.

Testimony of Claimant's Lay Witnesses

Claimant

105. Claimant testified at hearing that her neck pain has resolved, but she continues to experience issues with balance. She testified that she uses a cane daily, except when at the grocery store, at which time she utilizes a shopping cart for balance. Claimant stated that she is able to walk straight but feels as though she is being pulled

back when she stops. She testified that her balance problem is better now than it was before. Claimant demonstrated walking to the Court – she was observed taking a few steps forward then lurching backwards. She walked with a cane. Claimant testified that her ongoing symptoms include aversion to light, blurry vision, burning pain on the right side of her head, and issues sleeping. Claimant testified that after the work injury she returned to work for two to three weeks but experienced pain in her head which made it difficult to perform her job duties. Claimant stated that she did not intend to stop working before the accident and that she wanted to work until age 65 or 66. She testified that prior to the work injury, was tired at the end of the day due to a lot of work at her job. Claimant testified she babysits her six year old grandchild on a daily basis.

Claimant's Daughter

106. Claimant's daughter testified at hearing that, prior to the work injury, her mother was more energetic, independent, and capable of doing things she is currently incapable of doing. She testified that her mother has exhibited physical and mental changes, noting that Claimant no empathy regarding her husband's death in January 2015. She testified that, prior to the injury, Claimant did not complain consistently about any physical problems and was not seeking medical care for the year prior for any serious mental or physical condition. She stated that, within a few weeks after the work injury, Claimant to walk with an altered gait, which has continued for several years but improved with PT Campbell's therapy. Her understanding is that her mother signed the resignation letter to receive accrued vacation time as a lump sum payment. She testified that her mother now has to be supervised and cannot be responsible for anything. She believes Claimant's condition was caused by the work injury.

Testimony of Respondents' Lay Witnesses

Heidi Hill

107. Ms. Hill was the Human Resources Manager for Employer. Ms. Hill testified that Claimant was offered modified duty after her work injury. She testified that on July 21, 2014, Claimant declined to return to modified duty, but was still considered an employee of Employer. Ms. Hill testified that, at that point, Claimant still had the option to return to work performing modified duty, or that Claimant could resign and receive a lump sum payment. She testified that on September 5, 2014, Claimant again declined to return to modified duty and voluntarily resigned from Employer.

Keith Doberstein

108. Mr. Doberstein has worked as an investigator for over 21 years and is licensed in California and Colorado. He authenticated that he took the surveillance video of Claimant on September 1-3, 2019. He testified that he personally observed Claimant taking care of a child; only once having her cane with her that she did not actually use; and not using a cane to walk in and out of the grocery store.

Ultimate Findings

109. The ALJ finds the testimony of Ms. Hill and Mr. Doberstein more credible and persuasive than the testimony of Claimant and Claimant's daughter.

110. The ALJ finds that the reports and testimony of Drs. Hammerberg, LaFosse, Moe, and Nyberg, as supported by the medical records and the opinions of Drs. Hughes, Burris, Ginsberg, Lipkin, and Sacha, are more credible and persuasive than the reports and testimony of Drs. Benson, Moses, and Perrillo, and PT Campbell.

111. The ALJ finds that Claimant failed to prove it is highly probable Dr. Hughes erred in his DIME determination regarding MMI and impairment.

112. The ALJ finds that Claimant failed to prove it is more probable than not further medical treatment is causally related to her work injury.

113. The ALJ finds that Claimant failed to prove it is more probable than not she is entitled to additional temporary indemnity benefits.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals*

Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter

of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

The finding of a DIME physician concerning the claimant's whole person medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* WC 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. Deviations from the *AMA Guides* constitute evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Vuksic v. Lockheed Martin Corporation* WC 4-956-741-02 (ICAO, Aug. 4, 2016). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In re Goffinett,* WC 4-677-750 (ICAO, Apr. 16, 2008).

Pursuant to WCRP 17-2(A) health care practitioners are to use the MTG when furnishing medical care under the Act *See* §8-42-101(3)(b), C.R.S. The ALJ may also appropriately consider the MTG as an evidentiary tool. *Logiudice v. Siemans*

Westinghouse, W.C. 4-665-873 (ICAP, Jan. 25, 2011). Howeverm the ALJ is not required to grant or deny medical benefits based upon the MTG. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAP, Apr. 27, 2009). The ALJ's consideration of the MTG may include deviations where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAP, Jan. 25, 2011).

Claimant argues Dr. Hughes committed the following errors in finding Claimant is at MMI with no permanent impairment:

1) Dr. Hughes failed to refer Claimant for a neuropsychological evaluation before placing Claimant at MMI. He further failed to mention that Dr. Ledezma consistently recommended a neuropsychological evaluation.

2) Dr. Hughes failed to order final vestibular reports/evaluation, which would have yielded objective evidence on which to base diagnosis, MMI and treatment.

3) Dr. Hughes improperly disregarded objective evidence which indicated Claimant has significant vestibular difficulties.

4) Dr. Hughes improperly disregarded or was not competent to appreciate objective evidence of altered gait and retropulsion in the surveillance video.

5) Dr. Hughes failed to rate the vestibular disorder/altered gait.

6) Dr. Hughes misdiagnosed a conversion disorder.

7) Dr. Hughes failed to rate “mental impairment.”

8) Dr. Hughes failed to send Claimant to a board certified psychiatrist for a psychiatric rating.

9) Dr. Hughes failed to rate Claimant’s cognitive difficulties.

As found, Claimant failed to prove it is highly probable Dr. Hughes erred in his DIME opinion regarding MMI and impairment. Dr. Hughes diagnosed Claimant with a closed head injury with symptoms consistent with a post-concussive syndrome, but without objective evidence of residuals of traumatic brain injury; a resolved cervical spine sprain/strain; and progressive balance problems of unclear etiology with psychiatric features that suggested to Dr. Moe that she had a conversion disorder. Regarding Dr. Hughes not noting recommendations for and referring Claimant for a neuropsychological evaluation, there is not clear and convincing evidence Dr. Hughes was in error because he determined that there was no objective evidence of residuals of a TBI. Dr. Hughes reviewed various medical records, including those of Dr. Ledezma and Dr. Moe. He specifically referred to and relied on Dr. Moe’s analysis, which determined that Claimant’s current complaints were unrelated to the work injury. Dr. Hughes specifically noted that Dr. Moe did not feel Claimant had sustained permanent psychological impairment. He noted that he agreed with Dr. Ledezma’s recommendation for continued counseling, but reiterated that such treatment was not related to the work injury. Accordingly, Dr. Hughes’

failure to specifically note Dr. Ledezma's recommendation for neuropsychological evaluation and failure to refer Claimant for such is not highly probable in error, considering Dr. Hughes did not attribute Claimant's psychological issues to the work injury. Dr. Hughes' opinion that Claimant's condition and symptoms are unrelated to the work injury are shared by Drs. Hammerberg, LaFosse, Moe, and Nyberg. While there is testimony from some of Respondents' expert witnesses that Dr. Hughes "could" have ordered additional testing if he so chose, the evidence does not establish it is highly likely Dr. Hughes erred in not doing so. As credibly testified to by Dr. Hammerberg, neuropsychological testing under the MTG would apply if Dr. Hughes determined that Claimant's psychological issues were a result of the work injury, which he did not.

The same analysis applies regarding Dr. Hughes' failure to refer Claimant for vestibular evaluation or wait for a final report from Dr. Lipkin. Claimant underwent vestibular testing and vestibular therapy prior to Dr. Hughes' evaluation. Dr. Hughes reviewed the records from this testing and treatment. He diagnosed Claimant was "progressive balance problems of unclear etiology with psychiatric features." Various physicians opined that Claimant had a non-organic/non-physiologic gait disturbance and presentation and that her balance problems were not the result of the work injury. Dr. Hughes himself remarked on inconsistencies in Claimant's presentation based on his personal observation of her at his clinic, in the clinic parking lot, and on surveillance video. Dr. Hughes' failure to obtain additional vestibular testing or information or failure to provide an impairment rating was not in error, as Dr. Hughes did not find any potential vestibular problems or balance issues work-related.

Regarding an alleged misdiagnosis of conversion disorder, Dr. Hughes did not actually diagnose Claimant with conversion disorder. He stated that Claimant's findings were "bizarre" and "perhaps consistent" with a conversion disorder. Moreover, even assuming arguendo, that Dr. Hughes did diagnose Claimant with conversion disorder, he did not opine that such condition or any psychological condition, was related to the work injury. To the extent he stated that he would leave it up to a board certified psychologist, Dr. Hughes relied on Dr. Moe's opinion that there was no permanent psychological impairment. Dr. Hammerberg credibly testified that Dr. Hughes should have deferred a finding of MMI for psychological evaluation *if* Dr. Hughes attributed Claimant's psychological symptoms to the work injury (emphasis added). Here, Dr. Hughes clearly concluded that Claimant's ongoing issues were not work related Dr. Moe credibly opined that Claimant did not sustain any psychological impairment as related to the work injury. Dr. Moe corroborated Dr. Hammerberg's explanation with his credible testimony that a mental condition is not rated if it is deemed not work-related. While Dr. Hughes could have referred out, not in error failing to do so. Dr. LaFosse credibly opined that Claimant does not have conversion disorder and is likely malingering.

Similarly, the evidence does not establish it is highly probable Dr. Hughes erred in failing to rate Claimant's alleged cognitive difficulties. Again, Dr. Hughes did not find any residual conditions related to the work injury. Dr. LaFosse credibly opined that Claimant's cognitive functioning is at within the normal limits and at least in the same range as her premorbid cognitive abilities.

The varied opinions of the multiple treating physicians and experts in this case, which support both the positions of Claimant and Respondents, emphasize the myriad differences of medical opinions that have been reached in this case, including that of DIME physician Dr. Hughes. There was extensive evidence offered regarding, *inter alia*, the use and efficacy of DTI imaging and the intricacies neuropsychological testing, with attacks from experts on both sides regarding everything from testing methods to formatting of reports. To the extent there is disagreement with Dr. Hughes' DIME opinion, the evidence indicates that these are differences of opinion that do not rise to the level of clear and convincing evidence. That Dr. Hughes "could have" taken a different approach or come to a different conclusion here does not establish, based on the totality of the evidence, that he clearly erred by finding Claimant MMI with no impairment.

The records indicate Claimant underwent extensive evaluation and treatment after her work injury and prior to being placed at MMI by Dr. Hughes, including CT scans, MRI scans, ENT evaluation, neurological evaluations, vestibular evaluations, vestibular therapy, physical therapy, and psychological evaluation and counseling. Dr. Hughes reviewed these medical records, and based on his review and evaluation, ultimately opined that Claimant reached MMI and that any ongoing issues and need for treatment was unrelated to the work injury. The need for deferring MMI for additional testing and treatment applies when there is a determination that conditions are work related. Similarly, the assignment of an impairment rating also necessitates a finding that the condition is work related. Here, Dr. Hughes found that there was no objective evidence of residuals of a TBI, that Claimant's cervical spine sprain/strain had resolved, and there were psychiatric features unrelated to the work injury. Dr. Hughes opinion is consistent with those of Drs. Hammerberg, Sacha, Burris, Moe, Nyberg and LaFosse. Drs. Hughes, Sacha, Burris, Moe and Hammerberg agree Claimant may need ongoing medical treatment that is unrelated to the work injury.

Based on the totality of the evidence, Claimant failed to overcome Dr. Hughes' DIME opinion on MMI and permanent impairment by clear and convincing evidence.

Medical Treatment

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. However, the claimant may receive medical benefits after MMI to maintain his status or prevent a deterioration of his condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Furthermore, §8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a DIME. The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or a DIME. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, WC's 4-947-316-01 & 4-935-813-03 (ICAO, July 31, 2015) (where the claimant had not reached MMI, ALJ's

finding terminating all future medical treatment reflected an implicit determination that the claimant had reached MMI and was thus erroneous).

As found, Claimant failed to prove by a preponderance of the evidence further medical treatment is reasonable, necessary or related to cure and relieve Claimant's effects or maintain Claimant's condition. Drs. Hughes, Sacha, Moe, Nyberg and Hammerberg have credibly opined that Claimant's ongoing condition is not related to the work injury. Accordingly, any need for ongoing treatment is not causally related to Claimant's industrial injury.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As Claimant failed to overcome Dr. Hughes' determination regarding MMI, she failed to prove by a preponderance of the evidence she is entitled to temporary indemnity benefits for any additional period of time.

ORDER

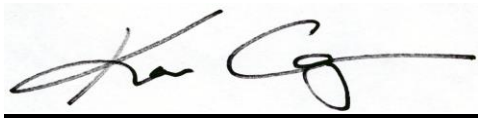
1. Claimant failed to overcome Dr. Hughes DIME opinion on MMI and permanent impairment by clear and convincing evidence.

2. Claimant's claim for medical maintenance benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 19, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents established by a preponderance of the evidence that Claimant received an overpayment of indemnity benefits for which Respondents are entitled to repayment.

FINDINGS OF FACT

1. Claimant sustained an admitted injury arising out of the course of his employment with Employer on October 15, 2019. (Ex. G).

2. Following the injury, Claimant received treatment through Concentra Medical Centers, where he saw Paula Pook, M.D., John Sacha, M.D., Lacie Esser, PA-C, and Jonathan Claasen, D.O., among others. (Ex. A & C).

3. On January 21, 2021, Dr. Claasen placed Claimant at MMI with a whole person impairment rating of 13%. On February 11, 2021, Respondents filed a Final Admission of Liability (FAL), admitting for a 13% whole person impairment, and permanent partial disability (PPD) benefits of $51,327.86. Respondents also admitted to previously-paid temporary total disability (TTD) benefits and temporary partial disability (TPD) benefits. (Ex. G).

4. Subsequently, Claimant requested a Division Independent Medical Examination (DIME). On July 21, 2021, Eric Shoemaker, M.D., performed the DIME and issued a report dated August 11, 2021. Dr. Shoemaker placed Claimant at MMI effective November 4, 2019. Dr. Shoemaker also determined that Claimant had no permanent impairment rating attributable to Claimant's work-related injuries. (Ex. A).

5. On September 8, 2021, Respondents filed an second FAL, consistent with Dr. Shoemaker's DIME opinions. Respondents admitted to an MMI date of November 4, 2019, with a 0% impairment rating. Respondents asserted an overpayment in the amount of $71,731.90, for TTD, TPD, and PPD benefits paid after November 4, 2019. (Ex. G).

6. Claimant filed an Application for Hearing on October 6, 2021, endorsing as issues compensability, medical benefits and "the alleged overpayment, compensability, and denial of maintenance care described in the Final Admission of Liability." Claimant did not endorse the issue of challenging Dr. Shoemaker's DIME opinion or otherwise contest the September 8, 2021 FAL. (Ex. J). The October 6, 2021 Application for Hearing was

designated as W.C. Case No. 5-128-511-001. Office of Administrative Courts' records indicate no further action was taken in W.C. 5-128-511-001, and the matter was closed.[1]

7. Insurer's claims adjuster, MR[Redacted], testified at hearing that Insurer paid Claimant $71,731.90 in combined indemnity benefits. Ms. MR[Redacted] credibly testified that Insurer's payment log, Exhibit I, is an accurate statement of the amounts Insurer paid to Claimant for PPD, TTD, and TPD benefits. For the period of January 20, 2020 through December 7, 2020, Insurer paid Claimant $42,937.52 in TTD benefits. Insurer paid Claimant $65.00 in TPD benefits for the period of October 26, 2020 through February 1, 2021, and $28,729.38 in PPD benefits for the period of January 21, 2021 through August 26, 2021. (Ex. I).

8. Claimant did not appear at hearing and did not present evidence in defense of Respondents' claims.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

[1] The ALJ takes judicial notice of the Office of Administrative Courts' files related to this claim, including the absence of entries. *See Habteghrigis v. Denver Marriott Hotel*, W.C. No. 4-528-385 (ICAO March 31, 2006) ("A court can take judicial notice of its own records and files.").

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERPAYMENT

Respondents' Entitlement to Repayment of Disability Benefits

Pursuant to § 8–43–303(1) C.R.S., upon a prima facie showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In relevant part, the Colorado Workers' Compensation Act defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive. § 8-40-201 (15.5), C.R.S. (2021).[2] An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Section 8-42-113.5 (1)(c), C.R.S., authorizes insurers to seek and order for repayment of an overpayment, and ALJs are authorized to conduct hearings to require such repayments. § 8-43-207 (q), C.R.S. Respondents may retroactively recover an overpayment of benefits, and such recover is not limited to duplicate benefits. *In re Wheeler*, W.C. No. 4-995-488-004 (ICAO Apr. 23, 2019); *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

Respondents bear the burden of proof to establish by a preponderance of the evidence that a claimant received an overpayment, and that respondents are entitled to recovery of that overpayment. *City & Cty. of Denver v. Indus. Claim Appeals Off.*, 58 P.3d 1162, 1164-1165 (Colo. App. 2002); See *In the Matter of the Claim of Robert D. Scott, Claimant*, W.C. No. 4-777-897, (ICAO Oct. 28, 2009).

Respondents have established by a preponderance of the evidence that Claimant received overpayments in the amount of $71,731.90, and that Respondents are entitled to repayment of that amount. Respondents initially paid Claimant's TTD and TPD benefits based on the date of MMI and work restrictions assigned by Dr. Claasen. Respondents initially admitted to the 13% impairment rating assigned by Dr. Claasen, filed an FAL consistent with that rating, and began paying PPD benefits in corresponding to the ATP's impairment rating. Claimant then requested a DIME. The DIME physician found that Claimant had no impairment rating attributable to his work injury, and was at MMI on

[2] The General Assembly amended § 8-40-201 (15.5), C.R.S., effective January 1, 2022, removing the phrase "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive " from the definition of "overpayment." However, the matter before the ALJ is based payments and events prior to January 1, 2022, consequently the applicable statute is the Worker's Compensation Act in effect prior to January 1, 2022. *See Stark v. Zimmerman*, 638 P.2d 843 (Colo 1981) (repeal of a statutory provision does not operate retroactively to modify vested rights or liabilities); *Martinez v. People*, 484 P.2d 792 (Colo 1971) (repealed statutory provisions remain in force as far as pending actions, suits and proceedings are concerned).

November 4, 2019. On September 8, 2021, Respondents filed a second FAL consistent with the DIME's opinions admitting for an MMI date of November 4, 2019 and a 0% impairment rating. Pursuant to § 8-43-203 (2)(b)(II)(A), C.R.S., Claimant had thirty days to contest the FAL and request a hearing seeking more compensation. Claimant failed to do so, consequently Claimant's claim automatically closed with respect to the admitted date of MMI and impairment rating on October 8, 2021. Because Claimant did not challenge the DIME's MMI date or impairment rating of the DIME, Claimants benefits are controlled by the DIME's impairment rating and MMI date. *See In re Claim of Mattorano,* W.C. No. 4-861-379-01 (ICAO July 25, 2013)

Pursuant to § 8-42-103, and 8-42-105, respondents are required to pay temporary disability benefits while a claimant is under a disability that prevents the claimant from earning his or her full average weekly wage. Such benefits continue until the claimant reaches maximum medical improvement. § 8-42-105 (3)(a), and § 8-42-106 (2)(a) C.R.S. Respondents paid Claimant TTD and TPD benefits for the period of January 20, 2020 through February 1, 2021, in the aggregate amount of $43,002.52. Because all of the Claimant's TTD and TPD benefits were paid after the date of MMI assigned by the DIME, the benefits exceeded the amounts should have been paid or were amounts Claimant was not entitled to receive. *See Wheeler, supra* ("respondents are allowed to recover as an overpayment the TTD benefits that were due and owing when paid but are later determined to be amounts the claimant was not entitled to receive).

Similarly, Claimant received $28,729.38 in PPD benefits based on a 13% whole person impairment, which is inconsistent with the DIME's assignment of a 0% impairment rating, which would result in no PPD benefits. Claimant therefore received PPD benefits exceeding the amount that should have been paid or which he was not entitled to receive.

As found, Respondents have established by a preponderance of the evidence that Claimant received $71,731.90 in disability benefits to which he was not entitled. Accordingly, Respondents are entitled recover from Claimant the overpayment of $71,731.90.

OVERPAYMENT RECOVERY

Section 8-42-113.5, C.R.S. governs the recovery of overpayments. Where a claimant receives any payments from any source which requires the reduction of any disability benefit, § 8-42-113.5 provides for different methods of recovery for respondents. Under § 8-42-113.5 (a), a claimant is required to provide written notice of learning of such payment within twenty days, and any resulting overpayment "shall be recovered by the employer or insurer in installments at the same rate as, or at a lower rate than, the rate at which the overpayments were made." "Such recovery shall reduce the disability benefits … payable after all other applicable reductions have been made." *Id*. Where no written notice is provided, "the employer or insurer is authorized to cease all benefit payments immediately until the overpayments have been recovered in full." § 8-42-113.5(1)(b). If, however, recovery under § 8-42-113.5 (a) or (b) is "not practicable," respondents are authorized to seek an order for repayment. § 8-42-113.5(1)(c), C.R.S.

The term “practicable” refers to a respondent’s ability to recover the overpayment from ongoing or unpaid benefits.” *In re Martin*, W. C. No. 4-453-804 (ICAO, Oct. 4, 2004).

When the parties are unable to agree upon a repayment schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev’d on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994). No evidence exists in the record from which the ALJ can determine whether a payment schedule is appropriate or the terms of repayment.

ORDER

It is therefore ordered that:

1. Claimant shall repay to Respondents $71,731.90 in overpaid benefits.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 18, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

1. If Claimant suffered residual medical issues because of opioid dependence, whether he requires continuing medical maintenance treatment to address his dependence.

2. If there are no remaining residual medical issues from opioid dependence, whether additional medical maintenance treatment is reasonable or necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of his condition.

FINDINGS OF FACT

1. Claimant is 62-year-old male who resides in Twain Harte, California. He has lived in California since July 16, 2017. Claimant previously lived in Denver, Colorado. Employer is a restaurant located in Sheridan, Colorado who hired Claimant as a Grill Cook on October 23, 2012.

2. On September 19, 2014 Claimant was injured while working for Employer. He specifically bent over to put away a grill scraper, stood up, twisted and felt a pop in his lower back. Claimant initially underwent medical treatment at Concentra Medical Centers. He received Percocet, physical therapy and a lumbar MRI. Claimant was subsequently referred to Authorized Treating Physician (ATP) John T. Sacha, M.D. for pain management.

3. Dr. Sacha is a Colorado licensed physician who is Board Certified in Physical Medicine and Rehabilitation, Electrodiagnostic Medicine, and Pain Management. He has been Level II accredited by the Colorado Division of Workers' Compensation (DOWC) for the past 25 years. Dr. Sacha is on the PDMP committee for opioids and the committee that develops guidelines for the safe use of opioids in the State of Colorado. He treats patients with acute and chronic complex spinal disorders and provides medication management as part of his regular practice.

4. Dr. Sacha first evaluated Claimant on November 21, 2014. He documented that Claimant's lumbar MRI revealed degenerative disc disease with facet spondylosis and bulging at L4-L5 and L5-S1 and left-sided foraminal narrowing. Dr. Sacha's initial plan included administration of left L5 and S1 transforaminal epidural steroid injections (TF ESIs)/spinal nerve blocks, immediate discontinuation of Percocet and utilization of Tramadol and Gabapentin.

5. Dr. Sacha subsequently administered left L5 and S1 TF ESIs/spinal nerve blocks. Claimant also underwent lower extremity EMG/NCV testing that confirmed S1 radiculopathy. Dr. Sacha referred Claimant to Andrew Castro, M.D., for a surgical consultation.

6. Dr. Castro evaluated Claimant on February 18, 2015 and recommended repeat ESIs prior to surgical consideration. Dr. Sacha administered additional injections. On March 27, 2015 Dr. Sacha reported that Claimant's pain had worsened, the injections had not relieved his symptoms and the only remaining options were surgery or placing him at Maximum Medical Improvement (MMI).

7. On May 7, 2015 Claimant underwent lower back surgery with Dr. Castro. The specific procedure consisted of a bilateral laminectomy and discectomy at L4-5 and a left-sided laminectomy and discectomy at L5-S1.

8. Claimant received opioids immediately following surgery, but was quickly weaned from the medications. His condition improved slightly but his symptoms waxed and waned. Claimant suffered constant lower back pain and intermittent left leg symptoms.

9. On September 28, 2015 Dr. Sacha concluded that Claimant had reached MMI because his symptoms had plateaued. Dr. Sacha determined that Claimant required medical maintenance care in the form of a medication maintenance program, a gym pass, a couple of psychological visits and medications over the next 12–24 months. He explained that the preceding recommendation constituted a standard maintenance care plan for patients who have undergone spinal surgery. On October 5, 2015 Dr. Sacha assigned 13% lumbar spine and 2% mental permanent impairment ratings.

10. On November 13, 2015 Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Sacha's MMI and impairment determinations. The FAL also acknowledged medical maintenance care. Following the parties' stipulation to resolve residual issues, Respondents filed an Amended FAL on January 21, 2016. Claimant did not challenge the Amended FAL and his claim closed by operation of law on all issues other than medical maintenance benefits.

11. Claimant continued to receive maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. His maintenance care during the period included non-opioid medications, utilization of a TENS unit, chiropractic treatment, acupuncture, an additional lumbar MRI, further sets of TF ESIs, another EMG and a surgical reevaluation.

12. On July 14, 2017 Claimant visited Dr. Sacha for the final time before moving to California. Dr. Sacha noted that Claimant's condition remained unchanged, his symptoms were tolerable and he experienced good and bad days. Claimant's treatment involved continued medications for two months, a gym pass and a new ATP for maintenance management in California.

13. On November 8, 2017 ATP Tariq Mirza, M.D. located in Modesto, California, began treating Claimant. He noted that Claimant's symptoms included pain in his back

and legs as well as reactive depression. Dr. Mirza immediately prescribed medications, including Duragesic (Fentanyl) patches of 50 micrograms (mcg)/hour, Soma and Neurontin.

14. On November 22, 2017 Dr. Mirza conducted a physical examination that revealed findings virtually identical to Claimant's previous visit. He continued to prescribe the same medications. Dr. Mirza recommended repeat lumbar ESIs, continued utilization of the TENS unit and physical therapy.

15. On February 14, 2018 Claimant returned to Dr. Mirza for an examination. He reported "as long as I have medications in my system I am functional, without medication pain in my lumbar spine is 8-9 or even 10, however with the help of medication it [decreases] to 3-4 and it is manageable." Dr. Mirza increased Claimant's Fentanyl patches to 100 mcg/hour and continued the other medications.

16. On April 11, 2018 Dr. Mirza noted that Claimant had completed therapy but had not noticed any improvement in flexibility. Claimant remarked that his lower back pain was 7-8/10, but with medication it diminished to 3-4/10. Dr. Mirza continued to prescribe the same medications at the same dosages.

17. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha to determine whether his condition had worsened so that he was no longer at MMI. Dr. Sacha obtained an updated history from Claimant, reviewed Dr. Mirza's records and performed a physical examination. He was critical of Dr. Mirza's renewed prescription of opioids. Dr. Sacha detailed that Claimant "was opioid naïve and on non-opioid analgesics from this practitioner [and] is now on 100 mcg Fentanyl patches."

18. Dr. Sacha explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He emphasized that Fentanyl is a particularly dangerous drug and the State of Colorado recommends never exceeding 50 Morphine Milligram Equivalents (MMEs) per day. Notably, on July 5, 2018 Claimant was taking 240 MMEs/day or five times the recommended limit. Dr. Sacha further explained that opioid medications were 100% contraindicated for patients like Claimant who suffer lung issues.

19. Dr. Sacha testified at the hearing in this matter that during his July 5, 2018 evaluation Claimant acknowledged that his functioning had decreased while taking opioids. He explained that opioids increase a patient's pain receptors. Dr. Sacha attributed Claimant's decreased functioning to opioid dependence from taking high levels of Fentanyl prescribed by Dr. Mirza. Claimant's functional decline was thus no longer related to his original lumbar spine injury.

20. Dr. Sacha explained that when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. Dr. Sacha thus outlined a maintenance care plan to address Claimant's opioid dependence that included a change of physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. He further recommended a gym pass for 12 months, one further ESI and one to three visits with a physical medicine or pain management specialist. Dr. Sacha

emphasized that his 12-month maintenance care plan was not directed at a spinal issue, but at the problem of increased pain receptors caused by opioid analgesics. He testified:

> [Claimant] probably wouldn't have needed anymore maintenance care beyond that point, once the large offending agent, which was the opioid analgesics, was discontinued. And the danger was still the biggest problem, and I was of the opinion, and still am of the opinion, that the decline in function, the worsening symptoms were a direct result of using the fentanyl rather than the actual lumbar spine issues. So we were really treating the problem, which was the opioid analgesics, not his spine, when I made the recommendations for that year of maintenance care.

21. On August 30, 2018 the parties conducted a hearing before ALJ Goldman. He issued an order dated October 1, 2018 denying Claimant's petition to reopen based on a worsening of condition.

22. After the hearing, Dr. Mirza began decreasing Claimant's opioid analgesics. He gradually reduced Claimant's Fentanyl from 100 mcg/hour patches to 75 mcg/hour patches on October 24, 2018, then to 50 mcg/hour patches on November 28, 2018 and finally to 25 mcg/hour patches on May 17, 2019. Dr. Mirza stated that his goal was to discontinue opioid analgesics "in a few months." However, over the next 22 months between May 17, 2019 and March 24, 2021 Dr. Mirza continued Claimant on 25 mcg/hour Fentanyl patches without providing any other maintenance medical care.

23. On February 5, 2021 Claimant returned to Colorado to visit Dr. Sacha for an evaluation. Dr. Sacha reviewed Claimant's medical records and conducted a physical examination. He noted that Claimant's continued use of Fentanyl was "surprising" because he was clearly not a candidate for opioids. Dr. Sacha explained that the 25 mcg/hour patch constituted 60 MMEs/day. The amount exceeded the State of Colorado recommended dosage of 50 MMEs/day. Dr. Sacha remarked that Claimant's continued Fentanyl usage placed him at high risk for opioid misuse and sudden respiratory depression. He proposed an updated maintenance treatment plan that included the following: (1) immediate discontinuation of Fentanyl; (2) three months of non-opioid analgesics; and (3) other treatment modalities including chiropractic care and acupuncture treatment for symptom control during the weaning period.

24. On February 25, 2021 Respondents applied for a hearing on the issue of medical benefits. Respondents specifically sought "an order compelling discontinuation of opioids (Fentanyl), with a weaning/tapering schedule, and then discontinuation of maintenance care under this claim as per Dr. Sacha."

25. On March 24, 2021 Dr. Mirza noted that he had a long discussion with Claimant about discontinuing Fentanyl patches and replacing them with Suboxone films. Claimant testified and the record reflects that he has not taken any Fentanyl since March 24, 2021.

26. On May 8, 2021 Dr. Sacha issued a report following his review of Dr. Mirza's March 24, 2021 report. He noted that Dr. Mirza had discontinued Fentanyl and started Claimant on Suboxone. Dr. Sacha commented that it was reasonable to provide Claimant with a one month supply of Suboxone before weaning him off the medication over a four-week timeframe. He explained that any further use of Suboxone and any other medical care after the weaning period should be performed under private insurance because it would not be related to Claimant's September 19, 2014 industrial injury.

27. Dr. Sacha testified that during his February 5, 2021 evaluation, Claimant was suffering from opioid dependence. Notably, although Claimant was experiencing pain, it was attributable to Fentanyl usage. Dr. Sacha remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his subsequent symptoms and functional limitations were caused by the medications. Specifically, the opioid medications caused an increase in Claimant's pain receptors. Dr. Sacha explained that, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. Claimant thus required three months of Buprenorphine to wean him from Fentanyl.

28. Dr. Sacha remarked that treatment for Claimant's original lumbar spine injury was no longer required. He emphasized that "the problem that I made recommendations for was getting off the opioid analgesics, because that's what we were treating, not the spinal problem, and they didn't follow that." Dr. Sacha thus remarked that, after the three-month period, no further maintenance care would be necessary for either Claimant's lumbar spine or opioid dependence. He emphasized that three-months of post-Fentanyl care was reasonable because it was the humane way to wean Claimant from pain medications. Dr. Sacha determined that, at the conclusion of the three-month weaning period, no additional medical maintenance treatment was necessary for Claimant's September 19, 2014 lumbar injury or subsequent opioid dependency.

29. Dr. Sacha testified that Claimant initially required up to 24 months of medical maintenance care after his industrial injury and subsequent surgery. However, because Dr. Mirza prescribed excessive opioids, Claimant's current problems were iatrogenic in nature because he became dependent on opioids. Claimant thus required additional treatment, beyond the original 24 months, to wean from medications. Dr. Sacha acknowledged that Claimant's opioid dependence was related to his original lumbar spine injury because it occurred during the course of his medical treatment. Claimant's weaning from Fentanyl was thus covered as part of his Workers' Compensation claim. Notably, when Claimant is weaned from Fentanyl he will return to his pre-opioid level of function. Any continuing functional limitations are reflected in his impairment rating. Dr. Sacha summarized that a three month weaning period for opioid dependence is reasonable and allowing Claimant to receive additional medical maintenance care beyond the three-month weaning period will cause harm. He explained that Claimant will be better off functionally, mentally and from a pain standpoint if his care is discontinued and he stops visiting doctors.

30. Claimant testified at the hearing in this matter. He explained that he has suffered constant pain since his September 19, 2014 industrial injury. Although his

symptoms have waxed and waned over time, they have persisted. Nothing other than opioid medications have decreased his severe pain and improved his function.

31. Although Claimant suffered residual medical issues because of opioid dependence, Respondents have proven that it is more probably true than not that additional medical maintenance treatment for his dependence is no longer causally related, reasonable or necessary to address his symptoms or prevent further deterioration of his condition. Respondents have also established that additional medical maintenance treatment is no longer reasonable or necessary to relieve the effects of Claimant's original lumbar spine injury or prevent further deterioration of his condition. Accordingly, Respondents request to terminate Claimant's medical maintenance benefits is granted.

32. Claimant initially injured his lower back on September 19, 2014 while working for Employer. He received conservative treatment and was referred to ATP Dr. Sacha for pain management. By May 7, 2015 Claimant underwent lower back surgery. On September 28, 2015 Dr. Sacha concluded that Claimant reached MMI and required medical maintenance treatment including medications over the next 12–24 months. Claimant then received maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. Ultimately, Dr. Sacha was Claimant's primary ATP for more than two and a half years and saw him approximately 40 times.

33. On November 8, 2017 Dr. Mirza began treating Claimant in California. He immediately prescribed Claimant opioid medications in the form of Fentanyl patches. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha. Dr. Sacha was critical of the renewed prescription of opioids and explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He explained that opioids increase a patient's pain receptors. However, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. Dr. Sacha thus outlined a maintenance plan that included a change of physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. He emphasized that the maintenance care plan was not directed at Claimant's original lumbar spine injury, but at the increased pain receptors caused by opioid analgesics.

34. Dr. Sacha persuasively testified that Claimant initially required up to 24 months of medical maintenance care after his industrial injury and subsequent surgery. However, because Dr. Mirza prescribed excessive opioids, Claimant's medical problems were iatrogenic in nature and he became dependent on opioids. Claimant thus required additional treatment beyond the original 24 months to wean from medications. Dr. Sacha acknowledged that Claimant's opioid dependence was related to his original lumbar spine injury because it occurred during the course of his medical treatment.

35. Dr. Sacha testified that during his February 5, 2021 evaluation, Claimant was still suffering from opioid dependence. Notably, although Claimant was experiencing pain, it was attributable to Fentanyl usage. Claimant thus required three months of Buprenorphine to wean him from Fentanyl. Notably, when Claimant is weaned from Fentanyl he will return to his pre-opioid level of function. Dr. Sacha emphasized that three-months of post-Fentanyl care was reasonable because it was the humane way to wean

Claimant from pain medications. Therefore, removing the cause of Claimant's pain receptor increase by eliminating Fentanyl diminishes within three months and ameliorates the condition.

36. Dr. Sacha also remarked that treatment for Claimant's original lumbar spine injury was no longer required. He persuasively remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, Claimant's subsequent symptoms and functional limitations were caused by the medications. Referring to his February 5, 2021 report, Dr. Sacha emphasized that "the problem that I made recommendations for was getting off the opioid analgesics, because that's what we were treating, not the spinal problem, and they didn't follow that." In his May 8, 2021 report Dr. Sacha explained that any further use of Suboxone and any other medical care after the weaning period should be performed under private insurance because it would not be related to Claimant's September 19, 2014 industrial injury. The record thus reveals that Claimant does not require additional treatment for his original lumbar spine injury because his only remaining problems are related to opioid dependency. Dr. Sacha therefore persuasively determined that, at the conclusion of the three-month weaning period, no additional medical maintenance treatment is necessary for either Claimant's September 19, 2014 lumbar injury or subsequent opioid dependency.

