OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-141-704-001

ISSUE

1. Whether Claimant substantially complied with the statutory requirements for objecting to the Final Admission of Liability (FAL) and requesting a Division IME (DIME).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant works as a signal technician supervisor for Employer. (Tr. 41:19-20). Claimant sustained an admitted injury to his lower back on June 27, 2019. (Ex. A).

2. Authorized Treating Physician (ATP) Joan Mankowski, M.D., placed Claimant at maximum medical improvement (MMI) on June 22, 2020. Respondent filed a FAL admitting for the MMI date and permanent partial disability benefits consistent with the impairment rating and apportionment. The FAL was mailed to Claimant on July 10, 2020. (Ex. A).

3. [Redacted, hereinafter LLH] was an insurance adjuster for Respondent. On July 13, 2020, Ms. LLH[Redacted] left a voicemail message for Claimant regarding the FAL. According to the note in her file, she "explained MMI, PP award, maintenance, apportionment of rating, 30-day objection period, advised injured worker to read through the final admission, once received, and to call if he has any questions." (Tr. 27:3-12).

4. On or about August 5, 2020, Claimant called Ms. LLH[Redacted] and left a voice message regarding the paperwork he received, including the FAL. (Ex. 2).

5. Claimant credibly testified that Ms. LLH[Redacted] called him back and they spoke. He told Ms. LLH[Redacted] that he objected to the MMI determination and wanted to get another opinion. Ms. LLH[Redacted] told Claimant he would be responsible for the payment to the DIME physician, and that he had to fill out the paperwork and send her a copy.[1] (Tr. 47:16 – 48:2)

6. The ALJ infers that by early August 2020, Ms. LLH[Redacted] knew Claimant objected to the MMI date and planned to request a DIME.

7. On August 8, 2020, Claimant, who was not represented by counsel at the time, mailed a handwritten letter to the Division of Workers' Compensation (Division), which read: "I, Fernando Hurtado would like a re-evaluation of MMI. I feel that the current MMI is inaccurate. Any questions please feel free to contact me any time. Greatly

[1] During the hearing, Respondent's counsel made a Motion to Strike Claimant's testimony, which the ALJ took under advisement. The ALJ denies the Motion to Strike Claimant's testimony.

appreciated!!!" Claimant attached the Notice and Proposal, and Application for DIME. (Exs. B and 3).

8. Claimant testified that he emailed the letter, Notice and Proposal, and Application for DIME to Ms. LLH[Redacted]. (Tr. 48:6-12). Claimant presented no documentary evidence of this email.

9. Claimant further testified that he sent the email to Ms. LLH[Redacted] from his work email address. (Tr. 59:4-10). Despite this testimony, Claimant presented no documentary evidence of ever using his work email to communicate with Ms. LLH[Redacted] at any other time.

10. The Division received Claimant's objection and DIME request. On September 1, 2020, the Division wrote to Claimant, copying Respondent via U.S. Mail, and advised Claimant that the Notice and Proposal, and Application for DIME he filed was incomplete. The Division gave Claimant 20 days to refile the documents correctly. (Ex. E).

11. Claimant timely refiled a corrected Notice and Proposal, and Application for DIME on or about September 17, 2020. In the corrected Notice, Claimant listed LLH[Redacted] as the adjuster, and identified her email as, [Redacted]. (Ex. 6). The ALJ infers that Claimant and the Division used this email address when emailing Ms. LLH[Redacted]. Claimant testified he emailed the Notice to Ms. LLH[Redacted]. (Tr. 49:6-15). Claimant presented no documentary evidence of this email.

12. In relation to this litigation, Respondent's IT Department did a search on Ms. LLH's [Redacted] email, [Redacted]. They looked at three specific parameters: Claimant's name, Claimant's personal e-mail address, and the WC number of the case for the time period from July 10, 2020 to December 31, 2020. (Tr. 23:20-24:12). Respondent did not use Claimant's work e-mail address as a parameter for the search. Respondent recovered multiple emails from Claimant and the Division related to the DIME process, addressed to [Redacted]. (Ex. R). The ALJ infers that both [Redacted] and [Redacted] were active emails for Ms. LLH[Redacted].

13. On October 22, 2020, the IME Unit of the Division designated a physician panel and sent it to Respondent, via email, to [Redacted]. (Ex. 7). This email was delivered to Ms. LLH's[Redacted] email account and was recovered by Respondent's IT Department. (Ex. R).

14. The IME Unit sent a DIME Physician Confirmation and invoice to Respondent on November 9, 2020, via email, to [Redacted]. (Ex. 8). This email was delivered to Ms. LLH's [Redacted] email account and was recovered by Respondent's IT Department. (Ex. R).

15. On December 17, 2020, Claimant's counsel filed an Entry of Appearance. (Ex. J). Respondent's counsel filed an Entry of Appearance on December 23, 2020. (Ex. K)

16. Claimant scheduled an appointment with the DIME physician, Joseph Morreale, M.D., for January 15, 2021, and provided notice to the IME Unit and Respondent, via

email. Claimant sent the notice of the appointment to [Redacted] on December 7, 2020. (Ex. 9). This email was delivered to Ms. LLH's[Redacted] email account and was recovered by Respondent's IT Department. (Ex. R).

17. Counsel communicated on or about January 19, 2021. Claimant's counsel advised Respondent's counsel that a DIME had taken place with Dr. Morreale and that Dr. Morreale was requesting the records. On January 20, 2021, Respondent agreed to produce the records to Dr. Morreale so that he could complete his report, but Respondent clarified that the production of medical records to Dr. Morreale was not a waiver of Respondent's right to challenge the jurisdiction of the DIME. (Ex. L).

18. Dr. Morreale examined Claimant on January 15, 2021, and issued a DIME report on February 4, 2021, finding Claimant not to be at MMI. (Ex. M). The Division issued a "Not-at-MMI" notice on June 25, 2021. (Ex. N).

19. [Redacted, hereinafter AH] is Employer's Claims Manager. Mr. AH[Redacted] reviews claims that come to his office, assigns them to staff, and manages the process of claims handling. (Tr. 19:15-22).

20. Ms. LLH[Redacted], the only claims adjuster with whom Claimant communicated, retired from Employer on August 31, 2020. (Tr. 20:24-25).

21. Mr. AH[Redacted] testified that he and a few other adjusters monitored Ms. LLH[Redacted]'s files after her retirement. He did not assign a new adjuster to handle Claimant's matter until late September 2020, approximately a month after Ms. LLH[Redacted] retired. (Tr. 21:1-8). Mr. AH[Redacted] assigned Claimant's claim to adjuster [Redacted, hereinafter TM]. (Tr. 22:24-23:8)

22. Mr. AH[Redacted] further testified that no one monitored the emails sent to Ms. LLH[Redacted] after her retirement on August 31, 2020. (Tr. 21:9-11). The ALJ infers that Respondent did not see the emails delivered to Ms. LLH[Redacted]'s email account from the Claimant and the Division regarding the DIME because no one monitored Ms. LLH[Redacted]'s email after her retirement.

23. Mr. AH[Redacted] testified that an autoreply was set up on Ms. LLH[Redacted]'s email after her retirement. (Tr. 21:9-22). The autoreply was attached to the email: [Redacted]. The autoreply stated: "LLH[Redacted] is no longer with the City and County of Denver. If you need assistance, please call 720-913-3330 and you will be redirected." As of January 19, 2021, the autoreply associated with this email was functioning. (Ex. D).

24. Claimant credibly testified that he never received this autoreply when he emailed Ms. LLH[Redacted]. There is no evidence that Respondent attached an autoreply to the email, [Redacted], which is the email address Claimant and the Division used.

25. Mr. AH[Redacted] testified that he received a copy of the September 1, 2020 letter from the Division regarding Claimant's incomplete objection and DIME request and made a note in Claimant's claim file. (Tr. 22:3-13). He entered a note on September 8, 2020 that read: "we received copy of letter dated 9/1/20 addressed to clt from the DOWC DIME

Unit stating that they had received an incomplete request for a DIME . . . the letter givem [sp] him 20 days to remedy this. I put letter out to file. It's up to clt to fix this if he wants to proceed." (Ex. 5).

26. Mr. AH[Redacted] testified he took no other action after receiving the September 1, 2020 letter from the Division because it was Claimant's responsibility to correct the deficiencies in the objection to the FAL and DIME request. (Tr. 22:3-23). He testified he had no thoughts to investigate or retrieve the items from Ms. LLH[Redacted]'s email account after she retired because an autoreply email was sent out stating that Ms. LLH[Redacted] was no longer employed and provided a telephone number to call for additional assistance, if needed. (Tr. 34:15-25).

27. WCRP 5-13 requires Respondent to notify the Division and Claimant of any change in the adjuster handling a claim within 30 days of the change. Despite having notice that Claimant objected to the FAL and requested a DIME, Respondent never advised Claimant, nor the Division, nor the DIME Unit that Ms. LLH[Redacted] retired or that Claimant's claim had been assigned to Ms. TM[Redacted]. (Tr. p. 31:18-25).

28. Mr. AH[Redacted] further testified that Respondent was not aware that Claimant was objecting to the FAL and requesting a DIME until sometime in late December 2020, or January 2021. (Tr. 27: 18-23). The ALJ does not find this testimony credible. The ALJ infers that Mr. AH[Redacted], who was monitoring Claimant's claim, knew on or about September 1, 2020, that Claimant was objecting to the FAL and requesting a DIME.

29. Claimant credibly testified that to the best of his knowledge he emailed Ms. LLH[Redacted] his objection to the FAL and request for a DIME, and the subsequent refiling of these documents. Claimant credibly testified he did not receive an autoreply notifying him that Ms. LLH[Redacted] was no longer working for employer.

30. The ALJ finds that Respondent's failure to notify Claimant that Ms. LLH[Redacted] retired, and that his claim had been reassigned, along with Respondent's failure to monitor Ms. LLH[Redacted]'s email, directly led to Respondent not seeing the communications from Claimant and the Division regarding the DIME.

31. The ALJ finds that Respondent had notice in early September 2020 that Claimant objected to the FAL and requested a DIME.

32. The ALJ finds that that Claimant substantially complied with the requirements of § 8-43-203(2)(b)(III), C.R.S.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits

by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Substantial Compliance

Where a party wishes to challenge the ATP's findings as to MMI, the Act sets for the following procedure:

> If any party disputes a finding or determination of the authorized treating physician, such party shall request the selection of an IME. The requesting party shall notify all other parties in writing of the request, on a form prescribed by the division by rule, and shall propose one or more acceptable candidates for the purpose of entering into negotiations for the selection of an IME. Such notice and proposal is effective upon mailing via United States mail, first-class postage paid, addressed to the division and to the last-known address of each of the other parties. Unless such notice and proposal are given within thirty days after the date of mailing of the final admission of liability or the date of mailing or delivery of the disputed finding or determination, as applicable pursuant to paragraph (a) of this

> subsection (2), the authorized treating physician's findings and determinations shall be binding on all parties and on the division.

§ 8-42-107.2(2)(b), C.R.S. (2020).

While the requirements of the statute may be characterized as a jurisdictional prerequisite to obtaining a DIME, courts have recognized that requirements may be met by substantial compliance. *Lockyear v. May's Concrete, Inc.*, W.C. No. 4-623-424 at *3 (November 4, 2008). Substantial compliance with the statute can be sufficient to prevent closure of a claim. *See Stefanski v. Indus.Claim Appeals Office, 128 P.3d 282 (Colo. App.2005)* (any pleading which adequately notifies employer that claimant does not accept FAL constitutes substantial, if not actual, compliance with statutory obligation to provide written objection), *aff'd Sanco Indus. v. Stefanski,147 P.3d 5 (Colo. 2006)*; *see also EZ Bldg. Components Mfg., LLC v. Indus. Claim Appeals Office, 74 P.3d 516 (Colo.App.2003)* (concept of *substantial compliance* has been applied to various *notice* requirements in workers' compensation proceedings). "To determine whether there has been substantial compliance with a statute, a court will consider whether the allegedly complying acts fulfill the statute's purpose." *Koontz v. Bowser Boutique, Inc.*, W.C. No. 4-359-795 at *6 (January 13, 2012). The purpose of section 8-42-107.2(2)(b) of the Colorado Revised Statutes is to ensure that the party requesting the DIME provides timely notice to the non-requesting party of the request for a DIME. There must be evidence that Claimant made a genuine effort to comply with the statutory requirements. *See Pinon v. U-Haul*, W.C. No. 4-632-044 (April 25, 2007), *aff'd sub. nom. Pinon v. Indus. Claim Appeals Office* (Colo. App. 07CA0922, April 3, 2008) (NSOP) (substantial compliance requires party intent or to actually make good faith or colorable effort to comply with statutory requirements).

The ALJ finds that Claimant made a good faith effort to comply with the requirements of section 8-42-107.2(2)(b) of the Colorado Revised Statutes, and Respondent had timely notice of Claimant's request for a DIME. Claimant spoke with Ms. LLH[Redacted] in early August 2020, and discussed what he needed to do to object to the FAL and request a DIME. (Findings of Fact ¶ 5). Claimant timely filed his objection to the FAL and request for a DIME with the Division on or about August 8, 2020. *Id.* at ¶ 7. The Division received Claimant's objection to the FAL and his request for a DIME, and notified Claimant it was incomplete. *Id.* at ¶ 10. The Division sent a copy of this letter to Respondent, and Respondent made a note in the file, but took no other action. *Id.* at ¶¶ 25-26. Claimant timely refiled the corrected objection to the FAL and request for a DIME with the Division on September 17, 2020. *Id.* at ¶ 11. Over the next several months, Claimant and the Division sent emails to [Redacted] regarding the DIME process. *Id.* at ¶¶ 13-14 and16. Respondent received these emails, but no one was monitoring Ms. LLH[Redacted]'s email following her retirement. *Id.* at ¶ 22. Claimant continued to attempt to communicate with Ms. LLH[Redacted] regarding the DIME because Respondent never notified him, as required by WCRP 5-13 that Ms. LLH[Redacted] retired and his claim had been reassigned. ¶ 27.

ORDER

It is therefore ordered that:

1. Claimant substantially complied with the statutory requirements for objecting to the Final Admission of Liability and requesting a Division IME.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

- Did Claimant prove a right total knee arthroplasty (TKA) recommended by Dr. Vanmanen is causally related to his March 30, 2015 admitted work accident?

FINDINGS OF FACT

1. Claimant has worked for Employer in various capacities since 1997. He currently works as a loader. The job is physically demanding, requiring heavy lifting and prolonged standing and walking. Claimant is currently 63 years of age.

2. Claimant suffered an admitted injury to his right knee on March 30, 2015. He was helping a customer in the plywood aisle when another customer asked for assistance. When he turned to address the second customer, he felt a sharp pain in his right knee and had difficulty walking.

3. Claimant was referred to CCOM for authorized treatment. He was diagnosed with a right knee strain and given a knee brace.

4. A right knee MRI was completed on April 23, 2015. It showed: (1) mild to moderate osteoarthritis along the medial femoral condyle, (2) grade 3 patellar chondromalacia, (3) a small joint effusion, and (4) a small tear in the posterior horn of the medial meniscus.

5. Respondents' expert, Dr. Fall, credibly testified the meniscal tear could have been acute or degenerative, but nevertheless was likely the primary pain generator.

6. Claimant was referred to Dr. Shawn Nakamura, an orthopedic surgeon. At his initial appointment on June 1, 2015, Claimant described "intermittent" 3/10 sharp, aching pain in the right knee. The knee had relatively good range of motion and no instability. X-rays showed "mild" tricompartmental degenerative changes with "very mild" narrowing of the medial compartment and "mild" narrowing of the patellofemoral joint. Claimant had some medial joint line tenderness and pain with McMurray testing. Dr. Nakamura recommended an arthroscopic medial meniscectomy.

7. The surgery was denied after a Rule 16 peer review by Dr. Frank Polanco. He opined surgery was premature because Claimant had not done any physical therapy.

8. Claimant was subsequently referred to PT.

9. Dr. Nakamura gave Claimant a cortisone injection on September 18, 2015. He did not recommend surgery at that time. He recommended Claimant continue with his exercises and follow up "as needed."

10. On November 16, 2015, Dr. Merchant at CCOM documented Claimant was improving with exercise and modified duty. He stated, "[Claimant] is still not interested in surgery." Physical examination was largely benign with relatively good range of motion and minimal medial joint line tenderness.

11. Dr. Merchant put Claimant at MMI on November 23, 2015. Dr. Merchant assigned a 16% lower extremity rating for the meniscal tear and range of motion deficits. He opined Claimant required no ongoing medications and no additional surgery was anticipated. He indicated Claimant may need additional injections in the future.

12. Respondent filed a Final Admission of Liability on January 5, 2016 based on Dr. Merchant's rating. The FAL admitted for reasonably necessary medical treatment after MMI.

13. Claimant sought no further treatment for his right knee for almost three years. He returned to Dr. Nakamura on October 18, 2018. Claimant stated the previous injection in September 2015 was "extremely helpful," but he was currently experiencing 5/10 stabbing and burning pain in the knee. X-rays of both knees now showed "moderate" narrowing in the medial compartments bilaterally and a possible lose osteochondral body on the right. This represents a progression of the medial joint space narrowing on the right as compared to the 2015 x-ray findings. Dr. Nakamura diagnosed "degenerative joint disease" in the right knee and gave Claimant another cortisone injection. No surgery was recommended.

14. Claimant returned to Dr. Nakamura on April 18, 2019. He was having difficulty with prolonged walking and standing, particularly after a long day of work. Dr. Nakamura noted "these injections do work well for him, but they start to lose their efficacy about 2 months prior to his [next] injection." Dr. Nakamura discussed the possibility of a knee replacement for Claimant's "advanced arthritis," but Claimant was "not quite ready for surgery at this time."

15. Claimant saw PA-C Brandon Madrid at CCOM on June 17, 2020. Claimant told Mr. Madrid he received cortisone injections "for about a year and a half and they stopped working." He felt the knee had worsened and believed it was related to the March 2015 work accident. Claimant described 10/10 pain 100%. Mr. Madrid ordered x-rays and an MRI and prescribed a Medrol Doespak.

16. X-rays on June 17 showed moderately severe medial joint space narrowing that "has progressed bilaterally" since the October 2018 imaging.

17. A right knee MRI on June 29, 2020 showed a complex degenerative tear involving the anterior and posterior horns of the medial meniscus, an intra-articular loose body, and full-thickness cartilage loss with subchondral edema over the medial femoral condyle and tibial plateau.

18. Claimant was referred back to Dr. Nakamura for further evaluation. Dr. Nakamura had moved out of town in the interim, so Claimant saw Dr. Michael Vanmanen instead. Claimant told Dr. Vanmanen his knee pain had never improved after the March

2015 work accident. He was becoming increasingly frustrated with his daily activities and difficulty engaging in activities because of the knee pain. Physical examination findings were largely identical on both knees, including positive medial McMurray test, 1+ effusion, patellofemoral crepitus, and weakness of the quadriceps and hamstrings. Dr. Vanmanen documented,

> We had a lengthy discussion regarding the patient's previous MRI, as well as x-rays and physical exam today. He does have end-stage arthritis of both the right and left knee with severe medial tibiofemoral joint arthritis. Both knees are painful throughout the knee. . . . [H]is daily activities are severely compromised [and] he wants bilateral total knee replacements. We said we would start with the right and then do the left.

19. Claimant saw Dr. Centi at CCOM on July 22, 2020. Dr. Centi thought it was questionable whether the proposed TKA was causally related to the March 2015 work accident.

20. Claimant filed a Petition to Reopen on January 14, 2021 based on a change of condition.

21. Dr. Allison Fall performed an IME for Respondent on May 5, 2021. She issued a report and testified at hearing. She opined the recommended right TKA was reasonably necessary but not causally related to the work accident. Dr. Fall emphasized Claimant has end-stage degenerative joint disease in both knees. She noted the original accident involved no significant impact or trauma but merely involved "turning" to the left. At the time, Claimant had early degenerative changes, but the primary pain generator was presumed to be the meniscal tear. Claimant subsequently developed severe "end-stage" osteoarthritis in both knees, which is the reason he now needs bilateral TKAs. She thought the end-stage degeneration in Claimant's uninjured left knee is strong evidence the degeneration in the right knee was unrelated to any trauma. Dr. Fall concluded the work accident did not cause, aggravate, or accelerate the severe osteoarthritis that now necessitates bilateral TKAs.

22. Dr. Fall's opinions regarding causation of the recommended right TKA are credible and persuasive.

23. Claimant failed to prove the proposed right TKA is causally related to the March 2015 work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Medical benefits can continue after MMI if additional treatment is reasonably needed to relieve the effects of the injury or prevent deterioration of a claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even if the respondents admit liability for medical benefits after MMI, they retain the right to dispute the relatedness of any particular

treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As an initial matter, although Claimant filed a Petition to Reopen, the medical portion of his claim remains open based on the January 5, 2016 FAL. Therefore, reopening is not a prerequisite to an award of additional medical benefits. Nevertheless, Claimant still must prove a causal nexus between the requested treatment and the original injury.

There is no doubt the proposed right TKA is reasonably necessary. But Claimant failed to prove it is causally related to the March 2015 work accident. Claimant appears to be an affable fellow, and by all accounts is a dedicated, hardworking employee. But the outcome in this case does not hinge on Claimant's credibility. Rather, it involves a causation determination primarily based on medical factors. In that regard, Dr. Fall's analysis and conclusions are persuasive regarding the absence of any causal relationship between the work accident and the current need for a right TKA. The initial accident was minor and involved no significant force or trauma. At the time, Claimant had early osteoarthritis, but his symptoms were related to the meniscal tear. Claimant was put at MMI and returned to full duty less than 9 months after the accident. He thereafter sought no additional treatment for almost three years. When Claimant returned to Dr. Nakamura in October 2018, the degenerative changes had progressed and were similar in both knees. Claimant's osteoarthritis continued to worsen and was at "end-stage" in both knees by June 2020. Dr. Vanmanen now recommends replacing both knees, and the decision to start with the right knee appears to be based primarily on administrative concerns or convenience, rather than relative severity. As Dr. Fall explained, the uninjured left knee serves as a control and confirms that Claimant would have required a right knee TKA regardless of the March 2015 work accident. The need for a right TKA reflects the natural progression of Claimant's underlying osteoarthritis, without contribution from the work accident.

ORDER

It is therefore ordered that:

1. Claimant's request for a right total knee arthroplasty under his workers' compensation claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will

be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: January 6, 2022

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

STIPULATIONS

During the November 4, 2021 hearing, the parties agreed to specifically place the medical billing for Claimant's September 30, 2020 lumbar MRI conducted at Colorado Springs Imaging before the ALJ for resolution should the claimed injury be found compensable. The parties further stipulated that the amount billed for the aforementioned MRI was $1,742.00. (Resp's. Exh. T, p. 490). Finally, the parties agreed that if it were determined that Respondents were liable for this bill, the actual amount owed would be determined pursuant to the workers' compensation fee schedule. These stipulations are approved.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his low back on July 16, 2020.

II. If Claimant established that he sustained a compensable injury to his low back on July 16, 2021, what medical benefits are reasonable, necessary and related to this injury.

III. If Claimant established that he sustained a compensable low back injury, what temporary disability benefits are owed.

IV. If Claimant established that he sustained a compensable low back injury and his entitlement to temporary disability benefits, whether Respondents are entitled to the imposition of late reporting penalties pursuant to C.R.S. § 8-43-102(1) (a).

V. Claimant's Average Weekly Wage (AWW).

Because the ALJ concludes that Claimant failed to establish that he suffered a low back injury arising out of his employment with Respondent, this order does not address issues II-V as outlined above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The record in this matter is voluminous and the testimony presented is substantially conflicting.

2. Claimant is a former ranch hand for Respondent-Employer. He began working for Employer on June 3, 2020. (Resp's Exh. C, pp. 7, 22) (10/12/21 Hrg. Tr. p. 34, ll. 8-13; p. 91, ll. 3-8). Claimant's job duties included moving irrigation sprinklers and hose reels using a tractor or a four-wheel ATV (quad), mowing and performing some equipment maintenance. (10/12/21 Hrg. Tr. p. 34, ll. 14-25; p. 91, ll. 16-23). Claimant's job was full time, but seasonal in nature, encompassing the summer and early fall with the actual end date depending on the weather. (10/12/21 Hrg. Tr. pp. 91-92, ll. 24-5).

3. [Redacted, hereinafter KB] is the ranch foreman for Respondent-Employer. He was Claimant's supervisor during the time that he was employed at the ranch. (10/12/21 Hrg. Tr. pp. 90-91, ll. 2-11). Mr. KB[Redated] testified that all ranch hands had Saturdays off and that Claimant had two additional days of the week off. (10/12/21 Hrg. Tr. p. 92, ll. 6-12). He testified further that both he and Claimant were scheduled to work on Sundays. (10/12/21 Hrg. Tr. p. 92, ll. 13-14). According to Mr. KB[Redated], weather could cause the work hours to vary, sometimes causing a workday to be shorter than scheduled, and sometimes resulting in Claimant not reporting to work at all for one or more days at a time. (10/12/21 Hrg. Tr. pp. 92-93, ll. 20-5; p. 115, ll. 11-18). During his testimony, Claimant agreed that weather-related issues sometimes affected his work hours and work schedule. (10/12/21 Hrg. Tr. pp. 75-76, ll. 22-13). Claimant also testified that he did not work seven days a week and that he believed he had Saturdays off. (10/12/21 Hrg. Tr. p. 75, ll. 6-17).

4. Claimant testified that his last job prior to beginning work for Respondent-Employer was as a car mechanic for Meinecke Car Care Center (Meinecke) in approximately 2010. (10/12/21 Hrg. Tr. p. 35, ll. 17-21). During the course of his employment with Meinecke, Claimant suffered a work related injury to his low back while lifting a transmission in December 2010. Claimant was unable to return to work after this injury. Rather, he was approved for social security disability and did not work for a number of years before returning to work for Respondent-Employer on June 3, 2020. (10/12/21 Hrg Tr. pp. 35-36, ll. 22-17) (Resp's Exh. O, pp. 482-489).

5. Claimant alleges that he sustained a compensable injury to his low back on July 16, 2020, while driving a tractor with an attached mower 1-2 miles per hour down a dirt road when a dog or coyote jumped out in front of him prompting him to swerve and go down an embankment adjacent to the roadway. (10/12/21 Hrg. Tr. pp. 43-44, ll. 23-1). The tractor came to a rest on the side of the ditch with the attached mower high centered on the ground. Claimant presented photographs demonstrating the position of the tractor and mower after the incident occurred. (Clmt's. Exh's. 1-2). The photographs show that the tractor upright and parked on the side of the ditch. (Clmt's Exh. 2) (10/12/21 Hrg. Tr. pp. 44-45, ll. 13-5). Claimant also acknowledged the following details regarding this incident:

- The incident occurred at approximately 9:00 in the morning while he was driving 1-2 miles mph down the roadway. (10/12/21 Hrg. Tr. p. 43, ll. 11-13).

- The mower that the tractor was pulling was not in operation;

Claimant was merely transporting it and was not actually mowing anything at the time. (10/12/21 Hrg. Tr. pp. 73-74, ll. 14-1).

- Immediately prior to the incident, Claimant was driving the tractor and attached mower down the middle or center part of the road. (10/12/21 Hrg. Tr. p. 73, ll. 17-19).

6. During cross-examination, Claimant conceded that he had an extensive history of low back problems and had undergone multiple surgeries directed to the low back prior to the July 16, 2020 tractor incident. (10/12/21 Hrg. Tr. p. 71-72, ll. 23-1; pp. 72-73, ll. 19-1). Despite surgery, Claimant continued to have low back problems and pain following his December 2010 injury at Meinecke Car Care Center. (10/12/21 Hrg. Tr. pp. 72-73, ll. 19-5). Indeed, Claimant testified, and the medical records support a finding that he continued to obtain low back treatment for his December 2010 lifting injury, which included injections and the use of medication up to the July 16, 2020 tractor incident. (Id. at p. 73, ll. 2-5) (See, also, Resp's. Exh. G).

7. Claimant testified that he experienced an increase in low back pain following the July 16, 2020 tractor incident, and that he first sought treatment for his alleged July 16, 2020 injury about 2-3 weeks after the incident. (10/12/21 Hrg. Tr. p. 48, ll. 13-20; p. 49, ll. 9-13; pp. 54-55, ll. 24-22). Careful review of the evidentiary record fails to establish any contemporaneous medical records referencing an evaluation of or treatment directed to the low back for an injury purportedly caused by a July 16, 2020 injury arising out of running a tractor into a ditch. Rather, the medical records contemporaneous with Claimant's alleged July 16, 2020 injury include an August 4, 2020 report from Physician Assistant (PA-C) Joshua Stoneburner, and an August 8th and August 31, 2020 report authored by PA-C Kristen Viehman whom Claimant regularly sees for chronic pain management stemming from his 2010 low back injury. (Resp's Exh. G). The aforementioned reports support a finding that Claimant was following up with his chronic management providers for care associated with lumbar post laminectomy syndrome. During these appointments, Claimant reported 8-9/10 pain across his back that radiates down his legs to the bottom of his feet for which he was provided with prescription refills. As noted, these records are devoid of any reference to an increase in Claimant's pain or his having suffered a new low back injury as a consequence of running a tractor off the road on July 16, 2020. (See Resp's. Exh. G, pp. 130-140). Careful review of the medical record evidence supports a finding that no medical provider has issued an opinion that a July 16, 2020 tractor accident caused or contributed to Claimant's ongoing back problems in any way.

8. Although Claimant testified that increased pain caused his inability to perform his work duties following the tractor incident (10/12/21 Hrg. Tr. pp. 54-55, ll. 24-22), PA-C Viehman's August 31, 2020 follow up report indicates that Claimant was enjoying his work in the fields on the ATV. (Resp's Exh. G, p. 132).

9. Claimant testified that his last day of performing work tasks for Respondent-Employer was sometime in mid-August 2020. (10/12/21 Hrg. Tr. p. 48, ll.

21-23; p. 51, ll. 7-9; p. 84, ll. 15-17). He testified further that he was told by Mr. KB[Redated] to not come to work if he was physically unable to do the job, and that he missed more than three days of work prior to September 18, 2020 because of the July 16, 2020 tractor injury. (10/12/21 Hrg. Tr. p. 51, ll. 10-23). The following evidence contradicts Claimant's testimony regarding his lost time from work:

- Claimant's time sheets and wage records reflect that he continued to work, and be paid for such work, through September 18, 2020. (Resp's Exh. C, pp. 7-11, 13-21). Claimant testified that he had no reason to believe that he would get paid by the Employer for hours or days that he did not actually work supporting an inference that he actually worked after mid-August 2020. (10/12/21 Hrg. Tr. p. 85, ll. 12-16). Moreover, Claimant's unemployment compensation form (completed by the Employer) also indicates that his last day worked was September 18, 2020. (Resp's Exh. C, pp. 22-23).

- Claimant's testimony regarding his purported inability to work as a result of the July 16, 2020 tractor incident is also contradicted by the testimony of Mr. KB[Redated]. Mr. KB[Redated] testified that, when he first spoke with Claimant about the tractor incident at approximately 11:00 a.m. on July 16, 2020 (approximately two hours after the accident occurred), Claimant advised him that he was not hurt. Claimant then returned to work and completed his full shift with no apparent problems. (10/12/21 Hrg. Tr. pp. 95-96, ll. 3-17; p. 101, ll. 10-17; p. 109, ll. 22-24). Mr. KB[Redated] also explained that the time sheets – which reflect that Claimant worked 8 hours on July 16, 2002, 8 hours on July 17, 2020, 10 hours on July 19, 2020, and 9 hours on July 20, 2020 – were accurate and consistent with his recollection of the actual hours that Claimant worked immediately following the July 16, 2020 tractor incident. (Resp's Exh. C, p. 9) (10/12/21 Hrg. Tr. p. 109, ll. 13-18). Mr. KB[Redated] also testified that Claimant did not say anything to him about having injured his back or wanting to see a doctor, even though they discussed the tractor incident again on July 19, 2020. Mr. KB[Redated] also testified that he did not observe anything to suggest that Claimant was having problems with his back in the days immediately following the July 16, 2020 incident. (10/12/21 Hrg. Tr. pp. 102-103, ll. 19-15).

- Mr. KB[Redated] spoke to the information on the time sheets that indicates that Claimant did not work from July 29, 2020 through August 12, 2020. According to Mr. KB[Redated], the reason Claimant missed work during this approximate 2 week period was because he was sick and had to wait for the results of a Covid test before he was able to return to work. Regarding the nature of his

illness, Mr. KB[Redated] testified that Claimant advised him that he was experiencing symptoms such as a fever and a cough, without mention of any problems with his back at the time. (Resp's Exh. C, pp. 9-10) (10/12/21 Hrg. Tr. pp. 103-104, ll. 22-9).

- Mr. KB[Redated] further testified regarding the information on the time sheets reflecting that Claimant did not work between September 5, 2020 and September 10, 2020, a period of six days. (Resp's Exh. C, p. 11). Mr. KB[Redated] testified that this time off (to the extent it exceeded Claimant's regularly scheduled days off) was due to weather issues and did not have anything to do with problems surrounding the condition of Claimant's low back. (10/12/21 Hrg. Tr. p. 104, ll. 10-18).

- In addition to the above referenced evidence, Claimant's testimony regarding his post July 16, 2020 work history is inconsistent with and contradicted by his subsequent testimony during cross-examination. Despite his testimony that he had an increase in pain following the tractor incident that caused his inability to work beyond mid-August 2020, Claimant later acknowledged that he sent a text message to Mr. KB[Redated] in September 2020 advising that he could not come into work as scheduled because he had hurt his back the day before. (10/12/21 Hrg. Tr. p. 74, ll. 10-17). Clearly, if Claimant had stopped working for the Employer in mid-August, there would have been no need for him to advise his supervisor on a day in September that he was not able to come to work that day. A screen shot of the text message reflects that it was sent by Claimant to Mr. KB[Redated] on September 20, 2020. In this text message, Claimant stated that he "jacked [his] back up pretty good" the day before (September 19, 2020), that he was making an appointment to see his doctor, and that he would not be able to make it in to work that day. (Resp's Exh. C, pp. 12) September 19, 2020 was a Saturday, Claimant's day off.[1] Claimant acknowledged sending this text message to Mr. KB[Redated] and initially testified that he had "re-jarred" his back the day before. (10/12/21 Hrg. Tr. p. 74, ll. 12-14). He then denied that any incident occurred on September 19, 2020 resulting in his inability to work. Rather, he testified, he was just being "jarred around" at work and there were fewer and fewer days he felt that he could actually work. (10/12/21 Hrg. Tr. pp. 74-75, ll. 18-5).

- Mr. KB[Redated] confirmed that since September 19, 2020 was

[1] The ALJ took administrative notice that both July 18, 2020 and September 19, 2020 were Saturdays. (10/12/21 Hrg. Tr. p. 121, ll. 8-11)

a Saturday, Claimant was not scheduled to work that day. (10/12/21 Hrg. Tr. p. 104, ll. 19-23). Mr. KB[Redated] further testified that Claimant was scheduled to work on September 20, 2020 but did not come to work that day. (10/12/21 Hrg. Tr. pp. 104-105, ll. 24-3). Instead, Mr. KB[Redated] testified, he received Claimant's text message stating that he had "jacked [his] back up pretty good yesterday", after which he called Claimant to check on him. Mr. KB[Redated] spoke to Claimant on September 20, 2020 after receiving the aforementioned text message. Mr. KB[Redated] testified that during their September 20, 2020 conversation, Claimant advised him that he had tripped on a sidewalk and hurt his back. (10/12/21 Hrg. Tr. p. 105, ll. 4-25; pp. 106-107, ll. 15-4).

- Mr. KB[Redated] testified that Claimant was also scheduled to work on September 21, 2020. (10/12/21 Hrg. Tr. p. 107, ll. 5-7). Mr. KB[Redated] testified that he called Claimant again on September 21, 2020 to see how his back was doing. According to Mr. KB[Redated], Claimant advised him that his back was still hurting and that he did not know when he would be able to come in to work. (10/12/21 Hrg. Tr. p. 107, ll. 8-21). Mr. KB[Redated] testified that he then advised Claimant that since they were at the end of the season and the weather was changing, he could exercise the option of taking his lay off, so that he would not have to come to work with a sore back. (10/12/21 Hrg. Tr. p. 107-108, ll. 22-2). The time records and unemployment compensation form support Mr. KB[Redated] recollection that the last day Claimant actually worked for Respondent-Employer was September 18, 2020, the day before the Saturday (September 19, 2020) when Claimant tripped over a sidewalk and "jacked" up his back. (Resp's Exh. C, pp. 11, 22) (10/12/21 Hrg. Tr. p. 108, ll. 3-6). Mr. KB[Redated] testified that Claimant's early lay off had nothing to do with the July 16, 2020 tractor incident, but rather was due to the back injury that occurred on September 19, 2020 on Claimant's day off when he tripped on the sidewalk. (10/12/21 Hrg. Tr. p. 122, ll. 3-23).

10. Mr. KB[Redated] testified that, up through the time that Claimant left his employment at the ranch, he never said anything to about having suffered a back injury as a result of the July 16, 2020 tractor incident. Moreover, he testified that he never observed Claimant demonstrate any signs consistent with having back problems following that incident. (10/12/21 Hrg. Tr. p. 108, ll. 9-19; p. 111, ll. 6-10). Mr. KB[Redated] also testified that, *other than in connection with the September 19, 2020 injury that occurred on his day off*, Claimant did not request any time off work because of problems with his back. (10/12/21 Hrg. Tr. p. 108, ll. 20-23). Mr. KB[Redated] testified that he did not become aware that Claimant was alleging to have sustained an

injury to his back as a result of the July 16, 2020 tractor incident until Claimant filed the "lawsuit" regarding this claim, weeks after all the seasonal employees had been laid off. (10/12/21 Hrg. Tr. p. 111, ll. 11-22).

11. The evidence presented, including Claimant's time records, persuades the ALJ that Mr. KB[Redated]' testimony regarding Claimant's work schedule and ability to work after the July 16, 2020 tractor incident is more credible and persuasive than the testimony of Claimant.

12. Regarding the occurrence of the July 16, 2020 tractor incident, Mr. KB[Redated] testified that he learned of the incident soon after it had happened when another employee who worked directly under him texted him about it. (10/12/21 Hrg. Tr. p. 95, ll. 1-8). Mr. KB[Redated] testified that, although he was scheduled to be off that day, he went in to work to check everything out. Mr. KB[Redated] testified that he went straight to where the tractor was where he met with and spoke to Claimant. (10/12/21 Hrg. Tr. pp. 95-96, ll. 9-3). Mr. KB[Redated] testified that first he asked Claimant if he was okay and Claimant responded that he was fine, albeit a little embarrassed. Claimant did not say anything about having injured his back. (10/12/21 Hrg. Tr. p. 96, ll. 4-12). Mr. KB[Redated] further testified that during this conversation, he discussed with Claimant what happened to cause the tractor to go into the ditch. According to Mr. KB[Redated] , Claimant told him that a fox or a dog ran out in front of him, causing him to swerve to the side of the road and into the ditch. (10/12/21 Hrg. Tr. p. 96, ll. 18-22).

13. Mr. KB[Redated] testified that he did not believe that this is what happened. Mr. KB[Redated] testified that coming from the middle of the road, it would have taken quite a bit of speed in order for someone to jerk the wheel and move the tractor as far off the road as it was positioned when he arrived on scene. (10/12/21 Hrg. Tr. pp. 98-99, ll. 17-8). Mr. KB[Redated] testified that based on the tracks in the dirt, it appeared that Claimant had driven straight off the road onto the side of the embankment, rather than having swerved to avoid an animal running in front of the tractor. (10/12/21 Hrg. Tr. p. 100, ll. 4-16) Mr. KB[Redated] further testified that, based on the position of the tractor and attached mower and what he observed at the scene of the accident, it appeared that Claimant had high centered the mower on the side of the roadway, and that this would not have jarred him at all. (10/12/21 Hrg. Tr. p. 111, ll. 14-17). Mr. KB[Redated] testified that later that day he asked Claimant again about the tractor incident, and Claimant maintained his explanation that a fox/dog ran out and caused him to swerve into the ditch. (10/12/21 Hrg. Tr. pp. 101-102, ll. 18-5)

14. Mr. KB[Redated] testified that on July 19, 2020, Claimant confessed to him that contrary to his earlier indication, no fox or dog had run in front of the tractor causing him to swerve onto the side of the ditch. Rather, Mr. KB[Redated] testified that Claimant admitted that he had simply not been paying attention and had just driven off the road. (10/12/21 Hrg. Tr. pp. 102-103, ll. 19-3; pp. 120-121, ll. 18-3). Nonetheless, Mr. KB[Redated] testified that Claimant did not report any injury to his back and did not request an opportunity to see a doctor at that time. (10/12/21 Hrg. Tr. p. 103, ll. 4-9). Based upon the position of the tractor in the pictures admitted into evidence, the ALJ

credits the testimony of Mr. KB[Redated] to find that Claimant probably simply drifted to the side of the road toward the ditch and when the mower made contact with the ground and high centered, Claimant shut the tractor down. Indeed, it does not appear from the pictures that the tractor abruptly swerved off the roadway into the ditch. The tractor is not actually in the ditch. Rather, it is positioned on the side of the embankment with its nose and wheels parallel to the roadway. (Clmt's Exh. 1-2). Based upon the totality of the evidence presented, the ALJ is not convinced that a four-legged animal darted in front of Claimant's tractor causing him to suddenly and unexpectedly to swerve into the ditch.

15. As noted above, Claimant had been evaluated at Comprehensive Pain Specialists shortly after the July 16, 2020 incident where he was evaluated by PA-C Viehman on August 8, 2020 and August 31, 2020. Claimant followed up with PA-C Viehman on December 8, 2020. During this encounter, PA-C Viehman noted that Claimant had just finished putting up the Christmas tree and decorations and was now having increased back pain. PA-C Viehman further noted that Claimant was planning to see spinal surgeon Dr. Lloyd Mobley after January 1 to discuss the next steps for surgery, as he would be having a change in his insurance plan. (Resp's Exh. G, pp. 105-111)

16. Claimant was evaluated by Dr. Mobley on January 14, 2021, during which appointment; Claimant reported that he had been having "severe difficulty with low back pain over the past year." (Resp's. Exh. F, p. 81). Dr. Mobley did not document a cause for Claimant's back pain other than to indicate that he "has a history of lumbar fusion L4-S1", has adjacent level disease at L3-4, and requires a lumbar fusion (Id.) Despite an exhaustive review of Dr. Mobley's January 14, 2021 report, the ALJ is unable to find any indication that Claimant's need for additional treatment, including the recommended L3-4 fusion, is related to an alleged July 16, 2020 injury after driving a tractor off the side of the road.

17. Claimant testified resolutely that, during the 2-3 years immediately preceding the July 16, 2020 tractor incident, no doctor had recommended additional back surgery, and he did not intend to undertake further surgery to his low back. (10/12/21 Hrg. Tr. p. 41, ll. 7-16; p. 42, ll. 4-18; p. 54, ll. 19-23; p. 69, ll. 5-7; p. 81, ll. 11-20). In this case, Claimant asserts that his disability and need for additional treatment/surgery was precipitated by jarring he experienced when he drove Respondent's tractor onto the side of the ditch on July 16, 2020. The ALJ finds Claimant's inference unconvincing. By report dated May 27, 2020 (approximately 7 weeks before the July 16, 2020 tractor incident), Dr. Mobley noted that Claimant had been having left lower back pain at about L4-5 or L3-4 and that it started after a car accident in February of 2019. (Resp's Exh. F, p. 89). Dr. Mobley further opined that Claimant had adjacent level degeneration at L3-4 for which he recommended a lumbar fusion at L3-4. Dr. Mobley noted that Claimant wished to consider undergoing such intervention but would not be able to proceed until the winter. (Resp's Exh. F, p. 90). The fact that Claimant had been diagnosed with adjacent level disease in May 2020 for which surgical correction had been recommended severely undermines his claim that

the need for this surgery is causally related to the July 16, 2020 tractor incident.

18. Claimant underwent an additional two part lumbar spinal surgery as performed by Dr. Mobley on March 1 and 3, 2021. The specific procedures performed were an anterior/posterior lumbar internal fixation and fusion at L3-4. (Resp's Hrg. Exh. F, pp. 73, 76).

19. Respondent sought the opinions of Dr. Timothy O'Brien as to whether Claimant's need for spinal surgery, as performed March 1st and 3rd was causally related to the July 16, 2020 tractor incident. Dr. Timothy O'Brien conducted an independent medical examination (IME) on July 16, 2021 and issued a report outlining his findings/opinions on September 17, 2021. (Resp's Exh. D).

20. As part of his IME, Dr. O'Brien performed a physical examination. He also completed a records review wherein he reviewed medical and imaging reports dating back to 2009. At the conclusion of his IME, Dr. O'Brien opined that Claimant did not suffer a work related injury as a consequence of driving his tractor into the ditch on July 16, 2020. Because there was a complete absence in the record of any historical input documenting that an injury occurred on July 16, 2020, which stood in sharp contrast to Claimant's consistent habit of reporting all prior injuries/symptoms involving the low back, Dr. O'Brien opined that it was virtually medically impossible that a low back injury occurred on July 16, 2020. (Resp's. Exh. D, p. 434).

21. Dr. O'Brien also opined that Claimant's pain score of 9/10 on July 7, 2020 (9 days before his alleged injury) versus his 9/10 pain score on August 4, 2020, approximately 3 weeks after his alleged July 16, 2020 injury supported a conclusion that he had no increase in his pain levels, which underscored the fact that Claimant did not injure himself at work on July 16, 2020. (Resp's. Exh. D, p. 43).

22. Dr. O'Brien also noted that there were no changes in Claimant's imaging studies obtained prior to and following the alleged July 16, 2020 injury. According to Dr. O'Brien, the absence of additional new radiographic findings serves to support a conclusion that no injury occurred on July 16, 2020. (Resp's. Exh. D, pp. 43-44).

23. Finally, Dr. O'Brien opined that secondary gain issues were driving Claimant's reports of increased low back pain following the July 16, 2020 tractor incident. According to Dr. O'Brien, Claimant was likely magnifying his pain in an effort to continue to obtain opioid pain medication. Dr. O'Brien went so far has to opine that Claimant was a narcotic drug seeker and had a history of "fabricating or manufacturing pain in order to 'seek more narcotics.'" (Resp's. Exh. D, p. 45). Accordingly, Dr. O'Brien questioned the reliability of Claimant's history and exam performance.

24. Dr. O'Brien also testified at hearing as a board certified, Level II Accredited retired orthopedic surgeon. Dr. O'Brien maintains a forensic practice only; he does not treat patients nor does he perform surgery. Dr. O'Brien testified consistently with his September 17, 2021 IME report. He testified that, although he reviewed "many

thousands" of pages of medical records as part of his IME, he did not outline every single medical record reviewed in his IME report. (11/4/21 Hrg. Tr. p. 26, ll. 7-15). Dr. O'Brien testified that Claimant's medical records reflect an extensive history of low back issues, including chronic pain and multiple treatments and surgeries, prior to July 16, 2020. (11/4/21 Hrg. Tr. p. 27, ll. 15-23). Dr. O'Brien testified that a December 20, 2011 ER report documents not only that Claimant sustained an injury to his low back while lifting a transmission the day before, but also that Claimant had spinal arthritis that had been symptomatic prior to this date. (Resp's Exh. O, pp. 482-489) (11/4/21 Hrg. Tr. pp. 28-29, ll. 11-12). In addition to the December 2011 transmission injury, Dr. O'Brien testified, that the medical records reflect numerous claimed back injuries, as well as episodes of increased back pain without specific injury, prior to July 16, 2020. (11/4/21 Hrg. Tr. p. 29, ll. 13-23).

25. Regarding Claimant's prior low back surgeries, Dr. O'Brien testified that the medical records reflect that he underwent the following procedures prior to July 16, 2020:

- February 7, 2012 - diskectomy and decompression at L4-5 by Dr. Ghiselli (Resp's Exh. N, pp. 293-295) (11/4/21 Hrg. Tr. pp. 35-37, ll. 25-19);

- July 20, 2012 – decompression and fusion at L4-5 by Dr. Jamrich, based on Dr. Jamrich's belief that the previous diskectomy and decompression at L4-5 had failed (Resp's Exh. N, pp. 293-294) (11/4/21 Hrg. Tr. p. 37, ll. 20-25; p. 38, ll. 16-24);

- November 12, 2014 – revision and extension of fusion at L4-5 and L5-S1 by Dr. Kuklo, based on Dr. Kuklo's assessment that there was a non-union of bone from L4-5 and a stenosis or constriction of the spinal elements around the spinal cord at the level of the cauda equina and the nerve roots at that level, causing ongoing radiculopathy (Resp's Exh. J, p. 243) (11/4/21 Hrg. Tr. pp. 39-40, ll. 1-7);

- October 12, 2016 – revision posterior arthrodesis/fusion at L4-S1 augmented with an anterior arthrodesis at those levels by Drs. Schoeff and Syre, due to an ongoing failure to heal at L4-5 and L5-S1 (Resp's Exh. J, pp. 239-242) (11/4/21 Hrg. Tr. pp. 40-41, ll. 8-15);

- January 15, 2018 – spinal cord stimulator implant by Dr. Mobley to try to relieve ongoing pain at the L4-S1 levels (Resp's Exh. O, pp. 300-301) (11/4/21 Hrg. Tr. pp. 41-42, ll. 19-23);

- December 26, 2018 – removal of spinal cord stimulator by Dr.

Mobley due to malfunctioning with shocking pains (Resp's Exh. O, pp. 296-297) (11/4/21 Hrg. Tr. pp. 42-43, ll. 24-25).

26. Dr. O'Brien testified that, based on what he saw in the medical records, there was never a period of time between 2012 and July 16, 2020 when Claimant did not have ongoing back pain and other symptoms, or when Claimant had stopped treating his low back pain. Rather, Dr. O'Brien testified, Claimant had a chronic condition that was unrelenting and has never let up since it started. (11/4/21 Hrg. Tr. pp. 44-45, ll. 19-6).

27. Regarding Claimant's reporting an "immediate" onset of pain following the July 16, 2020 tractor incident; Dr. O'Brien testified that this would not necessarily mean that any trauma or injury occurred at that time. Rather, Dr. O'Brien testified, within the backdrop of an extensive arthritic condition in the spine, an increase in pain could simply be the manifestation of an underlying condition, similar to when Claimant has pain when getting out of bed or when arising from a seated position.[2] (11/4/21 Hrg. Tr. pp. 83-85, ll. 21-1)

28. Dr. O'Brien testified regarding May 27, 2020 clinical note of Dr. Mobley. (Resp's Exh. F, pp. 87-90) Regarding Dr. Mobley's notation that Claimant was post-op fusion L4-5, L5-S1 "with good results", Dr. O'Brien testified that this could mean that the fusion had finally consolidated, such that there was a solid column of bone from L4-S1. Alternatively, Dr. O'Brien testified, the reference to "good results" could mean that there was pain relief. (11/4/21 Hrg. Tr. pp. 45-46, ll. 7-10). As it pertains to Claimant's situation, Dr. O'Brien questioned whether the reference was intended to indicate pain relief because Dr. Mobley wrote that Claimant had adjacent level degeneration at L3-4, which appeared to be indicating that there were still ongoing symptoms emanating from that spinal level. In addition, a spinal cord stimulator, which had been placed to relieve pain, had failed and had been removed. Consequently, Dr. O'Brien testified, he interpreted the reference to "good results" to indicate that there was solid arthrodesis but ongoing symptomatology. (11/4/21 Hrg. Tr. p. 46, ll. 10-17).

29. Regarding Dr. Mobley's assessment in his May 27, 2020 report of adjacent level degeneration at L3-4 (Resp's Exh. F, p. 90), Dr. O'Brien explained that this was the level above the prior fusion mass, and that Dr. Mobley was indicating that this level has gone on to degeneration. (11/4/21 Hrg. Tr. p. 47, ll. 14-16). Dr. O'Brien testified that this degeneration was expected and happens almost 100% of the time, because the removal of two motion segments – at L4-5 and L5-S1 – creates incredible stress above and below the fusion mass, causing the segments that remain mobile to have to do more work since the fused segments are no longer contributing. (11/4/21 Hrg. Tr. pp. 46-47, ll. 18-17). Dr. O'Brien also testified that in addition to stating that the L3-4 level had degenerated, Dr. Mobley was indicating that this level was causing symptoms leading to the recommendation for a L3-4 fusion to treat those symptoms. (11/4/21 Hrg. Tr. p. 47, ll. 17-20).

[2] Consistent with Dr. O'Brien's testimony, Claimant reported to PA-C Viehman on July 7, 2020, that moving aggravated his pain and that getting up and off the tractor caused pain. (Resp's Exh. G, p. 143)

30. As referenced, Claimant was seen at Dr. Drennan's office (Comprehensive Pain Specialists) on July 7, 2020, and again on August 4, 2020, i.e. 9 days *prior to* and 19 days *after* the July 16, 2020 tractor incident, respectively. (Resp's Exh. G, pp. 134-140, 140-145). When asked to compare Claimant's reported back symptoms on these two dates, Dr. O'Brien testified (as he had alluded to in his September 17, 2021 IME report), that the reports are identical, not only in terms of the pain score and reported level of pain, but also in terms of the characterization of where the pain is and where it goes. (Resp's Exh. G, pp. 138 and 143) (11/4/21 Hrg. Tr. pp. 52-53, ll. 17-18; p. 54, ll. 3-14; p. 81, ll. 20-25; p. 100, ll. 4-13).

31. Dr. O'Brien also reviewed the findings referenced in the May 21, 2020 lumbar MRI report completed approximately *3 ½ weeks prior to* the July 16, 2020 tractor incident with those of the September 30, 2020 lumbar MRI report completed approximately *9 ½ weeks after* the July 16, 2020 tractor incident. (Resp's Exh. P, pp. 490-491; pp. 493-494) Dr. O'Brien testified that the May 21, 2020 MRI report showed arthritis at nearly every level in the lumbar spine, post-surgical changes, ongoing disc protrusions, and facet arthropathy or facet degeneration. (11/4/21 Hrg. Tr. pp. 54-55, ll. 18-1) Dr. O'Brien testified that all the classic findings of spinal arthritis were present on this MRI, including disc bulging, annulus degeneration, and ligament and flavum degeneration. (11/4/21 Hrg. Tr. p. 55, ll. 20-22). In addition, Dr. O'Brien testified, the May 21, 2020 MRI report showed a retrolisthesis at L3-4 caused by that joint trying to compensate for the lack of motion at the fused levels at L4-S1. According to Dr. O'Brien, the L3-4 spinal segment was shifting on itself, or subluxating. (11/4/21 Hrg. Tr. p. 55, ll. 14-19).

32. When asked to compare the findings in the May 21, 2020 lumbar MRI report with those in the September 30, 2020 MRI report, Dr. O'Brien testified that the September 30, 2020 MRI showed the same post-surgical changes, the same arthritic changes, and was essentially saying the same things as the May 21, 2020 MRI report. (Resp's Exh. P, pp. 490-491; pp. 493-494) (11/4/21 Hrg. Tr. pp. 56-57, ll. 18-7). Dr. O'Brien testified that there were no significant changes noted in the September 30, 2020 lumbar MRI report as compared to the May 21, 2020 lumbar MRI report. (11/4/21 Hrg. Tr. p. 57, ll. 8-17). He testified further that the radiologist who interpreted the September 30, 2020 lumbar MRI expressly noted that he had a comparative study dated May 21, 2020, and that he used terms such as "similar to the prior study," "no significant interval change," and "retrolisthesis unchanged". Dr. O'Brien testified that this indicated that, when the radiologist was comparing the two studies and determining in his own mind whether something has changed, he opined that there was no significant change or no change at all. (11/4/21 Hrg. Tr. pp. 57-58, ll. 18-4).

33. On cross examination, Dr. O'Brien acknowledged that the September 30, 2020 MRI report used the language "broad based disc bulge" at L2-3 and L3-4, and that this particular terminology was not used in the May 21, 2020 MRI report. (11/4/21 Hrg. Tr. pp. 82-83, ll. 18-13). While he agreed that the September 30, 2020 MRI report used the term "broad based disc bulge", Dr. O'Brien did not agree that this meant that there was a change in Claimant's MRI between those two dates. (11/4/21 Hrg. Tr. p. 85, ll. 5-15).

Dr. O'Brien explained that there is no scientific definition for a disc bulge, and what one radiologist identifies as a disc bulge may be interpreted differently by another radiologist. (11/4/21 Hrg. Tr. p. 85, ll. 19-24). Moreover, Dr. O'Brien testified, in looking at the specific descriptions of the radiologists' findings in their MRI reports, the L2-3 disc bulge, the L3-4 disc bulge, and the mild bilateral foraminal impingement noted in the September 30, 2020 MRI report were all referenced in the May 21, 2020 MRI report, but stated in different words. Dr. O'Brien testified that the two radiologists were saying the same things with different nomenclature. (11/4/21 Hrg. Tr. p. pp. 100-102, ll. 23-9; pp. 107-108, ll. 9-12). Further, Dr. O'Brien testified, it was known from the September 30, 2020 MRI report that the radiologist had the May 21, 2020 MRI for comparison and in his mind found the two MRI studies to be similar or identical with no significant changes. (11/4/21 Hrg. Tr. p. 102, ll. 10-20). Dr. O'Brien testified that there were so many references in the September 30, 2020 MRI report to "no change" that, despite the use of different terminology, he believed the radiologists were seeing the same thing, and that if there were significant interval changes in the MRI's, those changes would have been referenced. (11/4/21 Hrg. Tr. p. 108, ll. 15-19).

34. The ALJ has carefully reviewed the MRI's reports in question and notes that the May 21, 2020 MRI references the following:

- L2-3: There is retrolisthesis measuring 4 mm. Central posterolateral, and foraminal protrusions and osteophytes are seen. There are also far lateral protrusions and osteophytes.

- L3-4: Thickening of the ligamentum flavum is present. There is retrolisthesis measuring 5 mm. A central, posterolateral, foraminal, and far lateral protrusion and osteophyte is identified. There is moderate left and mild right lateral recess narrowing. There is mild right and moderate left foraminal narrowing.

* * *

- IMPRESSION:

  2. There is retrolisthesis at L2-3 and L3-4.

  3. There are protrusions and osteophytes at the L2-3 and L3-4 segments. (Resp's. Exh. P, pp. 493-494).

35. The ALJ has also carefully reviewed the remaining imaging studies and finds the MRI report from August 24, 2018, particularly relevant to the question of whether the disc bulging referenced at L2-3 and L3-4 in the September 30, 2020 MRI represents an new finding and thus an interval change in the extent of pathology in Claimant's lumbar spine following the July 16, 2020 tractor incident. The August 24, 2018 MRI indicates that there is a "mild disc bulge" at L2-3 and L3-4. (Resp's. Exh. P, p. 498). Consequently,

there was objective evidence of disc bulging at L2-3 and L3-4 prior to Claimant's July 16, 2020 tractor incident and September 30, 2020 MRI. Based upon the imaging study reports the ALJ is sufficiently persuaded that the broad based disc bulging observed on the September 30, 2020 MRI is probably not a new finding. Indeed, it is likely that such bulging has been present since August 2018. While the May 21, 2020 MRI does not use the term "bulge", it does reference that there are "protrusions" at L2-3 and L3-4. Given the MRI findings of bulging at L2-3 and L3-4 on August 24, 2018 and September 30, 2020, the ALJ is convinced that the reference to "protrusions" at these levels in the May 21, 2020 MRI is describing similar pathology, i.e. bulges with different terminology. Accordingly, the ALJ is not convinced that the July 16, 2020 tractor accident caused new pathology in the lumbar spine, which gave rise to Claimant's disability and need for medical treatment, including the staged L3-4 fusion surgery performed by Dr. Mobley.

36.. Dr. O'Brien testified that the surgery Dr. Mobley recommended in his May 27, 2020 report consisted of the procedures he actually performed on March 1 and 3, 2021. (Resp's Exh. F, p. 90) (11/4/21 Hrg. Tr. p. 61, ll. 7-18). Dr. O'Brien further testified that the fact that the surgery had been recommended before the July 16, 2020 tractor incident occurred indicates that Dr. Mobley felt that all surgical indications – including the arthritis, the adjacent level degeneration, and the symptoms – existed in May 2020, prior to the July 16, 2020 incident. (11/4/21 Hrg. Tr. pp. 61-62, ll. 19-4). The ALJ credits the reports of Dr. Mobley and the testimony of Dr. O'Brien to find that, because all surgical indications existed as of May 27, 2020, it is improbable that the July 16, 2020 tractor incident aggravated, accelerated, or combined with Claimant's pre-existing low back condition causing his need for surgical intervention. To the contrary, the evidence presented supports a reasonable inference that Claimant's need for treatment/surgery was pre-existing and related to the natural and probable progression of a degenerative condition in his lumbar spine, which was significantly symptomatic in the weeks leading up to the July 16, 2020 tractor incident. Indeed, Claimant's condition had become so symptomatic by May 27, 2020 that Dr. Mobley recommended surgical correction to cure and relieve him of his ongoing pain.

37. Dr. O'Brien testified that Claimant's medical records show that, historically, he takes care of his pain when it occurs, whether due to a manifestation of his underlying arthritis or due to a new injury. He does not delay in reporting things and he does not delay in seeking medical attention. Rather, Dr. O'Brien testified, based on the medical records, Claimant either urgently or emergently gets care when he notes back pain that he feels is new or increased above his baseline. (11/4/21 Hrg. Tr. p. 49, ll. 19-23; p. 50, ll. 10-14). Furthermore, Dr. O'Brien testified that the medical records reflect that Claimant was seen at Dr. Drennan's office on August 4, 2020, and that there is no indication in this report, either historically or in the providers assessment, that there was an injury which had occurred on July 16, 2020. (Resp's Exh. D, pp. 134-40) (11/4/21 Hrg. Tr. pp. 50-52, ll. 15-16). Dr. O'Brien testified that Dr. Drennan and his physician assistants have, on numerous occasions, discussed Claimant's waxing and waning pain and the etiology of that pain, whether a manifestation, a minor injury or a more substantial injury. (11/4/21 Hrg. Tr. p. 92, ll. 19-23). Dr. O'Brien testified that Dr. Drennan and the providers in his office have proven to be meticulous and detailed historical recorders of facts, such that he

believed that if Claimant had reported an injury from the July 16, 2020 tractor incident, Dr. Drennan would not have failed to record it. (11/4/21 Hrg. Tr. pp. 92-93, ll. 23-3; p. 97, ll. 11-23). Based upon the evidence presented as a whole, the ALJ finds no record support to medical evidence to buttress Claimant's assertion that he sought treatment in connection with a back injury that occurred as a result of the July 16, 2020 tractor incident, or as found that he reported this incident to any of his medical providers.

38. Dr. O'Brien testified about his concerns regarding evidence of Claimant's addiction, drug-seeking behavior and secondary gain motives. Similar to other secondary gain situations, Dr. O'Brien testified, the needs caused by an addiction to narcotics can alter the way an injured person interacts in the workers' compensation system. (11/4/21 Hrg. Tr. pp. 65-66, ll. 4-3). Regarding the information in the medical records that indicated a history of addiction and drug-seeking behavior, Dr. O'Brien noted that there was documentation that Claimant had been fired from pain clinics and from orthopedic clinics because of addiction and drug-seeking behavior. (11/4/21 Hrg. Tr. pp. 66-67, ll. 24-14). Dr. O'Brien testified that there were many references in the records by a number of practitioners indicating that Claimant had a history of addiction, withdrawal, narcotic dependency, drug-seeking behavior, and conversion disorders. (11/4/21 Hrg. Tr. p. 67, ll. 15-20). Further, Dr. O'Brien noted, Claimant remained on narcotics and by definition is still addicted. Dr. O'Brien testified that the definition of addiction is whether a person has withdrawal symptoms if the substance is removed. Dr. O'Brien testified that Claimant's earlier medical records document previous episodes of withdrawal, and he would continue to have withdrawal symptoms right now as he has been on narcotics too long and his body has become too dependent. (11/4/21 Hrg. Tr. pp. 95-96, ll. 25-16).

39. Claimant does not dispute that due to his preexisting back injury he is prescribed and uses opioid medications to control his pain. Claimant testified he was taking pain medication during the year prior to the incident and this pain medication was prescribed by Dr. Drennan. (10/21/21 Hr. Tr. p. 48). Claimant testified he was taking 20-milligrams of oxycodone and Dr. Drennan is his pain management physician. (Id.) Careful review of Claimant's records from Comprehensive Pain Specialists fails to establish that Claimant in anyway is using the opioid pain medications prescribed to him inappropriately or improperly. (Resp's. Exh. G). To the contrary the records indicate Claimant has been utilizing the prescription medications as he has been directed to by his treating pain management physician. There is no reference in the records from Comprehensive Pain Specialists of drug seeking behavior or in the records of any other post July 16, 2020 medical provider. The only reference to the potential for the over use of narcotic medication was one note over five years prior to the July 16, 2020 injury, a fact which Dr. O'Brien admitted during his cross-examination.

40. Based upon the evidence presented, the ALJ agrees with Claimant that the stated concern surrounding Claimant's continued use of opioid medications to support Dr. O'Brien's claim of secondary gain constitutes a "Red Herring" in this case. The evidence presented fails to support a finding that Claimant filed his claim so he could continue to obtain opioid medication. While Dr. O'Brien concludes that secondary gain is playing a role in this case, the ALJ finds a dearth of evidence to support the

suggestion. Indeed, Claimant was already receiving narcotics for his admitted and well-documented low back problems prior to the July 16, 2020 tractor accident. Absent evidence of excessive use or diversion, the ALJ finds that Claimant probably would continue to receive opioids from his pain specialist providers removing the specter that fabrication of symptoms is at play here. Absent evidence of excessive medication use or misappropriation to support a conclusion that Claimant is magnifying his pain to secure additional opioid medication, the ALJ is disinclined to accept Dr. O'Brien's conclusion as anything other than his personal belief that Claimant is a drug seeker. The ALJ finds Dr. O'Brien's opinions/theories concerning the presence of secondary gain in this case gratuitous and irrelevant given the volume of other objective medical evidence that more persuasively establishes the probable cause of Claimant's increasing low back pain.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The Alleged Mechanism of Injury (MOI) and Claimant's Credibility

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. Here, a question exists regarding whether the MOI described by Claimant may be causative of his alleged increased pain and findings demonstrated on the September 30, 2020 MRI. As presented, the evidence establishes that Claimant most likely drifted off the edge of the road while driving tractor on July 16, 2020. The ALJ credits the testimony of Mr. KB[Redated] to conclude it unlikely that Claimant was jarred or tossed about violently in the cab of the tractor causing an increase in his symptoms based on the position of the tractor in the pictures admitted into evidence. Indeed, the medical records are devoid of any mention or indication that Claimant told any of his medical providers about the July 16, 2020 tractor incident, much less reporting that he sustained a back injury as a consequence of being tossed about inside the cab when he traveled toward the ditch. To the contrary, the report from PA-C Viehman dated August 31, 2020, approximately 2 weeks after the incident in question, indicates that Claimant continued to enjoy his work riding around the fields on an ATV. Consequently, the ALJ is not convinced that Claimant suffered debilitating pain as a consequence of the July 16, 2020 incident when the tractor in question drifted off the road.

E. Furthermore and as found, Claimant's testimony was contradicted a number of times throughout the hearing and he called his own credibility into question when he confessed that he did not swerve off the road to avoid a four legged animal and when he changed his testimony regarding tripping on a sidewalk on September 19, 2020. Such inconsistences and lack of candor cannot be reconciled with the balance of the competing evidence nor ignored by the court. Accordingly, the ALJ concludes that Claimant's testimony regarding the events he asserts caused a low back injury are unreliable and unpersuasive. Given the totality of the evidence presented, the ALJ agrees with Respondents to find/conclude that Claimant probably did not suffer an injury during the July 16, 2020 tractor incident.

Compensability

F. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I) (b), C.R.S.*

G. The phrases "arising out of" and "in the course of" are not synonymous

and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

H. Under the Workers' Compensation Act (hereinafter Act) there is a distinction between the terms "accident" and "injury." An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, § 8-40-201(2) (injury includes disability resulting from accident).

I. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain from an incident occurring at work without sustaining a compensable "injury." This is true, as in the instant case, even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supported the ultimate finding that no injury occurred where a claimant experienced pain after being struck by a bed she was moving as part of her job duties). In this case, the following evidence supports the conclusion that Claimant failed to prove he suffered a compensable injury:

- Mr. KB[Redated] , Claimant's former supervisor, testified that Claimant advised him that he was fine and that at no time did Claimant ever indicate to him that he had injured his back or that he was in need of medical treatment for a back injury from the July 16, 2020 incident.

- The medical records are devoid of any mention or indication that Claimant told any of his medical providers about the July 16, 2020 tractor incident, much less reporting that he sustained a back injury as a result. To the contrary, according to a report

from PA Viehman dated August 31, 2020, Claimant reported that he was enjoying his work riding around the fields in an ATV.

- There is no credible evidence to indicate that any medical treatment was sought or necessitated as a result of the July 16, 2020 tractor incident. The medical records document that Claimant has a history of readily and expediently seeking treatment after experiencing a significant increase in his back pain, whether due to an injury such as a fall or due to a minor incident such as twisting while shopping at a grocery store. In stark contrast to this pattern of behavior, Claimant did not seek any treatment for several weeks following the July 16, 2020 incident. When he did seek treatment, he saw the same providers that he had been seeing prior to July 16, 2020 for routine follow up visits with no mention of the July 16, 2020 tractor incident. While Claimant did undergo an L3-4 fusion surgery by Dr. Mobley on March 1 and 3, 2021, Dr. Mobley had already recommended this surgery on May 27, 2020, approximately seven weeks before the July 16, 2020 tractor incident even occurred. At that time, Dr. Mobley noted that Claimant would not be able to proceed with the surgery until the winter. In a December 8, 2020 report, PA Viehman in Dr. Drennan's office noted that Claimant was planning to see Dr. Mobley after January 1 to discuss the next steps for surgery, as he will have a change in his insurance plan. The need for the the L3-4 fusion, and Claimant's decision to undergo the surgery at the time that he did, bear no causal relation to the July 16, 2020 tractor incident.

- As Dr. O'Brien explained, and as evidenced by the findings described and the language used by the radiologist in the September 30, 2020 lumbar MRI report, the September 30, 2020 lumbar MRI demonstrated no change compared to the May 21, 2020 lumbar MRI.
-
- Claimant's subjective symptom report was also unchanged on August 4, 2020 as compared to July 7, 2020, based on the medical records from Dr. Drennan's office.

J. Not only does the evidence outlined above support the conclusion that no compensable injury occurred as a result of the July 16, 2020 tractor incident, this evidence also supports the conclusion that Claimant's employment related duties did not aggravate, accelerate or combine with his pre-existing low back condition so as to cause a disability or need for any treatment. Rather, the evidence presented supports a conclusion that Claimant's ongoing pain and subsequent need for treatment, including

surgery was, more probably than not, related to the natural progression of a chronic pre-existing degenerative condition in Claimant's lumbar spine.

K. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a pre-existing infirmity or disease to produce disability or the need for treatment for which workers' compensation is sought. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by employment related activities and not an underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

L. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, as asserted by Respondents, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found, the ALJ credits the opinions of medical records of Dr. Mobley and the testimony of Dr. O'Brien to find and conclude that Claimant's low back pain/dysfunction, more probably than not, is related to and emanating from the natural progression of a pre-existing condition rather than the duties of his employment. Accordingly, Claimant has failed to establish the requisite causal connection between his alleged injury and his work activities. Because Claimant has failed to establish he suffered a compensable injury, his claim must be denied and dismissed. Consequently, his remaining claims need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2)

That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-169-895-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that his June 3, 2021 right shoulder surgery and post-surgical therapy and medications were reasonably necessary to cure or relieve the effects of an industrial injury.

2. Whether Respondents are responsible for payment and/or reimbursement of medical expenses associated with the surgery.

FINDINGS OF FACT

1. On January 27, 2021, Claimant sustained an admitted injury to his right shoulder arising out of the course of his employment with Employer.

2. Claimant's injury occurred when he was moving a sheet of plate steel that had fallen from the bed of his work truck. Claimant lifted the steel, slipped on ice, and felt a sensation in his right shoulder. Claimant reported the incident to Employer on January 27, 2021. The record is insufficient to determine if Claimant indicated he wished to seek medical care, or if Respondents provided Claimant with a list of designated physicians at this time, although Claimant testified that no list was provided.

3. On February 3, 2021, Claimant went to UCHealth Family Medical Clinic for evaluation of his right shoulder. Claimant initially denied his injury was work-related, but accurately described his mechanism of injury. Claimant had decreased range of motion of the right shoulder, with pain on raising the arm higher than 60 degrees abduction or forward flexion, tenderness in the anterior deltoid and decreased strength. Claimant was diagnosed with a right shoulder injury and referred to the Orthopedic Center of the Rockies for further evaluation. (Ex. M).

4. On February 16, 2021, Claimant saw Jeffrey Ebel, D.O., at the Orthopaedic & Spine Center of the Rockies (OCR). Claimant reported he was initially seen by his primary care physician. After examining Claimant, Dr. Ebel recommended a right shoulder MRI, and noted that if Claimant were a candidate for surgical repair, he would be referred to one of the clinic's shoulder specialists. (Ex. 5, BS 400-401 & 411).

5. On February 17, 2021, Claimant underwent a right shoulder MRI at Loveland MRI, which showed "a massive rotator cuff tear with complete tearing of the supraspinatus and infraspinatus tendons," chronic degenerative tearing of the superior labrum, and several acromioclavicular joint arthrosis with joint space widening. (Ex. 3).

6. On March 2, 2021, Claimant saw Christopher Stockburger, M.D., at OCR, on referral from Dr. Ebel. Dr. Stockburger reviewed Claimant's x-rays and MRI study, and conducted an examination. He described Claimant's injury as a "large acute-on-chronic rotator cuff tear with some fatty infiltration and significant retraction," and noted that the

"majority of his joint is well preserved." He recommended surgery, to include a right shoulder arthroscopic rotator cuff repair, subacromial decompression, possible biceps tenotomy, and possible superior capsular reconstruction. (Ex. 5, BS 403-405). Claimant was initially scheduled to undergo surgery on March 18, 2021. (Ex. P, p. 62).

7. On March 16, 2021, Claimant informed Dr. Stockburger's office that his injury was work-related. Dr. Stockburger's office contacted Insurer and was advised that a worker's compensation claim had been filed that day. On March 16, 2021, Dr. Stockburger's office submitted a request for authorization of the surgery to Insurer. Insurer advised that Claimant had not seen an occupational medicine physician yet, and Dr. Stockburger's staff advised him to see a designated physician as soon as possible. (Ex. P, p. 62).

8. On March 19, 2021, Claimant saw Lori Long-Miller, M.D., at Concentra. Dr. Long-Miller was an authorized treating physician (ATP). Dr. Long-Miller examined Claimant and diagnosed a superior labrum anterior-to-posterior (SLAP) tear of the right shoulder, and a traumatic complete tear of the right rotator cuff. Claimant reported he had seen his primary car provider and "then ortho OCP." The ALJ infers OCP is a reference to Orthopaedic & Spine Center of the Rockies and the "ortho" referenced is Dr. Stockburger. Dr. Long-Miller noted that Claimant was initially scheduled for surgery on March 18, 2021 but Claimant's health insurer denied the claim because it was a work-related injury. Dr. Long-Miller indicated that Clamant needed a referral for surgery. In the WC 164 form Dr. Long-Miller completed, she noted that the "Treatment Plan" included only "Orthopedic specialist referral," and noted that the MMI date was unknown because of "surgery." She then referred Claimant to "OCR Ft. Collins" "to have surgery" and instructed Claimant to return 10 days after surgery or within 3 weeks. (Ex. 7). Dr. Long-Miller's referral to "OCR Ft. Collins" was a referral to Dr. Stockburger at the Orthopaedic & Spine Center of the Rockies.

9. On March 30, 2021, William Ciccone, M.D., conducted a medical record review at Insurer's request to opine on the reasonableness, necessity, and relatedness of the surgery requested by Dr. Stockburger. Based on his review of records, Dr. Ciccone opined that Claimant sustained a sprain/strain to the right shoulder and that his "rotator cuff tear is chronic, preexisting and is unrelated to the work event." Dr. Ciccone offered no persuasive rationale for this opinion, and did not address the Claimant's lack of prior symptoms. Dr. Ciccone's statement that "on 3/2/21 the orthopedist reviews the MRI scan and feels the claimant has a large chronic rotator cuff tear with fatty infiltration," is not an accurate characterization of Dr. Stockburger's 3/2/21 MRI review or his diagnosis. While Dr. Stockburger acknowledged that some of Claimant's pathology was chronic, he also indicated Claimant's rotator cuff tear was an "acute -on-chronic" injury, indicating that some portion of Claimant's pathology was acute. Dr. Ciccone also opined that the recommended surgery was not reasonable, necessary, or work-related, based on his opinion that Claimant's pathology was chronic. Dr. Ciccone's opinion regarding the Claimant's injury and the reasonableness, necessity and relatedness of the proposed surgery is not credible or persuasive. (Ex. A).

10. On April 7, 2021, Insurer notified Dr. Stockburger that authorization for surgery was denied based on Dr. Ciccone's opinion. (Ex. C)

11. On April 15, 2021, Claimant returned to Dr. Long-Miller. Dr. Long-Miller addressed Insurer's denial of surgical authorization as follows: "Pt reports surgery denied after ortho review of records, no pt interview or exam. Pt is very clear that he slipped and fell while moving plate and heard and felt shoulder pop on [date of injury]. Prior to injury no shoulder pain or problems or ROM difficulty. Regardless of any findings that ortho feels were pre-existing, this is an injury made worse by work related fall/injury and should therefore be covered." Dr. Long-Miller noted that Claimant was willing to participate in physical therapy and referred him for physical therapy. Dr. Long-Miller further noted "I feel that this is a work-related injury regardless of any chronic findings on MRI because pt reports no pain and full function prior to work fall." She again noted that Claimant was not at MMI because he required surgery. (Ex. 7).

12. Claimant returned to Dr. Long-Miller on April 22, 2021, at which time she noted that Claimant's condition was unchanged and that he was in constant pain. She noted that physical therapy gave a few hours of relief. Finally, Dr. Long-Miller indicated "this is a work-related injury, needs surgery." (Ex. 7).

13. On May 10, 2021, Insurer filed a General Admission of Liability admitting only for medical benefits. (Ex. A).

14. On May 19, 2021, Claimant returned to Dr. Stockburger. Dr. Stockburger described the findings on Claimant's MRI as follows: "He eventually had an MRI demonstrating a large[,] retracted tear with some proximal migration and some evidence of fatty infiltration consistent with some of this being chronic, but clearly had an acute injury at work with significant weakness." He noted that Claimant and done physical therapy, activity modification, anti-inflammatories and continued to have significant functional deficits with a massive rotator cuff tear in a young, health patient without significant arthritis, which I consider a major problem and he certainly is indicated for surgical intervention for this." Dr. Stockburger's impression was "acute-on-chronic massive rotator cuff tear with near pseudoparalysis on exam." Again, he reiterated that he believed surgery was reasonable. Claimant then decided to proceed with surgery. (Ex. 1).

15. On June 3, 2021, Dr. Stockburger performed surgery on Claimant's right shoulder. The procedures performed were a right shoulder rotator cuff repair, right shoulder biceps tenotomy and right shoulder acromia decompression. (Ex. 1).

16. At follow up visits, Dr. Stockburger indicated that Claimant was doing well with physical therapy at ProActive physical therapy, and that he was receiving therapy multiple times per week. (Ex. 1). By September 29, 2021, Dr. Stockburger noted that Claimant had weaned out of therapy and was progressing with strength and motion., with no major concerns. He was scheduled for a final follow up visit six weeks later, which would have occurred sometime in mid-November 2021. (Ex. 1).

17. Claimant credibly testified that before January 27, 2021, that he had no prior injuries to his right shoulder, and no prior shoulder treatment. Claimant's medical records from before January 27, 2021, show no prior injuries to Claimant's shoulder, although he did have some prior issues with pain radiating to his shoulder from a cervical spine injury. Claimant testified that on January 27, 2021, he felt a pop in his shoulder and felt immediate symptoms. Claimant also had difficulty raising his arm above his head. Claimant testified that after Insurer denied prior authorization for his surgery, he went to OCR for surgery, and that a claim was submitted to his personal insurer. He testified that after surgery, his shoulder rapidly improved. Following surgery, Claimant had twenty-two physical therapy visits until authorization by his personal health insurance expired. Claimant paid co-pays for physical therapy and surgery, and paid for medications. Claimant testified he would like to continue therapy if warranted.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). “The claimant bears the burden of proof to establish that a need for medical treatment was proximately caused by an injury arising out of and in the course of employment.” *In re Claim of Daniely*, W.C., No. 5-124-750 (ICAO, Feb. 26, 2021), citing 8-41-301(1), C.R.S,. and *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990), “Further, treatment necessitated by an industrial aggravation or acceleration of a pre-existing condition is compensable.” *Id*. Whether medical treatment is reasonable and necessary is a question of fact for determination by the ALJ. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

In addition to being “reasonable and necessary,” treatment must be “authorized.” “‘Authorization’ and the reasonableness of treatment are separate and distinct issues. *Repp v. Prowers Med. Center*, W.C. No. 4-530-649 (ICAO Sep. 12, 2005), *citing One Hour Cleaners v. Indus. Claim Appeals Office, 914 P.2d 501* (Colo. App. 1995). "Authorization" refers to the physician's legal status to treat the injury at the respondents' expense, and not the particular treatment provided. *Popke v. Indus. Claim Appeals Office*, 797 P.2d 677 (Colo. App. 1997); s*ee also*, *One Hour Cleaners*, 914 P.2d at 504 (“authorized medical benefits” refers to legal authority of provider to deliver care). All treatment provided by an “authorized treating physician” is “authorized.” *Bray v. Hayden School Dist. RE-1*, W.C. No. 4-418-310 (ICAO Apr. 11, 2000). “However, treatment is not compensable unless it is also ‘reasonable and necessary’ to cure or relieve the effects of the industrial injury.” *Id*.

An employer is liable for medical expenses when, as part of the normal progression of authorized treatment, an authorized treating physician refers the claimant to other providers for additional services. *Greager v. Indus. Comm’n*, 701 P.2d 168 (Colo. App. 1985). If a claimant obtains treatment from a provider who is not “authorized,” a respondent is not required to pay for it. Section 8-43-404(7), C.R.S; *Yeck*, *supra; Pickett v. Colo. State Hosp.*, 513 P.2d 228 (Colo. App. 1973). The existence of a valid referral is a question of fact. *Suetrack USA v. Indus. Claim Appeals Office*, 902 P. 2d 854 (Colo. App. 1995).

Claimant has established by a preponderance of the evidence that his June 3, 2021 right shoulder surgery was reasonable and necessary to cure or relieve the effects of his industrial injury. Claimant’s ATP, Dr. Miller, opined that Claimant “needs surgery” on his right shoulder and that the need for surgery was the result of his industrial injury. Further Dr. Stockburger also opined that the surgery was reasonable and necessary

and was the result of an "acute-on-chronic" injury. Dr. Ciccone's opinion that Claimant sustained only a strain/sprain of his right shoulder is not credible or persuasive. Given the fact that Claimant was asymptomatic and fully functional prior to his industrial injury, and experienced significant symptoms and limitations not relieved by conservative treatment, the ALJ concludes that the surgery was reasonable and necessary to cure or relieve the effects of Claimant's work injury. Moreover, the ALJ concludes that post-surgical therapy and medications were also reasonable and necessary to cure or relieve the effects of Claimant's work injury.

Respondents appear to argue that Claimant's surgery was not "authorized" for two reasons. First, that Dr. Stockburger was not an ATP, and second, that Insurer denied prior authorization under W.C.R.P. 16. The ALJ concludes that Dr. Stockburger was an "authorized treating provider" as of March 19, 2021, and therefore the treatment was "authorized." On that date, Dr. Miller referred Claimant to Dr. Stockburger for surgery. By virtue of this referral, Dr. Stockburger became an ATP. Thus, any treatment Dr. Stockburger provided after March 19, 2021 was "authorized."

That Claimant underwent surgery after Insurer's denial of prior authorization under W.C.R.P. 16 does not lead to a different conclusion. The purpose of "prior authorization" under W.C.R.P. Rule 16, is to "offer[] protection to the authorized treating physician from providing treatment which the insurer considers non-compensable. In the absence of pre-authorization, a treating physician's treatment expenses are not protected." *Repp, supra.* "However, nothing in [Rule 16] precludes a claimant from proving the disputed treatment is reasonable, necessary, and authorized at a subsequent evidentiary hearing." *Id*. Even where a physician fails to comply with Rule 16 and seek prior authorization for a procedure, a claimant is not precluded from having the issue of medical treatment adjudicated by an ALJ and obtaining an order which requires respondents to pay for treatment. *Arszman v. Target Corp.*, W.C. No. 4-798-406 (ICAO Dec. 15, 2011).

Because the June 3, 2021 surgery was reasonable and necessary to cure or relieve the effects of Claimant's industrial injury, and Dr. Stockburger was an ATP within the chain of referral from Dr. Miller, Respondents are responsible for reimbursement of the surgery and post-surgical therapy. Pursuant to § 8-42-101(6)(a), C.R.S., Claimant, and his health insurer, are entitled to reimbursement for amounts paid for treatment rendered by Dr. Stockburger after March 19, 2021, Claimant's post-surgical therapy and post-surgical medications.

ORDER

It is therefore ordered that:

1. Claimant established by a preponderance of the evidence that his June 3, 2021 right shoulder surgery and post-surgical therapy and medications were reasonably necessary to cure or relieve the effects of an industrial injury.

2. Respondents are responsible for payment and/or reimbursement of medical expenses associated with Claimant's June 3, 2021 surgery, including post-surgical therapy and medications.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 7, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

Whether Claimant has proven by a preponderance of the evidence that the left L5-S1 Artificial Disc Replacement (ADR) surgery requested by Stephen Pehler, M.D. is reasonable, necessary and causally related to his May 11, 2020 industrial injury.

FINDINGS OF FACT

1. Claimant is a 23 year old male who worked as a concrete finisher for Employer. On about May 11, 2020 Claimant was picking up a concrete form and dragging it over a grassy area at work. He lost his balance, stepped into a hole with his right foot and twisted his lumbar spine to the left side. He immediately experienced lower back pain.

2. Claimant continued to work for about one week before seeking medical treatment. On May 18, 2020 he visited Denver Health and reported that about one week earlier he had stepped into a hole and twisted. He immediately suffered lower back and left leg pain.

3. On May 21, 2020 Claimant visited Lutheran Medical Center. He reported left leg pain for the previous five days and worsening back pain for the past 10 days. Claimant was diagnosed with acute bilateral lower back pain with left-sided sciatica.

4. On May 27, 2020 Employer completed a First Report of Injury. Under the mechanism of injury section, Employer noted Claimant "stepped wrong." Claimant then began treatment at Workwell Occupational Medicine with Authorized Treating Physician (ATP) Brenden Matus, M.D.

5. On June 10, 2020 Claimant underwent a lumbar MRI. The imaging revealed a broad-based, central and left-sided disc protrusion mildly indenting the dural sac and markedly deforming the left S1 root sleeve. Dr. Matus referred Claimant for physical therapy and to Samuel Chan, M.D. Dr. Chan administered two sets of lumbar Epidural Steroid Injections (ESIs). Dr. Matus remarked that the ESIs provided a diagnostic response. On August 14, 2020 Dr. Matus referred Claimant to Stephen Pehler, M.D. for an orthopedic surgical evaluation.

6. Dr. Pehler reviewed Claimant's lumbar imaging. He noted that the x-rays revealed mild spondylosis and the MRI reflected a left-sided disc herniation at L5-S1 that compressed the descending S1 nerve root. Based on the failure of conservative care and the imaging findings, Dr. Pehler recommended a left-sided L5-S1 microdiscectomy.

7. On November 10, 2020 Claimant underwent a left-sided L5-S1 microdiscectomy. Dr. Pehler documented an extreme amount of pressure from the disc herniation that was causing severe compression of the descending S1 nerve root. He

also addressed a large disc herniation with an extruded fragment. Dr. Pehler testified that there were no complications during the surgery.

8. After his microdiscectomy, Claimant continued to receive treatment through Workwell. Claimant acknowledged that his lower back condition improved for about five months following surgery. The medical records support Claimant's account of his recovery. For example, on December 2, 2020 Claimant notified Maria Kaplan, PA-C at Dr. Pehler's office that overall he was doing quite well and had experienced significant relief of both his lower back and left lower extremity pain. By December 17, 2020 Dr. Chan noted Claimant was feeling much better and no longer using narcotics. On December 23, 2020 Dr. Matus reported Claimant's overall pain had improved with less frequent leg symptoms. He assigned work restrictions of "lift and carry 5 pounds max and only around waist/chest area. No lifting from ground level. Avoid repetitive bending, twisting or stooping at the waist. Wear back brace with activity."

9. On January 8, 2021 Dr. Matus reported Claimant was being weaned from his back brace, his pain level was 3/10 and his work restrictions were decreased. By January 29, 2021 Claimant's restrictions were reduced to the following: "[l]imit lift and carry 15 pounds max and only around waist/chest area. Avoid repetitive bending, twisting or stooping at the waist."

10. On February 8, 2021 Claimant returned to Dr. Pehler for an examination. Claimant reported that overall he was feeling well, with significant improvement in his lower back and leg symptoms. Because Claimant was progressing well three months after surgery, Dr. Pehler released him to full duty work without restrictions. On February 9, 2021 Dr. Chan also remarked that Claimant was doing quite well with pain levels of 3/10.

11. On February 12, 2021 Claimant again visited Workwell for an evaluation. Teresa Ayandele, PA-C noted Dr. Pehler had removed Claimant's work restrictions. PA-C Ayandele advised Claimant to continue physical therapy and home exercises. She remarked that Claimant should follow-up in two weeks with the possible "transition to work conditioning." Although PA-C Ayandele had noted that Dr. Pehler removed Claimant's work restrictions, she stated that the limitations remained unchanged as follows: "[l]imit lift and carry 20 pounds max and only around waist/chest area. Avoid repetitive bending, twisting or stooping at the waist."

12. On March 11, 2021 Claimant visited Dr. Chan for an evaluation. Dr. Chan recounted that Claimant had undergone a discectomy with Dr. Pehler on November 10, 2020 and was improving. Claimant had undergone physical therapy, massage therapy and chiropractic care. Dr. Chan commented that Claimant's work restrictions had been removed but he had not yet returned to work. He summarized that there was no specific change to Claimant's current treatment plan and he should continue with postsurgical protocols.

13. Claimant testified that his condition significantly worsened following an incident at home while playing with one of his children in early March, 2021. He specifically noted that, while he was playing with his daughter, he picked up a ball, made a sudden twist, and immediately felt pain in his back.

14. On March 12, 2021 Claimant returned to Workwell for an examination. PA-C Ayandele noted that Claimant had increased his activities. However, he aggravated his lower back and leg pain while playing with his children in the yard. Claimant's pain increased to 5/10 and PA-C Ayandele characterized the incident as a "set-back." Similarly, on March 26, 2021 Jones Logan, D.O. of Workwell commented that Claimant had aggravated his condition playing with his kids a few weeks earlier. Dr. Logan referred Claimant for a new lumbar MRI.

15. On April 2, 2021 Claimant underwent a lumbar MRI. The imaging revealed a broad-based central and right-sided disc protrusion mildly indenting the dural sac and the left S1 nerve root sleeve.

16. On April 12, 2021 Claimant returned to Dr. Pehler for an evaluation. Dr. Pehler documented that a few weeks earlier Claimant was playing with his kids and suffered a twisting event. Claimant described a recurrence of symptoms in his left lower extremity. After reviewing Claimant's lumbar MRI, Dr. Pehler remarked that Claimant had a slight repeat disc protrusion at the left L5-S1 level. Dr. Pehler recommended conservative treatment.

17. On May 3, 2021 Claimant visited Emily Halla, PA at Dr. Pehler's office. PA Halla reported that Claimant had undergone a left-sided L5 microdiscectomy seven months earlier. She remarked that Claimant suffered an injury a couple months ago that caused a repeat protrusion at the left L5-S1 level. PA Halla recounted that Claimant's pain was located in his lower back and radiated to his left buttock through his legs down to his toes with associated numbness, tingling and burning.

18. On June 4, 2021 Claimant again visited Dr. Pehler for an evaluation. Dr. Pehler noted Claimant had complete symptom recurrence with progressive right-sided buttock pain. He explained that Dr. Chan had administered left L5-S1 ESIs that provided only minimal relief. Because of Claimant's fairly broad-based disc protrusion, Dr. Pehler requested a left L5-S1 Artificial Disc Replacement (ADR).

19. On June 16, 2021 orthopedic surgeon E. Patrick Curry, M.D. reviewed Dr. Pehler's surgical request. Dr. Curry recommended denial of the ADR because it did not meet the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). He explained that lumbar ADRs are only appropriate in cases where surgical fusion is an option. However, fusion surgery was not a consideration for Claimant. Moreover, ADRs are recommended for discogenic lower back pain rather than Claimant's radicular symptoms. On June 17, 2021, Insurer denied Dr. Pehler's ADR request based upon Dr. Curry's opinion.

20. On August 19, 2021 Claimant applied for a hearing asserting that Dr. Pehler's L5-S1 ADR request was reasonable, necessary and related to the present claim. On August 27, 2021 Respondents filed a response to the application for hearing contending that Dr. Pehler's ADR request was not reasonable, necessary and related to his May 11, 2020 work injury.

21. On November 3, 2021 Claimant underwent an independent medical examination with orthopedic spine surgeon Brian Reiss, M.D. Dr. Reiss reviewed Claimant's medical records, performed a physical examination and considered Claimant's April 2, 2021 lumbar MRI. Based upon his evaluation and experience, Dr. Reiss determined that a L5-S1 ADR was not reasonable, necessary or causally related to Claimant's industrial injury. He further noted that a repeat microdiscectomy was the best surgical option.

22. Dr. Pehler testified at the hearing in this matter. He explained that Claimant substantially improved following his November 10, 2020 microdiscectomy, but then suffered a recurrence. Dr. Pehler specified that the recurrent herniation was caused by Claimant's accident at home in early March, 2021 while playing with his children. He acknowledged that he would not have recommended the ADR absent the incident at home. The recurrent herniation and larger, broader protrusion caused the need for the ADR.

23. Dr. Pehler remarked that, based on Claimant's mechanism of injury in which he re-herniated his disc at home, his chances of an additional herniation were very high. Replacing the disc through an ADR would remove any chance of another disc herniation and was the best and quickest method to return Claimant to full function. Dr. Pehler explained that Claimant is a good candidate for an ADR. He emphasized that Claimant's April 2, 2021 MRI clearly demonstrated a larger, broad-based protrusion that affects his right side with a recurrence on the left side.

24. Rule 17, Ex. 1 (G)(11)(a), addresses the criteria for a lumbar ADR. Notably, the patient must meet fusion criteria, and "if the patient is not a candidate for a fusion, a disc replacement should not be considered." Dr. Pehler initially testified that Claimant satisfied the criteria delineated in the *Guidelines* for an ADR. He specified that Claimant has single level disease, has no facet arthropathy or arthritis, has failed conservative treatment, continues to be symptomatic, has a single pain generator, has a component of spondylosis, and has some degeneration at the L5-S1 level. However, he also acknowledged that Claimant is not a candidate for fusion surgery.

25. Dr. Reiss maintained that the ADR proposed by Dr. Pehler is not reasonable and recommended a microdiscectomy as the proper surgical procedure. He explained that a lumbar ADR is a much more aggressive, complex, risky procedure than a microdiscectomy. In a young patient like Claimant, an ADR will cause additional stress and issues with the structures around the artificial disc, the device will not last forever, and removing or revising an artificial disc is very difficult. Dr. Reiss noted that Claimant's central disc bulge was present prior to the first surgery, still contained within the annulus and was not on the verge of exploding. He thus concluded that a repeat microdiscectomy would be sufficient to address Claimant's condition. Dr. Reiss detailed that there was only a 5-10% possibility of a re-herniation following a repeat microdiscectomy. He thus strongly disagreed with Dr. Pehler's opinion that Claimant has a "high probability" of a recurrent herniation if he undergoes a repeat microdiscectomy.

26. Dr. Reiss agreed that Claimant was doing well prior to his early March, 2021 accident at home. However, Claimant likely suffered a recurrent L5-S1 disc herniation

when twisting while playing at home with his children. Claimant was susceptible to easily herniating his disc with loading and twisting even before his work injury. Specifically, Claimant initially injured his lower back on May 11, 2020 by simply stepping into a small hole and twisting. Dr. Reiss thus reasoned that it is more probable than not that the loading and twisting incident at home in early March, 2021 caused the recurrent disc herniation. Furthermore, Claimant likely would have herniated his disc during the event at home even if he had not had the prior microdiscectomy.

27. Claimant has failed to prove that it is more probably true than not that the left L5-S1 ADR surgery requested by Dr. Pehler is reasonable, necessary and causally related to his May 11, 2020 industrial injury. Initially, on about May 11, 2020 Claimant stepped into a hole and twisted his lumbar spine to the left side while working for Employer. He immediately experienced lower back pain. After receiving conservative care, he underwent a lumbar MRI. The imaging revealed a broad-based, central and left-sided disc protrusion. Based on the failure of conservative care and the imaging studies, Dr. Pehler recommended a left-sided L5-S1 microdiscectomy.

28. On November 10, 2020 Claimant underwent a left-sided L5-S1 microdiscectomy. By February 8, 2021 Claimant reported significant improvement in his lower back and leg symptoms. Because Claimant was progressing well three months after surgery, Dr. Pehler released him to full duty work without restrictions. On March 11, 2021 Dr. Chan remarked that Claimant was still improving after his microdiscectomy. Claimant had received physical therapy, massage therapy and chiropractic care. Dr. Chan summarized that there was no specific change to Claimant's current treatment plan and he should continue with postsurgical protocols.

29. Claimant testified that his condition significantly worsened following an incident at home in early March, 2021. He specifically noted that, while he was playing with his daughter, he picked up a ball, made a sudden twisting movement, and immediately felt back pain. On March 12, 2021 PA-C Ayandele noted that Claimant had aggravated his lower back and leg pain while playing with his children in the yard. Claimant's pain increased to 5/10 and PA-C Ayandele characterized the incident as a "set-back." Similarly, on March 26, 2021 Dr. Logan commented that Claimant had aggravated his condition while playing with his kids a few weeks earlier and referred him for a new lumbar MRI. The April 2, 2021 lumbar MRI revealed a broad-based, central and right-sided disc protrusion mildly indenting the dural sac and the left S1 nerve root sleeve. On June 4, 2021 Dr. Pehler noted Claimant had complete symptom recurrence with progressive right-sided buttock pain when he suffered a twisting event while playing with his children. He remarked that Dr. Chan had administered left L5-S1 ESIs and Claimant obtained only minimal relief. Because Dr. Pehler was concerned that a revision microdiscectomy would only provide minimal relief, he recommended an L5-S1 ADR.

30. Dr. Reiss explained that Claimant suffered a recurrent L5-S1 disc herniation while at home playing with his children in early March, 2021. Claimant was susceptible to easily herniating his disc with loading and twisting even before his work injury. Specifically, Claimant initially injured his lower back on May 11, 2020 by simply stepping into a small hole and twisting. Dr. Reiss thus reasoned that it is more probable than not that the loading and twisting incident at home in early March, 2021 caused the recurrent

disc herniation. Furthermore, Claimant likely would have herniated his disc during the event at home even if he had not undergone the prior microdiscectomy. Dr. Pehler also noted that, following the November 10, 2020 microdiscectomy, Claimant substantially improved, but suffered a recurrent disc herniation. He agreed that the recurrent herniation was caused by Claimant's accident at home in early March, 2021 while playing with his children. Dr. Pehler remarked that he would not have recommended the ADR absent the event at home.

31. The record reveals that Claimant, Dr. Reiss and Dr. Pehler agreed the accident at home in early March, 2021 significantly changed Claimant's condition. Following his intervening accident, Claimant's lower back and leg symptoms substantially worsened, his pain level increased, he required extensive treatment not contemplated before the accident (an MRI, ESIs, and surgery), and his post accident lumbar MRI identified a recurrent disc herniation. In fact, Claimant's April 2, 2021 lumbar MRI revealed not only a broad-based, central disc protrusion that existed prior to his microdiscectomy, but also a right-sided disc protrusion. The incident at home in early March, 2021 triggered Claimant's need for additional surgery. Because of the intervening event at home Claimant's recurrent disc herniation was unrelated to his May 11, 2020 industrial injury.

32. Based on the medical records and persuasive medical opinions, the early March, 2021 accident constituted an intervening event that severed the causal connection to Claimant's original May 11, 2020 work-related accident. The intervening event triggered Claimant's disability. Accordingly, Claimant has failed to establish that his recurrent disc herniation is causally related to his May 11, 2020 work accident. Accordingly, Claimant's request for an L5-S1 ADR is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Indus. Claim Appeals Off.,* 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang,* W.C. No. 4-450-747 (ICAO, May 16, 2005). No liability exists when a later accident occurs as the direct result of an intervening cause. *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). However, the intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens,* 49 P.3d at 1188. The new injury is not compensable "merely because the later accident might or would not have happened if the employee had retained all his former powers." *In Re Chavez,* W.C. No. 4-499-370 (ICAO, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

5. As found, Claimant has failed to prove by a preponderance of the evidence that the left L5-S1 ADR surgery requested by Dr. Pehler is reasonable, necessary and causally related to his May 11, 2020 industrial injury. Initially, on about May 11, 2020 Claimant stepped into a hole and twisted his lumbar spine to the left side while working for Employer. He immediately experienced lower back pain. After receiving conservative care, he underwent a lumbar MRI. The imaging revealed a broad-based, central and left-sided disc protrusion. Based on the failure of conservative care and the imaging studies, Dr. Pehler recommended a left-sided L5-S1 microdiscectomy.

6. As found. on November 10, 2020 Claimant underwent a left-sided L5-S1 microdiscectomy. By February 8, 2021 Claimant reported significant improvement in his lower back and leg symptoms. Because Claimant was progressing well three months after surgery, Dr. Pehler released him to full duty work without restrictions. On March 11, 2021 Dr. Chan remarked that Claimant was still improving after his microdiscectomy. Claimant had received physical therapy, massage therapy and chiropractic care. Dr. Chan summarized that there was no specific change to Claimant's current treatment plan and he should continue with postsurgical protocols.

7. As found, Claimant testified that his condition significantly worsened following an incident at home in early March, 2021. He specifically noted that, while he was playing with his daughter, he picked up a ball, made a sudden twisting movement, and immediately felt back pain. On March 12, 2021 PA-C Ayandele noted that Claimant had aggravated his lower back and leg pain while playing with his children in the yard. Claimant's pain increased to 5/10 and PA-C Ayandele characterized the incident as a "set-back." Similarly, on March 26, 2021 Dr. Logan commented that Claimant had aggravated his condition while playing with his kids a few weeks earlier and referred him

for a new lumbar MRI. The April 2, 2021 lumbar MRI revealed a broad-based, central and right-sided disc protrusion mildly indenting the dural sac and the left S1 nerve root sleeve. On June 4, 2021 Dr. Pehler noted Claimant had complete symptom recurrence with progressive right-sided buttock pain when he suffered a twisting event while playing with his children. He remarked that Dr. Chan had administered left L5-S1 ESIs and Claimant obtained only minimal relief. Because Dr. Pehler was concerned that a revision microdiscectomy would only provide minimal relief, he recommended an L5-S1 ADR.

8. As found, Dr. Reiss explained that Claimant suffered a recurrent L5-S1 disc herniation while at home playing with his children in early March, 2021. Claimant was susceptible to easily herniating his disc with loading and twisting even before his work injury. Specifically, Claimant initially injured his lower back on May 11, 2020 by simply stepping into a small hole and twisting. Dr. Reiss thus reasoned that it is more probable than not that the loading and twisting incident at home in early March, 2021 caused the recurrent disc herniation. Furthermore, Claimant likely would have herniated his disc during the event at home even if he had not undergone the prior microdiscectomy. Dr. Pehler also noted that, following the November 10, 2020 microdiscectomy, Claimant substantially improved, but suffered a recurrent disc herniation. He agreed that the recurrent herniation was caused by Claimant's accident at home in early March, 2021 while playing with his children. Dr. Pehler remarked that he would not have recommended the ADR absent the event at home.

9. As found, the record reveals that Claimant, Dr. Reiss and Dr. Pehler agreed the accident at home in early March, 2021 significantly changed Claimant's condition. Following his intervening accident, Claimant's lower back and leg symptoms substantially worsened, his pain level increased, he required extensive treatment not contemplated before the accident (an MRI, ESIs, and surgery), and his post accident lumbar MRI identified a recurrent disc herniation. In fact, Claimant's April 2, 2021 lumbar MRI revealed not only a broad-based, central disc protrusion that existed prior to his microdiscectomy, but also a right-sided disc protrusion. The incident at home in early March, 2021 triggered Claimant's need for additional surgery. Because of the intervening event at home Claimant's recurrent disc herniation was unrelated to his May 11, 2020 industrial injury.

10. As found, Based on the medical records and persuasive medical opinions, the early March, 2021 accident constituted an intervening event that severed the causal connection to Claimant's original May 11, 2020 work-related accident. The intervening event triggered Claimant's disability. Accordingly, Claimant has failed to establish that his recurrent disc herniation is causally related to his May 11, 2020 work accident. Accordingly, Claimant's request for an L5-S1 ADR is denied and dismissed. *See Vargas v. United Parcel Service*, W.C. No. 4-325-149, (ICAO Aug. 29, 2002) (where the claimant underwent a spinal fusion and was involved in a motor vehicle accident six months after reaching MMI that worsened his symptoms and required additional back surgery not previously contemplated, the motor vehicle accident constituted an intervening event that severed the causal connection between the claimant's initial fusion surgery and need for additional medical treatment); *Wingstrom v. Wal-Mart Stores, Inc.*, W.C. No. 4-633-188 (ICAO July 14, 2010) (where the claimant reached MMI for her admitted lower back injury in October 2004, throwing a blanket onto her bed in 2008 was an intervening event

because the claimant's condition was stable until August 2008 and her work injury related to the left side of her lower back while her complaints after August 2008 involved the right side of her lower back). *Compare Reynal v. Home Depot USA, Inc.*, W.C. No. 4-585-674-05 (ICAO June 25, 2012) (where the claimant suffered a lower back injury in 2003 while working for one employer and developed additional back pain in 2011 while working for a different employer, the 2011 injury was not an intervening event and the claimant was entitled to permanent total disability benefits based on his 2003 work injury because the 2011 incident was a "temporary exacerbation [that] did not result in . . . a new injury.").

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for an L5-S1 ADR is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: January 7, 2022.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the Claimant suffered a right knee injury and is entitled to a lower extremity scheduled impairment.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage was $559.79. The parties further stated that Respondents would be filing an admission with regard to the impairment of the cervical spine provided by the Division or Workers' Compensation Independent Medical Examiner, Dr. Stephen Lindenbaum of 17% whole person impairment.

FINDINGS OF FACT

Based on the evidence presented, the Judge enters the following findings of fact:

1. Claimant was 68 years old at the time of the hearing and was working for Employer as a shuttle driver, until approximately April 2020 when his Employment was terminated due to the COVID-19 pandemic. His job duties included escorting customers, driving customers to and from the dealership, shoveling snow off the sidewalks, throwing down deicer, cleaning off snow from the vehicles and driving them to the service areas.

2. Claimant testified that he had had a prior work related injury to his left knee, including treatment, but never had any problems with the right knee prior to the admitted work related accident.

3. On February 7, 2020 he was exiting the west door of the service building, which was the door used by the employees. He proceeded to cross a parking lot that had a slight incline. There was a dusting of snow on the ground and Claimant slipped and fell. He testified that his legs went out from under him, hyperextending the right knee and landed on his right side, hitting his head on the concrete, which knocked his hat and hearing aids off. Claimant continued to work the rest of the day, mainly sitting in the waiting area, but did not report the injury that day. He reported the injury to his supervisor the following Monday, February 10, 2020, his next scheduled shift. Claimant stated that he had initial pain in his right knee, neck, right shoulder and back. He requested medical care and was sent to Concentra.

4. Claimant was first seen on February 10, 2020 by Dr. Nancy Strain at Concentra Medical Centers in Lakewood. Dr. Strain documented that Claimant presented with a slip and fall, right knee and shoulder pain, and hit his head. She reported that Claimant was not sure what happened to his knee but that it "pops and clicks very

loud with certain movements." He reported that he had no prior right knee problems. Dr. Strain further noted that the pain in the knee was moderate, had clicking and stiffness, no decreased range of motion, no swelling, and was exacerbating by using the stairs. On exam she noted that there was tenderness over the medial joint line, had pain with range of motion, and had a positive medial Apley's grind test.[1] She assessed an internal derangement of the right knee; ordered x-rays and an MRI of the right knee; and returned Claimant to full work duties.

5. The First Report of Injury was completed on February 12, 2020 and specifically noted that the body part affected was the lower extremities—knee, falling backwards hitting his right side shoulder.

6. Claimant retuned to see Dr. Strain on February 13, 2020 and she changed restrictions to lift, push and pull up to 20 lbs. occasionally but was awaiting the MRI results.

7. An MRI read by Dr. Michael Otte performed on February 24, 2021 showed posterior horn medial meniscus tear through the root ligament implantation and debris in the posterior joint line, as well as fibrillation in the posterior horn lateral meniscus root implantation. Claimant had osteoarthritis in all three compartments and intact ligaments and was developing osteophytes along the extensor mechanism from the patella. Dr. Otte noted particularly that the medial collateral ligament was intact and free from sprain pattern. He found no edema in the lateral collateral ligament or conjoined tendon and that the soft tissue and neurovascular structures were unremarkable. The only moderate edema was in the soleus muscle.[2]

8. Claimant was evaluated by Dr. Kathryn Bird, of the Littleton Concentra office, on March 4, 2020. Claimant reported that any symptoms of the right knee were getting better as his wife was doing massage as she was a massage therapist and he continued working modified duty. On exam she found a positive lateral McMurray test and positive medial McMurray test and positive Thessaly's.[3] She diagnosed a right knee strain. However, she noted that the knee was getting better so they would be focusing on his right shoulder complaints. She continued the prior restrictions at that time. She referred Claimant to physical therapy.

9. Claimant saw physical therapist Kenneth Marshall on March 4, 2020. Mr. Marshall noted Claimant was diagnosed with a right knee strain and recommended therapy to address the strain and improve range of motion and proceeded with neuromuscular reeducation, exercise, hot packs and electrical stimulation.

[1] Apley's grind test or Apley Compression test is used to evaluate patients for problems of the meniscus in the knee.
[2] Soleus muscle is located on the back of the lower leg from the shin bone to the heel bone as part of the Achilles tendon.
[3] Tests that assess detection of meniscal tears.

10. Dr. Bird rechecked Claimant on March 16, 2020 and noted that Claimant was taking no medications at that time. There was no notation of Claimant complaining of knee pain during this visit.

11. On March 19, 2020 Claimant was evaluated by Dr. Failinger primarily for the right shoulder and on exam showed mild crepitus and focal medial joint line pain. Minimal and benign physical examination findings were found by Dr. Failinger during his examination of the right knee. Dr. Failinger assessed medial compartment degenerative joint disease, with meniscus tear. At that time Dr. Failinger suggested cortisone injection for the right knee, which Claimant declined, in exchange for ongoing therapy.

12. Claimant returned to see Dr. Failinger on April 16, 2020 and Claimant advised that he thought his knee was better and that both therapy and time were helping with his knee symptoms.

13. On April 17, 2020 Dr. James Linberg, an orthopedic surgeon performed a medical records review and assessed that Claimant had significant preexisting arthritis and a posterior horn tear, which were not caused by the slip and fall injury but by wear and tear with age.

14. On April 20, 2020 Dr. Bird examined the right knee and stated that the appearance of the right knee was normal, had normal strength, palpation and tone, though had some tenderness over the lateral joint line.

15. On April 21, 2020 Dr. Allison Fall examined Claimant and stated that Claimant's right knee was doing better. The remainder of the three page report concerned only other body parts.

16. Dr. Failinger examined Claimant on April 23, 2020 but only focused on the right shoulder complaints.

17. On May 12, 2020 Claimant reported to Dr. Bird some pain in the right knee with a similar evaluation as the last. The majority of the evaluation and complaints involved the right shoulder and neck. She continued to recommend physical therapy.

18. Claimant was attended by Dr. Robert Kawasaki, a physiatrist, who only mentions in passing Claimant's right knee injury and specifically reported that Claimant reported his right knee was doing much better and was "not problematic." There is also mention that Claimant had difficulty with toe walking and heel walking related to balance related to the head and neck injury, as well as right foot pain from an old injury. Subsequent reports are equally limited regarding any mention of right knee problems. For, example on February 16, 2021, Dr. Kawasaki stated that Claimant had treated for right knee pain. Dr. Kawasaki noted that symptoms were as indicated in the history and physical. "Otherwise negative for other joint pain, need for walking aids, muscle cramps, joint stiffness, fractures, pain elsewhere." The report only addressed pain in the shoulder and neck.

19. Claimant made no complaints of knee problems on August 31, 2020 when he was evaluated by Dr. Bird. Most of that evaluation involved the shoulder and neck complaints and denials of care for them. The only diagnosis was for the right shoulder. He returned for assessment with Dr. Bird on October 1, 2020. While he did complain of right knee pain at that time he reported to Dr. Bird that his knee problems had improved with physical therapy. Again, she did not provide an assessment or treatment recommendations for the knee. On October 20, 2020 Dr. Bird again evaluated Claimant, failed to examine or diagnose any right knee condition, and reviewed the plan for treatment and diagnosis with Claimant, who expressed understanding.

20. Claimant was placed at maximum medical improvement by Dr. Bird on November 11, 2020. She assigned an impairment rating for loss of range of motion of the lower extremity, though she stated that the right knee MRI findings cannot be attributed to this work injury. She provided restrictions with regard to the upper extremity injury including lifting ten pounds constantly and no lifting overheard. On February 17, 2021 Dr. Bird stated, because Claimant reported he was quite functional with the right knee, that an impairment was inappropriate, revising the impairment to only rate the cervical spine.

21. On April 21, 2021 Claimant underwent a DIME with Dr. Stephen Lindenbaum. He noted that Claimant's main complaint was his cervical spine. The DIME physician noted on exam that Claimant had full extension and some limitation on flexion of the right knee, but no instability and Claimant had measurements of both thighs at equal distance above the knee with no difference in circumference and no evidence of effusion. Dr. Lindenbaum stated that the MRI showed evidence of chronic chondromalacia of all three compartments that contributed to his meniscal abnormality as well as the fact that Claimant is grossly overweight. He stated that he provided an impairment of the right lower extremity based on the fact that Claimant had no history of prior injury to the right knee.

22. The ALJ credits the Claimant's testimony and reports of Dr. Bird and Dr. Failinger that Claimant sustained a strain of the right knee on February 7, 2020. Claimant proved by a preponderance of the evidence that he sustained a right knee strain when he hyperextended his right lower extremity when he slipped and fell on ice in the course and scope of his employment with Employer.

23. The ALJ credits the reports of Drs. Bird, Dr. Failinger, and Dr. Kawasaki that physical therapy and the massage therapy provided by Claimant's wife improved the right knee strain, over the contrary report of Dr. Lindenbaum. The ALJ further credits the report of Dr. Lindberg (in part) that the significant preexisting arthritis and a posterior horn tear, were not caused by the slip and fall injury but by wear and tear with age. Claimant failed to show by a preponderance of the evidence that Claimant is entitled to an impairment rating for the right lower extremity.

24. Evidence and inference contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Permanent Impairment

Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error.

See Gonzales v. Browning Ferris Industries of Colorado, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the *AMA Guides* in his opinions.

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in Sec. 8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of Sec. 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). In *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) the court, citing *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996), noted that whether a particular component of the Claimant's overall medical impairment was caused by the industrial injury is an inherent part of the rating process under the *AMA Guides*. Therefore, the *Egan* court determined that in order to challenge and overcome the causation conclusion by the DIME physician, a party must present clear and convincing evidence. However, the *Egan* court further explained that the statutory scheme, requiring causation questions to be challenged through a DIME, applies only to injuries resulting in whole person impairment. When there is a dispute concerning causation or relatedness in a case involving only a scheduled impairment, the ALJ continues to have jurisdiction to resolve the dispute. The Division IME physician's causation determination is not afforded any special weight in a scheduled disability and the increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. The determination of the impairment rating by the DIME physician regarding a scheduled impairment is thus not entitled to presumptive effect, including any prerequisite findings of relatedness. *Yeutter v. Industrial Claim Appeals Office*, 487 P.3.d 1007 (Colo. App. 2019); *Morris v. Olsen Heating & Plumbing Co.*, No. 4-980-171-002 (ICAO, July 6, 2018).

Claimant has the burden to establish causation of a scheduled injury, as a scheduled impairment is not a DIME determination referenced by Sec. 8-42-107.2(4)(c). *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007). In *City Market v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003) the court acknowledged that the question of whether the claimant sustained a scheduled or whole person rating is one of fact for the ALJ, and is not determined by the "rating physician." See also *Morris v. Olson Heating and Plumbing*, ICAO, W.C. No. 4-980-171-02 (July 6, 2018). A rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with

which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

With regard to an extremity impairment, the claimant bears the burden to prove a scheduled rating by a preponderance of the evidence. *Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

Here, Claimant had the burden of proving that the lower extremity injury was causally related to the work-related fall and that he is entitled to an impairment rating. Addressing the work-related fall and the question of causation, it is found that Claimant did have an admitted slip and fall which caused a strain of the right lower extremity. Claimant credibly testified that when he slipped on the ice, his legs went from under him, and his right knee hyperextended. This caused the Claimant's right knee strain as initially diagnosed by Dr. Strain. Claimant reported the right knee pain at the initial appointment with the designated provider and subsequent providers including Dr. Bird, Dr. Failinger, Dr. Fall, Dr. Kawasaki, and therapist Marshall.

As found, Claimant has failed to show by a preponderance of the evidence that he is entitled to receive Permanent Partial Disability (PPD) benefits for a right knee injury. Even if Respondents had the burden of proof to show that the DIME physician's opinion was incorrect by a preponderance of the evidence, as may be suggested by several ICAO non-binding opinions, Respondents have done so. The totality of the evidence in this case shows that Claimant's knee complaints related to the strain of the right knee diminished and resolved as evidenced by Dr. Kawasaki's credible remarks that the right knee was not problematic, which is credible, and in contrast with the less persuasive report of Dr. Lindenbaum. The strain was treated and the strain resolved. This is supported by Dr. Bird's records of therapy improving the knee condition as well as Dr. Failinger and Dr. Fall's reports. Dr. Bird persuasively explained that he had been able to return to functional status. Claimant received significant physical therapy at Concentra, which improved the strain. This is shown in multiple reports by Dr. Bird as well as in the other provider records. Claimant also declined treatment, including injections offered by Dr. Failinger. Further, the MRI of the right knee failed to show significant effusion, edema or signs of an acute injury that was a result of the strain, only osteoarthritic and degenerative changes that can be expected give the Claimant's age and body habitus. Neither did the medical records reflect persuasive evidence of swelling or other trauma following the incident. As found, the bulk of the persuasive medical evidence reflects that a rating for Claimant's right knee is not warranted. Accordingly, Claimant has failed to show by a preponderance of the evidence that he is entitled to an impairment rating of the right lower extremity and is not entitled to any additional impairment rating for the right knee.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for an impairment rating of the lower extremity is denied and dismissed.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 11th day of January, 2022.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-108-612-003

ISSUES

1. Whether Claimant established by a preponderance of the evidence that the April 30, 2021 surgery performed on Claimant's left ankle was reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

FINDINGS OF FACT

1. Claimant was a correctional officer employed by Employer. Claimant reported that on May 17, 2019, he sustained an injury in the course and scope of his employment while descending stairs, when he twisted his right ankle. Respondents contested that Claimant sustained a compensable injury and the matter was adjudicated at a hearing before ALJ Edwin Felter on November 6, 2019. On November 27, 2019, ALJ Felter issued an Order in which he determined that Claimant sustained a compensable injury to his right ankle in the form of an aggravation and acceleration of a pre-existing right ankle condition. ALJ Felter further ordered that Respondents are responsible for the cost of all authorized, causally related, and reasonably necessary medical care and treatment related to Claimant's May 17, 2019 right ankle injury. (Ex. 1).

2. Following Claimant's injury on May 17, 2019, Claimant was initially seen at North Suburban Medical Center emergency room where x-rays of his right ankle were negative.

3. Claimant then received treatment from Karen Hill, D.O., at Concentra. The ALJ infers that Dr. Hill was Claimant's authorized treating provider. Claimant was then referred to for an orthopedic consult and saw resident Henry Yu, M.D., and Robert Leland, M.D. at the UC Health Foot and Ankle Center, on August 1, 2019. Claimant testified that Dr. Leland is a foot and ankle specialist. (Ex. F).

4. Initially, Drs. Yu and Leland diagnosed Claimant with a sprain of the deltoid ligament of the right ankle and closed ankle fracture. Claimant was placed in a lace-up brace and recommended to participate in a home exercise program focusing on ankle strength, range of motion and proprioception. (Ex. D).

5. At his October 17, 2019 visit, Claimant reported that he had reinjured his right ankle in early September 2019. Claimant continued to have medial ankle pain which he reported had been persistent since his injury. On examination, Dr. Leland noted that Claimant was tender in the region of his deltoid ligament, and opined that Claimant had a probable medial ankle impingement secondary to a deltoid ligament tear. He recommended an MRI to better delineate the deltoid ligament, and instructed Claimant to follow up after the MRI for further evaluation. (Ex. D).

6. Claimant did not undergo an MRI as recommended by Dr. Leland, and did not return to Dr. Leland until December 10, 2020. At that time, he reported continued ankle

pain that had not improved. Dr. Leland's examination of Claimant's ankle demonstrated tenderness along the anterior medial aspect of the ankle with pain on dorsiflexion, but was otherwise normal. Dr. Leland's assessment was right medial ankle impingement. He recommended physical therapy with deep tissue mobilization and indicated that if the recommended treatment did not resolve his symptoms surgical debridement would be recommended. (Ex. D).

7. On February 11, 2021, Respondent scheduled Claimant for a demand appointment with Dr. Leland to take place on February 18, 2021. (Ex. 4).

8. Claimant returned to Dr. Leland on February 18, 2021, without improvement of his ankle symptoms. Dr. Leland opined that Claimant's pain was likely caused a hypertrophied deltoid ligament causing impingement in the ankle joint. Dr. Leland performed a steroid injection in the right ankle and indicated if it did not provide lasting benefit surgery would be scheduled. (Ex. D).

9. On March 4, 2021, in response to correspondence from Respondent's counsel, Dr. Leland indicated that physical therapy and possible arthroscopic debridement of the ankle would be reasonably necessary to cure or relieve the effects of Claimant's May 17, 2019 injury. (Ex. 4). The ALJ finds Dr. Leland's statement credible.

10. Claimant received approximately two weeks of improvement with the steroid injection, but the pain ultimately returned. On April 8, 2021, Dr. Leland indicated that Claimant had "essentially exhausted his nonsurgical treatment options" and that an ankle arthroscopy and debridement would be considered.

11. On April 30, 2021, Dr. Leland performed an arthroscopic evaluation and limited debridement of Claimant's right ankle. During the procedure, Dr. Leland noted that "Examination of the joint revealed some hypertrophic tissue both anterolateral and anteromedial consistent with the patient's impingement symptoms. With dorsiflexion of the ankle, there was noted to be evidence of impingement on the talar dome." After tissue was debrided, Dr. Leland noted there was no sign of any further impingement. (Ex. E).

12. On May 26, 2021, Claimant underwent an independent medical examination (IME) with Timothy S. O'Brien, M.D. At the time of the IME, Dr. O'Brien had not yet reviewed Dr. Leland's operative report, and indicated that he was not certain as the precise procedure performed. He did note "As Dr. Leland suggested, an arthroscopic debridement and removal of any medial impinging lesions was performed …" Dr. O'Brien further noted that "[t]his is a very limited surgery and is not highly traumatic." Dr. O'Brien did not opine on the reasonableness or necessity of the surgery in his IME report. (Ex. F). Dr. O'Brien was testified at hearing as an expert in orthopedic surgery. He testified that the procedure performed by Dr. Leland was not reasonable or necessary, and characterized the procedure as "bad medicine." Dr. O'Brien testified that Dr. Leland should not have performed surgery because no MRI was performed prior to surgery, no "differential injections" were performed, that Claimant's pain was "migratory." and that Claimant's pain generator was not clearly identified prior to surgery.

13. He further state that there was no scientific basis for using an arthroscopic scope as an investigative procedure in an ankle. Dr. O'Brien testified that there is no medical literature, or reported double-blind clinical studies, to support an arthroscopic investigation of the ankle. He referenced the lack of double-blind studies, which compare the results of a proposed "real" procedure to a placebo procedure to determine the effectiveness of the "real" procedure. He testified that he is not aware of any such studies being performed.

14. Dr. O'Brien's testimony is not persuasive. As Dr. O'Brien testified, there is little anatomic distance within the ankle. Claimant's ankle pain was described throughout his treatment as tenderness to the anterior medial aspect of his ankle. Although there were slight variations in the area of reported tenderness, given the anatomy of the ankle, the ALJ does not find these variations significant. The steroid injection performed by Dr. Leland in February 2021 did provide relief for two weeks, following which Dr. Leland determined that surgery was appropriate. During surgery, Dr. Leland indicated that he identified and debrided hypertrophic tissue that was consistent with the Claimant's impingement symptoms. The lack of clinical trials for arthroscopic evaluation of the ankle as no credible evidence was presented to indicate how such a procedure would be amenable to a double-blind study, or whether investigatory surgeries are routinely subjected to clinical trials.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*,

183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the April 30, 2021 surgery was reasonably necessary to cure or relieve the effects of Claimant's industrial injury. As found, Dr. Leland credibly opined in March 2021 that arthroscopic debridement was reasonably necessary to cure or relieve the effects of Claimant's injury. Dr. Leland, a foot and ankle specialist, deemed it appropriate to perform surgery on Claimant's ankle after Claimant experienced ongoing symptoms for approximately two years. Although no MRI was performed, Dr. Leland was able to identify pathology in the ankle during surgery to which he attributed Claimant's impingement symptoms. When considering all the evidence, the ALJ finds it more likely than not that the surgery was reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's April 30, 2021 left ankle surgery performed by Dr. Leland was reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 13, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered a compensable right knee injury on February 9, 2021 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injury.

3. Whether Claimant's right knee treatment was provided by an Authorized Treating Physician (ATP).

4. A determination of Claimant's Average Weekly Wage (AWW).

5. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reimbursement for out-of-pocket expenses related to the medical treatment and surgery on his right knee.

FINDINGS OF FACT

1. Employer is a global corporation that focuses on aerospace, arms, defense, information security and technology. Claimant is a 59 year old male who works for Employer as an assembler and electrical tester. His typical job duties are mostly sedentary in nature involving sitting and handling small computer components.

2. Claimant earned $27.97 per hour and worked 40 hours per week. His shifts commenced at 5:00 a.m. and generally ended at about 3:30 p.m. over four days each week. Claimant thus earned an Average Weekly Wage (AWW) of $1,118.80.

3. At approximately 11:30 a.m. on February 9, 2021 Claimant realized he and a co-worker needed office supplies. Office supplies are stored downstairs in an older section of the building. Claimant noted that the stairs are different from those he uses to go to lunch or enter and exit the building. The steps Claimant used to retrieve office supplies are about 75 yards from his workstation and steeper than those he regularly uses in the newer part of the building. He remarked that he obtains office supplies from downstairs about once every two months.

4. On February 9, 2021 Claimant went down the steps and picked up lightweight office supplies. As he was ascending the stairs and reached the fourth step, he felt a "pop" and experienced immediate pain in his right knee. As soon as Claimant returned to his workstation he reported the injury to his supervisor.

5. Approximately one hour after the injury Claimant visited Erika Spadafora, NP at Employer's medical clinic. Claimant told NP Spadafora that at 11:30 a.m. earlier in the day he had been walking from lunch back to his office when he "felt a pop" in his right knee. NP Spadafora noted Claimant was not carrying anything at the time of his injury and there were no hazards on the stairs. She recommended using ice packs three times per day for 15-minute intervals in addition to taking Motrin and Tylenol. NP Spadafora concluded that Claimant's injuries were likely not related to his work activities based on his history of present illness. She commented that Claimant would follow-up in one week for re-evaluation.

6. Claimant disagreed with the history of present illness as recorded by NP Spadafora. He specifically noted that he was carrying items at the time. Furthermore, he commented that he was on a specific errand to retrieve office supplies and not returning from his lunch break.

7. On February 15, 2021 Claimant returned to Employer's medical clinic and visited Authorized Treating Physician (ATP) Andrew Plotkin, M.D. for an examination. On the date of the injury, Claimant had signed a Notice of Designated Provider, pursuant to the requirements of W.C.R.P. 8-1(C)(2), acknowledging his awareness that Dr. Plotkin was the designated provider for his work injury. Dr. Plotkin recorded that on February 9, 2021 Claimant was ascending stairs at work when he felt a pop in his right knee. Claimant remarked that nothing unusual, such as twisting or stepping incorrectly, had occurred during the incident. Dr. Plotkin noted Claimant had visited his Primary Care Provider (PCP) and obtained right knee x-rays. The x-rays revealed degenerative changes in the patellofemoral compartment. Dr. Plotkin concluded that Claimant's injury was not compensable because there was no work-related mechanism of injury or hazard and the "activity [was] a normal life activity." He commented that Claimant "understands this is not considered work-related and is going to follow-up with his PCP after the MRI scan."

8. Dr. Plotkin testified at the hearing in this matter and maintained that Claimant did not suffer an industrial injury to his right knee on February 9, 2021. He remarked that Claimant's right knee MRI on February 19, 2021 revealed a horizontal meniscal tear. The imaging also reflected degenerative changes including thinning of the cartilage and a parameniscal cyst. Non-occupational factors including aging, wear and tear over time, and obesity are risks for the development of degenerative knee changes. Claimant arrived at work on February 9, 2021 with pre-existing knee pathology. Dr. Plotkin thus reasoned that Claimant's pre-existing knee condition precipitated his pain at work on February 9, 2021. After conducting research, he also explained that walking up stairs does not create an increased risk for a meniscus tear. Instead, twisting is a key risk factor for developing the injury. Accordingly, Claimant's mechanism of injury of climbing stairs on February 9, 2021 did not likely cause his right knee injury.

9. Robert Michael, M.D. was Claimant's PCP. At the referral of Dr. Michael, Claimant underwent an MRI of his right knee on February 19, 2021. The MRI revealed "horizontal tear posterior horn of medial meniscus with parameniscal cyst formation." He was referred to Panorama Orthopedics for a surgical consultation.

10. On April 29, 2021 Claimant underwent a surgical repair of the complex tear over the posterior horn of his medial meniscus, extending from the posterior middle to the anterior horn, with James Johnson, M.D. at Panorama Orthopedics. The procedure was covered through Claimant's private health insurance policy Cigna. All of the treatment Claimant received related to his right knee pathology documented by the MRI has been covered under his private health insurance policy. The payments Claimant made for treatment of his right knee totaled $5,145.32.

11. After undergoing surgery, Claimant missed two weeks of work. During the two week period Claimant received short-term disability benefits.

12. On August 10, 2021 Claimant underwent an independent medical evaluation with John R. Burris, M.D. He reviewed Claimant's medical records and performed a physical examination. Dr. Burris recounted that on February 9, 2021 Claimant was walking up a set of stairs between the supply area and his workstation. On approximately the fourth step Claimant felt a pop in his right knee and immediately experienced pain. He was not carrying anything heavy at the time and there were no hazards or obstacles on the stairs. Based on Claimant's account, Dr. Burris reasoned that the February 9, 2021 work incident "represent[ed] an activity of daily living and not a unique or special hazard of employment." Dr. Burris remarked that, because Claimant's normal work activities are sedentary and mostly seated, they "would not introduce a risk for a knee condition." He explained that Claimant's right knee symptoms were thus likely "independent and unrelated to his employment." Therefore, Claimant's right knee condition was not work-related.

13. On December 9, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Burris. Dr. Burris maintained that Claimant's right knee injuries were not related to his work activities for Employer on February 9, 2021. He remarked that x-rays taken by Claimant's PCP revealed degenerative spurring of the superior patella. The findings take months or years to develop. The x-rays also did not reveal any acute bony abnormalities. In addressing Claimant's February 19, 2021 right knee MRI, Dr. Burris noted the imaging revealed degenerative changes, including thinning of the cartilage, that can take months or years to develop. Furthermore, the horizontal tear revealed in the MRI could have been acute, but was more likely degenerative in nature based on the additional finding of a parameniscal cyst. Dr. Burris thus determined that Claimant arrived at work on February 9, 2021 with .with pre-existing pathology in his right knee. He summarized that the imaging findings, in conjunction with Claimant's mechanism of injury, did not likely proximately cause his right knee condition. Although he acknowledged that walking up steep stairs without twisting puts additional pressure across the patella area of the knee, the mechanism would not likely cause a horizontal tear of the posterior horn and body of the medial meniscus.

14. Dr. Burris explained that the Division of Workers' Compensation discussion of a proximate cause requires an event that is the "a final straw" aggravating or accelerating a pre-existing condition. He emphasized that "you can have a pre-existing condition, and then something happens that is the event that tips it over, but you have to

have a specific event and a mechanism that's consistent with causing that. This mechanism is not consistent with a meniscal injury."

15. Claimant has failed to establish that it is more probably true than not that he suffered a compensable right knee injury on February 9, 2021 during the course and scope of her employment with Employer. Initially, on February 9, 2021 Claimant went down a flight of stairs to retrieve lightweight office supplies. As he was ascending the stairs and reached the fourth step, he felt a "pop" and experienced pain in his right knee. He immediately reported the injury to his supervisor. After initially receiving medical treatment through ATP Dr. Plotkin, Claimant had a right knee MRI through his PCP that revealed a meniscus tear. He subsequently underwent arthroscopic surgery on April 29, 2021.

16. Although Claimant maintained that he injured his right knee while performing his job duties on February 9, 2021, the persuasive medical evidence reveals that the mechanism of injury did not cause his right knee meniscus tear. Approximately one hour after the injury Claimant visited NP Spadafora at Employer's medical clinic. NP Spadafora determined that Claimant's injuries were likely not related to his work activities based on his history of present illness. Furthermore, Dr. Plotkin persuasively maintained that Claimant did not suffer an industrial injury to his right knee on February 9, 2021. Claimant was ascending stairs at work when he felt a pop in his right knee. Nothing unusual, such as twisting or stepping incorrectly, occurred during the incident. Dr. Plotkin commented that Claimant's right knee MRI on February 19, 2021 revealed a horizontal meniscal tear. The imaging also reflected degenerative changes including thinning of the cartilage and a parameniscal cyst. Non-occupational factors including aging, wear and tear over time, and obesity are risks for the development of degenerative knee changes. Claimant arrived at work on February 9, 2021 with pre-existing knee pathology. Dr. Plotkin thus reasoned that Claimant's pre-existing knee condition precipitated his pain at work on February 9, 2021. After conducting research, he also explained that walking up stairs does not create an increased risk for a meniscus tear. Instead, twisting is a key risk factor for developing the injury. Accordingly, Claimant's mechanism of injury of climbing stairs on February 9, 2021 did not likely cause his right knee injury.

17. Dr. Burris also persuasively maintained that Claimant's right knee injuries were not related to his work activities for Employer on February 9, 2021. He remarked that x-rays taken by Claimant's PCP revealed degenerative spurring of the superior patella. The findings take months or years to develop. The x-rays also did not reveal any acute bony abnormalities. In addressing Claimant's February 19, 2021 right knee MRI, Dr. Burris noted the imaging revealed degenerative changes, including thinning of the cartilage, that can take months or years to develop. Furthermore, the horizontal tear revealed in the MRI could have been acute, but was more likely degenerative in nature based on the additional finding of a parameniscal cyst. Dr. Burris thus determined that Claimant arrived at work on February 9, 2021 with .with pre-existing pathology in his right knee. He summarized that the imaging findings, in conjunction with Claimant's mechanism of injury, did not likely proximately cause his right knee condition. Although he acknowledged that walking up steep stairs without twisting puts additional pressure across the patella area of the knee, the mechanism would not likely cause a horizontal

tear of the posterior horn and body of the medial meniscus. Dr. Burris explained that proximate cause contemplates an event that is the "a final straw" aggravating or accelerating a pre-existing condition. He emphasized that "you can have a pre-existing condition, and then something happens that is the event that tips it over, but you have to have a specific event and a mechanism that's consistent with causing that. This mechanism is not consistent with a meniscal injury."

18. Based on Claimant's right knee x-rays and MRI he suffered from degenerative, pre-existing pathology in his right knee. The persuasive medical opinions reveal that Claimant's activity of ascending stairs at work would not likely cause a horizontal tear of the posterior horn and body of the medial meniscus. Claimant's assertion that his symptoms arose after the performance of a job function does not create a causal relationship based solely on temporal proximity. The mechanism of injury was insufficient to constitute the proximate cause of Claimant's right knee medial meniscus tear. Accordingly, Claimant's work activities on February 19, 2021 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work activities does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. In *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014) the Supreme Court addressed whether an unexplained fall while at work satisfies the "arising out of”

employment requirement of the Workers' Compensation Act and is thus compensable. The Court identified the following three categories of risks that cause injuries to employees: (1) employment risks directly tied to the work; (2) personal risks; and (3) neutral risks that are neither employment related nor personal. The Court determined that the first category encompasses risks inherent to the work environment and are compensable while the second category is not compensable unless an exception applies. *Id.* at 502-03. The Court further defined the second category of personal risks to encompass those referred to as idiopathic injuries. These are "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, and similar conditions. *Id.* at 503. The third category of neutral risks would be compensable if the application of a but-for test revealed that the simple fact of being at work would have caused any employee to be injured. *Id.* at 504-05. For example, if an employee was struck by lightning while at work, the resulting injuries would be compensable because any employee standing at that spot at that time would have been struck. However, the Court also concluded that the but-for test does not relieve the employee of proving causation, nor does it suggest that all injuries that occur at work are compensable. *Id*. at 505.

9. Claimant asserts that the matter should be analyzed under the “employment risk” or first category of injuries delineated in *City of Brighton*. He specifies that at the time of his injury he was in the process of carrying office supplies upstairs as required to complete his job duties. The action of climbing stairs thus proximately caused his injury, necessitated the need for medical treatment and resulted in disability. However, Claimant’s appeal to the *City of Brighton* analysis fails because the decision was not concerned with the question of whether an injury occurred. The decision instead involved whether and when an injury "arises out of” the course and scope of employment. In *City of Brighton* there was no dispute the claimant fell down a set of stairs and suffered injuries. Here, however, the persuasive medical evidence reveals that the specified mechanism of injury did not cause Claimant’s meniscal tear or aggravate his pre-existing condition. Because Claimant did not suffer an injury, there is no question of whether the injury “arose out of” employment. Accordingly, the *City of Brighton* analysis is not instructive in the present matter.

10. As found, Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable right knee injury on February 9, 2021 during the course and scope of her employment with Employer. Initially, on February 9, 2021 Claimant went down a flight of stairs to retrieve lightweight office supplies. As he was ascending the stairs and reached the fourth step, he felt a “pop” and experienced pain in his right knee. He immediately reported the injury to his supervisor. After initially receiving medical treatment through ATP Dr. Plotkin, Claimant had a right knee MRI through his PCP that revealed a meniscus tear. He subsequently underwent arthroscopic surgery on April 29, 2021.

11. As found, although Claimant maintained that he injured his right knee while performing his job duties on February 9, 2021, the persuasive medical evidence reveals that the mechanism of injury did not cause his right knee meniscus tear. Approximately one hour after the injury Claimant visited NP Spadafora at Employer’s medical clinic. NP Spadafora determined that Claimant’s injuries were likely not related to his work activities

based on his history of present illness. Furthermore, Dr. Plotkin persuasively maintained that Claimant did not suffer an industrial injury to his right knee on February 9, 2021. Claimant was ascending stairs at work when he felt a pop in his right knee. Nothing unusual, such as twisting or stepping incorrectly, occurred during the incident. Dr. Plotkin commented that Claimant's right knee MRI on February 19, 2021 revealed a horizontal meniscal tear. The imaging also reflected degenerative changes including thinning of the cartilage and a parameniscal cyst. Non-occupational factors including aging, wear and tear over time, and obesity are risks for the development of degenerative knee changes. Claimant arrived at work on February 9, 2021 with pre-existing knee pathology. Dr. Plotkin thus reasoned that Claimant's pre-existing knee condition precipitated his pain at work on February 9, 2021. After conducting research, he also explained that walking up stairs does not create an increased risk for a meniscus tear. Instead, twisting is a key risk factor for developing the injury. Accordingly, Claimant's mechanism of injury of climbing stairs on February 9, 2021 did not likely cause his right knee injury.

12. As found, Dr. Burris also persuasively maintained that Claimant's right knee injuries were not related to his work activities for Employer on February 9, 2021. He remarked that x-rays taken by Claimant's PCP revealed degenerative spurring of the superior patella. The findings take months or years to develop. The x-rays also did not reveal any acute bony abnormalities. In addressing Claimant's February 19, 2021 right knee MRI, Dr. Burris noted the imaging revealed degenerative changes, including thinning of the cartilage, that can take months or years to develop. Furthermore, the horizontal tear revealed in the MRI could have been acute, but was more likely degenerative in nature based on the additional finding of a parameniscal cyst. Dr. Burris thus determined that Claimant arrived at work on February 9, 2021 with .with pre-existing pathology in his right knee. He summarized that the imaging findings, in conjunction with Claimant's mechanism of injury, did not likely proximately cause his right knee condition. Although he acknowledged that walking up steep stairs without twisting puts additional pressure across the patella area of the knee, the mechanism would not likely cause a horizontal tear of the posterior horn and body of the medial meniscus. Dr. Burris explained that proximate cause contemplates an event that is the "a final straw" aggravating or accelerating a pre-existing condition. He emphasized that "you can have a pre-existing condition, and then something happens that is the event that tips it over, but you have to have a specific event and a mechanism that's consistent with causing that. This mechanism is not consistent with a meniscal injury."

13. As found, based on Claimant's right knee x-rays and MRI he suffered from degenerative, pre-existing pathology in his right knee. The persuasive medical opinions reveal that Claimant's activity of ascending stairs at work would not likely cause a horizontal tear of the posterior horn and body of the medial meniscus. Claimant's assertion that his symptoms arose after the performance of a job function does not create a causal relationship based solely on temporal proximity. The mechanism of injury was insufficient to constitute the proximate cause of Claimant's right knee medial meniscus tear. Accordingly, Claimant's work activities on February 19, 2021 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant did not suffer a compensable injury while working for Employer on February 9, 2021. Accordingly, his claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-161-549-001

ISSUES

I. Whether Respondents overcame the opinion of the Division Independent Medical Examiner, Dr. Macaulay, that Claimant is not at MMI.

II. Whether the medical treatment recommended by the Division Examiner is reasonable and necessary and whether the ALJ can order Respondents to pay for the medical treatment recommended by the DIME physician.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On October 16, 2020, Claimant sustained a compensable work-related injury to her nose.
2. Claimant reported a paper towel dispenser cap fell and hit her on the nose. Claimant testified, "Well, I put my hand in to check the towels, and the lid fell off, and it fell on my nose." Hrg. Tran. pg. 73, lines 17-20.
3. Claimant reported the accident to her supervisor, "Cecelia", within 20 minutes after the event. Cecelia completed some paperwork, but she told Claimant that she did not recommend that Claimant go to the doctor because they would administer a coronavirus test and would not let her return to work for two weeks. She did not give Claimant any names of clinics or physicians (Hg. Tr., pp. 75-76)
4. Claimant experienced pain at the 8-9 level in the area of the bridge of her nose the day after the and she felt "pins and needles as if [I] had ants [in the nose]." (Hg. Tr., pp. 76-77).
5. After requesting medical care from her supervisor "Cecelia," for months after the injury without a referral, Claimant ultimately went to human resources. A human resources representative finally sent Claimant to Dr. Sadie Sanchez at Midtown Occupational. (Hg. Tr., pp. 77-78).
6. One of the reasons Claimant did not go to a doctor during the months after the accident is that the doctors she contacted only gave telemedicine visits due to the COVID pandemic. As a result, Claimant did not seek any medical treatment from October 16, 2020, through January 10, 2021. Hrg. Tran. pg. 51, lines 11-18 and pg. 79.
7. On January 11, 2021, Dr. Sadie Sanchez evaluated Claimant. Claimant reported she was restocking a paper towel container when the lid fell onto her nose. She stated her nose swelled. She denied loss of consciousness, but "her pain was so

bad, she blacked out for a minute." She denied any nose bleeding or lesions on her nose. Claimant reported the next day she had a brown mucus discharge from her nose. Claimant further complained of headaches, poking pain at 4-5/10, body fatigue, daily headaches, and vision changes. There were further times where she felt she could not breathe. Dr. Sanchez noted, "The patient has not returned to work at the company of record due to confusion regarding COVID testing and this injury with her employer. She has been working full duty with another employer (she had this job at the time of injury and continues to work there)." Respondents' Ex. I at pgs. 100-101.

8. Dr. Sanchez referred Claimant for x-rays. The x-rays were normal. Respondents' Ex. J, pg. 105. *See also Respondents' Ex. I, pg. 101*.

9. Following review of the x-rays, Dr. Sanchez opined,

> The patient's objective findings do not correlate with subjective complaints and she exhibited mild pain behaviors at today's visit. I explained to the patient that the MOI would have suggested at least a nasal contusion and possibly a fracture. However, the x-ray taken today does not demonstrate concern for nasal fracture. Furthermore, without an abrasion or laceration or any evidence of a more serious injury, it is difficult to entertain that any internal derangement occurred due to the injury. The intermittent swelling cannot easily be explained…. To summarize, I would not expect long-term sequela from this type of injury without a fracture, and therefore, I am not able to offer the patient any further treatment.

   Dr. Sanchez concluded, "She does not require any work restrictions or impairment rating. She was encouraged to see her PCP to consider non-work-related diagnosis." Dr. Sanchez opined Claimant was at MMI with no impairment. Respondents' Ex. I Pg. 102, 103.

10. Based on the evidence submitted at hearing, the ALJ finds that Claimant was hit on the nose when the cap or lid of a paper towel dispenser fell and hit her.

11. On February 11, 2021, a Final Admission of Liability was filed consistent with Dr. Sanchez's MMI report. The Final Admission of Liability denied any permanent impairment or maintenance care. Respondents' Ex. A, pgs. 2-10.

12. Before the work-incident, Claimant sought medical treatment from 2012 through 2017 for a myriad of issues. Respondents' Ex. L, pgs. 125-148.

13. On March 8, 2012, Claimant sought treatment for eyestrain and headaches. *Id.* at pgs. 128-130.

14. On October 3, 2012, Claimant underwent a lung check due to a history of tuberculosis. *Id.* at pgs. 131-133.

15. On December 11, 2012, Claimant sought treatment for having left ear pain, arm pain and headaches. *Id.* at pgs. 135-136.

16. On August 6, 2014, Claimant sought treatment for blurred vision. *Id*. at pgs. 139-140.

17. On March 21, 2017, Claimant returned to her PCP complaining of frontal, bilateral and temporal headaches over the last two months. Her physician noted, "She almost always had headaches after 4:00, but sometimes wakes up with headaches. Further, her vision is sometimes very blurry, occurs at any time of day and not always associated with headaches." Claimant was diagnosed with tension headaches. *Id.* at pgs. 144-145.

18. On July 11, 2017, Claimant returned to her PCP. She complained of blurry vision and frontal headaches. She also noted eye watering. *Id.* at pgs. 146-147.

19. Between July 11, 2017, and October 16, 2020, over a three-year period, Claimant did not actively treat on a regular basis for blurry vision or headaches.

20. On June 15, 2021, Dr. Hugh Macaulay performed a Division Independent Medical Examination (DIME). Claimant reported while working with a paper towel dispenser the device struck her on the nose. She stated she felt like her nose was going to fall into pieces. She admitted her nose did not bleed but reported that "liquid came out of both sides of her nose." She stated she did not seek medical treatment due to potential COVID issues. Respondents' Ex. K, pg. 108.

21. Claimant further reported she could not breathe out of the right side of her nose. This caused her fear and anxiety. She noted she felt she would stop breathing and die and a choking sensation. Despite having a history of headaches, Claimant asserted she had no problems with headaches before the incident. *Id.* at pg. 108-109.

22. Claimant admitted she had been working full-duty and full-time at her job of cleaning. *Id.* at pg. 110.

23. Dr. Macaulay's HEENT, neurological and cognitive examination were all normal. He noted, "Ms. Gonzalez has a normal neurological examination. She does have evidence for moderate anxiety secondary to concerns that she feels have not been addressed and may result in her death. Her nasal passages appear patent and the tissues without evidence of significant inflammation." *Id.* at pg. 116.

24. Dr. Macaulay noted,

> The medical records indicate prior events of headaches, nasal congestion and blurring of vision and occasional symptoms associated with upper respiratory infection. Most of her treatments have been for health maintenance without reflection of symptoms similar to those associated with her industrial accident…Ms. Gonzalez does not feel that she has been evaluated and has significant fears associated with the potential long-term effects of her industrial event.

Dr. Macaulay concluded claimant was not at MMI. He recommended an ENT and neuropsychological evaluation to assist in determining Claimant's current condition and the cause of such. *Id.* at pg. 112. *See also pg. 116*.

25. On September 16, 2021, Dr. Allison Fall performed an Independent Medical Examination (IME). Claimant reported her nose was swelling and "it feels like there are small ants in her nose." Respondents' Ex. J. pg. 118.

26. Claimant testified the day following the incident, "I feeling right where I was injured, pins and needles as if I had ants." Hrg. Tran. pg. 76, lines 9-13.

27. The medical records indicate, Claimant did not report a feeling of "ants in her nose" to Dr. Sanchez or Dr. Macaulay.

28. As to the reporting of the incident, Claimant reported she was offered to go to human resources but did not go because she would have had to take a COVID test. Respondents' Ex. K, pg. 108; Respondents' Ex. J pg. 119.

29. Claimant reported despite Dr. Sanchez's recommendations she did not get her eyes checked because the vision clinic was closed. *Id.*

30. Claimant testified that she obtained new glasses in October 2020 for reading, but yet also wears them while driving. Hrg. Tran. 83, lines 13-19; pg. 90, lines 8-9.

31. Claimant reported to Dr. Fall before the accident she had no problems with headaches. Dr. Fall noted, "Records indicate otherwise." Respondents' Ex. J, pg. 121.

32. As to her complaints related to vertigo and throat, Dr. Fall noted, "She did not complain of this to me, nor would it be related." *Id.*

33. After evaluating Dr. Macaulay's provisional 10% whole person impairment rating, Dr. Fall opined,

> I would concur that blunt nasal trauma was work related but would not relate headaches or dizziness to the contusion. This is out of proportion to objective findings and not supported by the medical documents. Also, she had preexisting headaches, and the etiology of the headaches has not been determined. Certainly, they are not from a head injury.