37. The preceding chronology and persuasive opinion of ATP Dr. Sacha reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's September 19, 2014 industrial injury. Claimant has received reasonable and necessary medical maintenance care for both his original lumbar spine injury and his subsequent development of opioid dependence. Claimant initially required up to 24 months of medical maintenance care after his industrial injury and subsequent surgery. By July 5, 2018 Claimant's maintenance care plan was no longer directed at his original lumbar spinal condition, but at the increased pain receptors caused by opioid analgesics. While Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his subsequent symptoms and functional limitations were caused by the medications. Claimant thus required three months of Buprenorphine to wean him from Fentanyl. Because the three-months period of opioid cessation began on March 24, 2021, the appropriate weaning period has now ended. Therefore, no further maintenance care is necessary to address Claimant's lumbar spine or opioid dependence. Additional medical maintenance treatment is no longer causally related, reasonable or necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of his condition. Accordingly, Respondents request to terminate Claimant's medical maintenance benefits is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of

the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to *Grover* they can seek to terminate their liability for ongoing maintenance medical treatment. *See* §8-43-201(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.* However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn*, W.C. No. 4-754-838 (ICAO, Oct. 1, 2013); *see* §8-43-201(1), C.R.S. (stating that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. *See In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012). Because Respondents seek to terminate all of Claimant's medical maintenance care, they bear the burden of demonstrating that continuing medical maintenance benefits are no longer causally related, reasonable or necessary to relieve the effects of Claimant's September 19, 2014 industrial injury or prevent further deterioration of his condition.

5. As found, although Claimant suffered residual medical issues because of opioid dependence, Respondents have proven by a preponderance of the evidence that additional medical maintenance treatment for his dependence is no longer causally related, reasonable or necessary to address his symptoms or prevent further deterioration of his condition. Respondents have also established that additional medical maintenance

treatment is no longer reasonable or necessary to relieve the effects of Claimant's original lumbar spine injury or prevent further deterioration of his condition. Accordingly, Respondents request to terminate Claimant's medical maintenance benefits is granted.

6. As found, Claimant initially injured his lower back on September 19, 2014 while working for Employer. He received conservative treatment and was referred to ATP Dr. Sacha for pain management. By May 7, 2015 Claimant underwent lower back surgery. On September 28, 2015 Dr. Sacha concluded that Claimant reached MMI and required medical maintenance treatment including medications over the next 12–24 months. Claimant then received maintenance treatment with Dr. Sacha until he moved to California on July 16, 2017. Ultimately, Dr. Sacha was Claimant's primary ATP for more than two and a half years and saw him approximately 40 times.

7. As found, on November 8, 2017 Dr. Mirza began treating Claimant in California. He immediately prescribed Claimant opioid medications in the form of Fentanyl patches. On July 5, 2018 Claimant returned to Colorado for an evaluation with Dr. Sacha. Dr. Sacha was critical of the renewed prescription of opioids and explained that Dr. Mirza had prescribed Fentanyl patches far in excess of the standard of care in Colorado. He explained that opioids increase a patient's pain receptors. However, when opioids are discontinued, the increased pain receptors remain and only gradually decrease over time. Dr. Sacha thus outlined a maintenance plan that included a change of physician and a supervised weaning from opioids followed by non-opioid analgesics for 12 months. He emphasized that the maintenance care plan was not directed at Claimant's original lumbar spine injury, but at the increased pain receptors caused by opioid analgesics.

8. As found, Dr. Sacha persuasively testified that Claimant initially required up to 24 months of medical maintenance care after his industrial injury and subsequent surgery. However, because Dr. Mirza prescribed excessive opioids, Claimant's medical problems were iatrogenic in nature and he became dependent on opioids. Claimant thus required additional treatment beyond the original 24 months to wean from medications. Dr. Sacha acknowledged that Claimant's opioid dependence was related to his original lumbar spine injury because it occurred during the course of his medical treatment.

9. As found, Dr. Sacha testified that during his February 5, 2021 evaluation, Claimant was still suffering from opioid dependence. Notably, although Claimant was experiencing pain, it was attributable to Fentanyl usage. Claimant thus required three months of Buprenorphine to wean him from Fentanyl. Notably, when Claimant is weaned from Fentanyl he will return to his pre-opioid level of function. Dr. Sacha emphasized that three-months of post-Fentanyl care was reasonable because it was the humane way to wean Claimant from pain medications. Therefore, removing the cause of Claimant's pain receptor increase by eliminating Fentanyl diminishes within three months and ameliorates the condition.

10. As found, Dr. Sacha also remarked that treatment for Claimant's original lumbar spine injury was no longer required. He persuasively remarked that, while Claimant had some residual spine pain before Dr. Mirza prescribed opioids, Claimant's subsequent symptoms and functional limitations were caused by the medications.

Referring to his February 5, 2021 report, Dr. Sacha emphasized that "the problem that I made recommendations for was getting off the opioid analgesics, because that's what we were treating, not the spinal problem, and they didn't follow that." In his May 8, 2021 report Dr. Sacha explained that any further use of Suboxone and any other medical care after the weaning period should be performed under private insurance because it would not be related to Claimant's September 19, 2014 industrial injury. The record thus reveals that Claimant does not require additional treatment for his original lumbar spine injury because his only remaining problems are related to opioid dependency. Dr. Sacha therefore persuasively determined that, at the conclusion of the three-month weaning period, no additional medical maintenance treatment is necessary for either Claimant's September 19, 2014 lumbar injury or subsequent opioid dependency.

11. As found, the preceding chronology and persuasive opinion of ATP Dr. Sacha reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's September 19, 2014 industrial injury. Claimant has received reasonable and necessary medical maintenance care for both his original lumbar spine injury and his subsequent development of opioid dependence. Claimant initially required up to 24 months of medical maintenance care after his industrial injury and subsequent surgery. By July 5, 2018 Claimant's maintenance care plan was no longer directed at his original lumbar spinal condition, but at the increased pain receptors caused by opioid analgesics. While Claimant had some residual spine pain before Dr. Mirza prescribed opioids, his subsequent symptoms and functional limitations were caused by the medications. Claimant thus required three months of Buprenorphine to wean him from Fentanyl. Because the three-months period of opioid cessation began on March 24, 2021, the appropriate weaning period has now ended. Therefore, no further maintenance care is necessary to address Claimant's lumbar spine or opioid dependence. Additional medical maintenance treatment is no longer causally related, reasonable or necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of his condition. Accordingly, Respondents request to terminate Claimant's medical maintenance benefits is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Although Claimant suffered residual medical issues because of opioid dependence, he no longer requires continuing medical maintenance treatment to address his dependence.

2. Additional medical maintenance treatment is no longer causally related, reasonable or necessary to relieve the effects of Claimant's industrial injury or prevent further deterioration of his condition. Respondents' request to terminate Claimant's medical maintenance benefits is thus granted.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: July 21, 2022.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the left wrist condition is causally related to the June 19, 2020 work accident?

II. Whether Claimant has proven by a preponderance of the evidence that surgery to Claimant's left wrist, which took place on August 2, 2021 as recommended by Dr. Scott, was reasonably necessary and related to the admitted June 19, 2020 work accident?

III. Whether Claimant has proven by a preponderance of the evidence that Claimant's migraines and headaches are causally related and is entitled to treatment under the admitted June 19, 2020 work accident?

PROCEDURAL ISSUES

The parties entered into a stipulation on September 4, 2020 specifically agreeing that Respondent's failed to provide a Designated Provider list (DPL); Claimant treated at Concentra, which was paid for by Respondents; the authorized treating provider (ATP) was to be Kristin Mason, who was immediately authorized; Claimant waived penalties associated with failure to provide a DPL; and temporary total disability benefits were to be terminated as of September 4, 2020. The Order approving the stipulation was issued by this ALJ on September 16, 2020 while employed by Division in her capacity as a PALJ.

Claimant filed an Application for Hearing dated October 15, 2021 on issues of medical benefits, including relatedness of body parts and authorization of Dr. Scott for left wrist surgery.

Respondents filed a Response to Application for Hearing on December 21, 2021 listing issues of preexisting condition, causation and relatedness.

FINDINGS OF FACT

Based on the evidence presented at hearing including exhibits, testimony and a deposition, the ALJ enters the following findings of fact:

1. At the time of this order, Claimant reached the age of 57. Claimant worked for Employer for a period of approximately three months at the time of the admitted work related injury of June 19, 2020. Claimant performed work activities for Employer which included work as a trainer, machine operator, boxing up and shipping parts and testing materials.

2. The medical records showed a long history of multiple sclerosis (MS) causing back, neck and shoulder pain as well as lower extremity pain beginning in 2009. Claimant's records show that she was taking narcotic medications and had a narcotics contract with her primary provider, Dr. Melanie Metcalf, who would frequently state that Claimant's pain and MS was adequately controlled. There was also a consistent pattern of headaches for many years, including in 2012 due to the secondary effects of taking Gylenya for her MS and in 2013 when she was having rebound headaches. She had multiple diagnostic tests that were consistent with MS. In early 2019 she was having sinus pain and headaches, which Dr. Metcalf treated with oral medications.

3. Claimant also had prior orthopedic complaints including a right knee condition for which was surgically repaired with a right knee arthroscopy in 2012. Medical records from University of Colorado Hospital (UCH) document Claimant's ongoing neck and back issues including steroid injections in 2012 and 2013. Claimant was diagnosed with occipital neuralgia as early as December 18, 2014 by Dr. Metcalf and December 4, 2012 by Dr. Jason Krutsch.[1] The UCH records show she was also previously diagnosed with tinnitus by Dr. Ronald Olsen on November 22, 2013, headaches on December 14, 2012 by Dr. Krutsch, and migraines variant by PAC Wall on March 19, 2014.

4. On February 14, 2013 Dr. Metcalf documented that Claimant had had recurrent headaches starting in September 2012, which were not improved with ibuprofen or tylenol or imitrex and had similar headaches which lasted for several months in their intensity. Headaches were again documented on March 14, 2013, including left eye feeling cold and blurry vision. She ordered a brain MRI at that time to rule out underlying process causing headaches. On April 24, 2013 Claimant reported to Dr. Metcalf that she had worsening headaches for the prior 72 hours. On October 15, 2014 Claimant reported to Dr. Metcalf that she had "daily headaches" and Dr. Metcalf ordered a sleep study.

5. On February 15, 2015 she reported headaches to Dr. Mathew Gerlach of Front Range Orthopedics. In fact, on March 31, 2015 Dr. Gerald Rupp documented that his neurological exam showed, speech and swallowing problems, changes in sensation, balance, dizziness, headaches, incoordination and tremors.

6. On June 6, 2016 Claimant was attended at the UCH Spine Center with a plethora of complaints, including headaches, for which she had received trigger point injections. On August 31, 2016 she reported headaches which were constant for the past week. Claimant was evaluated in 2016 at UCH for continued MS, frequent falls and muscle spasms. Diagnostic testing and exam at the neurology clinic were consistent with demyelination including dysesthesias, spasticity, dysphagia, and supported the diagnosis of multiple sclerosis, which was consistent with MRI. Claimant was also seen at the UCHospital Spine Center in 2016 for acute pain of left knee, lumbar pain, cervical radiculopathy, thoracic axial neck pain, bilateral hip pain, headaches, right shoulder pain, bilateral anterior knee pain, peripheral neuralgia, and chronic pain syndrome.

7. Claimant was further evaluated by UCHealth Hand Clinic for bilateral wrist pain due to infusions to treat her MS on February 13, 2018. Dr. Matthew Lorio stated that the infusion effects were temporarily caused symptoms. On April 3, 2018 Dr. Timothy

[1] See Dr. Timothy Vollmer report at UCHealth February 1, 2016, Exhibit C, bate 491.

Vollmer, her UCH Rocky Mountain MS Center Neurologist, documented that Claimant had a variety of problems including moderate recurring episode of depressive disorder, arthralgia of the knee, bilateral hip pain, MS, chronic pain, and peripheral neuralgia. Dr. Vollmer provided a history that Claimant's osteoarthritis pains were worsening with the rituximab infusions, causing both bilateral knee and hand pain and had also noted eye jerking for about 4 months. On May 1, 2019 Claimant also presented with headaches to Dr. Metcalf.

8. Claimant was seen by her primary provider on October 9, 2019 after having been treated in the emergency room following an assault by an individual at her employment. Claimant was complaining of headaches, neck and left forearm pain at that time. On exam Dr. Metcalf noted that Claimant had a bruise under her chin and normal range of motion of both her neck and left forearm. On October 15, 2019 Dr. Metcalf noted the left hand x-rays were negative. Claimant followed up with Dr. Metcalf on January 29, 2020 but made no mention of left wrist or hand problems other than generalized pain caused by her MS in her neck, back and lower back, which were being treated and symptoms controlled adequately with her narcotic pain treatment. On April 14, 2020 Claimant had a virtual checkup appointment with Dr. Metcalf regarding her medications. She noted no different symptoms and noted diagnosis of MS, hyperlipidemia and medial epicondylitis but there was no exam to corroborate ongoing epicondylitis symptoms.[2]

9. Claimant was seen by Dr. Jason Krutsch of Colorado Pain Care on March 3, 2020. Claimant reported to Dr. Krutsch that she had a history of headaches, as well as on April 2, 2020, April 30, May 14, May 28, and June 22, 2020. Dr. Krutsch documented a long history of multiple medial branch block (MBB) of the cervical spine related to her ongoing chronic pain, going back to 2015 with at least 11 with his office and another 7 with Aprima. On April 30, 2020 Claimant had another MBB for the cervical spine spondylosis and chronic pain followed up by another cervical spine MBB on May 28, 2020.

10. On June 19, 2020 Claimant was speaking to a coworker at work. When she was done with the conversation, she turned around and tripped over a pallet and as she was falling, she reacted by protecting her face with her left hand and arm. She fell on her knees and left wrist, with her head bouncing twice off of her left hand, causing a wrist injury. She also sustained a cut on the inside of her lip and cheek. Claimant testified that following the fall, her knees, her hand and her head hurt.

11. Claimant was seen on June 19, 2020 at UCHealth Longs Peak Hospital (LPH) Emergency Services by Physician Assistant Coleen August, who noted Claimant had tripped over a pallet, injuring her knees and catching herself with her left hand. She noted Claimant denied hitting her head and had no neck pain or back pain or other injuries. Ms. August ordered x-rays of the left wrist and bilateral knees, which showed a possible fracture of the left wrist but normal findings of the bilateral knees. Ms. August documented prior medical history that included depression, headaches, high cholesterol, multiple sclerosis, incontinence, right elbow surgery, hysterectomy, knee arthroplasty,

[2] This ALJ notes that April 14, 2020 was the height of the COVID-19 pandemic when the State of Colorado was in shut down.

pelvic laparoscopy, right shoulder surgery and prior right wrist surgery for a tendon repair in 2003.

12. Claimant was attended by Dr. Lori Long-Miller, of Concentra Medical Cetners-Longmont, on June 22, 2020 for the complaints of bilateral knee, left wrist, and a right-side lip contusion. The neck pain was described as dull, aching in nature and radiating to the occiput with associated headaches. The left wrist pain was located in the left dorsal wrist with weakness of the hand, wrist, decreased range of motion (ROM), stiffness, swelling and tenderness. On exam, Dr. Long-Miller documented that Claimant had left wrist swelling and anatomic snuff box swelling, diffuse dorsal and snuff box pain, and ROM was deferred due to pain. Dr. Long-Miller assessed a contusions of her bilateral knees, a left elbow contusion, left wrist injury and cervical strain. She stated that the objective findings were consistent with history and work related mechanism of injury. Dr. Long-Miller referred Claimant for an orthopedic evaluation, physical therapy at the Boulder Concentra Clinic, which Claimant attended from June 22, 2020 through July 25, 2020, and provided Claimant with a shoulder sling. Upon review of the multitude of records submitted in this matter, this ALJ finds that Dr. Long-Miller failed to document Claimant's significant prior history of cervical spine, chronic pain of the cervical spine, the long history of headaches as well as the occipital neuralgia or the cervical MBBs which were as recent as May 28, 2020.

13. On June 22, 2020 Claimant was again seen by Dr. Metcalf via telehealth. She noted that Claimant had fallen forward on both knees and left wrist at work and fractured her left wrist. She diagnosed MS and insomnia.

14. On June 23, 2020, the Claimant was evaluated by Peter D. Wood, M.D. of Front Range Orthopedic and Spine who requested an MRI of the left wrist and took a history that Claimant fell onto her outstretched left hand. She had swelling in her wrist and pain at the base of her thumb as well as an irregularity of the scaphoid area. He placed her in a short arm thumb Spica splint, and ordered an MRI scan.

15. Claimant was evaluated by Nurse Practitioner Keith Meier, of Concentra Medical Centers, on June 26, 2022, documenting that Claimant had been evaluated by the orthopedic surgeon and that he had requested an MRI of her left wrist. Nurse Meier's examination of the wrist revealed left wrist and radial wrist pain which was constant, moderate described as dull, with grip weakness, hand weakness, decreased ROM and tenderness in the scapholunate interval and the radial aspect as well as dorsal aspect at the scaphoid. Mr. Meier, continued to note ongoing cervical strain including muscle spasms with palpation and associated cervical headaches. He limited Claimant's use of her left upper extremity.

16. Respondents filed a General Admission of Liability on July 2, 2020 admitting for temporary disability benefits and medical benefits related to the June 19, 2020 work accident.

17. The MRI took place on July 10, 2020 and was read by Brian Cox, M.D., who noted that Claimant had active de Quervain's tenosynovitis, age indeterminate bone marrow edema surrounding the scapholunate interval, cystic changes in the proximal lunate with a small distal radioulnar joint effusion suggesting changes of ulnocarpal

abutment without ulnar variance, and a large dorsal ganglion cyst arising from the triscaphe articulation, deep to the second extensor compartment. Dr. Cox also noted thickening and increased signal within both first extensor compartment tendons extending from the radial styloid process to the level of the thumb CMC joint with regional tenosynovial fluid indicative of active tendinosis.

18. Dr. Wood documented on July 14, 2020 that symptoms had been gradually improving with moderate left wrist pain, characterized as a dull aching and sharp stabbing type of pain. Claimant described symptoms located in the radial aspect of the wrist, aggravated by any movement and relieved by rest, ice and modification of activity. Dr. Wood noted on exam that Claimant's left wrist showed significant tenderness over the first dorsal compartment with mild swelling and pain with resisted thumb extension and abduction, a positive Finkelstein's test[3], and limited range of motion of her wrist secondary to discomfort, but not her digits. Dr. Wood recommended proceeding with conservative treatment, following review of the MRI films, including providing a steroid injection into the 1st dorsal compartment to treat the De Quervain's tenosynovitis and prescribed physical therapy.

19. Nurse Meier saw Claimant on July 21, 2020 noting she presented for recheck of her knee, wrist and lip. Claimant reported that she hurt so bad that she was crying following the wrist injection and that it did not help. With regard to the neck, Mr. Meier noted that injury history was previously documented, that symptoms were unchanged with continuous right posterior neck and right trapezius pain.

20. Claimant was attended by Mr. Keith Meier at Concentra on July 23, 2020 for cervical spine x-rays, which Dr. William McCuskey read as showing degenerative changes, otherwise unremarkable. It is not apparent in the medical records submitted by the parties, that Claimant's workers' compensation Concentra providers were aware of her pre-existing neck and headache issues.

21. Claimant returned to Concentra on July 24, 2020 and was evaluated by Kevin Riedel, P.T., who reported Claimant continued having headaches and was in therapy for her hand. He stated that Claimant was not progressing with PT, reported she had no change with her neck pain. They provided functional dry needling and manual therapy, which she tolerated well, and suggested that she be progressed with work restrictions.

22. On September 4, 2020 the parties entered into a Stipulation. Respondents conceded they did not provide Claimant with a list of designated medical providers, but Claimant had been treated a Concentra, which was paid for by Respondents. The parties stipulated that Dr. Kristin Mason would immediately be authorized as Claimant's authorized treating physician, so long as Dr. Mason accepted Claimant as a patient.

23. Claimant was initially seen by Dr. Kristin Mason on September 28, 2020 who took a history of relapsing-remitting MS and an on the job injury on June 19, 2020 when she tripped over a pallet, falling on both knees, onto concrete, banging her right ankle and falling onto her left hand and wrist, hitting her face on her hand, causing a cut

[3] Finkelstein's test is a provocative test for diagnosis of De Quervain's disease.

inside her lip. Claimant complained that headaches increased by movement seemed to emanate from the occipital area. She complained of left hand and wrist pain, had an MRI which showed some bone edema but not a clear fracture of the scaphoid. She saw Dr. Wood, and he placed her in a thumb Spica splint. He prescribed hand therapy, but it never happened. Claimant denied previous trauma to the left wrist. She noted pain with turning her head while driving, walking, and picking anything up increased her left wrist and hand pain. On physical exam, Dr. Mason noted that Claimant was pleasant and cooperative with few pain behaviors. Dr. Mason noted Claimant did have decreased sensation in the median distribution of the left hand with a positive medial Tinel's, and a somewhat ratchety quality on manual muscle testing. On neck exam, Dr. Mason found tenderness over the upper cervical segments and to a lesser extent the suboccipital muscles. The left wrist showed some diffuse swelling, mild tenderness over the TFCC[4], and more significantly tender over the scaphoid. Finkelstein's test was also positive. She also found that flexion/extension were quite limited. Dr. Mason assed probable cervical sprain-strain, with likely cervicogenic headaches; left wrist sprain vs. occult scaphoid injury with some degree of underlying de Quervain's; left knee contusion; and right ankle contusion. Dr. Mason prescribed trial medications for the headaches, stating that it was often somewhat of a process to find the appropriate treatment for posttraumatic headaches. She provided restrictions of five lbs., including no lifting greater than five lbs., limited standing and walking, and no crawling, kneeling, squatting or climbing.

24. An x-ray report issued by Dr. William Wahl on September 30, 2020 showed advanced disc disease at the C5-C6 and C6-C7, reversal of normal cervical lordosis centered at C5, and no compression fractures.

25. Dr. Mason evaluated Claimant again on October 20, 2020. She changed Claimant's headache medication, prescribed an MRI of the cervical spine in order to not aggravate an underlying condition with physical therapy and continued restrictions.

26. Dr. Mason reviewed Claimant's left wrist MRI on November 9, 2020 and noted possible lunotriquetral ligament tear, edema in the lunate and a TFCC tear. She documented that following physical therapy Claimant was complaining of increased headaches and that Claimant denied having similar headaches before. Claimant described the headaches as left greater than right, occipital radiating to frontal, at times associated with visual changes and nausea. Claimant reported an incident where she fell against a wall after losing balance due to headaches. Dr. Mason continued to assess cervical strain, left wrist injury and post migraine headaches. She referred Claimant to Dr. Drewek, regarding her neck and changed her headache medication again.

27. On November 30, 2020 Dr. Mason conducted a telemedicine visit with Claimant, noting that Claimant had potentially been exposed to COVID. They discussed sending Claimant to Dr. Frank Scott, a hand orthopedist, as well as for a neurologic evaluation related to ongoing headache concerns, as Claimant had been seen by Dr. Drewek who opined that the headaches were an unlikely consequence of neck problems.

[4] The TFCC stand for triangular fibrocartilage complex, a structure in the wrist that supports the carpal bones on the wrist.

28. Claimant was evaluated at the UCH Hand Clinic on January 12, 2021 by Dr. Frank Scott and Dr. Thomas Ergen, who documented that Claimant's symptoms were consistent with left De Quervain's, left thumb CMC arthritis and left ulnar abutment syndrome. They ordered three x-ray views of her left thumb and confirmed that they showed left thumb CMC[5] arthritis that was moderate. They proceeded with corticosteroid injection for the left thumb CMC only, as Claimant reported she only had temporary relief with the De Quervain's injection.

29. Dr. Mason evaluated Claimant on February 25, 2021. Claimant reported feeling better after the left wrist injection with Dr. Scott, still having certain pain with movement. Dr. Mason documented a taut band in the upper cervical and middle paraspinals bilaterally. She noted that wrist ROM following the injections was better than on previous examinations, and Claimant had less left wrist swelling. Dr. Mason proceeded with trigger point injections into the cervical spine at that time.

30. Claimant had an independent medical evaluation, at Respondents' request, by Dr. Carlos Cebrian on February 25, 2021, who issued a report on March 17, 2021. He documented a mechanism of injury consistent with prior records wherein Claimant reported falling over a pallet, falling first on her knees and raising her left hand to protect her face, then falling on her left hand, hitting her face on her hand and causing a small cut on her upper lip. He completed a medical records review which spanned over ten years and was approximately 88 pages long. Dr. Cebrian opined that the work related June 19, 2020 claim diagnoses included the bilateral knee contusions, the left wrist sprain, de Quervain's tenosynovitis, and the lip abrasion. He provided a list of 25 non work related diagnosis including the headaches, vertigo, tinnitus, cervical spine, chronic pain and the occipital neuralgia based on the medical records reviewed.

31. On March 18, 2021 Dr. Mason documented that Claimant had followed up with Dr. Oyoung from Neurology, who had previously recommended discontinuation of medications for headaches. On examination Dr. Mason noted significant tenderness in the area of the snuffbox and lunotriquetral ligament area. On April 8, 2021, Dr. Mason noted she received the IME from Dr. Cebrian and discussed the results with Claimant. She found that Claimant continued to have tenderness in the snuffbox and lunotriquetral ligament area and to a lesser extent the scapholunate area as well as the TFCC. She continued to recommend follow up with Dr. Scott and Dr. Oyoung.

32. On April 26, 2021 Dr. Scott noted that Claimant had excellent short term results with her left thumb CMC osteoarthritis injection. They discussed treatment options and determined to perform repeat injection of the left thumb CMC.

33. Claimant was attended by Dr. Thomas France at the UCH Hand Clinic on June 14, 2021 who documented that Claimant's last left thumb CMC injection was not as effective as the first one. They discussed surgical options at that time. While there were indications of past medical history of chronic pain in the feet, arms, hands as well as depression, headaches and MS, they were not explained in the context of time or referenced a work injury. Dr. France noted Claimant was tender to palpation at the thumb

[5] Carpometacarpal joint.

CMC joint but had no pain with "A1 pulley of the thumb."[6] She also had pain along the TFCC and with ulnar deviation of the wrist.

34. Claimant's July 12, 2021 follow-up report with Dr. Mason noted that Claimant continued to have major problems with headaches that were constant left-sided hemi-cranial, which seemed to be constant and daily. She continued to diagnose posttraumatic headaches, changed her headache medication and discussed the upcoming surgery with Dr. Scott set for August 2, 2021.

35. On August 2, 2021 Claimant proceeded with the left wrist arthroplasty-LRTI (ligament reconstruction and tendon interposition), and left first dorsal compartment release-De Quervain's release by Dr. Frank Scott.

36. On August 17, 2021 Dr. Scott noted that Claimant was post left thumb CMC arthroplasty with left de Quervain's release on August 2, 2021. He noted that Claimant fell and landed on her wrist on her bed. He removed the splint and sutures, and stated she was stable.

37. The last record by Dr. Scott is dated September 27, 2021 and he continued to diagnose De Quervain's disease and localized primary osteoarthritis of the CMC joint of the left thumb. He documented that Claimant was approximately eight weeks post left thumb CMC arthroplasty and left first dorsal compartment release. Dr. Brady Williams coauthored the report. The exam of the left upper extremity documented that the incision was clean, dry, intact and well-healed, thumb was in good functional position and stable, Claimant had thumb opposition to the distal palmar crease of the small finger, persistent paresthesia on both the ulnar and radial aspect of the thumb. He noted that Claimant was progressing as expected.

38. Dr. Mason examined Claimant on January 3, 2022 noting that following surgery, she was doing much better with left wrist movement, with no swelling or deformity. She recommended Claimant continue with physical therapy for her wrist and change headache medications, though she had not been very successful with prior prescriptions.

39. Kristin Mason, M.D. testified by deposition on January 24, 2022, as Claimant's authorized treating physician. She is board certified in physical medicine and rehabilitation as well as electrodiagnostic and neuromuscular medicine. She has been Level II Accredited by the Division of Workers' Compensation since 2001. Dr. Mason is accepted an expert in physical medicine and rehabilitation, electrodiagnostic and neuromuscular medicine, as well as a Level II Accredited physician. Dr. Mason stated that Claimant was complaining of headaches increased by movement and associated with ringing in her ears, as well as some eye pain, nystigmus, left hand and wrist pain, soreness in her left knee and tenderness on the outside of her right ankle during her first evaluation. She opined that the surgery performed by Dr. Scott was reasonable, necessary and related to the June 19, 2020 work related injury. She specifically opined that Claimant sustained multiple insults to her left wrist including causing the aggravation of the left thumb CMC joint, and left first dorsal compartment injury or De Quervain's

[6] A test to identify trigger finger symptoms.

tenosynovitis. She stated that Claimant had undergone conservative care and required surgery, and in hindsight, she improved since the surgery with less swelling, tenderness, better capacity to use her hand and improved range of motion.

40. Claimant testified at hearing that she injured her left wrist when she fell causing pain. She stated that, she had some problems with her wrist before this injury, but the problems she had after the injury caused swelling, tenderness and loss of range of motion and had not experience that kind of pain in her wrist until this fall. She stated that she had had no other injuries between June 19, 2020 and the date of her surgery. She explained that the symptoms she had had prior to this injury into the left hand or wrist were resolved before this accident happened, including the tingling which was resolved by the MS medication. Claimant explained that the surgery helped relieve the pain in her wrist and thumb areas where she hurt herself during the fall. Claimant also testified that she had had headaches before the accident but that they were different after the accident but acknowledged that she did not remember about all the treatment she had received for headaches. She stated that she had given herself whiplash during the fall and that was what was causing the headaches.

41. Dr. Cebrian testified at hearing consistent with his report. Dr. Cebrian was accepted as an expert in occupational medicine and as a Level II Accredited physician by the Division since 2001. He opined that Claimant had sustained an injury to her left wrist but that only the surgical intervention for the first dorsal compartment release (de Quervain's disease) was related to work event and that the surgical intervention for the CMC arthroplasty was not a result of Claimant's work injuries. Dr. Cebrian explained that MS caused nerve pain that weakens the muscles and places more pressure on the joints for the body's support, in turn causing osteoarthritis to develop. Dr. Cebrian is persuasive with regard to the need for the first dorsal compartment surgery but not with regard to his opinion of the surgical intervention of the CMC joint.

42. Dr. Cebrian also testified regarding Claimant's headaches. He attributed the headaches partially to her preexisting cervical pathology, which was actively being treated, including shortly before the work related accident. He also opined that it was likely that the preexisting and diagnosed multiple sclerosis and nystagmus (eye jerking), previously diagnosed migraines, occipital neuralgia, and chronic opiod use were also contributing to Claimant's ongoing headache condition and need for medical care. He explained that these were preexisting conditions not related to the accident. Dr. Cebrian is found persuasive with regard to the headache condition.

43. As found, on June 19, 2020 Claimant injured her left wrist, causing de Quervain's tenosynovitis (first dorsal compartment) and aggravated the preexisting condition of the CMC joint and TFCC on June 19, 2020. While Claimant did suffer from aches and pains in her bilateral wrists due to her MS and arthritic or degenerative joints, the fall on her left wrist on June 19, 2020 aggravated her preexisting condition. Claimant was persuasive in her testimony that she had pain, swelling and loss of range of motion in her left wrist and hand as a consequence of her June 19, 2020 fall on her left wrist. As found, the fall caused an aggravation of her preexisting arthritic condition of her left wrist. As found, this was documented by the emergency room visit on June 19, 2020, on June 22, 2020 by Dr. Long-Miller and in subsequent reports issued by Dr. Mason. Dr. Mason

documents multiple times that claimant continued with pain at the base of the thumb, snuffbox area and swelling of the left wrist. As found, Dr. Wood credibly opined on July 14, 2020 that Claimant's left wrist showed significant tenderness over the first dorsal compartment with mild swelling and pain with resisted thumb extension and abduction, a positive Finkelstein's test, and limited range of motion of her wrist secondary to discomfort. As found, Dr. Frank Scot on January 12, 2021 opined that Claimant's symptoms were consistent with left De Quervain's, left thumb CMC arthritis and left ulnar abutment syndrome. As found, this is supported by Dr. Long-Miller's medical records, which go into extensive description of having had left wrist swelling and anatomic snuff box swelling, diffuse dorsal and snuff box pain. Nurse Meier's examination of the wrist revealed left wrist and radial wrist pain which was constant, moderate, with grip weakness, hand weakness, decreased ROM and tenderness in the scapholunate interval and the radial aspect as well as dorsal aspect at the scaphoid. These medical providers are found persuasive. Even Dr. Cebrian opined that the De Quervain's tenosynovitis was related to the injury. As found, Claimant has proven by a preponderance of the evidence that the left wrist De Quervain's disease, aggravation of the CMC joint are related to the June 19, 2020 work relate injury.

44. As found, the left wrist De Quervain's tenosynovitis and the aggravation of the arthritic CMC joint are found to be compensable and causally related to the June 19, 2020 work related injury. Dr. Wood and Dr. Scott performed injections in both sites and Claimant had only temporary relief with the injections. Claimant was also involved in physical therapy with little relief. As found, Dr. Scott complied with the requirements of the Division's Medical Treatment Guidelines in proceeding with applicable conservative care before recommending surgical repair. As found, Dr. Scott's opinion of Claimant's need for surgery of these conditions is found persuasive and therefore, the surgery is found to be reasonably necessary and related to the June 19, 2020 event. Dr. Scott performed the surgical intervention on August 2, 2021 including the left wrist arthroplasty with left de Quervain's release. Claimant has proven by a preponderance of the evidence that the surgery performed by Dr. Scott on August 2, 2021 was reasonably necessary and related to the admitted compensable workplace injury of June 19, 2020 and was performed in order to address the aggravated CMC joint and De Quervain's disease.

45. As found, Dr. Cebrian is persuasive that, in this matter, Claimant clearly had a long history of headaches. As found, as early as June 22, 2020 Claimant stated to Dr. Long-Miller that her headaches were in the occiput. Dr. Mason's testimony indicated that sleep apnea and occipital neuralgia can cause headaches. Claimant was diagnosed with both of these conditions as early as December 18, 2014 by Dr. Metcalf and December 4, 2012 by Dr. Jason Krutsch.[7] She was also previously diagnosed with tinnitus by Dr. Ronald Olsen on November 22, 2013, headaches on December 14, 2012 by Dr. Krutsch, and migraines variant by PAC Wall on March 19, 2014. As found, Dr. Mason stated in her initial report on September 28, 2020 that Claimant's headaches "seemed to emanate from the occipital area." Claimant had headaches affecting her occipital area for many years as documented in the medical records. As found, Claimant's need for continuing medical care for the headaches and migraines are not causally related to the June 19,

[7] See Dr. Timothy Vollmer report at UCHealth February 1, 2016, Exhibit C, bate 491.

2020 work related injury. Claimant has failed to prove causation of the migraines and headaches to the work related June 19, 2020 claim.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

B. Medical Benefits

The three issues to be determined in this case are intertwined in a claim for reasonably necessary medical benefits related to the admitted compensable work related injury of June 19, 2020.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

A claimant has a compensable injury if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produces a disability for which benefits are sought. § 8-41-301(1)(c), C.R.S. See *Merriman v. Indus. Comm'n*, 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff*, 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, Claimant must prove by a preponderance of the evidence that her symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). Pain is a typical symptom from an aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant may have suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016).

When a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The finding of a compensable injury or a compensable disability does not require a finding that all medical treatment after the industrial injury is authorized or causally related to the industrial injury. *Briggs v. Williard Plumbing & Heating Inc.*, W.C. No. 4-526-000 (I.C.A.O. Nov. 26, 2003). This is true even where the there is an admission of liability as to medical care and medical care has been provided despite denial, and merely because there is an admitted injury it cannot be construed as a concession that all medical care which occurred after the injury were caused by the injury. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012).

Claimant's fall onto her left wrist did cause injury to Claimant's tendons in her first dorsal compartment in her left wrist, and aggravated her underlying arthritis in her wrist including the CMC joint, aggravation of the left ulnar abutment syndrome and the aggravation of the tendons of the TFCC. This is supported by Claimant's persuasive testimony in this matter as well as the opinions of Dr. Mason, and the medical records from Dr. Scott, Dr. Long-Miller, Dr. Wood, and Nurse Meier as stated above. This is supported by the orthopedic specialists' opinions above, Dr. Wood and Dr. Scott. It is also supported by the limited persuasive evidence by Dr. Cebrian regarding the first dorsal compartment or de Quervain's tenosynovitis. Claimant has shown that both the de Quervain's tenosynovitis and the aggravation of the preexisting osteoarthritis, which became symptomatic and which required medical care following the June 19, 2020 fall, were proximately caused by the June 19, 2020 workplace injury. Claimant has further shown that the need for the surgery performed by Dr. Frank Scott was reasonably necessary and related to the June 19, 2020 fall at work.

In this matter, Claimant has a long history of painful, unrelenting MS, cervical spine complaints, headaches, and occipital neuralgia, which caused ongoing headaches or migraines. None of these conditions were caused by her fall at work. None of these conditions were worsened by her June 19, 2020 work related fall despite the extensive medical care provided by authorized treating providers and paid for by Respondents. This is supported by the lengthy preexisting records of Dr. Metcalf as well as Dr. Cebrian's opinions regarding the headaches, which are persuasive in this matter. Claimant has failed to show the causal relationship between the work related injury and the ongoing headaches from which Claimant suffers. As found the ongoing headache condition and the need for medical care related to the ongoing headaches are not reasonably necessary and are not proximately caused by the June 19, 2020 workplace accident.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay for the left first dorsal compartment release (de Quervain's release) and the left CMC joint arthroplasty as completed by Dr. Scott in August 2021, and all costs associated with the reasonably necessary and related medical care, subject to the Colorado Workers' Compensation Fee Schedule.

2. Claimant's migraines and headaches are not causally related to the June 19, 2020 industrial accident, and thus, medical benefits for her migraines and headaches are denied and dismissed.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 21st day of July, 2022.

By: Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

Has the claimant demonstrated, by a preponderance of the evidence, that the C4 to C7 anterior cervical discectomy and fusion (ACDF) recommended by Dr. Ewell Nelson is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted July 17, 2020 work injury?

FINDINGS OF FACT

1. The claimant works at the employer's ranch as a ranch manager. His job duties include conditioning five to seven horses and overseeing other ranch employees.

2. On July 17, 2020, the claimant was operating a skid steer to move a 1,400 to 1,600 pound bale of hay. This bale of hay rolled off the skid steer forks, causing the skid steer to pitch forward and then back in a forceful manner. The claimant's initial symptoms included headaches, as well as pain in his neck, shoulders, and arms.

Medical Treatment Prior to July 17, 2020

3. The claimant has spent most of his life riding, breaking, and training horses. This included many years working as a jockey racing horses in the United States and Canada. During his lengthy horse related career, the claimant has been thrown from horses, resulting in injuries. Due to such injuries, the claimant has undergone surgery on both of his arms.

4. In 2007, the claimant was thrown from a horse and injured his left wrist, necessitating surgery. During that treatment, the claimant was diagnosed with carpal tunnel syndrome. The claimant also experienced neck pain following the 2007 incident. On June 18, 2007, he underwent magnetic resonance imaging (MRI) of his cervical spine. The MRI showed mild multilevel degenerative changes with stenosis.

5. In 2018, the claimant suffered a right wrist fracture while working as a gate trainer at a horse track. This injury also necessitated surgery. On April 16, 2019, the claimant's surgeon recommended carpal tunnel surgery. The claimant testified that he did not undergo carpal tunnel surgery because he was able to perform all of his job duties, at that time.

6. The claimant further testified that after recovering from these prior injuries and related surgeries, he was able to return to full duty work. The claimant testified that prior to July 17, 2020, he was never off a horse for more than a few days and did not have to take any medications.

Medical Treatment Beginning July 17, 2020

7. The claimant's authorized treating provider (ATP) for this claim is Concentra Medical Centers (CMC). On July 20, 2020, the claimant was seen at CMC by Dr. Felix Meza and Devin Jacobs PA-C. On that date, the claimant described his mechanism of injury and reported tightness and pain in his neck, intermittent headaches, tingling in his left fourth and fifth fingers, and pain in his right elbow. The claimant was diagnosed with a neck strain and right elbow contusion. He was referred to physical therapy.

8. Cervical spine x-rays taken on July 20, 2020 showed degenerative changes, with significant disc space narrowing in the lower cervical segments.

9. On July 24, 2020, the claimant returned to PA Jacobs and reported improved symptoms with physical therapy.

10. On August 7, 2020, the claimant reported to PA Jacobs that he continued to have neck tension and aching, with worsening right upper extremity aching. PA Jacobs ordered x-rays of the claimant's right elbow and right shoulder.

11. On August 10, 2020, the claimant was seen by PA Jacobs at the request of the claimant's physical therapist. The claimant reported continuing headaches and intermittent tingling and numbness in his hands. On this date, PA Jacobs added right cervical radiculopathy to the claimant's list of diagnoses and ordered an MRI of the claimant's cervical spine.

12. On August 22, 2020, the cervical spine MRI was reviewed by Dr. Elizabeth Carpenter. In her report, Dr. Carpenter identified moderate cervical spondylosis with multilevel thecal sac stenosis; an 8 mm AP thecal sac at the C3-C4 level; moderate multilevel facet arthropathy; a degenerative bone cyst on the left at the C3-C4 level; and severe foraminal stenosis on the left at C3-C4; right from C4 to C6, and bilaterally at C6-C7.

13. On August 31, 2020, the claimant was seen by Dr. Robert Kawasaki. At that time, the claimant reported pain in his upper cervical spine, headaches, and occasional numbness and tingling in his hands. On examination of the claimant's cervical spine, Dr. Kawasaki noted tenderness to palpation of the occipitoatlantal junction. He also noted that specific facet loading caused increased pain in that same area, and reproduced headaches. Dr. Kawasaki opined that the claimant's underlying cervical spondylosis was the result of the claimant's career as a jockey. He also opined that the July 17, 2020 "whiplash injury" created the claimant's cervicogenic headaches. Dr. Kawasaki recommended acupuncture and chiropractic treatment. He also discussed possible future treatment, concluding injections and medial branch blocks.

14. On September 18, 2020, the claimant was seen by PA Jacobs. At that time, the claimant reported worsening neck pain, with shooting pain from his neck down his right arm to his elbow, right hand numbness, and headaches.

15. On September 28, 2020, the claimant returned to Dr. Kawasaki and reported persistent neck pain, headaches, and pain in his bilateral shoulder girdles. The claimant also reported that he had been seen at the Orthopedic Center of Colorado by Maria Kaplan, PA, who referred him for an interlaminar epidural steroid injection (ESI). Dr. Kawasaki recommended ongoing conservative care, including chiropractic treatment and physical therapy.

16. On October 22, 2020, Dr. Kawasaki performed bilateral upper extremity electromyography (EMG) testing. These tests did not show evidence of cervical radiculopathy. In the medical record of that date, Dr. Kawasaki noted, "[a]lthough the patient's EMG did not show evidence of axonal losses, the patient can have radiculitis causing some nerve irritation with pain, numbness, and tingling in the upper extremities." Dr. Kawasaki opined that the claimant has some increased pain in his neck with potential radiculopathic symptomatology. Dr. Kawasaki recommended an interlaminar ESI at the C7-T1 level. This injection was administered on November 25, 2020.

17. On November 2, 2020, and November 30, 2020, the claimant was seen at CMC by Dr. Meza. The claimant continued to report persistent pain in his neck, right trapezius, and right shoulder.

18. On December 24, 2020, the claimant was seen by Dr. Kawasaki and reported some temporary relief from the injection. However, the claimant continued to report persistent neck pain and headaches. Dr. Kawasaki opined that the claimant's ongoing pain was related to the work injury. Dr. Kawasaki recommended bilateral C2-C3 and C3-C4 medial branch blocks. The recommended medial branch blocks were administered on January 29, 2021.

19. For a period of time in 2021, the claimant relocated with the employer to Florida. During that time, the claimant's treatment was transferred to CMC providers in that state. On March 5, 2021, the claimant was seen at CMC in Florida by Rosemarie Schanel, PA-C. The claimant described his work injury and reported headaches, pain in his neck, trapezius, right shoulder, and right arm. PA Schanel diagnosed the claimant with right cervical radiculopathy, made a referral for a neurological consultation, and prescribed cyclobenzaprine and gabapentin.

20. On April 6, 2021, the claimant returned to PA Schanel and reported that the medications were helping him sleep and reducing his pain. However, he also reported continued pain in the base of his skull and left hand numbness. Between April and June 2021, the claimant continued to report increased pain, numbness, and tingling in his bilateral upper extremities.

21. On June 14, 2021, the claimant returned to CMC in Colorado and was seen by Dr. Meza. The claimant continued to report persistent neck and right upper extremity symptoms.

22. On July 7, 2021, the claimant was seen by Dr. Kawasaki. At that time, Dr. Kawasaki noted that the claimant had increased symptoms with range of motion and referred the claimant to a neurosurgeon. Dr. Kawaski noted that if surgery was not recommended, the claimant would be a maximum medical improvement (MMI). Dr. Kawaski opined that it was unlikely that the claimant would need surgery.

23. On August 31, 2021, the claimant was seen at Boulder Neurological and Spine Associates by PA Michael Kiley. The claimant described his injury and reported bilateral hand weakness and numbness. He also reported bilateral shoulder and triceps pain. PA Kiley ordered x-rays and an MRI of the claimant's cervical spine.

24. On September 15, 2021, the cervical spine x-rays showed moderately severe diffuse cervical spondylosis, multilevel disc space narrowing, endplate sclerosis, degenerative spurring, and degenerative facet joint arthropathy. A cervical spine MRI was also performed on that date and showed findings similar to the prior MRI.

25. On October 12, 2021, the claimant returned to Boulder Neurological and Spine Associates and was seen by Dr. Ewell Nelson. At that time, the claimant reported persistent neck and upper extremity pain. Dr. Nelson reviewed the September 15, 2021 MRI and recommended a C4 to C7 anterior cervical discectomy and fusion (ACDF) to address the claimant's bilateral radicular symptoms. On October 21, 2021, a request for authorization of a C4 to C7 ACDF was sent from Dr. Nelson's practice to the insurer.

26. On October 25, 2021, the claimant attended an independent medical examination (IME) with Dr. B. Aaron Castro. In connection with the IME, Dr. Castro reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his November 7, 2021 IME report, Dr. Castro opined that the claimant's need for cervical surgery is not work related. Rather, it is Dr. Castro's opinion that the need for surgery is related to pre-existing degenerative changes in the claimant's cervical spine. In addition, it is possible that some of the claimant's symptoms are not coming from his cervical spine, but rather from carpal tunnel syndrome. Based upon Dr. Castro's report, the respondents denied authorization for the recommended spinal fusion surgery.

27. On June 1, 2022, Dr. Justin Green administered EMG testing of the claimant's bilateral upper extremities. In his report, Dr. Green noted that the claimant had moderate carpal tunnel syndrome in the right wrist, without ongoing denervation. The EMG also showed no evidence of ongoing right upper extremity radiculopathy.

28. Dr. Castro's testimony was consistent with his written report. Dr. Castro reiterated his opinion that the surgery is not reasonable or necessary medical treatment. In support of this opinion, Dr. Castro noted that the claimant does not have spine instability. Dr. Castro noted that it is unclear if the claimant's symptoms are coming from

his cervical spine. In addition, the EMG studies showed evidence of carpal tunnel syndrome, but did not show evidence of cervical radiculopathy. Dr. Castro opined that it is more likely that the claimant's hand related symptoms are due to carpal tunnel syndrome.

29. During Dr. Castro's testimony a clarification was made regarding two medical records he referenced in his IME report as occurring in 2017. Specifically, medical records identified as June 20, 2017 and September 21, 2017, were in fact records from those dates in 2007. Dr. Castro testified that this was a typographical error in his report, and it did not change his ultimate opinion regarding the claimant's cervical spine and the recommended surgery.

30. The claimant testified that his current symptoms differ from those he experienced from his prior injuries. His current symptoms are more severe and are constant. As a result, he has to take medications (including gabapentin). Prior to his 2020 injury, the claimant rode horses virtually every day. Since his injury, he now rides once or twice a month. The claimant explained that he rides at those times because he is not comfortable letting his boss, (a woman in her 70s), ride alone. The claimant wants to undergo the recommended surgery.

31. The ALJ credits the claimant's testimony regarding the nature and onset of his symptoms. The ALJ also credits the medical records and the opinions of PA Jacobs, PA Schanel, PA Kiley, and Dr. Nelson over the contrary opinions of Dr. Castro. The ALJ finds that the claimant has demonstrated that it is more likely than not that he suffered an injury to his cervical spine on July 17, 2020. Specifically, the ALJ finds that the claimant's pre-existing cervical spine condition was aggravated by the July 17, 2020 injury. The ALJ also finds that the claimant has successfully demonstrated that it is more likely than not that the C4 to C7 ACDF recommended by Dr. Nelson is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the July 17, 2020 injury aggravated the pre-existing condition of the claimant's cervical spine, necessitating treatment. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that the C4 to C7 anterior cervical discectomy and fusion (ACDF) recommended by Dr. Nelson is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted July 17, 2020 work injury. As found, the claimant's testimony, and the opinions of PA Jacobs, PA Schanel, PA Kiley, and Dr. Nelson are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the recommended C4 to C7 anterior cervical discectomy and fusion (ACDF), pursuant to the Colorado Medical Fee Schedule.

Dated July 22, 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

STATE OF COLORADO
OFFICE OF ADMINISTRATIVE COURTS
Workers' Compensation No.: 4-956-021

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

In the Matter of the Workers' Compensation Claim of:

[REDACTED],
Claimant,

v.

[REDACTED],
Employer,

and

[REDACTED],
Insurer,
Respondents.

THIS MATTER has come before the undersigned on Respondents' Motion for Summary Judgment.

FINDINGS OF FACT

1. [Redacted] ("Claimant") sustained a work-related injury on July 7, 2014. Liability was admitted and claimant underwent medical treatment until he was placed at maximum medical improvement by Dr. Joseph Morreale on July 10, 2017 at a follow-up Division Independent Medical Examination ("DIME"). *Resps. Ex. A, pp. 6-11.* Pinnacol Assurance filed a Final Admission of Liability ("FAL") on September 5, 2017. *Id., pp. 1-5.*

2. Respondents admitted for maintenance medical treatment in the FAL. *Id.* However, claimant has not received medical treatment from any authorized medical providers of which respondents are aware since being placed at MMI on July 10, 2017. *See Resps. Ex B, pp. 12-13,* ¶3. The last payment made by Pinnacol Assurance for medical treatment rendered to Claimant was a payment made on May 4, 2017 to Concentra Medical Centers for an April 28, 2017 date of service. *Id.* No medical benefits have become due and payable since that time. *Id.* Two other later payments made to Concentra, one on November 3, 2017 for a listed date of service of October 16, 2017, and the second on January 26, 2018 for a listed date of service of January 5, 2018, were for reimbursement of time spent by treating providers responding to inquiries made by representatives

of respondents without corresponding medical treatment rendered to Claimant. *See Id.; see also Resps. Ex. C.* No payments of any kind have been made to Claimant's treating medical providers since that time, nor have any bills been submitted for payment. *Resps. Ex B, pp. 12-13, ¶3.*

3. Claimant filed an Application for Hearing on December 19, 2017, endorsing the issues of overcoming the DIME, permanent partial disability ("PPD") benefits, and challenging an offset respondents had taken against the PPD award. *Resps. Ex. D.* The parties resolved the issues by stipulation, which was granted on September 7, 2018. *Resps. Ex. E.* Pinnacol Assurance issued a check to claimant in the amount of $7,489.59 on September 12, 2018, representing the remaining balance of PPD benefits as per the resolution agreed upon by the parties. *See Id; see also Resps. Ex. B, p. 13, ¶4.*

4. Claimant filed a subsequent Application for Hearing on November 14, 2018, endorsing the issues of petition to reopen, permanent total disability benefits, "impairment rate," and medical benefits. *Resps. Ex. F.* The parties went to hearing on the issues of petition to reopen and medical benefits. Hearing occurred May 24, 2019. Administrative Law Judge Margot W. Jones presided. ALJ Jones issued her *Findings of Facts, Conclusions of Law, and Order* on July 31, 2019, served on the parties on August 2, 2019. *Resps. Ex. G.* ALJ Jones denied and dismissed claimant's request to reopen his claim and his request for medical benefits. *Id. at p. 11.*

5. This claim was thereafter dormant for nearly three years until Claimant filed an Application for Hearing on April 5, 2022, endorsing issues of compensability and permanent total disability benefits. *Resps. Ex. H.* Prehearing Administrative Law Judge Marcus J. Zarlengo struck the Application by Order dated April 25, 2022. *Resps. Ex. I.*

6. Claimant has now filed the instant Application for Hearing on May 10, 2022, endorsing issues of petition to reopen, compensability, and temporary partial disability benefits from July 9, 2014 ongoing. *Resps. Ex. J.* Respondents filed their Response to Application for Hearing on May 23, 2022, endorsing as a defense that Claimant's request to reopen his claim is time-barred by the applicable statute of limitations contained in C.R.S. §§ 8-43-303 (1)& (2). *Resps. Ex. K.*

CONCLUSIONS OF LAW

1. OACRP 17 provides for summary judgment when the pleadings and supporting documents demonstrate that there is no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. The burden is on the moving party to establish that no genuine issue of fact exists. *Wilson v. Marchiondo*, 124 P.3d 837 (Colo. App. 2005).

2. C.R.C.P. 56 applies to motions for summary judgment filed with the Office of Administrative Courts to the extent it is consistent with OACRP 17. *Fera v. ICAO*, 169 P.3d 231 (Colo. App. 2007). Once the moving party establishes that no material fact is in dispute, the burden of proving the existence of a factual dispute shifts to the opposing party. C.R.C.P. 56; OACRP 17. The failure of the opposing party to satisfy its burden entitles the moving party to summary judgment. *Ballesteros v. Westaff, Inc.*, W.C. No. 4-475-838 (ICAO Nov. 24, 2008).

3. A claim may be closed by a "final award" resulting from an admission or order after a contested hearing, and an "award" includes an order that grants or denies benefits. *Burke v. Industrial Claim Appeals Office*, 905 P.2d 1 (Colo. App. 1994). Unless an "award" of benefits expressly reserves other issues for future determination, the "award" closes the claim and requires the parties to satisfy the reopening requirements of § 8-43-303, C.R.S., before litigation of any further issues. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. 2003); *See Brown & Root, Inc. v. Industrial Claim Appeals Office*, 833 P.2d 780, 784 (Colo. App. 1991).

4. Pursuant to § 8-43-303(1), C.R.S., "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition…." Also, § 8-43-303(2)(a), C.R.S., allows an administrative law judge to reopen a claim on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition "at any time within two years after the date the last temporary or permanent disability benefits or dependent benefits excluding medical benefits become due or payable…." Similarly, § 8-43-303(2)(b), C.R.S., allows an administrative law judge to reopen a claim for medical benefits only on the grounds of error, mistake or change in condition "at any time within two years after the date the last medical benefits become due and payable…."

5. Therefore, a petition to reopen a claim on the ground of fraud, overpayment, error, mistake, including mistakes of law, or change in condition is subject to time limitations and must be filed either within six years of the date of injury, or within two years of the last payment of benefits or compensation, on the ground of fraud, overpayment, error, mistake, including mistakes of law, or change in condition. *Eichstedt v. King Soopers*, W.C. No. 4-528-268 (ICAO May 27, 2011) (internal citations omitted). "The time limits set for in § 8-43-303, C.R.S. operate as a statute of limitations, and apply when complications develop directly from the original injury, even if the claimant attempts to classify the condition as a new disability." *Calvert v. Industrial Claim Appeals Office*, 155 P.3d 474, 476 (Colo. App. 2006).

6. Claimant's request to reopen his claim, inclusive of a request for temporary partial disability benefits, is time barred by the applicable statute of limitations in C.R.S. § 8-43-303. Respondents are entitled to a judgment as a matter of law dismissing Claimant's claim for benefits, because Claimant's request to reopen the claim falls outside of any of the permissible reopening timeframes.

7. The combined provisions of §§ 8-43-303(1) & (2), C.R.S., provide three separate timeframes in which a claim may be reopened: (1) within 6 years of the date of injury; (2) within 2 years after the date the last disability benefit becomes due or payable; and (3) within 2 years after the date the last medical benefits become due and payable.

8. Each of the three referenced events in this claim well exceed the permitted timeframe in which a claim can be reopened. The date of injury, July 10, 2014, is nearly 8 years from the date of the May 10, 2022 Application for Hearing in question.

9. The date the last disability benefits became due or payable was via the stipulation approved on September 7, 2018, with associated payment made on September 12, 2018, which is approximately 3 ½ years from the May 10, 2022 Application for Hearing.

10. The date the last medical benefit became due or payable was related to the April 28, 2017, date of service with Concentra Medical Centers, paid on May 4, 2017. No payments for the rendering of medical treatment to Claimant have come due and payable since, which is approximately 5 years from the May 10, 2022 Application for Hearing. Even using the date of the last payment to medical providers for costs unrelated to medical treatment rendered, January 26, 2018, Claimant's May 10, 2022 Application for Hearing and request to reopen the case is nearly 4 ½ years later.

11. Claimant's claim was closed by the FAL filed on September 5, 2017. Claimant must reopen his claim to obtain the pre-MMI benefits he is seeking. Claimant previously attempted to reopen his claim within the applicable limitations period. His claim was denied and dismissed. Three years after the hearing for Claimant's prior reopening attempt, and well after the expiration of the limitations period for reopening a claim, Claimant has filed a new Application for Hearing endorsing issues of petition to reopen and temporary partial disability benefits.[1] Claimant's request to reopen his claim and receive pre-MMI medical benefits is clearly time barred.

12. As found, Claimant's request to reopen his claim and receive pre-MMI medical benefits is time barred. The summary judgment evidence establishes that there is no genuine issue of material fact Claimant's request to reopen his claim is time barred by application of the statute of limitations in § 8-43-303, C.R.S. Respondents are therefore entitled to judgment as a matter of law dismissing Claimant's claim for benefits set forth in his May 10, 2022 Application for Hearing.

ORDER

1. Respondents' motion for summary judgment is hereby granted. Claimant's application for hearing dated May 10, 2022, on the remaining issues of petition to reopen, compensability, and temporary partial disability benefits is hereby denied and dismissed.

2. The hearing which has been set for September 6, 2022 at 1:30 p.m. in Denver is hereby vacated.

3. All other issues and defenses not addressed within this order are preserved for potential future determination.

DATED this 22nd day of July, 2022.

/s/ Glen Goldman

Administrative Law Judge

[1] The endorsement of "compensability" is moot due to the fact that liability has been admitted.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, see Section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://colorado.gov/dpa/oac/forms-WC.htm**.

OFFICE OF ADMINISTRATIVE COURTS CERTIFICATE OF SERVICE

I hereby certify that a true and correct copy of the foregoing Order was served upon the following party by email on 7-22-22.

Jeff C. Staudenmayer, Esq.
rs3@rs3legal.com

Mr. Peter Anderson
andersonpeter64@gmail.com

/s/ Fabiola Mendez

ISSUES

I. Whether Claimant proved by a preponderance of the evidence Decedent's death proximately resulted from his industrial injury, entitling Decedent's dependents to death benefits under Section 8-42-115, C.R.S.

II. In the event Claimant proved entitlement to death benefits, determination of Decedent's average weekly wage ("AWW").

III. In the event Claimant proved entitlement to death benefits, whether Respondents are entitled to an offset for social security benefits for death benefits owed to Claimant.

PROCEDURAL MATTERS

1. Prior to the hearing, Respondents submitted a motion for summary judgment, and Claimant submitted a response. The ALJ did not rule on the motion prior to the hearing, and determined that she would address the motion in her Findings of Facts, Conclusions of Law, and Order.

2. The parties stipulated that Decedent never requested authorization for his third lumbar spine surgery, and Claimant has not requested payment of medical benefits.

The Parties stipulated that no medical treatment from the date of the arbitration (April of 2017) forward was paid for under the Decedent's workers' compensation claim. Moreover, the parties stipulated that the decedent made no request for authorization for any medical treatment after April of 2017.

FINDINGS OF FACT

1. Decedent sustained an admitted industrial injury to his low back on September 8, 2011.

2. Decedent underwent conservative treatment and was initially placed at maximum medical improvement ("MMI") on October 8, 2012 with a 10% whole person impairment rating.

3. Decedent continued to experience issues with his back and subsequently reopened his worker's compensation claim.

4. On February 26, 2014, Decedent underwent a L4-5, L5-S1 transforaminal lumbar interbody fusion and a posterior fusion at L4-5, L5-S1, performed by Donald S. Corenman, M.D. The surgery was to treat L4-5 and L5-S1 isolated disk resorption and radiculopathy. During this procedure Dr. Corenman placed a cage around the L4-5 and L5-S1 fusion. Decedent was removed from work completely and never returned to work.

5. Decedent experienced continued back and increased left leg pain after the February 2014 surgery. Imaging revealed continued compression of the nerve root.

6. Decedent subsequently underwent a second surgery with Dr. Corenman on January 30, 2015 to redo the decompression of the L5 and S1, as well as to remove a portion of the extruded cage.

7. Decedent's pain continued following the second surgery. Decedent underwent additional treatment, including medial branch blocks, injections, physical therapy and medication.

8. On July 8, 2015, Allison Fall, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Fall noted Decedent continued to experience ongoing left lower extremity radicular complaints. She opined that Decedent was approaching MMI. Dr. Fall remarked that her only concern was Decedent's lack of a good pain management regimen, given that he did not have one provider providing pain management and was not on an opioid agreement with routine screening in accordance with the Medical Treatment Guidelines. Dr. Fall noted that Decedent reported he was obtaining opioid medications from multiple providers. Dr. Fall opined that Decedent was taking a significant amount of short-acting opioid medications, and that it would be preferable for him to be on long-acting medications.

9. On May 17, 2016, Michael Janssen, D.O. conducted a 24-month Division Independent Medical Examination ("DIME"). Dr. Janssen opined that Decedent reached MMI on April 30, 2015 with 16% whole person permanent impairment. He concluded that additional injections, facet blocks and diagnostic studies that had occurred since such date were considered maintenance care. Dr. Janssen noted that the Decedent was on a "substantial amount" of narcotics, including Oxycontin, oxycodone and Lyrica. He recommended Decedent detoxify from the narcotics, which Dr. Janssen stated did not appear to increase Decedent's overall function at the time. He recommended Decedent undergo maintenance care of injections and medication for three to five months. Dr. Janssen noted Decedent did continue to have some neuropathic pain and symptomatology secondary to the extruded cage that migrated and, at some point in the future, he may be considered a candidate for a spinal cord stimulator.

10. On June 22, 2016, Dr. Fall performed a medical record review, including Dr. Janssen's DIME report. Dr. Fall opined that Decedent was at MMI with no further indication for additional interventions. She remarked that Decedent remained on a high level of opioids.

11. On July 5, 2016, Respondents filed a Final Admission of Liability ("FAL") reflecting an AWW of $1,387.80. Claimant was paid temporary indemnity benefits and permanent partial disability benefits based on that AWW.

12. On April 7, 2017, then-counsel for Decedent and Respondents jointly filed an Arbitration Agreement and Stipulated Summary and Facts, agreeing to participate in binding arbitration pursuant to Section 8-43-206.5, C.R.S. The parties identified the issue for arbitration as "medical benefits, and specifically what past, present and future treatment is reasonable, necessary, and related to the work injury." (R. Ex. B, p. 8).

13. On April 3, 2017, Decedent presented to Bruce Lippman, M.D. at Glenwood Medical Associates, who noted Decedent entered into a short-term pain agreement with him, and was to undergo a urine screening. Dr. Lippman prescribed Lyrica 150mg, four times per day for thirty days, Cymbalta 60mg, once per day for 30 days, Oxycodone HCI ER 30mg, twice a day for thirty days, and Oxycodone HCI 5MG, 1 tab 4 times daily for thirty days.

14. The parties' attorneys attended an arbitration hearing before ALJ Thomas DeMarino on April 10, 2017. Decedent was not in attendance.

15. ALJ DeMarino issued an Amended Arbitration Order on May 1, 2017. ALJ DeMarino based his determinations on the Stipulated Findings of Fact presented by the parties, Dr. Janssen's DIME report, and Dr. Fall's IME reports. ALJ DeMarino concluded that Decedent reached MMI for his September 8, 2011 occupational injury on April 30, 2015, and that his maintenance care ended five months after his date of MMI, or on September 30, 2015. ALJ DeMarino ordered that all medical treatment after September 30, 2015 is not reasonable or necessary as a result of the occupational injury on September 8, 2011, nor is it related to the occupational injury occurring September 8, 2011. ALJ DeMarino further ordered that Respondents were not liable to pay any medical treatment expense after September 30, 2015; including, without limitation, OxyContin, oxycodone, and Lyrica, and any other opioid medication.

16. On August 1, 2017, Decedent and Respondents entered into a voluntary settlement agreement settling Decedent's worker's compensation claim on a full and final basis for $34,999. As part of this settlement, Decedent agreed that he "rejects, waives, and forever gives up the right to claim all compensation and benefits to which [Decedent] might be entitled for each injury . . . claimed here, including: . . . (h) Medical, surgical, hospital, and all other health care benefits . . ." (R. Ex. C, pp. 20-21).

17. The Division of Workers' Compensation approved the settlement on August 4, 2017.

18. At no time was Claimant or E.G. party to the arbitration or settlement.

19. Decedent continued to experience low back and left lower extremity symptoms related to his work injury for which he continued to treat with Dr. Lippman. Decedent did

not make any requests to Respondents for authorization of treatment after April 2017. All medical treatment from the date of the arbitration, April 10, 2017 forward, was not paid for under Decedent's workers' compensation claim.

20. On October 17, 2017, Dr. Lippman noted that Decedent's pain medications were taken over by a pain specialist in Denver. Decedent's medications included Oxycodone 5mg oral tablet 1 tab, 4 times per day for 30 days, and Oxycodone ER 30mg Oral Tablet ER 12 Hour abuse-deterrent twice a day for 30 days.

21. Decedent presented to Dr. Lippman on January 15, 2018, reporting that he can no longer see his pain management doctor in Denver, and that he needs a new referral as well as pain medication refills. Decedent was prescribed increased dosages of narcotics, including Oxycodone HCI 10mg, twice per day for 30 days and Oxycodone HCI ER 30mg, three times per day.

22. On January 19, 2018, Decedent returned to Dr. Lippman to discuss medications. Dr. Lippman noted he last prescribed Oxycodone 10mg, but that Decedent reported he had taken Percocet 10/325 and thought this worked better. Dr. Lippman opined that, because he already has a filled prescription for Oxycodone 10mg, he will continue with that and then in a month he can have Percocet filled rather than Oxycodone alone.

23. Decedent again saw Dr. Lippman on March 2, 2018, reporting that he was probably going to go off CIGNA and is going to have to find somebody other than Dr. Carley to prescribe his narcotics, and that he will need a referral for that in addition to short-term prescriptions pending the determination of a new pain management specialist.

24. On March 13, 2018, Decedent presented to Dr. Lippman to discuss symptoms and medications. Dr. Lippman noted that Decedent was on high doses of narcotics and that there is a trend toward moving down from high doses so that this may happen in the future.

25. Chad Prusmack, M.D. at Rocky Mountain Spine Clinic assumed care for Decedent from Dr. Corenman. Decedent first presented to Dr. Prusmack on May 21, 2018. Dr. Prusmack noted Decedent's back and left leg symptoms had not improved after undergoing two surgeries as a result of a work-related incident. Dr. Prusmack reviewed Decedent's CT scan and MRI, noting evidence of significant left-sided lateral recess ectopic bone overgrowth encroaching on the descending L5 nerve roots at L4-5, causing foraminal stenosis and significant excessive L5-S1 ectopic bone growth. He further noted good decompression posteriorly on the MRI but significant moderate foraminal stenosis at L4-5 and L5-S1, as well as significant encroachment on the L5 nerve roots. Dr. Prusmack further noted that inspection of the L5-S1 area showed that there is pseudarthrosis, most likely at L5-S1. Dr. Prusmack assessed Decedent with significant persistent stenosis due to ectopic bone formation; epidural scar causing severe left-sided dysfunction, radiculopathy and footdrop; and pseudoarthrosis potentially at L5-S1. Dr. Prusmack noted Decedent was on 55mg of Oxycodone per day. He recommended Decedent undergo surgery.

26. On August 14, 2018, Dr. Lippman stated,

> [Decedent] has a done a good job dropping by a large amount of mEq of morphine a day, and we will go ahead and hold him at the current dose of 90mEq of morphine a day, up his Lyrica to 50 milligrams twice a day, and follow up in two weeks with the intention of trying to taper him down a little bit further on his Oxycodone and possibly go up on his Lyrica dose.
>
> (Cl. Ex. 14, p.159).

27. Decedent presented to Dr. Lippman on August 29, 2018 to discuss pain management. Dr. Lippman noted that Decedent reported Oxycodone 30mg along with Percocet 10mg in the morning worked well, but that he did not get much release from Oxycodone 20mg extended release in the afternoon. Dr. Lippman noted that Decedent's current dose of oxycodone was 90mg equivalents of morphine, which he remarked was a "significant drop" from the 180mg equivalents Decedent was taking just two months prior. Decedent reported that he was a little leery of reducing medication any further at that point.

28. On October 24, 2018, Decedent presented to Elizabeth Jackson, PA, presenting for a prescription refill. PA Jackson only provided a one-week refill of medications due to a follow-up the following week. Decedent was to take Olanzapine 5mg, 1PO once a day for 30 days, Percocet 5-325mg tablet, once a day for 7 days, and there are two different 7 day prescriptions for Oxycodone HCI ER 20 and 30mg tablets, once a day for 7 days.

29. On October 29, 2018, Decedent returned to Dr. Lippman reporting worsening low back pain. Decedent reported that he felt he needed more oxycodone for break through pain. Dr. Lippman prescribed Decedent Oxycodone HCI ER 20mg, twice a day for 30 days, and Percocet 7.5-325mg, twice a day for 30 days.

30. Decedent returned to Dr. Prusmack on December 17, 2018. Dr. Prusmack noted that new CT scans, MRI and x-rays showed pseudoarthrosis at L5-S1, as well as ectopic bone causing stenosis with significant peridural fibrosis. He recommended Decedent undergo a left re-exploration, L5-S1 laminectomy with decompression of the L5 nerve roots, posterolateral fusion L5-S1 with re-instrumentation of L5-S1.

31. On January 17, 2019, Dr. Prusmack performed the following surgery on Decedent: (1) Re-exploration left L5-S1 laminectomy for decompression of nerve roots, stenosis, and ectopic bone; (2) left transfacet decompression of nerve roots, L5-S1; (3) posterolateral arthrodesis using BMP and iliac autograft, L4-5, L5-S1; (4) bilateral segmental instrumentation using Globus percutaneous pedicle screws and rods, L4-5; and (5) harvesting of iliac autograft.

32. On January 30, 2019, Decedent spoke via telephone with David Whatmore MMS, PAC, of Rocky Mountain Spine Clinic, P.C., for his first postoperative visit. Decedent's

medications at the time of this appointment included, *inter alia,* OxyContin 30mg three times a day and oxycodone 10mg three times a day. PAC Whatmore documented,

> We talked extensively about his pain control. This is a patient who has been on OxyContin and oxycodone for several years and does have chronic pain management up in Eagle. The patient feels though he has been getting a rash possibly due to some adverse reaction to the oxycodone although he has been on this for several years. He has also been taking Robaxin that we prescribed for him. . .
>
> PLAN: Based on the severity of the back pain being his primary complaint and difficulty sleeping, we will switch him to valium 5 mg with 1 tablet every 4 to 6 hours as needed for back pain and muscle spasms. We will attempt to switch him down to Norco although he understands that this may be a transition over time due to his current level of oxycodone use. We will also prescribe a course of oral steroids and see if this helps reduce the inflammation in the back to allow him to have better pain control. The patient will be recommended to start physical therapy next week once his pain is a little bit better controlled and he is sleeping better.

(Cl. Ex. 15, pp. 212-213).

33. On February 17, 2019, Claimant found Decedent unresponsive after Decedent went to take a nap. Eagle County Paramedic Services ("EMS") were called to the scene and attempted resuscitation, to no avail. Decedent was pronounced dead. The EMS report notes Decedent's family reported that Decedent had been using hydromorphone for pain control and had a "possible" history of prescription drug and alcohol abuse.

34. Claimant testified that Decedent did not drink and that she was unaware of anyone making such statement to the EMS. She further testified that she never saw Decedent take medication that he was not prescribed, nor in a non-prescribed amount.

35. Kelly C. Lear, M.D. performed an autopsy of Decedent on March 21, 2019. Dr. Lear concluded that Decedent died of mixed drug intoxication including the following: morphine, hydromorphone, and diazepam. She noted other significant conditions included chronic back pain and severe hypertensive cardiovascular disease. She stated,

> Toxicologic analyses of body fluid obtained at autopsy revealed a mildly elevated concentration of morphine, and hydromorphone and diazepam/nordiazepam within therapeutic ranges. Although he likely had some established tolerance to opioids, particularly oxycodone, he had not been on chronic morphine maintenance; this in combination with a new second opioid (hydromorphone) and benzodiazepine (diazepam) is therefore felt to be significant. His heart was also markedly enlarged, and therefore he was also susceptible to fatal cardia arrhythmia.

(R. Ex. E, p. 63).

36. Decedent's Certificate of Death issued on April 29, 2019 listed his cause of death as mixed drug intoxication. Chronic back pain and hypertensive cardiovascular disease were listed as other significant conditions contributing to but not resulting in the underlying cause of Decedent's death.