Id. at pg. 121.

34. As to Dr. Macaulay's opinion Claimant was not at MMI, Dr. Fall opined,

> Given no loss of function, this additional workup would not be indicated.
>
> In my opinion the only diagnosis related to the incident is a nasal contusion. There is no objective medical evidence to support her ongoing complaints. In fact, she is erroneously attributing complaints to the nose which are not related such as her throat, breathing, vision changes and headache pain. Records document prior similar complaints for other reasons. Being struck on the nose would not cause ongoing breathing problems or vision problems, headaches, vertigo, dizziness and/or choking. Her complaints are out of

> proportion to the evidence and out of proportion to the fact that she did not pursue immediate medical treatment. There are likely psychosocial issues playing a role in her issues given that there was the issue of her being off work after the COVID test and then being told there was no longer a position for her.

Id. at pg. 122.

35. Dr. Fall concluded that:

> There is no evidence that her headaches are impeding her function. In fact, she is working full duty at her primary job cleaning houses. Also, Dr. Macaulay only finds her [not] at MMI based upon subjective complaints without correlating objective findings. He himself indicates he did not know the etiology of her subjective complaints. She is at MMI for the nasal contusion which did not require any treatment. The surveillance video is consistent with one leading a normal functional life without limitation from a remote nasal contusion, which is what would be anticipated.

Id.

36. Claimant testified that on several occasions a brown substance came out of her nose. "It came out the day of the injury, also the next day, and it kept coming out for, I don't remember if it was 15-days or 22-days." Hrg. Tran. pg. 80, lines 23-25.

37. Claimant's testimony is inconsistent with the medical records as she told Drs. Fall and Dr. Sanchez she had brown discharge the next day, not for an ongoing period of time. Respondents' Ex. J, pg. 119; Ex. Respondents' Ex. I, pg. 101.

38. Respondents took the evidentiary deposition of Dr. Macaulay on October 5, 2021. The Respondents went through the medical record in detail with Dr. Macaulay. The Respondents addressed with Dr. Macaulay:

- The minor nature of the accident.
- The various inconsistencies in the medical record.
- The extent of Claimant's preexisting headaches.
- The change in symptoms as time went on.
- The extent of the global symptoms reported by Claimant for what appeared to be a very minor accident.

39. In order to show the minor nature of the accident, Respondents showed Dr. Macaulay a short video of what purported to happen during the accident. The video apparently demonstrated the lid of a paper towel dispenser hit another person on the head.[1] Dr. Macaulay was also made aware that when Claimant was evaluated by Dr. Sanchez, Claimant denied any nose bleeding or any visual

[1] The video was not admitted into evidence at the hearing.

lesions to her nose. As for the inconsistencies in the medical records, Respondents went through the discrepancy regarding Claimant's description of when – and for how long – she noticed a brownish colored discharge from her nose. Respondents also went through Claimant's prior records from 2012 through 2017 that demonstrated Claimant sought medical treatment for headaches, but yet denied having prior headaches to Dr. Macaulay. Respondents also went through the extent of Claimant's symptoms, and how Claimant started to complain about different symptoms as time went on. For example, Claimant did not complain of vertigo when she was evaluated by Dr. Sanchez or Dr. Fall, but she did complain about vertigo when she was evaluated by Dr. Macaulay. Lastly, Respondents went through the global nature of Claimant's symptoms for what appeared to be a very minor accident. For example, Respondents went through the various symptoms Claimant contends were caused by the accident. These symptoms include headaches, breathing problems, vertigo, vision problems, a choking sensation and throat issues.

40. Dr. Macaulay was also asked whether he believed Claimant's injury was minor. He answered, "Well, it depends on how one defines 'minor,' but it would not appear to be a life-threatening or significant injury that would involve the structure of the nasal pyramid." Respondents' Ex. F, pg. 41, lines 14-19.

41. He was also asked as to whether he agreed Dr. Sanchez's physical examination was normal. He replied, "Yes. For what was evaluated, yes it was." *Id.*, lines 20-22.

42. Dr. Macaulay was asked whether Claimant complained of any issues with her vision, breathing or throat when she presented to Dr. Sanchez. He replied:

> She did note an issue associated with her vision that was attributed to her glasses or some issue, we don't know what, noting that her prescription was changed about three months prior to the evaluation by Dr. Sanchez, and that she did have some problems with breathing in the morning, though it is not clear whether that was due to nasal or distal pulmonary issues.

Dep. Trans. pgs. 41-42, lines 23-8.

43. When asked whether ongoing drainage would be associated with the work-incident, Dr. Macaulay replied, "I would say that it would be relatively unlikely. I won't go so far as to say it is medically improbable. But, you know, just on the by-and-by, I would say that it would be relatively unlikely." *Id.* at pg. 19, lines 2-9.

44. As to whether mild traumatic brain injuries typically improve and not deteriorate over time as the case here, Dr. Macaulay testified, "That would be the normal progression. Normally, it will get better, usually within 90 to 120 days. Sometimes, however, when you have a concussive-type event, it can persist for years." *Id.* at pg. 47, lines 4-10.

45. Dr. Macaulay testified he did not see any visual or nasal issues on his physical examination. He also confirmed his examination of claimant's tongue and throat

were normal. Lastly, her cognitive examination was "rather good." *Id.* at pgs. 47-48, lines 16-9.

46. Dr. Macaulay testified it was unlikely Claimant sustained any brain damage as a result of the work incident. *Id.* at pg. 79, lines 9-11.

47. Dr. Macaulay was asked whether Claimant's ongoing complaints were possibly psychological. He testified, "Yes." *Id.* lines, 21-23.

48. Despite bringing all of these issues to the attention of Dr. Macaulay, he still concluded that Claimant is not at MMI. Dr. Macaulay is of the opinion that Claimant is not at MMI because she needs additional medical treatment to determine the extent of her injuries, if any, that flow from the accident, and whether further active treatment is necessary. Dr. Macaulay concluded that Claimant needs to be seen by an ear nose and throat (ENT) doctor to determine whether Claimant has an injury to her nose that requires additional medical treatment. He also concluded that an ENT evaluation is required to assess whether Claimant's vertigo might have been caused by the accident by performing a series of studies that can help determine whether there is a disturbance to Claimant's balance mechanism that is either peripheral or central. And, based on those findings, the ENT should be able to diagnose the cause of Claimant's vertigo, whether it was caused by the accident, and whether additional medical treatment is warranted.

49. He also concluded that Claimant's symptoms might be caused by anxiety. But, to determine whether Claimant's symptoms are due to anxiety, or the work-related trauma, a neuropsychologist should assess Claimant and make that determination.

50. Thus, Dr. Macaulay concluded that Claimant needs additional medical treatment to determine the extent of her injuries, if any, and whether additional medical treatment is necessary to cure and relieve Claimant from the effects of her injury and is therefore not at MMI.

51. Dr. Macaulay concluded that the initial – and only – medical appointment Claimant had under this claim with Dr. Sanchez was insufficient. In other words, based on her report, he could not tell whether Dr. Sanchez adequately addressed the extent of Claimant's work accident. As a result, he concluded that Claimant needs additional evaluations to determine the extent of her injury and whether she needs additional treatment before she can be placed at MMI.

52. Dr. Macaulay's opinion is a reasonable interpretation of the underlying medical records combined with Claimant's reported symptoms. While the ALJ agrees that the mechanism of injury seems very inconsequential, Claimant does have some complaints that arguably warrant an evaluation by a physician that specializes in nasal symptoms – such as an ENT. Moreover, while Claimant's global symptoms seem to be out of proportion to the mechanism of injury, and may be related to an underlying psychological disorder, Dr. Macaulay's opinion that Claimant should be evaluated by a neuropsychologist is also not unreasonable. Claimant did get hit on her nose/head and is reporting symptoms

that Dr. Macaulay said are consistent with a mTBI (mild traumatic brain injury). As a result, the ALJ finds Dr. Macaulay's opinion that Claimant is not at MMI to be credible and persuasive.

53. Dr. Fall testified at the hearing. Dr. Fall testified regarding Claimant's report of a brown discharge the day after the injury, Dr. Fall testified, "Well it wouldn't typically cause a bloody nose that would show up the next day. Hrg. Tran. pg. 20, lines 20-22. So I don't know what that accounts for. I don't know what to make of that." *Id.* at lines 22-23.

54. When addressing Claimant's failure to seek medical treatment for months, Dr. Fall testified, "If her situation was that dire, she would have gone in for treatment. There was access to treatment. She could have received treatment. Treatment was available for her." Hrg. Tran. pg. 52, lines 22-25.

55. As to her vision, Claimant testified, "So I went to get glasses made. At the health clinic they suggested that I get glasses made so that my head wouldn't hurt and things like that." Hrg. Tran. pg. 83, lines 13-19.

56. Claimant testified that "I told the doctor that about 2-months before – I don't remember, but I had gone to get the lenses about five months before maybe, and she said that's why I had headaches and I felt a little disoriented." Hrg. Tran pg. 86, lines 16-19.

57. Claimant was asked when she received new glasses. She testified, "In October." Hrg. Tran pg. 90, lines 8-9.

58. Dr. Fall further testified Claimant's poor eyesight and/or new prescription glasses could be the cause of her ongoing complaints of headaches and visual issues. Hrg. Tran pg. 21, lines 18-20. *See also pg. 30, lines 5-8*.

59. Dr. Fall reviewed the x-rays and Dr. Sanchez's report. Dr. Fall testified that:

> I mean, the x-rays don't rule out every abnormality, but Dr. Sanchez did a thorough, you know, explanation of how she came to her conclusions that she couldn't account for those symptoms having been caused by the reported mechanism of injury and that she didn't see any evidence of a fracture of the nose where it had been hit. So there was really no treatment to be offered.
>
> So you know, there weren't any objective findings at that point in time that could be attributed or at that time, and the symptoms couldn't be attributed to the nasal contusion.

Hrg. Tran pg. 22, lines 4-17. *See also pgs. 28-29, lines 20-4*.

60. Dr. Fall testified Claimant was properly placed at MMI by Dr. Sanchez, did not require further medical treatment and or require any impairment rating. Hrg. Tran pp. 22-23, lines 18-2.

61. When reviewing the DIME report, Dr. Fall noted the DIME took place nearly one-year after the injury. She testified:

> That is, you know, another piece of information, which you know is consistent with my opinion. That fact that she's you know, showing up to meet with Dr. Macaulay and telling him there's new symptoms even as of, you know, two weeks ago and worsening with other symptoms would not be consistent with, you know, these normal examinations of Dr. Sanchez, myself and Dr. Macaulay all have.

Hrg. Tran. pg. 29, lines 9-20.

62. When asked whether Claimant admitted to preexisting conditions to Dr. Macaulay, Dr. Fall testified, "No she denied any preexisting conditions. Q. Is that true to the medical records? A. No. When you look at the medical records, she did have the complaints of the, you know, blurry vision and headaches, and you know, possibly prediabetes." *Id.* at pg. 30, lines 9-17. *See also Respondents' K pg. 109, 110*.

63. Dr. Fall was asked whether Claimant would have sustained injuries of this magnitude based on the mechanism of injury, Dr. Fall testified,

> Not that would be consistent with the symptom's she's currently reporting. I think she could have had a lot of pain when that piece hit her nose. It can be really painful, but there wouldn't be any, you know, ongoing – there was no evidence even when Dr. Sanchez saw her earlier on of any structural or physical change that occurred.

Hr. Tran. pgs. 30-31, lines 18-2.

64. Dr. Fall testified Dr. Macaulay's physical examination was normal. She testified, "Yes. I even read through his deposition earlier today, and that was gone through, and everything he checked was normal." *Id.* at pg. 31, lines 3-10.

65. Following review of Dr. Macaulay's deposition testimony where he testified Claimant's complaints could be psychological, Dr. Fall testified:

> I would agree that her complaints are likely expounded, if that's the right word -- confounded by psychological complaints. So, you know, who knows. Maybe when she feels nasal stuffiness, in her mind it, you know, escalated into something bigger like, 'I can't breathe.' And so yeah, I do think psychological issues are playing a role. Whether that's the underlying reason why she has headaches and vision problems, I don't know.

Hrg. Tran. pgs. 32-33, lines 16-1.

66. Dr. Fall testified Dr. Macaulay erred in his DIME report for several reasons. She testified:

    a. The first error that is at the top of my head that I'll start off with is in the impairment rating when he assigned a 10% for episodic neurological impairment for the headaches. We are taught in our Level II

reaccreditation that we can use that category for headaches when they're caused by a head injury. He testified that he thought it was unlikely that she sustained a head injury, traumatic brain injury, concussion. So he is incorrect in using the brain injury portion of the guidelines to rate a subjective complaint of a headache given that the headache was not caused by a brain injury.

b. He erred in causation. So he is attributing these symptoms to the incident when he's kind of having to go around four back doors to come up with some kind of explanation when if you look at actually what happened and how she was able to function normally after, it's just not medically plausible that the incident caused the complaints she's currently having…The psychological testing may show that she has anxiety and tends to be, you know, a somatic compliant, that's not going to help us with the actual incident and what it caused. If the ENG notes that she has chronic sinusitis, that's not going to change the issue of causation…So nothing they're going to find is going to be caused by the piece of metal hitting her nose.

Hrg. Trans. at pgs. 33-34, lines 6-14. *See also pgs. 60-61, lines 18-13*.

67. As to her function, Claimant testified she could go to work, cook, clean, and take care of her children. *Id.* at pg. 93, lines 11-23. But merely being able to perform her job does not mean she was not injured and that she does not require additional medical treatment to determine the extent of her injury that was caused by the accident.

68. Claimant was asked, "Q. So mainly bending is your issue? A. Yes. When I bend down I feel as if my nose is going to fall off, as if something's loose in there. Q. But otherwise you do the things you typically do correct? A. Well, when I sleep, I can't sleep facedown because my nose hurts. When I was my face, I can't touch my nose that much or be rough with it because my nose hurts a lot." *Id.* at pg. 94, lines 5-12.

69. Claimant testified she had sought no medical treatment after seeing Dr. Sanchez as they were only allowing telehealth appointments and she wanted to be seen in person. Claimant testified she was seen in person by Drs. Sanchez, Macaulay and Fall. *Id.* at pgs. 95-96, lines 5-11. The ALJ finds that Claimant's explanation for not seeking medical treatment right after the accident is credible.

70. Overall, the ALJ finds Claimant's testimony to be credible to the extent that she is honestly reporting her symptoms – as she perceives them – and as she remembers them developing. While there are some inconsistencies, the inconsistencies do not rise to a level of finding the Claimant not credible. For example, although Claimant stated to Dr. Macaulay that she did not have any prior headaches – and the records demonstrate otherwise - Claimant had not actively treated on a regular basis for headaches for approximately 3 years before the accident. Thus, Claimant was arguably not having headaches for a reasonable period of time before the accident.

71. Dr. Fall testified Claimant sustained a nasal contusion and there was no objective evidence to support Claimant sustained a head injury as previously concluded by Dr. Macaulay. Hrg. Trans. pg. 25, lines 19-23; pgs. 26-27, lines 22-4.

72. When comparing Claimant's complaints from her IME report to Dr. Macaulay's DIME report, Dr. Fall testified Claimant did not report any chest pain, swallowing issues, breathing issues or dizziness during the IME, unlike her complaints to Dr. Macaulay. Hrg. Trans. pg. 23, lines 3-23.

73. Dr. Fall also testified Dr. Macaulay erred in finding Claimant had not reached MMI and that Claimant's work incident resulted in an impairment rating.

74. The ALJ finds Dr. Fall's opinions to be founded on a reasonable interpretation of the evidence. That said, the ALJ does not find her opinions to represent clear and convincing evidence that Dr. Macaulay erred and that his conclusion regarding MMI is wrong.

75. The evaluation by an ENT and a neuropsychologist consists of diagnostic treatment that offers a reasonable prospect for defining Claimant's condition and suggesting further treatment. As a result, such treatment is inconsistent with a finding that Claimant is at MMI.

76. The evaluation by an ENT and a neuropsychologist are not found to be tests that are essential for the DIME physician to solely render an impairment rating. As found, the tests are essential to define Claimant's condition and suggest further treatment and are inconsistent with a finding of MMI.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents overcame the opinion of the Division Independent Medical Examiner that Claimant is not at MMI.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing

evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

The ALJ must focus on the evidence submitted in this case. As found, Claimant was involved in an accident in which the lid or cap of a paper towel dispenser hit Claimant on the nose. Based on the accident, Claimant reports a myriad of symptoms. While the extent of her symptoms, and the global nature of her symptoms, seems out of proportion to the event, Dr. Macaulay, the DIME physician, is of the opinion that Claimant is not at MMI. His opinion is based on his conclusion that the medical treatment provided to date – a single evaluation by Dr. Sanchez – failed to address Claimant's complaints which Claimant attributes to her work accident. As a result, he is of the opinion that Claimant needs additional medical treatment in the form of an evaluation by an ENT and a neuropsychologist to define the extent of Claimant's work accident, the conditions which flow from the accident, if any, and to determine whether additional medical treatment is reasonably necessary to cure and relieve Claimant from the effects of her work injury. As found, Dr. Macaulay's conclusion is a reasonable interpretation of the evidence.

Respondents had Claimant evaluated by Dr. Fall. Dr. Fall concluded that the accident could not have caused anything more than a mere contusion and that Claimant's complaints and symptoms – which Claimant associates to the accident – are unrelated. As a result, she determined Claimant is at MMI with no impairment. She also concluded that Dr. Macaulay erred in his assessment of this case. The court also found that Dr. Fall's conclusions were a reasonable interpretation of the evidence in this case. The court further found, however, that her opinion does not rise to the level of clear and convincing evidence.

The ALJ also found Claimant to be credible regarding her perception and reporting of her symptoms. In other words, the court found that Claimant is honestly reporting her symptoms and the timing of such to the best of her ability – regardless of whether they are related to the industrial accident. It is, however, the symptoms that need to be evaluated by other physicians in order to determine causation and whether additional treatment is reasonably necessary and related to the industrial accident. While there are some inconsistencies in Claimant's testimony, it must be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct the historical facts underlying an event. *See People v. Brassfield*, 652 P.2d 588, (Colo. 1982).

As a result, the ALJ finds and concludes that based on the entire record, Respondents have failed to present clear and convincing evidence that Dr. Macaulay erred, and that Claimant is at MMI. In reaching this conclusion, the court has considered WCRP 11-5(D). Rule 11-5(D) provides that the DIME physician can order tests that are essential to providing an impairment rating. In this case, it is arguable that the testing suggested by Dr. Macaulay will assist in determining Claimant's impairment rating. However, in this case, the tests are not being recommended to merely assist in providing Claimant an impairment rating. In this case, the medical treatment is being recommended to define the extent of Claimant's work accident and define future treatment, if any. Then, after Claimant has been provided the proper medical treatment, Dr. Macaulay can assess Claimant for an impairment rating. Thus, the ALJ finds and concludes that applying Rule 11-5(D) in this case would result in Claimant receiving pre-MMI medical treatment after being placed at MMI. The ALJ therefore finds and concludes that the treatment being recommended by Dr. Macaulay is inconsistent with a finding of MMI based on the facts and circumstances of this case.

As a result, the ALJ finds and concludes that Respondents have failed to overcome the opinion of Dr. Macaulay that Claimant is not at MMI by clear and convincing evidence. Therefore, the ALJ finds and concludes that Claimant is not at MMI.

II. Whether the medical treatment recommended by the Division Examiner is reasonable and necessary and whether the ALJ can order Respondents to pay for the medical treatment recommended by the DIME physician.

The ALJ has found that Claimant is not at MMI. Claimant, however, has requested the ALJ to order Respondents to pay for the treatment recommended by Dr. Macaulay.

Rule 11-5(D) does allow an ALJ to order Respondents to pay for testing that is essential for an impairment rating. However, as found here, the treatment recommended by Dr. Macaulay is not merely essential for Dr. Macaulay to determine Claimant's impairment rating. The treatment recommended by Dr. Macaulay is to define the extent of Claimant's work accident and define future treatment, if any, before Dr. Macaulay can determine MMI and provide an impairment rating. The treatment is therefore necessary to obtain MMI and inconsistent with post MMI treatment necessary to perform an impairment rating as allowed under Rule 11-5(D).

Moreover, an ALJ cannot order Respondents to provide specific diagnostic testing, evaluations, or both, which have not been prescribed by an authorized treating physician or when such treatment is inconsistent with Rule 11. *See* WCRP 11-5(D) *and Potter v. Grounds Service Co.,* W.C. No. 4-935-523-04 (August 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-917-329-03 (May 15, 2018.) As a result, Claimant's request for an order that orders Respondents to pay for an assessment by an ENT and a neuropsychologist, which have been recommended by Dr. Macaulay – the DIME physician - is denied. If, however, an authorized treating physician prescribes an evaluation by an ENT and/or a neuropsychologist, that is a separate issue and is not addressed in this order.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the opinion of the DIME physician by clear and convincing evidence. Claimant is thus not at MMI.

2. Claimant's request for an order for Respondents to pay for an evaluation with an ENT and a neuropsychologist, as recommended by the Division Examiner, is denied.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 18, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on March 29, 2021.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his March 29, 2021 industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period March 29, 2021 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $702.62.

FINDINGS OF FACT

1. Employer is a tree care company. Claimant is a 63-year-old male who worked for Employer as a Groundsman. His job duties involved cleaning debris from beneath trees as his co-worker trimmed branches.

2. Claimant testified that on March 29, 2021 he went to a job site with tree trimmer [Redacted, hereinafter DW]. He detailed that at approximately 11:30 a.m. Mr. DW[Redacted] cut a 20-30 foot long crabapple tree limb that was about 6-8 inches in diameter. Claimant remarked that the limb fell, struck him on the head and knocked him to the ground. He experienced significant neck pain and reported his symptoms to Mr. DW[Redacted]. Claimant continued to work with Mr. DW[Redacted] until they returned to Employer's office at approximately 7:30 p.m. Claimant noted that at Employer's office he reported his injury to supervisor [Redacted, hereinafter MP].

3. The record reflects that Claimant has a long history of cervical spine and neck issues. Claimant testified that he suffered a neck injury due to a motor vehicle accident when he was 15 years old. He also had a prior Workers' Compensation claim from an incident on April 22, 2020 that involved his cervical spine and radicular pain in his left arm. A cervical spine MRI on May 26, 2020 revealed degenerative changes at C4-5, C5-6, and C6-7. John P. Ogrodnick, M.D. determined that Claimant's cervical condition was not work-related. On July 7, 2020 he reasoned that Claimant had reached Maximum Medical Improvement (MMI) without impairment or work restrictions. Claimant reported a 75% improvement in his condition upon reaching MMI.

4. Claimant explained that, prior to his March 29, 2021 work accident he suffered an injury at home on March 16, 2021. He specified that he had been shoveling snow at home, entered his garage, slipped, and struck his head on an antique steamer. The accident caused a head laceration and loss of consciousness. Claimant remarked that he was unsure about how long he was unconscious. He did not seek medical attention after the fall.

5. Claimant's coworker [Redacted, hereinafter BE] testified that he and Claimant went out drinking on March 16, 2021. He remarked that, when he dropped Claimant off at home, Claimant was "buzzed." Mr. BE[Redacted] saw Claimant enter his residence through the garage but did not witness a fall.

6. Claimant acknowledged that he told numerous coworkers about his fall at home. Coworkers DW[Redacted], Mr. MP[Redacted], and Mr. BE[Redacted] all commented that Claimant showed them a laceration on his head and a picture of a pool of blood on his garage floor on the work day after the incident. Claimant also told his coworkers he was knocked unconscious as a result of the fall.

7. Mr. DW[Redacted] and Mr. MP[Redacted] also disputed Claimant's account regarding the March 29, 2021 tree trimming incident. Mr. DW[Redacted] testified that he has been a tree trimmer for almost a year and Claimant was not struck by any tree limbs while he was trimming crabapple trees. However, at about 1:30 p.m. on March 29, 2021 Mr. DW[Redacted] was trimming an ash tree when Claimant walked underneath him. Mr. DW[Redacted] cut a small branch, with a diameter about the size of a wrist that struck Claimant and knocked him down. Claimant stated he was all right and continued working without issue until they returned to Employer's office at approximately 7:30 p.m. Claimant never reported a neck injury to Mr. DW[Redacted]. Similarly, Mr. MP[Redacted] testified that he saw Claimant at Employer's office on March 29, 2021 at about 7:15 p.m. but Claimant did not report an injury.

8. Owner of Employer [Redacted, hereinafter O] testified that the jobs Claimant and Mr. DW[Redacted] completed on March 29, 2021 involved pruning and shaping crabapple and ash trees. However, there was no reason to remove a large limb, such as the one described by Claimant, from the trees.

9. Claimant testified that on March 30, 2021 he attended an appointment with his primary care physician (PCP) for a physical examination. He remarked that his PCP immediately noticed a problem with his neck and referred him to a Workers' Compensation provider for an evaluation.

10. Later on March 30, 2021 Claimant visited Dr. Ogrodnick at SCL Health Medical Group. Claimant reported that his initial injury occurred at home on March 16, 2021 when he slipped and struck the top of his head on an antique steamer. He believed he was unconscious for hours because when he woke up it was dark and his face was "slimy" with blood. Claimant told Dr. Ogrodnick he was beginning to improve, but on March 26, 2021 at work a heavy crabapple tree branch fell across the chipper, hit him in the head and knocked him to the ground. Claimant noted that he suffered pain throughout his

entire body, but finished his shift. Furthermore, Claimant commented that on March 29, 2021 a coworker cut a smaller branch that hit him in the head but did not knock him down. Claimant reported to Dr. Ogrodnick that he suffered a headache, blurred vision and loss of balance. Dr. Ogrodnick determined that Claimant had significantly limited cervical range of motion. He diagnosed Claimant with a traumatic head injury and a neck strain. Dr. Ogrodnick restricted Claimant from working and referred him for an MRI. The MRI revealed only degenerative changes.

11. On March 31, 2021 Claimant visited the emergency department at Lutheran Medical Center after his PCP notified him that he was anemic. Claimant reported "moderate constant aching neck pain since a slip and fall approximately 10 days ago, also states tree limbs fell and dropped on his head on March 17." Imaging revealed an acute nondisplaced fracture of the right C2 lateral mass and right C2 transverse process. Claimant then saw neurosurgeon Mark Edward John Magner, M.D. for a consultation. Claimant reported the following three recent injuries: 1) falling and striking his head at home on an appliance on March 16, 2021; 2) being struck on the head by a heavy tree branch on March 26, 2021; and 3) being hit by another tree branch on March 29, 2021. Dr. Magner diagnosed Claimant with a C2 fracture that was structurally stable and recommended a cervical collar.

12. On April 2, 2021 Claimant returned to Dr. Ogrodnick for an evaluation. After reviewing the imaging findings from Lutheran Medical Center Dr. Ogrodnick determined "[i]t is not clear when [Claimant] sustained [his] cervical fracture. "[T]ransverse process fracture not typical with axial load from tree branch on top of head."

13. On May 12, 2021 Claimant was involved in a single vehicle automobile accident. He explained that he was not feeling well and was driving to the hospital when he rolled his van. Claimant commented that he did not sustain any injuries in the crash, but awoke in an oxygen "tent" at the hospital due to a COVID-19 diagnosis. At the emergency department Claimant was intubated and assessed with numerous rib fractures, a left pleural effusion, a scalp hematoma/laceration, lactic acidosis, alcohol intoxication with a blood alcohol of .317 and an "old" C2 fracture.

14. On November 18, 2021 Albert Hattem, M.D. conducted a records review of Claimant's claim. Dr. Hattem explained that on March 31, 2021, when Claimant visited the Lutheran Medical Center emergency department as recommended by his PCP for an evaluation of anemia, he also reported neck pain. Claimant attributed his neck pain to the slip and fall 10 days earlier. Dr. Hattem determined that Claimant's "report clearly supports the conclusion that [his] neck pain began after the slip and fall at home and prior to the work related tree branch incident." He reasoned that the slip and fall at home on March 16, 2021 constituted a significant injury. In fact, Claimant told Dr. Ogrodnick that, when he fell, he struck his head on an antique steamer and lost consciousness for hours. Dr. Hattem remarked that the preceding mechanism of injury was consistent with a cervical spine fracture. Finally, Dr. Hattem agreed with Dr. Ogrodnick that the tree branch incident did not likely cause Claimant's cervical spine fractures.

15. Dr. Hattem also testified at the hearing in this matter. He maintained that the March 29, 2021 tree branch accident did not likely aggravate, accelerate or combine with Claimant's pre-existing condition to cause his cervical spine fracture. Dr. Hattem explained that the following factors are considered in performing a causation analysis: (1) whether the diagnosis is consistent with the mechanism of injury; (2) pre-existing injuries; (3) subsequent injuries; (4) consistency of complaints relating to the mechanism of injury; and (5) credibility of the injured worker. After considering the preceding factors, Dr. Hattem determined that Claimant's March 16, 2021 accident at home was the likely cause of his cervical spine fracture. Notably, Dr. Hattem agreed with Dr. Ogrodnick that a tree branch falling on Claimant was unlikely to cause, aggravate of accelerate Claimant's pre-existing cervical spine fracture. In fact, a transverse process fracture is more consistent with a bad fall.

16. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on March 29, 2021. Initially, Claimant explained that, while working for Employer on March 29, 2021, he was struck in the head and knocked to the ground by an approximately 20-30 foot long, 6-8 inch diameter crabapple tree limb. He was subsequently diagnosed with a cervical spine fracture. Despite Claimant's assertion, the record reveals numerous internal inconsistencies and conflicts with other witnesses that cast doubt on the veracity of his account. Moreover, the persuasive medical opinions reflect that Claimant more likely suffered his cervical spine fracture in an injury at home on March 16, 2021 and the mechanism of injury of a falling tree branch was unlikely to cause a cervical spine fracture. Accordingly, the March 29, 2021 accident did not likely aggravate, accelerate, or combine with Claimant's pre-existing condition to produce a need for medical treatment.

17. Claimant's description of the cause of his cervical spine injury is internally inconsistent. Although Claimant testified that he was injured by a falling branch on March 29, 2021, the medical records provide multiple accounts regarding the cause of Claimant's injury. Claimant explained that, prior to his March 29, 2021 work accident he suffered an injury at home on March 16, 2021. He specified that he had been shoveling snow at home, entered his garage, slipped, and struck his head on an antique steamer. The accident caused a head laceration and loss of consciousness. Claimant did not seek medical treatment after the fall. When Claimant visited Dr. Ogrodnick on March 30, 2021 he reported that his initial injury occurred at home on March 16, 2021 when he slipped and struck the top of his head on an antique steamer. Claimant told Dr. Ogrodnick he was beginning to improve, but on March 26, 2021 at work he was struck in the head by a heavy crabapple branch that hit him in the head and knocked him to the ground. Claimant also commented that on March 29, 2021 a coworker cut a smaller branch that hit him in the head but did not knock him down. Moreover, in a visit with Dr. Magner on March 31, 2021 Claimant reported the following three recent injuries: 1) falling and striking his head at home on an appliance on March 16, 2021; 2) being struck by a heavy tree branch on his head at work on March 26, 2021; and 3) being hit by another tree branch on March 29, 2021. Based on Claimant's three different descriptions to medical providers and pre-existing history, it is speculative to attribute his cervical spine injury to a March 29, 2021

accident at work. As Dr. Ogrodnick noted after reviewing Claimant's imaging findings "[i]t is not clear when [Claimant] sustained [his] cervical fracture."

18. Mr. DW[Redacted] and Mr. MP[Redacted] also credibly disputed Claimant's description of the March 29, 2021 tree trimming incident. Mr. DW[Redacted] testified that he has been a tree trimmer for almost a year and Claimant was not struck by any tree limbs while he was trimming crabapple trees. However, at about 1:30 p.m. on March 29, 2021 Mr. DW[Redacted] was trimming an ash tree when Claimant walked underneath him. Mr. DW[Redacted] cut a small branch, with a diameter about the size of a wrist that struck Claimant and knocked him down. Claimant stated he was all right and continued working without issue. Claimant never reported a neck injury to Mr. DW[Redacted]. Similarly, Mr. MP[Redacted] testified that he saw Claimant at Employer's office on March 29, 2021 at about 7:15 p.m. but Claimant did not report an injury. Finally, Mr. O[Redacted] testified that there was no reason why large limbs, such as the one described by Claimant, would have been removed from the trees on March 29, 2021.

19. The medical records reveal that the most likely cause of Claimant's cervical spine fracture was his slip and fall at home on March 16, 2021. On March 31, 2021 at Lutheran Medical Center Claimant attributed his neck pain to a slip and fall that had occurred approximately 10 days earlier. Dr. Hattem determined that Claimant's "report clearly supports the conclusion that [his] neck pain began after the slip and fall at home and prior to the work related tree branch incident." He reasoned that the slip and fall at home on March 16, 2021 constituted a significant injury. In fact, Claimant struck his head on an antique steamer and lost consciousness for hours. Dr. Hattem remarked that the preceding mechanism of injury was consistent with a cervical spine fracture. After performing a causation analysis, Dr. Hattem determined that Claimant's March 16, 2021 accident at home was the likely case of his cervical spine fracture.

20. The medical records also reflect that a falling tree branch on March 29, 2021 did not likely cause Claimant's cervical spine fracture. Specifically, a tree branch falling on top of the head is not a mechanism of injury typically associated with a cervical spine fracture. Dr. Ogrodnick noted "transverse process fracture not typical with axial load from tree branch on top of head." Dr. Hattem agreed with Dr. Ogrodnick that a tree branch falling on Claimant was unlikely to cause, aggravate of accelerate Claimant's pre-existing cervical spine fracture. The numerous internal inconsistencies in Claimant's account, conflicts with credible witnesses and persuasive medical opinions reveal it is unlikely Claimant suffered a cervical spine fracture while working for Employer on March 29, 2021. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on March 29, 2021. Initially, Claimant explained that, while working for Employer on March 29, 2021, he was struck in the head and knocked to the ground by an approximately 20-30 foot long, 6-8 inch diameter crabapple tree limb. He was subsequently diagnosed with a cervical spine fracture. Despite Claimant's assertion, the record reveals numerous internal inconsistencies and conflicts with other witnesses that cast doubt on the veracity of his account. Moreover, the persuasive medical opinions reflect that Claimant more likely suffered his cervical spine fracture in an injury at home on March 16, 2021 and the mechanism of injury of a falling tree branch was unlikely to cause a cervical spine fracture. Accordingly, the March 29, 2021 accident did not likely aggravate, accelerate, or combine with Claimant's pre-existing condition to produce a need for medical treatment.

9. As found, Claimant's description of the cause of his cervical spine injury is internally inconsistent. Although Claimant testified that he was injured by a falling branch on March 29, 2021, the medical records provide multiple accounts regarding the cause of Claimant's injury. Claimant explained that, prior to his March 29, 2021 work accident, he suffered an injury at home on March 16, 2021. He specified that he had been shoveling snow at home, entered his garage, slipped, and struck his head on an antique steamer. The accident caused a head laceration and loss of consciousness. Claimant did not seek medical treatment after the fall. When Claimant visited Dr. Ogrodnick on March 30, 2021 he reported that his initial injury occurred at home on March 16, 2021 when he slipped and struck the top of his head on an antique steamer. Claimant told Dr. Ogrodnick he was

beginning to improve, but on March 26, 2021 at work he was struck in the head by a heavy crabapple branch that hit him in the head and knocked him to the ground. Claimant also commented that on March 29, 2021 a coworker cut a smaller branch that hit him in the head but did not knock him down. Moreover, in a visit with Dr. Magner on March 31, 2021 Claimant reported the following three recent injuries: 1) falling and striking his head at home on an appliance on March 16, 2021; 2) being struck by a heavy tree branch on his head at work on March 26, 2021; and 3) being hit by another tree branch on March 29, 2021. Based on Claimant's three different descriptions to medical providers and pre-existing history, it is speculative to attribute his cervical spine injury to a March 29, 2021 accident at work. As Dr. Ogrodnick noted after reviewing Claimant's imaging findings "[i]t is not clear when [Claimant] sustained [his] cervical fracture."

10. As found, Mr. DW and Mr. MP[Redacted] also credibly disputed Claimant's description of the March 29, 2021 tree trimming incident. Mr. DW[Redacted] testified that he has been a tree trimmer for almost a year and Claimant was not struck by any tree limbs while he was trimming crabapple trees. However, at about 1:30 p.m. on March 29, 2021 Mr. DW[Redacted] was trimming an ash tree when Claimant walked underneath him. Mr. DW[Redacted] cut a small branch, with a diameter about the size of a wrist that struck Claimant and knocked him down. Claimant stated he was all right and continued working without issue. Claimant never reported a neck injury to Mr. DW[Redacted]. Similarly, Mr. MP[Redacted] testified that he saw Claimant at Employer's office on March 29, 2021 at about 7:15 p.m. but Claimant did not report an injury. Finally, Mr. O[Redacted] testified that there was no reason why large limbs, such as the one described by Claimant, would have been removed from the trees on March 29, 2021.

11. As found, the medical records reveal that the most likely cause of Claimant's cervical spine fracture was his slip and fall at home on March 16, 2021. On March 31, 2021 at Lutheran Medical Center Claimant attributed his neck pain to a slip and fall that had occurred approximately 10 days earlier. Dr. Hattem determined that Claimant's "report clearly supports the conclusion that [his] neck pain began after the slip and fall at home and prior to the work related tree branch incident." He reasoned that the slip and fall at home on March 16, 2021 constituted a significant injury. In fact, Claimant struck his head on an antique steamer and lost consciousness for hours. Dr. Hattem remarked that the preceding mechanism of injury was consistent with a cervical spine fracture. After performing a causation analysis, Dr. Hattem determined that Claimant's March 16, 2021 accident at home was the likely case of his cervical spine fracture.

12. As found, the medical records also reflect that a falling tree branch on March 29, 2021 did not likely cause Claimant's cervical spine fracture. Specifically, a tree branch falling on top of the head is not a mechanism of injury typically associated with a cervical spine fracture. Dr. Ogrodnick noted "transverse process fracture not typical with axial load from tree branch on top of head." Dr. Hattem agreed with Dr. Ogrodnick that a tree branch falling on Claimant was unlikely to cause, aggravate of accelerate Claimant's pre-existing cervical spine fracture. The numerous internal inconsistencies in Claimant's account, conflicts with credible witnesses and persuasive medical opinions reveal it is unlikely Claimant suffered a cervical spine fracture while working for Employer on March 29, 2021.

Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: January 21, 2022.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that the disc arthroplasty surgery recommended by Dr. Michael Janssen is reasonable, necessary and related to her admitted May 8, 2019 work injury.

II. Whether Respondents established, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment on March 17, 2021, thus precluding wage loss benefits after this date.

FINDINGS OF FACT

The evidence in this matter is voluminous. The parties submitted in excess of 800 pages of exhibits and testimony was taken over approximately 6 ½ hours. Based upon the evidence presented, the ALJ enters the following findings of fact:

1. Employer operates an assisted living facility known as [Facility name redacted] Care Center. (Resp's. Exh. DDD). Claimant was working for Employer in her capacity as a certified nursing assistant (CNA) when she injured her low back on May 8, 2019, while transferring a resident to obtain her weight. According to Claimant, the resident wrapped her hands around her neck and then went "dead weight" causing her to strain her low back. (Resp's. Exh. A, WW).

2. Claimant was seen later that day by Terrence Lakin, DO at Southern Colorado Clinic ("SCC"), who diagnosed her with a lumbosacral strain. He assigned work restrictions that generally limited Claimant to 10-15 pounds occasional lifting. His report documented a past medical history that included fibromyalgia, arthritis, depression and multiple car accidents. Claimant also disclosed a prior lumbar injury which was treated with injections. (Resp's. Exh. A). On May 10, 2019, Claimant underwent lumbosacral x-rays that demonstrated only mild degenerative changes. (Resp's. Exh. B).

3. Over the next few weeks, Claimant treated at SCC reporting moderate (4/10) pain and functional improvement. Claimant reported at her first physical therapy (PT) session on June 12, 2019, that she did not have too many limitations with activity, and the therapist noted that she sat comfortably in the chair with no visible distress or gait deviations. (Resp's. Exh. D). She then went an entire week without *any* pain at all. (Resp's. Exh. F).

4. Claimant also reported to Dr. Lakin's Physician Assistant (PA) on June 27, 2019 – just seven weeks post-injury – that she was already walking 3-5 miles per day, was able to carry a one-gallon jug without pain and was performing "some yard work now." (Resp's. Exh. H). She then acknowledged to her therapist that she spent June 25 and June 26 performing yard work, which required "deep" and "repetitive" squatting, and

thereafter only had some muscle soreness, with no "actual pain" that next day, at which time she was able to perform all of her therapy exercises. (Resp's. Exh. G). She similarly reported to her therapist on August 1 that she spent two hours grocery shopping and lifted a lot of items from the shelf to the cart, and while she did have some soreness thereafter, she did not report "pain". (Resp's. Exh. I). Throughout this time, Claimant continued working for Employer with restrictions and repeatedly indicated that she was "having no issues" doing so, and described her pain generally at a level of 3-4/10. (Resp's. Exhs. C-R).

5. The content of the admitted medical records supports a finding that Claimant was making gains in her functional status over the first weeks and months following this strain injury. (See generally, Resp's. Exhs. R-W). This evidence provides important context to Claimant's later subjective reports, regarding her ability to perform modified duty in 2021, her need for surgery and the credibility of the extreme functional limitations that she is now claiming.

6. On August 19, 2019, a lumbar MRI demonstrated a "[d]esiccated degenerative bulging disc, osteophyte and loss of disc height at L5-S1 with severe foraminal narrowing, left greater than right" along with a "5 mm central disc protrusion at L4-L5 without significant canal stenosis. (Resp's. Exh. J).

7. On September 30, 2019, Claimant was evaluated by physiatrist Michael Sparr, MD, who noted that her most problematic issues seemed to be left sacroiliitis with a strong element of left L5-S1 greater than L4-L5 facet dysfunction and arthralgias and foraminal stenosis that may cause intermittent radiculitis. On November 6, he performed a left SI joint injection. (Resp's. Exh. K, M).

8. On December 11, 2019, Claimant reported to Dr. Sparr that she was resistant to undergo conservative modalities, and was concerned that chiropractic treatment could cause her headaches, although Dr. Sparr assured her that manipulation of the pelvis would not do so. She also wanted to avoid massage due to alleged hypersensitivity. (Resp's. Exh. N).

9. On December 16, 2019, Claimant complained to Dr. Lakin that she was not happy with her last appointment with Dr. Sparr because he "pressed" on her facets which she reported caused her to collapse onto the exam table.[1] Claimant suggested that if she had not fallen onto the exam table she would have fallen to the floor because Dr. Sparr was "not ready" to catch her. She then reportedly needed several minutes to regain her strength to continue with additional testing. Finally, Claimant expressed her "aversion" to starting any new medications as an adjunct to her treatment. It was hoped that additional facet injections would "calm her lumbar extension pain down" so that she could progress to maximum medical improvement (MMI) by January or February 2020. (Resp's. Exh. O).

[1] Dr. Barton Goldman would later explain that collapsing from a facet examination constituted a nonphysiologic examination response. (Hearing testimony of Dr. Goldman).

10. After Claimant underwent a first set of medial branch blocks (MBBs), she again told Dr. Sparr that she was wanted to defer chiropractic treatment due to her concern over headaches. On February 13, 2020, Dr. Lakin was considering a release to full duty, although Claimant expressed apprehension. He explained to her that if she continued to fail to report any consistent improvement, she would be at MMI. Repeatedly, he said, Claimant would "improve only to have exacerbation of pain and we start all over again." He believed that a psychological evaluation could be necessary. (Resp's. Exhs. P-U).

11. On May 19, 2020, after she was administered a second set of MBBs, Claimant underwent a psychological evaluation with Herman Staudenmayer, PhD, to whom she stated a belief that when she had been afforded a rhizotomy she would be "fully healed." Claimant expressed frustration concerning the timeliness of her treatment, noting that if she had received timely treatment her pain would have been resolved. Dr. Staudenmayer administered "The Battery for Health Improvement-2 (BHI-2) which revealed a moderately high (68% tile) score for somatic complaints, which was higher than the level of somatic complaints observed in the normal population. Dr. Staudenmayer noted that Claimant endorsed 16 of 26 somatic complaint items, leading him to conclude that it may be possible that Claimant was indirectly venting unrecognized psychological distress through physical complaints. He also noted that Claimant's tile score of 58% regarding her perceived level of dysfunction was also higher than what is commonly seen in the normal population. While not particularly unusual for medical patients, Dr. Staudenmayer noted that it (Claimant's functionality score) was not normal, adding that if Claimant seems to be "more functionally limited than would be expected given objective medical information, psychological factors could be contributing to [her] perceptions". Based upon the results of Claimant's testing battery, Dr. Staudenmayer concluded that '[s]he does indicate some aspects of somatization and focus on functional complaints and has a strong sense of perseverance, self-reliance, and emotional stability". (Resp's. Exh. V).

12. Dr. Staudenmayer recommended cognitive therapy and self-regulation/relaxation with EMG biofeedback. Claimant adamantly refused any psychological treatment, noting that she was "waiting for the rhyzotomy (sic) that [would] fix [her]". Dr. Staudenmayer then noted that "[Claimant's] resistance to psychological intervention [was] consistent with a belief that her only problem is physical and that a rhyzotomy (sic) will resolve her issues". Dr. Staudenmayer diagnosed an unspecified adjustment disorder and somatic symptom disorder. (Resp's. Exh. V).

13. On June 10, 2020, Claimant was evaluated by Dr. Lakin who liberalized her restrictions by allowing Claimant to lift up to 30 pounds on occasion. During this encounter, Claimant complained to Dr. Lakin that Dr. Sparr pushed very hard on her SI joint "every time" he evaluated her and that he had pushed hard again on June 1, resulting in her legs almost giving out. She complained that she usually had high pain for 3-4 days

after seeing him, and stated that she would not allow him to examine her again. (Resp's. Exh. X).[2]

14. Claimant underwent a radiofrequency ablation (rhizotomy or RFA) on June 18, 2020, which she described as "excruciating." (Resp's. Exh. Y). The ALJ notes that, while Claimant expressed certainty that "she [would] be fully healed," once she underwent rhizotomy, as she now believes will be the case with surgery, the RFA did not resolve her complaints as she predicted. Rather, the medical records support a finding that when Claimant returned to Dr. Lakin on June 24, 2020, she complained that she worse off following the procedure than before.[3] Claimant reported that she had been working with restrictions before her RFA and following this procedure was hardly able to perform any of her duties because of increased pain. She appeared frustrated and restful of Dr. Sparr for "pressing on her low back until she fell down". Claimant's restrictions were upgraded and Dr. Lakin raised concerns regarding the psychosocial aspects of the claim with Claimant again. Claimant indicated that she had no desire to see Dre. Staudenmayer again because he wanted to "delve into her past issues about abuse. According to Claimant, her life was "perfect" before the injury forming the basis for this claim and she did not want to "dredge up" old memories that had no bearing on her pain. Per Claimant, she had dealt with her past abuse memories prior to this injury and would deal with them "fine once her low back pain [was] better resolved. The ALJ finds it clear that Claimant sees no connection between her past abuse and current symptoms. (Resp's. Exhs. Y, Z).

15. Claimant returned to Dr. Sparr on July 8, 2020. As is the case with his other reports, he referenced nothing about Claimant's dramatic pain response or collapsing incidents from SI or facet palpation, or that she mentioned that she was dissatisfied with aspects of his examinations. Claimant reported an "extremely poor" response to the rhizotomy. She complained that it caused bruising on her thighs and back. She reported an increase in pain worse with flexion but better with extension. She reported that the RFA caused her legs to become weak and that she had numbness throughout her legs. Dr. Sparr advised that numbness involving the entire legs "would require compression on multiple nerves within her spine and spinal cord which is not possible after rhizotomy." He characterized these symptoms as "atypical," and he also commented that she had contacted his office earlier without mentioning such symptoms. Dr. Sparr again explained that rhizotomy would in "no way" cause bilateral lower extremity weakness, upon which Claimant corrected herself to report that her legs only felt "diffusely weak". (Resp's. Exh. AA). Dr. Sparr felt it reasonable to obtain a repeat MRI of the lumbar spine to "assure that there is nothing further causing compression and [Claimant's] noted weakness. He also scheduled an EMG of the bilateral lower extremities to "determine if there is any nerve damage of any sort. (Id.).

---

[2] Dr. Goldman would later explain that this SI examination response was nonphysiologic. (Hearing Testimony of Dr. Goldman).

[3] Dr. Goldman would subsequently testify that an RFA procedure would not cause a long-term increase in pain or decrease in function. (Hearing Testimony of Dr. Goldman).

16. On July 14, 2020, Claimant again declined to see Dr. Staudenmayer or "any other psychologist to assist us with frustration and working through problems." Claimant indicated her belief that she and Dr. Sparr did not get along and voiced concern about further "interventions and has trepidation about pursuing any further steroid injections due to detrimental effects." She also reported that she was working with restrictions, but clarified her need to squat at work and "demonstrate[d] the ability to do that for times like tying her shoes or picking up her keys." She specifically wanted her ability to squat documented so that she did not get into trouble when squatting occasionally at work. Per Claimant's request, PA Schwartz loosened Claimant's restrictions to allow squatting. (Clmt's Exh. 7, p. 361, 364).

17. Claimant underwent an EMG on August 12, 2020. The results of this study were documented by Dr. Sparr as being "normal" with "no evidence of left or right lumbosacral radiculopathy, left or right sciatic or distal compression neuropathy and no evidence of generalized peripheral neuropathy, leading Dr. Sparr to note that Claimant's reported lower extremity weakness was not supported by the results of the EMG. **(**Resp's. Exh. BB). Dr. Goldman later agreed with Dr. Sparr that Claimant's report of lower extremity weakness caused by her rhizotomy was a nonphysiologic complaint. (Testimony of Dr. Goldman). Upon review of the results of Claimant's EMG study, Dr. Sparr revised his suggestion for a repeat MRI, noting that it was not necessary. (Resp's. Exh. BB, p. 119).

18. Claimant would subsequently claim that the EMG worsened her condition (Resp's. Exh. CC), prompting Dr. Goldman to again testify that such complaints represented non-credible symptom magnification. (Testimony of Dr. Goldman).

19. On September 24, 2020, Dr. Lakin called and spoke to Claimant at length about her use of Gabapentin and other medications. Dr. Lakin found Claimant's response to his question of whether Claimant was benefitting from Gabapentin "very unclear". He tried to assess whether the titrated dose Claimant was taking was helpful only to have her indicate "several times that [it was] not hurting her." The two apparently "went around in circles, without her telling me that she is clearly benefiting." He commented that she was "very concrete in her thinking" and that she declined his repeated suggestion to adjust the dosage down to see if she noticed a benefit from the medication only to have her indicate that she did not want to make any changes "until she sees orthopedic spine surgeon." Dr. Lakin stated that he would be performing an impairment evaluation on October 13, 2020. (Resp's. Exh. EE).

20. On September 30, 2020, Claimant underwent a MRI that references similar findings as the previous study performed 13 months earlier (when she was walking up to 35 miles/week and gardening with no pain, etc.). (Resp's. Exh. FF).

21. On October 8, 2020, Dr. Michael Janssen performed a spinal surgery evaluation. Dr. Janssen believed there to be "vertical instability" and a loss of structural integrity at L5-S1, but also remarked of normal age-related changes with a minimal bulge and no thecal sac compression at L4-L5. He recommended an L4-L5 and L5-S1

discogram. He noted that he was "very particular" about these tests. Consequently, he indicated that the discogram needed to be done by someone he was familiar with or he would not make treatment decisions." (Resp's. Exh. GG). In the meantime, Claimant continued to work modified duty "without issue." (Resp's. Exh. HH).

22. On November 4, 2020, Claimant underwent lumbar discography at L4-L5 and L5-S1 followed by post discography CT of the lumbar spine. Discography revealed a concordant pain response to disc provocation at L4-5. The L5-S1 disc was found to be completely incompetent and repeated attempts at provocation failed to provoke a concordant pain response. Post discography CT scan demonstrated the following findings:

> Trace retrolisthesis L5 on S1. Vertebral body height and alignment otherwise maintained. There is moderate disc height loss L5-S1 and mild disc height loss L4-5. Discogram was performed at L4-5 and L5-S1.
>
> Findings as follows:
>
> L4-5: Modified Dallas grade 3 tear at approximately the 6:00 position.
>
> L5-S1: There is circumferential extension of contrast to the annulus consistent with grade 4 tear.
>
> Soft Tissues: The visualized soft tissues are unremarkable.

(Resp's. Exh. II, JJ).

23. On November 19, 2020, Dr. Janssen recommended reconstruction at L5-S1 for what he considered discogenic symptomatology, loss of structural integrity of the disc and vertical instability. He noted that Claimant was only able to work part-time and that her pain had altered her quality of life and ADLs, in as s much as she "tried to do half marathons with her daughter" but was apparently unable to do so. He stated that she could not take care of all her customers because she had severe axial back pain, despite the fact that the medical records consistently indicated that she was performing her modified but full-time duties "without issue," and had been doing so for many months, since May 2019. Dr. Janssen also remarked that there was no psychological overlay concerns, despite the findings of Dr. Staudenmayer and the other magnification markers documented throughout the case. (Resp's. Exh. KK).

24. The ALJ finds that Dr. Janssen assumed several facts that are inconsistent with voluminous medical record and that he had an inaccurate understanding of the psychiatric indicators and contraindications to surgery, leading him to reach opinions based upon incomplete information.

25. On December 18, 2020, Claimant returned to Dr. Lakin and his NP, at which time she again requested that her restrictions be modified to be less onerous, as she had

done on July 14, 2020. The ALJ finds this to be further evidence that Claimant was able to perform her modified work activities without problems. She was thereafter permitted to lift 10-15 pounds and squat and bend when using "good judgment," with allowances for frequent rest and stretch breaks. (Resp's. Exh. LL).

26. On December 22, 2020, Claimant was provided alternative modified work at the [Third Party Employer redacted] in Pueblo for 40 hours/week at $12.00/hour ($480/week). Claimant's duties included folding and organizing lightweight items under 10-15 pounds with no bending/twisting at the waist and no prolonged standing. The ALJ notes that the duties associated with this job offer were actually less physically demanding than the restrictions she was assigned a few days earlier, which would allow for some bending. Dr. Lakin approved this job offer. Claimant presented to the [Third Party Employer redacted] on December 29, 2020, at which time she agreed, as evidenced by her signature, that she would not perform duties that are outside of her physical limitations . . . " (Resp's. Exh. DDD, p. 260).

27. On January 27, 2021, Claimant underwent an orthopedic examination with surgeon Dr. Brian Reiss at Respondents' request. Dr. Reiss noted that, from a psychological point of view, it was "quite concerning" that Claimant complained of a severe increase in symptoms after her examinations with Dr. Sparr and after her EMG and RFA procedures as evidenced in the admitted medical record. He reviewed the discogram and remarked that, when performing discograms, the "most important information comes from a pain response at the time of injection. According to Dr. Reiss, Dr. Janssen appeared to ignore the fact that Claimant failed to report a significant pain response to provocation at this level during the discogram, when recommending surgery at L5-S1, which he opined is inappropriate. Per Dr. Reiss, Dr. Janssen simply assumed that because there is significant degeneration at and the disc is incompetent at L5-S1, this is Claimant's source of pain, i.e. her pain generator. According to Dr. Reiss, this supposition ignores the results/findings of the discogram and amounts to pure speculation. Dr. Reiss went on to remark that discograms were "notoriously unreliable, but if one is going to proceed with [a] discogram then you cannot simply throw out the result." As stated by Dr. Reiss, Dr. Janssen, did exactly that by suggesting disc replacement at L5-S1 "simply based upon the fact that more degeneration is present at that level, even though the amount of degeneration does not correlate with that level being the pain generator." (Resp's. Exh. NN).

28. Dr. Reiss concluded that a disc replacement procedure was not supported by the Workers' Compensation Medical Treatment Guidelines (MTGs), because the pain generator had not been adequately identified, there was no true instability and the likelihood of surgical intervention providing a positive result was not better than continued non-surgical treatment. A total disc replacement, stated Dr. Reiss, was unlikely to decrease Claimant's pain or increase her function. He also remarked that conservative care had not been appropriately completed. Dr. Reiss ultimately determined that the work injury involved a lumbar strain with pain that was probably being perpetuated by deconditioning and the absence of an appropriate exercise program. Dr. Reiss recommended a physical therapy program focused on core strengthening. Finally, and

contrary to the conclusion of Dr. Janssen, he noted that there was evidence of psychological overlay in the record. (Resp's. Exh. NN).

29. On March 16, 2021, Dr. Lakin remarked that the results of Dr. Reiss' independent medical examination (IME) "made sense from an orthopedic standpoint." During this appointment, Claimant indicated that she was still working but with increased pain by the end of the day. Nonetheless, she did not mention anything about having to work beyond her restrictions while performing tasks at the [Third Party Employer redacted]. Similarly, there is no indication in this report that Claimant informed Dr. Lakin that she could not continue working in her modified position, or that Dr. Lakin questioned her ability to do so; indeed, he maintained her on restrictions substantially similar to those she had been assigned previously. (Resp's. Exh. OO).

30. The day after her March 16, 2021 appointment (March 17, 2021), Claimant left work after two hours because she was "not feeling well." This was documented contemporaneously by the employer. Claimant never returned to [Third Party Employer redacted]. (Resp's. Exh. DDD, pp. 264-265).

31. During the period that Claimant worked modified duty position at the [Third Party Employer redacted] (December 29, 2020 through March 17, 2021), Employer paid her wages pursuant to the modified duty job offer at $12.00 per hour, and the Insurer paid the difference between her modified wages and regular wages as temporary partial disability (TPD). The difference between Claimant's $579.60 AWW for Employer and the $480.00 in wages earned as part of her modified job with the [Third Party Employer redacted] is $99.60 ($66.40 TTD/TPD rate). Respondents have been paying TPD since Claimant's commencement of employment at the [Third Party Employer redacted] in late December, and continue to pay such amounts despite her failure to return to the [Third Party Employer redacted], pending a determination by the ALJ as to their liability for wage loss benefits. (Resp's. Exh. XX).

32. Although she had left the [Third Party Employer redacted] on March 17 and had not returned to work since, Claimant suggested to Dr. Lakin on April 7, 2021 that she was still working with restrictions, with "no issues." She reported that her surgery with Dr. Janssen had been denied, and complained that she was experiencing numbness and tingling in her back down her legs and spasms (although such complaints were rendered unreliable by the previous diagnostic testing), and that PT was not helping. She requested a second surgical opinion with Dr. Bee and indicated that she did not believe she could return to any productive work. Dr. Lakin elected to "place" Claimant off work completely until he could obtain some "definitive answer or until she has some improvement." (Resp's. Exh. PP).

33. In contrast to her April 7, 2021 statements to Dr. Lakin, Claimant reported to her physical therapist on April 20, 2021 that she had pain but had become more functional and was "able to do larger loads of laundry and get less leg cramps." (Resp's. Exh. QQ).

34. On May 19, 2021, Dr. Lakin suggested that Claimant had reached MMI and scheduled her for an impairment rating on June 22; however, Dr. Lakin left the Southern Colorado Clinic resulting in a change of provider to Dr. Thomas Centi. (Resp's. Exh. SS). While Dr. Centi had assumed Claimant's care by June 22, 2021 – after Dr. Lakin left the medical practice – and he did not perform the previously scheduled impairment rating evaluation. (Resp's. Exh. TT).

35. On July 9 and July 12, 2021, Claimant underwent an IME with physiatrist L. Barton Goldman, MD. Following his IME, Dr. Goldman opined that Claimant demonstrated a "very high somatic focus and concrete, linear, somewhat rigid problem solving," with a very "concrete, fix it" and oversimplified understanding of her pain generators. He documented a normal gait pattern without antalgia, and found 4/5 positive Waddell signs during his evaluation.

36. Dr. Goldman reviewed and commented on Claimant's MRI as follows: "The . . . MRI scan is notable for diffuse especially lower lumbar spondylosis and degenerative changes seen in more than 50% of individuals without low back pain over 30. He was impressed by the amount of fatty atrophy present in the core musculature adjacent to the lumbosacral structures which he felt was contributing to Claimant's core weakness and hypermobility on clinical examination. Based upon his observations, Dr. Goldman opined that Claimant's MRI was "consistent with likely multi-factorial pain generators primarily involving the surrounding lumbosacral musculature that generally are not dramatically amenable to specific surgical intervention . . ."

37. Dr. Goldman also reviewed Claimant's CT scan noting that it "implies that there may be some contribution of discogenic pain to a multifactorial chronic low back pain condition primarily due to a muscular or myogenic injury with secondary discogenic and facet pain generators." (Resp's. Exh. UU at p. 227). He went on to opine that this "type of chronic multifactorial biopsychosocial pain presentation generally responds very poorly to more aggressive surgical interventions such as are being contemplated at this time on . . . behalf of [Claimant]." (Id.).

38. Dr. Goldman provided claim-related diagnoses of chronic lumbosacral strain with mild secondary facet dysfunction, possible L5-S1 instability requiring confirmatory standing flexion/extension films. He felt that Claimant was deconditioned and would benefit from a generalized aerobic and core strengthening program and found it significant that she had "no specific clear-cut vocational re-entry goal at this time." (Resp's. Exh. UU). He noted that Claimant's "perception that just about all of her different treatments so far have made her worse in the presence of clear signs of unconscious somatization are additional relative but nevertheless strong contraindications . . . against her benefitting from more aggressive spinal surgery in general.

39. As to the specific disc arthroplasty procedure recommended by Dr. Janssen, Dr. Goldman found that Claimant's work-related condition did not meet the criteria outlined in Rule 17, Exhibit 1, page 106 of the Medical Treatment Guidelines because her pain generators had not been adequately identified and treated, and because she had pain

beyond the L5-S1 level, based on clinical examinations, MRIs and discography results. Furthermore, because her spine pathology was not limited to one level, as required per page 107 of Exhibit 1, and she exhibited symptomatic facet arthrosis, Dr. Goldman opined that disc replacement surgery was contraindicated under Rule 17. According to Dr. Goldman, Claimant's medical records demonstrated that she would have difficulty with the aggressive rehabilitation necessary to further improve her function or stabilize her pain levels following disc arthroplasty surgery. Accordingly, Dr. Goldman agreed with Dr. Reiss' analysis that Claimant was not a good candidate for surgery and that she did not meet Rule 17 criteria.

40. Dr. Goldman also raised concerns for unconscious somatization based upon Claimant's contention that her treatment (rhizotomy) and diagnostic testing (EMG) worsened her symptoms. While he felt that psychiatric issues were complicating Claimant's presentation, which represented a contraindication to aggressive surgery, he did think it appropriate, as noted above, to address Dr. Janssen's suggestion that Claimant had "vertical instability" by completing a series of standing lumbosacral flexion/extension x-rays. In the meantime, Dr. Goldman opined that Claimant could benefit from improved pain management education, counseling, and biofeedback, although she appeared to "not be open nor enthused about additional support and treatment in this regard", which according to Dr. Goldman, presented yet another "relative contraindication" to aggressive surgical intervention." (Resp's. Exh. UU).

41. On September 28, 2021, Claimant underwent the aforementioned flexion/extension x-rays. This imaging revealed "mild degenerative lumbar facet arthropathy" only. Lumbar alignment was normal and there was no evidence of any acute findings, fractures or instability on flexion or extension. (Resp's. Exh. VV). Dr. Centi indicated thereafter that Claimant would be placed at MMI on November 23, 2021. (Id.). As part of his IME, Dr. Goldman also noted that if "gross instability" was not present on Claimant's standing flexion/extension films, Claimant would be "considered at maximum medical improvement. (Resp's. Exh. UU at p. 229).

42. On November 15, 2021, Claimant was evaluated by Dr. Scott Primack. Although he did not have all of Claimant's records for review (he did not reference Dr. Goldman's findings, acknowledged that he did not have the most recent MRI study and remarked that Claimant simply "told me" about the discogram), Dr. Primack came to the same conclusion as explicitly reached by Drs. Goldman and Reiss (and at least implicitly found by Drs. Lakin and Centi): that "people who have multilevel spondylosis are not good candidates for [a disc replacement] procedure." Claimant and Dr. Primack spoke about counseling for "coping skills" and her "sleep-wake cycle", but she, once again, expressed that she did not think counseling was necessary. (Resp's. Exh. EEE).

43. Claimant filed an Application for Hearing on May 25, 2021, endorsing the issues of authorization of the surgery recommended by Dr. Janssen and TTD from March 17, 2021 and continuing. (Resp's. Exh. YY). Respondents filed a response to Claimant's hearing application on June 7, 2021 contending that Claimant did not leave work due to the injury and voluntarily resigned and was therefore, responsible for the termination of her

employment. Respondents also endorsed offsets and overpayments. (Resp's. Exh. ZZ). As noted above, the matter proceeded to hearing on November 4, 2021 and November 24, 2021.

44. At the hearing, Claimant acknowledged that she worked full-time modified duty from May 2019 to December 2020 with the Employer, during which time she was not performing transfers but would occasionally push patients who weighed up to 100 pounds in wheelchairs. Additionally, Claimant testified that she would perform passive range of motion on the residents Assigned to her caseload. She stated that she had no issues performing her job duties over the 19 to 20 months after the injury "as long as [she] stayed within [her] restrictions." As referenced above, Claimant was transferred to a modified duty position at the [Third Party Employer] which she testified required her to bend and reach down into bins to grab items to tag. She claims that this aggravated her low back condition. She characterized her work at the [Third Party Employer] as "repetitive," but also acknowledged that she could take as many breaks as she wanted. She also acknowledged that she agreed not to perform duties that were outside of her limitations. She alleged that she told "Ms. K[Redacted[]" (later clarified to be [Redacted]) about difficulties she was having performing her tasks. According to Claimant, Ms. K [Redacted] responded by indicating that Claimant's tagging job was "all that they had." Claimant testified that she was having significant problems performing ADLs up to the day of the hearing, but acknowledged that she did her own laundry and "some" yardwork, including planting and weeding, and also her own shopping.

45. Ms. K[Redacted] testified as the Assistant Manager of the [Third Party Employer]. She explained the stores' modified duty process. She testified that workers referred to the store for modified duty are told at orientation that they are not to work outside of their physical restrictions. She also testified that she would frequently ask workers referred to the store how they were doing with their assigned duties and that she asked Claimant how she was doing/feeling "all the time." She believed that the store had provided "dozens" of modified duty position to injured workers, and stated that the store could provide work to a variety of injured workers with wide ranging limitations. Ms. K[Redacted] was provided with Claimant's work restrictions in advance of her job placement, and confirmed the correct restrictions before assigning her to a specific position. Ms. K[Redacted] testified that Claimant was initially provided a position in the men's department that she believed was within her abilities, but Claimant complained after a short time – which she recalled was after a day or maybe a few days – that the tasks were too onerous so she was moved, and "never hung another item." According to Ms. K[Redacted], she transitioned Claimant to the break room to prepare lightweight items, such as hats, ties, purses, sunglasses and scarves for resale. She stated that the heaviest item Claimant would lift would probably be a purse, and that Claimant could sit or stand "at her convenience." She explained that the materials to prepare were on a cart at table height, on springboards in yellow bins, so the bins are "always floating right on top", meaning that the position required no bending or twisting. She also testified that the job had no production expectations. Rather, it "would just take you however long it took you" to prepare the items for the sale floor.

46. Ms. K[Redacted] disputed Claimant's assertion that she reported difficulties performing her job duties after her very short stint in the men's department, because as Ms. K[Redacted] testified, she "check[s] on people all the time," and asks how they are doing "all the time, probably every day." Ms. K[Redacted] testified that she saw Claimant "several times a day, all day, every day" and other than in the first day or two when she was in the men's department, she "never had a complaint from [Claimant] …" She also disputed Claimant's contention that she reported that her duties exceeded her restrictions. Instead, Ms. K[Redacted] recalled, that Claimant reported that she was not feeling well on March 17, and that she left after working for two hours, and never returned. Ms. K[Redacted] testified that if Claimant had indicated that she was having difficulty performing her tasks, she would have been assigned less onerous work – which Ms. K[Redacted] testified that the [Third Party Employer Redacted] routinely provides under such circumstances. Ms. K[Redacted] also disputes Claimant's assertion that she stated that there were no other jobs available. Instead, Ms. K[Redacted] testified that the [Third Party Employer redacted] can accommodate a wide variety of restrictions.

47. Dr. Goldman testified at both the November 4 and November 24, 2021 hearings. Dr. Goldman is a Board Certified, Level II Accredited expert in the area of Physical Medicine and Rehabilitation (RM&R) who teaches the accreditation course and helped develop the MTGs.

48. Dr. Goldman described the "dramatically different" presentation Claimant demonstrated in the first three months of the claim when compared to the time she began modified duty at the [Third Party Employer redacted]. According to Dr. Goldman such a difference would most likely be related to a specific physical change, such as a new or exacerbated pain generator, or the result of psychosocial issues. Based upon his examination and records review, Dr. Goldman opined that Claimant's change in presentation was not physiologic. Indeed, Dr. Goldman noted that the objective findings demonstrated no change in the pathology, as per the MRIs, the EMG was normal and the CT showed only common age-related issues. Dr. Goldman also noted that Claimant's response to the facet examination by Dr. Sparr was not physiologic. Rather, he opined that Claimant's response to Dr. Sparr pressing on her SI joints demonstrated symptom magnification which he concluded was also supported by her response to several interventions, including the rhizotomy.[4] Her claim that the EMG caused weakness in her legs was "another sign of somatization", according to Dr. Goldman. He remarked that the psychological evaluation by Dr. Staudenmayer confirmed that Claimant suffered from an adjustment reaction and mistook psychological stress for physical symptoms, but she declined the recommended psychological treatment.

49. As to surgery, Dr. Goldman raised several misconceptions held by Dr. Janssen. First, Dr. Goldman agreed with Dr. Riess that the discogram was not diagnostic. Second, the radiology and examinations confirmed that her problems stemmed from more than one level. Consequently, he opined that the suggested disc replacement surgery

[4] Dr. Goldman acknowledged that a rhizotomy could be painful, but qualified that such would not cause pain or disability beyond a few days, and that Claimant's claim of lower extremity weakness from it was not physiologic

would probably not be successful for that reason. He stated that the record indicated that Claimant would likely not submit to the aggressive rehabilitation that would be necessary to derive any benefit from the surgery, and that Claimant herself indicated that she would not be "enthused" about committing to such a program. He thought without such rehabilitation, the proposed surgery would fail and Claimant could suffer iatrogenic disability, as she had already exhibited based upon her nonphysiologic response to the rhizotomy. Thus, he opined that Claimant would probably not only fail to improve following the recommended surgery, but that she would likely worsen. He testified that while somatization is not an automatic disqualifier for surgery, Claimant's reluctance or refusal to undergo counseling to address it was problematic.

50. Dr. Goldman clarified that the work restrictions provided by Dr. Lakin were reasonable and safe, and would not cause any injury or aggravation. Based upon the evidence presented, the ALJ finds it improbable that Claimant's modified job duties, as described by Ms. K[Redacted] would have aggravated or exacerbated Claimant's condition. Indeed, Dr. Goldman reiterated during his testimony that Claimant's disability at [Third Party Employer redacted] was inconsistent with what she demonstrated in the period just after her injury, in her 19-20 months or employment post-injury with the Respondent-Employer and even with her recent activities since she left [Third Party Employer redacted].

51. The ALJ finds Dr. Goldman's testimony credible and more persuasive, both in establishing that the requested surgery is unlikely to result in any improvement (and could very well do harm), and that Claimant presents with significant psychosocial overlay than the contrary reports of Dr. Janssen and Claimant's testimony.

52. The ALJ does not find Dr. Janssen's surgical opinion to be persuasive. In assessing weight, the ALJ finds that his opinion is outdated, not supported by any other doctor and based on incorrect facts, including that Claimant did not exhibit psychological overlay, and he relied on a non-diagnostic discogram. His recommendation is not consistent with the MTGs. Perhaps most significantly, he based his recommendation on the assumption that Claimant had spinal instability, but subsequent flexion/extension x-rays objectively established this was not correct.

53. The ALJ finds Ms. K[Redacted] credible, and her unambiguous testimony persuasive. The record supports a finding that Claimant was provided work within her restrictions that required no bending, and that the [Third Party Employer redacted] could and would have provided further accommodations if it had been requested. The record also supports a finding that Claimant never requested further accommodation after she was moved from the men's department nor did she complain to any that she was being asked to work beyond her given restrictions. Indeed, one day before Claimant left work early (March 16, 2021) she saw Dr. Lakin whose report from this date of visit is devoid of any indication that Claimant's pain symptoms were worse *because* she was having to work beyond her given restrictions. Given Claimant's propensity to report any increase in her symptoms, even those she believed were caused by her treatment/examinations or diagnostic testing, the ALJ finds it improbable that she would not have reported to Dr.

Lakin that her pain was worsened because she was made to work beyond her restrictions. Simply put, if Claimant was having difficulty performing her modified duty tasks or was experiencing increased pain because she was worked beyond her restrictions, she would have reported it timely.

54. In this case, the ALJ credits the testimony of Ms. K[Redacted] that, when Claimant reported difficulties in the men's department, she was promptly moved. While Claimant asserts that she complained about her work and difficulty performing it, the ALJ looks, as noted above, to the contemporaneous records, which do not support her claims, as she did not contemporaneously report to Dr. Lakin that she was working outside of her restrictions – either on March 16, the day before she left work, or on April 7, the next time she saw him. Ms. K[Redacted] was clear and persuasive in her denials, which are supported by Employer's records that document that Claimant went home on March 17 because she was "not feeling well." Ms. K[Redacted] presents as a witness with no bias, prejudice or interest in the outcome of the proceedings. Accordingly, the ALJ credits Ms. K[Redacted]'s testimony over that of Claimant's, where conflicting.

55. The Medical Treatment Guidelines, specifically WCRP Rule 17, Exhibit 1, guide the principles surrounding the care and treatment of low back pain. Rule 17, Exhibit 1(G) addresses the general clinical and diagnostic indicators that should be considered before surgical intervention concerning the low back, including artificial disc replacement, is undertaken.

56. As noted, artificial lumbar disc replacement is a surgical procedure addressed by the MTGs. Regarding disc replacement surgery WCRP Rule 17, Exhibit 1(G)(11)(a) provides:

> General selection criteria for lumbar disc replacement includes symptomatic *one-level* degenerative disc disease. The patient must also meet fusion surgery criteria[5], and if the patient is not a candidate for fusion, a disc replacement procedure should not be considered. Additionally, the patient should be able to comply with pre-and post-surgery protocol. (Emphasis added).

[5] Rule 17, Exh. 1(G)(4)(d) notes that the diagnostic indication for spinal fusion includes the following: "i, Neural Arch Defect usually with stenosis or instability: Spondylolytic spondylolisthesis, congenital unilateral neural arch hypoplasia. It should be noted that the highest level of success for spinal fusions is when spondylolisthesis grade 2 or higher is present. ii. Segmental Instability: Excessive motion, as in degenerative spondylolisthesis 4mm or greater, surgically induced segmental instability. iii. Primary Mechanical Back Pain/Functional Spinal Unit Failure: Multiple pain generators objectively involving two or more of the following: (a) internal disc disruption (poor success rate if more than one disc involved), (b) painful motion segment, as in annular tears, (c) disc resorption, (d) facet syndrome, and/or (e) ligamentous tear. Because surgical outcomes are less successful when there is neither stenosis nor instability, the requirements for pre-operative indications must be strictly adhered to for this category of patients. iv. Revision surgery for failed previous operation(s) if significant functional gains are anticipated. v. Other diagnoses: Infection, tumor, or deformity of the lumbosacral spine that cause intractable pain, neurological deficit, and/or functional disability.

57. Based upon the evidence presented, Claimant may technically meet the diagnostic criteria for a fusion surgery as she appears to have primary mechanical back pain involving multiple pain generators with objective evidence of internal disc disruption and has a painful motion segment (annular tearing) and facet syndrome. (See Rule 17, Exh. 1(G)(4)(d)(iii)). Nonetheless, the MTGs raise several concerns for proceeding with disc replacement surgery in this case, including the following:

- The evidence presented supports a finding that Claimant has more than one-level of symptomatic degenerative disc disease in the lumbar spine. Indeed, Claimant's imaging (MRI) revealed a "desiccated degenerative bulging disc, osteophyte and loss of disc height at L5-S1 with severe foraminal narrowing, left greater than right" along with a "5 mm central disc protrusion at L4-L5 without significant canal stenosis." Moreover, her discogram revealed annular tearing at both L4-5 and L5-S1 and while she demonstrated concordant pain at L4-5, Claimant's L5-S1 was deemed to be completely incompetent. Accordingly, the ALJ credits Dr. Goldman's testimony to find that Claimant has objective evidence of more than one level of degenerative disc disease in the lumbar spine making her a poor candidate for disc replacement surgery even if she did not exhibit clear signs of somatization.

- The evidence presented supports a finding that not all of Claimant's potential pain generators have been adequately defined and treated. As with any fusion procedure, all pain generators must be adequately defined and treated for those persons for whom disc replacement surgery is being recommended. Here, the evidence supports a finding that Claimant's discogram is probably non-diagnostic in terms of supporting Dr. Janssen's conclusion that a disc replacement procedure is reasonable and necessary at L5-S1. Indeed, repeated attempts at L5-S1 provocation failed to produce a concordant pain response at this segment leading Dr. Reiss to note that Dr. Janssen seemingly ignored this finding and recommend a disc replacement at L5-S1 "simply based upon the fact that more degeneration [was] present at [this] level, even though the amount of degeneration [did] not correlate with that level being the pain generator." While discography may prove useful in evaluating morphological abnormalities of the disc, including annular tearing, the MTGs provide, as opined by Dr. Reiss, that the presence of an annular tear does not necessarily identify the tear as the pain generator. In this case, the evidence presented persuades the ALJ that Claimant has pathology at multiple disc levels along with facet joint arthritis. While it is possible that Claimant's

symptoms could be emanating from the L5-S1 disc, the ALJ credits Dr. Goldman's opinions to find that the cause of Claimant's pain is probably multifactorial. The ALJ is also convinced that there has not been an adequate effort to define and treat Claimant's specific pain generator(s), which the ALJ finds will be difficult to accomplish in light of the unreliable nature of Claimant's subjective reporting given the degree of somatization and psychological overlay she exhibits.

- The evidence presented supports a finding that while a psychosocial evaluation that provided clear signs of unconscious somatization and psychological overlay has been performed, Claimant has refused to address the psychiatric issues/conditions that may be driving or impacting many of her physical complaints. The ALJ credits the opinions of Drs. Staudenmayer and Goldman to find that without the recommended biofeedback and cognitive therapy, Claimant's psychiatric diagnoses pose a significant threat to her post-surgical recovery raising the strong probability that the surgery will fail, which could lead to the development of iatrogenic disability.

58. Based upon the evidence presented, the ALJ is not convinced that Claimant has demonstrated that the requested L5-S1 disc replacement procedure recommended by Dr. Janssen is reasonable and necessary. Indeed, the ALJ credits Dr. Goldman's opinion to find that the evidence demonstrates that "[a]t the very least [Claimant] has multifactorial reasons for her chronic pain that cannot be addressed by a disc arthroplasty in the presence of contraindicated symptomatic facet joint arthritis and more than one level of degenerative disc disease as discussed on pages 106-107 of Rule 17, Exhibit 1." When considered in its totality, the evidence presented persuades the ALJ that the proposed disc replacement surgery does not meet the criteria set forth in the MTG's and that deviation from the guidelines would not be appropriate in this case in light of the evident psychological overlay exhibited by Claimant.

59. Based upon the evidence presented, the ALJ credits the testimony of Ms. K[Redacted] to find that Claimant did not leave work due to her injury, but rather made a volitional decision to no longer appear for modified duty as provided by Employer and approved by Dr. Lakin. Consequently, the ALJ is persuaded that Claimant is responsible for her wage loss and not entitled to wage loss benefits after March 17, 2021.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its entirety, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that while Claimant suffers from pathologic changes in the lumbar spine that are probably causing her pain, the proposed L5-S1 disc replacement surgery does not meet the medical treatment guidelines given the multilevel nature and extent of her disc disease and confounding psychological issues. As found, the opinions of Dr. Goldman and Reiss are credible and more persuasive than the contrary opinions of Dr. Janssen and the testimony of Claimant. Accordingly, Claimant has failed to make a convincing case that the L5-S1 disc replacement procedure is reasonable and necessary.

Medical Benefits- The L5-S1 Disc Replacement Surgery

D. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

E. The MTG's enumerated at WCRP, Rule 17 are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). WCRP Rule 17-2(A) provides: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). Moreover, the Court is not bound by the MTGs in deciding individual cases based on the guidelines or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

F. While the Court is not required to utilize the medical treatment guidelines as the sole basis when deciding whether specific medical treatment is reasonable, necessary or related to an industrial injury or occupational disease, the Guidelines carry substantial weight as accepted guidance in the assessment and treatment of low back pain. Concerning the medical issue presented, the MTG's, specifically WCRP Rule 17, Exhibit 1 (G) provides that in order to qualify for an artificial disc replacement surgery, the patient should exhibit spine pathology limited to one level and have undergone a psychosocial evaluation which addresses confounding issues, including somatization and other clear indications that there may be a translation of psychological distress into physical symptomatology.

G. In this case, Claimant's imaging studies, including the MRI and discogram clearly indicate that she has multi-level degenerative disc disease, annular tearing and facet joint involvement. Moreover, Claimant has refused to address the psychological factors which are probably affecting her interpretation and reporting of pain. The presence of multi-level disc disease coupled with the chronicity of Claimant's low back pain and her failure to address the potential that confounding psychosocial issues are playing a role in her pain and response to treatment make her a poor surgical candidate. Indeed, such factors pose as strong contraindications to proceeding with artificial disc replacement surgery. Because Claimant's pain is probably multifactorial and could be emanating from facet arthritis, myogenic changes, disc disruption or annular tearing, the ALJ questions whether addressing the single L5-S1 spinal segment is going to relieve cure and relieve Claimant's intransigent discomfort. Based upon the evidence presented, the ALJ is not convinced that the results of Claimant's discogram point to L5-S1 being her pain generator. Simply put, the ALJ is not persuaded that all of Claimant's potential pain generators have been adequately defined and treated as required by the MTG's, nor is the ALJ convinced that there is a reasonable probability that Claimant will significantly benefit from the proposed disc replacement surgery given her current physical capacity (core strength/aerobic condition) and her strongly held believe that her only problem is physical in nature.

H. As noted above, the MTG's provide that a psychosocial evaluation, which addresses confounding issues be completed before moving to artificial disc replacement. This is true because there is "some evidence that depression is a more accurate predictor of the development of low back pain than many common MRI findings, such as disc bulges, disc protrusions, Modic endplate changes, disc height loss, annular tears, and facet degeneration, which are common in asymptomatic persons and are not associated with the development of low back pain." (Rule 17, Exh. 1(E)(2)(c)). In this case, the record submitted establishes that Claimant has been treated for reactive depression and has a past history of physical abuse. (Resp's. Exh. V). While Claimant has undergone past psychological treatment, the record demonstrates that treatment to be remote. As noted, Claimant has refused to participate in any therapy to address her evident somatization leading Dr. Goldman to opine that her "understandable desire 'to be fixed' via external interventions (surgery) as compared to rehabilitated and healed (more of an internal and time demanding process) again paradoxically undermines the likelihood that she will benefit from surgical intervention. (Resp's. Exh. UU p. 230).

I. As demonstrated by WCRP 17-5(C) the MTG themselves recognize that deviations from the guidelines are reasonable in individual cases. *Madrid v. TRTNET Group, Inc*., WC 4-851-315-03 (ICAO April 1, 2014). Consequently, evidence of compliance or non-compliance with the assessment protocols of the MTG have not been considered dispositive when determining whether medical treatment is reasonable and necessary. *Madrid v. TRTNET Group, Inc*., *supra*. The ALJ may weigh evidence of compliance or non-compliance with the MTGs and assign such evidence an appropriate weight considering the totality of the evidence. *See Adame v. SSC Berthoud Operating*

Co., LLC., WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). Here, the ALJ has "[considered] the medical treatment guidelines adopted under § 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease." In keeping with the MTGs and as found above, the ALJ concludes that while Claimant's current condition is directly related to her industrial injury, she does not meet the surgical indications to proceed with artificial disc replacement, nor has she presented sufficient evidence that would substantiate that a deviation from the MTGs is warranted in this case. Indeed, the evidence presented strongly supports a reasonable inference that given the multitude of contradictions to the recommended procedure, Claimant would not likely benefit from the surgery which raises the real potential for the development of iatrogenic disability. Based upon the evidence presented, the ALJ concludes that Claimant has failed to establish that she is a candidate for artificial disc replacement surgery or that the procedure is otherwise reasonably necessary. Accordingly, her request for authorization to proceed with surgery must be denied and dismissed.

Claimant's Wage Loss & Termination for Cause

J. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding her continued entitlement to lost wage benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if the claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* 102 P.3d 323 (Colo. 2004). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo.App. 2000).

K. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008). In this case, Claimant contends that she left her modified duty job because of increased symptoms related to her having to work beyond

her given restrictions. Respondents contend that Claimant voluntarily quit her job, and as such, committed a volitional act barring her entitlement to wage loss benefits after March 17, 2021.

L. Even if Claimant voluntarily quit her job, *Blair v. Art C. Klein Construction Inc.,* W.C. No. 4-556-576 (ICAO, November 3, 2003), held that a claimant's voluntary resignation is not dispositive of the issue of whether the claimant was responsible for the termination of employment. The *Blair* Court held that the pertinent issue is the reason claimant quit because the claimant is not "responsible" where the termination is the result of the injury. *See Colorado Springs Disposal v. Industrial Claim Appeals Office, supra; Gregg v. Lawrence Construction Co.,* W.C. No. 4-475-888 (ICAO, April 22, 2002); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO, April 24, 2002). According to *Blair,* "if the claimant was compelled to resign from . . . employment such that it can be said the termination was a necessary and a natural consequence of the injury, rather than the claimant's subjective choice, the claimant would not be at fault for the termination." Here Claimant argues that she left her modified duty position because of her injury. As noted, Claimant contends that she experienced increased symptoms as a consequence of being made to work beyond the restrictions imposed on her due to her injury. Accordingly, she asserts that she is not responsible for her wage loss. The ALJ is not convinced.

M. In this case, Claimant worked for the Respondent-Employer for about 20 months, through late December 2020, after which she began transitional employment at [Third Party Employer redacted]. She was provided a Rule 6-compliant work offer that was approved by her authorized treating provider (ATP), Dr. Lakin. She commenced employment in a position consistent with those limitations (and also consistent with her work restrictions over the 20 months prior), which restrictions Dr. Goldman clarified were reasonable, safe and unlikely to cause aggravation. She completed paperwork explicitly agreeing that she would not work outside of these restrictions, and acknowledged that she was directed by her supervisor, Ms. K[Redacted], to not do so.

N. Based upon the evidence presented that ALJ concludes that Claimant's job duties in January to March 2021 were to prepare lightweight items that were within her lifting capacity and that her position required no bending or twisting. Indeed the credible/convincing testimony of Ms. K[Redacted] persuades the ALJ that Claimant was provided a table at which she could sit and stand as needed to complete her modified duty tasks and that the bins from which she picked items from were on spring-loaded carts that maintained the items at table-height. Thus, no bending or twisting was necessary. Claimant insists that she had to bend to retrieve items, and, thus, that she was assigned work that was beyond her restrictions. However, in crediting Ms. K[Redacted]'s contrary testimony, the ALJ considers the surrounding evidence. Most notably, Claimant did not contemporaneously indicate that she was being worked beyond her restrictions. While Claimant testified that several other employers witnessed the problems she was having at work, she presented no independent verification from Jan, Wendy, Jerry, Roxanne or Chole that she was being made to work beyond her restrictions. Moreover, the day before she left work early, Claimant was evaluated by Dr. Lakin who maintained her on the same restrictions. The medical report from this date of visit is devoid of any indication that

Claimant was having increased symptoms because she was asked to work beyond her restrictions nor did she report such an allegation to Dr. Lakin on April 7. Given the frankness with which Claimant has reported the alleged cause of increased symptoms in this case, the ALJ agrees with Respondents that the absence of documentation in the medical record to support Claimant's allegations bolsters a reasonable conclusion that no such complaints were made either on March 16, 2021 (one day before Claimant left work early allegedly because she was assigned work that was beyond her restrictions causing increased pain) or April 7, 2021 after she left work. As found, the ALJ credits the testimony of Ms. K[Redacted] and the contemporaneous notation in the employment records to conclude that Claimant left work early on March 17, 2021 because she was feeling ill not because she was having increased pain from performing work outside of her restrictions.

O. In concluding that Claimant is responsible for her wage loss, the ALJ is convinced that Ms. K[Redacted] would have been provided different tasks if she indicated that she needed it. Indeed, Ms. K[Redacted] had previously done so, after Claimant indicated that her initial position with the store over the first day or few days was causing her increased symptoms, even though that position was within her restrictions and was explicitly approved by Dr. Lakin. The ALJ also finds it notable that at the time Claimant left the [Third Party Employer redacted], she had worked her prior position and then the transitional work position for over 19 months. The evidence presented supports a conclusion that that the activities Claimant was performing in 2021 at [Third Party Employer redacted] were less physically demanding than those duties Claimant performed prior to starting at [Third Party Employer redacted], which makes her claim that these limited activities were aggravating her symptoms incredible and unconvincing. Indeed, just a few weeks after the initial injury, Claimant was walking 3-5 miles/day, was performing physical yardwork "all weekend" and was able to walk through a grocery store and lift items for two hours. The intervening medical records document no new objective injury or aggravation or any change in pathology that would explain how or why Claimant would become more disabled. Claimant thereafter engaged *for months* in activities that were more physical than those she described and Ms. K[Redacted] confirmed she was performing at the [Third Party Employer redacted]. The ALJ also notes Claimant's admission after she left work she was lifting loads of wet clothes – an activity beyond what was required at [Third Party Employer redacted], and her admission of current-day ADLs, such as weeding. Based upon the evidence presented, the ALJ is convinced that Claimant probably did not leave work because of the industrial injury[6]. Rather, the ALJ is convinced that Claimant simply abandoned her modified duty job. Because her termination was not compelled by the natural consequence of the work injury, Claimant is "responsible" for her job separation. Accordingly, her wage loss following March 17, 2021

[6] Respondents' suggestion that Claimant alleged increased symptoms as a pre-text to leaving the [Third Party Employer redacted] because she felt aggrieved that the request for surgery was denied is probable and consistent with Dr. Staudenmayer's findings concerning somatization. The ALJ concludes it likely that Claimant is indirectly venting unrecognized psychological distress through physical complaints for purposes of obtaining some emotional relief. This well-documented psychological overlay makes her claims of subjective worsening unreliable.

is not attributable to her on the job injury. *Blair v. Art C. Klein Construction Inc., supra.; Longmont Toyota, Inc.*, *supra*.

ORDER

It is therefore ordered that:

1. Claimant's request for additional medical treatment in the form of a L5-S1 artificial disc replacement is denied and dismissed.

2. Respondents have proven, by a preponderance of the evidence, that Claimant is responsible for the termination of her employment. Accordingly, her wage loss after March 17, 2021 is not attributable to her on the job injury. Respondents may terminate payment of temporary partial disability (TPD) benefits as of March 17, 2021 and take credit for all amounts of TPD paid after March 17, 2021.

3. All matters not determined herein are reserved for future determination

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the reverse total shoulder arthroplasty performed by Dr. John Papilion on March 31, 2021 was reasonably necessary and related to the admitted March 2, 2020 work related injury.

FINDINGS OF FACT

Based on the evidence presented at hearing and post hearing, the ALJ enters the following findings of fact:

1. Claimant was a sixty eight year old commercial delivery truck driver for Employer at the time of the hearing who drove a Maxim ten speed tractor trailer. He had worked for Employer for approximately eight years and continued to be employed by Employer. The last day worked was July 9, 2020. He worked full time as a truck driver, which involved delivering lumber and other materials as both a local driver and a long haul driver, including to Wyoming and Nebraska, though the bulk of the driving was locally. He had from one delivery up to ten per day. He would drive same the tractor generally. He was not required to unload the materials. Claimant would work from approximately 5:00 a.m. up to ten to twelve hours a day, five days a week.

2. Upon arriving at work Claimant would perform a pre-trip examination of the tractor and the trailers before using either to make sure they were both safe to be on the road and drive, entering it into the on board electronic computer. He would also do a post trip upon returning to the yard. They involved multiple check lists. Claimant would drive two different types of trailers. The flatbed and a curtain-side trailer. The curtain trailer had rubber leather-like sides that would have to be pulled back and to the side so that they would protect the merchandize or materials from exposure. The curtains weighted approximately 150 to 200 lbs. and would slide on metal bars at the top. They were 45 to 50 foot long and approximately eight foot tall. Sometimes the curtains were stiff and hard to open or close due to poor maintenance. They curtains would get hung up on the slide, so Claimant would have to jerk the curtain to make them open or close. It was very heavy and very awkward. They had no handle but had two straps at the bottom, which he would pull one in each hand, bracing himself when doing it. The straps were approximately two to three feet apart.

3. On March 2, 2020, during the last delivery, Claimant had to open the curtain for the forklift to get to the materials to unload the truck. As he was pulling the curtain open, he grabbed the straps and pulled at about chest height, when he felt a tear and ripping sensation in his right shoulder, as well as a lot of pain. He was able to complete his delivery and reported the injury to his supervisor when he returned to the Employer yard.

4. On March 3, 2020 Claimant sought medical attention because of the pain. He was having difficulty raising his arm and was in a lot of pain. He took over the counter medication to help.

5. He was attended by Jonathan Joslyn, PA-C at Concentra on March 3, 2020 and reported that Claimant felt a rip in his right shoulder and upper arm, was having difficulty with sleeping at night, was now hard to move the arm above the shoulder level and any use was exacerbating his shoulder pain. He provided a history of pulling a curtain side trailer curtain that got caught pulling right arm, injuring his right shoulder, reporting constant pain. On physical exam Claimant had tenderness in the lateral shoulder and in the posterior shoulder and though he had full range of motion, it was with pain. He was diagnosed with a right shoulder strain, provided with medications and ordered physical therapy. Mr. Joslyn stated that the mechanism of injury appeared to be consistent with the mechanism of injury and returned Claimant to modified duty. Dr. Amanda Cava approved the report. Dr. Cava also completed a Physician's Report of Workers' Compensation Injury on March 6, 2020, continuing the same restrictions.

6. On March 5, 2020 physical therapist Darwin Abrams documented right shoulder pain with weakness, moderate tenderness in the infraspinatus muscle and tender points over the infraspinatus..

7. Dr. Theodore Villavicencio of Concentra evaluated Claimant on March 7, 2020, who documented the same history and continued medical restrictions. On exam he found tenderness in the lateral shoulder and in the posterior shoulder, full range of motion with pain, forward flexion with pain, abduction with pain, external rotation with pain and pain in the lateral shoulder.

8. Therapist Joshua Strough also documented tenderness over the infraspinatus and some soreness and achiness on March 12, 2020. He noted that Claimant had been given work restrictions by the treating medical provider which limited his participation in one or more essential job functions, only achieving up to fifty percent of his physical therapy goal. Claimant reported that he had some decrease in symptoms with therapy which included massage therapy, reeducation, therapeutic exercises and instruction with a TheraBand.

9. Claimant was evaluated by PA-C Lisa Grimaldi on March 13, 2020 who noted Claimant had tenderness in the lateral shoulder and in the posterior shoulder, with abnormal flexion at 105 degrees with pain, abduction of 95 degrees with pain, external rotation with pain and pain in the lateral shoulder. Claimant reported that he was 40% better since starting PT, but he still had a difficult time moving or lifting his arm above his shoulder.

10. Dr. Kenneth Birge documented on March 20, 2020 that Claimant was continuing to improve, and had more movement, attributing it to the therapy he was receiving. However, he documented that Claimant had abnormal flexion, extension, abduction and adduction of the right shoulder. The notes do not indicate whether this is passive or active range of motion. Dr. Birge stated that Claimant was only fifty percent

towards his goals at this point, which was also reported by therapist Strough on March 26, 2020.

11. On March 27, 2020 Dr. Grimaldi stated that he had made good strides with physical therapy in reaching a full range of motion with pain at the extremes of motion. Again, this does not specify whether it was passive or active range of motion. She did report mild to moderate pain depending on position of the right shoulder. While she did release Claimant to full duty, she also prescribed pain medication on that day to be taken three to four times a day.

12. Therapist Natasha Shkrobor reported on March 27, 2020 Claimant was sore after the prior day's physical therapy and stated that Claimant had only reached 50% of his therapy goal. Claimant continued with therapy with Mr. Strough on April 2, 2020. Claimant continued to report aching in his shoulder, which Claimant was still very concerned about, though he felt stronger following therapy. Mr. Strogh continued to recommend continued therapy. On April 3, 2020 Claimant continued to state he was doing well but continued to have achiness during the day.

13. Claimant reported having to fasten straps over materials and was feeling soreness in the right shoulder on April 10, 2020. Despite that, he was discharged from physical therapy.

14. On April 14, 2020 Mr. Joslyn, the physician assistant, reported that Claimant continued to have constant pain in his right shoulder but that therapy was helping. Claimant continued to work but only on flat bed trailers and was concerned about returning to work using curtain trailers. He was still taking ibuprofen and using gel, which were helpful. While Claimant was able to perform the work and be functional, he continued to have achiness in the shoulder and was "not at end of healing." Dr. Cava reviewed the chart and agreed that Claimant was making progress.

15. On April 28, 2020 Mr. Joslyn reported that Claimant had improvement overall but was still feeling limited with pulling straps with a crowbar, which he used to do easily one handed. Claimant reported that now he was having difficulty performing the strap work even with both hands, was working almost full duty but had not tried a curtain truck yet. He reported constant ache in the right shoulder with a pain score of 5/10 level and on exam Mr. Joslyn found tenderness in the deltoid and in the lateral shoulder. Mr. Joslyn continued medications and stated that Claimant was progressing somewhat slower than expected, had pain with exertion and would consider an MRI or injection if Claimant did not show further improvement by the next visit.

16. Dr. Jeffrey Peterson reevaluated Claimant on May 12, 2020 for follow-up of the right shoulder strain. He noted Claimant was working but had deep aching pain during the day and especially at night which was disconcerting. Dr. Peterson discussed the mechanism of injury where he was closing a curtain, met resistance, and immediately had a sharp/searing pain in shoulder. This had not abated. He noted he was right handed and must switch to left hand use regularly due to the constant right shoulder pain. On exam, Dr. Peterson found abduction/adduction pain along the supraspinatus track as well

as the interface between the anterior and middle deltoid body. The rotator cuff evaluation showed external rotation pain with slight limitation but no gross deficits to ROM evaluation of the shoulder girdle. He noted that pain was constant and sharp. Dr. Peterson ordered an MRI of the right shoulder and returned Claimant to modified activities.

17. On May 19, 2020 Dr. Eduardo Seda of Health Images read the Claimant's MRI of the right shoulder, which revealed a full thickness tear of the infraspinatus and supraspinatus of 19 mm (less than 2 cm). It showed a bicep tendon tear, AC arthrosis and no significant muscle atrophy.

18. On May 22, 2020 Dr. Peterson stated that Claimant was awaiting a specialist evaluation. At that time he assessed a traumatic tear of the supraspinatus and infraspinatus tendons of the right shoulder.

19. On May 28, 2020 Claimant had his first visit with Dr. John Papilion, an orthopedic specialist, who documented that Claimant was pulling a curtain that caught, and he felt a tearing sensation in his right anterolateral shoulder. He reported that Claimant had constant ache as well as significant weakness lifting away from the body and overhead, and that it bothered him at night. Claimant reported some improvement with physical therapy but continued to have symptoms. He also documented Claimant's prior history of a bicep injury approximately 20 years prior, which resulted in a popeyed deformity. On exam, Dr. Papilion found that Claimant had a markedly positive drop arm test with significant weakness in the supra and infraspinatus. He reviewed the MRI films, which revealed a full-thickness tear of the supraspinatus with retraction to the mid humerus. There was no muscular atrophy or fatty infiltration indicative of a chronic tear and only minimal degenerative changes in the AC joint. Following discussion with Claimant he recommended proceeding with arthroscopic surgery including subacromial decompression, debridement of the labrum and biceps stump and rotator cuff repair. Dr. Papilion provided further limited work status.

20. Dr. Peterson reevaluated Claimant on June 9, 2020, stating Claimant was awaiting rotator cuff surgery. On July 6, 2020 Dr. Peterson documented Claimant's surgery was scheduled for July 13, 2020.

21. Claimant proceeded with the arthroscopic surgery of the massive rotator cuff tear of the right shoulder on July 13, 2020. Dr. Papilion noted that he performed an exam under anesthesia, including video arthroscopy, arthroscopic debridement of the biceps stump, superior labrum, and rotator cuff, an arthroscopic subacromial decompression wit release of coracoacromial ligament, and arthroscopic repair of the RCT, supraspinatus and infraspinatus. He noted in the operative report that the massive rotator cuff tear was of a large 5 cm tear that was retracted to the mid humeral head but was able to mobilize by dissecting all the way back to the scapular spine. He stated that the tissue quality was good and was able to achieve primary repair, did not require a graft augmentation, but due to the massive extent of the tear, the procedure took twice as long as expected.

22. Dr. Papilion reported on July 23, 2020 that Claimant was recovering post-surgery though was still in an immobilizer and was having difficulty sleeping but that his pain was under control. He noted that Claimant had had a large full thickness rotator cuff tear. He recommended passive range of motion therapy and cautioned Claimant against lifting and no use of the right arm.

23. Claimant had multiple sessions of physical therapy, all of which indicated that Claimant was progressing in therapy as anticipated with complaints of pain.

24. On August 20, 2020 Dr. Papilion stated also that he was to progress to more active therapy, but continued with the restriction of no use of the right arm.

25. Claimant returned to Dr. Peterson on September 4, 2020 for examination. He noted that there appeared to be supraspinatus atrophy at this point but no AC joint hypertrophy or distal clavicle or midshaft clavicle deformity, nor superior migration of the proximal portion of the clavicle, AC joint step-off, dislocation, ecchymosis, effusion, erythema, skin blanching, skin tenting, scapular winging or swelling. He found limited range of motion in all planes without pain and noted that Claimant would have significant difficulties with the physical requirements of his Job. Claimant continued with physical therapy.

26. On October 10, 2020 Dr. Papilion stated that Claimant continued to show some improvement post-surgery. He recommended continuing physical therapy, topical medications and lifted restrictions to light work, return to commercial driving with no overhead.

27. The October 13, 2020 therapy notes showed that Claimant's progress was slower than expected, with standing exercises bringing to light aberrant motion patterns that were addressed with verbal and tactile cues. Weight and resistance were introduced with gravity and tolerated well to fatigue. AROM improved in gravity minimized position. The therapist indicated that Claimant was tolerating the therapy well though overall progress was slower than expected.

28. Dr. Papilion examined Claimant on November 5, 2020 and stated that Claimant had persistent weakness in the supraspinatus with mildly positive drop-arm test with weakness in the infraspinatus and external rotation lag. He was concerned that there might be a recurrent tear or a residual tear. He ordered a follow up MRI to evaluate and discussed with Claimant the possibility of a reverse shoulder arthroplasty.

29. On November 7, 2020 Dr. Eduardo Seda read the Claimant's new MRI findings as re-tear of the interval rotator cuff repair at the supraspinatus without suture anchor distraction and moderate residual tendinosis in the subscapularis and infraspinatus.

30. Claimant was attended by Christian Updike, M.D. at Concentra on November 9, 2020 and found joint pain, muscle pain, muscle weakness and night pain. He stated that this patient was new to him and that the MRI was not yet available. He discussed that probability of re-tear of the right rotator cuff and counselled him on smoking

cessation. On exam Claimant had "POSITIVE can test, unable to ABDUCT above shoulder."

31. On November 12, 2020 Dr. Papilion advised Dr. Updike that the MRI "as expected reveals a large recurrent tear with retraction to the mid humeral head. There is early atrophy in the supraspinatus muscle. The subscapularis is intact. There is proximal migration of the humeral head consistent with early cuff arthropathy." On exam there was a markedly positive drop-arm test and significant weakness in the supra and infraspinatus. Dr. Papilion recommended a reverse shoulder arthroplasty.

32. Respondents sent Claimant's medical records for a record review by Dr. William Ciccone II, an orthopedic consultant who completed a report on November 23, 2020. Dr. Ciccone opined that Claimant had suffered a minor sprain/strain of the right shoulder and was at maximum medical improvement by April 28, 2020 as he had achieve his physical therapy goals, had full range of motion and the shoulder was only painful upon exertion. Dr. Ciccone was also under the mistaken belief that Claimant had returned to full duty without limitations. He conjectured that since Claimant had a prior bicep injury, there was history of prior shoulder injury. He stated that based on the operative report one could make an argument that since the RTC was stiff, the damage to the rotator cuff tendon was not an acute, but a chronic condition. He opined that the rotator cuff pathology was preexisting and not acute or caused by the work-related incident of March 2, 2020. Dr. Ciccone is not credible in this matter.

33. On December 3, 2020 Dr. Papilion appealed the denial of surgery stating as follows:

> Al though, there was a 2-month delay in getting an MRI. Once this MRI was performed, it revealed a full-thickness tear about 2 cm with retraction to the acromial edge. There was no evidence for muscular atrophy and this is all consistent with an acute full-thickness tear in the rotator cuff. This is even admitted by Dr. Ciccone in his review.
>
> In addition, Dr. Ciccone opines that [Claimant] is a. candidate for reverse shoulder arthroplasty due to the failed nature of his rotator cuff tear with evidence for now muscular atrophy and further retraction with proximal migration, all consistent with rotator cuff arthropathy.
>
> On exam today, wounds are all well healed. There are abnormal contours in the biceps, which are chronic. He can flex and abduct only to 70 degrees. Markedly positive drop-arm test. Significant weakness in the supra and infraspinatus with an external rotation lag of about 20 degrees. There is pain with attempted lifting.
>
> It is my opinion and clear in the medical records that [Claimant] sustained a significant injury in the work-related incident of 03/02/2020. This is evidenced by an MRI 2 months after the injury, which showed an acute large tear in the rotator cuff without evidence for chronicity. He underwent arthroscopy and rotator cuff repair, which has gone on to fail. I continue to recommend a reverse total shoulder arthroplasty as definitive treatment in this 67-year-old male with rotator cuff arthropathy.
>
> I respectfully request that you reconsider surgical authorization.

34. Dr. Ciccone authored a second report on December 18, 2020 disputing treaters' assessment of the work-related nature of the injury based, not on imaging, but on the clinical findings of the physician assistant and therapist indicating full or near full range of motion in the days following the injury, which he opined were not consistent with an acute tear but a chronic tear. He stated that the reverser total shoulder arthroplasty was not related to the work related incident. Again, Dr. Ciccone is not found persuasive.

35. Dr. Updike continued to follow up on December 30, 2020 noting that Dr. Papilion continued to recommend right total reverse arthropathy. He discussed workers' compensation process of denial of surgery. He was also advised to keep any upcoming appointments with Concentra, was returned to modified duty with no commercial driving. stated that the work-related mechanism of injury was consistent with the objective findings, and was referred to a second orthopedic opinion. This ALJ infers that the Concentra medical team agreed on the causation analysis that Claimant's RCT was related to the March 2, 2020 event.

36. Claimant returned to consult Dr. Papilion on January 5, 2021 with regard to the right shoulder. He noted that he recommended a total reverse arthroplasty, which had been denied and appealed without success. He documented Claimant continued to have weakness and loss of motion, and had been unable to return to work as a long haul truck driver. On functional testing on the right Claimant had a positive drop-arm test, positive empty can test and positive Jobe test.[1] He also had a positive Hawkins-Kennedy impingement test, (R) and positive Neer impingement test, (R). Dr. Papilion stated Claimant:

> .. has a massive recurrent rotator cuff tear in his right shoulder. He has failed conservative treatment. This is not felt to be a repairable rotator cuff. He has significant symptoms of weakness loss of motion. I believe he is an excellent candidate for reverse shoulder arthroplasty. This has been denied by his Worker's Comp. insurance company. He has a hearing pending. He is not able to work. We will proceed with putting this through his private health insurance and schedule for reverse shoulder arthroplasty. The risks and benefits of operative versus nonoperative treatment were discussed

37. On January 20, 2021 Claimant was seen by orthopedic surgeon, John Schwappach, who reviewed the records, including those from Cencentra, Dr. Updike and Dr. Papilion, both of whom continued to recommend a reverse total shoulder arthroplasty, and the MRI results. He noted that the November 7, 2020 images showed a re-torn rotator cuff repair at the supraspinatus tendon in a midsubstance tear without suture anchor distraction. There was moderate residual tendinosis in the subscapularis and infraspinatus. The biceps tendon had torn from the anchor and there was stable AC joint arthritis. On physical exam Claimant demonstrated an inability to actively abduct his right arm past 90 degrees. He had weakness in right shoulder internal rotation. Dr. Schwappach diagnosed traumatic re-tear of the supraspinatus tendon of his right shoulder. He further stated as follows:

[1] Tests to determine tendon and rotator cuff pathology.

> After discussing with Claimant the risks and benefits of both operative and nonoperative treatment, his current level of function and various ways he has tried to adapt, it becomes clear to me that he indicates for a reverse total shoulder arthroplasty of the right arm. This would be directly related to his failed rotator cuff repair, which was exquisitely done by Dr. Papilion. As such, this should be covered under workers ' compensation system. I believe that he reaches all of the State of Colorado Guidelines for reverse total shoulder and the same should be offered to him.

38. Multiple treating provider records continued to show recommendations for the right total shoulder arthroplasty despite denial and delay due to litigation. Claimant's restrictions were kept in place, continued to follow up and provide ongoing medications.

39. Claimant proceeded with the right shoulder arthroplasty on March 31, 2021 by Dr. Papilion. The operative report stated that the diagnosis was a massive recurrent rotator cuff tear with rotator cuff arthropathy of the right shoulder.

40. On April 7, 2021 Dr. Updike stated that Claimant was not at maximum medical improvement, continued to be unable to work, and that his objective findings were consistent with history of work-related mechanism of injury. On April 28, 2021 Dr. Updike reported that Claimant was status post-surgery, reported no new concerns, pain was better, performing physical therapy at Dr. Papilion's office, mostly passive and wearing a sling.

41. A last Supplemental Report authorized by Dr. Ciccone was issued on May 12, 2021. He opined that the presence of a tangent sign on the MRI of May 19, 2020 were confirmatory that Claimant had preexisting pathology as a positive "tangent sign" is a predictor of chronic irreparable rotator cuff tear, which would not be present if the tear had been acute. Dr. Ciccone further stated that "While I would agree that in a 67-year-old with a chronic rotator cuff tear that failed arthroscopic repair is a candidate for reverse arthroplasty, I do not believe that the potential need for the procedure is causally related to a work injury."

42. Dr. Cava took over care again as of May 27, 2021 and continued the prior care providers' recommended course of physical therapy, restrictions and stated that Claimant's objective findings were consistent with history of work-related mechanism of injury. This continued through at least October 4, 2021, when Dr. Cava stated that she did not anticipate Claimant reaching MMI for another three months approximately.

43. Claimant testified that, while therapy did help significantly in getting him stronger, the weakness did not go away when he was originally returned to full duty at the end of March, 2020. By the end of the day he would continue to feel weak and had a hard time raising his arms, especially when he had to throw the straps over the flat bed trailers and tie them down. Also, he stated that the doctors and therapists had no problems lifting his arm, but when he did it he could reach a certain point and then he could raise it no farther. And while he had a full release, he did not return to work with curtain trailers, only flatbed trailers as he would not have been able to open and close the curtains, so he was limited to local driving only, not long haul driving. Claimant assured that since the March 2, 2020 date of injury, he has not had one pain free day or recovered

his strength, neither has he returned to doing activities with his family in the same manner including sporting get-togethers and yardwork with his wife. Claimant is credible.

44. Dr. Papilion testified at hearing that over the last thirty one years he has evaluated thousands of patients with shoulder pathology, including acute injuries, acute on chronic as well as degenerative conditions. He has noted a variety of patient complaints in a wide range of reports with regard to strength, weakness and motion, from anywhere from completely debilitating small tears to full range of motion patients with large tears. Dr. Papilion testified consistent with his reports above regarding Claimant's weakness and drop arm tests, which were also consistent with a full thickness tear of the supraspinatus tendon.

45. He reviewed the diagnostic films himself, noting that the surrounding structures to the tear on the axial and coronal views, did not show atrophy, also called fatty infiltration, justifying his recommendation for the a arthroscopic repair of the rotator cuff. While he stated that the supraspinatus muscle was not attached and was not a normal muscle, neither was there any chronic rotator cuff tear, but an acute tear amenable to repair, as arthroscopic procedures are the first line treatment for a 2 cm tear.

46. However, Dr. Papilion confirmed that when he performed the July 13, 2020 arthroscopic procedure, he found that the tendon tear was actually 5 cm in length instead of the 2 cm tear he was expecting based on the MRI films. He also examined the area for arthritis and atrophy and found none, nor any pathology that would denote a chronic condition. Dr. Papilion opined that since Claimant progressed in physical therapy and returned to work, that it was possible that the initial acute tear caused by the March 2, 2020 incident grew from the time of the injury to the time of the MRI, and certainly from the time of the MRI to the time of the surgery.

47. Dr. Papillion explain that a reverse total shoulder procedure is a salvage procedure because it replaces the ball and socket with metal and plastic, putting the ball where the socket was and the socket where the ball normally resides, placing the majority of the function on the deltoid muscle to activate the movement of the arm. Dr. Papilion explained that it was not uncommon to have a failed arthroscopic repair. It happens and that is when one considers the more drastic total reverse arthroplasty, such as in Claimant's case. Dr. Papilion opined that it was nothing that Claimant did in the interim between the first surgery and the November 7, 2020 MRI. Re-tears just happen this way that the tissue is not strong enough and re-tears in approximately 50% of cases. During the March 31, 2020 procedure, Dr. Papillion now found atrophy as the muscle that had not been functioning for a long time. He found the suture knots there, the tear massive and was now retracted almost over to the glenoid rim, and probably had no chance of revision of rotator cuff re-tear.

48. He also explained that he thought the positive tangent sign that Dr. Ciccone referenced was present in the first MRI. But considering Claimant's exam, history, verbal interview, medical records, Dr. Papilion made a causation analysis based on the whole picture, not just the MRI, which is only one of the tools that needed to be considered. And while Claimant had a positive tangent sign, it in and of itself was not a complete predictor

of atrophy in this case as many individuals have a different anatomical composition and atrophy simply means “smaller than it used to be because it is not being used,” and Claimant had not been using the muscle due to the tear.

49. Dr. Papilion stated as follows:

> [Claimant] has done this work [commercial driver and deliveries] for 40 plus years. He's thrown those curtains on a daily basis. He could have had some rotator cuff pathology, but the fact is that he was fully functional and didn't have any symptoms, never sought medical care, performed his full duty, and he had an episode; a documented injury that he reported, and he had changes in his exam, changes in his symptoms. That all supports an acute injury, whether or not there was some underlying chronicity…. In this case, I don't think that was the effect, because I don't think this was a minor injury. I think it was a substantial injury.

50. Lastly, Dr. Papilion stated that the medical records following the work related incident are reflective of a Claimant that had conservative care in accordance with the Guidelines and the standard of care, probably had some bleeding of the tendon upon tearing but with anti-inflammatories, modified work and limiting overhead activities, exercise, mobilization, the inflammation abated and Claimant was able to achieve better or even full range of motion, none of which is uncommon for an individual with a rotator cuff tear. Dr. Papilion completely disagreed with Dr. Ciccone’s opinion that Claimant had returned to baseline by April 28, 2020 as he continued to have difficult with doing activities overhead and a substantial portion of his job, such as using curtain trailers, he was not back to his pre injury status, had not had a full trial back to full work, where he was using his shoulder to pull the curtains. Dr. Papilion opined that Claimant had clearly had a mechanism of injury consistent with an acute tear of the rotator cuff on March 2, 2020. He continued to benefit from the total reverse arthroplasty, though it was not a spectacular result, he continued to improve and was not at maximum medical improvement at the time of the hearing. Dr. Papilion is credible.

51. Dr. Ciccone testified during a deposition on November 23, 2020 post-hearing. He testified consistent with his three medical records review reports. Dr. Ciccone’s opinions that the July 13, 2020 and the March 31, 2021 surgeries were not related to the March 2, 2020 event are not credible. Neither is his interpretation of the diagnostic testing or testimony regarding preexisting atrophy.

52. Dr. Papilion’s opinion that Claimant suffered from a specific incident that caused the right rotator cuff full thickness tear on March 2, 2020 is credible.

53. The arthroscopy surgery performed on July 13, 2020 by Dr. Papilion to treat Claimant’s supraspinatus full thickness tear was reasonably necessary and related based on the circumstances and information both available and known at the time.

54. Dr. Papilion’s opinion that the March 31, 2021 right shoulder total reverse arthroplasty was reasonably necessary and related to the March 2, 2020 accident is persuasive and credible.

55. Claimant proved that the right shoulder total reverse arthroplasty was reasonably necessary and related to the March 2, 2020 incident in order to cure and relieve Claimant from the effects of the compensable injury.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Medical Benefits:

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See*

City of Boulder v. Streeb, 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Therefore, in a dispute over medical benefits that arises after the filing of a general admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the work injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A panel of the ICAO also addressed these issues in *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012). The panel stated:

> [The *Snyder*] principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury.

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Claimant alleged that surgery recommended and performed by Dr. Papilion for the right total shoulder arthroplasty was reasonably necessary and related to the work injury of March 2, 2020. Respondents argue that while it may be reasonably necessary it is not related to the March 2, 2020 injury as they alleged the injury involved only a minor strain. Respondents further argue that neither the arthroscopic surgery performed on July 13, 2020 nor the total shoulder arthroplasty performed on March 31, 2021 was related the accident of March 2, 2020 but were performed for the underlying preexisting or degenerative chronic condition.

However, a preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting

condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004).

As found here, Claimant was a sixty eight year old commercial delivery driver of a large tractor trailer performing heavy tasks such as tying down construction materials on flatbeds and opening and closing heavy side curtains on trailers for approximately eight years for Employer and many year before that. As further found, Claimant did not have any problems performing any of the jobs he was assigned prior to the March 2, 2020 work related injury. Whether, the rotator cuff pathology started as a small tear on March 2, 2020 and became increasingly worse over the subsequent months or Claimant had an asymptomatic underlying condition that became symptomatic and was aggravated when he attempted to pull the side curtains of the trailer is not a question that can be determined easily because there was no evidence of symptoms or medical records prior to March 2, 2020. What is clear, and is so found, is that Claimant is credible and did not have problems before the incident when he was pulling on the straps, felt a tear in his shoulder and started having pain symptoms in his right shoulder and had none before this time. What is also clear to this ALJ is that Claimant is a stoic gentleman that probably does not complain of pain easily or readily. Claimant is found credible.

The medical records as a whole also support Claimant's testimony. While Respondents' expert attempted to reason out the findings of the first month's initial examinations, loss of range of motion, findings on MRI, Dr. Papilion is vastly more persuasive and credible than the contrary opinions of Dr. Ciccone. Both Dr. Seda and Dr. Papilion interpreted the MRI film of May 19, 2020 as clearly showing a full thickness tear of the supraspinatus tendon of approximately 2 cm and no muscle atrophy. During the July 13, 2020 arthroscopy Dr. Papilion found a 5 cm supraspinatus full thickness tear, which he was not expecting based on the MRI films and did not detect any atrophy. Dr. Papilion, in fact, stated that the surgery took approximately twice what it was supposed to because of the massive tear but that he was able to mobilize the tendon nonetheless during surgery. While, in retrospect, had Dr. Papilion known about the massive tear he may have elected to perform the total reverse shoulder arthroplasty surgery instead of the arthroscopy initially, but it did not lessen the Claimant's need for the total reverse shoulder surgery. The subsequent November 7, 2020 MRI findings as read by Dr. Seda, Dr. Schwappach and Dr. Papilion clarified the need for the surgery because the Claimant had a retorn supraspinatus tendon which caused continuing and unremitting symptoms as documented in the Concentra records as well as by Dr. Papilion and Dr. Schwappach. Dr. Papilion was persuasive and credible. He looked at the whole picture, the clinical findings on exam, the films, and review of the records as well as the history provided by Claimant, Claimant's longevity on the job and the type of work he performed. Claimant has shown by a preponderance of the evidence that the right total reverse shoulder arthroplasty was reasonably necessary and related to the March 2, 2020 work related accident.

ORDER

IT IS THEREFORE ORDERED:

1. The right shoulder total reverse arthroplasty surgery performed by Dr., John Papilion on March 31, 2021 was reasonable, necessary and related to the admitted March 2, 2020 injury.

2. Respondents shall pay for that reverse arthroplasty surgery procedure and related expenses incurred by Claimant and his authorized treating providers.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on or about December 19, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his left knee, including a left total knee replacement, is reasonable, necessary, and related to the work injury.

FINDINGS OF FACT

1. The claimant has worked for the employer since September 2007. The claimant's current position is Operator 3. The claimant's job duties include operating a road grader and other equipment, digging culverts, replacing signs, and general road maintenance.

2. The claimant asserts that on or about December 19, 2020, he suffered a left knee injury at work. The claimant also provided testimony regarding an incident in November 2020[1]. The claimant testified that in mid-November 2020, he was getting down from the back of a service truck when he felt a pop in his left knee. The claimant also testified that this felt like a "sprain" and the pain went away. The claimant did not report the November incident to the employer.

3. On December 19, 2020, the claimant was shoveling snow during his shift. While shoveling, he slipped on the ice and caught himself with the snow shovel. During this slip, the claimant felt a pop and pain in his left knee. The claimant testified that this incident was different from the one in November and he reported this incident to his supervisors. He was then instructed to seek medical treatment for his knee.

4. The claimant's authorized treating provider (ATP) for this claim is Dr. Albert Krueger. The claimant was first seen by Dr. Krueger on December 28, 2020. The claimant reported that he injured his left knee when he slipped on ice and twisted his knee. On that date, Dr. Krueger opined that the claimant suffered a dislocation of the left patella. He recommenced the quadricep strengthening exercises and over-the-counter pain medication.

[1] The November incident is not at issue in this case. However, the ALJ includes a summary of the claimant's testimony regarding the November incident for clarification of the record.

5. On January 26, 2021, the claimant returned to Dr. Krueger. At that time, the claimant reported continued left knee pain. Dr. Krueger referred the claimant to Dr. Kevin Borchard for an orthopedic consultation.

6. The claimant was first seen by Dr. Borchard on January 29, 2021. On that date, the claimant reported that he injured his left knee when he slipped and twisted the knee. On exam, Dr. Borchard noted effusion, crepitus, and pain. Dr. Borchard opined that the claimant suffered an acute injury on top of chronic degenerative changes in the knee. On that date, Dr. Borchard administered a corticosteroid injection to the claimant's left knee.

7. The claimant testified that the injection provided more than four weeks of pain relief. However the pain returned and the claimant requested an additional injection from Dr. Bourchard.

8. On March 16, 2021, the claimant returned to Dr. Borchard. At that time, the claimant reported that his left knee pain was primarily along the lateral joint line. Dr. Borchard noted effusion, range of motion limited to 120 degrees, and lateral joint line tenderness. Dr. Borchard recommended that the claimant undergo a magnetic resonance image (MRI) of his left knee.

9. On March 23, 2021, the claimant underwent an MRI of his left knee. The MRI showed patellofemoral grade 4 chondromalacia with subjacent marrow edema and a cyst; a small joint effusion; and a radial tear at the medial meniscus posterior horn root junction.

10. On April 6, 2021, the claimant returned to Dr. Borchard. On that date, Dr. Borchard discussed the MRI findings and identified the claimant's left knee diagnoses as medial and lateral meniscus tears and patellofemoral osteoarthritis. Dr. Borchard recommended a left total knee arthroplasty.

11. During this same time period, Dr. Borchard was also providing care for the claimant's right knee. The right knee is not part of this claim. Dr. Borchard has recommended that the claimant also undergo a right total knee arthroplasty, outside of the workers' compensation system.

12. At the request of the respondents, on June 15, 2021, the claimant attended an independent medical examination (IME) with Dr. Timothy O'Brien. In connection with the IME, Dr. O'Brien reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his June 28, 2021 IME report, Dr. O'Brien opined that the December 19, 2020 incident was "a very minor, self-healing, self-limited knee strain or sprain". Dr. O'Brien further opined that the claimant was already a candidate for a left knee replacement prior to his minor December 19, 2020 injury. In support of these opinions, Dr. O'Brien noted that the claimant's left knee MRI is normal for his age.

13. On September 30, 2021, Dr. Borchard authored a letter in which he confirmed that the left knee MRI showed a lateral meniscus tear and a medial meniscus tear. Dr. Borchard opined that these tears were acute and caused by the twisting injury when the claimant slipped on ice. Dr. Borchard further opined that, given the condition of the claimant's left knee, a total knee replacement is the most reliable surgery to address the claimant's pain complaints from the meniscus tears.

14. On October 19, 2021, Dr. Kruger authored a letter in which he opined that when the claimant slipped on ice and twisted his left knee, that incident triggered the need for left knee surgery.

15. Dr. O'Brien's deposition testimony was consistent with his written report. Dr. O'Brien testified that the claimant suffered a minor left knee strain/sprain that had resolved. Dr. O'Brien further testified that the recommended knee replacement surgery is intended to address the arthritis in the claimant's left knee. Dr. O'Brien also testified that there are traumatic events that can accelerate an arthritic condition. The type of traumatic event would either be a high energy injury or an injury involving planting the foot and pivoting. It is Dr. O'Brien's opinion that the claimant's mechanism of injury does not fall into either of these categories.

16. The claimant testified that prior to the November and December 2020 incidents, he had no left knee issues and had not sought treatment for his left knee. The claimant has undergone prior treatment for his right knee, including injections and surgery.

17. The ALJ credits the claimant's testimony regarding the nature and onset of his left knee symptoms. The ALJ also credits the medical records and the opinion of Drs. Borchard and Kruger over the contrary opinions of Dr. O'Brien. The ALJ specifically credits Dr. Borchar's opinion that the claimant suffered an acute injury on top of chronic degenerative changes. The ALJ finds that when the claimant slipped on ice on December 19, 2020 and twisted his left knee, the pre-existing condition in his left knee was aggravated and accelerated, resulting in pain symptoms and the need for medical treatment. Therefore, the ALJ finds that the claimant has successfully demonstrated that it is more likely than not that he suffered an injury to his left knee while at work on December 19, 2020.

18. The ALJ further credits the medical records and the opinion of Drs. Borchard and Kruger over the contrary opinions of Dr. O'Brien. The ALJ finds that the claimant has demonstrated that it is more likely than not that treatment of the claimant's left knee is reasonable, necessary, and related to the work injury. Furthermore, the ALJ credits the opinions of Dr. Borchard and finds that a total left knee replacement is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that on December 19, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant's pre-existing degenerative left knee condition was aggravated and accelerated by his slip on December 19, 2020. As found, the claimant's testimony, the medical records, and the opinions of Drs. Bouchard and Krueger are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that treatment of the claimant's left knee, including a total left knee replacement, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the opinions of Dr. Bouchard are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant suffered a compensable injury to his left knee on December 19, 2020.

2. The respondents shall pay for treatment of the claimant's left knee, including the recommended left total knee replacement, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined here are reserved for future determination.

Dated this 24th day of January 2022.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above

address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has shown by a preponderance of the evidence Respondents violated W.C.R.P. Rule 5-5(C)(1) for failure to timely file an Amended General Admission of Liability following receipt of Administrative Law Judge Cannici's June 2, 2021, Findings of Fact, Conclusions of Law, and Order.

II. Whether Respondents have shown by a preponderance of the evidence, that that the violation was cured within 20 days of the claimant's Application for Hearing pursuant to section 8-43-304(4), C.R.S.

III. Whether Claimant has shown by clear and convincing evidence that Respondents knew, or reasonably should have known, that they were in violation.

IV. Whether Claimant proved by clear and convincing evidence that Respondents knew, or reasonably should have known, they were in violation, and what is the applicable penalty period and amount.

PROCEDURAL HISTORY

Administrative Law Judge Peter J. Cannici issued, Findings of Fact, Conclusions of Law, and Order on June 4, 2021 holding Respondents failed to overcome the opinions of Division Examiner, Dr. Martin Kalevik. He determined that Claimant was not at MMI and required additional treatment for her admitted work related injuries of August 21, 2019.

Claimant filed an Application for Hearing on September 20, 2021listing the issues of penalties for Respondents' alleged failure to file a General Admission of Liability within thirty (30) days of Judge Cannici's June 2, 2021 Order per Rule 5-5(C)(1), requesting penalties pursuant to Sections 8-43-304, C.R.S and 8-43-305, C.R.S.

Respondents filed a Response to Application for Hearing on October 11, 2021 on issue of penalties.

The parties indicated that they attended a separate hearing on November 17, 2021 before Administrative Law Judge Steven R. Kabler and were awaiting an order on the issue of change of physician. The parties disputed that this ALJ should either await a decision in that matter or should review the order, if any, was issued in that matter.

Claimant also brought up a preliminary matter regarding unanswered discovery sent to Respondents' on September 30, 2021 and why Respondents failed to provide responses. Claimant noticed the failure to respond two days prior to hearing. Claimant

moved to extend the time to commence the hearing based on the failure to provide responses to discovery. Respondents' objected to the motion stating that Claimant failed to identify the failure to respond in connection with this hearing as Claimant had multiple claims and had had multiple hearing in connection with this particular claim, which also included multiple responses to discovery. Respondents stated that, had this been brought up in a timely manner, that Respondents would have been able to provide the requested responses. Respondents argued that pursuant to C.R.C.P. Rule 37(a) Claimant was required to file a motion to compel or set it for a prehearing in a timely manner, which did not take place. Further, Respondents state that the questions that Claimant submitted included requests for any testimony of witnesses, but they are not calling any witness, a request for exhibits, all of which are included in Claimant's Exhibit packet, questions that fall under Attorney-Client privilege, as well as requests for admission, which they dispute are appropriate under the Workers' Compensation Rules of Procedure. Claimant read into the record the types of questions that were specifically tailored to the issues set for hearing. This ALJ Considered the arguments of the parties, determined that there was insufficient basis for an extension and denied Claimant's motion for extension of time.

Respondents agreed that they received ALJ Cannici's Findings of Fact, Conclusions of Law and Order, and that the General Admission of Liability was not filed until September 27, 2021, well beyond 30 days after the order was issued.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was injured in the course and scope of her employment with Employer on August 21, 2019.

2. She was placed at maximum medical improvement (MMI) on November 18, 2019 by Dr. Kathryn Bird at Concentra, the authorized treating physician (ATP).

3. Claimant challenged that decision by seeking a Division of Workers' Compensation Independent Medical Examination (DIME). Dr. Martin Kalevik was assigned as the DIME physician and conducted an examination, issuing a report dated August 27, 2020. Dr. Kalevik determined Claimant was not at MMI and required further medical care.

4. Respondents challenged the decision and ALJ Cannici found on June 4, 2021 Respondents had failed to overcome the determination of the DIME physician that Claimant was not yet at MMI. Respondents did not appeal the decision.

5. On July 1, 2021 Claimant requested Respondents schedule a follow up appointment with the ATP so that Claimant may resume care.

6. Claimant stated that she attempted to contact the ATP for medical care and was declined an appointment multiple times. She stated that the delay in care was a hardship in seeking medical care from an ATP. She stated that she was advised that her claim was closed and could not be provided an appointment.

7. Neither party provided the ATP with a copy of the DIME report issued by Dr. Kalevik to inform the ATP that further medical care was necessary in this matter.

8. Claimant testified that the insurance adjuster scheduled her for a September 7, 2021, demand appointment with Dr. Bird, but that the appointment date and time was sent to her by text messaging. This ALJ infers from the testimony and from counsel's statements that either the adjuster scheduled it or requested that the provider schedule the appointment after providing authorization.

9. Claimant attended the demand appointment on September 7, 2021.[1]

10. Claimant also attended an appointment with her primary care physician to address her work injuries on September 7, 2021. Following the September 7, 2021, demand appointment, Claimant failed to seek additional treatment from Concentra.

11. After September 7, 2021, Claimant sought treatment exclusively from her primary care provider New West Physicians and did not follow up with Dr. Bird or Concentra.

12. Claimant continued to work and lost no time from work.

13. On September 27, 2021 Respondents filed a General Admission of Liability for medical benefits only, as Claimant had no lost time. This was eighty seven days after a thirty day period the Order was issued, if there was a deadline.

14. Based on the facts presented in this case, the ALJ finds that Claimant has failed to show that Respondents were required to file a General Admission of Liability as ALJ Cannici determined that Claimant was not at maximum medical improvement and did not terminate or reduce, increase or change benefits being paid to Claimant in this matter.

15. Also found is that Respondents cured any potential claim for penalty by filing the General Admission of Liability within 20 days of the Application for Hearing.

16. Finally, it is found that the steps taken by Respondents in scheduling the September 7, 2021 follow up appointment with Dr. Bird were objectively reasonable. Respondents' conduct was rationally grounded in law and fact and in accordance with the order issued by ALJ Cannici.

[1] Neither party submitted medical records or other documents to dispute this statement, and a demand letter was not introduced into evidence.

17. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Violation of W.C.R.P. Rule 5-5(C)(1)

Claimant argues that Respondents violated W.C.R.P. Rule 5-5(C)(1) as ALJ Cannici issued a final order on June 2, 2021 finding Respondents had failed to overcome the DIME physician's finding that Claimant was not at MMI and required further care.

W.C.R.P. Rule 5-5(1)(C) states as follows

> (C) Upon termination or reduction in the amount of compensation, a new admission shall be filed with supporting documentation on or prior to the next scheduled date of payment, regardless of the reason for the termination or reduction. An admission shall be filed within 30 days of any resumption or increase of benefits.
>
> (1) Following any order (except for orders which only involve disfigurement) becoming final which alters or awards benefits, an admission consistent with the order shall be timely filed.

W.C.R.P. Rule 5-5(C)(1) requires a new admission to be filed "upon termination or reduction in the amount of compensation." Those circumstances were not present here as Claimant continued to work and lost no time from work so no indemnity payments were due. Rule 5-5(C)(1) requires the filing of an admission after an order "which alters or award benefits" being paid under the WC Act.

The plain reading of the rule, including the phrase 'being paid' leads to the conclusion that no admission was required under the circumstances presented here. See *Miller v. Recob & Associates*, ICAO, WC, 5-001-904-02 (September 17, 2018). Even if Claimant argued the Order increased the amount of benefits being paid (since none were being paid as Claimant continued to work) and therefore an admission was required, no authority was provided in which a Colorado Court held that W.C.R.P. Rule 5-5(C) and 5-5(C)(1) requires an admission to be filed by the insurer or employer after action was taken which fully complied with the order issued by an Administrative Law Judge. Indeed, such an interpretation would require an employer or insurer to file an admission after every order. Claimant failed to show that Respondents were required to file an admission in this matter by an certain deadline.

C. Penalties

Under § 8-43-304(1), C.R.S. (2021), penalties of up to one thousand dollars per day may be imposed against a party who: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or the Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or the Panel. *Pena v. Indus. Claim Appeals Office,* 117 P.3d 84, 87 (Colo. App. 2004)

To determine whether penalties should be imposed under Sec. 8-43-304(1), C.R.S. is a two-step process, first requiring the ALJ to determine if the employer's conduct violated the Act, a rule, or an order. If a violation occurred, the ALJ must then determine whether the party's actions were objectively reasonable. An ALJ may impose a penalty

under Sec. 8-43-304(1) if it is shown that the employer failed to take an action that a reasonable employer would have taken to comply with a rule. The employer's conduct is measured by an objective standard of reasonableness. *Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965, 967 (Colo.App.2003). Different divisions of the Colorado Court of Appeals have reached different conclusions regarding the measure of "objectively reasonable" conduct. Some divisions have concluded that the relevant inquiry is whether the conduct was based upon a rational argument in law or fact, while others have concluded that the question is merely whether the conduct was unreasonable. *See Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97, 100 (Colo. App. 2005) [discussing the two lines of cases]. *Diversified Veterans Corporate Ctr. v. Hewuse,* 942 P.2d 1312, 1313 (Colo.App.1997).

The also ALJ has wide discretion in determining the amount of any penalty. *Crowell v. Industrial Claim Appeals Office*, 298 P.3d 1014 (Colo. App. 2012). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The penalty should be sufficient to discourage future violations, but should not be constitutionally excessive or "grossly disproportionate" to the violation found. *Colorado Dept. of Labor & Employment v. Dami*, 442 P.3d 94 (Colo. 2019). When assessing proportionality, the ALJ should "consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses." *Id*. at 103. The ALJ can also consider factors such as the reprehensibility of the conduct involved and the harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005); *Pueblo School Dist. No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996). Actual prejudice or harm to the claimant is relevant but is not dispositive, particularly where the violation is not explained by the evidence. *Strombitski v. Man Made Pizza, Inc*., W.C. No. 4-403-661 (July 25, 2005).

Here, the ALJ was not persuaded there was a violation of the rules cited by Claimant. Stated another way, Claimant did not prove these rules mandated the filing of an admission in this case. The ALJ also considered the argument that the case of *Edward Flake v. JE Dunn Construction Co.,* W.C. 4-997-403-03 (ICAO September 19, 2017) provided a basis for penalties to be imposed in the case. That case was factually distinct in that Respondents initially provided medical benefits to Claimant then filed a Final Admission of Liability after being placed at MMI without impairment but no DIME was requested.

Even if Respondents were required to file an admission, Respondents acted reasonably in scheduling a follow up with Dr. Bird for September 7, 2021, which Claimant attended. The fact that Dr. Bird failed to understand the nature of the follow up appointment because neither party provided Dr. Bird with information that was critical,

including ALJ Cannici's order or the DIME report issued by Dr. Kalevik, does not detract from the reasonable steps taken by Respondents in this matter. Claimant had the same opportunity to provide the critical documentation to Dr. Bird as Respondents. Lastly, Claimant failed to follow up with Dr. Bird or Concentra after the September 7, 2021 appointment. Since there is no requirement to file a General Admission of Liability pursuant to W.C.R.P. Rule 5-5(C)(1), there is not circumstances that would require an allocation for a penalty.

Therefore, it is found and concluded that Claimant failed to prove that Respondents acted objectively unreasonable in this matter. *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo.App. 1999). Claimant failed to prove by a preponderance of the evidence that a penalty is due. Therefore, Claimant's claim for penalties are denied and dismissed and all other issues set for this hearing are moot.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's requests for penalties for violation of W.C.R.P. Rule 5-5(C)(1) pursuant to Sections 8-43-304 and 305, C.R.S. are denied and dismissed.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-118-981-003 and 5-135-641-002

ISSUES

I. Consistent with the views expressed by the ICAO, whether Claimant established by a preponderance of the evidence that he sustained permanent impairment to his cervical spine – and if so – the extent of his impairment.

PROCEDURAL HISTORY

In W.C. 5-118-981, Claimant sustained a work injury on September 7, 2019. The claim was at first denied and Claimant, through counsel, filed an application for hearing dated July 13, 2020, on various issues including, but not limited to, compensability. Respondents provided medical treatment and Claimant was placed at MMI by an authorized treating physician, Dr. Julie Parsons. Before the parties proceeded to hearing on the compensability dispute, Respondents requested a Division IME. Dr. James Regan was selected and confirmed as the DIME physician. Respondents subsequently filed a Final Admission of Liability (no permanent impairment) on October 14, 2020. The Final Admission of Liability was filed before the Division IME took place.

In W.C. 5-135-641, Claimant sustained a work injury on October 21, 2019. Respondents initially denied the claim and Claimant, through counsel, filed an application for hearing dated August 24, 2020, on various issues including, but not limited to, compensability. Again, respondents provided some medical treatment. On October 14, 2020, respondents filed a Final Admission of Liability (no permanent impairment). Claimant objected and requested a Division IME.

Pursuant to various prehearing orders, the claims were consolidated for purposes of the DIME and for the hearing. Therefore, the DIME physician addressed both claims and both claims were heard at the March 26, 2021, hearing.

This ALJ issued an order on May 15, 2021, that denied Claimant permanent partial disability benefits for his cervical and lumbar spine. Claimant only appealed that portion of the order that denied him permanent partial disability benefits for his cervical spine. The ICAO reviewed the May 15, 2021, order regarding the denial of benefits for Claimant's cervical spine. The ICAO set aside the appealed portion of the ALJ's order and remanded the matter for additional findings. The ICAO directed the ALJ to determine whether Claimant established, by a preponderance of the evidence, that he suffered permanent partial disability due to his cervical spine injury. Therefore, this order will only address Claimant's claim for permanent partial disability benefits regarding his cervical spine. Claimant's claim for permanent partial disability benefits for his lumbar spine, which was denied and not appealed, will therefore not be addressed in this order.

In light of the direction provided by the ICAO, the ALJ has reviewed and reweighed the evidence related to Claimant's injury to his cervical spine. In light of such

review and reweighing of the evidence, the ALJ is issuing new findings of fact and conclusions of law for Claimant's cervical spine.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On September 7, 2019, Claimant was helping lift heavy equipment – a bucket of water - into the back of a truck which caused him to develop neck pain. (Claimant's Exhibit 6, p. 236)[1] (Respondents' Exhibit G, pp. 175B)

2. On September 12, 2019, Claimant was seen at Advanced Urgent Care by Katie Krueger, PA-C. His safety supervisor was present to provide translation. Claimant, through his supervisor, related that his injury occurred on September 7, 2019, when he was helping carry heavy equipment into a truck and he felt sudden pain in his neck and could not move his head from side to side. He also said that his neck pain continued and was described as shooting pain down into his back with numbness in his fingertips bilaterally. He also complained of symptoms of "pins and needles" and a pain level of 6/10. Claimant further complained that his upper back and shoulders ached. PA Krueger noted that Claimant's neck was stiff and had decreased range of motion. It was also noted that Claimant could not move his head from side to side and when moving his head to the left, he described his back pain increasing to 8/10. Lastly, Claimant denied any prior neck problems. PA Krueger's physical exam documented neck tenderness and pain with motion. Cervical X-rays were ordered and over the counter medication was prescribed. Claimant was instructed to apply heat and ice and to perform gentle stretching/ROM exercises. He was returned to full duty work but was advised to be self-limiting and work as tolerated. Ms. Krueger specifically diagnosed Claimant's neck with (1) strain of neck muscle, (2) neck pain and (3) muscle spasm of cervical muscle of neck. (Claimant's Exhibit 13, pp. 827 - 828; p. 830)

3. On September 19, 2019, Claimant returned to Advanced Urgent Care and was again seen by Katie Krueger, PA-C. He reported that his neck pain continued but felt a little better. He also reported that he had been doing home exercises. On the other hand, turning his neck aggravated his neck and caused shooting pain. His range of motion had increased but remained limited when he turned his head to the left. He continued with "needles and tingling" in his fingers in the morning and sometimes up his left arm during the day. The physical exam showed tenderness of the trapezius and limited range of motion with lateral tilt and rotation. Claimant reported pain with left lateral tilt and rotation. Medical massage for his neck was ordered with continued over the counter medication. He was again returned to full duty work but was advised to self-limit as tolerated. PA Krueger continued to diagnose Claimant with a neck injury as a (1) strain of neck muscle, (2) neck pain and (3) muscle spasm of cervical muscle of neck. (Claimant's Exhibit 13, pp. 833 - 837)

[1] Respondents ultimately admitted liability for the September 7, 2019, claim on October 14, 2020.

4. On October 2, 2019, Claimant was seen at Advanced Urgent Care by Julie Parsons, M.D., for his neck strain. Claimant again reported that his neck was feeling a little better but turning his neck caused shooting pain. The physical exam revealed neck pain with motion and a negative Spurling's maneuver. Physical therapy was ordered and Claimant was returned to full duty. Dr. Parsons reaffirmed Claimant's specific diagnoses of (1) strain of neck muscle, (2) neck pain and (3) muscle spasm of the cervical muscle of his neck. (Claimant's Exhibit 13, pp. 850 - 853)

5. On October 21, 2019, Claimant returned to Advanced Urgent Care and was seen by Katherine Lindsey, NP, for a new injury. According to the medical records, Claimant had fallen that day getting off a truck ladder and rolled his left ankle, landing on his back, and bumping his head very lightly. His chief complaint was left ankle pain, but he also complained of worsening back pain – which he said was from a prior injury. He could not bear any weight on his left ankle. He was prescribed crutches for his ankle and was restricted with limited weightbearing. (Claimant's Exhibit 13, p. 859)

6. On October 23, 2019, Claimant returned to Advanced Urgent Care and saw Dr. Parsons for his neck and new ankle injury. In the WC164 form, she placed Claimant at maximum medical improvement for his October 21, 2019, ankle injury. (Claimant's Exhibit 13, p. 878) As set forth in a second WC164 form, she did not place Claimant at MMI for his September 7, 2019, neck injury. (Claimant's Exhibit 13, p. 874 and 878) His neck was feeling better with massage therapy. The medical notes show that Claimant remained with neck pain with motion. He was returned to full duty as tolerated. Dr. Parsons again diagnosed Claimant's neck injury as (1) strain of neck muscle, (2) neck pain and (3) muscle spasm of the cervical muscle of his neck. (Claimant's Exhibit 13, pp. 871 - 874, p. 924)

7. On November 5, 2019, Claimant's Medical Massage of the Rockies notes state his neck felt better for three days after his last massage. The records indicate Claimant complained of neck pain and stiffness and that he continued to experience numbness and tingling in his hands. The records also say he was experiencing headaches with pain on the right side from his neck to his temple and dizziness. Under objective findings, the therapist noted hypertonicity in Claimant's trapezius and scalene muscles. (Claimant's Exhibit 13, p. 879)

8. On November 7, 2019, Claimant returned to Medical Massage of the Rockies. His complaints of neck pain and stiffness continued. He reported that his neck felt better until that morning. He also reported that his neck was more painful on the left than the right. Numbness, tingling in his hands and dizziness continued. His headaches had improved. It was also noted that the hypertonicity in his trapezius and scalene muscles continued. (Claimant's Exhibit 13, p. 880)

9. On November 11, 2019, Claimant was seen again at Medical Massage of the Rockies. The records state Claimant's neck pain and stiffness continued, but that the last massage improved his symptoms for a couple of days. Claimant still complained that the left side of his neck remained more painful than the right. The

physical examination still documented continued hypertonicity in Claimant's trapezius and scalene muscles. (Claimant's Exhibit 13, p. 881)

10. On November 12, 2019, Claimant returned to Dr. Parson's for additional treatment. It was again noted that his neck pain was improving with medical massage therapy. Claimant was, however, experiencing headaches and had full range of motion but pain with motion. Dr. Parsons continued her diagnoses of Claimant's neck injury as (1) strain of neck muscle, (2) neck pain and (3) muscle spasm of the cervical muscle of his neck. (Claimant's Exhibit 13, pp. 884 - 886)

11. On November 22, 2019, an MRI of Claimant's cervical spine was performed which showed at C6-7 a central disc protrusion with annular tear, moderate spinal stenosis and mild bilateral neural foraminal stenosis. (Claimant's Exhibit 13, pp. 922 – 923)

12. On November 23, 2019, Claimant returned for medical massage. Again, his neck pain had improved for a few days after the massage but the numbness and tingling in his hands continued. The therapist documented that the "insurance called and wants me to NOT work on the neck" anymore. (Claimant's Exhibit 13, p. 924)

13. On November 27, 2019, Claimant returned for follow up with Dr. Parsons for his neck pain. Claimant reported he had been let go from his job. He also stated that his neck felt better with massage, but that the numbness and tingling in his fingers continued as well as his headaches. Consistent with the massage therapy records, Claimant stated that the massage therapy had helped. On physical exam, Dr. Parsons reported decreased range of motion with pain in his neck and limited turning left to right. To the diagnosis of (1) neck strain, (2) neck pain and (3) cervical muscle spasm, Dr. Parsons added (4) spinal stenosis in the cervical region and (5) cervical radiculopathy. Based on the new diagnosis, which included cervical radiculopathy, she prescribed Claimant Prednisone. And based on the new diagnosis, Dr. Parsons referred Claimant to Ascent Medical Consultants for his cervical radiculopathy. (Claimant's Exhibit 13, pp. 927 - 928, 936)

14. On December 17, 2019, Claimant was seen by Dr. Eric Shoemaker at Ascent Medical Consultants. Dr. Shoemaker noted that Claimant's cervical symptoms began on September 7, 2019, while helping a worker lift a case of gallon jugs of liquid. He noted that Claimant reported that his neck pain symptoms were severe. Claimant also stated that prior to his September 7, 2019, injury, he did not have neck symptoms. It was also noted that Claimant's neck pain was located at the cervical thoracic junction radiating into the interscapular region and down his left upper extremity. It was also noted that Claimant's pain in his lateral deltoid and arm extended to his proximal radial forearm and included constant numbness and tingling involving the second and fourth digits. Claimant also complained of nausea, dizziness, and headaches, particularly when lying down. (Claimant's Exhibit 13, p. 939)

15. On that date, Dr. Shoemaker personally reviewed the cervical MRI, noting its low-quality imaging. He noted at the C6-7 level a shallow broad-based posterior

protrusion eccentric to the right. He also noted that assessment of the foramen was not possible due to the low-quality imaging. He stated that the MRI report described at C6-7 a central disc protrusion with annular tear, moderate spinal stenosis, but no abnormal cord signal. He also stated that the MRI report noted minimal diffuse bulge at C5-6 with mild bilateral foraminal stenosis and that there were similar findings at C4-5, but yet the remaining levels were unremarkable. Dr. Shoemaker also performed a physical examination. He noted that Claimant's cervical range of motion was moderately decreased in all planes with a positive right arm Spurling's maneuver indicating cervical radiculopathy from disc compression. Dr. Shoemaker recommended a left paramedian C7-T1 interlaminar epidural steroid injection and noted Claimant was taking gabapentin before work but should continue with the medication before bed instead. Dr. Shoemaker's specific diagnosis for Claimant's neck condition was left C7 radiculitis secondary to a C6-7 disc protrusion causing some canal stenosis and potentially some foraminal stenosis. (Claimant's Exhibit K, pp. 939 - 943)

16. On December 18, 2019, Claimant returned to Dr. Parsons. She recorded that Claimant's neck had limited extension and side to side movement but negative Spurling's maneuver. She assigned 30-pound restrictions. Dr. Parsons diagnosed (1) neck strain, (2) neck pain and (3) cervical muscle spasm, (4) spinal stenosis in cervical region and (5) cervical radiculopathy. (Claimant's Exhibit 13, pp. 947 - 950)

17. On January 6, 2020, Claimant returned to Dr. Shoemaker for a left paramedian C7-T1 interlaminar epidural injection under fluoroscopy guidance and radiological images for his arm and neck pain. (Claimant's Exhibit 13, pp. 968 - 970)

18. On January 21, 2020, Claimant returned to Dr. Shoemaker. For a week after the injection Claimant stated that he had received 50% improvement overall with almost complete relief of his upper extremity symptoms; however, by the date of this January 21, 2020, visit, he was back at baseline with 0% sustained improvement from the injection. Dr. Shoemaker recommended bilateral upper extremity EMGs and advised Claimant to not drive while taking gabapentin and to only take it at night. (Claimant's Exhibit 13 pp. 1040 - 1043)

19. On January 28, 2020, Claimant returned to Dr. Parsons for additional treatment. He reported that his chief complaint was neck pain and that his numbness, tingling, and headaches continued. Claimant reported that he was working at a new job. A bilateral upper extremity EMG was pending. She returned Claimant to full duty. Dr. Parsons retained her specific diagnoses for Claimant's neck as (1) neck strain, (2) neck pain and (3) cervical muscle spasm, (4) spinal stenosis in cervical region and (5) cervical radiculopathy. (Claimant's Exhibit 13, pp. 1055 - 1058)

20. On February 3, 2020, Respondents asked for a medical record review by Scott Primack, D.O. about Dr. Shoemaker's request for bilateral upper extremity EMGs. Dr. Primack found the request reasonable. (Claimant's Exhibit 13, pp. 1068 - 1069)

21. On February 15th and 16th of 2020, surveillance video was obtained of Claimant. (Respondents' Exhibit DD, via hyperlinks in the investigative report.) The video shows Claimant walking in a normal manner. Claimant was not walking in a guarded manner as described by Dr. Primack in his May 20, 2020, report. The video also shows Claimant moving his neck with no problems. (Respondents' Exhibit DD and K, p. 218)

22. On February 20, 2020, Claimant returned to Dr. Shoemaker. His EMGs documented moderate bilateral carpal tunnel symptoms, right greater than left but given that his upper extremity symptoms were worse on the left, Dr. Shoemaker suspected that Claimant's left upper extremity symptoms were related to Claimant's specific diagnosis of left C7 radiculitis secondary to left C6-7 disc protrusion causing some canal stenosis and potentially some foraminal stenosis. Dr. Shoemaker noted that Claimant's injury had occurred while doing heavy lifting, and to a reasonable degree of medical certainty Claimant's specific diagnosis of C7 radiculitis secondary to a C6-7 disc protrusion resulted from his work injury. He again instructed Claimant not to drive or operate heavy machinery or work at unprotected heights while taking gabapentin and to take it at night. (Claimant's Exhibit 13, p.1072 - 1074)

23. On February 24, 2020, Claimant returned to Dr. Parsons. His chief complaint was neck pain. She noted the cortisone injections had temporarily helped and that his range of motion had improved. She returned Claimant to full duty and prescribed gabapentin. Dr. Parsons again retained her specific diagnoses for Claimant neck of (1) neck strain, (2) neck pain, (3) cervical muscle spasm, (4) spinal stenosis in cervical region and (5) cervical radiculopathy. (Claimant's Exhibit 13, p. 1083 - 1086)

24. On March 17, 2020, Claimant returned to Dr. Shoemaker for a follow up evaluation. Claimant's chief complaint is listed as neck pain and Dr. Shoemaker noted Claimant's primary pain at this point is his neck with radiation into the left arm and shoulder. Due to Claimant's persistent radicular symptoms, Dr. Shoemaker recommended a left C7-T1 interlaminar ESI for diagnostic and potentially therapeutic benefit. He continued Claimant on gabapentin 300 mg 2 tablets before bedtime. (Claimant's Exhibit K, p.1165 - 1168)

25. On May 18, 2020, Claimant returned to Dr. Shoemaker. Again, his chief complaint was neck pain. Claimant reported that he had not seen Dr. Parsons since March because of COVID. His symptoms were the same as his last visit on March 17, 2020. His current pain level was a 6/10. His worst pain level in the last few weeks was a 7/10 and his best was 5/10. Claimant found gabapentin useful to manage his pain. He had to limit activities and was working less due to pain. His work was slower. The gabapentin made him drowsy. The cervical epidural steroid injection had been denied and was waiting for a Rule 16 IME review and hoped to be able to move forward with the injection. (Claimant's Exhibit K, pp. 1186 - 1188)

26. On May 20, 2020, Dr. Primack performed an independent medical examination regarding Claimant's neck and back. On physical examination of Claimant's neck, Dr. Primack noted Claimant had full cervical range of motion except with right lateral side bending. He also noted that Claimant walked in a very guarded and slow manner. Dr. Primack stated:

> On today's clinical examination, he does ambulate in a very guarded manner. He has a slowed gait cycle. He has difficulty going into heel strike and toe off bilaterally because of pain. I asked him if that "is how he normally walks." He states that he does not move that fast.

Based on his examination of Claimant's cervical spine and review of the surveillance video, Dr. Primack concluded that there were no clinical findings to support Claimant's claim of ongoing neck problems. Dr. Primack found "no problems whatsoever" regarding Claimant's cervical spine and did not indicate Claimant had any impairment regarding his cervical spine. (Respondents' Exhibit K, pp. 213-221.)

27. The description by Dr. Primack of Claimant's limited ability to move and walk is in stark contrast to the February 2020 surveillance video. The surveillance video of Claimant shows him moving his neck freely and without any limitation. The surveillance video also shows Claimant walking without any problems. (Respondents' Exhibit DD, via hyperlinks in report.)

28. On May 27, 2020, Claimant returned to Advanced Urgent Care after a three-month gap due to COVID and was seen by Laura Lunn McDonough, PA. He reported he made good progress during that time but had plateaued. She returned him to work without restrictions because Claimant believed that he could self-modify as needed. Ms. McDonough planned for Claimant to do full duty without taking gabapentin. (Claimant's Exhibit 13, pp.1200 -1205)

29. On June 16, 2020, Dr. Shoemaker issued a report in which he concluded that Claimant reached MMI for his neck injury on January 6, 2020 and assessed Claimant's impairment. In assessing Claimant's impairment, Dr. Shoemaker considered Dr. Primack's report in which Dr. Primack concluded Claimant did not have any cervical impairment based on his examination and the surveillance video. Dr. Shoemaker disagreed with Dr. Primack's conclusion. In support of his conclusion, Dr. Shoemaker stated that "consistent with Dr. Primack's clinical evaluation the patient has persistent rigidity with range of motion restrictions." But, Dr. Primack did not find decreased cervical range of motion in all planes, Dr. Primack only noted decreased range of motion consisting of "right lateral side bending." On the other hand, Dr. Shoemaker noted – and rated – cervical decreased range of motion in i) flexion, ii) extension, iii) right lateral flexion, iv) left lateral flexion, v) right rotation, and vi) left rotation.

30. Based on the AMA Guides, page 80, table 53.II.B, Dr. Shoemaker assigned Claimant a 4% whole person impairment. He assessed range of motion based on

bubble inclinometers in multiple planes and attached the impairment rating worksheets to his report. Using figure 81 cervical range of motion, page 82, he measured a maximum cervical flexion angle of 22 degrees. Based on table 55, page 88, that measurement translated to a 4% whole person rating. He measured a maximum cervical extension angle of 14 degrees. Based on table 55, page 88, that measurement translated to a 4% whole person rating. He measured a maximum cervical right lateral flexion angle of 20 degrees. Based on table 56, page 90, translated into a 2% whole person rating. He measured a left lateral flexion angle of 16 degrees. Based on table 56, page 90, this translated into a 2% whole person impairment. Dr. Shoemaker measured maximum cervical right rotation angle of 28 degrees was measured. Based on table 57, page 90, this results in a 3% whole person impairment. Maximum cervical left rotation angle of 25 degrees was measured. Based on Table 57, page 90, this gave Claimant a 3% whole person impairment. The range of motion impairments add up to 18% whole person impairment and combined with the Table 54 impairment due to specific disorder resulted in Claimant being provided a 21% whole person impairment. (Claimant's Exhibit 13, pp. 1221 - 1224)

31. When Dr. Shoemaker determined Claimant's impairment on June 16, 2020, Claimant did have more than 6 months of documented pain and rigidity of his cervical spine.

32. However, despite Dr. Primack mentioning the inconsistencies in his examination – and the surveillance video – Dr. Shoemaker did not sufficiently address the inconsistencies in Claimant's range of motion and did not ask to review the surveillance video – and did not review the surveillance video - before providing Claimant an impairment rating for his cervical spine. In other words, the record on which Dr. Shoemaker relied contains inconsistencies regarding Claimant's range of motion and the ALJ finds that Dr. Shoemaker did not adequately address those issues.

33. On September 11, 2020, Dr. Primack issued another report related to his review of the surveillance video. Dr. Primack concluded that the surveillance video showed Claimant moving his cervical spine from side to side. He also noted that Claimant could flex forward at the head without difficulty and that he showed adequate rotation. He also concluded that Claimant did not demonstrate any cervical impairment. Dr. Primack stated:

> I appreciate your need for my analysis of the Oscar Lopez surveillance videos. The first video is almost 60 minutes and the second video are 7 minutes. The first video is from 2/15/2020. Throughout the video, Mr. Lopez was able to ambulate without difficulty and move his cervical spine from side-to-side.
>
> He is able to flex forward at the head without difficulty. He was able to ascend and descend stairs without difficulty. He was able to ambulate with a bag at the level of his right shoulder. At 5:47pm he

> was able to check his truck out with a helmet on his head. At 6:20, he was able to demonstrate adequate rotation.
>
> On, 2/16/2020, he was able to walk without difficulty. He could also use his phone. With phone use there was side bending. Given the mechanism of injuries, the clinical examination, a review of the extensive medical records, and the surveillance videos, there is no evidence of any cervical spine or foot/ankle impairment. The patient does not demonstrate any restrictions or impairment whatsoever.

In the end, Dr. Primack credibly and persuasively concluded Claimant did not demonstrate any impairment or range of motion deficits or restrictions regarding his cervical spine in the surveillance video.

(Respondents' Exhibit K, p. 231)

34. The ALJ finds that the Table 53.II.B 4% impairment rating provided by Dr. Shoemaker is consistent with the AMA Guides and supported by the underlying medical records of Claimant's treating providers, but the range of motion deficits that were rated by Drs. Shoemaker and Regan are not supported by Dr. Primack's assessment and the surveillance video.

35. On October 14, 2020, Respondents filed a Final Admission of Liability for the September 7, 2019, work injury involving Claimant's neck. (Respondents' Exhibits, p. 133.) In support of their admission, Respondents attached the October 23, 2020, reports from Dr. Parsons. The detailed medical report from October 23, 2020, arguably places Claimant at MMI for all conditions, including his neck. (Respondents' Exhibit F, pp. 140-143) However, the October 23, 2020, WC164 form shows Claimant is only being placed at MMI for his October 21, 2019, ankle injury. (Respondents' Exhibit F, p. 144)

36. On December 4, 2020, James Regan, M.D. performed a DIME evaluation. He also considered Dr. Primack's opinion that Claimant had no problems whatsoever with his neck. Without reviewing the surveillance video – or asking to review it - Dr. Regan rejected Dr. Primack's opinion and assigned an impairment rating. Dr. Regan provided Claimant an impairment rating. Based on the AMA Guides, page 80, table 53.II.B, Dr. Regan assigned a 4% whole person impairment. He also assessed range of motion on attached impairment rating worksheets to his report. Using figure 81 cervical range of motion, page 82, he measured a maximum cervical flexion angle of 15 degrees translated to a 4% whole person impairment. Maximum cervical extension angle was 20 degrees which translated to a 4% whole person impairment. Maximum cervical right lateral flexion angle was 20 degrees which translated to 2% whole person impairment. Left lateral flexion angle was 15 degrees which translated to a 2% whole person impairment. Maximum cervical right rotation angle was 30 degrees which translated to a 3% whole person impairment. Maximum cervical left rotation angle was of 35 degrees which translated to 2% whole person impairment. These range of motion impairments add up to 17% whole

person impairment and combine with the Table 54 impairment due to specific disorder to give 20% whole person impairment. (Claimant's Exhibit 1, pp. 1 - 15).

37. Claimant called Dr. Regan to testify at hearing. Ultimately, Dr. Regan retracted his opinion regarding Claimant's impairment rating. At hearing, he concluded that based on the date Claimant was placed at MMI by Dr. Shoemaker, Claimant did not have pain and rigidity, with or without muscle spasm, for 6 months or more, and that an impairment rating was not appropriate under the AMA Guides. Thus, he ultimately concluded that Claimant's impairment rating for his cervical spine was 0%.

38. Respondents called Dr. Scott Primack to testify at hearing. Dr. Primack opined that the cervical injury never happened. He concluded that Dr. Shoemaker's treatment for the cervical spine was based on history and one "can't really treat someone for a neck problem when a neck problem never happened." To Dr. Primack, Claimant's problem with credibility and inconsistency was "most disturbing" and resulted in him not providing Claimant a rating for his cervical spine. (Tr.: p.61, l. 23 through p. 62, l. 6) The ALJ finds Dr. Primack's opinions to be credible and persuasive regarding Claimant's lack of credibility and inconsistencies.

39. Dr. Primack disagreed with any cervical impairment rating because in his opinion Claimant was malingering and consciously misrepresenting his physical capacity. He could not cite from the record any other doctor who agreed with his opinion of malingering and admitted that Dr. Regan did not note evidence of malingering or symptom exaggeration. Dr. Regan testified that "candidly," he did not see any malingering during his DIME examination. He considered Claimant had given an earnest effort and was honest. That said, Dr. Regan did not review the surveillance video or ask to review the surveillance video. (Tr.: p. 140, ll. 2 – 6) Alternatively, Dr. Primack disagreed with Claimant's cervical rating because it was significantly high when comparing the Claimant's level of functioning and referenced his job. (Tr.: p. 85, l. 17 – 23) (Tr.: p. 86, l. 15 through p, 87, l. 2) (Tr.: p. 88, l. 22 through p. 89, l. 10)

40. Claimant's counsel asked Dr. Regan about the significant rating for a cervical spine considering Claimant's supposed level of function at work. Dr. Regan answered that many of his patients are in pain but work because they have to feed their families so just because there is performance does not mean there is no pain. He believed that Claimant had the pain he described but did not have the financial leverage to not work. (Tr.: p. 143, l. l21 through p. 144, l. 8) Asked whether he had adopted Dr. Shoemaker's range of motion measurements, Dr. Regan testified his cervical rating was independent of Dr. Shoemaker's. (Tr.: p. 178, l. 21) Asked how he documented rigidity as required for permanent impairment, Dr. Regan testified that his range of motion is synonymous to rigidity and that Claimant definitely had pain and rigidity for a year and a half between his injury and his range of motion measurements on December 4, 2020. (Tr.: p. 198, ll. 12 – 16; p. 200, l. 18 – p. 201, l. 1)

41. Based on the medical records, Claimant did have documented cervical pain and rigidity for more than 6 months.

42. Based on Claimant's presentation to Dr. Primack - compared to his presentation in the surveillance video – the ALJ does not find Claimant credible as it relates to the extent of his cervical impairment based on any decrease in range of motion due to his work accident. The ALJ finds that Claimant has misrepresented his range of motion deficits. As a result, the ALJ does not find the cervical range of motion measurements obtained by Drs. Shoemaker and Regan to be a true and accurate representation of Claimant's medical impairment that was caused by the work accident.

43. The ALJ finds the difference between Claimant's presentation to Dr. Primack, the range of motion deficits measured by Drs. Shoemaker and Regan and his appearance in the surveillance video to be in stark contrast. It is as if the person Drs. Primack, Shoemaker, and Regan evaluated is different from the person in the video. Moreover, Claimant chose not to testify at the hearing. He therefore did not attempt to explain the stark difference regarding his range of motion as measured by Drs. Shoemaker and Regan and that contained in the video and observed by Dr. Primack. As a result, the ALJ finds that Claimant did not dispute the stark discrepancy between Claimant's presentation to Drs. Primack, Shoemaker, and Regan and his appearance during the surveillance video.

44. The AMA Guides state that in order to provide an impairment rating, the underlying medical record must support the conclusion that there is impairment, and that the impairment is permanent. The AMA Guides provide the following instructions:

> Before formal evaluation is carried out under the Guides, an analysis of the history and course of the medical condition, including the findings on previous examinations, the treatment and responses to treatment, and the impact of the condition on life activities, must support a conclusion that an impairment is permanent and stabilized.
>
> This information gathering and analysis serves as the foundation upon which the evaluation of a permanent impairment is carried out. It is most important that the evaluator obtain enough clinical information to characterize the medical condition fully in accordance with the requirements of the Guides. Once this task is accomplished, the evaluator's findings may be compared with the clinical information already available about the individual. If the current findings are consistent with the results of previous clinical evaluations, they may be compared with the appropriate tables of the Guides to determine the percentage of impairment
>
> If the findings of the impairment evaluation are not consistent with those in the record, the step of determining the percentage of impairment is meaningless and should not be carried out until

> communication between the involved physicians or further clinical investigation resolves the disparity.

See AMA Guides, Section 1.2, Structure and Use of the Guides, pg. 3.

45. In this case, Dr. Primack's records and the surveillance video do not support the conclusion that Claimant has permanent impairment based on range of motion – as rated by Drs. Shoemaker and Regan. Moreover, neither Drs. Shoemaker nor Regan communicated with Dr. Primack in any way, or asked to see the surveillance video, to resolve the disparity regarding Claimant's cervical range of motion observed between the doctors and on the surveillance video.

46. As a result, the ALJ does not find the ultimate opinions of Drs. Shoemaker or Regan regarding the impairment rating provided for Claimant's decreased range of motion to be persuasive since their opinions are based on Claimant's presentation – which the ALJ does not find credible. It is self-evident that an opinion based on false information is unreliable and not persuasive.

47. The ALJ has reviewed and reweighed the evidence related to Claimant's cervical spine injury. The ALJ does not find Claimant's representations and presentation regarding his decreased range of motion involving his cervical spine at the time it was measured to be credible. As a result, the ALJ is not crediting the impairment rating associated with Claimant's decreased range of motion based on the opinions of Dr. Primack and the surveillance video.

48. On the other hand, the ALJ does find Claimant's statements to his medical providers about the cause of his cervical spine injury on September 7, 2019, and the duration of some stiffness – rigidity – to be credible. For example, Claimant alleges that before September 7, 2019, he did not have a preexisting neck condition that required medical treatment. A review of the medical records supports such a contention. Second, after his injury, Claimant underwent an MRI that demonstrated a herniated disc. Moreover, Dr. Shoemaker concluded that Claimant's radicular symptoms were consistent with the MRI findings. Third, there was no credible and persuasive evidence that Claimant suffered from a herniated cervical disc before the lifting incident on September 7, 2019, and that it required medical treatment.

49. The ALJ has also considered the fact that the record is not entirely consistent about what Claimant was lifting when he hurt his neck and when his pain developed. The ALJ, however, finds that the essence of Claimant's description is similar. He was lifting something on September 7, 2019, and developed neck pain.

50. The ALJ is mindful that some of these new findings about Claimant's cervical spine are contrary to the ALJ's prior findings. However, after further review, analysis, and reflection, the ALJ believes that Claimant's credibility issues surrounding his back injury and cervical range of motion overly obscured the ALJ's evaluation of the evidence regarding the circumstances surrounding Claimant's cervical spine injury. In other words, the ALJ finds that in this case, the Claimant's credibility is not an all or nothing proposition. Thus, while the ALJ did not credit all of Claimant's

statements to his medical providers regarding his back injury, and the extent of his impairment/disability regarding his back and neck, the ALJ does credit his initial statements to his medical providers regarding the cause of his September 7, 2019, neck injury.

51. After reviewing and reweighing the evidence, the ALJ credits the opinions of Dr. Primack over the opinions of Drs. Shoemaker and Regan as for that portion of the rating Drs. Shoemaker and Regan provided for Claimant's decreased range of motion.

52. The ALJ only credits that portion of Dr. Shoemaker's opinion that found Claimant's September 7, 2019, work related cervical injury resulted in a 4% whole person impairment rating under Table 53.II.B

53. Based on the evidence presented, the ALJ finds that Claimant's neck injury was caused by the September 7, 2019, work accident and not the October 21, 2019, work accident.

54. Claimant's cervical injury has several specific diagnoses: (1) neck strain, (2) neck pain, (3) cervical muscle spasm, (4) spinal stenosis in cervical region and (5) cervical radiculopathy.

55. Claimant's cervical injury has objective pathology; namely, the November 22, 2019, cervical MRI which shows at the C6-7 level a shallow broad-based posterior protrusion eccentric to the right, with annular tear, moderate spinal stenosis believed by Dr. Shoemaker to be the cause of Claimant's neck pain and left upper arm symptoms.

56. The medical evidence credited by the ALJ establishes Claimant's cervical injury resulted in an intervertebral disc or other soft tissue lesion, unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity which warrants a 4% rating under Table 53.II.B of the AMA Guides. But the ALJ further finds that Claimant did not suffer range of motion impairment under the AMA Guides based on the opinions of Dr. Primack and the surveillance video.

57. As a result, the ALJ finds that Claimant's September 7, 2019, work injury resulted in a 4% whole person impairment rating pursuant to 53.II.B of the AMA Guides.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally;

neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI, and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not

mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

Where an ALJ determines that a DIME physician changed his opinion concerning MMI or impairment, the party seeking to overcome that new opinion bears the burden of proof by clear and convincing evidence. *Dazzio,* W.C. No. 4-660-149 (ICAO June 30, 2008); *Clark v. Hudick Excavating, Inc.*, W.C. No. 4-524-162 (ICAO November 5, 2004).

If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAP, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAP, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAP, Sept. 16, 2002)

I. Consistent with the views expressed by the ICAO, whether Claimant established by a preponderance of the evidence that he sustained permanent impairment to his cervical spine – and if so – the extent of his impairment.

In this case, the ICAO concluded that Dr. Regan's ultimate opinion – that Claimant did not have any cervical impairment based on Claimant being placed at MMI within 6 months of his injury - was legally incorrect and it was therefore overcome by clear and convincing evidence. Thus, the ALJ was directed to determine Claimant's cervical impairment rating, based on the preponderance of the evidence.

As found, on May 20, 2020, Dr. Primack performed an independent medical examination regarding Claimant's neck and back. On physical examination of Claimant's neck, Dr. Primack noted Claimant had full cervical range of motion except with right lateral side bending. Dr. Primack also noted that Claimant walked in a very guarded and slow manner.

As further found, on September 11, 2020, Dr. Primack issued another report related to his review of the surveillance video. Dr. Primack concluded that the surveillance video showed Claimant moving his cervical spine from side to side. He also noted that Claimant could flex forward at the head without difficulty and that he showed adequate rotation. He also concluded that Claimant did not demonstrate any cervical impairment.

Based on Dr. Primack's examination of Claimant's cervical spine and review of the February 2020 surveillance video, Dr. Primack credibly and persuasively concluded

that there were no clinical findings to support Claimant's claim of ongoing neck problems and any decreased range of motion. Dr. Primack found "no problems whatsoever" regarding Claimant's cervical spine and did not indicate Claimant had any impairment regarding his cervical spine.

As found, the description by Dr. Primack of Claimant's inability to move and walk freely, and the cervical range of motion deficits measured by Drs. Shoemaker and Regan, are in stark contrast to the February 2020 surveillance video. The surveillance video of Claimant shows him moving his neck freely and without limitation. The surveillance video also shows Claimant walking without any problems. The surveillance video does not show Claimant having the degree of impairment he exhibited when evaluated by Dr. Primack or when his cervical range of motion was measured by Dr. Shoemaker and Regan.

As a result, the ALJ does not find the range of motion measurements obtained by Drs. Shoemaker and Regan to be reliable and persuasive since their opinions are based on Claimant's misrepresentation of his cervical spine range of motion. It is self-evident that an opinion based on false information is unreliable and not persuasive. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982).

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he suffered a 4% whole person impairment of his cervical spine pursuant to Table 53.II.B. of the AMA Guides due to his September 7, 2019, work injury. The ALJ further finds and concludes that Claimant failed to establish by a preponderance of the evidence that he suffered additional impairment based on any range of motion deficits.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Due to his September 7, 2019, work injury, Claimant suffered a 4% whole person impairment rating of his cervical spine.
2. Respondents shall pay Claimant permanent partial disability benefits based on a 4% whole person impairment rating.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 27, 2022.

ISSUES

- Did Claimant prove that an L4-5 fusion surgery recommended by Dr. Castro is causally related to his December 19, 2018 industrial injury?

FINDINGS OF FACT

1. Claimant worked in Employer's furniture department for approximately six weeks in November and December 2018. He suffered an admitted low back injury on December 19, 2018 while processing furniture donations.

2. Claimant had a history of low back pain related to osteoarthritis before the work injury. He sought treatment for back pain at Salud Family Medicine on March 25, 2014. Claimant attributed the pain to a fall in December 2013. Physical examination showed reduced range of motion and paraspinal tenderness to palpation. Claimant was given a Toradol injection and a prescription for Tramadol. On May 27, 2014, Claimant reported the Tramadol was not helping his pain and worried he was taking "too much" of it. The provider diagnosed generalized osteoarthritis and changed the prescription to Vicodin. Claimant returned three days later asking for a different pain medication because the Vicodin was not helping. Claimant described pain "everywhere," and cited his back as one of the "worst" areas. His pain medication was changed to MS Contin. At his next appointment on June 19, 2014, Claimant reported, "everything is getting worse." He was subsequently diagnosed with a chronic pain disorder and referred to a pain management specialist. In August 2014, he was diagnosed with peripheral neuropathy, presumably related to his longstanding diabetes, and prescribed gabapentin. On October 2, 2014, Claimant stated his pain was no better but he could not afford a pain clinic. The gabapentin dosage was increased. At his appointment on November 4, 2014, he reported ongoing pain in multiple areas, including his back. His doctor emphasized the need to get in with a pain clinic because "pt's OA [is] worsening." Over the next several months, he continued to receive Vicodin and gabapentin for pain while looking for to a pain clinic that would accept Medicaid. On February 6, 2015, Claimant's pain was 8-9/10 and he needed his Vicodin refilled because he could not get in with the pain clinic until the end of the month.

3. Claimant returned to Salud on December 16, 2015 for acute head and neck pain after being assaulted and kicked in the head four days earlier. He was diagnosed with a concussion, and later reported memory loss because of the assault. He also testified to ongoing memory problems at hearing. The next three Salud appointments were focused solely on his acute neck and head injuries. Claimant's last documented appointment was on February 1, 2016. He was referred for a repeat cervical CT because of continuing neck pain.

4. Although Claimant has numerous chronic medical issues, there are no records for any condition (including his diabetes) from February 2016 until the work accident.

5. Claimant testified, in the year before his work injury he had "small" pains in his back, but not as bad as the day after his work injury, with numbness and tingling in his feet.

6. On December 19, 2018, Claimant was putting unsellable donated furniture into a large trash compactor. While lifting a sofa into the dumpster, Claimant felt a "pull" in his low back. He "didn't think much about it at the time," and worked the remainder of his shift. He did not report an injury or request medical attention.

7. Claimant awoke the next morning with severe low back pain, and numbness and tingling in his feet. He went to work, but had to rest on a couch after his legs "gave out." He reported the injury to his supervisor and was referred for treatment.

8. Claimant saw Dr. Julie Parsons at Advanced Urgent Care on December 20, 2018. He denied any previous back injury. Physical examination showed limited ROM, right leg weakness, and limited tandem gait. X-rays showed only degenerative changes in the lumbar spine. Dr. Parsons diagnosed a low back strain and lumbar radiculopathy.

9. Dr. Parsons referred Claimant to Dr. Roberta Anderson-Oeser, a physiatrist. At his initial appointment on January 28, 2019, Dr. Anderson-Oeser noted Claimant lifted a couch and felt a "crack" in his low back and immediate sharp pain.[1] The next day he had difficulty getting out of bed and fell in the shower because of numbness in his legs. Claimant denied any prior low back issues. Physical examination showed palpable muscle spasms in the lower lumbar paraspinals. Straight leg raising was positive bilaterally. Sensation was decreased in an S1 distribution bilaterally and leg strength was reduced to 4-5/5 throughout both legs. Dr. Anderson-Oeser diagnosed a lumbar strain, muscle spasms, and lumbar radiculopathy. She ordered an MRI to evaluate a possible L5-S1 disc lesion or nerve root compression. Dr. Anderson-Oeser noted she would prescribe no pain medication because Claimant was an active marijuana user. Claimant stated the marijuana was helpful to manage his "chronic pain."

10. lumbar MRI was completed on February 21, 2019. There were no acute findings, and the radiologist described the observed pathology as "degenerative." The most significant findings were at L4-5, with grade I spondylolisthesis, a diffuse disc bulge, ligamentum flavum thickening, and bilateral facet arthropathy causing moderate bilateral neural foraminal narrowing, worse on the left. Lesser degenerative changes were noted at other levels. No herniated disc, central stenosis or nerve root compression was identified.

11. Dr. Anderson-Oeser oversaw conservative care over the next year, including massage therapy, osteopathic manipulation, acupuncture, facet injections, and

[1] At hearing, Claimant agreed the history documented by Dr. Anderson-Oeser was incorrect, as he did not experience a "crack" in his back; he simply felt a pull.

lumbar epidural steroid injections. Claimant received no appreciable benefit from any of the treatment, and his condition continued to deteriorate. Eventually, Dr. Anderson-Oeser referred Claimant to Dr. Bryan Castro, an orthopedic surgeon.

12. Claimant saw Dr. Castro on February 26, 2020. Dr. Castro noted some of Claimant's apparent clinical abnormalities were effort-dependent and improved with coaching. Dr. Castro found 4/5 weakness throughout the lower extremities, "which is a nonphysiologic exam as he is able to walk without neurologic deficits." Dr. Castro reviewed x-rays and the MRI, which highlighted "degenerative spondylolisthesis" at L4-5 and some facet joint "gapping" consistent with instability. Dr. Castro stated, "This is a degenerative process. I do not see any acute fracture, dislocation, or herniations." He recommended an updated MRI and an EMG. Regarding causation, he opined,

> He does not have acute radiculopathy. While he may need surgical intervention, I think it is somewhat debatable whether this is causally related to the accident in question as there are certainly pre-existing degenerative changes here, but as he reports he did not have the symptoms before and he did have them afterwards, than someone could assume it was related to the accident in question.

13. A new lumbar MRI was obtained on March 6, 2020. At L4-5, it showed grade I anterolisthesis, disc protrusion, ligamentum flavum hypertrophy, and facet arthropathy encroachment on both neural foramina. There was fluid in the facet joints. There was contact with and some compression of the L4 nerve roots, worse on the right.

14. EMG testing performed on May 6, 2020 was normal, with no evidence of lumbar radiculopathy.

15. Claimant returned to Dr. Castro on June 19, 2020. Dr. Castro noted the L4-5 spondylolisthesis did not appear grossly unstable based on flexion-extension x-rays. He recommended "a simple decompression" surgery at L4-5.

16. Dr. Castro reevaluated Claimant on December 9, 2020. Updated x-rays showed increased instability. As a result, Dr. Castro changed the recommendation from a decompression to a fusion.

17. Dr. Michael Janssen reviewed the surgery request for Insurer on December 14, 2020. He opined none of the pathology on the MRI was caused, accelerated, or exacerbated by the work accident. Dr. Janssen concluded,

> After reviewing all this information, and I reviewed both MRI scans in detail (02/21/2019 and 03/06/2020), it is my professional opinion this patient has a long-standing age-related degenerative spondylolisthesis secondary to facet arthropathy, facet erosion, and incompetence of the disc at his age. This is not a work-related, underlying condition, and despite the fact the patient may have had some myofascial back pain, the anatomical condition that is being recommended for surgery is clearly not occupation-related.

18. Claimant had a third lumbar MRI on December 22, 2020. It confirmed progression of the underlying degenerative changes at L4-5, including worsening of the central stenosis, ligamentum flavum hypertrophy, and facet arthropathy.

19. On January 28, 2021, Dr. Castro responded to an inquiry from Claimant's counsel regarding causation. He circled "yes" to a question asking whether the surgery was related to the work accident. He offered no analysis or explanation to support his opinions beyond that already stated in his February 26, 2020 report.

20. On February 2, 2021, Dr. Anderson-Oeser responded to a similar inquiry and opined the surgery was related to "an aggravation of a pre-existing condition caused by the injury." On August 16, 2021, Dr. Anderson-Oeser elaborated on her causation opinion, stating that because Claimant had "no prior history of low back pain preceding his work injury," and had no pain associated with the pre-existing degenerative changes before the injury, the work accident caused a "permanent aggravation" of his pre-existing condition.

21. Claimant saw Dr. Michael Rauzzino for an IME on April 19, 2021 at Respondents' request. Claimant again denied any prior low back issues. Dr. Rauzzino agreed an L4-5 fusion is reasonable, but opined it is not related to the work accident. He explained the initial post-injury imaging showed no acute structural changes to Claimant's lumbar spine that could be attributed to the injury, and the follow-up MRIs showed progression over time consistent with the natural and expected course of degenerative lumbar spine disease.

22. After completing his IME report, Dr. Rauzzino received and reviewed the medical records from Salud, which solidified his opinion that the proposed L4-5 fusion is not related to the work accident. The records show a pre-existing, severe, chronic pain syndrome affecting multiple areas including Claimant's low back. Dr. Rauzzino opined the low back symptoms documented in the Salud records would not be expected to resolve completely. He conceded that patients can have asymptomatic osteoarthritis, but explained that once it becomes symptomatic, it rarely resolves and suddenly reappears several years later. He was not persuaded the gap in Claimant's treatment records meant his multiple health problems resolved. Instead, he believed it more likely Claimant did not pursue medical care for financial and insurance reasons, and may have simply turned to marijuana to modulate his pain. Dr. Rauzzino clarified that the imaging showed only degenerative arthritic conditions, most severe at the L4-5 level, progressing on each successive MRI. He concluded,

> [L]ifting couches could have caused his back to hurt some, but the lifting of the couches is not what caused him to progress over the course of the next year to the point where Dr. Castro recommended surgery. That was due to the degenerative changes, and that would have occurred whether he lifted [ ] couches or not.

23. Dr. Rauzzino's causation opinions are credible and persuasive.

24. Claimant failed to prove the proposed L4-5 fusion surgery is causally related to the December 2018 work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment to the same body part was proximately caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not prove an injury objectively caused any structural anatomical change to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). But the mere fact a claimant experiences symptoms after an accident at work does not necessarily mean the employment aggravated or accelerated a preexisting condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Ultimately, the ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove the L4-5 fusion is causally related to his industrial injury. The argument that Claimant was "asymptomatic" before the work accident is not persuasive. Claimant had severe degenerative spine disease, which developed over many years. He has suffered from chronic pain since at least 2014, severe enough to warrant prescriptions for Tramadol, Vicodin, MS Contin, and gabapentin, and referral to a pain specialist. During that time, Claimant identified his low back as one of his "worst" areas. The fact that there are no treatment records (for any condition) between February 2016 and December 2018 does not prove his back was symptom-free. As Dr. Rauzzino recognized, absence of evidence is not necessarily evidence of absence. Given the documented history and objective pathology, it is unlikely Claimant's back pain ever resolved. It is more likely he stopped pursuing treatment

because of financial reasons and because he found marijuana a more effective pain reliever than conventional medical options.la Claimant's repeated denials of prior back issues, coupled with his admitted memory loss from a head injury, substantially diminish his credibility. His lack of candor regarding his preinjury medical condition also undermines the causation opinions provided by his treating physicians. Dr. Anderson-Oeser's assessment is based on the faulty premise that Claimant had "no prior history of low back pain preceding the injury." Dr. Castro had a similar misunderstanding, and even with that same bad information, Dr. Castro was equivocal regarding causation ("someone could assume it was related to the accident").

Dr. Rauzzino and Dr. Janssen persuasively explained that the proposed surgery is not intended to treat any pathology or condition caused by the work accident. Claimant probably suffered a soft tissue injury while moving the couch, as evidenced by his reported back pain, palpable spasm in the paraspinal muscles, and tenderness to palpation around the lumbar spine. But there was no acute injury to the discs, facet joints, vertebra, or any other spinal structure. The accident did not cause or worsen the pre-existing spondylolisthesis. Dr. Rauzzino and Dr. Janssen are persuasive that none of the pathology on the post-injury MRI was caused, accelerated, or aggravated by the injury. Although the injury may have temporarily elicited pain from the underlying osteoarthritis, it did not accelerate or otherwise change the natural trajectory of the degenerative process.

Claimant appropriately received conservative interventions for his myofascial injury. He was not a candidate for a lumbar fusion immediately after the accident, because he had no identifiable nerve root compression and no spinal instability. In June 2020, Dr. Castro opined there was no gross instability and recommended only a "simple decompression." By December 2020 (two years after the accident), updated x-rays and MRI showed further progression of the spondylolisthesis and associated instability. As a result, Dr. Castro determined a decompression would no longer suffice, and instead recommended a fusion to address the increased instability. The progressive worsening of Claimant's degenerative lumbar spine disease over two years cannot reasonably be attributed to the work accident. The ALJ agrees with Dr. Rauzzino that Claimant probably would have required a fusion at this time irrespective of the work accident.

ORDER

It is therefore ordered that:

1. Claimant's request for an L4-5 fusion surgery is denied and dismissed.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address

for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to a "one-time" maintenance medical evaluation as reasonably necessary and related to his June 18, 1992 work injury.

II. Whether Claimant established, by a preponderance of the evidence, that Respondents lost the right of selection of the authorized provider, and Claimant has the right to change physicians to a physician of his choosing.

PROCEDURAL HISTORY

This matter previously proceeded to hearing before ALJ Barbra Henk on May 24, 1995. On June 6, 1995, ALJ Henk issued Findings of Fact, Conclusions of Law, and Order. (Exhibit D) In summary, ALJ Henk entered a general order keeping medical benefits open, but "[w]ill not attempt to limit or specify the type of future care Claimant may obtain. Respondents are protected by the ordinary requirements that the care be reasonable, necessary, related to the injury and in compliance with the fee schedule." (Exhibit G, pp. 12-13)

This matter then proceeded to hearing before ALJ Patrick Spencer on April 15, 2021 by way of stipulated facts and exhibits. The issue for determination at the April 15, 2021 hearing was whether the claim was closed to maintenance medical benefits such that a reopening would be necessary before Claimant could pursue additional evaluations and treatment. The parties stipulated that if the claim was determined to be open for maintenance medical benefits, then Respondent-Insurer would authorize a one-time evaluation with Claimant's authorized treating provider (ATP) Michael Dallenbach to determine what, if any additional injury-related treatment was reasonably needed. ALJ Spencer determined that Claimant's claim for medical benefits after MMI remained open, and ordered, per the parties' stipulation, the Insurer to cover a one-time evaluation with Dr. Michael Dallenbach. (Exhibit C) Neither party appealed ALJ Spencer's April 15, 2021 order.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Sollender, the ALJ enters the following findings of fact:

Background and Claimant's Testimony

1. Claimant suffered an admitted industrial injury to his right wrist on June 18, 1992.

2. Claimant was placed at maximum medical improvement (MMI) by Dr. Daniel Olson on July 27, 1993 with an apportioned upper extremity impairment rating. (Exhibit G, p. 82)

3. Respondents filed a Final Admission of Liability on September 12, 1994.

4. On May 24, 1995, the parties proceeded to hearing before ALJ Henk on the sole issue of Claimant's entitlement to medical benefits after MMI. ALJ Henk awarded a general order of maintenance medical benefits for Claimant. (Exhibit D)

5. Claimant stopped working for the Employer in 1997. He then began working for the Colorado Department of Human Services (CDHS) as a maintenance supervisor later in 1997. Claimant worked full time and full duty with no restrictions.

6. In October 2011, Claimant was diagnosed with right wrist pain associated with Kienbock's disease and underwent surgery to include a right wrist denervation procedure. Respondents authorized and paid for this treatment.

7. Following his surgery, Claimant came under the care of Dr. Michael Dallenbach who diagnosed Claimant with "Advanced Kienbock's disease stage IIIB to IV. Dr. Dallenbach placed Claimant at MMI on January 23, 2012 documenting the following with respect to maintenance medical care:

> Because of his advanced Kienbock's disease, which will within a reasonable degree of medical probability continue to advance, [Claimant] will require future medical as well as surgical intervention with further treatment being dependent upon his level of pain, function, and underlying pathology.

8. Following his placement at MMI, Claimant returned to his position at the CDHS full time, full duty with no restrictions. He continued working his defined position until he retired on August 1, 2020. Claimant testified that he suffered no injuries to the right wrist/arm while working for the Department of Corrections between his January 23, 2012 MMI date and August 1, 2020, when he retired. As noted, Claimant worked in a supervisory capacity but did have the occasion to change light bulbs/ballast and work on other maintenance projects, including both electrical and plumbing jobs. According to Claimant, he would use a variety of hand tools to complete his work tasks, including screw drivers, wire strippers, cordless drills and flashlights.

9. According to Claimant, his wrist pain gradually worsened after retiring from the CDHS. Around October of 2020, his right wrist pain progressed to the point where he wanted to return to his ATP (Dr. Dallenbach) for further evaluation. Claimant requested that Respondent authorize an evaluation with Dr. Dallenbach. Respondents refused on the basis that the claim was closed. Claimant then filed an Application for Hearing seeking a determination of whether the claim was closed as to maintenance medical treatment.

10. As noted above, the parties proceeded to hearing with ALJ Spencer on April 15, 2021. By order issued May 26, 2021, ALJ Spencer determined the claim was open for maintenance care per the previous order issued by ALJ Henk on June 6, 1995. (Exhibit C, pp. 7-8) ALJ Spencer then ordered Respondents authorize a one-time evaluation with Dr. Dallenbach. (Id. at p. 9)

11. On May 27, 2021, Claimant's counsel's office, through Andy Lotrich, emailed Respondents' counsel noting that Dr. Dallenbach had retired and no longer practicing medicine. (Exhibit E, p. 16) As part of the May 27, 2021 email, Mr. Lotrich noted that Claimant had been treated previously by Dr. Karl Larsen[1]. Mr. Lotrich asked if Respondents would be "amenable" having Dr. Larsen replace Dr. Dallenbach for purposes of the evaluation. (Id.)

12. Approximately 30 minutes after Mr. Lotrich sent his email, Respondents' counsel responded as follows: "Since Dr. Dallenbach was the primary ATP in this matter and is no longer available to treat your client for non-medical reasons, my clients designate Concentra Outlook Blvd. 4112 Outlook Blvd., Suite 325, Pueblo, CO 81008, as your client's new primary ATP. (Exhibit E, p. 16)

13. Respondents' email response went on to indicate: "At this time, my clients are still considering the FFCLO and have not determined whether they will appeal or authorize a one-time evaluation with Concentra. I will let you know how they decide to proceed." claimant's new primary authorized treating provider. (Exhibit E, p. 16)

14. Claimant's counsel's office then requested Respondents consider a designation to Dr. Castrejon prompting Respondents, through counsel to answer as follows: "No. Concentra is on BBU, Inc.'s designated provider list. It not subject to negotiation, since Dallenbach is unavailable for non-medical reasons then my clients have the obligation to designate a new primary ATP for your client." (Exhibit E, p. 15)

15. Despite the indication that they would advise Claimant whether they would appeal ALJ Spencer's order or authorize the one-time evaluation with Concentra, the evidence presented persuades the ALJ that Respondents neither appealed ALJ Spencer's May 26, 2021 order nor did they authorize the evaluation with Concentra. Rather, the evidence presented establishes that Respondents requested that Claimant attend an Independent Medical Examination ("IME") with Dr. Jonathan Sollender. Consistent with the request, Dr. Sollender completed the IME on July 26, 2021.

16. As part of his IME, Dr. Sollender obtained a history from Claimant. He also reviewed medical records and completed a physical examination. He then authored the report contained at Respondents' Exhibit F. During the IME, Claimant reported "symptom aggravation" (Exhibit F, p. 20) occurring "about 8 months" prior to the IME, i.e. around October/November 2020 – shortly after he retired. Claimant

[1] Dr. Dallenbach referred Claimant to Dr. Larsen for evaluation and treatment during the course of the claim. (Exhibit F, p. 17-18) Accordingly, the ALJ finds that by virtue of the referral, Dr. Larsen is an authorized treating physician in this case.

reported that his wrist pain never ended after his 2011 surgery but was so "negligible" at that time that he was "only aware of soreness after heavy or repetitive use, suggesting that by October/November 2020 his pain was worsening with time. Indeed, Claimant reported that at the time of the July 26, 2021 IME he had wrist pain at night which, in contrast to his daytime pain, could not be ignored. (Exhibit F, p. 18)

17. Claimant also reported to Dr. Sollender that he tried to "see a workers' compensation doctor but [had] not been able to obtain a referral." (Exhibit F, p. 18)

18. Claimant testified that since retiring on August 1, 2020, he did small projects, including things that he had put off while he was working, around his home. Claimant testified that he remodeled a bathroom, converted his carport into a garage and took out a sliding glass door and replaced it with a walk-in door.

19. As part of his IME report, Dr. Sollender documented that Claimant engaged in 'hand intensive hobbies." He documented that Claimant reported that he built a garage at his home, and replaced a sliding glass door. Dr. Sollender observed that Claimant had several bruises on his left hand and forearm, which Claimant reported had occurred while replacing the sliding glass door. (Exhibit F, p. 18) According to Dr. Sollender, Claimant reported that he was doing more physically than he did when he was working. (Id.)

20. Dr. Sollender concluded that Claimant had "significantly" increased the use of his hands in a manner that was "inconsistent" with his prior level of employment. He characterized Claimant as a "full laborer with home projects of building a garage, replacing doors, etc." (Exhibit F, p. 21). He concluded that the "forceful" tasks associated with being a laborer caused Claimant to "experience an aggravation, exacerbation and acceleration" of his underlying Kienbock's disease due to non-work-related causes. Simply put, Dr. Sollender concluded that "if [Claimant] had not engaged in this (sic) heavy labor tasks, which [were] inconsistent with his prior employment, he would not be symptomatic." Accordingly, Dr. Sollender deemed the "chain of causation" to be broken prompting his opinion that Claimant's need for further evaluation and treatment (if necessary) was unrelated to his original injury or the treatment thereof. (Exhibit F, p. 21)

21. Dr. Sollender stated in his report that he could not determine whether Claimant's Kienbock's disease in the right wrist was any more advanced than it was in 2011-2012, when he was last treated. (Exhibit F, p. 21) Nevertheless, he found from Claimant's historical statement that his condition was stable until he retired.

22. As noted, Dr. Sollender testified by deposition on October 12, 2021. Dr. Sollender reiterated his opinion that Claimant's current pain/symptoms were unrelated to his 1992 industrial injury. In support of his opinion, Dr. Sollender testified:

> In essence, [Claimant] was doing fine from the surgery done by Dr. Larson (sic) in 2011. He did so well that he was able to continue his regular job without restrictions and adapted to his new wrist, if you will.
>
> He retired in July 2020. At that time of retirement, his wrist was doing fine. He said he had no problems with the wrist.
>
> In my estimation, any further challenges to his wrist condition after the date of retirement would not be due to a work condition but due to any exacerbating factors. Specifically, he said that he was doing far more work with his hands in retirement than he ever did in his eight years since he was placed at MMI in 2012. That included building a garage at his home, doing woodwork, putting in sliding glass doors.
>
> Basically, doing the intensity and acuity of work that he was not expected to be doing in his job.
>
> So to me, without any occupational factors in play, the exacerbation of his complaints were due to nonwork events.

(Sollender Depo. Tr. p. 14, ll. 15-17)

23. Dr. Sollender also testified that but for Claimant's retirement he would not have built a garage and would not be in pain because "he clearly was not in pain the day before he retired." (Sollender Depo. Tr. p. 16, ll. 11-20) While Dr. Sollender attributed Claimant's symptoms to non-work-related activities, he testified that he did not ask Claimant about what tools he was using, nor did he ask Claimant about his time commitment to these activities. (Sollender Depo Tr. p. 15, ll. 20-25, p. 33, ll. 22-25, p. 34, ll. 1-17)

24. During cross-examination, Dr. Sollender conceded that trauma can cause Kienbock's disease, that Kienbock's disease can progress and worsen over time and that it can be a life-long problem. (Sollender Depo. Tr. p. 21, ll. 8-21) He also admitted that Claimant never told him that his wrist was pain-free following his October 27, 2011 surgery. (Id. at p. 23, ll. 18-21) He also agreed that the type of post retirement activities Claimant was doing would not cause Kienbock's disease but "[could] certainly aggravate [it] if it was already present but stable." (Sollender Depo Tr. p. 25, ll. 3-5) Based upon his testimony, the ALJ finds that Dr. Sollender believes that Claimant's Kienbock's disease was stable until he retired and began working more aggressively with his hands/wrists building a garage and setting doors which caused his underlying condition to become increasingly symptomatic.

25. While Dr. Sollender conceded that an MRI is the best way to determine if there has been a progression of Claimant's Kienbock's disease, he testified that his

opinions concerning Claimant's present need for maintenance treatment were not dependent on completing an MRI, because he did not believe that Claimant's current pain is related to his industrial injury. Based upon his testimony, Dr. Sollender believes the question presented is one of causation, specifically whether Claimant's pain complaints are related to his original industrial injury or conversely to non-occupational factors which aggravated his underlying Kienbock's disease giving rise to his increased symptoms. Because he determined that Claimant's pain complaints were caused by non-work-related activities, which broke the "chain of causation" between Claimant's original injury and his current symptoms, Dr. Sollender opined that an MRI was unnecessary and the lack of one posed no impediment in his ability to opine that Claimant's pain is not causally related to his industrial injury. (Sollender Depo Tr. p. 32, ll. 4-20)

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Entitlement to Maintenance Medical Care

C. A claimant's need for medical treatment may extend beyond the point of maximum medical improvement where he/she requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present

condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity). When the respondents challenge a claimant's request for specific medical treatment, the claimant bears the burden of proof to establish entitlement to the benefits by a preponderance of the evidence. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015).

D. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonableness, necessity or relatedness of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra.* Indeed, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those, which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

E. The question of whether the claimant met the burden of proof to establish his/her entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). The evidence presented persuades the ALJ that, consistent with the May 26, 2021 order of ALJ Spencer, the claim remains open for post MMI maintenance treatment. Moreover, the content of ALJ Spencer's May 26, 2021 order convinces the undersigned that ALJ Spencer directed Respondents to "cover a one-time evaluation" as part of the maintenance treatment with Dr. Dallenbach. Neither party appealed the order of ALJ Spencer. Consequently, ALJ Spencer's order is final. Despite the final nature of ALJ Spencer's order, Respondents have yet to comply with ALJ Spencer's mandate by authorizing a one time appointment with an ATP in this case. While the evaluation could not be scheduled with Dr. Dallenbach, the evidence presented persuades the ALJ that Respondents designated a new ATP (Concentra) forthwith but failed to set an appointment with the new ATP so as to comply with ALJ Spencer's May 26, 2021 order.

F. The evidence presented also convinces the ALJ that Claimant suggested alternatives to Dr. Dallenbach in order to satisfy the directive for completion of a one-time evaluation. Claimant's suggestions were answered with a hard "No" and that the issue was not open for discussion/negotiation. Despite standing firm on the designation of Concentra as the newly designated ATP in this case, the evidence presented strongly supports a conclusion that Respondents did not schedule Claimant for an appointment to complete the evaluation ordered by ALJ Spencer. Instead, Respondents requested that Claimant attend an independent medical examination with Dr. Sollender. Armed with Dr. Sollender's opinions Respondents now contend (in contrast to their prior agreement to authorize an evaluation if the claim were determined to be open for maintenance care) that Claimant's need for a one-time evaluation is unrelated to his 1992 industrial injury. The ALJ is not convinced.

G. The ALJ credits Claimant's testimony to find/conclude that substantial evidence supports a conclusion that the passage of time and the lack of maintenance treatment in any form has resulted in a deterioration of Claimant's condition. Dr. Sollender's opinion that Claimant's symptoms can be explained as an aggravation of a pre-existing condition due to his engagement in activities involving the use of his hands and wrists post retirement is unconvincing. During his deposition, Dr. Sollender acknowledged his limited understanding of the activities Claimant actually performed and the tools he used to complete those activities. Indeed, on cross-examination Dr. Sollender admitted that he did not know how many days the Claimant worked on home improvement activities. Similarly he acknowledged he did not ask Claimant how many hours per day he engaged in such activity or how many breaks he took or what kind of tools he used. Based upon the evidence presented, the ALJ is not persuaded that Dr. Sollender sufficiently advised himself on the activities Claimant was actually performing when forming his causation opinions. While the ALJ acknowledges that Dr. Sollender is a respected surgeon, the incomplete nature of the information he gathered from Claimant highlights the fact that his causation opinion appears speculative and based simply on his unsupported conclusion that Claimant's use of his hands/wrists in activities post retirement activities was sufficient to aggravate Claimant's Kienbock's disease and sever the causal connection to the 1992 work injury. Based upon the evidence presented, the ALJ finds it equally probable that Claimant's current symptoms are causally related to the natural and probable progression of his Kienbock's disease, which became symptomatic because of his 1992 work injury. Nonetheless, Claimant's condition continues to deteriorate. Given the content of ALJ Spencer's May 26, 2021 order and the testimony regarding the progressive nature of Kienbock's disease, the ALJ is convinced that the parties probably recognized the dilemma in determining whether Claimant required additional maintenance treatment. Indeed, the record contains ample evidence that Respondents agreed to authorize a "one-time" evaluation to determine Claimant's maintenance treatment needs.

H. Without completion of the previously agreed upon one-time evaluation, the ALJ is convinced that Claimant's condition will likely deteriorate further resulting in worsening pain and greater functional decline. Accordingly, the ALJ concludes that

Claimant has proven, by a preponderance of the evidence, that the requested one-time evaluation constitutes reasonable and necessary maintenance treatment related to his 1992 industrial injury. As noted, respondents retain the right to dispute whether any treatment recommendation following the one-time evaluation is reasonable, necessary and related to Claimant's 1992 industrial injury. *Hanna v. Print Expediters Inc., supra.*

Authorized Provider and Right of Selection

I. Authorization to provide medical treatment refers to a medical provider's legal authority to provide treatment to the claimant with the expectation that the provider will be compensated by the insurer for said services. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018). Authorized providers include those medical personnel to whom the claimant is directly referred by the employer, as well as providers to whom an authorized provider refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

J. C.R.S. § 8-43-404(5)(a) contemplates that respondents will designate a physician who is willing to provide treatment without regard to non-medical issues, including such concerns as the prospects for payment in the event the claim is ultimately denied. *Lutz v. Industrial Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Scoggins v. Air Serv,* W. C. No. 4-642757- (ICAO, Mar 31, 2006). The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). If the physician selected by the respondent refuses to treat the claimant for non-medical reasons and the respondent fails to appoint a new treating physician, the right of selection passes to the claimant, and the physician selected by the claimant is authorized. *See Ruybal v. University Health Sciences Center, supra; Teledyne Water Pic v. Industrial Claim Appeals Office, supra; Buhrmann v. University of Colorado Health Sciences Center,* W.C. No. 4-253-689 (Nov. 4, 1996); *Ragan v Dominion Services, Inc.,* W.C. No. 4-127-475 (Sept. 3, 1993).

K. The fact that an authorized treating provider stops providing treatment for non-medical reasons does not automatically authorize a claimant to change physicians. Rather, the Act affords employers the right to select a new physician in the event that an authorized provider refuses to provide treatment or discharges an injured worker from care for non-medical reasons. *C.R.S. § 8-43-404(10) (b).* Failure to do so entitles a claimant to select the physician who attends to his/her injuries. In this case, the evidence presented persuades the ALJ that Claimant initially sought authorization to return to Dr. Dallenbach around October 2020. Respondents denied authorization for the medical evaluation. The parties then proceeded to hearing with ALJ Spencer in April 2021. In ALJ Spencer's Order of May 26, 2021, he ordered that Claimant should be permitted an evaluation with Dr. Dallenbach. Assuming *arguendo* that Respondents

effectively lost the right of selection when they initially declined authorization of an evaluation with Dr. Dallenbach in October 2020, Dr. Dallenbach was re-established as the authorized treating provider based upon ALJ Spencer's Order of May 26, 2021.

L. The parties were unaware that Dr. Dallenbach had retired and was no longer practicing medicine until Claimant's counsel's office attempted to schedule Claimant for an evaluation on May 27, 2021. Upon learning that Dr. Dallenbach was unable/unwilling to provide treatment to Claimant, Respondents, through counsel of record, immediately designated Concentra Outlook Boulevard as Claimant's new authorized treating physician. Based upon the evidence presented, the ALJ is not convinced that Respondents actions in designating Concentra lay outside the aforementioned statute or that they lost the right of selection in this case. The ALJ finds/concludes that Claimant's authorized treating provider is Concentra Outlook Boulevard.

ORDER

It is therefore ordered that:

1. Insurer shall cover a one-time evaluation, as maintenance care, with an authorized treating provider, to include Concentra, to determine what, if any, additional medical treatment Claimant may require to cure and relieve him of the effects of his industrial injury. Respondents retain the right to challenge any treatment recommendation of the grounds that it is not reasonable, necessary or related to Claimant's 1992 wrist injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

2. All matters not determined herein are reserved for future determination

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a

Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered whole person impairment to his left shoulder?

- Claimant requests PPD based 9% whole person rating assigned by Dr. McLaughlin.

- The parties agreed to reserve issues relating to unpaid or unreimbursed medical expenses.

FINDINGS OF FACT

1. Claimant worked for Employer as a journeyman lineman, maintaining electrical lines throughout the Western Slope. He injured his left shoulder on July 29, 2020 while using an 8-foot "hot stick" to move a heavy power line.

2. Claimant initially saw Dr. Robert McLaughlin at SCL Health in Grand Junction on July 30, 2020. Dr. McLaughlin diagnosed a left AC joint injury.

3. In August 2020, Claimant moved back to Arkansas, where his family lives.

4. Claimant underwent a left shoulder MRI on August 24, 2020. It showed mild AC joint arthropathy and mild reactive edema involving the distal clavicle. There were no rotator cuff or labral tears.

5. Respondents filed a Notice of Contest on August 31, 2020.

6. Claimant was referred to an orthopedic surgeon, Dr. John Harp. On October 1, 2020, Dr. Harp performed a left shoulder arthroscopic subacromial decompression, distal clavicle excision, and extensive debridement.

7. Claimant saw Dr. Gary Zuehlsdorff on January 4, 2021 for an IME at his counsel's request. Dr. Zuehlsdorff noted Claimant's left shoulder pain extended into his left trapezius muscle, but not his neck. Claimant explained he was back to work at full duty, but the work increased the symptoms in his left shoulder.

8. Dr. Allison Fall performed an IME for Respondents on April 7, 2021. Dr. Fall agreed Claimant suffered a compensable injury to his left shoulder. She noted the injury caused sleep disturbance and made driving with the left arm difficult. She further noted his left shoulder symptoms increased with physical work. Examination showed reduced shoulder range of motion and AC joint crepitus. He was tender to palpation over the lateral supraspinatus and described referred paresthesias to the left arm with palpation of the upper trapezius. Cervical range of motion was unrestricted but left lateral bending elicited

shoulder paresthesias. Dr. Fall also observed decreased scapulothoracic stability with poor movement patterns and myofascial symptoms. She opined Claimant was approaching MMI, pending additional PT and follow up with his surgeon for a possible injection.

9. Respondents filed a General Admission of Liability on June 25, 2021.

10. Because his providers in Arkansas were not Level II accredited, Claimant returned to Dr. McLaughlin in on July 30, 2021 for an evaluation of MMI and impairment. Dr. McLaughlin noted Claimant had "returned to full duty and is doing well, although still with symptoms." He was working as a lineman in Texas. His left shoulder was still "sore" and felt "a little weak" in certain positions. Examination showed some residual crepitus and reduced range of motion. Strength was good and impingement testing was negative. Claimant's cervical spine was nontender. Dr. McLaughlin opined Claimant was at MMI as of July 31, 2021. He assigned a 15% upper extremity rating based on the distal clavicle resection and ROM loss. The 15% scheduled rating converts to 9% whole person. Dr. McLaughlin recommended post-MMI maintenance care including TheraBand exercises to target the ongoing scapulothoracic dyskinesis, up to 6 PT sessions, and follow up with his orthopedic surgeon for possible injections or other interventions if he did not continue to improve.

11. Respondents filed a Final Admission of Liability on August 16, 2021, admitting for Dr. McLaughlin's 15% scheduled rating and for medical benefits after MMI.

12. Dr. John Raschbacher performed a records-review for Respondents on December 9, 2021. He opined there was "no medical basis" to convert the admitted scheduled rating to its whole person equivalent. He saw no evidence that the injury affected any structures "proximal" or "medial" to the left shoulder. He opined, "there is simply no basis, other than secondary gain, for conversion to a whole person impairment." He noted Claimant was released with no restrictions but opined that if whole person conversion were deemed appropriate, his restrictions should be revisited with an eye toward possible disqualification from his career as a lineman.

13. Dr. Raschbacher testified at hearing consistent with his report. He opined the "shoulder" is not confined to the glenohumeral joint, but also includes the sternoclavicular joint, acromioclavicular joint, and scapulothoracic articulation. Dr. Raschbacher considers the shoulder to be "part of the arm," so in his view, any symptoms or functional impairment affecting the broadly-defined "shoulder" represent purely scheduled impairments.

14. Claimant credibly and persuasively testified his left shoulder remains symptomatic. He experiences pain into his left trapezius and scapulothoracic region with activity and movements, including but not limited to reaching away from his body and working overhead. Claimant further testified he has pain and functional loss and to his left trapezius, and scapulothoracic region while working out. He described intermittent sleep disturbance and difficulty driving long distances with his left arm.

15. Dr. Raschbacher's opinions regarding whole person impairment are neither credible nor persuasive.

16. Claimant proved by a preponderance of the evidence he suffered functional impairment to his left shoulder not listed on the schedule of disabilities.

CONCLUSIONS OF LAW

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g*., *Brown v. City of Auror*a, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved he suffered functional impairment not listed on the schedule. The surgery performed by Dr. Harp was directed to anatomical structures

proximal to the "arm," including a subacromial decompression, distal clavicle resection, and rotator cuff debridement. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008) ("The [claimant's] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint"); *see also Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). More important, Claimant credibly described pain and associated functional limitation in areas proximal to his arm such as the scapula and trapezius. This pain affects his ability to engage in various activities, including overhead reaching. Multiple providers noted AC joint crepitus. Dr. Zuehlsdorff documented left trapezius pain with activity, and Dr. Fall objectively observed scapulothoracic dysfunction. Dr. Raschbacher's arguments regarding whole person conversion mirror those he made in *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). In that case, he advocated a similarly expansive view of what constitutes the "shoulder," and by extension what impairments remain on the schedule. The ALJ in *Newton* rejected those arguments and was upheld by the ICAO. The Panel's analysis in *Newton* is persuasive. The preponderance of persuasive evidence shows Claimant's functional impairment extends beyond his "arm at the shoulder."

Dr. McLaughlin provided a 15% scheduled rating, which converts to 9% whole person. Neither party requested a DIME, so Dr. McLaughlin's rating is binding under § 8-42-107.2(b). Claimant is entitled to PPD benefits based on Dr. McLaughlin's 9% whole person rating.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on Dr. McLaughlin's 9% whole person rating. Insurer may take credit for any PPD benefits previously paid to Claimant in connection with this claim.

2. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition

to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: January 31, 2022

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant overcame the Division Independent Medical Examination (DIME) opinion of John Hughes, M.D. regarding Maximum Medical Improvement (MMI) by clear and convincing evidence.

2. If Claimant has overcome the DIME as to MMI, whether Claimant has established by a preponderance of the evidence entitlement to reasonable, necessary and related medical treatment.

3. Whether Claimant proved by a preponderance of the evidence that he is entitled to a higher Average Weekly Wage (AWW) than $754.59 as admitted in the Final Admission of Liability (FAL).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 55 year-old male who worked for employer. Employer hired Claimant to work as a "Milker."

2. Claimant speaks Spanish and testified that he cannot read, understand, or speak English. (Tr: 40:22-41:2)

3. On October 7, 2018, Claimant suffered an admitted industrial injury. (Tr. 41:3-4). Claimant and three fellow employees were using a large iron metal bar to try to unjam a gate. Claimant testified that the bar was approximately five and a half feet long, and weighed about 80 pounds. (Tr. 43:13-25) The bar released from the gate and hit Claimant on the right side of his forehead causing him to fall backwards to the ground. Claimant testified that he hit the back of his head when he fell, and he lost consciousness. (Tr. 47:7-19).

4. Claimant's co-workers took him to the Emergency Room (ER) at Platte Valley Medical Center approximately an hour later. Claimant testified that there was no translator with him in the ER, and the physician did not speak Spanish. (Tr. 76:12-17). The medical records make no reference to a translator, but contain documents in Spanish, including instructions regarding Claimant's head injury. (Ex. D). Claimant testified that he could sort of follow what the doctor was saying. (Tr. 76:15-17).

5. According to the medical records, Claimant told the ER physician that he sustained a blow to the front of his head from a metal bar and he had a headache and neck pain. Claimant denied loss of consciousness, vision change, nausea and vomiting. (Ex. D).

6. Claimant testified, on direct examination, that he does not remember if he told anyone in the ER that he lost consciousness. He just remembered "telling the doctor how the incident happened." (Tr. 49:18-50:1). On cross examination, however, Claimant testified that he reported loss of consciousness while in the ER. (Tr. 78:19-22).

7. In light of the inconsistencies in Claimant's testimony, and the ER records, the ALJ finds that Claimant did not tell anyone in the ER that he lost consciousness.

8. Claimant had a CT of his head and his back while in the ER. The impression of the head CT was "[n]o intracranial hemorrhage. Right frontal scalp swelling." Claimant received a normal Glasgow Coma Scale rating, indicating normal neurological function. Claimant's final diagnosis at discharge was a scalp hematoma. (Ex. D).

9. Authorized Treating Provider (ATP) Julie Parsons, M.D. saw Claimant on October 15, 2018, about a week after the accident. According to the medical records, Claimant told Dr. Parsons a metal bar hit him in the right eye, he subsequently fell on his back, hit the back of his head, and lost consciousness for a minute or so. Claimant reported no loss of hearing, no vision change, no nausea, and no dizziness. He reported muscle aches, but no swelling. Dr. Parsons reviewed Claimant's CT reports from the ER. In addition to a contusion to the face, Dr. Parsons diagnosed Claimant with a neck sprain and a low back strain. Claimant had no restrictions and returned to full duty work. (Ex. E)

10. Claimant saw Dr. Parsons again on October 24, 2018. His chief complaints were back and neck pain. He again reported no loss of hearing, no vision change, no nausea, and no dizziness. Dr. Parsons referred Claimant to physical therapy for his lower back strain. The physical therapy did not improve Claimant's lower back pain, so Dr. Parson's ordered an MRI of the lumbar spine. (Ex. E). The MRI revealed a left far lateral disc herniation at the L3-L4, a shallow posterior central disc herniation at L5-S1, and a disc bulge at L4 to L5 with a right central annular perforation. (Ex. I)

11. On January 3, 2019, Dr. Parsons referred Claimant to Roberta Anderson-Oeser, M.D. for a physical medicine and rehabilitation consultation. Dr. Anderson-Oeser examined Claimant on February 13, 2019, and his chief complaint was low back pain and right lower extremity pain and paresthesia. He did report having headaches. Dr. Anderson-Oeser diagnosed Claimant with a low back strain, low back pain, lumbar radiculopathy, and muscle spasms. She recommended epidural steroid injections, and an EMG/Nerve Conduction Study. (Ex. F).

12. In addition to Drs. Parsons and Anderson-Oeser, Claimant sought medical treatment from psychologist Jesus Sanchez, Ph.D. (Ex. 11), psychiatrist Gary Gutterman, M.D. (Ex. 7), surgeon Brian Castro, M.D. (Ex. G,) and otolaryngologist Alan Lipkin, M.D. (Ex. 9,13,16).

13. On August 6, 2019, Claimant told Dr. Parsons he was experiencing headaches accompanied with nausea and vomiting. Claimant was vague regarding the onset of the intermittent vomiting, but thought it began in May. Dr. Parsons instructed him to follow up with his primary care physician for the headaches and nausea/vomiting. Dr. Parsons explained that these symptoms were not consistent with a concussion this late after the injury, especially with a normal CT of the brain. Dr. Parsons transferred Claimant's care to Dr. Anderson-Oeser. (Ex. E.)

14. Claimant testified he reported his symptoms of dizziness and headaches at his first visit with Dr. Parsons. (Tr. 80:19-24). The ALJ does not find this testimony credible as it is not supported by the medical record. The ALJ finds that Claimant did not report his symptoms of headaches and dizziness to Dr. Parsons until August 2019, 10 months after he first began treating with her.

15. On August 22, 2019, Claimant told Dr. Anderson-Oeser that he was experiencing nausea, vomiting, headaches and neck pain. Claimant felt his medication was causing the dizziness and headaches. (Ex. F). The ALJ finds that Claimant did not report his symptoms of vomiting and nausea to Dr. Anderson-Oeser until August 2019, seven months after he first began treating with her.

16. On October 17, 2019, approximately a year after the incident, Claimant was referred to Dr. Castro for a surgical consultation regarding his lumbar spine. Dr. Castro opined that there was no indication for surgical intervention as there was no neural impingement, no disc herniation, and his straight leg raise was negative. Dr. Castro recommended that Claimant stop walking with a cane, and walk and stretch on a daily basis. (Ex. G).

17. Claimant continued to treat with Dr. Anderson-Oeser. On November 18, 2019, Claimant reported no improvement in his symptoms despite injection therapy and conservative care. (Ex. F).

18. On May 12, 2020, Claimant saw Dr. Anderson-Oeser and reported that in addition to his ongoing headaches and dizziness, he was having tinnitus and increased hearing loss. Dr. Anderson-Oeser referred Claimant to Alan Lipkin, M.D., an otolaryngologist, for an evaluation. (Ex. F)

19. On June 11, 2020, Claimant met with Dr. Lipkin. In his notes, Dr. Lipkin says Claimant "is referred by Dr. Anderson-Oeser WC for evaluation of tinnitus, hearing loss, dizziness that occurred as a result of a work-related injury that occurred 10/07/2019." (Ex. H.) Dr. Lipkin did not make an independent determination that Claimant's symptoms were causally related to his industrial injury. Further, Dr. Lipkin routinely noted the date of injury as 2019, not 2018. Claimant was still using a walking cane, despite Dr. Castro's recommendation to the contrary. Claimant reported no issues with driving or basic self-care. Claimant's audiogram showed "bilateral high frequency sensorineural loss, possibly pre-existing." (Ex. H).

20. On October 29, 2020, Dr. Lipkin diagnosed Claimant with the following: sensorineural hearing loss in both ears, tinnitus of the right ear, Benign Paroxysmal Positional Vertigo (BPPV) left ear. (Ex. H).

21. Dr. Lipkin was deposed on August 11, 2021. Dr. Lipkin testified he is not an expert regarding traumatic brain injuries (TBIs). (Ex. M at 11:25-12:5). He did not have Claimant's prior medical records before initiating care on June 11, 2020. (*Id.* at 30:9-17). Dr. Lipkin testified that symptoms of BPPV typically occur within weeks of a head injury or acute injury, but can also occur spontaneously with an unknown cause. (*Id*. at 31:2-32:3 and 33:14-19). Dr. Lipkin testified that at his March 22, 2021 visit with Claimant, he did not think that Claimant was suffering from ongoing BPPV and Claimant was experiencing less-specific unsteadiness. (*Id.* at 36:2-11).

22. In preparation for a 24-Month DIME, pursuant to §8-42-107(8)(b), C.R.S., Respondents retained Mark Paz, M.D., to conduct an Independent Medical Examination (IME).

23. On December 8, 2020, Claimant saw Dr. Paz for his IME. An independent Spanish-English interpreter was present at the exam. Claimant told Dr. Paz he is able to drive and perform activities of daily living. Claimant indicated he used the cane for relief of right-sided low back pain. (Ex. I).

24. Dr. Paz opined that Claimant sustained a right forehead contusion as a result of the October 7, 2018, incident. He concluded that it was not medically probable that Claimant has lumbar radiculopathy as a claim-related diagnosis. Dr. Paz further opined that Claimant has nonorganic low back pain. Dr. Paz opined that the Claimant's lumbar degenerative disc disease was not aggravated or accelerated by the October 7, 2018, incident. Claimant exhibited non-physiologic responses during physical examination and Claimant's medical records document a non-diagnostic and non-therapeutic response to injections to the low back. Based on these physical findings and reports, Dr. Paz opined that Claimant's bilateral lower extremity symptoms lack organic etiology and physiologic correlation, the onset of these symptoms occurred eight months prior to the IME and lack a temporal relationship to the October 7, 2018, incident. Furthermore, Dr. Paz opined that Claimant's symptoms of dizziness and vertigo are not causally related to the October 7, 2018, incident. Dr. Paz pointed out that there was no recurring documentation of symptoms of dizziness or a diagnosis of vertigo through May 8, 2019. No temporal relationship was established between the symptoms of dizziness and the date of injury. Dr. Paz opined that the Claimant reached MMI on November 9, 2020. (Ex. I).

25. Respondents requested a 24-Month DIME. John Hughes, M.D. was confirmed as the DIME physician. Dr. Hughes was asked to evaluate Claimant for a TBI that he may have sustained on October 7, 2018. (Ex. J.) Claimant did not object to the limited scope of the DIME nor did he seek a prehearing conference to amend the DIME application pursuant to WCRP Rule 11.

26. Dr. Hughes performed the DIME on April 27, 2021. He agreed with Dr. Paz and placed Claimant at MMI as of November 9, 2020. Dr. Hughes opined that Claimant did

not sustain a TBI, and he did not believe the assignment of a permanent impairment rating was appropriate. (Ex. J).

27. Dr. Hughes made the following diagnoses of Claimant: 1) Work related closed head injuries sustained October 7, 2018, with multiple injury components; 2) Scalp contusion, resolved; 3) Cervical spine/sprain, resolved; 4) Lumbar spine pain, refractory to nonsurgical care with non-identification of the lumbar spine regional pain generator to date; 5) BPPV, probably secondary to the closed head injury with current vague symptoms and incomplete documentation, not supporting assignment of a permanent impairment rating; 6) Adjustment disorder with depressed mood, quiescent on medications monitored by Dr. Gutterman. (Ex. J).

28. Dr. Hughes noted in his DIME report that he did not have all of Dr. Lipkin's medical records. There is no evidence that Claimant made any attempt to provide Dr. Hughes with any missing records per WCRP Rule11-4(B).

29. At the hearing, Dr. Paz credibly testified that based on medical literature and Claimant's presentation in the ER, Claimant did not sustain a TBI. (Tr. 105 ¶ 9-23. Specifically, no neurological deficits were observed on physical examination. *Id*. Dr. Paz credibly testified that in the ER Claimant was observed to have a normal Glasgow Coma Scale, which is a test that assesses neurological function or dysfunction. (Tr. at 107 ¶ 15-25). Claimant had a score of 15, which is the highest score possible, and indicates the highest neurological function.

30. Dr. Paz credibly testified that after a head injury or a TBI, and based on medical literature, the interval between head trauma with loss of consciousness and development of symptoms is equal to or less than four weeks. Dr. Paz testified that the Medical Treatment Guidelines do not address the onset of post TBI symptoms, so he relied on the most applicable medical literature in forming his opinion. (Tr. 108:10-25). Claimant reported symptoms of dizziness ten months after the October 7, 2018, incident.

31. Dr. Paz credibly testified that Claimant's hearing loss and tinnitus were unrelated to the October 7, 2018, incident based on their latent development in relation to the injury and documentation in medical records. (Tr. 110: 8-25). Dr. Paz further testified that only 15 percent of cases of BPPV are associated with a closed head injury. (Tr. 112:1-25). As such, Dr. Paz opines that Claimant's BPPV is unrelated to the October 7, 2018, incident, no further treatment is indicated, and a permanent impairment rating is not appropriate. (Tr. at 113:1-25).

32. Dr. Anderson-Oeser was deposed on October 15, 2021. Dr. Anderson-Oeser testified that Claimant had all of the symptoms of a TBI (nausea, dizziness and headaches). (Ex. N at 14:21-15:5). She testified that Claimant is not at MMI for TBI because he has not had vestibular rehabilitation and neuropsychological testing. (*Id.* at 19:3-17). Dr. Anderson-Oeser testified that neuropsychological testing should occur within three to six months of the injury. (*Id.* at 19:23-20:10). Claimant's injury occurred over three years ago.

33. Dr. Anderson-Oeser testified that Dr. Hughes' DIME opinion was in error because he did not have all of the medical records, but she did not know what medical records Dr. Hughes' was missing. (*Id.* at 26:8-27:14 and 32:1-33:8). She testified that Dr. Hughes erred by not having Claimant obtain vestibular therapy before reaching his conclusion that Claimant did not suffer a TBI. (*Id.* at 28:8-21). Dr. Anderson-Oeser also testified that it was "difficult'" to determine if Claimant had a TBI without neuropsychological testing because Claimant's injury was "mild". (*Id*. at 28:1-7).

34. Dr. Anderson-Oeser testified that symptoms such as nausea, dizziness, vomiting, headaches and confusion are indications of a TBI, and are present right after the injury. (Tr. 33:22-34:11).

35. Claimant did not report symptoms of nausea, dizziness, vomiting, or confusion right after the injury. Claimant did not report these symptoms until approximately ten months after his injury. The ALJ infers that Claimant did not begin experiencing these symptoms before August 2019.

36. The ALJ finds that Dr. Anderson-Oeser's testimony is credible, but it is not persuasive. Dr. Anderson-Oeser has a difference of medical opinion from Dr. Hughes and Dr. Paz.

37. The ALJ finds that Claimant did not suffer a TBI, Claimant's date of MMI is November 9, 2020, Claimant has no permanent impairment and medical maintenance is not necessary.

38. Claimant credibly testified that he "made about $1,440 per two week period" and he earned productivity bonuses of approximately $300, seven times a year. (Tr. 42:14-21). According to Claimant's wage records, he earned $37,729.77 from October 17, 2017 through October 2, 2018. (Ex. L). The records include multiple entries of $323.23, which the ALJ infers represents bonuses earned by Claimant. The ALJ finds that Claimant's AWW is $754.59 ($37,729.77 divided by 50 weeks).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's Findings

The party seeking to overcome the DIME physician's opinion bears the burden of proof by clear and convincing evidence. *Id.* Clear and convincing evidence is evidence that demonstrates that it is highly probable the DIME physician's opinion is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge,* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001).

In this case, the DIME physician, Dr. Hughes, determined that Claimant suffered a head injury, but not a TBI. (Findings of Fact ¶¶ 26-27). He also determined that Claimant reached MMI on November 9, 2020. (Id. at ¶ 26). These findings were consistent with those of Dr. Paz, who completed an IME on December 8, 2020. (*Id.* at ¶¶ 23-24). Dr. Hughes indicated that that Claimant's BPPV may be secondary to the October 7, 2018 injury, but he opined that Claimant's symptoms were vague and the documentation he had did not support assignment of a permanent impairment rating. (Id. at ¶ 27). Dr. Hughes opined that maintenance medical care was not indicated despite the clinical diagnosis of BPPV. *Id.* Dr. Hughes' opinion must be overcome by clear and convincing evidence.

Dr. Oeser-Anderson opined that Dr. Hughes was incorrect and that Claimant suffered a mild TBI, and was not at MMI because he needs vestibular therapy and neuropsychological testing. (*Id.* at ¶ 32). MMI is defined as the point in time when any medically determinable physical or mental impairment as a result of an injury has become stable, and when no further treatment is reasonably expected to improve the situation. § 8-40-201(11.5), C.R.S. Dr. Oeser-Anderson offered an opinion with respect to what treatment she believes Claimant needs, which differs from the opinions of Dr. Hughes and Dr. Paz. There is no clear and convincing evidence, however, that Dr. Hughes' opinions are incorrect.

Dr. Anderson-Oeser also opined that Dr. Hughes' opinions were incorrect because he did not have all of the medical records, even though she did not know what records he was missing. (*Id.* at ¶ 33). Nevertheless, Claimant did not introduce any evidence to indicate that Dr. Hughes would have reached a different opinion had he had additional records. Claimant did not introduce sufficient evidence to meet his burden of proof to overcome Dr. Hughes' findings regarding MMI and the assignment of no permanent impairment rating.

AWW

The entire objective of wage calculation is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although average weekly wage generally is determined from the employee's wage at the time of injury, § 8-42-102(2), C.R.S. (1992 Cum.Supp.), if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage. Section 8-42-102(3), C.R.S. (1992 Cum.Supp.); see *Williams Brothers, Inc. v. Grimm*, 88 Colo. 416, 297 P. 1003 (1931); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993). The ALJ finds that Claimant's AWW is $754.59. (Findings of Fact ¶ 38). This figures includes Claimant's wages and bonus.

ORDER

It is therefore ordered that:

1. Claimant failed overcome the opinion of DIME physician regarding MMI by clear and convincing evidence. Claimant's date of MMI is November 9, 2020, with no permanent impairment ratings and no recommendation of maintenance medical care.

2. Claimant is not entitled to additional medical benefits.

3. Claimant's AWW is $754.59 as admitted in the July 2021 FAL.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 31, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 222 South 6th Street, Suite 414, Grand Junction, CO 81501	
In the Matter of the Workers' Compensation Claim of: [Redacted] Claimant, vs. [Redacted] Employer, and **UNINSURED,** Insurer, Respondent Employer. And regarding **DELTA COUNTY MEMORIAL HOSPITAL,** Medical Provider, Respondent Hospital	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-065-586-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER ON REMAND

On October 9, 2019, a hearing in this matter was held in Grand Junction, Colorado before Administrative Law Judge Cassandra M. Sidanycz. The claimant was present and represented by [Redacted], Esq. The respondent hospital was represented by J[Redacted], Esq. [Redacted, herinafter **JB**] Billing Manager for the hospital; and [Redacted, hereinafter **LB**], Business Office Manager for the hospital, testified at the hearing. The respondent employer did not appear or otherwise participate in the hearing.

The hearing was digitally recorded from 8:30 a.m. to 11:12 a.m. The claimant's exhibits 1 through 7 were admitted into evidence. The respondent hospital's exhibits A through H were admitted into evidence.

On October 30, 2019, the ALJ issued Findings of Fact, Conclusions of Law, and Order. Delta County Memorial Hospital timely appealed to the Industrial Claim Appeals Office (the ICAO). The ICAO issued an Order of Remand on March 13, 2020 instructing the ALJ to issue a new order. Pursuant to the Order of Remand, on May 28, 2020, the ALJ issued Findings of Fact, Conclusion of Law, and Order on Remand.

The May 28, 2020 order was timely appealed to the ICAO. On August 21, 2020, the ICAO issued an order limiting the number of days for penalties to eight. Thereafter, the ICAO's order was appealed to the Colorado Court of Appeals. On June 17, 2021, the Court of Appeals affirmed, in part, and set aside in part, the ICAO order. The matter was then remanded to the ICAO, and ultimately remanded to the ALJ by the ICAO on

January 24, 2022. The ALJ issues this order pursuant to the January 24, 2022 remand order.

In this order, [Claimant redacted] will be referred to as "the claimant"; [Employer redacted] will be referred to as "the respondent employer" or "the employer"; and Delta County Memorial Hospital will be referred to as "the respondent hospital" or "the hospital".

Also in this order, "the ALJ" refers to the Administrative Law Judge; "C.R.S." refers to Colorado Revised Statutes (2017); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

- Whether the respondent hospital was properly joined as a party to this proceeding.

- Whether the language included in the claimant's Application for Hearing pled the issue of penalties with sufficient specificity.

- Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent hospital pursuant to Sections 8-43-304 and 8-43-305, C.R.S., for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. The claimant has requested penalties for the period of June 13, 2019 up to and including October 9, 2019.

FINDINGS OF FACT

1. On July 22, 2017, the claimant suffered an injury while working as a tow truck driver. The injury occurred while the claimant was loading an F250 pickup truck onto her assigned tow truck. To do so, the claimant was lying on the ground attaching the safety chains. At that time, the winch on the tow truck released and caused the truck to roll back. The claimant was underneath the truck when this occurred and one of the tires of the pickup truck rolled onto the claimant's right arm. The claimant was able to remove her arm from under the tire. However, the truck rolled a second time and the tire rolled onto the claimant's chest. The claimant was able to extract herself from out from under the truck and called for help. Bystanders assisted the claimant in calling the respondent employer and emergency services.

2. The claimant initially received medical treatment at Valley View Hospital (VVH) in Glenwood Springs, Colorado. That initial treatment included six days in ICU at VVH. At the time of the accident, the claimant lived in New Castle, Colorado. Subsequently, the claimant moved to Hotchkiss, Colorado. After her move, the claimant transferred medical treatment for her injury to Delta County Memorial Hospital, the respondent hospital in the current case.

3. On September 11, 2018, the undersigned ALJ held a hearing on the issues of: 1) whether the claimant was an employee of the respondent employer; 2) whether she suffered a compensable injury; 3) whether the claimant's medical treatment was reasonable, necessary, and related to that injury; 4) whether the claimant's medical treatment was authorized; 5) whether the claimant was entitled to temporary total disability (TTD) benefits; and 6) whether penalties were to be assessed for the respondent employer's failure to obtain and maintain workers' compensation insurance.

4. On October 11, 2018, the ALJ entered Findings of Fact, Conclusions of Law, and Order (FFCLO) in which the respondent employer was found to have been the employer of the claimant at the time of the July 22, 2017 injury. In addition, the ALJ ordered that the employer was responsible for the payment of medical treatment related to the claimant's work injury. That treatment included treatment the claimant received from Delta County Memorial Hospital.

5. At hearing, the claimant testified that she provided the respondent hospital a copy of the ALJ's FFCLO. The claimant has also provided copies of the FFCLO to collection agencies attempting to collect on behalf of the hospital. However, the claimant has continued to receive bills from the hospital for medical treatment related to her work injury.

6. The claimant also testified that the respondent employer has not paid any amount related to her work injury, as ordered by the ALJ. The claimant testified that to her knowledge the respondent employer has not made any payment to any of her medical providers.

7. On April 10, 2019, the claimant's attorney authored a letter in which he informed the hospital that they were to collect from the respondent employer. In that letter counsel referenced Section 8-42-101(4), C.R.S. which states:

> Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

8. In addition, the April 10, 2019 letter notified the hospital that they could be subject to penalties pursuant to Sections 8-43-304 and 8-43-305, C.R.S.

9. Ms. JB[Redacted] is the hospital's Billing Manager for physician billing. Ms. JB[Redacted] explained that the hospital has two billing departments. Those departments are physician billing and facility billing. Ms. JB[Redacted] testified that she first became aware of issues surrounding the claimant's bills on May 7, 2019. At that time, Ms. JB[Redacted] received the April 10, 2019 letter from the claimant's counsel and a copy of the FFCLO. Based upon her understanding of the FFCLO, Ms. JB[Redacted] instructed her staff to send the claimant's bills to the Division of Workers' Compensation (DOWC).

10. At the hearing, the hospital provided a copy of a communication from the DOWC in response to the hospital's attempts to bill the DOWC. In that communication the DOWC confirmed that the employer did not send any payment to the DOWC; nor did the employer post a bond. In a later communication from the DOWC, it was clarified that even if monies had been paid by the employer to the DOWC, those funds would ultimately be distributed to the claimant and not to any specific medical provider.

11. On June 13, 2019, counsel for the hospital responded to the April 10, 2019 letter from the claimant's counsel. In that reply, the hospital reiterated the information obtained from the DOWC. In that same response, the hospital took the position that "[the hospital's] only recourse is to resume collection from [the claimant]."

12.Ms. B[Redacted] testified that physician billing has not sent a bill to the claimant since May 7, 2019. A bill was sent to the claimant on that date, which was the same date Ms. JB[Redacted] learned of the ALJ's FFCLO. Ms. JB[Redacted] credibly testified that the May 7, 2019 bill was generated automatically within the billing system. Records entered into evidence at hearing indicate that the physician billing department has not billed the claimant since May 7, 2019.

13.Ms. JB[Redacted] also testified that amounts are owed for the claimant's medical treatment. However, Ms. JB[Redacted] is "holding" those bills as it is unclear to her where to send the billing. Based upon the information submitted via testimony and evidence, it does not appear to the ALJ that the hospital has sent any billing directly to the employer.

14.Ms. LB[Redacted] is the hospital's Business Office Manager. She and her staff handle facility billing. Ms. LB[Redacted] testified that she first learned that the claimant has an order regarding her medical bills in July 2019. Ms. LB[Redacted] also testified that bills are sent to collections through an automated system.

15. Records entered into evidence show that the respondent hospital sent bills directly to the claimant on June 18, 2019; July 2, 2019; July 8, 2019; July 18, 2019; July 31, 2019; August 7, 2019; August 13, 2019; and September 12, 2019.

16. Records entered into evidence indicate that some of the claimant's bills from the facility billing department have been turned over to collections. Specifically, on September 20, 2019, A-1 Collections began attempts to collect on two bills, one in the amount of $977.00 and the other in the amount of $547.00.

17. On June 18, 2019, the claimant filed an Application for Hearing (AFH) for penalties for the hospital's alleged violation of Section 8-42-101(4), C.R.S. That application was rejected by the Office of Administrative Courts (OAC) because the case caption listed the hospital as the employer and did not correctly identify the respondent employer.

18. On June 19, 2019, the claimant filed a second AFH endorsing the same penalty issues. This AFH was also rejected by the OAC because the hospital and the respondent employer were identified together as "employer". The staff with the OAC instructed the claimant's counsel to caption the case as identified by the DOWC (ie. the claimant vs. the uninsured respondent employer).

19. On June 20, 2019, the claimant filed a third AFH for penalties for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. This application was processed by the OAC as the claimant and employer were properly identified on the case caption. In the June 20, 2019 AFH, "Penalties" was marked as an endorsed issue. In addition, the AFH included the following:

> 8-42-101(4) DELTA MEMORIAL HOSPITAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

20. All of the AFHs filed by the claimant were provided to the respondent hospital. In addition, the hospital was provided notice of the October 9, 2019 hearing.

21. The respondent hospital argues that the claimant has received other medical treatment from their facilities that is unrelated to the claimant's work injury. However, neither party presented evidence clarifying this "other" and allegedly unrelated treatment.

22. The respondent hospital further argues that if they are unable to collect from the claimant and are unable to collect from the DOWC, they are left without recourse. The ALJ is not persuaded by this assertion. The ALJ finds no impediment to the respondent hospital simply collecting from the respondent employer. As indicated by communications entered into evidence, the employer has apparently attempted to file for bankruptcy and the claimant is a creditor.

23. The ALJ credits the claimant's testimony and the evidence entered into evidence and finds that the claimant has demonstrated that the respondent hospital has continued to bill the claimant after receiving notice of the FFCLO. The ALJ finds that on June 18, July 2, July 8, July 18, July 31, August 7, August 13, and September 12, 2019, the respondent hospital sent bills to the claimant. In addition, the ALJ finds two additional instances of the respondent hospital attempting to collect from the claimant when two bills were forwarded to collections on September 20, 2019. The ALJ also finds that the claimant has demonstrated that it is more likely than not that the respondent employer violated the language of Section 8-42-101(4), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

4. The respondent hospital first argues that they were not properly joined in this case, and therefore a claim for penalties cannot be asserted against them. The ALJ disagrees. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that:

> Any employer or insurer, or any officer or agent of either, or any employee, **or any other person** who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty. . . or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by the articles . . . shall also be punished by a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge. . .(*emphasis added*).

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

5. As one of the claimant's authorized medical providers, the ALJ concludes that the respondent hospital is a subject to the provisions of the Act. Therefore, the hospital can be found to be in violation or in compliance with the Act.

6. The ALJ concludes that the claimant correctly captioned this case as the claimant vs the respondent employer and regarding the respondent hospital. The language of Section 8-43-304, C.R.S. does not require that penalties be asserted against a "party" to the claim. Furthermore, the hospital's reliance on two Industrial Claim Appeals Office (ICAO) orders[1] is unfounded. Neither of those cases are determined on the issue of "joining" a party to a claim. Nor do those cases speak to the procedural process for assessing penalties against a non-party medical provider. The ALJ concludes that the respondent hospital was properly notified of their involvement in the claimant's claim as a medical provider and the claimant's allegations of a statutory violation.

7. The respondent hospital has also argued that the claimant did not meet the specificity requirement in filing the Application for Hearing (AFH) requesting penalties. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015).

8. The purposes of the specificity requirement are to provide notice of the basis of the alleged violation so as to afford the putative violator an opportunity to cure the violation, and to provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. *See Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Davis v. K Mart,* W.C. No. 4-493-641 (ICAO, Apr. 28, 2004); *Gonzales v. Denver Public School District Number 1,* W.C. No. 4-437-328 (ICAP, Dec. 27, 2001). In essence, the notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015). *Matthys v. City of Colorado Springs,* W.C. No. 4-662-890 (ICAO, Apr. 2, 2007). Of course, the statute does not prescribe a precise form for pleading penalties, and an ALJ may consider the circumstances of the individual case to determine whether the application for hearing was sufficiently precise to satisfy the statute. *See Davis v. K Mart*, W.C. No. 4-493-641 (ICAO Apr. 28, 2004).

---

[1] *Davis v. Cub Foods*, (WC 3-990-098; ICAO 11/20/93) and *Gutierrez v. Startek USA*, (WC 4-842-550-05; ICAO 8/29/14).

9. As found, the claimant's AFH marked "Penalties" as an endorsed issue. In addition, the AFH included the following:

> 8-42-101(4) DELTA MEMORIAL HOSPITAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

10. The ALJ has considered the specific facts of this case and finds that the claimant has met the specificity requirement in the inclusion of the above language in her AFH. The claimant identified that penalties were sought against the respondent hospital. The claimant also quoted the section of the Act that the hospital is alleged to have violated. The ALJ finds that the hospital was sufficiently notified of the issues to be addressed at hearing.

11. With regard to the issue before the ALJ, the ALJ notes that prior to the assessment of any penalties, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995). Section 8-43-305, C.R.S. provides that each day is a separate offense. Therefore, penalties may be assessed of up to $1,000.00 per day.

12. Section 8-42-101(4), C.R.S. provides: "Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider **shall under no circumstances** seek to recover such costs or fees from the employee (*emphasis added*)." The ALJ reads the legislature's use of the language "shall" and "under no circumstances" to clearly state the intent that a medical provider shall cease all collection against a claimant once there has been an admission of liability or a final order.

13. In this case, the claimant seeks penalties for the hospital's alleged violation of Section 8-42-101(4), C.R.S. for continuing to seek payment from the claimant for medical treatment. The claimant has requested penalties from June 13, 2019 up to and including the date of hearing, October 9, 2019.

14. The respondent hospital points to language found in Section 8-43-304(4), C.R.S. and argues that the claimant's burden of proof is clear and convincing evidence. The ALJ disagrees with this assertion. Section 8-43-304(4), C.R.S. addresses what is to occur if penalties are alleged, but the violation has been cured. Then, and only then, does the burden of proof increase from a preponderance of the evidence to clear and convincing evidence. Here, there has been no cure of the hospital's violation as they continue to seek payment from the claimant. Therefore, Section 8-43-304(4), C.R.S. is not applicable in the current case.

15. As found, the respondent hospital has continued to bill the claimant for medical treatment related to her work injury. In addition, the hospital's facility billing department has turned the claimant's balances over to collections. As found, these continued attempts to collect from the claimant constitute a violation of the clear language of Section 8-42-101(4), C.R.S. The respondent hospital was notified that they were to no longer pursue collection against the claimant. Nevertheless, they continue to seek payment from the claimant, despite the notification that the respondent employer is responsible for payment of the claimant's work related medical expenses.

16. The hospital has argued that there are certain bills at their facilities that may not be part of the treatment of the claimant's work related injury. While that may be the case, the ALJ finds no persuasive evidence on the record to indicate that the hospital has attempted to clarify any non-work related treatment. It is the position of this ALJ that is the responsibility of the medical provider to correctly categorize the claimant's medical treatment as work related and non-work related. The hospital's practice of billing the claimant for any and all treatment, despite the clear language of Section 8-42-101(4), C.R.S., further demonstrates the hospital's clear disregard of the Act.

17. In the Remand Order dated March 13, 2020, ICAO specifically stated "the penalties in this matter may only be imposed for the days on which the billing actually occurred". Therefore, the ALJ concludes that the respondent hospital billed the claimant eight times between June 13, 2019 through and including October 9, 2019; (June 18, July 2, July 8, July 18, July 31, August 7, August 13, and September 12, 2019). In addition, two bills were sent to collections on September 20, 2019, resulting in two additional instances of the respondent hospital attempting to collect from the claimant.

18. Based upon all of the foregoing, the ALJ concludes that penalties are appropriate in this matter. Given the statutory violation, the ALJ orders the respondent hospital to pay to the claimant penalties of $750.00 per day for the 10 total billing instances that occurred during the period of June 13, 2019 through and including October 9, 2019. This results in total penalties of $7,500.00 ($750.00 per day for 10 separate instances). No portion of this total shall be apportioned to the uninsured employer fund.

ORDER

It is therefore ordered that the respondent hospital shall pay the claimant penalties totalling $7,500.00, for ten days as noted above.[2]

Dated this 3rd day of February 2022.

ISSUES

The hearing in this matter was set on the endorsed issues of permanent partial disability (PPD) benefits and medical benefits after MMI. The parties made several concessions and agreements at hearing and in their post-hearing briefs that narrowed the issues considerably:

- Respondent is not challenging the 3% upper extremity rating assigned by Dr. McCranie for Claimant's left shoulder, which is identical to the rating assigned by the DIME. However, Respondent does not agree the scheduled rating should be "converted" to whole person.

- Respondent does not dispute the 5% lower extremity rating assigned by Dr. McCranie for Claimant's left hip. Claimant agrees he suffered only scheduled impairment to the left hip and agrees Dr. McCranie's rating is most consistent with the evidence.

- Claimant conceded there is insufficient evidence to prove permanent impairment to his right hip.

- The parties agreed to reserve issues related to medical benefits after MMI.

The issues remaining for determination are:

- Did Respondent overcome the DIME's cervical rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence the 3% left shoulder extremity rating should be "converted" to the 2% whole person equivalent?

- Did Claimant prove by a preponderance of the evidence he suffered whole person impairment to his right shoulder?

- If Claimant proved whole person impairment to his right shoulder, did Respondent overcome the DIME's 2% whole person rating by clear and convincing evidence?

- If Claimant failed to prove whole person impairment to his right shoulder, did he prove a 4% scheduled impairment by a preponderance of the evidence?

FINDINGS OF FACT

1. Claimant is a sergeant with Employer's police department. He has worked for the department for 19 years.

2. Claimant suffered admitted injuries on July 10, 2020 during a work-related motor vehicle accident while apprehending a suspect in a stolen vehicle.

3. Claimant received authorized treatment at Employer's occupational medicine clinic. At his initial visit with PA-C Paula Homberger on July 14, 2020, he reported pain in his neck, left shoulder/upper back, hips, and back. Examination of his neck showed bilateral paraspinal tenderness and diminished range of motion. Both shoulders were tender to palpation, worse on the left. There was anterior hip tenderness bilaterally. Ms. Homberger diagnosed a cervical strain, thoracic strain, bilateral shoulder strains, and bilateral hip strains/contusions. She ordered MRIs of the left shoulder and right hip. Claimant was placed on light duty and referred for PT, chiropractic treatment, and massage therapy.

4. The left shoulder MRI showed mild rotator cuff tendinosis with no tear. It also showed evidence of a prior remodeled injury of the anterior inferior glenoid chondral labral complex, with some capsular thickening but no edema to suggest acute re-injury.

5. The right hip MRI showed a chronic mild subcortical cystic change in the anterior superior margins of the acetabulum, but no evidence of a labral tear or other internal derangement.

6. Claimant steadily improved over the next few months, as reflected in the treatment records and pain diagrams he completed. His neck remained his biggest complaint, and he was eventually referred for a cervical MRI. The MRI showed mild to moderate degenerative changes at C5-6 and C6-7 but no acute pathology.

7. On August 18, 2020, Claimant reported his hips were mostly better but continued to be stiff and achy in the morning. There is no mention of any shoulder symptoms in the report or on Claimant's pain diagram. Claimant felt ready to return to full duty. He was again referred for chiropractic treatment.

8. On August 24, 2020, Claimant's chiropractor, Dr. Loparco, documented 2/10 pain in the hips and 1/10 pain in the shoulders. Tenderness and muscle spasms were observed in multiple areas, including the neck, shoulder, hip, and thoracic spine.

9. Claimant followed with Ms. Homberger on August 28, 2020. His primary complaint remained his neck and he was continuing to improve. Claimant marked only his neck on the pain diagram but told Ms. Homberger his hips still felt stiff and achy in the morning. He had returned to full duty work.

10. The pain diagram from Claimant's next appointment on October 8, 2020 reflects 1/10 neck pain with intermittent left hand numbness. There are no markings on the shoulders or hips, although Claimant reported "feeling the same" as his previous appointment. He had been attending chiropractic treatment three times per week and still had two sessions left. Ms. Homberger stated the bilateral shoulder and hip strains had "resolved."

11. Claimant was evaluated by Dr. Nicholas Kurz on February 16, 2021. He had finished his course of chiropractic treatment and was not using any pain medication. Claimant was working full duty without difficulty and denied any issues with activities of daily living. His pain diagram noted 4-5/10 neck pain "all the time," with numbness and tingling in his left arm. Even though there is no evidence of any pre-injury neck issues or treatment, Dr. Kurz opined Claimant's neck had returned to "baseline," and any ongoing symptoms were unrelated to the work accident. The remainder of Claimant's injuries were listed as "resolved." Dr. Kurz put Claimant was at MMI with no impairment and no restrictions.

12. Respondent filed a Final Admission of Liability (FAL) based on Dr. Kurz' report. Claimant timely objected to the FAL and requested a DIME.

13. Dr. Thomas Higginbotham performed the DIME on May 31, 2021. Claimant told Dr. Higginbotham his injuries had improved but he continued to have symptoms, particularly with respect to his neck. Claimant completed a pain diagram on which he identified pain in his neck, posterior shoulders, and hips. Claimant had pursued additional chiropractic treatment after MMI under his health insurance, with a $50 per visit co-pay. Claimant stated his neck pain worsened with increased physical activity but "he doesn't allow [it] to limit him." The physical examination was straightforward with no pain behaviors to suggest exaggeration. Dr. Higginbotham noted tenderness and tautness to palpation of the cervical anterior muscles, cervical paraspinal muscles, suboccipitals, and thoracic paraspinals. Cervical range of motion was mildly reduced in all planes. There was minimal palpatory shoulder tenderness and no evidence of impingement, but shoulder range of motion was slightly reduced bilaterally. Dr. Higginbotham credibly testified the reduced shoulder range of motion was probably related to scapulothoracic soft tissue dysfunction "including the rotator cuff muscles that are attached about the scapula onto the shoulder."

14. Dr. Higginbotham provided the following impairment ratings:

Cervical spine: 13% whole person
Right shoulder: 4% upper extremity / 2% whole person
Left shoulder: 3% upper extremity / 2% whole person
Right hip: 11% lower extremity / 4% whole person
Left hip: 6% lower extremity / 2% whole person

15. Dr. Higginbotham opined the clinical findings at the DIME were consistent with ongoing "strain patterns" from the work injuries. When questioned about pain diagrams and records from other providers that do not show ongoing symptoms in the shoulders or hips, Dr. Higginbotham explained such symptoms "have a tendency to recur. Strain patterns tend to be kind of quiescent and then can be present."

16. Dr. Kathy McCranie performed an IME for Respondent on December 9, 2021. Claimant reported ongoing injury-related symptoms in his neck, left shoulder, and left hip. Claimant denied any symptoms in the right shoulder or right hip. Physical examination showed tenderness to palpation of the left cervical paraspinals, bilateral

upper trapezius, bilateral levator scapulae, and bilateral supraspinatus muscles. Dr. McCranie agreed with Dr. Higginbotham that a cervical spine rating was warranted, and calculated a rating of 9%. She assigned a 3% upper extremity / 2% whole person rating for the left shoulder, and a 5% extremity rating for the left hip. Her rationale for rating the left shoulder and hip was: "the left shoulder MRI scan did not show any acute findings, but there was mild tendinosis, and on today's examination, mild impingement signs were indicative of persistent shoulder impairment. In the left hip, MRI scan findings do not show any acute injury. However, his examination was indicative of persistent hip pain and discomfort."

17. Dr. McCranie disagreed with Dr. Higginbotham that Claimant suffered any permanent impairment of the right shoulder or right hip. She acknowledged Claimant complained to Dr. Higginbotham of mild tenderness in his right shoulder but argued that "tenderness" is subjective and insufficient to support a permanent impairment. She also noted that Claimant told her the right shoulder and hip pain had resolved by the time of her IME. She conceded that Dr. Higginbotham's ratings contain no technical errors with respect to the range of motion measurements.

18. Dr. McCranie opined that Claimant's left shoulder and left hip ratings, which are not challenged by Respondent, reflect purely scheduled impairments, and should not converted to whole person. She opined the injury to Claimant's shoulders is distal to the glenohumeral joint and does not impact the torso/body. She also pointed to the cervical rating which she believes accounts for any proximal symptoms or limitations. Dr. McCranie opined Claimant's hip injuries were limited to the hips without any pain going into the back or the trunk. Lastly, Dr. McCranie cited Claimant's continued stellar performance in a highly physically demanding job as further proof that his shoulder and hip impairment ratings should be scheduled ratings and not whole person.

19. Dr. Higginbotham's opinions regarding Claimant's shoulder and neck impairment are credible and more persuasive that the contrary opinions offered by Dr. McCranie.

20. Respondent failed to overcome Dr. Higginbotham's 13% whole person cervical rating by clear and convincing evidence.

21. Claimant proved he suffered functional impairment to his shoulders not listed on the schedule.

22. Respondent failed to overcome Dr. Higginbotham's 2% whole person right shoulder rating by clear and convincing evidence.

CONCLUSIONS OF LAW

A. Burdens and standards of proof

The parties have raised several interrelated issues regarding permanent impairment. The DIME provided multiple impairment ratings, one of which is clearly a whole person impairment (cervical) but the remainder of which may be whole person or

scheduled impairments (shoulders and hips). Claimant believes he suffered whole person impairment to his shoulders but agrees he has only scheduled impairment to the left hip.[1] Respondent agrees Claimant has impairment of the left shoulder but believe it is a scheduled impairment.

As postured, the issues create split burdens of proof. Additionally, there are preliminary questions regarding which of the DIME's findings are entitled to presumptive weight, and which findings are evaluated based on a preponderance of the evidence.

There is no dispute that Respondent must overcome the DIME's cervical rating by clear and convincing evidence. Regarding the shoulders, the initial consideration is whether they constitute scheduled or whole person impairments. Section 8-42-107 sets forth two methods of compensating permanent medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides a DIME process for whole person ratings. The DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Conversely, scheduled impairment is a question of fact for the ALJ based on a preponderance.

Whether a claimant sustained a scheduled or non-scheduled impairment is a threshold question of fact for determination by the ALJ. The heightened burden of proof which attends a DIME rating applies only if the claimant establishes by a preponderance of the evidence that the industrial injury caused functional impairment not found on the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the DIME's rating. *Webb v. Circuit City Stores, Inc*. W.C. No. 4-467-005 (ICAO August 16, 2002). Although the DIME's opinions may be relevant to this determination, they are not entitled to any special weight on this threshold issue. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) (DIME provisions do not apply to the scheduled ratings).

In light of the foregoing principles, the ALJ has allocated the burdens of proof in the following manner: (1) Respondents must overcome the DIME's cervical rating by clear and convincing evidence; (2) Claimant must prove by a preponderance of the evidence he sustained whole person impairment to either or both shoulder; (3) if Claimant has whole person impairment to his shoulder(s), Respondents must overcome the DIME rating by clear and convincing evidence; (4) if Respondents overcome the DIME whole person rating, the proper rating is a factual question based on a preponderance of the evidence; (5) on the other hand, if Claimant does not have a whole person impairment, then Claimant must prove the proper shoulder rating(s) by a preponderance of the evidence.

B. Respondent did not overcome the cervical rating

A DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear

[1] The right hip is moot because Claimant concedes there is insufficient evidence to support a right hip rating. Likewise, the left hip requires no discussion, because Claimant accepts the 5% scheduled lower extremity rating advocated by Respondent.

and convincing standard also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME's whole person rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

Respondent filed to overcome the DIME's cervical rating by clear and convincing evidence. Dr. McCranie conceded there were no technical errors in Dr. Higginbotham's measurements or deviations from the rating protocols under the *AMA Guides*. The differences between Dr. Higginbotham and Dr. McCranie's cervical ROM measurements probably reflect reasonable day-to-day variability, coupled with potential interval improvement in the six months between the DIME and Dr. McCranie's IME. But the DIME does not err merely by using valid measurements obtained during his evaluation, notwithstanding the possibility the claimant may improve in the future.

C. Claimant proved whole person impairment to his shoulders

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person

impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

If the claimant has ratable impairment of the cervical spine and also seeks a whole person rating for the shoulder, the functional impairment used to "convert" the shoulder rating must be distinct from the cervical impairment. *Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004); *Steinhauser v. Azco, Inc*., W.C. No. 4-808-991-02 (January 11, 2012).

Claimant proved he suffered whole person impairment to his shoulders not captured by the cervical spine rating. Dr. Higginbotham persuasively explained the reduced shoulder range of motion was related to dysfunction in the scapulothoracic area and rotator cuff muscles attached to the scapula. Those structures are part of Claimant's torso and not part of his "arm." They are also distinct from the anatomical structures covered by the cervical rating. Accordingly, Claimant is entitled to a 2% whole person rating for the left shoulder, as calculated by Dr. Higginbotham and Dr. McCranie. Additionally, Respondent must overcome Dr. Higginbotham's 2% right shoulder rating by clear and convincing evidence.

D. Respondent failed to overcome the DIME's right shoulder rating

As found, Respondent failed to overcome the DIME's right shoulder rating by clear and convincing evidence. Claimant suffered a documented soft tissue injury to this right shoulder. Although his symptoms improved significantly, he continued to experience intermittent symptoms, particularly with activity. Dr. Higginbotham concluded the right shoulder pain Claimant reported at the DIME was consistent with waxing and waning "strain patterns" from the accident. His physical examination showed dysfunction in the scapulothoracic area and rotator cuff muscles attached to the scapula, which caused measurable range of motion loss. These ROM deficits were correctly translated into a small impairment rating.

The mere fact that Claimant's right shoulder may have improved by the time of Dr. McCranie's IME six months after the DIME does not invalidate Dr. Higginbotham's rating. Permanent impairment is to be determined at the time of MMI. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998) ("MMI serves to demarcate when a disability becomes permanent"); *Golden Animal Hospital v. Horton*, 897 P.2d 833 (Colo. 1995). As a practical matter, a DIME will necessarily occur some months after MMI, and the examiner can only evaluate the claimant in real time. But the concordance between the claimant's condition at the time of MMI and findings at subsequent examinations becomes increasingly attenuated with the passage of time. Section 8-40-201(11.5) provides that the possibility of improvement resulting from the passage of time shall not affect a determination of MMI. It necessarily follows that improvement with time does not negate a claimant's impairment rating.

The argument that Claimant does not qualify for a right shoulder rating because there is no objective evidence of pathology such as an MRI is unpersuasive. Dr. McCranie assigned a left hip rating based solely on Claimant's subjective clinical presentation despite acknowledging the MRI showed no acute pathology. Specifically, Dr. McCranie relied on the fact that Claimant merely reported "some pain" with hip rotation. If such minimal clinical findings were sufficient to warrant a left hip rating, it is unclear why Dr. Higginbotham would be precluded from citing examination findings of scapulothoracic and rotator cuff muscle dysfunction affecting range of motion to support a right shoulder rating.

At most, Dr. McCranie's opinions represent a "mere difference of medical opinion" with Dr. Higginbotham, and do not rise to the level of clear and convincing evidence.

ORDER

It is therefore ordered that:

1. Respondent's request to overcome the DIME's 13% whole person cervical rating is denied and dismissed.

2. Respondent's request to overcome the DIME's 2% whole person right shoulder rating is denied and dismissed.

3. Respondent shall pay Claimant PPD benefits based on a 13% whole person cervical rating, a 2% whole person left shoulder rating, a 2% whole person right shoulder rating, and a 5% scheduled left hip rating.

4. Respondent may take credit for any PPD benefits previously paid to Claimant in connection with this claim.

5. Respondent shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

6. Claimant's claim for permanent impairment of the right hip is denied and dismissed.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For

statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the Final Admission of Liability (FAL) filed by the respondents on December 7, 2020, is invalid because the FAL relies on an invalid impairment rating.

FINDINGS OF FACT

1. This claim has a lengthy procedural history. As the issue before the ALJ is narrow, the ALJ does not recite the claimant's entire medical history in this order. The claimant suffered an injury at work on January 22, 2020. The respondents have admitted liability for the injury.

2. The claimant's authorized treating provider (ATP) for this claim has been with Centura Centers for Occupational Medicine (CCOM) in Durango, Colorado. Throughout much of his treatment, the claimant was seen at CCOM by Dr. Adam Owens. The claimant was also seen at CCOM by Kelly MacLaurin, PA-C.

3. On October 14, 2020, the claimant was seen by PA MacLaurin. On that date, PA MacLaurin opined that the claimant had reached maximum medical improvement (MMI). PA MacLaurin performed a physical examination in which she noted that the claimant had reached MMI for neurology, neuropsychology, and Spine Colorado.

4. On that same date, a WC164 form was completed indicating that the claimant had reached MMI and an impairment rating was pending review by a doctor. The WC164 form of that date is co-signed by PA MacLaurin and Dr. Thomas Centi. Dr. Centi is the Medical Director of CCOM.

5. PA MacLaurin testified that when she saw the claimant on October 14, 2020, the claimant reported that he had completed all his treatment and was released from the specialists. PA MacLaurin credibly testified that based on her review it appeared that the claimant had plateaued, the claimant's remaining treatment could be performed under maintenance care, and there was an indication from the neuropsychologist that the condition was not work-related. It was for these reasons that PA MacLaurin placed the claimant at MMI on October 14, 2020, and referred the claimant to a physician within CCOM for an impairment rating.

6. On October 19, 2020, the claimant was seen by Dr. Owens. The claimant testified that he presented for an appointment with CCOM sometime in October and demanded to see Dr. Owens.

7. In the October 19, 2020 medical record, Dr. Owens noted that the claimant was at MMI and "has been tentatively arranged to have impairment rating with a different CCOM Dr. [i]n the near future." On exam, Dr. Owens noted: that the claimant was in no acute distress; was alert to person, place, and time. For HEENT[1] findings, Dr. Owens recorded "[n]ormocephalic and atraumatic, extraocular movements intact, patent nares". Finally, Dr. Owens noted that he "encouraged the patient to follow through with the plan that has been arranged by my medical director at CCOM."

8. A WC164 form dated October 19, 2020, is signed by Dr. Owens and PA MacLaurin. That WC164 form states that the claimant reached MMI on October 14, 2020, the claimant was released to full duty, but was not cleared for DOT driving. That same document indicates that an impairment rating was pending review by a doctor.

9. Sometime after his October 19, 2020 examination of the claimant, Dr. Owens left the CCOM practice.

10. Dr. Centi was employed by CCOM throughout 2020 as the Medical Director and he was PA MacLaurin's supervising physician. Dr. Centi is a Level II accredited physician. Dr. Centi testified that he primarily practiced medicine at the Colorado Springs, Colorado and Pueblo, Colorado CCOM locations in 2020. Occasionally, Dr. Centi would travel to the Durango CCOM location to treat patients.

11. At the time that Dr. Owens' resignation, CCOM prohibited air travel because of COVID-19 concerns. As a result, Dr. Centi could not travel to Durango to perform an in-person impairment rating for the claimant. In addition, CCOM did not have the capability to conduct virtual health visits at that time.

12. Dr. Centi testified that Dr. Owens should have performed the claimants impairment rating, but Dr. Owens did not. As Dr. Owens had resigned from CCOM before performing an impairment rating evaluation for the claimant, Dr. Centi was the next in line to complete the impairment rating. Due to the moratorium on air travel, and that there were no other Level II accredited physicians at the Durango CCOM, Dr. Centi performed a record review impairment rating for the claimant on November 27, 2020.

13. Based upon the medical records, Dr. Centi authored a report in which he noted that the claimant reached MMI on October 19, 2020. He also assigned a zero percent impairment rating for the claimant. Dr. Centi based his opinion, in part, on the neuropsychological examination that found that the claimant had a mild cognitive impairment, which was mostly related to sleep apnea and not the traumatic brain injury.

14. On December 7, 2020, the respondents filed a Final Admission of Liability (FAL) relying upon Dr. Centi's November 27, 2020, report.

---

[1] Head, eyes, ears, nose, and throat.

15. On January 6, 2021, the claimant filed an Objection to the FAL. On January 13, 2021, the claimant filed a Notice and Proposal with an Application for a Division Sponsored Independent Medical Examination (DIME).

16. On January 25, 2021, the parties attended a pre-hearing conference with PALJ Elsa Martinez Tenreiro. At that time, the issue before the PALJ was the respondents' motion to strike the claimant's Notice and Proposal. PALJ Martinez Tenreiro noted that the claimant filed the Notice and Proposal late, and granted the motion. As a result, the claimant's Notice and Proposal was stuck.

17. At that same pre-hearing, the claimant asserted that the FAL was invalid. PALJ Martinez Tenreiro declined to make any rulings on that issue, as it had not been noticed for that pre-hearing conference.

18. On April 15, 2021, the claimant filed an Application for Hearing (AFH). The issues endorsed in that AFH were: medical benefits; reasonably necessary; average weekly wage; temporary total disability benefits; permanent partial disability benefits; and permanent total disability benefits. On May 12, 2021, the respondents filed a response to the claimant's AFH.

19. On June 10, 2021, Dr. Owens authored a report in which he opined that the claimant had reached MMI on October 19, 2020. Although this report indicates a "date of evaluation" of October 19, 2020, Dr. Owens did not author the report until June 10, 2021. In his June 10, 2021 report, Dr. Owens assessed a whole person permanent impairment rating of 20 percent. Dr. Owens testified that this would have been his assessment if he had prepared the report following his October 19, 2020 evaluation of the claimant.

20. On June 29, 2021, the parties attended a pre-hearing conference with PALJ John Sandberg. In his order, PALJ Sandberg noted that the issue before the merits ALJ is to determine whether the FAL is valid.

21. The sole issue before the ALJ is whether Dr. Centi's report was invalid, thus making the FAL filed by the respondents invalid. The ALJ is not persuaded that Dr. Centi's report is "invalid". Although relying upon prior medical records may not be "best practice" for completing such a report, the ALJ finds no requirement in the statute, the WCRP, or case law that requires Dr. Centi to physically examine the claimant, particularly since he determined that the claimant had a permanent impairment rating of zero percent. Here, it is clear to the ALJ that Dr. Centi adopted the examination findings of PA MacLaurin on October 14, 2020. The ALJ further notes that on October 19, 2020, Dr. Owens indicated that the claimant was released to full duty, (although not cleared for DOT driving), and that an impairment rating was pending review by a Level II provider.

22. The ALJ credits the medical records and the testimony of Dr. Centi and PA MacLaurin over the conflicting testimony of Dr. Owens and the claimant. Although it was not ideal, Dr. Centi performed a record review impairment rating because there was no Level II accredited physician at the Durango CCOM that could perform an impairment rating for the claimant.

23. For all of the forgoing reasons, the ALJ concludes that the impairment rating assessed by Dr. Centi is valid. Therefore, the FAL filed by the respondents is likewise valid.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. An authorized treating physician (ATP) shall make a determination as to when the injured worker reaches maximum medical improvement (MMI). Section 8-42-107(8)(b)(I), C.R.S. If either party disputes the ATPs determination of whether the injured worker has or has not reached MMI, they must pursue the DIME process. Section 8-42-107(8)(b)(II), C.R.S.

5. When an ATP who is not Level II accredited determines that an injured worker has reached MMI, the ATP shall determine if the injured worker sustained any permanent impairment and shall refer the injured worker to a Level II accredited physician for a medical impairment rating. Section 8-42-107(8)(b.5)(II), C.R.S. If either party disputes the impairment rating, the parties must pursue the DIME process. Section 8-42-107(8)(c), C.R.S.

6. The Workers' Compensation Act does not require in-person examinations for an ATP to determine permanent medical impairment. In fact, the Act specifically permits record review impairment ratings for injured workers that are not Colorado state residents at MMI. Section 8-42-107(8)(b.5)(I)(A), C.R.S.

7. Workers' Compensation Rules of Procedure (WCRP), Rule 16-2(B) states that an Authorized Treating Provider (ATP) is any of the following: (1) the treating physician designated by the employer and selected by the injured worker; (2) a healthcare provider to whom an ATP refers the injured worker for treatment, consultation, or impairment rating; (3) a physician selected by the injured worker when the injured worker has the right to select a provider; (4) a physician authorized by the employer when the employer has the right or obligation to make such an authorization; (5) a healthcare provider determined by the Director or an administrative law judge to be an ATP; or (6) a provider who is designated by the agreement of the injured worker and the payer.

8. Section 8-43-404(5)(a)(I)(A), C.R.S. specifically provides that a "corporate medical provider" may be included on the designated list of medical providers for an injured worker to select from when choosing an authorized treating provider. The designation "authorized treating physician" includes not only those physicians to whom an employer directly refers a claimant, but also those to whom a claimant is referred by an authorized treating physician." *Bestway Concrete v. Indus. Claim Appeals Office*, 984 P.2d 680, 684 (Colo. App. 1999). Whether a referral has been made is a question of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997).

9. CCOM is a corporate medical provider as discussed in Section 8-43-404(5)(a)(I)(A), C.R.S. As the medical director of CCOM, Dr. Centi would be included in the umbrella of the corporate medical provider designation of ATP. Dr. Centi was the supervising physician for PA MacLaurin. In addition, Dr. Centi would be considered an ATP within the chain of referrals.

10. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the December 7, 2020 FAL is invalid. As found, the ALJ is not persuaded that the impairment rating performed by Dr. Centi was invalid. As found, the medical records, and the testimony of Dr. Centi and PA MacLaurin are credible and persuasive.

ORDER

It is therefore ordered that the December 7, 2020 Final Admission of Liability is valid.

Dated this 3rd day of February 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

Note: This FFCL was served on February 3, 2022 and it is inferred that the ALJ's date was a clerical error.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-103-723-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 24, April 12, July 28, and November 1, 2021, in Denver, Colorado. The hearing was recorded by Google Meets recorded (reference: Google Meets, February 24, beginning at 1:30 PM, and ending at 4:30 PM; April 12, beginning at 1:30 PM, and ending at 2:30 PM; July 28, beginning at 8:30 AM, and ending at 9:30 AM; and, November 1, beginning at 8:30 AM, and ending at 9:00 AM).

The Claimant was present in person, virtually, and self-represented at all sessions of the hearing. Respondents were represented by [Redacted] Esq., at all sessions of the hearing.

Hereinafter [Redacted]shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits A, C-E, G-2-G-4 and H-M (erroneously marked by capital letters instead of Arabic numbers) were admitted into evidence, without objection. Respondents' Exhibits A-S were admitted into evidence, without objection. No stipulations were submitted.

The evidentiary deposition of Kathleen D'Angelo, M.D., taken on May 14, 2021, and lodged with the Office of Administrative Courts (OAC) on May 20, 2021.

At the conclusion of the hearing, the ALJ ordered post hearing briefs; Respondents' brief was filed on November 22, 2021. Claimant's brief was filed on December 14, 2021. No timely reply brief was filed and the matter was deemed ready for decision on December 20, 2021.

ISSUES

Although the parties designated other issues, the ALJ determined that the only issue to be determined by this decision concerns Claimant's request to reopen her claim. The ALJ earnestly advised the Claimant that if her claim was re-opened, she should seek the assistance of counsel. As herein below found and concluded, her claim is re-opened.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Respondents filed a Final Admission of Liability (FAL), mailed on June 21, 2021, admitting for a date of maximum medical improvement (MMI) of May 16, 2019, a little over two months from the date of injury, which was March 11, 2019; for aggregate temporary total and partial disability benefits of $1,623.63, from March 12, 2019 through April 17, 2019; for aggregate medical benefits of $1,427.55; and, for zero permanent disability benefits, pursuant to the opinion of Nazia Javed, M.D. , authorized treating physician (ATP). There was no admission concerning disfigurement benefits

The Injuries

2. The Claimant worked as a waitress for the Employer on March 11, 2019 when she sustained admitted injuries after tripping over a rack of glasses while delivering food to a customer. *Resp. Ex. A*. The Claimant received treatment for her injuries through May 16, 2019. *Resp. Ex. C.*

3. The Claimant was 25 years-old as of the date of the last session of the hearing. In addition to working as a waitress for the Employer herein, the Claimant

worked driving Ubers, as a model, while at the same time attending nursing school at the C.U. Health Sciences Center, where she ultimately graduated as an R.N. (Registered Nurse), near the top of her class.

Medical Course—Nazia Javed, M.D.

4. The Claimant went to UC Health on March 11, 2019, where she complained of **left lower extremity pain, and a facial contusion**. *Resp. Ex. H,* p. 43. Claimant followed up at UC Health with Karen Elmquist, P.A. ((Physician's Assistant) on March 18, 2019 for complaints of chronic rhinosinusitis. *Id.* at 53-54.

5. The Claimant began treatment with occupational medicine doctor,,Nazia Javed, M.D., on March 18, 2019. Dr. Javed noted right sided jaw pain and swelling in her left leg. *Resp. Ex. I,* p. 56-58. Dr. Javed referred the Claimant to physical therapy (PT), and released her to light duty work. In their brief, Respondents make a point that Claimant did not mention left leg problems and IME (Independent Medical Examiner), Dr. D'Angelo pins part of her opinion on this absence of subsequent articulation of left leg problems.

6. The Claimant followed up with Dr. Javed on April 17, 2019, and did not mention any ongoing pain in her left leg, according to Dr. Javed, and indicated that her back and shoulder symptoms had improved due to PT *Resp. Ex. I,* p. 61-62. Claimant "state[d] she feels better, no pains in left leg, contusion has healed well. Her back and shoulder muscles are better also." *Id.* Dr. Javed noted that Claimant's contusion had healed well. *Id.*

7. The Claimant only had three visits with doctor, Dr. Javed of Aviation & Occupational Medicine. Claimant requested to be seen by an Orthopedic specialist but was refused a referral by Dr. Javed. The Claimant was given referral for 2 months of physical therapy (PT) as a solution to her pains . Dr Javed failed to refer the Claimant an MRI (magnetic resonance imaging) or any other other diagnostics. Claimant's young age and lack of experience managing her medical issue through a work compensation provider required her to follow Dr. Javed's treatment plan. The Claimant was dissatisfied with Dr. Javed's care.

8. On April 17, 2019, the Claimant attended PT and was evaluated by Christine Hill, D.P.T. PT Hill noted that the Claimant had made progress and discharged her from therapy. *Resp. Ex. K.*

9. *The* Claimant returned to Dr. Javed on May 16, 2019. *Resp. Ex.* I, p. 64-65. According to Dr. Javed, the Claimant said that she had no pain in her left leg and that her contusion had healed well. *Id.* According to Dr. Javed, the Claimant told Dr. Javed that her back and shoulder muscles were pain free, and that she no longer had right sided jaw pain. *Id.* Claimant told Dr. Javed that she saw her personal dentist, who

indicated that her jaw was normal. *Id.* Physical examination of the back, neck, right shoulder, and left leg was normal, according to Dr. Javed. *Id.* Dr. Javed stated the opinion that Claimant was at MMI as of May 16, 2019 with no permanent impairment and released her from care to full duty. *Id.*

The Claimant

10. According to the Claimant, she received poor treatment for her injuries. Sustaining physical injuries while being in the middle of her most important exams did not give her much room to seek help concerning her injuries.

11. Respondents made a mutual mistake of material fact by not taking into account in filing the FAL her income from Uber, Lyft and her modeling jobs Instead of doing so, Respondents claimed an overpayment based on her "admitted AWW, which was based only her wages from the Employer and not her other pay from other, multiple employments. This omission amounts to a mutual mistae of material fact upon which the FAL was based.

12. Given the Claimant's financial and academic obligations, she went back to work as a part time waitress, with discomfort and pain in order to survive and provide for herself.

13. During the COVID-19 quarantine, Claimant was able to attend her school online and was paid unemployment (UI) at the same time. Claimant had more time to care for her injuries and her physical condition. Claimants attempted to contact the insurance carrier for help but was repeatedly dismissed by different agents who refused to look into Claimant's case and medical situation.

14. The Claimant had a right shoulder MRI and x-rays on April 1, 2020, and was diagnosed with supraspinatus tendinosis. Her medical findings indicate chronic shoulder pain and left leg swelling with discolored scar. Claimant mouth is still injured and in needs for teeth alignment. Respondents' IME, Dr. D'Angelo summarily dismisses these findings.

15. According to the Respondents, all of Claimant's medical exams are "insignificant," as opined by IME Dr. D'Angelo. The Claimant was working as a bedside nurse for the past year at The Center at Lincoln. Claimant's work as a nurse often required her to perform physically exerting tasks, such as patients repositioning and standing on her feet for extended periods. Claimant was becoming tired and exhausted having to fight off feelings pain and discomfort while trying her best to care for her patients. Claimant's medical condition forced her to quit her job as a rehab nurse and seek a job with a light physical workload. Claimant now works at a COVID- 19 testing facility. The injuries Claimant sustained during her work accident are preventing her from having the full capacity of working in physically demanding nursing environment,

such as the Intensive Care Unit (Claimant's original aspiration as a nurse). The FAL concerning no permanent impairment was based on a mutual mistake of material fact regarding permanent disability. The ALJ infers and finds that there was a "rush to judgment/closure regarding permanent impairment. (the FAL was filed a little over two months from the date of injuries).

16. The Claimant continues to work as model yet is limited due her permanent left leg scar and difficulty wearing high heels, which she had not experienced prior to the admitted injuries. The ALJ infers and finds that Claimant's chances of booking future modeling job that require exposed legs are very slim. Respondents, by ignoring "bodily disfigurement" in the FAL, made a mutual mistake of material fact.

17. Respondents argue that Claimant's claim closed pursuant to the Final on July 21, 2019, by virtue of the fact that there was no timely objection thereto. The aggregate evidence, however, supports the fact that the FAL was based on a mutual mistake of material fact concerning disfigurement and aggregate wages from multiple employments.

18. After Dr. Javed placed the Claimant at MMI on May 16, 2019 (barely two months after the date of injuries), the Claimant saw her primary care physician, Dr. Vanlandingham, for other medical reasons. She then saw Dr. McCabe on June 3, 2019 for a physical examination to be cleared to drive for Uber. *Resp. Ex. M*, p. 90. Dr. McCabe's report noted that Claimant was healthy overall with no known medical conditions causing problems, and that **she felt** fit to drive. *Id. Id.* Dr. McCabe did not deal with the issues of multiple employments, AWW, or bodily disfigurement.

19. The Claimant returned to Karen Elmquist, P.A, (Physician's Assistant) on July 25, 2019 for a referral to dermatology. *Id.* at 91. Claimant followed up with P.A. Elmquist on November 12, 2019 for a blood work referral for nursing school, but unrelated to her work injuries. complaints. *Id.* at 93. Claimant saw P.A. Elmquist again on January 27, 2020 for a sore throat and cough, *Id.* at 95. Respondents argue that because P.A. Elmquist did not deal with Claimant's admitted work injuries, this absence is evidence that the FAL resolved all issues in the Claimant's claim. The aggregate evidence belies this assertion.

The Employer

20. [Redacted, hereinafter Mr. O], the owner of Employer, testified that Claimant returned to
work for Employer at the end of April 2019 and continued working until March 16, 2020 when Employer furloughed 90% of its employees due to the Covid-19 pandemic. *Hrg. Aud. 2, 12:53-14:46.* Claimant's pleadings indicate she believes the reason for her termination from Employer was because of Covid 19. *CL. Ex. A*, p. 3. Claimant applied for and received unemployment benefits after she was laid off *Hrg. Aud. 1*, 2:06:15;

Resp. Ex. S. O[Redacted]'s testimony sheds **no** light, to refute the Claimant's testimony that she worked with pain.

21. The Claimant was laid off by Employer due to the Covid 19 pandemic on March 16, 2020, and on March 17, 2020 she contacted the Insurer about reopening her claim. *Hrg. Aud. 1*, 2:02:15-2:02:35. After she was furloughed by the Employer due to the Covid-19 pandemic, she presented to her physician with symptoms of her work injury. The ALJ infers and finds that there is nothing unreasonable about the Claimant's presentation concerning symptoms of the work injuries, given the fact that her layoff greatly reduced her means of support, whereas she had been working with pain.

Kathleen D'Angelo, M.D.

22. The Claimant had a right shoulder MRI and x-ray on April 1, 2020, and was diagnosed with mild supraspinatus tendinosis. Her rotator cuff appeared intact, and the right shoulder x-ray was unremarkable. *Resp. Ex. F*, p. 31-32; 34. Dr. D'Angelo opined that mild supraspinatus tendinosis is not an acute, traumatic finding, but is more likely the result of her mild lateral downsloping of the acromion. *Resp. Ex. N*, p. 131. Claimant also had an x-ray of her left tibia/fibula done on April 1, 2020 which was unremarkable. *Rep. Ex. F*, p. 33. There was a finding of a small, 6x4 benign exostosis off the proximal medial tibial metaphysis, which is benign and of no clinical significance, according to Dr. D'Angelo. *Id.*; *D'Angelo Depo. 22.* According to Dr. D'Angelo, Claimant's tibial issue is pre-existing. Prior to her work injury, Claimant had x-rays taken of her knees on March 26, 2018 which showed a small osseous excrescence from the cortex of the left proximal medial tibia. *Resp. Ex. F*, p. 30. According to Dr. D'Angelo, all of Claimant's conditions are insignificant, her condition has not changed since two months after the admitted injuries and, ultimately, Claimant's present condition is not work-related. The ALJ finds Dr. D'Angelo's. ultimate opinion as lacking in credibility because it vis refuted by the aggregate evidence concerning after-effects of the Claimant's admitted injuries.

Dental

23. The Claimant alleges that her teeth were knocked out of place in the accident, and has submitted photographs which she believes show mal-aligned teeth. *Cl. Ex. G.* Claimant, however, was already a patient at Risas Dental, and consulted with Risas Dental for a comprehensive evaluation in 2018. *Resp. Ex. G.* She followed up with Risas Dental on May 15, 2019 and discussed with her dentist that she was interested in braces because her left teeth were slowly moving inward. *Id.* Claimant had a wisdom tooth removed on May 20, 2019. *Id.* at 37-38. The dental note does not mention the work-injury. *Resp. Ex. G.* Claimant pursued this treatment through her personal insurance. *Resp. Ex. G.* There is probable cause to believe that the matter would properly be resolved by an expert opinion concerning causal relatedness or lack

thereof. The fact that the FAL did not consider this proposition amounts to a mutual mistake of material fact at the time of the FAL.

After the Admitted Injuries

24. The Claimant booked modeling jobs on three occasions, on September 14, 2020, September 15, 2020, and October 1, 2020. *Id.* Claimant was able to pursue a nursing degree and graduate *cum laude* after her injury, and is currently working full time as a R.N. *Hrg. Aud. 1,* 53:52-54:31; 2:01:00-2:01:35; *CL. Ex. H.* After graduation, Claimant also worked as a nurse at the Center at Lincoln in 2020. *Resp. Ex. P.* Claimant testified that she is currently earning more overall wages than she did while working for Employer because the wages for a R.N. are higher than for a waitress. *Id.* Claimant began working as a R.N. in August of 2020. *Id.*

Dr. D'Angelo Continued

25. Dr. D'Angelo, M.D. performed her IME of Claimant on September 21, 2020. *Resp. Ex. N.* At the IME appointment, Claimant told Dr. D'Angelo that her symptoms had been ongoing "pretty much since the injury." *Id.* at 103. Although Dr. D'Angelo was of the opinion that the Claimant self-limited with range of motion (ROM). *Id.* at 109. Dr. D'Angelo stated the categorical opinion that none of the Claimant's current complaints were claim-related, and that Claimant remained at MMI for this claim without the need for reopening. *Id.* at 110. Dr. D'Angelo offered no persuasive reason concerning to what the Claimant's current symptoms are related. The aggregate evidence does not permit an inference that the Claimant's current symptoms are related to an alternative non-work related cause. Moreover, Dr. D'Angelo implies that the Claimant is "OK.". Whereupon, Dr. D'Angelo implies that the Claimant's current symptoms must be related to unknown congenital pre-existing conditions or other undisclosed causes. The ALJ rejects Dr. D'Angelo's inferences in this regard. Dr. The ALJ rejects this premise as not supported by the totality of the evidence. Indeed, the ALJ finds the Claimant to be credible in her disagreement with Dr. D'Angelo's minimization of the Claimant's injuries.

26. The ALJ infers and finds that Dr. D'Angelo apparently relied heavily on the absence of medical notations concerning no complaints of pain to her right shoulder, left leg, jaw, neck, and upper back when visiting some physicians from May 2019 through March 2020-- between her injuries and the fact that that Claimant continued working during this period. *Id.* at 131. Dr. D"Angelo fails to address the fact that the Claimant worked with pain, or Dr. D"Angelo implies that the Claimant actually fabricated working with pain.

27. Dr. D'Angelo rendered a "catch-all" opinion that there is a lack of **objective findings** to substantiate Claimant's complaints, and that Claimant had

withdrawal with very minimal touch to her skin around the right shoulder. *Id.* Dr. D'Angelo noted no problem when Claimant moved her right arm while lifting paperwork or personal items, which shows, according to Dr. D"Angelo, that Claimant is self-limiting her range of motion. *Id.* This observation does not deal with whether or not the Claimant had a problem lifting a full carton of milk heavy food trays or lifting patients, for example. According to Dr. D'Angelo, the Claimant is not a reliable historian. The ALJ infers and finds that this observation is in and of itself, unwarranted and subjective, based on the fact that the Claimant presented as an articulate, credible witness in her testimony—in the manner of an individual who graduated *cum laude,* as a.R.N. from the UC Health Sciences Center,

28. According to Dr. D"Angelo, the Claimant requires no work restrictions and suffers from no permanent impairment. *Id.* at 132. Dr. D"Angelo's opinions, insofar as they may support the proposition that a re-opening is not warranted, evade the issues concerning mutual mistake of material fact. In fact, the ALJ finds Dr. D"Angelo's opinions in this regard lacking in credibility.

29. According to Dr. D'Angelo, there is no objective evidence supporting Claimant's ongoing complaints. *Id.* at 32. Dr. D'Angelo testified that Claimant's work-related condition has not deteriorated or worsened, that Claimant's work-related diagnoses had resolved as of the date of MMI, and that Claimant has no further diagnosis attributable or causally related to the work-injury. *Id.* at 31; 32. Dr. D'Angelo testified that it is medically improbable that Claimant's current condition is causally related to her work injury because she was allegedly pain free for many months following MMI (inferred from medical records reviewed by Dr. D'Angelo), and there is nothing to medically support a causal relationship between Claimant's current complaints and the work injury, according to Dr. D'Angelo. *Id. at 54.* The ALJ does **not** find this opinion to be credible in light of the totality of the evidence.

30. In support of her opinion that Claimant was at MMI and nothing has changed since then, Dr. D'Angelo testified that she had not seen any physician opinions stating that Claimant was not at MMI, or that Claimant was unable to work. *Id.* at 26. This non-medical opinion borders on taking on an adversarial tone and is not persuasive, and detracts from Dr. D'Angelo's overall credibility.. Further, Dr. DAngelo does not persuasively address the issue of AWW, based on multiple employments, permanent scarring of the leg and how it will affect the Claimant's modeling career.

31. Because of Claimant's disagreement with some of the lack of medical notations (noted by Dr. D"Angelo), Respondents argue that the Claimant is not credible. The ALJ infers and finds that this argument does not significantly undercut the core of the Claimant's testimony. Claimant testified that since the injury occurred, she is still suffering from shoulder and leg pain, and facial swelling. *Hrg. Aud 1*, 48:40-49:25. Claimant testified that she requested an MRI from Dr. Javed during the course of her treatment in the workers' compensation claim, but that Dr. Javed recommended PT

instead. *Id.* The ALJ infers and finds that Dr. D'Angelo attempted to justify a rush to closure, without adequate tests. According to the Claimant, she still suffers from all of the injuries she sustained while working. *Id.* Claimant testified that during the course of her workers' compensation treatment, she was not offered an injection or an MRI, and that she believes she needed these treatments to bring her to MMI during the course of her workers' compensation treatment. *Hrg. Aud. 53:20-53:42.* In light of the fact that the Claimant is a R.N,, having graduated from nursing school *cum laude,* the ALJ finds the Claimant's testimony in this regard more credible that Dr. D'Angelo's summary dismissal of the Claimant's present condition. The Claimant believes that her complaints "could have been solved" if the ATP, Dr. Javed, would have sent the Claimant to have an MRI during her treatment. *Id.* This fact supports the idea, that evidence of "what could have been is warranted because Claimant's testimony supports the fact that there was a mutual mistake of material fact at the time the FAL was filed.

32. Respondents place their arguments on the allegation that placement at MMI was appropriate and nothing further is warranted. Respondents do not persuasively deal with the issue of mutual mistake of material facts involving AWW based on multiple employments and bodily disfigurement as of the filing of the FAL.

Ultimate Findings

33. The ALJ finds the Claimant to be a credible witness. Further, the ALJ finds the overall opinions of Dr. D'Angelo as lacking credibility in some respects, *e.g.,* in not persuasively addressing the issues of AWW based on multiple employments, bodily disfigurement and its effects on Claimant's modeling career.

34. The ALJ infers and finds the credible testimony of the Claimant concerning her present condition is more credible than Dr. D'Angelo's ultimate opinions minimizing Claimant's present condition.

35. The ALJ finds that the Claimant has proven, by a preponderance of the evidence that there was a mutual mistake of material facts, concerning AWW based on multiple employments and bodily disfigurement. Therefore, a re-opening of the Claimant's claim is warranted.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations,

determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research or facts); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant was a credible witness. Further, as found, the overall opinions of Dr. D'Angelo were lacking credibility in some respects, *e.g.,* in not persuasively addressing the issues of AWW based on multiple employments, bodily disfigurement and its effects on Claimant's modeling career.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding without regard to the existence of contradictory testimony or contrary inferences. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). So long as the findings of fact are supported by **substantial evidence,** they should be

upheld –even if an appellate tribunal would have reached a different conclusion if it had entered findings of fact. *See May D & F v. Indus. Claim Appeals Office,* 752 P.2d 589 (Colo. App. 1988). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ makes a rational choice in determining that the credible testimony of the Claimant concerning her present condition is more credible than Dr. D'Angelo's ultimate opinions minimizing Claimant's present condition.

Multiple Employments

c. Where an injured worker has arranged **multiple** employments to earn a living, and the injury in part precludes some work , a fair computation of the true AWW should encompass all employments. *St. Mary's Church & Mission v. Indus. Comm'n,* 735 P. 2d 902 (Colo. App. 1986); *Jefferson County Public Schools v. Dragoo,* 765 P.2d 636 (Colo. App. 1988); *Broadmoor Hotel v. Indus. Claim Appeals Office,* 939 P.2d 460 (Colo. App. 1996), *cert. denied* July 14, 1997. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant is entitled to hearing concerning the financial effects of her injuries on her multiple employments—as opposed to Respondents mistakenly admitting an AWW based on the solitary employment on the admitted date of injuries.

Re-Opening

d. Under section 8-43-303(1), C.R.S., a case may be re-opened after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). It is well established that if an industrial injury leaves the body in a weakened condition, and that weakened condition is a proximate cause of further injury to the injured worker. The additional injury is a compensable consequence of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Endorsement of "petition to reopen" on an application for hearing or response to application for hearing sufficiently raises the issue for consideration. *See Cooper v. Indus. Claim Appeals Office,* 109 P.3d 1056 (Colo. App. 2005). The Court of Appeals held that a mutual mistake of fact concerning the

claimant's condition was made at the time the DIME placed the claimant at MMI was a n appropriate ground for re-opening. *See Berg. V. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). As found, there was a mutual mistake of material fact, concerning AWW based on multiple employment and bodily disfigurement at the time the FAL was filed. Therefore, a re-opening of the Claimant's claim is warranted.

e. There is no restriction as to the number of times a case may be re-opened and when based upon new or different evidence no such limitation may be imposed by the courts, that being a matter for legislative expression. *Graden Coal Co. v. Ytoarralde,* 137 Colo. 527, 328 P.2d 105 (1958).

f. Mistake of fact at the time an FAL is filed is an appropriate ground for re-opening a claim, if the criteria for reopening are met. *See City and County of Denver v. Indus. Claim Appeals Office,* (2021COA146, December 2, 2021). As found, there was a mutual mistake of material fact at the time of the filing of the FAL, thus, warranting a re-opening thereof.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits and/or re-opening. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, there was a mutual mistake of material fact at the time of the filing of the FAL, thus, warranting a re-opening of the Claimant's claim.

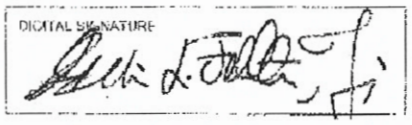
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. W.C. No. 5-103-723-001 is hereby re-opened as to all issues..

B. Any and all issues not determined herein are reserved for future decision.

DATED this 7th day of February 2022.



EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

WC 5-103-723-001

OAC CERTIFICATE OF SERVICE

I hereby certify that on **February 7, 2022** a true and correct copy of the foregoing Order was served upon the following parties by email, to the addresses on file with the OAC, who shall provide copies to all other parties pursuant to OAC 16-G.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-137-923-001

ISSUES

I. Whether the left rotator cuff surgery recommended by Claimant's treating surgeon, Dr. Michael Hewitt, is reasonable and necessary and causally related to the industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted work injury on April 26, 2020, to her left upper extremity while working as a Registered Nurse ("RN") for Respondents.
2. On April 28, 2020, Claimant was working in her capacity as registered nurse for respondent employer, when she tripped over an oxygen tube and fell landing on her left shoulder. Before this date, Claimant credibly testified that she had no prior injuries and active treatment of the left shoulder.
3. On the date of injury, Claimant reported to Swedish Emergency room with severe shoulder pain. An x-ray of the left shoulder revealed an acute non-displaced fracture of the left humeral neck and head extending along the base of the greater tuberosity. (C Ex. 15, BS 46A).
4. Claimant was seen by a P.A. at Concentra on April 28, 2021; at which visit, she was noted to have significant bruising. Claimant advised that she could not move her shoulder without pain and was having trouble sleeping. (C.Ex. 12, BS 001-004). Claimant was then seen by Dr. Villavicencio on May 1, 2020. On this date, Dr. Villavicencio recorded that claimant's range of motion remained very limited with significant pain in the day and causing sleep issues at night. The doctor provided Claimant with work restrictions on this day. (C. Ex. 12, BS 005-007).
5. Claimant testified that she was given light duty work and suffered a partial wage loss from April 28, 2020, through May 23, 2020. Thereafter, she was completely off work for about three (3) months, from May 24, 2020, through August 17, 2020. During this time, Claimant was attending physical therapy, massage therapy and was taking prescribed medications.
6. Claimant's employment as a registered nurse, requires her to, among other tasks, be able to transfer patients from bed to the wheelchair, or vis-versa, and/or lift patients off the floor, lift up to fifty (50) pounds, and perform CPR, which requires the administration of fifty (50) pounds of pressure. After returning to work, although Dr. Villavicencio had not provided continuing restrictions, Claimant credibly testified that she has continued to have trouble completing all of the integral functions of her job as a registered nurse. She has been unable to use her left arm to complete lifting tasks and could not perform the compression portion of the CPR skill, as she could

not compress the fifty pounds of pressure required to perform this skill. As a result, she has had to request and receive help from her co-workers.

7. On October 28, 2020, Dr. Villavicencio placed Claimant at MMI and assigned an impairment rating. (C.Ex. 12, BS 34-39). Claimant testified credibly that although she had been placed at MMI, she continued to experience pain and loss of function of her left shoulder and continued to have difficulty sleeping. As such, she was sent for an evaluation with Dr. Scott Primack, who evaluated Claimant on December 16, 2020. Dr. Primack concluded that Claimant's examination was consistent with a rotator cuff tear; and hence, he recommended an MRI scan. (C. Ex. 14).

8. Claimant underwent the left shoulder MRI scan on March 3, 2021, which scan evidenced: small partial-thickness tearing of the supraspinatus and infraspinatus tendons and small partial-thickness delaminating tear within the superior third of the subscapularis tendon. (C. Ex. 15, BS 45-46).

9. Upon review of the MRI scan, Dr. Villavicencio referred Claimant to Dr. Michael Hewitt, Orthopedic surgeon, who examined her on April 5, 2021. On this date, Dr. Hewitt reviewed the MRI scan and noted Claimant's continuing symptoms of pain with lifting and intermittent night pain and catching sensation in her shoulder. After reviewing the MRI, he diagnosed a Type 2 SLAP tear. Due to Claimant's continued objective findings, lack of improvement with conservative care and the evidence on MRI scan, Claimant and Dr. Hewitt agreed that surgery in the nature of a rotator cuff repair was the next best option. (C. Ex. 12, BS 18-19).

10. Claimant resigned her employment with Respondent-Employer in January 2021 and has worked for several other employers since as a registered nurse. Claimant testified credibly that she has suffered no new injuries to her shoulder since the original work-related injury in April 2020. Claimant also testified that she had to travel back to Chicago on multiple occasions, to attend to her ailing mother during the summer of 2021. During this time, Claimant testified that she and Dr. Hewitt agreed to pursue a more conservative route and attempt a subacromial injection before proceeding with surgery. This injection took place on September 16, 2021; but unfortunately, provided no relief. As a result, on October 25, 2021, Dr. Hewitt recommend proceeding with surgery. (C. Ex. 12. BS 002-003). On November 2, 2021, Dr. Hewitt requested authority to proceed with an arthroscopic repair rotator cuff of left shoulder with subacromial decompression. (C. Ex. 13, BS 42). This request was denied by Respondents, who secured a record review to support their denial from Dr. William Ciccone dated November 2, 2021.

11. In reviewing Dr. Ciccone's report, it becomes clear that he was unaware that Claimant was off work for a three-month time period after the injury, and that after Claimant was released to work full duty, that she has continued having lifting difficulties. Since he did not examine Claimant or interview her, he is unaware that since returning to work, she continues to experience difficulty with her left shoulder, so much so, that she needs to request help from co-workers to continue to work, and that she avoids the use of her left shoulder. Further, Dr. Ciccone does not refer to a review of the report written by Dr. Scott Primack, who recommended the MRI scan back in December 2020. Dr. Ciccone does, however, reference that Dr. Hewitt

noted, in a May 18, 2020, report that Claimant has a previous history of left shoulder pain. But, despite such a reference, there is a lack of credible and persuasive evidence that Claimant required, or was undergoing, treatment for her rotator cuff before the work accident. In the end, Dr. Ciccone disagreed with both authorized treating physicians, Drs. Hewitt and Villavicencio, and instead concluded that the findings on MRI are age related and not related to the industrial injury. Thus, he concludes that surgery is not causally related to the industrial injury. (R.Ex. A).