37. On September 30, 2020, Claimant filed a Dependent's Notice and Claim for Compensation, listing an injury date of September 8, 2011.

38. Dr. Prusmack performed a medical record review and issued a report on May 20, 2021. Dr. Prusmack opined that all medical care Decedent received subsequent to September 8, 2011 that was pain or neurologically-related (including back pain, leg pain, weakness and sensory loss) was medically necessary and related to Decedent's September 8, 2011 work injury, including the February 2014 and January 2015 surgeries, Dr. Prusmack's January 2019 surgery, and all non-surgical conservative medical treatment. He specifically opined that any surgical or medical complications sustained by Decedent during his treatment for his back condition after September 8, 2011 are related to the work injury, including the reoperation and the mixed drug intoxication that lead to Decedent's death.

39. Dr. Prusmack noted that Decedent developed severe low back and leg pain after the work injury and underwent extensive and appropriate conservative care that did not alleviate Decedent's back pain and underwent two surgeries medically necessary to relieve the effects caused by the injury. Dr. Prusmack explained that he proceeded with surgery in January 2019 because Decedent failed to improve from the 2015 surgery and continued to have severe back and left leg pain, as well as left leg weakness and numbness. He noted that findings on CT scans included excessive "ectopic bone" which is caused by the product used in the first surgery called BMP. This product can cause excessive delayed bone growth which surrounds and injures the nerve roots. He further explained that, a CT scan also suggested that the L5-S1 had not fused and Decedent developed pseudarthrosis. Dr. Prusmack noted that each of these issues are within the accepted complications of lumbar surgery and because the initial surgery was related to the injury, the treatments and complications are therefore related to the injury. Dr. Prusmack determined that all of the drugs in Decedent's system when he died, in accordance with the autopsy and toxicology reports, were prescribed as a part of relieving Decedent's pain following surgery, and that combination of drugs caused Decedent's death.

40. Dr. Prusmack provided testimony at a post-hearing deposition. Dr. Prusmack testified as an expert in neurosurgery on behalf of Claimant. Dr. Prusmack explained that "pseudarthrosis" means a lack of fusion, and that the lack of fusion seen on Decedent's CT was at L4-5 and L5-S1, which had, supposedly, been fused in Decedent's 2014 and 2015 surgeries. Dr. Prusmack further explained that approximately eight percent of fusion surgeries involving two levels run the risk of not fusing, which then results in continued pain, continued bone spur growth, and stenosis. Dr. Prusmack testified that Decedent

experienced these ramifications as a result of the his 2014 and 2015 surgeries. He testified that imaging his surgery revealed Decedent had not fused from the prior surgeries. Dr. Prusmack explained that items moving around that should be fused caused more bone to be grown around the nerves, which is called stenosis. Further, if the bone does not grow at the fusion, but rather grows on the nerves, that is called ectopic bone. He testified that both of these conditions could be Decedent's surgery and CT scan. He further testified that ectopic bone would cause pain or additional pain in the situation of a lack of a fusion.

41. Dr. Prusmack testified that, at the time Decedent presented to him in 2018, Decedent was on 30 milligrams of Oxycontin three times a day, and 10 milligrams of Percocet three times a day for his pain management. Dr. Prusmack stated that the dosages were not untypical for patients who had the type of pain Decedent had. Dr. Prusmack explained that one of the major elements of narcotics is that people grow a tolerance to them, which means they get less effective at higher doses as time goes on. There are a high-moderate range of patients that Dr. Prusmack sees that have chronic pain and have needed to be on the narcotics long enough to grow both a dependence and a tolerance. Dr. Prusmack explained that when there is a patient on a long-acting narcotic, Oxycontin, and a short-acting narcotic, Percocet, it means that the patient is tolerant-dependent and has been on the pain medications for a protracted period of time. Dr. Prusmack stated that "surprise" or "alarm" would not be appropriate terminology when seeing the doses that Decedent was taking but, rather, it provided him with context that Decedent had been in pain for a very long time. Dr. Prusmack testified that although Decedent was on a higher dose than most chronic pain patients, he has seen higher doses; more than anything, the doses showed Dr. Prusmack that Decedent was in a very difficult pain syndrome that obviously multiple doctors have failed to help. Dr. Prusmack testified that when seeing bone spur growth after an attempted fusion, the type of medication regimen that Decedent was on was appropriate, and that after the second failed surgery, Decedent would not have been able to address his pain without the narcotics.

42. Dr. Prusmack further testified that, per Dr. Lippman's August 14, 2018 medical note, Decedent was significantly reducing his narcotics. He explained that Lyrica is used for nerve pain and is not a narcotic. Based on this note, Dr. Prusmack determined that Dr. Lippman was doing an effective job of decreasing the narcotics, and exchanging them for medication less risk and less side effects. Dr. Prusmack testified that the CDC makes recommendations and suggestions, but does not take into consideration the context for this particular case. He stated that in an ideal world, everyone would detox off of narcotics, but that is not feasible.

43. Dr. Prusmack explained that his office changed Decedent's medication to a more effective anti-spasmatic drug (Valium) and tried to downgrade Decedent's narcotics to a milder morphine equivalent (Norco). He testified that the medications listed in Decedent's autopsy report were medications prescribed by doctors and consistent to his recently changed prescriptions. He testified that there was nothing out of the ordinary in the type of prescription or recommendation, and that the amounts and combinations used were

extremely common and that he would not have foresaw the eventual outcome. Dr. Prusmack further testified that all of the drugs prescribed to Decedent in his system at the time he died were the result of his prior failed surgeries and/or the surgery he performed. He explained CDC are guidelines that don't take into account every specific case. Ideal world would want everyone to detox off of narcotics, but just not feasible and is very hard to do. Dr. Prusmack explained the difference between short-acting and long-acting opioids. He testified that the long-acting medicines Decedent was on was indicated for chronic pain.

44. Dr. Fall testified by deposition on behalf of Respondents as expert in physical medicine and rehabilitation. She agreed with Dr. Janssen's determination in May 2016 that Decedent should consider detoxification as he was on a substantial amount of narcotics that did not appear to increase his overall function. Dr. Fall explained that opioid medication has inherent risks and that Decedent was on high doses without documented associated improvement or functional benefit. She testified that the risk outweighed the benefits in Decedent's case and medication should not have been continued. Dr. Fall stated that her opinion is consistent with CDC guidelines. She explained that in 2017 and 2018, the dose of OxyContin had gotten up to 30mg three times a day and 30 mgs from Percocet. As it got closer to surgery, Dr. Lippman decreased the meds to total of 55 mg of oxycodone per day up to time of surgery. She explained this went from 180 MME to 90 MME to 83 MME, which is above the CDC guidelines.

45. Dr. Fall testified that she did not review the lumbar x-rays or CT scan but would go by Dr. Prusmack's expertise regarding the failed fusion. She stated that the failed fusion did not mean Decedent was required to be on narcotics above what is recommended by the CDC because there is no direct correlation between anatomical pathology and the need for pain medications. Dr. Fall testified that she has seen patients with pseudarthrosis that did not have pain and did not take medications, while some have been on very high levels of opioid medications even in the case of no pathology. Dr. Fall opined that the narcotics Decedent was taking at time of death were in excess and not medically necessary. She testified that the medications were not indicated merely because Decedent had surgery and were not indicated for his chronic pain. Dr. Fall explained that certain medications like Benzodiazepine, Valium or Diazepam can interact with opioids and can have greater risk of respiratory failure and death when used together.

46. Dr. Fall testified that, at the time of her follow-up report, Decedent was set up with a pain management specialist, Dr. Sohn, and was having urine drug screens and being switched to a long-acting opioid medication. She stated that the ectopic bone growth that Decedent experienced was an ongoing process and could have started after the second surgery, or even as early as after the first surgery. She agreed with Dr. Prusmack that the pseudarthrosis was "possibly" the pain generator, and if the pseudarthrosis was the pain generator, then an additional revision surgery would be necessary.

47. Claimant testified that, at the time of the settlement, Decedent's pain was ongoing and subsequently worsened. Her belief was that Decedent required the medication to

have any quality of life. She testified that, by the end of 2017, there were days that Decedent could not function due to his symptoms.

48. At the time of death, Decedent left behind his wife, Claimant, who he had been married to since July 14, 2009; as well as four children. Only one of the children, E.G., was under 18 at the time of Decedent's passing. E.G.'s date of birth is August 11, 2001. On the date Decedent died, E.G. was 17 years old and living with Decedent and Claimant. E.G. continued to live with Claimant through the age of 18. He received social security benefits when he was 17 years old as a result of the death of his father. Decedent did not provide any substantial support to the three older children who were between the ages of 18 and 22 at his time of death.

49. Claimant proved by a preponderance of the evidence that Decedent's death was the proximate result of his September 2011 work injury.

50. Claimant and E.G. are found to be dependents of Decedent. E.G. was a dependent until he reached the age of 18 following Decedent's death.

51. Decedent's wage records indicate Decedent's earning varied by week based on the amount of overtime Decedent worked. The ALJ finds that a fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of $1,387.80, based on 51 weeks of pay leading up to the work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Summary Judgment

Respondents argue that Claimant should not be able to pursue this claim as Decedent settled his claim on a full and final basis in 2017.

It is undisputed Decedent entered into a full and final settlement of his workers' compensation claim in August 2017, which served to close his claim on a full and final basis. Pursuant to the settlement agreement and §8-42-204(1), C.R.S., such settlement shall not be reopened other than on the ground of fraud or mutual mistake of material fact. Here, Claimant is not alleging fraud or mutual mistake of material fact with respect to Decedent's claim. Claimant is also not attempting to reopen Decedent's claim or appeal ALJ DeMarino's Arbitration Order. Instead, Claimant has filed a separate claim for death benefits as a dependent.

Pursuant to the Rule of Independence and the Act, Decedent's actions in settlement, compromise, or release under the Act do not legally bar the rights of Decedent's dependents to bring and pursue a separate independent death claim. See In re Claim of Clubb, 033115 COWC, 4-952-696-01 (Colorado Workers' Compensation Decisions, 2015), Larson's Workers' Compensation Law, § 98.01 [2], "The settlement, compromise, or release by the deceased of his or her rights under the Act cannot bar the statutory rights of any dependents, since these rights are independently created by statute."

Section 8-41-504, C.R.S. provides, "No dependent of an injured employee, during the life of the employee, shall be deemed a party interest to any proceeding by said employee for the enforcement of any claim for compensation nor with respect to any settlement thereof by said employee."

"Disability benefits awarded to a worker and death benefits awarded a worker's dependents are entirely independent of one another." *Richards v. Richards & Richards*, 664 P.2d 254, 255 (Colo. App. 1983). "Under th[e] rule [of independence], death benefits provided to dependents, and wage loss and disability benefits provided to an injured

worker, are considered to create distinct rights and compensate for separate losses. *City of Loveland Police Dep't v. Indus. Claim Appeals Off.*, 141 P.3d 943, 954 (Colo. App. 2006). For the past fifty years, the Colorado courts have consistently held that the "the settlement, compromise, or release by the deceased of his rights under the Act does not bar the rights of the dependents since they are independently created by statute." *Richards*, 664 P.2d at 255 (emphasis added); *Hampton's Claimants v. Director of Division of Labor & Empl.,* 31 500 P.3 1186, 1188 (Colo. App. 1972); *Clubb v. Re Monks*, W.C. Nos. 4-952-696-01 & 3-850-643, *4 (ICAO Dec. 24, 2014) (claimant does not have standing to attack the settlement for the reason that she is not a party to the settlement agreement and that agreement does not affect her claim for death benefits).

Respondents further argue that Claimant's death benefits claim is subject to the arbitration between Decedent and Respondents, contending that ALJ DeMarino's definitively ordered that Respondents are not liable for any medical treatment after September 30, 2015, including OxyContin, oxycodone, and Lyrica, or any opioid medication, as he found such treatment not reasonable, necessary or related to Decedent's work injury. Respondents contend that ALJ DeMarino's binding Arbitration Order relating to reasonably necessary medical treatment absolves Respondents of any liability for the cause of the Deceased's death and entitles Respondents to judgment as a matter of law.

The ALJ disagrees, as the Act and the Rule of Independence again applies. C.R.S. § 8-43-206.5 provides that "Any arbitration award pursuant to this section shall be binding on the parties, and no other procedure . . . shall be available to the parties for the further review of such award." Claimant was not a party to the arbitration, thus, the arbitration is not binding on Claimant's claim for death benefits in this case.

Summary Judgment is a drastic remedy and is not warranted unless the moving party demonstrates that there is no genuine dispute to material fact and it is entitled to judgment as a matter of law. *Van Alstyne v. Housing Authority of Pueblo*, 985 P.2d 97 (Colo. App. 1999). All doubts as to the existence of disputed facts must be resolved against the moving party, and the party against whom judgment is to be entered is entitled to all favorable inferences that may be drawn from the facts. *Kaiser Foundation Health Plan v. Sharp*, 741 P.2d 714 (Colo. App. 1987).

Respondents failed to prove there is no genuine dispute to material fact and they are entitled to judgment as a matter of law.

Death Benefits

Respondents further contend that Claimant's claim fails because Decedent's death was the result of unauthorized medical treatment that was not reasonably necessary or related to his work injury, as determined by the Amended Arbitration Order and Settlement Agreement.

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question

of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003).

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (reasoning that the surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

When a claim is denied and medical treatment is not offered by employer, the claimant may choose his own medical provider. After proving compensability the provider will be considered an authorized treating physician and his charges compensable. However, if the claimant changes to another physician for non-medical reasons before compensability has been determined, he is still required by §8-43-404(10) to notify the employer in writing so that the employer may designate a new treating physician. The failure of the claimant to provide notice renders the treatment by the subsequent physician unauthorized. *Rush v. Enterprise Leasing Company*, WC 5-081-615 (ICAO, Sept. 6, 2019).

As discussed above, pursuant to the Act and the Rule of Independence, Claimant's claim is a separate claim from that of Decedent. Thus, while the Amended Arbitration Order finding no further treatment reasonable, necessary or related to Decedent's work injury can be taken into consideration with respect to other evidence presented, it is not dispositive for purposes of Claimant's claim. Claimant is not requesting authorization or payment of treatment Decedent underwent after closure of his claim. More importantly, Section 8-42-115, C.R.S does not require that the injured worker, at the time of death, be treated by an authorized provider.

Section 8-42-115, C.R.S. provides that, where death proximately results from an industrial injury, the decedent's dependents are entitled to receive the decedent's workers' compensation benefits. For a death to proximately result from a compensable injury or occupational disease, there must be a nexus between the death and the injury or disease. *Subsequent Inj. Fund v. Indus. Claim Appeals Off.*, 131 P.3d 1224, 1228 (Colo. App. 2006). With regard to the sufficiency of a nexus between an injury and a disability, a division of this court has held that an injury must be "significant" and that there must be a direct causal relationship between the injury and the resulting disability. *Subsequent Inj. Fund v. Indus. Claim Appeals Off.*, supra; *Seifried v. Indus. Comm'n*, 736 P.2d 1262 (Colo.App.1986).

Although ALJ DeMarino previously determined no further treatment was reasonable, necessary and related to Decedent's work injury, his determination was based on the determinations of Dr. Janssen and Dr. Fall which were based on the circumstances and conditions that existed at the time. Although Decedent's condition continued and worsened after closure of his claim, he was unable to reopen his claim for additional treatment due to the Settlement Agreement. The medical records indicate that Decedent's ongoing and worsening symptoms and need for treatment was the result of result of his work injury and failed surgeries prior to being placed at MMI.

Prescription medication, including opioids, were prescribed to Decedent both during and after closure of his claim for pain management as a result of the work injury. Decedent was participating in chronic pain management and Decedent and his physicians were attempting to decrease his amount of narcotics after closure of his claim. In August 2018, Dr. Lippman noted there had been a significant drop in Decedent's amount of narcotics and that Decedent had been dropping his morphine dosage and attempting to taper on Oxycodone. Dr. Prusmack credibly opined that the high dose of long-acting narcotic of Oxycontin, and a short-acting narcotic of Percocet, were appropriate to help mitigate Decedent's pain.

It was subsequently determined, as credibly explained by Dr. Prusmack, that Decedent's spine did not fuse from the second surgery. This resulted in Decedent developing pseudarthrosis, ectopic bone growth, and stenosis with corresponding additional back and leg pain. Dr. Prusmack credibly opined that these conditions and symptoms were the result of Decedent's work injury and failed surgeries. Due to Claimant's condition, Dr. Prusmack determined a third surgery was required to relieve the effects of the failed fusion, with the goal of reducing Decedent's pain and allowing Decedent to wean of narcotic medications. As Dr. Prusmack performed the third surgery to treat the complications from the second lumbar surgery, the need for the third surgery was proximately caused by Decedent's initial work-related injury.

The medical records indicate Decedent experienced improvement in nerve pain after the third surgery. Dr. Prusmack credibly explained that, due to Decedent's lessened radicular symptoms and expected post-operative back pain, PA Whatmore began to wean Decedent off of opioid medication and transition him on to Valium, as well as Norco, which has a milder morphine equivalent, for his back pain and muscle spasms. Dr. Prusmack

credibly opined that the medications and doses Decedent was taking, as well as the combination of those medications, were common and appropriate. Decedent died one month after undergoing the third surgery. The coroner concluded that Decedent's death was the result of mixed drug intoxication. Dr. Prusmack credibly opined that the drugs present in Decedent's system at the time of death were drugs that were prescribed to Decedent as a result of the industrial injury and subsequent surgeries.

It is undisputed Decedent was on high doses of opioid medication. Dr. Prusmack credibly testified that, while Decedent's dosages were in excess of the CDC recommendations, they were appropriate for Decedent, as the CDC guidelines apply on a case-by-case basis. Here, the totality of the evidence establishes a significant nexus between Decedent's death and his work injury. Decedent underwent treatment specifically for conditions that resulted from his work injury and failed surgeries. Decedent was taking medication as prescribed as related to this treatment, which resulted in his death. There is no evidence of any intervening event or other direct cause of death to indicate Decedent's work injury was not a consequential causative factor in his death. The preponderant evidence establishes that Decedent's death proximately resulted from his September 8, 2011 work injury.

Dependents

A person is presumed to be wholly dependent if they are a widow or a minor child of the deceased under the age of eighteen years. § 8-41-501(1)(a)&(b), C.R.S.

Where one or more dependent is entitled to receive a decedent's benefits, the benefits are to be apportioned between such dependents in a "just and equitable" manner. § 8-42-121, C.R.S.

The preponderant evidence establishes that, at the time of Decedent's death, Claimant was married to Decedent and E.G. was a minor child for whom Decedent recognized and financially supported. As the widow and son of Decedent, Claimant and E.G., respectively, are dependents of Decedent and are entitled to Decedent's death benefits. As E.G. was a dependent of Decedent until he reached the age of eighteen (18) following Decedent's death, he is entitled to death benefits for such time period.

The ALJ apportions Decedent's death benefits 50% to Claimant and 50% to Decedent's son, E.G., until such time E.G. reached 18 years of age. Subsequently, the death benefits are apportioned 100% to Claimant.

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a

fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

Section 8-42-114, C.R.S. provides, that dependents entitled to death benefits shall receive sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week for accidents occurring on or after July 1, 1989, and not less than a minimum of twenty-five percent of the applicable maximum per week. In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits.

Claimant argues for an AWW of $1,518.29 (based on 12 weeks of pay periods from 6/11/2011-9/3/2011, while Respondents argue for an AWW of $1,361.10 (based on a 53 weeks of pay periods).

As found, the wage records indicate the number of hours of overtime Decedent worked varied weekly, thus resulting in varied weekly earnings. No evidence was offered indicating Decedent received a pay raise or some permanent increase in overtime hours around the time of the work injury. Accordingly, the ALJ concludes a fair approximation of Decedent's wage loss and diminished earning capacity is an AWW of $1,387.80, based on the 51-week pay period leading up to Decedent's work injury.

As E.G. received social security benefits when he was seventeen (17) years old, those benefits may be offset under 8-42-103(c)(II).

ORDER

1. Respondents' Motion for Summary Judgment is denied.

2. Decedent's death was the proximate result of his work injury.

3. Claimant and E.G. are dependents of Decedent and entitled to Decedent's death benefits.

4. Decedent's death benefits are apportioned 50% to Claimant and 50% to E.G., until such time E.G. reached 18 years of age and ceased being a dependent. After such time the death benefits are apportioned 100% to Claimant.

5. Respondents are entitled to an offset for social security benefits paid to E.G. out of the portion of death benefits paid to E.G. only.

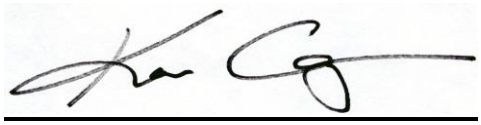
6. Decedent's AWW was $1,387.80.

7. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 22, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Is Claimant entitled to TTD benefits commencing November 6, 2020?
- Did Respondent prove TTD was properly terminated on November 5, 2020 because Claimant was put at MMI by an authorized treating physician?
- Did Respondent prove Claimant was released to regular employment by the attending physician?
- Did Claimant prove entitlement to a general award of reasonably necessary medical treatment for his compensable injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a Corrections Officer.

2. In the first week of October 2020, Claimant began experiencing flu-like symptoms. He tested positive for COVID-19 on October 8, 2020.

3. Claimant quarantined at home for several weeks after receiving the positive test result.

4. Claimant's initial respiratory symptoms improved by the end of October 2020, but he continued to struggle with other symptoms including conjunctivitis, photophobia, and progressive "brain fog." He received ongoing treatment from his personal providers.

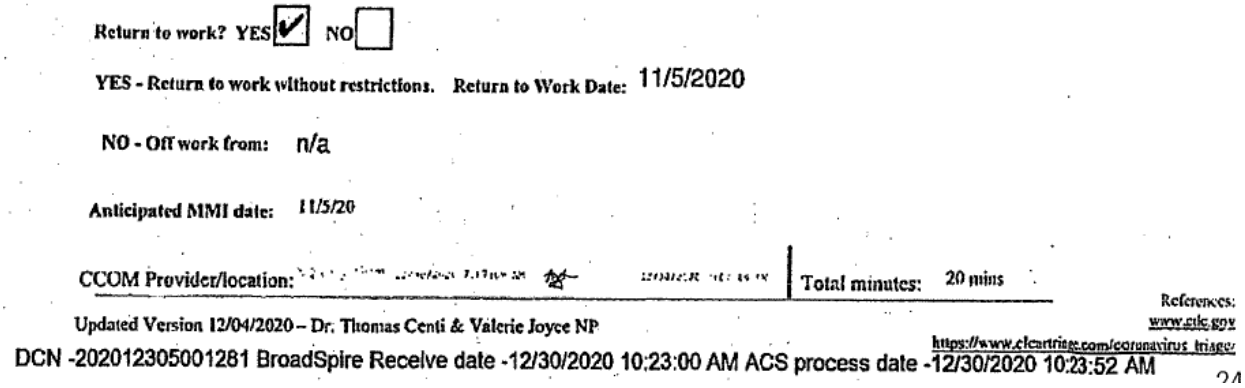
5. On December 15, 2020, Claimant requested an appointment with his PCP to discuss his residual symptoms and to complete paperwork for Short Term Disability (STD) benefits. Claimant described persistent "COVID brain fog," manifested by difficulties with attention, concentration, and memory.

6. Claimant saw PA Becky Kueter on December 17, 2020. Ms. Kueter documented multiple ongoing symptoms since contracting COVID, including headache, myalgias, conjunctivitis, and memory issues. Claimant told Ms. Kueter, "He does not feel safe going back to work" in a correctional setting. Ms. Kueter ordered blood work and a brainstem MRI, and referred Claimant for psychological and neurological evaluations.

7. On December 22, 2020, Claimant's wife (Ms. [Redacted, hereinafter Ms. M]) emailed Employer's HR department requesting assistance because Claimant was still having medical issues and "we don't know what to do."

8. There is no persuasive evidence Employer responded to Ms. M's email. However, on December 29, 2020, Claimant was contacted by Valerie Joyce, FNP at CCOM for a telehealth appointment. Claimant and Ms. M described Claimant's ongoing symptoms, treatment, and work status. Ms. Joyce provided no treatment recommendations and scheduled no follow up.

9. CCOM issued two reports based on the telehealth evaluation. The first report bears the heading "COVID-19 TELEHEALTH APPOINTMENT," and briefly documents the information provided by Claimant and Ms. M. The form also contains the following notations:



Return to work? YES ☑ NO ☐

YES - Return to work without restrictions. Return to Work Date: 11/5/2020

NO - Off work from: n/a

Anticipated MMI date: 11/5/20

CCOM Provider/location: Total minutes: 20 mins

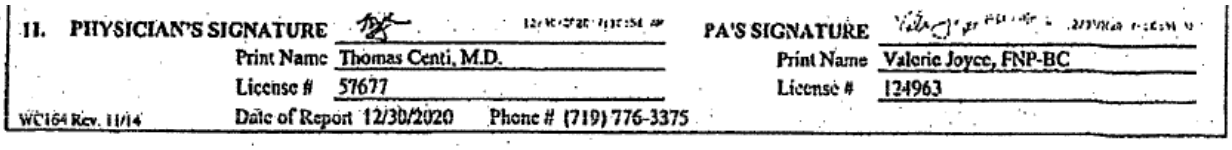
DCN -202012305001281 BroadSpire Receive date -12/30/2020 10:23:00 AM ACS process date -12/30/2020 10:23:52 AM

10. The second document is a WC164 form dated December 30, 2020, stating Claimant was at MMI and released to regular duty as of November 5, 2020. The form also stated Claimant requires no maintenance care but should continue to follow up with his PCP "for personal health issues." The form contains the following signature block:



11. PHYSICIAN'S SIGNATURE — PA'S SIGNATURE

Print Name: Thomas Centi, M.D. — Print Name: Valerie Joyce, FNP-BC

License #: 57677 — License #: 124963

WC164 Rev. 11/14 Date of Report: 12/30/2020 Phone #: (719) 776-3375

11. Dr. Centi's signature on both documents is an electronic "stamped" signature, rather than handwritten. The signature dates and times are illegible on all versions of exhibits offered into evidence.

12. CCOM sent the forms to Broadspire on December 30, 2020 but gave no copies to Claimant. Claimant was unaware of the content of either report until he received them months later attached to a Final Admission of Liability.

13. On January 20, 2021, the Division issued a letter advising that a Notice of Contest had been filed and the claim was denied.

14. As instructed during the telehealth appointment with Ms. Joyce, Claimant pursued additional evaluation and treatment in 2021 under the direction of his PCP.

15. Claimant had an IME with Dr. Gary Zuehlsdorff at his counsel's request on January 10, 2022. Regarding the December 29, 2020 appointment at CCOM, neither Claimant nor Ms. M were told Claimant could return to work. They were advised to follow up with Claimant's personal physicians for any ongoing issues. Claimant and Ms. M confirmed they spoke only with Ms. Joyce and had no contact with Dr. Centi. Dr. Zuehlsdorff documented that Claimant was approved for short-term disability in November 2020, and started receiving benefits in January 2021. Dr. Zuehlsdorff opined Claimant probably contracted COVID from exposure at work. He diagnosed "long COVID syndrome" and opined Claimant is not at MMI because he requires additional treatment.

16. Claimant saw Dr. Allison Fall on April 14, 2022 for an IME at Respondent's request. Dr. Fall concluded Claimant probably contracted COVID at work. She opined the COVID resolved and none of Claimant's ongoing symptoms are work-related.

17. Respondent filed a Final Admission of Liability (FAL) on May 26, 2022. The FAL stated, "Pursuant to the enclosed medical report by Dr. Centi dated 12/29/2020, claimant has been placed at MMI as of 11/5/2020 with no impairment and no maintenance care requirement."

18. Respondent filed an Amended FAL on June 6, 2020, admitting for TTD benefits from October 8, 2020 through November 5, 2020. The admitted average weekly wage (AWW) is $1,289.19, with a corresponding TTD rate of $859.50. Claimant stipulated to the admitted AWW at the hearing.

19. Claimant has not worked in any capacity since October 8, 2020. Employer paid Claimant's salary through October 2020, but paid no wages thereafter. Employer terminated Claimant on September 24, 2021.

20. Respondent failed to prove Claimant was put at MMI on November 5, 2020 by "an authorized treating physician."

21. Respondent failed to prove "the attending physician" released Claimant to return to work on November 5, 2020.

22. No ATP has placed Claimant at MMI or released him to regular duty since his work injury.

23. Claimant is entitled to ongoing TTD benefits commencing November 6, 2020.

24. Claimant received STD benefits commencing in approximately January 2021. The parties presented no evidence regarding whether Claimant must repay any of the STD benefits based on a concurrent award of TTD. It cannot be determined on the present record whether Respondent make take an offset for STD benefits.

25. Claimant is entitled to a general award of medical treatment from authorized providers reasonably needed to cure and relieve the effects of his compensable injury.

CONCLUSIONS OF LAW

A. Preliminary issues

Although the claim was fully contested when Claimant filed his Application for Hearing, Respondent subsequently admitted liability in a FAL dated May 26, 2022. This resolved the threshold question of compensability.

Respondent filed an Amended FAL on June 6, 2022, admitting for a closed period of TTD from October 8, 2020 through November 5, 2020. Respondent made no request at hearing to withdraw its admission. By filing the admission, Respondent conceded that Claimant was entitled to temporary disability benefits. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 18 P.3d 790 (Colo. App. 2000). Once commenced, TTD benefits "shall continue" until the occurrence of a terminating event enumerated in § 8-42-105(3) or (4).

Respondent denied TTD after November 5, 2020 on the theory that Claimant was put at MMI and released to full duty. Termination of TTD under § 8-42-105(3)(a) or 105(3)(c) are affirmative defenses that the Respondent must prove. Section 8-43-201(1); *Valley Tree Service v. Jimenez*, 787 P.2d 658 (Colo. App. 1990); *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (December 16, 2004). Accordingly, Claimant is entitled to reinstatement of TTD benefits effective November 6, 2020 unless Respondent proves a legally sufficient terminating event.

B. Is TTD after November 5, 2020 barred by a determination of MMI?

Entitlement to TTD terminates when the claimant reaches MMI. Section 8-42-105(3)(a). Under § 8-42-107(8)(b)(I), the initial determination of MMI must be made by "an authorized treating physician." Once an ATP declares a claimant at MMI, no additional TTD may be awarded unless a DIME is completed. Section 8-42-107(8)(b)(II); *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002).

Even though an ATP's determination of MMI cannot be questioned absent a completed DIME, the ALJ has jurisdiction to consider the threshold factual question of whether the claimant has been put at MMI by "an authorized treating physician." *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996), *Briley v. K-Mart Corporation*, W.C. No. 4-494-519 (March 12, 2003).

A handful of ICAO cases have addressed whether and under what circumstances a determination by a non-physician can substitute for that of an authorized treating "physician." In *Flake v. JE Dunn Construction Co*., W.C. No. 4-997-403-03 (September 19, 2017), the ICAO upheld an ALJ's finding that a declaration of MMI was valid even though it was initially made by a physician assistant ("PA"). The Panel noted that PAs are statutorily authorized to provide medical services "under the personal and responsible direction and supervision of a [licensed physician]." Sections 12-240-107(6)(a), (6)(b)(I), C.R.S. Because the ATP had later countersigned the WC164 form and stated in a report that he agreed with the PA's determination of MMI, the Panel concluded that substantial

evidence supported the ALJ's finding that the claimant had been put at MMI "by an authorized treating physician."

The Panel in *Flake* referenced several previous ICAO decisions for the proposition that "medical determinations made by physician assistants . . . *may be adopted by the physician* and relied upon as a decision of the physician himself." (Emphasis added). One case, *MacDougall v. Bridgestone Retail Tire Operations LLC*, W.C. No. 4-908-701-07 (April 12, 2016), involved a penalty claim against the insurer for filing an FAL based on an MMI determination from a PA. In *MacDougall*, Dr. Olson had previously evaluated the claimant and opined he would probably be at MMI at the next office visit. Dr. Olson was out of the office at the next appointment, so the claimant saw Dr. Olson's PA instead. The PA determined the claimant was at MMI "as per Dr. Olson's previous note." Dr. Olson later wrote a report stating he agreed the claimant was MMI as of the date determined by the PA. He explained that his electronic signature was placed on all WC164 forms completed by PAs in his office, and gave no indication the electronic signature had been applied to the form inappropriately. Dr. Olson. The ALJ interpreted Dr. Olson's subsequent report as ratifying the PA's declaration of MMI. In dicta, the Panel indicated these facts supported the ALJ's decision not to impose a penalty against the insurer for filing the FAL based on the PA's report.

The other cases cited in *Flake* involved issues other than determinations of MMI. In *Bassett v. Echo Canyon Rafting Expeditions*, W.C. No. 4-260-804 (April 3, 1997), the Panel held that the supervising ATP was "responsible" for work restrictions imposed by a PA because the PA's report was addressed to the ATP and stated, "we saw" the claimant and "we ordered x-some rays." And in *Terry v. Captain D's Seafood Restaurant*, W.C. No. 4-226-464 (December 9, 1997), the Panel held that a full-duty release by a PA could be ascribed to the ATP where the report stated the PA had "discussed" the examination findings with the ATP. The Panel determined that, "the ALJ could, and did, reasonably infer that [the ATP] authorized the physician's assistant to sign for him in releasing the claimant to regular employment."

The critical common element in these cases was persuasive evidence that the treating physician was involved in, adopted, or ratified the determination by the non-physician working under their supervision.

As found, Respondent failed to prove Claimant was put at MMI by an "authorized treating physician." Numerous factors lead the ALJ to conclude the December 30, 2020 pronouncement of MMI is invalid. First, the statute plainly requires that an MMI determination be made by a "physician." Because of this clear language, and considering the significant ramifications that can attend a declaration of MMI, it is highly doubtful this function be delegated to a non-physician. Although a PA or other medical support personnel may make a preliminary assessment, the ultimate decision must reflect some independent judgment by a treating physician.

This point seems even more salient where, as here, the MMI determination was made by a nurse rather than a PA. The ICAO decisions discussed earlier rested in part

on the statutory requirement that PAs be directly supervised by a physician.[1] But nurse practitioners are not subject to a similar requirement of physician oversight. See § 12-255-104(9)(c); 3 CCR 716-1 § 1.9.C.11. Although such supervision may occur in certain medical facilities, it cannot simply be presumed, as it can with PAs.

Most important, there is no persuasive evidence that Dr. Centi was contemporaneously or subsequently involved in the determination of MMI by Ms. Joyce. Dr. Centi's "stamped" electronic signature was probably applied by Ms. Joyce, by CCOM office staff, or by an automated process. There is no persuasive evidence Dr. Centi had any knowledge of Ms. Joyce's determination, much less approved, adopted, or ratified it. The persuasive evidence shows Claimant was put at MMI by a nurse rather than a physician.

C. Is TTD after November 5, 2020 barred by a full-duty release?

Section 8-42-105(3)(c) provides that TTD terminates when "the attending physician gives the employee a written release to return to regular employment." Whether the claimant was "given" a full-duty release by "the attending physician" are questions of fact for resolution by the ALJ. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

As found, Respondent failed to prove Claimant was given a full-duty release by "the attending physician." The prior finding that Dr. Centi was not involved in determining MMI is equally dispositive of whether the full-duty release can terminate TTD.

D. General Award of Medical Benefits

Respondent admitted Claimant suffered a compensable injury on October 11, 2020. As a matter of law, Claimant is entitled to a general award of medical treatment from authorized providers reasonably needed to cure and relieve the effects of his injury. Claimant neither requested nor tried any specific medical benefits. Consequently, no order regarding specific medical benefits is warranted or appropriate.

E. Short-term disability offset

Claimant received STD benefits commencing in January 2021 from a disability policy provided by Employer. Section 8-42-103(d)(I) provides a dollar-for-dollar offset against temporary disability benefits unless the claimant contributed to the premiums or must repay the STD carrier because he received a concurrent award of TTD benefits. The parties presented no evidence regarding the disability policy terms or whether Claimant contributed to the premiums. Accordingly, no specific order can be issued regarding whether or to what extent Respondent may be entitled to an offset.

[1] Section 12-240-107(6)(a) provides that a physician may "delegate to a physician assistant . . . the authority to perform . . . acts that physicians are authorized by law to perform." Section 12-240-107(6)(b)(I) requires that a physician assistant may only exercise delegated authority "under the personal and responsible direction and supervision" of a licensed physician.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant TTD benefits at the weekly rate of $859.50, commencing November 6, 2020 and continuing until terminated by law.

2. Respondent shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

3. Respondent shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

1. Whether Claimant established by a preponderance of the evidence that additional chiropractic and massage treatment are reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

FINDINGS OF FACT

1. On April 25, 2018, Claimant was sustained admitted injuries arising out of the course of his employment with Employer in a work-related motor vehicle accident. As a result of the accident, Claimant sustained extensive injuries, including a fracture of the left humerus, lung contusions, right acetabular fracture, thoracic rib fracture, closed head injury and ligamentous injuries to both knees. (Ex. 2). Claimant's injuries necessitated multiple surgeries between May 1, 2018 and December 8, 2020. (Ex. 1 & 2).