12. Upon review of Dr. Ciccone's report, both Drs. Hewitt and Villavicencio, continue to recommend surgery and find same to be, not only reasonable and necessary; but also, causally related to the industrial shoulder injury. In Dr. Hewitt's rebuttal report of December 8, 2021, he notes Claimant's continued lost range of motion and pain with objective findings and the existence of a positive impingement sign. On the other hand, Dr. Ciccone performed no physical examination. Therefore, he has no first-hand knowledge of a positive impingement sign, nor any detected lost range of motion, nor the existence of persistent weakness, as referenced by and found by Dr. Hewitt, the ATP. In his report, Dr. Hewitt notes that he strongly disagrees with Dr. Ciccone's opinions and finds his surgery recommendation to be not only reasonable and necessary; but also, causally related. (C.Ex. 13, BS 40). In his report of December 15, 2021, Dr. Villavicencio notes review of Dr. Ciccone's IME report, and yet, he continues to concur with Dr. Hewitt's recommendation for surgery.) (C. Ex. 12, BS 1).

13. The ALJ finds the opinions of the two treating physicians, to be more credible and persuasive than those of Dr. Ciccone. The opinions offered by Drs. Hewitt and Villavicencio are consistent with the underlying medical records and Claimant's testimony. The ALJ finds that Dr. Hewitt's recommendation is supported by his objective findings, and the fact that conservative care has failed. Surgery is the next most reasonable medical option to assist Ms. Remillard in regaining function in her injured left shoulder.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the left rotator cuff surgery recommended by Claimant's treating surgeon, Dr. Michael Hewitt, is reasonable and necessary and causally related to the industrial injury.

Claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

In deciding whether Claimant has met her burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not addressed every piece of evidence that might lead

to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970);* § 8-41-301(1)(c), C.R.S. 2013.

As found, the credible evidence in this case demonstrates that Claimant has met her burden of establishing, by a preponderance of the evidence, that the April 26, 2020, work injury proximately caused the need for the recommended left shoulder rotator cuff surgery as requested by her treating surgeon, Dr. Hewitt, and her treating physician, Dr. Villavicencio. The persuasive evidence establishes that the surgery recommended by Dr. Hewitt is not only reasonable and necessary; but also causally related to the April 26, 2020, work related injury. As found, with respect to this determination, the ALJ credits the testimony of the treating surgeon and physician, over that of Respondents' hired medical record review expert, who failed to examine Claimant. The ALJ also finds that the medical reports and credible testimony of Claimant outline continuing persistent pain and functional impairment with failed conservative treatment, leading to and supporting Dr. Hewitt's recommendation for surgery. Thus, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence the shoulder surgery is reasonably necessary and causally related to her industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall authorize and pay, pursuant to the Colorado Workers' Compensation medical benefits fee schedule, for the rotator cuff surgery and all expenses associated therewith as recommended by Dr. Hewitt.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 8, 2022.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-093-482-006

ISSUE

1. Whether Claimant has established by a preponderance of the evidence that Respondents are subject to penalties for failure to timely pay temporary total disability (TTD) benefits.

2. Whether Claimant has established by a preponderance of the evidence that Respondents are subject to penalties for conducting surveillance and for sending a Rule 16 letter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant suffered an industrial injury on November 23, 2018, and has been receiving TTD benefits since December 13, 2018. (Ex. E). Claimant testified that as of the date of the hearing he had been receiving TTD checks for three years and 15 days. (Tr. 29:17). Respondents issued TTD checks approximately every two weeks between December 13, 2018 and September 22, 2021. (Ex. E).

2. Claimant credibly testified that during this three year span, there were five times when his TTD check did not arrive and had to be reissued, and there were two times when his TTD check was issued or mailed late.

3. Claimant testified that he never received the TTD check that should have been issued around December 13, 2018. He further testified that Respondents reissued a replacement check on January 25, 2019. (Tr. 21:19). In his discovery responses, Claimant stated that this TTD check was reissued on January 10, 2019. (Ex. 1, p 124). According to Respondents' payment log, Respondents placed a "stop payment" on the December 13, 2018 check, and reissued the check on January 10, 2019. (Ex. F). The ALJ finds that Respondents reissued the December 13, 2018 check on January 10, 2019.

4. Claimant testified he did not receive his January 2, 2019 TTD check. After learning of this, Respondents placed a "stop payment" on the January 2, 2019 check and reissued the check on January 17, 2019. (Tr. 21:20-21 and Ex. F).

5. Claimant testified he should have received his TTD check on August 28, 2019, but did not. After learning of this, Respondents placed a "stop payment" on the August 28, 2019 check, and reissued the check on October 17, 2019. (Tr. 21:25-22:2 and Ex. F).

6. Claimant testified he did not receive his TTD check that should have been issued on January 29, 2020. Claimant testified he moved residences on January 25, 2020, and

notified Respondents' counsel of his new address. (Tr. 22:2-9). After learning Claimant had not received his TTD check, Respondents placed a "stop payment" on the January 29, 2020 check and reissued the check on March 16, 2020. (Ex. F).

7. Claimant testified he did not receive his September 23, 2020 TTD check. After learning of this, Respondents placed a "stop payment" on the September 23, 2020 check and reissued the check on October 28, 2020. (Tr. 22:13-16 and Ex. F).

8. Claimant testified that he did not receive his April 9, 2021 TTD check. (Tr. 22:17-23: 13) (Ex. 1, p. 124). Respondents issued the check on April 19, 2021. (Ex. F). The ALJ finds that while this check was issued late, this delay was not unreasonable.

9. Claimant testified that his July 14 or 15, 2021 TTD check was mailed five days late. (Tr. 24:24-25:2). Respondent issued Claimant a TTD check on July 19, 2021. (Ex. F). The ALJ finds that while this check was issued late, this delay was not unreasonable.

10. Claimant had the option to have his TTD payments processed via direct deposit. Claimant testified that the process did not work, so he did not utilize it. (Tr. 36:19-7). In an April 8, 2020 email, Claimant told his counsel, with respect to direct deposit, "[t]oo much difficulty, and I just don't trust the insurer. I prefer mailing my checks. If they continue to not mail my checks we can always request another hearing." (Ex. I at 57).

11. Between January 2020 and June 2021, Claimant moved three times. He moved on January 25 or 29, 2020, April 1, 2020, and June 11, 2021. (Tr. 22:2-24: 9) Claimant testified he had four different addresses during the life of the claim, all outlined in his answers to discovery. (Tr. 37:22). According to Claimant's discovery responses, his four addresses were:

a. 10115 W. Dartmouth Place, #202, Lakewood 80227
b. 10115 W. Dartmouth Avenue, #F-301, Lakewood 80227
c. 7355 W. Kentucky Drive Apt F, Lakewood 80226; and
d. 7395 W. Ohio Ave #107, Lakewood 80226

(Ex. A at 124).

12. There was significant confusion related to Claimant's move and change of address in January 2020. On cross-examination, Claimant retracted his testimony that he lived at **10115** W. Dartmouth Avenue, #F-301, Lakewood 80227, and testified that the correct address was **10075** W. Dartmouth Avenue, #F-301, Lakewood 80227. (Tr. 43:19-44:16).

13. On January 23, 2020, Claimant emailed his attorney stating he would be moving to 10075 W. Dartmouth Ave. #F-**103**, Lakewood, CO **80027,** on January 25, 2020. (Ex. I at 52).

14. On February 10, 2020, Claimant emailed his attorney stating that he was moving to 10075 W. Dartmouth Ave. #F-**301**, Lakewood, CO **80227**. (Ex. 1 at 110).

15. On February 18, 2020, Respondents issued Claimant's TTD check and sent it to 10075 W. Dartmouth Ave. #F-103, Lakewood, CO 80027. (Ex. G at 31)

16. Two days later, on February 20, 2020, Claimant's counsel asked Respondents to send Claimant's TTD checks to 10075 W. Dartmouth Ave. #F-103, Lakewood, CO 80027 (Ex. 1 at 111).

17. On March 11, 2020, after another correction of the address and request for reissuance, Respondents placed a "stop payment" on the TTD check for January 18, 2020 through January 31, 2020, and reissued it. (Ex. G at 33).

18. Claimant testified his attorney followed up with Respondents' counsel regarding the status of Claimant's TTD checks on multiple occasions, including March 4, 5, 10, 11, 13 and 18 of 2020. (T 26:11-27:11). He further testified that his attorney notified Respondents of his move and the checks were still late. (T 25:17-19).

19. The ALJ finds that Claimant's move in January 2020, and the multiple mistakes made by Claimant and his counsel with respect to the correct address, contributed to the difficulties in receiving his TTD check for the period of January 18, 2020 through January 31, 2020.

20. On October 12, 2020, Claimant notified his counsel at the time, that his September 24, 2020 TTD was two weeks late, and she reached out to Respondents' counsel. (Ex. 1 at 66-67). On October 13, 2020, after the initial inquiry into TTD payments, Respondents' counsel responded noting that the checks issued on September 23, 2020 and October 7, 2020 had not yet been cashed, and asked Claimant's counsel what action they would like, whether that includes a stop pay and reissue, and also to confirm the correct mailing address since counsel previously requested the TTD payments go to their law office. (Ex. 1 at 65). With respect to the September 23, 2020 TTD check, Claimant's counsel initially asked for the status of two checks, but withdrew one request after the check arrived, asking for the other check to be reissued. (T 34:22-25).

21. Claimant has been represented by five different attorneys during the life of his claim. (Tr. 31:17-18).

22. According to Respondents' payment log, the December 13, 2018, January 2, 2019, August 28, 2019, January 29, 2020 and September 23, 2020 TTD checks were all issued timely. Payment was stopped on each of these checks, and the TTD checks were reissued after Respondents learned that Claimant did not receive his check and they had confirmation that the check had not cleared. (Ex. F at 19).

23. The ALJ finds that over the two and a half years from December 2018 to July 2021, five of Claimant's TTD checks never arrived, but Respondents reissued the checks once they were made aware that Claimant had not received the check, and they had

confirmation that the check had not cleared. During this time period, Claimant received one TTD check five days late, and Respondents issued one ten days late.

24. The ALJ finds that Respondents timely issued Claimant's December 13, 2018, January 2, 2019, August 28, 2019, January 29, 2020 and September 23, 2020 TTD checks. The ALJ further finds that the time it took for Respondents to reissue these checks was reasonable.

25. The ALJ finds that Claimant's address changes and the incorrect address information being forwarded to counsel contributed to the difficulties in timely receiving his TTD checks.

26. The ALJ finds that Respondents timely cured the issues related to TTD checks that Claimant did not receive.

27. Claimant did not provide any evidence regarding the surveillance video or the Rule 16 letter that he alleged were a basis for penalties.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict

by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Penalties for Late TTD Benefits

Claimant is seeking penalties for seven TTD payments that he received late between December 13, 2018 and September 22, 2021. Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000 per day where the insurer's act or inaction constitutes a violation of the Act, a rule, or an order, and any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003). There is, however, no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

Section 8-42-105(2)(a), C.R.S. provides, in relevant part, that "the first installment of compensation shall be paid no later than the date that liability for the claim is admitted by the insurance carrier." Section 8-43-304(4), C.R.S. gives respondents the opportunity to cure alleged violations within twenty (20) days of the mailing of an application for hearing asserting penalties. The statute states that if the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The curing of the violation within the twenty-day period shall not establish that the violator knew or should have known that such person was in violation. Clear and convincing evidence is evidence that is stronger than a preponderance and is unmistakable and free from serious or substantial doubt. *DiLeo v. Koltnow*, 200 Colo. 119, 613 P. 2d 318 (1980).

The ALJ finds Claimant failed to meet his burden that Respondents violated the Act or that any such violation was objectively unreasonable under the clear and convincing standard that applies. Claimant has failed to establish that Respondents violated the Act because two checks arrived late, and five had to be reissued. The December 13, 2018, January 2, 2019, August 28, 2019, January 29, 2020 and September 23, 2020 TTD checks were all issued timely. (Findings of Fact ¶ 24). The evidence shows that each of these checks was issued timely and in compliance with the Act. *Id.* Once Respondents learned that Claimant never received these checks, they were placed on stop pay and reissued.

The date of reissuance for these checks also does not constitute a violation of the Act. *Id.* The ALJ recognizes there are practical issues involved in cancelling a check and

reissuing. Respondents communicated with Claimant and tried to resolve any stop pay/reissue issues timely. The ALJ further finds that the time it took for Respondents to reissue these checks was reasonable. *Id.* Claimant received the seven TTD checks at issue. Claimant has failed to prove by a preponderance of the evidence that Respondents violated the ACT and that penalties should be awarded.

Even if Claimant had established a violation of the Act, he failed to establish by clear and convincing evidence that Respondents' violation was objectively unreasonable. The ALJ recognizes the multiple moving parts with Claimant having five separate counsel and at least four separate personal mailing addresses. The ALJ finds that Claimant's address changes and the incorrect address information being forwarded to counsel contributed to the difficulties in timely receiving his TTD checks, particularly his January 29, 2020 TTD check. (*Id.* at ¶¶ 21 and 25). As for the other checks dated December 13, 2018, January 2, 2019, and August 28, 2019, Claimant failed to establish that the reissuance date was unreasonable, failing to provide evidence of any knowledge by Respondents of a violation or unreasonable action in reissuing the check to ensure it was paid. The ALJ finds that there is no evidence that Respondents actions were objectively unreasonable, given the duration of this claim, the multiple relocations and multiple change of counsel.

Claimant did not introduce any testimony on the issues of surveillance and the Rule 16 letter at hearing. (*Id.* at ¶ 27). There are no ripe issues in regards surveillance or the Rule 16 letter for which relief can be granted.

ORDER

It is therefore ordered that:

1. Claimant's request for penalties related to late TTD payments is denied.

2. Claimant's request for penalties related to late surveillance is denied.

3. Claimant's request for penalties related to a Rule 16 letter is denied.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 8, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Whether [Dependent Claimant, Redacted] established, by a preponderance of the evidence, that she and [Deceased Claimant, Redacted] were in a common law marriage at the time of his passing.

- If so, whether [Dependent Claimant] should be classified as a partially dependent beneficiary or a wholly dependent beneficiary.

STIPULATIONS

- The parties agreed that at the time of his death, [Deceased Claimant, redacted] had an average weekly wage (AWW) of $2,537.93.

- The parties also stipulated that [Minor Dependent, Redacted] is a wholly dependent beneficiary and entitled to receive workers' compensation death benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. [Deceased Claimant, redacted] passed away on May 13, 2021. At the time of his passing he had one natural born minor child, [Minor Dependent] (DOB: 4/26/10), from his relationship with Claimant. *Ex. G,* p. 18. He also had three adult children; [Redacted, hereinafter BH] (DOB: 1/2/98), [Redacted, hereinafter AH] (DOB: 8/19/95), and [Redacted, hereinafter VH] (DOB: 10/17/93), from a previous relationship, none of whom are not entitled to recover death benefits based upon their ages. *See Ex. F; see also*, C.R.S. §§ 8-41-501; 8-41-502. At the time of his passing, [Deceased Claimant, redacted] was in a relationship with Claimant. They lived together in South Fork, CO, with [Redacted minor dependent], [Redacted, hereinafter LG] (DOB: 2/6/09), and [Redacted, hereinafter DS] (DOB: 9/13/01). *See Ex. H.* LG[Redacted] and DS[Redacted] are Claimant's children from prior relationships. [Deceased Claimant, redacted] had not legally adopted LG[Redacted] or DS[Redacted] at the time of his passing. Consequently, they are not entitled to recover death benefits under the Workers' Compensation Act. *See* C.R.S. §§ 8-41-501; 8-41-502.

2. Claimant testified her romantic relationship with [Deceased Claimant] began August 3, 2001. They lived together without marrying for six years until they formally married on August 3, 2007, in Winnemucca, Nevada. *Ex. I.* Approximately one year later, Claimant and [Deceased Claimant] separated for roughly two years. Neither Claimant nor [Deceased Claimant] filed for divorce during this two-year period. However, they agreed to date other people.

3. Claimant began a relationship with [Redacted, hereinafter Mr. G] a couple months after her separation from [Deceased Claimant, redacted], moved in with Mr. G[Redacted] in Battle Mountain, NV, and lived with him for approximately 1 ½ years. During this time, Claimant gave birth to their child, LG[Redacted], on February 6, 2009. Claimant testified she left Mr. G[Redacted] in August 2009 and moved in with relatives in Elko, Nevada. Nonetheless, Claimant continued to see Mr. G[Redacted] while simultaneously rekindling her relationship with [Deceased Claimant, redacted]. [Redacted dependent, minor] was conceived during this period. As noted, she was born April 26, 2010.

4. Claimant testified [Deceased Claimant, redacted] did not know [Redacted, dependent minor] was his child initially. She testified she originally listed Mr. G[Redacted] as [Redacted dependent minor]'s father on the birth certificate, but she would later correct the birth certificate to reflect that [Redacted dependent minor]'s father was [Deceased Claimant, redacted] after a paternity test revealed him to be [Dependent minor]'s father. She also changed [Dependent minor]'s last name to [Deceased Claimant]'s. Submitted into evidence were two paternity tests, one for LG[Redacted] dated March 2, 2010, which confirmed [Deceased Claimant, redacted] was not LG[Redacted]'s biological father, and one for [Dependent minor] dated July 6, 2010, which determined he was [Dependent minor]'s father. *Ex. E, see also, Ex. G.* Claimant confirmed on cross-examination the paternity tests were done pursuant to court proceedings in which she and the State of Nevada were listed as obligees and [Deceased Claimant, redacted] as an obligor. She testified [Deceased Claimant, redacted] initiated the actions, as that was the only mechanism to have the testing completed in order to determine paternity for the two children. She testified that she still lists [Dependent minor]'s last name as Mr. G[Redacted]'s on tax returns, because she has been unable to change her last name with the Social Security Administration (SSA). *See Ex. N*, p. 79.

5. She testified Mr. G[Redacted] is currently obligated to pay $389 in monthly child support for LG[Redacted], which he pays "once in a while." She testified she "does not pay attention to" to the frequency of Mr. G[Redacted]'s child support payments but did acknowledge that there is a back due child support lien in excess of $17,000.00.

6. Claimant testified that after NH[Dependent minor] was born and her paternity established, she terminated her relationship with Mr. G[Redacted]. She and the children (DG[Redacted], LG[Redacted] and NH[Dependent minor]) then moved back in with [Deceased Claimant, redacted] in late 2010 or early 2011. Claimant, [Deceased Claimant, redacted] and the children lived in Elko, Nevada until June 2014, when they moved to South Fork, Colorado and rented a home. According to Claimant, the lease to this house was solely in [Deceased Claimant, redacted] name. Claimant testified she separated from [Deceased Claimant, redacted] again shortly after Christmas 2015. She moved into her own apartment with the children, and [Deceased Claimant, redacted] remained in the aforementioned rental home.

7. Claimant filed for divorce in May 2016. *See Ex. J.* The decree dissolving the marriage was signed October 13, 2016. *Id.* The decree notes, "The name change request is not detrimental to any person." Thus, Claimant was granted a legal restoration of her prior name, [Claimant name, redacted]. *Id.*, p. 22. Claimant professed ignorance regarding restoration of her maiden name and testified that she has used [Deceased Claimant, redacted] name as her legal last name since her divorce was finalized. Although ordered as part of the decree, [Deceased Claimant, redacted] failed to file a QDRO (Qualified Domestic Relations Order) concerning his retirement account. Consequently, Claimant's status regarding entitlement to any portion of [Deceased Claimant, redacted]'s retirement account at the time of the divorce is unknown. Based upon the evidence presented, it is also unknown whether [Deceased Claimant, redacted] identified Claimant as his spouse for purposes of qualifying her for entitlement to his retirement funds or life insurance benefits in the event of his premature death.

8. Claimant testified that during the pendency of their separation from May 2016 - October 2016, neither she nor [Deceased Claimant, redacted] told the kids they were divorcing. According to Claimant, because [Deceased Claimant, redacted]'s work required extensive travel away from home for weeks to months at a time, the children did not inquire as to his absence. Claimant testified that she and [Deceased Claimant, redacted] "did not take the divorce seriously." Rather, she testified that they started seeing each other approximately one month later in November 2016. According to Claimant, she and [Deceased Claimant, redacted] maintained separate residences but that he stayed at her apartment when he was in town. This arrangement continued until March 2018. At that time, [Deceased Claimant, redacted] bought a home located at 264 Pinon Circle in South Fork. Claimant and the children then moved back in with him. Claimant, the children and [Deceased Claimant, redacted] lived together at the 264 Pinon Circle address through his passing and she has continued her residence there since his death.

9. Claimant testified that when [Deceased Claimant, redacted]purchased the home at 264 Pinon Circle, he did so in his name only. Claimant testified this was done because she had bad credit at the time. On cross-examination, Claimant confirmed that the home was refinanced in September 2019, more than a year after they moved into together, again in [Deceased Claimant, redacted]'s name only. *Ex. L*, p. 37. She also testified that the property tax account was in his name at the time of his death. Throughout the time they lived together, Claimant and [Deceased Claimant, redacted] owned no real property jointly.

10. Utilities to the home at 264 Pinon Circle and other family expenses were largely in their names individually, not jointly. Claimant testified the water bill was paid once yearly in [Deceased Claimant, redacted]'s name. The electric bill was also solely in [Deceased Claimant, redacted]'s name, as were the cell phones used by those in the household. Moreover, the satellite TV bill was in his name. *Ex. L*, pp. 40, 42-43. Claimant agreed that she and [Deceased Claimant, redacted] owned separate vehicles titled in their names individually, and they had no jointly titled vehicles. The only

expenses held jointly were a car insurance policy and a propane account. *Id.,* pp. 39, 41-43.

11. Claimant testified she and [Deceased Claimant, redacted] each had three credit cards in their names individually. *See Id.,* pp. 46-51. She testified they each had individual checking accounts rather than joint checking/savings accounts. She testified that she had electronic access to [Deceased Claimant, redacted] checking account and she used that access to pay household bills from his account. She also conceded on cross-examination that neither she nor [Deceased Claimant, redacted] ever executed a will or other estate plan nor did they ever execute any powers of attorney (POA) to act on the behalf of the other at any time.

12. Claimant and [Deceased Claimant, redacted] filed separate tax returns in recent years. Their respective 2019 and 2020 tax returns were admitted into evidence as *Exhibits M & N.* Claimant testified that she personally completed each of their tax returns using computer-based software. On cross-examination, she was asked why they each filed as Head of Household, which is a filing status that requires the filer not be married.[1] She professed ignorance of the significance of filing both returns as Head of Household testifying that [Deceased Claimant, redacted] told her to file the taxes in that manner when they completed their returns in 2017. She testified she was unaware that couples who are common law married could file joint returns. Claimant testified that before 2017 and when they were married, H&R Block prepared their taxes. She could not recall whether they filed as married or head of household, at points stating she thought it was both. [Deceased Claimant, redacted] earned $104,354 in wages in the taxable year 2020. *Ex. M,* p. 52. Claimant earned $45,665.00 in wages in the taxable year 2020. *Ex. N*, p. 79.

13. Claimant's 2020 wages extend through August 15, 2020. She quit her job as a working manager at Mountain Pizza and Tap Room (Mountain Pizza) around August 15, 2020 due to what the ALJ finds was the requirement that she work substantial overtime hours to assure that the restaurant was properly staffed.[2] During cross-examination, Claimant agreed she was on track to earn about $75,000.00 - $80,000.00 for the year before she quit. It is uncontroverted that Claimant was unemployed between August 15, 2020 and February 7, 2021, when she returned to work cleaning vacation homes for her friend, Joyce Ann Reed. Claimant testified she worked as little as 4 hours per week, or as much as 20 hours per week during the busy period of Spring Break. As noted, wage records were ordered from Ms. Reed and reflect that Claimant earned $585.00 in February 2021, $742.50 in March 2021, and $587.50 in April 2021, prior to [Deceased Claimant, redacted]' passing in May 2021.

[1] U.S. Department of the Treasury. Internal Revenue Service. (2020) *Publication 501: Dependents, Standard Deduction, and Filing Information* (Cat. No. 15000U). Retrieved from https://www.irs.gov/publications/p501#en_US_2020_publink1000220775.

[2] Claimant testified that she would have to pick employees up from the Community Corrections Center in Alamosa, shuttle them to their shift in South Fork, and then drive them back to Alamosa after their shift, a distance of 192 miles roundtrip per day worked. According, to Claimant [Deceased Claimant, redacted] implored her to quit for sake of the children.

Exhibit O. When asked why she returned to work cleaning houses, Claimant testified she wanted to help and not "leave them hanging," referring to her employer. On re-direct, she clarified she was looking for work at the time Ms. Reed was looking for help. She testified the money she earned in this time went to household expenses.

14. Claimant testified neither she nor [Deceased Claimant, redacted] wore wedding rings, either while officially married or during any period following their divorce. According to Claimant, she was not a jewelry person, and the "promise ring" [Deceased Claimant, redacted] gave her was too small. She never attempted to have it re-sized. She also testified that [Deceased Claimant, redacted]' occupation as a driller precluded his wearing of a ring.

15. Claimant testified that even after their divorce, she and [Deceased Claimant, redacted]would introduce themselves to people as husband and wife when meeting new people, and also when going to events for the kids such as sporting activities or parent/teacher conferences. On cross-examination, she was pressed about whether or not at the kids' events they introduced themselves as husband and wife or just as the parents of the children, and she changed her testimony to admit the latter was the case.

16. On cross-examination, Claimant testified she and [Deceased Claimant, redacted] never talked about formally marrying again after their divorce and reconciliation. She admitted that they had no agreement to be married or later become married in any capacity. She was asked about what was different in the scenarios of 2008 versus 2016, where the first separation extended over a couple of years but without them being divorced, compared to 2016 where they got divorced after a shorter separation. She testified that she just needed a break from [Deceased Claimant, redacted] in 2008 but in 2016, they were fighting frequently which lead to their divorce. She testified that after their divorce and subsequent reconciliation, their relationship was better due to agreements they made as to how to best work through their differences. According to Claimant, the relationship between she and [Deceased Claimant, redacted] was "perfect" after their divorce so she saw no reason for the two to remarry.

17. Ms. Joyce Ann Reed testified at hearing. She testified that she became acquainted with Claimant and [Deceased Claimant, redacted] in approximately 2015 through the church they all attended. She testified generally that she saw them at church and at least on one occasion she and her husband took [Deceased Claimant, redacted] and the children ice fishing. However, she testified that she never went to their home, never went out to eat with them, never took trips with them, or engaged in other activities with them. Importantly, she testified that she had no actual knowledge of whether Claimant and [Deceased Claimant, redacted] considered themselves a married couple.

18. Ms. Reed also testified that Claimant has worked for her cleaning the vacation rental properties she manages. According to Ms. Reed, Claimant began work for her in 2016 and continued her employment until she started working at Mountain

Pizza. Per Ms. Reed, Claimant then started working for her again at some point after she stopped working at the pizzeria. As noted, *Exhibit O* are the records Ms. Reed produced reflecting Claimant's wages for 2021.

19. Claimant also called Rose Tullos to testify at hearing. Ms. Tullos testified that she is a neighbor of Claimant. She testified that when Claimant and [Deceased Claimant, redacted] moved into the neighborhood her recollection was that "maybe" one of them introduced the other as husband or wife when they first met, but she did not recall specifically. She testified they would visit each other's homes, attended BBQs together, and went out to dinner with each other on a couple occasions. She testified she had no actual knowledge of whether Claimant and [Deceased Claimant, redacted] were married. Rather, she testified she assumed they were married based upon interactions with the family. She admitted on cross-examination, that she would assume generally that any couple raising children while living under one roof and using the same last name were probably married.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Death Benefits

B. The Workers' Compensation Act provides that spouses and the minor children (under the age of 18) of an injured worker who succumbs to his/her injuries are presumed to be wholly dependent and entitled to death benefits. C.R.S. § 8-41-501(1)(a) and (b). Section 8-41-503(1), C.R.S., provides: "Dependents and the extent of their dependency shall be determined as of the date of the injury to the injured employee, and the right to death benefits shall become fixed as of said date irrespective of any subsequent change in conditions except as provided in section 8-41-501(1)(c). Death benefits shall be directly payable to the dependents entitled thereto or to such person legally entitled thereto as the director may designate."

C. Section 8-42-115(1)(b), C.R.S., states: "(1) In case death proximately results from the injury, the benefits shall be in the amount and to the persons following: . . . (b) If there are wholly dependent persons at the time of death, the payment shall be

in accordance with the provisions of § 8-42-114." If there are both persons wholly dependent and partially dependent, only those wholly dependent shall be entitled to compensation. § 8-42-119, C.R.S.

D. There are no precise statutory definitions of what constitutes a wholly dependent person verses a partially dependent person or how such classes of dependents must be determined financially. Partial dependents are simply noted by statute to be entitled to receive "only that portion of the benefits provided for those wholly dependent which the average amount of the wages regularly contributed by the deceased to such partial dependents at and for a reasonable time immediately prior to the injury bore to the total income of the dependents during the same time." *Id.*

E. In this case, Claimant contends that at the time of Mr. [Deceased Claimant, redacted]'s death she was wholly dependent on his income. In support of her contention Claimant points out that, [Deceased Claimant, redacted]' average weekly wage was "greater in a single week than [her] gross compensation for the preceding 3 months." According to Claimant, the entire household lived on [Deceased Claimant, redacted] wages while her financial contribution to the household was less than 1% at the time of his death. Because dependency is fixed as of the date of injury (death), Claimant contends that she, in addition to NH[Dependent minor], as his dependent child, was wholly dependent on [Deceased Claimant, redacted] at the time of his death.

F. Assuming that Claimant is considered to be [Deceased Claimant, redacted]' common law spouse, Respondents contend that she should be classified as a partial dependent based upon her earnings in the months leading up to [Deceased Claimant, redacted] untimely death. As provided for by statute, if there are both persons wholly dependent and partially dependent, only those wholly dependent shall be entitled to compensation. C.R.S. § 8-42-119. Therefore, if Claimant was only partially dependent on [Deceased Claimant, redacted]' income at the time of his death, Respondents argue that she would be unable to recover any benefits during NH[Dependent minor]'s period of entitlement as a stipulated wholly dependent child.

G. In this case, Respondents note that the Act does not define how much income a person must earn from other sources, to be dependent upon a worker who suffers a fatal accident, in order to be classified as a partially verses a wholly dependent individual. According to Respondents, the guidance provided by the Act revolves around the discussion of distribution of benefits amongst partially dependent individuals, stated to be the "average amount of the wages regularly contributed by the deceased to such partial dependents at and for a reasonable time immediately prior to the injury bore to the total income of the dependents during the same time." C.R.S. § 8-42-119. In essence, Respondents contend that if an alleged dependent receives income from other sources and not wholly from the deceased worker, than those dependents must be paid out in a proportion similar to the proportion of support provided by the deceased worker in life. With this guidance as the closest definition to what constitutes a partially dependent individual, Respondents argue that an individual who receives some income from sources other than the income provided by the deceased would, by definition, be a

partial dependent. Within this context, Respondents assert that Claimant should be considered a partially dependent individual at best.

H. In support of their contention, Respondents note that in the months preceding [Deceased Claimant, redacted]' passing, Claimant had returned to work cleaning houses, which reasonably would have continued into the foreseeable future even absent the present circumstances necessitating her return to work. While her average monthly earnings ($638.33) for the three-month period extending from February – April 2021 were not "excessive" in comparison to [Deceased Claimant, redacted]' wages, Respondent's contend that Claimant's wages[3] were not insignificant and must be accounted for when determining her level of dependency. Respondents argue further that the case for Claimant being considered partially dependent only is strengthened if the period for receipt of income stretches back into 2020 when she was working as general manager at Mountain Pizza. In that employment, Claimant agreed she was on track to earn about $75,000 - $80,000 before she quit. Regardless of when the analysis is applied, Respondents contend that Claimant's receipt of income from her own employment renders her a partially dependent beneficiary only. Accordingly, Respondents assert that NH[Dependent minor] is the sole wholly dependent beneficiary entitled to receive death benefits in this case. Per Respondents, because Claimant is a partially dependent only, she is not entitled to recover any death benefits until NH[Dependent minor]'s period of entitlement ends, and only then if she is unmarried.

I. While Respondents raise questions regarding Claimant's dependency status based upon her earnings in the months leading up to [Deceased Claimant, redacted] passing, the evidence presented persuades the ALJ that Claimant's employment and receipt of wages by itself is insufficient to overcome the presumption of dependency for a widowed spouse. Rather, there must be proof that [Deceased Claimant, redacted] provided no support to Claimant. *Clarke v. Clarke*, 95 Colo. 409, 36 P.2d 461 (1934); See also, *Diamond Industries, Division of Medford Corp. v. Claimant in Death of Crouse*, 589 P.2d 1383 (Colo.App. 1978)(rejecting the argument that widowed spouse was only entitled to 43% of the death benefits because the deceased contributed only 43% of the income earn by the couple). Even where the decedent provides no support to the spouse, the need for support may be sufficient to prove dependency. *Tilley v. Bill's Sinclair*, 524 P.2d 314 (Colo.App. 1974). Because dependency is fixed at the time of death, the ALJ finds Respondents' suggestion that Claimant was not dependent because of wages she earned in 2020, before [Deceased Claimant, redacted] death, is at odds with the Act and unpersuasive. Here, the evidence presented supports a conclusion that Claimant was dependent on [Deceased Claimant, redacted]' income despite the wages she earned cleaning houses at the time of his passing. Indeed, the ALJ finds/concludes that Claimant's aggregate earnings ($1,915.00) over the three months preceding [Deceased Claimant, redacted] death, which as noted, is less than a single week of [Deceased Claimant, redacted] stipulated earnings ($2,537.93), strongly supports a conclusion that she was dependent on his income. Nonetheless, the question of whether Claimant was in a common law marriage

[3] Excluding child support payments from Mr. G[Redacted] when made periodically, which was a source of income to Claimant and LG[Redacted] that presumably benefited the household.

with [Deceased Claimant, redacted] at the time of his death must be answered before any award of death benefits can be issued to her in this case.

Common Law Marriage

J. Colorado has long recognized common law marriages. See *Taylor v. Taylor*, 50 P. 1049 (Colo.App. 1897). Since 1987, the pivotal case in Colorado outlining the requirements for establishing a common law marriage has been *People v. Lucero*, 747 P.2d 660 (Colo.1987). In *Lucero*, the Colorado Supreme Court stated that a common law marriage is established by mutual consent or agreement of the parties to be husband and wife, followed by a mutual and open assumption of a marital relationship. In doing so, it focused on cohabitation of the parties and their reputation in the community as the two primary factors to evaluate an intention to be married, although any evidence manifesting such an intention to establish a marriage could fulfill the burden of proof. *See Id.* at p. 665.

K. Recently the Colorado Supreme Court revisited the standard and refined the test to emphasize the parties' mutual agreement to enter into a marital relationship in the context of a trio of opinions issued on January 11, 2021. The primary case setting forth the Court's new standard was *Hogsett v. Neale*, 478 P.3d 713 (Colo. 2021). It elaborated on the new standard and need to review the totality of the circumstances in the case of *In re Estate of Yudkin*, 478 P.3d 732 (Colo. 2021).[4] In *Hogsett*, the Court modified the applicable test to acknowledge modern norms, which rendered the more traditional indicia of marriage no longer exclusive to marital relationships, i.e. those recognized by *Lucero* as typically indicative of a marital relationship because that indicia is often present in non-marital relationships currently. The new test established by *Hogsett*, while retaining elements from *Lucero*, is essentially that a common law marriage is "established by the mutual consent or agreement of the couple to enter the legal and social institution of marriage, manifested by conduct reflecting that agreement." *Hogsett*, 478 P.3d at 715. The *Hogsett* court elaborated that marriage represents "a deeply personal commitment to another human being . . . and the decision whether and whom to marry is among life's momentous acts of self-definition." *Id.* at p. 719, citing *Goodrige v. Dep't of Pub. Health*, 798 N.E.2d at 954-55 (2003). The core inquiry under this standard is whether the parties intended to enter into a truly marital relationship involving a committed, intimate relationship of mutual support and obligation. *Id.* at p. 715. The necessity to show an agreement to marry is absolute in this standard, although the Court retained the elements of *Lucero* that such an agreement could be inferred from the parties' conduct assessed within the context of the overall relationship. *Id.*

L. The *Hogsett* Court further elucidated factors which a Court should examine when necessary to infer an agreement to marry, including instances of shared financial responsibility such as leases, joint bills, filing joint tax returns, evidence of

[4] The third case, *In re Marriage of LaFleur and Pyfer*, 479 P.3d 869 (Colo. 2021), largely focused on the issue of whether same sex couples could prove the existence of a common law entered into prior to same sex marriages before Colorado legally recognized same sex marriages.

estate planning including wills, symbols of commitment (rings), the couples references to each other, and also the more traditional factors such as cohabitation, having children together, and use of surnames. *Id.* at pp. 722-725. However, it also noted the more important factors emphasized by *Lucero*, namely cohabitation, using each other's surnames, and having children together, were less decisive in modern times given the frequency with which those factors may be present in couples who both considered themselves married and not. *Id.* at pp. 722-723. The Supreme Court emphasized these points further in the *Yudkin* case, noting the purpose of a court's examination is to discover the intent of the parties to be married, not "test the couple's agreement to marry against an outdated marital ideal." *Yudkin*, 478 P.3d at 718.

M. In this case, the evidence establishes that Claimant and [Deceased Claimant, redacted] were in a long term personal relationship with a level of commitment that at one time resulted in a formal marriage. Nonetheless, their relationship deteriorated and they divorced. Moreover, the ALJ agrees with Respondents that the course of their relationship following their divorce up to and at the time of [Deceased Claimant, redacted]' passing did not mirror the "momentous act of self-definition" the Colorado Supreme Court contemplated when deciding to refine the doctrine of common law marriage. The core query of *Hogsett* is to identify the existence of an intent to be married. Here, Claimant testified that after their divorce she and [Deceased Claimant, redacted] had no plans on becoming formally married again, they did not discuss it, and it otherwise was not manifested in any express agreement. Absent that express agreement, the ALJ may try to infer an agreement from the overall circumstances presented. While the ALJ is able to infer from the evidence the two appeared to care for each other and NH[Dependent minor]'s interests, there is insufficient evidence for the ALJ conclude that those factors rose to an intent to become married again subsequent to their formal divorce.

N. The on again – off again nature of Claimant and [Deceased Claimant, redacted]' relationship does not reflect a series of events for the last several years from which agreement to marry can be inferred. Indeed, during the course of their formal marriage, Claimant and [Deceased Claimant, redacted] separated and Claimant then entered into another long-term relationship with Mr. G[Redacted], moving in with him and conceiving his child, LG[Redacted], all while still being formally married to [Deceased Claimant, redacted]. Claimant and [Deceased Claimant, redacted]' only joint child was conceived in this period while Claimant was in multiple intimate relationships at the same time.

O. Moreover, after the reconciliation from their first separation, Claimant and [Deceased Claimant, redacted] divorced, choosing to sever the marital commitment they made to each other. Claimant testified that they simply did not think much of the divorce, which she characterized as being done almost impulsively. While her characterization of the divorce may have been meant to minimize the significance of it, in doing so she also demonstrated, at least her view (if not her and [Deceased Claimant, redacted]' combined) that whether to become or remain married was less than the "momentous act(s) of self-definition," as the *Hogsett* Court discussed. That

lack of commitment to the institution of marriage mirrors the events of years earlier when they separated and Claimant entered into her long-term relationship with Mr. G[Redacted]. The course of their relationship has not been demonstrated to have been one of complete commitment even when formally married.

P. As found, Claimant testified that she and [Deceased Claimant, redacted]' relationship was "perfect" when he passed away in terms of them not fighting as often as they previously had, but that does not equate under the principles announced in *Hogsett* to constitute a marriage. As the *Yudkin* Court noted, it is the ALJ's role to discover the intent of the parties to be married, rather than apply a vague test as to whether at the time of [Deceased Claimant, redacted]' passing a traditional picture of a happy home was sufficient to apply an outdated ideal of marriage. It certainly cannot be said they were common law married after their formal divorce when they were voluntarily living apart and simply dating. While their resumption of cohabitation with the children could constitute some indicia of a marital relationship, the Court in *Hogsett* was quick to note that this holdover factor from *Lucero* is no longer reliable to demarcate a boundary between marital and non-marital unions because many unmarried couples live and have children together. The evidence presented as a whole provides scant proof that Claimant and [Deceased Claimant, redacted] transitioned back into a marital relationship after moving in together in 2018. Indeed, the evidence presented persuades the ALJ that neither Claimant nor [Deceased Claimant, redacted] considered the legal ramifications of their prior divorce and indicate in any form a desire to re-establish a relationship, which carried the attributes of a legally binding relationship. They never executed any estate planning documents. They filed separate tax returns in a manner that required the parties not be married. The entirety of both their assets were owned individually, in the form of bank accounts, credits cards, and vehicles.[5] Even the home in which they lived was owned individually by [Deceased Claimant, redacted]. From every aspect in which Claimant and [Deceased Claimant, redacted] had set up their lives, there was no sign of an intent to enter into the legal institution of marriage. See *Sara Ortega v. Blue Star Holding Company*, W.C. No. 4-661-263-02 (ICAO, April 17, 2018). This fact is even more striking in light of their prior formal marriage and the presumed understanding the two had about the role of the legal process in a marriage, regardless of the extent of their sophistication concerning legal issues. Absent the presentation of additional indicia of an intent to enter into a true marital relationship, the ALJ concludes Claimant has failed to establish that she was common law married to [Deceased Claimant, redacted] at the time of his passing.

Q. Perhaps by habit and history from their prior formal marriage (e.g. use of the [Deceased Claimant, redacted]'s surname and referring to each other as spouses, although the evidence of the latter presented at hearing was minimal), Claimant may have felt as if she was married in the context of a social institution, but there is no persuasive evidence that she and [Deceased Claimant, redacted] agreed to enter into the *legal* institution of marriage. *See Hogsett*, 478 P.3d at 715 (stating common law

[5] As noted, the identity of any person entitled to [Deceased Claimant, redacted] retirement funds and/or life insurance is unknown.

marriage is "established by the *mutual* consent or *agreement* of the couple to enter the legal and social institution of marriage.")(Emphasis added).

R. As noted, the only peripheral evidence of a marital relationship presented besides Claimant's own testimony was the testimony of Ms. Tullo stating she perhaps recalled Claimant or [Deceased Claimant, redacted] introducing each other as spouses on one occasion, which the ALJ concludes is a fact somewhat counterproductive to Claimant's case when that single occasion is weighed against Ms. Tullo's testimony about the frequency with which the families spent time together. Ms. Tullo otherwise admitted her assumption that Claimant and [Deceased Claimant, redacted] were married was based upon the outdated societal norms the Supreme Court has steered the common law marriage standard away from; i.e. cohabitation, raising kids, and use of a common surname. In this case, Claimant's use of a common surname must also be viewed in light of the context of the parties' entire relationship. The two had formally divorced, but Claimant by her own testimony was not aware her name had been formally changed as part of the divorce and she continued to use the [Deceased Claimant, redacted]'s name even after they were divorced and living apart. Her use of the [Deceased Claimant, redacted]'s name was therefore ongoing due solely to her misunderstanding that the divorce had not affected the status of her legal name.

S. Based upon the principles announced in Hogsett and Yudkin, the ALJ finds/concludes that there is insufficient evidence to prove the existence of a common law marriage in this case. Indeed, based upon Claimant's testimony that the two never talked about remarrying following their divorce, the ALJ finds a lack of evidence to support a conclusion that she and [Deceased Claimant, redacted] consented or expressed a mutual agreement to enter into the social and legal institution of marriage. Moreover, there is insufficient indicia to infer such an agreement to the extent required by the Supreme Court under the aforementioned cases. Because Claimant has failed to prove the existence of a common law marriage, her claim for death benefits must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for death benefits is denied and dismissed.

2. NH[Redacted, Dependent minor] is the sole wholly dependent person entitled to recover death benefits under the Act in this case. Respondents shall pay such benefits to NH[Dependent minor] from the date of [Deceased Claimant, redacted]'s passing until said benefits can be terminated by operation of law.

3. All matters not determined herein are reserved for future determination.

DATED: February 10, 2022

/s/ Richard M. Lamphere_____

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues set for determination included:

- Did Respondents prove by a preponderance of the evidence that Claimant sustained an injury as a result of an intervening event that occurred at Lapels Cleaners, on or around October 14, 2010, sufficient to sever the causal relationship between her present symptoms and her July 29, 2005 injury at Craig Hospital?

- Are further medical maintenance benefits provided by Michael Gesquiere, M.D. reasonable, necessary, or related to the July 29, 2005 work injury?

- Did Respondents prove, by a preponderance of the evidence, that the affirmative defense of statute of limitations against a reopening of an award for indemnity benefits is applicable?

- Is Claimant is entitled to TTD benefits from December 31, 2010 to ongoing and TPD benefits from April 30, 2010 to February 4, 201?

- Is Claimant entitled to a higher average weekly wage ("AWW")?

- Is Claimant entitled to penalties?

PROCEDURAL HISTORY

This case had an extensive procedural history before the record was closed. There were two hearings in 2016 for which counsel for Claimant sought a continuance, which was opposed by Respondents. After the June 30, 2017 hearing was completed, the case was set for a full day hearing on September 13, 2017, which was continued at Claimant's request. The parties then agreed to complete the testimony by deposition. The AWW issue was added by Order, dated August 29, 2019.

The record then remained open for the completion of Dr. Gesquiere's deposition. A dispute arose concerning the completion of the deposition, as well as payment for the transcript. This dispute was resolved by the January 31, 2018 Order.

The case was then held in abeyance pursuant to the agreement of the parties and the Order issued by the undersigned ALJ on November 7, 2019. This Order was issued to allow the parties to participate in a settlement conference.

In January 2020, a status update was requested by the undersigned and ultimately the parties advised the Court an Order was requested. Hearing transcripts

were subsequently lodged with the Court. After a delay, Volumes I, II and III of the transcripts of Dr. Gesquiere's deposition (taken on three separate days) were lodged with the Court on June 15, 2020.

The undersigned issued a Summary Order on March 26, 2021. Claimant requested a full order on March 30, 2021. An Amended proposed Order was filed on behalf of Respondents. This Order follows.

STIPULATIONS

The parties reached the following Stipulations:

1. The issue of penalties endorsed by Claimant in her February 29, 2016 Response to Application for Hearing ("RAH") was resolved pursuant to the parties' August 26, 2016 Joint Stipulation.

2. The parties agreed that Dr. Michael Gesquiere is an Authorized Treating Physician ("ATP") per the parties' July 30, 2015 Joint Stipulation.

3. The parties agreed to payment/repayment of the third deposition of Dr. Gesquiere (which occurred on June 6, 2018) in accordance with the parties' September 21, 2017 Joint Stipulation and January 31, 2018 Order.

The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

1. Claimant worked as a rehabilitation technician at Employer.

2. There was no evidence in the record which showed that Claimant suffered an injury to or required treatment for her cervical spine before 2005. There was no evidence Claimant had physical restrictions before her work injury. Claimant treated for headaches in 1997, but there was no evidence in the record that she required treatment for headaches in the five years before the work injury.

3. On July 29, 2005, Claimant suffered an admitted industrial injury while working for Employer. She was assisting a patient into a wheelchair when the patient became agitated and grabbed her neck. Claimant testified the patient hung onto her neck for several minutes.

4. Claimant sustained an injury to her neck and shoulder. Claimant testified she felt neck pain and developed a headache as a result of this injury.

5. Claimant initially received conservative treatment from ATP-s designated by Employer for her injury, including Hugh Macaulay, M.D. In the initial evaluation on July 29, 2005, Dr. Macaulay diagnosed a cervical strain and headaches, secondary to

the strain. Claimant received treatment recommended by Dr. Macaulay, which included medications and physical therapy ("PT").

6. Claimant's report of symptoms increased over time and Dr. Macaulay referred her for EMG testing, which took place on September 6, 2005 with David Reinhard, M.D. The EMG performed on this date did not show evidence of cervical radiculopathy or brachial plexopathy. The EMG showed mild to moderate median neuropathy (carpal tunnel syndrome) at the right wrist, which Dr. Reinhard opined was not work-related.

7. On December 15, 2005, Claimant was evaluated by Joel L Cohen, Ph.D. for the emotional sequalae from her work-related injury. Claimant was described as pleasant, but quite distressed frustrated by the persistent nature of her pain. Dr. Cohen's psychological diagnoses included both adjustment reaction with mixed emotional features, as well as a diagnosis of psychological factors affecting physical condition. He recommended six to eight sessions of psychotherapy. Claimant began psychotherapy, seeing Dr. Cohen in follow-up on December 28, 2005, January 4, 12, 2006, with some gradual improvement noted. The ALJ found the need for psychotherapy was directly related to the work injury

8. Claimant returned to Dr. Macaulay on January 25, 2006, with complaints of worsening headaches and neck pain with no aggravating factors, including work. Dr. Macaulay noted that Claimant underwent an MRI which showed a mild disc bulge at C5-6 on the right with possible nerve impingement. Claimant denied radicular symptoms. Dr. Macaulay's assessment was: cervical strain. Dr. Macaulay noted that the trigger point injections performed by Christopher Lafontano, D.O. (in August 2005)[1] were not overly beneficial and referred Claimant for a second opinion with Scott Primack, M.D.

9. Claimant was evaluated by Dr. Primack on January 27, 2006. Claimant reported symptoms of ongoing neck pain and radiating symptoms going into the right upper extremity. Dr. Primack's diagnoses were: cervical spine/right upper extremity-EMG/NCV was essentially unremarkable, but the cervical MRI indicated some effacement of the exiting right C6 nerve root. Claimant had been through rehabilitation and trigger point injections. Dr. Primack recommended a right C6 epidural steroid injection (ESI). The ALJ concluded this treatment was recommended because of Claimant's symptoms and the objective evidence of effacement present on the MRI.[2]

10. Claimant underwent the epidural steroid injection on February 2, 2006 which was administered by Floyd Ring, M.D. Dr. Ring noted that Claimant had no true radicular components associated with the cervical spine but had numbness and tingling into the fourth and fifth digits, as well as somewhat in the third. Claimant reported

[1] Dr. LaFontano's assessment was: somatic dysfunction of the cervical, thoracic and ribs; myalgia; cervicalgia and muscle spasm. Claimant's Exhibit 15, p. 356.

[2] Exhibit 15, p. 391.

decreased neck pain and headaches during a follow-up visit with Dr. Macaulay on February 7, 2006.

11. Claimant returned to Dr. Cohen on February 9, 16, March 2, 2006 and was making progress with regard to reducing her stress level and depression. The ALJ noted these records documented a direct connection between Claimant's emotional issues and the work injury.

12. Claimant underwent another ESI performed by Dr. Ring on March 28, 2006, for complaints of C7 distribution right arm paresthesias. She said she experienced some relief in the arm, but intensified pain in the neck.[3]

13. In the April 11, 2006 evaluation, Dr. Macaulay found that the right upper extremity dermatomes appeared appropriately innervated. Claimant continued to experience neck and upper extremity symptoms. In his report dated May 5, 2005, Dr. Macaulay diagnosed Claimant with cervical spine strain; right upper extremity parasthesias; C5-6 disk protrusion. Dr. Macaulay then referred Claimant to Andrew Daily, M.D.

14. In the neurosurgical consultation performed by Dr. Dailey on May 17, 2006, he noted Claimant had developed left upper extremity paresthesias after the injury. An MRI performed on this date showed straightening and a reversal of the cervical curvature centered at C5-6. There was a C5-6 disc bulge just touching the cord. Dr. Daily subsequently recommended a cervical discectomy at C5-6 for progressive complaints and significant degeneration. The ALJ determined Claimant required this treatment of her neck, headaches and both upper extremities as a result of the July 29, 2005 work injury.

15. On June 12, 2006, Claimant was evaluated by Stephen Johnson, M.D. [neurosurgeon]. Dr. Johnson noted that Claimant had an ESI at C4-5 with Dr. Ring that helped her headache symptoms. Dr. Johnson stated that Claimant also had a C7 injection that did not significantly help her symptoms. Dr. Johnson found Claimant initially had left wrist weakness, with mild discomfort on neck extension and finger extension on the left. Further testing was within normal limits. Dr. Johnson agreed with Dr. Dailey that Claimant was symptomatic, at least in part, from the disc disease at C5-6 and that she would benefit from the proposed discectomy and fusion at C5-6.

16. Claimant saw Dr. Cohen at regular intervals for the first six months of 2006. In the report following the session on June 16, 2020, Dr. Cohen noted that although Claimant was distressed, her situation was more stable than when he originally met with her. Claimant reported difficulties with depression that were tied to her physical symptoms. Dr. Cohen recommended that Claimant's psychotherapy continue after the surgery.

[3] Exhibit 15, pp. 225-227.

17. On June 20, 2006, Claimant underwent an anterior cervical discectomy and allograft fusion at C5-6. The surgery was performed by Dr. Dailey, who opined conservative treatment measures had failed and surgery was required.

18. Following the surgery, Claimant returned to Dr. Macaulay. Claimant initially reported that her left arm pain was gone at the time of the June 26, 2006 evaluation. By the next day, however, she told Dr. Macaulay that she was having fairly significant discomfort in her left upper extremity, but that it was somewhat less than prior to her surgery.

19. Claimant complained of neck pain and bilateral shoulder soreness in the follow-up evaluation on July 29, 2006 appointment with Dr. Macaulay. At that time, Claimant denied radicular symptoms, but had hypersensitivity in the medial aspect of the bilateral forearms. On examination, Dr. Macaulay noted Claimant had 5/5 strength in the bilateral upper extremities. Claimant was referred for PT and prescribed medications. In the evaluation on August 11, 2005, Dr. Macaulay found parasthetic sensation extending into the C6 distribution bilaterally. Dr. Macaulay noted that Claimant had 5/5 strength from a motor standpoint with relatively normal range of motion in the hands, elbows, and shoulders.

20. In the August 17, 2006 evaluation with Dr. Macaulay, Claimant complained of neck pain with headache. Dr. Macaulay noted that Claimant had full range of motion ("ROM") in the cervical spine with some decreased active ROM with rotation. Claimant said her right upper extremity felt different, which was reproduced with brachial plexus stretch, especially in the median distribution. On August 25, 2006, Dr. Macaulay indicated that his examination of films showed good stability of the cervical spine with an intact fusion. Claimant continued to have work restrictions and was unable to drive.

21. On October 23, 2006, Claimant underwent additional diagnostic testing for neurological issues with Dr. Reinhard. Claimant had symmetric muscle reflexes in the upper extremities, with no focal motor deficits. Dr. Reinhard found it was a normal EMG/NCS of the upper extremities that showed no electrodiagnostic evidence of cervical radiculopathy, brachial plexopathy, polyneuropathy, or peripheral mononeuropathy.[4] The study showed mild neuropathy at the right wrist, which Dr. Reinhard said was unrelated.

22. After the surgery, Claimant was also saw Dr. Cohen for psychotherapy. The notes from her appointment on October 25, 2006 reflected Claimant's report that her right arm had improved, but she had increased left arm complaints. Claimant continued to receive psychotherapy for depression which was tied to pain complaints.

23. Claimant was re-evaluated by Dr. Macaulay on November 6, 2006, with her chief complains listed as: cervical spine strain; right upper extremity paresthesias;

[4] Exhibit 15, p. 410.

C5-6 protrusions; ACDF, C5-6, 6/20/06. On examination, Claimant had full neck ROM, with myofascial tension found in the upper trapezius musculature, paracervical and parathoracic muscles. Reproduction of symptoms with brachial plexus stretching in the left upper extremity was present in the radial, median and ulnar distributions.

24. On January 26, 2007, Dr. Macaulay determined Claimant was at MMI. Claimant had pin in the cervical spine, as well as right and left upper extremities. At that evaluation, Claimant's diagnoses included: cervical spine strain; right upper extremity paresthesias; C5-6 disc protrusion; anterior cervical discectomy and fusion, C5-6. Claimant was assigned a 24% whole person impairment, which included a medical impairment for the cervical spine, as well as loss of range of motion. The ALJ concluded the diagnosis of right upper extremity paresthesias was evidence of an injury to this area of Claimant's body.

25. Respondents filed a Final Admission of Liability ("FAL") on or about February 1, 2007. The FAL admitted for Dr. Macaulay's permanent medical impairment rating, as well as admitting for medical maintenance benefits after MMI that were related, reasonable and necessary. The FAL reflected payment of temporary total disability ("TTD") benefits through August 14, 2006 and temporary partial disability ("TPD") benefits paid through September 4, 2006. Permanent partial disability ("PPD") benefits based upon the medical impairment rating were to be paid through June 24, 2009.

26. Claimant returned to work for Employer in 2007 and performed duties other than those when she was injured. Claimant left this employment as of January 26, 2007.[5] The ALJ concluded this was unrelated to the work injury.

27. The ALJ found that the medical records admitted at hearing documented right upper extremity pain, neck pain and paresthesias for which Claimant required treatment after the July 29, 2005 work injury. Those symptoms were reported by Claimant after Dr. Macaluay determined she was at MMI. Claimant also suffered from depression and required treatment after the July 29, 2005 work injury. Claimant also reported headaches to her treating physicians, which continued after she was found to be at MMI.

28. After she was found to be at MMI, Claimant testified she had headaches, neck pain, right shoulder pain, right thoracic pain from the shoulder blade to the spine, as well as muscle spasms.[6] Claimant was credible when describing these symptoms.

29. Claimant continued to treat with Dr. Cohen in 2007 and the records reflected regular psychotherapy visits. Dr. Cohen noted Claimant required treatment for

[5] Hearing Transcript Vol II, pp. 60:1-5.

[6] Hearing Transcript Vol II, pp. 68:1-14.

depression related to symptoms in the notes dated May 16, October 22, November 5, 2007 and January 7, 2008.

30. Claimant returned to Dr. Macaulay on April 25, 2008 and reported 10/10 pain localized in the neck, head, and shoulders. Dr. Macaulay noted myofascial tension throughout the upper extremities and especially the paracervical musculature, limited ROM with active and passive testing, subjective complaints of decreased sensation to light touch in bilateral upper extremities, what right worse than left. Dr. Macaulay prescribed dilaudid and stated that Claimant was to go to the emergency room if her symptoms worsened. On April 28, 2008, Claimant had continued complaints of bilateral upper extremity numbness. Dr. Macaulay recommended a repeat MRI of the cervical spine with gadolinium and bilateral upper extremity EMG/NCVs.

31. On May 2, 2008, a repeat cervical MRI showed minor disc bulging at C6-7, causing mild left-sided foraminal narrowing. This was objective evidence which documented the condition of Claimant's spine, including a potential pain generator.

32. On May 14, 2008, Claimant presented at the Emergency Department at Swedish Medical Center (southwest) ["Swedish"] for headache symptoms. She was treated with a course of Morphine and Zofran. Claimant also treated for headaches at the ED at Swedish on January 21, 2010 and September 13, 2010. She was also treated for chronic back and neck pain at Swedish on September 27, 2010, January 24, 2011 and August 6, 2011. Claimant treated for headaches and chronic upper extremity pain on July 1, 2013. The ALJ found this hospital treatment was causally related to the July 29, 2005 work injury.

33. James Ogsbury, III, M.D. evaluated Claimant on May 21, 2008 and characterized the disc protrusion as "significant" in his May 21, 2008 report and diagnosed status post ACDFP C5/6; persistent cervical nerve root irritation syndrome with axial pain and headache predominant and non-radicular right, greater than leg arm pain and numbness. Dr. Ogsbury noted Claimant's symptom complex had not resolved since the surgery.[7] The ALJ credited this opinion.

34. Claimant treated with Antony Euser, D.O. from 2009 through March 10, 2015. Dr. Euser initially evaluated Claimant on November 5, 2009, at which time he said he was awaiting her full chart. Claimant was noted to be on maintenance care. Dr. Euser evaluated Claimant on November 25, 2009, January 25, February 4 and March 4, 2010.

35. When Dr. Euser evaluated Claimant on March 4, 2010, she was noted to be working under restrictions and Dr. Euser's assessment was: cervical spine fusion and he monitored/refilled Claimant's prescriptions. Claimant was found to be not at MMI. This was before Claimant began working at Lapel's Cleaners. The ALJ found

[7] Exhibit 15, p. 841.

Claimant's worsening symptoms, as well as the fact she was no longer at MMI was related to her original work injury.

36. Dr. Euser saw Claimant at regular intervals, including an evaluation on April 8, 2010. As part of these evaluations, Dr. Euser monitored her symptoms and prescribed medications. In the evaluation on April 8, 2010, Claimant's headaches were noted to have continued and a CT scan was recommended. David Solsberg, M.D. noted the CT scan noted no intracranial abnormality. Dr. Euser's assessment was: cervical spine fusion; headache and hypothyroidism. The ALJ found that Dr. Euser ordered the CT scan because of symptoms related to the July 29, 2005 work injury.

37. Dr. Euser examined Claimant on May 6, June 3, July 8, August 5, September 16 and October 13, 2010. In the June 3, 2010 report, he noted Claimant was experiencing more pain, as her job had changed. Claimant did not identify a discrete injury or trauma related to this employment, nor did Dr. Euser conclude this was a new injury. These records reflected the continued need to treat cervical symtoms.

38. Claimant worked for approximately 14-15 months at Gold Label Cleaners from approximately November 2008-August 2010. Claimant also worked for a period answering telephones at home. No employment or wage records were admitted related to this employment.

39. Dr. Euser completed a medical necessity form for Insurer on October 13, 2010, in which he opined Claimant's depression was secondary to the July 29, 2005 work injury. Dr. Euser noted Claimant had experienced a severe increase in headaches, neck pain and right shoulder/trapezius pain, as well as increased numbness in the right arm. This record was evidence that Claimant's symptoms were related to the July 29, 2005 work injury.

40. Claimant began work at Lapel's Cleaners on approximately April 20, 2010. Claimant's payroll records from April 30-December 31, 2010 from Lapel's Dry Cleaners were admitted into evidence.[8] Claimant testified that the job was supposed to be easier, but she performed the job of a presser. Claimant testified she did not reinjure herself while working at Lapel's. Claimant left this employment in January 2011 and did not work after that time.[9] Claimant advised her healthcare providers that she did not think this was a separate injury. The medical records during this period of time did not contain direct references to an increase in symptoms related to the Lapel's employment

41. Dr. Euser continued to treat Claimant and evaluated her on November 18, 2010, January 6 & 25, February 10, March 3, April 7 & 28, May 5, June 2, July 7, August 4, September 1, November 3, 2011. During these appointments, Dr. Euser

[8] Exhibit 16.

[9] This was confirmed by the July 26, 2012 SSA Decision-Exhibit 17.

concluded Claimant was no longer at MMI as a result of increased pain symptoms. However, Claimant's treatment was identified as "maintenance" in these records. The ALJ inferred that this treatment was required to maintain MMI and prevent the deterioration of Claimant's condition.

42. For purposes of the statute of limitations on re-opening indemnity benefits, the deadline for requesting TDD/TPD benefits was June 24, 2011.

43. There was no evidence in the record that Claimant filed an Application for Hearing ("AFH") on or before June 24, 2011 in which she requested indemnity benefits.

44. On November 29, 2011, Claimant filed a Petition to Reopen for worsening of condition. An AFH (Expedited) was filed concurrently that same day.[10] Respondents filed a Response to the AFH (Expedited) on December 2, 2011. No hearing took place on this AFH.

45. An AFH (Expedited) was filed by Claimant on February 6, 2012 and Respondents' RAH was filed on February 8, 2012.[11]

46. On February 29, 2012, Claimant underwent an independent medical examination with Brian Reiss, M.D., at the request of Respondents. At that time, Claimant noted the headaches were most bothersome to her and she was also experiencing neck pain. Claimant stated her right upper extremity felt abnormal/dead and she also experienced scapular pain when she reached above her head, along with spasms. Claimant had constant numbness to her anterior arm, dorsal forearm and dorsum of her hand (presumably on the right side), as she denied left upper extremity complaints. Dr. Reese noted Claimant's neck rotation was limited to the right.

47. Dr. Reiss stated Claimant's current diagnoses were chronic back pain and chronic headaches, intermittent falling. Dr. Reiss said the first of these diagnoses were be causally related to a work injury, but he did not believe September 1, 2011 fall was related to the work injury. Dr. Reiss said Claimant remained at MMI. Dr. Reiss indicated it was not clear why or if her falling was related to the cervical spine injury. There was no evidence of cord injury or cord compression or myelopathy and her cervical discectomy and fusion or solid. Dr. Reiss opined it would be highly unusual to associate a problem with falling with a well-healed one level neck surgery.

48. Dr. Reiss noted treatment for her ongoing chronic neck pain and headaches was problematic. He suggested consideration of reevaluation with the rehabilitation for physician and possibly some PT, as well as modifications of medication. The medications that were reasonably related to retreatment for work injury included Lexapro, gabapentin, Cymbalta, bystolic and metaxalone. The ALJ inferred

[10] Exhibits 5 and 6.

[11] Exhibits 8 and 9, respectively.

that Dr. Reiss was not questioning that Claimant continued to require to treatment and medications, but rather was recommending an evaluation to determine the type and duration of said treatment.

49. A hearing took place on July 6, 2012, after which time ALJ Felter issued Full Findings of Fact, Conclusions of Law and Order on July 30, 2012. As part of this Order, Judge Felter concluded Claimant proved a worsening of condition and relied upon the testimony of Dr. Euser, whom he found credible. ALJ Felter found Respondents did not timely raise the statute of limitations defense to the Petition to Reopen and, therefore, waived this defense.

50. The instant case was reopened by ALJ Felter's Order, pursuant § 8-43-303(1), C.R.S. The reopening was as to medical benefits only and all other issues were reserved. A timely appeal was filed and on January 17, 2013, the Industrial Claim Appeals Office dismissed an appeal as interlocutory.[12] Pursuant to ALJ Felter's Order, Claimant was entitled to medical benefits. The medical records admitted at hearing reflected these were provided by Dr. Euser in this timeframe.

51. Even though the issue of indemnity benefits was reserved by virtue of ALJ Felter's Order, Claimant did not request those benefits before June 24, 2011, nor was an AFH filed requesting TTD or TPD benefits in 2012 or 2013.

52. Dr. Euser also evaluated Claimant on January 10, February 9 & 17, March 1, April 12, May 7 & 10, July 6, August 17, September 14, October 12 & 24, November 9, December 7, 2012. During this time, Dr. Euser continued to prescribe medications and also made referrals for Claimant. All of these appointments were described by Dr. Euser as "maintenance". The ALJ inferred Dr. Euser was of the opinion that the treatment he provided to Claimant was reasonable and necessary, as well as related to the work injury.

53. Claimant returned to Dr. Euser on January 4, 25, 29, March 1, April 19, May 28, 24, June 29, 2013.[13] A CT of the head and cervical spine was ordered by Dr. Euser, which was found to be within normal limits.

54. Dr. Euser evaluated Claimant on August 2 & 30, October 4, November 1, 4, December 6 & 14, 2013, January 3, March 7, June 2 & 20, July 11, September 5, 2014. Dr. Euser's assessment included headache; pain in joint in shoulder region; pain in thoracic spine; unspecified hypothyroidism; unspecified back disorders. Dr. Euser's records during this period of time reflected a reference to the July 29, 2005 work injury and the ALJ inferred Dr. Euser concluded the treatment required because of the injury.

[12] Exhibit 12.

[13] Hearing Transcript Vol II, pp. 58:10-12; 59:9-10.

55. The ALJ concluded from Dr. Euser's treatment records that the treatment he rendered was related to the work injury Claimant sustained while working for Employer. The ALJ incorporated by reference ALJ Felter's conclusions regarding Dr. Euser's credibility when the issue of re-opening was adjudicated. Further, based upon Dr. Euser's treatment records and his deposition testimony, the ALJ concluded Claimant's July 29, 2005 work-related injury was the cause for her need for treatment.

56. Claimant filed a Worker's Claim for Compensation against Lapel's Dry Cleaners on March 11, 2013.[14] The Claimant represented that the body parts affected included her neck, headaches, and bilateral upper extremities. Claimant listed the injury as an occupational disease with a date of injury as December 31, 2010.

57. There was no evidence in the record that a hearing was held in this case or that it was adjudicated.

58. Dr. Euser referred Claimant to Dr. Gesquiere and Claimant began treating with Dr. Gesquiere November 13, 2014. Claimant saw Dr. Gesquiere on multiple occasions from November 2014 to 2017.

59. When Claimant was evaluated on November 13, 2014 by Dr. Gesquiere, she complained of chronic right shoulder, neck and right upper extremity, headaches and migraine type pain. On examination, Claimant had significant tenderness over the right except for the talus muscle and the occipital nerve, along with tenderness over the cervical paraspinal right trapezius and rhomboid muscle. Decreased ROM was noted in the cervical spine.

60. Dr. Gesquiere's diagnoses were: chronic pain syndrome with opioid tolerance independence-patient is on multimodal therapy; cervical post laminectomy syndrome; cervical radiculopathy; right carpal tunnel syndrome; migraine headache versus occipital neuralgia. Dr. Gesquiere administered a greater occipital nerve block end right and recommended an MRI of the cervical spine.

61. Claimant underwent an EMG with Levi Miller, M.D. on February 11, 2015. The impression was abnormal and showed chronic denervation and evidence of severe right-sided carpal tunnel. Dr. Levi indicated that the study was essentially unchanged from the July 26, 2012 EMG.[15]

62. On May 25, 2015, Claimant returned to Peak Anesthesia after a repeat C6 ESI and indicated that she had more than 75% relief of pain and a significant decrease in headaches. RHE T at 252. Trigger point injections did not help. Claimant complained of ongoing neck and shoulder pain.

[14] Exhibit V.

[15] Exhibit 15 pp. 422-423.

63. Respondents filed an AFH on January 15, 2016. The AFH requested a hearing on the issues of medical benefits (authorized provider; reasonably necessary), as well as causation and independent intervening injury. Respondents also raised the statute of limitations defense.

64. Claimant filed her RAH on February 29, 2016 and requested a hearing on the medical benefits issues, as well as TTD benefits from December 31, 2010 and ongoing and TPD benefits from April 30, 2010 to February 4, 2011, as well as penalties.[16]

65. Claimant did not request reopening of the claim vis a vis indemnity benefits within six years of the date of injury or two years after the last payment of indemnity benefits was due.

66. The February 29, 2016 RAH filed by Claimant requested an Order reopening the claim with regard to indemnity benefits. The ALJ found Claimant's request for TTD benefits is time-barred.

67. Claimant continued to see Dr. Gesquiere in 2017. The records documented symptoms of cervical and upper extremity pain. The ALJ found the treatment provided by Dr. Gesquiere was to maintain MMI.

68. On May 19, 2017, Claimant underwent a repeat MRI of the cervical spine, upon referral by Dr. Kent Schreiber.[17] The MRI showed new canal stenosis at C3-4 and C4-5, upon comparison with the prior MRI from December 9, 2014. *Id*. The MRI showed mild to moderate foraminal narrowing at C6-7, which was unchanged from the previous MRI.

69. On June 20, 2017, Claimant was evaluated by Dr. Gesquiere for headaches, neck pain, right shoulder and right upper extremity pain. Dr. Gesquiere characterized this as evaluation and continued treatment of ongoing pain symptoms. Dr. Gesquiere noted Claimant had decreased cervical ROM, with significant trigger point bilaterally, worse on the right side. DTR biceps and brachial radialis appeared near symmetical, with the right biceps diminished.

70. Dr. Gesquiere's assessment was: chronic pain syndrome; brachial neuritis or radiculitis NOS; spinal stenosis and cervical region; post laminectomy syndrome, cervical region. After reviewing Claimant's MRI, Dr. Gesquiere referred Claimant to Dr. Mobley for further evaluation of the previous fusion and adjacent segment to see if pain symptoms could be resolved with revision and extension of her cervical fusion as a treatment option. Dr. Gesquiere also recommended Botox treatment. The ALJ inferred Claimant's continued symptoms related to her original injury and fusion surgery. This was borne out by the medical records related to Dr. Gesquiere's treatment.

[16] Claimant's RAH was initially stricken, but reinstated by the Order dated July 27, 2016.

[17] Exhibit U.

71. Claimant requires continuing treatment for her chronic pain which arose out of her July 29, 2005 work injury.

72. Claimant did not prove she was entitled to a higher AWW.

73. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Statute of Limitations-TTD/TPD

An ALJ has broad discretion to reopen an award under certain circumstances. *Renz v. Larimer County School District Poudre R-1,* 924 P.2d 1177 (Colo. App. 1996). However, a petition to reopen a claim is subject to time limitations. *In Re Eichstedt*, WC 4-528-268 (ICAO, Dec. 22, 2010). A petition must be filed within six years of the date of injury pursuant to §8-43-303(1), C.R.S. *See Thye v. Vermeer Sales and Serv.,* 662 P.2d 188, 190 (Colo. App. 1983).

Furthermore, a Petition to Reopen is barred unless filed within two years of the last payment of benefits or compensation pursuant to § 8-43-303(2), C.R.S. on the ground of fraud, overpayment, error, mistake or change in condition. *Calvert v. Industrial Claim Appeals Office,* 155 P.3d 474, 476-77 (Colo. App. 2006). As found, Claimant did

not request TTD/TPD benefits until after the status of limitations had run. (Findings of Fact 42-43, 51). Claimant did not provide evidence to support an argument that the statute of limitations was tolled. Therefore, the claim for reopening to recover said benefits was time-barred. The ALJ determined there was no legal authority to extend the time in which Claimant could seek indemnity benefits.

***Grover* Medical Benefits**

To prove entitlement to medical maintenance benefits, Claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once Claimant establishes the probable need for future medical treatment she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity". *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chili's Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether Claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

As a starting point, the evidence showed Claimant suffered an admitted injury on July 29, 2005 in which she injured her neck and develop symptoms which included upper extremity pain and headaches. Claimant's treatment course was both lengthy and substantial, including a cervical fusion. As determined in Findings of Fact 5–15, Claimant required treatment for symptoms that involved neck pain, upper extremity pain and headaches. Claimant also required psychotherapy, as she had symptoms of depression related to her physical injury. The ALJ concluded these were related to the 2005 injury.

Following the surgery, Claimant required extensive treatment for the cervical spine and upper extremity, as well as for headaches. (Findings of Fact 18–24). The claim was in reopened by the order issued by ALJ Felter and pursuant to said order, claimant was entitled to medical benefits. (Findings of Fact 50–51). Claimant continue to treat with Dr. Euser, who provided active treatment, as well as monitoring Claimant's medications. (Findings of Fact 52–55.) The ALJ concluded that the treatment provided by Dr. Euser was reasonable and necessary, as well as related to the July 29, 2005 injury. Claimant's treatment was then transferred to Dr. Gesquiere, who has provided treatment to the present.

The ALJ concluded Claimant met her burden of proof and showed she was entitled to maintenance medical benefits. The ALJ found it was more probable than not that Claimant's need for treatment to maintain MMI was related to the July 29, 2005 injury. This was based upon the evidence in the form of the records of the physicians (Drs. Euser and Dr. Gesquiere) who provided maintenance medical treatment to Claimant. These ATP-s treated Claimant over a period of years and they conducted

multiple evaluations, as well as documenting Claimant's symptoms. The ALJ credited the opinions of those treating physicians over the various physicians Respondents retained to perform independent medical examinations over the years, which included Dr. Ridings, Dr. Fall, Dr. Reiss and Dr. Rauzzino.

When coming to this conclusion, that ALJ considered Respondents' argument that Claimant developed new symptoms of her time and that the diagnostic testing remained unchanged over the last few years. Based on the totality of the evidence, the ALJ found Claimant consistently reported symptoms that were referable to the cervical spine, which included headaches. (Findings of Fact 52-54, 70-71). Claimant also require treatment for upper extremity symptoms that the ALJ determined was related to the injury. Accordingly, Claimant met her burden of proof and she is entitled to continued maintenance treatment to maintain her condition (and MMI) and to prevent the deterioration of her condition.

Intervening Cause

Respondents contended Claimant's employment (for different employers) and injury at a subsequent employer (Lapel's) constituted an intervening case, which served to cut-off their liability for medical benefits. Respondents had the burden of proof on this issue. On the question of intervening injury, the ALJ determined Respondents did not meet their burden of proof. An intervening injury may sever the causal connection between the injury and Claimant's temporary disability if Claimant's disability is triggered by the intervening injury. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (Colo.1970).

The ALJ concluded there was insufficient evidence to find that Claimant's work at Lapel's Cleaners was an intervening cause in this case, at least with regard to medical benefits. (Finding of Fact 41). Although her symptoms fluctuated and there were some occasional increased symptoms after her short tenure at that employer, it was more probable than not that Claimant continued to require maintenance treatment because of the original injury. The ALJ concluded Claimant consistently reported cervical symptoms and required treatment for those symptoms. The ALJ found this need for treatment was the result of the original injury. As determined in Findings of Fact 37, 42, 52-55, the medical records related to the treatment rendered by Dr. Euser and Dr. Gesquiere supported this conclusion. Claimant's testimony also supported this conclusion.

AWW

§ 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to

determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court's decision was one of fairness and Justice Plank stated:

"The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage". *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant's wages to based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant's AWW.

In the case at bar, the ALJ determined Claimant did not prove she was entitled to a higher AWW. First, the ALJ concluded that any claim for TTD/TPD benefits was time-barred. Therefore, the request for a higher AWW was moot. Second, Claimant did not establish that she would be entitled to a higher AWW because of a wage loss and lost earning capacity that was tied to the injury. As found, Claimant left the employment with Employer for reasons not related to the subject injury. (Finding of Fact 26). She had other employment following the injury and there was insufficient evidence in the record to establish that Claimant was entitled to a higher AWW, based upon a loss of earning capacity or wage loss. Claimant did not adduce evidence to make such a showing and therefore the claim for a higher AWW fails.

ORDER

IT IS HEREBY ORDERED:

1. Claimant proved she was entitled to *Grover* medical benefits to maintain MMI.

2. Respondents shall provide maintenance medical treatments to Claimant, pursuant to the Colorado Workers' Compensation Fee Schedule, as recommended by Dr. Gesquiere and his referrals.

3. Claimant's claim for TTD/TPD benefits is denied and dismissed.

4. Claimant's claim for a higher AWW is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

- Did Claimant prove she suffered a compensable occupational disease involving her neck?

- The parties stipulated to an average weekly wage (AWW) of $2,000.

- The parties stipulated that, if the claim is compensable, Claimant is entitled to TTD benefits from December 16, 2019 to January 17, 2020, at the maximum rate of $948.15. The parties stipulated Claimant is also entitled to TPD benefits but agreed to reserve the specific amount(s).

FINDINGS OF FACT

1. Claimant has been a dental hygienist since 1994. She has worked for Employer since 2013.

2. Claimant's work entailed cleaning patients' teeth and other tasks associated with oral hygiene. In performing her duties, Claimant is required to maintain relatively static neck postures for extended periods. She typically sits on the right side of patients and holds her head tilted to the right while accessing patients' mouths.

3. Claimant has a documented history of neck pain since at least 2004. She received chiropractic treatment from Dr. Randy Knoche in 2004 and 2005 for primarily right-sided neck pain and headaches. There is no indication of significant symptoms radiating into the upper extremities.

4. Claimant's neck symptoms improved, and she had no treatment for neck pain from May 2005 until August 2009. She saw Dr. Knoche on August 31, 2009 with complaints of neck pain, headaches "off and on," and right thumb pain for approximately five weeks. Dr. Knoche's records note "Px" in the thumb. The meaning of this notation is not entirely clear but based on other references in Dr. Knoche's records, "Px" probably means "pain." She had a few chiropractic sessions and her neck symptoms improved from "constant" to "intermittent."

5. Claimant sought no further treatment for neck pain until after a motor vehicle accident on November 19, 2013. Claimant's vehicle was "T-boned" on the driver's side. She suffered injuries, including a "whiplash" injury to her neck.

6. Claimant saw her PCP, Dr. Alexios Constantinides, on November 20, 2013. Dr. Constantinides diagnosed cervical and thoracic strains from the MVA. He performed osteopathic manipulation and prescribed NSAIDs.

7. On November 26, 2013, Dr. Constantinides documented neck pain with rotation but no radicular symptoms.

8. Dr. Constantinides performed OMT several times over the next few weeks. Examination findings such as spasm and tenderness to palpation remained consistent with cervical and thoracic soft tissue injuries and myofascial dysfunction. Claimant repeatedly denied any radicular symptoms.

9. On March 13, 2014, Dr. Constantinides documented Claimant was gradually improving with PT and massage therapy although her neck and upper back were fatigued at the end of the workday.

10. On June 12, 2014, Claimant reported her neck was doing better, but she had recently developed numbness and tingling in her right pinkie. She was "unsure if MVA related," and noted the finger symptoms were particularly prominent "while scaling teeth at work."

11. At her June 26, 2014 appointment, Claimant reported "both hands falling asleep."

12. On August 28, 2014, Claimant stated her neck continued to improve but she was still having numbness in her hands, worse on the right, and worse at night. Dr. Constantinides referred Claimant for an EMG "to discern cervical radic[ulopathy] vs. CTS vs. other."

13. Claimant saw Dr. Griffis for electrodiagnostic testing on September 17, 2014. Her chief complaint was numbness and tingling in the 4th and 5th fingers of both hands. She also reported neck pain since the MVA. Tinel's was positive at the elbows bilaterally. The electrodiagnostic testing showed no evidence of carpal tunnel syndrome, cubital tunnel syndrome, or cervical radiculopathy. Dr. Griffis diagnosed mild ulnar neuritis at the elbows, but ordered a cervical MRI to rule out a cervical disc herniation or nerve root impingement.

14. The MRI was completed on September 26, 2014. It showed a disc protrusion at C5-6 that narrowed the left lateral recess, contacting and slightly deforming the cord. There was no cord signal abnormality to suggest edema or myelomalacia. The MRI also showed a mild/moderate posterior bulge at C6-7. There was no foraminal stenosis or impingement at any level.

15. After reviewing the MRI, Dr. Griffis diagnosed ulnar neuritis and a chronic cervical strain. He instructed Claimant on home stretching exercises and released her from care.

16. At an appointment on January 9, 2015, Claimant told Dr. Constantinides her neck pain and hand numbness were improving with massage therapy. Her work schedule had recently increased to four day per week, and she noted increased symptoms by the end of the work week.

17. On February 20, 2015, Dr. Constantinides documented Claimant was working four days per week seeing six patients per day, which was aggravating her neck and upper back symptoms. Her pain also increased with nonwork activities such as house cleaning and yard work.

18. There are no further treatment records until a follow-up appointment with Dr. Constantinides on February 16, 2017. The primary focus of the visit was a respiratory infection and low back pain. However, Claimant also reported "some mild neck pain without recent trauma or radicular symptoms."

19. On March 30, 2018, Claimant returned with complaints of right hand weakness and reduced dexterity. The symptoms seemed to worsen after recent right-sided breast surgery. Physical examination was normal, including a negative Spurling's test. Dr. Constantinides ordered a repeat EMG.

20. Claimant reported the symptoms to Employer and stated she thought the condition was caused by "twenty-six years of being a dental hygienist" and holding her neck in awkward and fixed positions. Employer did not file an Employer's First Report, refer Claimant to a physician, or take any other action. Eventually she retained counsel who filed a claim for her.

21. Claimant saw Dr. Dale Cassidy, an orthopedic surgeon, on May 18, 2018 with complaints of pain, numbness, tingling, and weakness in the right hand. Her symptoms were primarily in the 4th and 5th fingers. The symptoms worsened while performing her work as a dental hygienist. She told Dr. Cassidy about her history of neck pain but denied any radiation from the neck down to her hand. Examination of the right arm showed normal strength and sensation except some paresthesias involving the right 4th and 5th fingers and the dorsal ulnar aspect of the right hand. Tinel's was positive medially over the right ulnar nerve. He noted "no evidence of cervical pathology and her Spurling's test and neck range of motion was generally unremarkable." Dr. Cassidy diagnosed mild lateral epicondylitis and right cubital tunnel syndrome. He gave Claimant a splint to wear at night.

22. Follow up visits with Dr. Cassidy on June 11, July 16, and July 25, 2018, showed some improvement with use of the wrist splint.

23. Claimant returned to Dr. Cassidy on October 15, 2018 with worsening symptoms in her hand and arm, including weakness. Examination of the right elbow showed no tenderness and full range of motion. Provocative testing for carpal and cubital tunnel was negative, and the recent EMG had showed no evidence of peripheral compression. Dr. Cassidy noted Claimant's symptoms were progressing down to her hand with weakness and paresthesias. He wrote "[g]iven her unusual symptoms as well as shoulder and neck pain I would recommend a scan of her cervical spine as well as brachial plexus."

24. A cervical MRI on October 27, 2018 showed C5-6 intervertebral disc height loss with a posterior disc osteophyte complex. There was moderate right neural foraminal

stenosis primarily caused by uncovertebral hypertrophy. There was no left-side stenosis. A brachial plexus MRI performed the same day was normal.

25. Claimant followed up with Dr. Cassidy on November 20, 2018 to review the MRI findings. She had some tenderness over the right lateral epicondyle but no clinical signs of cubital tunnel syndrome. Dr. Cassidy released Claimant to follow up "as needed" for her elbow and referred her to the "spine team" for evaluation of her neck.

26. Claimant saw Dr. Paul Stanton, a spine surgeon, on December 13, 2018. Her biggest complaint was ongoing right upper extremity weakness. She indicated the arm symptoms were worse when performing her job as a dental hygienist. She found relief with "resting her head." Physical examination showed mild weakness with wrist extension and biceps on the right. Dr. Stanton ordered x-rays which showed advanced disc space collapse at C5-6. He also reviewed the October 2018 MRI. Dr. Stanton opined Claimant "will eventually need to have this reconstructed," but was not enthusiastic about the prospect of surgery. He recommended a cervical ESI at C5-6.

27. Claimant saw Dr. Scott Ross, an interventional pain management specialist, on January 21, 2019. She described "rather notable right-sided neck pain and paresthesias that are in a C6 distribution." She explained the paresthesias were initially in the third to fifth digits of the right hand, but that had resolved and been replaced with weakness and paresthesias in the first and second fingers of the right hand. She described feeling clumsy and loss of dexterity.

28. The records January 21, 2019 show Claimant seen Dr. Ross "approximately seven years ago" for cervical injections. The prior records are not in evidence but Claimant only recalled seeing Dr. Ross after the MVA. She testified he performed "injections" but did not remember exactly what was done. On her intake form, Claimant stated her neck pain started "17 years ago" but the upper extremity weakness started in approximately April 2018. When asked about the cause of the problems, she marked "work injury" and "auto accident."

29. On March 20, 2019, Claimant was evaluated by David Whatmore, physician's assistant for Dr. Chad Prusmack. Mr. Whatmore noted, "since [the MVA] she has had a lot of pain on the right side of the neck, significantly worsening headaches and his started noticing some weakness developing into the right hand particularly with her grip strength." Examination showed mild weakness in the right bicep and triceps and limited cervical range of motion. Mr. Whatmore recommended a C5-6 ESI to further delineate the pain generator.

30. Dr. Ross performed a right C5-6 transforaminal ESI on April 22, 2019. She had a good diagnostic response with approximately three weeks of relief.

31. Claimant followed up with Mr. Whatmore on May 14, 2019. He opined she was a candidate for a disc replacement or a C5-6 fusion.

32. Another cervical MRI was done on November 6, 2019. It showed central and right lateral protrusions and osteophytes at C5-6, causing moderate right foraminal narrowing.

33. Mr. Whatmore reevaluated Claimant on December 9, 2019. After consulting with Dr. Prusmack, he recommended a C5-6 disc replacement.

34. Dr. Prusmack performed an anterior cervical discectomy with C5-6 artificial disc replacement on December 17, 2019.

35. Claimant responded well to the surgery and recover quickly. On March 2, 2020, she reported resolution of her neck pain and radicular symptoms. Dr. Prusmack lifted her restrictions and allowed her to return to work.

36. On April 22, 2020, Mr. Whatmore had a discussion with Claimant about the etiology of her neck symptoms. He noted she had only occasional neck pain before the MVA, and had a "marked escalation of symptoms as a result of her motor vehicle collision." Mr. Whatmore opined the need for surgery was caused by the MVA.

37. Dr. Douglas Scott performed an IME for Respondents on November 9, 2021. Dr. Scott noted Claimant's history of neck pain since at least 2004. He opined the imaging studies showed longstanding, progressive and chronic cervical spondylosis with intravertebral disc narrowing and stenosis at C5-6, "the level most often injured and cervical neck whiplash injury." He also cited Mr. Whatmore's opinion the neck surgery was necessitated by the MVA. Dr. Scott concluded the C5-6 pathology was related to the 2013 MVA "which caused a 'whiplash' which required subsequent chiropractic treatment, physical therapy, pain management, and possible cervical neck injections." He opined the need for surgery was due to the natural progression of the MVA, without regard to Claimant's work activities.

38. On July 6, 2021, Dr. Prusmack wrote a letter in response to an inquiry from Claimant's counsel regarding causation of the surgery. He opined Claimant's work as a dental hygienist exacerbated her prior neck issues and was the root cause of her need for surgery. He noted she was put at MMI for the MVA in February 2015 and released with no impairment or restrictions. There was no suggestion that she needed any surgery at that time. Over the next several years she developed progressive neck pain, arm pain and weakness that was reported to be "worse with work as a dental hygienist." He noted Claimant "was constantly in awkward, bent neck and static postures." He cited literature showing high rates of neck problems among dental hygienist and dentists because of the neck postures peculiar to their profession. Dr. Prusmack concluded that the 2013 MVA may have contributed to Claimant's neck issues, but it was her work which exacerbated these issues and ultimately required surgery in 2019.

39. Dr. Prusmack testified via deposition to elaborate on the opinions expressed in his report. He opined the pathology that led to surgery was related to both the MVA and Claimant's work, but her work contributed the "majority" of causation. Dr. Prusmack opined the MVA probably weakened the structures in Claimant's cervical spine and made

them more susceptible to injury from the prolonged static neck postures associated with her work. Dr. Prusmack pointed to the "accelerated and significant" worsening of MRI findings between 2014 and 2019, which was more than he would expect from a purely natural progression. He emphasized that the pathology at C5-6 was primarily on the right side of Claimant's spine, which correlated with years of maintaining static neck posture with her head tilted to the right. Claimant's body "counterbalanced" the work-related "asymmetries [and] poor recruitment patterns" by building osteophytes and remodeling the discs. This led to progressive right-sided foraminal stenosis and ultimately necessitated the surgery.

40. Dr. Prusmack's causation opinions are credible and more persuasive than contrary opinions in the record.

41. Aside from a few understandable memory lapses regarding details of her medical history, Claimant's testimony was credible and persuasive.

42. Claimant proved she suffered an occupational disease to her cervical spine as a direct and proximate result of her work for Employer.

43. Claimant has a surgical scar on the front of her neck approximately 2 inches long and approximately ¼ inch wide. The scar is irregularly shaped, partially raised, partially indented, and discolored compared to the surrounding skin. The ALJ finds Claimant should be awarded $2,000 for disfigurement.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001).

A pre-existing condition does not disqualify a claim for compensation. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But the mere fact that a claimant experiences symptoms during or after work activity does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The mere fact an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

As found, Claimant proved she suffered an occupational disease involving her cervical spine proximately caused by her work as a dental hygienist. Dr. Prusmack's analysis and conclusions are persuasive. The correlation between Claimant's primarily right-sided spinal pathology and her typical posture with her head tilted to the right is compelling. Dr. Prusmack is probably correct that the MVA set the stage, but Claimant's work ultimately pushed her over the edge to the point she required surgery. In that regard, Claimant's work aggravated, accelerated, and combined with her pre-existing condition to produce a need for treatment and disability. There is no persuasive evidence to suggest Claimant maintains static or awkward neck postures outside of work at a level remotely comparable to her exposure at work.

B. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant suffered visible disfigurement to her anterior neck because of the work injury. The ALJ concludes Claimant should be awarded $2,000 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's claim for an occupational disease on April 1, 2018 is compensable.

2. Insurer shall pay Claimant TTD benefits at the rate of $948.15 from December 19, 2019 to January 17, 2020.

3. Insurer shall pay Claimant statutory interest of 8% pre annum on all compensation not paid when due.

4. Insurer shall pay Claimant $2,000 for disfigurement.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he suffered compensable injuries on October 23, 2021.

II. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical benefits to cure or relieve the effects of his industrial injuries.

III. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to a one-time change of physician to Dr. Kareem Sobky at Presbyterian St. Luke.

IV. If compensable, what is Claimant's average weekly wage.

V. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits from October 23, 2020 through the date of maximum medical improvement.

VI. Whether Claimant has proven by a preponderance of the evidence that he is entitled to penalties for alleged violations of Section 8-43-203, C.R.S. and W.C.R.P. Rule 5-2 for Respondents' alleged failure to admit or deny the claim in a timely manner or if Respondents have cured any potential penalties pursuant to Section 8-43-304(4), C.R.S.

PROCEDURAL HISTORY

This matter was previously scheduled for Hearing for May 11, 2021 and came before Administrative Law Judge Edwin L. Felter, Jr. The parties submitted their exhibits at that time. Claimant stated that he did not have time to review Respondents' exhibits as they were provided electronically and he was unable to access them. Respondents stated that a hard copy of the exhibit packet had been left on Claimant's porch, but Claimant stated that he had not receive it. The parties disclose that PALJ Susan Phillips combined all issues listed on the multiple Applications for Hearing into one hearing.

There are two regular Applications for Hearing. One was filed by Claimant's prior counsel on December 23, 2020 which lists issues of compensability, medical benefits, average weekly wage ($1,191.71), temporary disability benefits and requests authorization of care under Dr. Carlos Glass, psychologist, pursuant to Dr. Corson's referral. The second one was filed by Claimant on December 23, 2020, which includes the additional issue of penalties for failure to admit or deny the claim, was accompanied by a Concentra Work Activity Status Report dated December 8, 2020 and a letter from

the Division dated December 15, 2020, stating that they had not received a timely admission or denial. The third is an Applications for Expedited Hearing—One-Time Change of Authorized Treating Physician dated January 11, 2021 with an attached Notice of One-Time Change of Physician & Authorization for Release of Medical Information filed by Claimant on January 5, 2021 for a change to Dr. Kareem Sobky at Presbyterian St. Luke, from Dr. Corson at Concentra.

Other relevant procedural history includes Claimant's Petition to the Division's Director for penalties dated January 6, 2021 and Motion for Summary Judgment dated January 15, 2021. The motions were denied on January 27, 2021 by Director Tauriello pursuant to Sec. 8-43-203(2)(a), C.R.S. It is clear that the Motion for Summary Judgement was also filed with the OAC as ALJ Steven R. Kabler also denied the motion on January 26, 2021.

A Prehearing Order for Prehearing Conference of February 8, 2021 was issued by PALJ Susan D. Phillips granting Respondents' motion to engage in discovery with the *pro se* Claimant, denying Respondents' motion to compel Claimant's attendance at an IME, granting an extension of time, vacating a prior hearing set for March 12, 2021, consolidating all issues for the rescheduled hearing, denying Claimant's motion to compel claim file as moot, and denying Claimant's motion for penalties.

On May 7, 2021 and on subsequent dates Claimant sent multiple emails to the Office of Administrative Courts demanding an order that Respondents pay for benefits based on alleged statements made during the May 11, 2021 hearing before ALJ Felter. In an abundance of caution, Respondents filed a Response to Claimant's Motion for Summary Judgment on June 17, 2021. On June 28, 2021 ALJ Felter issued an order denying Claimant's Motion for Summary Judgment.

On July 14, 2021 ALJ Felter issued an Order Concerning Hearing of August 27, 2021 indicating that any ALJ could hear this matter and that no further extensions would be allowed unless under "extreme good cause."

During pretrial matters, Claimant was advised that he had the right to be represented by an attorney and waived that right. He was also advised that he would be held to the same standard as an attorney with regard to his knowledge of the Act, rules and case law and that the court could not assist in his prosecution of the claim. Claimant acknowledge his understanding and requested leave to proceed *pro se* (self-represented).

Claimant's exhibits 1 through 13A and 15 through 17 were admitted into evidence. Respondents objected to Exhibit 1 and 4 as Claimant had circled and written on the exhibits. This ALJ took judicial notice that there were some marks and writing on the exhibits but that this ALJ would not take notice, other than as part of Claimant's position statement regarding these markings, as they do not change the wording on the documents themselves. Respondents objected to Exhibits 15 through 17. These photographs were admitted following Claimant laying a foundation. Respondents' Exhibits A through Z were admitted into evidence over Claimant's objections.

Respondents stipulated that Insurer was the correct insurer for Employer on the Claimant's claim for date of injury of October 23, 2020.

The parties stipulated that Claimant continued to be on work restrictions through April 20, 2021.

FINDINGS OF FACT

Based upon the evidence, the ALJ makes the following Findings of Fact:

1. Claimant testified that he was employed by Employer from April 1, 2020 through October 23, 2020 as a Class A truck driver. His duties included hauling flooring products in a large tractor trailer. Claimant had deliveries both within the state and out of state (Wyoming). This required Claimant to check the loads on the trailer, hook up the trailer, drive and deliver the products within a certain amount of time. He would also use a forklift to move the heavy products when necessary. Claimant was only allowed to drive up to 11 hours a day, at which time Claimant had to have overnight stays at motels. Overnights would occur approximately once per week. Claimant would be reimbursed for the overnight expenses including a per diem. Respondents would frequently pay for the motels with a company credit card. Claimant testified that on October 22, 2020 he was able to complete his job duties without difficulty, including unloading his truck while performing deliveries, and that he would not have been able to do so if he had been hurt.

2. During the week of October 23, 2020 Claimant was due to haul product from the Aurora facility to locations that were not familiar to Claimant. Claimant was assigned the new route because a co-worker was on vacation. Claimant objected to the change because he did not know the routes that had to be covered, did not have any training regarding the routes, including the delivery points and customers, the opening and closing times or the deadlines for delivery.

3. Claimant arrived at the Employer's facility extremely early on October 23, 2020 because he needed to obtain the paperwork, familiarize himself with the routes for deliveries, the loads on the trailer, the order of the delivers and whether the products were loaded in the right order in order to accomplish the deliveries. He also needed to make sure that the products were strapped in correctly. Claimant testified that the products were extremely heavy and his first delivery had to happen by 6 a.m. in the morning. On that particular day, it had snowed and the parking lot was covered in snow and ice. Claimant stated that the person in charge of the loading frequently would raise the trailer to a higher level, with the nose higher than the back end, in order to use a forklift, and would fail to level the trailer out after loading. This would cause problems when Claimant was hitching the semi-truck to the trailer because they were not able to couple correctly to secure the trailer to the semi-truck. Claimant needed to have the semi-truck come together with the trailer so that the king pin and lock achieve coupling in order to secure the load. However, if the front end was too high, this cannot happen.

4. On October 23, 2020 Claimant arrived at approximately 2:00 a.m. Claimant had been provided with the security code so that he could enter the building when needed. He entered the building to access the truck, that was kept in the building due to the cold weather. He stated that he had safety glasses, gloves, and steel toed boots, as required. He took the truck to his personal vehicle to get his personal belongings. As Claimant was walking from the vehicle to the truck, his arms full of personal items he was transferring, Claimant states he slipped on the ice and fell forward, injuring his abdomen and both knees. He states that it was so slippery that he lost control and that it was very fast. He also hit his head hard. He does not know if he lost consciousness. Claimant stated that he got up afterwards, after what he thought might have been a few minutes, and continued to the dock area to check the trailer.

5. Claimant assumed that the fall would have been caught by the security system on the building. He stated that the employees are advised that the premises are under surveillance because of the cost of the products, which could amount to millions of dollars. Claimant found out later that the security system was not operational and failed to record the fall as the video set up were just "dummies."[1] Claimant determined since Concentra was not open at that time in the morning and there was no one around to discuss what had happened to him that he would proceed with his deliveries and see how he did. He managed the pre-trip inspection of the semi-truck and drove to the dock area where the trailer was parked in the bay. He found that the trailer was too high. He tried to manually lower the trailer with the hand crank. He struggled with the crank and overstrained himself, causing severe pain in his abdomen and groin. Claimant did not know if the hernias occurred at the time of the fall or when he strained himself but his abdomen was already hurting by the time he was trying to crank the trailer down. Claimant testified that it took him approximately 20 to 30 minutes to get the trailer level so that it could be coupled with the truck.

6. Claimant identified and explained the notations he had made on the pictures he had taken of the parking lot and dock area with his phones. The parking lot and dock pictures were taken on the day of the injury at approximately 5:50 a.m.[2] These pictures were taken with his work phone. He described the hook up mechanism shown on the photos showing the large gap between the trailer and the truck (5th wheel). He stated that the lock jaws had a release handle once the coupling was achieved but it would not operate unless the coupling occurred correctly. When the trailer was not level, the trailer would show the plate on the trailer as uneven. Claimant explained that the trailer must then be lowered so that the trailer skid plate is level or parallel with the 5th wheel plate until the king pin was able to be secured on the plate then the lock jaw released, so the handle could be operated to secure the load. The building pictures were taken on April 11, 2021.[3] These pictures were taken by Claimant with his personal phone. He downloaded and printed the pictures himself. He explained that the difference in color was because he printed some pictures with his own printer, which stopped working, and the remaining pictures with his mother-in-law's printer. He testified that no other person

[1] Exhibit 1 pp. 1-2; Exhibit 17 pp. 1 & 3.
[2] Exhibit 15 & 16
[3] Exhibit 17

had access to either of his phones before he downloaded the pictures. As found, Claimant is credible and has proven that he was injured in the course and scope of his employment, injuring his bilateral knees and abdomen.

7. Once Claimant was on his way, he was forced to stop at the open weigh station. He was advised that he was significantly overweight, at approximately 68,000 pounds. He returned to the facility and unloaded some of the product that he no longer had time to deliver that day due to the delays. He used a forklift to perform the activity. Claimant testified that he was in pain the whole time he was working that day and asked the customers to perform the unloading. On his way back, he contacted Concentra. He was asked questions, including whether he had been exposed to COVID-19. Claimant disclosed that he had been at the VA Hospital, after which he received a call that he might have been exposed. Concentra advised that they would be unable to see him for an exam until after a fourteen day self-quarantine.

8. Claimant returned to the Employer's facility and advised the management that he could not unload the trailer. Claimant stated he later communicated with the Human Resources department for Employer by email, specifically the HR Consultant (J.B.), regarding the accident and incident and the fact that Concentra refused to see him for the next two weeks due to COVID-19 exposure. Since Claimant failed to receive a response from HR, he consulted with his personal provider, Dr. Tutt. He was provided with an appointment for the following Monday. Claimant stated that he did not discuss the work injury with his supervisor because he considered that he had a "hostile work environment" and was not getting along with his supervisor. Specifically, he discussed that his supervisor had threatened him not to make any further complaints about any issues about the company work or the other workers. He therefore would only discuss matters directly affecting his work, schedule or hours, not his medical conditions. As found, Claimant is credible in his testimony.

9. Claimant's direct supervisor testified that he provided text messages that he had kept from communications between himself and "[Claimant's first name] Driver," who he stated was Claimant.[4] The texts included several from June 2020, when Claimant had discussed a work-related back injury that subsequently resolved on November 9, 2020. On Monday, October 26, 2020 Claimant sent the following text to his supervisor:

> Claimant:
>
> Good evening Sir, I have a problem. I was informed today that I may have been exposed to vivid [sic.] 19 at the VA where I go for some of my therapy sessions.
>
> I will begin a new test and screening tomorrow, but not sure how things are handled at work??? I'm being told I should self quarantine for 2 weeks but need to communicate with you.
>
> …

[4] Exhibit 0, bates 75-89.

I attempted my therapy, but was turned away until I complete my screening period and am determined to be safe.

Supervisor:

... If you are not showing symptoms you can come to work.

Claimant:

Do I request sick time, or PTO. I have a mild grade fever and have felt a little sluggish since Friday morning. I need to go to clinic for test and first screening tomorrow, I'd like to request time off.

Supervisor:
Ok let me know when you plan to be back.

Claimant:
I will speak with doctors and keep you informed, thanks Sir.

On October 28, 2020 Claimant sent his supervisor a text stating:

Claimant:

Hello Sir, just spoke with Mr. P[HR] and informed him I don't have a doctor's release to return to work yet. I see my primary care doctor Monday morning and she will provide me with instructions from there. I will make every effort to keep you informed as soon as I get answers myself.

10. On October 29, 2020 Claimant mentions that he may be seeing a specialist but when questioned by his supervisor for what, he failed to respond. The October 30, 2020 text references that Claimant had submitted information addressing further medical concerns to HR. This was repeated on November 2, 2020, stating that he had texted the information to the HR Consultant. On November 3, 2020, though it seems that the texts are from a different phone or text stream.

11. Claimant responded on Friday, Oct 30, 2020 as follows:

Claimant:
Good morning Sir, I've submitted information to Human Resource addressing the further medical concerns. But on a more pressing scale, I am unable to enter the Paylocity program to enter medical leave for this week, or next. Can you please assist and enter hours for me? Thanks.

12. It is not apparent from the texts that the supervisor responded to the above text based on the provided texts. On Monday, Nov 2, 2020 Claimant sent his supervisor a follow-up text:

Claimant:
Good afternoon Sir, my primary doctor states my fever has returned and my blood pressure is extremely high, so they are continuing the quarantine for now. Other medical information has been sent to HR.

Supervisor:

[Claimant] Hr will be calling you today. They said they haven't heard from you?

Claimant:
Ok, I have been texting Ms. [HR Consultant]'s number all my information.

Supervisor:
Make sure you speak with her today please.

Claimant:
I will be expecting and awaiting her call.

Claimant:
[Supervisor] I tried to call Ms. [HR Consultant] at 801-349-2595 but got no answer. Not sure why I can't reach her for follow up.

Supervisor
That is the correct number so I'll let her know.

Claimant:
Thanks Sir

13. On Tuesday, Nov 3, 2020 the supervisors' texts screen show:

Claimant:
Sorry, I can't talk right now.

14. The next text in the exhibits shows "Text Message, Friday 7:41 AM." It is suggested by the placement of this text that since it is on the same screenshot as the prior November 3, 2020 text, that it would be Friday November 6, 2020. It seems to be addressed to the HR Consultant. This text does not display as the other text sent by Claimant in a grey box, but in green, like the texts from the supervisor. It looks like a copy and pasted text so it may be from October 30, 2020. The text states as follows:

Claimant:
Good morning Ms. [HR Consultant], I'm writing to inform you I may have suffered an OJI. I fell on the ice last Friday in the company parking lot as I was getting ready for driving at 2am. I believe I may have injury to my

Then the message is cut off and continues "necessary by my medical providers." Then another cut off portion states "I believe the hernia problem is the…" and again it is cut off. Following these partial messages, another message from Claimant to his supervisor on "Wednesday at 3:03 PM" states:

Claimant:
Hey [supervisor], I finished sending the rest of those messages to Ms. [HR Consultant] myself. Have a good evening.

15. This ALJ infers from the texts above that Claimant likely authored the texts but, whether the text messages were truly authored at the times suggested by the order

of the list provided by the supervisor is in question. Some texts were clearly sent to the supervisor by another individual such as the time reference of "Text Message, Friday 7:41 AM" as it looks different than the other texts and is in green instead of gray as other texts which are likely authored by Claimant. This ALJ finds that the texts under Finding of Fact numbers 9 through 14 are, in fact, texts sent by Claimant. This is supported by certain references made by Claimant on October 26 which stated that "I attempted my therapy, but was turned away until I complete my screening period." This is consistent with Claimant's testimony that he attempted to see someone at Concentra but was turned away due to his COVID exposure. It also follows that Claimant informed his supervisor on October 28 that he "just spoke with [HR] and informed him I don't have a doctor's release to return to work yet. I see my primary care doctor Monday morning and she will provide me with instructions from there." This is supported by the fact that Claimant was seen by Dr. Tutt on November 2, 2020. And on October 30 Claimant stated "Good morning Sir, I've submitted information to Human Resource addressing the further medical concerns." From all this information, this ALJ finds that the copied text message listing "Text Message, Friday 7:41 AM" was more likely than not a text message originally sent by Claimant to the HR Consultant on Friday October 30, 2020, advising them of the prior Friday's work related slip and fall accident and clearly advised of the hernia problem, though the full text message was not displayed by the evidence submitted. However this is supported by Claimant's testimony listed above explaining how he was injured and reported the injuries, who's testimony as listed above in Findings of Fact 1 through 8 is found credible.

16. The last text dated "Today 8:18 AM," which this ALJ infers to have taken place around November 9, 2020, based on the supervisor's testimony and the employment records, detailing the Claimant's termination, is clearly addressed to multiple individuals, and states:

> Claimant:
> Good morning all, trying to get things off on a good note. Just need to get my final paycheck provided today as per Colorado guidelines. [Supervisor] I need my clipboard out of the truck, and I will be returning company products as well. [First unknown person] I'll need information on what I need to do to file my short and long term disability claim thru the insurance. [Second unknown person], you're right, Work Comp will take care of my OJI concerns. Thanks, [Claimant].

17. Claimant has a past history of several medical conditions. On June 26, 2016 Claimant was under the care of Dr. Charles Glass, a psychologist, due to a diagnosis of adjustment reaction with anxious features, relating to an on the job slip and fall injury in 2015 when he injured his right shoulder.[5] This care related to Claimant's fear of surgery and his past experiences with surgeries.

18. Claimant went through the Division Independent Medical Examination (DIME) process in 2017, as a result of his right shoulder injury in 2015.[6] The evaluation

[5] Exhibit P, bates 90-93.
[6] Exhibit T, bates 199-231.

included multiple conditions. The DIME physician identified no masses or tenderness in the abdomen.[7] The DIME documented examining the lower extremities showing muscle tone is diminished on gross inspection on the right side compared to the left. He found mild bilateral iliotibial-band tenderness on palpation, sitting straight leg raising was near full, with evidence of hamstring tension bilaterally. Surgery of the right shoulder occurred in April 2017.[8] The first documented work-related injury occurred on September 20, 2007, documenting thoracolumbar condition, for which he was given an impairment rating.[9] The DIME physician noted that the MRI of the lumbar spine showed a mild disc bulge from L4-S1 with moderate facet hypertrophy changes at L5-S1 but found that the lumbar spine condition was not related to the 2017 injury.

19. Claimant had a substantial right knee injury and surgeries resulting in a total right knee replacement (TKA) in January 2018.[10] Prior to surgery he was diagnosed with right knee osteoarthritis (OA) with retained hardware from prior ORIF for Tibial Plateau fracture and prior anterior cruciate ligament (ACL) reconstruction. In April 2018 Claimant complained of left foot problems and was diagnosed with a left foot second intermetatarsal space neuroma.[11]

20. Dr. Cebrian reported that on August 1, 2019 Claimant was seen at UCHealth Emergency Care by Dr. Matthew Zuckerman and Claimant reported that he had a past history of chronic low back pain.[12]

21. Past medical-history is positive for hypertension diagnosed in the mid-1990's, diabetes diagnosed in 2017 and blood clots experienced in 2015 related to contusions to the right lower extremity.[13]

22. Claimant underwent a Department of Transportation (DOT) physical on March 26, 2020. At that time, Nurse Kathy Okamatsu completed the Federal Motor Carrier Safety Regulation examination, including of the abdomen and lower extremities for any abnormalities. She advised that Claimant had no abnormalities for the abdomen or the extremities and met the federal standards but required periodic monitoring of hypertension, finding Claimant qualified to continue driving. The same nurse also performed the October 22, 2019 DOT exam, making similar findings.[14]

23. On August 31, 2020 Claimant established care with Dr. Jennifer Marie Tutt at Centura Health. Dr. Tutt stated that Claimant had hyperextended his left knee four weeks prior to the exam but his symptoms had been slowly improving since the incident.[15]

---

[10] Exhibit R, Kaiser medical records, bates 143-162; Exhibit S, bates 170-198.
[11] Exhibit R, bates 167-168
[12] Exhibit Y, bate 439.
[13] Exhibit T, bate 221.
[14] Exhibits 5 and 5B.
[15] Exhibit U, bates 236.

24. Claimant returned to Dr. Tutt on November 2, 2020. Dr. Tutt stated that she was unable to fully examine Claimant as he had been exposed to COVID-19 and had a mild temperature on November 2, 2020. She suspected Claimant has an inguinal hernia so she ordered an ultrasound of the groin and also a referral to general surgery. She also placed a referral to orthopedic surgery.[16] Dr. Tutt assessed the following: [17]

> 1. Groin pan.
> Complains of having left groin pain and swelling for almost 2 weeks.
> Symptoms occurred after he slipped on the ice in a parking lot.
> The swelling/bulging gets worse and more painful with deep cough.
> Concerned he may have a hernia. Has a history of a right-sided hernia requiring surgery 12 years ago.
> Minimal pain at rest however with a cough pain can be quite severe. Has been taking Aleve with only partial relief.
>
> 2. Knee pain.
> C/o having left knee pain x 3-4 months.
> Injured his knee by twisting/hyperextending it several months ago.
> At that time had persistent swelling and pain. His symptoms gradually improved with time and using Voltaren gel.
> Reinjured his knee 10 days ago after slipping on ice.
> His current pain is worse than it was before. At rest his pain is a 6 out of 10.
> Has been taking Aleve with partial relief.

25. Respondents completed a First Report of Injury (FROI) on November 6, 2020 documenting that Respondents were notified of the work related injuries on November 3, 2020 regarding injuries to Claimant's knee and groin due to a fall. They reported the date of injury as October 22, 2020[18] and stated that was Claimant's last day of work. The form was completed by an HR Employer Representative, the HR Consultant, which noted Claimant's average weekly wage as $1,180.00.

26. An Employer Termination Slip was issued on November 9, 2020, stating that Employer was unable to accommodate Claimant's light duty restrictions and Claimant was formally terminated from employment with Employer as of November 9, 2020.[19]

27. Claimant was first seen at Concentra on November 9, 2020 by Nurse Kathy Okamatsu. The history reported was that Claimant was in the process of moving items from his personal truck to the company truck, while walking on the icy parking lot. He slipped on the ice, falling forward and landing on both knees but that he did not strike his head. Shortly thereafter, Claimant used both hands to turn the crank arm of his truck to move the landing gear, while lowering the high trailer and had a sudden onset of pain in the left groin. On exam Nurse Okamatsu found tenderness over the left lateral collateral ligament, over the medial collateral ligament and diffusely over the posterior knee. Upon palpation of the left knee she found crepitus and that Claimant had abnormal flexion and

[16] Exhibit U, bates 259.
[17] Exhibit U, bate 261.
[18] Instead of the correct date of October 23, 2020.
[19] Exhibit L, bate 57.

extension while performing range of motion, though without pain. She found mild swelling and tenderness of the right knee proximally to the patella. She also observed mild limping. Upon palpation of the abdomen, she noted that Claimant may have a left inguinal hernia. She assessed that Claimant had a strain in the left groin, and bilateral knee injuries. Nurse Okamatsu made a causality determination, stating that it is at least 51% likely this condition is a result of exposure at work. She ordered an MRI of the left knee and an ultrasound of the abdomen, as well as x-rays of the bilateral knees. She provided restrictions of lifting up to 10 lbs. occasionally, push/pull up to 15 lbs. occasionally, no squatting or kneeling.

28. Claimant had a limited abdominal ultrasound of the left groin area, on November 9, 2020, which showed a large indirect inguinal hernia.[20] This was pursuant to Nurse Okamatsu's referral. Also on November 9, 2020, Claimant obtained an MRI of the left knee, also pursuant to Nurse Okamatsu, which showed a horizontal tear of the left knee medial meniscus of the posterior horn, mild to moderate medial compartment arthritis, subchondral edema of the medial tibial plateau, moderate patellofemoral compartment osteoarthritis with some moderate to high-grade involvement of the central to lateral trochlea, subchondral edema, and left knee joint effusion.[21]

29. On November 11, 2020, Dr. Thomas Corson reviewed the MRI results with Claimant, which revealed a left medial meniscus tear of the posterior horn and the ultrasound reveals a reducible hernia. Dr. Corson reported Claimant's history of "significant PTSD and severe anxiety (he became tearful and anxious upon hearing the results and the likelihood of needing surgery for the hernia and possibly the meniscus. He sees a psychiatrist for his PTSD and says he was going to need to see him after hearing this news. He has a significant phobia of surgery." Claimant also reported that his right knee was still causing him a fair bit of discomfort as well. On exam Dr. Corson found reducible hernias on both the right and left inguinal sites. He also found swelling of the left knee over the medial joint line and tenderness as well as altered gait. He noted that Claimant was anxious, concerned, quiet and tearful. Dr. Corson modified restrictions to include 5 lbs. lifting occasionally and may not walk on uneven terrain or climb ladders. Claimant was referred to Dr. Robert Glass, psychologist (to assist Claimant with severe anxiety due to likelihood of surgery); to a general surgeon for the hernia, to an orthopedic surgeon at Steadman Hawkins in Vail, Dr. Hackett, for the knee conditions and to physical therapy.[22]

30. Employer sent Claimant a COBRA letter dated November 16, 2020 advising Claimant that he would no longer be entitled to health insurance benefits from Employer as of his termination on November 30, 2020. If he wished to continue health benefits under COBRA beginning December 1, 2020, he would be required to pay a premium of $1,172.61 per month to cover medical, dental and vision benefits.

[20] Exhibit U, bate 318.
[21] Exhibit U, bates 333-334.
[22] Exhibit V, bates 358-362.

31. Respondent Insurer filed a Notice of Contest on November 19, 2020 stating further investigation of prior medical history and compensability evaluation was needed.[23] The Notice of Contest (NOC) showed a date of injury as October 22, 2020[24], consistent with the FROI filed by Employer. It is noted that the claim number on the NOC of "5153276" is the correct one for this claim, identified Claimant by name, address and social security number as well as the correct Employer and Insurer for this claim.

32. Employer's Statement, which is dated December 1, 2020 and signed by HR Consultant, stating that Claimant was no longer employed as of October 30, 2020.[25] It shows that as of June 1, 2020 Claimant's weekly earnings were $1,191.71 and Claimant worked 40 hours a week.

33. Dr. Charles Glass documented on December 3, 2020 that Claimant was interested in pursuing psychological evaluation and treatment but appointments were only being conducted by telehealth because of the Coronavirus pandemic and Claimant did not have the technical capability to have telehealth appointments.

34. Claimant returned to Concentra for follow-up on December 8, 2020. Dr. Corson examined Claimant, and palpated reducible right and left inguinal hernias. He found right knee swelling, tenderness diffusely over the anterior knee, over the lateral joint line, over the medial joint line, in the undersurface of the patella, in the inferior pole patella, on the distal patella tendon, in the mid portion of the patella tendon and in the superior pole patella, with limited range of motion in all planes. Dr. Corson found swelling of the left knee at the medial joint line, the patella, with tenderness over the medial collateral ligament, diffusely over the medial knee and diffusely over the posterior knee, in addition to crepitus and limited range of motion in all planes. He stated that MMI was unknown because he was awaiting specialist input. He assessed acute medial meniscal tear of the left knee, injury to the right knee and inguinal hernias. Dr. Corson stated that the objective findings were consistent with history and work-related mechanism of injury.

35. On December 15, 2020 the Division issued an Urgent Notice Requiring Immediate Response. It notified Respondents that the period for filing a timely position statement had expired and that they were potentially in a penalty situation, as an admission or denial had not been filed with the Division. As found, Respondents complied with the requirement to file a Notice of Contest on November 19, 2020, though Division may have rejected it due to discrepancies of the date of injury.

36. On December 22, 2020 Dr. Corson again evaluated Claimant and continued to provide work restrictions of lifting up to five pounds, pushing and pulling up to fifteen pounds no crawling, kneeling, squatting, climbing or walking on uneven surfaces.

37. Claimant filed a Notice of One-Time Change of Physician & Authorization form on January 5, 2021 requesting a change from Dr. Corson to Dr. Sobky. On January

[23] Exhibit 10.
[24] Instead of the correct date of October 23, 2020.
[25] Exhibit 9.

6, 2021 Respondents denied the change of physician as Dr. Sobky was not on the designated provider list. Attached to the letter was a designated provider list but nothing on the list or document showed this had been provided to Claimant. Claimant testified that he did not receive the list until he received the January 6, 2021 letter. As found Respondents failed to use the correct form required by the rules as there is no certificate of mailing nor is it signed by Claimant. As further found, the designated provider list was not provided in a "verifiable manner"[26] as required by the rules. It is also found that Claimant filed the One-Time Change of Physician request within ninety days of the date of the injury. The deadline was January 21, 2021, pursuant to Sec. 8-43-404(5)(a)(III)(A), C.R.S. and W.C.R.P. Rule 8-5(A). Therefore, Claimant is entitled to a one-time change of physician under this provision. Claimant testified that after he filed the Notice he changed provider to Dr. Sobky who took over care.

38. Dr. Kareem Sobky of HealthOne/OrthoOne, of Colorado Limb Consultants, evaluated Claimant on January 13, 2021 for the bilateral knee problems. He obtained x-rays that showed a total right knee arthroplasty in good position, no sign of obvious complications though a small fleck of bone or cement at the superior pole of the patella, but that the implants seemed to be stable. He also reviewed the left knee MRI, which he read as showing a medial meniscus tear, full thickness chondral loss, full thickness chondral loss of the medial femoral condyle. Dr. Sobky referred Claimant for physical therapy for edema control, strengthening of the quads, hip girdle, stabilization of the bilateral knees, and modalities twice a week for six weeks.

39. On January 15, 2021 Insurer filed an Amended Notice of Contest, which stated that it was "refiled to correct DOL [date of loss] to 10/23/2020." It included the claim number as "5153276," which is the correct workers' compensation claim number in this matter.

40. Claimant was evaluated by Dr. Anthony Canfield first on February 23, 2021 for the bilateral inguinal hernias. It is inferred that this was pursuant to a referral within the chain of referral as the "Workmen's Comp. coordinator" was present during the evaluation. On exam, Dr. Canfield, found that there was a left inguinal hernia palpable with Valsalva but the right side was uncomfortable but he did not feel a hernia on the right. He ordered a right sided dynamic ultrasound to rule out possible right groin recurrent right inguinal hernia. Dr. Canfield on exam found Claimant was negative for back pain or joint stiffness and had a steady gait. He stated that the right and possibly the left inguinal injuries were work related. On February 24, 2021 he filed a request for surgery authorization scheduled for March 18, 2021 at Presbyterian St. Luke.

41. Claimant underwent an MRI of his right knee on March 3, 2021. The MRI showed low signal intensity thickening and internal architectural distortion of the quadriceps tendon; longitudinal clefts of hyperintensity at the patellar insertion consistent with partial tearing, overall comprising approximately 15% of the cross-sectional

[26] Exhibit M, bate 58-59.

circumference. The right knee showed signs of mild proximal tendinosis without signs of a tear.[27]

42. Dr. Sobky assessed Claimant again on March 12, 2021. He read the right knee MRI, which showed an interstitial tear of the distal lateral quadriceps but no avulsion, loosening of the prosthesis or fracture of the prosthesis, no patellar tendon or quadriceps tendon avulsion. He found no significant effusion at that time. Dr. Sobky stated that Claimant continued to have significant bilateral weakness of the lower extremities, significant quadriceps atrophy of the right lower extremity, dysfunction and derangement of the left knee, tear of the medial meniscus of the left knee, and noted that Claimant was anticipating hernia surgery the following week. Dr. Sobky advised that he would take additional x-rays of the right knee on his follow up visit to determine what other treatment would be needed but that he should continue with physical therapy.

43. On March 25, 2021 Dr. Alexandra McKenzie issued a report following a limited ultrasound of the right inguinal area. She found no definite evidence of a right inguinal hernia, stating that the ultrasound was limited by artifact shadowing related to existing mesh and the radiologist recommended a CT scan for further evaluation.

44. Dr. Corson stated on March 30, 2021 that Claimant's general surgeon, Dr. Canfield, had ordered a CT of his abdomen. He also documented that the MRI of the right knee showed some particle disease, but did not have the actual reports to review. He continued to state that the objective findings were consistent with history and work-related mechanism of injury. Dr. Corson continued to provide work restrictions consistent to those provide in December 2020.

45. On April 20, 2021, Dr. Carlos Cebrian authored an independent medical evaluation (IME). Respondents retained Dr. Cebrian, to conduct an IME evaluation which took place on April 5, 2021. Dr. Cebrian opined that Claimant's alleged mechanisms of injury did not support that he suffered a work injuries on October 23, 2020. Dr. Cebrian addressed the four areas of complaint in order. Regarding the left knee, Dr. Cebrian noted that Claimant's left knee pain complaint began the summer of 2020 due to a hyperextension and twisting injury documented by Claimant's personal care provider Dr. Tutt. Claimant's described his mechanism of injury to Dr. Cebrian as falling forward onto his knees. Dr. Cebrian stated this would be consistent with a bruise or strain, but would not with a meniscal tear. Regarding Claimant's right knee, Dr. Cebrian opined that Claimant had a history of right knee pain and complaints, including a prior right knee arthroplasty. He noted that Claimant did not complain of right knee pain on his initial evaluation with Dr. Tutt and therefore, the right knee complaints were pre-existing, not related to the work injury. Regarding Claimant's hernia, Dr. Cebrian noted that there was no evidence of a right-sided hernia condition. Regarding the left-sided hernia, Dr. Cebrian noted that Claimant's hernia was very large on the initial sonogram, indicating that it was a pre-existing condition. Dr. Cebrian noted that Claimant has a history of hernia repairs including a repair in 2007. Dr. Cebrian concluded that the request for a left inguinal hernia repair was not causally related to the work injury.

[27] Exhibit Z, bates 460-461.

46. Dr. Corson, either by coincidence, communication with the nurse case manager, who was present by telephone throughout the visit, or by receipt of Dr. Cebrian's report, determined on April 20, 2021 that Claimant had reached MMI without need for further care or restrictions. However, his report still documented that the objective findings were consistent with history and work-related mechanism of injury. His assessment was as follows:

1. Acute medial meniscal tear, left, initial encounter (S83.242A)
2. Hernia, inguinal (K40.90)
3. Knee injury, left, initial encounter (S89.92XA)
4. Knee injury, right, initial encounter (S89.91XA)
5. Painful orthopaedic hardware (T84.84XA)
6. Strain of groin, left, initial encounter (S76.212A)

47. Dr. Cebrian testified at hearing consistent with his report. He stated that Claimant had a lengthy history of right knee complaints, including a right total knee arthroplasty. He testified that Claimant's right knee x-ray and other imaging studies did not show any damage to the hardware. With regard to the partial 15% quadriceps interstitial tear shown on the MRI, he stated that it was too small to be significant and was probably age related. Dr. Cebrian testified that Claimant's left knee meniscal injury pre-dated the work injury as documented in August and November of 2020 reports by Dr. Tutt. Dr. Cebrian testified that Claimant's left knee meniscal tear was consistent with a twisting injury not a straightforward fall to his knees initially described by Claimant. Lastly, Dr. Cebrian stated that there was no evidence suggesting that Claimant had or has a right-sided hernia and that inguinal hernias are generally the result of congenital non-work factors, that an upper body cranking motion would not put significant pressure on the groin in a way that would cause or worsen an inguinal hernia. Dr. Cebrian also noted that Claimant had not complained of lower back pain until approximately six months after the work injury. As found, while Dr. Cebrian opined that that the work related incidents of October 23, 2020 did not cause Claimant's injuries to his bilateral knees and inguinal areas, this ALJ does not find his above-summarized report and hearing testimony credible.

48. Claimant testified that when he slipped on ice, he had multiple items in his hands as he was transferring them from his personal vehicle to his work truck. He was unbalanced and was slipping and sliding on the ice. He fell forward but knows that he was unstable on the ice before he actually fell forward. He did not recall exactly how much twisting involved in the manner in which he was falling but knows there was some twisting involved before he fell forward. He also stated that while he was attempting to use the crank handle to lower the loaded trailer, he was slipping on the ice and had to attempt to lower the trailer multiple times before he was successful, all the while slipping on the ice, which was shown in the pictures he submitted.

49. Claimant agreed that he had prior problems with his knees, but not to the extent as after the October 23, 2020 injury. He did not deny that he had a hyperextension problem in the summer, but that it had resolved by the time of this injury, with the care he

had been previously given. He advised Dr. Tutt of that fact, which she documented. He also stated that his abdomen was sore after he fell but that the force involved in pulling on the hand crank was very significant because the trailer was overloaded with 68,000 lbs. of materials and he was slipping while performing the task. He disagreed with his supervisor that the crank was easy to move. Claimant's testimony is credible and persuasive.

50. Claimant testified that he believed he earned $28.00 per hour plus overtime and incidentals. His incidentals were overnight trip per diem of approximately $500.00 per week. He received approximately $125.00 for the phone, $80.00 for the meals and for hotels up to $300.00 per night. Claimant also testified that when Claimant was stranded for the weekend on a Saturday, that his hours were not compensated despite being away from home. He also testified that he did not return to work after the October 23, 2020 date of injury, that Employer made a mistake in first reporting the injury as having occurred October 22, 2020 and that he was formally terminated as of November 9, 2020 because of his restrictions.

51. Claimant's direct supervisor testified he was the warehouse manager for Employer. He stated that someone that has a work related injury can report to him but that Claimant did not. He conceded that employees could report work injuries directly to the Human Resources (HR) department. He would generally communicate with Claimant directly or by text. He identified [Claimant] Drive as Claimant in the text messages he provided, as listed above. He stated that he was not at the warehouse until approximately 7:30 a.m. each day. He stated that Claimant was paid hourly and was provide $20.00 per diem for breakfast and $60.00 per diem for dinner. The supervisor stated that generally he paid for hotels or motels with his own credit card, which was approximately $100.00 to $200.00 per night but that they would reimburse employees for out of pocket costs. The supervisor stated that the crank is not difficult to move but could not state what amount of strength or force in terms of pounds is required or if the weight of the trailer would change the amount of force involved, but that drivers had to do it every day.

52. Insurer's Senior Claims Representative testified that he had been involved in the claim since December 2020. The Claims Representative stated that Insurer received the claim on November 6, 2020. He stated that Insurer's records show that they sent in the Notice of Contest dated November 19, 2020 but that Division rejected the NOC because it did not have the correct date of loss that corresponded with the workers' compensation number. Insurer received correspondence from Division and documented a conversation with a Division representative regarding the NOC that was filed. Insurer then communicated with Employer to resolve the issue of the date of injury. After the Claims Representative was able to communicate with Employer and received further information, Respondent Insurer filed a new NOC on January 15, 2021. He advised that NOCs are required to be filed electronically with the Division pursuant to the rules but that hard copies are sent to the parties. The Claims Representative is found credible. As found, it is determined that Respondents filed a timely Notice of Contest in this matter, which was likely rejected by the Division due to the discrepancy in the date of injury. As

found, both NOCs provided Claimant notice of Respondents' position and no penalties are due for failure to admit or deny.

53. The wage records show that Claimant earned $30,367.87 from April 1, 2020 through October 15, 2020 for a weekly average of $1,073.61 [$30,367.87 / 198 days x 7 days]. This ALJ considered that Claimant received an increase in hourly earnings to $27.50 per hour as of June 1, 2020, and that Employer reported Claimant's average weekly wages as $1,180.00 and $1,191.71 in two separate documents. Despite these facts, as found, it is determined that the fair approximation of Claimant's average weekly wage (AWW) as of October 23, 2020 is $1,153.61, which includes the $80.00 per diem and the average earnings from April 1, 2020 through October 15, 2020. As of December 1, 2020, Claimant lost his health benefits, including medical, dental and vision. Claimant's COBRA benefits amounted to $1,172.61 per month or $270.60 per week [$1,172.61 x 12 / 52]. Therefore, as found, Claimant's AWW, beginning on December 1, 2020, was $1,424.21.

CONCLUSIONS OF LAW

Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2020. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion).

Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to

produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

As found, Claimant was injured in the course and scope of his employment on October 23, 2020. Claimant slipped on ice in Employer's parking lot, injuring his bilateral lower extremities, including a meniscal tear on the left side and aggravating the right knee as well as causing a quadriceps injury on the right. The accident also resulted in injury to his bilateral inguinal areas causing a definite hernia on the left side and possible hernia on the right side, aggravating the preexisting right sided conditions. This is supported by Claimant's testimony, which will not be recited here, but is contained in Findings of Fact 1 through 8 as well as Findings of Fact 15, 48 and 49. This determination is also supported by the opinions of Dr. Corson, Dr. Tutt, Nurse Okamatsu, Dr. Sobky and Dr. Canfield.

Specifically it is found that Claimant injured his left knee, right knee and quadriceps, and bilateral inguinal areas on October 23, 2020 as a direct consequence of the fall and subsequent efforts in cranking motions to secure the trailer to the truck on October 23, 2020. Dr. Tutt stated that she was unable to fully examine Claimant as he had been exposed to COVID-19 and had a mild temperature on November 2, 2020. Dr. Tutt stated that Claimant had symptoms which occurred after he slipped on the ice in a parking lot including swelling/bulging in his abdomen, which gets worse and more painful with deep cough. She was concerned he may have a hernia, as he had a history of a right-sided hernia requiring surgery 12 years before, and reinjured his knee 10 days ago after slipping on ice. Nurse Okamatsu specifically found on exam on November 9, 2020 that Claimant had swelling and tenderness of the right knee proximally to the patella, left knee crepitus and abnormal flexion and extension, and upon palpation of the abdomen, she noted that Claimant may have a left inguinal hernia. Dr. Corson specifically stated multiple times that the mechanism of the Claimant's injuries were the cause of the work related injuries. Upon examination on two different occasions, he found palpable reducible hernias on both the right and the left. Dr. Corson reviewed the left knee MRI, which he read as showing medial meniscus tear, full thickness chondral loss, and full thickness chondral loss of the medial femoral condyle. Dr. Corson reported that Claimant became tearful and anxious upon hearing the results of the diagnostic testing and the likelihood of needing surgery for the hernia and possibly the meniscus. Dr. Sobky also found that Claimant had a horizontal tear of the left knee medial meniscus and a right knee interstitial tear of the distal lateral quadriceps. This ALJ finds all of this evidence credible and persuasive.

With regard to the bilateral hernias, Dr. Corson continued to state that the Claimant's objective findings were consistent with history and work-related mechanism of injury, continuing to diagnose Claimant with inguinal hernias, left meniscal tear and right knee painful hardware, even at the time of releasing Claimant from care. Dr. Canfield, found that there was a left inguinal hernia palpable with Valsalva. On the right side Dr. Canfield noted that Claimant was uncomfortable but he did not feel a specific hernia at the time of exam but ordered a right sided dynamic ultrasound to rule out possible right groin inguinal hernia. The ultrasound was limited by artifact shadowing related to existing mesh and the radiologist recommended a CT scan, which has not yet taken place. Lastly,

Claimant underwent a DIME in 2017 and DOT physicals in both 2019 and 2020 with Nurse Okamatsu which included abdominal examinations, all three of which revealed no masses or abnormalities in the abdomen. Nothing in Dr. Cebrian's report or testimony persuades this ALJ that this is not the case. While Dr. Cebrian opined that that the work related incidents of October 23, 2020 did not cause Claimant's injuries to his bilateral knees and inguinal areas, this ALJ does not find that credible or persuasive. As found, based on the totality of the evidence, Claimant has proven by a preponderance of the evidence that the October 23, 2020 incidents aggravated, accelerated or combined with his preexisting conditions to cause disability and need for medical treatment and therefore are compensable injuries. When considered in its totality, the ALJ concludes that the evidence in this case supports the reasonable inferences/conclusions that Claimant suffers from compensable left and right knee injuries including a right quadriceps injury, as well as bilateral inguinal injuries and psychological sequelae from the severe anxiety due to likely need for surgery, as recommended by Dr. Canfield.

Claimant has failed to show that his low back was injured in the claim as he did not have an exacerbation or aggravation of the low back as a result of the October 23, 2020 accidents. Claimant argues that the records from Dr. Sobky demonstrate a spinal injury and foot drop issue. However, no such records were persuasive in this matter. In fact, Dr. Canfield examined him on February 23, 2021 and found Claimant was negative for back pain or joint stiffness and had a steady gait. Medical records show that Claimant failed to mention problems with his back immediately after and subsequent to the injury for several months. The only source of prior medical records is the summary provided by Dr. Cebrian, which show that Claimant has a significant history of chronic low back problems dating back to 2007. The mere fact a claimant experiences symptoms following a work injury does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function or on the job injuries, does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's symptoms and work activities. As found, it is determined that the October 23, 2020 accident did not cause Claimant's continuing low back pain and any evidence to the contrary is found not credible or persuasive. Claimant has failed to show by a preponderance of the evidence that the October 23, 2020 work injury caused any injury or aggravation of his preexisting chronic low back complaints.

Medical benefits

"Authorization" refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Under § 8-43-404(5)(a), the employer has the right to choose the treating

physician in the first instance. It is well established that an employer does not lose the right to designate a treating physician merely because it denies a claim. *Yeck v. Industrial Claim Appeals Office,* 966 P.2d 228 (Colo. App. 1999). Once the employer has exercised its right of selection, the claimant may not unilaterally change physicians without prior approval from the respondents, by statute or an ALJ. Such permission may be express or implied, and a physician becomes authorized if the "employer has expressly or impliedly conveyed to the employee the impression" that he has permission to treat with the physician. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Here, the First Report of Injury states that Claimant provided notice of the injury as of November 3, 2020 and Claimant established care with Concentra as of November 9, 2020. As found, Respondents referred Claimant to Concentra upon notice of the claim. In fact, Claimant testified that he knew he needed to contact Concentra as of the day of injury and did so, but was unable to be seen because of his exposure to COVID-19, so he attended Dr. Tutt on November 2, 2020. This initial visit with Dr. Tutt is considered emergent care services and are compensable.

Claimant was then seen and treated at Concentra as of November 9, 2020. This indicates that Claimant chose to be seen by Concentra providers and the subsequent referrals of those providers. Therefore, as found, Claimant's authorized treating providers are Nurse Okamatsu, Dr. Corson, Dr. Canfield, Dr. Glass and the orthopedic specialist at Steadman Hawkins, Dr. Hackett, pursuant to Dr. Corson's referrals. As found, this is in addition to the diagnostic testing and treatment referred by these providers, including physical therapy, pool therapy, MRIs of the left and right knees, ultrasounds of the abdomen, CT of the abdomen prescribed by Dr. Canfield and the psychological care prescribed by Dr. Corson with Dr. Glass, which are all authorized, reasonably necessary and related to the injury.

It is unclear from the record if Dr. Corson, another authorized provider or if Insurer authorized Dr. Sobky to address Claimant's work related lower extremity injuries. However, Respondents conceded in their brief that Dr. Sobky was already an authorized treating physician in this matter. Therefore, this is taken as a judicial admission and Dr. Sobky is also an authorized treating physician.

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular

treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Dr. Sobky stated on March 12, 2021 that Claimant required continued physical therapy and was to proceed with hernia surgery. Dr. Canfield ordered a CT of his abdomen. Claimant has proven that the surgery, as recommended by Dr. Canfield, and for which he submitted a request for prior authorization, for the left inguinal hernia, is reasonably necessary and related to the compensable work injury of October 23, 2020. Claimant has proven that he requires further diagnostic testing as stated by the Dr. McKenzie, who performed the right inguinal limited ultrasound and recommended a CT scan for further evaluation, as well as Dr. Canfield, which this ALJ finds as reasonably necessary medical care. Claimant was found to have both swelling of the right knee and a quadriceps injury, which also need to be addressed by the authorized treating providers. Dr. Corson referred Claimant to Dr. Glass for psychological treatment due to Claimant's anxiety related to proposed surgery, and which is found reasonably necessary and related to the injury. All of this care did not take place but is found to be reasonably necessary and related to the injury.

Change of Physician

Claimant requested a one-time change of physician to Dr. Sobky. He filed his request on January 5, 2021, on the Division required form, which was certified to the claims handler. On January 6, 2021 Respondents' counsel sent a letter to deny the one time change of physician citing to W.C.R.P. Rule 8-5(A) and (B). Claimant filed an Application for Expedited Hearing related to that One-Time Change of Physician on January 11, 2021. Claimant attached to the Application for Expedited Hearing the Notice of One-Time Change of Physician to Dr. Sobky and Respondents' letter that cited to the rule.

Since the request was filed within the required 90 days pursuant to Sec. 8-43-404(5)(a)(III), C.R.S., which states specifically:

> An employee may obtain a one-time change in the designated authorized treating physician under this section by providing notice that meets the following requirements:
>
> (A) The notice is provided within ninety days after the date of the injury, but before the injured worker reaches maximum medical improvement;…"

Claimant filed the Notice of One-Time Change of Physician & Authorization form on January 5, 2021 to request a change of provider from Dr. Corson of Concentra to Dr. Kareem Sobky at Presbyterian St. Luke. The deadline to request a one-time change of

physician was January 21, 2021, pursuant to Sec. 8-43-404(5)(a)(III)(A), C.R.S. and W.C.R.P. Rule 8-5(A).

Respondents' cited in their denial letter WC.R.P. Rules 8-5(A-C), which state as follows:

> (A) Within ninety (90) days following the date of injury, but before reaching maximum medical improvement, an injured worker may request a one-time change of authorized treating physician pursuant to §8-43-404(5)(a)(III). The new physician must be a physician on the designated provider list or provide medical services for a designated corporate medical provider on the list. The medical provider(s) to whom the injured worker may change is determined by the designated provider list given to the injured worker pursuant to Rule 8-2 or 8-5(C).
>
> (B) To make a change pursuant to this Rule 8-5 the injured worker must complete and sign the form established by the division for this purpose. The injured worker shall submit the form to the employer by mailing or hand-delivering the completed form to the person(s) designated by the employer to receive the form. The person(s) so designated is listed on the designated provider list given to the injured worker pursuant to Rule 8-2 or 8-5(C) as the respondents' representative(s). The injured worker may, but is not required to, provide the form to the impacted physicians. In any event, the respondents' representative(s) shall notify the impacted physicians and the individual adjusting the claim of the change, unless an objection is submitted pursuant to paragraph (C) of this Rule 8-5.
>
> (C) If the insurer or employer believes the notice provided pursuant to this rule does not meet statutory requirements and does not accept the change of physicians, it must provide written objection to the injured worker within seven (7) business days following receipt of the form referenced in paragraph (B). The written objection shall set out the reason(s) for the belief that the notice does not meet statutory requirements.
>
> (1) If the employer or insurer does not provide timely objection as set out in this paragraph (C), the injured worker's request to change physicians must be processed and the new physician considered an authorized treating physician as of the time of the injured worker's initial visit with the new physician.
>
> (2) If written objection is provided and the dispute continues, any party may file a motion or, if there is a factual dispute requiring a hearing, any party may request that the hearing be set on an expedited basis.

Respondents cite to W.C.R.P. Rule 8-5(A), which in turn states that "The medical provider(s) to whom the injured worker may change is determined by the designated provider list given to the injured worker pursuant to Rule 8-2 or 8-5(C)." Respondents were on notice that the *pro se* Claimant may request a one-time change of physician.

W.C.R.P. Rule 8-2(A) states

> (A) When an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers from which the injured worker may select a physician or corporate medical provider. For purposes of this rule 8, the list will be referred to as the designated provider list.

(1) A copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury.

(2) The designated provider list must include contact information for the insurer of record including address, phone number and claims contact information. If the employer is self-insured, the same contact information is required including the names and contact information of persons responsible for adjusting the claim.

Respondents had actual notice of the claim likely by October 30, 2020 but no later than November 9, 2020, as he was terminated on November 10, 2020 due to inability to accommodate his restrictions. Respondents failed to provide a copy of the designated provider list by November 16, 2020 in a verifiable manner. Respondents knew or should have known that they failed to provide a timely designated provider list within the seven days from the date of the injury or the date of notice of the injury, as required by rule and statute, pursuant to Sec. 8-43-404(5)(a)(I)(A), C.R.S. and W.C.R.P. Rule 8-2.

W.C.R.P. Rule 8-2(E), specifically states "If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing." In this matter, Claimant selected Dr. Sobky as his authorized treating provider. There is no persuasive evidence showing that Respondents provided a designated provider list in compliance with the rules and statute. In essence, Respondents have conceded that they failed to meet the statutory requirements by not including the appropriate form. Therefore, Claimant's selection of Dr. Sobky makes Dr. Sobky the new authorized treating physician.

In *Berthold v. Indus. Claim Appeals Office of Colo.,* 410 P.3d 810 (Colo. App. 2017) the court held that "section 8-43-404(5)(a)(IV) applies only to changes of physician obtained under section 8-43-404(5)(a)(III)." Section 8-43-404(5)(a)(IV)(C) states that "[T]he originally authorized treating physician shall continue as the authorized treating physician for the injured employee until the injured employee's initial visit with the newly authorized treating physician, at which time the treatment relationship with the initially authorized treating physician shall terminate." Here, Claimant filed the Notice of One-Time Change of physician on January 5, 2021 and was evaluated by Dr. Sobky on January 13, 2021. Therefore, the termination provision of the statute requires the termination of the relationship with Dr. Corson happened as of January 13, 2021.

Respondents argue that Claimant waive the right to have this issues addressed as the issue was not addressed in Claimant's post hearing position statement or brief. The respondents do not contend they submitted a designated provider list in compliance with the statute until they attached it to the January 6, 2021 denial and objection to the request for a change of physician. The ALJ noted Rule 8-2(A)(1) specifies the list must be given to the claimant within seven days following the date the employer received notice. The sanction applicable to a failure to timely provide the list involves passing to the claimant the authority to select a physician or chiropractor of the claimant's choosing. See *In re Claim of Austin vs. Wells Fargo*, W.C. No. 4-973-614-05, ICAO (April 20, 2018).

As found Claimant filed the One-Time Change of Physician request within ninety days of the date of the injury in compliance with the rules. A one-time change of physician deauthorizes or terminates Dr. Corson and the Concentra as the authorized treating providers pursuant to statute. Therefore, it is concluded, Claimant has shown by a preponderance of the evidence that he is entitled to a one time change of physician to Dr. Sobky.

While Respondents argue that Claimant reached maximum medical improvement, no evidence was provided showing that Dr. Sobky placed Claimant at MMI.

"Section 8-42-107(8)(b)(I), C.R.S., provides that 'an authorized treating physician shall make a determination' as to the achievement of MMI. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo.App. 2002). A determination of MMI by an authorized treating physician terminates a Claimant's ability to seek further care without a determination by a Division of Workers' Compensation Independent Medical Examiner's (DIME) opinion pursuant to Sec. 8-42-107(8)(b)(II), C.R.S., which states in pertinent part "If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected in accordance with section 8-42-107.2…" While Dr. Corson did state that Claimant was at MMI on April 20, 2021, Dr. Corson was no longer Claimant's ATP by January 13, 2021, the first time Claimant was evaluated by Dr. Sobky. Therefore, Dr. Corson was no longer Claimant's ATP and Respondents' reliance on his reports after January 13, 2021 are in error and void or stricken.

Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v.United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

As found, Claimant's average weekly wage (AWW) as of October 23, 2020 is $1,153.61, and Claimant's AWW beginning on December 1, 2020 is $1,424.21. Respondents filed the FROI on November 6, 2020 reporting Claimant's average weekly wage as $1,180.00 and an Employer's Statement reporting a wage of 1,191.71. Employer conceded that Claimant received a wage increase on June 1, 2020 to $27.50 per hour and that Claimant would also travel with overnights at least once per week. Respondents also conceded that Claimant would be provided a per diem of $20.00 for breakfast and $60.00 for dinner for a total of $80.00 per week. The wage records show that Claimant earned $30,367.87 from April 1, 2020 through October 15, 2020 for a weekly average of $1,073.61 from April 1, 2020 through October 15, 2020 [$30,367.87 / 198 days x 7 days]. This ALJ considered that Claimant received an increase in hourly earnings to $27.50 per hour as of June 1, 2020 but determined that the fair approximation, despite the increase, is $1,073.61 plus the per diem of $80.00 for a total of $1,153.61 as of the date of the injury. Pursuant to the COBRA letter Claimant's health benefits were terminated as of November 30, 2020. The cost of continuing health benefits, beginning December 1, 2020, was $1,172.61 per month, $270.60 per week, which would increase the average weekly wage to $1,424.21. The ALJ concludes this methodology of calculating Claimant's AWW is the most accurate, appropriate, and fair approximation of Claimant's AWW.

Temporary total disability benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbois* Logic, 952 P.2d 831 (Colo. App. 1997).

Respondents argued that if the claim was deemed compensable, that Claimant's entitlement of temporary disability benefits should be terminated as of April 20, 2021 when Dr. Corson released Claimant to full duty. In *Archuletta v. Industrial Claim Appeals Office,* 381 P.3d 374 (Colo. App. 2016), the Colorado Court of Appeals addressed the applicability of the termination provisions enunciated in § 8-42-105(3), C.R.S. The Court specifically held that if the claimant receives a return to work from an attending physician prior to receiving TTD benefits, then TTD benefits cannot cease or be terminated because they never commenced. See also *Chavez v. Costco Wholesales, Inc.,* W.C. 5-096-055-003, I.C.A.O. (February 4, 2022). Further, since Dr. Corson was not Claimant's ATP after January 13, 2021, Dr. Corson's opinion regarding MMI is not compelling, especially in light of Claimant requiring further surgery and treatment that has not yet taken place and has been deemed authorized, reasonable, necessary and related to the October 23, 2020 injury.

As found, Claimant has established by a preponderance of the evidence that he is entitled to an award of TTD benefits beginning October 23, 2020 as Claimant testified that he was able to perform his job on October 22, 2020 and on October 23, 2020 he was not able to perform all of his activities. He specifically testified that he had to request that the customers unload the truck for him. He was unable to work after that date. Further, after he was provided restrictions by the Concentra ATP, Nurse Okamatsu, of lifting up to 10 lbs. occasionally, push/pull up to 15 lbs. occasionally, no squatting or kneeling, Employer issued a termination slip stating that they were unable to accommodate Claimant's restrictions. As found, Claimant's testimony is found credible and the medical records in this case document that Claimant was continually kept on restrictions by Dr. Corson through January 13, 2021 when Dr. Sobky took over care. Dr. Sobky's last note on March 12, 2021 indicated that Claimant would be proceeding with surgery the following week. Dr. Sobky also mentions that Claimant was having significant amounts of dysfunction and limping at that point, with no mention of changing Claimant's restrictions. Claimant is entitled to TTD beginning October 24, 2020 until terminated by law or otherwise released to work or placed at MMI by Claimant's new ATP, Dr. Sobky, as of January 13, 2021.