2. On June 9, 2020, Claimant's authorized treating physician (ATP), Brian Beatty, D.O., placed Claimant at MMI, and assigned impairment ratings for both lower extremities and Claimant's left elbow. Dr. Beatty also noted that Claimant would need additional maintenance care including follow up orthopedic care for anticipated bilateral knee arthroplasties, and follow-up medical care. Dr. Beatty did not provide an impairment of Claimant's thoracic spine or brain injury. (Ex. 1).

3. On July 13, 2020, Respondents filed a Final Admission of Liability (FAL). Claimant filed an objection to the FAL on August 11, 2020, and requested a Division Independent Medical Examination (DIME). (Ex. 9).

4. On September 17, 2020, Claimant returned to Dr. Beatty. Dr. Beatty performed osteopathic manipulations to the thoracic and lumbar spine, and noted that Claimant would continue with a home exercise and stretching program. (Ex. 1)

5. On January 26, 2021, Claimant had a Division independent medical examination (DIME) with David Yamamoto, M.D. Claimant reported his then-existing symptoms as thoracic spine pain, knee pain, mild depression. Dr. Yamamoto opined that as a result of his work-related accident, Claimant had a thoracic spine sprain/strain with ongoing stiffness, bilateral knee internal derangements requiring surgery, comminuted left humerus fracture requiring surgery, adjustment disorder, and mild traumatic brain injury (resolved). Dr. Yamamoto opined that Claimant was not at MMI, and that Claimant required a future right knee total arthroplasty. Dr. Yamamoto did not recommend or offer an opinion regarding Claimant's need for massage therapy or chiropractic treatment. (Ex. 2).

6. Following the DIME, Claimant continued to receive care, including physical therapy. On July 7, 2021, Dr. Beatty referred Claimant to Dr. Wolff for "a few sessions" of

chiropractic care, and indicated he would see Claimant back in two months for follow up. (Ex. E).

7. From September 10, 2021 to January 7, 2022, Claimant was seen at Green Mountain Chiropractic and Massage on nine dates. At each visit Claimant requested a "full body massage" and received massage therapy from Jessica Cain, CMT. At each massage therapy visit, Ms. Cain recorded Claimant's reported symptoms for six areas, including the left shoulder and arm (twice), upper back, neck, lower back, legs and thighs, and right knee. With the exception of Claimant's right knee and neck pain increasing from 4/10 to 5/10 at the November 12, 2021 visit, and Claimant's reported pain level in his legs increasing from a 3/10 to 4/10 on December 16, 2021, Claimant's reported pain levels were identical at each visit with Ms. Cain. Despite no documentation of Claimant reporting improvement in symptoms at any visit, Ms. Cain documented the following statement at each visit: "Patient is showing improvement since the prior visit. He is progressing as anticipated. Intensity is decreased since the prior visit." Claimant's only documented chiropractic treatment during this time was a November 12, 2021 visit with Dr. Wolff. At that visit, Claimant's only reported complaint was low back pain rating 5/10. (Ex. 3).

8. Claimant's next documented visit with Dr. Beatty was on December 28, 2021, when Claimant reported he was continuing to see a chiropractor for his back pain "which is not helping." Claimant also was attending physical therapy 3 times per week. At this visit, Dr. Beatty recommended Claimant continue physical therapy and follow up with Dr. Dayton. Dr. Beatty did not recommend or prescribe additional chiropractic care or massage. (Ex. 1).

9. The parties stipulated that Insurer denied authorization for chiropractic and massage treatment as of February 24, 2022.

10. Claimant returned to Dr. Beatty on March 15, 2022, reporting continued right knee pain with stiffness and swelling. Dr. Beatty noted that Claimant was receiving benefit from physical therapy, and that Claimant would follow up with Michael Dayton, M.D. Dr. Beatty did not recommend or prescribe additional chiropractic care or massage. (Ex. 1)

11. Claimant next saw Dr. Beatty on April 26, 2022. Claimant reported improvement in his symptoms, but that he had developed increasing low back pain over the last several days. Dr. Beatty diagnosed Claimant with a lumbosacral strain and performed osteopathic manipulation. He made no recommendations for chiropractic care or massage. (Ex. 1).

12. On May 31, 2022, Claimant saw orthopedist Dr. Dayton at UC Health. Referred Claimant for sixteen sessions of physical therapy. Dr. Dayton did not recommend or refer Claimant for chiropractic or massage. (Ex. 5).

13. Respondents requested that, Allison Fall, M.D., performed a record review and comment on the issue of whether chiropractic and massage care were reasonable and necessary to relieve the effects of Claimant's work injuries. Dr. Fall opined that the chiropractic care and massage therapy Claimant received from Green Mountain Chiropractic was not medically reasonable and necessary to relieve the effects of

Claimant's injury. Dr. Fall noted that Claimant's massage treatments were directed to multiple body parts, and was not specifically addressing the thoracic spine diagnosis provided by Dr. Yamamoto. She further opined that Claimant's records did not document a sustained long-term benefit from the massage therapy. (Ex. F).

14. With the exception of Dr. Beatty's referral for chiropractic care on July 7, 2021, the record contains no documentation of a referral or recommendation for chiropractic care or massage care from an ATP.

15. Claimant testified that he has been receiving weekly massages for at least six months, which he characterized as helpful. Claimant also testified that he continues to receive chiropractic care, which he believes is helpful to his overall recovery. Claimant testified he believed such treatment is reasonable and necessary. No records of either chiropractic or massage after January 7, 2022 were offered or admitted into evidence. Claimant also testified Dr. Beatty has performed spinal adjustments when he sees Claimant. Claimant also testified that Dr. Dayton has recommended massage, although no documented recommendation was offered or admitted into evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to

conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

An ALJ lacks jurisdiction to order an ATP to provide or recommend a particular form of treatment which has not been prescribed or recommended by the ATP. *See Potter v. Ground Services Co.*, W.C. No. 4-935-523-04 (ICAO, Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995).

Claimant has failed to establish by a preponderance of the evidence that additional chiropractic treatment or massage therapy is reasonably necessary to cure or relieve the effects of Claimant's industrial injuries. Claimant was last referred for chiropractic care on July 7, 2021, when Dr. Beatty referred Claimant for "a few sessions." Claimant was then seen at Green Mountain Chiropractic and Massage for nine massage therapy visits and one chiropractic treatment. The record contains no credible evidence that any ATP has recommended either massage therapy or chiropractic care for Claimant since July 7, 2021.

Claimant's massage and chiropractic records do not credibly document improvement in Claimant's symptoms resulting from such treatment between September 10, 2021 and January 7, 2022. Claimant's testimony that he is currently receiving chiropractic and massage that he finds helpful is not persuasive evidence of the reasonableness or necessity of such treatment.

Claimant contends his testimony that chiropractic and massage are reasonable and necessary is sufficient to permit authorization of treatment. In support of this position, Claimant cites *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) and *Gelco Courier v. Indus. Com. of Colo*., 702 P.2d 295 (Colo. App. 1985). In both *Lymburn* and *Gelco*, the Court of Appeals found that a combination of medical evidence and claimant testimony was sufficient to support an award of temporary disability benefits. Neither *Lymburn* nor *Gelco* stand for the proposition that an ALJ may authorize medical care based solely on a claimant's testimony. To the contrary, an ALJ lacks jurisdiction to order an ATP to provide or recommend a particular form of treatment which has not been prescribed or recommended by the ATP. *See Potter v. Ground Services Co.*, W.C. No. 4-935-523-04 (ICAO, Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995). Because no credible, persuasive evidence was presented demonstrating a current, existing recommendation for massage therapy or chiropractic treatment from Claimant's ATPs, the ALJ lacks authority to order such treatment.

With respect to Claimant's position that Insurer improperly denied benefits, Claimant's Application For Hearing does not assert a rule violation, statutory violation, or penalty claim. As such, those issues are not properly before the ALJ. Claimant cites no authority, and the ALJ has found none, supporting the proposition that an ALJ has the authority to authorize treatment based solely on an insurer's alleged failure to follow WCRP standards for denial. To the extent Claimant asserts that Respondents' denial of chiropractic and massage constitutes "an act of bad faith claims adjusting," (as stated in Claimant's position statement) claims of bad faith are not within the ALJ's jurisdiction. *In re Claim of Horiagon*, W.C. No. 4-985-020 (ICAO Mar. 15, 2015).

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of massage therapy and chiropractic treatment is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 25, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-113-544-001

ISSUES

The issues set for determination included:

- Did Respondents overcome the conclusions of Stephen Lindenbaum, M.D., who performed the Division-sponsored Independent Medical Examination ("DIME"), by clear and convincing evidence?

- Whether Claimant proved by a preponderance of the evidence that she suffered compensable injuries to her right shoulder, cervical spine, and left hip?

- Is Claimant entitled to TTD benefits from July 15, 2019 to the present?

PROCEDURAL STATUS

A Summary Order was issued on April 11, 2022. As part of the Summary Order, the ALJ ordered that the hearing transcript be filed with the Court, as it was cited by the parties in their briefs. On April 12, 2022, Respondents submitted a Request for Specific Findings of Fact, Conclusions of Law and Order. Respondents filed an Amended Proposed Order on April 15, 2022. A hearing transcript was then lodged with the Court on May 13, 2022. This Order follows.

FINDINGS OF FACT

1. Claimant's medical history was significant in that she sustained injuries in prior motor vehicle accidents which occurred in 1992 and the record had evidence of treatment for her low back in 2001 (at the emergency room of the Community Hospital (Munster, IN.) Claimant was treated for neck, right shoulder and low back pain after a MVA in 2004. There was also an indication Claimant was injured in an accident in 2010, however, those records were not admitted into evidence.

2. There was no evidence in the record that Claimant required treatment after approximately 2010, nor was there evidence she had permanent work restrictions as a result of those accidents/injuries.

3. Claimant worked for Employer as a delivery driver. She started working for Employer in April 2019. Her job duties include delivering sandwich orders as well as helping with various side work in the store, including cleaning and stocking products.

4. On June 24, 2019, Claimant suffered an admitted injury when she was injured in an MVA while working for Employer. This was a T-bone collision in which the

other vehicle struck the rear passenger side and spun Claimant's vehicle around. Claimant testified that the collision was severe and she felt pain in her neck, back and shoulder, as well as her arm.[1]

5. Claimant was treated later that day at the Emergency Department of UC Health-Green Valley Ranch. Claimant reported pain in her neck, lower back, arms and legs, along with tingling in her hands. She had underlying tight spasm-like quality with a sharp lancinating pain. Edward Cetaruk, M.D. evaluated Claimant and noted tenderness, pain and spasm in the cervical, thoracic and lumbar spine, but normal range of motion ("ROM"). Dr. Cetaruk noted the pain was localized to her lower lumbar area and spine, with some tingling to her fingers and toes.

6. Dr. Centaruk's assessment was: back strain, initial encounter. He opined her pain was due to soft tissue injury of the muscles and connective tissues of her spine and back. The ALJ found the Cr. Centaruk's findings supported the conclusion Claimant injured her back, including the lumbar spine.

7. Claimant was evaluated by Kartik Patel, M.D. at UC Health on July 2, 2019. Dr. Patel reviewed the imaging of Claimant's thoracic spine and lumbar spine. He ordered physical therapy ("PT") and pain management, as well as prescribing Celebrex.

8. TF[Redacted] is the General Manager for Employer. They worked in the same store. After taking one day off, Claimant returned to work and her normal job duties. Mr. TF[Redacted] testified he saw Claimant and talked to her daily. Mr. TF[Redacted] testified she did not ask for accommodations or do her job any differently than before the accident. He testified she was a hard worker and would run to her car from the store; and this continued after the accident.[2]

9. Claimant testified she returned to work, but felt pain doing her job duties and walked with a limp. She said had trouble completing all of duties and left work early. Claimant testified she felt severe pain in her back and hip on July 10, 2019 and was not been able to work. Claimant texted Mr. TF[Redacted] to advise that she had pinched her sciatica and the pain in her leg was so bad she could not work. Her pay records reflected that she last worked on July 11, 2019.[3]

10. Claimant was evaluated by Tom Ashar, M.D. at the UC Emergency Department on July 10, 2019. She reported standing at the counter at work and experienced severe pain in her left hip. Dr. Ashar administered an Ativan injection to Claimant's hip. Dr. Ashar noted Claimant was scheduled for a pain specialist and PT

[1] Hearing Transcript ("Hrg. Tr.") p. 72:10-13.

[2] The testimony of Mr. TF[Redacted] from the prior hearing as admitted as Exhibit Q.

[3] Exhibit 6, p. 280.

evaluation for her injuries. The PT notes from UC Health on July 17 and 31, 2019 reflected pain complaints in the cervical and lumbar spine, as well the left leg and right shoulder.

11. On July 30, 2019, Claimant filed a Worker's Claim for Compensation that listed several body parts injured in the work-related accident, including the neck and right shoulder.

12. On July 29, 2019, Claimant underwent an MRI of her cervical spine. The films were read by Joseph Ugorji, M.D., whose radiology summary included: C3-4: 3 mm posterior disc herniation protrusion with tiny posterior annular tear-disk material gently contacted ventral spinal cord contributing to low-grade spinal canal stenosis; C4-5: 2 mm chronic posterior disc osteophyte complex low-grade biforaminal stenosis; C5-6: 2.8 mm posterior disc bulge with superimposed shallow inferior disc extrusion and posterior radial-type annular tear and moderate spinal canal stenosis was present, as well as low grade interspinous ligament swelling. The ALJ noted the MRI documented objective findings with respect to Claimant's cervical spine.

13. An MRI of the lumbar spine was also performed on July 29, 2019. Dr. Ugorji noted there was a 7.5 mm right facet synovial cyst, bilateral facet hypertrophy and low grade right facet arthropathy present at L4-5. Dr. Ugorji also noted preserved disc morphology and hydration, with no spinal canal or foraminal stenosis present at T11-12, T12-L1, L1-2, L2-3, L3-4, and L5-S1.

14. On July 30, 2019, Claimant underwent an MRI on her left hip. Dr. Ugorji stated no fracture or dislocation was present involving the bony pelvis or either hip. A greater than 50% thickness intermediate signal at chondro-osseous junction posterior labrum and superior labrum, with no paralabral pseudocyst or swelling. The findings were longer than the expected for a paralabral sulcus. Dr. Ugorji said given the absence of fluid insinuating the labral tissue, the differential diagnosis favored labral scar although a recent tear would be difficult to exclude. The ALJ found this opinion raised the question of a recent injury and documented a potential pain generator.

15. On August 5, 2019, Claimant was evaluated by Ryan Mansholt, PA-C and the report was counter-signed by Usama Ghazi, D.O. At that time, Claimant had low back pain, with radiation to the left groin and lower extremity, as well as left buttock. She also had neck pain, which radiated to the right arm down to the wrist, along with sleep disturbance. The ALJ noted Claimant's report of symptoms corresponded to all body parts which were Claimant alleged were injured over the course of the claim. Myofascial pain and spasm was noted in the thoracic spine and Claimant's right shoulder had limitations in its ROM, with positive supraspinatus, Hawkins and Neer signs. Examination of the low back showed loss of lumbar lordosis and severe spasm. Tenderness was present in Claimant's left hip into the trochanteric region. The ALJ found the presence of spasms was objective evidence of injury.

16. The diagnoses were: muscle spasm, headache, post-concussive syndrome, cervical sprain/strain; lumbar sprain/strain, sacral sprain/strain; brachial neuritis/radiculitis, sciatica, left hip pain; sprain/strain left hip; cervical spondylosis without myelopathy; thoracic spondylosis without myelopathy; lumbar spondylosis without myopathy; lumbar radiculitis; right shoulder sprain/strain; cervical radiculitis. PA-C Mansholt and Dr. Ghazi noted there was a causal relationship between the accident and Claimant's complaints/diagnoses, based upon the available information. An orthopedic consult for the left hip was recommended, along with a MRI arthrogram for the right shoulder. Claimant was taken off work for two weeks.

17. Claimant was evaluated by various physicians at Advanced Orthopedic & Sports Medicine Specialists, starting with Michael Shen, M.D. on August 7, 2019. At that time, she complained of severe low back and left leg pain and hypoesthesia. On examination, Claimant had normal lower extremity strength, with an antalgic gait. She had moderate spasm and tenderness in the paraspinous area. Dr. Shen noted Claimant's lumbar MRI showed some early facet arthropathy, but was essentially normal. Some effusion was note in her SI joints. Dr. Shen stated he did not see indications for surgical intervention, as Claimant was mechanically stable and neurologically intact. He opined her pain was out of proportion and believed she would benefit from physiatry and pain management.

18. Similar findings were made in an evaluation on August 14, 2019 by Christopher D'Ambrosio, M.D., who evaluated Claimant for lumbar and left hip pain. Restrictions in Claimant's left hip ROM were documented by Dr. D'Ambrosio, who also opined Claimant's pain as out of proportion to her diagnostic testing. Dr. D'Ambrosio prescribed Diclofenac Sodium.

19. Claimant was evaluated by Barry Ogin, M.D. on August 16, 2019, at which time she complained of pain in her left buttock and radiating down her leg. She also had pain along the back of her head and her neck, which radiated along her right shoulder. Dr. Ogin's impression were: back and right leg pain, negative lumbar MRI, negative hip MRI, subjective complaints as noted; mild cervicothoracic strain; severe anxiety and probable depression; history of left sided hip and pelvis fractures in 2010.

20. Dr. Ogin discussed the results of the MRI-s with Claimant and believed her prognosis was good. He suspected there was a strong psychological basis to her pain. Dr. Ogin recommended PT and electrodiagnostic testing for the lower extremity.

21. Claimant was then seen for follow-up on September 11, 2019 by Teresa McDonald PA-C at Advanced Orthopedics for lumbar and right shoulder pain. The ALJ found the medical records from Advanced Orthopedics documented Claimant's report of pain in her low back, left hip/leg, cervical spine and right shoulder. An injection was administered for left hip and thigh pain.

22. The ALJ found there was evidence of psychological issues which impacted Claimant's report of symptoms and treatment. Claimant was evaluated on August 26, 2019 and diagnosed with an adjustment disorder by Aggie Poznanska, MA, LPCC, NCC.

Claimant received psychological treatment with Ms. Poznanska through November 8, 2019.

23. Claimant underwent an MRI on her right shoulder on August 27, 2019. Dr. Ugorji noted it showed a 4 mm. greater than partial thickness tear in the undersurface of the glenohumeral ligament and a 28 mm. greater than partial thickness tear of the superior labrum with extension into the biceps-labral anchor. The infraspinatus, teres minor, subscapularis and supraspinatus tendons were intact.

24. In a follow-up evaluation on September 20, 2019, Dr. Ogin's impression included lumbosacral strain; possible left sacroiliac joint strain; right shoulder strain, small labral tear identified; subjective complaints. Dr. Ogin administered a right shoulder injection and ordered a left SI joint injection for diagnostic and therapeutic purposes.

25. The ALJ concluded there were clinical indications in the form of pain in the, which led to request for the MRI-s made by the physicians treating Claimant. These physicians, including Dr. Ogin, recommended and oversaw treatment. The ALJ inferred that that the physicians who evaluated Claimant and ordered MRI-s of those areas were of the opinion these were injured on June 24, 2019.

26. On December 19, 2019, Claimant was evaluated by John S. Hughes, M.D. who performed an independent medical examination. Dr. Hughes recounted that Claimant suffered a motor vehicle accident on June 24, 2019. He explained that at her June 24, 2019 emergency room visit Claimant reported lower back pain. Claimant reported current symptoms of lower back, left hip and right shoulder pain. Dr. Hughes concluded that Claimant had received reasonable, necessary and related medical treatment for her June 24, 2019 injuries. He reasoned that Claimant had not reached MMI.

27. Also on December 19, 2019, Robert Messenbaugh, M.D. conducted an Independent Medical Evaluation of Claimant, at the request of Respondents. Claimant reported pain in her right shoulder, cervical spine, lumbar spine and left hip. Dr. Messenbaugh opined Claimant sustained some degree of injury to her left hip, lumbar spine, cervical spine and left shoulder in the June 24, 2019 accident. In the initial report, Dr. Messenbaugh found Claimant was not at MMI and opined she needed further evaluation.

28. On March 3, 2020, ALJ Cannici issued an Order which concluded that Claimant suffered a "compensable back strain" during the course and scope of her employment on June 24, 2019. This Order found Claimant did not sustain injuries to the cervical spine, thoracic spine, right shoulder or left hip.[4]

[4] Exhibit C, p. 11.

29. On March 12, 2020, Respondents filed a General Admission of Liability ("GAL") which admitted for medical benefits only.

30. Dr. Messenbaugh issued supplemental reports dated January 16 and March 13, 2020. In the January 16, 2020 report, Dr. Messenbaugh stated Claimant suffered a lumbar spine soft tissue myofascial strain and sprain, without associated neurological deficit. He opined Claimant did not suffer an injury to her cervical spine, shoulder or hip as a result of the MVA.

31. In the March 13, 2020 report, Dr. Messenbaugh said Claimant was at MMI and assigned a 0% impairment to her lumbar spine. Dr. Messenbaugh said Claimant was at MMI as of July 15, 2019. Dr. Messenbaugh opined that Claimant did not require maintenance treatment, including any treatment for her neck, shoulder or hip.

32. On March 25, 2020, Claimant was placed at MMI by Nathan Faulkner, M.D. and he agreed with Dr. Messenbaugh that the date of MMI was July 15, 2019. This was not a particularly credible conclusion since it was before the date Dr. Faulkner initially evaluated and provided treatment to Claimant (September 26, 2019).

33. On May 19, 2020, Respondents filed a Final Admission of Liability ("FAL"), based upon Dr. Faulkner's report.

34. On September 25, 2020, Claimant underwent a DIME, which was performed by Dr. Lindenbaum. At the time of the evaluation, Dr. Lindenbaum noted Claimant entered the room with an extremely antalgic gait and used a cane. Dr. Lindenbaum reviewed both the treatment records, as well as the IME reports from Dr. Messenbaugh and Dr. Hughes. Claimant reported pain in the cervical spine, lumbar spine and right shoulder.

35. On examination, no paracervical spasm was present in the cervical spine. ROM testing showed 44° of cervical flexion was present, 22° of extension, 40° of right lateral flexion, 39° of left lateral flexion, 60° of cervical rotation to the right and 59° to the left. Claimant reported severe hip pain during the examination. Dr. Lindenbaum was not able to examine Claimant's thoracic spine.

36. Examination of Claimant's right shoulder there was a questionable positive speed test, with mild pain on ROM in the areas of impingement. Claimant's ROM of the right shoulder showed 130° of flexion, 35° of extension, adduction of 40°, abduction of 90°, internal and external rotation of 80° and 70° respectively. The motor and sensory exam was essentially normal.

37. Dr. Lindenbaum expressed his concern that as a result of his examination as well as the opinions of multiple physicians that Claimant's pain was out of proportion to the examination and she had a significant functional disability related to psychological factors. Dr. Lindenbaum stated Claimant had findings from the MVA compatible with pain

related to an injury to the cervical spine and over six months with treatment that was not successful; with the associated MRI findings of some disc abnormalities, which would imply that an impairment rating was indicated. There was also a suggestion of right shoulder dysfunction, based upon the MRI and the physical exam would qualify for a rating. He concluded Claimant was not at MMI, as she needed to be evaluated by Dr. Ogin or another orthopedic surgeon with regard to her right shoulder. Dr. Lindenbaum said there was no evidence, based on the presence of Waddell findings for extreme hyperthesia, as well as complaints of severe pain that could warrant a rating for the thoracic or lumbar spine or left hip. However, Dr. Lindenbaum did not say that the lumbar and thoracic spine and hip were not injured in the accident.

38. Dr. Lindenbaum provided a provisional rating of 8% for ROM loss in the right shoulder, which would convert to a 5% whole person rating. Dr. Lindenbaum, while noting this was a very difficult case, found Claimant had an 11% impairment for loss of ROM in the cervical spine and 4% for a specific disorder for a total of a 15% whole person impairment. Dr. Lindenbaum stated there was no evidence for apportionment at that time. By the provision of a medical impairment rating to this area of the body, the ALJ concluded that Dr. Lindenbaum found Claimant's cervical spine and right shoulder were causally related her work injury. Dr. Lindenbaum assigned no impairment rating to Claimant's thoracic spine, hip, or lumbar spine. Dr. Lindenbaum's opinion was persuasive to the ALJ.

39. There was no evidence in the record that Claimant returned to her ATP-s and received additional treatment after the evaluation by Dr. Lindenbaum.

40. Dr. Messenbaugh testified at hearing as an expert in orthopedic surgery (the specialty in which he is board certified) and was Level-II accredited pursuant to the W.C.R.P. Dr. Messenbaugh testified he did not think Claimant injured her hip, neck, or shoulder in the MVA. This was because when she was evaluated at the emergency room at UC Health, her complaint was of low back pain. Dr. Messenbaugh stated there was no indication Claimant hit her head and he had not seen injuries involving the right shoulder in similar accidents where it was nontethered. He opined Claimant would have had much greater pain in the right shoulder had it been injured in the subject accident. Dr. Messenbaugh said Claimant did not suffer severe whiplash as a result of this accident.

41. Dr. Messenbaugh noted that Dr. Lindenbaum and four other physicians concluded Claimant's pain complaints were out of proportion to the physical and radiographic findings. Dr. Messenbaugh stated he disagreed with Dr. Lindenbaum that the shoulder should be rated, as he did not believe any shoulder issues were related to the June 24, 2019 accident. He also disagreed with the provisional rating to the cervical spine, as Claimant did not report head or neck pain in the Emergency Department after the accident.

42. The ALJ determined that Dr. Messenbaugh's reports and testimony did not establish Dr. Lindenbaum's conclusions were in error, but rather were an alternate opinion.

43. The ALJ found Claimant was evaluated by multiple physicians, who although they found symptom magnification and psychological issues, nonetheless ordered diagnostic testing and treatment. The referrals made by these physicians led the ALJ to conclude they believed Claimant required treatment for her neck, shoulder, low back and hip. The ALJ determined Claimant suffered an injury to each of those areas.

44. The ALJ found the March 3, 2020 Order issued by ALJ Cannici was issued prior to the DIME performed by Dr. Lindenbaum, who was able to review the evaluations/opinions of the physicians who examined Claimant before September 2020.

45. Claimant met her burden of proof and proved she was entitled to TTD benefits.

46. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). In the case at bench, there was conflicting medical evidence, including by the physicians who evaluated Claimant on the issue of MMI.

Compensability of Right Shoulder, Cervical Spine and Left Hip

As determined in Findings of Fact 3-4, Claimant suffered an admitted industrial injury when she was involved in a MVA on June 24, 2019 when she was working for Employer as a delivery driver. The ALJ found Claimant had previously injured her neck, low back and right shoulder in other MVA-s, however, there was no evidence in the record she had continuing treatment or work restrictions as a result. (Findings of Fact 1-2.)

Claimant required treatment as a result of the June 24, 2019 accident at the Emergency Department of UC Health, where x-rays were taken and medications were prescribed. (Finding of Fact 5).

Subsequently, Claimant required treatment when she returned to UC Health on July 2 and 10, at which time she was evaluated for thoracic spine, lumbar spine and hip pain. As found, Claimant's pain complaints in the cervical spine, right shoulder, lumbar spine and left hip prompted her ATP's to order MRI-s, which were taken of the cervical and lumbar spine, as well as left hip. (Findings of Fact 12-14). An MRI of the right shoulder was done on August 27, 2019. (Finding of Fact 23). The ALJ found Claimant's physicians made the referrals for diagnostic testing because of her pain complaints.

Claimant was evaluated by orthopedic specialists at Advanced Orthopedics in August and September, 2019. Concerns were raised by physicians that Claimant's report of pain was out of proportion to what was shown on diagnostic testing; nevertheless treatment was recommended and Claimant treated with ATP, Dr. Ogin. The ALJ found there were psychological issues, as referenced in the medical records, but the medical showed Claimant consistently reported symptoms in the neck, shoulder, low back and hip.

A dispute arose concerning the areas Claimant's body which were injured in the subject accident. A hearing was held and ALJ Cannici concluded Claimant suffered a compensable back strain. (Finding of Fact 28). ALJ Cannici concluded Claimant did not suffer compensable injuries to the cervical spine, thoracic spine, right shoulder or left hip. Respondents then filed a GAL on March 12, 2020 for the low back only. (Finding of Fact 29). On March 25, 2020, Claimant was placed at MMI by Dr. Faulkner, who said the date of MMI was July 15, 2019. After Claimant requested an DIME, which was performed by Dr. Lindenbaum, he concluded she was not at MMI. Respondents then disputed that conclusion.

At the outset of the hearing, there was a disagreement between the parties regarding the issue of compensability and allocation of burdens of proof on those body parts which had not been admitted. Respondents argued it was Claimant's burden of proof to establish compensability. They asserted a DIME physician's opinion was not entitled to special weight on the issue of compensability. *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). Respondents argued that in *Faulkner,* the Court of Appeals held that *Qual-Med* was limited to a situation where the correctness of the DIME opinion was the sole issue, not an initial compensability or causation finding. *Faulkner v. ICAO* at 846. Therefore, *Faulkner* stood for the proposition that Claimant had the initial burden of proving entitlement to benefits by a preponderance of the evidence by demonstrating that the injury arose out of and in the course of employment.

Claimant argued she did not have the burden to prove that each body part affected by the admitted industrial injury is compensable prior to a DIME. Rather, she averred the DIME physician has the authority to determine what body parts are related to the claim and cited *Gray v. Dunning Construction*, W.C. No. 4-516-629 (ICAO 2005), Qual-Med v.

ICAO, 961 P.2d 590 (Colo. App. 1998). Claimant also cited *In re Claim of Sharpton*, W.C. No. 4-941-721-03 (November 29, 2016) for the principle that the DIME process contemplates the DIME physician will evaluate all components of Claimant's condition and determine the cause of the various medical components.

To determine which body parts were injured in the subject accident, the ALJ reviewed the medical records admitted at hearing. Based upon a totality of the evidence, the ALJ found that there was sufficient evidence to establish that Claimant suffered a compensable injury to the following body parts: right shoulder, cervical spine, and left hip. (Finding of Fact 43). This was found first in the medical records admitted at hearing where Claimant's evaluating physicians made treatment recommendations. (Finding of Fact 25). The ALJ also inferred that that the physicians who evaluated Claimant and ordered MRIS of those areas were of the opinion these were injured in the subject accident. *Id.*

Second, Dr. Lindenbaum specifically analyzed each of the body parts in question, as well as determining whether each had a permanent medical impairment. As found, Dr. Lindenbaum had the benefit of the previous medical providers, including the physicians who performed IME-s. (Finding of Fact 43). Therefore, based upon the medical records admitted into evidence, the ALJ concluded Claimant suffered a compensable injury/aggravation to her right shoulder, cervical spine, and left hip as a result of the June 24, 2019 accident.

Overcoming Dr. Lindenbaum's Opinions

The question of whether Respondents overcame Dr. Lindebaum's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the findings of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007). The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. Respondents had the burden of proof to overcome Dr. Lindenbaum's conclusion on MMI. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004). Respondents had the burden of proof to overcome Dr. Lindebaum's conclusion on MMI, as well as on causation/relatedness.

The ALJ also found Dr. Lindenbaum's report included an identification of areas of the body impacted by the accident, as well as an analysis of the findings on MRI. (Findings of Fact 34-37). As determined in Finding of Fact 37, Dr. Lindenbaum concluded Claimant was not at MMI with regard to her shoulder and noted there was evidence of pathology on the MRI. Dr. Lindenbaum likewise found there was evidence of pathology on the MRI of Claimant's cervical spine. *Id.* Dr. Lindenbaum specifically addressed the question of Claimant's exaggerated pain complaints *Id.* Dr. Lindenbaum provided a provisional rating for Claimant's cervical spine and shoulder. The ALJ concluded Dr. Lindenbaum was of the opinion that the injuries to those parts of the body were caused by the work injury and the ALJ found Dr. Lindenbaum's opinions persuasive. (Finding of Fact 38).

In summary, the ALJ determined that Dr. Lindenbaum addressed each of the body parts implicated by the work injury and provided an opinion on causation/relatedness. As found, Respondents did not meet their burden of proof to show that Dr. Lindenbaum's conclusions were more probably wrong. (Finding of Fact 42). The ALJ determined that what was offered into evidence was a differing expert opinion (Dr. Messenbaugh) that disagreed with Dr. Lindenbaum's opinion. (Finding of Fact 41). This difference between the opinions of Dr. Lindenbaum and Dr. Messenbaugh did not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., *supra*, WC-s 4-532-166 & 4-523-097.

TTD Benefits

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits.

The ALJ determined Claimant was entitled to TTD benefits based upon the opinion of the DIME physician, Dr. Lindenbaum. (Finding of Fact 44). This was also based on the fact there was no evidence in the record that Claimant worked after July 11, 2021 and she had work restrictions at various times while she was being treated. (Finding of Fact 9). Accordingly, Respondents will be ordered to pay TTD benefits from July 12, 2019 until terminated by law.

ORDER

It is therefore ordered:

1. Respondents shall provide medical benefits to Claimant, including the evaluation by Dr. Ogin (or other orthopedic surgeon) for her cervical spine, and right shoulder.

2. Since Clamant is not at MMI, Respondents shall pay TTD benefits from July 12, 2019 and continuing.

3. Respondents shall pay 8% interest on all benefits not paid when due.

4. All matters not determined herein are reserved for future determination.

DATED: July 25, 2022

Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-161-807-001

ISSUES

1. Whether Respondents established by a preponderance of the evidence that Claimant received an overpayment of indemnity benefits for which Respondents are entitled to repayment.

FINDINGS OF FACT

1. Claimant was properly served with the Application for Hearing in this matter on April 1, 2022 by mail addressed to Claimant's home address and email address. Notice of Hearing was also sent to Claimant by mail and email to his address of record on April 22, 2022. Claimant has not filed any entry of appearance or response with the Office of Administrative Courts or otherwise participated in this matter.

2. On January 11, 2021, Claimant sustained an admitted lumbar spine injury arising out of the course of his employment with Employer. Following a course of treatment, Claimant's authorized treating physician (ATP) Jeffrey Baker, M.D., placed Claimant at maximum medical improvement (MMI) effective November 23, 2021. (Ex. 1).

3. Over the course of Claimant's claim, Insurer paid Claimant temporary partial disability (TPD) benefits through January 9, 2022. At hearing, KJ[Redacted], the claims adjuster Insurer assigned to Claimant's claim testified that Insurer paid Claimant a total of $4,033.28 in TPD benefits from November 23, 2021 until January 9, 2022.

4. On February 23, 2022, Respondents filed a Final Admission of Liability (FAL) asserting an overpayment of $4,033,28 in TPD benefits. (Ex. 1). This overpayment claim represents the TPD benefits Insurer paid Claimant after the date of MMI until January 9, 2022. (Ex. 1). Claimant did not object to the FAL, or request a hearing related to the FAL.

5. Based on the amendment to §8-40-201 (15.5), C.R.S., that modified the definition of "overpayment" effective January 1, 2022, Respondents limited their request for repayment to only those overpayments that occurred prior to January 1, 2022. Ms. KJ[Redacted] credibly testified that the total amount of TPD paid from November 23, 2021 to December 31, 2021 was $3,791.61.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits

by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERPAYMENT

Pursuant to § 8–43–303(1) C.R.S., upon a prima facie showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In relevant part, the Colorado Workers' Compensation Act defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive. § 8-40-201 (15.5), C.R.S. (2021).[1] An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Section 8-42-113.5 (1)(c), C.R.S., authorizes insurers to seek and order for repayment of an overpayment, and ALJs are authorized to conduct hearings to require such repayments. § 8-43-207 (q), C.R.S. Respondents may retroactively recover an overpayment of benefits, and such

[1] The General Assembly amended § 8-40-201 (15.5), C.R.S., effective January 1, 2022, removing the phrase "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive," from the definition of "overpayment." As noted, Respondents have limited their claim to payments occurring before January 1, 2022, consequently the applicable statute is the Worker's Compensation Act in effect prior to January 1, 2022. *See Stark v. Zimmerman*, 638 P.2d 843 (Colo. 1981) (repeal of a statutory provision does not operate retroactively to modify vested rights or liabilities).

recover is not limited to duplicate benefits. *In re Wheeler*, W.C. No. 4-995-488-004 (ICAO Apr. 23, 2019); *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

Respondents bear the burden of proof to establish by a preponderance of the evidence that a claimant received an overpayment, and that respondents are entitled to recovery of that overpayment. *City & Cty. of Denver v. Indus. Claim Appeals Off.*, 58 P.3d 1162, 1164-1165 (Colo. App. 2002); *See In the Matter of the Claim of Robert D. Scott, Claimant*, W.C. No. 4-777-897, (ICAO Oct. 28, 2009).