Penalties

Claimant argues that since the Division issued a letter dated December 15, 2020, stating that Division had not received a timely admission or denial from Respondents, that Claimant is entitled to penalties pursuant to alleged violations of Section 8-43-203(1)(a), C.R.S. and W.C.R.P. Rule 5-2. Section 8-43-203(1)(a) states that "the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested…" W.C.R.P. Rule 5-2 states in pertinent part:

> (C) The insurer shall state whether liability is admitted or contested within 20 days after the date the employer's First Report of Injury is filed with the Division. If an Employer's First Report of Injury should have been filed with the Division, but wasn't, the insurer's statement concerning liability is considered to be due within 20 days from the date the Employer's First Report of Injury should have been filed. The date a First Report of Injury should have been filed with the Division is the last day it could have been timely filed in compliance with paragraph (B) above.
>
> (D) The insurer shall state whether liability is admitted or contested within 20 days after the date the Division mails to the insurer a Worker's Claim for Compensation or Dependent's Notice and Claim for Compensation.
>
> (E) A statement regarding liability is required for any claim in which a division-issued workers' compensation claim number is assigned or a First Report of Injury should have been filed pursuant to paragraph (B) of this rule. A statement regarding liability shall not be filed without a First Report of

> Injury, Worker's Claim for Compensation, or Dependents Notice and claim having been successfully filed and assigned a workers' compensation claim number. A first report of injury must be filed prior to a notice of contest being accepted by the division.

This ALJ infers from Claimant's argument that Claimant is stating that he did not have notice of the denial. However, Claimant failed to state that he did not receive the Notice of Contest dated November 19, 2020 and, in fact, confirmed his address as stated on the Notice of Contest. Pursuant to W.C.R.P. Rule 1-4(1)(A), proper service is to be made by mail. In *Bowlen v. Munford*, 921 P.2d 59, 60 (Colo. App.1996) the court acknowledged the rule that whenever a document is filed with the Division, a copy of the document shall be mailed 'to each party to the claim'; *Kuhndog, Inc. v. Ind. Claim Appeals Office,* 207 P.3d 949 (Colo. App. 2009).

Respondent Insurer filed a Notice of Contest on November 19, 2020 stating further investigation of prior medical history and compensability evaluation was needed. The Notice of Contest had the correct claim number of 5-153-276, identified Claimant by name, address and social security number as well as the correct Employer and Insurer for this claim. While the Division may have rejected the NOC due to the incorrect date of injury, the NOC served to give notice to Claimant regarding the denial of the claim.

An elementary and fundamental requirement of due process in any proceeding is notice reasonably calculated, under all the circumstances, to apprise Claimant of the pendency of the action and afford Claimant an opportunity to present a response. *Mullane v. Cent. Hanover Bank & Trust Co*., 339 U.S. 306, 314, 70 S.Ct. 652, 94 L.Ed. 865 (1950); *Schmidt v. Langel*, 874 P.2d 447, 451 (Colo.App.1993).

Due process does not require that the method of providing notice be absolutely certain to effect notice in every instance; it only requires that the method be reasonably calculated to effect notice to Claimant. *Kuhndog, Inc. v. Ind. Claim Appeals Office, supra.* Further, the record indicates, and Claimant does not contest, that Claimant was provided actual notice, as he provided a copy of the NOC in his Exhibit packet[28]. Accordingly, the service made in this instance was not deficient. *EZ Bldg. Components Mfg., LLC v. Indus. Claim Appeals Office*, 74 P.3d 516, 518 (Colo.App.2003) (when there is no indication that the prescribed method of notice is jurisdictional, actual notice satisfied due process).

Further, under Sec. 8-43-203(2)(a), an employer "may become liable" to Claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division. The phrase "may become liable" means imposition of penalties under Sec. 8-42-203(2)(a) is discretionary. *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of requiring the employer to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise its administrative oversight over the claim process. *Smith v. Myron Stratton Home,* 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties in general are to punish the violator and deter

[28] Exhibit 10.

future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office,* 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Industrial Claim Appeals Office,* 442 P.3d 94 (Colo. 2019). The claimant bears the burden of proof to establish circumstances justifying the imposition of a penalty under Sec. 8-43-203(2)(a), C.R.S. *Pioneer Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). This has not occurred in this case. The Claims Representative testified that the NOC was filed timely on November 19, 2020 and this is credible.

Claimant failed to prove Employer should be penalized under Sec. 8-43-203(2)(a), C.R.S as there was no harm and, since Claimant received actual notice of the denial, there is no need to address the issue of the cure provision in this matter. The Claimant's claim for penalties is denied and dismissed.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Claimant has proven by a preponderance of the evidence that he suffered compensable injuries on October 23, 2020 causing injuries to his bilateral knees, right quadriceps and bilateral inguinal injuries, including the sequelae of those injuries.

2. Claimant's claim of a lumbar spine injury or aggravation is denied and dismissed.

3. Respondents shall pay for the authorized, reasonable and necessary medical benefits to cure or relieve the effects of Claimant's industrial injuries of October 23, 2020, including all care, referrals through the Concentra system, diagnostic testing and therapy as stated above, including Nurse Okamatsu, Dr. Corson, Dr. Canfield, Dr. Sobky, Dr. Glass, Dr. McKenzie, Dr. Tutt (for only the emergency visit of November 2, 2020), Denver Integrated Imaging, Health Images Cherry Creek, Presbiterian St. Lukes' Medical Center Diagnostic Imaging Department and the orthopedic specialist at Steadman Hawkins, Dr. Hackett.

4. Claimant has proven by a preponderance of the evidence that he is entitled a one-time change of physician pursuant to Sec. 8-43-404(5)(a)(III) and (IV), C.R.S. to Dr. Kareem Sobky at Presbyterian St. Luke as his new authorized treating physician from January 13, 2021 forward, and terminating the relationship with Dr. Corson and Concentra. Any actions taken by Respondents in reliance of a Concentra provider placing Claimant at MMI after January 13, 2021 is void and stricken.

5. Claimant's average weekly wage as of October 23, 2020 is $1,153.61, for a temporary total disability rate of $769.07. Beginning December 1, 2020 Claimant's AWW is adjusted to $1,424.21, due to cancellation of his health insurance (COBRA), for a TTD rate of $949.47.

6. Respondents shall pay temporary total disability benefits from October 24, 2020 until terminated by law. Claimant is owed temporary total disability benefits from October 24, 2020 through November 30, 2020 in the amount of $4,174.95. Claimant is owed TTD from December 1, 2020 through the date of the hearing, August 27, 2021, in the amount of $36,622.41. TTD shall continue after that date until terminated by law.

7. Claimant's claim for penalties is denied and dismissed.

8. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that medical maintenance benefits in the form of 12 chiropractic visits recommended by Authorized Treating Physician (ATP) Greg Reichhardt, M.D. are reasonable, necessary and causally related to his August 30, 2017 industrial injury.

2. Whether Claimant is entitled to recover costs related to the litigation of a medical maintenance benefit pursuant to §8-42-101(5), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Pre-Load Supervisor. On August 30, 2017 Claimant suffered a traumatic amputation of his right upper extremity while working with a piece of machinery. He was immediately transported to Medical Center of the Rockies Emergency Department and underwent surgery to stabilize his condition.

2. Claimant subsequently underwent therapy, rehabilitation and pain management. He also received a prosthesis for his right upper extremity.

3. On November 12, 2018 Frederick Mark Paz, M.D. performed an independent medical examination of Claimant. He reviewed Claimant's medical history and conducted a physical examination. After considering the direct history provided by Claimant during this evaluation, the findings on physical examination and prior medical records, Dr. Paz concluded that it was medically probable that Claimant's traumatic right trans-humeral amputation was causally related to his August 30, 2017 accident. Furthermore, Claimant's posttraumatic stress disorder, depression, and headaches were causally related to the August 30, 2017 incident. Finally, Dr. Paz determined that Claimant had reached Maximum Medical Improvement (MMI).

4. On December 17, 2018 Authorized Treating Physician (ATP) Kimberly L. Siegel, M.D. determined that Claimant had reached MMI. Dr. Siegel assigned Claimant a 100% right upper extremity and a 14% mental permanent impairment. She did not assign Claimant a permanent impairment for his cervical spine because his cervical and back pain was myofascial in nature and reactive to the traumatic amputation. Moreover, an MRI of the cervical spine did not reveal pathology consistent with Claimant's symptoms. Dr. Siegel also determined that Claimant was entitled to receive medical maintenance benefits that included up to 40 chiropractic sessions to be reassessed every three years.

5. On July 19, 2019 Dr. Paz conducted a follow-up independent medical examination of Claimant. Based on his clinical assessments and review of prior records, he determined that Claimant's back symptoms were not causally related to an axial spine diagnosis. Specifically, Claimant's subjective symptoms were not consistent with a lumbar

spine diagnosis. Notably, the chiropractic treatments Claimant had received did not reduce his back symptoms and maintain his functional level of activity.

6. In an October 5, 2020 report Claimant's chiropractor Bruce W. Weber, D.C. recounted Claimant's neck and back condition. He explained that Claimant "had his arm taken off on a conveyor belt while working" for Employer on August 30, 2017. Dr. Weber detailed that Claimant was

> very sore today in neck and back, hard to turn his neck, coupling motion of spine with the loss of his shoulder is severe due to the lack of attachment points of his muscles of his scapula and then to the spine, there is severe asymmetry of his spine and pulling to opposite side. Headaches daily and very sore since he has not been adjusted to compensate for the constant, recurrent, pulling to his upper back due to the loss of his shoulder.

He remarked that Claimant was much better after an adjustment and had been miserable for four months when he was unable to obtain treatment.

7. Claimant explained that since reaching MMI he has been evaluated by ATP Greg Reichhardt, M.D. on a monthly basis. On March 24, 2021 Dr. Reichhardt referred Claimant for 12 additional sessions of chiropractic treatment for his neck and shoulder related to ongoing occipital headaches.

8. On April 2, 2021 Dr. Paz performed a Rule 16 Review of the requested 12 additional sessions of chiropractic treatment. In reviewing Claimant's medical records Dr. Paz considered a February 23, 2021 report from Dr. Reichhardt. Dr. Reichhardt had recorded that, on the evening prior to the examination, Claimant had fallen down two steps, 12 feet across the basement floor and struck his head on a cement wall. Claimant impacted the left frontal area, with no posttraumatic amnesia, loss of consciousness, disorientation, or confusion. Claimant noted that he has suffered neck pain since the February 22, 2021 accident. Based on the preceding medical history, Dr. Paz concluded that 12 chiropractic sessions were not authorized. Specifically, it was not medically probable the fall Claimant sustained on February 22, 2021 was causally related to his August 30, 2017 industrial accident. Dr. Paz also noted "the prior record does not document episodic neurologic vision changes associated with [Claimant's] headaches." Respondents subsequently denied Claimant's request for additional chiropractic treatment.

9. Claimant testified at the hearing in this matter about his need for additional chiropractic sessions. He remarked that chiropractic treatment improves his symptoms and provides immediate relief. Claimant explained that consistent chiropractic treatment also provides lasting benefits. Notably, when treatment is interrupted, it takes time to re-establish prolonged benefits. Claimant summarized that chiropractic treatment improves his function because he is more mobile, it is easier to maintain posture and his headaches decrease.

10. On August 18, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Reichhardt. Dr. Reichhardt testified that Claimant's current symptoms include headaches, neck pain, thoracic pain and lower back pain. He also noted that Claimant continues to experience phantom limb pain associated with his right arm amputation. Dr. Reichhardt attributed the preceding symptoms to Claimant's August 30, 2017 industrial injury.

11. Dr. Reichhardt detailed that he disagreed with the opinions of Dr. Paz regarding the denial of Claimant's chiropractic treatment. He explained that, despite the success of an independent exercise program with the vast majority of his patients, Claimant's situation was unique because of his amputation. Specifically, Claimant suffers biomechanical challenges because the loss of his arm creates imbalances in the cervical and thoracic area as well as supporting and manipulating his prosthesis. Dr. Reichhardt summarized that "while I do follow the medical treatment guidelines, recommendation to try to focus people on an active independent exercise program, I do find that his condition represents an extenuating circumstance in that the usage of the chiropractic treatment would still be within the guidelines."

12. Dr. Reichhardt explained that additional chiropractic treatment is necessary to augment Claimant's independent exercise program. He specified that "because of the potential for imbalance due to the loss of his arm and also associated with the use of the prosthesis and conditioning factors that may contribute to that, he has ongoing problems with his neck and upper back that warrant chiropractic treatment more so than the standard cervical strain." Dr. Reichhardt detailed that Claimant requires additional chiropractic treatment because he experiences constant or at least regular intermittent stress to his upper back and neck. Chiropractic sessions relieve Claimant's symptoms associated with his imbalance and help him to remain functional. Notably, the imbalance created by Claimant's amputation "cause irritation and aggravation to the structures in his neck and his back." Dr. Reichhardt summarized that Claimant's loss of the mass or weight on his right side caused his left side to be heavier and thus created a biomechanical imbalance for his neck and upper back.

13. Dr. Reichhardt also commented that Claimant developed migraines after his August 30, 2017 industrial injury. He determined that Claimant's condition involved his neck, either as a direct injury or as a result of excessive strain, and balance associated with his amputation and use of his prosthesis. Dr. Reichhardt reasoned that Claimant could have developed migraine headaches or occipital neuralgia as a result of the neck and myofascial pain associated with the accident.

14. In his report of October 12, 2021 Dr. Weber detailed Claimant's imbalance as a result of his August 30, 2017 right arm amputation. He remarked that Claimant was experiencing "a lateral deviation of his upper thoracic spine due to the imbalance of muscle pull from side to side due to the loss of his shoulder acting as an attachment point to the muscles." He was laterally deviating his neck to the left shoulder and suffered pain with right lateral flexion, Dr. Weber noted that Claimant's was suffering muscle spasms with lateral flexion of his neck because of the loss in weight and counterbalance due to

his amputation. Specifically, Claimant's lower back was "concaving to compensate for the weight difference from one side to another due to the loss of his arm."

15. On January 7, 2022 the parties conducted the post-hearing evidentiary deposition of Dr. Paz. Dr. Paz maintained that additional chiropractic treatment is not reasonable, necessary or related to Claimant's August 30, 2017 industrial injury. He noted that there were no objective findings that Claimant suffers from myofascial pain or that justify ongoing treatment of the cervical spine. Dr. Paz reasoned that, based upon his clinical assessments at his independent medical examinations and considering Claimant's prior medical records, it was not medically probable that Claimant's back symptoms were causally related to an axial spine diagnosis. He detailed that "there was no pathology which was causally associated with the symptoms in the cervical, thoracic, or lumbar spine . . . none of the symptoms were identified pathophysiologically to be clinically correlated with Claimant's [occipital headache] symptoms."

16. Dr. Paz also addressed Dr. Reichhardt's reference to imbalance created by the August 30, 2017 right arm amputation as a basis for additional chiropractic treatment. Initially, Dr. Paz explained that there has been no "imbalance" detailed in any medical terms or defined in Claimant's history of medical treatment. He noted that Dr. Reichhardt's "own testimony was that he really didn't have an explanation as to what structurally the explanation would be as to why there would be imbalance." Generally, the "imbalance" referenced by Dr. Reichhardt was insufficient to cause Claimant's back and neck issues or warrant additional chiropractic sessions.

17. Claimant has demonstrated that it is more probably true than not that medical maintenance benefits in the form of 12 additional chiropractic visits as recommended by ATP Dr. Reichhardt are reasonable, necessary and causally related to his August 30, 2017 industrial injury. Initially, on August 30, 2017 Claimant suffered a traumatic amputation of his right upper extremity while working with a piece of machinery. Claimant subsequently received therapy, rehabilitation and pain management. He also obtained a prosthesis for his right upper extremity. On December 17, 2018 ATP Dr. Siegel determined that Claimant had reached MMI and recommended medical maintenance benefits that included up to 40 chiropractic sessions to be reassessed every three years.

18. On March 24, 2021 Dr. Reichhardt referred Claimant for 12 additional sessions of chiropractic treatment for his neck and shoulder related to ongoing occipital headaches. Dr. Paz concluded that 12 chiropractic sessions were not authorized. Specifically, it was not medically probable that Claimant's February 22, 2021 fall was causally related to his August 30, 2017 industrial accident. Dr. Paz also noted "the prior record does not document episodic neurologic vision changes associated with [Claimant's] headaches." Respondents subsequently denied Claimant's request for additional chiropractic treatment.

19. Claimant credibly testified that chiropractic treatment improves his symptoms and provides immediate relief. Claimant explained that consistent chiropractic treatment also provides lasting benefits. Notably, when treatment is interrupted, it takes time to re-establish prolonged benefits. Claimant summarized that chiropractic treatment

improves his function because he is more mobile, it is easier to maintain posture and his headaches decrease. The medical records and persuasive opinion of Dr. Reichhardt support Claimant's testimony.

20. In an October 5, 2020 report Dr. Weber persuasively recounted that the coupling motion of Claimant's spine with the loss of his shoulder was severe due to the lack of attachment points of his muscles on his scapula and spine. Notably, there was severe asymmetry of his spine and pulling to the opposite side. Claimant experienced daily headaches and was sore in the absence of chiropractic adjustments to compensate for the constant, recurrent, pulling on his upper back due to the loss of his shoulder. Moreover, in his report of October 12, 2021 Dr. Weber detailed Claimant's imbalance as a result of his August 30, 2017 right arm amputation. He remarked that Claimant was experiencing a lateral deviation of his upper thoracic spine because of the imbalance of muscle pull from side to side due to the loss of his shoulder that acted as an attachment point to the muscles. Dr. Weber noted that Claimant was suffering muscle spasms with lateral flexion of his neck because of the loss in weight and counterbalance due to his amputation.

21. Dr. Reichhardt persuasively explained that additional chiropractic treatment is necessary to augment Claimant's independent exercise program. He specified that, because of the potential for imbalance due to the loss of Claimant's arm and the use of the prosthesis, he has ongoing problems with his neck and upper back that warrant chiropractic treatment. Dr. Reichhardt detailed that Claimant requires additional chiropractic treatment because he experiences constant or at least regular intermittent stress to his upper back and neck. Chiropractic sessions relieve Claimant's symptoms associated with his imbalance and help him to remain functional. Notably, the imbalance created by Claimant's amputation "cause[s] irritation and aggravation to the structures in his neck and his back." Dr. Reichhardt summarized that Claimant's loss of the mass or weight on his right side caused his left side to be heavier and thus created a biomechanical imbalance for his neck and upper back. He also commented that Claimant developed migraines after his August 30, 2017 industrial injury. Dr. Reichhardt reasoned that Claimant could have developed migraine headaches or occipital neuralgia as a result of the neck and myofascial pain associated with the accident.

22. In contrast, Dr. Paz maintained that additional chiropractic treatment is not reasonable, necessary or related to Claimant's August 30, 2017 industrial injury. He noted that there were no objective findings that Claimant suffers from myofascial pain or that justify ongoing treatment of the cervical spine. Dr. Paz reasoned that, based on his clinical assessments at his independent medical examinations and considering Claimant's prior medical records, it was not medically probable that Claimant's back symptoms were causally related to an axial spine diagnosis. He detailed that there was no pathology causally associated with Claimant's symptoms in the cervical, thoracic, or lumbar spine. Furthermore, none of the symptoms were clinically correlated with Claimant's occipital headache symptoms. Finally, Dr. Paz explained that there has been no "imbalance" detailed in any medical terms or defined in Claimant's history of medical treatment. Generally, the "imbalance" referenced by Dr. Reichhardt was insufficient to cause Claimant's back and neck issues or warrant additional chiropractic sessions.

23. Based on Claimant's credible testimony, Dr. Weber's chiropractic records and the persuasive opinion of Dr. Reichhardt, Claimant has demonstrated that medical maintenance benefits in the form of 12 additional chiropractic visits are reasonable, necessary and causally related to his August 30, 2017 industrial injury. As an ATP, Dr. Reichhardt has consistently treated Claimant during the course of his claim and noted continuing aggravation to the structures in his neck and his back as a result of his right arm amputation. The amputation caused Claimant's left side to be heavier and thus created a biomechanical imbalance for his neck and upper back. Claimant also developed migraine headaches as a result of neck and myofascial pain. Dr. Paz's contrary opinion that Claimant neck and back symptoms are unrelated to the August 30, 217 amputation is not supported by the medical records or persuasive evidence. Accordingly, Claimant's request for medical maintenance benefits in the form of 12 additional chiropractic visits is granted.

24. Claimant is entitled to recover costs related to the litigation of a medical maintenance benefit pursuant to §8-42-101(5), C.R.S. The record reveals that a medical maintenance benefit in the form of 12 additional chiropractic sessions was requested by ATP Dr. Reichhardt. The request was both unpaid and contested. As detailed in preceding sections of the present opinion, the benefit was ordered by the undersigned ALJ following a hearing initiated through an application for a hearing. Claimant is therefore entitled to receive reasonable costs incurred in pursuing the medical benefit. Claimant shall submit the evidence of costs to the ALJ pursuant to §8-43-207 C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

Additional Chiropractic Treatment

6. As found, Claimant has demonstrated by a preponderance of the evidence that medical maintenance benefits in the form of 12 additional chiropractic visits as recommended by ATP Dr. Reichhardt are reasonable, necessary and causally related to his August 30, 2017 industrial injury. Initially, on August 30, 2017 Claimant suffered a traumatic amputation of his right upper extremity while working with a piece of machinery. Claimant subsequently received therapy, rehabilitation and pain management. He also obtained a prosthesis for his right upper extremity. On December 17, 2018 ATP Dr. Siegel determined that Claimant had reached MMI and recommended medical maintenance benefits that included up to 40 chiropractic sessions to be reassessed every three years.

7. As found, on March 24, 2021 Dr. Reichhardt referred Claimant for 12 additional sessions of chiropractic treatment for his neck and shoulder related to ongoing occipital headaches. Dr. Paz concluded that 12 chiropractic sessions were not authorized. Specifically, it was not medically probable that Claimant's February 22, 2021 fall was causally related to his August 30, 2017 industrial accident. Dr. Paz also noted "the prior record does not document episodic neurologic vision changes associated with [Claimant's] headaches." Respondents subsequently denied Claimant's request for additional chiropractic treatment.

8. As found, Claimant credibly testified that chiropractic treatment improves his symptoms and provides immediate relief. Claimant explained that consistent chiropractic treatment also provides lasting benefits. Notably, when treatment is interrupted, it takes time to re-establish prolonged benefits. Claimant summarized that chiropractic treatment improves his function because he is more mobile, it is easier to maintain posture and his headaches decrease. The medical records and persuasive opinion of Dr. Reichhardt support Claimant's testimony.

9. As found, in an October 5, 2020 report Dr. Weber persuasively recounted that the coupling motion of Claimant's spine with the loss of his shoulder was severe due to the lack of attachment points of his muscles on his scapula and spine. Notably, there was severe asymmetry of his spine and pulling to the opposite side. Claimant experienced daily headaches and was sore in the absence of chiropractic adjustments to compensate for the constant, recurrent, pulling on his upper back due to the loss of his shoulder. Moreover, in his report of October 12, 2021 Dr. Weber detailed Claimant's imbalance as a result of his August 30, 2017 right arm amputation. He remarked that Claimant was experiencing a lateral deviation of his upper thoracic spine because of the imbalance of muscle pull from side to side due to the loss of his shoulder that acted as an attachment point to the muscles. Dr. Weber noted that Claimant was suffering muscle spasms with lateral flexion of his neck because of the loss in weight and counterbalance due to his amputation.

10. As found, Dr. Reichhardt persuasively explained that additional chiropractic treatment is necessary to augment Claimant's independent exercise program. He specified that, because of the potential for imbalance due to the loss of Claimant's arm and the use of the prosthesis, he has ongoing problems with his neck and upper back that warrant chiropractic treatment. Dr. Reichhardt detailed that Claimant requires additional chiropractic treatment because he experiences constant or at least regular intermittent stress to his upper back and neck. Chiropractic sessions relieve Claimant's symptoms associated with his imbalance and help him to remain functional. Notably, the imbalance created by Claimant's amputation "cause[s] irritation and aggravation to the structures in his neck and his back." Dr. Reichhardt summarized that Claimant's loss of the mass or weight on his right side caused his left side to be heavier and thus created a biomechanical imbalance for his neck and upper back. He also commented that Claimant developed migraines after his August 30, 2017 industrial injury. Dr. Reichhardt reasoned that Claimant could have developed migraine headaches or occipital neuralgia as a result of the neck and myofascial pain associated with the accident.

11. As found, in contrast, Dr. Paz maintained that additional chiropractic treatment is not reasonable, necessary or related to Claimant's August 30, 2017 industrial injury. He noted that there were no objective findings that Claimant suffers from myofascial pain or that justify ongoing treatment of the cervical spine. Dr. Paz reasoned that, based on his clinical assessments at his independent medical examinations and considering Claimant's prior medical records, it was not medically probable that Claimant's back symptoms were causally related to an axial spine diagnosis. He detailed that there was no pathology causally associated with Claimant's symptoms in the cervical,

thoracic, or lumbar spine. Furthermore, none of the symptoms were clinically correlated with Claimant's occipital headache symptoms. Finally, Dr. Paz explained that there has been no "imbalance" detailed in any medical terms or defined in Claimant's history of medical treatment. Generally, the "imbalance" referenced by Dr. Reichhardt was insufficient to cause Claimant's back and neck issues or warrant additional chiropractic sessions.

12. As found, based on Claimant's credible testimony, Dr. Weber's chiropractic records and the persuasive opinion of Dr. Reichhardt, Claimant has demonstrated that medical maintenance benefits in the form of 12 additional chiropractic visits are reasonable, necessary and causally related to his August 30, 2017 industrial injury. As an ATP, Dr. Reichhardt has consistently treated Claimant during the course of his claim and noted continuing aggravation to the structures in his neck and his back as a result of his right arm amputation. The amputation caused Claimant's left side to be heavier and thus created a biomechanical imbalance for his neck and upper back. Claimant also developed migraine headaches as a result of neck and myofascial pain. Dr. Paz's contrary opinion that Claimant neck and back symptoms are unrelated to the August 30, 217 amputation is not supported by the medical records or persuasive evidence. Accordingly, Claimant's request for medical maintenance benefits in the form of 12 additional chiropractic visits is granted.

Recovery of Costs

13. Section 8-42-101(5), C.R.S. provides that

> If any party files an application for hearing on whether the claimant is entitled to medical maintenance benefits recommended by an authorized treating physician that are unpaid and contested, and any requested medical maintenance benefit is admitted fewer than twenty days before the hearing or ordered after application for hearing is filed, the court shall award the claimant all reasonable costs incurred in pursuing the medical benefit. Such costs do not include attorney fees.

14. As found, Claimant is entitled to recover costs related to the litigation of a medical maintenance benefit pursuant to §8-42-101(5), C.R.S. The record reveals that a medical maintenance benefit in the form of 12 additional chiropractic sessions was requested by ATP Dr. Reichhardt. The request was both unpaid and contested. As detailed in preceding sections of the present opinion, the benefit was ordered by the undersigned ALJ following a hearing initiated through an application for a hearing. Claimant is therefore entitled to receive reasonable costs incurred in pursuing the medical benefit. Claimant shall submit the evidence of costs to the ALJ pursuant to §8-43-207 C.R.S.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

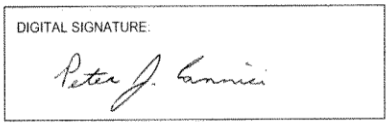
1. Claimant's request for medical maintenance benefits in the form of 12 additional chiropractic visits is granted.

2. Claimant is entitled to receive reasonable costs incurred in pursuing the medical benefit. Claimant shall submit the evidence of costs to the ALJ pursuant to §8-43-207 C.R.S.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: February 17, 2022.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-148-535-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 4, 2022, in Denver, Colorado. The hearing was electronically recorded (reference: 1/4/2022, beginning at 1:45 PM, and ending at 2:35 PM)..

The Claimant was present in person and represented by [Redacted]., Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted]shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 13 were admitted into evidence, without objection. Respondents’ Exhibits A through S were admitted without objection. Respondents’ Exhibit B, p. 16 was admitted over objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was

filed, electronically, on January 12, 2022. Claimant filed no timely objections as to form. Therefore, the matter was ready for decision on January 19, 2022. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant has overcome the opinion of John Burris, M.D., the Division Independent Medical Examiner (DIME) by clear and convincing evidence, as to the date of maximum medical improvement (MMI); and, f not, whether the Claimant is entitled to post-MMI maintenance medical benefits.

FINDINGS OF FACT

'Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 64 year-old commercial accounts manager for the Employer.

2. Claimant sustained a prior work injury in November 2017. Claimant pulled herself up into a truck that did not have running boards and injured her chest, shoulder, back and right arm. (Ex. J. 292). Imaging showed degenerative changes. (Ex. G, pg. 251). After undergoing conservative treatment, Claimant was discharged at MMI on July 18, 2018 with no impairment rating. (Ex. G, pg. 255).

3. On October 30, 2019, Claimant sustained another prior work injury when she was cleaning snow off some vehicles and her right foot slipped on ice. She did not fall and was able to steady herself. She reported right low back pain radiating into her buttocks. (Ex. C, pg. 26). Claimant was referred for chiropractic and acupuncture treatment. (Ex. C, pg. 28). Claimant was placed at MMI with no impairment rating on December 6, 2019 by Dr. Gary Zuehlsdorff. Claimant reported that she had only a residual ache in her low back. (Ex. C, pg. 39-40).

4. In this claim, on June 22, 2020, Claimant reported to Dr. Sharon Walker at On the Mend that she pulled herself up into a super duty truck that did not have running boards on June 17, 2020. Claimant testified that she slipped when pulling herself up, but did not fall, and landed back on her feet. Claimant reported low back pain, right shoulder pain and upper extremity numbness. (Resp. Ex. C, pg. 42).

5. Claimant returned to On the Mend on June 30, 2020 and requested a referral back to her treating chiropractor from the prior 2017 work injury. (Ex. C pg. 47).

Claimant began treatment with Dr. Roger Smith for chiropractic care on June 30, 2020. (Ex. D, pg. 155).

6. Dr. Allison Fall performed a Respondents' IME on November 5, 2020. Dr. Fall opined that the mechanism of injury was unclear as there were some variations in the mechanism of injury as Claimant added that she had been pushing on doors which caused injury to her arm prior to attempting to pull herself up into the truck. After a review of the records and examination, Dr. Fall concluded that claimant sustained some myofascial pain as a result of grabbing the handle to pull herself up into the vehicle and then stepping back off. Dr. Fall noted that Claimant's examination was unremarkable and there were no signs of sacroiliac joint dysfunction or radiculopathy. Dr. Fall concluded that any mild muscular strain would have resolved. Dr. Fall noted claimant could pursue ongoing chiropractic treatment on her own. (Ex. B, pg. 24).

7. Claimant continued with conservative care with her chiropractor, Dr. Smith. (Ex. D, pg. 155 – 182). She continued with massage therapy at Vetanze Therapy. (Ex. E, pg. 199-212).

8. On April 6, 2021, Dr. Zuehlsdorff placed claimant at MMI. Dr. Zuehlsdorff opined that Claimant had undergone significant conservative care, including chiropractic care, acupuncture and some physical therapy. Claimant reported only 50% improvement after nearly ten months of treatment. Dr. Zuehlsdorff assigned a 14% whole person for the cervical spine and 18% whole person for the lumbar spine for a combined 29% whole person impairment. Dr. Zuehlsdorff did not recommend any maintenance care. (Ex. C, pg. 111-112).

9. Respondents requested a Division IME.

10. Dr. Burris performed a Division IME on July 20, 2021 and evaluated Claimant's right shoulder, cervical spine and lumbar spine. (Ex. A.). Dr. Burris opined that based on the reported mechanism of injury, the clinical notes, and diagnostic testing, claimant suffered minor lumbar and right shoulder soft tissue strains. (Ex. A, pg. 9).

11. Dr. Burris agreed with MMI as of April 6, 2021. Dr. Burris assigned no impairment rating. Dr. Burris concluded that claimant had completed exhaustive treatment exceeding the Colorado DOWC treatment guidelines without appreciable change in her subjective complaints or functional status. (Ex. A, pg. 9). Dr. Burris supported his opinion that Claimant's subjective complaints were out of proportion to the nature of the workplace event. Furthermore, Claimant's clinical course had not followed a typical physiologic pattern associated with an acute event. Dr. Burris noted that Claimant's diagnostic testing from the recent injury was essentially unchanged from testing predating the event. Dr. Burris opined that Dr. Zuehlsdorff's rating was not

supported by objective findings. (Ex. A, pg. 10-11). Dr. Burris did not recommend any medical maintenance care. (Ex. A, pg. 11).

12. Respondents filed a Final Admission of Liability on August 17, 2021, admitting to Dr. Burris's Division IME opinions. (Ex. 7). Claimant filed an Application for Hearing to overcome the opinions of Dr. Burris. (Ex. 9).

13. Claimant testified that while the mechanism of injury in her current claim was similar to the 2017 claim, her pain from the current claim was much worse overall and it severely impacted her whole body and function. Claimant testified that she did not have any residual issues from her 2017 or 2019 claims.

14. Claimant further testified that she felt she was not at MMI as she needed continued treatment with Dr. Smith, her chiropractor, for her work-related injuries. Claimant testified that she remained in pain and she was unable to do many of the things that she used to be able to do.

15. Claimant testified that Dr. Smith had recently begun to provide a new form of chiropractic treatment and Claimant was optimistic this treatment would improve her condition. She testified to date she had experienced some improvement in her pain and function from the new treatment and she wanted to continue this treatment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Overcoming the Division IME

a. A Division IME physician's findings concerning whether the claimant has reached MMI and regarding permanent medical impairment are generally binding unless overcome by clear and convincing evidence. C.R.S. § 8-42-107(8)(b)(III); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see also Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

b. While claimant testified that she believed she was not at MMI and required more treatment to reach MMI, Claimant failed to prove by clear and convincing evidence that Dr. Burris erred in his determination that Claimant reached MMI as of April 6, 2021.

c. After a review of the records, both Dr. Zuehlsdorff and Dr. Burris concluded that claimant had reached MMI as of April 6, 2021. Claimant offered no medical evidence that Dr. Burris's determination of MMI was incorrect. Claimant's subjective belief that she is not at MMI is insufficient to prove by clear and convincing evidence that Dr. Burris's determination of MMI was incorrect.

d. Similarly, claimant provided no medical records or testimony that the impairment rating assigned by Dr. Burris was incorrect and such evidence was unmistakable and free from serious or substantial doubt. Claimant relies on Dr. Zuehlsdorff's impairment rating to dispute Dr. Burris's impairment rating, but after a review of the records, this is merely a difference of opinion and does not amount to clear and convincing evidence. Furthermore, Claimant's testimony regarding her ongoing pain and lack of function does not constitute clear and convincing evidence that the Division IME made an error with respect to claimant's impairment rating.

Medical Maintenance Benefits

e. A claimant is entitled to post-MMI maintenance medical benefits if future medical treatment will be "reasonably necessary to relieve the claimant from the effects of the industrial injury or occupational disease even though such treatment will not be received until sometime subsequent to the award of permanent disability". *Grover v. Indus. Comm'n*, 759 P.2d 705, 710 (Colo. 1998). In deciding whether maintenance care is necessary there must be evidence which establishes "but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that [s]he will suffer a greater disability than [s]he has thus far." *Stollmeyer v. Industrial Claim Appeals Office of State of Colo.*¸916 P.2d 609, 610 (Colo. App. 1995).

f. Neither Dr. Zuehlsdorff nor Dr. Burris recommended any medical maintenance care. Dr. Fall opined that Claimant should pursue chiropractic care on her own.

g. Nonetheless, Claimant has continued to treat with her chiropractor for her low back condition. Claimant has testified that chiropractic treatment continues to help her. Claimant's testimony is credible that the chiropractic treatments from Dr. Smith is necessary to maintain her condition.

h. However, C.R.S. §8-42-101(3)(a)(III) provides that compensation for fees for chiropractic treatments shall not be made more than ninety days after the first of such treatments nor after the twelfth such treatment, whichever first occurs, unless the chiropractor has received level I accreditation.

i. Therefore, based on claimant's testimony, claimant has proven by a preponderance of the evidence that she is entitled to medical maintenance care for the chiropractic treatment by Dr. Smith subject to the limitations set forth by statute.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Claimant failed to prove by clear and convincing evidence that Dr. Burris erred in his opinions as to MMI and impairment rating. Claimant has not overcome the Division IME.

B. Claimant has proven by a preponderance of the evidence that she is entitled to medical maintenance care. Specifically, Claimant has proven she is entitled to chiropractic care, subject to the limits set forth in C.R.S. §8-42-101(3)(a)(III).

DATED this 21st day of February, 2022.

ISSUES

Whether the claimant has overcome, by clear and convincing evidence, the opinions of the Division-sponsored independent medical examination (DIME) physician that the claimant's cervical spine was not injured, and therefore no impairment rating was assigned to the claimant's cervical spine.

Whether the claimant has demonstrated, by a preponderance of the evidence, that her average weekly wage (AWW) should be increased for the period of February 1, 2021 through February 28, 2021, due to the loss of her health insurance.

FINDINGS OF FACT

1. The claimant suffered an injury at work on March 25, 2020, while working as a barista. On that date, the claimant was injured when she was struck by three boxes of frozen sandwiches that fell from a shelf. The claimant testified that she was struck on the back of her head near the base of her skull.

2. The claimant's authorized treating physician (ATP) for this claim is Dr. James McLaughlin. The claimant first saw Dr. McLaughlin on March 25, 2020. At that time, the claimant reported a headache and some visual disturbances. Dr. McLaughlin diagnosed post concussive symptoms and tightness of the cervical spine. He took the claimant off of all work at that time.

3. On March 27, 2020, Dr. McLaughlin ordered a head computed tomography (CT) scan. On March 31, 2020, a head CT showed no acute intracranial pathology. In addition to the head CT, x-rays were taken of the claimant's cervical spine. The x-rays showed no fracture or bone lesion, and no spondylolisthesis.

4. On April 1, 2020, Dr. McLaughlin noted that the head CT and x-rays of the claimant's cervical spine were normal.

5. On April 20, 2020, Dr. McLaughlin indicated that the claimant could return to full duty work the following day (April 21, 2020).

6. On April 23, 2020, the respondent filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits.

7. On May 4, 2020, the claimant was seen by Dr. McLaughlin. At that time, the claimant reported that she felt very fatigued after working a full shift, with a headache and tightness in her neck. At that time, Dr. McLaughlin limited the claimant to working four hour shifts.

8. On June 25, 2020, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Bernton opined that the claimant suffered a contusion to the cervical and occipital area with a minor muscle strain. Dr. Bernton further opined that the claimant's continuing symptoms were likely the result of anxiety, and depression (with somatoform complaints). In addition, he opined that the claimant had reached maximum medical improvement (MMI) as of the date of the IME.

9. On July 31, 2020, Dr. McLaughlin released the claimant to full duty, with no work restrictions.

10. On August 31, 2020, Dr. McLaughlin referred the claimant to Brittany Matsumura for consultation. On September 14, 2020, the claimant was seen by Dr. Matsumura. At that time, the claimant reported occasional visual disturbances, increased migraine headaches, dizziness, and occasional memory issues. Dr. Matsumura noted the claimant's neurologic exam was normal. She recommended the claimant take propranolol to treat her headaches.

11. During his treatment of the claimant, Dr. McLaughlin identified the claimant's diagnoses as: headache and cervical strain.

12. Throughout her treatment with Dr. Matsumura, the claimant's diagnoses were identified as: post-traumatic headache, myofascial muscle pain, cervicalgia, and dizziness.

13. The claimant testified that she believes that both her head and neck were injured on March 25, 2020. The further claimant testified that since the injury she has had pain and issues with her neck range of motion.

14. The claimant's spouse testified that he and the claimant have medical insurance through the employer. He further testified that he believes that the health insurance was canceled in February 2021. The claimant and her spouse learned that their insurance was canceled when they attempted to fill a prescription. It is their understanding that the insurance was reinstated March 1, 2021. A similar situation occurred in June 2020, when the claimant was provided written notice that her health insurance was canceled. However, in February 2021, the claimant did not receive any written notice.

15. On April 19, 2021, Dr. McLaughlin determined that the claimant had reached MMI. At that time, Dr. McLaughlin assessed a whole person permanent impairment rating of 11 percent. This whole person impairment rating was reached by assigning six percent impairment for the claimant's cervical spine (with four percent for a Table 52 rating and two percent for range of motion) and five percent impairment for the claimant's headaches.

16. On July 13, 2021, the claimant attended a Division sponsored independent medical examination (DIME) with Dr. John Hughes. In connection with the DIME, Dr. Hughes reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Hughes identified that the claimant suffered a "work-related blow to the head with development of post-traumatic migraine headaches". Dr. Hughes agreed with Dr. McLaughlin that the claimant had reached MMI by April 19, 2021. Dr. Hughes assessed a whole person permanent impairment rating of five percent. This was based upon the claimant's traumatic head injury. Dr. Hughes opined that the claimant did not suffer a cervical spine injury. Therefore, he did not assess an impairment rating for the cervical spine.

17. On July 21, 2021, the respondents filed a Final Admission of Liability (FAL) which relied upon Dr. Hughes's DIME report.

18. On November 1, 2021, Dr. Bernton authored a report in which he opined that the medical records supported Dr. Hughes's determination that the claimant does not have any permanent impairment to her cervical spine. Dr. Bernton also noted that based upon his review of the claimant's medical records,significant rigidity of the cervical spine was not evident, nor documented consistently. Dr. Bernton further noted that none of the claimant's providers pursued magnetic resonance imaging (MRI) of the claimant's cervical spine.

19. The ALJ credits the medical records and the opinions of Dr. Hughes over the contrary opinions of Dr. McLaughlin. The ALJ finds that it was appropriate for Dr. Hughes to assess an impairment rating without the inclusion of the cervical spine. The ALJ finds that the opinion of Dr. McLaughlin that the cervical spine should have been included in the rating is a mere difference of opinion and does not rise to the level of any error on the part of Dr. Hughes. The ALJ finds that the claimant has failed to overcome Dr. Hughes's DIME opinion regarding the impairment rating.

20. The ALJ finds that the claimant has not demonstrated that it is more likely than not that she is entitled to an increase in her temporary average weekly wage (AWW) for the month of February 2021. The ALJ finds that the claimant has failed to demonstrate that her health insurance was canceled in February 2021. Furthermore, even if the insurance was canceled during that time, the ALJ finds no persuasive evidence on the record that any loss of insurance coverage in February 2021 was related to the claimant's work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v.*

Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the claimant has failed to prove by clear and convincing evidence that Dr. Hughes's impairment rating was incorrect. The claimant has failed to establish anything other than a difference of opinion between medical providers. As found, the medical records and the opinions of Dr. Hughes are credible and persuasive.

6. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings at the time of the injury. In order for a particular payment to be considered "wages" it must have a "reasonable, present-day, cash equivalent value," and the claimant must have access to the benefit on a day-to-day basis, or an immediate expectation of receiving the benefit under appropriate, reasonable circumstances. *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM*

Corporation, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her average weekly wage (AWW) should be increased for the period of February 1, 2021 through February 28, 2021, due to the loss of her health insurance. As found, the claimant has failed to demonstrate that her health insurance was canceled in February 2021. Furthermore, even if the insurance was canceled during that time, the ALJ found no persuasive evidence that any loss of insurance coverage was related to the claimant's work injury

ORDER

It is therefore ordered:

1. The claimant has failed to overcome the DIME physician's opinion regarding the claimant's permanent impairment rating.

2. The claimant's request for an increase in her average weekly wage (AWW) for the period of February 1, 2021 through February 28, 2021, is denied and dismissed.

Dated this 22nd day of February 2022.

Cassandra M. Sidanycz
Administrative Law Judge

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above

address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant sustained a compensable injury arising out of the course and scope of his employment on June 4, 2021, injuring his left knee.

II. Whether Claimant has proven, by a preponderance of the evidence that he is entitled to medical benefits as a result of a compensable industrial injury.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on September 7, 2021 on multiple issues including compensability, medical benefits that are authorized, reasonably necessary and related to the alleged work related injury of June 4, 2021, average weekly wage and temporary disability benefits. Claimant withdrew the issues of average weekly wage and temporary disability benefits at the time of the hearing.

Respondents filed a Response to Application for Hearing on September 10, 2021 adding issues of responsible for termination and authorization of medical provider. Respondents withdrew the issue of termination in response to Claimant's withdrawal of the issue of temporary disability benefits and stipulated that the providers Claimant was treated by were authorized.

Prehearing Administrative Law Judge Royce Mueller entered a prehearing conference order on December 29, 2021 granting Respondents' motion for a post-hearing deposition of authorized treating provider (ATP) Lori Rossi, M.D. Respondents sent a Notice of Deposition of Dr. Rossi for January 31, 2022.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant worked for Employer as a heavy duty alignment technician for a period of almost 21 years, on and off. The last period of employment started as of March 1, 2021. The job required Claimant to perform duties involving bending, kneeling and twisting, lifting over 100 lbs. and up to 300 lbs. with lift assistance, laying on the ground and creeper, getting up and down from a creeper, lifting heavy parts in awkward positions and installing them on vehicles. Claimant worked on a variety of vehicles, from cars to large busses and 18 wheelers.

2. Claimant credibly testified that he had not had prior left knee problems before June 4, 2021.

3. On Friday, June 4, 2021, between 9 and 10 a.m., Claimant was working on the kingpins[1] of a large bus for Employer. This required Claimant to remove the wheel, hub and tire assembly from the bus with a dolly. As he was removing the wheel it started to roll and slide. In an attempt to stop the tire from rolling away, he tried to catch the tire with his leg to prevent it from falling. Claimant felt an immediate pop, and pain in his left knee within the hour. Claimant stated that he thought he had tweaked the knee and it would get better with rest over the weekend. He stated that in dealing with heavy machinery, it is common to have these kinds of incidents and felt it was not necessary to report each bump and bruise as that would mean he would report something almost on a daily basis. Claimant stated that he told his coworker, but did not report the injury to HR because they were gone for the day, by the end of the day when he realized the severity of the injury. He stated that he reported the injury first thing on Monday, June 7, 2021.

4. The left knee pain became progressively worse over the following hours and on June 5, 2021 he could hardly put any weight on his left knee. He rested that day, elevating his leg on his couch all day alternating using ice and heat on the knee. On June 6, 2021 Claimant accompanied his wife to the grocery store and he only lasted approximately 15 minutes before he needed to go to his truck and to rest his leg due to the pain. On the way home, Claimant stopped for gas for his vehicle. While he was pumping the gas, he turned towards the truck and his left leg gave out, causing him to fall against the gas pump.

5. Claimant went to the emergency room at Medical Center of Aurora and was first seen by Nurse Gail K. Turner. She noted that Claimant was being seen after an injury on Friday, with continued pain, swelling and decreased range of motion. The note goes on to state that Claimant had left knee pain while attempting to stand at work, with continued pain in the left knee and hip since Friday.

6. Claimant was then seen by an ER physician, Dr. Anna Schubert, who documented a different mechanism of injury involving a recliner. Dr. Schubert concluded after examination that Claimant had a small joint effusion with possible ligamentous injury, recommended therapy, over the counter medication and a follow up with orthopedics. The radiologist, Dr. Benjamin Sacks described that the plain films showed possible small effusion and recommended an MRI of the left knee.

7. Claimant testified that he spoke to the nurse to advise about his work related left knee injury before he was seen by the physician. Claimant testified he does not own a recliner, denied sitting in a recliner anytime between June 4 and June 6, and denied making any statements about getting out of a recliner. As found, the first contact with Nurse Turner is more persuasive and credible over the contrary notations of Dr. Schubert.

[1] The main pivot in the steering mechanism.

8. Claimant was next attended by Dr. Lori Rossi on June 7, 2021 at Midtown Occupational Medicine. Dr. Rossi documented that Claimant injured his left knee after repeatedly getting up and down from a creeper. Claimant went into the office on crutches, with continued pain with ambulation. She noted diffuse anterior swelling and positive McMurray's test,[2] was unable to bear weight and had instability with popping. Dr. Rossi requested that Dr. Noel see Claimant as she valued his opinion with regard to causality. Dr. Rossi at this time stated that the objective findings were yet to be determined as work related. She recommended restrictions, over the counter medication, prescribed a soft knee brace since the knee was unstable, and ice for the swelling.

9. Employer completed the First Report of Injury on June 8, 2021, which noted that Claimant injured his left knee while working under a tractor, performing a wheel alignment and had popping and could not bear weight.

10. On June 10, 2021 Claimant was evaluated by Dr. Lon Noel. Claimant provided a more detailed mechanism of injury where he was performing an alignment with a 350 lb. dolly, while picking up the tire, it shifted and he slid under it. Claimant developed left knee pain, which was progressively worsened causing him to have problems walking. Dr. Noel noted that Claimant had an antalgic gait, favoring the left lower extremity, had swelling anteriorly, with an equivocal McMurray's test. Dr. Noel concluded that the Claimant's left knee injury was work related and that the objective findings were consistent with the mechanism of injury. He also recommended an MRI of the left knee.

11. The left knee MRI from Health Images on June 21, 2021 showed mild degeneration of the ACL, a large area of full thickness and near full thickness cartilage loss in the central patella with mild reactive marrow edema,[3] posterior root rupture of the medial meniscus including mild extrusion of the meniscal body, and cartilage irregularity of the condyle with a small area of high grade cartilage fissuring and small joint effusion.

12. On June 22, 2021, Claimant was seen by Dr. Rossi. She noted that "Causality was originally an issue, but cleared up by Dr. Noel at the last clinic visit." Dr. Rossi now changed that the objective findings were consistent with the history and the work related mechanism of injury. Dr. Rossi reviewed Claimant's left knee MRI and diagnosed him with a medial meniscus tear. Dr. Rossi referred Claimant to an orthopedic surgeon, Dr. Hewitt.

13. Respondents filed a Notice of Contest on July 12, 2021 stating the claim was denied for further investigation for compensability.

14. Dr. Rossi again saw Claimant on July 22, 2021 and continued to recommend restrictions and the prior treatment plan, including the referral to Dr. Hewitt. This was echoed in the reports from August 9, 2021 and August 23, 2021.

[2] Test to identify potential meniscus tears in the knee.
[3] Typically a response to an injury.

15. Claimant was evaluated by Dr. Michael Hewitt, an orthopedic surgeon, on September 3, 2021. He reviewed the MRI and examined Claimant, which showed a large joint effusion. He aspirated 40cc of fluid and performed a cortisone injection. He also recommended an unloader brace.

16. Claimant stated that he was last seen by a doctor about his left knee on September 21, 2021 as his care was denied from then on. Claimant stated that he continued working, though modifying what he was doing, and being very deliberate and careful with what work he performed, as his left knee kept popping, gave out sometimes and continued to have pain every time he put weight down, though he mostly did not have problems with range of motion.

17. Dr. Robert Watson, a level II occupational medicine physician, issued a records review dated December 7, 2021 at Respondents' request. Dr. Watson stated that inconsistencies in the medical records made it more probable than not that Claimant was not injured on the job on June 4, 2021.

18. Dr. Watson testified at hearing consistent with his report, outlining all the inconsistencies in the records, stating that it was more likely that Claimant tore his meniscus while getting up from a recliner.

19. Dr. Rossi testified by deposition on January 31, 2022. She stated that she diagnosed Claimant with an acute posterior root medial meniscus rupture. She testified that initially, after reviewing all the records, she opined that Claimant sustained a work related injury. She stated that it was unlikely that Claimant's ruptured meniscus was caused by standing up from a recliner.

20. As found, it is more likely than not that on June 4, 2021, Claimant injured his left knee in the mechanism he described at the hearing and that is reflected in Dr. Noel's June 10, 2021 report. Dr. Noel took the time to obtain a full description of the mechanism of injury. As found, it more likely than not that the June 6, 2021 report by Dr. Schubert does not accurately reflect Claimant's mechanism of injury. Further, Dr. Noel and Nurse Turner are more persuasive and credible over the contrary opinion of Dr. Watson and the testimony of Dr. Rossi. Lastly, Dr. Rossi's opinion, after Dr. Noel evaluated Claimant, assessing that the injury was work related was more credible than the subsequent change of opinion. As found, Claimant's left knee was asymptomatic before the work related injury, he worked a heavy duty job, with heavy parts, assembling and dismantling the kingpins, which required Claimant to remove the wheel, hub, and tire assembly from the bus with a dolly, all of which were very heavy. As found, Claimant was injured in the course and scope of his employment with Employer on June 4, 2021.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal

relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." § 8-41-301, C.R.S.

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Indus, Comm'n*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, the medical records, Claimant's testimony, and the opinions of Dr. Noel, the opinion of Dr. Rossi following Dr. Noel's evaluation and before her deposition, and the

records of Nurse Turner are credible and persuasive, over the contrary opinion of Dr. Watson and the deposition testimony of Dr. Rossi, which are not persuasive. Claimant asserted he was working a heavy duty job, working performing an alignment when the tire was sliding and he had to put his leg under the tire to brace it. He immediately felt a pop and shortly thereafter, started feeling pain in his left knee, while getting up and down from the creepers. Further, Claimant had no prior left knee injuries or symptoms before the June 4, 2021 work related injury. Claimant is credible and persuasive. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered injuries to his left knee arising out of and in the course and scope of his employment with Employer on June 4, 2021 and that the injury was proximately caused by the June 4, 2021 accident.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical treatment for this work injury. As found, Claimant has proven by a preponderance of the evidence that the treatment Claimant received from the emergency room at Aurora Medical Center, Dr. Rossi, Dr. Noel, Dr. Hewitt, Health Images and other providers within the chain of referral was reasonable medical treatment necessary to cure and relieve Claimant from the effects of the work related injury, including but not limited to the physical therapy, the braces, crutches and nonsteroidal medications, the aspiration and the cortisone injection. As found, Claimant has proven by a preponderance of the evidence that the physical therapy recommended by Dr. Hewitt is reasonable medical treatment related to Claimant's left knee work related injury of June 4, 2021.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for workers' compensation benefits for date of injury of June 4, 2021 for his left knee injury is compensable.

2. Employer shall cover all authorized, reasonably necessary treatment related to the June 4, 2021 injury from authorized providers to cure or relieve the effects of Claimant's compensable injury, including but not limited to the charges from at Aurora Medical Center, Midtown Occupational Medicine, Dr. Rossi, Dr. Noel, Dr. Hewitt, Health Images and other providers within the chain of referral.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 22nd day of June, 2022.

Denver, CO 80203

Note: This order was issued on February 22, 2022. The above cited month was a scrivener's error.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-165-956-003

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the May 19, 2021, request by authorized treating provider ("ATP") Lucas Schnell, D.O., for a left knee arthroscopic ACL reconstruction with soft tissue allograft with partial medical meniscectomy is reasonable and necessary as well as causally related to Claimant's admitted industrial injury.

II. Whether Claimant established by a preponderance of the evidence that the proposed L5-S1 lumbar disc arthroplasty requested by authorized treating provider ("ATP") Stephen Pehler, M.D., on August 19, 2021, is reasonable and necessary as well as causally related to Claimant's admitted industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered an admitted industrial injury on February 19, 2021, while working as a delivery/dock worker for Employer. Before starting work as a deliver/dock worker for Employer in 2019, Claimant worked 20 years in the same position at YRC. In Claimant's position, he had to drive semis and deliver product to different locations.

2. On February 19, 2021, Claimant had backed two semis together, back-to-back, and was moving an aluminum ramp that was folded in half, which weighed about 180 to 220 pounds, between the trucks beds when he felt a pop in his low back which took him down to the ground, hitting both knees and landing on his hands. Claimant described the pain as severe and said that he remained on the ground due to pain until he could pick himself up. Claimant's testimony was consistent with the report of injury made by Brian Alvarez, M.D., three days later on February 22, 2021. *See* Claimant's Exhibit Tab 6, Bate Stamp ("BS") 27.

3. Claimant testified that before his admitted injury of February 19, 2021, he did not have symptoms or pain in either his left knee or low back which lasted more than a few days, had never missed a day of work due to back pain, and had not required any ongoing medical treatment for his left knee or low back.

4. For example, Claimant testified that although he had received treatment for back pain three times on January 8, 2020, January 28, 2020, and August 10, 2020 these singular visits were for pain originating from lifting at work but that the back pain went away and he did no follow-up care.

5. Claimant also testified that he had been involved in two separate car accidents on March 2, 2020, and December 4, 2020 but received no medical treatment from either accident for his back or knee, had no symptoms or lingering pain complaints, and missed no time from work.

6. Claimant also testified that between August 2018 and December 2019 he was treated at Kaiser Permanente for pancreatitis which he thought caused him to suffer from back pain. But his back pain at that time did not involve numbness or weakness in his legs.

7. Claimant's medical records that predate his work injury demonstrate that Claimant did have intermittent back pain for which he received treatment. But the records do not demonstrate that Claimant also had numbness and weakness in his legs.

8. Following Claimant's admitted industrial injury, at his first February 22, 2021, visit with authorized treating provider ("ATP") Bryan Alvarez, M.D., at Aurora Colorado Occupational Medical Partners ("Aurora COMP") Claimant was diagnosed with a lumbar spine sprain and assigned physical therapy, massage therapy, and chiropractic treatment. *See* Claimant's Exhibit Tab 6, BS 27-32.

9. On Claimant's pain diagram, filled out on February 22, 2021, he did not circle the left knee but credibly testified that he told ATP Alvarez about the knee, but he did not know at his first visit whether the knee was related to the back pain or a separate condition. *See* Claimant's Exhibit Tab 6, BS 33. At the first visit, Claimant also indicated on ATP Alvarez's intake form that he had had prior gastrointestinal abdominal pain as well as muscle weakness and previous back pain. *See* Claimant's Exhibit Tab 6, BS 35.

10. Following Claimant's initial visit with ATP Alvarez, Claimant underwent a series of chiropractic treatment with Zachary Jipp, DC, (*See* Claimant's Exhibit Tab 7, physical therapy at Aurora COMP with multiple providers, *see* Claimant's Exhibit Tab 8) and massage therapy (*See* Claimant's Exhibit Tab 9), but such treatments provided no lasting relief.

11. On March 4, 2021, at Claimant's first physical therapy visits, it was noted that he had "occass paresth over bilat hips," and that:

> Pt injured lower spine after pulling a ramp out of the truck. Pt Experienced severe, sudden LBP, and felt a "pop" in his back. The pain took him down to his knees. Pain did improve from DOI but now pain remains unchanged. Pt has begun chiropr. Rx and reports increase in lower trunk soreness with Rx. Sleep is interrupted. Pain level is at 7/10 currently, over lower trunk
>
> *See* Claimant's Exhibit Tab 8, BS 122.

12. At Claimant's second visit with ATP Alvarez on March 8, 2021, Claimant reported the following:

> Bob is a 56 y/o male who presents with lower back pain s/p back injury. Today he reports no improvement of his back pain. He has 6/10 pain that spreads across his lower back as well as one

> episode of a tingling sensation from his back to his L knee. He also reports aching of his bilateral hips and a feeling of instability of the L knee. He denies saddle anesthesia, incontinence, numbness, or pain radiating down his leg. He has done one session of PT and Chiro which he reports exacerbate this back pain. The pain increases with movement and decreases with rest. He is no longer taking any medications for his pain as the flexeril made him "groggy" and the meloxicam gave him diarrhea. He has not been working since the injury. X-ray showed with no signs of fracture. Today we discussed getting an MRI and continuing PT/Chiro/Massage.

See Claimant's Exhibit Tab 6, BS 41 (Emphasis added).

13. On March 9, 2021, at physical therapy, it was noted that along with low back pain, Claimant's "left lateral knee is weak and painful." *See* Claimant's Exhibit Tab 8, BS 125.

14. On March 9, 2021, during massage therapy the massage therapist's objective findings were:

> Palpation reveals hypertonicity and tenderness in b/l lower back. Mid back and upper legs.
>
> Swedish and deep tissue applied bilaterally to latissimus dorsi, mid/low traps, thoracolumbar paraspinals . . . .

See Claimant's Exhibit Tab 9, BS 143.

15. On March 21, 2021, ATP Alvarez noted that Claimant "has had increased left knee instability and the same low back pain as previously noted in his last appointment. *See* Claimant's Exhibit Tab 6, BS 48.

16. On March 22, 2021, ATP Alvarez put in a request for Claimant to have an MRI of the left knee and to continue physical therapy, massage therapy, and chiropractic therapy. *See* Claimant's Exhibit 6, BS 58.

17. On March 22, 2021, when making the MRI referral ATP Alvarez noted:

> Orthopedist Referral
>
> I recommended a consultation with a qualified Orthopedist.
>
> **Referral Reason: L-Medial Meniscal Tear**
>
> Referral Status: Regular 55-year-old gentleman who works as a commercial truck driver. While in the middle of. . . His lumbar spine has been the more painful region and thus is taken out most of his therapy and attention. The left knee symptoms were getting worse and did not improve despite physical therapy exercises. An MRI was obtained and showed a medial meniscal tear with overlying peer meniscal cyst. Please evaluate and appreciate recommendations for management.

See Claimant's Exhibit Tab 6, BS 60.

18. On March 17, 2021, Claimant underwent an MRI of the lumbar spine requested by ATP Alvarez, which MRI found:

    1. Straightening typical lordosis of the lumbar spine.
    2. Multilevel disc bulges and protrusions, most prominent at L4-L5 and L5-S1. Mild to moderate bilateral L5-S1 neuroforaminal narrowing abuts and may irritate the exiting bilateral L5 nerve roots. Mild bilateral L3-4 and L4-5 neuroforaminal narrowing.
    3. Some mild L5-S1thecal sac narrowing and indentation of the anterior thecal sac at other levels.
    4. Multilevel fact arthropathy and some facet joint effusions.

    See Claimant's Exhibit Tab 10, BS 157.

19. On March 24, 2021, Claimant's back pain was slowly improving but his left knee pain and instability remained. *See* Claimant's Exhibit Tab 8, BS 127.

20. On April 1, 2021, at physical therapy it was noted that Claimant's low back pain was at 5/10 and that he was laying in a recliner to relieve pain but that the left knee was still painful. *See* Claimant's Exhibit Tab 8, BS 129.

21. On April 1, 2021, at the massage therapy visit the massage therapist noted:

    > After MT, pt reports better movement in low back. Pain decreased to 3/10. Pain is more localized to right SI area as opposed to wide spread throughout the iliac crest.

    See Claimant's Exhibit Tab 9, BS 145.

21. On April 1, 2021, Claimant had an MRI of the left knee performed at Health Images which was requested by ATP Alvarez. That MRI came back with findings of:

    1. Medial meniscal tear with overlying parameniscal cyst.
    2. Absence of the anterior cruciate ligament consistent with previous complete disruption.
    3. Mild chondromalacia of the patellofemoral compartment.

    See Claimant's Exhibit Tab 11, BS 159.

22. On April 1, 2021, after reading the left MRI knee study, ATP Alvarez referred Claimant out for a consultation with a "qualified orthopedist" noting again:

    > Referral Status: Regular 55-year-old gentleman who works as a commercial truck driver. On the day of injury, the patient was pulling the ramp out from back of the truck when he felt a pop in his low back. The pain was great enough to make him fall to his knees, specifically on the left knee. Since the injury he has reported left knee pain but the lumbar spine has been the more painful and thus has taken most of his attention. The left knee symptoms were getting worse and did not improve despite physical

> therapy exercise. An MRI was obtained and showed a medial meniscal tear with overlying peer meniscal cyst. Please evaluate and appreciate recommendations for management.

See Claimant's Exhibit Tab 9, BS 146.

23. On April 21, 2021, Claimant was still complaining of left knee pain and instability. *See* Claimant's Exhibit Tab 8, BS 140.

24. On April 7, 2021, Claimant, based on the referral from ATP Alvarez, was evaluated at the Center for Spine & Orthopedics by Luca Schnell, D.O., who made a recommendation for:

    1. ACL brace.
    2. Formal physical therapy.
    3. Intraarticular steroid injection today.
    4. Follow-up in 6 weeks for reassessment.
    5. No squatting, stooping, kneeling, climbing, or lifting greater and 30 pounds.

See Claimant's Exhibit Tab 12, BS 161.

25. At the April 7, 2021 visit ATP Schnell injected Claimant's left knee with lidocaine and noted:

> I discussed with Robert that he has an ACL deficiency which potentially could be chronic as I do not see any acute edema or pivot-shift type of lesion. He also has a medial meniscus tear. I think the feeling of instability could be coming from the meniscus or the ACL issue. He does not recall an instability sensation prior to this work related event. We will exhaust conservative treatment. If he fails this, I would consider arthroscopic ACL reconstruction with allograft and partial medial meniscectomy.

See Claimant's Exhibit Tab 12, BS 161-162 (Emphasis added).

26. On May 19, 2021, ATP Schnell noted the following:

> Robert returns and states unfortunately he is still having medial joint line pain and a feeling of gross instability of his knee when he does not wear his ACL brace. He does note that the brace helps him tremendously. He stresses that he did not have any of these symptoms prior to his work-related injury that occurred on February 19, 2021. He has a known complete ACL rupture as well as posterior horn medial meniscus tear with parameniscal cyst.
>
> * * *
>
> Impression:
>
> 1. Left knee posterior horn medial meniscus tear with parameniscal cyst.

2. Left knee complete ACL rupture.
3. Left knee mild primary osteoarthritis.

Recommendation:

1. Left knee arthroscopic ACL reconstruction with soft tissue allograft with partial medial meniscectomy.
2. no squatting, stooping, kneeling, climbing or lifting greater than 30 pounds.
3. Follow up for pre-op visit after authorization obtained.

I discussed with Robert he has failed conservative treatment in the form of physical therapy, steroid injection, and ACL bracing. I think that he will have some permanent instability if his ACL rupture is not addressed, as well as some chronic pain with his meniscus tear. I discussed the options of allograft versus autograft for ACL reconstruction. He is amenable to allograft with partial meniscectomy. Regarding cautions, the patient did have an acute injury at work which he relates all of his symptoms to. He said he had no prior problems with the knee before this and now has instability, which would correlate with his ACL rupture. I cannot definitively determine the acuity of his ACL tear. Subjectively the patient denies any prior history of instability. I do think it is reasonable to correlate his twisting injury with the pathology noted on his MRI.

See Claimant's Exhibit Tab 12, BS 164-165.

27. On May 20, 2021, ATP Schnell put in a request for a left ACL reconstruction and meniscectomy.

28. After the surgical request was submitted, Respondent had Claimant's records reviewed by James P. Lindberg, M.D. He noted that if Claimant's missing ACL or the meniscus tear was actually acute and result of the work injury, there would have been ACL remnants and a bloody effusion on his MRI, with significant pain and disability. The complete absence of an ACL was not compatible with an acute injury and the meniscal tear was secondary to his long-standing ACL ligament tear (Resp 015-16). Dr. Lindbergh further noted there was no mention of any kind of twisting injury - in fact the records indicate he fell forward immediately onto his hands and knees. On the other hand, Claimant credibly testified that he really does not know whether he twisted his knee, all he knows is that his body went out due to his back pain and he ended up on the ground and developed back and knee pain. As a result, Claimant most likely twisted his knee during the accident due to the onset of pain and instability after the work accident.

29. Dr. Lindberg did not examine Claimant but based on the record review, gave the opinion that "the meniscus tear is secondary to his long standing anterior cruciate ligament tear and if he decides to have surgery done by Dr. Schnell, it should be

done under his own insurance, that it was not a result of Claimant falling on his hands and knees." *See* Claimant's Exhibit Tab 17, BS 201-204.

30. Dr. Lindberg's report was provided to ATP Schnell who opined as follows:

> After review of Dr. Lindberg's report, I do agree with some of the conclusions of his report. Regarding Mr. Warren's ACL rupture, I cannot directly correlate this with his work-related injury. It is accurate there was no bloody effusion or edema noted on the MRI of Mr. Warren's left knee on 04/01/2021. Therefore, this could be a chronic tear, unrelated to his work-related injury on 02/19/2021.
>
> Regarding his medial meniscus tear, it was initially report to me by Mr. Warren that he had a twisting type injury when he fell, which would coincide with the posterior horn medial meniscus tear. However, I cannot directly say with high probability that his meniscus tear was from his work-related accident. It is unable to be determined from his MRI or clinical exam.
>
> Overall, I cannot directly state that Mr. Warren's multiple injuries to his knee are directly related to his work injury based on his history, imaging findings and clinical exam. I do feel Mr. Warren could potentially have some chronic pain and instability in his knee due to his meniscus tear and ACL rupture. I would be happy to address these issues for the patient in the future outside of his work claim.

See Claimant's Exhibit Tab 12, BS 166.

31. Claimant credibly testified that his left knee has been unstable since the injury, that in his working life he has had no knee problems, and that if in fact the ACL was previously ruptured, the knee was stable until his admitted industrial injury where he fell on his knee. The medical records reflect that after the first visit with ATP Alvarez, the medical records are consistent with Claimant's testimony.

32. While the request for surgery in the knee claim was under denial, Claimant was referred out to Nicholas Olsen, D.O., for a series of injections to his lumbar spine and then to the Center for Spine and Orthopedics. The treatment received at those facilities did not relieve Claimant's symptoms. *See* Claimant's Exhibit Tabs 13-14.

33. Claimant credibly testified that he was unhappy with the lack of progress as it related to his lumbar spine and ATP Alvarez sent him out for a second opinion to the Orthopedic Centers of Colorado where he was evaluated by ATPs Stephen Pehler, M.D., and Maria Kaplan, P.A. At the first visit which occurred on August 11, 2021, ATP Kaplan noted:

> [P]atient is very pleasant 56-year-old male for initial consultation of his low back pain with intermittent right buttock, hip and lower extremity radiculopathy and tingling. He was involved in a work-related injury on 2-19-2021 in which he was lifting a 180 pound ramp, twisted wrong and fell to the ground. Since that time he has had constant and fairly debilitating low back pain. He has completed physical therapy without any relief to his symptoms has

> also had a total of 14 cortisone injections as well as 2 Medrol Dosepaks with minimal improvement to his symptoms. His most recent injection was one week ago. He currently takes Tylenol and ibuprofen. He reports the majority of his pain is in his low back with some right thigh pain intermittently. He has tried muscle spasm medicines and this was not helpful. He has increased pain with lumbar flexion, extension, rotation as well as physical activities and prolonged standing and walking. He has not been able to return back to work due to his pain. He denies changes to bowel bladder function, focal weakness, saddle anesthesia.
>
> * * *
>
> At this point in time, patient is a forms of conservative therapies including physical therapy, anti-inflammatories, pain medicines, rest as well as multiple cortisone injections to the lumbar spine without any improvement to his symptoms. He has reduced qualify of life due to pain and is unable to work or do any physical activities. We discussed surgical intervention due to his symptoms as well as radiographic findings. The surgery would be a L5-S1 lumbar disc arthroplasty. We discussed the risks and benefits of surgery as well as postoperative outcomes and expectations and he would like to move forward with this. We will submit to insurance for authorization and he will need preoperative clearance prior to scheduling. We will prescribe gabapentin to take for nerve pain.

See Claimant's Exhibit Tab 16, BS 197-198 (Emphasis added).

34. On August 15, 2021, a CT was performed of Claimant's lumbar spine. *See* Claimant's Exhibit Tab 15-16.

35. On August 19, 2021, Claimant returned to ATP Pehler at Orthopedic Centers of Colorado who noted that:

> Interval history: This patient is very pleasant 56-year-old male is here today for preoperative consultation. He continues to have debilitating levels of back pain as well as right greater than left buttock and lower extremity pain. He has attempted now 14 corticosteroid injections in the Workmen's Comp. setting including 2 Medrol Dosepaks. He has had only limited and intermittent relief. His symptoms are affecting his quality of life as well as his ability to work. He had previously recommended a lumbar disc replacement.
>
> * * *
>
> Assessment Plan:
>
> This point time, we will continue forward insurance approval for his lumbar disc replacement. We reviewed the risk and benefits as well as expectations in the postoperative setting. He voiced understanding. He does wish to proceed forward. We will hopefully schedule the near future. He continues to have back pain

> as well as buttock and leg pain that is affecting his quality of life as well as ability ambulate**.** He has spondylosis and disc height loss with this protrusion at the L5-S1 level. The rest of his lumbar spine from L1 down to L5 look pristine. He has attempted extensive conservative treatment and continues to be symptomatic.

See Claimant's Exhibit Tab 16, BS 199 (Emphasis added).

36. After receiving ATP Pehler's request for surgery, Respondent had Claimant evaluated by Brian Reiss, M.D. It was Dr. Reiss' written opinion and testimony at hearing that Claimant had a clear history of chronic recurring low back pain that was not consistent with chronic pancreatitis. (See Respondents' Exhibit J, BS 69,70. He also concluded that Claimant's current level of pain was very similar to his prior intermittent recurring lower back pain. *See* Respondents' Exhibit J, BS 70. Lastly, it was also his opinion that the surgery recommended by Dr. Pehler was neither reasonable, necessary nor related to Claimant's admitted industrial injury, that Claimant had returned to baseline but that at most what Claimant required was a core strengthening program. *See* Claimant's Exhibit Tab 18.

37. Dr. Reiss also concluded that the surgery is inconsistent with the Colorado Medical treatment Guidelines. But again, such opinion seems heavily weighted on his contention that Claimant has returned to baseline and just needs some core strengthening – with which the ALJ disagrees. The ALJ also finds that the Guidelines are not persuasive based on the facts of this case.

38. ATP Pehler was provided with Dr. Reiss' denial and issued a report challenging his conclusions setting forth that:

> Dear ABF Freight
>
> Thank you for taking the time to review Mr. Robert Warren's case. As you know, this patient is a very pleasant 56-year-old male that was involved in a work-related injury on 02/19/2021. Prior to this injury Mr. Warrant denies any significant injuries or pathology to his lumbar spine. He does endorse some occasional musculoskeletal injuries that primarily resolved with supportive care. Since Mr. Warren's injury in February of 2021, he has attempted every form of conservative treatment possible. This has included physical therapy, pool therapy, anti-inflammatory medications, muscle spasm medications, corticosteroids, epidural steroid, and facet injections all without any significant symptomatic relief. His symptoms have greatly affected his quality of life and ability to work.
>
> * * *
>
> Imaging obtained in my office and from his prior MRI demonstrated disc height loss and a disc herniation at the L5-S1 level. Given his failure of every form of conservative treatment and continued symptoms, my recommendation was for a lumbar disc replacement at the L5-S1 level. By review of Dr. Reiss's IME performed in

> October of 2021, this request was denied. Dr. Reiss sites his reasoning including that the pain generator has not been identified and that Mr. Warren has not completed all conservative care**.** I respectfully disagree with Dr. Reiss. Mr. Warren has completed an extensive amount of conservative care over the past eleven months. This has included several months of both workman's compensation sponsored physical therapy, and physical therapy funded by Mr. Warren. Dr. Reiss also sites that the pain generator has not been identified. Based on our review of Mr. Warren's imaging, his L5-S1 disc appears to be his only source of pathology. There is no evidence of significant degenerative changes to any other level or any facet degenerative changes present. Mr. Warren has temporarily responded to epidural steroid injections targeting his L5-S1 level. While we certainly understand that a response to a lumbar epidural steroid injection is not an indication for disc replacement, Mr. Warren does meet the indications for a lumbar disc arthroplasty.
>
> My recommendation for a lumbar disc arthroplasty at L5-S1 is a reasonable and indicated procedure to address Mr. Warren's continued and worsening pain and symptoms. He has attempted and failed now approaching eleven months of conservative care with no sustained symptomatic relief.

See Claimant's Exhibit Tab 16, BS 200A.

39. The ALJ finds Dr. Pehler's opinion and rationale for surgery to be credible and persuasive because his opinion is consistent with Claimant's underlying medical records and statements to his medical providers regarding his pain and disability as well as Claimant's completion of conservative medical treatment – which did not help.

40. Claimant credibly testified he understands the risk of lumbar surgery and desires to pursue it.

41. The opinions of Dr. Reiss and those of ATP Pehler could not be more divergent. Dr. Reiss' opinion is based on his conclusion that Claimant's condition has returned to baseline and that Claimant merely needs to improve his core strength. But such opinion is inconsistent with the underlying records, Claimant's testimony, and the opinions of his ATPs. Before the work injury, Claimant could perform his regular job duties and was not suffering from chronic pain. At this point in time, he cannot. In the end, Dr. Reiss' opinion does not appear to offer reasonable medical treatment to improve Claimant's condition. It also appears Dr. Reiss' opinion ignores Claimant's pain complaints and current disability. On the other hand, Dr. Pehler, in his medical judgement, has determined that the surgery he has recommended offers Claimant the best option to cure and relieve him from the effects of his work injury.

42. While the medical records submitted at hearing reveal Claimant has had very little physical therapy, he has undergone other conservative treatment. As noted by Dr. Alvarez, Claimant's conservative treatment has consisted of physical therapy, anti-

inflammatories, pain medicines, rest as well as multiple cortisone injections to the lumbar spine without improvement of his symptoms.

43. Claimant remains under the care of ATP Alvarez who has not yet released Claimant at maximum medical improvement ("MMI") and who noted on September 29, 2021, that:

> Pain in his L-spine is worsening and becoming more constant. Now has constant burning pain in his R hip that radiates down to his calf and foot. Taking ibuprofen and Tylenol with minimal relief. The back surgery is still not scheduled yet. He expresses frustration with his pain the how he has not been able to have surgery, states it is affecting his mood and he feels depressed because he is always fighting the pain. Discussed coping strategies and will f/u 2-weeks.
>
> *See* Claimant's Exhibit Tab 6, BS 109.

44. Based on Dr. Alvarez' September 29, 2021, report, Claimant has not returned to baseline and continues to have chronic and disabling pain that has not been relieved by any of the treatment provided to date. The ALJ finds such conclusions to be credible and persuasive since it is supported by Claimant's testimony and the opinions of the ATPs.

45. On December 8, 2021, Claimant returned to ATP Alvarez who noted "no change overall but with some worsening of symptoms. Court date in week of January 19. Continue HEP." *See* Claimant's Exhibit Tab 6, BS 111J.

46. ATP Alvarez's WC164 forms have consistently maintained that Claimant's injuries are consistent with a history of a work-related mechanism of injury. *See for example,* Claimant's Exhibit Tab 6, BS 39, 58, 75, 80 and 93. ATP Alvarez has concluded that the left knee and low back symptoms are related.

47. ATP Schnell has contended that although Claimant's ACL may have been preexisting, he was asymptomatic before the events of February 19, 2021, and Claimant's testimony is consistent in that regard. Claimant has been symptomatic in the knee since that time and the ALJ finds that the pain and instability Claimant suffers was caused by his work injury.

48. Medical records reflect that Claimant has consistently complained of low back pain shooting into his right leg and down and that those symptoms were not present before February 19, 2021, even though he had had back pain which he contends was related to pancreatitis. Except for some bilateral calf pain, such back pain did not go past his back level.

49. Since the work accident, Claimant has consistently complained of pain in his left knee. Claimant credibly testified at hearing that he wants to undergo the surgery recommended by ATP Schnell on his knee and the surgery recommended by ATP Pehler. He just wants to get back to work. Before this event, Claimant "never missed work."

50. Claimant's testimony and statements to his medical providers mostly tracks the underlying medical records. As a result, the ALJ finds Claimant's statements to his medical providers and testimony to be credible and persuasive.

51. The ALJ finds the opinions of Claimant's ATPs to be credible and persuasive because the ALJ finds their opinions are supported by the underlying medical records and Claimant's statements to them as well as his testimony about his pain and disability since the work accident.

52. The ALJ finds that before the work accident, neither Claimant's back nor knee were disabling and neither required any active medical treatment. But the ALJ further finds that after the accident, both Claimant's knee and back required medical treatment and that both conditions were disabling. As a result, the ALJ finds that Claimant's work injury caused the need for medical treatment – including the surgeries recommended.

53. The ALJ further finds that the surgeries are reasonably necessary to treat Claimant's knee instability and back pain, with radicular symptoms, which were caused by his work accident. Thus, the need for surgery is also related to his work accident.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion

of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that the May 19, 2021, request by authorized treating provider ("ATP") Lucas Schnell, D.O., for a left knee arthroscopic ACL reconstruction with soft tissue allograft with partial medical meniscectomy is reasonable and necessary as well as related to Claimant's admitted industrial injury.

II. Whether Claimant established by a preponderance of the evidence that the proposed L5-S1 lumbar disc arthroplasty requested by authorized treating provider ("ATP") Stephen Pehler, M.D., on August 19, 2021, is reasonable and necessary as well as related to Claimant's admitted industrial injury.

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42--101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company, W.* C. No. 4-445-060 (February 22, 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). *See also*: Section 8-43-201(3), C.R.S.

In this case, the issue is whether the proposed treatment is reasonable and necessary, as well as related to the injury. The ALJ evaluated the mechanism of Claimant's injury, his symptoms, the opinions of his treating physicians and medical providers, along the medical opinions of Respondents' experts. Each of the proposed courses of treatment is reviewed, *infra.* The ALJ Also considered the Medical Treatment Guidelines.

Respondents contend that the left knee surgery recommended by ATP Schnell is not necessary or related because the symptoms did not develop immediately following the injury. This is in fact not the case as the ALJ has found that the symptoms have been present since Claimant's injury.

Respondents contend that the lumbar surgery recommended by ATP Pehler is not necessary or related as Claimant had a temporary aggravation of his low back condition and returned to baseline and that all he needs is some core strengthening. As found, the medical records reflect that Claimant has not returned to baseline, that the condition he now has is separate and distinct from that suffered when he had pancreatitis and intermittent back pain and that physical therapy, medications, injections, and massage therapy, or Claimant's own therapy, have not resolved the symptoms from that condition. The Respondents also contend the back surgery is inconsistent with the Medical Treatment Guidelines. The ALJ, however, does not find the Medical Treatment Guidelines to be persuasive in this case.

Additionally, ATP Alvarez has confirmed the progression of Claimant's symptoms from the date of injury and they are consistent with the care now being recommended by ATP Schnell and ATP Pehler. There is credible and persuasive evidence that Claimant had no symptoms in either his left knee or low back that required medical treatment or caused any disability just before his admitted industrial injury and Claimant credibly testified away the prior episodes of back pain in 2020 from lifting at work and differentiated the back pain related to his pancreatitis.

Respondents are liable if the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause a need for medical treatment. Section 8-41-301(1)(c), C.R.S.; *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). In this case, the evidence leads the ALJ to conclude that while Claimant may have had underlying asymptomatic conditions, it was the admitted industrial injury that caused his symptoms and the need for medical treatment.

The ALJ finds and concludes that the surgeries recommended are reasonable and necessary to cure and relieve Claimant from the effects of his work injury.

As a result, the ALJ finds and concludes Claimant has satisfied his burden by a preponderance of the evidence with regard for the left knee arthroscopic ACL reconstruction with soft tissue allograft with partial medial meniscectomy and the L5-S1 lumbar disc arthroplasty. The proposed surgeries are reasonable, necessary, and causally related to his work accident.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent shall pay the cost, pursuant to the Colorado Medical Fee Schedule, of the left knee arthroscopic ACL reconstruction with soft tissue allograft with partial medial meniscectomy recommended by ATP Schnell on May 19, 2021.

2. Respondent shall pay the cost, pursuant to the Colorado Medical Fee Schedule, of the L5-S1 lumbar disc arthroplasty, recommended by ATP Pehler on August 19, 2021.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 22, 2022.

Denver, CO 80203

ISSUES

➢ Whether Claimant has proven by a preponderance of the evidence that the recommended ketamine treatment is reasonable medical treatment necessary to maintain Claimant at maximum medical improvement ("MMI")?

FINDINGS OF FACT

1. Claimant is a 60-year-old female who was employed with Employer as a dental biller. Claimant sustained a work injury on January 5, 2017 when she slipped on a sidewalk while at work after a snowstorm. Claimant testified she tripped when she did not see where the sidewalk ended, and rolled her right ankle.

2. Claimant was referred to Dr. Robert J. McLaughlin with St. Mary's Occupational Medicine for medical treatment. Claimant subsequently was referred to Dr. Christopher Copeland for orthopedic evaluation on March 2, 2017. Dr. Copeland eventually performed ankle surgery on July 5, 2017.

3. Due to lingering symptoms, burning and shooting pain, and discoloration. Dr. McLaughlin began to discuss the possibility of complex regional pain syndrome ("CRPS") with Claimant. On October 12, 2017 the doctor referred Claimant to Dr. Brittany Matsumura for pain management. Dr. Matsumura initially evaluated Claimant on November 9, 2017. Dr. Matsumura reviewed Claimant's medical records which were noted in Dr. Matsumura's medical report, obtained a medical history and performed a physical examination. Dr. Matsumura recommended Claimant be referred for a CRPS workup.

4. Claimant underwent the CRPS testing under the auspices of Dr. J. Tashof Bernton on February 26, 2018. Dr. Bernton reviewed the triple-phase bone scan, Autonomic Testing Battery, and Stress Theromography, and opined that Claimant was within diagnostic limits for CRPS. Dr. Bernton recommended sympathetic blocks to determine the extent of CRPS.

5. Claimant underwent right L3 lumbar sympathetic blocks on March 29, April 3, and April 12, 2018 under the auspices of Dr. Kenneth Lewis. Claimant was eventually referred to Dr. Giancarlo Barolat for consideration of a nerve stimulator trial.

6. Claimant consulted with Dr. Barolat on May 9, 2018. The doctor noted the sympathetic blocks gave Claimant good, but short term, pain relief, and that she had

tried many different medications with mixed results. Dr. Barolat opined Claimant was had chronic, severe neuropathic pain syndrome with the characteristics of CRPS type 1, and had failed all conservative treatment modalities. Dr. Barolat recommended the nerve stimulator trial.

7. Claimant returned to Dr. Bernton on June 14, 2018, who noted that since Claimant did not have long-term symptom control from the sympathetic blocks, either a nerve stimulator trial or ketamine infusions should be considered.

8. Respondent initially denied the request of the nerve stipulator trial. Dr. Barolat noted in an appeal letter dated August 30, 2018 that ketamine infusions could be attempted prior to a spine surgery, but instead he opined that the nerve stimulator was reasonable treatment.

9. Respondent subsequently approved the nerve stimulator trial and Claimant began the nerve stimulator trial on July 9, 2019. Claimant eventually underwent the implantation of the peripheral nerve stimulator ("PNS"). Claimant testified that the PNS improved her "stabbing" nerve pain, but other CRPS symptoms persisted.

10. Claimant consulted with Dr. Matsumura on October 22, 2019. The doctor noted that although Claimant had improved with the nerve stimulator, Claimant's activities were limited by pain and she was having periodic pain issues. Dr. Matsumura also noted that Claimant reported that following her PNS implant, she had signficant pain which was improved with ketamine. Dr. Matsumra noted Claimant did have a hallucination with the ketamine as it was given as a quick bolus instead of slowly over time.

11. Dr. Matsumura recommended additional ketamine therapy, noting that Claimant continued to have periodic pain issues. Dr. Matsumura noted that ketamine provided after her surgery was significantly helpful for intense pain. Dr. Matsumura recommended a trial of ketamine compounded neuropathic cream which could incorporate several medications that would assist with Claimant's pain.

12. Claimant testified that the topical ketamine compound cream helped with the burning and pins and needles sensations in her toes. Claimant testified that she thought the ketamine might help with her symptoms and would allow her to bake food and do things around the house. Claimant testified she does not wear shoes due to the pain in her feet and only wears slides.

13. Dr. McLaughlin placed Claimant at MMI on November 21, 2019 and provided Claimant with an impairment rating that included a rating for her CRPS condition, in addition to a rating for her ankle and mental impairment. Dr. McLaughlin recommended post-MMI medical care, including follow up with Dr. Barolat and Dr. Matsumura and continued medications.

14. Respondent filed a Final Admission of Liability on December 18, 2019, admitting to the impairment rating and the post MMI medical treatment.

15. Claimant continued to treat with Dr. Matsumura on January 21, 2020. The doctor noted ongoing issues, including progressive sensitivity of the thigh near the surgical site, calf cramping, skin sensitivity, "bone pain," and weakness. Dr. Matsumura noted Claimant was using a topical cream including ketamine, which was noted to be quite helpful in her pain exacerbations and allodynia complaints. Dr. Matsumura noted that ketamine compound cream was the most effective topical analgesic. Dr. Matsumura noted that Respondent had declined to further authorize that cream. Dr. Matsumura noted that the ketamine cream had been quite effective in maintaining Claimant's function for her severe exacerbations of pain.

16. Claimant returned to Dr. Matsumura on September 15, 2020. Dr. Matsumura noted that Claimant still had pain flares even with the PNS, and had consulted with Dr. Barolat about whether the PNS could be adjusted. Dr. Matsumura noted Claimant had been through extensive conservative treatment for her pain. Dr. Matsumura noted that they had tried a topical ketamine compounded cream which had been helpful in the past, but was denied by the carrier Dr. Matsumura noted that following her stimulator placement, Claimant was given a bolus of ketamine quickly and had symptoms of hallucinations, anxiety, breathing difficulties, however, she has had ketamine with past surgeries without issues. Dr. Matsumura discussed ketamine infusion with Claimant and noted that the ketamine infusion was typically a last resort treatment for ongoing pain despite appropriate conservative efforts.

17. Claimant indicated she was interested in pursuing ketamine infusions, and Dr. Matsumura discussed Claimant's ketamine reaction following the PNS surgery, and discussed the possibility that Claimant's bad reaction was due to the quick administration of the bolus. Dr. Matsumura noted Claimant had ketamine administered following other surgeries before without incident.

18. Dr. Matsumura referred Claimant to Dr. William James at the Western Slope Ketamine Clinic for ketamine treatment. Dr. Matsumura noted Claimant had been through extensive treatment for CRPS with limited improvement and despite having the PNS had ongoing pain flares.

19. Claimant consulted with Dr. William James on October 29, 2020. Dr. James noted Claimant had been diagnosed with CRPS for three years prior, and had treated her symptoms with physical therapy, nerve blocks, sympathetic blocks, and a PNS. Dr. James noted Claimant had ongoing significant physical impairment due to pain. Dr. James opined it was medically necessary to proceed with intervention involving the recommended ketamine infusion.

20. Claimant testified she hoped the infusions would provide pain relief, even if only temporary. Claimant testified that she was aware that the infusions helped with pain for different times for different patients. She testified that even short time periods with no pain would be a great benefit to her, both physically and mentally. Claimant testified she hoped the infusions would help her perform basic tasks around her house on her own, which would be helpful because she needs so much help at home. Claimant testified that if she had the ketamine infusions, and they were effective, she may be able to have a normal outing with grandchildren or go for an extended walk: things she had not been able to do living with CRPS.

21. Claimant testified her physicians had advised her of side effects of ketamine including hallucinations, heart rate changes, blood pressure changes. Claimant testified that she had no side effects with the use of topical ketamine. Claimant further testified she had no side effects when anesthesiologists used ketamine during the two PNS procedures and a third personal surgery. Claimant testified she wished to pursue treatment that included the ketamine infusion because it may provide her with some pain relief.

22. Respondent obtained a records review independent medical examination ("IME") with Mark Paz, M.D. After reviewing Claimant's medical records, Dr. Paz issued a report dated April 14, 2021. Dr. Paz's opined that the ketamine infusion therapy recommended by Dr. James would not be reasonable, necessary treatment related to the CRPS diagnosis in this case. Dr. Paz noted in his report that the proposed ketamine infusion was not supported by Colorado Medical Treatment Guidelines, Rule 17, Exhibit 7. Dr. Paz noted the information from the Colorado Medical Treatment Guidelines indicates that, although low dose daily infusions may achieve some pain relief compared to placebo, the relief with infusion faded within a few weeks.

23. Dr. Paz further noted in his report that the fact that Claimant may have responded favorably to a topical compound that included ketamine the ketamine infusions were not comparable. Dr. Paz noted that the basis for the use of a topical compound pharmaceutical is to minimize a clinically insignificant level with the systemic absorption of the medication in the compound. Dr. Paz noted the compounding cream is utilized to achieve a local effect at the site of the injury (the nerve endings) without systemic side effects. The infusion of ketamine has the objective of achieving a systemic effect. Dr. Paz opined in his report that you cannot extrapolate a predictable benefit of infusions by pointing to prior reported benefit to the topical compound

24. Dr. Paz testified at hearing consistent with his IME report. Dr. Paz noted in his testimony that none of the studies involving ketamine documented any functional improvement in patients with CRPS. Dr. Paz testified that, per the Division Level II accreditation, the objective of treatment is a combination of reduction of pain and improvement in function.

25. Dr. Paz testified that the summary conclusion in the Medical Treatment Guideline references literature that documents ketamine is associated with the risk of potential harm which outweighed evidence of limited short-term benefit in patients with CRPS. Dr. Paz opined in his report that IV ketamine NMDA receptor antagonists were not recommended for treatment of CRPS. Dr. Paz testified that the reason ketamine is not a recommended treatment is based upon the probability of whether the treatment would be beneficial. Dr. Paz testified that if there is a greater than 50% probability that the treatment would be beneficial then the provider must consider the risk/benefit, whether the risks outweigh the benefit. Dr. Paz opined that with regard to the use of ketamine infusions in the treatment of CRPS, the Medical Treatment Guidelines determined the benefits do not outweigh the risks.

26. Dr. Paz also discussed in his report and testimony the issue of undesired side effects associated with ketamine infusion including the risk of emergence reactions which includes delirium accompanied by irrational behavior and cognitive impairment. With regard to Claimant, Dr. Paz noted that Claimant had a documented history of experiencing hallucinations associated with the infusion of a bolus of ketamine which she received following the July 16, 2019 operative procedure for placement of the nerve stimulator. Dr. Paz testified that in his opinion, this factor alone would warrant against consideration of ketamine infusion therapy for Claimant in this matter. Dr. Paz testified that despite Claimant's belief that the occurrence of the hallucinations related to the improper administration of the bolus of ketamine, the fact that a reaction occurred, even if Claimant may not have had a reaction previously, would point against use of ketamine infusion therapy in this case.

27. Dr. Paz discussed in his report Claimant's functioning level throughout her treatment course. Dr. Paz noted that when comparing the January 29, 2018 functional capacity evaluation results with those of February 17, 2020 there was little variation. Dr. Paz opined that by definition the medical maintenance is for the purpose of maintaining the level of function the patient achieved when they reached maximum medical improvement. Dr. Paz opined that Claimant's functioning level remains comparable as it was when Claimant was placed at MMI in November of 2019 and when Claimant completed the FCE on February 17, 2020.

28. The ALJ notes that the Medical Treatment Guidelines relating to CRPS indicate that there are contraindications to ketamine infusions, but the Guidelines also state as follows: "There is some evidence that in CRPS patients, low dose daily infusions of ketamine can provide pain relief compared to placebo."

29. The ALJ finds Claimant's testimony regarding her symptoms and the effectiveness of her medical treatment to be credible and persuasive and supported by the medical records entered into evidence at hearing.

30. The ALJ credits the medical reports from Dr. Bernton, Dr. James and Dr. Matsumura and finds that Claimant has demonstrated that it is more probable than not that the recommended ketamine injections are reasonable medical treatment necessary to maintain Claimant at MMI. The ALJ notes the contrary opinions expressed by Dr. Paz in his report and testimony at hearing, but finds the opinions expressed by Dr. James and Dr. Matsumura to be more credible and persuasive.

31. The ALJ credits the opinions of Dr. Matsumura and Dr. James, along with the testimony of Claimant, over the conflicting opinions of Dr. Paz and finds that Claimant has proven that it is more likely than not that ketamine infusion treatment with Dr. James is reasonable medical treatment necessary to maintain Claimant at MMI by preventing the deterioration of her condition as related to the admitted injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondent is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*,

759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

4. The Division's Medical Treatment Guidelines ("the Guidelines") are generally accepted as professional standards for medical care under the Act and are to be used by health care providers when providing care. *See* Section 8-42-101(3)(b), C.R.S.; *Hall v. ICAO*, 74 P.3d 459 (Colo. App. 2003). The ALJ is not required to grant or deny medical benefits based on the Guidelines and the ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

5. As found, Claimant has proven by a preponderance of the evidence that ketamine therapy injections recommended by Dr. Matsumura and Dr. James is reasonable medical treatment necessary to maintain Claimant at MMI.

6. As found, the opinions of Dr. Matsumra and Dr. James, the progress notes from various providers, and Claimant's testimony found to be credible and persuasive with regard to the issue of whether the recommended treatment is reasonable necessary and related to Claimant's work injury.

7. The ALJ therefore finds that Respondent ia liable for the reasonable medical treatment necessary to maintain Claimant at MMI and prevent the deterioration of her condition, including the ketamine infusion therapy recommended by Dr. James.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the reasonable medical treatment necessary to maintain Claimant at MMI including the ketamine infusion therapy recommended by Dr. James.

2. Respondent's liability for the ketamine infusion therapy shall be paid pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: February 22, 2022

222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the recommended treatment included physical therapy and a referral to a physiatrist is reasonable medical treatment necessary to maintain Claimant at maximum medical improvement ("MMI")?

FINDINGS OF FACT

1. Claimant is a 56-year-old female who sustained an admitted work injury on March 3, 2003 when she was taking laundry out of a dryer. Claimant was referred for medical treatment and eventually underwent a lumbar discectomy with Dr. Dwyer on May 21, 2003. Claimant later underwent a lumbar fusion surgery on December 12, 2003 after continued complaints of pain after the discectomy. Claimant testified she did pretty well following her lumbar fusion surgery.

2. Claimant was placed at MMI by Dr. Krebs on July 26, 2004 and provided with a 20% whole person impairment rating. Respondents filed and FAL on October 8, 2004 admitting for the 20% impairment rating. The FAL also admitted for reasonable and necessary maintenance care as recommended by an authorized treating physician.

3. Claimant testified she continued to receive maintenance medical care after the FAL was filed. Claimant testified she was in Oklahoma in 2007 through 2009 when she received medical treatment after her back gave out. Claimant testified she returned to Colorado and was treated at Valley View Hospital in 20012 for severe back pain after her back went out again.

4. Claimant testified she had two other injuries during this time. Claimant testified she injured her shoulder on August 4, 2014 when she was driving a transit bus. Claimant testified she also fell off a horse in July 2014. Claimant testified neither of these incidents involved an injury to her low back.

5. Following the incident with the horse in July 2014, Claimant was evaluated by Dr. O'Brien with Glenwood Medical Associates. Dr. O'Brien noted Claimant had multiple contusions and recommended Claimant have x-rays of her right shoulder and left knee to ensure she did not have fractures. Dr. O'Brien otherwise encourages her to stretch the best she can.

6. Claimant continued to treat with Dr. Lippman, Jr. in 2015. Claimant reported to Dr. Lippman, Jr. on September 15, 20015 that the topomax prescription was very effective in relieving her left leg pain down to 0, but she still reported having a back ache.

7. Claimant testified that she experienced a worsening of her condition in October 2019 that involved increased pain in her low back.

8. Claimant sought treatment on March 13, 2020 with Dr. Lippman Jr. Dr. Lippman Jr. diagnosed Claimant with likely facetogenic back pain and recommended a magnetic resonance image ("MRI") of the lumbar spine. Claimant underwent the MRI of the lumbar spine on May 19, 2020. The MRI showed marked loss of disc height at L34 and L4-5 along with desiccation at those two levels. A small left paracentral disc bulge at T11-T12 was also noted.

9. Claimant returned to Dr. Lippman Jr. on July 16, 2020. Dr. Lippman increased Claimant's work restrictions to limit her lifting/pushing/pulling/carrying to no more than 20 pounds. Dr. Lippman Jr. recommended Claimant be referred to Dr. Cole, a physiatrist to review the MRI and determine whether facet injections may be helpful and determine if Claimant should have physical therapy or possibly a rhizotomy.

10. Respondents obtained a medical record review independent medical examination ("IME") with Dr. Douglas Scott on August 22, 2020. Dr. Scott reviewed the medical records including the MRI report and opined that Claimant's current diagnosis was facet generated low back pain without radiculopathy.

11. Dr. Scott noted that the fusion at the L5-S1 level did not cause the facet dysfunction or pain. Dr. Scott noted, however, that the lumbar fusion places more shear stress on the disk levels above the fusion. Dr. Scott opined that this increased stress can accelerate progressive degenerative disk disease at the level or two levels above the fusion level in the lumbar spine leading to progressive desiccation and narrowing of the disk space at these levels. Dr. Scott noted that this may place greater shear and torsional stress of the facet joints.

12. Dr. Scott opined that it was possible that the L5-S1 fusion had accelerated the development of the degenerative disk disease at L3-L4 and L4-L5 and may have contributed to facetogenic pain in the lower back. Dr. Scott opined that it was reasonable to believe that but for the L5-S1 lumbar fusion, Claimant would not have facetogenic pain at this time.

13. Dr. Scott recommended that Claimant be referred for at least six to eight weeks of conservative treatment with physical and manual therapy. Dr. Scott opined that if Claimant was unresponsive to this treatment, she should have a psychosocial

screening before completing the referral to Dr. Cole for his evaluation to consider facet joint injections vs. medial branch block or more physical therapy.

14. Dr. Scott issued a follow up report on October 6, 2020 to clarify that while it was possible that the lumbar fusion may have contributed to the degenerative spondylosis in Claimant's back, it is just as possible that the degenerative spondylosis was caused by Claimant's age, smoking history and/or accelerated by riding horses.

15. Claimant testified at hearing that riding horses actually helped her back pain. This testimony is consistent with the medical records from Dr. Lippman and found to be credible.

16. The ALJ credits Claimant's testimony at hearing along with the medical records of Dr. Lippman Jr. and the August 22, 2020 medical report from Dr. Scott and finds that Claimant has established that it is more probable than not that the recommended medical treatment to Claimant's L3-L4 and L4-L5 disk levels is causally related to Claimant's L5-S1 fusion surgery that was related to her industrial injury.

17. The ALJ notes that following Claimant's shoulder injury while driving the transit bus and the injury when she fell of the horse in 2014, Claimant's medical treatment did not involve her lower back. Claimant treated for those injuries and recovered. However, Claimant sought additional medical treatment to her low back over a year later in September 2015. Claimant appears from the medical records to have had a favorable response to that treatment.

18. Claimant then developed a worsening of her low back condition in 2019 which resulted in the need for additional medical treatment. The ALJ credits the medical records from Dr. Lippman Jr. and Claimant's testimony at hearing and finds that this medical treatment is causally related to her March 3, 2003 work injury and necessary to maintain Claimant at MMI.

19. The ALJ further finds that the recommended medical treatment including the physical therapy and referral to Dr. Cole, the physiatrist is reasonable medical treatment necessary to maintain Claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

4. As found, Claimant has proven by a preponderance of the evidence that recommended physical therapy and referral to Dr. Cole, a physiatrist, is reasonable medical treatment necessary to maintain Claimant at MMI.

5. As found, the medical records from Dr. Lippman Jr., along with the testimony of Claimant at hearing are found to be credible and persuasive with regard to this issue. Additionally, the ALJ credits the opinions expressed by Dr. Scott in his August 22, 2020 medical report in finding that Claimant has established by a preponderance of the evidence that the recommended treatment, including the physical therapy and referral to Dr. Cole, is reasonable, necessary and related to Claimant's work injury.

6. The ALJ therefore finds that Respondent's are liable for the reasonable medical treatment necessary to maintain Claimant at MMI and prevent the deterioration of her condition, including the recommended physical therapy and referral to Dr. Cole.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the reasonable medical treatment necessary to maintain Claimant at MMI including the recommended physical therapy and referral to Dr. Cole, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: February 23, 2022

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-170-051-001

STIPULATIONS

I. Following the presentation of evidence, the parties conferred and agreed to an average weekly wage (AWW) of $500.00.

II. The parties also stipulated that should the injury in question be determined compensable, Claimant's authorized treating physician is Douglas Bradley, M.D. at Concentra Medical Centers.

The above referenced stipulations are approved.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence that he sustained a compensable injury to his left shoulder while working as a line cook for Employer on April 13, 2021.

II. If Claimant established that he sustained a compensable left shoulder injury, whether he also established that he is entitled to all reasonable, necessary, and related care for his left shoulder, including, but not limited to, the April 13, 2021 emergency room visit to St. Mary Corwin and the left shoulder surgery performed by Dr. Jennifer Fitzpatrick on May 25, 2021.

III. Whether Claimant established that he is entitled to Temporary Total Disability (TTD) benefits beginning April 14, 2021 and ongoing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a former line cook for Employer.[1] He began his employment around July 17, 2020. On April 13, 2021, Claimant was reaching for a bowl above his workstation when he heard a pop followed by tingling and numbness in his left shoulder/arm.

2. Claimant testified that the incident in question occurred at approximately 6:45 p.m. while he was preparing to plate a food order. Claimant has a history of pain

[1] Claimant believes that his employment with Employer is ongoing because he was not terminated from his job and because he continues to receive correspondence from the company. Nonetheless, he has not returned to work due to his injury.

and treatment directed to his neck and right shoulder; however, he reportedly never had any left shoulder problems until he began working for Employer in 2020.

3. Claimant's primary care provider (PCP) is Southern Colorado Family Medicine (SCFM). The providers at SCFM have been treating Claimant since 2016. Claimant saw his PCP on August 13, 2020, shortly after starting his work for Employer and approximately eight months prior to the incident in question. Claimant presented to his PCP for evaluation of chronic back pain among other conditions, including GERD, and insulin dependent diabetes. There is no mention of shoulder pain in the note from this date of visit. As part of his treatment plan, Claimant was referred to pain management for his chronic back pain.

4. Claimant presented to Parkview Pain Management on October 5, 2020. During this encounter, he completed a detailed pain diagram that depicts back pain, neck pain, and right shoulder pain[2]. Claimant also checked the box indicating his right shoulder was symptomatic. Notably absent from this pain diagram is any indication that Claimant was experiencing left shoulder pain.

5. A medical report from Parkview Pain Management dated November 9, 2020 documents that Claimant had been working for Employer, which work required him to be on his feet for eight to ten hours per day doing "lots of bending, twisting, and heavy lifting" which activity was causing back pain prompting him to seek treatment. Again, there is no mention of left shoulder symptoms.

6. On April 6, 2021, Claimant presented to Parkview Medical Center in follow-up concerning the treatment of his back pain. During this encounter, Claimant reported a new complaint of a "recent onset of severe left-sided neck pain [with] radiation into the left shoulder and upper arm." Claimant noted that his symptoms were similar to the pain he reported five years earlier, which pain was felt to be emanating from his neck. Because Claimant demonstrated significantly limited cervical spine range of motion, he was referred for a cervical MRI.

7. Several hours later, Claimant presented to St. Mary Corwin Hospital for complaints involving acute pain in the left shoulder. Claimant reported cold, numbing pain, 9 over 10 in intensity. He described the pain as feeling similar to that which he experienced with a prior rotator cuff tear in the right shoulder." Claimant denied prior trauma to the left shoulder and advised that his primary care provider had ordered an MRI.

8. On April 8, 2021, Claimant presented to his primary care provider at SCFM for an evaluation of his "acute" left shoulder complaints. During this visit, Claimant reported experiencing anterior left shoulder pain of one month in duration. Claimant's physical examination was abnormal and an x-ray revealed slight elevation of the left distal clavicle suggestive of possible ligamentous damage. A left shoulder MRI

[2] *See* Resp. Ex. E, pp. 71-83. As noted, Claimant has a documented history of neck, back, and right shoulder conditions consistent with the October 5, 2020 pain diagram.

was ordered. Claimant attributed his symptoms to repetitive activity at work and stated that it felt like his pain was emanating from his rotator cuff. He also requested a "note" for the work he missed on April 6 – 7. Claimant testified returned to work with the note on April 8, 2021. He reportedly spoke to "Mike" (Mike Martinez), the general manager, about his left shoulder condition; however, he testified that no changes were made to his schedule or job duties as a result of the conversation.

9. Claimant testified that he returned to work for his shift on April 13, 2021 and was performing his usual job duties as a cook when the incident in question occurred around 6:45 p.m. He recalled specifically having an order of chicken Alfredo ready, so he pulled the chicken and reached for a pasta bowl to put the food in. Per Claimant, as soon as he reached his fully extended left arm an inch or two above eye level to grab the dishware, he heard a pop and felt tingling and numbing in his left arm. According to Claimant, he dropped the dish, walked away and put his head against the wall in pain." Claimant testified that he then reported the incident to management but was offered nothing more than Tylenol for pain. Claimant testified that he sat at work until he felt capable of driving himself to the Emergency Department (ED) at St. Mary Corwin Hospital.

10. Upon presentation to the ED, Claimant reported that he was "at work and reached out and up and left shoulder popped and went numb." By the time Claimant was evaluated, his left arm numbness had resolved but he was experiencing limited and painful range of motion in the arm/shoulder. Claimant reported having pain in the left extremity the week prior to the incident in question. The history of present illness indicates, "A few hours ago he reached up to grab a dish with his left arm and felt a pop with pain and numbness in the left shoulder." The mechanism is indicated as "overexertion from strenuous movement or load" as well as "overhead work." It is noted that Claimant had problems with the shoulder over the previous week and that an MRI was already scheduled. An x-ray taken as part of Claimant's treatment in the ED did not show acute findings. Claimant was placed in a shoulder immobilizer, counseled "on sprain vs. rotator cuff injury" and advised to keep the MRI appointment that had been scheduled previously. He was then discharged home with an excuse letter indicating that he had been seen in the ED and could return to work on April 15, 2021.

11. Prior to reporting for work on April 15, 2021, Claimant returned to SCFM at 9:40 a.m. During this appointment, Claimant reported that he felt a pop in his left shoulder while at work on Tuesday, April 13, 2021, after which he presented to the ED. Claimant also reiterated that he was having left shoulder pain prior to April 13, 2021 and at the time was "concerned that he was about to tear [the] rotator cuff because he was having symptoms in the shoulder which were similar to before when tore his right rotator cuff a few years ago." The report form this date of visit notes that "[Claimant] made this appointment to request a letter from doctor to his employer stating that they needed to open workman's comp case." Claimant was advised that he would need to see a workers' compensation provider and work with his employer to initiate a claim because SCFM did not treat work related injuries.

Employer documentation reflects that Claimant reported the injury to the Employer at 6:45 p.m. on April 15, 2021.

12. On April 20, 2021, Claimant was given a list of medical providers from which to choose pursuant to WCRP 8 by email. This list included providers at Concentra whom Claimant elected to see for treatment.

13. Claimant presented to Douglas Bradley, M.D., at Concentra on April 21, 2021. In a patient form filled out on this date Claimant indicated that, he reached for a plate and heard a pop and his left hand went numb. A physical examination reflected severely limited range of motion of the left shoulder but no abnormalities, tenderness, and full range of motion in the cervical spine. Dr. Bradley felt that Claimant might have suffered a brachial plexus injury. He prescribed Lyrica, ordered an EMG and recommended that Claimant move forward with the MRI of his left shoulder. Claimant was given "no use" restrictions for the left arm.

14. Claimant testified that he subsequently had a discussion with Mike Martinez, regarding modified work. According to Claimant, Mr. Martinez sat him down at a table and told him he could be a host. Claimant testified that he received nothing in writing regarding the modified duty, which would have clarified what the job duties of a "host" are.

15. On April 22, 2021, Claimant underwent an MRI of the left shoulder. The MRI demonstrated a partial thickness tear of the subscapularis and infraspinatus tendons and a full-thickness, partial width tear and additional partial-thickness and intrasubstance tear of the supraspinatus tendon.

16. On April 24, 2021, Dr. Bradley reviewed the MRI and referred Claimant for evaluation with orthopedist Jennifer Fitzpatrick, M.D. Claimant was evaluated by Dr. Fitzpatrick on May 10, 2021 for complaints involving the left shoulder and left-sided radiating neck pain. Claimant reported that his shoulder pain was interfering with his ability to perform activities of daily living. Dr. Fitzpatrick diagnosed Claimant with an "acute" traumatic complete tear of the left rotator cuff and recommended left shoulder arthroscopic rotator cuff repair with biceps tenodesis distal clavicle excision. Dr. Fitzpatrick sent a prior authorization request on May 12, 2021. The request was denied.

17. Surgery was performed by Dr. Fitzpatrick on May 25, 2021. Following surgery, Claimant was excused from work completely[3] by Dr. Fitzpatrick after the surgery and indicated he could return to work on June 3, 2021 with the restrictions of no use of the left arm and that he must wear a sling.

18. Physician Assistant (PA-C) Catherine Fitzgerald examined Claimant during a post-surgical appointment on June 2, 2021 at Parkview Orthopedics. Claimant reported an eagerness to start physical therapy. Claimant was documented as doing

[3] Claimant had previously requested a leave of absence from work but that work was not able to accommodate.

well. Consequently, he was referred to therapy for his shoulder at Momentum Physical Therapy.

19. On June 30, 2021, Claimant returned to Dr. Fitzpatrick for a post-operative follow-up. Claimant indicated that he felt that some of his pain might be coming more from his neck versus his shoulder. Dr. Fitzpatrick recommended an MRI of the cervical spine.

20. An MRI of the cervical spine was completed on July 8, 2021. The study was compared with a CT of the neck done on August 30, 2015. The impression of the radiologist was multilevel and multifactorial degenerative changes greatest at C6-7 resulting in moderate left and mild right foraminal narrowing.

21. On July 23, 2021, Dr. Fitzpatrick referred Claimant back to Dr. Bradley for treatment. It is indicated by Dr. Fitzpatrick that Claimant's physical therapist believed that his ongoing pain might be coming more from the neck versus the shoulder. An x-ray of the shoulder showed no abnormalities beyond a mild widening of the acromioclavicular joint presumed secondary to the resection of the distal clavicle.

22. On July 23, 2021, Dr. Bradley noted that Claimant still had pain in the collarbone and lateral shoulder with weakness and persistent numbness. The diagnosis included clavicle pain, brachial plexus neuropathy of the left shoulder, and traumatic incomplete tear of the left rotator cuff.

23. Dr. Fitzpatrick reviewed the cervical MRI on August 25, 2021 and indicated degenerative changes contributing to mild left and right foraminal narrowing.

24. On August 27, 2021, Claimant returned to Dr. Bradley with reports of continuing left arm weakness and numbness into his fingertips. Claimant had a nearly fully frozen shoulder after surgery. Claimant remained off work with restrictions of no lifting or carrying more than four pounds, no pushing and pulling more than six pounds.

25. Claimant underwent an independent medical examination (IME) with Dr. Jack Rook at the request of his attorney on September 20, 2021. Claimant reported that he was doing fine with the job until several weeks prior to "an acute injury" that occurred on April 13, 2021. Claimant explained that he started experiencing mild discomfort in the left shoulder that progressively worsened, causing him difficulties with his job duties. He stated that his job involved repeatedly lifting pots, pans, trash and water buckets - frequently greater than 50 pounds. When the activities became extremely painful to perform, Claimant went to the ER and then followed up with his primary care physician, who recommended light duty and referred him for an MRI. Claimant stated that he sustained an acute injury while "reaching above the shoulder level with his left arm, attempting to grab a pasta bowl, he felt and heard a pop in his shoulder that was associated with severe pain." Claimant stated he was unable to use his left arm and could not continue working.

26. Following a records review and physical examination, Dr. Rook diagnosed Claimant with left shoulder pain, status post arthroscopic rotator cuff repair, distal clavicle resection, and biceps tenodesis; incomplete post-operative recovery with ongoing pain and shoulder weakness and limited range of motion; and surrounding myofascial pain involving left-sided paracervical and upper trapezius musculature. Dr. Rook opined that Claimant's initial symptoms were the result of an occupational disease resulting from the physical requirements of the job, including cleaning the grill with a wire brush, performing frequent heavy lifts, repetitive reaching below, at and above shoulder level, and mopping the floor at the end of each work shift. Dr. Rook further opined that, on April 13, 2021, Claimant sustained an acute rotator cuff tear superimposed on the chronic left shoulder pain. Dr. Rook opined that, in light of the lack of prior history of left shoulder problems or alternative mechanism, Claimant sustained an occupational injury to the shoulder.

27. Claimant underwent an IME with Dr. Carlos Cebrian at Respondents' request on October 21, 2021. Claimant provided a history of injury to Dr. Cebrain consistent with that he had reported to Drs. Bradley, Fitzpatrick and Rook previously. Specifically Claimant informed Dr. Cebrain that his left shoulder had begun bothering him weeks prior to April 13, 2021, that he asked his employer to modify his duties without success and that on April 13, 2021, while reaching at approximately eye level for a porcelain bowl, he heard a pop and felt a tearing sensation in his left shoulder. Claimant stated he told his supervisor about his injury before he left work and went to the ED. Per Dr. Cebrain's report, Claimant endorsed pain and numbness in the shoulder as well as jolting sensations in his neck. Dr. Cebrain also documented Claimant's prior history of neck pain[4], right shoulder problems, and diabetes.

28. Dr. Cebrian opined regarding causation for both an occupational disease as well as the acute injury alleged by Claimant. Dr. Cebrian concluded that it was not medically probable that Claimant sustained an acute injury on April 13, 2021 because the mechanism of injury (MOI) was minimal. He explained that simply reaching with an extended arm at shoulder level to lift an empty bowl would not involve sufficient force to cause a traumatic injury or aggravate any preexisting pathology. Dr. Cebrian further indicated that Claimant's job duties were insufficient to satisfy the criteria in the Medical Treatment Guidelines (Guidelines) for development of a cumulative trauma injury. Dr. Cebrain cited the risk factors for the development of cumulative trauma from the Guidelines to include: overhead work of at least 30 minutes per day for a minimum of 5 years; work requiring shoulder movement at the rate of 15-36 repetitions per minute with no 2 second pauses for 80% of the work cycle; and work that requires shoulder movement with force 10% or greater of the maximum voluntary force and has no 2 second pauses for 80% of the work cycle. In concluding that Claimant did not meet the criteria for the development of a cumulative trauma disorder in the left shoulder related to his work duties, Dr. Cebrian noted that Claimant performed limited work about the shoulder level. Dr. Cebrain concluded that Claimant's left shoulder pain, dysfunction and rotator cuff tearing was a result of degeneration, not any work activity. In support of his opinion, Dr. Cebrian noted that Claimant had pre-existing AC joint arthropathy, a

[4] Despite Claimant denial of prior neck complaints.

prior tear in the right rotator cuff in the absence of trauma, a history of tobacco dependence and a history of diabetes, which was poorly controlled at times.

29. Robert Messenbaugh, M.D., a board certified orthopedic surgeon with experience in treating shoulder injuries, performed a review of Claimant's medical records at the request of Respondents on October 31, 2021. Dr. Messenbaugh reviewed both Dr. Rook's IME report as well as the opinions of Dr. Cebrian. Dr. Messenbaugh opined that the mechanism of the reported left shoulder injury was inconsistent with the creation of an acute rotator cuff tear. Dr. Messenbaugh opined that Claimant did not sustain an acute injury to his left shoulder as described. Dr. Messenbaugh also opined that Claimant did not sustain any injury to his cervical spine. Dr. Messenbaugh indicated that he was in full agreement with Dr. Cebrian that there was no acute injury to the left shoulder and that the need for left shoulder treatment, including surgery, was not related to Claimant's alleged April 13, 2021 claim.

30. [Redacted, hereinafter BG] testified as an assistant manager for the Employer. Per a request from Respondents, Mr. BG [Redated] measured the distance between the floor and the shelf where the dishes are stored, where Claimant would have been reaching to grab the pasta bowl in question. Mr. BG [Redated] took the measurements at multiple locations on the shelf across the line. He testified that the height was consistently 66 inches from the floor to the top of the shelf. Mr. BG [Redated] testified that the height to reach the top of the dishes stacked on the shelf could vary by up to six inches depending on how high the dishes are stacked. Mr. BG [Redated] testified that he is 6'1" (73 inches) and Claimant is two to three inches taller, or 6'2" or 6'3". Mr. BG[Redated] testified that his own shoulder was approximately the same height as the shelf (66 inches). With dishes being stacked as high as 6" up from the 66" mark the height of some dishes could be as high as 72", or 6'. Based upon the evidence presented, the ALJ finds that Mr. BG [Redated] would have had to reach his arm up to grab a bowl stacked 6 inches high. If Claimant is 2" to 3" taller than Mr. BG[Redated], the ALJ finds that he too would have had to reach above shoulder height, closer to eye level as Claimant has maintained from the beginning, to grab the bowl in question.

31. Mr. BG [Redated] further testified regarding Claimant's work after the injury. He testified he was instructed to offer Claimant light duty and offered Claimant a job as a greeter. He admitted that he did not consult with Claimant's ATP regarding the job duties and his restrictions. He also did not go over with Claimant what his specific duties as a greeter would be. The Court asked a clarifying question to Mr. BG [Redated] as to whether a modified job offer was provided to Claimant in writing. Mr. BG [Redated] confirmed no written offer was made.

32. Dr. Cebrian testified at hearing as a Level II accredited expert in occupational medicine. During his testimony, Dr. Cebrian reiterated his opinion that Claimant's left shoulder rotator cuff tear and need for treatment was due to degeneration rather than an acute injury or cumulative trauma disorder. According to Dr. Cebrain, the threshold for sustaining cumulative trauma to the shoulder is quite high

and something more common to assembly line workers as opposed to someone performing Claimant's work duties. Dr. Cebrian testified that there must be consistent work above shoulder level for at least five years, repetitive and forceful activity without breaks for at least 80% of the shift or heaving lifting for several years. Dr. Cebrian testified that, based on the duties described by Claimant; there was not a significant amount of overhead activity involved in his work. Therefore, Dr. Cebrian testified that Claimant did not meet the minimum threshold for cumulative trauma of the shoulder.

33. Concerning Claimant's assertion that he sustained a traumatic injury to the left shoulder while reaching to grab a bowl at or slightly above eye level, Dr. Cebrian repeated his opinion that the MOI was "very minor" and insufficient to cause an acute injury. Dr. Cebrian testified that reaching away from the body with the arms is an activity most people do on a regular basis. He then reiterated that there were comorbid factors contributing to degeneration of the tendons of the shoulder, which lead to the tearing in this case. Per Dr. Cebrain, the presence of osteophytes on imaging supported his belief that Claimant's rotator cuff tear was degenerative in nature rather than traumatically induced. He explained that osteophytes caused by degeneration protrude into the subacromial space where the rotator cuff tendons lay and over time cause fraying and tearing with movement of the shoulder. He also testified that Claimant's poorly controlled diabetes and smoking history was a factor in the degeneration and tearing of Claimant's rotator cuff tendons. According to Dr. Cebrain, uncontrolled/poorly controlled diabetes disrupts and weakens tendon function over time creating a predisposition to tearing. Moreover, Dr. Cebrain noted that smoking degenerates tendons more easily than in a nonsmoker. Dr. Cebrian cited Claimant's 2016 right shoulder tear in 2016 in the absence of any trauma or work activity as support that Claimant's left rotator cuff tear was spontaneous (only indicated by the development of pain) and degenerative in nature.

34. During cross-examination, Dr. Cebrian was asked if Claimant's left shoulder condition was degenerative, what caused it to become symptomatic. Dr. Cebrian responded, "So, short of any unknown trauma that occurred that we're not aware of, the degeneration, at some point, became symptomatic and can be something that can cause problems." Upon further questioning, Dr. Cebrian acknowledged Claimant became symptomatic while working.

35. The ALJ has carefully considered Dr. Cebrain's opinions and has weighed them against the balance of the competing evidence, including Claimant's testimony and the reports of Dr. Rook and Dr. Fitzpatrick. Based upon the totality of the evidence presented, the ALJ finds Dr. Cebrain's and Messenbaugh's opinions less persuasive than those of Drs. Rook and Fitzpatrick. In this case, the ALJ credits the medical records as a whole, the opinions of Drs. Rook and Fitzpatrick and Claimant's testimony to find that he probably suffered acute tears of the tendons of the rotator cuff as a direct consequence of reaching away from his body with the left arm to retrieve a bowl on a shelf at about eye level.

36. As presented, the record supports a finding that Claimant sought treatment as a direct result of the pain, numbness and tingling in his left shoulder precipitated by his work related activities on April 13, 2021. Accordingly, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that his left shoulder condition/injury is compensable. As found above, the contrary opinions of Dr. Cebrain are unpersuasive.

37. Based upon the evidence presented, including Claimant's testimony concerning his functional abilities and the reports of Dr. Fitzgerald, the ALJ finds that the left shoulder surgery she performed on May 25, 2021 was reasonably necessary and causally related to Claimant's April 13, 2021 work duties.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

D. To recover benefits under the Worker's Compensation Act, the Claimant's injury must have occurred "in the course of" and "arise out of" employment. *See* § 8-41-301, C.R.S.*; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish compensability. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this case, there is little question that Claimant's alleged injuries occurred within the time and place limits of his employment relationship with Employer, i.e. at the restaurant during his regularly scheduled shift. Moreover, the alleged injury occurred during an activity, namely plating a food order, which the ALJ concludes is expected of Claimant in his position as a line cook. While there is substantial evidence to support a conclusion that Claimant's alleged injury occurred in the course of his employment, the question of whether the injury "arose out of" his employment must be resolved before the injury is deemed compensable.

E. The "arising out of" element required to prove a compensable injury is narrow and requires a claimant to show a causal connection between his/her employment and the injury such that the injury has its origins in work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001)*; Madden v. Mountain West Fabricators, 977 P.2d 861* (Colo. 1993). Specifically, the term "arising out of" calls for examination of the causal connection or nexus between the conditions and obligations of employment and the claimant's injury. *Horodysky v. Karanian, supra*. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact, which the ALJ must determine, based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

F. The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that he sustained a work-related injury or occupational disease. Indeed, an incident which merely elicits pain symptoms without a

causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). In this case, the medical record evidence is devoid of any indication that Claimant's left shoulder was symptomatic or required treatment before he began working for Employer. The evidence presented supports a conclusion that Claimant sought care in the emergency room and with his PCP for left shoulder pain in early April 2021, for symptoms he attributed to the repetitive nature of his work. Based upon the evidence presented, the ALJ is convinced that Claimant was able to continue working his job despite the onset of symptoms. Nonetheless, his duties were not modified and he continued using the left arm/shoulder to complete the duties required of a cook, which probably caused further injury to the rotator cuff on April 13, 2021, as he reached away from his body with the left arm to retrieve a bowl from a shelf above the grill line. Indeed, the MRI unequivocally establishes that Claimant has full and partial thickness tears of several tendons within the left rotator cuff that Dr. Fitzpatrick opined were traumatic in nature. As found, the ALJ credits the opinion of Dr. Fitzpatrick over Dr. Cebrain to conclude that the aforementioned tearing was probably acute, which conclusion is supported by the severity of symptoms and disability Claimant described immediately after the MOI occurred.

G. While the ALJ is persuaded that Claimant may have suffered from pre-existing degeneration in the left shoulder, the presence of a pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

H. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent, as asserted by Respondents in this case, the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Based upon the evidence presented, the ALJ is convinced that the increased

symptoms and disability Claimant experienced on April 13, 2021 were a consequence of an aggravation and the industrially based acceleration of his underlying left shoulder degeneration causing tearing of the left rotator cuff. As found, the ALJ rejects Dr. Cebrain's contrary opinions as unpersuasive.

I. In concluding that Claimant has proven, by a preponderance of the evidence, that he suffered a compensable work injury, the ALJ finds the opinion of the Industrial Claim Appeals Panel in *Sharon Bastian v. Canon Lodge Care Center*, W.C. No. 4-546-889 (August 27, 2003) instructive. In *Bastian*, the claimant, a CNA was on an authorized lunch break when she injured her left knee. Claimant was returning to her employer's building with the intention of resuming her duties when she "stepped up the step at the door to the facility", heard a pop in her left knee and felt severe pain. She did not "slip, fall, or trip." Ms. Bastian was diagnosed with a meniscus tear and "incidental arthritis." The claim was found compensable. On appeal, the respondents contended that the ALJ erred, in part, on the grounds that the claimant was compelled to prove that her knee injury resulted from a "special hazard" of employment. Relying on their decision in *Fisher v. Mountain States Ford Truck Sales*, W.C. No. 4-304-126 (July 29, 1997), the Panel concluded that there was no need for claimant to establish the step constituted a "special hazard" as claimant "did not allege, and the ALJ did not find, that the knee injury was "precipitated" by the claimants preexisting arthritis." The same is true of the instant case. As in *Bastian*, (outside of the involvement of a different body part) and found here, the discrete injury to Claimant's left shoulder arose out of his involvement in work activity rather than being precipitated by an idiopathic condition he imported to the work place. Accordingly, the ALJ concludes that Claimant was not required to establish that the concurrence of a pre-existing weakness and a hazard of employment lead to his injury in this case.

J. Analogous to the MOI asserted in *Bastian* and *Fisher*, *supra* the MOI claimed to have caused injury in this case arose from activities that, per Dr. Cebrain, are the type which should not lead to a finding of compensability because the forces involved are "minimal" and are activities performed daily and in a similar fashion by others. Merely because Claimant was engaged in activity, specifically reaching up and outward from the body, which is performed daily outside of work and similarly by others does not compel a finding that Claimant's injury is not work-related as suggested by Dr. Cebrain. Claimant is not required to prove the occurrence of a dramatic event to prove a compensable injury. *Martin Marietta Corp. v. Faulk,* 158 Colo. 441, 407 P.2d 348 (1965). Contrary to Dr. Cebrain's opinion that Claimant could not have injury his left shoulder because the force in reaching away from the body was minimal, the persuasive evidence supports a conclusion that Claimant suffered acute tearing of the left rotator cuff after reaching with his left arm to retrieve a bowl on the shelf above his workstation. While unusual, the ALJ is convinced that a logical connection exists between Claimant's reaching activities at work, his left shoulder symptoms and his need for treatment. Consequently, the claimed injury is compensable.

Medical Benefits

K. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

L. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, the evidence demonstrates that Claimant's medical care as provided at Concentra (Dr. Bradley) and his referrals, including the orthopedic evaluation and subsequent surgery performed by Dr. Fitzpatrick was reasonable, necessary and related to his acute left rotator cuff tears sustained April 13, 2021. The aforementioned care was necessary to assess and treat, i.e. relieve Claimant from the acute effects of his injury. The specialist referrals were reasonable and necessary to determine the extent of injury in light of Claimant's ongoing disability surrounding function of the left shoulder/arm. Moreover, the evidence presented persuades the ALJ that the recommendation to proceed with a left shoulder surgery on May 25, 2021 was reasonable and necessary given Claimant's continued pain and functional decline. Consequently, Respondents are liable for the aforementioned medical treatment, including Claimant's left shoulder rotator cuff repair performed by Dr. Fitzpatrick.

Claimant's Entitlement to Temporary Total Disability Benefits

M. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). A claimant must establish a causal connection between the industrial injury and the

subsequent wage loss in order to be entitled to TTD benefits. Section 8-42-103, C.R.S.; *Liberty Heights at Northgate v. Industrial Claim Appeals Office,* 30 P. 3d 872 (Colo. App. 2001).

N. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions, which impair the Claimant's ability effectively, and properly to perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

O. Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(d)(I) which states: "The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

P. All written offers of modified duty shall clearly state "that future offers of employment need not be in writing" and that "benefits . . . will be terminated if an employee fails to respond to an offer of modified employment." C.R.S. § 8-42-105(d)(III)(A, C).

Q. In this case, Claimant has established that he was injured at work. The evidence presented also supports a conclusion that Claimant was given physical restrictions to include no use of the left upper extremity beginning April 21, 2021 by his authorized treating provider, Dr. Douglas Bradley. Nonetheless, the evidence presented persuades the ALJ that Claimant's restrictions were not accommodated. Consequently, he suffered a wage loss. While Respondents assert that Claimant was offered modified employment, the evidence presented supports a conclusion that Employer did not follow the statutory requirements that modified duty offers be extended in writing. Indeed, Mr. BG[Redated] conceded that nothing was ever offered to Claimant in writing, that the exact details of the modified duty he would be performing were not disclosed, and that the identified modified duty position was not approved by Claimant's ATP. Based upon the evidence presented, the ALJ concludes that Respondents have not provided Claimant with a bona fide modified job offer in compliance with the statue. Respondents contend that because Claimant rejected the verbal offer of modified duty, he is not entitled to TTD benefits. The ALJ is not convinced, determining instead that Claimant's rejection of the verbal offer of modified duty was reasonable considering the fact that Claimant's ATP did not approve the offer and Mr. BG[Redated] did not disclose the specific duties Claimant would be expected to perform as part of his modified duties. Accordingly, Claimant has proven that he is entitled to indemnity benefits beginning April 14, 2021 through the present and ongoing until properly terminated by operation of law.

ORDER

It is therefore ordered that:

1. The parties' stipulation concerning Claimant's AWW is approved. Claimant's AWW is $500.00.

2. Claimant has established, by a preponderance of the evidence, that he sustained a compensable injury to his left shoulder on April 13, 2021, including, but not limited to, a tear of the left rotator cuff and injuries to the surrounding musculature.

3. Respondents are liable for Claimant's treatment with St. Mary Corwin ED, Concentra Medical Centers and all treatment based upon referrals therefrom, including but not limited to his care/surgery with Dr. Fitzpatrick.

4. Respondents shall pay temporary total disability benefits beginning April 14, 2021 and ongoing until terminated according to law.

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

DATED: February 23, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that Respondents must file an amended final admission of liability ("FAL") admitting for maintenance medical benefits?

FINDINGS OF FACT

1. Claimant was employed by Employer as an automobile mechanic. Claimant sustained an admitted low back injury June 10, 2019 in the course and scope of his employment with Employer when he tripped over an object that was sticking out of the concreate floor.

2. Prior to Claimant's work injury, Claimant had a prior injury to his hip from a motor vehicle accident that occurred when he was 19 years old. Claimant is currently 36 years old as of the date of hearing. Claimant testified at hearing that he did not have medical treatment to his low back prior to the work injury.

3. The medical records establish that as of May 16, 2019, Claimant was receiving medical treatment related to his hip injury with Dr. Kanopsic Jr. Claimant reported at this time that he was having spasms of sharp pain that typically last for a few seconds. Claimant was taking Cyclobenzaprine (Flexeril) at this time. While Claimant reported low back pain at the time of the examination, Dr. Kanoposic opined that given the duration of Claimant's symptoms, he did not believe the etiology of Claimant's complaints were related to a herniated disc.

4. Following his work injury, Claimant was examined on June 10, 2019 by Dr. Utt. Dr. Utt noted Claimant reported no history of back problems, but did have a history of pain into the right buttock and thigh, but not beyond the knee. Claimant returned to Dr. Utt on June 12, 2019 and was diagnosed with a lumbar radiculopathy. Dr. Utt continued conservative treatment which included physical therapy, and medications including Flexeril, Tylenol, and Ibuprofen. Claimant eventually underwent surgery on his lumbar spine consisting of bilateral laminectomy, microdiscectomy, facetectomy, and foraminotomy at the L4-5 with Dr. Agrawal on September 20, 2019.

5. Following Claimant's back surgery, Claimant was released by the neurosurgical physicians' assistant ("PA") Laura Fox on January 2, 2020. PA Fox noted

in her January 2, 2020 report that she recommended physical therapy if Claimant's back started to bother him more.

6. Claimant returned to Dr. Utt on January 10, 2020. Dr. Utt noted Claimant had mild decreased right foot inversion strength. Dr. Utt released Claimant to return to work full duty. Claimant returned to Dr. Utt on February 21, 2020 with reports of numbness, but reported his back pain was improving. Dr. Utt noted Claimant had good lumbar flexion with mildly decreased side bend and extension. Claimant was encouraged to continue stretching and core strength exercising.

7. Claimant returned to Dr. Utt on March 16, 2020 for an evaluation for an impairment rating. Dr. Utt listed Claimant's date of MMI as March 5, 2020[1]. Dr. Utt noted Claimant had been released to return to work without restrictions. Dr. Utt provided Claimant with an impairment rating of 20% whole person. Dr. Utt noted that as of his last visit, Claimant felt he could lift up to 100 pounds rarely with frequent bends, squats, kneel, and climb. Dr. Utt further noted that Claimant needed no further maintenance care and no ongoing medications.

8. Claimant testified at hearing that as of March 2020, he was continuing to take Flexeril, Tylenol, and Ibuprofen for ongoing back and radicular symptoms including numbness into his bilateral feet.

9. Claimant underwent a Division-Sponsored Independent Medical Examination ("DIME") July 30, 2020 under the auspices of Dr. Elfenbein. Claimant reported to Dr. Elfenbein that he was much better after his surgery. With regard to his current complaints, Claimant reported continued low back pain rated 7 out of 10 at its worst with 2-3 out of 10 at it's best and 4-5 out of 10 on average. Dr. Elfenbein provided Claimant with an impairment rating of 16% whole person. Dr. Elfenbein noted in his report that no maintenance care was necessary with relation to the work injury of June 10, 2019.

10. Respondents filed an FAL admitting for the 16% whole person impairment rating and denied maintenance medical treatment.

11. On August 28, 2020 Claimant saw his personal provider, Dr. Dana Patton at St. Mary's Family Practice. Dr. Patton noted that Claimant reported he still had muscle spasms in his low back. Claimant testified at hearing that these muscles spasms were related to his low back injury. Claimant returned to Dr. Patton on October

[1] Dr. Utt's medical report providing the impairment rating does not appear to have a date listed on it. However, the range of motion worksheet lists March 16, 2020 as the date of the exam at the top of the sheet, and the ALJ adopts this date as corresponding to the medical report that provides Claimant's impairment rating.

30, 2020 and reported he continued to take medications including Tylenol, Ibuprofen, and Cyclobenzaprine for pain management.

12. Claimant testified that he attempted to follow up with Dr. Utt's office for continued post-MMI care but told the case was closed.

13. Claimant testified he was evaluated by St. Mary's neurosurgery on January 27, 2021 and was referred for physical therapy. The January 27, 2021 St. Mary's neurosurgery clinic progress note states that claimant presented to the office with a complaint of back pain with radiation to the right lower extremity which had been ongoing and was getting worse. The note references the L4-5 bilateral laminectomy and bilateral discectomy performed September 21, 2019 by Dr. Agrawal.

14. Respondents obtained a records review independent medical examination ("IME") with Dr. Cebrian on February 5, 2021. Dr. Cebrian summarized Claimant's medical records and noted that the L4-5 disc hearnation and resultant lumbar surgery were work related conditions. Dr. Cebrian opined the Claimant was at MMI as of March 5, 2020 and no maintenance care was indicated.

15. Claimant was evaluated by nurse practitioner Crick on April 8, 2021. Ms. Crick noted Claimant continued to complain of low back pain with radiation down into his right lower extremity and numbness/tingling in both feet. Claimant had a new MRI on April 8, 2021 which demonstrated an L5-S1 disc extrusion with right greater than left foraminal narrowing. Ms. Crick recommended a right sided L5-S1 epidural steroid injection.

16. Claimant underwent the L5-S1 epidural steroid injection on April 23, 2021 under the auspices of Dr. Steury.

17. Claimant testified at hearing that after the surgery and being placed at MMI he remained symptomatic from the back injury. Claimant testified he sought medical treatment through his personal physician which was billed through his personal health insurance and received a lumbar spine injection. Claimant testified his symptoms improved after the April 23, 2021 injection. Claimant testified he continues to experience symptoms including tingling into his toes and the bottom of his feet. Claimant testified these symptoms are distinct from his sporadic right hip symptoms from the prior motor vehicle accident.

18. Dr. Cebrian testified at hearing consistent with his report. Dr. Cebrian opined that Claimant's April 8, 2021 MRI showed a new finding at the L5-S1 level. Dr. Cebrian testified that Claimant's previous back surgery involving a microdiscectomy and foraminotomy would not cause a disc herniation at the level below the affected area.

19. Claimant testified on rebuttal that Dr. Argawal had said his surgery could make the disc underneath the surgical site weaker. The ALJ notes that this testimony is not supported by the records from Dr. Anrgawal and does not credit this portion of Claimant's testimony.

20. In addition to the physical therapy Claimant testified he continues to receive medications, including Neurontin and Gabapentin. Claimant testified it had been recommended that Claimant switch to Amitriptyline.

21. The ALJ notes that Claimant's medical records document that Claimant was taking Flexeril prior to his work injury along with other over the counter medications. The ALJ finds that there is insufficient evidence to find that the recommended prescription medications Claimant testified to at hearing, including the Neurontin and Gabapentin are related to Claimant's workers' compensation injury as these ongoing medications are consistent with Claimant's prescriptions from prior to the work injury.

22. Additionally, the ALJ notes that Claimant's most recent MRI shows new findings that were not present initially following his work injury. There is insufficient evidence to establish that Claimant's ongoing complaints for radicular symptoms are related to his work injury and not the new findings referenced in the April 8, 2021 MRI.

23. The ALJ notes that no physician has opined that Claimant's new findings at the L5-S1 level are related to Claimant's June 10, 2019 work injury. The ALJ further credits the opinion of Dr. Cebrian that the findings at L5-S1 are not related to Claimant's work injury and finds this opinion to be persuasive with regard to the need for Claimant's ongoing treatment. The ALJ further finds that the April 23, 2021 right sided L5-S1 epidural steroid injection is likewise not related to Claimant's June 10, 2021 work injury.

24. The ALJ credits the opinions of Dr. Utt, Dr. Elfenbein and Dr. Cebrian and finds that Claimant has failed to demonstrate by a preponderance of the evidence that his need for ongoing medical treatment is related to his June 10, 2019 injury. Insofar as Claimant requests relief in the form of an amended FAL being filed admitting for maintenance medical treatment, the ALJ determines that Claimant has failed to prove that it is more likely than not that Claimant would need post-MMI medical treatment necessary to maintain Claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

4. As found, Claimant has failed to prove by a preponderance of the evidence that Claimant needs medical treatment related to the June 10, 2021 work injury in order to maintain Claimant at MMI.

5. As found, the medical reports from Dr. Utt, Dr. Elfenbein and Dr. Cebrian are found to be credible and persuasive with regard to the issue of whether Claimant needs ongoing medical treatment to maintain himself at MMI.

6. The ALJ therefore finds that Claimant has failed to meet his burden of proof and Claimant's request for an admission of liability for ongoing maintenance medical treatment should be dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for an amended FAL that admits for maintenance medical treatment is denied.

2. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: February 23, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he received at Memorial Regional Hospital is reasonable and necessary to cure and relieve him from the effects of the occupational disease.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits beginning June 12, 2020,

4. If the claimant is awarded TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant was responsible for the termination of his employment with the employer, thereby ending TTD benefits.

STIPULATION

If the claim is found compensable, the parties have stipulated to an average weekly wage (AWW) of $1,603.05.

FINDINGS OF FACT

1. The employer operates a mine. The claimant began his employment at the mine as a contractor. After one year as a contractor, the claimant was hired as a permanent employee in the position of Mechanic III.

2. The claimant's job duties included driving a large fuel truck around the mine property to fuel various pieces of equipment. The claimant testified that the truck has a 10,000 gallon tank and a two inch hose that runs between 30 and 40 feet.

3. The claimant further testified that for each fuel stop, he would park the fuel truck, and then place a chock block behind one of the tires. The way in which this task is accomplished was that the chock block is lifted off a pole on the side of the truck. Then the chock block is placed on the ground behind the tire. The claimant estimates that the chock block he used weighted 50 to 60 pounds. In addition, during the winter months, the chock block can become covered in ice and frozen debris, resulting in additional weight.

4. The claimant testified that the next part of the fueling process would be to pull the hose from the fuel truck to the receiving vehicle. At times it would be necessary to pull the entire length of the hose. The claimant would then connect the hose, turn the fuel on, and then disconnect, and retract the hose. The claimant testified that for some vehicles he had to reach above his head. At other times, it was necessary to climb onto the vehicle to connect the hose.

5. Once a fuel stop was completed, the claimant would lift the chock block and return it to the post on the truck. The claimant testified that he made between 20 and 30 stops during a 12 hours shift.

6. It is the claimant's position that the repetitive nature of these work activities resulted in an injury to his right shoulder and four bulging discs in his neck.

7. The claimant first sought treatment for his neck and shoulder symptoms on June 12, 2020. The claimant did so on that date, because he was in severe pain. On June 12, 2020, the claimant sent a text message to his direct supervisor, Mr. [Redacted, hereinafter Mr. K], stating that he would be using a sick day because "shoulder is killing me". The claimant did not report to Mr. K[Redacted] that he believed his work activities were the cause of his shoulder symptoms.

8.On August 18, 2020, [Redacted, hereinafter Ms. AS] HR Business Partner for the employer, prepared an Employer's First Report of Illness or Injury regarding the claimant. That form lists the onset of the claimant's illness or injury as "unknown". That same form also stated that the cause of the injury was "[U]nknown. Employee didn't provide a report of injury to his supervisor. Employee contacted Employee Services after his paid leave was exhausted, and indicated on his short-term disability paperwork that the injury was work-related."

9.On September 15, 2020, the claimant completed an Injured Employee's Report for the insurer. That document indicates that the date of the claimant's injury was February 15, 2019 through June 20, 2020. The claimant also identified the injured body parts as his right shoulder and neck. Under "accident facts" the claimant identified "frequent heavy lifting over a period of time".

10.At the request of his attorney, on May 17, 2021, the claimant attended an independent medical examination (IME) with Dr. Gary Zuehlsdorff. In connection with the IME, Dr. Zuehlsdorff reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his report, Dr. Zuehlsdorff opined that the claimant's job duties resulted in cumulative trauma to his cervical spine and right shoulder. Dr. Zuehlsdorff also identified that claimant's condition as "a form of repetitive motion injury".

11.At the request of the respondents, on July 8, 2021, the claimant attended an IME with Dr. Mark Failinger. In connection with the IME, Dr. Failinger reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Failinger opined that the claimant's work

activities did not cause the claimant's neck and shoulder pain. Dr. Failinger noted that the claimant denies any specific incident that initiated the onset of his symptoms. Dr. Failinger also noted that the right shoulder MRI did not reflect "significant shoulder pathology". Dr. Failinger reviewed whether the claimant's symptoms were the result of cumulative activities. Dr. Failinger opined that the claimant's job activities did not meet the criteria for repetitive movement.

12. Dr. Failinger's deposition testimony was consistent with his written report. Dr. Failinger testified that the claimant's job duties did not rise to the level of creating cumulative trauma. Dr. Failinger also noted that the claimant's job duties were not repetitive in nature. Dr. Faillinger opined that the claimant's arm use was "pretty rare and intermittent". In support of his opinion, Dr. Failinger noted that the claimant would fill a truck once every 40 to 45 minutes, or 16 trucks in a 12 hour shift. Dr. Failinger also noted that there is no clear diagnosis of the claimant's condition. Finally, Dr. Falinger testified that the claimant's symptoms are coming from a degenerative condition in his neck. Dr. Failinger does not believe that the claimant's job duties caused an aggravation or acceleration of that pre-existing condition.

13. [Redacted, hereinafter Mr. K], Maintenance Supervisor, was the claimant's supervisor. Mr.K[Redacted] testified that it was the claimant's job to run the lube truck to fuel mobile equipment. During a normal shift, an employee in the claimant's position would make approximately 20 stops. Mr. K[Redacted] testified that the fuel hoses are not connected while "charged". Although there will always be some residual fuel in a hose, while moving and connecting a hose, it is not charged. No fuel connections are done overhead.

14. [Redacted, hereinafter SM] Maintenance Supervisor for the employer testified regarding the claimant's job duties. Specifically, Mr. SM[Redacted] testified that the process for filling a vehicle starts with parking the lube truck near the receiving vehicle. Then the driver of the lube truck places the chock block for the lube truck. The hose is then pulled from the lube truck to the receiving vehicle. During this process the hose is not pressurized with fuel. Once the connection is made, the hose is pressurized to fill the receiving vehicle. When fueling is completed, the hose is depressurized and disconnected from the receiving vehicle. The hose is then returned to the lube truck via a hydraulic winder. At times, multiple vehicles will be driven to the location of the lube truck. In that instance, the lube truck chock block is not moved. Mr. SM[Redacted] estimated that the claimant would fill a total of 16 vehicles during one 12 hour shift. This does not mean 16 stops per shift, as explained above regarding multiple vehicles receiving fuel at the same location.

15. Ms. AS[Redacted] testified via deposition. Ms. AS[Redacted] confirmed that she spoke with the claimant on June 19, 2020. During that telephone conversation, the claimant told Ms. AS[Redacted] that he was reporting "an occupational illness". When Ms. AS[Redacted] requested additional information, the claimant reported that he had hurt his shoulder during a prior job, and he aggravated that injury. Ms. AS[Redacted] testified that she was not given the impression that the claimant was claiming this aggravation happened at work. Ms. AS[Redacted] also testified that she prepared the First Report of

Injury in August 2020 because the claimant had begun to claim that his condition was work related. Ms. AS[Redacted] testified that she attempted to assist the claimant with FMLA leave, and short term disability. However, the claimant was not compliant in providing requested information. The claimant's employment was terminated by the employer on December 23, 2020. Ms. AS[Redacted] testified that the claimant's employment was terminated because he failed to comply with her requests for information, and the claimant had stopped communicating with the employer.

16.The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the testimony of Mr. K[Redacted], Mr. Marshall, and Ms. AS[Redacted]. The ALJ specifically credits the testimony of Mr. K[Redacted] and Mr. SM[Redacted] regarding the claimant's job duties and the equipment utilized to perform those duties. The ALJ credits the opinions of Dr. Fallinger over the contrary opinions of Dr. Zuehlsdorff. The ALJ specifically credits the opinions of Dr. Fallinger that 1) the claimant's job activities did not meet the criteria for repetitive movement and 2) that the claimant's job duties did not cause an aggravation or acceleration of the claimant's pre-existing condition. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *H & H Warehouse v. Vicory, supra*.

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id*. Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id*.

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *F. R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not

necessarily create a causal relationship based on temporal proximity. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, October 27, 2008).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer. As found, the opinions of Dr. Fallinger, and the testimony of Mr. K[**R**edacted], Mr. SM[**R**edacted] and Ms. AS[**R**edacted] are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim is denied and dismissed. All remaining issues are dismissed as moot.

Dated this 25th day of February 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she sustained a compensable occupational disease, entitling her to reasonable, necessary and related medical benefits.

FINDINGS OF FACT

1. Claimant is a 64-year-old woman who worked for Employer as a security guard since June 28, 2016. Claimant's regular shift was from 6:00 a.m. to 2:00 p.m. five to six days per week. Claimant occasionally worked overtime. Claimant spent the entirety of her shift in a guard shack with windows. One window had minimal tinting at the top of the window.

2. Claimant credibly testified at hearing. Claimant testified she experienced exposure to sunlight while working in the guard shack which caused a burning sensation in her eyes. Claimant acknowledged she is also exposed to sunlight outside of work. Claimant alleges her exposure to sunlight while at work caused or worsened her bilateral cataracts. Claimant alleges she suffered an occupational disease with a date of onset on or around November 4, 2020.

3. Claimant's co-worker, [Redacted, hereinafter WG], credibly testified by telephone on behalf of Claimant. He testified that the windows to the guard shack are not tinted and he experiences sun exposure in the guard shack. Mr. WC[Redcted] testified the security guards stay in the guard shack throughout their shifts and that he has also had problems with the sun exposure.

4. On November 3, 2020, Claimant presented to Optometrist Nicole Ramos, O.D. at the Colorado Eye Center with complaints of blurry vision at a distance and near-sightedness out of her right eye. Claimant reported her belief that the sun was causing her cataracts and a burning sensation in her eyes. Dr. Ramos noted that Claimant worked in front of a window with direct sunlight for most of the day. She diagnosed Claimant with age-related bilateral nuclear cataracts and referred Claimant for a surgical evaluation with Ophthalmologist Howard Amiel, M.D.