Respondents have established by a preponderance of the evidence that Claimant received overpayments of temporary partial disability benefits in the amount of $3,791.61, and that Respondents are entitled to repayment of that amount. Pursuant to § 8-42-103, and 8-42-106, respondents are required to pay temporary disability benefits while a claimant is under a disability that prevents the claimant from earning his or her full average weekly wage. Such benefits continue until the claimant reaches maximum medical improvement. § 8-42-106 (2)(a) C.R.S. Respondents paid Claimant TPD benefits for the period of November 23, 2021 through December 31, 2021, in the amount of $3,791.61. Because these TPD benefits were paid after the date of MMI assigned by Claimant's ATP, the benefits exceeded the amounts should have been paid or were amounts Claimant was not entitled to receive. *See Wheeler, supra* ("respondents are allowed to recover as an overpayment the TTD benefits that were due and owing when paid but are later determined to be amounts the claimant was not entitled to receive. Respondents are, therefore, entitled to recover the overpayment.

OVERPAYMENT RECOVERY

Section 8-42-113.5, C.R.S. governs the recovery of overpayments. Where a claimant receives any payments from any source which requires the reduction of any disability benefit, § 8-42-113.5 provides for different methods of recovery for respondents. Under § 8-42-113.5 (a), a claimant is required to provide written notice of learning of such payment within twenty days, and any resulting overpayment "shall be recovered by the employer or insurer in installments at the same rate as, or at a lower rate than, the rate at which the overpayments were made." "Such recovery shall reduce the disability benefits … payable after all other applicable reductions have been made." *Id*. Where no written notice is provided, "the employer or insurer is authorized to cease all benefit payments immediately until the overpayments have been recovered in full." § 8-42-113.5(1)(b). If, however, recovery under § 8-42-113.5 (a) or (b) is "not practicable," respondents are authorized to seek an order for repayment. § 8-42-113.5(1)(c), C.R.S. The term "practicable" refers to a respondent's ability to recover the overpayment from ongoing or unpaid benefits." *In re Martin*, W. C. No. 4-453-804 (ICAO, Oct. 4, 2004).

When the parties are unable to agree upon a repayment schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the

authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994). No evidence exists in the record from which the ALJ can determine whether a payment schedule is appropriate or the terms of repayment.

ORDER

It is therefore ordered that:

1. Claimant shall repay to Respondents $3,791.61 in overpaid temporary disability benefits.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 26, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-188-909-001

ISSUE

1. Did Claimant prove by a preponderance of the evidence that she sustained a compensable injury on November 2, 2021, while in the course and scope of her employment?

2. If Claimant suffered a compensable injury, was the medical treatment Claimant received on January 24, 2022 from Dr. Romero reasonable, necessary and related to her injury on November 2, 2021?

3. Did Claimant prove by a preponderance of the evidence that she is entitled to TTD benefits and TPD benefits?

STIPULATIONS

1. Claimant's AWW is $1,219.00.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 31 year-old female. On November 2, 2021, Claimant was working in the course and scope of her employment as a registered nurse for Employer.

2. On November 2, 2021, CNA HL[Redacted] called Claimant at approximately 7:00 p.m., and asked her to come to a patient's room to assist with moving the patient (KW) to a recliner chair. KW was too weak to move on his own as he had dialysis earlier in the day.

3. Claimant had been KW's nurse that day, so she was familiar with KW and the care he was receiving at the hospital. Claimant had no issues with KW throughout the day. Claimant noted that KW had not ambulated all day because he was too weak.

4. When Claimant entered KW's room, he was sitting on the edge of the bed, and Ms. HL[Redacted] was standing to his side. Ms. HL[Redacted] moved so Claimant could talk to KW. KW was hunched over, so Claimant assessed his health status to see if he was in pain, nauseous, etc. before moving KW to the recliner with Ms. HL[Redacted] 's assistance. Before Claimant could move him, however, KW started getting agitated. (Tr. 22:1-18).

5. Claimant testified that KW started yelling at her and saying that it was his body and he could do what he wanted. She further testified that KW was waving his finger at her and tapping the tip of her nose. When she stepped back and asked him not to do that,

he grabbed her left arm to pull her forward, yanked her back and forth, to the point she was off balance. She further testified that KW's other hand brushed against her chest and hit her chin. Claimant testified that it was a quick interaction, maybe 10 to 30 seconds. She told KW he could not treat staff that way, and she called security. (Tr. 24:2–25:21).

6. According to the incident report, when security arrived, KW was sitting up in bed and staff was trying to verbally de-escalate him. Security was told that Claimant "was grabbed by the patient, pushed, then hit by the patient." It is not clear from the incident report who made this statement. KW told security he was a grown man and was tired of being told what to do. KW felt disrespected by being told he could not do certain things. The report further states that KW's wife was very apologetic towards the staff for the incident. (Ex. 5).

7. Claimant completed a written statement that was included with the incident report. In her statement, Claimant explained that after she was called into the room and had checked on KW, he got verbally aggressive and said it was his body and he could do what he wanted. Claimant tried to explain that they were trying to keep him safe so he did not fall. KW got more agitated and aggressive. When Claimant tried to back away, KW grabbed her left arm, shoved her backwards, and pulled her forward. Claimant lost her balance, and KW struck her across the chest into her left arm with his other hand, and then struck her chin when he let go of her left arm. The narrative section of the incident report concluded with, "[f]urther review with CNA that witnessed event confirmed RN Stephanie's statement." (Ex. 5)

8. The following day, November 3, 2021, the Parker Police Department came to the hospital to investigate the report of an assault. The police interviewed Claimant. Her statement to the police was consistent with the written statement she provided to Parker Security the day before. (Ex. 6). Officer LM[Redacted] testified that Claimant had no visible redness, no bruising, swelling, abrasions, or cuts approximately 18 hours after the incident. (Tr. 62:10-19).

9. Officer LM[Redacted] also interviewed Ms. HL[Redacted] . She told Officer LM[Redacted] that she called Claimant for assistance because KW tried to stand up, but he was too weak and tired to stand on his own. Ms. HL[Redacted] said she was preparing the recliner when she overheard Claimant and KW arguing, and when she turned around to look at them she saw KW pointing at Claimant. Ms. HL[Redacted] said that she went back to preparing the recliner, as KW and Claimant continued to argue. When she turned around again, Ms. HL[Redacted] saw KW push Claimant with his right hand on her left shoulder, and this is when Claimant called a security alert. (Ex. 6).

10. Lastly, the police interviewed KW and his wife. KW's wife was not in the room on November 2, 2021, when the incident occurred. KW told the police that he did not remember anything about what happened the prior evening. According to the police report, Claimant was confused and easily distracted throughout the interview. (Ex. 6).

11. Officer LM[Redacted] completed the police report and concluded that "[a]fter speaking to [KW], I do not feel he had the mental culpability required for assault." (Ex. 6).

12. Ms. HL[Redacted] was the only other person in KW's room, in addition to KW, during the incident. Ms. HL[Redacted] testified at the hearing that as she was preparing the recliner, she was not facing KW or Claimant. She turned around when she heard them arguing, and specifically heard Claimant say something to the effect "you are not going to do this to me again." Ms. HL[Redacted] testified that she saw KW pointing at Claimant, but she did not see him push, pull or strike Claimant. (Tr. 72:2-21). The ALJ finds that Ms. HL[Redacted] had her back turned for the majority of the time Claimant was in KW's room.

13. Per the Hospital's Midas Statements, Ms. HL[Redacted] told her supervisor that KW pushed Claimant with his fingertips on the left side of her chest two times. Ms. HL[Redacted] said that KW never hit Claimant in the face, nor did he ever grab her arm. (Ex. H).

14. Ms. HL[Redacted]'s testimony at the hearing was inconsistent with her past statements regarding the events of November 2, 2021. At the hearing, Ms. HL[Redacted] testified that she did ***not*** see KW push, pull or strike Claimant. (Tr. 72:11-21). But shortly after the incident, Ms. HL[Redacted] told security that she witnessed the incident and agreed with Claimant's statement regarding the attack. (Ex. 5). The next day, November 3, 2021, she told her supervisor, DB[Redacted], that KW pushed Claimant with his fingertips on the left side of her chest, twice. (Ex. H). That same day, Ms. HL[Redacted] told the police that KW pushed Claimant with his right hand on her left shoulder. (Ex. 6/Ex. I). The ALJ discredits Ms. HL[Redacted] 's testimony and does not find her credible.

15. In contrast, Claimant's testimony regarding the events on November 2, 2021, was generally consistent with the statement she drafted after the incident and with what she told the police the following day. The ALJ notes that Claimant's statement varied as to which arm KW used to grab her left arm. The ALJ does not find this inconsistency to be significant, nor does it affect Claimant's credibility. The ALJ finds Claimant's testimony credible.

16. The ALJ finds that KW was too weak to stand on his own, but he became agitated when Claimant tried to help prevent him from falling. KW grabbed Claimant's left arm, he pushed and pulled on it, and he struck Claimant's chest and chin. Claimant did not have any visible bruising or redness the day after the incident.

17. Two years prior, on December 10, 2019, Claimant suffered a compensable work injury to her left shoulder when a patient attacked her. (Ex. N). Claimant had two MRIs, one shortly after the injury and another in August 2020. Both MRIs were negative for labrum or rotator cuff tears. Claimant had two surgeries on her left shoulder, one in October 2020 and the second in February 2021. (Tr. 48: 9-13).

18. Claimant was placed at MMI on January 29, 2021, with a zero percent (0%) impairment rating. She was released to work at full duty with no work restrictions, and a Final Admission of Liability was filed reflecting the same. (Ex. N).

19. Claimant testified that prior the incident on November 2, 2021, she had full range of motion and was able to do all of her duties at work with no issue. Claimant testified she "still had pain here and there . . . but overall it was doing great." (Tr. 27:2-9).

20. Ajay Vellore, M.D., evaluated Claimant on August 5, 2021. At this appointment, three months prior to her injury, Claimant noted that things had been fairly stable, and overall her shoulder was feeling better. She complained of "significant biceps tendon pain" which was quite "annoying." (Ex. E). The ALJ finds Claimant's testimony regarding the condition of her left shoulder prior to the November 2, 2021 injury is not inconsistent with what she reported to Dr. Vellore as Respondents allege.

21. On November 4, 2021, two days after her injury, Claimant went to Concentra and was treated by ATP, Jonathan Claassen, D.O. She reported pain with left elbow extension in the bicep and deltoid areas. She had pain trying to raise her left arm up and when getting dressed. Claimant's pain was an 8/10. Dr. Claassen diagnosed Claimant with a left shoulder strain, left biceps strain, and cervical strain. He ordered a left shoulder MRI. Dr. Claassen noted Claimant's history of left shoulder surgeries in October 2020 and February 2021. (Ex. 10).

22. Claimant had a left shoulder MRI on November 11, 2021. The impression read "[f]indings suspicious for a delamination type partial tear involving the anterior infraspinatus tendon."

23. The ALJ finds that Claimant reinjured her left shoulder in the course and scope of her employment on November 2, 2021.

24. On November 15, 2021, Claimant saw Landon Fine, D.O., who had treated her previously. Dr. Fine evaluated Claimant and reviewed her MRI. He noted that the "MRI is difficult to interpret and it is unknown if this tear is acute or chronic and it does not appear that there is a significant retraction and minimal other intra-articluar pathology." Dr. Fine recommended that Claimant begin with conservative treatment consisting of NSAIDs, injections, and physical therapy. (Ex. F).

25. On January 24, 2022, Alex Romero, M.D., evaluated Claimant and reviewed her November 2021 MRI. He noted that Claimant's shoulder findings were a bit inconsistent. According to Dr. Romero, Claimant had a small intrasubstance tear of her supraspinatus, but on examination her symptoms were very significant. He diagnosed her with chronic left shoulder pain and an incomplete tear of her left rotator cuff, unspecified whether traumatic. (Ex. F).

26. The ALJ finds that Claimant's appointment with Dr. Romero on January 24, 2022 was reasonable, necessary and related to her work injury on November 2, 2021.

27. Claimant was given work restrictions, and Employer gave Claimant a light-duty job that accommodated her work restrictions. (Tr. 32:22-33:3).

28. Claimant testified that sometime in December 2021, Employer informed her that her modified light-duty job could not be accommodated for a period of time. (Tr. 33:1-11). Claimant did not work from sometime between December 2021 and mid-January 2022. (Tr. 33:20-34:5).

29. Claimant testified that sometime in January 2022, Employer gave Claimant a modified job working in the corporate office of her Employer that accommodated her work restrictions. (Tr. 33:20-34:5).

30. Claimant testified that her current work restrictions include no lifting, no pushing and no pulling. (Tr. 35:4-7).

31. Claimant testified that prior to November 2, 2021, she worked approximately 36 hours a week. Currently, Claimant is working 20-30 hours per work in her modified position. Claimant's wages have been affected by a reduction in the overall hours she is working per week. (Tr. 35:8-23). This testimony in uncontroverted.

32. The ALJ finds that Claimant is entitled to TTD benefits and TPD benefits.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936);

Bodensieck v. Indus. Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *Triad Painting Co. V. Blair,* 812 P.2d 638 (Colo. 1991). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. F*aulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846. A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *Univ. Park Care Ctr. v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

As found, the only three people in KW's room at the time of the incident on November 2, 2021, were Claimant, KW, and Ms. HL[Redacted] . KW was confused and did not recall anything regarding what happened in the hospital. Ms. HL[Redacted] had her back turned for most of the events that occurred. Moreover, Ms. HL[Redacted] 's version of what occurred was inconsistent. Ms. HL[Redacted] 's testimony was neither persuasive nor credible. (Findings of Fact ¶14).

In contrast, Claimant was credible and her testimony was persuasive. The ALJ credits the testimony of Claimant and her description of the events that occurred on November 2, 2021. As found, Claimant proved by a preponderance of the evidence that she suffered a work injury arising out of, and in the course and scope of her employment on November 2, 2021. The evidence demonstrated that even though KW was weak, he became agitated and grabbed Claimant left arm, and yanked it back and forth, causing

Claimant to reinjure her left shoulder. (Findings of Fact ¶ 16). While Claimant has a history of left shoulder issues, including two surgeries, Claimant credibly testified that she was able to work full duty without any restrictions, prior to the injury she sustained on November 2, 2021. (Findings of Fact ¶¶ 19-20). Claimant established by a preponderance of the evidence, that she suffered a compensable injury to her left shoulder on November 2, 2021. (Findings of Fact ¶ 23).

For an insurer to be liable for the payment of medical bills, the employee must have suffered a compensable injury arising out of and in the course of employment. Section 8-42-101, C.R.S. If the injury is compensable and the medical services are reasonable and necessary, then the insurer is responsible for the expenses incurred by the employee for the treatment of the injury. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Claimant establish that a compensable injury occurred on November 2, 2021. As such, payment for the medical bill from Claimant's treatment with Dr. Romero on January 24, 2022 is reasonable, necessary, and related to her compensable injury. (Findings of Fact ¶ 26).

TTD and TPD Benefits

To qualify for TTD benefits under § 8-42-105, a claimant must establish three conditions: (1) the industrial injury caused the disability; (2) the injured employee left work as a result of the injury; and (3) the temporary disability is total and lasts for more than three working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo.1995).

Once a claimant establishes that the industrial injury is causing a temporary wage loss, that claimant is entitled to receive TTD benefits until: (1) the claimant reaches MMI; (2) the treating physician releases the claimant to return to regular employment; (3) the claimant actually returns to regular or modified employment; or (4) the treating physician authorizes a return to modified employment, the employer offers such employment to the claimant, but the claimant fails to begin that employment. *Colo. Springs v. Indus. Claim Appeals Office*, 954 P.2d 637, 639 (Colo. App. 1997).

As found, prior to November 2, 2021, Claimant was working full duty, without restrictions. Claimant was subsequently given work restrictions. Employer gave Claimant a modified job that accommodated her work restrictions. Sometime in December 2021, Employer was not able to accommodate these restrictions, and there was no work for Claimant until January 2022. In mid-January 2022, Employer gave Claimant a modified job in the corporate office of Employer that accommodated her restrictions. Claimant is still restricted from lifting, pushing and pulling, and she has not returned to full duty work. As found, Claimant's wages have been affected by a reduction in the overall hours that she is working per week. Claimant is entitled to TTD benefits and TPD benefits. (Findings of Fact ¶¶ 27-32).

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury while in the course and scope of her employment on November 2, 2021.

2. The medical treatment Claimant received on January 24, 2022 with Dr. Romero was reasonable, necessary and related to her injury on November 2, 2021.

3. Claimant is entitled to TTD benefits and TPD benefits from November 2, 2021 forward.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 7-26-22

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Respondents proved by a preponderance of the evidence that they are entitled to withdraw their December 14, 2021 and April 25, 2022 General Admissions of Liability pursuant to Sec. 8-43-201(1), C.R.S. (Cum. Supp. 2021).

II. Whether Claimant proved by a preponderance of the evident that he is entitled to a change of physician in accordance with Sec. 8-43-404(5)(a)(III), C.R.S. and W.C.R.P. Rule 8, 7 CCR 1101-3.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a 53 year-old man with some college education. Claimant worked for Employer as an assistant manager. Claimant was hired on November 2, 2021. His responsibilities included learning every facet of the Employer's day to day business, waiting on customers, learning how to make every item on the menu, unloading supplies, training employees, learning the responsibilities of the store manager.

2. Claimant testified that, when hired, he was not aware that the assistant store manager's duties would involve heavy lifting and did not disclose any information related to his preexisting low back condition.

3. Claimant has an extensive, longstanding prior low back condition for which he was actively treating prior to this incident. Claimant testified he was already experiencing back pain on the day that he reported for work on November 12, 2021, prior to any work activity, and his left lower back, left leg, and left foot were bothering him on a daily basis prior to this incident. Claimant testified his back pain never fully resolved after his 2016 surgery, and he was routinely treating with gabapentin prescribed by Dr. Ludwig and Dr. Whittier for back pain since the 2016 surgery.

4. The medical records list a history that Claimant had back pain and left leg symptoms initially in 1991, when they performed an MRI but Claimant improved with conservative treatment. Approximately six years later he developed recurrent pain and was seen in Illinois where they obtained another MRI.

5. On December 8, 2015 Claimant's MRI, as read by Dr. Eric Lynders, showed a large, caudally directed left paracentral disc extrusion a the L5-S1, that contacted and impinged at the left S1 nerve root in the lateral recess, with disc material contacting the ventral surface of the left S2 nerve root, and moderate to severe central spinal canal stenosis and foraminal narrowing. He also noted fissuring of the L3-4 and L4-5 on the MRI.

6. Claimant was evaluated by neurosurgeon Stephen Johnson, M.D. on

December 30, 2015. Dr. Johnson took a history and noted Claimant's complaint of sharp pain in his left low back with radiation to his left buttock, posterior left thigh, posterior left calf and lateral and bottom of the left foot. He was able to walk fairly comfortably though had increased pain with sitting. Claimant revealed that he had significant weakness of the plantar flexion of the left ankle for the previous three weeks, with persistent numbness of the lateral and bottom of his left foot and numbness of his left saddle area. Claimant also reported some slowing of urination. On exam, Dr. Johnson noted an abnormal gait, not able to push off with plantar flexion of the left ankle and inability to toe walk. Claimant had positive straight leg raise on the left, diminished pin sensation over the dorsum of the lateral aspect of the foot and big toe as well as the saddle area on the left extending laterally from the midline and inferiorly along the medial left thigh suggesting an S1-S2 hypesthesia. Dr. Johnson recommended proceeding with surgery in light of the findings.

7. On January 12, 2016 Claimant was attended by Dr. Johnson, who documented a history as follows:

> [Claimant] was doing reasonably well until a car trip to Estes Park in early November, which brought on pain involving his left low back and left leg. The symptoms worsened in early December. He has had persistent radicular left leg pain. He had an epidural steroid injection, which did not significantly help his pan. He describes a sharp pain in the left low back radiating to the left buttock, posterior left thigh, posterior left calf, and into the later and bottom of the left foot.
>
> Pertinent findings at the time of the hospital admission include ability to toe walk on the left. His gait is abnormal because of the decreased strength with plantar flexion of the left ankle. Straight leg raising is positive on the left. There is significant weakness of plantar flexion of the left ankle. The left ankle reflex is absent. Pin sensation is diminished over the dorsum and lateral aspect of the left food as well as the plantar surface of the left foot.

8. Claimant proceeded with a semi-hemilaminectomy of the L5-S1 with excision of the disk herniation on January 12, 2016 performed by Dr. Johnson at SCLH. The postoperative diagnosis was herniated disc, L5-S1, left. During the surgery, Dr. Johnson identified the left S1 nerve root and performed a foraminotomy. He also identified a large disk herniation contained by the posterior longitudinal ligament. He made an incision in the ligament and discectomy was performed removing the extruded disk material as well as fragments within the disk that had migrated inferiorly to the disk and the additional fragments close to the midline. Dr. Johnson observed that the common dural sack and proximal S1 and S2 nerve roots then appeared decompressed.

9. On discharge on January 13, 2016 Dr. Johnson noted that Claimant, following surgery, was allowed to gradually progress his activities and made progress with ambulation. He was discharged home with plans for a follow-up visit.

10. Dr. Sean O. Bryant noted that the MRI of March 14, 2016 showed good decompression at the L5-S1 level, some post-surgical scarring around the nerve root, no recurrent herniation and the disc space was narrowed at L5-S1 with degenerative findings otherwise stable and no prevertebral mass or fluid collection. The same fissuring of the L3-4 and L4-5 was also seen on this MRI.

11. Claimant was seen by Dr. Johnson on March 16, 2016. He noted that

Claimant was doing well until one week prior, when he awoke with numbness involving his left foot. He was seen at Presbyterian/St. Luke's Medical Center, where they ordered X-Rays and an MRI. The X-Rays showed a lumbar spine partial laminectomy at L5-S1 on the left. Dr. Johnson was hopeful that sensation would improve with walking, physical therapy and time.

12. On April 8, 2016 Dr. Eric Whittier of SCLH Medical Group recommended gabapentin twice daily for nerve pain, as well as clonazepam three times a day and citalopram daily because of the insomnia and general anxiety. On April 12, 2016 Dr. Johnson agreed with Claimant's primary treating physician to start him on gabapentin twice daily.

13. On May 20, 2016 Claimant was admitted to the hospital with a generalized anxiety disorder, insomnia, and a severe episode of recurrent major depressive disorder and post-traumatic stress disorder (PTSD). Dr. Whittier noted that the PTSD was from childhood trauma and ongoing chronic anxiety. Upon discharge he recommended establishing therapy and psychiatric consult for medication control.

14. On June 20, 2016 Claimant continued with PTSD, generalized anxiety, insomnia and had an exacerbation of his back pain with left sided radiculopathy due to lifting in physical therapy. Dr. Whittier increased his gabapentin to four pills a day TID (three times daily), bupropion and tramadol every six hours for pain.

15. On January 16, 2017 Claimant reported to Dr. Whittier that he was having back pain and radicular symptoms that was likely worsening his PTSD as his mood was visibly worse. He increased his antidepressant and sleep medications. He was taking four tablets of gabapentin per day in addition to the tramadol as needed. He also made a referral to neurosurgeon Dr. Wong as Claimant declined to return to Dr. Johnson for his worsening lumbar spine pain and radiculopathy with muscle weakness. On February 17, 2017 Dr. Stephen Carmel also documented ongoing low back and left sided radiculopathy.

16. On July 25, 2017 Dr. Whittier again mentioned a referral to a second opinion neurosurgeon for the low back and radicular problems on the left. Claimant continued to have PTSD, generalized anxiety and insomnia. Claimant had an annual exam on October 24, 2017, with Dr. Whittier who noted that Claimant only taking one to two dozes of gabapentin at nighttime and had stopped most of his antidepressants but continued to see a therapist for depression. On physical exam he found mild tenderness in the low back and recommended that Claimant continue on gabapentin. This was also the recommendation on May 15, 2018 and December 10, 2018.

17. On January 10, 2019 Claimant had significant low back pain with radiculopathy and evidence of distal weakness on the lower extremity. Dr. Whittier recommended orthopedic evaluation with Western Orthopedics. On June 13, 2019 Claimant continued to have problems with anxiety, medications were restarted, and referrals to both therapy and a gastroenterologist were placed. On August 7, 2019 he continued to have insomnia, anxiety. Medications were changed. On September 16, 2019 he had continued low back and radicular symptoms despite continued use of two gabapentin pills per night, with some subtle weakness and pain when sleeping. On musculoskeletal exam, Dr. Whittier found chronic low back pain, positive for tenderness to palpation, with left leg radiculopathy and left leg numbness as well as deep tendon reflex

(DTR) on neurologic exam. He also noted depressed mood with tearfulness. Dr. Whittier referred Claimant to Denver Back Pain Specialists and recommended Claimant continue to take the gabapentin.

18. Dr. Whittier again evaluated Claimant on October 1, 2020. Claimant continued with anxiety, depression, insomnia and lumbar spine chronic pain and radiculopathy. He continued to take gabapentin. On October 15, 2020 he placed a prescription for gabapentin, two tablets per night. On November 19, 2020 Claimant continued with the same medications and same diagnosis of generalized anxiety, insomnia, PTSD. Claimant continued with gabapentin for the chronic pain.

19. Claimant was seen by Dr. Jacob Ludwig for the first time on March 25, 2021 and diagnosed chronic bronchitis, insomnia, generalized anxiety, hypertension, and Dr. Ludwig referred Claimant to a new therapist. On August 27, 2021 Claimant was seen by Dr. Ludwig and diagnosed with the same issues of generalized anxiety, PTSD, hypertension, insomnia, back pain with left sided radiculopathy with associated neuropathy controlled with gabapentin, and mild intermittent reactive airway disease. Dr. Ludwig noted that "He is in real distress related to the above situation and especially struggling without access to gabapentin, clonazepam, Lisinopril, doxepin and albuterol inhaler."

20. Just two months prior to this claim Claimant reported he was helping his cousin move boxes and felt increased back pain and left-sided sciatica. Claimant testified he helped his cousin lift and carry a variety of many items at a garage sale, and he felt back pain with pain into his left leg and left foot.

21. Claimant saw his primary care physician, Dr. Jacob Ludwig, at SCL Health Medical group on September 10, 2021, who recommended he change his gabapentin intake to three times a day. Dr. Ludwig documented that Claimant reported he was in a physically, mentally, and emotionally abusive relationship at that time. Claimant requested removal of the history that was recorded during the visit regarding his relationship. The report notes Claimant was hospitalized in the past for these (presumed harmful mental health) thoughts, and did not want to go back to the hospital. Claimant also reported his father was abusive as well. Claimant complained to Dr. Ludwig the sciatica was constant, and went down to the toes. Dr. Ludwig gave Claimant the suicide hotline information, and recommended he continue his medications including clonazepam and Lexapro and continue therapy.

22. Claimant reported he had chronic low back pain for years, and Claimant himself requested a referral for sports medicine and an MRI, and they offered him both. Dr. Ludwig noted Claimant had acute on chronic low back pain with severe left-sided sciatica symptoms and neuropathy. Dr. Ludwig reported that Claimant increased his gabapentin dosage to "TID" which means three per day from his regular dosage of twice per day. On exam, Dr. Ludwig found Claimant had tenderness in the back, and a positive straight leg raise ("SLR") test on the left. Given the neurologic symptoms in setting of prior laminectomy, Dr. Ludwig recommended an MRI to evaluate recurrent nerve compression. Dr. Ludwig recommended Claimant establish care with a sports medicine physician and a physical medicine rehabilitation specialist/physiatrist.

23. Claimant stated that his symptoms continued at that level for less than two weeks and then he went back to taking one to two pill at bedtime. Claimant testified the

back pain he experienced in September 2021 was new and different than what he experienced immediately before that incident in September 2021.

24. On November 12, 2021 Claimant reported to his Employer a low back injury while lifting boxes of dairy products. Claimant's manager was pushing the boxes towards him and he would rotate, lift them and then rotate to the opposite side to stack them. When lifting the last one, Claimant felt a pop in his low back. He felt immediate increasing pain in his low back going down his left leg and into his foot.

25. Claimant's manager, testified that she did not witness any incident or injury. She stated she worked alongside Claimant on November 12, 2021 putting away the mix in the walk-in. Although Claimant testified he was unable to continue working after the incident, the manager testified Claimant was able to complete the task of putting the frozen mix away, and after the frozen mix was put away, she and Claimant continued working on other tasks including putting away paper, dilly bars, and queso. Although Claimant testified he experienced "excruciating" pain while putting the mix away, the manager contradicted Claimant, stating she never witnessed Claimant cry out in pain, or exhibit any signs of an injury or pain. The manager stood next to Claimant to hand him the products, but did not hear his back pop or observe anything to indicate that Claimant hurt himself. The manager testified Claimant never told her about his prior back injury, any lifting restrictions, or any physical limitations when they went over the job duties.

26. When the manager was about to leave for the day, she let Claimant know he could stay and work or he could go home. Claimant looked at her funny, but did not report any injury at that time. After Claimant continued to look at her in a funny way, the manager asked Claimant to come with her to the office. She and Claimant spoke for a lengthy time, but Claimant did not tell her what happened. Ultimately, she was the first one to ask if he was hurt. Claimant then told her he felt a twinge while putting the supplies away, but felt a pop when he lifted the queso. Claimant initially declined to seek medical treatment, but the manager insisted.

27. Prior to working for Employer, Claimant had not worked since 2009 at a formal job. Claimant testified he listed employers on his job application, and misrepresented his work history through 2019. Claimant testified he did this as he wanted to work with the manager of Employer, whom he had previously met and with whom he had discussed a possible job.

28. On November 12, 2021, Dr. Brian Cooper of UCHealth – Harmony Emergency, noted a history that Claimant was lifting while at work and felt a pop in his left lower back. Before going to the emergency, he had been resting in bed, arriving at the ED via Uber. Claimant reported symptoms of low back pain with some weakness to his left leg. Dr. Cooper evaluated Claimant and found him to be in acute distress. Claimant was provided with prednisone (Medrol Dospak), flexeril and lidocaine patches. Dr. Cooper opined the evaluation showed a lumbar series with no acute findings other than degenerative changes at the L5-S1 level. Dr. Cooper recommended Claimant follow-up closely with his primary doctor to arrange further follow-up. His discharge medications were oxycodone (Percocet), Medrol Dospak, Lidoderm patches and cyclobenzaprine (flexeril).

29. Claimant received the designated provider list from Employer on November 12, 2021 by text message, and from Pinnacol on November 16, 2021. The designated

provider list included Concentra in Fort Collins, Workwell Occupational Medicine in Loveland, Workwell Occupational Medicine in Fort Collins, and UC Health Occupational Medicine in Fort Collins. Claimant chose to treat at Workwell Occupational Medicine in Loveland with Dr. Dupper.

30. Claimant was first seen by Dr. Robert Dupper at Workwell, Longmont. He took a history that Claimant was lifting crates and stacking them on November 12, 2021, which required Claimant to lift and twist repeatedly. As he lifted and twisted, he heard his low back pop. Then he developed significant left leg radiation that went into the foot with some numbness and tingling. He noted that in addition to using the flexeril and lidocaine patches received from the emergency room, Claimant was also taking Tylenol and ibuprofen as well as using ice packs. Dr. Dupper took a history from Claimant of back pain and treatment going back to 1991. Dr. Dupper listed Claimant's current medication as Gabapentin, Lisinopril, Clonazepam, vitamins, Tylenol, ibuprofen. On exam he noted that there was tenderness present in the lumbosacral area but no edema in the back or lower extremities. There was also an absent reflex at the ankles, altered sensation along the left lateral calf, a shuffling gait, absent toe and heel walking on the left, some hesitancy with urination, moderate limited range of motion and a positive SLR on the left. Dr. Dupper ordered a "STAT"[1] MRI and prescribed Tramadol for pain. While Dr. Dupper provided an opinion that the objective findings were consistent with the mechanism of injury, the record is devoid of notes stating that he had reviewed medical records or requested any prior records.

31. Dr. Virginia Scroggins Young read the November 15, 2021 MRI and observed post-operative changes and disc bulges with high signal annular fissuring at L3-4 and L4-5. Claimant already had annular fissuring with disc protrusions in his December 8, 2015 MRI at L3-4 and L4-5.

32. Claimant was seen by Dr. Dupper on November 18, 2021. He noted that Claimant was in severe distress and had weakness of the left calf when attempted to stand on his toes. Claimant reported this last symptom as new. Dr. Dupper refilled the cyclobenzaprine and diagnosed strain of the low back with radiculopathy. He referred Claimant to Dr. Shoemaker, a physiatrist as well as physical therapy.

33. After Claimant began treatment, he moved to Aurora, Colorado. Before he moved to Aurora, he spoke with Insurer to find out if there was a possibility of being treated in Denver or another areas. The Insurer's adjuster advised that a change in location does not result in a change of doctor. Insurer advised that the list of designated providers did not have any providers outside the Fort Collins/Loveland area but that there were many providers in Denver that could attend him and that the adjuster could provide a couple.

34. On November 22, 2021, Claimant sent his new address to the adjuster and asked when a list of clinics and/or doctors around his area could be emailed to him. On November 23, 2021 Insurer sent Claimant a list in his area and recommended calling them to find out if they would accept transfer of his care and then set up with whichever was easiest for Claimant. The list included Workwell in Aurora; CareNow in Denver and SCL in Denver.

[1] STAT is a medical abbreviation for urgent or rush, from the Latin word statim, meaning "immediately."

35. Claimant scheduled an appointment with Workwell in Aurora with Dr. Matus. Claimant testified that he wanted to maintain continuity of care. Claimant acknowledged in discovery that Dr. Matus was his treating provider, and testified SCL Health was not on the initial Employer's designated provider list in the Fort Collins/Loveland areas.

36. Claimant was first seen by Dr. Brenden Matus on December 3, 2021. He noted he was seeing Claimant as a transfer patient from another clinic. He reviewed the history and personal history as well as the MRI. He opined that the post-surgical findings were not acute and did not require a surgical consult. He agreed with the physical therapy and physiatrist referrals. He refilled the flexeril, ibuprofen and the patches.

37. After Claimant moved to Aurora and started seeing Dr. Matus at Workwell in Aurora, Claimant filed a Notice of "One-Time" Change of Physician form on February 2, 2022 requesting SCL Health Medical Group ("SCL") be his authorized treating physician. The objection by Respondents was that SCL was not a provider listed on the Employer's initial designated provider list in the Fort Collins/Loveland areas.

38. Claimant saw Dr. Shoemaker, a physical medicine and rehabilitation doctor/physiatrist, on December 14, 2021. Dr. Shoemaker reported there were no acute findings on MRI to indicate a new disc injury. Dr. Shoemaker documented a "challenging" conversation with Claimant regarding causation. Dr. Shoemaker noted Claimant "certainly openly disagreed" with Dr. Shoemaker's medical assessment that the annular fissures at the L3-L4 and L4-5 were incidental, known to be present in asymptomatic individuals, and that it was "highly unlikely" that Claimant simultaneously injured four separate structures during the discrete work-event. Dr. Shoemaker opined the annular fissures were probably incidental, asymptomatic, and unrelated to the work incident. However, he opined that Claimant likely had an aggravation of the previously existing chronic condition at the L-5 S1 level as well as hip injury, which was minor compared to the aggravation of the spine condition. Dr. Raschbacher agreed with this finding regarding the annular fissures. Dr. Shoemaker also noted Claimant "initially ramped up his usage [neuropathic pain medications] to 3 times a day, though as symptoms have been recently improving, he is back down to his normal gabapentin usage." Dr. Shoemaker opined Claimant's condition had not yet returned to his chronic baseline. Dr. Shoemaker recommended a pain psychology evaluation on December 14, 2021, and documented multiple times that Claimant "denied pain psychology." Dr. Shoemaker increased Claimant's gabapentin, cyclobenzaprine p.r.n., and a 10-day course of meloxicam. Nothing in this record shows that Dr. Shoemaker had Claimant prior treatment records.

39. On December 14, 2021 Respondents filed an Admission of Liability, admitting to reasonably necessary medical benefits and temporary total disability benefits.

40. On February 9, 2022, Dr. Shoemaker wrote "as per previous notes, I recommended pain psychology, and he declined." Dr. Shoemaker reported that the Claimant's pain disability score was 143 out of a highest possible score of 150, which would be extreme disability. Dr. Shoemaker opined Claimant's score was inconsistent with a patient who was capable of their own self-care, and was highly inconsistent with objective findings, including Claimant's physical function during their encounters. Dr. Shoemaker opined this indicated that Claimant was "not a reliable reporter of his degree of functional ability."

41. Dr. Jeffrey Raschbacher performed an IME on March 25, 2022. Dr. Raschbacher opined Claimant had a long history of prior similar problems, that there was no clear evidence that the reported history produced any change in symptomatology over and above his baseline, and there is no clear evidence radiologically or documented by physical examination that Claimant sustained a new injury or aggravation on November 12, 2021.