5. Claimant first presented to Dr. Amiel on November 19, 2020 with complaints of decreased vision bilaterally, which began approximately one year prior. Dr. Amiel's record contains no mention of sunlight exposure and does not address potential occupational relatedness. Dr. Amiel also diagnosed Claimant with age-related bilateral cataracts. He recommended Claimant proceed with cataract surgery.

6. Employer filed a First Report of Injury on November 27, 2020.

7. Claimant underwent right-sided cataract surgery on December 8, 2020 and left-sided cataract surgery on December 22, 2020. Both surgeries were performed by Dr. Amiel.

8. Claimant subsequently attended multiple post-operative evaluations with Dr. Ramos. On December 9, 2020, Dr. Ramos noted, "Will call Workman's Comp to verify that cataracts are not age related." (R. Ex. C, p. 25). Dr. Ramos' medical notes do not otherwise address or discuss the causality of Claimant's condition.

9. Insurer filed a Notice of Contest on December 18, 2020 denying liability for Claimant's injury/illness for not being work-related.

10. Claimant continued to see Dr. Ramos for multiple follow-up appointments until January 26, 2021, at which time she was discharged from care.

11. On April 7, 2021, Chester T. Roe III, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Roe performed an evaluation and medical records review. Claimant reported to Dr. Roe she worked in a guard shack with a window in front of her. She reported the sun burned her eyes while at work and that in May 2020 her right vision worsened. Dr. Roe opined that it is not medically probable the sunlight exposure Claimant experienced at work is casually related to the development or progression of Claimant's bilateral cataracts or her need for cataract surgery. He opined that nothing in his records review or his examination indicated Claimant sustained anything other than age-related cataract etiology.

12. Dr. Roe credibly testified at hearing on behalf of Respondents as a Level II expert in ophthalmology. Dr. Roe explained the difference between an ophthalmologist and an optometrist, stating an ophthalmologist is a medical doctor licensed to treat disorders of the eye while an optometrist, who is not a medical doctor, focuses on correcting vision using lenses. Dr. Roe testified that an ophthalmologist would have more expertise than an optometrist regarding the causation of cataracts. Dr. Roe explained that age is the number one risk factor for developing cataracts and that cataracts are one of the most common age-related eye diseases in the United States, with an average surgical age of 69 years. Dr. Roe testified that, at her age, Claimant is not outside of the norm for developing vision-impairing cataracts requiring surgery.

13. Dr. Roe further testified that there is no Level I peer-review evidence supporting the theory that excessive exposure to sunlight causes or worsens cataracts. He explained that, despite Colorado's high altitude and greater exposure to UV light, cataracts are not more frequently diagnosed in Colorado. He continued to opine that it is to medically probable Claimant's exposure to sunlight through windows while on the job caused, aggravated or accelerated her bilateral cataracts.

14. The ALJ finds the opinions of Drs. Roe and Amiel more credible and persuasive than the opinion of Dr. Ramos.

15. Claimant failed to prove it is more probable than not the hazards of her employment caused, intensified or aggravated her bilateral cataracts.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The “rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability.” *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo.App. 1991). The standard for determining the onset of disability is when “the occupational disease impairs the claimant’s ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity.” *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005).

As found, Claimant failed to prove it is more probable than not she suffered a compensable occupational disease. While Claimant is credible regarding her exposure to sunlight and experience of symptoms while working in the guard shack, there is

insufficient evidence establishing such exposure as the proximate cause of Claimant's bilateral cataracts. At her initial evaluation, Dr. Ramos, an optometrist, noted Claimant's work exposure to sunlight but nevertheless diagnosed Claimant with age-related cataracts. Subsequently, in a December 9, 2020 medical note, Dr. Ramos noted she would "call Workman's Comp to verify that cataracts are not age-related." However, Dr. Ramos' notes contain no further discussion or causal analysis regarding Claimant's condition. Thus, Dr. Ramos did not specifically opine Claimant's condition is work-related. To the extent the ALJ can reasonably infer from Dr. Ramos' notes her opinion is that Claimant's condition is work-related, such opinion is less credible and persuasive than those of Drs. Amiel and Roe. Dr. Amiel and Dr. Roe, both ophthalmologists, credibly determined Claimant's condition is age-related. Dr. Roe credibly testified that ophthalmologists likely have more expertise than optometrists in determining the causation of cataracts. Furthermore, Dr. Roe is a Level II accredited expert in ophthalmology.

Dr. Roe credibly testified that, at Claimant's age, she is not outside of the norm for developing cataracts and requiring cataracts surgery. Importantly, no credible or persuasive evidence was offered establishing that excessive exposure to sunlight causes or worsens cataracts. Dr. Roe credibly opined it is not medically probable Claimant's exposure to sunlight through windows while on the job caused, aggravated or accelerated her bilateral cataracts. Based on the totality of the evidence, the preponderant evidence does not establish that the hazards of Claimant's employment caused, intensified or aggravated her bilateral cataracts and need for cataract surgery. As Claimant failed to prove it is more likely than not she sustained a compensable occupational disease, the remaining issue of medical benefits is moot.

ORDER

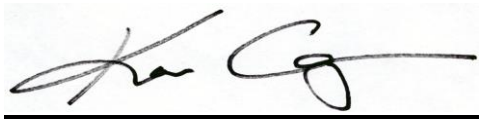
1. Claimant failed to prove she suffered a compensable occupational disease with a date of onset on or around November 4, 2020. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 25, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2.

2. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant chose Thomas Corson, M.D. at Concentra Medical Centers as his ATP through his words and conduct.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 2, 2021 through January 17, 2022.

4. Whether Respondents have proven by a preponderance of the evidence that Claimant abandoned his position and was responsible for his termination from employment under §8-42-105(4) C.R.S. and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

5. Whether Claimant has demonstrated by a preponderance of the evidence that Respondents are financially responsible for medical bills he incurred at UC Health.

FINDINGS OF FACT

1. Claimant has worked for Employer as a Laborer for approximately 24 years. He testified that while at work on June 18, 2021 he fell off scaffolding from a height of approximately 12-13 feet onto his head and shoulder. Employer's General Supervisor transported Claimant to UC Health for emergency medical treatment.

2. At the emergency room at UC Health Claimant reported falling from scaffolding while performing his job duties for Employer. He suffered a head laceration and right shoulder pain. After conducting a physical examination and reviewing Claimant's medical history, Paul Douglas Mack, PA-C diagnosed Claimant with the following: (1) a laceration of the scalp; (2) a likely first degree separation of the right shoulder AC joint; and (3) acute right shoulder pain. Medical providers stapled Claimant's head wound.

3. Claimant submitted the following three medical bills from UC Health at hearing: (1) statement date September 9, 2021 with a date of service of July 20, 2021 and provider David S. Braun, P.A. for a total of $53.40; (2) statement date December 5, 2021 for a total of $320.00 and (3) statement date December 5, 2021 for a total of $88.00. Claimant remarked that he received the preceding medical bills associated with his visit

to UC Health for treatment following the injury and follow-up care to remove the staples from his scalp.

4. Claimant remarked that Employer did not provide any information about a Workers' Compensation claim. Specifically, Respondents did not supply Claimant with a list of at least four designated medical providers pursuant to §8-43-404(5), C.R.S. and WCRP Rule 8-2.

5. Claimant did not immediately return to work. However, during the week following the accident he went to Employer's office and sought modified employment. Employer provided light duty work in the form of sweeping floors, changing light bulbs and other custodial duties. However, Claimant explained that his light duty work aggravated his right shoulder condition. He noted that he requested medical treatment and Employer's owner was aware of his pain. However, Employer never provided medical information or a clinic location.

6. Because of his shoulder pain, Claimant stopped showing up for work in July of 2021 but did not notify Employer. He acknowledged that he did not mention to Employer that he needed different light duty work because of his right shoulder pain. Claimant also recognized that Employer would have worked with him to accommodate his concerns. Finally, Claimant acknowledged that failing to call-in or show-up for work could result in the termination of employment.

7. Employer's payroll records reflect that Claimant last received wages on June 25, 2021 based on the pay period ending June 20, 2021. Claimant did not receive wages in July, 2021.

8. Employer's Human Resources Officer and Account Manager NJ[Redacted] testified at the hearing in this matter. Her job duties include handling Employer's Workers' Compensation claims. Although she was apprised of Claimant's June 18, 2021 accident, she believed Claimant's injury were limited to a head laceration that was addressed in the emergency room. Ms. NJ[Redacted] was not aware of Claimant's shoulder injury as a result of the fall from scaffolding. She acknowledged that she did not provide Claimant with a list of at least four designated Workers' Compensation providers.

9. Ms. NJ[Redacted] explained that Claimant was injured on Friday, June 18, 2021, but returned to work for Employer on Tuesday, June 22, 2021. Employer assigned Claimant light duty work. Ms. NJ[Redacted] asked Claimant about how he was feeling and told him to reach out to her if he needed anything.

10. Ms. NJ[Redacted] emphasized that she was not aware of Claimant's shoulder issues, but she talked with Claimant during the three weeks he returned to work. Claimant never discussed pain or the need for different work. Ms. NJ[Redacted] understood that Claimant was doing well while performing light duty work.

11. Ms. NJ[Redacted] testified that Claimant stopped showing up to work on July 16, 2021. Because he was a no-call/no-show, Employer's policy was termination. The termination was effective July 19, 2021.

12. Claimant testified that his shoulder continued to deteriorate after he ceased working for Employer. Specifically, his shoulder pain continued to worsen. He thus sought legal counsel to obtain further treatment.

13. On July 21, 2021 Claimant's attorney filed a Workers' Compensation claim. Respondents' filed their own claim on July 22, 2021. The matters were subsequently consolidated.

14. On August 12, 2021 Claimant visited Thomas Corson, D.O. at Concentra Medical Centers to assess his Workers' Compensation injuries. Claimant reported that on June 18, 2021 he was performing his job duties on scaffolding approximately 15 feet high when he lost his footing and fell head first onto packed dirt. He noted that he injured his head and right shoulder and briefly lost consciousness. Claimant reported continuing head pain and limited right shoulder range of motion. He had not returned to work for Employer because he required medical clearance. Dr. Corson assessed Claimant with the following: (1) a closed head injury with concussion; and (2) a right rotator cuff tear. He prescribed medications, ordered a right shoulder MRI and recommended physical therapy. Dr. Corson determined that his objective findings were consistent with a work-related mechanism of injury. He assigned temporary work restrictions including the following: (1) no lifting in excess of two pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead, crawling, squatting, climbing, use of the right upper extremity or working in a safety-sensitive position.

15. Ms. NJ[Redacted] commented that Employer would have been able to accommodate Claimant's work restrictions of no lifting in excess of two pounds pushing/pulling in excess of five pounds, and no reaching overhead, crawling, squatting or climbing as assigned by Dr. Corson. She remarked that there "is always something to do around the office."

16. On August 27, 2021 Claimant underwent an MRI of the right shoulder. The imaging confirmed the diagnosis of a right rotator cuff tear.

17. On November 29, 2021 Claimant returned to Dr. Corson for an examination. Dr. Corson noted that Claimant could return to modified duty employment with the following restrictions: (1) no lifting in excess of five pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead or away from the body and no working in a safety-sensitive position.

18. Based on a referral from Dr. Corson, Claimant visited surgeon Craig Davis, M.D. for an evaluation on September 15, 2021. Dr. Davis recommended surgical repair of Claimant's right Shoulder.

19. On December 17, 2021 Respondents filed a General Admission of Liability (GAL). Respondents approved right rotator cuff repair surgery.

20. On January 17, 2022 Claimant underwent right shoulder surgery. Respondents agreed to commence Temporary Total Disability (TTD) benefits as of the date of the surgery.

21. Claimant testified that he has continued to receive treatment from Dr. Corson since his first evaluation on August 12, 2021. The record includes documentation from three visits with Dr. Corson on the following dates: (1) August 12, 2021; (2) August 23, 2021; and (3) November 29, 2021. Based on a referral from Dr. Corson, Claimant also visited Dr. Davis at a different Concentra location on September 15, 2021. Finally, Claimant remarked that he recently visited Dr. Corson on January 3, 2022 and had a follow-up appointment scheduled for January 24, 2022. Claimant acknowledged that he has been pleased with his care, did not express any dissatisfaction with Dr. Corson. raise any concerns with the designation or request a change of physician.

22. Claimant has established that it is more probably true than not that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. Initially, on June 18, 2021 Claimant suffered industrial admitted injuries when he fell off scaffolding at work. He received emergency medical treatment at UC Health. During the week following the accident he went to Employer's office and sought modified employment. Employer provided light duty work. Claimant noted that he requested medical treatment and Employer's owner was aware of his pain. However, Claimant remarked that Employer did not provide him with any information about a Workers' Compensation claim. Specifically, Respondents did not supply Claimant with a list of at least four designated medical providers. The record is also devoid of a written list of four designated providers. Finally, Respondents have acknowledged that they did not explicitly meet the requirements of §8-43-404(5), C.R.S. and WCRP Rule 8-2 WCRP 8-2 by providing a list of designated providers within seven days of Claimant's injuries. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

23. Because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose Concentra for treatment. Respondents have demonstrated that it is more probably true than not that Claimant chose Dr. Corson at Concentra as his ATP through his words and conduct. Claimant's conduct reveals that he exercised his right of selection and chose Dr. Corson at Concentra as his ATP. Claimant testified that he has continued to receive treatment from Dr. Corson since his first evaluation on August 12, 2021. The record includes documentation from three visits with Dr. Corson on the following dates: (1) August 12, 2021; (2) August 23, 2021; and (3) November 29, 2021. Based on a referral from Dr. Corson, Claimant also visited Dr. Davis at Concentra on September 15, 2021. Finally, Claimant remarked that he recently visited Dr. Corson on January 3, 2022 and had a follow-up appointment scheduled for January 24, 2022.

24. In the days after the June 18, 2021 work accident Claimant signified through his words and conduct that he had selected Concentra to treat his injuries. Claimant's testimony and the medical records reveal that he chose Concentra and has received treatment through Dr. Corson since August 12, 2021 that has lasted in excess of five months. Claimant acknowledged that he has been pleased with his care, did not express any dissatisfaction with Dr. Corson. raise any concerns with the designation or request a change of physician. Accordingly, Claimant selected Dr. Corson at Concentra as his ATP.

25. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 2, 2021 through January 17, 2022. On June 18, 2021 Claimant fell off scaffolding at work and visited UC Health for emergency care. During the week following the accident, Claimant performed some light duty tasks for Employer. Employer's payroll records reflect that Claimant last received wages on June 25, 2021 based on the pay period ending June 20, 2021. Claimant did not receive wages in July, 2021. Claimant thus suffered medical incapacity based on the loss of bodily function and an impairment of wage earning capacity because of his inability to resume prior work. The June 18, 2021 accident impaired his ability to effectively and properly perform his regular employment. The record thus reveals that Claimant's industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

26. However, Respondents have proven that it is more probably true than not that Claimant abandoned his position and was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. During the week following his accident, Employer provided light duty work for Claimant in the form of sweeping floors, changing light bulbs and other custodial duties. However, Claimant explained that the light duty work aggravated his right shoulder condition and he ceased showing up for work on July 16, 2021.

27. Ms. NJ[Redacted] emphasized that she was not aware of Claimant's shoulder issues, but talked with him during the three weeks he returned to work. Claimant never discussed pain or the need for different work. Ms. NJ[Redacted] thus understood that Claimant was doing well while performing light duty work. Claimant acknowledged that he did not mention to Employer that he needed different light duty work because of his right shoulder pain. Claimant also recognized that Employer would have worked with him to accommodate his concerns.

28. Claimant explained that, because of his right shoulder pain, he stopped showing up for work in July of 2021. He did not notify Employer but simply ceased working. Claimant acknowledged that failing to show up or call-in to work could result in the termination of employment. Ms. NJ[Redacted] credibly testified that Claimant stopped showing up to work on July 16, 2021. Because he was a no-call/no-show, Employer's policy was termination. The termination was effective July 19, 2021.

29. Despite Claimant's contention that he suffered a worsening of his right shoulder condition, the record reveals that his shoulder condition has remained consistent from the time he stopped working until he underwent right shoulder surgery on January 17, 2022. Notably, on August 12, 2021 Dr. Corson assigned temporary work restrictions including the following: (1) no lifting in excess of two pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead, crawling, squatting, climbing, use of the right upper extremity or working in a safety-sensitive position. On November 29, 2021 Dr. Corson reduced Claimant's restrictions to the following: (1) no lifting in excess of five pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead or away from body and no working in a safety-sensitive position. Ms. NJ[Redacted] credibly commented that Employer would have been able to accommodate Claimant's work

restrictions of no lifting in excess of two pounds pushing/pulling in excess of five pounds, and no reaching overhead, crawling, squatting or climbing as assigned by Dr. Corson on August 12, 2021.

30. Claimant ceased reporting to work on July 16, 2021, was aware that termination could follow and did not suffer a worsening of condition. He thus precipitated his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. Claimant is thus precluded from receiving TTD benefits for the period July 2, 2021 until he underwent surgery on January 17, 2022. However, Respondents agreed to commence TTD benefits as of the date of Claimant's right shoulder surgery on January 17, 2022.

31. Claimant has failed to demonstrate that it is more probably true than not that Respondents are financially responsible for medical bills he incurred at UC Health. Initially, Claimant submitted the following three medical bills from UC Health: (1) statement date September 9, 2021 with a date of service of July 20, 2021 and provider David S. Braun, P.A. for a total of $53.40; (2) statement date December 5, 2021 for a total of $320.00 and (3) statement date December 5, 2021 for a total of $88.00. Claimant remarked that he received medical bills associated with his visit to UC Health for treatment following the injury and follow-up care to remove the staples from his scalp. However, the medical bills submitted by Claimant do not include the dates of service correlated with his June 18, 2021 injury, his treatment or any records supporting that the care arose from his industrial injury. The bills simply do not provide the information required by Rule 16-9. Claimant or the providers must provide the information required by Rule 16-9 so Respondents can ensure the treatment relates to the industrial injury, If the additional documentation required by Rule 16-9 is provided, Respondents shall pay the preceding UC Health bills.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Right of Selection

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In Re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. In a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* WC 3-969-031 (ICAO, June 29, 2005). Once the emergency is over the employer retains the right to designate the first “non-emergency” physician. *Bunch v. Indus. Claim Appeals Off.*, 148 P.3d 381, 384 (Colo. App. 2006).

6. Authorization to provide medical treatment refers to a medical provider’s legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Indus. Claim Appeals Off.,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Appeals Off.,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Off.,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC’s 4-

793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Indus. Claim Appeals Off.,* 996 P.2d 228, 229 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (determining that surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

7. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck,* 996 P.2d at 229. However, the Colorado Workers' Compensation Act requires respondents to provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch,* 148 P.3d at 383.

8. The term "select," is unambiguous and should be construed to mean "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *Williams v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO, Oct. 28, 2016); *Loy v. Dillon Companies*, W.C. No. 4-972-625 (Feb. 19, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

9. As found, Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. Initially, on June 18, 2021 Claimant suffered industrial admitted injuries when he fell off scaffolding at work. He received emergency medical treatment at UC Health. During the week following the accident he went to Employer's office and sought modified employment. Employer provided light duty work. Claimant noted that he requested medical treatment and Employer's owner was aware of his pain. However, Claimant remarked that Employer did not provide him with any information about a Workers' Compensation claim. Specifically, Respondents did not supply Claimant with a list of at least four designated medical providers. The record is also devoid of a written list of four designated providers. Finally, Respondents have acknowledged that they did not explicitly meet the requirements of §8-

43-404(5), C.R.S. and WCRP Rule 8-2 WCRP 8-2 by providing a list of designated providers within seven days of Claimant's injuries. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

10. As found, because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose Concentra for treatment. Respondents have demonstrated that it is more probably true than not that Claimant chose Dr. Corson at Concentra as his ATP through his words and conduct. Claimant's conduct reveals that he exercised his right of selection and chose Dr. Corson at Concentra as his ATP. Claimant testified that he has continued to receive treatment from Dr. Corson since his first evaluation on August 12, 2021. The record includes documentation from three visits with Dr. Corson on the following dates: (1) August 12, 2021; (2) August 23, 2021; and (3) November 29, 2021. Based on a referral from Dr. Corson, Claimant also visited Dr. Davis at Concentra on September 15, 2021. Finally, Claimant remarked that he recently visited Dr. Corson on January 3, 2022 and had a follow-up appointment scheduled for January 24, 2022.

11. As found, in the days after the June 18, 2021 work accident Claimant signified through his words and conduct that he had selected Concentra to treat his injuries. Claimant's testimony and the medical records reveal that he chose Concentra and has received treatment through Dr. Corson since August 12, 2021 that has lasted in excess of five months. Claimant acknowledged that he has been pleased with his care, did not express any dissatisfaction with Dr. Corson. raise any concerns with the designation or request a change of physician. Accordingly, Claimant selected Dr. Corson at Concentra as his ATP. *See Murphy-Tafoya v. Safeway, Inc.*, WC 5-153-600 (ICAO, Sept. 1, 2021) (where right of selection passed to the claimant, six months of treatment with personal provider following her work injury demonstrated that the claimant had exercised her right of selection); *Rivas v. Cemex Inc*, WC 4-975-918 (ICAO, Mar. 15, 2016) (through his words and conduct in obtaining treatment from Workwell for five weeks, the claimant selected Workwell as his authorized provider); *Pavelko v. Southwest Heating and Cooling*, WC 4-897-489 (ICAO, Sept. 4, 2015) (the claimant exercised his right of selection when he obtained treatment for two years from provider recommended by the employer); *Tidwell v. Spencer Technologies*, WC 4-917-514 (ICAO, Mar. 2, 2015) (where the employer failed to designate an authorized medical provider and claimant obtained treatment from personal physician Kaiser for his industrial injury, the claimant selected Kaiser as his authorized treating physician through his words or conduct).

TTD Benefits and Responsible for Termination

12. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Indus. Claim Appeals Off.*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two

elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

13. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAO, July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing his assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

14. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 2, 2021 through January 17, 2022. On June 18, 2021 Claimant fell off scaffolding at work and visited UC Health for emergency care. During the week following the accident, Claimant performed some light duty tasks for Employer. Employer's payroll records reflect that Claimant last received wages on June 25, 2021 based on the pay period ending June 20, 2021. Claimant did not receive wages in July, 2021. Claimant thus suffered medical incapacity based on the loss of bodily function and an impairment of wage earning capacity because of his inability to resume prior work. The June 18, 2021 accident impaired his ability to effectively and properly perform his regular employment. The record thus reveals that Claimant's industrial injuries caused a disability lasting more than three

work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

15. As found, however, Respondents have proven by a preponderance of the evidence that Claimant abandoned his position and was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. During the week following his accident, Employer provided light duty work for Claimant in the form of sweeping floors, changing light bulbs and other custodial duties. However, Claimant explained that the light duty work aggravated his right shoulder condition and he ceased showing up for work on July 16, 2021.

16. As found, Ms. NJ[Redacted] emphasized that she was not aware of Claimant's shoulder issues, but talked with him during the three weeks he returned to work. Claimant never discussed pain or the need for different work. Ms. NJ[Redacted] thus understood that Claimant was doing well while performing light duty work. Claimant acknowledged that he did not mention to Employer that he needed different light duty work because of his right shoulder pain. Claimant also recognized that Employer would have worked with him to accommodate his concerns.

17. As found, Claimant explained that, because of his right shoulder pain, he stopped showing up for work in July of 2021. He did not notify Employer but simply ceased working. Claimant acknowledged that failing to show up or call-in to work could result in the termination of employment. Ms. NJ[Redacted] credibly testified that Claimant stopped showing up to work on July 16, 2021. Because he was a no-call/no-show, Employer's policy was termination. The termination was effective July 19, 2021.

18. As found, despite Claimant's contention that he suffered a worsening of his right shoulder condition, the record reveals that his shoulder condition has remained consistent from the time he stopped working until he underwent right shoulder surgery on January 17, 2022. Notably, on August 12, 2021 Dr. Corson assigned temporary work restrictions including the following: (1) no lifting in excess of two pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead, crawling, squatting, climbing, use of the right upper extremity or working in a safety-sensitive position. On November 29, 2021 Dr. Corson reduced Claimant's restrictions to the following: (1) no lifting in excess of five pounds; (2) no pushing/pulling in excess of five pounds; (3) no reaching overhead or away from body and no working in a safety-sensitive position. Ms. NJ[Redacted] credibly commented that Employer would have been able to accommodate Claimant's work restrictions of no lifting in excess of two pounds pushing/pulling in excess of five pounds, and no reaching overhead, crawling, squatting or climbing as assigned by Dr. Corson on August 12, 2021.

19. As found, Claimant ceased reporting to work on July 16, 2021, was aware that termination could follow and did not suffer a worsening of condition. He thus precipitated his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. Claimant is thus precluded from receiving TTD benefits for

the period July 2, 2021 until he underwent surgery on January 17, 2022. However, Respondents agreed to commence TTD benefits as of the date of Claimant's right shoulder surgery on January 17, 2022.

Medical Bills

20. Colorado Division of Workers' Compensation (DOWC) Rule of Procedure 16-9(A) specifies that the "treating provider shall maintain medical records for each injured worker when billing for the provided treatment." Rule 16-9(B) further provides that "all medical records shall legibly document the treatment billed" and "shall include at least the following information: (1) patient's name; (2) date of treatment; (3) name and professional designation of person providing treatment; (4) assessment or diagnosis of current condition with appropriate objective findings; and (5) treatment provided."

21. As found, Claimant has failed to demonstrate by a preponderance of the evidence that Respondents are financially responsible for medical bills he incurred at UC Health. Initially, Claimant submitted the following three medical bills from UC Health: (1) statement date September 9, 2021 with a date of service of July 20, 2021 and provider David S. Braun, P.A. for a total of $53.40; (2) statement date December 5, 2021 for a total of $320.00 and (3) statement date December 5, 2021 for a total of $88.00. Claimant remarked that he received medical bills associated with his visit to UC Health for treatment following the injury and follow-up care to remove the staples from his scalp. However, the medical bills submitted by Claimant do not include the dates of service correlated with his June 18, 2021 injury, his treatment or any records supporting that the care arose from his industrial injury. The bills simply do not provide the information required by Rule 16-9. Claimant or the providers must provide the information required by Rule 16-9 so Respondents can ensure the treatment relates to the industrial injury, If the additional documentation required by Rule 16-9 is provided, Respondents shall pay the preceding UC Health bills.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Because Respondents failed to provide Claimant with a written list of designated providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2., the right to select an ATP passed to him.

2. Claimant chose Dr. Corson at Concentra as his ATP to treat his June 18, 2021 industrial injuries.

3. Because Claimant was responsible for his termination from employment he is precluded from receiving TTD benefits for the period July 2, 2021 until he underwent surgery on January 17, 2022. However, Respondents agreed to commence TTD benefits as of the date of Claimant's right shoulder surgery on January 17, 2022.

4. Respondents are not financially responsible for Claimant's medical bills from UC Health. However, if the additional documentation required by Rule 16-9 is provided, Respondents shall pay the UC Health bills related to Claimant's June 18, 2021 industrial injuries.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-177-672-001

ISSUES

The issues set for determination were:

- Is Claimant entitled to higher average weekly wage?

FINDINGS OF FACT

1. On May 15, 2021, Claimant was injured while working for Employer when she was assisting a coworker in carrying a 300lb bucket of potatoes up stairs.

2. Claimant worked two separate jobs for Employer, packer and process operator. Claimant's rate of pay at the time of her injury as a packer (her main job code) was $19.14 per hour. Claimant's rate of pay as process operator her (secondary job code) was $26.01 per hour.

3. [Redacted, hereinafter AN] testified as a representative of Employer, where she has worked for six years. She is the HR Manager, which is the position she has held for three months. In that capacity, she knew of Employer's practices/policies concerning pay rates based upon job codes and paid time off due to Covid-19.

4. Ms. AN[Redacted] testified Claimant could be scheduled or assigned to work either job code based on business need. Claimant could work in both positions in a given pay period or even in a given day. Claimant worked hours in both categories.

5. Ms. AN[Redacted] also testified that there were two ways in which employees could work overtime. Overtime was either voluntary and awarded based on seniority, or it was mandatory and required, based on reverse seniority. Overtime was not consistently offered or earned and would also vary day to day, and week to week.

6. Ms. AN[Redacted] stated when employees were paid for time off due to Covid-19, they were paid for forty (40) hours per week at their base pay rate. Ms. AN[Redacted] testified that pay at this rate was made pursuant to company policy. For Claimant that was $765.60 (40 hours X $19.14=$765.60).

7. Claimant's wage records were admitted at hearing.[1] These records covered the period for April 9, 2021 to May 15, 2021 and reflected the fact that Claimant worked overtime most weeks in 2020-2021. Specifically, the records showed the fact Claimant worked overtime forty-five (45) out of the fifty-two (52) weeks for the year. The weeks Claimant did not receive overtime included five (5) full weeks and two partial weeks Claimant was off due to Covid-19.

[1] Exhibits 4 and E.

8. Claimant also consistently worked hours as a process operator, at the higher rate.

9. On August 10, 2021, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for medical benefits.[2]

10. On September 16, 2021, an Application for Hearing ("AFH") was filed at the Office of Administrative Courts ("OAC") by Claimant listing the following issues: AWW, TPD, and TTD.

11. On October 1, 2021, a Response to Application for Hearing was filed by Respondents.

12. On October 21, 2021, Claimant received a letter stating that she had exhausted the transitional duty available to her under Employer's Transitional Duty Policy, which provided for temporary work restrictions resulting from occupational injuries. The letter informed Claimant that she would be placed on Workers' Compensation leave with benefits.[3]

13. On January 5, 2022, a GAL was filed on behalf of Respondents, admitting for medical benefits, TPD beginning June 17, 2021 through October 20, 2021, and TTD beginning October 21, 2021. The GAL admitted for an AWW of $1,149.59, which resulted in a TTD rate of $766.39 per week. Respondents calculated the AWW by using Claimant's earnings for one year (52 weeks) leading up to the injury.[4]

14. Claimant was off work for one partial week and four full weeks for pay periods beginning June 21, 2020 and ending July 25, 2020 due to COVID-19. Claimant was off work for one partial week and one whole week again due to COVID-19 for pay periods beginning October 18, 2020 and ending October 31, 2020.[5]

15. Claimant's pay for the weeks she was off work due to COVID-19 was capped at $765.60/week and was calculated using her rate of pay for her main job code per Employer's COVID-19 policy. No overtime was paid during the weeks Claimant was off for Covid-19.

16. The admitted AWW did not fairly compensate Claimant for her wage loss, as using the weeks when she was out for Covid-19 had the effect of lowering the calculated AWW.

17. Claimant is entitled to a higher average weekly wage.

---

[2] Exhibit A.

[3] Exhibit G.

[4] Exhibit D.

[5] Exhibit E.

18. The ALJ determined that calculating Claimant's AWW using the 20 (twenty) weeks leading up to her injury more fairly represented her AWW. Claimant was therefore entitled to a higher AWW of $1,302.05 per week. Claimant's TTD rate was $868.03 per week.

19. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2022) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

AWW

§ 8-42-102(2), C.R.S. (2022) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2022) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair

approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979" and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court's decision was one of fairness and Justice Plank stated:

"The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage." *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), the issue of how to fairly calculate AWW arose where Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant's AWW.

In the case at bar, Respondents argued the default method for calculating Claimant's AWW was the appropriate methodology for this determination. Specifically, Respondents asserted that calculating Claimant's AWW using the preceding year, which included five full weeks and two partial weeks where Claimant did not receive her full pay, was a fair determination of her AWW ($59,778.92/52=$1,149.59). Respondents contended that Claimant's pay was variable from week to week.

Claimant argued the method used by Respondents did not fairly establish Claimant's AWW. Claimant argued that because of the decrease in pay for the weeks she was out the entire week or part of the week due to COVID-19, the AWW was not an accurate calculation of her AWW. Claimant averred her AWW should be calculated using the 20 (twenty) weeks preceding her injury. Using this calculation, Claimant argued that her AWW was $1,302.05, resulting in a TTD rate of $868.03 per week. The ALJ was persuaded that Claimant met her burden of proof and was entitled to higher AWW.

As determined in Findings of Fact Nos. 2–4, Claimant worked two different positions for Employer. Claimant's rate of pay as a packer was lower ($19.14/hour) than for her work as a process operator ($26.01/hour). Claimant's pay records documented she worked hours in both pay categories from April 9, 2021 to May 15, 2021 (Finding of Fact 4). The ALJ also found that Claimant worked overtime hours prior to her work injury. (Finding of Fact 7). In fact, Claimant's pay records reflected the fact that she worked overtime hours a total of 45 out of the 52 weeks for that period of time. *Id.* The weeks Claimant did not work overtime hours were ones when she was off work taking leave due to Covid-19.

Respondents admitted AWW included those weeks when Claimant was off work due to Covid-19. The ALJ concluded that the admitted AWW was not a fair calculation of Claimant's AWW, as the inclusion of those weeks had the effect of lowering Claimant's AWW. (Findings of Fact 14-16). This was not representative of Claimant's AWW, as she consistently worked hours at a higher pay rate. The pay records admitted at hearing showed Claimant worked not only overtime hours, but also was paid at the higher position rate, which was not included in the Covid-19 wages paid. (Finding of Fact 7).

The ALJ considered Respondents' argument that using the whole period of 52 weeks was the fairest calculation of AWW. As found, this contention did not address the fact that the wages paid while Claimant was off due to Covid-19 did not incorporate either overtime wages of the pay at the higher rate. Accordingly, the ALJ concluded Claimant met her burden of proof and established she was entitled to a higher AWW. (Finding of Fact 17). This comports with the Court of Appeals' holdings in *Campbell* and *Pizza Hut.* The ALJ concluded that an AWW of $1,302.05 per week was a fairer calculation of Claimant's AWW and diminished earning capacity. *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

ORDER

IT IS HEREBY ORDERED:

1. Claimant established she was entitled to a higher AWW of $1,302.05 per week, which gives a TTD rate of $868.03 per week.

2. Respondents shall pay TTD and TPD benefits based upon a TTD rate of $868.03 per week.

3. Respondents shall pay interest at the statutory rate on all benefits not paid when due.

4. Issues not expressly decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-158-404-002

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that she suffered compensable injuries to her bilateral shoulders on December 18, 2020.

2. Whether Claimant proved by a preponderance of the evidence that she suffered compensable injuries to her bilateral knees on December 18, 2020.

3. If Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her bilateral shoulders, what medical benefits are reasonable and necessary.

4. If Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her bilateral knees, what medical benefits are reasonable and necessary.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 56 year-old woman who was involved in a motor vehicle accident in Casper, Wyoming on December 18, 2020, while employed by Employer.

2. The vehicle was traveling approximately 70 miles per hour, when the driver hit a patch of ice. The vehicle slid from the outside lane across the two-lane highway and struck the guardrail on the North side, causing significant damage to the front of the vehicle. The momentum spun the vehicle back across the two lanes and it struck the guardrail on the South side. The driver gained control of the vehicle and drove it off to the North side of the interstate. (Ex. 3).

3. Claimant testified she was seated behind the driver, in the back seat, at the time of the accident. She was wearing a seatbelt that came across her left shoulder. Claimant grabbed the armrests tightly, and braced her feet as the vehicle struck the guardrails. Claimant did not fall to the floor of the vehicle during the accident. The airbags did not deploy, but the impact caused Claimant's eyeglasses to fly off her head. Claimant further testified that her whole body was shaking after the accident. (Tr. 16:1-8, 27:1-22)

4. Claimant was taken by ambulance to the Emergency Department (ED) at the Wyoming Medical Center. According to the trauma flow sheet, Claimant had left knee pain, c-spine tenderness, and a right shin contusion. The ED records further note that Claimant reported having neck and back pain, a headache, nausea without vomiting, mild

abdominal pain and left knee pain. (Ex. 7). Claimant did not report any pain in her shoulders or right knee.

5. While in the ED, Claimant had a CT scan of her head and neck, both of which were negative. She also had a CT scan of her chest, abdomen and pelvis that was unremarkable. Claimant had an x-ray of her left knee that showed no evidence of an acute traumatic injury. The ED physician opined that Claimant most likely had a left knee strain or sprain. (Ex. 7 and I).

6. On December 22, 2020, Claimant saw Authorized Treating Physician (ATP), David Yamamoto, M.D. She presented with neck pain, back pain, bilateral shoulder pain, bilateral knee pain, jaw pain, and abdominal pain. According to Claimant, her bilateral shoulder pain started the day after the accident and she had pain every day since. She reported the pain as achy, intermittent and a 7-8/10. Claimant reported not being able to lift her arms over her head, and having some numbness in the fingers on her right hand. Claimant told Dr. Yamamoto that her bilateral knee pain also started the day after the accident. She reported that the pain was worse in her left knee, 7/10 pain. (Ex. 8).

7. Dr. Yamamoto noted that Claimant's primary diagnosis was neck strain, and he referred her to physical therapy for her neck strain. With respect to Claimant's bilateral shoulder and bilateral knee complaints, his assessment was injury of right knee, injury of left knee, injury of right shoulder, injury of left shoulder. Dr. Yamamoto's medical records do not evidence any examination of Claimant's shoulders and knees. (*Id.*).

8. Claimant returned to see Dr. Yamamoto on January 5, 2021. In addition to her neck, back, jaw and abdominal pain, Claimant continued to report bilateral shoulder and knee pain. Her shoulder symptoms were similar to what she reported at her previous appointment, but she now reported some numbness in her fingers on both hands, with the right hand being worse than the left. Claimant still reported pain in her knees, with the left being worse than the right. The medical records note Claimant's x-ray of her left knee showed no abnormalities. There is no evidence that Dr. Yamamoto ever ordered an x-ray of Claimant's right knee. (*Id.*).

9. Claimant had a pre-existing left knee injury. She suffered a work-related injury in 2016. Claimant testified that she twisted her left knee, but it improved with treatment. (Tr. 25:22-26:2).

10. On January 19, 2021, Claimant saw Dr. Yamamoto and reported that the pain in her shoulders was 8/10, and she was not able to lift her arms above her shoulders. There is no indication that Dr. Yamamoto conducted any examination related to Claimant's shoulders, but he diagnosed her with a strain of both shoulders. Similarly, there is no evidence that Dr. Yamamoto examined Claimant's knees, but he noted "unspecified superficial" injuries to both knees. Claimant was to return in two weeks for an evaluation of her neck strain, upper back strain and bilateral shoulder pain. Dr. Yamamoto did not note the need to evaluate her knees at a future visit. (Ex. 8).

11. Dr. Yamamoto referred Claimant for physical therapy on February 17, 2021. Although the treatment was authorized, Claimant did not begin physical therapy until May 2021. Claimant was reminded that this treatment was authorized on several occasions prior to her beginning physical therapy. (Ex. J and Ex. L).

12. Once Claimant began physical therapy, she reported severe pain to the point where she no longer wanted the therapist to touch her. Claimant complained of pain with any type of movement, including moving her arms overhead. Claimant's physical therapist documented significant guarding during her appointments. On May 27, 2021, Claimant's physical therapist noted that Claimant continued to "present with abnormal signs and symptoms." Furthermore, according to the records, Claimant wanted hands-on treatments to cease and she did not want to schedule any further appointments. (Ex. L).

13. On March 3, 2021, Dr. Yamamoto ordered MRIs of Claimant's cervical spine, right shoulder and left shoulder. He did not order any x-rays of her knees. Claimant underwent left and right shoulder MRIs on April 2, 2021. The MRI of the left shoulder revealed a partial bursal surface tear and degenerative changes. The right shoulder MRI showed tendinosis, bursitis, arthrosis, and other degenerative changes. (Ex. K).

14. Respondents retained J. Tasof Bernton, M.D. to perform an Independent Medical Examination (IME). Dr. Bernton reviewed Claimant's medical records, and examined her on October 5, 2021. Dr. Bernton opined that Claimant's shoulder and knee complaints were unrelated to her motor vehicle accident on December 18, 2020. He stated that it was "not medically probable that the shoulder and knee complaints or wrist numbness are related to the accident." (Ex. M).

15. Dr. Bernton credibly testified in support of his IME report. He testified that during his examination of Claimant, the range of motion in her shoulders was inconsistent and sub-maximal. (Tr. 36:18-19). He testified that Claimant performed a greater range of motion when she rolled over to her side than during the examination, indicating she was providing sub-maximal range of motion in her shoulders. (Tr. 36:4-10).

16. During the IME, Claimant also provided sub-maximal range of motion for her lower extremities. From a supine position, Claimant was only able to raise her right leg 12 degrees and her left leg seven degrees. But when Dr. Bernton asked her to sit up on the exam table, Claimant effectively performed a straight leg raise of 90 degrees. Claimant provided a greater range of motion when performing a normal task than she did when raising and flexing her knees. (Tr. 36:11-19).

17. With respect to Claimant's shoulders, Dr. Bernton diagnosed Claimant with bilateral degenerative changes in her shoulders with a partial left rotator cuff tear, noted to be present on a degenerative basis. (Ex. M).

18. Dr. Bernton credibly testified that if Claimant suffered an acute injury causing symptoms to her shoulders a year after the accident, then she would have experienced the symptoms immediately, not serval days after the accident. (Tr. 45:7-10). Claimant did not report or describe any pain to her bilateral shoulders while in the ED.

19. Dr. Bernton credibly testified that Claimant's right shoulder impressions did not show anything consistent with an acute injury. Claimant's right MRI impressions showed only degenerative changes, common with aging and osteoarthritis. Dr. Bernton credibly testified that there is no conceivable mechanism that the accident could have caused or exacerbated her degenerative changes in her right shoulder. (Tr. 43:7-44:14).

20. With respect to Claimant's left shoulder, Dr. Bernton testified the MRI showed pathology consistent with degenerative changes, not an acute injury. He testified that over time rotator cuff tears, both partial and complete, are common on a degenerative basis. Dr. Bernton further testified Claimant was not suffering from an acute injury on top of a chronic pathology. Specifically, Claimant did not have a mechanism of injury that would explain the pain in her left shoulder. (Tr. 45:16-48:21).

21. During the IME, Claimant told Dr. Bernton that her fingers get numb when she engages in repetitive motion (Tr. 48:25-49:2). The most common symptom of carpal tunnel syndrome is numbness in the first, second, and third fingers. (Tr. 49:3-16). Dr. Bernton diagnosed Claimant with likely carpal tunnel syndrome. (Tr. 50: 3-5).

22. In 2017, Claimant had a workers compensation injury, and was evaluated because she had a sudden onset of bilateral neck, shoulder, and hand pain. Claimant's EMG findings were consistent with a severe right median neuropathy at the wrist and a moderate left median neuropathy at the wrist. (Ex. G). Claimant, however, testified that she had carpal tunnel in her right wrist, but denied having carpal tunnel in her left wrist. (Tr. 28:16-21). Claimant was to follow up with a hand surgeon for her carpal tunnel syndrome, but she did not follow through with this recommendation. (Ex. G and Tr. 28:22-29:13).

23. Dr. Bernton opined that the motor vehicle accident did not cause Claimant's carpal tunnel syndrome. (Tr. 50:20-22). He testified that carpal tunnel is unlikely to resolve without intervention and will likely persist on some level continuously, unless surgical intervention is explored. (Tr. 61:1-7).

24. The ALJ finds that Claimant has a history of prior bilateral shoulder complaints and hand numbness. The ALJ further finds that Claimant's current complaints regarding numbness in her fingers is caused by her pre-existing carpal tunnel syndrome in both extremities.

25. With respect to Claimant's knee complaints, Dr. Bernton credibly testified that any persistent complaints present 10 months after the incident would have some objective evidence on exam. Claimant, however, did not have any objective issues with her knees upon exam. Claimant demonstrated significant restriction of motion in both knees, however, she did not display any pathology that would cause these symptoms. Dr. Bernton specifically noted that there was nothing that could explain Claimant's continued pain nearly a year after the accident. (Tr. 53:17-54:16).

26. Dr. Bernton noted in his IME report that there were no changes on examination during Claimant's year-long treatment with Dr. Yamamoto, and the medical records did

not outline a recommended course of treatment to bring her to MMI. Furthermore, Dr. Yamamoto did not provide any insight or analysis to why Claimant's pain complaints remain unchanged since the accident. (Ex. M).

27. Claimant continued to see Dr. Yamamoto on a regular basis, always reporting the same complaints. Dr. Yamamoto's medical records lack substantive recommendations or details regarding Claimant's progress. Dr. Yamamoto restated Claimant's alleged symptoms and complaints without providing any explanation for their cause.

28. Dr. Bernton credibly testified regarding the process a physician must follow to establish causation. He credibly testified that a claimant's complaints alone are not sufficient to establish causation. A physician must consider the physiology of the condition, and then address whether the incident as described could possibly cause that physiology. Taking these necessary steps into consideration, Dr. Bernton opined that the accident is not a reasonable cause for Claimant's ongoing symptoms with her bilateral shoulders and knees. (Tr. 63:14-64:12).

29. The ALJ finds that Claimant's bilateral shoulder complaints and her bilateral knee complaints are unrelated to the December 18, 2020 accident.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ.

Cordova v. Indus. Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim* Appeals *Office*, 5 P.3d 385 (Colo. App. 2000).

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both she and the employer were subject to the provisions of the Act, she was performing a service arising out of, and in the course of, her employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes that Claimant failed to meet her burden of proof regarding compensability. She did not present persuasive evidence to prove she suffered a compensable injury to her bilateral shoulders or her bilateral knees while working for Employer. The ALJ considered the evidence Claimant presented regarding her injury. A review of Claimant's and Respondent's exhibits indicate that there is no objective evidence that Claimant's bilateral shoulder complaints are related to the December 18, 2020 accident. (Findings of fact ¶ 29). The MRIs of Claimant's shoulders showed degenerative changes common with aging and osteoarthritis. *Id*. at ¶ 17. Claimant's ATP found that she had a strain of both shoulders, but offered no treatment plan, or insight as to why her pain complaints remained unchanged since the accident. *Id.* at ¶¶ 10 and 26. There is no objective evidence that Claimant suffered an acute injury to her bilateral shoulders in the accident. *Id*. at ¶ 18. Dr. Bernton credibly and persuasively testified that there was no mechanism of injury that would explain the pain in her bilateral shoulders. *Id*. at ¶ 20. The ALJ further concludes that the numbness Claimant is experiencing in her hands is due to her carpal tunnel syndrome. Claimant has pre-existing carpal tunnel syndrome in both extremities that has gone untreated.

Similarly, Claimant did not present evidence to prove she suffered a compensable injury to her bilateral knees. There is no objective evidence that Claimant suffered an injury to her knees that would explain her complaints a year after the accident. The only objective evidence presented was the December 20, 2020, x-ray of her left knee, which was taken immediately after the accident, but did not demonstrate evidence of acute trauma. *Id.* at ¶¶ 8 and 25.

The ALJ concludes that Claimant failed to present credible evidence to prove a compensable injury to her bilateral shoulders or bilateral knees, by a preponderance of the evidence.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury to her bilateral shoulders and this claim is dismissed.

2. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury to her bilateral knees and this claim is dismissed.

3. Claimant's request for medical benefits for her bilateral shoulders is denied.

4. Claimant's request for medical benefits for her bilateral knees is denied.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 1, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the right knee Synvisc-One injection recommended by Michael DaRosa, M.D. is reasonable, necessary and causally-related treatment for his July 1, 2020 industrial injury.

FINDINGS OF FACT

1. Claimant is a 63-year-old man who is the sole owner and operator of Employer, a liquor store. Claimant's native language is Korean and his English is limited. Claimant brings his dog to work with him each day.

2. On July 1, 2020, Claimant locked up his store and took a work break to walk his dog in the surrounding neighborhood. Upon returning to his store Claimant observed a man climbing out of a window located at the front of the store. Claimant observed the individual carrying Claimant's pink backpack.

3. Claimant pursued the individual and grabbed the backpack, which contained liquor and other items from Claimant's store. Claimant then grabbed the man by his shirt with one hand while holding his dog's leash in the other hand.

4. Claimant testified that the man then punched and kicked Claimant and pushed him to the ground and that he and the assailant wrestled each other back and forth. Claimant testified he was struck in the ear, which produced blood. Claimant testified he continued to hold onto the man's shirt and his dog's leash while this occurred.

5. Two police officers arrived at the scene, at which time the physical exchange ended.

6. Officer Pablo Carrera was one of the officers on the scene and interviewed Claimant in English on July 1, 2020. Officer Carrera testified by deposition. Officer Carrera testified that, due to the language barrier, it was difficult to understand Claimant. He relied on the assistance of Claimant's English-speaking neighbor, Stephen Fink, to help with questioning Claimant. Claimant reported that the assailant punched him on the left side of the head behind his ear and kneed Claimant in the groin. His understanding was that Claimant was struck twice by the assailant.

7. Claimant testified that he did not mention any issue with his knee to the police because he was nervous and flustered, his knee pain was not so bad at the time, and he was more focused on his head symptoms.

8. [Redacted, hereinafter SF] testified at hearing on behalf of Claimant. At the time of Claimant's industrial injury, Mr. SF[Redacted] lived on the same block as Claimant's liquor store and frequented the store. SF[Redacted] communicated with Claimant in English. On July 1, 2020, Mr. SF[Redacted] heard shouting outside. Upon looking out of his window, Mr. SF[Redacted] had an unobstructed view and observed Claimant following a man with a backpack. He observed Claimant catching up to and grabbing the individual by the arm or shoulder. The individual then swung his arm and struck Claimant on the side of his head. Mr. SF[Redacted] observed Claimant pulling the individual to the ground.

9. Mr. SF[Redacted] then left his room and walked outside to the location of the incident, approximately 20-30 feet away. He estimated this took approximately 30 to 40 seconds. Once outside, Mr. SF[Redacted] observed Claimant sitting on his buttocks with his legs around the man's torso in a "scissor hold" applying pressure. Mr. SF[Redacted] estimated Claimant had the man in this position for approximately two to three minutes. Mr. SF[Redacted] did not recall seeing any blow to Claimant's right knee or any blows to Claimant's chest, back, or legs. He testified that Claimant's right knee was between the assailant and the pavement at some point. Mr. SF[Redacted] testified that subsequent to the incident Claimant's head appeared swollen and Claimant was touching the side of his head where he was struck. Mr. SF[Redacted] testified it did not seem as though there was much of a struggle once Claimant took control. Mr. SF[Redacted] heard Claimant tell the police officers he was fine. Claimant did not inform Mr. SF[Redacted] of any other pain or injuries on July 1, 2020.

10. Claimant filed a First Report of Injury on July 10, 2020, listing the injury as a contusion of the left ear.

11. Claimant did not seek medical treatment from July 1-13, 2020.

12. On July 14, 2020, Claimant called his primary care provider Kaiser Permanente and complained of a two- week history of otalgia, tactile fever, pain, and swollen eyes.

13. On July 15, 2020, Claimant presented to Sarah D. Brodhead, M.D. at Kaiser with an interpreter. Claimant's chief complaint was ear pain. He reported that he was assaulted and hit in the left ear and chest. Claimant complained of pain that gradually migrated from the left side of his head to his right ear and eye. He reported that his chest felt okay. The review of symptoms noted neck and upper back pain. The medical record from this evaluation does not contain any mention of reported knee complaints. No knee examination was performed. X-rays of the cervical spine and facial bones were taken. Dr. Brodhead consulted with an ear, nose and throat ("ENT") physician and prescribed prednisone to reduce Claimant's inflammation.

14. Claimant testified he sought treatment at Kaiser on July 15, 2020 because of swelling to his head, eyes, nose and mouth and difficulty seeing. Claimant acknowledged he did not initially tell his physicians about any knee issues. Claimant testified he began developing problems with his right knee around the beginning of

August 2020. Claimant testified he had difficulty walking and pain when ascending the stairs. Claimant testified he did not sustain any other injury or accidents between the date of the work injury and his onset of pain in early August 2020.

15. On July 20, 2020 Claimant was evaluated by Marcia Eustaquio, M.D. at Kaiser. Dr. Eustaquio noted that Claimant reported his right ear began swelling 1.5 weeks after the initial injury and the swelling went down after he began taking prednisone. Dr. Eustaquio completed a review of symptoms. No knee complaints were documented. Dr. Eustaquio concluded Claimant's right ear condition was unrelated to Claimant's prior trauma.

16. On July 28, 2020, Claimant presented to Michael DaRosa, D.O. at SCL Health Medical Group for concussion without loss of consciousness, neck pain, and back pain. Claimant reported his mid-back pain was greater than his right knee pain and that Claimant was assaulted by a robber that hit his head, chest, and back. On examination of the right knee, Dr. DaRosa noted crepitus with no effusion, edema, erythema, ecchymosis or deformity. Medial and lateral McMurray's tests were positive. Dr. DaRosa diagnosed Claimant with, *inter alia*, primary osteoarthritis of the right knee. He referred Claimant for physical therapy and to Brian Williams, M.D. to coordinate Claimant's care. He noted he would continue to stay involved with Claimant's spine and knee care.

17. On July 29, 2020, Claimant filed a claim for compensation listing the affected body parts as his left ear, face, head and stomach.

18. On July 30, 2020 Claimant presented to Mackenzee Jordan Mullins, PA-C at Dr. Williams' office. PA-C Mullins noted Claimant's primary source of pain as mid-back and headaches. Examination of the right knee revealed generalized tenderness to palpation over the patella and medial/lateral joint lines. PA-C Mullins' assessment included post-traumatic osteoarthritis of the right knee.

19. Dr. Williams evaluated Claimant on August 4, 2020, noting Claimant reported that his most bothersome pain was back pain, but that he also had left shoulder, neck and chest wall pain. On examination, Dr. Williams noted pain in Claimant's right knee when lunging and "fairly normal" range of motion. At a subsequent evaluation on August 14, 2020, Dr. Williams noted Claimant reported continuing neck and back pain with some improvement.

20. Claimant returned to Dr. DaRosa on August 18, 2020 reporting significant low back and knee pain. Dr. DaRosa ordered x-rays, which Claimant underwent on August 27, 2020. X-rays of Claimant's bilateral knees were unremarkable and without evidence of degenerative joint disease.

21. Dr. DaRosa reviewed the x-rays on September 15, 2020, noting the knee x-rays were normal. At that time he administered a steroid injection to Claimant's right knee.

22. At a follow-up evaluation with Dr. DaRosa on October 15, 2020, Claimant reported improvement in his right knee pain. On November 12, 2020 Claimant reported to Dr. DaRosa that his medial right knee pain had returned. Dr. DaRosa ordered a right knee MRI.

23. On November 12, 2020, Allison Fall, M.D. performed an Independent Medical Examination ("IME") at the request of Insurer. Claimant reported to Dr. Fall that he was punched and kicked in his face, chest, back, and head during the work incident. Claimant reported various symptoms to Dr. Fall, including right knee pain. Dr. Fall reviewed Claimant's medical records, including Kaiser records dating back to January 29, 2018. She noted the January 29, 2018 Kaiser record documented Claimant's complaint of right knee pain when ascending stairs. On examination, Dr. Fall noted there were inconsistencies in Claimant's subjective complaints and reports about his function and his actual presentation. She further noted several non-physiologic findings. Examination of the bilateral knees revealed full range of motion with no meniscal signs or ligamentous instability. Dr. Fall noted that Claimant reported pain in four different areas of the knee without correlating objective findings.

24. Dr. Fall assessed Claimant with status post assault with left posterior ear contusion and likely right cervical thoracic strain, multiple resolved contusions, and significant psychological issues. She concluded that there is no evidence Claimant sustained an acute injury to his knee. Dr. Fall opined that Claimant's evaluations had mostly been benign with unremarkable examinations and that his ongoing subjective complaints are more likely based on psychosocial stressors than any residual physical injury. Dr. Fall recommended Claimant undergo continued psychological treatment until he reached psychological maximum medical improvement ("MMI"). She opined that Claimant reached MMI for his physical injuries.

25. Claimant underwent an MRI of his right knee on November 27, 2020. Vincent Herilhy, M.D.'s impression was as follows:

1) No evidence of a meniscal tear.
2) There is a mild moderate grade 2-4 chondral fibrillation in the weightbearing medical compartment with mild cystic change in the central femoral condyle.
3) Mild grade 2-4 patellofemoral chondromalacia with appropriate static alignment.
4) There is longitudinal split tearing of the proximal popliteus tendon with mild underlying tendinosis.
5) There is a 37 mm craniocaudal by 30 mm AP by 5 mm traverse sheetlike probable ganglion cyst extending superiorly from the proximal tibiofibular articulation along the fibular collateral ligament.

(Cl. Ex. 15, pp. 464-465).

26. Claimant returned to Dr. DaRosa on December 24, 2020. Dr. DaRosa noted Claimant was tender to palpation in various areas of the right knee, with positive crepitus and medial and lateral McMurray's tests. He reviewed Claimant's November 27, 2020 right knee MRI. Dr. DaRosa administered another right knee steroid injection and ordered that Claimant undergo a Synvisc-One injection. Dr. DaRosa submitted a request to Insurer for the Synvisc-One injection on December 29, 2020.

27. Upon referral from Dr. Williams, Claimant presented to Samuel Chan, M.D. on December 28, 2020 for evaluation and treatment for concussion/traumatic brain injury. Claimant reported that his initial pain complaint was over his right ear and then spread all over his body. Dr. Chan reviewed Claimant's medical records, noting that, in addition to Drs. DaRosa and Williams, Claimant had also seen Dr. Feldman for neurological evaluation, Dr. Lipkin for an ENT evaluation, Dr. Disorbio for psychological evaluation, and a Dr. Kim who is "well-versed in Korean culture. (R. Ex. G, p. 182). He reviewed, *inter alia*, the MRI of Claimant's right knee and noted degenerative findings with no evidence of a meniscal tear. Claimant complained of pain in several areas including his right knee. No knee exam was documented. Dr. Chan diagnosed Claimant with post-concussion syndrome and chronic pain syndrome. Dr. Chan opined that Claimant's underlying psychological dysfunction, such as anxiety, depression and PTSD-type symptoms, affected his recovery and current ongoing presentation. Dr. Chan agreed with the treating physician and Dr. Fall that Claimant has rather significant nonfocal symptoms and so far no significant pathology except for age-appropriate degenerative changes. Claimant continued to see Dr. Chan for follow-up evaluations and acupuncture treatment.

28. On December 30, 2020, Dr. Williams reviewed Dr. Fall's IME report as well as video of Claimant. He concluded that it was reasonable to think a man of Claimant's age may have had some exacerbations of pre-existing or latent conditions like osteoarthritis of the right knee as a result of the work injury. He opined that the corticosteroid injections were beneficial and that the viscosupplementation (Synvisc-One) injection recommended by Dr. DaRosa is reasonable.

29. On January 6, 2021 Albert Hattem, M.D. performed a physician advisor review regarding the request for the right knee Synvisc-One injection. Dr. Hattem reviewed records and opined Claimant's right knee injury was not related to the assault. Specifically, Dr. Hattem cited to the fact that there was no contemporary documentation of any assault to the knee and all of the initial care records made no mention of the right knee. He concluded that the recommended viscosupplementation injection is related to Claimant's pre-existing knee osteoarthritis and not causally related to Claimant's work injury.

30. At a February 3, 2021 follow-up evaluation, Dr. Chan remarked, "[Claimant] continues to produce a significant amount of pain complaints diffusely. Due to the language barrier as well as cultural barriers, it is rather difficult to quantify the patient's current symptomatology. Neither the patient nor the interpreter is able to provide accurate information." (R. Ex. G. p. 197).

31. On February 9, 2021, Mark C. Winslow, D.O. performed an IME at the request of Claimant. Dr. Winslow conducted a medical records review and physical examination of Claimant. His examination of the right knee revealed crepitus, tenderness and pain with full motion and palpation, but no effusion or instability. His impression included posttraumatic osteoarthritis aggravation of right knee. Dr. Winslow remarked that his examination did not produce overwhelming physical evidence to support the current physical complaints reported by Claimant. He noted Claimant's contention that no specialists had seen him was inconsistent with the medical records, which indicated Claimant had been thoroughly evaluated. Dr. Winslow further remarked there appeared to be some degree of cultural and language barrier and opined that Claimant is not malingering. He noted that despite records documenting knee osteoarthritis three years prior, Claimant was stable and did not require further treatment at that time. Dr. Winslow opined that Claimant likely experienced a significant aggravation due to the work injury. He concluded that the recommended injection is work-related and reasonably necessary to return Claimant to baseline.

32. On February 15, 2021, Dr. Chan noted "the patient does not do any of his own talking, but the interpreter is acting as a caretaker who answers all of the patient's questions without interpreting…There is definitely catastrophizing behavior from the interpreter." (Id. at 200-201). On March 1, 2021, Dr. Chan further noted,

> [i]t would appear the interpreter currently is directing his care, and I am rather concerned over the fact that the patient's interpreter at this juncture is catastrophizing the MRI findings to the patient. They are looking for a specific type of steroid injection. However, given his ongoing symptoms that are diffuse and nonfocal, again there is no specific focality to his examination that would indicate there is anywhere one may be able to inject.

(Id. at 204).

33. On March 9, 2021, Dr. DaRosa again requested authorization for a viscosupplementation shot. Dr. DaRosa noted Claimant reported to him that his right knee pain began after the July 1, 2020 injury and Claimant's July 28 2020 exam was consistent with a flare of arthritis that was more likely than not caused by the assault.

34. On March 29, 2021, Dr. Chan noted that Claimant's symptoms remained unchanged despite extensive treatment. Dr. Chan opined that Claimant's psychological issues were definitely affecting his presentation and ongoing pain symptoms. Dr. Chan concluded that Claimant had reached a plateau from a musculoskeletal standpoint and discharged Claimant from his care.

35. Dr. Fall testified by deposition on behalf of Respondents as a Level II accredited expert in physical medicine and rehabilitation. Dr. Fall testified consistent with her IME report. Dr. Fall testified that the initial medical records after the work injury did not

contain evidence of an acute injury. She opined that Claimant would have experienced immediate pain had the work incident caused any injury or aggravation or acceleration of his knee condition. Dr. Fall explained that Claimant's MRI demonstrated longstanding, degenerative arthritis with no evidence of a meniscal tear. She opined that the injection recommended by Dr. DaRosa is to treat Claimant's degenerative arthritic condition, which is not causally-related to the work-injury or reasonably necessary to cure or relieve its effects.

36. Claimant testified at hearing that he continues to experience right knee pain and difficulty ascending and descending stairs. Claimant wants to undergo the injection recommended by Dr. DaRosa to help improve his pain.

37. The ALJ credits the testimony of Claimant and the opinions of Drs. DaRosa, Williams and Winslow over the opinions of Drs. Fall, Chan and Hattem and finds that Claimant proved by a preponderance of the evidence the injection recommended by Dr. DaRosa is reasonably necessary and causally related.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is

subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Claimant proved it is more probable than not the right knee Synvisc-One injection recommended by Dr. DaRosa is reasonable, necessary and causally-related treatment for his July 1, 2020 industrial injury. Despite a prior diagnosis of right knee osteoarthritis in 2018, there is no evidence Claimant was undergoing treatment for or experiencing symptoms or limitations as a result of such condition leading up to his work injury. The altercation between Claimant and the assailant on the date of injury was, by credible description of Claimant and Mr. SF[Redacted], very physically involved and reasonably could result in aggravation of a pre-existing knee condition of a man in his 60s. Drs. DaRosa, Williams and Winslow all credibly opined that the work injury aggravated Claimant's pre-existing underlying arthritic condition. Dr. Williams reviewed Dr. Fall's IME report and continued to opine that the recommended injection is related and indicated.

The ALJ is not persuaded Claimant's delay in reporting knee symptoms is dispositive of the fact the work incident did not aggravate Claimant's knee condition. Claimant credibly testified he was initially more focused on his head symptoms, and later developed knee symptoms, at which time he notified his physicians. Despite noted psychosocial stressors documented in Claimant's records, based on the totality of the credible and persuasive evidence, the ALJ is persuaded the work assault aggravated Claimant's underlying knee arthritis, resulting in the need for medical treatment. The preponderant evidence further establishes that the injection recommended by Dr. DaRosa is reasonable and necessary treatment to relieve the effects of the work injury.

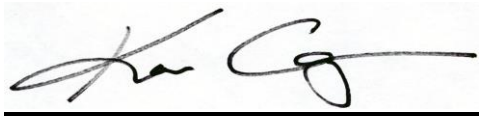
ORDER

1. Respondents shall authorize and pay for the right knee Synvisc-One injection recommended by Michael DaRosa, M.D., which is reasonable, necessary and causally-related treatment for Claimant's July 1, 2020 industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 3, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-011-488-006

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to a reopening of her claim based upon an alleged change of condition in the injuries caused by her admitted March 22, 2016 industrial injury.

II. If Claimant established that she is entitled to have her claim reopened, whether she also established that she is entitled to additional medical treatment.

PROCEDURAL HISTORY

This claim has been the subject of a prior hearing before this ALJ on November 5, 2019. On November 27, 2019, this ALJ issued a Summary Order, a copy of which is located at Respondents Exhibit A and can be summarized as follows:

1. Claimant was entitled to maintenance medical care, including mental health counseling and additional physical therapy; however, this ALJ determined that ongoing prescriptions for opioid medications were not reasonable or necessary.

2. Claimant's request for treatment for alleged Complex Regional Pain Syndrome (CRPS) was denied and dismissed as this ALJ determined that until such time that Claimant completed an evaluation and met the criteria for a diagnosis of CRPS (either Type I or II), which was causally related to her March 22, 2016 accident and/or subsequent hip surgery, it was premature and contrary to law to order Respondents to provide and pay for such treatment.

3. Claimant failed to overcome the Division Independent Medical Examiner, Dr. John Tyler's determinations regarding MMI and permanent impairment.

4. Claimant failed to prove she was permanently and totally disabled. Consequently, her claim for permanent total disability benefits was denied and dismissed.

5. Claimant was entitled to and awarded $1,200 in disfigurement benefits.

(See generally, Resp. Ex. A).

On January 16, 2020, Respondents filed an Amended Final Admission of Liability (FAL) consistent with the November 27, 2019 Summary Order. As part of the Amended FAL, Respondents admitted to an MMI date of January 9, 2019. Respondents also admitted to a 5% mental and 17% right lower extremity impairment rating as assigned

by Dr. Tyler. Claimant did not object to the Amended FAL and the claim closed by operation of law.

On May 18, 2021, Claimant, proceeding *pro se*, filed a Petition to Reopen the claim alleging a change in medical condition. (Resp. Ex. D). On August 30, 2021, the Claimant through her attorney filed an Application for Hearing. (Resp. Ex. H) As noted, hearing to address Claimant's right to reopen her claim proceeded on December 14, 2021. At the commencement of hearing, the parties agreed that the only issues to be determined were Claimant's claim for reopening and medical benefits.

FINDINGS OF FACT

Based upon the evidence and testimony presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted industrial injury on March 22, 2016 when she slipped in a puddle of water at work and fell, injuring her right hip.

2. Claimant proceeded with treatment and ultimately underwent a Division Independent Medical Examination (DIME) with Dr. John Tyler on October 27, 2017. Dr. Tyler determined Claimant had not reached maximum medical improvement (MMI) and required additional evaluation/treatment for her right hip.

3. Claimant underwent imaging which demonstrated a tear of her right hip acetabular labrum and a CAM deformity, which was surgically repaired by Dr. Geoffery Donor on February 5, 2018.

4. After undergoing additional treatment, including post-surgical rehabilitation, Claimant returned to Dr. Tyler on March 29, 2019 for a follow-up DIME.

5. As part of this follow-up DIME, Dr. Tyler reached the following impressions: (1) Status post repair of right hip labral tear with 75% improvement reported by patient; (2) Complaints of pain throughout the right paralumbar region and gluteal region with no discernable evidence of spinal pathology based on diagnostic studies and [his] examination that day, but with evidence of some myofascial trigger points within the right gluteal musculature; (3) Situational depression; and (4) Significant exaggerated pain behaviors. (Resp. Ex. L, bates 090)

6. Dr. Tyler determined that Claimant reached MMI as of January 9, 2019 with a 17% right lower extremity and 5% mental impairment rating. (Resp. Ex. L, bates 090-091) Dr. Tyler also determined that Claimant did not suffer a permanent injury or any impairment to her lumbar spine. Dr. Tyler stated that Claimant's complaints of lumbar spine pain were not directly related to the industrial injury but rather to Claimant's own behaviors. (Resp. Ex. L, bates 091)

7. On 9/30/19, as a result of her complaints of persistent right hip pain, Claimant underwent an MRI arthrogram of the hip, which was read to show no acute abnormality other than a shallow partial-thickness cleft anterior labrum, which likely was incidental. (Resp. Exhibit K, bates 074) Claimant sought additional care for her persistent hip pain with Dr. Gerald Riley who noted that Claimant was being evaluated for CRPS on November 4, 2019. (Id.) Confirmatory testing was not completed by the time the matter proceeded to hearing on November 5, 2019. Nonetheless, Claimant suggested that she was suffering from CRPS at the time of the November 5, 2019 proceeding. As noted above, this ALJ found that insufficient evidence had been presented to establish that Claimant had been diagnosed with CRPS and thus, it was premature to order that Respondents pay for treatment to cure and relieve Claimant of this condition.

8. Claimant was evaluated for ongoing hip pain through the rheumatology service at National Jewish Hospital on May 14, 2020. Physical examination during this encounter revealed no thigh swelling and consistent temperature and color in the thighs bilaterally. Blood testing was ordered and depending on the outcome, further recommendation for a triple phase bone scan in an effort to confirm a diagnosis of CRPS. (Id. at bates 075)

9. Claimant would not undertake additional testing until March 19, 2021, when she underwent a triple phase bone scan, the results of which were interpreted by Dr. James Walton. According to Dr. Walton, the results of Claimant's bone scan revealed, "No areas of activity that demonstrate increased uptake throughout all 3 phases of the examination which is the most diagnostically accurate pattern. However, there is relatively increased juxta-articular uptake about the elbows and mild uptake about the shoulders and knees at 3 hours, and to a lesser degree at the ankles." (Resp. Ex. D, bates 016) Dr. Walton did not provide a diagnosis of CRPS in his report. Nor did Dr. Walton indicate that any findings from the bone scan were causally related to Claimant's workers' compensation claim.

10. Following her bone scan, Claimant underwent a full body thermography on March 31, 2021 with Dr. Kenneth Taylor. Dr. Taylor noted the thermal findings might indicate a low risk for developing pathology in Claimant's breasts. (Resp. Ex. D, bates 024) Dr. Taylor did not provide a diagnosis of CRPS in his report. Nor did he indicate that any findings from the thermogram were causally related to Claimant's workers' compensation claim.

11. Following thermograph testing, Claimant presented to Family Nurse Practitioner (FNP) Deanna Leyba for a pain management evaluation. During her initial encounter on April 14, 2021, Claimant reported deep cold burning type pain in her right quad and left arm. (Clmt's. Exhibit 4, bates 45) She advised that she had been "bed ridden" from 2016-2020. (Id.) Physical examination revealed subjective complaints of pain to palpation of the midthoracic to the lumbar spine, otherwise the cervical and lumbosacral spine was documented as being "normal". (Id. at bates 46) No edema was observed in the extremities and Claimant's strength in the upper and lower

extremities was documented as “normal.” (Id.) Claimant demonstrated a normal gait, no tremor and no rigidity in the limbs. FNP Leyba provided an assessment of “chronic pain disorder” and complex regional pain syndrome I of the right lower extremity. (Id.)

12. Careful review of the treatment records of FNP Leyba reveal that after Claimant was seen April 14, 2021, she attended follow-up appointments on 4/28/21, 5/25/21, 6/17/21, 7/19/21, 8/10/21, 9/8/21, 10/6/21 and 11/3/21. (Clmt’s. Ex. 4, bates 1-47) Treatment consisted of medication management with a focus on participation in alternative modalities, including trigger point injections, massage therapy, chiropractic treatment, yoga, physical therapy and acupuncture to help decrease Claimant’s pain. (Id.) During the entirety of Claimant’s treatment under FNP Leyba, there was never an effort to perform confirmatory testing to determine the diagnosis of CRPS nor did any provider in the clinic conduct a causation analysis consistent with the Colorado Medical Treatment Guidelines or Budapest criteria to determine whether Claimant, in fact, has CRPS Type I or Type II. Accordingly, the ALJ questions the validity of FNP Leyba’s CRPS Type I diagnosis.

13. Claimant returned to Dr. Doner for re-evaluation on April 20, 2021. Although the record from this date of visit is devoid of a causation analysis performed by any of Claimant’s providers concerning Claimant's alleged CRPS, Dr. Doner noted that Claimant reportedly had been diagnosed with CRPS and as stated by her, it was in her “whole body.” (Resp. Ex. D, bates 19-27) Based upon the content of the medical records and the diagnostic testing completed up to the date of this visit, the ALJ finds Dr. Doner’s suggestion that Claimant had been diagnosed with CRPS and that it was present throughout her body unconvincing. Indeed, Claimant’s report to Dr. Doner that CRPS had been confirmed in her “whole body” appears to be a gross exaggeration of the bone scan and thermography testing results.

14. Claimant underwent a Respondent requested independent medical examination (RIME) with Dr. Lawrence Lesnak on July 14, 2021. Claimant reported to Dr. Lesnak that she had constant severe pain diffusely from under her breasts to the tips of her toes. Claimant graded her pain on a level of 0-100 at a 100. Dr. Lesnak noted the pain level reports were unusual in light of the fact that Claimant utilized daily doses of oxycodone and edible marijuana products. (Resp. Ex. K, bates 063) Claimant reported to Dr. Lesnak that she had not worked since March 22, 2016. (Resp. Ex. K, bates 064) Upon physical examination, Dr. Lesnak noted that Claimant did not have evidence of peripheral edema in either the upper or the lower extremities; there was no evidence of abnormal skin temperature or color changes, and no evidence of muscle atrophy or skin lesions. Dr. Lesnak utilized skin temperature monitoring devices on Claimant’s feet, which he documented as providing symmetrical readings of 88 degrees. (Resp. Ex. K, bates 075-076) Dr. Lesnak ultimately concluded that based upon all information available, including the medical records, his clinical examination and the results of Claimant’s bone scan and thermogram, that there was no medical evidence to support a diagnosis of CRPS Type I or Type II for Claimant. (Resp. Ex. K, bates 079) Dr. Lesnak further opined that Claimant did not require any further medical care as related to the injuries she sustained on March 22, 2016. (Resp. Ex. K, bates 080)

15. Claimant underwent a second triple phase bone scan on August 31, 2021. The results were interpreted by Dr. Jim Hart, who also compared the August 2021 bone scan results to those of the March 2021 scan. Under impressions, Dr. Hart stated, "(1) Decreased delayed update in the elbows compared to prior exam, as well as decreased bilateral knee uptake on blood pool images, may reflect a response to therapy. (2) There is increased update in the shoulders on delays compared to prior exam, which is of uncertain significance." (Resp. Ex. N, bates 101) Overall, Dr. Hart noted that the August 2021 scan demonstrated some improvement in the results from the prior scan. Dr. Hart did not provide a diagnosis of CRPS. Nor did Dr. Hart indicate that any findings from the second bone scan were causally related to Claimant's workers' compensation claim.

16. In an effort to determine whether she had CRPS, Claimant sought the opinions of Dr. Giancarlo Barolat. Dr. Barolat evaluated Claimant on September 9, 2021. During this evaluation, Claimant reported that following her slip and fall and subsequent right hip surgery, she developed hypersensitivity in the right lower extremity. Claimant informed Dr. Barolat that she traveled to a "medical center in Oklahoma, where she was given injections of steroids and vitamin B12 which, according to her, markedly decreased her hypersensitivity in the right lower extremity." (Resp. Ex. M, bates 096) She also described developing swelling and a "reddish" discoloration of the skin in the right leg that spread to the left leg, which also became painful. (Id.) She expressed that she experienced dizziness, tinnitus and cognitive sequelae (brain fog) and a spread of her right hip pain to her upper extremities and left rib cage, which created some difficulty in her ability to breathe. (Id. at bates 097) She reported extreme pain levels of a 10+ on a scale of 1 to 10. (Id.) She insisted that she had swelling in her lower extremities along with discoloration of her skin, was completely sedentary and unemployed, having been out of work for the previous 6 years. (Id.)

17. Physical examination revealed no "difference in size between the two thighs." (Resp. Ex. M, bates 098). Dr. Barolat was similarly unable to discern any color changes in the skin covering the right thigh. According to Dr. Barolat, Claimant demonstrated "absolutely no allodynia or hypersensitivity to touch anywhere in the body and in particular in the right lower extremity." (Id.) Dr. Barolat concluded in his report, "At today's examination, I cannot make the diagnosis of complex regional pain syndrome. She does not have any allodynia or hypersensitivity to touch, which is one of the cardinal features of CRPS." (Id.)

18. Following his examination, Dr. Barolat noted that he would defer any final comments until he had a chance to review additional records concerning Claimant's reported desensitization treatment. He noted that Claimant had "very widespread symptomatology involving the upper extremities, the lower extremities, the lumbar area, the chest area, the brain, the inner ear, and the bladder." (Resp. Ex. M, bates 098) Based upon Claimant's examination, Dr. Barolat was unable to "make the diagnosis of complex regional pain syndrome" as Claimant did not have any "allodynia or hypersensitivity to touch, which is one of the cardinal features of CRPS." (Id.) Dr.

Barolat questioned the alleged swelling and color changes in the right thigh noting that he was "very puzzled by [Claimant's] clinical presentation and clinical course. He then reiterated his request to review additional treatment records before making any "further therapeutic or diagnostic recommendations." (Id.) Based upon the evidence presented, it is unclear if Dr. Barolat reviewed additional records. No subsequent reports issued by Dr. Barolat were included in the exhibits submitted to the ALJ and he did not testify at hearing.

19. Claimant underwent additional imaging (MRI) of the right hip on September 30, 2021. Results of this imaging were compared to Claimant's September 1, 2017 right hip MRI and revealed a recurrent tear of the anterior superior labrum with a 2-millimeter paralabral cyst located at the anterior superior aspect of the right acetabulum. (Clmt's. Ex. 5, bates 21).

20. On 10/18/21, Claimant was seen by orthopedist Dr. Douglas Robert Adams, having been referred there by Dr. Doner. Careful review of the report from this date of visit indicates that at the time of her evaluation, Claimant was a "36 year-old female with chronic right hip pain from multifactorial etiology . . . whose pain appeared "most consistent with chronic regional pain syndrome and irritation of the lateral femoral cutaneous nerve (injured during surgery) of the right hip as opposed to symptoms related to a labral tear." (Clmt's. Ex. 5, bates 1-20) Accordingly, Dr. Adams assessed Claimant with CRPS Type II of the right lower extremity and concluded that she was not a good candidate for surgical repair of the tear and cyst revealed on the September 30, 2021 MRI because revision surgery was likely to result in reactivation of her CRPS without addressing the damage to her femoral cutaneous nerve. (Clmt's. Ex 5, bates 3) Similar to the providers before him, Dr. Adams relied only on the prior medical records to support his conclusion that Claimant had CRPS. He did not comment on the results of Claimant's thermogram or bone scan testing results. Moreover, he did not comment on Dr. Barolat's evaluation nor did he recommend additional confirmatory testing or complete a causation analysis of his own. Simply because he listed CRPS among his assessments, does not persuade this ALJ that Claimant is actually suffering from CRPS currently.

21. During the December 14, 2021 hearing, Claimant testified that she currently experiences ongoing symptoms including severe pain, extreme hot and cold sensations and swelling in her right quadriceps extending upward to the hip and her left elbow up to her left shoulder, which she attributes to CRPS. She testified that she "got worse" immediately after the surgery with Dr. Doner on February 5, 2018.

22. According to Claimant, Dr. Doner referred her to Dr. Richard Adams in September 2021 for further evaluation of her right hip complaints. As noted above, Claimant confirmed that Dr. Adams felt she was a poor surgical candidate and recommended against revision surgery for the recurrent right labral hip tear.

23. Claimant testified that she wished to proceed with additional evaluations and treatment for her alleged CRPS, including a Quantitative Sudomotor Axon Reflex Test (QSART) and a ganglion stellate block.

24. During cross-examination, Claimant testified that she has been working at United RF, LLC since July 2020 on a part-time basis. Because United RF is owned by Claimant's father, Claimant testified that she "did hardly anything" for her job despite earnings wages on a monthly and even weekly basis over the year and half since July 2020. Based upon the content of her testimony, the ALJ finds that Claimant maintains that her work at United RF constituted sheltered employment.

25. During cross-examination, Claimant was asked about a news interview she gave January 2021. Claimant acknowledged giving the interview but testified that she was unable to recall any specifics of the exchange she had with the reporter. She specifically denied discussing receipt of an injection dubbed the "Jesus Shot" in Oklahoma that significantly improved her pain during the interview. She also denied discussing any fundraising efforts through her bakery Crumbl at the interview.

26. In an effort to refresh Claimant's memory and impeach her with her prior statements, Respondents played a video showing a KRDO NewsChannel 13 interview with Claimant from January 21, 2021. Claimant agree she was the person depicted in the video during which she made several statements to the interviewer, including: in January of 2020 (a year prior) she received an anti-inflammatory injection known as the 'Jesus shot' in Oklahoma which "changed her life;" Claimant was in "remission" from her condition; and that she had held "a fundraiser through her bakery Crumbl for Valentine's Day" for a missing person. Respondents moved for the admission of the video recording, which was previously withheld on foundation grounds at the outset of hearing. As noted, the ruling on the admissibility of the video tape was reserved. Having considered the arguments for and against admission of the video tape advanced by counsel and the purpose for which admission is sought, i.e. reviving Claimant's memory and impeaching her based upon prior inconsistent statements, the ALJ agrees with Respondents that a sufficient foundation was established to admit Exhibit Q into evidence over Claimant's objection. (Colorado Rules of Evidence (CRE), Rule 607 & Rule 613) Respondents failed to lay foundation for the admission of Exhibit P. Consequently, Exhibit P is not part of the evidentiary record in this case.

27. During cross-examination, Claimant testified about her medical condition and symptoms at the time of the follow-up DIME with Dr. Tyler on March 29, 2019. Claimant testified that she had been experiencing rib pain, right hip pain, low back pain, knee pain, and right leg pain at the time of the follow-up DIME. She also testified that as of November 2019, she believed she was not at MMI from her injury, and that she was permanently and totally disabled because of her industrial injury.

28. Claimant confirmed that as of the December 2021 hearing date, she had undergone two separate triple phase bone scans as well as one thermogram.

29. During rebuttal testimony, Claimant testified that she has experienced minimal hair growth on her legs and losing toenails since her right hip arthroscopy. Claimant sought to introduce photographs she purportedly took of her legs on July 14, 2021, after the RIME with Dr. Lesnak. The ALJ admitted the photographs into evidence as Claimant's Exhibit 7 for the limited purpose of challenging Dr. Lesnak's testimony regarding the condition of Claimant's legs at the time of the RIME appointment. The ALJ instructed Claimant's counsel to forward the photographs to the court and Respondent's counsel because they had not been exchanged previously.

30. Five images were submitted to the court for review. Images 3, 4 and 5 contain a date in the upper left corner of the photo, purportedly to demonstrate that the pictures were taken after Claimant's RIME with Dr. Lesnak, on July 14, 2021, as testified to by Claimant. Image number 3 is of particular interest to the ALJ. This picture contains an image of Claimant's left lower leg and foot; however, clearly depicted in the background of this photo is a partial view of a television containing the image of a person wearing a black judicial robe consistent with the one this ALJ wears when conducting hearings by video. The ALJ carefully scrutinized this particular portion of the photograph further to find that while there is no image of the face of the person appearing on the television, the person wearing the black robe is also wearing a striped tie consistent with one this ALJ keeps in his office. Finally, the person on the television is wearing a silver watch on his left wrist, consistent with the type of watch this ALJ wears and the wrist he wears it on. Based on the content of this image, this ALJ reviewed the recorded video of the December 14, 2021 hearing. In that video, the tie this ALJ is wearing is consistent with that depicted in image number 3 submitted to the court by Claimant's counsel. Based upon his review of the hearing video, this ALJ is persuaded that the person appearing on the television in picture 3 of Claimant's Exhibit 7 is, more probably than not, the undersigned. Consequently, this ALJ questions the date that the photos comprising Claimant's Exhibit 7 were actually taken. While it is possible that the photos were taken on July 14, 2021 as suggested by inclusion of the date in the upper left corner of the picture, it is also possible that the pictures were taken during the December 14, 2021 hearing and reveal bruising on the legs that was not present at the time of Dr. Lesnak's RIME.

31. Regardless of when the photos were actually taken, careful review of the pictures reveals what the ALJ finds to be small focal areas of bruising on the proximal thighs bilaterally. There is also an area of bruising on the left shin, which appears to be partially obscured by a floral themed tattoo (Image #3). Outside of these bruises, the ALJ is unable to discern any color changes in the thighs/lower legs bilaterally. No abnormal hair growth pattern is evident on the legs in the pictures submitted for review. Inspection of the only image of the foot/toes submitted (Image #3) reveals the nail on the great toe of the left foot to be intact and without obvious injury, checking, cracking or delamination. Due to poor picture quality, the nails of the remaining toes are not visible.

32. As noted, Dr. Lesnak testified at hearing via videoconference as an expert in physical medicine and rehabilitation (PM&R). Dr. Lesnak explained that the Colorado

Medical Treatment Guidelines ("MTG")[1] have adopted the Budapest criteria in evaluating and diagnosing CRPS. Dr. Lesnak testified that the Budapest criteria are accepted by the general medical community in evaluating and diagnosing a patient with CRPS. Dr. Lesnak testified that per Rule 17, Exhibit 7 of the MTG, symptoms and reproducible objective findings on examination must be satisfied before a potential diagnosis of CRPS could be considered. At that time, assuming the initial criteria are satisfied, the next step is diagnostic testing. Dr. Lesnak testified that the MTG allow for four categories of diagnostic tests as potentially confirmatory for CRPS: trophic tests (x-rays and triple-phase bone scans); vasomotor testing (thermography); sudomotor testing (QSART); and sympathetic nerve test (injection trial). Dr. Lesnak testified that the MTG do not require a provider to proceed with all four diagnostic tests. Firstly, subjective complaints must be established. Secondly, criteria for objective clinical exam findings must be met. Thirdly, after establishment of objective findings consistent with subjective complaints, a provider can proceed with the diagnostic tests. Two out of four of the diagnostic tests must be positive for a valid confirmation of a diagnosis of CRPS.

33. Dr. Lesnak testified regarding the clinical evaluation he conducted during his IME with Claimant. Dr. Lesnak measured Claimant's skin temperature utilizing skin temperature probes. He also looked for swelling (edema), skin color changes, and allodynia or hyperesthesia. Dr. Lesnak testified that Claimant did not present with any findings consistent with CRPS based upon his objective clinical examination. He also testified that the three-phase bone scan from March 19, 2021 was "completely nondiagnostic for CRPS" and the thermography testing from March 31, 2021 did not demonstrate "any findings consistent whatsoever with CRPS." Concerning the triple phase bone scan conducted on August 31, 2021, Dr. Lesnak testified that it too failed to demonstrate any findings consistent with CRPS – that it was a "completely negative test for CRPS."

34. Dr. Lesnak testified that while Dr. Adams had noted that Claimant might have CRPS Type II in his October 18, 2021 report, he (Dr. Adams) did not document performing a physical examination consistent with the MTG to evaluate Claimant for CRPS. Rather, Dr. Adams conducted a "focused exam" limited to the right hip and thigh.

35. Dr. Lesnak testified that Claimant does not require additional diagnostic testing, e.g. QSART or a trial injection because she has no reproducible objective findings identified by any provider who has examined her previously. Accordingly, Dr. Lesnak opined that Claimant failed to satisfy the second tier of criteria set forth in Rule 17, Exhibit 7 of the MTG to move forward with such confirmatory testing.

36. Dr. Lesnak noted that even though Claimant did not meet the second tier of objective criteria as defined by the MTG, she nevertheless underwent three

[1]The ALJ takes administrative notice of the Medical Treatment Guidelines, specifically Rule 17, Exhibit 7: "Chronic Regional Pain Syndrome/Reflex Sympathetic Dystrophy" as material officially promulgated by the Division of Workers' Compensation.

diagnostic tests, (two bone scans and a theromgram) all of which were negative for CRPS.

37. Dr. Lesnak testified that the most recent right hip MRI arthrogram demonstrated abnormalities consistent with postoperative changes and not specifically a new tear in Claimant's hip labrum. Dr. Lesnak disagreed with Dr. Adam's assessment of an irritation of the lateral femoral cutaneous nerve in Claimant's right hip, testifying that it would be nearly impossible for a lateral femoral cutaneous neuritis or neuropathy to occur following a hip arthroscopy procedure, since the portals for the arthroscopy instruments are not inserted anywhere near the lateral femoral cutaneous nerve. Moreover, Dr. Lesnak testified that Claimant had consistently presented to all medical providers over the past several years with complaints of pain over her entire body rather than isolated or localized to her right hip, which would also be inconsistent with a diagnosis of a lateral femoral cutaneous neuritis or neuropathy.

38. Dr. Lesnak testified that based on all medical records reviewed and his examination of Claimant; she had not suffered a change (worsening) of her condition as related to the March 22, 2016 industrial injury.

39. On cross-examination, Dr. Lesnak confirmed that he disagreed with Dr. Adams' interpretation of the October 2021 MRI arthrogram. Dr. Lesnak testified that the findings on the MRI arthrogram were consistent with post-operative changes following a hip arthroscopy. Dr. Lesnak further testified that had he observed changes to Claimant's leg hair, toenail growth, or skin color, he would have documented those in his report. Because Claimant did not have noticeable trophic changes at the time of his examination, Dr. Lesnak testified that such changes do not appear in his RIME report.

40. The ALJ credits the opinions to Dr. Lesnak to find that Claimant does not meet the objective testing criteria set out in Rule 17, Ex. 7(G)(3)(b) to confirm a diagnosis of CRPS. The ALJ also credits the opinions of Dr. Barolat to find that Claimant has failed to establish that she meets the clinical criteria for a diagnosis of CRPS. Together, the opinions of Drs. Lesnak and Barolat persuade the ALJ that Claimant is not likely suffering from either CRPS Type I or II.

41. The ALJ finds Claimant's testimony regarding the alleged worsening of her condition unconvincing. As presented, the evidence persuades the ALJ that Claimant continues to have symptoms similar to those she expressed following her placement at MMI and at the previous hearing before this ALJ. While she asserts that she has had a worsening of CRPS related symptoms, including sudomotor, vasomotor and trophic changes in her legs, feet, rib cage and upper extremities, there is no persuasive evidence of the same. Indeed, Dr. Barolat, Claimant's selected IME saw no evidence of edema or color change in the lower extremities. While Claimant reported that her CRPS type pain had spread to her arms and left rib cage, Dr. Barolat noted that she had no hyperesthesia and/or allodynia, which is a classic symptom of CRPS. Consequently, Dr. Barolat could not confirm a diagnosis of CRPS. Moreover, Claimant's objective testing belies her assertion that her condition has worsened with

time. Both her thermogram and bone scans fail to support a conclusion that Claimant has CRPS let alone that it is spreading.

42. Based on the evidence presented, the undersigned finds that Claimant failed to produce sufficient objective evidence of a worsening condition, which would warrant removing her from MMI and reopen the case for additional medical benefits. To the contrary, the undersigned finds that Claimant's current symptoms, including her pain levels are "old and similar to those she experienced when she was placed at MMI."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Request to Reopen Her Claim Based on a Change Condition

C. Pursuant to § 8-43-303 (1) C.R.S., a claim may be reopened based on a change of condition, which occurs after maximum medical improvement. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). The burden to prove that a claim should be reopened rests with the injured worker to demonstrate that reopening is warranted by a preponderance of evidence. Pursuant to §8-43-303(1), C.R.S., a "change of condition" refers to a "change in the condition of the original compensable injury or a change in Claimant's physical or mental condition which must be causally connected to the original compensable injury." *Chavez v.*

Industrial Commission, 714 P.2d 1328 (Colo. App. 1985). Reopening may be appropriate where the degree of permanent disability has changed, or when additional medical or temporary disability benefits are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000); *Brickell v. Business Machines, Inc.*, 817 P.2d 536 (Colo. App. 1990) (reopening is appropriate if additional benefits are warranted).

D. The question of whether Claimant has proven a change in condition of the original compensable injury or a change in physical or mental condition which can be causally connected to the original compensable injury is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12, P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). In this case, Claimant alleges she has had a change in medical condition since being placed at MMI. Specifically, Claimant argues that she has a diagnosis of CRPS Type I or Type II related to her March 22, 2016 industrial injury and/or the hip arthroscopy necessitated by her slip and fall. As noted above, the ALJ is not convinced. Here, the persuasive evidence supports Dr. Lesnak's opinion that there is currently no clinical or diagnostic testing evidence that "in any way meets the specific criteria outlined in the State of Colorado Division of Workers' Compensation Medical Treatment Guidelines [to support] a diagnosis of CRPS, type I or Type II." While the ALJ is convinced that Claimant is experiencing physical symptoms (pain), there is sufficient evidence to support a conclusion that her complaints are somatically driven since her alleged symptoms cannot be accounted for by clinical observation/examination and/or detailed diagnostic testing. Certainly, Dr. Staudenmayer noted previously that Claimant was "over reporting symptoms" and "somaticizing her emotional distress." (Resp. Ex. M, bates 079) Moreover, Claimant had a strong somatic locus during her RIME with Dr. Lesnak. (Id.) Based upon the evidence presented, the ALJ concludes that further testing/treatment for CRPS would be in vain, as it is evident that Claimant does not suffer from the diagnosis.

E. Claimant also alleges that she has experienced a worsening of her medical condition related to her right hip in the form of a recurrent 2 mm tear in the anterior superior aspect of the labrum. While the ALJ is convinced that a recurrent tear in the labrum exists, insufficient evidence was presented to causally connect this tear to Claimant's March 22, 2016 slip and fall. Simply because Claimant has a recurrent labral tear does not mean that tear and any need for treatment is related to Claimant's prior slip and fall and right hip arthroplasty. Rather, Respondents are liable to provide medical treatment that is reasonably necessary to cure or relieve the employee from the effects of the injury or prevent further deterioration of the claimant's condition. § 8-42-101, C.R.S.; *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609, 611 (Colo.App.1995). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App. 2000). The mere occurrence of a compensable injury does not

require an ALJ to find that the need for subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those, which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 1997. Based upon the totality of the evidence presented, the ALJ concludes that Claimant has failed to establish a causal relationship her recurrent labral tear and her March 22, 2016 industrial injury. Even if Claimant had established that her recurrent labral tear was causally connected to her March 22, 2016 slip and fall, Dr. Adams declined to recommend surgery for Claimant. Rather he referred Claimant to her pain management physician for continued care. In resolving the conflicting medical opinions found in Dr. Adams' report and Dr. Lesnak's testimony regarding the nature of the right hip MRI arthrogram findings, the suggestion that Claimant is suffering from an injury to her lateral femoral cutaneous nerve and whether these findings/condition demonstrate a worsening of medical condition warranting additional treatment, the ALJ accredits the opinions of Dr. Lesnak as the most persuasive. As found, there is no credible medical opinion that Claimant has suffered a worsening of her medical condition as related to the right hip. The ALJ further finds there is no credible medical opinion that Claimant requires further medical treatment or evaluation as related to the right hip.

F. Based upon the medical records, evidence and testimony, the ALJ finds that Claimant's medical condition as related to the March 22, 2016 industrial injury has not worsened or changed. To the contrary, Claimant has alleged the same or similar complaints since the follow-up Division IME with Dr. Tyler in March 2019, wherein Dr. Tyler determined she had reached MMI. Claimant also alleged the same or similar complaints at the hearing previously held in this matter in November 2019, arguing she was not at MMI and that she was permanently and totally disabled. Consequently, Claimant's request to reopen the claim based upon a change of condition is denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a

Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

SO ORDERED this 3rd day of March, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere

Colorado Springs, CO 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the L4-S1 anterior lumbar interbody fusion ("ALIF") with revision of L3-S1 fusion requested by Michael Gallizzi, M.D. is reasonable, necessary and causally-related treatment for Claimant's industrial injury.

STIPULATIONS

The parties stipulated that the recommended removal of the spinal cord stimulator was reasonable, necessary, causally-related and authorized treatment for Claimant's industrial injury.

FINDINGS OF FACT

1. Claimant is a 64-year-old male who worked for Employer as an inbound storer.

2. Claimant sustained an admitted industrial injury on November 27, 2017 when he was loading 40-50 pound boxes from waist to shoulder height. Claimant experienced a pop and pain in his right low back at the time and later developed pain and numbness in his right lower extremity.

3. Claimant was diagnosed with a L3-L4 disc herniation and underwent treatment at Concentra with Thomas Corson, D.O.

4. On May 22, 2018 Claimant underwent a right L3-4 posterior lumbar interbody fusion performed by Scott Stanley, M.D.

5. Claimant continued to complain of low back pain and radiating pain and numbness in his right lower extremity. On September 18, 2018, an EMG/NCS of his right lower extremity revealed stable and chronic-appearing right-sided lumbar radiculopathy affecting the L3 and L4 nerve roots.

6. On February 22, 2019 Claimant underwent a L4-L5 transforaminal epidural steroid injection and selective nerve root block performed by Michael Gesquiere, M.D.. Claimant subsequently underwent implantation of a spinal cord stimulator performed by Dr. Gesquiere on June 25, 2020.

7. Upon Dr. Corson's referral, Claimant began seeing Michael Gallizzi, M.D. for chronic low back pain and lower extremity radiculopathy. Claimant first presented to Dr. Gallizzi on January 13, 2021. Claimant reported to Dr. Gallizzi that his symptoms only slightly improved following the L3-L4 fusion and had significantly worsened as of the

time of Dr. Gallizzi's evaluation. Claimant complained of pain, numbness and tingling in his right inner thigh and down his anterior thigh and shin, numbness in his right foot, and weakness in the right leg. Dr. Gallizzi ordered an MRI and CT scan of the lumbar spine to evaluate the status of Claimant's L3-4 fusion and hardware.

8. Claimant underwent the lumbar spine MRI and CT scans on January 25, 2021. Radiologist Trent Paradis, M.D. interpreted the results of both tests. His MRI findings included moderate spinal canal narrowing and mild bilateral neuroforaminal narrowing at L2-L3; mild bilateral neuroforaminal narrowing at L3-L4, spinal canal widely patent due to posterior element decompression; circumferential disc bulge and mild facet arthrosis at L4-L5 with moderate spinal canal narrowing slightly worse on the left side; circumferential disc bulge at L5-S1 causing minimal spinal canal narrowing and mild bilateral neuroforaminal narrowing, mild bilateral facet arthrosis. Dr. Paradis' impression was:

1. Bilateral posterior rod and screw fixation at L3 and L4 with corresponding interbody cage device. There is expected postsurgical soft tissue enhancement dorsal to the lumbar spine without a abscess or fluid collection.

2. Multilevel degenerative changes as above, worst levels are L2-3 and L4-5.

3. Stimulator electrode artifact is present in the subcutaneous tissues dorsal to the lumbar spine at L3 level and L4 level and extends into the spinal canal dorsally at T12-L1 level and continues cranially.

(Cl. Ex. 4, p. 15).

9. Dr. Paradis' CT scan findings included posterior element decompression at L3-4; osseous fusion of the remaining posterior elements bilaterally at L3-4; grade 1 anterolisthesis of L3 on L4; and straightening of expected lumbar lordosis. His impression was:

1. Bilateral posterior rod and screw fixation at L3-4 with corresponding interbody cage. There is osseous fusion of the remaining posterior elements at this level bilaterally. Grade 1 anterolisthesis of L3 on L4 is present. Hardware appears intact. No evidence of loosening.

2. There are stimulator electrodes in the subcutaneous tissues dorsal to the lumbar spine L2-L4 level with electrodes extending into the spinal canal dorsally at T12-L1 level and continuing cranially.

3. Multilevel degenerative disc disease throughout the lumbar spine, worst levels are L2-3 and L4-5.

(Id. at p. 16).

10. On January 28, 2021, Claimant attended a follow-up evaluation at Dr. Gallizzi's office with Adam Welker, PA-C. Claimant continued to report low back pain with right lower extremity radicular symptoms, which PA Welker noted had been an ongoing issue since Claimant's initial industrial injury in November 2017. PA Welker personally reviewed Claimant's recent lumbar spine MRI and CT scans. Regarding the MRI, PA Welker opined,

> Patient has severe neuroforaminal stenosis on the right side compared to the left at L4-5 and L5-S1. This is evident in the transfacet area. This has contact with the exiting nerve root at the L4 and the L5 level. He has concomitant increased fluid in his facet joint especially at L4-5.

(Id. at p. 15).

11. Regarding the CT scan without contrast PA Welker noted, "I agree that there is osseous fusion across the posterior lateral spot at L3-4 with residual grade 1 spondylolisthesis at L3-4. We did measure the patient's lumbar lordosis from the top of L1 to the top of S1 which measured only 33 degrees." (Id. at p. 16).

12. PA Welker recommended Claimant undergo right-sided L4-5 and L5-S1 transforaminal epidural steroid injections. PA Welker explained that the recommendation was,

> Based on the contact of the nerve in the neuroforamen with the disc which is evidenced on image 17 out of 21 sagittal T2 series showing the disc displacing the nerve root at the L4 and L5 neuroforamen with significant fluid in the facet joints at L4-5. The patient had incomplete resolution of his symptoms in reviewing in comparison to the 2017 MRI. I believe that these were missed opportunities to improve his right leg pain.

(Id. at p.18).

13. PA Welker also recommended Claimant undergo upright flexion-extension lumbar spine x-rays "as his lumbar lordosis is only 33 degrees with suspected significant sagittal imbalance of greater than 20 degrees this patient would likely need reconstruction." (Id.)

14. Claimant subsequently underwent the L4-L5 and L5-S1 epidural steroid injections and returned to Dr. Gallizi on March 3, 2021. Claimant reported that on the day of the injection and for approximately five days after feeling "a lot better but not 100% gone." (Id. at 20). Claimant's right foot paresthesia had improved. Flexion-extension x-rays of the lumbar spine revealed moderate L2-3 and mild L1-2, L4-5 and L5-S1 disc space narrowing; limited flexion-extension and no abnormal motion; and mild

sacroiliac joint arthritis. Curvature of the spine convex to the left measured less than 5 degrees.

15. Dr. Gallizzi opined that Claimant is a good candidate for L4-S1 ALIF with subsequent day 2 robotic assisted PSF. Claimant wanted the spinal cord stimulator removed as part of the procedure. Dr. Gallizzi noted Claimant needed to work on smoking cessation for at least one month prior to surgery.

16. Dr. Gallizzi reexamined Claimant on April 1, 2021. Claimant reported that he was making progress with quitting smoking. Dr. Gallizzi continued to recommend surgery to address Claimant's sagittal balance deformity and severe neuroforaminal stenosis at L4-5 and L5-S1. He explained,

> Patient will need nearly a 25 degree correction of his sagittal alignment due to his PILL mismatch of approximately 30 degrees. Based on his age and neuroforaminal stenosis as well as flat back deformity from his previous surgeries. I would recommend a staged L4-S1 ALIF with day 2 spinal cord stimulator removal hemilaminotomy to remove the leads out of the L1 level with revision L3-S1 fusion with concomitant hardware removal of his previous L3-4 fusion pedicle screws. This was discussed with the patient and we are okay to schedule him once he is on nicotine patches that he plans to wean prior to his surgery.

(Id. at p. 29).

17. On June 2, 2021 Brian Reiss, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Reiss performed a physical examination and reviewed Claimant's medical records which, at the time, did not include Claimant's imaging studies. He issued a report dated June 2, 2021. Dr. Reiss subsequently reviewed Claimant's imaging studies including several thoracic and lumbar x-rays as well as Claimant's January 25, 2021 lumbar spine MRI and CT scan. He issued a second report dated July 16, 2021. Dr. Reiss diagnosed Claimant with post laminectomy syndrome, degenerative disc disease low back pain, sciatica. He concluded that the imaging studies did not evidence any major stenosis or significant sagittal imbalance warranting reconstruction and extension of the lumbar fusion or decompression. Dr. Reiss thus opined that no further surgery was indicated.

18. Dr. Reiss testified at hearing on behalf of Respondents as a Level II accredited expert in orthopedic surgery. Dr. Reiss opined that the recommended surgery is not reasonably necessary to improve Claimant's condition. He explained that Claimant's x-rays and clinical examinations did not reveal true sagittal imbalance or instability, nor did the MRI and CT scans evidence severe stenosis. Dr. Reiss testified that the mild to moderate stenosis seen on Claimant's imaging is normal with aging. He opined that although Claimant likely has nerve damage, no significant nerve compression is present as to warrant a decompression procedure. Dr. Reiss explained that, pursuant to the Medical Treatment Guidelines, a surgically correctable pain generator has not been

clearly identified in Claimant's case, noting that a positive response to a transforaminal epidural steroid injection did not mean there is a surgically correctable lesion. He further explained that, while disc bulges may be present, the imaging shows that the foramina has sufficient space. Dr. Reiss testified that had minor, pre-existing degenerative findings at L4-5 and L5-S1 with very significant findings at L3-4 which are likely causing Claimant's symptoms. He opined that there is not a surgically correctable pain generator in this case. Dr. Reiss disagreed that there were missed opportunities to improve Claimant's leg pain and opined that Claimant's nerve or low back condition would not likely be improved by further surgery.

19. Claimant credibly testified at hearing that prior to his work injury he did not have any pain or numbness in his low back or lower extremities. Claimant currently experiences pain and numbness in his right lower extremity. Neither his initial back surgery nor the implantation of the spinal cord stimulator have improved his symptoms.

20. The ALJ finds the opinion of treating physician Dr. Gallizzi more credible and persuasive than the opinion of Dr. Reiss and Dr. Paradis.

21. Claimant proved it is more likely than not the surgery recommended by Dr. Gallizzi is causally related to Claimant's industrial injury and reasonably necessary to cure and relieve its effects.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000),

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he determines it is entitled to considering the totality of the evidence. See *Adame v. SSC Berthoud Operating Co., LLC*., WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

As found, Claimant proved it is more probable than not the recommended surgery is related to his industrial injury and reasonably necessary to relieve its effects. Claimant credibly testified he did not have any issues or limitations with his low back or lower extremities prior to the work injury. Since undergoing an L3-4 fusion in May 2018 as a result of the work injury, Claimant has consistently experienced low back pain and right lower extremity numbness and weakness. Upon review of Claimant's imaging, Dr. Gallizzi opined that significant stenosis is present at L4-5 and L5-S1 in the neural foramen with the nerve contacting the disc, as well as disc displacement of the nerve root at L4-5. He further opined Claimant requires nearly a 25 degree correction of his sagittal alignment due to his PILL mismatch of approximately 30 degrees. Dr. Gallizzi

explained that his recommendation for surgery is based on Claimant's age, neuroforaminal stenosis and flat back deformity from previous surgeries. Claimant underwent an injection at L4-L5 and L5-S1 which provided relief and improved Claimant's right foot paresthesia, indicating identification of a pain generator. Dr. Gallizzi credibly opined there have been missed opportunities to improve Claimant's pain. The ALJ has considered the applicable Medical Treatment Guidelines as well as the opinons of Drs. Reiss and Paradis, however, based on the totality of the evidence, the preponderant evidence establishes the surgery recommended by Dr. Gallizzi is causally related and reasonably necessary to cure and relieve the effects of Claimant's industrial injury.

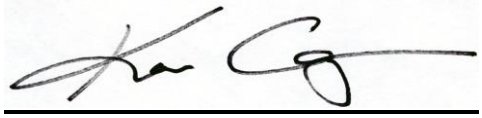
ORDER

1. Claimant proved by a preponderance of the evidence the L4-S1 anterior lumbar interbody fusion ("ALIF") with revision of L3-S1 fusion requested by Michael Gallizzi, M.D. is reasonable, necessary and causally related treatment for Claimant's industrial injury. Respondents are liable for the recommended surgery.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 4, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the cervical Medial Branch Blocks ("MBB"), as proposed by his ATP and Dr. Laker, are reasonable, necessary, and related to his industrial injury?

II. Has Clamant shown, by a preponderance of the evidence, that any physical therapy following the MBBs is reasonable, necessary, and related to his industrial injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury, and Subsequent Treatment

1. This is an admitted claim. On 2/9/20 Claimant tripped and fell on ice while shoveling snow at the school where he worked.

2. Claimant's initial complaints to the ATP, Dr. Bisgard, on 2/18/20 included complaints of pain in his neck, low back and elbow as well as a bump on the back of his head. As to his neck complaints, Dr. Bisgard initially diagnosed a "neck strain". (Ex. 2).

3. As to his initial complaints of cervical pain, Claimant was referred for physical therapy, and Dr. Bisgard provided a Toradol injection. Claimant was also assigned provided duty work restrictions. (Ex. 3, p. 152).

4. By 4/14/20, Claimant's primary complaint was continued neck pain, which was now also "going into his shoulder," along with ongoing headaches. Dr. Bisgard now suspected an underlying shoulder pathology. No neurological symptoms suggesting an underlying cervical pathology were identified at this point.

5. On 4/30/20, Claimant underwent a shoulder MRI, which revealed various pathologies, including an incomplete tear of the rotator cuff. Dr. Bisgard referred Claimant to an orthopedic surgeon, Dr. Genuario for a surgical consult.

6. On 5/29/20, Dr. Genuario requested a pre-shoulder surgery MRI, this time of Claimant's cervical spine. This cervical MRI was completed on 6/9/20 and revealed the following pertinent findings: 1) Facet joint degeneration is particularly severe at C3-4 2) No discrete disc herniations or sites of spinal cord compression or cord signal abnormality were found and 3) Degenerative neuro foraminal stenosis is severe on the left at C3-C4, bilaterally, at C6-7 and there was also moderate degenerative foraminal stenosis on the left at C4-5. (Ex. C).

7. Dr. Bisgard sent Claimant for a second opinion about his continuing pain with Dr. Scott Primack, who on 6/22/2020 offered Claimant trigger point injections. Dr. Primack apparently did not see the cervical MMI on that date. (Exhibit 4, p. 22).

8. Claimant was seen again by Dr. Primack on 7/20/20, with ongoing complaints of neck pain and left-sided headaches. Dr. Primack opined, "Previously, I did feel as though he very well may have a component of myofascial pain syndrome with occipital neuralgia. He is here today for occipital nerve block with trigger point injections along the splenius capitis." (Ex. E, p. 46). Dr. Primack injected .75 ml 1% lidocaine into Claimant's occipital nerve and 1 ml 1% lidocaine into four identified trigger points. (Ex. 4, p. 25) Dr. Primack did not diagnose a facet joint syndrome-nor did he personally perform a facet joint injection at any time.

9. Claimant returned to Dr. Bisgard the next day. "At the outset of her report, she noted: [Claimant, redacted] is her for re-evaluation of his neck and left shoulder injuries. He was seen [yesterday] by Dr. Primack and underwent facet injections yesterday. I did not [yet] receive a copy of the report but [Claimant, redacted] reports that he had significant relief. (Ex. F, p. 55). According to Dr. Bisgard's records of 7/21/2020, Claimant's pre-injection pain was 8-9 / 10 and Claimant's pain in his neck was reduced to zero, but began to return after the shots wore off and was 3 /10 when he saw Dr. Bisgard, and the time of total relief of neck pain and substantial relief of headache pain (down to 2 / 10) was 3 hours. (Ex. 3, p. 104).

10. Dr. Bisgard then stated, "As far as his neck issue I explained that he had a diagnostic response which is very encouraging. We have essentially localized the pain generator as far as his neck and headaches. Although his symptoms may worsen, Dr. Primack will likely recommend a repeat medial branch block ("MBB") and if he still has a diagnostic response, he will move onto a rhizotomy" (Ex. F, p.57).

11. At a follow-up visit on 8/10/20 Dr. Primack stated, "He [Claimant] had reasonable relief (from the trigger point injections) for approx. 48-72 hours" (Ex. E, p. 48). He further noted, "At this point in time, given that fact that he will be having surgery in a week, we both decided not to undergo a subsequent injection. I would like to see how he responds to his procedure [rotator cuff repair]. ...However, I cannot help but wonder, given the stiffness of the shoulder, how this does create problems with head and neck pain." *Id.*

12. At Claimant's follow-up visit on 8/12/20 Dr. Bisgard realized her erroneous assumption, upon receiving the actual report from Dr. Primack. She noted: "I had not received Dr. Primack's report but based on the [Claimant's] description of the injections, I thought he had undergone facet block. In fact, I received the records recently and learned that he went left greater occipital nerve blocks with trigger point injections. (Ex. F, p. 60). She then stated: "Now that I understand he had greater occipital nerve blocks, I will need to speak to Dr. Primack about his recommendations. I am hopeful that with the left shoulder surgery he will start getting some relief of the muscle tension contributing to his headaches." *Id* at 62.

Claimant has Successful Rotator Cuff Repair

13. In the interim, Claimant proceeded with arthroscopic shoulder surgery with Dr. Genuario, on 8/18/2020. In Claimant's six-month follow-up on 2/24/2021, Dr. Genuario noted: Patient is now 6 months postop. He was last seen three months ago. He is [to] continue to work with Nicholas [Schroeder] in physical therapy. (Ex. G, p. 89). "*Of note the shoulder is doing well without any limitations.* He is (sic.) also been *bothered by neck pain* and has under medial branch blocks of C3 and 4 with Dr. Scott Laker. Impression: 6 months out from a rotator cuff repair *doing well but limited by neck pain. Id.* Plan: Patient will follow up with Dr. Laker for potential ablations." *Id.* (emphasis added).

Also on 2/24/2021, PT Schroeder's notes indicate:

> Progress for improvement is: *excellent.*
>
> Prognosis is based on: a *positive response* to initial treatment, *attitude,* supportive family members, *the patient's apparent motivation to participate in therapy,* objective *and* subjective findings. (Ex. G, p. 90) (emphasis added).

Claimant's Neck Complaints Continue, Despite Shoulder Surgery Success

14. On 11/6/2020, Claimant returned to Dr. Primack, following his shoulder surgery. Dr. Primack again performed soft tissue trigger point injections, on the left side of Claimant's neck, into four different trigger points (Ex. E, p.50). At this visit, Dr. Primack noted:

> I still believe that as he recovers in reference to his rotator cuff repair, he would have less cervical spine discomfort. However, it is clear that in the face of recovery of his shoulder surgery, if there is still significant pain with facet loading, *medial branch block/facet joint injections* can be made at C3, C4 and C5-C6 *Id.* (emphasis added).

15. Claimant returned to Dr. Bisgard on 2/11/2021. She noted at this time: "Jeff is here for re-evaluation of his neck and left shoulder injuries. Unfortunately he has not done well over the past few days. Last night he experienced intense pain in his neck and had severe headache up to a level of 10 out of 10. (Ex. F, p. 66). "Jeff is scheduled for the MGG on Monday, Feb. 15. He is very concerned that he may not get relief and is not sure what to do after that." *Id* at 67. "I am optimistic that that Jeff will get relief with the medial branch blocks…If he has a diagnostic response, he will need a second confirmatory response prior to proceeding with the rhizotomy." *Id* at 68.

Claimant is Referred to Dr. Laker

16. Claimant was referred to Dr. Laker on 2/4/21, who noted, "I reviewed his *cervical MRI which does reveal some zygapophyseal joint fluid at left C3-4 as well as some edema at that joint.* (Ex. D, p. 32). "He has approximately 50% decreased range of motion on the left rotation. Cervical extension is limited by approximately 20% cervical flexion is intact." *Id.* (emphasis added).

17. Dr. Laker diagnosed Claimant with cervical facet joint syndrome, noting: "He has not made much headway with prior nonoperative care and it is reasonable to that point to move forward with a left medial branch block at C3 and C4 for degeneration/anesthesia of the left C3-4 facet joint. If this is helpful and he has appropriate anesthetic response, then a radiofrequency ablation would be indicated." *Id* at 31.

18. On 2/15/2021, Dr. Laker performed C3-4 Medial Branch Blocks ("MBB") on Claimant. Dr. Laker notes the following, immediately *prior* to the procedure:

> He is preprocedural VAS was a *6-7* out of 10.
>
> ***Right*** cervical rotation was ***50*** degrees, ***left*** cervical rotation was ***45*** degrees. Cervical *extension* was approximately ***15*** degrees. Cervical flexion was intact and normal. (Ex. D, p. 42).
>
> In is *Post-procedural* Summary, Dr. Laker then noted:
>
> After 15 minutes, I reexamined the patient. His pain at that point was a *1-2* out of 10. His ***right*** cervical rotation was ***75*** degrees, his ***left*** cervical range of motion was ***65*** degrees. Cervical *extension* was approximately ***35*** degrees. Cervical flexion was still intact and normal. *Id.* (emphasis added).

No more medical reports from Dr. Laker appear in the record herein.

19. Claimant returned to Dr. Bisgard on 3/2/21 following the MBB. She then noted: "He brought in his pain diary which as attached in the medical section as noted he had 6 to 7 hours of relief. *Based on his response, he is a candidate for rhizotomy.* If (sic.) is very anxious to proceed. (Ex. F, p. 72). (emphasis added). She further noted: "Jeff had an *excellent response to the medial branch block.* This is the best he has looked from the standpoint of his cervical spine and his exam has improved dramatically. He is anxious to proceed with definitive treatment and get back to work full duty. I have submitted a request to Dr. Laker to proceed…. As far as his left shoulder I am very pleased with how well he is done. He is no longer receiving directed physical therapy on his shoulder but is more directed to his cervical spine." *Id* at 74. (emphasis added).

20. After Dr. Bisgard recommended repeat MBB injections with Dr. Laker, Respondents denied authorization, pending a Rule 16 IME and records review by Dr. Lesnak. Following receipt of Dr. Lesnak's report of 3/25/2020 (Ex. A), and supplemental report of 6/9/2021, Respondent made official its denial of the repeat MBB on 6/17/2021. (Ex. I). Dr. Lesnak then authored an additional records review Addendum on 7/26/2021. His opinions did not change as a result of his supplemental reports.

IME of Dr. Lesnak

21. Dr. Lawrence Lesnak, DO, authored his IME, dated 3/25/2021, as noted above. After following the appropriate protocol, Dr. Lesnak's significant findings are summarized herein. He found that "Cervical facet joint loading activities reproduced

absolutely no symptoms on today's exam." (Ex. A, p. 13). "The patient exhibited occasional pain behaviors during today's evaluation, which appeared to be especially prevalent during cervical spine flexion and right cervical rotation activities" *Id.* "Subjective complaints *without any reproducible* objective findings on exam." *Id* at 14. He opined that Claimant had a *completely nondiagnostic* response to the initial round of MBBs. *Id* at 17. (emphasis added). "…there was *no* reported evidence of *any* injury trauma-related pathology on this [cervical] MRI report" *Id* at 7.

22. Dr. Lesnak did acknowledge, within his own record review, the medical record review of Dr. Kathy McCranie (dated 2/11/2021), wherein he summarized her findings: "In her report, Dr. McCranie suggested that Dr. Laker's recommendation for left-sided C3 and C4 medical facet nerve branch block trials appeared to be reasonable, necessary and related to [Claimant, redacted]'s occupational injury claim of 02/09/2020." *Id* at 10. [ALJ note: Dr. McCranie's actual IME records review report is not part of the record herein]. Apparently, she further opined that Claimant, on the videos, did not exhibit behaviors which should result in work restrictions. *Id.*

23. After grudgingly acknowledging at least the *possibility* that Claimant might have occupationally aggravated a preexisting shoulder condition, (while stating that the torn supraspinatus tendon as noted on the 4/30/2020 MRI was "*without any reported injury* or *trauma-related pathology whatsoever*") *Id* at 14. He assigned an extremity rating of 2%. However, he assigned no rating for Claimant's neck, concluding:

> However, there is *absolutely no medical evidence to suggest* that Mr. [Claimant] at this point in time has any type of symptoms stemming from cervical facet joints, and in fact, there is *absolutely no medical evidence to suggest* he developed or even aggravated any preexisting pathology involving the cervical facet joints at it relates to his reported occupational incident of 2/9/2020. *Id* at 15 (emphasis added).

24. Based upon the above, Dr. Lesnak reasoned that since Claimant reported relief from Dr. Primack's injections, as well as relief of headaches and neck pain three days following shoulder surgery, the source of his ongoing neck symptoms could not *possibly* be from his cervical facets. *Id* at 16, 17.

Claimant Continues Follow-up Visits

25. Claimant, however, continued to follow-up with Dr. Primack. At a visit. on 5/24/2021, Dr. Primack noted that the imaging studies "demonstrated degenerative changes at the facet joints", "consistent with facet arthropathy." (Ex. E, pp. 52, 53). Dr. Primack noted:

> On today's clinical examination, *facet loading* on the left side at C3-C4, C4-C5, and C5-C6 was *positive*...At this point in time, based upon the history, clinical examination, and a review of the medical records, I do believe that facet injections with RFA is a reasonable next step. It is clear that he does

not have *as much of* a myofascial pain component as he does a facet joint component. His exposure certainly can cause problems with facet arthropathy…Therefore, it is not unrealistic, given a slip and fall injury that someone can have facet arthropathy. This is also supported by the fact that he got over 85-to-90% better following the facet injections rendered by Dr. Laker.

It does not appear to be prudent to obtain authorization for trigger point injections. This is due to the fact that this is less of a myofascial problem as it is "a facet joint one." *Id* at 53. (emphasis added).

26. Claimant also continued to follow-up with Dr. Bisgard. Her notes from 6/2/2021 state: He was seen by Dr. Primack on May 24th. He feels the visit went well. Reviewed Dr. Primack's report with him. Dr. Primack explained how *the mechanism of his injury could lead to facet arthropathy* and also explained the anatomy of the shoulder girdle. He opined that TPI would not be useful at this point. He agreed with me that *Medical (sic.) branch blocks leading to rhizotomy is the best next step*…He [Claimant] reviewed the videotape surveillance and disputed Dr. Lesnak's interpretation. (Ex. F, p. 78) (emphasis added).

27. Claimant next saw Dr. Bisgard on 6/29/2021. She noted:" Jeff is here for re-evaluation of his neck pain. Yesterday, he woke up with one of the worst days he has had as far as his headache and neck pain up to 8-9/10...He is very frustrated after getting the denial letter for the facet injections. He also was notified the Lexapro refill was not authorized. …He is very pleased with the results of his shoulder surgery but is extremely frustrated that he is having ongoing neck pain that is limiting his activity." (Ex. R, p. 83)..."I will continue to disagree with Dr. Lesnak's opinion based on my 16 months of treatment and Dr. Primack's treatment of Jeff as well." *Id* at 85.

28. Claimant's next visit to Dr. Bisgard was on 7/21/2021. She noted:" This past week, he had 4 significant headaches (HA). He awoke in the mornings with neck pain and HA at 8-9/10 and lasted all day. …The Lexapro refills were not authorized and his PCP is only refilling the 10 mg dose…He expressed several times that he just wants relief from the pain. He would like to have the MBB that gave him significant relief and RFA if he has a diagnostic response." (Ex. 3, p. 38).

29. Claimant saw Dr. Bisgard on 8/31/2021 (Ex. 3, p. 29) and 10/7/2021 (Ex. 3, p. 27), at which times his cervical complaints continued, and Dr. Bisgard expressed her continuing frustration with the denial of the MBBs, which she continued to believe were warranted. On 11/3/2021, while his symptoms persisted, she noted, "I offered to send him home for the rest of the day but he is adamant that he has to go to work...I will see him after the [11/30/2021] hearing. *Id* at 18.

30. Claimant's frustration continued when he saw Dr. Bisgard on 12/1/2021, only to inform her that the hearing scheduled for 11/30/2021 had been continued. His pain complaints continued. Ex. 3, p. 10. The final report available from Dr. Bisgard is dated 12/21/2021, wherein she noted that a SAMMS conference had occurred on 12/8/2021, at

which she made the following recommendations:

> ●*Repeat medial branch block at C3-4.* If he has another diagnostic response, I would recommend proceeding with an RFA.
>
> ●The RFA should last between 12 and 18 months. If his symptoms recur, I would recommend repeating the medial branch block or RFA as recommended by the pain management specialist *up to 6 times.* I explained to Jeff that frequently patients only need an additional 1 or 2 blocks but *there have been some patients that require more over a several year period.*
>
> ●*In accordance with the Medical Treatment Guidelines, he should have 6-8 physical therapy sessions after the RFA's to help restore range of motion.* (Ex. 3, p. 5) (emphasis added).

31. At this same visit, she noted:

> I was also asked to address a preliminary impairment based on measurements today. As is typical for Jeff, his symptoms worsen throughout the day. He is being seen at the end of his workday, at 4PM so his range of motion measurements of his cervical spine are very restricted. *Id* at 5.

She then assigned his cervical ROM loss at 26%, combined with 7% for Table 53(II)(C), combined for 31% Whole Person. The shoulder was separately rated at 7% upper extremity. *Id* at 5-9.

Claimant Testifies at Hearing

32. Claimant stated that he has never been medically treated for his shoulder or his neck. He described his mechanism of injury (on a Sunday) as having his "feet go out from under me," while walking in the parking lot of Employer. This lot had ice under about an inch of fresh snow, which he was intending to clear.

> It all happened very quick…I landed on my back. I think I tried to catch myself on the left side a little bit. Then then when I hit the ground...the whole backside and my head and left side hit the ground. (Tr., p. 29).

33. He reported this to Employer the following Monday morning, but did not seek medical treatment, thinking he was just bruised, and thought he would just heal. But the pain "kind of progressively got worse over the next seven to eight days." He finally sought treatment on February 18th (2020), and treated with Dr. Bisgard.

34. Claimant described his symptoms during the ensuing months as a sore back (which resolved), shoulder pain, and neck pain. He described his neck pain as a little bit worse on the left side than right side if he tried to turn it. He overall described his neck pain as getting progressively worse as the day progressed, especially if he was

particularly active.

35. Claimant felt that the injections from Dr. Primack were initially helpful, but pain began to return after perhaps three hours, and after perhaps five to six hours, he was back to his pain baseline. After Dr. Lakers injection, the pain did not completely go away-maybe a 2- but it did return later maybe seven or eight hours. His symptoms remained much the same, but he was awaiting a second round of MBBs, but had to wait four to five weeks before the second one could be done. He noted that that appointment was finally set, and:

> And then I was actually leaving to go the that appointment to get that done, I was within about an hour of that appointment, and that's when I got a call saying that workmen's comp denied it (Transcript, p. 38).

36. Claimant expressed his confidence in his physicians, and just wants the pain to go away. If the ablation is what it takes, then he wants it to occur. His symptoms are ongoing, and tend to intensify as the day goes on. He has had no intervening injuries since his original work injury.

Testimony from Advanced Professional Investigations Personnel

37. Two private investigators from Advanced Professional Investigations, Robert Orozco and Richard Quiroga, described their roles in conducting surveillance of Claimant. Claimant was surveilled at various times and locations leading up to the date of the original IME by Dr. Lesnak on 3/25/2021. Dr. Lesnak subsequently relied, in part, in forming his IME opinions upon those surveillance videos. [After hearing their testimony, the ALJ concluded that sufficient foundation had been laid for the authenticity of said videos, and their reliance by Dr. Lesnak, at least in part, in forming his IME opinions. Upon this ruling, Respondents declined to call the third individual..., and Claimant declined the opportunity to cross-examine him. It is further noted that, despite their admission, Respondents did not request that the ALJ himself review the contents of said videos as a fact-finder].

Dr. Lesnak Testifies at Hearing

38. Dr. Lesnak was admitted as an expert as a Board Certified physician in the field of Physical Medicine and Rehabilitation with a sub-specialty in pain management. Dr. Lesnak is fully Level II accredited, and has personally performed injections including trigger point and medial branch blocks, for over 24 years.

39. Dr. Lesnak examined Claimant on 3/25/2021, and reviewed all of the existing medical records. He also viewed approximately 4 hours of the surveillance video which was supplied to him in CD format. He issued his original IME report on 3/25/2021, followed by two supplemental reports dated 6/9/2021 and 7/26/2021 (Ex. A, pp.1-25).

40. Dr. Lesnak testified that the cervical facets joints are a distinct mechanical joint of the cervical spine. They constitute a bony, moving joint as opposed to the soft tissues of the cervical spine, which are a totally different anatomical feature. Dr. Lesnak

also testified that the diagnosis of an injury to the facet joint vs the soft tissues involve different testing and different treatments, as discussed in the Medical Treatment Guidelines ("Guidelines").

41. Dr. Lesnak testified concerning various injections that which are used to diagnose and treat facet joint syndrome vs. soft tissue injuries and occipital headaches. One must distinguish the differences between trigger point injections, medial branch blocks, and occipital injections, and when and how each is to be administered and interpreted.

42. Dr. Lesnak noted that Dr. Primack performed only trigger point injections and occipital injections on two occasions, to wit: July 20, 2020 and Nov 6, 2020. Dr. Primack never performed facet injections or medial branch blocks in this case, as was initially assumed or believed by Dr. Bisgard when she first developed her diagnosis and causation opinions regarding Claimant's pain locator. (*see* Ex. A, E).

43. Dr. Lesnak opined that on each occasion following a trigger point injection into the soft tissues of the base of the neck, Claimant reported immediate 100% relief for approximately 3 hours, followed by partial relief for 6 to 7 hours, before an eventual return to baseline.

44. He further opined that there is substantial evidence from the medical records and Claimant's testimony that when Dr. Laker performed his first MBB, he failed to perform (or at least failed to document) that he performed the required pre-injection cervical facet loading test mandated by the guidelines to first establish the need for a facet joint injection trial.

45. Nonetheless, Dr. Laker proceeded with MBBs at C3 and C4 on 2/15/2021. (Ex. D). According to Dr. Laker's reports, Claimant's pain scores (VAS) were 1-2 /10 pre-injection and fell to 1-2 /10 within 15 minutes. Further, Dr. Bisgard reported on 3/2/2021 that Claimant reported 6 to 7 hours of relief per his pain diary and stated: "Based on his response, he is a candidate for rhizotomy" (Ex. F, p.72)

46. It is the medical opinion of Dr. Lesnak that the unrebutted evidence (including from Claimant) is that Claimant had an identical-or near identical-response to his pain complaints from both the trigger point injections, and the MBB. This, despite the fact such injections are intended to diagnose and treat distinct medical problems. Dr. Lesnak's ultimate medical opinions are that a) Claimant does not have a cervical facet joint syndrome/injury and, b) further diagnostic/treatment injections for facet joint syndrome such as MBB or rhizotomy/ablation are not medically related to the admitted injury, nor medically probable to relieve Claimant's cervical pain complaints.

47. Instead, Dr. Lesnak opined that the most likely cause of Claimant's ongoing neck pain "strongly suggest a presence of an underlying symptom somatic disorder or somatoform disorder, which are, in layman's terms, it is bodily complaints in the absence of anatomic pathology which are manifested by poorly controlled or uncontrolled

psychologic issues, such as anxiety or depression, things like that."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this instance, the ALJ finds that Claimant reported his injury to Employer as soon as reasonably practicable. As is not uncommon - and as is not unreasonable - Clamant

waited things out for a few days, thinking he would recover on his own. Once it became apparent that he needed medical treatment, he then described his symptoms to his treatment providers all along the way, in good faith, in a sincere effort to get better. Further, the ALJ finds that Claimant testified credibly, and in a forthright manner at hearing. It is duly noted that Claimant's reported responses to the treatments he received along the way did not always match a *perfect* paradigm. In any context, one cannot demand such *perfection* as a condition precedent to providing treatment. Such is not only the inexact *science* of medicine, but also the *art.*

E. It is further noted that the ALJ takes Dr. Lesnak at his word that, were Claimant his own patient, he would not administer the treatment being requested. As duly noted, the practice of medicine can often be an inexact science. The mere fact that other practitioners would proceed differently does not make them *wrong.* And as will be noted, *infra*, the ALJ does not find his ultimate conclusions to be sufficiently persuasive.

Medical Benefits, Reasonable and Necessary, Generally

F. Claimant bears the burden of establishing entitlement to any specific medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Medical Benefits, Related to Work Injury, Generally

G. Further, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Preexisting Condition, Generally

H. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation *or medical benefits* if the work-related activities aggravated, accelerated, or combined with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a preexisting condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Are Claimant's Cervical Facet Complaints <u>Related</u> to his Admitted Work Injury?

I. Dr. Bisgard opines that they are. Dr. Primack reviewed Claimant's mechanism of injury, and concluded that they are as well. Dr. McCranie, it appears, was hired by Respondents, yet opined that Claimant's symptoms were also reasonable, necessary, and related to his occupational injury. Dr. Lesnak opines otherwise. While the ALJ must engage in more analysis than merely taking a head count, it is duly noted that Dr. Lesnak is the outlier here. However it is also duly noted that Dr. Lesnak unnecessarily weighed in on the causation issue of Claimant's *shoulder* as well. This was a moot issue, since Respondents had admitted for that, and Clamant was 7 months post-surgery, and doing well. Dr. Lesnak apparently threw shade at Respondents' admission even for that injury. And in an unpersuasive fashion, by stating that the torn supraspinatus tendon on the MRI was "*without **any** <u>reported injury</u>* or trauma-related *pathology **whatsoever**.***" (Ex. A, p. 14). By materially overstating his case, he has rendered his other causation/relatedness issues suspect.

J. Claimant hit the pavement-hard, and awkwardly. Ice is like that, especially when you don't see it coming. It is not unrealistic to believe that such impact, in whiplash fashion, could affect and damage the facet joints. Yes, the facet joints could well have been in some preexisting degenerative state on the day he fell, *but those were the facet joints that Claimant brought to work with him that day.* And Dr. Laker noted some zygapophyseal joint *fluid* at C3-C4, as well as some *edema* at that joint. All the while, Dr. Lesnak adamantly insisted that there is *absolutely no medical evidence to* even *suggest* trauma to Claimant's facet joints. And the ALJ duly notes that Claimant credibly testified that he has never been treated for his neck or shoulder prior to this work incident. Regardless of whether this was an injury *de novo* to Claimant's neck, or an aggravation of a preexisting degenerative condition of his facets, the ALJ finds, by a preponderance of the evidence, that Claimant's ongoing neck complaints were caused by, and related to, his admitted injury of 2/9/2020.

Is the Second Round of MBBs <u>Reasonable and Necessary</u>?

K. As previously noted, Dr. Lesnak is once again the outlier. And while Dr. Laker did not weigh in on the causation/relatedness issue [Nothing in the record addresses whether or not Dr. Laker is Level II Accredited], he now comprises the fourth physician who feels that the proposed MBBs are *reasonable and necessary.* And while a head count does not end the discussion, the ALJ must note that Drs. Bisgard, Primack, and Laker all have a duty to recommend and provide for the best medical outcome for Claimant. Dr. Lesnak bears no such duty-nor, interestingly did Dr. McCranie-who nonetheless sided with Claimant on this issue. Respondents, perhaps understandably, want to limit their exposure, given the severity of Claimant's symptoms and the possible prospect of years of ongoing treatment, if a second diagnostic response to the MBBs is elicited.

L. Without testifying, or presenting an IME report, the four physicians noted above have made a highly persuasive case on behalf of Claimant. Has Dr. Lesnak sufficiently made his own, such that Claimant has no longer met his burden of proof? At the outset, the ALJ notes that Dr. Lesnak has opined that the most likely cause of Claimant's ongoing neck pain "strongly suggest a presence of an underlying symptom somatic disorder or somatoform disorder." The ALJ is not persuaded. No one contests, (not even Respondents) save Dr. Lesnak, that Claimant injured his shoulder during this fall. He then went through the entire shoulder rehabilitative process with minimal complaints. Even when offered the day off by Dr. Bisgard, Claimant insisted that he return to work. His orthopedist was pleased with his progress (as was Dr. Bisgard), and his physical therapist even noted his very high prognosis for success, given his motivation to recover. The ALJ finds that, any paper testing notwithstanding, Claimant's behavior is in no way suggestive of any somatoform disorder. Quite the contrary, actually. The man's pain is very real.

M. Dr. Lesnak adamantly insists that Claimant has provided a *totally nondiagnostic* response to the first round of MBBs. Dr. Laker certainly did not see that, when Claimant's range of motion measurements went up dramatically within 15 minutes of the MBBs. Dr. Lesnak notes (and not without record support) that Dr. Laker did not *document* any facet loading tests prior to administering the MBBs. This does not lead the ALJ to conclude that it did not occur-albeit better documentation would have been preferable. Dr. Lesnak, in his own physical exam, did not perceive any facet loading arthropathy. Dr. Primack did. And while given the luxury of testifying, in order to explain in detail, the difference between MBBs and the trigger point injections from Dr. Primack, Dr. Lesnak has not made a persuasive case why the testing to date must necessarily yield a binary choice between myofascial pain and facet pain. In the early going, especially, Claimant could have been suffering from *both.*

N. Claimant's possible myofascial complaints-now largely resolved, as one might expect with the passage of time-could well have been temporarily alleviated by the trigger point injections. These affected parts of the neck are not exactly miles apart. And this does not mean that, *ipso facto,* Claimant could not *also* have underlying facet complaints-complaints which show a pattern of worsening as the day wears on. The timelines for a projected full recovery-had Claimant's complaints indeed been purely myofascial-could explain Dr. Primack's revised belief that something more structural must underlie

Claimant's complaints. Such as facet joints. Hence his referral to Dr. Laker. This is but one possible explanation that Dr. Lesnak dismisses out of hand.

O. There is nothing in the record that suggests that Dr. Laker erred in his administration of the MBBs. Nor is there sufficient evidence that he somehow misinterpreted his own results, leading to some erroneous conclusion that a second round of MBBs should not occur. As duly noted, apparently this is not the way Dr. Lesnak would do things with his own patients. But, politely stated, his armchair quarterbacking is simply not persuasive to overcome the well-founded opinions of Drs. Bisgard, Primack, Laker, *and* McCranie. The ALJ finds, by a preponderance of the evidence, that a second round of medial branch blocks, followed by a rhizotomy if warranted, is reasonable and necessary to treat Claimant's facet pathology.

Physical Therapy

P. There is adequate evidence in the record for the ALJ to conclude, by a preponderance of the evidence, that physical therapy following the second MBB, is also reasonable and necessary to treat Claimant's work injury. Dr. Bisgard laid a sufficient foundation for this in her 12/21/2021 report, in apparent compliance with the Guidelines. Dr. Lesnak has not addressed this particular component with any specificity; to the extent that he has, the ALJ finds Dr. Bisgard more persuasive. And it is duly noted that Claimant's medical reports from his orthopedic providers indicate a highly motivated person with very good prognosis for recovery, due to the mindset he has manifested to date.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the Medial Branch Blocks as proposed by Dr. Laker.

2. Respondents shall pay for any physical therapy administered in conjunction with these Medial Branch Blocks.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you

mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he suffered a compensable right shoulder injury on January 31, 2021 as a result of an admitted left knee injury on January 28, 2021.

FINDINGS OF FACT

1. Claimant is a 52-year-old who works for Employer as a heavy equipment operator.

2. Claimant has extensive pre-existing history of left knee symptoms and treatment, as well as falls, documented in his Kaiser Permanente medical records. On August 23, 2017, Claimant was noted to have bilateral knee joint pain, for which he was referred to physical therapy. Five days later he advised he had no cartilage in his left knee and he had been told by an orthopedic surgeon years prior he may need a knee replacement. On September 12, 2017, Claimant received an injection into his left knee. On September 26, 2017, Claimant reported "massive dizzy spells" occurring simply from walking, standing, and sitting. Two days later he reported an incident of severe dizziness from standing and making coffee. On October 12, 2017, Claimant reported bilateral shoulder pain from recent falls that started back in June. On December 4, 2017, Claimant reported there was always swelling in the left knee.

3. On April 4, 2018, orthopedic surgeon Dimitri Zaronias noted Claimant had severe left knee osteoarthritis which they could treat non-operatively until ready for a total knee arthroplasty. On July 13, 2018, Claimant reported unbearable left knee pain, also with burning pain from his knee to his left foot since 2012. He was noted to have a chronic ACL tear and instability. On October 26, 2018, Claimant requested a left knee MRI due to 9/10 pain. Claimant reported there was not much holding his together and that his knee was "shot." Three days later he reported he was limping around a lot due to his knee. He reported normal underlying pain of 6/10 and worsening symptoms impairing his functionality. On December 18, 2018, claimant underwent an EMG for his lower extremities. The indication for the study was left leg pain and weakness. The EMG revealed moderate chronic left L5 radiculopathy.

4. Claimant was scheduled to undergo left knee replacement surgery on February 20, 2019. Id. At a pre-op appointment on January 23, 2019, Claimant noted 7/10 pain. He reported being able to walk only 20 yards without stopping due to pain, the pain waking him up every night, and difficulty putting on shoes and socks. The medical records document that prior to the scheduled surgery Claimant cancelled, blaming a family situation causing him to leave town. On August 23, 2019, another fall is noted, this time due to Claimant simply stepping on a rock and falling over.

5. Claimant suffered an admitted industrial injury on January 28, 2021 when he slipped and fell on ice at a construction site, landing on his left side.

6. Claimant presented to Tory Manchester, M.D. on January 28, 2021 reporting that he slipped and fell, injuring his left shoulder, left knee and left side of his ribs. Claimant reported experiencing immediate left shoulder pain and pain to a lesser extent in his left medial knee, with the ability to ambulate with mild pain. Examination of the left knee was negative for deformity, ecchymosis, erythema or swelling. Diffuse tenderness was present over the medial knee with full range of motion. Lachman's, Posterior drawer sign, and lateral Mcmurray's tests were negative. There were equivocal results for the medial McMurray's test. Dr. Manchester assessed with Claimant left knee and left shoulder strains. He prescribed Claimant medication and a left shoulder sling, referred Claimant for x-rays of the left shoulder and left knee, and restricted Claimant from use of his left arm.

7. Left knee x-rays taken on January 28, 2021 revealed tricompartmental osteoarthritis.

8. Claimant alleges that the January 28, 2021 work-injury to his left knee caused him to fall and injure his right shoulder while at home on January 31, 2021 Claimant testified that on January 31, 2021 he was walking his dog out to the kennel with a sling on his left arm and a glass of water in his right hand. Claimant testified his left knee buckled, causing him to fall and land on his right shoulder.

9. Claimant returned to Dr. Manchester on February 1, 2021, reporting persistent left shoulder pain. Dr. Manchester noted that Claimant, "[f]ell yesterday stepping up 2 stairs. No new injury, but persistence of pain, limitation in rom." (R. Ex. F, p. 43). On examination of the right shoulder, Dr. Manchester documented no tenderness or signs of impingement, full strength, and full range of motion. The medial McMurray's test of Claimant's left knee continued to be positive. Dr. Manchester referred Claimant for MRIs of the left shoulder and left knee. No right shoulder complaints are documented in the medical record from this evaluation.

10. Claimant underwent an MRI of the left knee on February 1, 2021. The radiologist's impression was:

> 1. Advanced tricompartmental left knee osteoarthritis, most severe in the medical and lateral compartments.
> 2. Multifocal bone marrow edema within the lateral greater than medial compartments, most likely degenerative and reactive in etiology although associated bone contusion difficult to completely exclude given the history of recent injury. No fracture line identified.
> 3. Chronic absence of the ACL.
> 4. Complex degenerative tearing of the medical and lateral menisci.
> 5. Knee joint effusion, Baker's cyst, and extensive synovitis/bodies within the knee joint.

(R. Ex. J, p. 245).

11. Dr. Manchester reviewed the left knee MRI at a follow-up evaluation on February 3, 2021, noting evidence of medial and lateral meniscus complex tears. The medical note from this evaluation contains no mention of right shoulder complaints. Dr. Manchester referred Claimant to Joseph Hsin, M.D. for orthopedic evaluation of his left shoulder and left knee.

12. Claimant presented to Dr. Hsin on February 10, 2021. Claimant denied pre-existing issues with his left knee. Dr. Hsin reviewed Claimant's left knee and left shoulder MRIs. He opined that Claimant likely sustained an acute left shoulder injury on top of chronic rotator cuff tears, for which he noted Claimant could consider reverse shoulder arthroplasty under his personal insurance. Dr. Hsin opined that Claimant sustained an aggravation of his pre-existing left knee arthritis and recommended physical therapy to return to baseline. He further opined that Claimant ultimately would need to consider undergoing a left knee replacement under his personal insurance.

13. Claimant saw Dr. Manchester later in the day on February 10, 2021. Dr. Manchester noted that Claimant was, "[a]damant that he was functional prior to the [work] fall, but does state he was often pushing through pain to be functional." (R. Ex. F, p. 52). He referred Claimant for physical therapy for his left shoulder and left knee. Regarding Claimant's right shoulder, Dr. Manchester remarked,

> [Claimant] now tells me he had a second fall at home. On 1/31, he was walking out to feed his dog and tripped on the stair steps, because my (*sic*) left knee feels weak from pain. He fell to his right, landing on his right shoulder (previously repaired and was doing well without restriction). He did not mention this fall at our last visit 2/3 and did not map the pain on his intake document. Unclear reason why. His exam today of the right shoulder is limited on range at 90 degrees, no neck symptoms, no head injury and no right knee pain. He has a small abrasion on his right ankle that he attributes to the fall, but no complication and no ankle pain. Strange he did not mention it last visit.

(Id. at p. 53).

14. Claimant underwent physical therapy for his left shoulder and left knee condition beginning January 29, 2021. On February 16, 2021, Courtney Spivey, PT, noted Claimant complained of right shoulder pain "since I fell at home last week." (R. Ex. G, p. 131). On March 5, 2021, Xochitl Ashpole, PT, documented Claimant "tripped getting up from the couch yesterday and fell on his R side so that his R shoulder is very painful today." (Id. at p. 134).

15. At a follow-up examination with Dr. Manchester on February 22, 2021, Claimant continued to complain of bilateral shoulder pain and left knee pain. Dr. Manchester noted

Claimant had undergone a previous right shoulder surgery. Claimant continued to report to Dr. Manchester he did not have any ongoing pain or limitations in his left shoulder or left knee prior to the slip and fall. Dr. Manchester referred Claimant for a right shoulder MRI. He also referred Claimant for an evaluation of his left knee and left shoulder by orthopedic surgeon Michael Hewitt, M.D.

16. Claimant first presented to Dr. Hewitt on March 1, 2021. Claimant reported that approximately three days after his January 28, 2021 injury, his left knee buckled at home and he fell onto his right shoulder. Dr. Hewitt focused on Claimant's left shoulder and left knee, diagnosing with an acute on chronic massive rotator cuff tear and left knee preexisting advanced arthritis with acute exacerbation. Recommended reconstruction left shoulder. Claimant subsequently underwent left shoulder surgery.

17. As of April 8, 2021, Claimant continued to complain to Dr. Manchester of persistent pain in his right shoulder.

18. Claimant underwent a right shoulder MRI on April 14, 2021. The radiologist's impression was:

1. Multifocal labral tearing with moderate glenohumeral degenerative joint disease.
2. There has been prior rotator cuff repair with essentially complete re-tear of the infraspinatus and full-thickness, partial-width re-tear of the supraspinatus.
3. Moderate tendinosis of the subcapularis and long head of the biceps.
4. Acromioclavicular degenerative joint disease with additional degenerative changes around the os acromiale.

(R. Ex. J, p. 247).

19. On July 14, 2021 Jon Erickson, M.D. performed Independent Medical Examination ("IME") at the request of Respondents. Dr. Erickson issued an IME report dated July 29, 2021. Regarding the alleged January 31, 2021 incident, Claimant reported noting some pain in his left knee that day with a resultant limp. Claimant reported that his left knee buckled while he was walking across a flat concrete surface in his backyard carrying a glass of water for his dog. He reported that he did not stumble or twist, but that his knee simply buckled, causing him to fall and land on his right shoulder.

20. Dr. Erickson opined that Claimant sustained a minor sprain/strain of the left knee with advanced pre-existing tricompartmental osteoarthritis and non-work-related possible re-tears of his right shoulder cuff. Dr. Erickson noted that, due to the delay in obtaining a right shoulder MRI, it was impossible to tell if the right shoulder cuff tears at the time of his alleged fall on January 31, 2021. Dr. Erickson concluded that Claimant only sustained a minor sprain/strain of the left knee on January 31, 2021, and that Claimant's left knee abnormalities were all pre-existing. He explained that physical examination on the day of the work fall did not show any evidence of significant acute trauma and radiographic

evidence did not show aggravation or worsening. Dr. Erickson further opined that the reported buckling of Claimant's knee was not due to the minor sprain, but rather, likely occurred because of Claimant's chronic ACL deficiency. He stated that simply walking across a flat concrete surface would not cause a normal knee to buckle. Dr. Erickson opined that because Claimant's alleged fall on January 31, 2021 occurred as a result of a pre-existing ACL deficiency of the left knee, the resultant injury to his right shoulder should not be considered work-related.

21. As of August 9, 2021, Claimant was reporting a decrease in left shoulder function. Dr. Hewitt opined that a reverse left shoulder replacement would provide Claimant the most reliable outcome.

22. On August 12, 2021, Dr. Manchester noted treatment for Claimant's right shoulder claim remained denied by Respondents. Dr. Nathan Faulkner, M.D., on September 3, 2021, recommended a left reverse shoulder replacement. Claimant's claim remains open for the time being as he treats for his left shoulder.

23. Respondents took the pre-hearing deposition of Dr. Manchester. Dr. Manchester testified as a Level 1 accredited expert in occupational medicine. Dr. Manchester testified that the findings on Claimant's initial exams reflected only a mild left knee sprain. He testified that on February 1, 2021, Claimant reported falling at home, and Dr. Manchester specifically remembered Claimant stating he had no new injuries from the fall. Dr. Manchester confirmed he performed exams on Claimant's right shoulder at all appointments, per Concentra's policy to examine the contralateral side of an injury. He explained that on February 1, 2021 Claimant had no symptoms or signs of injury on exam in his right shoulder. Dr. Manchester further testified that the pain diagrams Claimant completed on February 3, 2021 did not indicate any right-sided pain.

24. Dr. Manchester testified Claimant's left knee MRI showed chronic issues. He explained that Claimant's preexisting chronic ACL deficiency could lead to knee buckling. Dr. Manchester also testified that Claimant did not tell him his knee buckled on a flat service, but that Claimant specifically told him he tripped walking up stairs. Dr. Manchester testified that when Claimant did report pain in his right shoulder, he asked Claimant why Claimant had not mentioned it before, to which Claimant did not have a clear reason. Dr. Manchester further testified that findings on exam for Claimant's right shoulder did not change until February 10, 2021, and it did not make any medical sense why those symptoms and limitations would first appear on that day from an injury which allegedly occurred on January 31, 2021. He confirmed that if Claimant's right shoulder injuries identified on MRI occurred on January 31, 2021, Claimant should have exhibited immediate symptoms. Dr. Manchester opined that if Claimant did fall on his right shoulder at home on January 31, 2021, it was related to Claimant's pre-existing condition and unrelated to Claimant's admitted left knee injury. He agreed with Dr. Ericson that a left knee sprain would not be expected to cause Claimant's knee to buckle.

25. Claimant testified at hearing that he had pre-existing right shoulder issues for which he had obtained surgery years prior and recovered well with no issues or

restrictions until his fall at home on January 31, 2021. Claimant testified that, on February 1, 2021, he told Dr. Manchester he fell the night before due to having difficulty walking, his right shoulder took the brunt of the fall, and that he felt there had been an injury from the fall with pain in his right shoulder. Claimant testified Dr. Manchester's records and testimony were incorrect that he first complained of right shoulder pain on February 10th. Claimant stated he also complained of right shoulder pain to Dr. Manchester on February 3, 2021. Claimant also testified Dr. Manchester did not examine his right shoulder at every appointment, as testified to by Dr. Manchester.

26. Claimant further testified he had some pre-existing issues with left knee pain due to arthritis. Claimant testified that several years ago a surgeon told him he was eligible for a left knee replacement surgery, but cautioned against the surgery and recommended a non-operative approach. On cross-examination, when presented with the medical records documenting Claimant cancelled a scheduled left knee replacement surgery due to a family emergency, Claimant testified that was also a cause but not the primary reason. Claimant testified he was candid with Dr. Erickson at the IME about his prior left knee problems. Claimant testified that his prior issues with dizziness were caused by him working long hours and that did he did not recall becoming dizzy simply from walking and standing, as is documented in the medical records. Regarding the August 23, 2019 Kaiser note referencing he fell after simply stepping on a rock, Claimant testified he actually fell because his leg got tangled in a hose. Regarding Dr. Hsin's note that he denied prior left knee problems, Claimant testified he told Dr. Hsin he was functional and that he had a prior ligament tear in his left knee.

27. Claimant testified that between 2019 and the January 28, 2021 work injury his left knee symptoms were better due to his weight loss and exercise. He denied treating with any providers during such time period. Claimant was asked about the fall at home in March 2021, documented in his physical therapy notes. He initially denied any knowledge of the fall. When referred to the record, which discusses the fall hurt his right shoulder, he then stated he remembered the incident. When asked if he needed treatment for his right shoulder resulting from a January 31, 2021 fall at home or the March 2021 fall at home, Claimant stated, "I'm no expert." Claimant further testified that his right shoulder pain has stabilized, but that he continues to experience issues with mobility, strength and flexibility of the right shoulder. Claimant was working full-duty with no restrictions prior to the January 28, 2021 work injury.

28. Dr. Erickson testified at hearing as a Level II accredited expert in orthopedic surgery. Dr. Erickson testified consistent with his IME report. He explained that Claimant's left knee x-rays evidenced end stage arthritis. He testified that Claimant's February 1, 2021 left knee MRI showed reactive bone marrow edema, which is a reaction to pressures on the joint due to degenerative loss of cartilage. He explained that this is called near-advanced osteoarthritis, meaning the joint was "shot." Dr. Erickson testified that there was no evidence of recent trauma in the February 2021 left knee MRI and that all conditions visible in the MRI were degenerative. On cross-examination, Dr. Erickson was asked about the findings of the reviewing radiologist for the MRI that: "while much of this was likely degenerative and reactive, bone contusion cannot be excluded particularly in the

resetting of recent trauma." Dr. Erickson testified he disagreed that was potential differential diagnosis and believed all findings were clearly degenerative. He explained there were macerated meniscal tears, in both cases clearly atraumatic and degenerative. He testified there is definitive research that these types of tears are related to advanced arthritis due to collapse of the joint space which pushes the meniscus out of the joint. Finally, Dr. Erickson testified Claimant's MRI showed a chronic absence of the ACL, which would have been caused somewhere in the past by a traumatic substantial injury.

29. Dr. Erickson further testified that lacking an ACL can cause knee buckling, because of what is called a pivot shift dislocating phenomena. He testified that, with the combination of the solely degenerative MRI findings, and lack of objective findings or severe pain complaints documented by Dr. Manchester indicating more than a mild sprain, Claimant's knee would have given out solely due to his pre-existing ACL deficient knee. He testified Dr. Manchester's notes showed he was very thorough in his examination, and Dr. Manchester was not concerned with any serious injury to Claimant's left knee over and above the diagnosed mild sprain. Therefore, Dr. Erickson testified that any injuries to Claimant's right shoulder from a fall at home were caused by the degenerative deficiencies in his knee, and therefore, were not work-related. He opined that the January 28, 2021 fall at work did not cause Claimant's reported fall at home on January 31, 2021 and the resultant right shoulder condition. Dr. Erickson testified Claimant was at a high risk for having falls from his knee buckling due to the presence of those pre-existing conditions.

30. Dr. Erickson further testified Claimant denied at his IME any prior left knee difficulties before his work injury, despite repeated inquires. Dr. Erickson testified he reviewed the Kaiser records after the IME report was completed. He believes Claimant was not being truthful to him about his medical history after reviewing the Kaiser records. Dr. Erickson testified Claimant would have had symptoms and limitations in his right shoulder fairly quickly if he hurt his shoulder on January 31, 2021, and those are not reflected in Dr. Manchester's notes for the visits which followed.

31. On cross-examination, Dr. Erickson noted his report stated Claimant's left knee had no laxity to varus or valgus stress, but that was printed incorrectly and it should have stated there was trace laxity, the most minor of findings on Lachman's testing. Dr. Erickson testified with longstanding ACL injuries, patients can effectively hide abnormal examinations due to how they compensate over time for their injuries, which could reflect why only trace findings were present on his exam and no findings on Dr. Manchester's exam were present in the presence of a chronic lack of an ACL.

32. The ALJ credits the testimony and/or opinions of Drs. Manchester, Erickson, Hewitt, and Hsin, as supported by the medical records, over the testimony of Claimant.

33. Claimant failed to prove it is more probable than not his January 28, 2021 work injury weakened Claimant's left knee causing Claimant to fall and injure his right shoulder on on January 31, 2021.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need

not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). Thus, if an industrial injury leaves the body in a weakened condition and the weakened condition proximately causes a new injury, the new injury is a compensable consequence of the original industrial injury. *Price Mine Service, Inc. v. Industrial Claim Appeals Office,* 64 P.3d 936 (Colo. App. 2003); *Lanuto v. Amerigas Propane, Inc.,* WC 4-818-912, (ICAO, July 20, 2011). The preceding principle constitutes the "chain of causation analysis" and provides that a subsequent injury is compensable if the "weakened condition played a causative role in the subsequent injury." *In Re Fessler*, WC 4-654-034 (ICAO, Dec. 19, 2007); *see Martinez v. City of Colorado Springs*, WC 5-073-295 (ICAO, Sept. 12, 2019) (an infection that resulted from claimant's weakened condition was compensable because it was a natural, although not necessarily a direct, result of the work-related injury).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015). A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

Claimant failed to prove his January 28, 2021 left knee injury caused his fall on January 31, 2021, resulting in a right shoulder injury. Claimant has a significant history of pre-existing left knee problems, including severe osteoarthritis and chronic ACL tear and instability, dating back several years. Claimant's medical records reflect a history of reported unbearable left knee pain, impaired functionality, and left leg pain and weakness in 2018 and 2019. Claimant was scheduled to undergo left knee replacement surgery in February 2019, which Claimant cancelled. Dr. Manchester's records indicate Claimant admitted pushing through pain to be functional. Beyond severe pre-existing left knee issues, Claimant's prior medical records also document issues with dizziness and falling. While Claimant's pre-existing conditions do not preclude a finding that his fall on January 31, 2021 was caused by his January 28, 2021 work injury, the credible and persuasive evidence establishes it is more likely the January 31, 2021 fall was caused by the natural progression of Claimant's significant and long-standing pre-existing degenerative conditions and not any left knee condition resulting from the January 28, 2021 injury.

All of Claimant's treating physicians, as well as Respondents' IME physician, opine that Claimant's left knee MRI revealed severe, pre-existing chronic degenerative changes. Drs. Manchester and Erickson credibly and persuasively opined Claimant sustained no more than a sprain/strain of his left knee on January 28, 2021. Dr.

Manchester and Dr. Erickson also credibly opined that a minor sprain/strain would not likely cause Claimant's knee to buckle as it purportedly did on January 31, 2021. Both Dr. Manchester and Dr. Erickson credibly opined that the most likely cause for any spontaneous buckling of Claimant's left knee would be Claimant's pre-existing conditions in his knee, mainly the chronic lack of an ACL. Based on the totality of the evidence, the preponderant evidence does not establish any right shoulder condition Claimant sustained from falling at home on January 31, 2021 was caused by the work injury sustained on January 28, 2021.

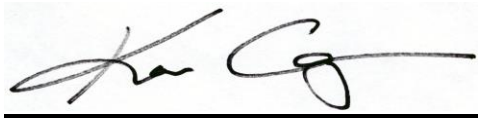
ORDER

1. Claimant failed to prove he suffered a compensable industrial injury on January 31, 2021. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 4, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the discogram recommended by Dr. Wade Ceola constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

FINDINGS OF FACT

1. The claimant was employed with the employer as an HVAC service technician. On May 9, 2019, the claimant suffered an injury to his low back while lifting an item and placing it in the back of his work truck.

2. The claimant's authorized treating physician (ATP) for this claim is Dr. Theodore Sofish. During his treatment of the claimant, Dr. Sofish has referred the claimant for various modes of treatment, including physical therapy, massage, and injections.

3. On May 16, 2019, the respondents filed a General Admission of Liability (GAL).

4. On November 6, 2019, Dr. Kirk Clifford performed a left sacroiliac (SI) joint injection.

5. On February 25, 2020, the claimant attended an independent medical examination (IME) with Dr. Douglas Scott. In connection with the IME, Dr. Scott reviewed the claimant's medical records, obtained a history from the claimant and performed a physical examination. In his IME report, Dr. Scott opined that on May 9, 2019, the claimant suffered a lumbar strain, and was not yet at maximum medical improvement (MMI). Dr. Scott further opined that the claimant had possible radicular pain, possible facet syndrome at left L5-S1, and possible L5 or S1 nerve root impingement at the left L5-S1 neuroforamina. Dr. Scott recommended the claimant undergo core strengthening exercises. He also recommended that the claimant undergo a facet injection or epidural steroid injection.

6. On May 13, 2020, Dr. Clifford performed left L5-S1 and S1-S2 transforaminal epidural steroid injections (TFESIs). On January 13, 2021, Dr. Clifford administered bilateral L5-S1 TFESIs. The claimant testified that the injections he received from Dr. Clifford provided some short term pain relief.

7. Following a referral from Dr. Sofish, the claimant was seen by orthopedic surgeon Dr. Donald Corenman at The Steadman Clinic on February 19, 2021. On that date, Dr. Corenman ordered a magnetic resonance imaging (MRI) scan of the claimant's lumbar spine.

8. An MRI of the claimant's lumbar spine was performed on February 29, 2021. The MRI showed, *inter alia*, a mild annular bulge of the L5-S1 intervertebral disc; a mild annular bulge of the L4-L5 intervertebral disc; and a mild annular bulge of the L3-L4 intervertebral disc.

9. On February 23, 2021, the claimant returned to The Steadman Clinic and was seen by Ehrich Bean, PA-C. On that date, PA Bean discussed the MRI findings and Dr. Coreman's recommendations. Based upon the medical record of that date, Dr. Corenman recommended that the claimant undergo a discogram at the L4-L5 and L5-S1 levels to determine the claimant's pain generator prior to pursuing fusion surgery.

10. On June 11, 2021, the claimant was seen by Dr. Wade Ceola. The claimant testified that he was referred to Dr. Ceola by Dr. Corenman because Dr. Corenman was retiring. Dr. Ceola noted that the claimant had a central disc herniation at the L5-S1 level as well as degenerative discs at various levels. Dr. Ceola agreed that a discogram would be appropriate. Specifically, Dr. Ceola recommended a provocative discogram at L3-4, L4-5, and L5-S1 (with L2-3 as a control). Dr. Ceola explained that the discogram would determine what surgical option would be optimal for the claimant. If the claimant's pain is reproduced at only the L5-S1 level, then a disc replacement at that level would be appropriate. However, if the discogram shows multiple pain generators, then a minimally invasive transforaminal lumbar interbody fusion (MIS TILF) could be pursued.

11. On June 26, 2021, Dr. Scott authored a report to specifically address the discogram recommended by Dr. Ceola. The June 26, 2021 report references the February 25, 2020 IME as well as an April 20, 2021 examination of the claimant.[1] Dr. Scott opined that a discogram might be reasonable, necessary and indicated for the claimant. However, he recommended that the claimant first undergo a psycho-social evaluation, as required by the Colorado Medical Treatment Guidelines.

12. Dr. Scott authored an additional report on July 15, 2021. Again, Dr. Scott referenced the February 25, 2020 IME and an IME on April 20, 2021. In his July 15, 2021 report, Dr. Scott indicates that he is answering questions posed to him in an April 16, 2021 letter from the respondents' counsel. Dr. Scott opined that the claimant suffered a low back sprain on May 9, 2019. He further opined that the claimant had recovered from that incident because it was more than two years after the injury. With

[1] It does not appear that there was a contemporaneous report generated by Dr. Scott following his April 20, 2021 examination of the claimant. If an April 2021 report exists, neither party offered it as evidence for this present matter.

regard to the recommended discogram, Dr. Scott recommended a comprehensive psychiatric examination.

13. On August 18, 2021, the claimant was seen by psychologist, Dr. Melissa Carris. At that time, Dr. Carris performed a psycho-social evaluation with psychometric testing. Dr. Carris noted that objective testing did not present any risk factors of psychiatric distress. In addition, Dr. Carris opined that "there are no significant barriers to a discogram and lumbar surgery."

14. On September 6, 2021, Dr. Scott authored a report in which he recommended denial of the recommended discogram. Dr. Scott noted that while a discogram might be reasonable treatment for the claimant, the claimant's return to work indicated that the discogram was not reasonable. Based upon Dr. Scott's September 6, 2021 report, the respondents denied authorization of the discogram.

15. During this claim, the claimant has had different work restrictions. Primarily the claimant has been under a 20 pound lifting restriction assigned by Dr. Softish. However, on December 7, 2020, the claimant participated in a functional capacity evaluation (FCE). Following the FCE, the claimant experienced a worsening of his symptoms. The claimant reported this to Dr. Sofish at an appointment on January 4, 2021. On that date, Dr. Sofish took the claimant off of all work. On February 11, 2021, Dr. Sofish returned the claimant to a 20 pound work restriction.

16. However, following that February 11, 2021 appointment and until September 23, 2021, Dr. Sofish's records indicate that the claimant was restricted from all work. On September 23, 2021, Dr. Sofish noted:

> "Employee has been on no work capacity since exacerbation in late February 2021, previously always 10-20 [pounds] restriction. I failed to [reinstitute] the 20 [pound] restriction after he recovered from that acute exacerbation and am doing so now.

17. This clarification is pertinent to the present case because the claimant began self employment in the Spring of 2021. Specifically, the claimant and two friends established an ammunition company. The company's doors opened in mid-August 2021. The claimant credibly testified that while working on this new business venture, he complied with the 20 pound work restriction that was reinstated by Dr. Sofish on February 11, 2021.

18. The ALJ credits the claimant's testimony regarding the nature of his symptoms and his understanding regarding his work restrictions. The ALJ also credits the medical records and the opinions of Drs. Corenman and Ceola over the contrary opinions of Dr. Scott. The ALJ places weight on the initial opinion of Dr. Scott that a discogram might be reasonable, following a psychological evaluation. The change to Dr. Scott's opinion seems to only be due to his understanding that the claimant has returned to work. The ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended discogram is reasonable medical treatment necessary

to cure and relieve the claimant from the effects of the work injury. It is clear from the record that the discogram will be utilized to ascertain an appropriate surgical plan.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that the discogram recommended by Dr. Wade Ceola constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury. As found, the claimant's testimony, the medical records, and the opinions of Drs. Corenman and Ceola are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the recommended disogram, pursuant to the Colorado Medical Fee Schedule.

Dated this 7th day of March 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Respondents proved by clear and convincing evidence that the DIME physician's opinion regarding impairment was incorrect.

II. Whether the Claimant proved by a preponderance of the evidence that the ancillary treatments for the hardware infection and removal, blood clots, and heart attack were reasonably necessary and related to the injury.

III. Whether Claimant proved by a preponderance of the evidence that Respondents are responsible for the medical bills, including the flight for life by Helicopter, ambulance from West Metro Fire Protection District, emergency room care at Emergency services Platte Valley Ambulance and St. Anthony Hospital, wound care treatment at St. Anthony Hospital and specialist at Panorama Orthopedics.

STIPULATIONS

Respondents admitted to the compensability of the September 17, 2017 claim. The parties stipulated that the treatment Claimant received for the fractured left foot and ankle, and the fracture of the left little finger were authorized, reasonably necessary and related to the work injury of September 21, 2017. Respondents continued to dispute any treatment for the cardiac/stroke issues as well as the infection and blood clots as being related to the admitted claim.

The parties agreed that the issues listed above are the issues to be addressed by the ALJ at this time, in order to simplify the issues for hearing. All other issues listed in the Applications for Hearing and the Response to the Application for Hearing were reserved by the parties for future determination.

PROCEDURAL HISTORY

Administrative Law Judge Margot Jones issued Findings of Fact, Conclusions of Law and Order dated October 18, 2018 finding the September 21, 2017 work related injury compensable.

Respondents' filed an Application for Hearing on July 27, 2021 on issues that included overcoming the opinion of the Division of Workers' Compensation Independent Medical Examiner (DIME), Dr. Dwight Caughfield dated July 5, 2021. Among other issues listed were causation, relatedness, preexisting injury or condition, idiopathic injury, and overpayment.

Claimant filed a Response to Application for Hearing on July 30, 2021 listing issues that included medical benefits that were authorized, reasonably necessary and related to the injury, temporary disability benefits, average weekly wage, permanent partial disability and permanent total disability benefits. Claimant also listed overcoming the DIME physician's opinion as to maximum medical improvement (MMI) and impairment.

Respondents filed an Amended Application for Hearing on August 11, 2021 on additional issues of Respondents' denial of any change of authorized treating physician and termination for cause among other issues, including defenses to the permanent total disability claim.

On August 24, 2021 OAC granted a motion to hold the issue of permanent total disability in abeyance pending the result of overcoming the DIME as to MMI.

The parties agreed that this ALJ should assess the issue of disfigurement immediately by photographs submitted under Claimant's Exhibit 41. This ALJ issued a Disfigurement Award and Order served on January 13, 2022.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was injured within the course and scope of his employment with Employer on September 21, 2017. Claimant suffered compensable work-related injuries to his left lower extremity and left hand when he fell off a ladder on September 21, 2017, including multiple sequelae from the injuries.

2. The Platte Canyon Fire Protection District records indicate that Claimant was on a ladder when it twisted and he fell off of a ladder onto a roof below. The specifically found Claimant was being supported by a co-worker, was awake, alert and oriented to person, place, time and event,[1] with chief complaint of left open "tib fib"[2] fractures, left pinky fracture and abdominal abrasions. He had to be extricated from the roof and transported by ambulance to the Regional Specialty Center.

3. Claimant was transferred from Elk Creek area, Pine Junction by Flight for Life on September 21, 2017 to the emergency room at St. Anthony Hospital where he was seen by Andreas Henning M.D., who diagnosed a left open medial malleolar fracture, a left fifth digit fracture of the PIP with dislocation, with pain under control, and noted superficial abrasions, a 6 cm open wound. He was also in a cervical collar. Dr. Henning noted that Claimant's diabetes was not under control and that Claimant reported he had landed on his hands and knees.

4. Claimant was later evaluated by Dr. Richard Ott and Physician Assistant Sonya Burgers Silleck. Following examination she diagnosed fractured dislocation of the

[1] Abbreviation noted in report AAOX4.
[2] Medical abbreviation of fractures of the medial malleolus of the distal tibia and the lateral malleolus of the distal fibula.

right little finger proximal interphalangeal joint. She reduced the fracture and splinted the finger while in the emergency room. She also diagnosed a fracture of the left ankle, with a visible wound medially with visible tibial plafond (a pilon fracture), which she reduced bedside, applying a dressing and a 3 way short leg splint. PAC Silleck also noted a partially imaged occlusion of the left proximal superficial femoral artery. There was noncalcific atherosclerotic disease involving the distal aorta, common iliac arteries and common femoral arteries. She consulted with Dr. Nimesh Patel of Panorama Orthopedics, who advised that an open reduction and internal fixation surgery would be required with regard to the left ankle fracture.

5. The x-rays of the left hand showed a fracture dislocation of the little finger proximal interphalangeal joint. The tibia fibular x-ray showed comminuted, displaced distal fibular shaft fracture and mildly displaced medial malleolus fracture. The left ankle x-ray showed mildly displaced transverse medial malleolar fracture, comminuted distal fibular shaft fracture with mild posterior displacement of some of the fragments.

6. Claimant underwent emergency surgery on September 21, 2017 with Dr. Patel for the left ankle and left leg including incision and drainage and open reduction internal fixation of the left bimalleolar ankle fracture. Claimant was referred to Panorama Orthopedics for follow up care and treatment of his left lower extremity and left hand. He was also referred to St Anthony Wound Care.

7. Brian Morgan, PA-C performed a closed reduction via digital block of the left proximal interphalangeal joint due to the fifth PIP dislocation and then placed in an intrinsic plus ulnar gutter splint to the left upper extremity.

8. Claimant was seen by multiple providers while inpatient at St. Anthony Hospital including general practice, orthopedic follow up, physical therapists and occupational therapists.

9. Claimant presented to the Emergency Department at St. Anthony due to chest pain on October 3, 2017 by Holly Pyle, PA-C. She noted as follows:

> Patient recently with tib-fib fracture repair by panorama. He did not take blood thinners after the surgery as he was unable to afford these. Pulmonary embolus was considered, CTA PE does not show any central blood clots, peripheral blood clots not ideally visualize secondary to bolus administration. Patient not hypoxic or tachycardic however. Initial troponin is mildly elevated. Repeat troponin at 3 hours is positive. Patient had been accepted by CHIP Dr. Turner at this time, they were informed of these results as well as Dr. Thanavaro had been consulted from cardiology. Patient currently chest pain free. Plan is to start patient on a heparin drip, catheterization in the morning.

Ms. Pyle noted that Claimant had no prior history of blood clots. Claimant was diagnosed with a myocardial infraction and admitted into the hospital for treatment and care. Dr. Joseph Turner advised that cardiologist Tharavaro would be performing catherization the following day.

10. On October 3, 2017 Claimant had a second orthopedic consult at the emergency room at St. Anthony's with Brian Morgan, PA-C. Mr. Morgan described the surgical recent procedure but noted that Claimant failed to take prescribed blood thinners after the surgery as he was unable to afford them. He assessed that Claimant was having

a myocardial infarction. He noted that Claimant had a history of insulin-dependent diabetes mellitus, histoplasmosis, and acute myocardial infarction, but no history of blood clots. He noted that Claimant had an eschar[3] to his open wound of his left lower extremity medially with some scant drainage. He noted that Claimant had mild leukocytosis at that time, a probable indication of ongoing infection. Following examination, he recommended that Claimant be admitted to the internal medicine service for workup of the myocardial infarction. He noted that from an orthopedic standpoint Claimant was at risk of infection. He noted that Claimant had an elevated leukocytosis.[4] Mr. Morgan consulted with Dr. Desai who agreed.

11. Dr. Michael Ptasnik noted on October 4, 2017 that Claimant presented with risk factors, specifically diabetes, with very typical sounding ischemic pain with transient right bundle branch block (RBBB) and marked troponin elevation. He looked to have had a non-Q infarction. Likelihood of severe coronary disease was very high and planned for urgent catheterization that morning and stenting as appropriate.

12. Left ankle wounds were reviewed. There was a traumatic wound about the medial and posterior-medial left ankle and above the level of the medial malleolus extending superiorly and posteriorly in a mild angular fashion that had been closed, as there were stitches in place. Part of the wound appeared to be granulating in and possibly left open. The surgical lateral wound was closed. There was a contusion of the posterolateral left heel.

13. The cardiovascular specialist, Dr. Mark Edgcomb evaluated Claimant on October 7, 2017 and noted that Claimant was undergoing treatment for wound infection with antibiotics due to a non-healing wound of the left ankle, which continued to be achy and throbbing.

14. Claimant was reevaluated on October 17, 2017 by Dr. Patel, who examined in clinic 4 weeks status post ORIF left bimalleolar ankle fracture and medial wound eschar, and removed the sutures. Dr. Patel noted that Claimant was using a boot and ambulating with a wheelchair. He reported Claimant was under stress due to the pain. Dr. Patel noted Claimant was experiencing quite a bit of drainage from his ulcer and swelling around his ankle as well as compliant with home therapy working on range of motion. Claimant reported changing his dressing daily and seeing a wound care specialist at SAH. Claimant related that he has been icing and elevating as much as possible to help with the swelling. He disclosed that he was having mild heart attacks while at home and was admitted to the hospital as he suffered another heart attack due to having blood clots. Dr. Patel advised Claimant to continue with wound care treatment and referred Claimant to physical therapy for ROM.

15. On October 27, 2017 Dr. Patel stated that it was medically necessary for Claimant to utilize a wheelchair for ambulation as well as an elevating leg rest for edema and soft tissue management and only to maintain toe-touch weight bearing.

16. Family nurse practitioner Hilary Murphy at Metro Community evaluated Claimant on November 14, 2017. She noted that his surgical wound was not healing due

[3] Dead skin around the wound site.
[4] Elevated white blood cell count.

to his diabetes mellitus type II and that the myocardial infarction may have been caused by the blood clot from the trauma to his ankle on September 2017. She noted that Claimant had a myocardial infraction on October 3, 2017 and that Claimant "has established with cardiology (Dr. Potasnik) [sic.] they think that the MI was S/T blood clot from the trauma to his ankle. Troponis were strongly positive and symptomatic with new RBBB…possible thrombus that have cleared." She indicated that Claimant was required to follow up with his wound care specialist, Dr. Reynolds and his cardiologist, Dr. Ptasnik. She also noted that Claimant's diabetes continued uncontrolled.

17. Claimant attended by Dr. Patel on November 14, 2017 status post ORIF left tibial bimalleolar fracture and medial wound eschar related to the September 21, 2017 accident. He was ambulating with a wheelchair at that time. He had limited range of motion but continued to have the ankle wounds. He was to continue with Dr. Reynolds for wound care treatment. On December 15, 2017 Dr. Patel indicated that the continued open wounds were causing significant discomfort including swelling and inflammation. Claimant also continued smoking and this was causing delay in his healing as Claimant indicated he was having difficulty with smoking cessation on his own.

18. Claimant designated Dr. Yamamoto as his authorized treating physician as of March 8, 2018.[5] Dr. Yamamoto first saw Claimant on March 12, 2018 and took a history of the injuries. He examined Claimant finding that he continued to have two open non-healing wounds since his original surgery that continued to have drainage, as well as weakness and swelling of the left lower extremity.

19. On April 25, 2018 FNP Murphy noted that Claimant had symptoms of claudication in the stent due to blood clotting.

20. When Dr. Kret evaluated Claimant on May 3, 2018, he noted that given Claimant's family history, history of coronary artery disease at his age and co-existent diabetes, Claimant was at an extremely high risk of coronary vascular and peripheral arterial occlusive disease. Claimant had a stent placed in his thigh in May 2018 by Dr. Marcus R. Kret at St. Anthony Hospital due to the ongoing blood clots and occlusion. It is noted in the history that Claimant had a preexisting stent placement in his left lower extremity due to a gunshot to the left leg that hit a main artery.

21. Claimant again presented to the ED at St. Anthony on October 6, 2018 and was seen by Dr. Jason Roth. He reported Claimant had left ankle pain related to an open compound fracture of his left ankle, surgically treated on September 21, 2017 by Dr. Patel of Panorama Orthopedics. He stated since that time Claimant had had wounds to the ankle, he had been seeing wound care for and had just recently finished a 10 days course of antibiotics secondary to concern for infection of the left ankle. He initially saw improvement but then over the past 3 days he had had worsening throbbing pain radiating proximally to his left calf, redness and swelling to the ankle as well as some purulent drainage from the wound. He stated the pain was exacerbated with ambulation. He indicated he had been taking pain medication at home with minimal relief. He was

[5] This was determined by ALJ Jones in her Findings of Fact, Conclusions of Law and Order dated October 18, 2018.

anticoagulated on Plavix and was status post stent placement in vein in his left thigh secondary to a blood clot. Claimant was admitted to the hospital.

22. Dr. Mark Edgcomb examined Claimant on October 7, 2018 for a vascular consultation related to complaints of swollen distal left lower extremity with a wound located on the lateral aspect of his ankle. Dr. Edgcomb opined that Claimant had history of open ankle surgery complicated by delayed wound healing and chronic ulcer and a superficial femoral artery (SFA) occlusion status post stent placement on May 9, 2018. He recommended continued ASA (aspirin) and Plavix, would obtain vein mapping and an arterial duplex. He noted that Claimant would likely need a bypass as it would probably provide better long term results than trying to reopen the stent.

23. Dr. Marcus Kret opined that "[I]n my eyes, we have to assume his hardware is infected. He had normal ABI after SFA stent and still wound persisted. I discussed this with the ortho PA on call who will communicate with Dr. Patel." He went on to recommend that Claimant would be best served to have a left femoral pop bypass and a vein map while in the hospital but that he could not accommodate a bypass surgery for a week so recommended discharge with antibiotics.

24. Claimant also had an infectious disease consultation with Dr. Geoffery Clover, who confirmed a left lower extremity wound infection and recommended continued topical and antibiotic treatment intravenous while in hospital and after discharge.

25. On October 8, 2018 PA-C Leigh Rayette Brown noted that Claimant was positive for enterococcus and enterobacter bacterial infections. She noted that Claimant had had femoral arterial graft for PVD[6] which appeared to have occluded. She reported that the patient was compliant with his aspirin and Plavix but continued to smoke and that "Ortho" did not want any OR intervention at that time due to risk factors. On exam she found a lateral wound about 4 cm long with slight surrounding erythema and warm to touch, especially the superior calf area. Dr. Gordon McGuire also evaluated Claimant and diagnosed a chronic non healing ulcer in the lower extremity. He noted that the ultrasound demonstrated occluded left SFA stent and that Dr. Kret was to bring him back to hospital early the following week to consider operative procedure. He also noted that Claimant's obesity, smoking and diabetes were likely compounding his ongoing wound issues. He recommended Claimant continue to follow up with Dr. Reynolds, the wound care specialist.

26. On October 16, 2018 Claimant underwent surgery with vascular surgeon Dr. Kret due to a post stent occlusion. Dr. Kret performed an artery bypass with reverse greater saphenous vein graft. The post-op diagnosis was left leg peripheral arterial occlusive disease with ulcer of the left ankle.

27. Dr. Nimesh Patel examined Claimant on October 23, 2018 and opined that Claimant had infected hardware in the left lower extremity as he continued to have an open non healing wound since his open reduction with internal fixation (ORIF) of fracture of the left ankle, and recommended surgical intervention of an irrigation and debridement of the left ankle and medial and lateral hardware removal.

28. On October 24, 2018 Dr. Yamamoto noted that Claimant had arterial bypass surgery of the left femoral artery on October 15, 2018 after the stent failed, and Claimant

[6] Peripheral Vascular Disease.

seemed to be much better, noting that the medial wounds on the left leg were healed. Dr. Yamamoto reported that the lateral left leg wound continued to be significant but had already improved with continued care at the Wound Care Center at SAH. He also stated that Claimant's osteomyelitis[7] of the lower left leg was being treated with IV antibiotics for a deep infection. Dr. Yamamoto indicated on November 6, 2018 that Claimant was to have hardware surgery removal soon.

29. Claimant proceeded with the hardware removal surgery with Dr. Patel on November 16, 2018 at St. Anthony Hospital, which included the deep left fibular and medial malleolus ankle hardware, irrigation and debridement of the left ankle wound as well as scar revision and delayed primary closure. During the surgery Dr. Patel proceeded to remove some of Claimant's nonhealing wound tissue in an elliptical fashion to freshen the skin edges, including dissecting deeper down to the level of the fibular plate and muscle tissue from the lateral wound around the fibula.

30. Dr. Geoffery Clover, an infectious disease specialist, examined Claimant on November 28, 2018. He noted Claimant was being followed at the Wound Care Center. He had a fairly slowly healing wound with significant peripheral arterial disease, as well, and was being followed by the vascular service. He had a left femoral stent that was probably nearly occluded. He noted that the stent was placed in May. With regard to the lower extremity infection, Claimant was treated for a couple weeks of antibiotics, but was feeling that it actually got worse in the last few days so was admitted. The cultures from the wound showed bacterial infection.[8] Upon examination of the left lower extremity he noted a linear wound with abscess surrounding cellulitis.

31. On December 19, 2018 Respondents filed a General Admission of Liability admitting to the Claimant's work related injuries caused by the fall. However, the payment log dated January 7, 2022 fails to show any payment for any of the emergency medical care including emergency medical transportation, St. Anthony's Hospital emergency care and surgery to left lower extremity or subsequent left lower extremity wound care, and any/all related care and treatment at Panorama Orthopedics and their referrals.[9]

32. Claimant moved to Illinois and transferred his care was to Midwest Occupational Health Associates and Memorial Industrial Rehabilitation Center in approximately March 2019. Claimant was seen by Chandra Pierson-Rye, FNP-BC on March 29, 2019 who provided a long medical history and stated that they would attempt to reestablish the same kind of care Claimant had while in Colorado, including with the SIU Wound Clinic and would be seen by the pain management clinic. Claimant started physical therapy, and was complaining of left foot and ankle pain, joint pain, low back pain and shoulder pain but also had multiple conditions which were impacting recovery,

[7] Inflammation of bone or bone marrow, usually due to infection

[8] Enterobacter cloacae and enterobacter faecalis.

[9] Several internal use logs dated October 23, 2018, March 19, 2019, and January 7, 2022 showed multiple payments to individuals or providers, including AAPEX Legal Services, Hall & Evans, Mitchell international Inc., The MCS Group Inc., Injured Workers Pharmacy, Claimant, Guarco, Inc. Paladin Managed Care, Peak to Peak Family Practice (Dr. Yamamoto), Claimant, Department of Child Support Services, Cypress Care, TMESYS Inc., Memorial Medical Center, Midwest Occupational Health, Rehab Associates of Colorado Inc. (Dr. Reichhardt), One Call Transportation, Southern Colorado Clinic (Dr. Obrien), Exam Works.

including anxiety related to his care, diabetes, heart conditions, hypertension, peripheral vascular disease and multiple surgical procedures, as noted by physical therapist bill Montgomery.

33. Claimant was evaluated by Dr. Greg Reichhardt on January 11, 2021 for the purposes of an impairment rating. Dr. Reichhardt noted that Claimant's hardware in the ankle was infected and also that Claimant underwent a lower extremity arterial stent and arterial bypass. Dr. Reichhardt noted Claimant's vascular disease but did not opine that it was related to the work incident. Dr. Reichhardt provided ratings to Claimant's left fifth digit disfigurement and left ankle. He specifically stated that "He does have range of motion limitations, but because of his inability to get to the neutral position, he is most appropriately rated based on ankylosis of the plantarflexed position, which according to Table 37 carries a 40% lower extremity impairment." Dr. Reichhardt opined that Claimant had a 43% impairment of the left fifth digit, which converts to a 2% whole person rating. Dr. Reichhardt also diagnosed Claimant with ankylosis of the ankle and provided a 40% lower extremity rating which converts to a 16% whole person rating. When combining both rating, Claimant was provided with an 18% whole person impairment relating to the work injuries.

34. Respondents filed a Final Admission of Liability (FAL) on an unknown date.[10] The admission admits for a 40% of the left lower extremity impairment due to the ankle injury and a 43% for the left fifth digit, pursuant to the impairment rating provide by Dr. Reichhardt on January 11, 2021. However, since Respondents paid past the lower benefits cap in temporary disability benefits, no permanent partial disability was paid.

35. On February 17, 2021 Respondents filed a second FAL, which did not admit for any impairment but still relied upon Dr. Reichhardt's report of January 11, 2021, denying any further medical benefits after maximum medical improvement. The reports attached to the FALs both state that Claimant should follow up as needed and specifically outlines in the narrative that Claimant should have follow ups, medication, laboratory tests, and physical therapy follow ups as needed for the following four years with regard to the work related injuries. Dr. Reichhardt specifically list the left shoulder and low back conditions as "non-work related." He provided diagnosis of the left displaced medial malleolar fracture, comminuted distal fibular shaft fracture, left fifth digit dislocation, history of vascular disease, tobacco use disorder and peripheral polyneuropathy.

36. Claimant objected to the FAL and requested a Division of Workers' Compensation Independent Medical Examination (DIME). Dr. Dwight Caughfield was assigned as the DIME physician and performed the DIME on June 15, 2021. He completed a record review, ultimately opining that the shoulder condition was not work related in his June 21, 2021 report. Dr. Caughfield specifically opined that Claimant's peripheral vascular disease was not related to the work injury. He stated that maximum medical improvement occurred on January 11, 2021 in accordance with the evaluation issued by Dr. Reichhardt. He assessed impairment of the lower extremity and finger injuries. Dr. Caughfield stated as follows:

> His left ankle dorsiflexion is -24 with the knee extended and a -21 with flexed consistent with a fixed deformity and loss of ankle dorsiflexion. I agree with Dr.

[10] Certificate of Mail was not completed.

> Reichhardt that this represents an ankylosis of the joint and measured today as an average of -22° dorsiflexion (or 22 plantar flexion) for a 50% impairment of the lower extremity per table 37 page 66. There is 4% impairment for his 12° inversion and 3% impairment for his 7 degrees eversion which are added for 7% LE impairment. These are added to the ankylosis impairment of 50% for 57% lower extremity impairment of the ankle. I then assigned a 15% lower extremity impairment of the ankle for his fracture per the rating tips page 8. The 57% ROM is combined with 15% LE for the fracture for a total LE impairment of 63%. Per table 46 the 63% LE is 25% WP impairment.
>
> For his left small finger he has a DIP impairment of 12% for 46 degrees of flexion. His PIP is 28% for 94 degrees of flexion (3%) and -50 degrees extension (25%). His MP impairment is 8% for 75 degrees of flexion and 5% for 0 degrees extension for 13%. The small finger joints impairments are combined for 45% small finger impairment which is 5% of the hand per table 1 page 15. The 5% UE per table 2 page 16 which is 3% WP per table 3.
>
> The 25% WP impairment for the hindfoot is combined with the 2% WP for digit 5 to obtain a total WP impairment of 27%.

(The June 28, 2021 report cited above--Exh. 25-- is found to be the correct impairment over that which was issued on June 21, 2021—Exh.G.) He recommended both maintenance care and restrictions.

37. Respondents sent Claimant for an independent medical examination with Dr. Timothy O'Brien on November 17, 2021. He stated that Claimant continued to have chronic pain in his left ankle and had a semi-rigid plantar deflection contracture that causes disability. He did recommend an ankle arthrodesis for both pain relief and improved function, though discussed that due to comorbidities, there was some risks involved. Dr. O'Brien opined that the impairment rating by both Dr. Reichhardt and Dr. Caughfield were inaccurate and inappropriate. In particular he disagreed with applying the rating under the AMA Guides for ankylosis and the additional range of motion impairment. This opinion is not persuasive with regard to his opinions about Claimant's impairment, specifically the ankylosis.

38. Dr. O'Brien also testified at hearing. He stated that the infection and blood clots as well as the treatment related to them regarding Claimant's left lower extremity were related to the work related injuries. Dr. O'Brien opined that Claimant's vascular disease was pre-existing. He did not believe it was aggravated or accelerated by the trauma or the surgery. Dr. O'Brien testified that diabetes is a risk factor for heart disease. He stated that as Claimant was also a smoker and was at increased risk for heart disease. He described Claimant as obese, which is another risk factor for heart disease. Further Dr. O'Brien testified that, in his experience, a patient does not develop vascular issues as a result of ankle surgery.

39. Dr. O'Brien indicated that Claimant's ankle joint was stiff and that Claimant had loss of ROM in his left ankle and foot. He went on to testify that "ankylosis" by definition is stiffing of the joint. Dr. O'Brien testified that Claimant's foot was mispositioned as a result of his injury and had suffered a functional change. Dr. O'Brien testified that he disagreed with the ROM measurements obtained by the treating doctors and the DIME physician but that the ROM measurements provided by the DIME physician were valid.

40. Other preexisting documented medical histories that are significant in this matter: 1) Kyle Kirkpatrick of St. Anthony Hospital documented on November 22, 2016 that Claimant had a preexisting history of ongoing migratory intermittent chest pain over the past month which would occur three hours at a time and several episodes per day. He advised Claimant that he had uncontrolled diabetes and was scheduled to see his primary care physician. After history and physical exam differential diagnosis was considered for pleurisy, pneumonia, pneumothorax, Ml, cardiac arrhythmia, pulmonary embolism. 2) He was evaluated by Brian Holmgren, PA, on April 7, 2017 at St. Anthony Hospital for left leg pain and thigh muscle spasms with a history of gunshot wound two years prior. They conducted an ultrasounds that showed no evidence of infection or venous or arterial occlusion and Mr. Holmgren suspected muscular spasm were due to dehydration.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the

exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming DIME with Regard to Permanent Impairment

Respondents seek to overcome the Dr. Caughfield's determination of impairment in this matter. Respondents must prove that the DIME physician's determination of impairment was incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, *supra.*

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*. Consequently, when a party challenges the DIME physician's impairment rating, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning his opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation

from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008); *In re Claim of Pulliam*, 071221 COWC, 5-078-454-001 (Colorado Workers' Compensation Decisions, 2021).

Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

The Act requires DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*. Lastly, where an ALJ finds a claimant's description of his present symptoms credible, this is sufficient to overcome the DIME physician's opinion. *In re Claim of Conger*, 100521 COWC, 4-981-806-001 (Colorado Workers' Compensation Decisions, 2021).

Here, Dr. O'Brien opined that the DIME physician inappropriately utilized the ankylosis table to provide an impairment because Claimant continued to have some range of motion in the ankle and should not have been provided with an ankylosis impairment. However, both Dr. Reichhardt and the DIME physician, Dr. Caughfield, disagreed with this

opinion. Specifically, Dr. Reichhardt stated that "He does have range of motion limitations, but because of his inability to get to the neutral position, he is most appropriately rated based on ankylosis of the plantarflexed position, which according to Table 37 carries a 40% lower extremity impairment." Dr. Caughfield stated that, and Dr. O'Brien himself stated, Claimant's injury resulted in stiffness of the ankle, especially with the ability to bring his hind foot backward into dorsiflexion and was very apparent as well as that there was no doubt that Claimant's ankle was stiff. Dr. O'Brien specifically defined that ankylosis means stiffness of the ankle. He further stated that Claimant had a malpositioned foot and that Claimant walks on the inside of his foot. He also stated that Claimant suffered a fracture of his lower extremity and a dislocation of his fifth digit of his left hand. Lastly he stated that Claimant does not have normal function.

While Dr. Caughfield calls the malformation of the healed fracture malalignment, Dr. O'Brien calls it malpositioning. Pursuant to the *Merriam-Webster Dictionary*,[11] the medical definition of malalignment is simply an incorrect or imperfect alignment of a joint, and the medical definition of malposition is wrong of faulty position. The medical records show that Claimant has difficulty walking and that he walks on the side of his foot. This was confirmed by Dr. O'Brien in his testimony. This ALJ infers that the terms could be used interchangeable and specifically finds, based on the totality of the evidence that Claimant has a malalignment, causing Claimant to be unable to plant his foot fully on the ground in a neutral position to walk. The AMA Guides under Sec. 3.2 notes that "[F]or purposes of impairment evaluation, ankylosis is defined as either: (a) complete absence of motion, or (b) planar restriction of motion preventing the subject from reaching the neutral position of motion in that plane. Dr. Caughfield specifically documented that Claimant's "[G]ait is left antalgic with equinus deformity and early toe strike with inability to reach neutral ankle." Dr. Reichhardt also found that Claimant could not "get to the neutral position." Therefore, Dr. Reichhardt and Dr. Caughfield's opinions with regard to the ankylosis of the ankle are more persuasive despite than contrary opinions of Dr. O'Brien, who is not persuasive with regard providing an impairment for ankylosis of the ankle. Respondents have failed to overcome the DIME physician's impairment rating with regard to the ankylosis. Dr. Caughfield's impairment due to ankylosis is correct.

Under the Impairment Rating Tips, Section 5 of Extremity Ratings, it states:

> The *AMA Guides, 3rd edition (revised)* does not include impairment ratings for foot and ankle fractures or arthritis. When documentation of functional change justifies a rating, choose a value from the given range that you deem appropriate for the injury. The following impairments must be **combined** with the appropriate range of motion impairment.

This ALJ infers from Dr. Caughfield's impairment rating that he opined that the fracture of the ankle was severe enough to justify a 15% lower extremity impairment. Claimant had a tibial pilon fracture. The Impairment Rating Tips indicate that an ankle fracture with malalignment including tibial pilon, may have up to a 25%. Dr. Caughfield designated less than the maximum. Based on the totality of the evidence, including review

[11] *Merriam-Webster Dictionary,*Merriam Webster, Inc,, 1st edition (January 1, 2016).

of the medical records, Respondents failed to overcome Dr. Caughfield impairment rating or that he was incorrect with regard to the impairment relating the fracture.

Further, Dr. Caughfield opined that Claimant had three types of loss of range of motion for the ankle. The first is dorsiflexion, which is what was measured to determine Claimant's ankylosed impairment. The other two are inversion and eversion. Dr. O'Brien agreed that the measurements made by Dr. Caughfield were valid. The *AMA Guides* specifically have requirements to measure all three of these losses independently and have an ankylosis table for dorsiflexion (Table 37) and for inversion and eversion (Table 38). Under Sec. 3.2 it states under Note: "Using an impairment rating of ankylosis excludes the simultaneous use of the abnormal motion measurements from the *same* table" (e*mphasis added*), and these are two separate and distinct tables. Therefore, it is inferred that the *AMA Guides* specifically require consideration for all three measurements. Whether these measurements are duplicative is a question of fact and this ALJ determines that they were not duplicative. These three measurements show a loss of range of motion and Dr. Caughfield's opinion with regard to the impairment due to these measurements are correct, despite Dr. O'Brien's contrary opinion. Respondents have failed to overcome the opinion of Dr. Caughfield in this matter.

Lastly, Respondents' argue that Dr. Caughfield failed to normalize the impairment rating for loss of range of motion for Claimant's finger injury. They rely on Dr. O'Brien's testimony that the AMA Guides require normalization. This ALJ reviewed the AMA Guides and was unable to find any mention of normalization. In fact, the Impairment Rating Tips under Section 1 of Extremity Ratings states that the AMA Guides "3rd Revised Edition has little commentary on this procedure." They also state that "when deemed appropriate, the physician may subtract the contralateral joint ROM impairment from the injured joint's ROM impairment." This ALJ infers from this commentary that it is discretionary with the DIME physician and in this case, Dr. Caughfield did not choose to do so. Further, the range of motion that Dr. O'Brien, Dr. Reichhardt and Dr. Caughfield obtained for the fifth digit were all different and simply a matter of when they were assessed. This is not sufficient to determined that the opinion with regard to range of motion of the finger was anything more than a simple difference of opinion, which is not sufficient to overcome the impairment rating by the DIME physician. Respondents have failed to overcome Dr. Caughfield's opinion with regard to the finger impairment by clear and convincing evidence.

This ALJ recognizes that Respondents need only prove that any one particular impairment opinion is overcome by clear and convincing evidence. When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers'

Compensation. *Id*. Therefore, if it is overcome, then the remainder of the decision need only be shown by a preponderance of the evidence. However, in conducting this analysis, it has assisted the trier of fact in determining whether any particular element was overcome by clear and convincing evidence, in order to apply the lower burden, and it was not. Respondents' have failed to prove by clear and convincing evidence that Dr. Caughfield's opinions regard to the impairment assigned in this matter was incorrect. As found and concluded, Dr. Caughfield's impairment rating are appropriate and correct.

C. Treatments for the Hardware infection, Blood Clots and Heart Attack or Myocardial Infarction (MI)

The Workers' Compensation Act (Act) imposes upon every employer the duty to furnish such medical treatment "as may reasonably be needed at the time of the injury ...and thereafter during the disability to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S. That duty includes furnishing treatment for conditions representing a natural development of the industrial injury, as well as providing compensation for incidental services necessary to obtain the required medical care. *Employers Mutual Insurance Co. v. Jacoe,* 102 Colo. 515, 81 P.2d 389 (1938); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo.App. 1995). Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 11 (Colo. App. 2004). A Claimant may be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease to "produce the disability for which workers' compensation is sought." H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's preexisting condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). In *Seifried v. Indus. Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986) the courts determined that "[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition

to become disabling." However an injury nevertheless must be 'significant' in that it must bear a direct causal relationship between the precipitating event and the resulting disability. See *Colorado Fuel & Iron Corp. v. Industrial Commission*, 152 Colo. 25, 380 P.2d 28 (1963). A claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). In other words, Respondents generally cannot be charged with the cost of treating non-work related conditions even if those conditions are discovered during the course of treatment for an industrial injury. See, *Antonio Prieto v. United Subcontractors, Inc.*, W.C. No. 4-572-001 (June 22, 2007), citing *5 Larson, Workers' Compensation Law*, § 94.03(5).

The duty to furnish medical care has been construed to also include paying for treatment of unrelated conditions when such treatment is necessary to achieve optimum treatment of the industrial injury. See *Public Service Co., supra; Merriman v. Industrial Commission, supra;.* In the *Public Service Co.* case, the court emphasized the factual nature of this determination and the Court of Appeals affirmed the ICAO decision requiring Respondent-Employer to pay medical benefits for treatment of a bipolar disorder to stabilize that condition before surgery was performed on Claimant's injured neck. The Court stated that "[T]he record must distinctly reflect the medical necessity of any such treatment and any ancillary service, care or treatment as designed to cure or relieve the effects of such industrial injury," (relying on *Milco Construction v. Cowan*, 860 P.2d 539 (Colo.App.1992). The Court further stated:

> [W]e conclude that ancillary treatment is a pertinent rationale for reasonably necessary care of a non-industrial disorder when such must be given 'in order to achieve the optimum treatment of the compensable injury' [5 Larson's Workers' Compensation Law]. *Id.*

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In this matter, Claimant argues that the treatments for the hardware infection, and wound care, hardware removal, the blood clots, and the heart attack (MI) were all incident and/or caused or aggravated by the Claimant's ongoing lower extremity problems and were required care to treatment the sequelae of the lower extremity injury. These problems must be addressed separately.

1. <u>Wound Care (infection), Blood Clots, and Hardware removal</u>

Claimant has proven, by a preponderance of the evidence, that he is entitled to the medical care required for the wound care of the left lower extremity, the blood clots with subsequent occlusion and need for stent replacement, and for the subsequent infection and hardware removal due to the compensable work injury. In reaching this conclusion, the ALJ finds the opinion of the Industrial Claims Appeals Panel in *Jamie Gardea v. Express Personnel Professionals,* W.C. No. 4-650-961 (October 28, 2011), instructive. In *Gardea,* Claimant sought the provision of a gastric bypass procedure after injuring his ankle in an industrial accident and being unsuccessful in accomplishing the required weight loss on his own. In that case, the respondents suggested that claimant's need for bypass surgery was due to obesity that predated his industrial injury and because he needed it prior to injuring his ankle, there was no causal relationship to the work injury. In affirming the ALJ, the Panel found respondents' notion of the term "ancillary" overly narrow, concluding that it was not necessary for there to be a direct causal relationship in order for the bypass procedure to be compensable. Rather, as the Panel noted, in affirming the ALJ, all that was necessary for such treatment to be compensable is a finding/conclusion that it is necessary to achieve optimum treatment of the industrial injury.

The need for hardware removal was caused by the infection surrounding the tissue and potentially the hardware itself. Claimant continued to have lesions and open wounds from immediately after the surgery of September 21, 2017 throughout the time he was released at maximum medical improvement by the DIME physician and Dr. Reichhardt. Following the initial surgery, multiple medical providers, including Dr. Patel, the surgeon, referred Claimant to the St. Anthony Wound Care Center to address wound care. It is also clear from the record that Claimant had uncontrolled diabetes. This was documented by Dr. Henning when Claimant was transported to St. Anthony Hospital. It was also documented by Dr. Kyle Kirkpatrick of St. Anthony Hospital on November 22, 2016 and scheduled him to see his primary care physician.

The diabetes may have preexisted the condition, and in fact delayed the healing process, the same way obesity preexisted the injury and may have been a factor that kept Claimant from achieving MMI at an earlier date. However, treatment would have likely not been a factor but for the work related injury. This is supported by Dr. Patel's opinion that the hardware was infected. The infection was the cause of the continual open wounds, as supported by Dr. Reynolds and the St. Anthony providers that treated Claimant. Claimant had a prior injury caused by a gunshot to the leg and resulted in medical providers placing a stent in his artery. This is documented in the medical record history on October 3, 2017 by PA-C Morgan, who noted that Claimant had a history of insulin-dependent diabetes mellitus, histoplasmosis, and acute myocardial infarction, but no history of blood clots. As found, both or either required Claimant to obtain continual reasonably necessary wound care to address the open wounds and infection. As found, the blood clot clearly cause the occlusion and need for surgery. These were proximately caused by the September 21, 2017 work related injury and both the wound care and the hardware removal were reasonably necessary to treat the sequelae of the work related injury. Dr. O'Brien agreed at hearing that the blood clots, infection and treatment for the infection was related to Claimant's work-related injury and resulting surgeries. As found the care Claimant received at St. Anthony Central, St. Anthony Wound Care and Panorama Orthopedics as

well as by other providers that attend Claimant for the blood clots, infection and wound care were reasonably and necessary. As found and concluded, Claimant infection, blood clots and infection related medical treatment, including hardware removal, are related to Claimant's admitted work-related September 21, 2017 injury.

2. Heart Attack (MI)

It is clear, from the medical records that the myocardial infarction was not caused by the work related injury. Claimant had a history of MI problems, including a family history of MI. The question is whether the treatment for the MI was ancillary to treating the lower extremity fracture and the sequela caused by the ongoing open wounds, blood clots and infections. As found, it was not. The St. Anthony physicians on October 6, 2017 assessed that Claimant was having a myocardial infarction. While Dr. Murphy at Metro Community on November 14, 2017 noted the myocardial infarction may have been caused by the blood clot from the trauma to his ankle on September 2017, this was history that was being conveyed by Claimant, and not a medical opinion. Further, Dr. Patel also provided this history as recounted by Claimant. However, this ALJ perceives no concrete medical opinion from the record that concludes that the blood clots caused the MI and the fact that the MI was so close in time to the work related injury may very well be a coincidence. Dr. O'Brien provided testimony that the cardiovascular disease was related to multiple risks factors in this matter, including Claimant's uncontrolled diabetes and his obesity as well as his addiction to smoking. These are well known factors for the development of heart disease. As found and concluded, Claimant has failed to show by a preponderance of the evidence that any of the MI symptoms or treatment were either caused by the blood clots or that the MI was caused or aggravated by the work related condition.

D. Payment of Authorized, Reasonably necessary and Related Medical Costs

The requirements of Respondent's responsibility to pay for medical care that are reasonably necessary and related to the injury are set forth above and need not be repeated here. Respondents are liable for emergency treatment without regard to the right of selection or prior authorization. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As found, Claimant proved the treatment he received upon being transported for emergency medical services was reasonably necessary emergent treatment for the industrial injury, including but not limited to care by West Metro Fire Protection District, emergency room care at Emergency services Platte Valley Ambulance and Flight for Life Helicopter, and St. Anthony Hospital, wound care treatment at St. Anthony Hospital Wound Care Center and specialist at Panorama Orthopedics. Additionally, Respondents must reimburse Claimant directly for any compensable medical treatment he paid from his own pocket pursuant to. Section 8-42-101(6)(a) and (b); WCRP 16-10(F). Respondents must cover all authorized medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As a general matter our courts have held that medical "treatment" for purposes of § 8-42-101(1)(a) includes expenses for "medical or nursing treatment or incidental to obtaining such medical or nursing treatment," provided the emergent medical care teams.

Section 8-42-101(6), C.R.S. states in pertinent part as follows:

(a) If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, *the employer or carrier shall reimburse the Claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided*. An employer, insurer, carrier, or provider may not recover the cost of care from a Claimant where the employer or carrier has furnished medical treatment except in the case of fraud. (*Emphasis added*.)

(b) If a Claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier, shall reimburse the Claimant for the full amount paid. [co-pays and/or deductibles] The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

Respondents' admitted that the care for the Claimant's work related injuries for his lower extremity including St. Anthony Hospital and Panorama were reasonably necessary and related to the claim. Respondents indicated that they were negotiating with Medicare or Medicaid, whom paid for Claimant's care while the claim was under contest. However, Respondents admitted for the work related injuries including the fractures to the left ankle and the fifth hand finger on December 19, 2018 caused by the fall. However, the payment log dated January 7, 2022 fails to show any payment for any of the emergency medical care including emergency medical transportation, St. Anthony's Hospital emergency care and surgery to the left lower extremity or subsequent left lower extremity wound care, and any/all related care and treatment at Panorama Orthopedics and their referrals, nor to Medicare or Medicaid. It has now been over three years since that admission was filed. Claimant has proven that Respondents should have reasonably known that payment was due to these providers and the statute requires Respondents to make payment. Claimant has proven by a preponderance of the evidence that Respondents failed to make payment and require and order to accomplish this.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents failed to overcome the DIME physician's opinion with regard to impairment by clear and convincing evidence. Respondents shall pay benefits and are ordered to file a Final Admission of Liability consistent with Dr. Caughfield's DIME report.

2. Respondents shall pay Claimant permanent partial disability benefits based on Dr. Caughfield's DIME impairment ratings of 63% left lower extremity impairment for the left ankle injury and 5% right hand impairment for left small finger rating.

3. Respondents are liable for the reasonable medical treatment necessary to cure and relieve the claimant from the effects of the industrial injury, including the treatment related to the infection, hardware removal, blood clot causing occlusion of the preexisting stent, and the open wound care of the left lower extremity.

4. Claimant's heart attack/myocardial infarction is unrelated to Claimant's September 21, 2017 work-related injury. Claimant's claim for this care is denied and dismissed.

5. Respondents shall pay for all reasonable, necessary and related medical expenses incurred in connection with Claimant's work injury. Respondents are ordered to reimburse Claimant for any out of pocket costs and any insurer or governmental program in full and in accordance with the fee schedule up to any amounts paid by the third party insurer or governmental program for costs associated with medical care related to Claimant's work injury as found reasonably necessary and causally related to this claim as stated above.

6. Respondents shall pay interest to the lien holder for payment of medical bills at the rate of 8% per annum not paid when due.

7. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

8. All matters not determined are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the claim may be reopened pursuant to Sec. 8-43-303, C.R.S. as a consequence of error, mistake, fraud or change in condition.

IF CLAIMANT HAS PROVEN THAT THE CLAIM SHOULD BE REOPENED, THEN:

II. Whether Claimant has proven by clear and convincing evidence that the Division of Workers' Compensation Independent Medical Examination (DIME) physician's opinion was incorrect.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to permanent total disability benefits.

IV. Whether Claimant has proven by a preponderance of the evidence that he is entitled to further medical benefits,

V. Whether Claimant has proven by a preponderance of the evidence that he is entitled to penalties for alleged violations of procedural orders, including PALJ Barbo's orders of January 17, 2018, January 24, 2018 and June 6, 2018, PALJ Broniak's order of July 27, 2018, PALJ Sandberg's prehearing conference of August 5, 2019 and order of August 21, 2019, PALJ Phillip's order of October 8, 2021.

FINDINGS OF FACT

Based on the evidence presented at the hearing and multiple submissions accepted by this ALJ up to and through February 3, 2022, the ALJ enters the following findings of fact:

a. Procedural History

1. Claimant, through prior counsel, challenged the DIME physician's rating and requested further medical care. Respondents filed a Final Admission of Liability on May 26, 2017 admitting to a 7% whole person spinal impairment and a 1 % whole person impairment for psychological condition for a total 8% whole person rating, pursuant to the Division of Workers' Compensation Independent Medical Examiners' (DIME) opinion (Dr. John Sacha). Respondents' admitted to liability for post-MMI medical treatment provided by an authorized treating physician that was reasonable, necessary and related to the compensable injury. Attached to the FAL was the full DIME report.

2. PALJ John Steninger addressed holding the issue of permanent total disability (PTD) in abeyance on June 29, 2017.

3. A hearing was held before ALJ Kara R. Cayce on October 19, 2017. Claimant appeared *pro se*. On November 9, 2017 ALJ Cayce issued Findings of Fact, Conclusions of Law and Order. She determined that Claimant had failed to overcome the DIME physician's opinion by clear and convincing evidence and found Claimant failed to show he had any disfigurement. ALJ Cayce noted that Claimant testified at hearing that he continued to experience pain, paralysis, an inability to walk, blurred vision, and a change in his voice. He further testified that he sustained spine damage, traumatic brain injury, foreign-language syndrome, and a stroke or seizure due to the industrial injury. The claimant stated that he had been "mistreated" by various physicians and that they had committed "malicious acts" and "malpractice." He alleged that multiple physicians failed to consider his "neurological findings," specifically referring to Dr. Smith's May 31, 2016 note and Dr. Solomon's September 7, 2016 note. The claimant testified that Dr. Sacha erred by failing to address those medical records, along with a May 3, 2016 report by Dr. Rauzzino and a May 10, 2016 CT scan of the head.

4. Claimant appealed ALJ Cayce's order. The Industrial Claim Appeals Office (ICAO) issued an order on April 2, 2018 affirming ALJ Cayce's order.[1] Claimant filed a Notice of Appeal on April 11, 2018. On February 14, 2019, the Colorado Court of Appeals dismissed Claimant's appeal.[2] Claimant petitioned for certiorari, and the Colorado Supreme Court denied his petition.[3] On October 28, 2019 ALJ Cayce denied with prejudice Claimant's Motion to Vacate/void ALJ Cayce's November 9, 2017 order.

5. PALJ Michael Barbo issued a Prehearing Conference Order stating that Claimant was precluded from having the issue of PTD addressed at hearing until a final order was issued by the Court of Appeals with regard to ALJ Cayce's order.

6. Claimant proceeded to file multiple applications for hearing. ALJ Felter issued Full Findings of Fact, Conclusions of Law and Order Granting Summary Judgement in Favor of Respondents and Order Concerning Pending Motion on September 18, 2018 including issues of compensability; medical benefits; modification of temporary total disability benefits; death benefits; and, penalties. However, ALJ Felter ordered that Claimant could proceed on the issue of Permanent Total Disability benefits. Claimant filed a Petition to Review but the appeal was held in abeyance pursuant to ALJ Felter's order of December 13, 2018. Claimant filed a Petition to Review and the ICAO affirmed the decision.[4] Claimant did not pursue any further appeals in this matter.

7. On February 25, 2019 Paul Tauriello, Director of the Division of Workers' Compensation, issued an order prohibiting Claimant from filing any further Applications for Hearing without a PALJ order determining the ripeness of the issues.

8. ALJ Felter denied Claimant's motion for recusal and issued Findings of Fact, Conclusions of Law and Order on March 17, 2020 denying Claimant's claim for

[1] *Webster v. Czarnowski Display Service, Inc.,* ICAO, W.C. No. 5-009-761-08 (April 2, 2018).
[2] *Webster v. Industrial Claim Appeals Office*, 18CA0714 (Feb. 14, 2019)(NSOP),
[3] *Webster v. Czarnowski Display Service, Inc.,* 2019SC148 (April 22, 2019).
[4] *Webster v. Czarnowski Display Service*, W.C. No 5-009-761-003 (February 7, 2019).

permanent total disability benefits, maintenance medical benefits and Respondent's request for sanctions against Claimant for violation of PALJ Sandberg's Prehearing Conference Order. Of note, ALJ Felter found that "[W]ithout any medical or other visible means of support, the Claimant testified that he believes the opinions of Dr. Sacha are invalid based on allegations of fraud, malfeasance, and misrepresentations by Dr. Sacha, Respondents, Respondents' counsel and other treating providers." Neither did he find credible any allegations of collusion among providers or Respondents in the matter. ALJ Felter found the Claimant' testimony totally devoid of any merit or factual support in the record and rejected the same.

9. Claimant appealed ALJ Felter's order and the Industrial Claim Appeals Office affirmed the decision.[5] Claimant further appealed the decision. The Court of Appeals affirmed the ICAO's and ALJ Felter's order.[6] Claimant petitioned for certiorari, and the Colorado Supreme Court denied his petition.[7] Claimant exhausted the appeals process, and ALJ Felter's order of March 17, 2020 is final and not subject to further review.

10. On May 18, 2020 ALJ Felter issued an Order Concerning Filings which ordered Claimant to cease and desist from further filings during the pendency of his appeal. Despite the order, Claimant filed multiple applications for hearing. Following a prehearing conference on June 17, 2020, finding that Claimant had a profound misunderstanding of cases he cited to the ALJ and determining that there was a serious abuse of the Workers' Compensation Adjudication system to the detriment of other meritorious cases, ALJ Felter struck the applications and vacated four separate hearings.

11. On October 15, 2021 Claimant filed an Application for Hearing on multiple issues. On November 5, 2021 PALJ Marcus Zarlengo issued an order limiting the issues for hearing to the issue of Claimant's petition to reopen the claim. This ALJ affirmed that procedural order on November 15, 2021. This ALJ also denied Claimant's Motion for Summary Judgement on the same day.

12. At the time of the hearing Claimant failed to appear. Upon discussion with Respondents' counsel, he advised that Claimant had had prior problems signing into the Google Meet system. This ALJ called Claimant and provided instructions on how to sign into the video hearing in order not to cause further delays.

13. At the hearing, Respondents argued that if the claim was reopened without an award of benefits, the order would not be an appealable order. The parties agreed that, if Claimant was successful in reopening the claim pursuant to Sec. 8-43-303, C.R.S., all issues including medical benefits, permanent partial disability, permanent total disability, penalties, and appeal of the multiple prehearing conference orders, were all at issue for this hearing.

[6] *Webster v. Industrial Claim Appeals Office*, 20CA1529 (March 25, 2021) (NSOP).
[7] *Webster v. Indus. Claim Appeals Office*, 2021SC294 (August 16, 2021).

b. Recusal

14. At the commencement of the January 28, 2022 full day hearing, this ALJ addressed Claimant's Motion for recusal of this ALJ filed on January 10, 2022. The motion was not accompanied by the required affidavit, documentation or other evidence pertinent to recusal. The Claimant's Motion contains opinions and conclusions, based on the ALJ's previous rulings against the Claimant, and no assertions of evidentiary (basic) fact, which would create an individual in possession of the relevant facts to harbor doubts about receiving a fair and impartial hearing and decision. A litigant cannot trigger disqualification of a judge by assertions or allegations of bias and impartiality alone, challenging the judge's integrity, which the Claimant has done. The Claimant's motion for recusal was denied. The ALJ herein disregarded any insults by Claimant's and remains fair and impartial concerning the Claimant's claims.

c. Injury

15. Claimant was injured in the course and scope of his employment with Employer on Wednesday, March 9, 2016 when he tripped over a large tote while carrying a metal table base and fell. He stated that he was in the middle of a large area where his boss and other coworkers saw him fall. They ran over to help him up. He kept shaking his head because he immediately felt fuzzy vision. Once his vision cleared, he went to the tote or box and kicked at it, falling again. He continued to work that day, mostly walking around.

16. Once he went home that day, he started having symptoms in his arm, as if it was contracting and shaking. He also stated that he felt like someone jumped on his back and felt like something wrapped around his front. He stated that he passed out until Friday probably due to the pain. When he woke, he felt he was lost, scared and in pain. He called a friend to take him to his employer to ask for help. He was referred to Concentra for care.

17. Claimant reported the injury to Employer on March 11, 2016 and completed an Employee's Report of Work Related Injury. Claimant reported that he tripped and fell, hitting his chest and knee on the concrete. Claimant wrote that he sustained injuries to his right hand, left knee and low back.

18. Employer's First Report of Injury, dated March 15, 2016, noted that Claimant reported injuries to his right rib, left knee, lower back, and third and fourth right fingers.

d. Medical history

19. Claimant presented to Amanda Cava, M.D. at Concentra Health Services (Concentra) on March 11, 2016. Claimant reported that he fell, landing on his right hand and left knee. Claimant complained of lower back pain, left knee pain and right

thumb/wrist pain.[8] Dr. Cava noted normal musculoskeletal, spine, neurologic and psychiatric findings. X-rays of Claimant's right hand demonstrated no fractures, other than preexisting evidence of prior healed fractures. Dr. Cava diagnosed Claimant with a lumbar strain, wrist strain and knee contusion. She released Claimant to modified duty and recommended medication and occupational therapy.

20. Claimant continued to treat at Concentra with complaints of pain in his low back, abdomen, knees, and right thumb/wrist, as well as numbness in his left leg. On March 21, 2016, all other systems were reviewed and found to be negative. Claimant was released to regular duty. On March 25, 2016, Claimant reported to Dr. Cava with complaints of pain in his back and left side/ribs. X-rays of Claimant's chest revealed no acute fracture, infiltrates, or pneumothorax.

21. On March 29, 2016, Claimant was admitted to the emergency department at the University of Colorado Hospital complaining of pain in his low back, groin, and ribcage. Claimant was diagnosed with left-sided low back pain and left-sided sciatica, was referred for physical therapy, and provided with a medical excuse to be off work for two days.

22. On March 31, 2016 Claimant was evaluated by Dr. Brian Counts at Concentra. His principal complaint was abdominal pain, with back pain and abdominal pain radiating to his testicles. Dr. Counts noted a prior history of multiple fractures in the right hand and chronic posterior knee pain for several months. He had complaints of blurred vision, back pain, joint pain, muscle weakness and night pain together with numbness and tingling. After performing a full physical, musculoskeletal and neurologic exam, Dr. Count found normal findings with the exception of the spondylolisthesis at the L5-S1 level. He ordered an MRI of the lumbar spine.

23. Claimant underwent a lumbar spine MRI on April 8, 2016 which revealed (1) disc degeneration at L3-L4, L4-L5 and L5-S1, (2) L3-L4 mild bilateral lateral recess and foraminal stenosis without nerve root deformity, and (3) L5-S1 mild bilateral lateral recess and moderate to severe bilateral foraminal stenosis with compression of bilateral exiting L5 nerve roots.

24. Dr. Cava reevaluated Claimant on April 12, 2016 and assessed a lumbar strain, bilateral lumbar radiculopathy, muscle spasm of the back, and weakness of both lower extremities. She reviewed the lumbar MRI with Claimant and referred Claimant to Michael Rauzzino, M.D., an orthopedic spine specialist.

25. Claimant presented to Dr. Rauzzino on May 3, 2016. Claimant reported falling on his right hand and left knee. Claimant complained of pain in his back, sides and abdomen, numbness and tingling in his lower extremities, tingling in his neck, right shoulder and hand, neck stiffness, and trouble breathing. Dr. Rauzzino noted no acute sensory deficits on physical examination. He remarked, Claimant "had very diffuse

[8] Also shown on Pain Chart, C Exh. 8, p. 730. (Subsequent pain chart show progressively expanding complaints, C. Exh. 8, pp. 724, 722, 723, 718, 714, 712, 708, 705, and 702)

complaints of abdominal pain, headache, arm and hand numbness, low back pain, and leg numbness." Dr. Rauzzino commented that it was difficult to put complaints of symptom together anatomically. He stated that the lumbar spine MRI does not account for the symptoms and he did not see an acute structural change from his low back pain standpoint, therefore, he concluded that Claimant may have had a muscle strain and would benefit from physical therapy.

26. Dr. Rauzzino also recommended Claimant undergo an MRI of his cervical and thoracic spine and consider a referral for psychiatric evaluation due to the possibility of delayed recovery resulting from psychological issues. He stated that Claimant was not a surgical candidate for Claimant's low back injury.

27. On May 3, 2016 Dr. Cava reevaluated Claimant and made referrals for psychological evaluation for anxiety and depression due to the work related injury, and to a physiatrist for treatment as Claimant was not a surgical candidate.

28. On May 10, 2016, Claimant reported to Dr. Cava experiencing difficulty with his speech over the last two weeks. She remarked that Claimant's subjective complaints were greater than the objective exam findings. Dr. Cava diagnosed Claimant with bilateral lumbar radiculopathy, spondylolisthesis at L5-S1, thoracic strain, anxiety reaction, and dysarthria.[9] Dr. Cava recommended a head CT scan, which was negative for bleed, stroke, or other acute findings.

29. On May 31, 2016 Claimant sought treatment at the emergency department of Providence Health Center in Waco, Texas, with complaints of pain in his abdomen, back and leg, as well as a difference in his voice and a pulling sensation on the right side of his face. Jason Smith, D.O. noted, "He also states that he had a seizure-like episode yesterday in which he was shaking. Since then his voice has been dramatically changed, he has had tingling of both legs, and has had jaw pain." Claimant reported use of marijuana and family was concerned with possibility of a stroke. A CT scan of Claimant's head demonstrated no hemorrhage, mass or acute infarct. A CT scan of Claimant's abdomen/pelvis revealed questionable enlargement of the prostate gland and a pars defect at L5 with grade 1 anterolisthesis. Dr. Smith noted, Claimant had a very odd presentation, complains of slight shaking yesterday evening that was then associated with difficulty speaking. Dr. Smith assessed a possible stroke, with simple partial seizure and pars defect in the low back. Dr. Smith noted that he also discussed "the pars intra-articularis fracture with the patient."

30. Claimant testified that he went to the emergency room because his providers at Concentra were not listening to him and that Dr. Counts had advised him he had a fracture in his low back, a pars defect, but he was being forced to work despite

[9] According to the Mayo Clinic Patient Information website, dysarthria occurs when the muscles you use for speech are weak or you have difficulty controlling them. Dysarthria often causes slurred or slow speech that can be difficult to understand. Common causes of dysarthria include nervous system disorders and conditions that cause facial paralysis or tongue or throat muscle weakness.

restrictions and weakness in his limbs. He testified that he was turned away from the emergency room because he provided the workers' compensation information, making the association that they must have spoken with the insurance and that was the reason he was turned away. This ALJ does not find Claimant persuasive in this matter. It is clear from the hospital records that he was provided with a full work-up as they obtained a head/brain CT, and abdominal/pelvis CT scan, which were overall significantly normal, except for the pars defect and possible enlarged prostrate. Claimant was discharged with a diagnosis of simple partial onset seizure and neurosensory deficit. He was advised to follow up with his personal provider.

31. Claimant underwent an MRI of his thoracic spine on June 9, 2016 which revealed minimal disc bulges with no evidence of stenosis. Claimant also had an MRI of the cervical spine which demonstrated mild degenerative changes and disc bulging at multiple levels, with no acute abnormalities and no evidence of neural impingement.

32. Claimant's medical care was transferred to Concentra in Waco, Texas at this point. Claimant presented to Kathryn Wright, M.D. at Concentra on June 24, 2016. Claimant reported having gone to the emergency room with abdominal pain, back pain, leg pain, "his voice sounding different and a pulling on R side of face. He also said he had a seizure-like episode on 6/14/16." She remarked, "I spent close to an hour with this patient going over every work up of all of his MRIs, x-rays and ER visits. He is under the impression that since he never had any health issues before except a fracture to his R hand, all of his pain sites and changes are related to this fall injury." Dr. Wright physically examined Claimant and assessed bilateral lumbar radiculopathy, lumbar strain, spondylolisthesis at L5-S1, muscle spasm of back, thoracic strain, cervical sprain, and diffuse abdominal pain. Dr. Wright referred Claimant to a neurosurgeon.

33. Claimant presented to Stephanie Roth, M.D. at Concentra on July 20, 2016. Claimant advised Dr. Roth that he had done extensive reading and research on his condition and that he was concerned he had foreign language syndrome (FAS). Claimant attributed all of his problems to the work injury. Dr. Roth noted that Claimant demonstrated only 30 degrees of lumbar flexion on examination, but that on the exam table "he goes from supine to sitting up with legs out straight in full extension and able to quickly spin around 180 degrees to put legs at the other end of the table to exam is (sic) L knee." Dr. Roth further noted a normal neurologic and psychiatric exam, with speech appropriate in content and delivery. Dr. Roth assessed lumbar strain, muscle spasm of back, spondylolisthesis at L5-S1, and thoracic strain. She referred Claimant to a neurologist, physiatrist, and psychologist.

34. Claimant was seen at Scott & White Memorial Hospital on July 28, 2016, where x-rays of his lumbar spine showed L5 pars defects with grade 1 anterolisthesis of L5 on S1 and no significant abnormal translational motion.

35. Claimant was seen by a second neurosurgeon, James Cooper, M.D., on July 28, 2016. Dr. Cooper ordered x-rays of Claimant's lumbar spine, which demonstrated L5 pars defects with grade 1 anterolisthesis of L5 on S1 and no significant

abnormal translational motion. Dr. Cooper documented a normal examination and normal x-rays with no evidence of instability. Dr. Cooper opined Claimant was not a surgical candidate. Claimant was also evaluated by Dr. Hudspeth on this day and diagnosed Claimant with diffuse abdominal pain, bilateral lumbar radiculopathy and lumbar strain. As found, nothing in either Dr. Cooper's or Dr. Hudspeth's records showed findings or diagnosis that would change the decision made by ALJ Cayce.

36. Dr. Wright reevaluated Claimant on August 9, 2016. Dr. Wright remarked that she spent extensive time with Claimant regarding all of his complaints and did a thorough examination. She stated Claimant had no neurological deficits and she found no tenderness to palpation on his body from head to toe. Dr. Wright listed Claimant's complaints of pain, paresthesias, voice changes, sore throat, chest wall pain, abdominal pain, and decreased sensation of the scalp. She confirmed that multiple imaging studies had been performed without identification of brain injury, abdominal pathology, or anything other than degenerative discs with mild stenosis.

37. Dr. Wright also evaluated Claimant on August 22, 2016. She noted the chief complaints as "injuries to neck, low back, stomach, left knee and right wrist c/o pain and tingling that start from middle back and radiates to groin area." She documented that the pain in the abdomen extended to both legs to below the knees together with burning pain going down both thighs. Claimant stated that he was getting weak with head shaking sometimes. In her review of systems she detailed that Claimant had blurred vision, chest pressure, pain with bending, but no tenderness to palpation, negative straight leg test and normal sensation. She also commented regarding Claimant's accent but stated that he had normal volume, pace and tone. Her diagnosis was consistent with prior diagnosis. She referred Claimant for further neurological workup and impairment rating.

38. On September 7, 2016, Claimant presented to Martin Solomon, M.D. He sent Dr. Wright a two page letter. Dr. Solomon stated, "This patient reports a history of a work-related injury with resultant neck and low back pain. The patient does report pain in his low back moving down his lower extremities, which may be due to S1 radiculopathies, based on the results of the MRI scan." Dr. Solomon also stated that Claimant had "intermittent speech with a foreign accent. This suggests a possible traumatic brain injury." Dr. Solomon recommended Claimant be referred to pain management for further treatment of his low back pain. As found, the records admitted into evidence from Dr. Solomon failed to opine that Claimant's symptoms of FAS or TBI were work-related.

39. On September 2, 2016 Dr. Wright amended her August 22, 2016 report to retract the referrals she made. On September 15, 2016 she made further amendments to her report stating that she received Dr. Solomon's letter and advised Claimant keep scheduled appointments and/or return to Concentra.

40. Claimant was placed at maximum medical improvement (MMI) by Murray Duren, M.D. at Concentra on September 12, 2016. Claimant continued to complain of back, knee, wrist, abdominal pain and seizure or stroke. Dr. Duren documented, "After lengthy discussion by [Claimant] regarding his problems including his preexisting

conditions and subsequent health issues not supported by the mechanism of injury nor initial presenting complaints, the recommended Physical Examination was refused by [Claimant].” Dr. Duren assessed a lumbar strain, left knee contusion and right wrist sprain and released Claimant to regular duty with no restrictions.

41. John Burris, M.D. at Concentra performed an impairment assessment on October 21, 2016. Dr. Burris remarked, “Clear psychosomatic overlay presented throughout today’s encounter. He is tearful at times when discussing his claim. He is a very poor historian with bizarre symptomatology described.” Dr. Burris reviewed Claimant’s medical records and performed a full physical examination. The diagnostic work up was negative and Claimant's pain diagram did not follow a neuro-anatomical pattern. Dr. Burris found Claimant's examination to be benign with no objective findings. He noted that no pain generator had been identified and Claimant was seen by two neurosurgeons who had not recommended any type of surgery. Dr. Burris found that Claimant was at MMI with no evidence of residual deficits and concluded that Claimant did not sustain any permanent impairment. Dr. Burris did not recommend any permanent work restrictions or maintenance care.

42. Claimant underwent a psychosocial evaluation with Dr. Susan Frensley on March 21, 2017 to determine his mental status for purposes of disability coverage as referred by the Texas Department of Disability Determination Services. Claimant alleged to Dr. Frensley that he hit his head on the ground during the fall at work in March 2016, but did not know if he lost consciousness. Claimant reported that his speech changed in April 2016, which he described as “[I]t felt like a strain coming from my stomach to my throat. It felt like an octopus grabbing my stomach.” Dr. Frensley remarked that Claimant’s “speech is decidedly a Jamaican accent and seems consistent with Foreign Accent Syndrome,” which she noted is most often caused by damage to the brain or a stroke. She stated that despite the FAS, Claimant’s speech remained highly intelligible and was not disordered. Dr. Frensley noted that Claimant had some difficulty relating history. Claimant denied any depressive symptomology.

43. Respondents filed a Final Admission of Liability (FAL) based on the opinion of Dr. Burris. Claimant’s counsel, at the time, filed a timely Objection to the Final Admission of Liability and requested a DIME.

44. John Sacha, M.D. performed the DIME on April 18, 2017. He noted that he was asked to review Claimant’s left-side, which he deemed not work-related, and for “any other areas deemed work related by the examiner.” Dr. Sacha noted that he reviewed all of Claimant’s medical records in detail. Dr. Sacha performed a physical examination, including cognitive, cutaneous, neurologic and musculoskeletal exams. Claimant complained of, among other things, low back pain with radiation to the left abdominal and groin area and lower extremities, neck pain, mid-back pain, numbness and tingling in his arms and thumbs, seizures, anxiety and shakiness. On physical examination, Dr. Sacha noted marked pain behaviors and a normal gait pattern with free and easy movement onto and off of the exam table. Dr. Sacha further noted some paraspinal spasm and pain with range of motion, negative straight leg raise and neural tension tests bilaterally, full

neck range of motion, and minimal crepitus with range of motion in knees bilaterally. He remarked that Claimant had a non-physiologic presentation. Dr. Sacha determined that the majority of Claimant's complaints were not work-related, including personality disorder, cervical complaints, shoulder complaints, brain and shakiness complaints, and knee complaints. He opined that Claimant's low back injury was work-related and ratable.

45. Dr. Sacha opined Claimant reached MMI as of October 21, 2016. He assigned a total combined 8% whole person impairment under the AMA Guides, consisting of a 7% whole person lumbar impairment (5% under Table 53IIB and 2% for range of motion deficits), and a 1% whole person impairment for psychiatric dysfunction. Dr. Sacha agreed Claimant could work full duty without any restrictions. As maintenance care, Dr. Sacha recommended six visits to a pool therapist and six-months of a psychiatric medication regimen.

46. Dr. Sacha specifically states:

> I reviewed all of the medical records in detail and looked at his examination despite the myriad of non-work-related complaints. It does appear that he has had a consistent complaint and findings of low back issues, and I do feel the low back is work related and ratable. I do feel that he also qualifies for a small Impairment from a psychiatric dysfunction because of his poor coping skills and poor people skills. He likely needs some maintenance medications from a psychiatric standpoint to help with these Issues and the adjustment disorder… All other areas and complaints are deemed not work related.

47. Claimant was evaluated on March 21, 2017 by Dr. Susan Frensley, PhD at the request of the Texas Disability Determination for Social Security Administration. ALJ Cayce noted that Claimant only submitted page two of five.[10] However, pages one through five were found in the Court of Appeals record.[11] This documents Claimant's multiple symptoms, including Claimant's ability to work though he may not be able to do so consistently due to anxiety and chronic pain. She diagnosed Somatic Symptom Disorder with anxiety and chronic pain. She stated that Claimant was devoting excessive time and energy to his symptoms and health concerns. She also diagnosed conversion disorder with speech symptoms (FAS), which was only provisional. While this may have been inadvertently missed by ALJ Cayce, it is found, that the diagnosis and findings do not address causation and does not specifically attribute the conditions to the work related injuries, and is a harmless error. As found, Dr. Frensley's opinion does not support a different conclusion than that found by the DIME physician, or that Claimant failed to overcome the DIME opinion by clear and convincing evidence, as found by ALJ Cayce.

e. Claimant's alleged "New Medical Evidence."

48. Claimant submitted and is relying on "new medical evidence" in support of his arguments with regard to error, mistake or change of condition. (Claimant's Exhibit 2,

[10] ALJ Cayce Order of November 9, 2017, Finding of Fact No. 26.
[11] Claimant's Exhibit 7, pp. 172-179 (pp. 57-62 of the COA record, tabbed as Claimant's prehearing submissions).

C.Exh. 2). Exhibit 2 consist of 90 pages. The first record that was not dated prior the hearing held before ALJ Kara Cayce was a four page report[12] and consisted of an Individual Psychotherapy Treatment session with Ms. Lindsey Kidd, M.S., LPC, Intern, dated March 14, 2019. The records showed that Claimant participated in six sessions of therapy, was cooperative with the treatment but demonstrated limited ability to utilize the coping skills to help address his symptoms of depression and anxiety. He demonstrated some slight ability to cope with pain. Ms. Kidd stated that Claimant had plateaued with the treatment and recommended discharge. (The vocational report issued by Ms. Kristine Harris on December 9, 2019 lists the treatment Claimant received from January 24, 2019 through March 14, 2019.[13])

49. The next records were three pages of Texas Worker's Compensation Work Status Reports.[14] They were illegible, and this ALJ was unable to clearly detect the date or the author of the documents. However, two of these reports were found in a different exhibit[15] dated October 24, 2018 and December 8, 2018 by Dr. Gist. He provided work restrictions and noted that the work injury diagnosis were for the low back and psychological issues limited to coping skills. This ALJ infers that these are maintenance care status reports.

50. The next new record in Exhibit 2 was from Dr. Duane Marquart, a chiropractor and radiologist, reading x-rays dated April 5, 2019 which showed degenerative changes of the lumbar, cervical and thoracic spine.[16] These records did not provide a causation analysis or any other analysis that might support reopening.

51. No other "new evidence" medical records were found in this exhibit, though there are multiple other illegible records and pleadings.

f. Other medical records submitted after the October 19, 2017 hearing before ALJ Kara Cayce

52. Claimant was seen at Baylor Scott & White Medical Center on November 15, 2017.[17] The record is for a lumbar spine MRI. The impression was of L5-S1 spondylolysis and spondylolisthesis with foramen but no spinal stenosis; tear in the midline annular fibers at L4-5 with a minimal disc protrusion without spinal stenosis; facet arthritis does result in foramen stenosis.; and bilateral facet arthritis and disc bulge resulting in spinal and foraminal stenosis at L3-4. As found, this report shows nothing that would change the decision made by ALJ Cayce on November 9, 2017. The MRI findings are consistent with ongoing degenerative condition and there are no causation

[12] Claimant's Exhibit 2, pp. 78-81, tabbed as Slides 69-72. (Note: there are multiple reports in this exhibit that are not legible.)
[13] Claimant's Exhibit H, pp. 795-796.
[14] Claimant's Exhibit 2, pp. 82-83, Slides 73-75.
[15] Claimant's Exhibit H, pp. 801-802.
[16] Claimant's Exhibit 2, pp. 85-88, tabbed as Slides 76-79. These can also be found at Claimant's Exhibit I, pp. 803-804.
[17] C Exh. 7, Post Hearing Submission in Court of Appeal File)

analysis that relates the continued degenerative process to the March 9, 2016 work related injuries. As found, nothing in this document supports reopening in this matter.

53. Claimant was evaluated by Dr. Shamonica L. Trunell, a chiropractor on April 5, 2019[18] with complaints of multiple issues including the neck, low back, buttocks, bilateral hands, hamstrings, calves, feet and shoulders. Dr. Trunel stated Claimant had multiple trigger points, spasms, tender points, decreased range of motion and his muscles were starved of oxygen. Under assessment he stated that the goal was to continue treatment to decrease inflammation, segmental dysfunction, muscle spasm. He performed chiropractic manipulation to increase articular motion and flexibility. As found nothing in this report indicates that Dr. Trunell made a causation analysis of the multiple complaints, was recommending treatment to treat the March 9, 2016 work related injuries, and addressed permanent impairment or permanent total disability.

g. Claimant's fraud arguments

54. Claimant stated that he was dissatisfied with the medical treatment he had received and believed he had been "mistreated" by the physicians at various medical facilities. He testified that his providers had him on 5 and 10 lbs. lifting maximum but his physical therapists were pushing him to do up to 50 squats, lifting 50 to 110 lbs. He stated that he kept feeling weaker and weaker all the time while he was working, especially with his arms, but no one would listen to him. He testified that he went multiple times to his employers' human resources department to request that they change his medical provider because they were not listening to him but they never did. Claimant believed that the physicians that treated him committed "fraud." However, Claimant also testified that he was off two days following the accident and then returned to work but when he was provided with work restrictions on April 8, 2016 he was laid off. The FAL dated May 26, 2017 showed Respondents paid for temporary total disability benefits for March 9 through the 21st, 2016 and April 1, 2016 and to MMI. This would show that Claimant may have been working only from March 22, 2016 through March 31, 2016, only 8 working days. Due to the inconsistency of these statements, Claimant is not persuasive in this matter.

55. Claimant acknowledged that he had seven different attorneys representing him on his claim and that, at the time of the DIME with Dr. Sacha, he was given a copy of the DIME packet by one of his prior attorneys. Claimant further stated that at the time of the appointment Claimant himself provided supplemental records to Dr. Sacha for his review.

56. Claimant testified that Dr. Sacha failed to perform his job as a DIME physician, specifically stating that he received a call in violation of Sec. 8-43-503, C.R.S. As found, this section addresses utilization review of authorized treating providers, not DIME physicians.

[18] Found at Exhibit I, pp. 805-807.

57. Claimant stated that "someone" called Dr. Sacha with instructions that included that Dr. Sacha should not review the left side of his body. Claimant testified that there was no other possibility than Respondents calling the physician to provide these instructions. It is specifically found that Dr. Sacha did not receive a call but that he was following the instructions on the paperwork submitted by the parties to review body parts pursuant to the W.C.R.P. Rule 11. Nothing in the report indicates that Dr. Sacha received a call from anyone but that he "was asked to review the left side," which Dr. Sacha concluded was not work related. This ALJ declines to make any inference otherwise. As found, neither Dr. Sacha nor the parties communicated in this matter other than pursuant to allowed procedures.

58. Claimant also testified that Respondents had conspired with Dr. Wright. Claimant alleged that after he had a phone call from the adjuster and discussed with the adjuster that his medical providers were treating him well, all of a sudden things changed and he was placed at MMI suddenly. Dr. Wright did document that there was contact from Colorado, but not whether the contact was from providers from Colorado or from someone else. As found, this ALJ finds no collusion here.

59. Claimant argued that Respondents were committing fraud based on the fact that Dr. Wright changed her report after receiving a call from Colorado. This ALJ declines to make that inference. There is no credible evidence that Respondents acted inappropriately and this was addressed by ALJ Felter in his order, which Claimant was unsuccessful in appealing. This ALJ determines not reopen this case based on allegations alone. Claimant also attempted to implicate his own attorneys as complicit in the acts supposedly perpetrated by Respondents. As found, Claimant has failed to show that there was fraud in this matter.

h. Claimant's mistake arguments

60. Claimant alleged during his testimony that multiple physicians, including Dr. Sacha, failed to consider all of his medical history, medical records and the history of his complaints following the injury. Claimant specifically referred to the fact that Dr. Sacha did not review his complaints as listed by prior providers, including the list of fourteen complaints provided by Dr. Duren on September 12, 2016 and by other providers. As found, Dr. Duren did consider the list of complaints and ultimately assessed that Claimant only had a lumbar strain, contusion of the left knee and sprain of the right wrist as the work related problems.

61. Claimant testified that Dr. Sacha erred by failing to address those medical records he stated were favorable to him (Claimant) and alleged that Dr. Sacha failed to address Dr. Rauzzino's May 3, 2016 record, Dr. Cava's May 3, 2016 report, the May 10, 2016 CT scan and Dr. Solomon's report of September 7, 2016. He stated that these records contained evidence of neurological findings supporting his position, including a head injury. As found Dr. Sacha specifically refers to Dr. Rauzzino in the DIME report, noting that Dr. Rauzzino did not feel Claimant was a surgical candidate. Moreover, Dr. Rauzzino's May 3, 2016 note specifically stated that he did not document any acute

sensory deficits or acute low back structural change. The DIME report also references the CT scan of Claimant's head, which was negative. While he does not mention Dr. Solomon's report specifically, as found, Dr. Solomon did not relate the possible TBI to the work related condition and DIME physicians are only obliged to review the records not include an exhaustive list of all the records they have reviewed. It is found that, while Dr. Sacha did not list every report he reviewed, his findings were supported by the records he reviewed. As found nothing in the evidence provided by either party shows the DIME physician a mistake when issuing his report.

62. Next Claimant testified that since the January 2010 imaging demonstrated that he had no preexisting pathology, that Dr. Sacha and Dr. Burris were incorrect in stating that he had a preexisting condition. This ALJ finds this evidence unpersuasive. As found there were approximately six years between these events and a significant portion of the pathology of his spine was showing degenerative changes by 2016. Further, as found, Claimant admitted that the 2010 documents were before ALJ Cayce for consideration when she issued her order. Notwithstanding the fact that there were preexisting degenerative changes, Dr. Sacha rated the lumbar spine without apportionment, providing a 7% whole person impairment, including 5% for specific disorder and 2% for loss of range of motion. Ultimately, as found, this ALJ fails to see any fraud, mistake or a reason to support reopening based on this argument.

63. Claimant conveyed that Dr. Wright did not give him any documentation that he was going to be placed at MMI, she just stated she would await Dr. Solomon's findings and then he was released from care. He highlighted the fact that "someone" must have changed her report because the August 22, 2016 report then stated that she was withdrawing her referral to neurology after she received a call from Colorado and read the September 7, 2016 report from Dr. Solomon, which only recommended pain management for the low back despite Dr. Solomon's indication that Claimant may have a possible TBI.[19] Claimant stated "someone," he assumed the adjuster, spoke to Dr. Wright, or that the report was changed by "someone." As found, there is no persuasive evidence to support these allegations and it is clear from the August 22, 2016 report and addendums, Dr. Wright is the one to have made both amendments on September 2 and September 15, 2016.

64. Claimant argued that Respondents were in violation of Sec. 8-43-503(3), C.R.S., which states "Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment." Claimant contended that Respondents contacted multiple providers throughout his claim. There is no error here as the evidence presented show that Claimant or his attorney, were notified at the same time as the medical providers of the communications or that the communications were not the complete document and this ALJ declines to assume that Claimant or his multiple counsels were not provided the documentation at the same time. Neither did Claimant deny receiving a copy of the letters at the same time they were sent to the providers. These arguments were before ALJ

[19] Traumatic Brain Injury.

Felter and will not be further readdressed. This ALJ is not persuaded that any of the communications or partial communications were dictating care and so finds. Also as found, nothing presented with regard to this argument supports reopening of the claim.

65. Lastly, Claimant argued that ALJ Felter was mistaken in failing to provide him maintenance medical benefits. However, the records submitted to ALJ Felter were the same ones before this ALJ with the exception of several records that do not recommend maintenance care for the diagnosed conditions causally related to the March 9, 2016 injuries. ALJ Felter found that based on the totality of the evidence and multiple references by providers as to Claimant's unwillingness to cooperate and symptom magnification, that no further maintenance care was reasonably necessary and related to the injury. This ALJ finds nothing to persuade that there was a mistake in this finding or anything to persuade this ALJ that sufficiently supports the reopening of the claim.

i. Claimant's error arguments

66. Claimant testified that Dr. Sacha was incorrect when he reviewed Dr. Rauzzino's report May 3, 2016 report, stating that Claimant was not a surgical candidate. Claimant emphasized the Dr. Rauzzino noted that there was "no simple surgery at this point," but that mean that there may be a complicated surgery. This ALJ notes that Claimant is taking this casual statement out of context. Dr. Rauzzino is very clear that Claimant had "no acute structural change" from his low back, had "a muscle strain," had "diffuse complaints" and numbness and would only benefit from physical therapy. He went on to state that the diffuse complaints and psychological overlay were the ones interfering with any other recommendations. Further, another surgeon, Dr. Cooper, opined Claimant was not a surgical candidate. This ALJ finds no error or mistake in Dr. Sacha's reasonable deductions of Dr. Rauzzino's report.

67. Next Claimant emphasizes that Dr. Rauzzino ordered MRIs of the thoracic spine and the cervical spine. The thoracic spine films showed degenerative changes and minimal bulging disc at multiple levels without stenosis. The cervical spine MRI showed multiple broad based central disc bulges or protrusions causing mild stenosis. Claimant testified that both Dr. Burris and Dr. Sacha erred in failing to appreciate the damage to Claimant's thoracic and cervical spine since he had no symptoms before the injury and had continued to have symptoms after the injury. Claimant further testified that both physicians minimized the damage to his spine. ALJ Cayce had this information before her at the time she issued her order in this case and these arguments were proffered during the prior hearings. This ALJ also agrees that the information presented does not rise to the level of clear and convincing evidence to overcome the causation opinion of Dr. Sacha in this matter. As found, this information rise to the level of an error or mistake that may allow Claimant to reopen his prior closed claim or litigation.

68. Claimant alleged that Dr. Sacha and Dr. Burris also disregarded the records of Dr. Solomon dated September 7, 2016 because Dr. Solomon diagnosed the TBI and other conditions. It is found that Dr. Solomon did not determine that the TBI

was work related. His conclusions and recommendations focus solely on the low back, which is what was rated in this case. As found, Claimant failed to prove error here.

69. Claimant stated that Dr. Sacha was in error because his report had conflicting information. Claimant mentioned to Dr. Sacha that he had a change in his voice as a result of the work related injury. Dr. Sacha advised him multiple times that he would terminate the DIME examination if he brought this issue up again, but he never did despite Claimant advising him multiple time that his voice changed. He also stated Dr. Sacha made an error because of the conflicting information that was in the report about walking normally but that Claimant continued to have pain. This ALJ finds nothing in conflict. One is Claimant's perception and symptoms, the other are the medical findings and opinions of the DIME physician. A DIME physician is permitted to review the records, make causation determinations based on those records he reviews and determine which, if any, are the conditions related to the claim that are rateable. As found, Dr. Sacha issued a report consistent with his findings that Claimant only had a spine impairment and a minor psychological adjustment problem related to the claim. This ALJ finds no error, mistake or fraud in Dr. Sacha's report or ALJ Cayce's conclusions with regard to the report.

70. Claimant stated that there was an error by Dr. Sacha in misreading the CT of the head dated May 10, 2016. Claimant focusses on the words "seizure vein and tightness since trauma 2 weeks ago." However, these are simply the "indications" or reasons for having the CT performed, not the findings. In fact, as found, the findings of the CT indicate that the cerebral cortical grey matter was normal and all other findings were normal. This ALJ concludes that there was no error here.

71. Claimant alleged that he had dysarthria and anxiety that were diagnosed and then overlooked. Dr. Duren on September 12, 2016 issued two separate reports. One of the reports stated that Claimant complained of 14 different issues including abdominal pain, anxiety, bilateral lumbar radiculopathy, dysarthria, lumbar strain, muscle spasm of back, paresthesias/numbness, radiculopathy, rib pain, spondylolisthesis al L5-S1 level, sprain of ligaments of cervical spine, strain of thoracic region, testicular/scrotal pain and weakness of both lower extremities. As found, Dr. Duren provided only an assessments as lumbar strain, contusion of the left knee and sprain of the right wrist as the work related problems. This ALJ infers that these are the work related diagnosis. This ALJ found particularly persuasive his statements as follows:

> Attempted discussion of the diagnoses, mechanism of injury, preexisting conditions, significance of the previous imaging results, findings of the neurosurgical consultation, cause of ongoing chronic pain and Impairment Evaluations regarding Colorado was unsuccessful and met with hostility and accusations of "you re [sic.] lying " and "you get paid by the insurance company."

72. Claimant testified that Dr. Murray Duren was not authorized to place Claimant at maximum medical improvement on September 12, 2016. He complained that Dr. Wright was his authorized treating physician and was the only authorized treating physician that had the authority to place him at MMI because she was the primary

authorized treating physician. Claimant also argued that Dr. Duren did not place Claimant at MMI on September 12, 2016. As found, there were two separate reports dated September 12, 2016. The first one documented examinations and a list of problems. The second clearly stated that Claimant was released from care, was at MMI without restrictions and may return to work his entire shift. It is found that both Dr. Wright and Dr. Duren were authorized treating physicians within the statutory definition, both worked at the same clinic and were authorized to treat Claimant, the same way that Dr. Counts, Dr. Cava, Dr. Hudspeth, and Dr. Rauzzino were authorized treating physicians working within Concentra. It is found that Dr. Duren was authorized to make an MMI determination and no error or mistake was made with regard to the diagnosis or finding of MMI to support reopening.

73. Claimant contended that records received by Claimant from social security were clear evidence that the prior findings with regard to permanent impairment was incorrect because Dr. Trunell, a chiropractor, in reading an x-ray found that Claimant had spondylolytic spondylosisthesis of the L5 of 15%. As found, this is simply the degree of fracture and slippage of the vertebra, not an impairment rating in accordance with the *AMA Guides to the Evaluation of Permanent Impairment* that are required to be used under by the Act by providers that are Level II accredited by the Division. Nothing in the records indicated that Dr. Trunell is a Level II accredited provider and this ALJ takes judicial notice of Sec. 8-42-101 (3.5) (a) (I) (A), C.R.S. that a chiropractor may only attain Level I status. As found, Claimant has failed to show mistake in the determination of impairment in this matter and ALJ Cayce made no mistake in finding that Claimant failed to overcome the DIME physician's opinions with regard to causation or impairment.

74. Claimant attempted to persuade this ALJ that ALJ Felter failed to provide a penalty because Respondents terminated temporary disability benefits in contradiction to Sec. 8-42-105(3)(C), which states that benefits cannot be terminated until a "the attending physician gives the employee a written release to return to regular employment." Claimant was found at MMI as of September 12, 2016 by an ATP, who released him to full employment. Benefits terminated pursuant to statute upon reaching MMI. This ALJ fails to see an error where benefits were provided in accordance with the Act.

75. Claimant also testified that he had an electronic box put on his back, which caused seizures on multiple dates. While this ALJ reviewed the records regarding the seizures, including the ER visit with Dr. Smith on May 31, 2016, the records do not suggest that the seizures occurred due to the work related injuries. Dr. Smith specifically stated that "patient's seizure history also seems to be consistent with simple partial seizure last night this is way too long for the patient to be postictal or Todd's paralysis. We'll treat with aspirin..." The records prior to this included Dr. Wright's referral for a CT scan of the head that was negative for bleeds, stroke or acute findings. Claimant later reported a seizure like episode on June 14, 2016. This ALJ determines that the evidence clearly indicated that the seizure disorder, stroke or foreign language disorder are not related to the work related injuries. No error, mistake or fraud has occurred that would justify a reopening and the already litigated claims or revisiting the findings, conclusions and orders by the prior ALJs. Further, at the time of the hearing, this ALJ did not perceive

any problems or alterations of Claimant's voice (FAS), volume, pace and tone, throughout the time Claimant was speaking at the January 28, 2022 hearing for over four hours, either while testifying or providing substantive arguments. In fact, this ALJ specifically finds that Claimant was extremely fluent in English, had cohesive thoughts and could articulate complex concepts and legal arguments throughout the hearing, though his arguments were sometimes not focused on the issues that needed to be addressed during the hearing or the specific evidence that supported his arguments.

76. Next Claimant stated that ALJ Felter was in error when he stated that Dr. Duren had not found that there was a TBI in this case as Dr. Duren listed that as part of the complaints that Claimant had. This ALJ interprets the list of "active problems," as complaints that Claimant was concerned about during the course of his care following the work related accident, not as diagnoses. Dr. Duren went on to state what the work related diagnosis were and none included a closed head injury, brain injury, stroke, neck injury or other work related injuries other than those expressed in his diagnosis and the DIME physician's report of impairment. This ALJ finds that Judge Felter did not commit any errors in this regard and Claimant has failed to show that there are any errors that would justify reopening of the claim.

77. Claimant also debated that ALJ Felter committed an error by putting great weight on the opinions of Drs. Duren, Burris and Sacha when determining that Claimant was not permanently and totally disabled. ALJ Felter found that all three advised that Claimant could return to regular duty and found them credible. Claimant again argues that Dr. Duren was not his authorized treating physician and that he did not release him to work. Claimant's arguments are faulty as stated above. As found, the ALJ had the discretion to make credibility determinations and proceeded to do so. Further as found, ALJ Felter's order was unsuccessfully appealed by Claimant. Nothing in the presentation during the hearing or the evidence submitted provides sufficient evidence upon which to base a claim of error sufficient to reopen the previously litigated claim.

78. Claimant contended that Ms. Kristine Harris' vocational report, introduced into evidence by Respondents, supported the arguments that she listed all records that were not listed in either Dr. Burris nor Dr. Sacha's reports, showing their bias against Claimant, which were beneficial to Respondents and minimized his complaints. But even Ms. Harris only relied on those reports that supported that Claimant could return to work. This ALJ finds no error in this. Physicians, like judges, do not have to regurgitate each and every medical record or report they have reviewed and Claimant testified that he had a copy of the DIME packet submissions and, in fact, took more records to the DIME for his consideration, when he was seen by Dr. Sacha. As found, Claimant was not persuasive in this argument.

79. Claimant claimed that ALJ Felter incorrectly denied him penalties as he is entitled to penalties for "negligence of a stranger," citing Sec. 8-42-203, C.R.S. This statutory provision applies to injuries (or death) caused by the negligence of a stranger and Claimant's ability to obtain benefits from that third party, that are not normally paid by under the Act. It also allows Respondents to seek a right of subrogation if Claimant

recovers from that third party tortfeasor. This ALJ finds that there is no error here either as there are no third party tortfeasors.

80. Claimant argued that ALJ Felter erred when he stated that there was no medical evidence to support that Claimant sustained any closed head injury, brain injury, stroke, neck injury, or other physical or psychiatric injury. As found, Claimant mischaracterized ALJ Felter's Finding of Fact 14 as he stated that there were no permanent injuries related to the claim other than those expressed by Dr. Sacha, the DIME physician in this matter. As further found, it is inferred that ALJs Cayce and Felter were not persuaded or found credible any documents or records that indicated that there were any permanent impairments related to the claim other than the lumbar spine injury and the psychological sequelae of the injury that Dr. Sacha found causally related to the March 9, 2016 injuries, despite any evidence to the contrary.

81. This ALJ finds and agrees with ALJ Felter who, at Finding of Fact No. 16 stated in his order of March 17, 2020:

> The Claimant also testified that other doctors who have treated him, including Dr. Cava and Dr. Solomon, had at times placed him on modified duty, diagnosed other work related injuries including, but not limited to, TBI and traumatic changes to his voice patterns, which were either overlooked or ignored or intentionally misrepresented by his other treating doctors, Respondents and ALJ Cayce, among others. The ALJ finds no credible evidence of any such collusion among the treating doctors, Respondents and/or the OAC or DOWC PALJs.

82. Lastly, Claimant made several other allegations, including but not limited to violations pursuant to Sec. 8-43-503(3), C.R.S. as a result of permitted communications with medical providers; failure of Respondents providing the court with a complete set of the medical records, and change of condition. This ALJ finds these arguments without merit and need not address the specific allegations as they are not supported by the facts, the medical records, or legal authority. Despite Claimant's allegations of wrongdoings, mistake and fraud, this ALJ finds none. It is clear that the medical providers, including the DIME physician, while noting the deficits Claimant was experiencing as well as the complaints, did not relate all other conditions to his workers' compensation claim and injuries of March 9, 2016. It is specifically found that even if there were any evidence that could have been inferred or interpreted as complicity among the providers and Respondents, that evidence is not credible and does not support a determination that there was any fraud, error or mistake to support a reopening of the prior decisions in this matter.

j. Claimant's appeal of the Prehearing Conference Orders

83. Claimant testified that he made a request for medical records from Respondents in November 2017. This was after the DIME took place. He explained that he went to Concentra and was provided with Dr. Solomon's records in an envelope. Claimant further stated that he did not recognize that there was a problem until he

received the Solomon records describing a possible head injury. Claimant claimed that Respondents failed to provide the medical records in this matter. This is not credible or persuasive. As found, PALJ Barbo specifically noted that records were to be provided to Claimant following the Order issued on January 24, 2018, it was confirmed to the PALJ by letter, and documented in his order of June 6, 2018 as well as the order of June 25, 2018 that the records were provided.

84. Further, PALJ Goldstein's order of July 27, 2017 also documented multiple instances of production of the claim file. He specifically stated that:

> At the prehearing conference, respondents counsel represented to the court and opposing counsel that she last supplied the complete claim file to attorney Britten Morrell on December 12, 2016. An order allowing Mr. Morrell to withdraw his appearance was entered by the Division on February 27, 2017. Claimant preceded (sic.) pro se (as a self-represented party) from that date until Robert James entered his appearance on May 19, 2017. At the prehearing conference, respondents' counsel represented to the court and opposing counsel that Mr. James requested and respondents provided all medical records and pleadings subsequent to December 12, 2017 (sic.) [2016]. According to respondents counsel, Mr. James did not request and was not provided the entire claims file. Mr. James, claimant's sixth attorney, filed a motion to withdraw on June 7, 2017 which was granted on June 20, 2017.
>
> At the prehearing conference, respondents objected to providing a new copy of the claim file. Respondents argue that production of the claim file was provided on December 12, 2016 and respondents' counsel has provided all requested documents on and after that date. Further, respondents' counsel argues that the parties agreed that this matter should first proceed to hearing on the issue of overcoming the DIME, and that the claim for permanent total disability benefits should be held in abeyance. Accordingly, respondents' counsel argues, claimant has everything he needs to litigate that issue, and there is no need to provide any documents in addition to those already provided.

PALJ Goldstein ordered supplementation of the claim file for those documents between the time they had been provide previously and the time of the order. This ALJ finds little to show that Claimant was not provided the complete claim file and medical records by Respondents or that they acted in any way inappropriately in this case to justify a reopening of all claims.

85. Claimant also maintained that PALJ Barbo committed an error because he denied Claimant the right to proceed on penalties for failure to admit or deny Claimant's injuries as required by law. Claimant agreed that he received the Notice of Contest Respondents filed on March 18, 2016, which was confirmed by PALJ Barbo according to the documents filed with the Division. Claimant alleged that they could not have been filed by March 18, 2016 because it was not until April 8, 2016 when the MRI of his lumbar spine was performed and his providers knew exactly what was wrong with him. This ALJ finds no error here, either. The statutory provision requiring notice is to admit or deny the claim within 20 days of having notice of the claim, not the specific injuries.

86. Claimant further seems to indicate that, since PALJ Barbo allowed the penalty issues to proceed to hearing that Claimant had already "proved" the right to the penalties. This is not the case. As found, Claimant failed to uphold his burden of proof in these matters and penalties were denied.

87. Claimant also indicated he was appealing multiple other prehearing conference orders, including PALJ Sandberg's, Broniak's, Phillip's and Steninger's. This ALJ finds no meritorious arguments here. As found, the orders were properly addressed by the prehearing administrative law judges who have the authority to address prehearing matters, discovery and ripeness to control the discovery and litigation process and proceeded to appropriately do so.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or

interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936). A workers' compensation case is decided on its merits. C.R.S. Sec. 8-43-201.

B. Reopening

Section 8-43-303(1) C.R.S., authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including *reopening* on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition. See *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). There is no basis to reopen a claim if the reopening does not lead to the award of additional benefits. *Richards v. ICAO*, 996 P.2d 756 (Colo. App. 2000).

Claimant has the burden of proof in seeking to reopen a claim. *Richards v. Indus. Claim Appeals Office*, 996 P.2d 756 (Colo.App.2000). The reopening authority is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ. *Renz v. Larimer County Sch. Dist. Poudre R-1,* 924 P.2d 1177 (Colo.App.1996). See *Berg v. Ind. Claim Appeals Off. of Colorado*, 128 P.3d 270 (Colo. App. 2005).

Claimant raised several issues in this matter. However, the matter of issue preclusion should be addressed first, before the merits of reopening the claim.

1. Issue preclusion

Under issue preclusion "once a court has decided an issue necessary to its judgment, the decision will preclude re-litigation of that issue in a later action involving a party to the first case." *Youngs v. Industrial Claim Appeals Office*, 297 P.3d 964, 974 (Colo. App. 20l2) (quoting *People v. Tolbert*, 216 P.3d 1, 5 (Colo. App. 2007)); see also *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001). See also *Davis v. Renfro & Co.,* ICAO, W.C. No. 4-960-859-008 (November 21, 2021)

Issue preclusion completely bars re-litigating an issue if the following four criteria are established: (1) the issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) the party against whom issue preclusion is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d at 47. Issue preclusion applies to administrative proceedings, including those involving workers' compensation claims. *Id.*

Claimant seeks to address the issues of causation, maximum medical improvement, permanent partial disability benefits, medical benefits, penalties, appeals of prehearing orders and permanent total disability benefits based on error, mistake, fraud or change of condition. However, these are identical issues as addressed by ALJ Cayce and ALJ Felter in their orders, which Claimant appealed and were upheld.

Claimant previously raised most, if not all, his allegations of mistake and fraud in the prior proceedings before ALJ Cayce and ALJ Felter. He maintained these allegations until exhausting his appeal rights. For example, all records either were tendered at the time of the litigation, were submitted to either ALJ Cayce or ALJ Felter for consideration or were available to all parties, including Claimant with some due diligence. Claimant was aware of who had treated, evaluated or examined him and had the same access to the records as Respondents. ALJ Felter addressed issues that concerned the alleged errors and Claimant further addressed the issue of error before ALJ Cayce. As such, Claimant is barred from re-litigating the same issues, or any issues that could have been previously raised, by the doctrine of issue preclusion.

2. Issue of Error or Mistake

Reopening may be granted based on any mistake of fact that calls into question the propriety of a prior award. Section 8-43-303(1), C.R.S.; *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). When a party alleges that a prior award is based on mistake, the ALJ must determine whether a mistake was made, and if so, whether it is the type of mistake which justifies reopening the case. *Travelers Insurance Co. v. Industrial Commission*, 646 P.2d 399 (Colo. App. 1981). In determining whether a particular mistake of fact or law justifies reopening, the ALJ may consider whether the mistake could have been avoided if the party seeking reopening timely exercised procedural or appellate rights prior to entry of the award. *Industrial Commission v. Cutshall*, 164 Colo. 240, 433 P.2d 765 (1967); *Klosterman v. Industrial Commission*, 694 P.2d 873 (Colo. App. 1984); *In re Claim of Davis*, 111221 COWC, 4-960-859-008 (Colorado Workers' Compensation Decisions, 2021)

A mistake in diagnosis has previously been held sufficient to justify reopening. See *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo.App.1989)(under circumstances where there is a mistake in diagnosis because the medical technology available to the treating physician at the time of the initial order is limited, a petition to reopen based on a mistake of fact may properly be granted). At the time a final award is entered, available medical information may be inadequate, a diagnosis may be incorrect, or a worker may experience an unexpected or unforeseeable change in condition subsequent to the entry of a final award. When such circumstances occur, Section 8-43-303 provides recourse to both the injured worker and the employer by giving either party the opportunity to file a petition to reopen the award. The reopening provision, therefore, reflects a legislative determination that in "worker's compensation cases the goal of achieving a just result overrides the interest of litigants in achieving a final resolution of their dispute." *Standard Metals Corp. v. Gallegos*, *supra,* 781 P.2d at 146 (quoting *Grover v. Indus. Commission*, 759 P.2d 705 (Colo.1988)); *Berg v. Ind. Claim Appeals Office*, 128 P.3d 270, 2005 WL 1903825 (Colo. App. 2005).

Claimant's request for reopening fails here, even if the allegations of mistakes were true, they are not the types of mistakes that justify reopening. By way of example, Claimant alleges that the DIME physician did not specifically address every medical report in the DIME report. Assuming for the sake of argument that this is a mistake, it is not the

type of mistake that would justify reopening. It is not material to the prior judicial decision upholding the DIME's ultimate opinion, specifically after the matter was already litigated and upheld through the appellate process. A second example is that ALJ Cayce cited that only one of the five page report of Dr. Frensley was in the record, which may have been considered a mistake. However, the report itself was insufficient as it provided no new evidence, diagnosis or causation analysis to support Claimant's allegation of impairment, thereby making this alleged mistake inconsequential and a harmless error. Further, the Court of Appeals record introduced into evidence by Claimant (Exhibit 7) showed that the complete report was available for review to both the panel and to the Court of Appeals either of which could have addressed the issue of error or mistake previously raised by Claimant and did not.

Next, the new information and medical records in Claimant's exhibits do not provide evidence upon which to link Claimant's conditions of head injury, stroke, dysarthria, anxiety, or other psychological conditions to the lumbar spine and psychological coping impairments related to the March 9, 2016 work related accident. The records that were before ALJ Cayce included these diagnosis, and ALJ Cayce did not consider them persuasive. This ALJ does not find them persuasive either or that they represented a dispute regarding a genuine issue of material fact. Accordingly, this ALJ determines that the request to reopen is no more than a bid by Claimant to re-litigate already determined issues.

Claimant requested reopening based on mistake and is relying on "new medical evidence," including Ms. Lindsey Kidd's report of March 14, 2019, Dr. Gist's Work Status Reports, Dr. Marquart's radiology reports. These records do not provide causation analysis or any other analysis that might support a reopening due to mistake. The "mistake" alleged by Claimant here is not the type of mistake which justifies a reopening. See *Department of Agriculture v. Wayne,* 30 Colo. App. 311, 493 P.2d 638 (1971) (ALJ does not abuse discretion if he denies petition to reopen because facts and evidence existed at time of prior order, and should have been within the knowledge of parties at that time). As found and concluded, the evidence provided by Claimant in the 1026 pages of records, is not sufficient to justify reopening in this matter.

Also as found, nothing in either Dr. Cooper's or Dr. Hudspeth's records showed findings or diagnosis that would change the decision made by ALJ Cayce by this ALJ. As found, Dr. Frensley's opinion does not support a different conclusion, that Claimant failed to overcome the DIME opinion by clear and convincing evidence. As found, the MRI report of November 15, 2017 shows nothing that would change the decision made by ALJ Cayce on November 9, 2017 as the MRI findings are consistent with an ongoing degenerative condition and there are no causation analysis that relates the continued degenerative process to the March 9, 2016 work related injuries sufficient to supports reopening in this matter. As found, Dr. Sacha did not receive a "call" but was only following the instructions on the paperwork submitted by the parties to review body parts pursuant to the W.C.R.P. Rule 11 and "was asked to review the left side," which Dr. Sacha concluded was not work related. As found, Dr. Solomon did not determine that the TBI was work related and his conclusions and recommendations focus solely on the low back,

which is what was rated in this case. As found, both Dr. Durren and Dr. Wright were authorized treating physicians legally qualified to make determinations with regard to MMI.

Neither did PALJ Barbo err when he denied Claimant the ability to proceed to litigate the issue of penalties for failure to admit or deny the claim in a timely manner. Sec. 8-43-203 (1) (a), C.R.S. States in pertinent part that "the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested…" Sec. 8-43-101(1) requires Respondents to report an injury within 10 days if there is lost time or a permanent physical impairment. Nothing in either statutory provision requires the parties to wait until they know the nature or extent of the injuries to file a notice of contest. Here, Respondents filed a NOC by March 18, 2016, nine days after the injury and complied with the reporting requirements of the Act. As found, PALJ Barbo did not err in denying Claimant the ability to proceed to hearing on this issue as Claimant conceded that Respondents had filed and that Claimant received the NOC.

Claimant's request for reopening fails because, even if the allegations of mistakes and fraud were true, Claimant failed to prove that additional benefits should be awarded. For example, Claimant argues that Dr. Sacha's impairment rating was incorrect or in error, but without credible evidence that the rating was anything but 8% whole person impairment, no further PPD benefits can be awarded. Further, even if the mistake were true, the authorized treating providers, nor any other providers, are recommending treatment at this time, either for the low back or the sequelae of psychological problems related to the low back, at this time. Neither have any other vocational experts opined that Claimant is permanently and totally disabled. Therefore, Claimant has failed to show that there is any evidence to support any other decisions than the ones already litigated and concluded.

3. Issues of fraud

To reopen the claim on the ground of "fraud," a claimant must prove the following: (1) a false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth or concealment of a material existing fact; (2) knowledge on the part of one making the representation that it is false; (3) ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) making of the representation or concealment of the fact with the intent that it be acted upon; (5) action based on the representation or concealment resulting in damage. *Tygrett v. Denver Water*, W.C. No. 4-979-139-002 (December 17, 2021).

Claimant previously raised most, if not all, his allegations of fraud in the prior proceedings. He maintained those allegations until exhausting his appeal rights, including allegations of collusion or violations of the Act and rules by Respondents in allegedly contacting the medical providers, medical providers mishandling or misdiagnosing

Claimant and providers failure to consider all the medical evidence in the matter as outlined in the findings above.

Allegations that Respondents contacted the DIME, that Dr. Sacha and Dr. Burris minimized his injuries or failed to appropriately document the injuries in their reports, that providers failed to acknowledge the pars defect or spinal fracture, or properly documented a preexisting hand fracture, that Dr. Wright's August 22, 2016 or Dr. Burren's September 12, 2016 reports were falsified or changed by someone; that the parties colluded with the DIME physician by contacting him; that Dr. Sacha or the parties communicated or colluded in this matter before the DIME physician issued his report or even that Claimant was denied discovery, are all issues that have been addressed and failed meet the harsh requirements of fraud in order to support a reopening of the claim in this matter. It is specifically found that even if there were any evidence that could have been inferred or interpreted as complicity among the providers and /or Respondents, that evidence is not credible and does not support a determination that there was any fraud to support a reopening of the prior decisions in this matter. Because Claimant has raised and exhausted his appeal rights, and because he failed to prove by a preponderance of the evidence that fraud occurred in this matter, Claimant's request to reopen the claim based on fraud is denied and dismissed.

4. Change in condition

While Claimant stated that he had had a change in condition, no evidence to support a change in condition was presented despite this ALJ's request that Claimant state what evidence was being presented to support a change in condition. In fact, all the medical records submitted were either records provided to ALJ Cayce or ALJ Felter or were available to Claimant in order for him to provide them to ALJ Felter at the December 10, 2019 hearing and/or the continued hearing March 2, 2020 when addressing future medical benefits. Claimant failed to do so. Respondents argue that Claimant was, in fact, improved compared to his presence at the prior hearings. While this ALJ has no present impression of the Claimant's status prior to the hearing held on January 28, 2022, Claimant advanced no persuasive testimony, evidence or argument that tended to show a worsening or change in condition. Claimant failed to show that there was a change in condition to merit a reopening in this matter.

C. Other issues

No other issues need be addressed by this order as Claimant failed to prove reopening based on error, mistake, fraud or change in condition. All other issues are moot.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's has failed to prove by a preponderance of the evidence that he is entitled to reopen the March 9, 2016 claim based on error, mistake, fraud or change in condition.

2. Claimant's claim for further benefits are denied and dismissed and the March 9, 2016 claim is closed.

3. All other issues are moot as Claimant failed to reopen the claim.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 8th day of March, 2022.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-099-706-003

ISSUES

I. Whether Claimant is entitled to reinstatement of temporary disability benefits as of July 13, 2021.

II. Whether Respondents are subject to penalties based on their termination of Claimant's temporary disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted injury when she struck the left side of her forehead on a steel beam on January 31, 2019, while employed by Employer.
2. Claimant's date of birth is February 17, 1953, making Claimant 65 on the day of the accident. (Ex., p. 58.)
3. As a result of her work injury, Claimant was diagnosed with a mild traumatic brain injury.
4. Claimant was eventually evaluated for her work-related problems on November 8, 2019, by Dr. David Reinhard, the agreed to authorized treating physician who diagnosed Claimant with head trauma resulting in post concussive syndrome.
5. On December 19, 2019, Dr. Reinhard provided an opinion that Claimant should not work over 4 hours a day, 4 days a week. Work restrictions were provided of no ladders, no waiting on customers, and no activities that required significant new learning, speed of task completion, or multitasking. (Claimant's Exhibit 8 #58)
6. Medical treatment was delayed until an order was entered by ALJ Kara Cayce on March 21, 2021, ordering Respondent's to provide the medical care recommended by Dr. Reinhard. (Claimant's Exhibit 6)
7. While waiting for medical care and treatment Claimant began work with ARC as a "volunteer" at the request of her employer on April 2, 2019. (Claimant's Exhibit 2 #7)
8. Respondent Insurer filed a revised General Admission of Liability on May 2, 2019, with an Employers Supplemental Report of Return to Work attached indicating that Claimant returned to work on April 2, 2019, at reduced wages. (Claimant's Exhibit 2 #10)
9. This modified job offer was provided on [Employer redacted]'s letterhead dated March 20, 2019. (Claimant's Exhibit 10 #61) Claimant began work at ARC as a volunteer working Monday-Thursday 10:00 am to 5:30 pm, with 30-minute breaks at $13.90 per hour. Claimant's doctors had provided restrictions of no stairs or ladders, kneeling or squatting. Sedentary duty 33% of the time. Claimant was requested to

sign an acknowledgement that she remained an employee of [Employer redacted]'s while performing the alternative modified duty with Bowles ARC Thrift Store and remained subject to the Employers attendance and HR policies. (Claimant's Exhibit 10 #62-63)

10. Claimant worked this modified job until March 15, 2020, when the Governor of the State of Colorado issued an emergency public health order as a result of the COVID pandemic. Claimant has a pre-existing condition of asthma that she was receiving active medical care for from Dr. Goodman. Dr. Goodman provided a medical note indicating that Claimant should avoid contagious environments and be able to socially distance for a period of 6-8 weeks. (Claimant's Exhibit 11 #71)

11. On March 16, 2020, Dr. Goodman issued a "Certificate to Return to Work/School." In this Certificate, he stated that Claimant should socially distance for the next 6-8 weeks and avoid contagious environments.

12. On May 15, 2020, Dr. Goodman, the physician who was treating Claimant for her asthma, completed another "Certificate to Return to Work/School." He stated that due to her moderately severe asthma, Claimant had to shelter at home longer due to the COVID 19 crisis. While he said Claimant could return to work on June 15, 2020, he also stated that Claimant should shelter at home until there was no longer a Covid 19 Crisis. (Claimant's Exhibit 12, #72) To the extent these two Certificates – work restrictions - conflict with one another, the ALJ finds that Dr. Goodman determined Claimant should shelter at home until the COVID 19 crisis was over.

13. On May 20, 2020, Respondent attempted to offer Claimant "volunteer" work with ARC using new work restrictions issued by Dr. Reinhard limiting Claimant's work to 4 hours a day for 4 days a week. In addition, he stated that Claimant should not use ladders, wait on customers, and not engage in activities that required significant new learning, speed of task completion, or multitasking. (Claimant's Exhibit 8 #58 and 12 #73-78) Claimant was unable to begin work in May of 2020 due to her pre-existing condition of asthma. As found above, Dr. Goodman, her asthma physician, provided a note indicating Claimant has moderately severe asthma and restricted Claimant to shelter at home until there was no longer a Covid 19 crisis. Thus, Claimant was precluded from working outside of her home by Dr. Goodman. (Claimant's Exhibit 12 #72)

14. Respondent filed an Amended General Admissions of Liability on August 13, 2020 & September 9, 2020, admitting for temporary partial disability benefits through March 25, 2020, and temporary total disability from March 26, 2020, through July 25, 2020, indicating that -0- temporary total disability was due for that period because the amount of unemployment received was greater than Claimant's temporary total disability rate. Respondent then began payment of temporary total disability at the rate of $53.46 per week because Claimant was receiving unemployment at the rate of $219.00 per week. (Claimant's Exhibit 3 #11 & Exhibit 4 #15)

15. On June 30, 2021, Dr. Reinhard, an authorized treating physician, approved another modified duty position with ARC. (Claimant's Ex. 18, #98-99)

16. On July 2, 2021, and based on Dr. Reinhard's approval, another modified job offer was made to Claimant. The job offer required her to begin modified work on July 13, 2021, at the ARC Thrift Store for 4 hours a day 4 days a week. The modified job offer stated that the job duties were "approved by her treating physician." However, Claimant was not only treating with Dr. Reinhard, her workers' compensation physician, she was also treating with her personal physician, Dr. Goodman, for her asthma. Although not an authorized treating physician, there is no indication Dr. Goodman signed off on the July 2, 2021, job offer.

17. On July 13, 2021, Claimant appeared for her shift at ARC. Upon arriving for her shift, a supervisor, Christina, requested Claimant sign a COVID release form. Claimant told Christina that she did not want to sign it because she was over the age of 65 and has asthma. Claimant noted that the COVID form indicates that she should not volunteer due to her age and asthma. The form specifically states that:

> Due to the state of emergency resulting from the COVID -19 virus, ARC Thrift stores is asking all volunteers to agree to the following guidelines while volunteering. *If you are in at risk category for this virus we ask that you do not volunteer. At risk categories included people aged 65 and older, individuals with chronic lung disease, asthma, or serious heart conditions, people who are immunocompromised, pregnant women, and individuals determined to be high risk by a licensed healthcare provider* (emphasis in original). (Claimant's Ex. 12, #81)

Thereafter, Christina looked at the form and went upstairs to the office and returned and told Claimant that the form needed updating and they would finish the paperwork later. Despite the form stating that Claimant should not volunteer due to her age and asthma, Claimant worked an entire shift that day.

18. On July 14, 2021, Claimant appeared and worked a second shift. At the end of her shift, Claimant was approached by the floor supervisor to complete her paperwork. Claimant testified that he requested that they complete the paperwork in the back room by the time clock. Claimant did not want to sign the ARC Thrift Volunteer Agreement and Release of Liability that is quoted above. As noted above, Claimant is over 65 years old and has asthma. The form itself indicates that people who are risk as defined by ARC are advised that they should not volunteer. Claimant did eventually sign the document believing that there had been changes to the form previously provided and that she was not releasing ARC from liability if she contracted COVID and sustained serious illness or death. (Claimant's Exhibit 19)

19. Claimant did sustain a brain injury and was presented with this paperwork in a very busy, noisy open area with a number of people working and talking called the "back room". Claimant described the area as a very large room where people are sorting, vendors are coming in and out by the time clock after she had worked her shift and was getting ready to leave. Claimant was struggling with the noise and confusion of the back-room area. The work in this area had increased her symptoms from the work-related head injury. Claimant felt confused, foggy and was struggling by the end of the shift.

20. The floor supervisor then requested a copy of Claimant's driver's license. Claimant did not want to give them a copy of her driver's license because she was standing by the file cabinet in the back room, which is where she believed the paperwork, including a copy of her license, would be stored. Claimant had previously worked there, and at that time the filing cabinet was located in a locked supervisor's office, which was a secure area. Given the new placement of the file cabinet, and all of the different types of people who were now "volunteering," Claimant did not feel secure with giving a copy of her driver's license to keep to the supervisor who would place it in the file cabinet.

21. Based on the totality of the circumstances, the ALJ finds that Claimant's reluctancy to provide a copy of her driver's license was reasonable due to her concerns about the safety of her driver's license. The ALJ is mindful that Claimant did not voice her concerns to ARC, but neither did ARC ask Claimant as to why she did not want to provide them a copy of her driver's license.

22. Claimant's supervisor then went upstairs, came back down, and told Claimant that she had to leave and that Claimant should call ReEmployability and her employer to get the matter straightened out.

23. As directed by ARC, Claimant contacted ReEmployability – the intermediary who was assisting with arranging Claimant's volunteer work at ARC - and her attorney in an attempt to deal with the issue. ReEmployabillity contacted Claimant's employer via email regarding the matter. Despite Claimant contacting ReEmployability there is a lack of credible and persuasive evidence that ReEmployability, Claimant's employer, or ARC ever contacted Claimant again about the issue and attempted to resolve situation. In essence, there was a breakdown in communication between Claimant, ReEmployability and ARC and why Claimant had to provide a copy of her driver's license and how to resolve the matter.

24. Emails from Cannecia Lowery at ReEmployability show that at 3:55 pm on July 14, 2021, they contacted ARC confirming that Claimant was asked not to return to ARC until she was able to present a photo ID. She was trying to confirm that information. (Claimant's Exhibit 20 #108) But there is a lack of credible and persuasive evidence that they discussed the matter with Claimant. Had they done so, they might have also realized that ARC already had a copy of Claimant's driver's license from her prior volunteer work with ARC.

25. The email response from Stephanie at ARC confirmed that it was a requirement that ARC take a copy of her identification card and confirmed that Claimant was told to contact ReEmployability because they needed to verify that Claimant was who she said she was. Despite the issue being discussed between ReEmployability and ARC, there is a lack of credible and persuasive evidence that this requirement was again discussed with Claimant and that Claimant was given an opportunity to resolve the matter with ARC.

26. As directed by ARC, Claimant did not return and was not contacted again by ReEmployability, ARC or Employer regarding returning to volunteer work at ARC. After contacting ReEmployability, no one contacted Claimant to advise her that she would have to provide a copy of her drivers' license to ARC in order to volunteer

there. Moreover, no one advised Claimant that her failure to provide a copy of her driver's license would be seen as a failure to accept modified employment and that her disability benefits would be terminated. Instead, Claimant received notification that her benefits were being discontinued because she did not appear for her modified work assignment at ARC – even though Claimant appeared for her modified work assignment and completed two shifts.

27. In order to volunteer at ARC, Claimant was required to sign an Employee Acknowledgement that she remained an employee of [Employer redacted]'s while performing alternative modified duty with the ARC Thrift Store in Littleton, Colorado. (Claimant's Exhibit 18 #104) There was also a statement that Claimant was required to comply with [Employer redacted]'s policies regarding employment issues, including attendance and HR policies. The Employee Acknowledgement did not indicate Claimant was also required to comply with ARC's HR policies. Again, the Employee Acknowledgement made clear Claimant was still an employee of [Employer redacted] and had to abide by [Employer redacted]'s HR policies.

28. Stephanie Raynor testified that she was the ARC assistant manager in July of 2021 at the Littleton store. She indicated that ARC has a number of volunteers from various systems working at the store. Some of them are referred through the court systems, others from the county food stamp assistance, in addition to the workman's compensation referred volunteers.

29. Ms. Raynor testified Claimant showed up at ARC and worked two full shifts. She testified that Claimant worked on July 13, 2021, and did not complete the required paperwork until the end of her shift on July 14, 2021. She indicated that because of some fraudulent activity that had been occurring only certain ARC employees could complete the employee paperwork. She also testified that she did not know Claimant and was not aware that Claimant had worked for ARC in 2019-2020, and provided a copy of her driver's license, because she did not begin working for ARC until October of 2020 after Claimant had already left ARC in March of 2020.

30. Ms. Raynor also testified that when she was reviewing paperwork in anticipation of testifying for the hearing she found Claimant's file from her earlier volunteer work with ARC that had a copy of Claimant's photo id in the file. Ms. Raynor testified that there are monthly audits of the files by corporate to confirm ARC's obligations to report hours particularly to the courts.

31. Ms. Raynor also testified that it was ARC's practice to have the supervisor complete the initial forms by asking the volunteer the questions and then circling the answers, then having the volunteer sign the form as well as themselves. (Respondent's Exhibit E #22)

32. Ms. Raynor testified that on July 14, 2021, ARC did actually have a copy of a photo ID confirming Claimant's identity from the previous period of time that she worked there that was located in the filing cabinet located in the back-room area by the time clock. As a result, the request for Claimant to provide a copy of her driver's license or a photo ID was duplicative and not necessary.

33. Ms. Raynor testified that if Claimant is over 65 and has asthma, that she is in a category of people that ARC indicates should not volunteer because ARC workers are "on the front line" of potential COVID exposure. She also testified that she is not able to change ARC policy. As a result, the job offered to Claimant was not reasonably available to Claimant in the first instance.

34. As found, Claimant has moderate to severe asthma and was over 65 at the time the job offer was made. As a result, based on ARC's policy, Claimant was not able to volunteer at ARC and perform the modified duty offered to her. Thus, [Employer redacted], through ReEmployability and Arc, offered Claimant modified employment for which Claimant was not eligible to perform. Therefore, [Employer redacted] did not provide Claimant a valid – or reasonable – job offer of modified employment in the first instance since ARC's policies precluded Claimant from volunteering there.

35. However, despite not providing Claimant a reasonable job offer in the first instance, Claimant did not refuse the offer of modified employment. Claimant appeared and started the modified work. The fact that her modified employment did not continue because Claimant did not provide a photo ID and ReEmployability never got back to her in an attempt to resolve the matter, does not negate the finding that Claimant accepted and started her offer of modified employment. Thus, Claimant began the modified employment.

36. Based on the circumstances, the ALJ also finds that Claimant did not constructively refuse an offer of modified employment. Instead, after beginning the modified employment, a dispute arose between Claimant and ARC about obtaining a copy of Claimant's driver's license and such dispute was not resolved. This merely resulted in Claimant not being allowed to continue performing the modified employment.

37. On August 27, 2021, and despite Claimant starting the modified employment, Respondents filed an Amended General Admission of Liability that terminated Claimant's disability benefits.

38. Because Claimant started the modified employment and worked two shifts, the ALJ finds that the unilateral termination of Claimant's temporary disability benefits was not the action of a reasonable insurer.

39. There is a lack of credible and persuasive evidence that Claimant was terminated from her employment with Employer - [Employer redacted]. Therefore, the ALJ will not make any at-fault findings regarding that issue.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a

preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is entitled to reinstatement of temporary disability benefits as of July 13, 2021.

Section 8-42-105(3)(d)(I), C.R.S., authorizes the termination of TTD benefits when "the attending physician" gives the claimant a "written release to return to modified employment, such employment is offered in writing, and the employee fails to begin such employment." Because the respondents seek to terminate benefits under this section, they have the burden of proof to establish the factual predicates for application of the statute. *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (I.C.A.O. December 16, 2004), citing *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P.3d 790 (Colo. App. 2000).

There may be more than one "the attending physician." *Popke v. Industrial Claim Appeals Office, 944 P.2d 677* (Colo. App. 1997). If there is a conflict between the attending physicians concerning whether or not the claimant is able to perform modified employment the ALJ may resolve the conflict as a matter of fact. *See Bestway Concrete v. Industrial Claim Appeals Office,* 984 P.2d 680 (Colo. App. 1999); *Burns v. Robinson Dairy, Inc.,* 911 P.2d 661 (Colo. App. 1995) (concerning physician's release to regular employment).

The Industrial Claim Appeals Office has held that under a proper interpretation of the statute the employment offered to the claimant must be "reasonably available under an objective standard." Whether the offered employment was reasonably available under an objective standard is one of fact for determination by the ALJ. *Simington v. Assured Transportation & Delivery,* W.C. No. 4-318-208 (I.C.A.O. MARCh 19, 1998). Factors that may be considered include the distance the claimant is required to travel and the availability of transportation to reach the employment. *Ragan v. Temp Force,* W.C. No. 4-216-579 (I.C.A.O. June 7, 1996).

Moreover, a failure to begin temporary modified duty includes a constructive failure to begin. *See Liberty Heights at Northgate v. Indus. Claim Appeals Office of State & Carol Vawser*, 30 P.3d 872 (Colo. App. 2001)

In this case, Respondents offered Claimant a job with ARC that was not reasonably available to her. The job offered to Claimant through ARC was not recommended for people 65 and over or those with asthma – due to the COVID 19 pandemic. At the time the job was offered to Claimant, Claimant was over 65 and suffered from asthma. As a result, the job was not reasonably available to Claimant in the first instance.

Moreover, even though the job was not reasonably available to Claimant due to her age and asthma, Claimant did start her modified employment. As found, Claimant started the modified employment worked her first two shifts with ARC until a dispute arose as to whether Claimant had to provide a copy of her ID or her drivers' license to ARC – even though they already had a copy. Claimant was directed to contact ReEmployability and her employer to resolve the issue. Claimant did contact ReEmployability as directed and they contacted her employer. However, neither ReEmployability nor Claimant's employer contacted Claimant in an attempt to resolve the matter and explain to Claimant why they needed a copy of her driver's license to discuss Claimant's concerns about the security of her drivers' license. Moreover, had such a discussion occurred, ARC might have realized that they already had a copy of her driver's license and a request for such was unnecessary or that they could find a safer place to keep Claimant's driver's license.

In addition, the ALJ has considered whether Claimant's conduct constituted a constructive failure to begin her modified employment. Under the circumstances, the ALJ finds and concludes that Claimant did not constructively fail to accept her modified employment. As found, Claimant started her employment as directed and worked two shifts. The court also found that the reason Claimant did not continue her modified volunteer work is because Claimant and ARC had a dispute about whether Claimant had to provide a copy of her driver's license – which ARC already had.

The court also wants to point out that it appears the disagreement and communication problems between Claimant, ARC, and ReEmployability were magnified due to Employer – [Employer redacted] – outsourcing the provision of modified employment to two other companies – ReEmployability and ARC. In other words, Employer – [Employer redacted] – did not directly offer and manage the offer of Claimant's modified employment and Claimant's modified employment. Instead, they

got two intermediaries involved – which only complicated the offer and acceptance of the modified employment and Claimant's continuation of her modified employment.

As a result, the ALJ finds and concludes that the job offer to Claimant was not reasonably available to Claimant in the first instance because at the time of the offer, Claimant was over 65 and had asthma. Thus, Claimant could not volunteer for ARC. The ALJ also finds and concludes that Claimant actually started her modified employment. Therefore, the ALJ finds and concludes that Respondents did not establish by a preponderance of the evidence that Claimant refused an offer of modified employment and that her temporary disability benefits should be terminated. As a result, Claimant is entitled to temporary disability benefits as of July 13, 2021, and continuing.

II. Whether Respondents are subject to penalties based on their termination of Claimant's temporary disability benefits.

Penalties of up to $1,000 per day may be imposed under § 8-43-304(1) based on an objective standard of negligence. Negligence is determined by the reasonableness of the insurer's actions and does not require the insurer's knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312, 1313 (Colo. App. 1997). The imposition of a penalty, therefore, is a two-step analysis. First, it must be determined a violation of an order, rule or statute has occurred. It then must be found that despite the violation, the act or failure to act was not accompanied by circumstances that would have led a reasonable insurer to proceed as it did. Such circumstances typically are by their nature beyond the control of the insurer. Examples would include sudden illness of the individual responsible, power outages, faulty information, insufficient notice, unsound official advice, or horrific weather conditions, among others. Thus, as long as an insurer takes the action that a reasonable insurer would take to comply with either a lawful order, rule or a provision of the Workers' Compensation Act, penalties will not be imposed. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094, 1097 (Colo. App. 1996); *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

Section 8-42-105(3)(d)(I) provides that temporary disability benefits terminate when:

> [T]he attending physician gives the claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

Moreover, WCRP 6-1(A)(4) provides that temporary disability benefits can be terminated without a hearing by filing an admission of liability form with:

> [A] letter to the claimant or copy of a written offer delivered to the claimant with a signed certificate indicating service, containing both an offer of modified employment, setting forth duties, wages and hours and a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions.

Section 8-42-105(3)(d)(I) works in tandem with WCRP 6-1(A)(4). In order to terminate temporary disability benefits under Section 8-42-105(3)(d)(I) and WCRP 6-1(A)(4), the Claimant must be offered modified employment, that has been approved by an authorized treating physician, and must fail to begin such employment.

In this case, Claimant was receiving temporary disability benefits in July of 2021. On July 2, 2021, Employer made an offer of modified employment that complied with WCRP 6-1(A)(4). On July 13, 2021, Claimant began her modified employment and worked on July 14, 2021 as well. As found, a dispute arose as to whether Claimant had to provide a copy of her driver's license and Claimant was never called back to continue her modified employment. As further found, Claimant's employer – [Employer redacted] – has not terminated Claimant.

On August 27, 2021, Respondent filed an Amended General Admission of Liability terminating Claimant's temporary disability benefits. This was despite the fact that Claimant had began her modified employment. To the extent there was a factual dispute as to whether Claimant constructively failed to begin, such matter was a factual dispute that was subject to resolution through a hearing and not the automatic termination of benefits pursuant to Section 8-42-105(3)(d)(I) and WCRP 6-1(A)(4). As a result, Respondents violated 8-42-105(3)(d)(I) by unilaterally terminating Claimant's temporary disability benefits after she had accepted and started her modified employment.

In addition, the action of terminating Claimant's temporary disability benefits after accepting and starting the modified employment was not accompanied by circumstances that would have led a reasonable insurer to proceed as it did. Because Claimant accepted and started her employment, there was no basis to unilaterally terminate her benefits without a hearing based on Respondent's contention that Claimant refused to comply with the job offer. As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that she is entitled to penalties.

The ALJ has wide discretion in determining the amount of penalties to assess. In determining such, the ALJ can consider the harm to Claimant. In this case, there was a lack of persuasive evidence that Claimant suffered substantial harm due to her temporary disability benefits being terminated. On the other hand, the ALJ finds that her benefits were terminated improperly. The ALJ has also taken into consideration the amount of temporary disability benefits being paid to Claimant at the time they were improperly terminated. As a result, the ALJ finds that Respondents should be assessed a penalty of $50.00 per day for the improper termination of Claimant's temporary disability benefits. Penalties shall run from August 27, 2021, the date the GAL was filed that terminated Claimant's disability benefits, through the date of the hearing, January 6, 2022.

Apportionment of Penalties

If a penalty is assessed under § 8-43-304, C.R.S. the ALJ must apportion payment of the penalty between the aggrieved party and the Colorado uninsured employer fund created by § 8-67-105 C.R.S. except that the amount apportioned to the

aggrieved party shall be a minimum of twenty-five percent of any penalty assessed. The ALJ determines that 65% of the penalty shall be apportioned and paid to Claimant and 35% shall be apportioned and paid to the Colorado Uninsured Employer Fund.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall reinstate Claimant's temporary disability benefits as of July 13, 2021.
2. Respondent shall pay a penalty in the amount of $50.00 per day from August 27, 2021, through January 6, 2022, which is 132 days. Therefore, the total penalty is $6,600.00.
3. Respondent shall pay 65% of the penalty - $4,290.00 - to Claimant.
4. Respondent shall pay 35% of the penalty - $2,310 - to the Colorado Uninsured Employer Fund.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-175-318-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his right eye arising out of the course of his employment with Employer on May 4, 2021.

2. Whether Claimant established by a preponderance of the evidence an entitlement to medical benefits.

3. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability benefits from June 5, 2021 until terminated pursuant to statute.

FINDINGS OF FACT

1. The parties stipulated that Claimant's average weekly wage at the time of his injury was $800.26.

2. Claimant was employed by Employer beginning July 16, 2016, as a production associate. On May 4, 2021, Claimant was delivering materials at Employer's facility using a cart. Claimant was pulling the cart while walking backward when he stumbled over a wooden pallet. Claimant fell into the pallet and sustained a scrape on his right knee, and ended up on the floor.

3. On May 4, 2021, Claimant reported the incident to his supervisor, [Redacted, hereinafter JA]. Mr. JA[Redacted] testified that Claimant informed him he had scraped his knee on a pallet, but that he was fine. Claimant did not ask to see a physician, and no first aid was administered. Also on May 4, 2021, Claimant completed an incident report for Employer. In that report, Claimant described his injuries as a "scrape" to the right knee. Claimant described the incident as follows: "Just finished delivering totes to deburr department, still had cart, was backing up, tripped over a leaning pallet, scraped right knee on pallet, I fell to the ground." (Ex. 4).

4. At hearing, Claimant testified that his right knee became caught in the pallet, and that he fell on his right hip, shoulder and knee. A co-worker, [Redacted, hereinafter AL], was present in the room where Claimant fell, but did not witness the fall. Mr. AL[Redacted testified that he saw Claimant sitting on the ground on his buttocks. Mr. AL[Redacted asked Claimant if he needed assistance, but Claimant did not require help. Mr. AL[Redacted then returned to his work and did not have any further observations of Claimant.

5. Claimant testified that he began noticing vision problems several days after his fall, and his vision deterioration began accelerating approximately three weeks later. Claimant continued to work from May 4, 2021 until June 4, 2021. At which point Claimant stopped

working because he was not comfortable working due to the decrease in his vision. Claimant did not return to work for Employer after June 4, 2021.

6. On May 25, 2021, Employer's Environmental Health, Safety and Security Manager, [Redacted, hereinafter RP], spoke with Claimant about the May 4, 2021 incident. Mr. RP[Redacted] had been at home on Covid quarantine at the time of the incident. Mr. RP[Redacted] asked Claimant how he was doing, and Claimant indicated he was fine. Claimant did not report any issues with his vision at that time.

7. On June 9, 2021, Claimant was seen at the UCH Primary Care Clinic in Lone Tree, and was evaluated by Rachel Rodriguez, M.D. Claimant reported vision issues in his right eye. Dr. Rodriguez diagnosed Claimant with low vision of the right eye, with normal vision in the left eye, and referred Claimant for an optometry examination. (Ex. G).

8. On June 16, 2021, Claimant saw optometrist Julia Kimball, O.D., at the UC Health Eye Center. Claimant reported to Dr. Kimball that he began having blurred vision eight months earlier, and felt like he was seeing a bubble in his central vision. Claimant also indicated he was concerned his vision issues were due to prior use of Viagra. Claimant reported he had fallen at work one-month earlier, and reported that he "noticed profound vision loss in right eye at that time." Claimant's wife reported to Dr. Kimball that Claimant's right pupil became white after the fall. On examination, Dr. Kimball noted a dense cataract in Claimant's right eye. She also noted the cataract had "bowed the iris forward with concern for angle closure, although IOP measured in normal range today." Dr. Kimball indicated the vision loss appeared to be due to the cataract, but she was unable to tell if Claimant's optic nerve and retina were healthy. With respect to Claimant's right eye, Dr. Kimball diagnosed Claimant with a cortical age-related cataract and referred Claimant to Cara Capitena Young, M.D., for an ophthalmological evaluation. (Ex. 14).

9. On or about June 17, 2021, Claimant emailed Employer advising that he had attended an eye appointment the previous day. Claimant indicated his vision loss was "due to a dense white cataract and bowed iris [his] right eye." Claimant also stated, "Headache and eye pain have been prevalent since the documented fall on May 4th." Claimant requested information on how to initiate a workers' compensation claim. (Ex. 8). Employer then provided Claimant with a designated provider list.

10. On June 17, 2021, Employer filed a First Report of Injury, indicating Claimant sustained a contusion of the knee as the result of the May 4, 2021 incident. (Ex. 1). On June 24, 2021, Employer filed a Notice of Contest, contesting the compensability of Claimant's injuries. (Ex. 2).