42. Claimant was ultimately placed at MMI by Dr. Brenden Matus on April 19, 2022 without impairment or maintenance care. Dr. Matus admitted it was "difficult to compare to his pre-injury baseline with a dearth of objective functional evidence from pre-injury."

43. Claimant was evaluated by Dr. Sander Orent, at Claimant's request on May 12, 2022. Dr. Orent took a history that Claimant was moving bulk soft serve ice cream on a platform. They were approximately 40 lbs. boxes. On the last lift, he felt a pop in the low back and severe pain. He reported he dropped the last crate while stocking. He went to pick up another box and had a sharp pain immediately going down the left leg. He noticed immediate weakness and started to limp. Dr. Orent opined that Claimant sustained an aggravation of his preexisting on November 12, 2021 based on the classic radicular findings that have worsened as a result of the lifting incident. He stated that Claimant required further care, including reimaging, an EMG nerve conduction study, antidepressants, counselling, and cognitive behavioral therapy.

44. Claimant testified he had moved from Denver to Windsor prior to being hired with Employer, but he had help and did not do much of the moving. Presumably, Claimant was unable to lift items and needed help because of his ongoing back injury and re-injury from September 10, 2021. Claimant testified that after this incident, he engaged in another activity that aggravated his low back pain while moving from one home to another in late November 2021 (from Winsor to Aurora), and testified this was not work-related. Claimant testified the pain from this aggravation was to his left lower back, left leg, and left foot, which is the same location that his pain has been consistently since before 2016. Claimant immediately tried to deny his testimony on cross examination, but ultimately agreed he aggravated his back while moving in November 2021. Claimant testified on re-direct he had a temporary worsening while moving, and also testified that activities of daily life aggravated his pain such as cleaning the bathtub, cleaning the toilet, and lifting more than he should and believed he lifted beyond what his capabilities were.

45. Dr. Raschbacher testified at hearing and opined that it was unlikely Claimant's condition was the result of a work injury, as his current condition was the same condition Claimant has treated for over many years prior to this claim. Dr. Raschbacher opined there was no objective basis to support a new injury or an aggravation on November 12, 2021, due to the lack of objective findings, and failure to provide physicians with a complete history of his prior physical and psychological condition. Dr. Raschbacher reviewed the MRI and opined it showed old post-operative changes, old scarring, no acute herniated discs, and nothing new or acute on it. Dr. Raschbacher testified if Claimant was in pain, it was the same pain he had experienced all along related to his prior condition. Dr. Raschbacher testified it was improbable that Claimant sustained a new injury, and that his symptoms were more likely the persistence of his pre-existing condition. Dr. Raschbacher testified Claimant was probably no different than his baseline condition.

46. Dr. Raschbacher testified Claimant's medical history showed a longstanding pattern of aggravation and reinjury, with a persistence of low back and left lower extremity complaints dating back to 2015, and the low back condition never resolved. Dr. Raschbacher testified there is nothing in the treating records showing Claimant's treating providers had access to his prior medical records or performed a prior medical record review. This ALJ agrees with the latter after having reviewed the exhibits provided.

47. Dr. Raschbacher testified Dr. Orent's opinion that Claimant's persistent low back pain since 2015 spontaneously resolved in September 2021 after 2 weeks does not make sense medically, and it would be quite unusual for a patient with longstanding pre-existing symptoms for years, with a severe new injury, to have a spontaneous resolution of the symptoms within 2 weeks. Finally, Dr. Raschbacher opined that, when performing a causation evaluations, it was important to analyze correlation of subjective and objective findings, and, in this case, there were no objective signs of injury.

48. As found, Dr. Raschbacher testified credibly that Claimant did not sustain a new work injury or an aggravation of his pre-existing condition as there were no acute findings of an acute injury, Claimant's complaints were the same as his pre-existing complaints, and there was no clear objective evidence Claimant was worse than his baseline condition.

49. As found, Dr. Raschbacher's opinion that there were no objective findings of a new, acute back injury related to a November 12, 2021 incident is credible and more persuasive than the contrary opinion of Dr. Orent. As found, while Dr. Shoemaker opined Claimant's condition had not yet returned to his chronic baseline, Dr. Shoemaker was not in receipt of the full medical history related to Claimant's longstanding prior complaints when he gave his opinion.

50. As found, although Dr. Orent and Claimant contended his psychological issues were not addressed in this case, Dr. Shoemaker recommended a pain psychology evaluation on December 14, 2021, and documented multiple times that Claimant "denied pain psychology." On February 9, 2022, Dr. Shoemaker wrote "as per previous notes, I recommended pain psychology, and he declined." As found, Dr. Raschbacher was persuasive in his assessment that Claimant already had delayed recovery and psychological issues which he was actively treating for prior to this claim related to chronic pain, PTSD, anxiety, abuse, generalized anxiety disorder, distressed marriage, which are unrelated to this claim.

51. As found, Dr. Orent's report lacks credibility. Dr. Orent's account of the mechanism of injury was not consistent with the Claimant's testimony, reports of mechanism of injury in the other medical records, or testimony of the manager.

52. As found, the manager testified credibly that there was no specific incident or accident at work, and she did not witness any accident or injury. As further found, she testified credibly that Claimant did not report a work injury until she suggested he may have been in pain.

53. As found, Claimant testified he experienced increased pain from this incident, and that he had not experienced pain like this, but this testimony is inconsistent with the medical records from September 2021 documenting "severe" pain, as well as the initial

hospital records showing that Claimant appeared uncomfortable, but was able to walk to the room without assistance.

54. As found, Claimant's testimony lacks credibility. Claimant testified inconsistently multiple times, and admitted to falsifying employment history to obtain an outcome he wanted and Claimant changed his testimony multiple times on the stand. As found, Claimant reported that he felt a pop when he lifted the queso on November 12, 2021. As found, some of the medical records indicate Claimant reported he injured himself while moving frozen mix.

55. As found, Claimant also told Dr. Raschbacher that he worked at a Thai restaurant before being hired with Employer, which is inconsistent with his testimony at hearing. As found, although Claimant had not worked for over 10 years, he testified he had an active lifestyle of backpacking through Europe, hiking, playing basketball, tennis, swimming, and skiing, which is inconsistent with his medical history of continual chronic low back pain and radiculopathy since 2015.

56. As found, the prior medical records from SCL Health showed a long-standing, chronic, pre-existing low back condition which never resolved after his back surgery in 2016, including on April 8, 2016 a recurrence of radicular pain to the left leg and foot numbness as well as increased anxiety and depression; on May 20, 2016 reports of continuing radicular symptoms as well as ongoing mood problems related to childhood PTSD and the pain from his back surgery, which brought his psych issues to the forefront; and multiple other instances of complaints of low back, left lower extremity radicular pain, anxiety, depression, PTSD related to childhood events and marital abuse, and insomnia. As found, Claimant continued to treat for the whole period of 2016 through 2021 for anxiety disorder, PTSD, insomnia, and back pain with left-sided radiculopathy as stated above. For example, on June 20, 2016 Claimant continued with PTSD, generalized anxiety, insomnia and had an exacerbation of his back pain with left sided radiculopathy due to lifting in physical therapy. Dr. Whittier increased his gabapentin to four pills a day TID (three times daily), bupropion and tramadol every six hours for pain. As found, Claimant was being treated on September 10, 2021 with the same dosage of gabapentin that Claimant testified he was told to increase his dosage to after the November 12, 2021 incident. He was on the increased dosage of gabapentin multiple times following his 2015 surgery.

57. The treatment plan recommended by Dr. Ludwig on September 10, 2021 was the same as the treatment plan Claimant had for November 12, 2021 as well as he was recommended on January 16, 2017, July 25, 2017, January 10, 2019, and September 16, 2019, with which Claimant failed to follow up to see specialists. As found, the September 10, 2021 mechanism of injury is similar to the mechanism of injury in this case- they both involve lifting incidents.

58. As found, Claimant reported symptoms of low back pain with some weakness to his left leg on November 12, 2021 to Dr. Brian Cooper, which were identical symptoms than those he complained of during his September 2021 incident and other prior lifting incidents. Further, as found, the X-rays of the lumbar spine which were taken at UCHealth showed no acute osseous or acute alignment abnormality of the lumbar spine and Dr. Cooper did not recommend follow-up with workers' compensation, but recommended Claimant work closely with his primary doctor to arrange further follow-up. This ALJ infers

from the information that Dr. Cooper did not opine that Claimant had an aggravation of his preexisting condition but an ongoing preexisting problem. Supporting this inference are the records that reflected Claimant did not have an impaired gait, and that he walked into his room without assistance. It is also supported by the fact that Claimant's MRI from November 15, 2021 had similar findings as the MRIs from December 8, 2015 taken before his surgery (with the exception of the subsequent surgical changes) and March 14, 2016 following the surgery.

59. As found, Claimant had a longstanding prior history of mental health issues as well, either affecting his chronic lumbar spine condition with radiculopathy or the lumbar spine chronic issues affecting his mental status.

60. As found, Claimant also reported to Dr. Orent that he began to limp, but the manager testified she did not witness any limping, and the UC Health records documented no limp.

61. As found, Dr. Shoemaker's opined that Claimant was not a reliable reporter of his own degree of functional ability is in accord with this ALJ's findings that Claimant was inconsistent in both his testimony and reporting of symptoms to his medical providers.

62. As found, Respondents have shown by a preponderance of the evidence that Claimant did not have a compensable event on November 12, 2021 that aggravated his preexisting condition and may withdraw their admission.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition

for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Are Respondents entitled to withdraw their General Admissions of Liability

Respondents are bound by a General Admission of liability and are required to continue paying until the law permits them to terminate benefits, or they obtain an order from an ALJ. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Once an admission has been filed, the employer may not unilaterally modify that admission if the employer comes to believe an injury is not compensable. Sec. 8-43-203(2)(d); Sec. 8-43-303, C.R.S. Rather, the employer must request a hearing before an ALJ and continue to make benefits payments until the ALJ enters an order allowing modification of the admission, in full or in part. Sec. 8-43-203(2)(d); Sec. 8-43-303; *Rocky Mtn. Cardiology v. ICAO*, 94 P.3d 1182 at 1185 (Colo. App. 2004) (" An employer is required to continue paying pursuant to an admission of liability and may not unilaterally withhold payment until a hearing is held to determine whether there is sufficient evidence to permit withdrawal of the admission.") The party seeking to withdraw an admission carries the burden by a preponderance of the evidence. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Section 8-43-201(1), C.R.S., places the burden of proof on Respondents and to withdraw is the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-

754-838 (ICAO, Oct. 1, 2013); *Munoz vs. JBS Swift & Co.,* WC, 4-780-871-03 (October 7, 2014). Therefore, Respondents' attempt to withdraw their admission of liability becomes an analysis of compensability of the previously admitted injury. *Kelly v. Insta Flap*, W.C. No. 5-120-413, (ICAO, Mar. 30, 2022).

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory, supra.* However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities. Based upon the credible evidence in the record in this case, Claimant merely experienced symptoms of his pre-existing condition while at work which was the natural progression of his disease, in this case continuing low back and left lower extremity radiculopathy, which would produces symptoms any time Claimant lifted something beyond his capabilities. This happened multiple times after Claimant's surgical procedure and November 12, 2021, including on June 20, 2016, January 16, 2017, July 25, 2017, January 10, 2019, and September 16, 2019, and September 10, 2021.

There is a difference between an accident and an injury at work. *Wherry v. City & County of Denver*, W.C. No. 4-475-818 (ICAO March 7, 2002). Just because an accident may have occurred at work, does not necessarily mean Claimant suffered a compensable injury. *Id.* The Workers' Compensation Act creates a distinction between the terms "accident" and "injury." The term "accident" refers to an "unexpected, unusual, or un-designed occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." In *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO 2020), the Industrial Claim Appeals Office upheld the ALJ's order denying and dismissing Claimant's claim for compensation where Claimant had proven an accident occurred, but where

Claimant failed to prove the injury was causally related to the accident. In *Washburn*, Claimant had video evidence of a slip and fall at work, and it was clear there was an accident or incident at work. *Id*. However, the ALJ found Claimant failed to prove she sustained a work-related injury as a result of the fall, and dismissed the claim. *Id.*

The court examined a similar case in *Kelly v. Insta Flap*, W.C. 5-120-413 (ICAO March 30, 2022). In *Kelly*, Claimant alleged an injury at work while moving a rolling rack, when the pipe rack began to fall off the hook and Claimant reached for the pipe to catch it and hurt his back. Claimant described the pain as instant and shocking. Claimant went home after the incident and sought medical treatment the next day. Claimant had a history of longstanding back complaints. The ALJ allowed respondents to withdraw their admission, and found that Claimant did not sustain a work injury that necessitated treatment, and that the Claimant's pre-existing or chronic low back condition was not aggravated or accelerated by the incident at work.

Here, Respondents have proven by a preponderance of the evidence that Claimant's back condition was pre-existing. The preexisting medical records and subsequent independent medical examination and opinions showed that the preexisting condition was symptomatic, disabling, and required treatment before the work incident of November 12, 2021. Claimant's testimony to the contrary is not credible. Complaints described by him show him to have been in significant or severe pain with multiple recommendations and requests for treatment before the work incident. The opinions of medical providers reliant upon Claimant's representations after he brought a workers' compensation claim are not persuasive. Claimant's pre-existing condition was not caused, aggravated, or accelerated by the November 12, 2021 work event. It is found that Claimant did not experience a compensable work injury in the course and scope of his employment and that any low back and radicular symptoms, including weakness were the natural progression of the underlying preexisting condition.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Sec. 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). As found, Claimant's need for treatment pre-existed any work incident on November 12, 2021 as his treatment plan was the same as recommended by his primary care physician on September 10, 2021 and at other times following his 2016 surgery as stated above. It is found and concluded that Claimant did not sustain a compensable work injury.

C. Is Claimant entitled to a change of physician

"Section 8-43-404(5)(a)(I)(A) requires an employer to 'provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers or a combination thereof where available, in the first instance, from which list an injured employee may select the physician who attends the injured employee.'"

Under Workers' Compensation Rule of Procedure 8, such list must be provided to an injured worker within seven business days following the date the employer has notice of the injury. W.C.R.P. Rule 8-2(A)(1).

Substantial evidence in the record establishes that Claimant timely received the designated provider list, listing four providers in the Fort Collins/Loveland area. Claimant initially chose Workwell in Loveland and Dr. Dupper as his attending physician. Claimant then moved to Aurora, Colorado and requested a relocation of his treating provider. After consultation with the Insurer's adjuster, who provided a list of providers in the Denver/Aurora Area, Claimant was transferred to Dr. Matus at Workwell in Aurora. It was after this transfer of care, on February 8, 2022 (which is 88 days after November 12, 2021) that Claimant requested a change of physician by filing the appropriate form. The form designated one of the providers listed by Insurer, SCL Group, after he relocated to Aurora. Respondents argue that Claimant was not entitled to designate a "new" provider and that he was prohibited from listing a provider that was not on the "original" list of providers from Fort Collins/Longmont.

An employee may obtain a one-time change in the designated authorized treating physician pursuant to Section 8-43-404 (5)(a)III, C.R.S., after certain conditions are met, including that the notice is provided within ninety days after the date of the injury, but before the injured worker reaches maximum medical improvement; the notice is in writing and submitted on a form designated by the director; the notice is directed to the insurance carrier and to the initially authorized treating physician; the new physician is on the employer's designated list; and the transfer of medical care does not pose a threat to the health or safety of the injured worker.

Sec. 8-43-404(5)(a)(III) allows for a one time change of physician by providing notice that meets multiple requirements. One of the requirements is Sec. 8-43-404(5)(a)(III)(D), which states that "the new physician is on the employer's designated provider list or provides medical services for a designated corporate medical provider on the list."

This statutory right is further explained in Rule 8, Colorado Workers' Compensation Rules of Procedure which includes the following procedural rules in Section 8-5(C) as follows:

> If the insurer or employer believes the notice provided pursuant to this rule does not meet statutory requirements and does not accept the change of physicians, it must provide written objection to the injured worker within seven (7) business days following receipt of the form referenced in paragraph (B). The written objection shall set out the reason(s) for the belief that the notice does not meet statutory requirements.
>
> > (1) If the employer or insurer does not provide timely objection as set out in this paragraph (C), the injured worker's request to change physicians must be processed and the new physician considered an authorized treating physician as of the time of the injured worker's initial visit with the new physician.
> >
> > (2) If written objection is provided and the dispute continues, any party may file a motion or, if there is a factual dispute requiring a hearing, any party may request that the hearing be set on an expedited basis.

The record shows that Respondent sent both Claimant and his counsel a letter stating that the Insurer would not authorize a change of physician and that Dr. Felix Meza

(one of the providers at Workwell Aurora) would remain Claimant's treating physician on February 10, 2022. This ALJ infers from this letter that Insurer was objecting to the change of physician. Despite the timely noticed objection, the objection does not set out the reason for the belief that the notice did not meet the statutory requirements as required by Rule 8-5(C). Therefore Claimant would be entitled to the change of physician in this case. However, the issue of change of physician is really made moot by the determination that Respondents have shown by a preponderance of the evidence that they are allowed to withdraw their admissions of liability as no compensable event occurred on November 12, 2021.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents have proven by a preponderance of the evidence that there was not a compensable work injury that occurred on November 12, 2021. Respondents' request to withdraw the general admission of liability is granted. Claimant's claim for compensation is *denied and dismissed* prospectively.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the medial branch block recommended by authorized treating physician ("ATP") Bradley Duhon, M.D. is reasonable, necessary and related to his industrial injury.

FINDINGS OF FACT

1. Claimant has worked for Employer since August 2000. Claimant sustained an admitted industrial injury on June 21, 2019 when he was struck by a moving forklift.

2. Claimant underwent treatment with authorized treating providers Annu Ramaswamy, M.D. and Bradley Duhon, M.D. He was diagnosed with left lumbar radiculopathy, lumbar lateral recess stenosis, protruding lumbar disc, lumbar foraminal stenosis, and lumbar stenosis without neurogenic claudication.

3. On April 26, 2021 Claimant underwent minimally invasive left L4-5 laminotomy with bilateral sublaminar decompression and minimally invasive left L5-S1 foraminotomies, performed by Dr. Duhon.

4. Post-operatively Claimant complained of low back pain as well as pain, numbness and tingling in his bilateral lower extremities.

5. On June 9, 2021, Claimant saw Dr. Duhon via a telemedicine visit. Dr. Duhon noted that Claimant's left-sided pain had resolved, but that he continued to have issues on his right side. Dr. Duhon noted L5 post-operative radiculitis of unknown etiology.

6. Claimant subsequently saw Dr. Duhon for a telemedicine visit on July 14, 2021 and an in-person evaluation on July 15, 2021. Claimant complained of low back pain, stabbing pain in the legs, and alternating leg symptoms. Dr. Duhon noted that Claimant's surgery did not result in "excellent decompression" and believed Claimant's ongoing pain was likely facetogenic in nature. Dr. Duhon further noted that Claimant's symptoms were different than his preoperative symptoms. Dr. Duhon remarked, "While the facet pain was not really much of an issue preoperatively, decompression requires partial facet resection and secondarily could have developed facetogenic pain." (Cl. Ex. 3, p. 20). He commented that he strongly believed Claimant needed medial branch blocks L4-S1 to identify his L4-S1 facets as the source of pain. Dr. Duhon also recommended an EMG of Claimant's bilateral lower extremities and a lumbar MRI. The lumbar MRI and EMG were performed on August 18, 2021 and December 15, 2021, respectively.

7. Claimant underwent additional physical therapy beginning on October 14, 2021 and continued in physical therapy throughout the remainder of 2021.

8. On September 23, 2021, Siva Ayyar, M.D. issued a peer review report regarding the recommendation for L4-S1 medial branch blocks. Dr. Ayyar reviewed the medical records and spoke with Dr. Duhon. He noted that Dr. Duhon stated the medial branch blocks and EMG testing are recommended to confirm the levels of involvement and to determined whether a spinal fusion will be beneficial. Dr. Ayyar concluded that the recommended L4-S1 medial branch blocks are not medically necessary. He explained that the MTG regarding the low back notes that medial branch blocks are probably not helpful to determine the likelihood of success for spinal fusion and, thus, not indicated in Claimant's case.

9. On October 20, 2021, Leo Lombardo, M.D. issued a peer review report regarding the recommended medial branch blocks. Dr. Lombardo also opined that the medical branch blocks are not medically necessary. Like Dr. Ayyar, he noted that, per the low back MTG, medial branch blocks are probably not helpful to determine the likelihood of success for spinal fusion. Dr. Lombardo further wrote that, while the recommended injections are generally accepted diagnostic injections used to determine whether a patient is a candidate for a facet rhizotomy, here a facet rhizotomy is not planned. He stated that a negative response to prior medial branch blocks was also noted.

10. On February 2, 2022, Dr. Duhon opined that Claimant could benefit from medial branch blocks focusing on the lumbosacral spine at L4-S1. He explained that the blocks are medically necessary because Claimant has facet-mediated pain emanating from these levels. Dr. Duhon further explained that the medial branch blocks are primarily diagnostic and will assist in confirming the source of Claimant's axial back pain and would allow to proceed with more therapeutic options such as dorsal rhizotomies.

11. On February 16, 2022, Dr. Duhon continued to note Claimant's persistent mechanical low back pain, pain in the left buttock and lateral hip, and numbness and tingling in the feet. He noted that Claimant's December 2021 EMG revealed moderate to severe chronic right L4-5 radiculopathy and mild left L4-5 chronic radiculopathy without apparent active/ongoing denervation. Claimant's August 2018 lumbar MRI revealed prior decompression at L4-5 but secondary to broad-based disc bulge and facet arthropathy, with significant stenosis at L4-5. Dr. Duhon further noted that he reviewed the February 11, 2021 medical of a Dr. Drew, and that such note indicated that the L5 selective nerve root block gave excellent relief during the anesthetic window. He remarked that bilateral L4-S1 medial branch blocks performed in October 2020 gave partial response during the anesthetic window. Dr. Duhon continued to opine that medial branch blocks are necessary, with possible dorsal rhizotomies to follow.

12. The ALJ finds the opinion of Dr. Duhon, as supported by the medical records, more credible and persuasive than the opinions of Drs. Ayyar and Lombardo.

13. Claimant proved that it is more probable than not the medial branch block recommended by Dr. Duhon is related to his industrial injury and reasonably necessary to cure and relieve Claimant of its effects.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant met his burden to prove he is entitled to undergo the medial branch block recommended by Dr. Duhon. Dr. Duhon recommended that Claimant undergo the medial branch block to identify and treat ongoing pain Claimant has

experienced as a result of his work injury and related surgery. Dr. Duhon credibly explained that the surgery did not result in excellent decompression, and that he suspects Claimant now has facetogenic pain. Dr. Duhon further credibly explained that the medial branch block is needed for diagnostic purposes to identify Claimant's source of pain and determine how to proceed regarding treatment. As Claimant's treating provider, Dr. Duhon is familiar with Claimant's condition and presentation. Dr. Duhon is also apprised of Claimant's medical records, including imaging.

Dr. Lombardo acknowledged that the recommended medical branch blocks are generally accepted as diagnostic injections to determine if a patient is a candidate for facet rhizotomies. Dr. Duhon specifically noted that, depending on the results of the medial branch blocks, a rhizotomy may be a consideration. Based on the totality of the evidence, Claimant has proven it is more likely than not the recommended medial branch block is related to his work injury and reasonably necessary to cure or relieve the effects of the injury. Accordingly, Respondents are liable for such treatment.

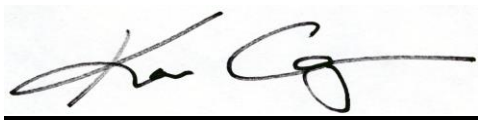
ORDER

1. Claimant proved by a preponderance of the evidence the medial branch block recommended by Dr. Duhon is reasonably necessary and related. Respondents shall authorize and pay for the medial branch block recommended by Dr. Duhon.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- Did Claimant prove an evaluation by an ATP is reasonably necessary medical treatment after MMI?

FINDINGS OF FACT

1. Claimant works for Employer as an automatic door repair technician. The job is physically demanding and routinely requires lifting heavy doors, motors, and other parts. It also requires extensive driving to perform on-site repairs at commercial establishments across Colorado.

2. Claimant suffered an admitted low back injury on December 1, 2020 while repairing an automatic door at a retail drug store.

3. Claimant received treatment at Concentra under the direction of Dr. J. Douglas Bradley and NP Jennifer Livingston. He was primarily treated for pain and muscle spasms around the lumbar spine and intermittent leg pain.

4. Claimant was initially prescribed NSAIDs, muscle relaxers, chiropractic treatment, and physical therapy.

5. By February 24, 2021, Claimant had completed chiropractic treatment but remained symptomatic. His pain was exacerbated by long drives and moving "wrong." He was prescribed a course of steroids and referred for massage therapy.

6. On March 17, 2021, Dr. Bradley documented that Claimant was slowly improving but he still "has to be careful" about his activities because he had "increased pain with working hard."

7. Claimant ultimately received the most benefit from a combination of dry needling, massage, and PT. On July 9, 2021, Ms. Livingston noted Claimant was "feeling significantly better" and "dry needling seems to be what turned his pain around." He had discontinued the muscle relaxers and was only using ibuprofen occasionally.

8. Claimant was released from therapy on August 2, 2021. The report noted he could perform his regular work with pain typically 3/10 or less.

9. Dr. Bradley put Claimant at MMI on August 23, 2021. Claimant had improved but reported, "If over work, get cramps or aches." His pain level that day was 1-2/10. Dr. Bradley released Claimant with no impairment and no restrictions. Dr. Bradley also wrote prescriptions for diclofenac gel and 800 mg ibuprofen, each with three refills.

Confusingly, despite writing two prescriptions, Dr. Bradley checked a box on the WC164 form stating Claimant required no maintenance care.

10. The prescriptions were transmitted to Claimant's pharmacy and he picked them up after the appointment with Dr. Bradley. Claimant found the diclofenac helpful with the muscle spasms, but tried to minimize use of the ibuprofen because it bothered his stomach. He used both medications sparingly for a couple of months until he "ran out." Claimant did not refill the medications because he did not realize he had refills available.

11. Claimant has worked his regular job continuously since being put at MMI. His back pain is generally well controlled but occasionally flares when working long shifts or driving long distances. Claimant's pain has increased recently because he has been "working a lot." Claimant credibly testified he would like to refill the diclofenac and discuss other maintenance care options with an ATP.

12. Claimant proved his ongoing back pain remains causally related to his admitted work accident.

13. Claimant proved entitlement to general award of medical treatment after MMI to relieve the effects of his injury, maintain function, and prevent deterioration of his condition.

14. Claimant proved an evaluation with an ATP to evaluate maintenance care options is reasonably necessary.

CONCLUSIONS OF LAW

The respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved a probable need for future treatment to relieve the effects of his compensable injury and prevent deterioration of his condition. Although Claimant's condition improved, he remained symptomatic when he reached MMI. Dr. Bradley reasonably prescribed diclofenac gel and ibuprofen to allow Claimant to manage expected recurrences of his pain. Waxing and waning is to be expected given the demanding nature of Claimant's work. The "checkbox" on the WC164 stating Claimant

requires no maintenance care is unpersuasive and probably a mistake, given that Dr. Bradley wrote two prescriptions with three refills on the same date.

Having found that Claimant is entitled to a general award of post-MMI medical benefits, it naturally follows he must have the option to follow up with an authorized provider occasionally. Claimant's request for an evaluation with an ATP to discuss his maintenance options is reasonable at this time, particularly considering Respondents retain the right to contest the reasonable necessity or relatedness of any specific treatment that may be recommended.

ORDER

It is therefore ordered that:

1. Insurer shall cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of Claimant's compensable injury and prevent deterioration of his condition.

2. Insurer shall cover an evaluation with Dr. Bradley or other ATP at Concentra to evaluate maintenance care options.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-053-442-004

ISSUES

The issues set for determination included:

- Did Claimant establish by a preponderance of the evidence that he is permanently and totally disabled ("PTD") as a result of his work injury?

- Did Claimant establish by a preponderance of the evidence that he is entitled to post-MMI maintenance medical benefits.

PROCEDURAL STATUS

A Summary Order was issued on April 15, 2022 and served on April 19, 2022. On May 2, 2022, Claimant submitted a Request for Specific Findings of Fact, Conclusions of Law and Order. Respondents filed amended Findings of Fact, Conclusions of Law and Order on May 3, 2022. This Order follows.

FINDINGS OF FACT

1. Claimant was fifty-three years old (D.O.B. October 7, 1967) as of the second day of hearing. Claimant testified he was born in Mexico and went to school (primary) for six years. He immigrated to the United States in 1985 and has no additional education since coming to the U.S. He said he can read and write Spanish. Claimant testified he cannot read/write English, but understands some English.

2. Claimant testified worked in the fields doing farm work. He also worked as a dishwasher, sewing, assembling cabinets and operated a forklift. He began working for Employer in June 2013. Claimant testified that his principal work duties involved driving an operating a water truck at construction sites. The ALJ inferred these jobs were physical in nature.

3. On March 1, 2017, Claimant was working in a trench, removing soil around a pipe. There was machinery operating and the accident occurred when nearby soil and rocks fell and struck Claimant, burying him in debris. His coworkers rescued him from the trench.

4. Claimant testified he did not initially think his injuries were serious, but he experienced pain when driving home. He was evaluated the next day at UC Health Harmony. Claimant complained of low back pain without radiation, but he denied neck pain. Mark Breen, M.D. evaluated Claimant and described the evaluation of the cervical spine as normal. Dr. Breen ordered X-rays, which were negative for acute fracture or acute osseous process. Claimant was to follow up with a workers' compensation physician.

5. Claimant received treatment from Ryan Otten, M.D. at US Healthworks Medical Group in Longmont starting on March 2, 2017. Claimant was initially diagnosed with lumbar and thoracic strain. Over the initial course of his treatment, Claimant also reported right shoulder pain and was diagnosed with right shoulder sprain/strain.

6. Claimant received physical therapy ("PT"), medications and other treatment, including chiropractic manipulation. Dr. Otten assigned work restrictions from the time he began treating Claimant, starting with a five (5) lb. restrictions for lifting, repetitive lifting, carrying, pushing/pulling, reaching overhead, repetitive motion, which was increased to fifteen (15) lbs. in each of those categories. These restrictions continued.

7. On May 31, 2017, Roberta Anderson-Oeser, M.D. evaluated Claimant. At that time, he was complaining of cervical and lumbar pain, right shoulder pain and right lower extremity numbness and weakness. Claimant reported physical therapy had not been helpful. The examination of the lumbar spine revealed palpable spasms in the lower lumbar paraspinals. Claimant had tenderness over the lower lumbar intradisk spaces, bilateral lower lumbar facet joints and bilateral PSIS.

8. Dr. Anderson-Oeser's impression was: cervical strain; right acromioclavicular joint sprain; lumbar strain; right lower extremity paresthesias. Claimatn was to continue taking Ibuprofen and work modified duty.[1]

9. The MRI of Claimant's lumbar spine on June 5, 2017 showed no disc herniation or spinal stenosis in the lumbar spine. Hypertrophic degenerative arthropathy was present from L2-L3 and L5-S1.

10. Claimant experienced continued right shoulder and scapular pain. He received conservative treatment including physical therapy and was referred to orthopedic surgeon, Robert Fitzgibbons, M.D.

11. Claimant underwent a right shoulder MRI arthrogram on June 22, 2017. The MRI which showed tendinosis of the infraspinatus tendon, mild tendinosis of the subscapularis tendon with minimal interstitial tearing, and acromioclavicular degenerative joint disease.

12. On June 22, 2017, Claimant underwent a right shoulder MRI, which showed tendinosis of the infraspinatus tendon, mild tendinosis of the subscapularis tendon with minimal interstitial tearing, and acromioclavicular degenerative joint disease.

13. Claimant returned to Dr. Fitzgibbons on July 17, 2017. The surgeon reviewed the MRI with Claimant and advised him that he was suffering from arthralgia of the right acromioclavicular joint. Treatment options, including arthroscopic repair, were discussed with Claimant.

[1] Exhibit J, pp. 210-212.

14. Dr. Fitzgibbons performed arthroscopic shoulder surgery on August 31, 2017, which included a distal clavicle resection, decompression and debridement. The pre-operative diagnosis was: right AC arthritis and post-operative diagnoses were: right AC arthritis; partial undersurface rotator cuff tear, supraspinatus; impingement.

15. Post-surgery, Claimant underwent treatment for his shoulder as documented in the medical reports admitted at hearing, as well as treatment for his cervical and lumbar spine. In particular, Peter Mars, M.D. evaluated Claimant October 3, 2017. At that time, Claimant reported pain in his right shoulder and back, with some improvement. Claimant was not working at that time and Dr. Mars kept Claimant off work through October 17, 2017. Dr. Mars opined Claimant's lumbar MRI showed "age appropriate facet arthritis" and his diagnoses were: complete tear of right rotator cuff; facet joint disease of lumbosacral region. Dr. Mars referred Claimant for PT and he was to continue with chiropractic treatments.

16. On October 27, 2017, Claimant returned to Dr. Fitzgibbons, who noted mild right shoulder pain. Dr. Fitzgibbons released Claimant to return to work with no restrictions and noted he needed four more weeks of PT. The ALJ inferred that this assessment of restrictions was for Claimant's shoulder only, as there was no indication Dr. Fitzgibbons evaluated Claimant's cervical and lumbar spine.[2]

17. Claimant returned to Dr. Anderson-Oeser on November 15, 2017, at which time Claimant reported symptoms of low back pain. Dr. Anderson-Oeser's impression was: cervical strain; right rotator cuff tear, status post repair; lumbar strain; lumbar facet arthropathy; right lower extremity intermittent paresthesias; muscle spasms. She recommended Claimant continue with PT, chiropractic treatment, osteopathic manipulation and dry needling. Claimant was to continue on modified duty.

18. The ALJ found Claimant had work restrictions issued by his ATP-s through May 2018. Claimant was able to work light duty for Employer.

19. Aaron Ontiveros testified at hearing. He works for the Employer as the HR Manager and assigned Claimant's light work duties. Mr. Ontiveros testified he does not speak Spanish and would speak with Claimant in English. Mr. Ontiveros said he would talk with Claimant in English of up to 30-45 minutes regarding his job duties and personal life. Mr. Ontiveros testified instructions were provided in English and Claimant was able to completed assigned tasks in accordance with those instructions.

20. On March 13, 2018, Claimant was evaluated by Ricardo Esparza, PhD, PLLC. Dr. Esparza diagnosed Claimant with adjustment disorder with anxiety and depression. He recommended six psychological counseling sessions with the focus on pain management, stress resiliency, mood improvement and anxiety reduction.

21. On May 8, 2018, Claimant underwent a FCE at WorkWell Occupational Medicine. Claimant reported bending forward exacerbated his pain and caused dizziness,

[2] Ex. I, p. 209.

blurred vision, and seeing spots. The FCE was not completed due to Claimant's symptoms.

22. On June 18, 2018, Dr. Otten placed Claimant at MMI. Dr. Otten assigned a permanent medical impairment rating, including a 10% whole person impairment of the lumbar spine, which included loss of range of motion ("ROM"), as well as a 22% scheduled impairment for the right shoulder.

23. Dr. Otten noted that because the FCE was terminated prematurely, it did not provide any useful objective measurements to inform permanent restrictions. Dr. Otten stated Claimant had a fifteen (15) lb. max lifting restriction. He said Claimant could continue to see Dr. Anderson-Oeser for medication management.

24. Surveillance video of Claimant taken on June 18 & 26, July 20, August 23 & 26, 2018 was admitted into evidence. The ALJ reviewed the videos. The ALJ found the videos showed Claimant was able to move and use his right upper extremity in several of these sequences. He also was able to stand for periods of time and could bend at the waist. The videos showed Claimant was able to do those activities on the days when the videos were taken. The ALJ inferred Claimant would be able to perambulate without difficulty and use his right arm in a job.

25. Claimant was terminated by Employer on or about August 30, 2018.

26. There was no evidence in the record that Claimant worked and earned wages after this time.

27. On September 18, 2018, Jeffrey Raschbacher, M.D. performed an IME, at the request of Respondents. Claimant reported 6/10 pain in his shoulders, neck, and low back, which had not improved from any treatment. Claimant said moving his neck hurt and he only "moves a little" due to his back pain. On examination, Claimant had negative impingement tests and full strength in his shoulders. No spasms were present in his low back. Claimant had non-physiologic findings. [3]

28. Dr. Raschbacher reviewed the surveillance video and noted Claimant did not appear to have residual pain or limitations. After reviewing the video, Dr. Raschbacher said Claimant's complaints made his subjective reports not a true indicator of his functional abilities. He did not believe Claimant required restrictions except for avoidance of repetitive strenuous overhead use of the right shoulder. He did not believe Claimant required maintenance medical treatment.

29. On December 14, 2018, Claimant was evaluated by Anjmun Sharma, M.D. for a Division-sponsored Independent Medical Examination ("DIME"). At that time, Claimant had pain in his neck, shoulder and back. Dr. Sharma concurred with Dr. Otten's MMI date of June 18, 2018. He assigned permanent medical impairment ratings to Claimant's right shoulder and lumbar spine. Specifically, Dr. Sharma found Claimant's

[3] Exhibit D, pp. 23-30.

right shoulder had a 10% specific disorder impairment and 8% ROM impairment, which gave a final and combined right upper extremity impairment of 17%, which converted to a 10% whole person impairment. Claimant's lumbar spine had a specific disorder impairment of 5% and a ROM impairment of 8% percent, which gave a combined impairment of 13%.

30. Dr. Sharma opined Claimant had permanent work restrictions of: maximum lift, repetitive lift, carry, push, pull no more than 40 pounds and no overhead lifting more than 10 pounds, as he had rotator cuff repair on the right shoulder. Dr. Sharma said Claimant did not require maintenance medical treatment.

31. Dr. Sharma testified as an expert in occupational medicine and family practice in connection with a prior hearing and the transcript was admitted into evidence. (Exhibit R). Dr. Sharma has been licensed since 2005, 2007 in Colorado. He estimated 50% of his practice was devoted to occupational medicine. He testified regarding his findings when he conducted the DIME of Claimant.

32. Dr. Sharma reviewed the videos of Claimant's activity. He described Claimant as being more active in the videos than what he observed in the DIME. Dr. Sharma testified that he believed the 40 lb. lifting restriction was still accurate along with a 15 lb. lifting restriction for overhead lifting. Dr. Sharma stated Claimant had no restrictions with regard to driving. Dr. Sharma's opinion regarding Claimant's restrictions was persuasive to the ALJ.

33. Claimant returned to Dr. Anderson-Oeser on May 2, 2019, at which time he reported pain in the posterior head and frontal region, as well as burning/aching sensations in the lower lumbar region, burning, pins and needles sensation in the posterior aspect of the right leg. He graded his pain as 7/10. On examination, Claimant had no evidence of swelling in the upper lower extremities. Increased tone with palpable spasms were found in the right cervical paraspinals, along with tenderness over the right occipital ridge and muscles. Cervical ROM was mildly restricted on extension.

34. Dr. Anderson-Oeser's impression was: cervical strain; right rotator cuff tear, status post repair; lumbar strain; lumbar facet arthropathy; lumbar facet pain and dysfunction; muscle spasm; adjustment disorder with depression and anxiety. Dr. Anderson noted Claimant should continue with the cyclobenzaprine for muscle spasms, lidocaine 5% topical ointment, Diclofenac for chronic pain, gabapentin for neuropathic pain and Topamax for headaches. Dr. Anderson-Oeser also recommended Claimant continue his program of stretching and home exercises.

35. The ALJ found Dr. Anderson-Oeser has treated Claimant since 2017 and her opinions regarding his need for maintenance medical treatment were credible.

36. Claimant underwent a psychological assessment on her about May 3, 2019, which was performed by Jesus Sanchez, Ph.D. to whom he had been referred by Dr. Anderson-Oeser. At that time, Dr. Sanchez noted Claimant's presentation was

remarkable for depressed, anxious mood and diminished self worth concept, as well as perceived loss of personal value. Dr. Sanchez' diagnostic impression was: adjustment disorder, with anxiety and depressed mood. Dr. Sanchez recommended 8 to 10 sessions of individual psychological counseling. The record was unclear whether Claimant completed this treatment. There was no evidence in the record that indicated claimant had restrictions based upon his psychological diagnoses.

37. A vocational assessment was conducted on behalf of Claimant by Gail Pickett, MA, QRC, ABDA, who authored a report dated August 11, 2019. Ms. Pickett noted Claimant completed six years of school and was able to read and write in Spanish. He was able to speak some basic work-related English and understood more English than he spoke. Claimant told Ms. Pickett that in order to complete job applications he required the assistance of his children. Ms. Pickett also noted Claimant had no computer skills and his work restrictions placed him within the light category. Ms. Pickett noted Claimant can operate a forklift and had skill in driving vehicles.

38. Ms. Pickett identified unskilled positions with the McLean Company for a Warehouse Candy Selector II position which required a GED, which Claimant did not have. In addition, BASF Corporation was looking for a packaging lead, which also required a GED. Emerson was looking for an assembler, which also required a high school diploma or GED.

39. Based upon the interview with Claimant, a review of medical records and labor market analysis, Ms. Pickett concluded Claimant was not able to return to the workforce. This was based on the fact the Claimant did not have English speaking, reading or writing skills on a competitive level and had only six years of education. All of his work history had been in jobs that were labor-intensive and this work experience did not provide him with transferable skills to lead to any employment within his work restrictions. Ms. Pickett concluded the Claimant was unable to earn any wages in any occupation.

40. On April 13, 2020, a Final Admission of Liability ("FAL") was filed on behalf of Respondents based upon a Stipulation of the parties and Order approving the Stipulation. Respondents admitted for a 13% whole person impairment and a 15% scheduled impairment. Liability for medical benefits after MMI were denied.

41. Dr. Raschbacher performed a follow-up IME of Claimant on June 5, 2020. Claimant reported pain levels of 5-7/10 for his "whole body in general". He reported not being able to lift more than 5 lbs. and not being able to reach up past his eye with his right arm. Claimant stated he had pain every day, could walk two blocks, drive for 20 minutes and said he had not functioned well in the prior 2-3 years. On examination, Claimant had with significant pain behaviors and lack of objective findings.

42. Dr. Raschbacher reiterated Claimant did not require restrictions other than avoidance of repetitive strenuous overhead work with the right arm. He stated Claimant did not require further maintenance care if he was to be believed that all of his medications

were of no help to him. The ALJ found this conclusion left open the possibility that some medications could help Claimant.

43. Roger Ryan performed a vocational evaluation on behalf of Respondents and issued an initial report on June 18, 2020. Mr. Ryan noted medical opinions of Claimant's capabilities were varied, but the surveillance videos indicated he was able to do physically more than he subjectively reported. He noted Claimant's physical capacities in surveillance appeared more in line with those reported by Dr. Sharma and Dr. Raschbacher.

44. Mr. Ryan issued a subsequent report on July 15, 2020. Mr. Ryan concluded he would use a "conservative approach," of correlating the varying opinions on restrictions to limiting his search to jobs requiring up to a 30 lb. lifting limit, and a 10 lb. overhead lifting limit for the right arm.

45. In his report, Mr. Ryan detailed that he contacted numerous employers for various positions, including fast food worker, driver, presser, office cleaner, and assembler/entry-level production jobs; these employers had job types were available to Claimant. These employers had open jobs at the time Mr. Ryan contacted them.[4] He noted if Claimant had some English skills, he could also work as a cashier, pizza delivery driver or automobile auction driver.[5]

46. Mr. Ryan compiled a list of 25 separate types of jobs, which Dr. Raschbacher reviewed and approved stating that Claimant could perform these within his restrictions. Mr. Ryan concluded Claimant could earn wages.

47. On July 15, 2020, Claimant underwent a FCE at Colorado In Motion. The testing was performed by Dona Leonard, MS, OTR, CEAS II. The testing was valid and Ms. Leonard indicated Claimant's maximum weight from waist height on the right side was 17.85 lbs; left-side 19.41 lbs. Claimant met the demand for material handling in the light demand category.

48. At the FCE, Claimant's other limitations were identified: occasional sitting with the opportunity to change positions and extend right leg and slightly recline; sitting with use of external support–either for bilateral light dexterity tasks leaning one or both arms, forceful gripping and pinching on an occasional basis. Claimant was not able to safely perform the task of looking upward to perform prolonged overhead work. The ALJ noted the particular restrictions with respect to sitting were not previously identified by Claimant's ATP-s

49. Dr. Raschbacher testified as an expert in Occupational and Family Medicine. Dr. Raschbacher agreed with Dr. Fitzgibbons' release of Claimant to work

[4] Exhibit E, pp. 70-72.

[5] *Id.*

without restrictions for the shoulder and opined there was no objective reason for Claimant's ongoing pain complaints in his shoulder.

50. Ms. Pickett testified as a vocational expert at hearing and said she used Dr. Otten's 15 lb. lifting restriction.[6] She also relied upon findings from the July 2020 FCE that found Claimant displayed additional limitations, such as requiring a cane and inability to maintain positions. Ms. Pickett testified that utilizing these restrictions limited Claimant's access to the labor market. She opined Claimant could not earn wages with his permanent restrictions and his work experience.

51. On cross-examination, Ms. Pickett agreed that if the 19.41 pounds listed as Claimant's max unilateral lift at the Colorado in Motion FCE was a bilateral lifting recommendation, he would have access to all light duty jobs and could probably find employment. [7] She also admitted Claimant would be able to work if he was functional in English, even if he required positional restrictions. Ms. Pickett noted her entire labor market research consisted of looking at job postings on Indeed.com.

52. Mr. Ryan also testified as a vocational expert at hearing. His testimony was consistent with his reports. More particularly, he identified specific employers who were hiring entry level employees. Mr. Ryan testified there were companies hiring within the light job classification and this included both full and part-time positions. There were two companies which had light assembly positions (no experience required), a part-time pizza delivery driver, office cleaner, and an automobile auction driver. Some of these positons did not require a G.E.D. In this last position, little to no English proficiency was required. Mr. Ryan also said that the positon at Emerson required a high school diploma or GED. Mr. Ryan noted entry level positions had openings with some frequency. Mr. Ryan's testimony about the availability of entry-level jobs was more persuasive to the ALJ.

53. Based upon the testimony of Mr. Ryan as a vocational rehabilitation and analysis expert, his report and the evidence in the record, the ALJ concluded there are jobs available in the Denver labor market within Claimant's restrictions in which he can earn wages.

54. Claimant testified he could not do some of the jobs identified by Mr. Ryan, including the light assembly jobs, as he still had consistent pain. Claimant's testimony did not refute Mr. Ryan's conclusions. Mr. Ryan opined there were assembly jobs available in the Denver labor market. Mr. Ryan testified Claimant was able to earn wages, despite his work injury. The ALJ found Mr. Ryan's opinions on Claimant's ability to earn wages were persuasive.

55. The ALJ found Claimant had permanent work restrictions that were attributable to his industrial injury. Based upon the available information, the ALJ found Claimant could not return to his former job and was limited to the light job category.

[6] Pickett deposition, p. 7:2-7; p. 37: 23-25; p. 61:1–14.

[7] Pickett deposition, p. 46:4-14; p. 47:24-48:4.

56. Claimant's work restrictions limited his access to the labor market and his ability to earn wages.

57. The ALJ concluded there were jobs within the Denver labor market within Claimant's restrictions.

58. The ALJ concluded Claimant was able to earn wages.

59. The ALJ determined Claimant failed to prove he was permanently and totally disabled as a result of the injury.

60. Claimant proved he was entitled to maintenance medical benefits.

61. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2020). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2020). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). In the case at bench, there was conflicting expert testimony on the issue of Claimant's ability to earn wages.

Permanent Total Disability

As determined in Findings of Fact 3-7, Claimant suffered an admitted industrial injury on March 1, 2017 when soil collapsed on him when he was working in a trench. Claimant injured his neck, right shoulder and lumbar spine. Claimant required treatment at the Emergency Department and then received treatment from ATP's, Dr. Otten and Dr. Anderson-Oeser. *Id.* Claimant required surgery on his right shoulder, which was performed by Dr. Fitzpatrick on August 31, 2017. (Finding of Fact 14).

Claimant reached MMI on June 18, 2018 and was assigned by a permanent medical impairment by both Dr. Otten, as well as the DIME physician, Dr. Sharma. (Findings of Fact 22-23, 32). As found, Claimant had permanent restrictions as a result

of his work injury. (Finding of Fact 55). Claimant initially worked light duty following his injury, but left his employment with employer on August 30, 2018. (Findings of Fact 18, 25). Claimant has not worked since that time and alleged he was no longer able to earn wages as result of his work injury. Respondents, while conceding Claimant had permanent work restrictions, averred he could earn wages in the Denver labor market.

To prove his claim that he is permanently and totally disabled, Claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2020). Claimant must also prove the industrial injury was a significant causative factor in the PTD claim by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Wallace v. Current USA, Inc.* W.C. No. 4-886-464 (ICAO, Dec. 24, 2014).

The term "any wages" means more than zero wages. *Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997). In determining whether Claimant is permanently and totally disabled, the ALJ may consider “human factors”. *See Weld Cty. Sch. Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). “Human factors” include such elements as Claimant’s “education, ability, and former employment”. *Holly Nursing Care Ctr. v. Indus. Claim Appeals Office*, 992 P.2d 701, 703 (Colo. App. 1999). In the case at bar, Claimant argued his restrictions, as well as lack of transferable skills prevented him from earning wages. Respondents averred Claimant could earn wages, as there were open jobs in the Denver labor market within his restrictions.

In the case at bench, the ALJ considered various “human factors” vis a vis Claimant to determine the issue of whether he could earn wages. As found, Claimant’s highest level of education was sixth grade. (Finding of Fact 1). Claimant could speak some English and could read/write Spanish. *Id.* Claimant’s vocational expert agreed Claimant had obtained some proficiency in English based on his work. (Finding of Fact 51). Mr. Ontiveros testimony also confirmed Claimant had some English proficiency. (Finding of Fact 19). Claimant’s employment experience was in labor-intensive positions. (Finding of Fact 2).

The ALJ found Claimant had permanent work restrictions as a result of his industrial injury and this limited his access to the labor market. There was a dispute regarding these restrictions. The ALJ determined Claimant’s restrictions, as identified by his physicians, were:

- Dr. Otten-15 pounds lifting;
- Dr. Sharma-maximum lift, repetitive lift, carry, push, pull of 40 lbs, 15 lbs overhead work;
- Ms. Leonard- lifting: right side was 17.85 lbs; left-side 19.41 lbs., light work category;
- Dr. Raschbacher-avoidance of repetitive strenuous overhead use of the right shoulder.

The ALJ concluded Claimant could not return to his prior position with Employer. (Finding of Fact 55). In addition, physically intensive positions beyond the light category were most probably beyond his restrictions. However, the ALJ credited Respondents' expert, Mr. Ryan and determined there were jobs within the local labor market (Denver). (Findings of Fact 43-46, 52-54). These potential employers had available openings and were within Claimant's permanent physical restrictions. *Id.* Ms. Pickett's expert testimony was also considered as part of this analysis (Findings of Fact 50-51), including her agreement that Claimant would have access to jobs if he was within the light category. The ALJ found Mr. Ryan's testimony that Claimant could earn wages to be more persuasive. (Finding of Fact 52). Based upon this evidence in the record, the ALJ determined Claimant could obtain and maintain employment. Accordingly, the ALJ found Claimant can earn wages and is not entitled to permanent total disability benefits.

When coming to this conclusion, the ALJ specifically considered Claimant's testimony that he could not perform specific jobs identified by Mr. Ryan. The ALJ determined some of Claimant's belief that he could not perform these jobs was subjective and not based upon work restrictions issued by his treating physicians. As found, Claimant is still able to drive and had other transferable job skills which supported the conclusion that he was employable and could earn wages, as confirmed by Mr. Ryan. (Finding of Fact 52). Utilizing the range of work restrictions of lifting from 15 pounds to 40 pounds (Dr. Sharma), as well as avoiding repetitive use of the right upper extremity, the ALJ determined Claimant could obtain and maintain employment, as identified by Mr. Ryan, perform the job and maintain such employment. *Id.* There were employers with these open positions available in the Denver labor market. Therefore, Claimant did not meet his burden of proof to show he was entitled to permanent total disability benefits.

Grover **Medical Benefits**

In the case at bench, there was conflicting medical evidence on the issue of maintenance medical treatment. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant presents evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Comm'n of Colorado,* 759 P.2d 705, 711-712 (Colo. 1988). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

The ALJ concluded Claimant met his burden of proof and is entitled to maintenance medical benefits. (Finding of Fact 60). As found, Dr. Anderson-Oeser evaluated Claimant at regular intervals since 2017 and the ALJ credited her opinions with regard Claimant's need for maintenance treatment, including medications. (Finding of Fact 35).

ORDER

IT IS HEREBY ORDERED:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. Respondents shall provide *Grover* medical benefits to Claimant, including an evaluation by Dr. Anderson-Oeser for medication management.

3. All matters not determined herein are reserved for future determination.

DATED: July 27, 2022

STATE OF COLORADO

Office of Administrative Courts

STIPULATIONS

Prior to commencement of the hearing, Respondents raised the following procedural matters and the parties reached the following stipulations:

I. The parties stipulated to withdraw, without prejudice, the issue of temporary total and/or temporary partial disability benefits.

II. In the event that the claim is determined to be compensable, the parties stipulated that Claimant's average weekly wage (AWW) is $833.67.

These stipulations were approved and accepted by the ALJ.

REMAINING ISSUES

I. Whether Claimant has proven, by a preponderance of the evidence, that he suffered injuries to his low back and right knee while in the course and scope of his employment with Respondent-Employer on July 8, 2021.

II. If Claimant established that he sustained compensable injuries to his low back and right knee, whether he also established his entitlement to all reasonable, necessary and related care to cure and relieve him from the effects of these injuries, including, but not limited to treatment directed to the low back and arthroscopic surgery directed to the right knee as proposed by Dr. Michael Simpson.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. D'Angelo, the ALJ enters the following findings of fact:

Claimant's Alleged July 8, 2021 Injuries

1. The record in this matter is voluminous and the testimony presented is substantially conflicting. Indeed, the parties submitted in excess of 800 pages of exhibits and the statements of Dr. Simpson and the testimony of Dr. Rook can aptly be described as being at odds with that of Drs. O'Brien and D'Angelo.

2. Claimant was employed by Respondent-Employer on July 8, 2021 as a commercial auto parts manager. As part of his duties, Claimant would pull auto parts from storage to fill orders and prepare the order for delivery. This occasionally required Claimant to climb a ladder to reach parts on the upper shelving.

3. Claimant testified that on July 8, 2021, he was using a three-step ladder to collect parts for an order. Claimant testified that as he was descending the ladder the bottom step, which was approximately 12 inches above the floor, broke causing him to fall backwards. According to Claimant, his right foot wedged between the ladder frame and the step causing him to twist and fall backward into some shelving and then onto the floor injuring his low back and right knee. The incident was unwitnessed. Nonetheless, Claimant testified that his fall created noise and a co-worker heard it but did not check on him.

4. Claimant testified that after he got up from the floor, he reported the incident to the store's Assistant Manager, Adam P[Redated]. He testified that approximately 10 minutes elapsed from the time of his fall to the time he reported his the incident to Mr. P[Redated]. Claimant admitted that he told Mr. P[Redated] that he did not think he needed medical treatment at the time of his alleged injury. (Hrg. Tr. 48:13-17).

5. Claimant testified that he showed the broken ladder to Mr. P[Redated] and subsequently completed an incident report around 4:00 p.m. He testified that his scheduled shift ended at 5:30 p.m. but he was sent home for the evening at around 5:00 p.m.

6. Claimant returned to work the next morning (July 9, 2021) reporting that he was "hurting" and "still in pain." Claimant testified that he was instructed to contact "HR" (human resources) and set a medical appointment. Claimant contacted HR in an effort to set a medical appointment. (Hrg. Tr. 25:19-23; 26:1-11)).

7. Claimant testified that during his phone call with HR on Friday July 9, 2021 he was instructed to go home and apply ice/heat to his injuries and rest. According to Claimant, he was off work Saturday, Sunday and Monday, returning to work on Tuesday (July 13, 2021). Upon his return to work on Tuesday, Claimant testified that he was instructed by Mr. P[Redated] and the store manager Rob H[Redated] to call UCHealth to schedule a doctor's appointment. According to Claimant, he was informed that he could not been seen until that coming Friday. (July 16, 2021). (Hrg. Tr. 27:1-19).

8. Between July 13, 2021 and July 16, 2021, Claimant testified that he worked full duty with low back and right knee pain. Moreover, he testified that he did not receive any medical treatment for eight days following the July 8, 2021 incident.

Claimant's Prior Low Back Injury, Prior Low Back Treatment and Lost Time

9. During the course of this case, Claimant has repeatedly told those involved in the process (including his medical providers) that he never had any prior back problems. Claimant specifically told all the medical providers (including his own IME physician) involved in this claim that he had no prior treatment for his back or any previous low back injuries. Based on the evidence presented, the ALJ finds that Claimant misrepresented his prior medical history as he actually filed and pursued a claimed injury to his low back occurring October 22, 2008.

10. The medical records from this prior undisclosed back injury demonstrate a consistent history of non-organic symptoms, inconsistent and varying presentations and provider concern for secondary gain issues. (RHE A, D & F).

11. Claimant presented to Dr. Suzanne Malis at Concentra on February 17, 2009 for a recheck related to his October 22, 2008 date of injury. (RHE D, p. 161). During this encounter, Dr. Malis reported that Claimant was observed to be standing upright and smoking outside the clinic but later in the exam room appeared to have difficulty standing up straight. (Id.) As a result, Dr. Malis was concerned that Claimant was intentionally faking or exaggerating his physical presentation.

12. Claimant also treated with Dr. Daniel Peterson in connection with his 2008 date of injury. Dr. Peterson too expressed concerns about the legitimacy of the case and specifically recommended that surveillance be performed. (RHE D, p. 163).

13. Dr. John Sacha also evaluated Claimant following the 2008 injury and expressed "serious doubts of the validity" of the claim. (RHE D, p. 154).

14. In short, Dr. Peterson, Dr. Malis, Dr. Sacha, Dr. John Ogrodnick, and Bernard Condevaux, PT all expressed concerns regarding the validity of Claimant's presentation and symptomology. (See generally, RHE A, p. 008, RHE D, pp. 154, 161, 163, 166, 180, Exhibit F, p. 198).

15. Claimant testified that he forgot about this prior injury and did not try to mislead anyone about it. (Hrg. Tr. 31:1-7). He did not recall any of the treating medical providers involved with the 2008 injury expressing any concern over the validity of his claim. He also testified that he did not remember missing 4-5 months of work as a result of this injury or settling this claim. (Hrg. Tr. 44:8-11; RHE N, p. 459).

16. The ALJ finds it unlikely that Claimant simply forgot about his prior 2008 injury. Here, the evidence presented supports a finding that the 2008 claim was highly disputed and that Claimant was represented by counsel. (RHE A & N). Retention of counsel to litigate a decidedly contested claim is not something that occurs every day. Accordingly, the ALJ finds it improbable that the claim would be easily forgotten. The evidence also supports a conclusion that Claimant was "very leery" of the doctors involved in the 2008 claim. He accused Dr. Sacha of turning him into a "pincushion" and complained that the doctors ignored his neck pain and reportedly told him that his symptoms were "all in his head." (RHE A, p. 4). During a Division Independent Medical Examination (DIME), Claimant informed Dr. Ogrodnick that he was told he was a surgical candidate. (Id.). He also reported that he had "endured" over 40 injections. (Id.). Claimant's frustration and distrust of the physicians assigned to the case coupled with his report of being a surgical candidate who had undergone in excess of 40 injections, whether he actually underwent that many injections or not, are not feelings and events one probably easily forgets about. Concerning this prior claim, the evidence presented also supports a finding that Claimant lost substantial time from work because of his 2008 low back injury and that he ultimately settled his 2008 claim. The ALJ finds the probable financial stress associated with losing months of time from work coupled

with Claimant's conscious decision to settle this significantly disputed claim, which involved events he once described as "all very ridiculous"[1], likely to serve as a constant reminder regarding the very existence of the claim itself. Accordingly, the ALJ is not convinced that Claimant simply forgot about the 2008 claim. Instead, the ALJ finds that Claimant probably intentionally failed to disclose this prior low back injury, due in part to the fact that the current claim involves a low back injury and the medical providers involved in the 2008 claim generally questioned his credibility and validity of that claim.

The Testimony of Adam P[Redated]

17. Mr. P[Redated] testified as Respondent-Employer's Assistant Manager. He was present at the store when Claimant fell but did not witness the incident. (Hrg. Tr. 106:1-5). Mr. P[Redated] testified that during the time Claimant reported the incident, he did not request medical care. According to Mr. P[Redated], Claimant requested medical care the day after the incident occurred. (Id. at 106:20-24).

18. Mr. P[Redated] testified that Claimant was upset when he reported the incident because a co-employee was laughing about the incident taking place. (Hrg. Tr. 107:10-13).

19. During cross-examination, Mr. P[Redated] testified he saw the ladder that Claimant testified had broken. (Hrg. Tr. 108:3-5). According to Mr. P[Redated], the ladder step had not "snapped in half" as Claimant suggested. Rather, the bolts attaching the step to the frame had slipped out of the step. (Hrg. Tr. 109:4-11).

Claimant's Initial Medical Care Following the July 8, 2021 Incident

20. Claimant presented to UC Health on July 16, 2021 for an initial evaluation with Dr. Kathryn Murray. (RHE H, p. 362). Dr. Murray's medical report indicates that Claimant reported that he did not have any previous trauma to his back or right knee and that Claimant was working full duty. (RHE H, p. 362). Dr. Murray's physical examination revealed no joint effusion in the right knee. (RHE H, p. 363). Indeed, there were no outward signs that Claimant had injured his knee. At the time of this evaluation, Claimant presented slightly hunched forward and leaning to the right side with 7-8/10 pain in his sacrum, buttocks and right knee. (RHE H, p. 359). The ALJ finds Claimant's presentation during this appointment concerning since he had been working full duty and exhibited no obvious signs of being injured or having limitations for more than a week before his first medical evaluation. Based upon the evidence presented, Claimant's symptoms appeared to worsen over the week prior to his initial medical evaluation.

21. On August 16, 2021, Claimant completed a pain diagram at UC Health. This diagram only depicts pain in the low back and buttock region. No complaints of pain are depicted as being present in the right knee. (RHE H, p. 331). During cross-examination, Claimant testified that he did not indicate that he had pain in the right knee because he did not know how to fill out the pain diagram. (Hrg. Tr. 55:15-17).

[1] See Ex. A, p. 4.

Interestingly and inconsistent with this claim, the medical record contains a pain diagram Claimant completed at the time of his initial evaluation on July 16, 2021. This diagram clearly depicts Claimant as indicating he was having pain in the right knee. (RHE H, p. 359). Based upon the evidence presented, the ALJ finds that contrary to his claim, Claimant probably knew how to fill out the pain diagram.

22. Claimant underwent an MRI of the right knee on August 25, 2021. This MRI demonstrated a "[d]egenerated medial meniscus" with a "nondisplaced tear involving the body and posterior horn of the medial meniscus. In addition to this degenerative tearing, the MRI revealed "edema superficial and deep to the medial collateral ligament", which in the "appropriate" clinical setting raised the potential for a "possible MCL strain." (RHE E, pp. 194-195).

23. Claimant also underwent MRI of the lumbar spine on August 25, 2021. The impression of the findings from this imaging was "moderate degenerative changes including mild-moderate T11-T12 and mild L3-L4 central canal stenosis and multilevel mild-moderate neural foraminal narrowing." No comparison to earlier imaging was done. (RHE E, pp. 196-197). Prior MR imaging of Claimant's lumbar spine was completed November 11, 2008, following Claimant's October 22, 2008 low back injury. This imaging revealed an L5-S1 disc protrusion and multilevel spondylosis and disc bulges at L1-L2, L2-L3, L3-L4, and L4-L5. Also identified was a sacral fracture at S3. (RHE E, p. 191-192). A follow-up CT scan obtained February 12, 2009 revealed no discrete fractures. Nonetheless, Claimant was noted to have L5-S1 degenerative disc disease. (Id. at p. 193).

24. Based upon the evidence presented, the ALJ finds that Claimant was likely suffering from pre-existing degenerative pathology in his low back and right knee prior to the July 8, 2021 incident. Moreover, although not disclosed to any treatment provider associated with the current claim, a medical report from Claimant's primary care provider (PCP) raises concern that Claimant continued to have trouble with his low back following the 2008 injury. Indeed, Dr. William Wilcox noted that during an appointment to establish care on May 3, 2021, Claimant advised that his back "bothers" him. (RHE G, p. 221). Claimant testified that that the report is inaccurate, that he had no back pain in May 2021 and he does not recall telling Dr. Wilcox that he did. (Hrg. Tr. 45:3-25; 46:1-16).

25. On September 20, 2021, Claimant presented to Centura Orthopedics for an examination with Dr. Michael Simpson. (RHE J, 437). Dr. Simpson's note from this date of visit reflects that Claimant's August 25, 2021 right knee MRI demonstrated a degenerative medial meniscus with a tear of the body in the posterior horn. (RHE J, 442). On September 23, 2021, Dr. Simpson requested authorization to perform a partial right sided medial meniscectomy. (RHE J, p. 436). The request would be denied based upon the opinions expressed by Dr. O'Brien following a September 30, 2021 medical record review. (RHE B, pp. 10-31).

The Medical Record Review Opinions and Subsequent Testimony of Dr. O'Brien

26. As noted above, Dr. O'Brien performed a records review on September 30, 2021. RHE B, 010. Following his review of Claimant's medical records, Dr. O'Brien opined that while Claimant suffered a mild, "self-limiting, self-healing", right knee sprain/strain, the July 8, 2021 incident did not cause an acute medial meniscus tear. According to Dr. O'Brien, Claimant's right medial meniscus tear was degenerative and pre-existing at the time of the July 8, 2021 incident. Per Dr. O'Brien, Dr. Simpson's indication that there is a causal relationship between the July 8, 2021 incident and Claimant's pre-existing degenerative tear and his recommendation to proceed with arthroscopic surgery was erroneous and should be rejected to two reasons. First, there is nothing on Claimant's MRI or in the clinical evidence to indicate that an arthroscopic surgery is warranted. Second, arthroscopic surgeries are not utilized to treat minor knee sprains/strains, which is the only injury causally related to the July 8, 2021 incident.

27. According to Dr. O'Brien, the meniscal tear revealed by MRI on August 25, 2021, is degenerative in nature and due to "attritional wear and tear over the course of many years, and is due to age-related desiccation and nicotine abuse." Dr. O'Brien supported this opinion by noting that because acute meniscal tears are always associated with bleeding and/or increased accumulation of post-traumatic joint fluid, (effusion), and Claimant had no visible effusion on his July 16, 2021 clinical examination, (eight days after the incident) and only minimal fluid accumulation[2] by MRI on August 25, 2021, the visualized tear is neither acute nor the result of a traumatic aggravation or acceleration of a pre-existing meniscus tear. (RHE B, pp. 13-14). Accordingly, the July 8, 2021, "work incident did not produce a meniscal injury." (Id. at p. 15).

28. Dr. O'Brien opined further that the recommended surgery would fail and expose Claimant to potential harm by accelerating arthritic changes and symptomology resulting in a premature need for a total knee arthroplasty. (RHE B, p. 15). He referred to scientific studies involving arthroscopic surgery in expanding on his opinion that the surgery proposed by Dr. Simpson was contraindicated and would only introduce additional trauma to the knee, which will create an intractable synovitis, which would likely aggravate Claimant's underlying mild osteoarthritis and increase his pain complaints. (Id.).

29. The ALJ interprets Dr. O'Brien's September 30, 2021, Medical Records Review report to indicate that not only is the need for the proposed surgery unrelated to the July 8, 2021 incident but also, based upon scientific and empirical evidence, the risk of proceeding with surgery outweighs any perceived/expected benefit of the procedure. Consequently, Dr. O'Brien's report can be read to indicate that the recommended surgery is contraindicated, i.e. it is unreasonable and unnecessary.

30. Dr. Simpson responded to Dr. O'Brien's records review report on November 15, 2021. (RHE J, p. 377). Dr. Simpson seemingly does not contest the conclusion of Dr. O'Brien that Claimant's right medial meniscus tear is degenerative in

[2] Which Dr. O'Brien attributed to mild underlying tricompartmental arthritis.

nature. Rather, Dr. Simpson notes that whether there is a degenerative component to Claimant's meniscal tear or not does not negate the fact that Claimant would be entitled to surgical treatment for a pre-existing condition if the condition became symptomatic after an industrial incident, as is the asserted case here. (Id. at p. 378). The ALJ infers from Dr. Simpson's November 15, 2021 record, that he believes Claimant's right knee was asymptomatic until the July 8, 2021 incident. Because the July 8, 2021 incident aggravated the underlying pre-existing degenerative meniscus tear causing the right knee to become symptomatic, Dr. Simpson concludes that Claimant is entitled to treatment, including surgery, for the right knee under the principals outlined in the medical treatment guidelines. (See RHE J, at p. 378). Careful review of Dr. Simpson's November 15, 2021 report fails to establish that he responded to Dr. O'Brien's concerns about the reasonableness/necessity of proceeding to surgery. Indeed, Dr. Simpson simply argued that Claimant's need for treatment (surgery) was causally related to the July 8, 2021 incident because this incident aggravated his underlying pre-existing condition resulting in his current symptoms.

31. Dr. O'Brien testified as a board certified, Level II accredited expert in orthopedics and orthopedic surgery. Dr. O'Brien testified that the August 25, 2021 MRI of Claimant's right knee showed myxoid degeneration of the lateral meniscus, which is a degenerative and chronic condition. (Hrg. Tr. 112:9 – 113:10). Dr. O'Brien further reiterated his opinions that Claimant's MRI showed a degenerative medial meniscus tear and that if this tear were acute, there would be an accumulation of blood in the knee joint. (Hrg. Tr. 113:11-25). The lack of hemarthrosis or bleeding indicates that Claimant simply had a chronic condition, not an acute tear. (Hrg. Tr. 115: 15-22). As set out in his medical records review report, Dr. O'Brien testified that an acute medial meniscus tear would cause immediate symptomology, but Claimant's report that he did not have a lot of symptoms in the knee and was able to work without limitation demonstrates that he did not sustain an acute medial meniscus tear. (Hrg. Tr.117:9-17).

32. Dr. O'Brien testified that on July 26, 2021, that Claimant had full range of motion in the right knee without pain. (Hrg. Tr. 118:2-12). Dr. O'Brien further testified that on August 16, 2021 Claimant had no complaints of pain in the right knee, which "is not consistent with a meniscus tear of that size that occurs acutely." (Hrg. Tr. 118:13-18). Dr. O'Brien then repeated his opinion that the surgery recommended by Dr. Simpson is not work related. (Hrg. Tr. 125:4-9). According to Dr. O'Brien, Claimant requires no further curative medical care or treatment related to the July 8, 2021 incident for his right knee. (Hrg. Tr. 128:17-19).

33. The ALJ has carefully considered Dr. O'Brien's opinions and has weighed them against the balance of the competing evidence. Based upon the totality of the evidence presented, the ALJ finds Dr. O'Brien's opinions credible and persuasive.

34. The evidence presented, persuades the ALJ that Claimant failed to prove that he suffered an acute tear of the medial meniscus as a direct consequence of stepping awkwardly on his right foot/leg after a step broke while he was descending a

short ladder on July 8, 2021. To the contrary, the evidence presented persuades the ALJ that Claimant's meniscal tear is, more probably than not, degenerative in nature and probably pre-existed the July 8, 2021 incident.

35. The ALJ also credits the opinions and testimony of Dr. O'Brien to find that the surgery recommended by Dr. Simpson is not reasonable or necessary. Indeed, Dr. O'Brien's report and testimony demonstrate convincingly that the proposed surgery is contraindicated, as it would likely introduce additional trauma to the joint, which would aggravate the underlying condition of the knee and increase Claimant's pain complaints.

The Opinions and Testimony of Dr. D'Angelo

36. Dr. Kathleen D'Angelo performed an independent medical examination (IME) of Claimant at Respondents' request on December 6, 2021. As with the treating providers, Claimant denied having any prior workers' compensation treatment or having had other significant disabling problems or accidents Dr. D'Angelo. (Dep. Tr. 7:8-11, RHE C, p. 34).

37. Dr. D'Angelo testified that Claimant is an unreliable historian. (Dep. Tr. 7:19-21). She testified that due to Claimant's unreliability, his subjective complaints cannot be depended on and must be verified through objective evidence. (Dep. Tr. 10:11-15).

38. Dr. D'Angelo testified that during Claimant's 2008 injury, at least four doctors noted that he was not a reliable historian. (Dep. Tr. 15:4-6). She also noted that Claimant demonstrated self-limiting behaviors during his April 7, 2009 functional capacity evaluation (FCE) and did not demonstrate the expected increased heart rate during dynamic lift testing. (Dep. Tr. 15:21-24, RHE F, p. 198). According to Dr. D'Angelo, Claimant's FCE exam results would not be considered valid due to false representation and Claimant's exaggerated pain levels. (Dep. Tr. 17:20-25).

39. Dr. D'Angelo testified that Claimant's presentation to Dr. Murray on July 16, 2021 does not make sense and is inconsistent with blunt trauma because Claimant testified that he was able to work full duty following his injury without hunching over (but then later presented hunched over and in significant pain for the first time during his initial medical examination). (Dep. Tr. 21:5-17). Dr. D'Angelo testified that if Claimant had sustained an acute injury it would be acutely symptomatic and she would not expect the pain symptoms to be worsening one week later for the first time. (Dep. Tr. 21:5-14).