11. On June 18, 2021, Claimant saw Kathryn Bird, D.O., at Concentra. Claimant reported right knee and shoulder injuries, and bilateral eye issues. On examination, Dr. Bird noted that Claimant's right knee and right shoulder were normal. Claimant did not recall hitting his head when he fell and indicated he started to develop headaches, nosebleeds, neck pain, and changes in vision after the fall. Dr. Bird could not opine that Claimant's cataract was caused by the May 4, 2021 fall because Claimant "does not

remember hitting his head during the incident. However symptoms started in close proximity to the fall." (Ex. 15).

12. On June 21, 2021, Claimant saw Dr. Capitena Young at the UC Health Eye Center. Dr. Capitena Young diagnosed Claimant with visually significant intumescent white cataract of the right eye. She also noted "Likely traumatic given time frame of vision loss associated with trauma at work but patient not sure if hit head, no history of open globe." A B-scan of Claimant's eye was performed that showed vitreous hemorrhage and retinal detachment. She noted that a detached retina could cause a white cataract. Dr. Capitena Young conveyed to Claimant the relative urgency in removing the cataract and referred Claimant to Marc Mathias, M.D. (Ex. 14).

13. On the same day, June 21, 2021, Claimant saw Marc Mathias, M.D., at the UC Health Eye Center. Claimant reported he had experienced blurred vision for 6-8 months, and after he fell at work his vision became significantly worse. Claimant reported he did not hit his head or eye when he fell. Dr. Mathias diagnosed Claimant with a mature cataract of the right eye, right retinal detachment, and vitreous hemorrhage of the right eye. Dr. Mathias indicated "highest suspicion for rhegmatogenous [retinal detachment] given trauma, but cannot completely rule out component of uveitis." He recommended that surgery take place within two weeks. (Ex. L).

14. On June 25, 2021, Claimant returned to Concentra where he saw Michael Pete, P.A. In addition to his vision issues, Claimant reported burning in the right knee but denied instability. Claimant also indicated he began to develop low/mid back pain on June 19, 2021. Claimant completed a pain diagram in conjunction with the visit identifying pain in the head, left lower back and right knee. On examination, Claimant's right knee was found to be normal, with the exception of the report of a burning sensation. Claimant's shoulder were both noted to be normal on examination with full range of motion, normal strength and no tenderness or impingement signs. Claimant was diagnosed with a right retinal detachment, right knee strain, and low back strain. Mr. Pete recommended physical therapy. Mr. Pete further opined that "based on findings of retinal detachment and onset of symptoms it is 51% probability this occurred with the fall." Mr. Pete offered no other rationale for his opinion that Claimant's retinal detachment was work-related. (Ex. 15).

15. On June 29, 2021, Dr. Mathias performed a retinal detachment repair of the right eye with pars plana vitrectomy, pars plana lensectomy, and posterior synechiolysis. Dr. Mathias' post-operative diagnosis was total retinal detachment, mature cataract and proliferative vitreoretinopathy (PVR). Intraoperatively, Dr. Mathias found extensive pathology in Claimant's right eye. These findings included poor pupillary dilation with 360-degree posterior synechiae, a completely detached retina with extensive subretinal bands and pigment deposition, anterior loop PVR inferiorly, and five retinal breaks. He further noted that the retina did not appear to relax, necessitating the removal of extensive subretinal fibrosis. Claimant saw Dr. Mathias for three additional post-surgical visits (June 30, 2021, July 7, 2021, and July 21, 2021). Dr. Mathias did not offer an opinion on the cause of Claimant's retinal detachment or cataract in any medical record. (Ex. K).

16. On July 8, 2021, Claimant saw Dilip Raghuveer, M.D., at UC Health. Dr. Raghuveer did not offer an opinion on the cause of Claimant's retinal detachment, indicating the issue was beyond his area of expertise. He indicated that Claimant's headaches were likely related to the retinal detachment. (Ex. 17).

17. On July 14, 2021, Claimant saw Kathryn Bird, D.O., at Concentra. Dr. Bird reviewed Claimant's chart, but did not have Claimant's ophthalmology records. Dr. Bird indicated Claimant "did start having eye symptoms within a week of the fall. Trauma, such as a fall, is a cause for retinal detachment. His retinal detachment is more likely than not work related." (Ex. 15).

18. On July 19, 2021, Claimant filed Worker's Claim for Compensation related to the May 4, 2021 fall. Claimant reported injuries to his head, right eye, neck, right shoulder, lower back, and right knee. (Ex. N).

19. At hearing, Clamant testified that 6-8 months before May 2021, he had an issue with visual acuity, which manifested as a "bubble" that distorted his central vision in his right eye, but that he could see around the periphery of his right eye. Claimant testified his vision was stable before May 2021, and did not affect his job. Claimant did not inform employer about his pre-existing vision issue before May 2021. Claimant does not know whether he struck his head when he fell, but did not have any marks or abrasions on his head after the fall. Claimant also testified he immediately had significant pain in his knee and shoulder on May 4, 2021, and that he also had pain in his head and eye on that day. Claimant's testimony that he felt immediate pain in his head, eye and shoulder was not consistent with the incident report he completed on May 4, 2021. Claimant began to develop headaches and nosebleeds two to three days after May 4, 2021, and his vision began to darken thereafter. Claimant testified that he did not associate his vision issues with the fall until June 9, 2021, and did not mention the vision issues to Employer until his June 17, 2021 email. Claimant testified that he has not worked for Employer since June 2021, and moved to Indiana in October 2021.

20. On September 2, 2021, Claimant underwent an independent medical examination with David Drucker, M.D. (With a report issued on September 12, 2021). (Ex. A). Dr. Drucker is a board-certified ophthalmologist, and was admitted to testify as an expert in ophthalmology and eye surgery. Dr. Drucker's testimony was presented by deposition. Dr. Drucker reviewed Claimant's medical records, and performed an examination of Claimant's eye. Dr. Drucker opined that the history and physical findings from Dr. Kimball, Dr. Capitena Young, and Dr. Mathias support the diagnosis of a super chronic right retinal detachment prior to May 4, 2021. Dr. Drucker explained that a "super chronic" retinal attachment refers to a retinal tear that has existed for more than two months.

21. Dr. Drucker noted that the June 29, 2021 surgical record notes shows Dr. Mathias found a bound-down pupil with 360-degrees posterior synechiae; intumescent lens; completely detached retina; extensive subretinal bands; subretinal fibrosis; pigment deposition; an anterior loop with PVR inferiorly; and retinal breaks at five locations. He also noted that Claimant's retina was inflexible and would not lay flat, necessitating an inferior retinectomy.

22. He opined that Dr. Mathias' surgical intraocular findings, (advanced PVR, inflexible retinal tissue, subretinal fibrotic bands, epiretinal fibrosis, and multiple retinal tears), were unlikely to be found in a retinal detachment occurring six weeks earlier. He noted that Claimant's report of a six-to-eight-month history of distorted vision with a visual "bubble" sensation was consistent with a vitreous hemorrhage, retinal tear and/or localized detachment. He indicated it would be normal for this type of pathology to progress over time to the pathology Dr. Mathias observed intraoperatively. Dr. Drucker also opined that it would be highly unusual to find this constellation of "catastrophic findings" after a fall that did not involve direct head or eye trauma six weeks earlier. Dr. Drucker's opinion was that it was unlikely Claimant's eye would deteriorate to the condition Dr. Mathias discovered between his fall on May 4, 2021 and surgery on June 29, 2021.

23. Dr. Drucker also testified that, although possible, it was unlikely that Claimant's pre-existing ocular pathology would be exacerbated or aggravated by the fall Claimant sustained, given the extent and severity of the intraocular findings. Specially, he stated "It is less likely as not that a relatively atraumatic fall not involving head or eye trauma would affect a fibrotic and membrane covered retina." In his deposition, Dr. Drucker indicated the Claimant's retinal tissue was rigid and adhered within the eye, such that the Claimant's relatively minor fall on May 4, 2021 would not likely have caused his pre-existing eye pathology to worsen. The ALJ finds Dr. Drucker's opinions credible and persuasive.

24. On October 10, 2021, Mark Winslow, D.O., issued a report related to an independent medical examination requested by Claimant's counsel conducted on August 12, 2021. Dr. Winslow is board-certified in neuromusculoskeletal medicine and family practice. Based on his review of medical records and examination of the Claimant, Dr. Winslow diagnosed Claimant with a retinal detachment "likely work related" and a mild knee strain, improved. Dr. Winslow was aware of Dr. Drucker's opinion that Claimant's retinal detachment was unlikely to be related to the May 4, 2021 fall based on the extent and severity of the intraocular findings. Dr. Winslow indicated that he disagreed with Dr. Drucker's opinion "and note[d] that the temporal relationship to the fall and the significant immediate changes following this fall make it more likely than not that this traumatic incident exacerbated the previously subclinical and undiagnosed underlying conditions." He further opined that while Claimant "did not strike his head one does not have to strike your head in order to create an intracranial lesion…. The sudden deceleration of a fall as described with traumatic force is sufficient to exacerbate underlying poor retinal condition." Dr. Winslow's opinion, which does not take into consideration Dr. Mathias' intraocular findings, is not persuasive. (Ex. 20).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits

by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in

an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold,* W.C. No. 4-960-513-01, (ICAO Oct. 2, 2015)

Claimant has failed to establish by a preponderance of the evidence that he sustained compensable injuries as a result of his May 4, 2021 fall. The primary issue in this case is whether the Claimant's deterioration in vision and total retinal detachment was the result of the May 4, 2021 fall, either by causing the retinal detachment or aggravating or exacerbating Claimant's pre-existing eye pathology. Although there is no dispute that Claimant tripped and fell on May 4, 2021, Claimant has failed to establish that the fall resulted in a compensable injury to his right eye. Claimant's position relies primarily on the timing of Claimant's vision deterioration approximately two to three weeks after May 4, 2021. While there is a correlation between the timing of Claimant's fall, and the subsequent decline in his vision, this correlation alone does not establish causation.

The ALJ finds persuasive the opinion of ophthalmologist Dr. Drucker that Dr. Mathias' intraoperative findings indicated that the retinal detachment was likely a pre-existing, and that a fall such as the one Claimant sustained was unlikely to cause or aggravate the condition.

Dr. Bird and Dr. Winslow attributed Claimant's retinal detachment to the May 4, 2021 fall. However, neither physician provided a cogent, persuasive explanation for the attribution other than the fact that Claimant's vision began to worsen several weeks after the fall, and that trauma can cause a retinal detachment. Neither physician persuasively explained how Claimant's fall, in which he did not sustain trauma to the head or eye, and which resulted in only a scraped knee, caused, accelerated, or aggravated the extensive intraocular pathology found by Dr. Mathias during Claimant's June 29, 2021 surgery. Dr. Winslow's opinion that Claimant's fall was sufficient to result in a retinal tear was not persuasive, given that Claimant's only initial complaint was a scraped knee.

MEDICAL TREATMENT

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is

one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Id.*

Because Claimant has failed to establish a compensable injury to his right eye, Claimant has failed to establish an entitlement to medical treatment for his retinal detachment or vision issues.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) of the Colorado Revised Statutes requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). Impairment of wage-earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997

Claimant has failed to establish an entitlement to TTD benefits. The evidence demonstrates that Claimant worked without restrictions following his injury until June 4, 2021. Claimant then stopped working due to concerns about his vision. Because the Claimant has failed to establish that the May 4, 2021 fall caused his vision issues, Claimant has failed to establish the required causal connection between a work-related injury and the subsequent wage loss.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his right eye on May 4, 2021.

2. Claimant's claim for medical benefits is denied.

3. Claimant's claim for temporary disability benefits is denied.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant proved, by a preponderance of the evidence, an entitlement to temporary disability benefits.

2. Whether Respondents proved by a preponderance of the evidence that Claimant was responsible for termination of his employment on September 2, 2021, and the wage loss resulting from his termination.

3. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 39-year-old man who was employed by Employer as a night fleet fueler. Claimant's job duties included driving a fuel truck to various job sites and fueling vehicles at those sites. Claimant's job required him to carry a fueling hose from the fuel truck to other vehicles, climb ladders while carrying a fueling hose to reach the other vehicle's fuel tank. The fuel hose weighs more than ten pounds, and in performing his job, Claimant was required to drag or carry the hose up a ladder, and reach overhead with the hose, and reach his arm away from his body. Claimant's regular work hours were Tuesday through Saturday, from approximately 3:00 to 4:00 p.m. until after midnight.

2. During the night of August 24, 2021, Claimant sustained a compensable injury arising out of the course of his employment with Employer when he fell from a ladder while working to refuel a vehicle.

3. Claimant reported his injury to Employer that night and was advised to contact his supervisor, [Redacted, hereinafter RB]. Claimant contacted Mr. RB[Redacted] the following morning and was advised to go to Concentra for evaluation.

4. On August 25, 2021, at approximately 9:50 a.m., Claimant was evaluated at Concentra by Barry Nelson, D.O. Claimant reported a mild headache, jaw pain, neck pain and upper back pain. Dr. Nelson examined Claimant and diagnosed him with an acute neck strain and contusion of the jaw. Dr. Nelson assigned written work restrictions of ten pounds for lifting, repetitive lifting, and carrying, pushing/pulling of twenty pounds, no reaching overhead, and no reaching away from the body. Dr. Nelson indicated Claimant could return to modified duty on August 26, 2021, and that the restrictions would remain in place until Claimant's scheduled follow-up visit on August 30, 2021. (Ex. A). Claimant's restrictions remained unchanged until December 2, 2021. On December 2, 2021, Dr. Nelson changed Claimant's restrictions to include lifting, repetitive lifting, and carrying limits of twenty pounds, pushing/pulling of forty pounds, and no overhead reaching. These work restrictions remained in place through Claimant's last documented visit with Dr.

Nelson on December 23, 2021. No medical records were admitted demonstrating that Claimant's restrictions have been lifted. (Ex. A).

5. On August 25, 2021, Claimant provided his supervisor, RB[Redacted], with a copy of the written work restrictions via text message. The work restrictions imposed by Dr. Nelson were such that Claimant could not fully perform his job duties, which required lifting, carrying, pulling, and pushing in excess of the assigned weights, and required Claimant to reach away from his body and above his head. (Ex. C).

6. Claimant testified that during their phone call on August 25, 2021, Mr. RB[Redacted] indicated that another employee would take over Claimant's route, and that Claimant should be available by telephone to provide the replacement driver with information and assistance. Claimant testified that he was available and did speak with his replacement sometime during the week.

7. Claimant further testified that Mr. RB[Redacted] did not instruct Claimant to return to work, and Claimant's impression was that he was to keep Mr. RB[Redacted] updated with his medical restrictions. Claimant testified that he spoke to Mr. RB[Redacted] two to three times following his injury, which is consistent with Mr. RB[Redacted] 's testimony.

8. In internal emails on Friday, August 27, 2021, Mr. RB[Redacted] and others discussed assigning Claimant a limited duty position, including having Claimant ride with his replacement driver and provide instructions. No credible evidence was admitted indicating that this limited duty position was communicated to Claimant in writing or otherwise. Moreover, after receiving Claimant's written work restrictions on August 25, 2021, Employer did not provide Claimant with a written offer of modified employment pursuant to §8-42-105(3), C.R.S

9. Mr. RB[Redacted] testified that he texted and called Claimant several times on August 25, 2021, to ask Claimant to complete an "incident report" for Employer. Both Mr. RB[Redacted] and Claimant testified they exchanged text messages between August 25, 2021 and Friday, August 27, 2021. The text messages were not offered into evidence. Mr. RB[Redacted] characterized his messages to Claimant as instruction Claimant to "call me, and we still need to fill out the accident report, so we know what happened." Claimant testified that Mr. RB[Redacted] did request the incident report be completed. Although Claimant was aware that Employer was requesting the Incident Report, no credible evidence was submitted to indicate that Employer advised Claimant of the timeframe for returning the Incident Report, that Employer placed any urgency on returning the report, or that the failure to return it within any specific timeframe could result in termination or other disciplinary action.

10. On the morning of Monday, August 30, 2021, Claimant spoke with Mr. RB[Redacted] on the phone and also sent Mr. RB[Redacted] a copy of the doctor's report. In an email dated August 30, 2021 at 10:41 a.m., Mr. RB[Redacted] wrote: "[Claimant] just now contacted me, he was under the impression is not able to work at all. [Claimant] thought the light duty didn't start until 8/30. I told [Claimant] we had training

courses we could have had him doing and he was on light duty since he was seen by Concentra. He is currently filling out injury report." (Ex. C).

11. Mr. RB[Redacted] testified that he sent Claimant an email to permit Claimant to perform light duty work in the form of online "Safety Training," on August 30, 2021. He further testified that Claimant completed one night of safety training on August 30, 2021, and that Claimant performed the training for "one night and then he stopped doing it." Mr. [Redacted, hereinafter EB] testified that after August 30, 2021, the Claimant was "unreachable" and did not communicate with Employer until Wednesday, September 1, 2021, when Mr. B[Redacted] contacted Claimant by phone.

12. Mr. RB[Redacted]'s testimony on this issue is inconsistent with the documentary evidence. Exhibit C, p. 70, is an email from [Redacted, hereinafter TS], Employer's HSSE Manager, which shows Claimant was not set up to do online "Safety Training" until August 31, 2021 at 4:33 p.m. At that time, Mr. TS[Redacted] sent Claimant information to access the online training. (Ex. C). On the evening of August 31, 2021, Claimant performed on-line training as requested by Employer. (Ex. C). The email to Claimant communicating the online Safety Training instructions was not admitted into evidence, and no credible evidence was admitted regarding the specific instructions Employer provided to Claimant with respect to the online "Safety Training." Other than the August 31, 2021 email from Mr. TS[Redacted], no credible evidence was admitted demonstrating Employer attempted to contact Claimant on August 31, 2021.

13. On September 1, 2021, Employer's EB[Redacted] emailed Mr. RB[Redacted] asking if Claimant had performed light duty work. Mr. RB[Redacted] responded that Claimant was doing "a light duty course." (Ex. C).

14. At approximately 4:00 p.m., on September 1, 2021, Ms. EB[Redacted] indicated in an email that she had called Claimant and requested that Claimant return the "incident report" "ASAP." (Ex. C). Mr. RB[Redacted] testified that Claimant did return Ms. EB[Redacted] 's call and returned the incident report. The report contained in Exhibit C is undated. Mr. RB[Redacted] testified he did not know when Claimant returned the incident report, but also that Claimant returned the incident report on September 1, 2021.

15. Mr. RB[Redacted] testified that Employer made the decision to terminate Claimant on September 1, 2021, because Claimant had returned the incident report, was non-communicative and had stopped doing online training. On September 2, 2021, Employer's terminated Claimant's employment. (Ex. C). The termination letter authored by EB[Redacted] (Senior HR Manager), identified the reasons for termination as: "no call no shows, poor communication with your manager and not completing assigned work." (Ex. C). The termination letter does not reference the incident report.

16. On October 19, 2021, Respondents filed a General Admission of Liability, admitted for an average weekly wage of $100.00. (Ex. D).

17. Claimant began working for Employer in April 2021, at an initial pay rate of $21.00 per hour. After June 13, 2021, Claimant earned $27.50 per hour, and received a "shift

premium" of $2.50 per hour. Claimant also received overtime pay at the rate of $41.25 per hour, and a shift premium of $1.25, during this time. During the five full pay periods before his injury and after Claimant's raise to $27/50 per hour, (i.e., June 13, 2021 – August 21, 2021), Claimant worked an average of 95 hours per two-week period and earned an average of $1,451.35 per week, which included overtime pay and shift premiums. (Ex. B). The ALJ finds Claimant's average weekly wage at the time of injury was $1,451.35.

18. Claimant testified that he applied for and received unemployment benefits for approximately two months following his injury, ending in November 2021.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) of the Colorado Revised Statutes requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). Impairment of wage-earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant suffered admitted injuries on August 24, 2021, and was under work restrictions through at least December 23, 2021. Notwithstanding that the Employer did not provide Claimant with a written offer of modified employment, Claimant returned to modified employment on August 31, 2021, when he performed online safety training. Accordingly, Claimant's right to TTD benefits terminated on August 31, 2021. However, upon termination of his employment on September 2, 2021, Claimant sustained actual wage loss due to his industrial injury and resulting disability. On and after September 2, 2021, Claimant remained under work restrictions that prevented him from resuming his pre-injury employment. Through at least December 23, 2021, Claimant was medically incapacitated with restrictions of bodily function that caused him to have work restrictions and impairment of his wage-earning capacity. His wage-earning capacity is thus impaired due to his industrial injury and resulting disability. No evidence was presented that Claimant has reached MMI or that his ATP has provided a written release to return to regular employment after September 2, 2021. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from August 25, 2021 to August 30, 2021, and beginning again on September 2, 2021.

Responsibility For Termination

The Workers' Compensation Act prohibits a claimant from receiving temporary disability benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). "Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment." *Gilmore*, 187 P.3d at 1132. "Generally, the question of whether the claimant acted volitionally, and therefore is 'responsible' for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances." *Gonzales v. Indus. Comm'n*, 740 P.2d 999 (Colo. 1987); *Windom v. Lawrence Constr. Co.*, W.C. No. 4-487-966 (November 1, 2002). *In re Olaes*, WC. No. 4-782-977 (ICAP, April 12, 2011).

Respondents have failed to establish by a preponderance of the evidence that Claimant was responsible for his termination. Employer's stated reason for terminating Claimant's employment was "due to no call no shows, poor communication with your manager and not completing assigned work."

No credible evidence was admitted that Employer had a specific "no call/no show" policy or that Claimant violated any such policy even if one existed. Claimant was assigned work restrictions on the morning August 25, 2021, which did not permit Claimant to perform his regular job duties, and Employer was aware of these restrictions. Nonetheless, Employer did not provide Claimant a written offer of modified employment. It was not until 4:33 p.m., on August 31, 2021, that Employer provided Claimant with access to the online training program. Thus, between August 25, 2021 and August 31, 2021, Employer did not assign Claimant work, and Claimant was under no obligation to contact Employer to advise he would be a "no show." Respondents have failed to establish by a preponderance of the evidence that Claimant violated any purported "no call/no show" policy.

Respondents have also failed to establish that Claimant volitionally failed to complete assigned work. Employer did not provide Claimant access to the online training until the late afternoon of August 31, 2021, and Claimant performed the work that evening. The evidence indicates that Employer's expectation was that Claimant would complete the online training during his normal shift, during the evenings. As found, Employer decided to terminate Claimant on September 1, 2021, before Claimant would have had the opportunity to continue with the online training that evening. Thus, Employer decided to terminate after Claimant had completed the only work Employer assigned following his injury, and before he had the opportunity to complete the training on a second day. Although Claimant did not perform the online training on September 1, 2021, this was after Employer's termination decision and was not the reason for termination. Other than the online training assignment on August 31, 2021, no credible evidence was presented

that Employer "assigned" any other work that Claimant could have completed prior Employer deciding to terminate him on September 1, 2021. Accordingly, the ALJ finds that Claimant did not volitionally fail to complete "assigned work," prior to his termination.

With respect to the alleged "poor communication," the evidence was insufficient to establish by a preponderance of the evidence that Claimant's alleged poor communication was volitional. Claimant immediately reported his injury to Employer. Although Mr. RB[Redacted] testified that he left voice and text messages for Claimant, the evidence was insufficient to establish the content of those messages, other than Mr. RB[Redacted] testifying that he left messages to "call me" and to return an incident report. Thus, the ALJ is unable to determine whether Mr. RB[Redacted]'s communications to Claimant informed Claimant of the apparent urgency Employer placed on returning the incident report or returning Mr. RB[Redacted]'s calls within any set period of time. Nor was Claimant informed his failure to immediately return the incident report would result in termination. Mr. RB[Redacted]'s testimony that Claimant refused to communicate with Employer from August 30, 2021 to September 1, 2021, is not persuasive. The only evidence that Employer attempted to communicate with Claimant during that timeframe was Mr. ST[Redacted] sending Claimant the online training at the end of the day on August 31, 2021. The ALJ finds that Respondents have failed to meet their burden of establishing that Claimant's communication issues with Mr. RB[Redacted], were volitional acts rendering the Claimant responsible for his termination.

Although Claimant was capable of the modified work that Employer assigned to him post-injury (i.e., the online training), Claimant was not "responsible" for his termination by Employer during his period of temporary disability. As such, a causal link between Claimant's industrial injury and his post-termination wage loss is established, and Claimant is entitled to temporary total disability benefits from August 25, 2021 to August 30, 2021, and from September 2, 2021, continuing until one of the criteria of § 8-42-105(3)(a)-(d), C.R.S, is met.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where the Claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*.

As found, Claimant's average weekly wage at the time of injury was $1,451.35.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits from August 25, 2021 to August 30, 2021, and from September 2, 2021, 2020, until terminated by law is GRANTED. Insurer shall pay Claimant TTD benefit during the relevant time period, until terminated by law, subject to any applicable offsets.

2. Claimant's average weekly wage at the time of injury was $1,451.35

3. Insurer shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

Whether the respondents have overcome, by clear and convincing evidence, the opinions of the Division sponsored independent medical examination (DIME) physician on the issues of maximum medical improvement (MMI) and recommended medical treatment.

FINDINGS OF FACT

1. On November 30, 2018, the claimant was performing his normal job duties when he twisted while reaching for a hook and felt a pop and pain in his back. The claimant testified that the pain was immediate, sharp, and stabbing. The claimant reported this incident to the employer and was referred for medical treatment.

2. The claimant's authorized treating provider (ATP) for this claim is Dr. Daniel Smith. The claimant was first seen by Dr. Smith on November 30, 2018. On that date, the claimant reported left lower thoracic pain. Dr. Smith opined that the claimant's pain was muscular in nature. He placed the claimant under work restrictions that included only driving.

3. The claimant returned to Dr. Smith on December 7, 2018, and reported continuing thoracic back pain. Dr. Smith listed the claimant's diagnosis as thoracic back sprain. He referred the claimant to physical therapy and prescribed Tramadol. On December 21, 2018, the claimant was seen by Dr. Smith. On that date, Dr. Smith determined that the claimant could return to full duty. The claimant testified that Dr.Smith released him to full duty at that time at the request of the claimant. The claimant further testified that he asked to be cleared to return to work because he could not afford to be off of work.

4. The claimant returned to Dr. Smith on January 31, 2019. On that date, Dr. Smith noted that the claimant had "mostly thoracic pain", but was also reporting "some more low back discomfort with some radicular symptoms down legs". The claimant reported that physical therapy was helping and he was able to perform his work duties.

5. On February 27, 2019, the claimant was again seen by Dr. Smith. On that date, the claimant reported persistent pain that traveled down both legs, with numbness and cramping into his buttocks. Dr. Smith added the diagnosis of "low back pain with radicular component" and ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

6. On March 11, 2019, a lumbar spine MRI was performed. The MRI showed multilevel spondylosis and stenosis; a mild broad disc bulge and mild thecal sac narrowing at the L1-L2 level; moderate disc space narrowing with a moderate asymmetric disc bulge at the L2-L3 level; and a mild disc bulge at the L4-L5 level.

7. On March 28, 2019, the claimant was seen by Dr. David Miller for consultation. Dr. Miller noted that the claimant had low back pain with bilateral radicular symptoms into his legs. Dr. Miller also noted that the lumbar spine MRI showed degenerative changes at all lumbar levels. Dr. Miller opined that surgery would not be beneficial to treat the claimant's condition. He also recommended that further physical therapy and injections would likewise not be beneficial. Subsequently, Dr. Smith referred the claimant to Dr. Wade Ceola for a surgical consultation.

8. On July 26, 2019, the claimant was seen by Dr. Ceola. At that time, the claimant reported persistent and significant back and leg pain. Dr. Ceola noted that the claimant had been through physical therapy without relief. Dr. Ceola noted the MRI results and opined that it was possible that the L4-L5 level was the pain generator. As a result, he recommended the claimant undergo injections to at that level. Dr. Ceola did not believe the claimant was a surgical candidate at that time.

9. In August and September 2019, Dr. Michael Campion administered bilateral L4-5 and L5-S1 facet injections. On September 4, 2019, the claimant was seen by Dr. Campion and reported that he did not experience any relief from the facet joint injections. Dr. Campion opined that it was possible that the claimant had bilateral L5 radiculopathy.

10. On October 24, 2019, the claimant was seen in Dr. Smith's practice by Andrew Henrichs, PA-C. At that time, the claimant reported that he could not continue working. As a result, PA Henrichs restricted the claimant from all work.

11. On November 8, 2019, the claimant returned to Dr. Ceola and reported that he had undergone injections, but the injections did not provide any relief. Dr. Ceola noted that the injections were not helpful from a diagnostic standpoint. On that date, Dr. Ceola referred the claimant to Dr. Kenneth Lewis for consideration of a spinal cord stimulator (SCS). Dr. Ceola also referenced the possibility of a future spinal fusion surgery.

12. On November 15, 2019, the respondents filed a General Admission of Liability (GAL).

13. On January 8, 2020, the claimant was evaluated by Dr. Kenneth Lewis for consideration for a SCS. Dr. Lewis opined that the claimant was not a candidate for SCS as he had symptoms of mechanical back pain.

14. On January 9, 2020, the claimant was seen by Dr. Smith. At that time, Dr. Smith noted that the claimant was not a candidate for a SCS. He opined that the claimant should obtain a second opinion from a surgeon.

15. On February 4, 2020, claimant was seen by Thomas Scruton, PA-C at Atlas Arch Neurosurgery. On that date, the claimant reported low back and extremity pain; right greater than left. PA Scruton opined that the claimant's pain was "multifactorial" and recommended diagnostic injections at the sacroiliac (SI) joint.

16. On March 2, 2020, Dr. Lewis performed the recommended SI joint injections. Subsequently, the claimant reported no improvement in his symptoms following the SI joint injections.

17. At the request of the respondents, Dr. Brian Castro performed a review of the claimant's medical records. In his March 29, 2020 report, Dr. Castro opined that on November 30, 2018, the claimant suffered a lifting sprain/strain injury. He also noted that the claimant's initial presentation was of lower thoracic/upper lumbar spine symptoms. It was not until later that the claimant began to report lower lumbar and hip symptoms. Dr. Castro further opined that the claimant's hip symptoms were not related to the November 30, 2018 work injury.

18. On May 7, 2020, the claimant returned to Dr. Ceola. At that time, Dr. Ceola noted that the claimant's pain generator had not been determined. Dr. Ceola recommended the claimant undergo a computed tomography (CT) scan and a psychological evaluation.

19. On May 19, 2020, a lumbar spine CT scan was performed. The CT scan showed mild to moderate loss of disc height and broad disc bulges at L1-L2; L2-L3; L3-L4; L4-L5; and L5-S1; and mild multilevel neural foraminal narrowing.

20. On June 11, 2020, the claimant was seen by Dr. Ceola and the results of the CT scan were discussed. In the medical record of that date, Dr. Ceola noted that the CT scan did not identify "surgically significant pathology". At that time, Dr. Ceola recommended the claimant undergo a discogram to determine if a surgical fusion would be appropriate.

21. On June 23, 2020, Dr. Giora Hahn performed a five level lumbar discogram. In the medical report, Dr. Hahn identified concordant discs at the L3-L4 and L5-S1 levels.

22. Following the discogram, Dr. Ceola recommended the claimant undergo surgery consisting of MIS TLIF[1] at both the L5-S1 and L3-L4 levels.

[1] Minimally invasive transforaminal lumbar interbody fusion.

23. On July 8, 2020, Dr. Castro issued a second report related to his further review of the claimant's medical records. Dr. Castro was specifically asked to state an opinion with regard to whether the recommended spinal fusion is reasonable, necessary and related to the claimant's November 30, 2018 work injury. In his report, Dr. Castro noted that the claimant has demonstrated "somewhat of a nonphysiologic presentation". In addition, Dr. Castro stated his opinion that a discogram is not an accurate assessment of pain, and "is known to be a very subjective test". Dr. Castro opined that the claimant suffered a thoracic sprain/strain injury, for which the claimant had reached maximum medical improvement (MMI). He also noted that all of the claimant's imaging studies show chronic degenerative changes. With regard to the recommended fusion surgery, Dr. Castro opined that the surgery is not related to the November 20, 2018 work injury. Based upon Dr. Castro's opinions, the respondents denied the requested lumbar fusion surgery.

24. On March 11, 2021, the parties appeared before ALJ Sidanycz. In an order dated March 30, 2021, ALJ Sidanycz found that the claimant failed to demonstrate, by a preponderance of the evidence, that the surgery recommended by Dr. Ceola was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 30, 2018 work injury.

25. On June 23, 2021, the claimant was seen by Dr. Davis Lorah for an impairment rating. Dr. Lorah assessed a whole person impairment rating of 15 percent. This rating was reached by combining a Table 53 impairment and additional impairment for range of motion. In the medical record of that date, Dr. Lorah identifies the claimant's date of MMI as May 17, 2021.

26. Subsequently, the claimant was seen by Dr. J.E. Dillon for a Division sponsored independent medical examination (DIME). In connection with the DIME, Dr. Dillon reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her DIME report, Dr. Dillon opined that the claimant was not at MMI. In support of this opinion, Dr. Dillon noted that the claimant "remains significantly symptomatic and would likely benefit from further active treatment." Dr. Dillon specifically recommended that the claimant pursue the spinal surgery recommended by Dr. Ceola. Dr. Dillon further opined that this procedure is indicated and warranted, as the claimant has failed extensive conservative care. Dr. Dillon also noted that prior to the work injury, the claimant was able to perform his physically demanding job duties, but now he is disabled as a result of his continuing symptomatology. In the DIME report, Dr. Dillon assessed a whole person permanent impairment rating of 22 percent.

27. The claimant testified that his current symptoms include constant and unbearable pain. The claimant wishes to pursue the fusion surgery recommended by Dr. Ceola.

28. Dr. Castro's deposition was taken on January 24, 2022 and is consistent with his written reports. Dr. Castro testified that he still does not believe the recommended surgery is reasonable, necessary, and causally related to the claimant's injury. More specifically, it is Dr. Castro's opinion that the claimant's pain generator has still not been identified. With regard to the results of the discogram, Dr. Castro opined that discograms are "very subjective". Dr. Castro does not believe that the risks of the recommended spinal fusion surgery outweigh the possible success. It is Dr. Castro's opinion that the surgery will likely diminish the claimant's function. Dr. Castro recommends that the claimant continue with physical therapy and medications as maintenance treatment.

29. The ALJ credits the medical records and the opinions of Dr. Dillon over the contrary opinions of Dr. Castro. The ALJ finds that the respondents have failed to demonstrate that it is highly probable that Dr. Dillon erred in reaching her conclusions as the DIME physician.

30. The ALJ recognizes that this is seemingly contrary to the March 2021 order regarding the same recommended surgery. However, as the ALJ explained at the outset of this hearing, this issue does not fall into an analysis of issue preclusion or *res judicata*. Previously, it was the claimant's burden, by a preponderance of the evidence, to demonstrate that the recommended medical treatment (the fusion surgery) was reasonable, necessary, and related to the work injury. In the current matter, it is the respondents' burden, by clear and convincing evidence, that the DIME physician's opinions are in error. While much of the evidence and facts presented at the two hearings were similar, the ALJ is able to reach a different conclusion at this time based upon the existence of a DIME opinion and the higher burden of proof.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the respondents have failed to overcome, by clear and convincing evidence, the opinion of the DIME physician on the issues of MMI and recommended medical treatment. The respondents have failed to establish anything other than a difference of opinion between medical providers. As found, the medical records and the opinions of Dr. Dillon are credible and persuasive.

ORDER

It is therefore ordered that the respondents have failed to overcome the DIME physician's opinions regarding MMI and recommended medical treatment.

Dated this 10th day of March 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Evidentiary Issues

   a. Admissibility of witness statements obtained by Employer.

   b. Admissibility of OSHA Reports.

II. Whether Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury to her left leg in the course and scope of her employment with the Employer on January 29, 2021.

III. Whether Claimant has proven, by a preponderance of the evidence, that she is entitled to reasonably necessary medical benefits to cure and relieve her from the effects of the alleged January 29, 2021, work injury.

IV. Whether Claimant is entitled to an award of temporary total disability benefits from February 8, 2021, to February 26, 2021 and from March 1, 2021 to March 26, 2021.

V. If the claim is found compensable, whether Respondents have shown Claimant violated a known safety rule thereby resulting in a 50% reduction in benefits.

STIPULATIONS

1. In the event of a compensable claim, the parties stipulated as follows:

   a. Claimant's average weekly wage is $676.55

   b. [Employer redacted] Health Services, UC Health, and Banner Health Burn Center are the authorized treating providers.

   c. Temporary total disability benefits from February 8, 2021 through February 26, 2021 and March 1, 2021 through March 26, 2021.

These stipulations were approved and accepted by the ALJ.

FINDINGS OF FACT

Claimant's Alleged Work Injury on January 29, 2021

1. On January 29, 2021, claimant worked at [Employer redacted], a meat processing plant, trimming tripe, and cutting honeycomb. Hrg. Tr. 44:6-10.

2. Claimant testified she had been asked to wash the tripe table prior to lunch. Hrg. Tr. 47:20-21; 48:7-8; 48:11-12. Claimant testified she used the red hose with 180-degree water to clean the table. Hrg. Tr. 49:11-13. Claimant reported that the hot water had gotten into her work boot (in part because she did not have protective gaiters on) and burned her left leg causing severe first and second-degree burns. Hrg. Tr. 47:21-25 – 48:1-4; 51:15-18.

3. The severity of the burns is shown in Claimant's Exhibit 1.

Claimant Failed to Report the Work Injury for Nearly Seven Hours after It Occurred

4. On January 29, 2021, at about 6:30 pm, Claimant presented to the [Employer Redacted] Health Clinic and was evaluated by David Concha, EMT. Resp. Ex. E, p. 100. Claimant informed Mr. Concha the alleged injury occurred at 11:30 am earlier in the day. *Id.* Claimant told Mr. Concha she noticed the significance of the injury after returning home from the hospital with her mother and after changing her clothes. *Id*. Claimant reported she left work without reporting the injury because it was not painful. *Id*. Mr. Concha observed blistering with large amounts of swelling and yellow coloration and displayed limited range of motion at the ankle due to the severity of the blistering. *Id*.

5. A [Employer redacted] employment record noted Claimant reported an injury almost seven hours after it had occurred which is against company policy. Resp. Ex. E, p. 133.

6. Mr. Concha referred Claimant to the emergency room for further care. *Id*.

Claimant was Diagnosed with first and Second Degree Burns over her Left Leg and Foot

7. On January 29, 2021, Claimant was evaluated at UC Health Greeley Emergency and Surgery Center. Physician assistant Julie Menefee observed two areas that were likely "second-degree burns which were blistered over the crease of the ankle. Other areas are likely first-degree burns." Resp. Ex. B, p. 26. The extent of the burns is also demonstrated in the photographs submitted by Claimant in Exhibit 1. As a result, Claimant had significant and severe first and second degree burns which would have most likely caused immediate pain.

8. Ms. Menefee noted the "incident occurred today at 11:30 while working at [Employer redacted]. She did not notice the burn until she took her boot off at 5:30." *Id*. at 27. This history Claimant provided of not noticing the burn until 5:30 p.m. was directly inconsistent with her testimony at hearing in which she stated that she started to get undressed to take a shower about a half hour after getting home earlier in the day in which she noticed her skin was wrinkly.

9. Claimant was referred to Northern Colorado Burn Center for additional care after bacitracin was applied to the wounds. *Id*. at 22-23. On February 1, 2021, Claimant presented to physician's assistant Eric Hofmann reporting a burn injury to her left ankle and top of her foot. Resp. Ex. A, p. 2. Mr. Hofmann noted the blisters had not yet popped and documented Claimant's report that she was unable able to wear shoes due to the swelling and the pain. Claimant described the pain as "constant, burning, and stabbing." *Id*. at 3. Mr. Hofmann diagnosed Claimant with first- and second-degree burns. *Id*. at 5.

Claimant Admitted She Did Not
Immediately Report the Incident to her Employer

10. At hearing, Claimant testified her team lead, [Redacted, hereinafter PR] asked her to clean the tripe table prior to lunch at around 11:00 am. Hrg. Tr. 48:7-8. Claimant testified she used one hose to clean the table and floor which was the 180-degree hot water hose. Hrg. Tr. 74:15-19. Claimant testified she felt moisture in her boot but did not think to report the incident to her employer. Hrg. 51:2-8.

Video Surveillance Shows Claimant
Wearing Gaiters and Apron Over Her Clothing

11. Claimant testified she had no difficulty walking around after the incident and did not notice any burns because she did not change her leggings before leaving her shift early. Hrg. Tr. 50:22-23; 53:2-5. This testimony lacks credibility since she had suffered severe first and second-degree burns and it most likely would have been painful when the incident occurred.

12. Claimant testified at the time of the incident she was wearing her apron and work boots, but no gaiters. Hrg. Tr. 75:13; 45:16-23. Claimant told Dr. Smith, at UC Health she was not wearing gaiters or any other type of protective equipment which is usually used when handling the red hose. Resp. Ex. A, p. 12. Clamant told Dr. Smith that she did not have protective gaiters on because otherwise her contention about being burned at work would not make sense (since the gaiters would stop the hot water from going into her boot).

13. Video surveillance showed Claimant walking down the hallway in an apron and gaiters after the alleged work injury. Resp. Ex. H & I. As a result, her statement to [Employer redacted] and Dr. Smith that she did not have protective gaiters on at the time of the alleged incident lacks credibility.

14. When confronted with the fact that she had gaiters on right after the reported injury occurred, Claimant provided a different explanation that did not make sense. Claimant testified after she cleaned the table, she went to put on gaiters before going to ask her supervisor for permission to leave work early due to her mother's medical condition. Claimant testified she put on the gaiters after she returned from lunch in case her supervisor did not allow her to leave work early. Hrg. Tr. 71:9-13.

15. Again, Claimant's explanation does not make sense - that she was going to ask her supervisor to leave work but yet decided to put on gaiters for the first time that day minutes before she made such a request to the supervisor. Claimant had no reason to put on the gaiters at lunch as she was asking her supervisor to go home. As a

result, the evidence shows that Claimant was wearing gaiters at the time of the alleged work injury.

Following the Alleged Incident, Claimant Requested Permission to Leave Work Early

16. Claimant testified she requested permission from her supervisor to leave work early to tend to her mother who was experiencing medical problems and had to go to the doctor. Hrg. Tr. 50:12-17. Claimant testified she left [Employer redacted] around 12:15 pm and got home around 12:40 pm to 1:00 pm. Hrg. Tr. 50:10; 51:9-12. Claimant subsequently testified she only lived about a couple of minutes away from work. Hrg. Tr. 60:21.

17. Ms. [Redacted, hereinafter KP] was Claimant's former supervisor at [Employer redacted]. Ms. KP[Redacted] no longer works for [Employer redacted]. Ms. KP[Redacted] testified she talked with Claimant for about 20 minutes to calm her down (because of her mother's medical issues) before she allowed Claimant to leave. Ms. KP[Redacted] recalled it was around 12:20 to 12:30 when Claimant left. Hrg. Tr. 90:1-6; 93:1-4.

18. Ms. KP[Redacted] testified Claimant's clothes were not noticeably wet. Hrg. Tr. 92:14. Ms. KP[Redacted] testified Claimant wore light clothing which would have made it obvious if she was wet. Hrg. Tr. 95:10-14.

19. Ms. KP[Redacted] testified at no time during her conversation with Claimant, did she report she had hot water in her boot or had been burned at work. Hrg. Tr. 93:19-20. If Claimant had actually suffered severe first and second degree burns at work, she would have most likely felt pain immediately and mentioned it – or formally reported it - to Ms. KP[Redacted].

20. The ALJ finds Ms. KP[Redacted]' testimony to be credible.

Claimant Seen Walking Normally and Wearing Gaiters Prior to Leaving Work

21. On March 10, 2021, Dr. Smith reviewed video from [Employer redacted]. The video showed footage of Claimant waking down a hallway after the alleged incident wearing what appeared to be gaiters. Resp. Ex. A, p. 21. Dr. Smith noted that at the initial visit, Claimant was adamant she was not wearing gaiters when the injury occurred.

22. Claimant agreed she put on regular shoes before leaving the facility. Hrg. Tr. 77:19-24.

Claimant Delayed Returning to Work upon Discovering the Burn and Provided Further Inconsistent Statements about the Alleged Injury

23. Claimant testified that once home, she undressed to shower and noticed red bubbles on her shin. Hrg. Tr. 51:15-21. Claimant testified she thought about how she cleaned the table and felt water in her boot and went back to her job to report the injury.

24. Claimant initially testified she believed she returned to [Employer redacted] about an hour and half or two hours after she arrived home. Hrg. Tr. 52:7-8; 63:14-18.

25. Claimant testified she returned to work around 2:30 pm to report the injury. Hrg. Tr. 63:19-21. Claimant later testified it was maybe past 3:00 when she returned to work because different nurses were on shift. Hrg. Tr. 77:8-13.

26. Claimant testified she was in no hurry to rush back for care because she did not think the burns were that severe. Hrg. Tr. 66:9-14.

27. Claimant also testified she did not go to the hospital to see her mother. Hrg. Tr. 65:7-9. Instead, Claimant went home to check on her sister and remained at home for a few hours before returning to [Employer redacted]. Hrg. Tr. 63:17-18.

28. Claimant ultimately conceded it was around 6:30 pm. when she returned to [Employer redacted]'s occupational health facility. Hrg. Tr. 80:17-21.

29. Claimant's contention about when she noticed the severe first and second-degree burns is inconsistent. She told the medical provider detailed above that she first noticed the burn at 5:30 p.m. when she finally took her boots off after going to the hospital, etc. She testified at hearing that she took got undressed to take a shower shortly after getting home and noticed the burn which would have been around 1:00 p.m. to 1:30 p.m.

30. In any case, Claimant's story lacks credibility and was inconsistent. She provided numerous different and inconsistent timelines for when she discovered the burns for the first time.

Claimant's Authorized Treating Physician Found the Burns Were Not Work-Related

31. Dr. Smith opined in all medical probability that her alleged injury did not occur at work. *Id*. Specifically, Dr. Smith stated as follows: "it is very doubtful with the type of injury she sustained that she would not have immediately experienced significant pain that would have affected gait, behavior and prompted a report to someone that she was injured…if [Claimant] did not injure herself at work then she most likely injured herself at home in the several hours she was absent from work. Home accidents can occur such as with boiling or near boiling water that cause similar injures to those she sustained and therefore could be a plausible explanation for how she sustained her injury outside of work." *Id*.

32. Dr. Smith also noted that Claimant mispresented the fact that she was wearing protective gaiters at the time which would have protected her from the boiling water entering her boot. The ALJ finds Dr. Smith's opinions to be credible and persuasive.

Claimant is Witnessed Using the Blue Hose

33. Team lead, PF[Redacted] testified on January 29, 2021, he had asked Claimant to clean the tripe table before lunch. Hrg. Tr. 99:13-20. Mr. PF[Redacted] testified he personally observed Claimant using the blue hose to wash the floor which contains 120-degree water which would not have caused a burn. Hrg. Tr. 99:23. The ALJ finds Mr. PF[Redacted]' testimony to be credible and persuasive.

34. Mr. PF[Redacted]' observations are crucial because Claimant admitted that she used only one hose (the red hose) for the cleaning job. As a result, PF[Redacted]' testimony is directly inconsistent with Claimant's allegations about her using the red hose and suffering a burn injury at work.

Both Ms. KP[Redacted] and Mr. T[Redacted] Testified it was Procedure to Use the Blue Hose Prior to Lunch Breaks

35. Ms. KP[Redacted] testified it was standard procedure for employees to use the blue hose, which is 120 degrees, when cleaning tables and the floor prior to lunch. The red hose is only used during shift changes to prevent contamination. Hrg. Tr. 87:8-11.

36. Safety manager, Neil T[Redacted] also testified regarding the cleaning procedures at [Employer redacted]. Mr. T[Redacted] testified that prior to lunch, the tables are cleaned with the blue hose and prior to shift changes, the tables, and floors are cleaned with the red hose. Hrg. Tr. 111:6-10; 111:19-23.

37. Mr. T[Redacted] testified [Employer redacted] sought to limit the time employees used the 180-degree red hose because it increased the temperature index of the floor. Hrg. Tr. 112:2-5.

38. As a result, Claimant's contention that she was using a red hose and it caused a burn injury at work is not credible.

[Employer redacted] Representatives Testified Claimant Received Training on Using the Red Hose

39. Ms. KP[Redacted] further testified Claimant knew that any time the red hose was in use, the requisite proper protective equipment would need to be used. Hrg. Tr. 85:19-24. Ms. KP[Redacted] testified Claimant was provided this training when she was hired.

40. Mr. Fernandez testified that if the red hose is used, a yellow rain suit needed to be worn and is obtained from the supervisor or himself. Hrg. Tr. 102:4-5.

41. Claimant testified she used the red hose because it was faster and that is what others would do. Hrg. 48:14-17; 49:11-13.

42. Mr. T[Redacted] further testified Claimant had acknowledged she had received the requisite 180-degree testing and failure to wear the required yellow rain suit constituted a major safety violation. Hrg. Tr. 110:12.

Records of the Employer

43. Based on the statements of Counsel, the appearance of the documents and the contents of the documents, the witness statements and OSHA Reports were

maintained by Employer and therefore records of the employer and admitted into evidence.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

I. Evidentiary Issues

a. Whether the witness statements submitted by Employer are admissible.

Witness statements and investigative reports maintained by the employer – hearsay – are admissible as "records of the employer" pursuant to 8-43-210.[1] Once a witness statement or investigative report is admitted into evidence - additional challenges to its reliability go to its weight. Thus, strong cross-examination, presentation of opposing evidence, and argument are the appropriate ways to attack questionable but admissible evidence.

1. Hearsay - in the form of medical records, physician reports, vocational reports, and records of the employer - is admissible under 8-43-210.

The admissibility of evidence in Colorado workers' compensation hearings is governed by Section 8-43-210 of the Workers' Compensation Act. It states in pertinent part:

> The Colorado rules of evidence and requirements of proof for civil nonjury cases in the district courts shall apply in all hearings; ***except that medical and hospital records, physicians' reports, vocational reports, and records of the employer are admissible as evidence and can be filed in the record as evidence without formal identification if relevant to any issue in the case*** (emphasis added).

Section 8-43-210.

One of the few Colorado Supreme Court cases to analyze the evidentiary rules applicable in workers' compensation cases is *Department of Labor and Employment v. Esser,* 30 P.3d 189 (Colo. 2001). In *Esser*, the Court wrestled with the conflict between the express language of Section 8-43-210 and 8-41-301. Section 8-43-210 allows medical records and physician reports - hearsay - to be admitted into evidence without being subject to the hearsay rules contained in the Colorado Rules of Evidence. That said, 8-41-301 provides that a Claimant must prove a claim for mental impairment by the oral testimony of a licensed physician or psychologist. The conflict exists because although 8-43-210 allows the admission of Claimant's medical records and reports into evidence to establish her claim for benefits, the lower court's interpretation of Section 8-41-301 required the claimant to have the psychiatrist or psychologist testify at hearing or by deposition.

[1] The analysis starts with the broad admissibility of medical records and physician reports under the same statute, 8-43-210.

In analyzing the evidentiary matter, the Court resorted to certain basic tools of statutory construction. The tools included determining the legislative intent of the act. The court, in determining the legislative intent, looked at:

i. the Act's policy declaration, and
ii. the plain and ordinary meaning of the words the General Assembly chose to use in 8-43-210.

Thus, the *Esser* court set forth the express purpose of the Act:

> It is the intent of the general assembly that the "Workers' Compensation Act of Colorado" *be interpreted so as to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation,* recognizing that the workers' compensation system in Colorado is based on a mutual renunciation of common law rights and defenses by employers and employees alike.

Esser at 196.

The Court then went to Section 8-43-210, which contains the basic evidentiary provisions appliable to workers' compensation claims in Colorado.

The statute provides in pertinent part:

> [T]he Colorado rules of evidence and requirements of proof for civil nonjury cases in the district courts shall apply in all hearings; ***except that medical and hospital records, physicians' reports, vocational reports, and records of the employer are admissible as evidence and can be filed in the record as evidence without formal identification if relevant to any issue in the case*** (emphasis added).

In analyzing the evidentiary provisions of the Act, the Court noted that:

> The Act obviously includes relaxed evidentiary standards, see § 8–43–210, in pursuit of its purpose of cost-effective, timely delivery of workers' compensation benefits to claimants.

Esser at 196.

The relaxed evidentiary standards referenced by the Court pertain to the admissibility of medical records, physician reports, vocational reports, and "***records of the employer***" (emphasis added). As a result, the relaxed standards in Section 8-43-210 allows certain enumerated documents to be admitted into evidence without formal identification — foundation. In other words, documents containing hearsay, which might be excluded under the Colorado Rules of Evidence, are admissible as substantive

evidence for the truth of the matter asserted in a workers' compensation case. And as stated in the *Esser* opinion, the remedy to rebut the hearsay in the medical report is for the opposing party to obtain an order compelling the licensed professional to appear for cross-examination at the hearing or at a deposition, under Colo. Rev. Stat. §§ 8-43-207(1)(a), 8-43-207.5(2), 8-43-212, 8-43-315 (2000) *Esser* at 191. See also CRE 806.

2. Although there are no Colorado cases defining "records of the employer," the term "record" has been defined by the Colorado Supreme Court in other matters to mean "a documentary account of past events."

There is not a Colorado Court of Appeals or Supreme Court case that has determined whether investigative reports or witness statements are "records of the employer" and admissible under 8-43-210. The Colorado Supreme Court has, however, had a chance to determine what constitutes "a record." In *Sky Fun 1 v. Schuttloffel*, 27 P.3d 361 (Colo. 2001) the Court embarked on defining "a record" since the term was not defined in the federal Pilot Records Improvement Act. To define "a record" the Court went directly to Webster's Dictionary and Black's Law dictionary. The Court cited the definition of a record set forth in Webster's and Black's. The Court stated:

> Generally, "a record is piece of writing that recounts or attests to something . . ." *Webster's Third New International Dictionary: Unabridged* 1898 (1993). *Black's Law Dictionary* 1279 (7th ed. 1999) defines a record as a documentary account of past events designed to memorialize those events.

Sky Fun at 367.

It is typical for witness statements and investigative reports to document past events. As a result, both witness statements and investigative reports fit within the plain and clear meaning of a record as stated in Webster's and Black's dictionary. Thus, when kept by the employer, the witness statements and investigative reports are records of the employer.

3. The statute does not restrict the admissibility of medical records, medical reports, and records of the employer – hearsay – just because they were prepared in anticipation of litigation.

In *Ackerman v. Hilton's Mechanical Men, Inc*., 914 P.2d 524 (Colo. App. 1996), the respondents submitted a letter written by a physician who evaluated the claimant's medical records and concluded the claimant was intoxicated at the time of the accident and that his intoxication most likely caused the accident. The ALJ credited the physician's opinion as stated in the letter and ordered the claimant's compensation to be reduced by 50%. *Id*. The claimant unsuccessfully argued that for evidence to be admitted pursuant to Section 8-43-210 without formal identification - foundation - such evidence must be inherently trustworthy, accurate, and reliable. Claimant argued that:

> [T]he only evidence which is inherently trustworthy and reliable in workers' compensation proceedings, and thus the

> only evidence that §8–43–210 is intended to include, consists of reports and records prepared to assist in the history, treatment, examination, diagnosis, or prognosis of claimants and their injuries, ***and not medical records which were prepared for litigation purposes*** (emphasis added).

Ackerman at 526

The court held that even though the report was prepared either in anticipation of litigation, or specifically for litigation, the statute did not provide any limiting language that prevented the report from being admitted into evidence. The court stated:

> Contrary to claimant's arguments, the General Assembly created no exceptions which made admissibility of a physician's report dependent upon either the type of physician's report being offered, i.e., treating or consulting, or the reason for which the report was written. And, since the General Assembly has not explicitly created such an exception, we have no authority to infer the existence of one.

Ackerman at 527.

In support of its conclusion, the court went through the legislative history of the statute since its inception in 1919. The court noted that in 1923, the statute was amended to limit the admissibility of physicians' reports to reports created by "attending or examining physicians." As a result, if a physician reviewed the claimant's medical records and rendered an opinion in a report, without examining the Claimant as done in *Ackerman*, the report would not be admissible. In 1983, however, the statute was repealed and reenacted. In the reenactment, the General Assembly deleted any reference to reports of specific classes of physicians, such as an "attending" or "examining." As a result, "physicians' reports" in general were to be admitted.[2] The court did not, however, analyze whether a physician's report would also qualify as a medical record. *Ackerman* therefore did not address the issue as to whether records encompass reports.

[2] In *Ackerman,* the court held that there is a distinction between "records" and "reports." The respondents in Ackerman sought the admission of a physician's letter that contained the physician's opinion about the claimant's blood/alcohol level at the time of a work-related accident. The court held that the term "report" refers to a "formal statement or account of the results of an investigation." *Ackerman*, 914 P.2d at 526. The court found that the physician's opinions, which were based on the results of toxicology tests, constituted a physician's "report," and therefore, held it was unnecessary to determine whether the physician's letter also constituted a "medical record." Thus, one could argue that a report that includes the results of an investigation is not a record. But that is a very persuasive argument because *Ackerman* specifically said they did not address whether the physician report was also a medical record. (*Ackerman* at 526.) ("We conclude that the letters at issue here are "physicians' reports" within the meaning of the statute; hence we need not determine whether the materials also qualify as "medical records.'")

4. The relaxed rule of evidence in Section 8-43-210 eliminates the need for medical records, physician reports, and records of the employer to be subject to the foundational requirements of the business record exception to the hearsay rule in CRE 803(6).

Medical records and physician reports are submitted and admitted into evidence under 8-43-210 in almost every workers' compensation hearing. The medical records and physician reports routinely consist of independent medical examinations that are undertaken and performed solely in anticipation of litigation. Despite being prepared solely in anticipation of litigation, and being hearsay, they are no doubt admissible pursuant to 8-43-210. *See Ackerman*, *supra.* (Letter – report - written by physician in anticipation of litigation is admissible under 8-43-210.).

Moreover, IMEs, are hearsay. *See Klein v. State Farm Mut. Auto. Ins. Co*., 948 P.2d 43, 50 (Colo. App. 1997) (IME reports are hearsay.) Plus, IME reports are hard to qualify as a business record under 803(6).[3]

5. A self-serving letter written by the employer is admissible as a record of the employer to establish the basis for Claimant's termination.

A letter written by an employer setting forth the basis for the claimant's termination – hearsay - is considered a record of the employer and admissible. *Churchill v. Sears, Roebuck & Co*., 720 P.2d 171. (Colo. App. 1986). In *Churchill*, the employer wrote a letter saying the claimant was terminated for lack of office skills, lack of interest in improving, absenteeism, and poor judgment. At hearing, the employer submitted the letter as substantive evidence of the basis for Claimant's termination. Claimant objected to the letter being admitted because she was not afforded an opportunity to cross examine its author. She also disputed the contents of the letter. Despite her objection, the court determined the letter was admissible under the statute as a "record of the employer." As a result, the *Churchill* court admitted the hearsay evidence based on the plain language of Section 8-43-210.

[3] IMEs performed in anticipation of litigation are admissible under 8-43-210 and not admissible under CRE 803(6) as a business record. There is not a Colorado case on point that specifically says an IME is not a business record. But there are several cases from other jurisdictions addressing the issue under evidentiary rules like Colorado's CRE 803(6). In *People v. Huyser*, 221 Mich App 293 (1997), the Michigan Court of Appeals concluded that the trial court erred by allowing the State to use, in its prosecution, an expert witness report of the doctor it [hired] to examine the victim of a sex crime. Because the report was prepared for the purpose of litigation, the Court believed it lacked trustworthiness of a record generated exclusively for business purposes. *Id.* Other courts faced with the same issue, such as the Supreme Court of Main in *State v. Tomails*, 736 A.2d 1047 (Me. 1999), reached the same conclusion, holding forensic expert reports are the antitheses of the business records addressed by the Maine version of Rule 803(6) and the fact that they are prepared in anticipation of litigation is a common reason for finding that they lack trustworthiness. Similarly, in *McElroy v. Perry*, 753 So.2d 121 (2000), the Florida Court of Appeal's reached the same conclusion. Thus, Defendants' insurance medical exams and reports (IMEs) and other expert reports are not admissible under the business record exception. *Id*.

6. An investigation into the possible cause of an accident, leading to a statement from a co-worker in an email — hearsay — is admissible as a record of the employer.

In *McIlravy v. Harpel Oil Co*. W.C. No. 4-756-089, the claimant alleged the ALJ based his conclusion that there was no toxic exposure to diesel fuel on improperly admitted hearsay – an email from a coworker. The claimant objected to Exhibit O, an email from an employee to the employer stating that he talked to the decedent one hour before he got back into town on April 2nd and that the decedent said nothing to him about being exposed to diesel fuel. An employer representative testified that when the claimant informed her that the decedent had been exposed to diesel fuel, she sent out a general email to all employees asking if anybody knew about the incident. The employer representative testified that she kept that information in the employer's records because it was part of her job duty as Director of Transportation to keep track of spills. The ALJ allowed the Exhibit, finding it to be an employer's record. On appeal, the claimant argued that the email is not a record of the employer but an investigative report, and that without this evidence the ALJ could not otherwise reasonably conclude that a diesel exposure had not occurred. The panel perceived no reversible error. The panel based its opinion on Section 8-43-210, which it classified as an exception to the general rule that hearsay is not admissible and found the email to be a record of the employer. The Panel concluded that "We are not persuaded that the ALJ was mistaken in his determination that the documents in this regard were employer records." *Id*.

7. Section 8-43-210 provides each party ample time to rebut any statements contained in the employer witness statements or investigative reports.

Section 8-43-210 requires the employer to exchange with claimant each employment record they intend to introduce as evidence at the hearing at least twenty days before the hearing. The statute provides:

> All relevant medical records, vocational reports, expert witness reports, and employer records shall be exchanged with all other parties at least twenty days prior to the hearing date.

This mechanism and due process safeguard of providing the records at least 20 days before the hearing allows the claimant to prepare to rebut the information in the records of the employer. As a result, if the claimant wants to rebut a witness statement or investigative report, the claimant can rebut the evidence at the hearing. The claimant can rebut the evidence by testifying at the hearing.[4] The claimant can also rebut the evidence by subpoenaing to the hearing the witness who provided the statement. Plus, the claimant can also subpoena any other witness with relevant information to rebut the records of the employer. *Esser* at 197. (A party may obtain an order compelling a

[4] *See Walker v. Director of Insurance*, Mo. Admin. Hrg. Comm., No. 05-1585, December 20, 2006), 2006 WL 4007572. (Ability of a party to testify and rebut hearsay statements in letters admitted at hearing, which were hearsay, provides "ample due process protection" in non-criminal matters.)

witness to appear for cross-examination at the hearing or deposition pursuant to sections 8-43-207(1)(a), 8-43-207.5(2),8-43-212, and 8-43-315.)

8. CRE 806 acknowledges that some hearsay will be admissible, and upon its admission, sets forth how to attack, or support, the credibility of the out of court declarant / statement.

Colorado Rule of Evidence 806 specifically addresses the methods by which a party may attack or support the credibility of an out of court statement. In other words, CRE 806 recognizes that hearsay evidence may be admitted under certain circumstances, and when it is admitted, sets forth how each party may either attack or support the credibility of the declarant – who is absent and cannot be cross examined. CRE 806 allows each party to attack or support the witnesses statement as if the witness had testified.

CRE 806 provides in pertinent part:

> When a hearsay statement . . . has been admitted in evidence, the credibility of the declarant may be attacked, and if attacked, may be supported, by any evidence which would be admissible for those purposes if declarant had testified as a witness.

As a result, CRE 806, through other witnesses, lets you cross examine the declarant. For example, another witness can be questioned about a conflicting statement the declarant allegedly made to someone else. This occurred in *United States v. Bernal*, 994 F.2d 1518 (1st Cir. 1989). In *Bernal*, a co-conspirator's hearsay declaration was received into evidence against the defendant.[5] The defense lawyer impeached that declarant by eliciting, on cross-examination of a prosecution witness, that this same co-conspirator (the hearsay declarant) had given quite a different version which exculpated the defendant from guilt. Such evidence is received not as substantive evidence, but as non-substantive impeachment evidence to be considered by the fact-finder in determining the hearsay declarant's credibility.[6]

The rationale behind Rule 806 is sufficiently stated by the Advisory Committee's Note in the Colorado Rules of Evidence: "this rule recognizes that a hearsay declarant should be, so far as possible, subject to impeachment and rehabilitation as if he or she had testified. Evidence may thus be offered to show the declarant's bias, character for truthfulness, felony convictions, consistency [and inconsistency], and the like."

Therefore, if an employment record, in the form of a witness statement, is admitted into evidence pursuant to CRS 8-43-210, then another witness with personal knowledge should be able to testify as to any inconsistencies that

[5] See Anthony M. Brannon, Successful Shadowboxing: The Art of Impeaching Hearsay Declarants, 13 Campbell L.Rev. 157 (1991).

[6] *Id.* at 175, 176.

were made by the hearsay declarant. For example, if a witness statement is admitted into evidence which indicates that the hearsay declarant did not see the claimant injure himself at work while lifting a cinder block, another witness on the stand, maybe a co-worker of the hearsay declarant, can testify that he heard the hearsay declarant say while they were at lunch that he saw Claimant injure his back while lifting a cinder block at work.

CRE 806 also provides that the party against whom the hearsay statement has been admitted may call the hearsay declarant as a witness, and cross examine him as to the statement. The ability to call the hearsay declarant, or any other witness to refute the hearsay statement, is aided by the requirement of 8-43-210, which requires all relevant employer records, such as a witness statement, to be exchanged with all parties at least twenty days before the hearing date. Thus, 8-43-210 dovetails with, and is congruent with, CRE 806. In other words, 8-43-210 allows the witness statement into evidence and CRE 806 allows the party against whom the statement is offered to test the veracity of the statement through examination of other witnesses, or cross-examination of the declarant. In addition, the party against whom the hearsay statement is offered, can also argue to the ALJ, the limited weight to give the hearsay statement because of possible bias, inconsistency with other evidence, and the fact that the proponent of the statement did not produce the witness at the hearing and subject the hearsay declarant to provide the statement under oath – and be subject to direct cross-examination.

9. The ALJ does not have to credit or find persuasive an investigative report or witness statement.

The ALJ does not have to credit records of the employer that are admitted into evidence. *Jarnagin v. Busby, Inc.,* 867 P.2d 63, 66 (Colo. App. 1993)(the credibility of witnesses and the sufficiency, probative effect, and weight of the evidence are all within the province of the trial court); *Absolute Emp. Services, Inc. v. Industrial Claim Appeals Off.,* 997 P.2d 1229, 1234 (Colo. App. 1999)("Although there may be some evidence in the record from which the [trier of fact] could have drawn [a particular] inference ..., [the trier of fact] certainly was not compelled to find this evidence persuasive....") *Littlefield v. Bamberger*, 32 P.3d 615, 619 (Colo. App. 2001).

As a result, if a party submits a witness statement into evidence, but does not produce the witness to testify, the ALJ can determine the weight to give the witness statement under those circumstances. For example, the employer might submit a witness statement from a coworker that says the claimant told him he hurt his back at home and not at work. But if the coworker is not brought to testify in person – the judge may decide to not credit the hearsay statement.[7] But, on the other hand, if the employer also produces an emergency room report from the week before the alleged

[7] The mere maintenance of hearsay documents in a personnel file does not overcome the inherent reliability problem with the evidence. *See Lynch v. City of Philadelphia,* 87 A.3d 398 (Pa. Commw. Ct. 2014)

work accident, which says the claimant said he hurt his back at home, the ALJ might credit the witness statement.

Admissibility and Weight Given to Witness Statements

Section 8-43-210 governs the admissibility of certain hearsay in workers' compensation proceedings, but not the weight to be given to that hearsay. The clear meaning of the statute does not limit the type of employment records that are admissible. Moreover, any attempt to limit the admissibility of certain employment records based on factors set forth in the exception to the hearsay rule - 803(6) – would nullify the plain language of Section 8-43-210. As a result, once an investigative report or witness statement is admitted into evidence, additional challenges to its reliability go to its weight. Thus, strong cross-examination, presentation of opposing evidence, and argument are the appropriate ways to attack questionable but admissible evidence.

In this case, the ALJ has admitted the witness statements into evidence and reviewed them since they are records of the employer but has not credited them or given them any weight. Some are in Spanish and were not translated. Plus, some statements are illegible. Moreover, some of the witness statements contain double hearsay. Except for Mr. T[Redacted], Respondents did not produce any of the witnesses who wrote the statements to testify. Therefore, they were not subject to cross-examination at the hearing. As a result, the ALJ has not credited the witness statements and has not given them any weight.

b. Admissibility and Weight Given to OSHA Reports

In this matter, the same analysis applies to the OSHA records. The OSHA records were received and maintained by Employer and therefore became records of the employer. The OSHA reports were thus received into evidence. That said, the findings of the OSHA investigation are disputed and are being litigated. Therefore, based on the disputed findings contained in the OSHA reports, the ALJ has not credited the information contained in the OSHA reports and has not given them any weight.

I. Whether Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury to her left leg in the course and scope of her employment with the Employer on January 29, 2021.

For a claim to be compensable, the claimant must prove that: (1) the injury arose out of the claimant's employment, and (2) that the injury was in the course of the claimant's employment. C.R.S. §8-41-301(1)(b). The "course of employment" requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991). An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). It is claimant's burden to prove by a preponderance of the evidence that she was injured in the course

and scope of employment. A preponderance of the evidence is that which leads the tier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Claimant must also prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. ICAO*, 989 P.2d 251 (Colo. App. 1999). Further, while a pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment, when the claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

Claimant testified at hearing that on January 29, 2021, she was cleaning the tripe table using the 180-degree hot water red hose, when she felt warm water trickle off her apron into her work boot and get her sock wet. Claimant testified she cleaned the table prior to the lunch at around 11:30 am and only used one hose (the red hose only) to clean the table and floor. Claimant also alleged repeatedly that she did have protective gaiters on that would have stopped the water from getting into her boot.

Claimant testified she did not think to report the incident because she felt no pain. Multiple witnesses credibly testified Claimant did not mention any incident prior to requesting permission to leave work early at around 12:15 pm.

In light of the photographs admitted as Claimant's Exhibit 1, this testimony lacks credibility. If Claimant had suffered the severe first and second degree burns at work as demonstrated by the photographs, she would have most likely experienced significant pain, had trouble walking, and notified the employer immediately. Dr. Smith credibly confirmed this fact in a report submitted into evidence at the hearing.

Video surveillance shows Claimant walking the [Employer redacted] corridors wearing a long apron and gaiters just minutes after the alleged work injury. Claimant is seen walking with a normal gait and no pain. Claimant told [Employer redacted] and Dr. Smith she had not being wearing gaiters at the time of the incident (because otherwise her contention about how the injury occurred would not make sense as the water would not have entered her boot).

When confronted with this fact at hearing, Claimant incredibly testified that she put on the gaiters right after cleaning the table, but before talking to Ms. KP[Redacted] to request the rest of the afternoon off due to a family emergency. Claimant would have had no reason to put on the gaiters at lunch if she was requesting to go home. Moreover, her foot was allegedly already wet so the story about putting protective gaiters on at lunch makes no sense. It is clear from the surveillance that Claimant had the gaiters on after the alleged injury which would have protected her from water getting into her boots or a burn occurring.

Claimant's hearing testimony regarding her timing of the discovery of the burns and return to [Employer redacted] to report said burns also conflicts with the history documented in the medical reports.

She told a doctor initially that she did not notice any burns until taking off her boots for the first time at 5:30. However, she testified at hearing that she took a shower at around 1:00 p.m. and noticed the burns and was back to report the injury at [Employer redacted] around 2:30 to 3:00.

Claimant eventually conceded there was about a seven-hour gap between when she alleged the injury occurred at 11:30 am and when she went back to [Employer redacted] to report the incident at 6:30 pm. Claimant testified she was in "no rush" to report the incident because she did not think the burns were severe. But the photographs demonstrate the severity of the burns.

Mr. Fernandez credibly testified he witnessed Claimant using the blue hose. This testimony aligns with Mr. T[Redacted]'s and Ms. KP[Redacted]' testimony that it was customary and procedure to use the blue hose to rinse off the table and floors before taking a lunch break. Claimant testified she did only use one hose when washing the table and floor. As a result, Claimant's contention further lacks credibility. If Claimant was using the blue hose, she would not have burned herself at work.

Dr. Smith noted in all medical probability that Claimant did not sustain an injury at work. Dr. Smith credibly documented that with the first and second degree burns Claimant sustained, it would be very doubtful Claimant would have not experienced immediate pain that affected her gait and behavior to prompt her to immediately report the injury. Dr. Smith also noted that claimant had lied to her about whether she was wearing gaiters.

Dr. Smith credibly noted Claimant likely injured herself at home in the several hours she was absent from work.

Claimant's story simply lacks credibility and was inconsistent. If she had suffered severe first and second-degree burns, she would have most likely noticed them immediately and would not have waited seven hours to go back to [Employer redacted] to report the alleged injury and seek medical treatment.

As found, the totality of the evidence presented persuades the ALJ that Claimant failed to prove, by a preponderance of the evidence, that she sustained a compensable injury on January 29, 2021.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for Workers' Compensation benefits is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 11, 2022.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-131-800-001

ISSUE

1. Whether Claimant overcame the Division Independent Medical Examination (DIME) opinion of Stanley Ginsburg, M.D. regarding the impairment rating by clear and convincing evidence.

2. If Claimant has overcome the DIME physician's opinion, what is the correct impairment rating?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 73 year-old male who worked for Employer as a Safety and Health Consultant. On February 24, 2020, Claimant sustained a work-related injury to his lumbar back when he was involved in a motor vehicle accident while driving in whiteout conditions. (Tr. 16:25-17:12).

2. Claimant was taken to the emergency room at Memorial Hospital of Converse County, Wyoming. He complained of lower back, right hand, and right hip pain. X-ray imaging revealed a compression fracture of the L4 vertebral body. (Ex. 6).

3. On February 27, 2020, Claimant began treating with Authorized Treating Physician (ATP) Kathryn Bird, D.O., at Concentra. After conservative modalities, including injections, did not improve Claimant's condition, surgery was recommended. (Ex. 15).

4. On September 17, 2020, Bryan Castro, M.D. operated on Claimant. The operation included a spinal fusion posterior transforaminal interbody fusion and decompression L4-5 and decompression right L3-4. (Ex. 13).

5. Following a course of post-operative rehabilitation, Dr. Bird placed Claimant at MMI on March 3, 2021. She also performed lumbar range of motion measurements on Claimant. (Ex. D).

6. When performing lumbar range of motion measurements, the physician measures a claimant's lumbar flexion, lumbar extension, right lateral flexion, left lateral flexion and straight leg raising maneuvers. Each category of measurements is done three times. *AMA Guides to the Evaluation of Permanent Impairment (Third Edition Revised).*

7. When performing lumbar range of motion measurements on Claimant, Dr. Bird measured Claimant' flexion at 7%, his lumbar extension at 6%, his lumbar right lateral flexion at 3%, and his lumbar left lateral flexion at 3%. The total lumbar range of motion

impairment was 19%. Dr. Bird's series of three measurements for each category resulted in only numbers divisible by five. (Ex. D).

8. Dr. Bird assigned Claimant a 29% whole person impairment rating for his lumbar spine, based on the 19% loss for range of motion and a 12% Table 53 specific disorder. *Id.*

DIME Examination

9. Respondents objected to the 29% whole person impairment rating assigned by Dr. Bird and filed a Notice and Proposal and Application for a DIME. Stanley Ginsburg, M.D., was selected as the DIME physician. The DIME occurred on July 8, 2021. (Ex. B).

10. Dr. Ginsburg performed lumbar range of motion measurements on Claimant. Dr. Ginsburg measured Claimant's lumbar flexion at 7%, his lumbar extension at 3%, his lumbar right lateral flexion at 2%, and his lumbar left lateral flexion at 1%. The total lumbar range of motion impairment was 13%. Dr. Ginsburg's series of three measurements for each category resulted in only numbers divisible by five. *Id.*

11. Dr. Ginsburg agreed with Dr. Bird that Claimant reached MMI on March 3, 2021. He assigned Claimant a 24% whole person impairment rating based on the 13% loss for range of motion and a 13% Table 53 specific disorder. *Id*.

12. On August 3, 2021, Respondents filed a Final Admission of Liability (FAL) consistent with the opinions of Dr. Ginsburg. The FAL admitted to a MMI date of March 3, 2021, and a 24% whole person impairment rating. (Ex. A)

Claimant's IME

13. Claimant's counsel requested that Gary Zuehlsdorff, D.O., perform a Claimant's IME. On October 6, 2021, Dr. Zuehlsdorff evaluated Claimant. (Ex. E.)

14. Dr. Zuehlsdorff performed lumbar range of motion measurements on Claimant. Claimant's lumbar flexion was measured at 7%, his lumbar extension at 4%, his lumbar right lateral flexion at 3%, and his lumbar left lateral flexion at 2%. The total lumbar range of motion impairment was 16%. Dr. Zuehlsdorff's range of motion measurements, unlike those of Drs. Bird and Ginsburg, are not all numbers divisible by five. *Id.*

15. Dr. Zuehlsdorff agreed with the MMI date of March 3, 2021. He assigned a 27% whole person impairment rating based on a 16% loss for range of motion and a 13% Table 53 specific disorder. *Id.*

16. With regard to the range of motion impairment, Dr. Zuehlsdorff stated in his IME report that "there are simply differences upon three different dates of 19% from Dr. Bird, 13% from Dr. Ginsburg, and 16% from [him]". *Id.* Dr. Zuehlsdorff opined that given the variability one would see in measurements of the lumbar spine on a day-to-day basis, the three range of motion impairments reflect a range of which Claimant could fall into. *Id*.

Respondents' IME

17. On November 8, 2021, Nicholas Kurz, D.O., evaluated Claimant at the request of Respondents' Counsel. (Ex. C).

18. Dr. Kurtz performed lumbar range of motion measurements on Claimant. Claimant's lumbar flexion was measured at 4%, his lumbar extension at 3%, his lumbar right lateral flexion at 0%, and his lumbar left lateral flexion at 1%. The total lumbar range of motion impairment was 8%. Dr. Kurtz's range of motion measurements, like those of Dr. Zuehlsdorff, are not all numbers divisible by five. *Id.*

19. Dr. Kurtz agreed with the MMI date of March 3, 2021. He assigned a 19% whole person impairment rating based on an 8% loss for range of motion and a 12% Table 53 specific disorder. *Id.*

20. Dr. Kurtz questioned Dr. Ginsburg's measurements because they were even numbers in increments of five (Dep. Tr. 44:2-22). Dr. Kurz credibly testified that Dr. Ginsburg's range of motion measurements met the Division of Workers' Compensation definition of valid. (*Id*. at 45:1-5). Dr. Kurz further testified that the ultimate say with respect to the impairment rating is with the DIME. (*Id.* at 29:13-18).

21. Dr. Zuehlsdorff, credibly testified that Dr. Ginsburg's range of motion numbers appear to be rounded. (Tr.45:16-18). Dr. Zuehlsdorff testified, however, that the Division of Workers' Compensation has never commented on this "rounding phenomenon." (Tr. 45:5-7). Dr. Zuehlsdorff testified that rounding the range of motion numbers would affect the actual impairment rating by, at most, a couple of percentage points. (Tr. 47:3-9).

22. The ALJ finds that while Drs. Kurtz and Zuehlsdorff both credibly questioned Dr. Ginsburg's measurements being in increments of five, this testimony is not persuasive. As both Drs. Kurtz and Zuehlsdorff testified, Dr. Ginsburg's measurements are not contrary to the Division guidelines or the AMA guides.

23. Dr. Zuehlsdorff testified that he and Dr. Ginsburg measured Claimant's lumbar flexion impairment at 7%. He testified that his left and right lateral flexion measurements each differed by 1% from Dr. Ginsburg's measurements. Dr. Zuehlsdorff testified that the 1% differences between him and Dr. Ginsburg can be attributed to a person's day-to-day variability. (Tr. 63:14-64: 8).

24. While Dr. Zuehlsdorff believes that his lumbar measurements are more accurate that Dr. Ginsburg's, there is no evidence that Dr. Ginsburg's impairment rating is incorrect.

25. The ALJ finds that Claimant did not overcome Dr. Ginsburg's opinions on impairment by clear and convincing evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's Impairment Findings

The party seeking to overcome the DIME physician's finding regarding permanent impairment bears the burden of proof by clear and convincing evidence. *Id.* Clear and convincing evidence is evidence that demonstrates that it is highly probable the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge,* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must

be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001).

In this case, the DIME physician, Dr. Ginsburg, assigned Claimant a 24% whole person impairment rating. (Findings of Fact ¶¶ 10 and 11). That opinion must be overcome by clear and convincing evidence. Claimant's expert, Dr. Zuehlsdorff, assigned Claimant a 27% whole person impairment rating. (*Id.* at ¶¶ 14 and 15). While Dr. Zuehlsdorff and Dr. Kurtz questioned Dr. Ginsburg's measurements because the numbers were all factors of five, neither doctor opined that Dr. Ginsburg's measurements were incorrect. (*Id.* at ¶¶ 20 and 21). Dr. Zuehlsdorff noted the minor differences between his and Dr. Ginsburg's measurements, and credibly testified that it could be attributed to Claimant's day-to-day variability. (*Id.* at ¶ 23).

Dr. Ginsburg offered an opinion regarding Claimant's impairment rating that differs from the opinions of Drs. Zuehldorff, Bird and Kurtz. There is no evidence, however, that Dr. Ginsburg's opinion regarding Claimant's impairment rating is incorrect. Claimant did not introduce sufficient evidence to meet his burden of proof to overcome Dr. Ginsburg's findings regarding impairment.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by clear and convincing evidence that the DIME physician's impairment rating is incorrect.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 11, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant established that she suffered a compensable Coronavirus ("Covid") infection arising out of her work duties on or about November 24, 2020.

II. If Claimant established that she suffered a compensable Covid infection, whether she also established, by a preponderance of the evidence, that she is entitled to reasonable, necessary and related medical treatment to cure and relieve her of the effects of said infection.

III. If Claimant established that she suffered a compensable Covid infection, whether she also demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits between July 12, 2021, and November 30, 2021.

Because the ALJ concludes that Claimant failed to establish that she suffered a compensable Covid infection, this order does not address issues II-III.

FINDINGS OF FACT

Based upon the evidence presented at hearing along with the deposition testimony of Dr. Fall, the ALJ enters the following findings of fact:

Background

1. Claimant, a 42 year-old woman, is employed as a case worker for Respondent-Employer. Claimant works at [Employer's facility, redacted]. Her job duties and responsibilities include assisting criminal offenders with job placement, preparing release documentation and assisting with court hearings. In November of 2020, Claimant's typical work hours were from 8:00 a.m. to 5:00 p.m. Monday through Friday with Saturdays and Sundays off.

2. Claimant's husband works at the same facility as Claimant but in a different department. During November 2020, Claimant's husband was working in the Transportation Department, which required that he move inmates around the correctional facility. His work shift was typically from 7:00 a.m. to 3:00 p.m., Monday through Friday with some 12-hour shifts as needed. In November of 2020, when Claimant and her husband were not working, including on weekends, they generally spent their time at home together.

3. During November 2020, Claimant, her husband and their daughter generally ate meals together at home. Claimant and her husband shared a bathroom, a

bedroom, and all other areas of their home. They also drove together in the same vehicle numerous times, went on community outings together, including shopping and dining and engaged in intimate contact with one another.

Claimant's Potential non Work-Related Exposure to Covid

4. During November 2020, Claimant shared a 3-bedroom, 1300 sq. ft. single family home with her husband and her daughter, who is 20 years old. The house is located in Florence, Colorado in Fremont County.

5. Neither Claimant nor her husband or daughter wore face coverings (masks) while together in their personal residence or when driving to and from places together in their vehicles. When conducting business in the community, Claimant, her husband and her daughter would only wear masks when required by the business establishment.

6. Claimant, her husband, and their daughter dined at Chili's Restaurant on November 6, 2020 and November 21, 2020. On each occasion, when dining at the restaurant, Claimant, her husband, and daughter took their masks off while at the table and while eating. Chili's was open to the public at that time and other diners were present in the restaurant without masks.

7. Claimant and her family members had numerous visitors to their family home during November 2020, while Claimant was present. None of the visitors wore masks while inside Claimant's house. The visitors included Paul Anderson, Claimant's father, and people who regularly worked in public places, including Shelby Murphy who worked at Walmart, Skyler Ross and Colton Walker who worked at Target, Jordan Brown who worked at Royal Gorge, and Desiree Fox who also worked at the Royal Gorge.

8. On November 22, 2020, Claimant's husband began to experience symptoms consistent with a Covid-19 infection, including fatigue, shortness of breath, headache and symptoms consistent with pneumonia. (Exh. J, p. 72).

9. Claimant testified that her husband tested for Covid on November 22, 2020, at a drive-thru test site. This test would return a positive result. According to Claimant's testimony, her husband tested positive for Covid on November 24, 2020, by a Binax Rapid test given by the Department of Corrections (DOC). (See also Exh. J, p. 72).

10. Per Dr. Fall, Claimant's husband probably had COVID on November 22, 2020 when he started having symptoms. (Fall Depo., p.25).

11. Claimant testified that she was scheduled to work on November 24, 2020 and would have reported to work that day, but just before her shift, she was advised by her husband that he had tested positive for Covid. (See also Exh. J, p. 72).

12. Claimant reported her husband's symptoms and positive test result to the call-in nurse line established by Respondent-Employer as soon as she learned that her

husband was Covid positive, i.e. on November 24, 2020. (Exh. J, p. 72). Claimant was instructed to go home, quarantine and test. She did not report to work.

13. Claimant inconsistently reported the onset of her symptoms to the nurse line. According to LB[Redacted] and Exhibit J, in one message Claimant reported being tired and run down on November 24, 2020. During another call, she reported her symptoms started November 25, 2020, when she was "real sick" with a sore throat, sinus problems and headaches. (Exh. J, p. 72).

14. Claimant testified that her own symptoms started on November 25, 2020, one day before Thanksgiving.

15. Claimant's first Covid positive test result came back on November 30, 2020, approximately one week after her husband had first tested positive.

16. Between August and mid-November of 2020, Claimant was required to undergo weekly PCR testing for Covid. For eleven weeks, Claimant tested negative for Covid. Claimant's first positive test result came after she spent hours and days in direct and unprotected contact with her husband, who had tested positive for Covid no later than November 24, 2020.

17. Between November 20, 2020 and December 1, 2020, the following events transpired:

- On Friday, November 20, 2020, Claimant took holiday and compensatory time; she was at home 24 hours. (Exh. N, p. 89). According to Dr. Fall, Claimant's husband [Redacted] was probably contagious for Covid by this date. (Fall Depo. p. 25).

- On Saturday, November 21, 2020, Claimant and her husband were at home together for extended time periods. (Exh. N, p. 89) (Exh. N, p. 89). Claimant testified she, her husband and her daughter went out to eat at Chili's restaurant.

- On Sunday, November 22, 2020, Claimant was at home 24 hours; her husband was also home during this time, during which he first complains of Covid like symptoms.

- On Monday, November 23, 2020, Claimant works 8 hours. Claimant's rapid Covid test is negative. Claimant is at home for the balance of the day with her symptomatic husband, whose symptoms persist. (Exh. N, p. 89).

- On Tuesday, November 24, 2020, Claimant was instructed to return home, quarantine and take a PRC test given that her husband had just tested positive for Covid by his rapid test.

Claimant returns home and spends the day with her Covid positive husband. (Exh. N, p. 89).

- On Wednesday, November 25, 2020, Claimant remains home in quarantine with Covid positive husband. (Exh. N, p. 89). Claimant reports developing Covid like symptoms on this date, approximately 3 days after her husband fist complained of symptoms. Based upon the evidence presented, it is unknown if Claimant takes another rapid or PRC test on this date.

- On Thursday, November 26, 2020, Claimant was at home 24 hours with her Covid positive husband. (Exh. N, p. 89).

- On November 27, 2020, Claimant was at home 24 hours with her Covid positive husband. (Exh. N, p. 89). Claimant's PCR test results from Nov. 24, 2020 are negative. (Exh. J, p. 72).

- On November 28, 2020, Claimant was at home 24 hours with her Covid positive husband. (Exh. N, p. 89).

- On November 29, 2020, Claimant was at home 24 hours with her Covid positive husband. (Exh. N, p.89).

- On November 30, 2020, Claimant was at home 24 hours with Covid positive husband. (Exh. N. p. 89). Claimant takes another Covid test. (Exh, D).

- On December 1, 2020, Claimant was at home for 24 hours with her Covid positive husband. (Exh. N, p.89). The results from Claimant's November 30, 2020 test are reported as positive for Covid. (Exh. D, p. 46).

18. The only known Covid positive person Claimant was exposed to without personal protective equipment (PPE) during the aforementioned time period was her husband.

19. When the facility received Claimant's Covid test results on December 1, 2020, Claimant was asked if she wanted to pursue workers' compensation benefits. Nine days later, she responded that she did not. (Exh. I, p. 69). No mention is made of any purported work-related exposure when she responded to this query.

20. Claimant worked a total of 3 shifts, or 24 hours, between November 18, 2020 and November 24, 2020, when she was sent home without working due to her husband's positive Covid test. She quarantined before testing positive herself on November 30, 2020. While at work during the aforementioned shifts, Claimant wore PPE, as did all other staff and facility offenders. During this time, Claimant was exposed to her

husband for approximately 248 hours during that period - almost 10 times longer than she was exposed to others at work. Further, Claimant never wore PPE around her husband whom the scientific data, according to Dr. Fall, demonstrates was probably positive for Covid on November 22, 2020, after developing symptoms. As noted, his diagnosis was confirmed on November 23, 2020.

Claimant's Contrasting Potential for Exposure to Covid While at Work

21. [Employer's facility] is located in Canon City, Colorado in Fremont County. The facility consists of at least five separate buildings that house offenders. The buildings are designated A, B, C, D, and E, which are referred to by names reflecting the letter assigned to the building, e.g. building E is referred to as Echo Unit. (Exh. O, p. 103). Claimant performs the majority of her work in her private office in Building E. The office has a door that could be closed to separate her from common areas within the building.

22. Strict safety protocols were in place in November 2020 concerning the use of protective equipment and social distancing due to the Covid pandemic. (Exh. O). The protocols changed over time from October 2020 to November 2020 to account for changes in the Center for Disease Control's (CDC's) knowledge of Covid transmission and spread. When in a building with any offenders known to have Covid, the staff was required to wear PPE including, goggles, an N 95 mask, a face shield over the mask, a gown and gloves. (Exh. O, p. 97). Claimant was required to, and did, wear at least a KN 95 rated mask at all times while in the facility as did offenders when interacting with staff.

23. The facilities Covid safety protocols were based on the best available scientific knowledge at the time and were authored based on input from Randolf Maul, M.D., Chief Medical Officer, and Health Authority for the Department of Corrections. (Exh. O, p. 96).

24. Both staff and offenders could be reprimanded or punished for failure to follow the aforementioned safety protocols. (Exh. Q. p. 107). Claimant testified that staff and offenders generally complied with the protocols. She testified that she never reported any staff to management for failure to comply with the protocols. Offenders who failed to comply could be subject to punishment under the Code of Penal Discipline, which could result in a loss of earned good time against the offender's sentence. Claimant never reported any failures of offenders to comply with the facilities safety protocols.

25. As stated above, Claimant's office was located in the Echo (E) building. As of November 19, 2020, Echo building did not house any known Covid positive offenders. (Exh. O, p. 103).

26. When Claimant met with offenders in her personal office, she would wear a KN 95 mask. As noted, offenders also wore masks during meetings with facility staff.

27. Claimant testified that she did not meet with known Covid positive offenders in her office. Rather, known positive offenders resided in buildings other than Echo

Building and were restricted to their assigned buildings. Covid positive offenders were not allowed to leave their buildings to travel to other buildings on facility grounds. Indeed, they were not even allowed to travel to the "chow" hall for meals. Instead, they had their meals delivered to their cells.

28. When Claimant had occasion to go into a building were Covid positive inmates resided, e.g. Alpha (A) Building, she wore the highest level of PPE available, including a gown, a personally fitted N 95 face covering, a face shield over that and gloves. (Exh.O, p. 96, 99). The N 95 is the highest-rated mask for personal protection. Every offender also wore a KN 95 mask when interacting with staff members. As of November 2020, out of 107-housed offenders in Alpha building, 27 were known to have Covid. (Exh. O, p.103).

29. Claimant testified that, other than Echo, the only building she recalls going into in November 2020 was Alpha building. Alpha building was being used as a quarantine unit at the time. The majority of the offenders housed in Alpha building, approximately 75%, did not have Covid. (Exh. O, p. 103). The cells in Alpha building had windows that could be opened.

30. The only time Claimant would have to go into Alpha building would have been to obtain the signatures of offenders who were scheduled to be released. Claimant did not present any credible evidence that she obtained signatures on release documents in the latter half of November 2020, which is when she contends she contracted Covid as part of her work duties.

31. Claimant did not establish that anyone she may have interacted with in Alpha building actually had Covid. She presented no persuasive evidence that she was in direct contact with a Covid positive offender in the latter half of November 2020. Rather Claimant contends that because the facility had an active Covid positivity rate of a least 40.44%, her infection had to have resulted from her work environment. According to Claimant, the prisons positivity rate means that she had a better than 40% chance of contracting Covid at work, which she contends, "far exceeds that risk of catching the virus outside of her work." As noted below the ALJ is not persuaded.

The Testimony of [Redacted, hereinafter SB]

32. SB [Redacted] testified as a member of the prisons management team. He oversees inmate programs administered by prison staff, including Claimant. At the time Claimant alleges she contracted Covid in the facility, SB[Redacted] was Claimant's Captain and direct supervisor. SB[Redacted] testified that only inmates who were on a discretionary release and were not Covid positive could be released in November 2020. Therefore, he testified that any signature Claimant obtained from an offender who was scheduled for discretionary release would not have been Covid positive. Accordingly, the risk that Claimant would have had close contact with a Covid positive offender was significantly reduced. If an offender was scheduled for mandatory release, he could be

released even if he had Covid; however, Claimant presented no convincing evidence that she obtained signed paperwork from such an inmate in the latter half of November 2020.

33. SB[Redacted] reiterated that anyone entering Alpha building, for any reason, was required to don full PPE. He also echoed that once an inmate was identified as Covid positive, that inmate was not free to leave the quarantine area or access the day hall. According to SB[Redacted], the facility instituted cohorting and restricted staff and inmate movement around the facility by November 2020. SB[Redacted] testified that if inmates were non-compliant with established safety protocols, incident reports were to be prepared. He testified that he received no such reports from Claimant outlining inmate non-compliance, nor did he ever receive any reports of face-to-face contact Claimant had with any confirmed Covid positive inmate. As noted, Claimant presented no convincing evidence that she interacted with a Covid positive offender during the two weeks before she became symptomatic on November 25, 2020, nor did she testify she had been in a building with Covid positive offenders, such as Alpha Building during that time. Even if there had been such an interaction, the evidence presented supports a finding that such contact would have likely occurred over minutes, not hours, and while both parties were wearing PPE.

34. During cross-examination, SB[Redacted] agreed that prior to November 2020, the facility experienced problems with staff and inmate compliance in wearing masks as instructed. Indeed, on October 13, 2020, an email sent by the Associate Warden, Lance Miklich, to prison staff verified that there was a problem getting staff members to wear their masks. The email provides in pertinent part:

> The department continues to struggle with staff and offenders wearing their masks as directed. CMC will now take the next step in holding our staff and inmates accountable. Our staff and inmates have been reminded and directed for several months prior to this point. (Exh. Q, p. 107).

35. Warden Thomas Little also sent an email to prison staff regarding the problem with Covid spreading throughout the facility on October 13, 2020. Warden Little noted: "As you all are aware, we have experienced staff positives here at CMC and there have been numerous outbreaks throughout the department."

36. Additional measures to distance staff from each other were instituted including suspension of communal meals. While some staff and inmates had an apparent problem adhering to the facilities safety protocols as documented in the aforementioned email, there is a dearth of evidence to suggest that Claimant was ever exposed to or had physical contact with a known Covid positive staff member or offender when neither party was wearing any PPE. Indeed, Claimant reportedly wore her PPE consistently.

37. On November 2, 2020, Warden Little sent out another email mentioning that the facility was experiencing a "spike" in Covid-19 cases. Nonetheless, Warden Little noted: "At this point, it appears that the risk to anyone being exposed has been relatively

low as our employees have been diligent in utilizing barrier masks while at the facility." Claimant contends that the evidence presented supports a finding that she was infected at the same time that this "spike" occurred in the facility.[1]

38. Accepting Claimant's assertion that she was infected no later than the date of Warden Little's November 2, 2020 email means that she did not experience symptoms for 23 days post infection until she developed symptoms on November 25, 2020. While Claimant argues that she was "infected" in early November 2020, the evidence presented persuades the ALJ that does not have a convincing understanding as to when she actually contracted Covid. Indeed, in her position statement, Claimant notes:

> Claimant tested positive on November 30, 2020, and was feeling symptoms as of November 25, 2020. That means she was infected sometime before the 25th, likely within five days of that time period, ***but it could have been fourteen days or more as well***. In any event, we know that the Claimant was infected at the same time that the virus was spreading rapidly throughout the prison where she worked, at an infection rate that exceeded 40%. (Emphasis added).

Thus, Claimant contends that "[i]t makes sense that the Claimant was infected as a result of her work at the prison." (Claimant's Post-Hearing Position Statement, p. 4).

The Testimony of [Redacted, hereinafter LB]

39. LB[Redacted] testified as Respondent-Employer's Human Resources Analyst. Ms. LB[Redacted] testified that she was part of the facilities Covid response team, which maintained a Covid hot line that employees were instructed to call to report, among other things, positive test results. According to Ms. LB[Redacted] , prison staff were required to undergo weekly PCR tests and daily Binax rapid tests before each shift. Ms. LB[Redacted] and Claimant both testified that staff members were not allowed to work if they had a positive Binax test on the day of work or if they were exposed to a known Covid positive person outside of work.

40. As noted above, Claimant contacted the hot line on November 24, 2020 and left a voice mail message that she had been exposed to her husband who had a Covid positive Binax test. (Exh. J, p. 72). Her voice mail message was returned and during a subsequent conversation with the hot line representative, Claimant indicated that she had taken a test and was "tired and rundown." (Id.) Claimant contacted the hot line again on November 27, 2020. She left a voice mail indicating that her husband was Covid positive, but her test result from November 24, 2020 was negative. Nonetheless, she reported experiencing symptoms. (Id.) During a follow-up phone conversation with hot line personnel, Claimant reported that she developed a sore throat, sinus symptoms and "really bad headaches" on November 25, 2020. She also reported that her husband's symptoms began on November 22, 2020. (Id.) Follow-up testing was scheduled for November 30, 2020 (five days after the onset of reported symptoms as recommended).

[1] See generally, Claimant's Post Hearing Position Statement, p. 4.

(Id.) Claimant was contacted after her November 30, 2020 test returned a positive result. During this conversation, Claimant reported that she worked the day shift and that prior to her positive test result she worked on November 19, 2020, November 20, 2020 and November 23, 2020, (presumably because her required daily Binax tests were negative). (Id.) She also advised that she worked in her office in Echo Unit, wore a N 95 and offenders wore KN 95 masks during contact with one another. (Id.) She did not identify any significant staff contact and noted that she did not carpool or socialize with staff. (Id.) Ms. LB[Redacted] testified that she determined there was no significant offender or staff contact that would have triggered further contact tracing measures at the facility. In other words, Claimant's reporting raised no concerns that she had indeed contracted the virus at the facility nor potentially infected anyone else at work.

The Medical Record Evidence

41. Claimant first sought medical care for reported Covid symptoms on December 12, 2020, at UC Health Urgent care in Canon City. Claimant arrived to the clinic with complaints of shortness of breath, cough, fatigue and loss of voice. (Exh. B, p. 25). She reported a positive Covid test result from November 30, 2020 and when asked by Medical Assistant (MA) Jessica Montelongo if there had been a known exposure to Covid, and if so to whom, Claimant reported: "Yes, husband". (Id.) Claimant did not report any known or suspected work exposures. However, she did report that her husband has been diagnosed with COVID pneumonia and the record reflects that he had been seen in the clinic the week before she presented there. (Exh. B, p. 21-22). A chest X-ray was ordered and revealed a normal heart size, clear lungs no consolidating infiltrates and normal pulmonary vascularity. (Exh. B, p. 22). Claimant was diagnosed with "bacterial sinusitis and bronchitis likely as a complication from Covid." She was prescribed antibiotics, a Medrol dose pack and an inhaler followed by a discharge to home with instructions to return if her symptoms worsened.

42. On January 4, 2021, Claimant was seen by Dr. Alfred Arline at Kaiser Permanente in Pueblo. Claimant reported headaches and sinusitis and was now status post 2 weeks of Covid leave, and some sick leave and vacation. Claimant complained of fatigue but no shortness of breath. She reported "initial COVID like symptoms, around 24th of November, after exposure to her husband, who was positive for COVID-19". (Exh. C, p. 38). With respect to Claimant's fatigue, Dr. Arline was "UNSURE OF HIS (sic) RELATED SOME OTHER ETIOLOGY, OR UNFORTUNATELY CONSEQUENCE OF PREVIOUS COVID-19 INFECTION". (Exh. C, p. 39). A cardiac exam, including an EKG for reported palpitations was reportedly normal.

43. As part of a questionnaire provided at check-in for her appointment on January 4, 2021, Claimant indicated that her visit was not related to Third Party Liability including workers' compensation. (Exh. C, p. 41).

44. On January 6, 2021, Claimant sent the employer an e-mail indicating that she wanted to file for workers' compensation benefits. (Exh. I, p. 70). At hearing, Claimant testified the impetus for this was her diminishing lack of personal/vacation leave.

45. After asserting on January 6, 2021, that her Covid infection was caused by an exposure at work, Claimant returned to UC Health Urgent Care in Canon City on January 7, 2021. During this encounter, Claimant reported that an "incident" occurred at work on November 23, 2020, which caused her to develop Covid-19 symptoms. (Exh. B, p. 12). Claimant did not mention a work incident exposing her to Covid to her medical providers previously nor did she testify at hearing about a specific incident purportedly exposing her to Covid at work on November 23, 2020. Finally, she did not testify that her symptoms began on November 23, 2020. Rather, she testified that her symptoms started on Wednesday, November 25, 2020, the day before Thanksgiving. Despite Claimant's report that she was exposed to Covid at work, the report from this date of visit indicates that it was "unknown" whether Claimant's exposure arose from a work related mechanism. (Id.) Repeat chest x-rays performed during this appointment revealed normal heart and lungs.

46. Claimant returned for treatment at Canon City Urgent Care on April 19, 2021 where she was reevaluated for persistent complaints of fatigue and shortness of breath by Physician Assistant (PA-C) Steven Quakenbush. (Exh. B, p. 9). PA-C Quackenbush did not opine on the cause of Claimant's Covid. Rather, he said MMI was pending a "decision on work-related causality and compensability."

47. On May 26, 2021, Claimant was seen at Kaiser Permanente to obtain Family Medical and Leave Act (FMLA) paperwork. She reported that she had been denied workman's compensation but felt too winded to go back to work. Claimant was informed that "the Kaiser FMLA office had determined that FMLA for HX of COVID was not allowed long term." (Exh. C, p. 44). Claimant then reported to her PCP on May 26, 2021, that she had been "trying to get FMLA but [the] Kaiser clinic denied." (Exh. F, p. 53).

48. Claimant underwent Holter monitoring for reported tachycardia at Pueblo Cardiology on February 2, 2021. She underwent monitoring for 72 hours and was evaluated by Dr. Bhavith Aruni afterwards on February 19, 2021. Results of Holter monitoring revealed an average heartbeat of about 66 bpm and a maximum heart rate of 170 bpm along with occasional PVCs. (Exh. H, p. 64). Although she had episodes of tachycardia (related to deconditioning after her Covid infection), no arrhythmias were noted on monitoring. (Exh. H, p. 65). Outside of being provided materials concerning diet, exercise and immunity, no further treatment recommendations were documented by Dr. Aruni following this visit.

49. Based upon careful review of the medical records admitted into evidence, the ALJ finds that none of the medical care providers who have treated or examined Claimant for her Covid symptoms have performed an analysis regarding the likely cause of Claimant's Covid infection, i.e. whether it stems from a work related exposure or arose from another cause.

Dr. Fall's Medical Records Review and Subsequent Deposition Testimony

50. Respondents sought the opinions of Dr. Allison Fall regarding the likely cause of Claimant's Covid infection. After review of Claimant's available medical records, her time sheets and her discovery responses, Dr. Fall issued a report outlining her opinions on September 10, 2021. (Exh. A). As noted, in addition to review of the available medical records, Dr. Fall scrutinized Claimant's answers to Respondents interrogatories. In those responses, Dr. Fall notes that Claimant reported that she had been tested for Covid on November 24, 2020 with a negative result. She also noted that Claimant reported being tested daily by Respondent-Employer prior to reporting to work and that all Covid testing yielded negative results until November 30, 2020, when a rapid test came back positive. According to Dr. Fall, Claimant's testing results supported an indication that the earliest exposure would be around November 18, 2020, with the positive test result placing the exposure around November 21, 2020. This would have been the weekend Claimant's husband became symptomatic and the same day Claimant and her family went to Chili's Restaurant. (Exh. N).

51. Dr. Fall noted that Claimant reported in her interrogatory responses that other than her husband, she did not have direct contact with anyone else outside her work that had tested positive. She also dismissed any suggestion that Claimant's exposure leading to her infection would have occurred in October or early November when Claimant was working in food service, as any such exposure timeframe would be inconsistent with the Covid testing results.

52. Concerning the situation Claimant suggested was a likely exposure from November 23, 2020, when she reportedly informed a Covid positive offender who was in her office for about 30 minutes that his parole was being suspended and he began crying, took off his mask and blew his nose, Dr. Fall noted that this was the only exposure she had at work between November 20, 2020 and the end of the month and that the exposure was short in duration and while Claimant and the offender were both wearing PPE. Comparing this incident to the time Claimant spent in direct contact with her Covid positive husband and her other movements about the community lead Dr. Fall to conclude that it was more probable that Claimant contracted Covid from her Covid positive husband.

53. Dr. Fall testified as an expert in the area of Physical Medicine and Rehabilitation (PM&R) by deposition on October 18, 2021. She is Level II accredited and by virtue of this accreditation is versed in performing causation analyses. While she is not an epidemiologist or infectious disease specialist, the ALJ finds that she is fully accredited and qualified to render causation opinions on respiratory, pulmonary and infectious conditions.

54. As part of the causation analysis in this case, Dr. Fall testified that she reviewed the available records/data and performed a risk analysis to answer the question of whether Claimant's Covid infection was more likely to have arisen as a result of her work duties or from other sources outside of her work. (Fall depo. pp. 8-11). Based upon the information she was provided, including Claimant's Covid testing results, Dr. Fall reiterated her opinion that Claimant was likely exposed to Covid virus between November 19th and 23rd, 2020. After concluding that Claimant's work on the food line in late October

or early November was not relevant since Claimant had serial negative tests for weeks thereafter, Dr. Fall then reviewed the potential for and nature of any exposure, i.e. duration and closeness of the contact and whether the contact was had while using PPE, to determine the cause of Claimant's Covid infection.

55. According to Dr. Fall, the highest risk scenario for the transmission of Covid is where one person has Covid and the other is exposed to that person and neither are wearing a mask. (Depo. Fall, p. 15). Length and type of exposure is also a risk factor. Parties who simply walk by and pass each other are at lower risk than people sitting in a restaurant for hours as this creates the potential for exposure to higher viral loads. (Depo Fall, p. 15). People who engage in one-on-one interaction within 6 feet of each other with neither party wearing a mask are at the highest risk for transmitting Covid. (Depo. Fall, p. 16). Certainly, direct contact, such as eating meals together and intimate contact, would increase the risk of transmission. (Depo. Fall, p. 26). Based upon her review of the information provided, Dr. Fall concluded that Claimant's risk for contracting Covid-19 was much higher outside of work than while at work. Indeed, Dr. Fall testified that it was medically more probable that Claimant contracted Covid outside of work because her husband was Covid positive and was probably infectious during time frames she had prolonged close contact with him without wearing any PPE. Accordingly, Dr. Fall concluded that Claimant was probably exposed to Covid by her husband who then transmitted it to her. (Exh. A, p. 6; Fall depo, p. 30).

56. The ALJ credits the unrebutted opinions of Dr. Fall to find that Claimant was at higher risk of contracting Covid from her husband than she was at work. While the evidence presented persuades the ALJ that Claimant was exposed to the virus sometime before November 25, 2020 and that there were cases of Covid among prison staff and inmates at the facility where she worked, Claimant presented no persuasive evidence that she was in contact with any known Covid positive staff member or inmate while at work.[2] Importantly, even if Claimant had established that she had been exposed to a Covid positive staff member or inmate, the evidence presented supports a finding that any interaction between the two would have occurred while Claimant was wearing her required full PPE whereas she was completely unprotected while she was around her husband who tested positive for Covid approximately one week before she did. The ALJ can't presume that Claimant contracted Covid at work simply because some staff and offenders had it.

57. Based upon the evidence presented as a whole, the ALJ finds that Claimant has failed to establish that her Covid infection was likely caused by an exposure to the virus at work. Indeed, the persuasive evidence supports a finding that Claimant was, more likely than not, exposed to Covid by her husband who transmitted it to her. Accordingly, her case must be denied and dismissed. Because Claimant failed to

[2] Based upon the testimony of Major Bourne, any suggestion that Claimant was exposed to Covid positive inmates in her office is unconvincing. Indeed, the undisputed evidence supports a finding that Covid positive inmates were not permitted to leave the quarantine area of the buildings where they were housed.

establish that she suffered a compensable Covid exposure, the remaining issues surrounding her entitlement to medical and indemnity benefits need not be addressed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving, by a preponderance of the evidence, that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Fall are supported by the medical record and the available medical literature concerning transmission and spread of Covid-19. Accordingly, the ALJ concludes that her opinions are credible and more convincing than the contrary testimony of Claimant.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and

resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. Under the Workers' Compensation Act, an injured employee is entitled to compensation where his/her medical condition is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this case, the question for determination is whether Claimant's alleged Covid infection arose out of an exposure related to her employment.

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). As noted above, proof by a preponderance of the evidence requires the proponent to establish the existence of a

"contested fact is more probable than its nonexistence." *Page v. Clark, supra.* Whether Claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Claimant alleges that she suffered a compensable Covid infection by interacting with co-workers and inmates within the correctional facilities where she worked. According to Claimant, repeated exposure to a work environment wherein the Covid positivity rate among staff/inmates was at least 40.44% caused her infection, which in turn lead to SOB, sore throat, sinusitis and persistent symptoms consistent with Long Haul Syndrome all of which hastened her need for medical treatment. Based upon the evidence presented, the ALJ concludes that Claimant's claims are rooted in the legal principals surrounding the manifestation of an occupational disease.

G. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-40-201(14), C.R.S. defines "occupational disease" as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

H. This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, W.C. No. 4-726-429 (ICAO, July 7, 2010). Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Anderson, supra*.

I. As noted, Claimant asserts that her repeated exposures to the work environment at Four Mile Correctional Center caused a Covid infection characterized by SOB, sinusitis headaches and heart palpitations. Claimant asserts that this infection and subsequent symptoms are compensable because they are fairly traced to the employment as a proximate cause, and they do not come from a hazard to which Claimant was equally exposed outside of the employment. Simply put, Claimant asserts that the conditions under which her work was preformed caused her symptoms, her need for treatment and the disability for which benefits are sought.

J. In support of her claims, Claimant argues that there is a temporal connection between her symptoms and her presence at work to establish causation in this matter. However, as explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his/her symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation." Crediting the opinions of Dr. Fall, the ALJ concludes that Claimant's subjective perception of occupational exposure is unreliable, probably incorrect and fails to establish the requisite causal connection to establish that she suffered a compensable injury. In this case, the evidence presented supports that Claimant worked in a facility where staff and inmates had tested positive for Covid. Nonetheless, she did not prove that she had direct contact with any Covid positive individual at work. Accordingly, she requests that the ALJ conclude that her infection was caused by exposure to Covid that may have existed in the air. She surmises further that because the infection rate at the facility was better than 40%, that there was a lot of virus which she could have come into contact which caused her infection. While Claimant may have been exposed to Covid in the air in the workplace, it does not support a sufficient nexus between her Covid and the work environment. Rather, the evidence presented supports a conclusion that Claimant's Covid symptoms were, more probably than not, caused by unprotected contact Claimant had with her husband, who was probably contagious by November 20, 2020. Indeed, the only known Covid positive individual that Claimant was exposed to between November 18, 2020 and November 30, 2020 was her husband to whom she was exposed for lengthy period of time without wearing PPE. Although the PPE Claimant was wearing at work may not have prevented 100% transmission of the Covid virus, the PPE Claimant was wearing in conjunction with the use of a mask by the offenders and/or other staff would have provided more protection against the virus than none at all. Accordingly, the ALJ concludes that Claimant's risk of exposure to Covid through her intimate contact with her known Covid positive husband was greater than any casual exposure Claimant may have experienced to Covid in the workplace when all parties were using some form of PPE.

K. Here, the evidence presented supports a conclusion that Claimant has failed to establish the requisite causal connection between her Covid infection and related symptoms and her work duties. Specifically Claimant failed to establish that her employment exposed her to a hazard that was more prevalent in the work place than in her own home given her prolonged exposure to her Covid positive husband. Claimant's failure to satisfy each element of an occupational disease by a preponderance of credible evidence is fatal to her claim. *Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988). Accordingly, her claim for benefits must be denied and dismissed and her remaining claims need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits based is denied and dismissed.

DATED: March 14, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he suffered a compensable low back injury on March 5, 2021?
- If Claimant proved a compensable injury, what is his average weekly wage (AWW)?
- Did Claimant prove a lumbar CT scan and an epidural steroid injection recommended by Dr. Lee are reasonably needed to cure and relieve the effects of the industrial injury?

FINDINGS OF FACT

1. Claimant has worked as a technician in Employer's Tire & Lube Express department since June 2018. He performs tire repairs and replacements, oil changes, and other basic vehicle maintenance tasks. He also stocks automotive merchandise. The job is physically demanding and routinely requires lifting up to 50 pounds. He occasionally lifts up to 75 pounds when working with larger truck wheels and tires.

2. On March 5, 2021, Claimant was removing boxes of oil from a "six-wheeler" and placing them on the floor. When he lifted one of the boxes, he felt a "twinge" and a "pop" in his right lower back.

3. Claimant reported the incident immediately to his supervisor, Tyler Crown. Mr. Crown completed an Employer's First Report of Injury and described the accident as "taking bulk oil boxes off six-wheeler and placing on floor." The injury was described as a back "strain."

4. Claimant continued working for a short time after the accident, but the pain worsened and he asked to leave early. He went home and applied ice and heat to his low back.

5. Claimant saw Dr. Lindsey Junk on March 6, 2021. Claimant explained he hurt his right low back the day before while lifting oil at work. Physical examination showed significant muscular tightness over the lumbosacral region "with the right significantly worse than the left." Dr. Junk diagnosed low back pain and muscle spasms. He prescribed Percocet and a muscle relaxer. Dr. Junk also took Claimant off work until his next appointment because of his "acute injury."

6. Claimant followed up with Dr. Junk on March 9, 2021. His back was feeling better after taking the pain medication and muscle relaxers. Examination showed "improved but still present muscular tightness in the right lumbosacral region." Dr. Junk scheduled Claimant to return in a week for "possible discharge from Workmen's Comp."

7. Claimant tried to return to work but his back pain quickly flared. As a result, Dr. Junk limited him to four-hour shifts.

8. On March 23, 2021, Dr. Junk referred Claimant to physical therapy and liberalized his restrictions to allow 8-hour shifts, split evenly between sitting and standing.

9. On March 30, 2021, Dr. Junk noted the longer shifts had exacerbated Claimant's back pain. Physical examination showed significant tenderness and multiple trigger points in Claimant's low back. His maximum shift was reduced to four hours.

10. Claimant followed up with Dr. Junk on April 13, 2021. Dr. Junk documented Claimant "has been having an intermittent course of progression and then regression with continuing pain in his lower back as well as some intermittent tingling in his feet." Dr. Junk again took Claimant off work.

11. Claimant had a lumbar MRI on April 28, 2021. It showed degenerative disc and facet changes, primarily at L4-5 and L5-S1. There were no disc herniations, nerve root impingement, or other acute abnormalities.

12. On June 2, 2021, Claimant told Dr. Junk he thought he could do light duty at work without exacerbating his back pain. Dr. Junk noted reduced soft-tissue tenderness to palpation of the lumbar region.

13. Claimant returned to part-time light-duty work on June 3, 2021 with a 25-pound lifting limit.

14. At his follow up appointment on June 15, 2021, Claimant stated he was "doing fairly well" with the light duty work assignment. Dr. Junk referred Claimant to Dr. Larry Lee for an orthopedic evaluation.

15. Claimant saw Dr. Lee on August 2, 2021. Dr. Lee noted Claimant underwent a left-sided L5-S1 microdiscectomy 10 years ago that resulted in "chronic nerve damage" and "chronic left lower extremity weakness." Claimant indicated the leg weakness had gotten worse since March 2021. Dr. Lee diagnosed degenerative disc disease and nonspecific "post-laminectomy syndrome." He was concerned Claimant may have developed an L5-S1 pars fracture and ordered a CT scan "to better evaluate the osseous structures" in Claimant's lumbar spine. He also indicated ESIs were "available" if Claimant wanted to pursue them but provided no specific discussion regarding their intended purpose or whether they were related to the industrial injury.

16. As noted by Dr. Lee, Claimant has a history of low back problems, including a lumbar surgery several years ago.[1] Claimant underwent ESIs after the surgery, the last in approximately 2016. Claimant testified the prior ESIs provided only short-term relief.

17. Claimant suffered a lumbar strain in January 2018 while lifting a toolbox. Treatment records from 2018 show the symptoms were primarily confined to the left lower back and left leg. A January 31, 2018 MRI showed post-surgical changes from a prior left L5-S1 hemilaminectomy and degenerative disc disease, most pronounced at the L5-S1 level. Claimant was referred to an orthopedic surgeon. In April 2018, Claimant told his

[1] There is conflicting evidence regarding whether the prior surgery was in 2010, 2011, 2012, or 2014.

PCP the orthopedic surgeon had suggested a fusion, but he wanted to try physical therapy first. Claimant participated in PT for approximately five weeks, with limited benefit. He stopped PT in June 2018 because he was moving to Lamar. Claimant had a primary care visit with Dr. Michaud on October 19, 2018. The primary focus of the appointment was hypertension and restless leg syndrome. The past medical history section of Dr. Michaud's report references Claimant's prior back surgery, but no current back-related symptoms or limitations were reported. Nor was any treatment recommended specifically for the low back. A previous prescription for hydrocodone-acetaminophen was listed as "discontinued . . . reason: course complete." On December 5, 2018, Dr. Michaud prescribed gabapentin for the restless leg syndrome. No complaints of back issues were documented. A review of past records performed by Respondents' IME showed no mention of Claimant's low back after December 2018. There is no persuasive evidence to suggest Claimant desired or required any further treatment for low back problems until the March 5, 2021 work accident.

18. Dr. Anant Kumar performed an IME for Respondents on November 9, 2021. Dr. Kumar also testified at hearing to elaborate on the opinions expressed in his report. Dr. Kumar agreed Claimant may have suffered a minor "sprain strain" from lifting the box of oil, but opined the injury should have resolved uneventfully within a few weeks. He opined Claimant could have been treated with heat, ice, and OTC medications. He opined the strain resolved and any ongoing back or leg symptoms are related to Claimant's underlying degenerative spine condition instead of the work accident. He noted Claimant's symptoms were initially limited to axial back pain and later "metamorphosed" to include leg symptoms. Dr. Kumar opined neither a CT scan nor ESIs are reasonably needed or causally related to the work accident. He pointed out Claimant had previously tried ESIs, without benefit. Because the recent MRI showed no new pathology to cause lower extremity symptoms, there is no reason to think ESIs will be effective now. He also thought it virtually impossible that the work accident could have caused a pars fracture. He did not believe a lumbar CT would appreciably add to the understanding of Claimant's current condition.

19. Dr. Kumar's opinions are partially credible. His opinion that Claimant suffered no compensable injury is not persuasive. His conclusion that Claimant reached MMI is beyond the ALJ's jurisdiction. His opinion that a CT scan is not reasonably necessary is less persuasive than Dr. Lee's opinion. However, the ALJ credits Dr. Kumar's opinion that bilateral L5-S1 ESIs are not reasonably necessary to cure and relieve the effects of Claimant's the work injury.

20. Claimant proved he suffered a compensable injury to his low back on March 5, 2021. Claimant's testimony regarding the incident and onset of symptoms was credible. Dr. Junk corroborated a muscle strain with spasms affecting Claimant's right lower back within a day of the accident. Dr. Kumar essentially conceded that Claimant suffered a strain at work on March 5. Claimant reasonably pursued treatment and suffered a period of disability proximately caused by the accident. These facts are sufficient to establish a compensable claim.

21. Claimant proved the lumbar CT requested by Dr. Lee is a reasonably necessary diagnostic evaluation for the work injury. The CT scan has a reasonable prospect of further defining the underlying pain generator, assisting Claimant's ATPs with causation determinations, and suggesting a course of treatment.

22. Claimant failed to prove bilateral ESIs are reasonably needed to cure and relieve the effects of his compensable injury. Dr. Lee provided no discussion or justification for bilateral ESIs other than to state they are "available" if Claimant wants them. Dr. Lee offered no explanation of how bilateral ESIs would be causally related to a right-sided soft-tissue injury. Dr. Kumar's opinions regarding the ESIs are credible and persuasive. Claimant previously tried ESIs with no benefit and the April 2021 MRI shows no new work-related pathology reasonably likely to be improved by ESIs.

23. Computation of Claimant's AWW is complicated by a work-related knee injury he suffered on August 23, 2020. He ultimately underwent a right knee arthroscopy, medial meniscectomy, and chondroplasty of the medial femoral condyle and patella on October 15, 2020. He participated in extensive post-operative physical therapy, and was released at MMI on February 26, 2021 (approximately one week before the low back injury). Although minimal records related to the knee injury were submitted at hearing, it is reasonable to presume Claimant ability to perform his physically demanding job was limited before[2] and after the surgery. Claimant testified he was working regular hours for approximately three weeks before the back injury, but that testimony is inconsistent with wage records that show less than 10 hours of work in the pay period from February 13 through February 26, 2021. Under the circumstances, it is more appropriate calculate Claimant's AWW using only pay periods before the knee injury.

Avg hours:	29.8534
AWW:	$447.80

24. Based on the foregoing factors, Claimant's AWW is $447.80.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." Section 8-40-201(1). Workers' compensation benefits are only payable if an accident results in a compensable "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The fact that the employer provides treatment after an employee reports symptoms does not automatically establish a compensable injury. The claimant must prove the symptoms and need for treatment were proximately caused by their work. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered a compensable injury to his low back on March 5, 2021. Claimant's testimony regarding the incident and onset of symptoms was

credible. Claimant has recounted the accident in a consistent manner on multiple occasions, including to his supervisor immediately after the accident. Dr. Junk corroborated a muscle strain with spasms affecting Claimant's right lower back within a day of the accident. Dr. Junk reasonably prescribed medication, ordered diagnostic testing, and referred Claimant to physical therapy. Although Claimant has a significant history of low back problems, his prior issues were primary on the left side of his back, whereas the injury affected his right side. Moreover, he performed a physically demanding job without limitation and required no treatment for any low back problems since 2018. There was a significant change in Claimant's functional status after the March 5 accident, and he was appropriately put on restrictions that precluded his regular work. Dr. Kumar essentially conceded that Claimant suffered a strain at work on March 5. Dr. Kumar's opinion that the strain did not result in a compensable injury because it required no treatment is not persuasive. Claimant reasonably sought treatment for an acute back strain directly caused by his work activity. And Dr. Kumar's argument that any strain resolved quickly and Claimant is at MMI does not persuade the ALJ that Claimant suffered no compensable injury in the first instance.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Compensable medical treatment includes reasonably necessary diagnostic evaluations and testing. The respondents must cover diagnostic testing that has a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012).

As found, Claimant proved the lumbar CT requested by Dr. Lee is a reasonably necessary diagnostic evaluation for the work injury. The CT scan has a reasonable prospect of further defining the underlying pain generator (even by ruling out potential conditions), assisting Claimant's ATPs with causation determinations, and suggesting a course of treatment.

Claimant failed to prove bilateral ESIs are reasonably necessary to cure and relieve the effects of his compensable injury. Dr. Lee provided no discussion or justification for bilateral ESIs other than to state they are "available" if Claimant wants them. He provided no explanation for how bilateral ESIs would be appropriate treatment for a right-sided soft tissue injury. Dr. Kumar's opinions regarding the ESIs are credible and persuasive.

C. Average weekly wage

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is $447.80.

ORDER

It is therefore ordered that:

1. Claimant's claim for a low back injury on March 5, 2021 is compensable.

2. Claimant's average weekly wage is $447.80

3. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including but not limited to the lumbar CT ordered by Dr. Lee.

4. Claimant's request for bilateral L5-S1 ESIs is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with Employer.

- If Claimant has proven she sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that the L4-S1 anterior posterior fusion is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her industrial injury?

- The parties stipulated prior to the hearing that Claimant had sustained a compensable injury to her right shoulder in the course and scope of her employment with Employer. The parties further stipulated that Claimant's medical treatment to date for the right shoulder injury was reasonable and necessary to cure and relieve the effects of the industrial injury. The parties stipulated that the issues of average weekly wage ("AWW"), temporary total disability ("TTD") and temporary partial disability ("TPD") would be reserved for determination at a future hearing.

FINDINGS OF FACT

1. Claimant sustained a compensable injury to her right shoulder on January 21, 2021 when she was setting up a portable x-ray machine, grasped the locking handle on the machine and twisted the handle. Claimant testified that the portable x-ray unit weighs between 1200 – 1500 pounds. Claimant testified that when she squeezed the handles, her shoulder was immediately inflamed. Claimant testified she attempted to squeeze the handle again, but did not have enough strength, so she need to use both hands.

2. Claimant testified that following the injury, she did not have function of her right arm. Claimant testified that she completed x-rays of two more patients, but did not have function of her arm as she completed these duties. Claimant testified she finished her shift and did not report her injury to her employer. Claimant testified she went home and treated her injury with Aleve and ice.

3. Claimant testified her low back started hurting when she was trying to move patients and the portable x-ray machine. Claimant testified that as the day went on, her low back became inflamed. Claimant testified she did not recall a specific event that led to her low back pain. Claimant testified she was more concerned with her

shoulder initially. Claimant testified she had no low back pain prior to January 11, 2020. Claimant returned to work the next day and reported her injury to employer.

4. The Workers' Compensation First Report of Injury was completed by Employer on January 15, 2020. The First Report of Injury notes that Claimant reported her in jury on January 12, 2020, and reported she felt low back and right shoulder pain at the end of her shift which was "noticeable after use of portable imaging".

5. Claimant was referred to Dr. Staqg for medical treatment. Dr. Stagg initially evaluated Claimant on January 15, 2020. Claimant reported to Dr. Stagg that she was doing an x-ray on January 11, 2020 and developed pain in her right shoulder and low back. Claimant reported intermittent radiation in to the lower extremities, but denied numbness or tingling or loss of function. Claimant reported improvement with her right shoulder pain. Claimant was diagnosed with an acute shoulder strain and a lumbar spraint. Dr. Stagg referred Claimant for an x-ray of the lumbar spine and recommended physical therapy.

6. The x-ray of Claimant's lumbar spine was performed on January 15, 2020 and showed mild degenerative disc disease ("DDD") with grad 1 anterolisthesis of L4 andL5 and levocurvature of the mid lumbar spine.

7. Claimant returned to Dr. Stagg on January 21, 2020. Based on the results of the lumbar x-ray, Dr. Stagg recommended Claimant be referred to a neurosurgeon.

8. Claimant was examined by Dr. Wong on January 31, 2020. Dr. Wong noted Claimant reported lumbar spine pain after a lifting injury on January 11, 2020. Dr. Wong recommended a magnetic resonance image ("MRI") of the lumbar spine.

9. Claimant returned to Dr. Stagg on January 29, 2020. Claimant reported to Dr. Stagg that her back was doing worse. Dr. Stagg noted that Dr. Wong had recommended an MRI of the lumbar spine and agreed that an MRI was appropriate.

10. Claimant underwent the MRI of the lumbar spine on February 6, 2020. The MRI showed a L5-S1 small left paracentral disc extrusion causing mass effect upon the descending left S1 nerve root. The MRI also showed mild foraminal narrowing on the left with facet hypertrophy present bilaterally at L5-S1 and L4-5. A broad based disc bulge was noted at the L4-5 level.

11. Claimant returned to Dr. Stagg on February 20, 2020. Claimant reported to Dr. Stagg that she was still having pain with radiation to the left extremity. Dr. Stagg noted the results of the lumbar MRI and recommended that she return to Dr. Wong and also obtain an epidural steroid injection ("ESI") with Dr. Bullard.

12. Dr. Stagg's records note that he discussed the case with Dr. Wong on or about March 3, 2020. Dr. Stagg noted that Dr. Wong had reviewed the MRI results and was not currently recommending surgical intervention. Dr. Stagg noted Dr. Wong recommended possible injection and conservative treatment with therapy.

13. Claimant retuned to Dr. Stagg on March 9, 2020. Dr. Stagg noted Claimant reported being about the same. Dr. Stagg noted the ESI was scheduled to proceed on March 11, 2020. Dr. Stagg recommended that Claimant also continue with her physical therapy.

14. Claimant underwent a bilateral L4-5 and L5-S1 facet steroid injection with Dr. Bullard on March 11, 2020.

15. Claimant had a telephonic evaluation with Dr. Stagg on March 31, 2020. Claimant repotted to Dr. Stagg that she immediately had good relief after the injection, then her symptoms got worse for a couple of days, and then gradually got somewhat better. Dr. Stagg noted that they discussed what Claimant could do, and he recommended that she increase her activity and work on some stretching, the follow up in 2 to 3 weeks.

16. Claimant had another telephonic evaluation on April 22, 2020. Claimant reported still having a significant amount of pain in the back, with some radiation down both legs. Claimant also reported not being able to have her routine therapy due to the CoVid pandemic. Dr. Stagg recommended continued conservative treatment included four (4) massage therapy visits.

17. Claimant had a telephonic evaluation on May 13, 2020 with Dr. Stagg. Claimant reported being frustrated because things were not improving. Claimant reported she was still having pain in her back with some radiation into her extremities. Claimant reported her symptoms increased when she increased her activity. Claimant reported the ESI did not give her a great deal of relief.

18. Claimant was able to be physically examined by Dr. Stagg on May 27, 2020. Claimant reported doing better with less pain, but still some occasional radiation down her right leg when she is up and walking. Dr. Stagg kept Claimant on work restrictions and recommended she finish her course of therapeutic massage.

19. Claimant returned to Dr. Stagg on June 17, 2020 and reported she had not had much improvement. Dr. Stagg noted there was some improvement initially after the ESI, but Claimant still reported some intermittent pain down the right and left extremity which would happen 2-3 times per day. Dr. Stagg recommended Claimant explore a facet injection and referred Claimant back to Dr. Bullard.

20. Claimant underwent bilateral facet injections at the L4-5 and L5-S1 levels on July 17, 2020.

21. Claimant returned to Dr. Stagg on July 22, 2020 and reported marked improvement of her pain following the facet injections[1]. Dr. Stagg recommended Claimant continue with her exercise program and core strengthening.

22. Claimant returned to Dr. Stagg on August 12, 2020 at which time Claimant reported that while the facet injections had helped some, they were not long lasting. Claimant reported she felt she had not made significant improvement, but wanted to avoid surgery. Dr. Stagg referred Claimant to Dr. Frazho for a second opinion about possible future injections.

23. Claimant returned to Dr. Stagg on September 2, 2020 with complaints of continued pain. Dr. Stagg noted Claimant had been evaluated by Dr. Wong seven months prior, and recommended she return to Dr. Wong due to the fact that she had not had a resolution of her symptoms with the conservative treatment. Dr. Stagg provided Claimant with an Oswestry, which provided a score of 34 showing moderate disability. Dr. Stagg noted no depressive symptomatology.

24. Claimant underwent a repeat MRI of the lumbar spine on October 5, 2021. The MRI showed no change in the L5-S1 small left paracentral disc extrusion. Facet degenerative changes were also noted.

25. Claimant returned to Dr. Wong on October 21, 2020. Dr. Wong noted Claimant's medical treatment since his last evaluation and recent October MRI. Dr. Wong recommended that if Claimant wished to pursue surgery, he would recommend an L4-S1 fusion. Dr. Wong noted Claimant was unsure how she wished to proceed.

26. Claimant had a teleconference appointment with Dr. Stagg on October 26, 2020. Claimant reported Dr. Wong had recommended an L4 through S1 fusion, and she wanted to proceed with this recommendation as she was still having significant pain in her back. Claimant was able to be evaluated by Dr. Stagg on October 29, 2020. Dr. Stagg noted Dr. Wong's surgical recommendation and agreed with this recommendation due to the persistence of Claimant's symptoms. Dr. Stagg also referred Claimant to Dr. McCoy for treatment of her shoulder.

27. Claimant testified at hearing that she wishes to proceed with the surgery recommended by Dr. Wong.

---

[1] Dr. Stagg's July 22, 2020 medical report appears to contain a typographical error with regard to the date of the facet injections. Dr. Stagg noted the injections occurred on 6/17/2020. However, the medical records show that the injections occurred on 7/17/2020.

28. With regard to the proposed surgery, Respondent obtained a records review from Dr. Larson on February 12, 2021. Dr. Larson opined that Claimant's low back condition was not related to the January 11, 2020 work injury. Dr. Larson opined that the imaging did not demonstrate any acute injury to Claimant's lumbar spine, but instead showed pre-existing lumbar degenerative disc disease. Dr. Larson opined that it was unlikely that work activities caused any long term or permanent change to Claimant's condition causing the need for medical treatment. Dr. Larson opined that at most, Claimant sustained a muscular strain at work, but the strain did not cause an aggravation or acceleration of her underlying degenerative disc disease.

29. Respondent referred Claimant to Dr. Ericson for an independent medical examination ("IME") on May 5, 2021. Dr. Erickson reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Ericson noted that Claimant reported that she noticed some brief episodes of muscle discomfort in her low back prior to January 11, 2020. Claimant reported the low back discomfort would resolve quickly with Aleve and rest. Claimant reported to Dr. Erickson that after the injury on January 11, 2020, she noticed some tightness in her lower back when she went home from work. Claimant reported later than evening she noticed a different sensation in her low back which was not muscular but seemed to be more structural and deeper.

30. In reviewing Claimant's MRI, Dr. Erickson elicited the help of Dr. Carpenter, an MSK expert radiologist. Dr. Erickson noted the MRI showed mild diffuse lumbar spondylosis with preservation for the most part of disc height. Significant degenerative changes were noted from L4-S1, with bilateral severe facet joint arthropathy without any pars defects. Dr. Erickson noted clear evidence of anterolisthesis, grade 1, at L4-5. Imaging studies confirmed this was a mobile defect, with mild instability. Dr. Erickson noted there was no evidence of any acute disc herniation or fracture, or any abnormality which could be clearly attributed to the injury on January 11, 2020. Dr. Erickson reported that the L4-5 instability was secondary to severe and progressive arthropathy of the involved faced joints.

31. Dr. Erickson opined that Claimant's work injury demonstrated evidence of a work-related sprain/strain of the right shoulder, which was now for the most part resolved. Dr. Erickson opined that Claimant's low back condition was most likely related to severely arthritic facet joints from L4-5 to L5-S1, causing grade 1 anterolisthesis, unstable, of L4 on L5. Dr. Erickson opined that this abnormality was a progressive degeneration which was now symptomatic, but was in no way caused by the work injury.

32. Dr. Erickson testified at hearing consistent with his IME report. Dr. Erickson testified he is Board Certified in Orthopedic Surgery and Level II accredited. Dr. Erickson testified Claimant has a very mild L4-5 anterolisthesis and pretty severe arthritic changes in her facet joints. Dr. Erickson testified that the radiology studies

showed no evidence of acute changes to Claimant's lumbar spine. Dr. Erickson testified it was his opinion that Claimant's low back condition was not related to her January 11, 2020 work injury.

33. Dr. Erickson testified at hearing that Claimant's low back condition that was being addressed involved instability at two levels. Dr. Erickson testified that his underlying condition was asymptomatic prior to the January 11, 2020 injury. Dr. Erickson testified this condition was not caused or aggravated by the work injury.

34. Dr. Wong issued a report on May 24, 2021 in which he opined that Claimant most likely had an asymptomatic lumbar degenerative condition consisting of L5-S1 degenerative disc disease as well as a L4-5 spondylolisthesis. Dr. Wong noted it was asymptomatic until Claimants work injury where she was lifting and moving the portable x-ray machine. Dr. Wong noted that Claimant's injury was reported appropriately and opined that a lumbar fusion would help her symptoms and was reasonable and necessary treatment to improve her pain.

35. Dr. Stagg issued a report on May 27, 2021 after reviewing the IME and the note from Dr. Wong. Dr. Stagg deferred to Dr. Wont's expertise regarding his treatment of the spondylolisthesis and agreed with his assessment.

36. The ALJ credits the opinions expressed by Dr. Wong over the contrary opinions of Dr. Erickson and finds that Claimant has demonstrated that it is more probable than not that the injury on January 11, 2020 aggravated, accelerated or combined with a pre-existing condition to cause Claimant's need for medical treatment involving her low back, including the recommended L4-S1 fusion.

37. The ALJ notes that the medical records demonstrate that Claimant's low back condition was asymptomatic prior to January 11, 2020, despite the degenerative changes shown on the radiology reports. The ALJ notes that Claimant reported to Employer on January 12, 2020 that the January 11, 2020 injury resulted in pain to her low back that necessitated medical treatment.

38. The ALJ relies on the testimony of Claimant at hearing along with the employer's first report of injury and medical records entered into evidence at hearing and finds that Claimant has established that it is more probable than not that the January 11, 2020 work injury aggravated, accelerated of combined with a pre-existing condition to cause Claimant's need for medical treatment to her lumbar spine, including the recommended L4-S1 fusion. The ALJ notes that the records establish Claimant's testimony that prior to the January 11, 2020 injury, her low back condition did not necessitate medical treatment to her lumbar spine. However, after the January 11, 2020 work injury which resulted in contemporaneous repots of pain in Claimant's low back, Claimant necessitated medical treatment for her low back condition. As such, the ALJ finds that the work injury on January 11, 2020 at the very least, accelerated or

combined with Claimant's pre-existing condition to cause the need for medical treatment involving Claimant's lumbar spine, including the L4-S1 recommended fusion.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondent is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, Claimant's injury on January 11, 2020 aggravated, accelerated of combined with a pre-existing condition to cause Claimant's need for medical treatment to her lumbar spine, including the recommended L4-S1 fusion. As found, the testimony of Claimant regarding the onset of symptoms related to the January 11, 2020 work injury along with the medical records and employer's first report of injury are found to be credible and persuasive in reaching this decision.

6. As found, Claimant has proven by a preponderance of the evidence that medical treatment to her lumbar spine recommended by Dr. Wong is reasonable and necessary to cure and relive the Claimant from the effects of the industrial injury. As found, the opinions expressed by Dr. Wong are credible with regard to this issue.

7. The ALJ therefore finds that Respondent is liable for the reasonable and necessary medical treatment necessary to cure and relived Claimant from the effects of the industrial injury to her lumbar spine, including the recommended L4-S1 fusion.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of the industrial injury, including the medical treatment to Claimant's lumbar spine. Respondent shall be paid pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: March 16, 2022

Grand Junction, Colorado 81501

ISSUES

I. Whether Respondents proved by clear and convincing evidence that the DIME physician's opinion of Dr. Alicia Feldman has been overcome with regard to the impairment and what is the impairment.

II. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits from September 14, 2020 through December 9, 2020.

III. Whether Respondents proved by a preponderance of the evidence that Claimant was terminated for cause as of September 15, 2020.

IV. Whether Claimant proved by a preponderance of the evidence that he is entitled to an increase in average weekly wage due to discontinuation of health insurance benefits.

V. Whether Claimant proved by a preponderance of the evidence that he is entitled to maintenance medical benefits after maximum medical improvement.

VI. Whether Claimant proved by a preponderance of the evidence that he is entitled to an award for disfigurement caused by use of a brace and alleged limping.

PROCEDURAL HISTORY

Respondents filed an Application for Hearing on September 13, 2021 listing the issues of compensability, medical benefits that are reasonably necessary, overcoming the Division of Workers' Compensation Independent Medical Examination (DIME) on impairment rating as well as permanent partial disability benefits, offsets, credits and overpayments.

Claimant filed a Response to Application for Hearing dated September 22, 2021 adding the issues of authorized medical benefits after maximum medical improvement, temporary disability benefits, disfigurement, permanent total disability benefits and interest on benefits owed not paid when due.

STIPULATIONS OF THE PARTIES

The parties stipulated that Dr. Alicia Feldman, the DIME physician, was not provided, as part of the medical records packet, a copy of the preexisting injury and impairment records, at the time the DIME took place on August 17, 2021.

The parties further stipulated that, at a minimum, an apportionment of 7% impairment rating for Claimant's lumbar spine is appropriate as Claimant acknowledged

receiving these benefits based on the Final Admission of Liability (FAL) dated April 9, 2012.

The parties stipulated that Claimant was not seeking to overcome the DIME physician's determination of maximum medical improvement (MMI).

The parties stipulated that Claimant was not seeking temporary total disability (TTD) benefits after December 10, 2021, when Claimant was released to full duty by his authorized treating physician (ATP), Dr. Jeffrey Baker.

The parties stipulated that, if found appropriate, any increase in average weekly wage (AWW) would only affect an award for permanent partial disability (PPD) benefits.

The parties stipulated that, if called to testify, Ms. [Redacted, hereinafter AM] would testify that she sent a copy of the task letter to Claimant and/or his counsel on August 24, 2020. Claimant also stipulated that, if called, Ms. [Redacted, hereinafter ST] would testify that she sent the September 2, 2020 copy of the job offer with the attached task letter signed by Dr. Baker on August 31, 2020. Claimant stipulated that Claimant was not asserting a technical deficiency with regard to the modified job letter sent on September 2, 2020.

The parties stipulated that there was good cause for the delay in production of Dr. John Raschbacher's Additional Medical Record Review and Addendum report dated February 7, 2022. Claimant continued to object to the admissibility of the February 7, 2022 report issued by Dr. Raschbacher despite the stipulation for good cause. Claimant declined to request a continuance of the hearing against counsel's advice. Over Claimant's continued objection, the report, Respondent's Exhibit labelled BB was admitted into evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was born on May 28, 1983 and 37 years old at the time of the admitted work related injury of July 22, 2020. Claimant worked as a blade operator for Employer on road projects since April 4, 2020. A blade machine or motor grader is a heavy equipment machine that grades roads. Claimant testified that he was fixing the roads with the blade to grade the roads, to build and repair the roads. Claimant was parked when struck by a large scrapper, a very large machine.

2. On July 22, 2020 a box scraper hit Claimant from behind, injuring Claimant's low back and neck. Claimant testified that box scrapper was a heavy equipment machine with two engines, one in front and one in back, that had a large container, and underneath the container a blade to smooth the ground that was much larger than the blade machine Claimant was sitting in. The scraper was travelling at approximately 30-35 miles per hour when it hit him. Claimant reported significant damage to the blade machine, including damaging the front windshield with the impact from behind.

3. Claimant was involved in a prior work related injury on August 1, 2011 while lifting roofing materials.

4. Dr. Robert Kawasaki evaluated Claimant with regard to prior injury on March 1, 2012 which noted that Claimant continued to have minimal symptoms with lumbar spine pain at 3/10 on a visual analog scale (VAS). He documented Claimant's prior MRI findings that showed minimal degenerative changes and shallow, mild disc bulge at the L4-5 level. He diagnosed a lumbar spine strain and provided an impairment rating consisting of 5% for Table 53, page 80, section II B of *the AMA Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised)*, and noted loss of range of motion (ROM) of 2% whole person. Dr. Kawasaki assigned a 7% whole person impairment rating to the injury by combining the specific disorder of the spine and ROM rating. Dr. Kawasaki released Claimant to full-time, full-duty work based on a Functional Capacity Evaluation and indicated that Claimant did not need any further medication and discharged him from his care.

5. Dr. Steven Bratman of Concentra attended Claimant in follow up on March 8, 2012, releasing Claimant to full duty work without restrictions, the impairment assigned by Dr. Kawasaki and no maintenance care.

6. The Respondents on the 2011 claim filed a Final Admission of Liability on April 9, 2012 admitting to the 7% whole person impairment rating, which Claimant stipulated he was paid.

7. Claimant requested a Division of Workers' Compensation Independent Medical Examination (DIME) in the 2011 claim and Dr. Miguel Castrejón was assigned as the DIME physician. He evaluated Claimant on August 1, 2012 with Claimant still reporting a sharp and stabbing pain to the left of his midback and across his lower back with pain extending into the lateral posterolateral thigh with pain at a 5-6/10 on visual analog scare (VAS) following return to work on July 31, 2012, the day before the evaluation. The DIME physician reviewed the medical records and opined that Claimant was not at MMI. He recommended trigger point injections and a trial of medication for the thoracic spine myofascial symptoms and electrodiagnostic testing with regard to the lumbar spine, including possible right SI joint injections under fluoroscopy, and chiropractic treatment as well as medications. Dr. Castrejón provided a provisional impairment rating as required by the Level II accreditation teachings. Under the *AMA Guides,* he stated Claimant would qualify for a 10% whole person impairment rating for the SI joint dysfunction consisting of a 5% for the specific disorder, under Table 53IIB, and 5% for loss of range of motion.

8. Claimant proceeded to settle his 2011 claim by signing a settlement agreement on September 21, 2012, before the filing of a general admission was due. As part of the settlement for the claim, Claimant received the amount of $20,000.00. The Division approved the settlement on October 1, 2012. The Division records state that the DIME completion was cancelled as of October 26, 2012. The settlement documents do not show which portion, if any, was designated for lost wages (7 months), closures, waivers or medical benefits in order for Claimant to achieve MMI and which, if any, was designated for further impairment.

9. Claimant testified that, after he settled his claim, he continued doing his own therapy and exercises for a period of about eight months, his back and leg problems eventually resolved and he returned to full work without any problems including the kind of work he performed with Employer.

10. Claimant reported the July 22, 2020 work related injury to his employer and was referred to Concentra Medical Centers for care.

11. Claimant was initially seen by physician assistant Stephen Toth who document the injury consistent with Claimant's testimony and other medical record histories. He reported that Claimant complained of neck and upper back pain with numbness into his right extremity. He order x-rays of the cervical spine. He noted tenderness in the right paraspinal muscles, the right rhomboid muscles and the trapezius muscle with normal but painful range of motion of the cervical spine. He described Claimant's pain as constant, sharp, dull and aching in nature. The severity of the pain was moderate. Associated symptoms included back stiffness and exacerbating factors included bending. Claimant was released to modified work, restricted from driving company vehicles due to functional limitations.

12. A Physician's Report of Injury (M164) form for July 22, 2020 was completed by Dr. Jeffrey Baker stating Claimant was examined, provided medications and an order for x-rays of the cervical spine, as well as returned to modified duty including no driving company vehicles due to functional limitations. The cervical radiology report by Steven Abrams, M.D. was normal with no acute fractures or subluxation.

13. Claimant testified that Mr. Toth later apologized to him for failing to properly document Claimant's lumbar spine problems that he complained of at the time of the initial visit. Claimant also stated that he returned to work the following Friday, and was advised by the foreman, Guadalupe, that there was no job available until he receive a full duty release by his providers. This ALJ takes notice that the Friday after the initial visit would have been July 24, 2020.

14. Ms. Elva Saint, a therapist at Concentra, noted on July 24, 2020 that Claimant had back and right low back pain, with the pain going up into the right shoulder blade. She noted that the pain radiated into the right buttocks, was constant and aching. Claimant had decreased range of motion. Upon exam, she noted Claimant had right sided muscle spasms and tenderness in the right paraspinal muscles, the sciatic notch, sacrum and right sacroiliac joint. Ms. Saint recommended physical therapy to address objective impairment and functional loss. After the PT session, lumbar spine x-rays were performed.

15. Claimant was also seen by Nicholas Wright, DPT, who, after examination of the lumbar spine, recommended manual manipulation, noting that posteroanterior testing in thoracic and lumbar spine reproduced right paraspinal pain. He performed functional dry needling and L4-5 lumbar paraspinal stimulation.

16. Respondents filed a General Admission of Liability (GAL) for the July 22, 2020 work related injury on August 27, 2020 admitting to an average weekly wage (AWW) of $1,171.71. They also started temporary total disability benefits as of July 23, 2020 at the rate of $781.14 per week.

17. On September 2, 2020 Employer sent Claimant a letter advising that Claimant's treating physician had authorized modified duty and multiple different jobs beginning September 14, 2020. However, the letter specified a notation that Claimant "must call Billy the day before to ensure that the job is still in progress."

18. The list of approved jobs by Dr. Jeffrey Baker dated August 31, 2020 included machine inspection and lubrication, washing trucks or equipment, painting machines, sweeping the garage or shop, counting trucks, cleaning up work sites, answering phones, filing and purging or shredding files. The only restriction was that Claimant could not drive.

19. Claimant received the letter dated September 2, 2020. Claimant recognized the letter but it was only one page. He stated that Billy was one of the Employer owners. He stated that he did not know the address of the Mayfield subdivision, as he had not been there before. No exact address is noted on the letter. Further, Claimant stated that the list of jobs was not attached. This ALJ takes notice that the Certificate of Delivery shows a date of August 24, 2020, which was before the August 31, 2020 date of approval by Dr. Baker and that the September 2, 2020 letter fails to show that there was any attachment to the letter, despite the parties' stipulations above.

20. Claimant testified that he called Billy on three different occasions and on the third try he left a message letting Bill know he had received the letter and was calling him about the modified duty job to find out what was available. Claimant stated that the following Tuesday or Wednesday Bill called him back and Claimant was able to speak with him. Claimant testified that they discussed Claimant's accident and current condition. Bill advised that he would be contacting the insurance company to find out what he could do to get Claimant more medical care for his back, and would get back to him. Claimant stated that he never was contacted by Bill after that and Claimant never returned to work. Billy never advised Claimant whether the job was still "available," and Claimant would have shown up for work if he had been advised one was available, as well as where and when he should return to work. Claimant also testified that he contacted multiple Jennifer, the business' secretary, and the second supervisor and owner, Russ. Neither of them returned his calls. Claimant considered Employer's failure to return his phone calls, as well as Bill's failure to get back to him as promised, as a kind way of discharging from his employment. He stated that this is common in the industry where an Employer does not call back, it meant that they were not interested in having the employee come back to work.

21. Respondents filed a second GAL on September 15, 2020 terminating temporary total disability as of September 13, 2020 and starting temporary partial disability benefits at the rate of $61.14 from September 14, 2020 forward.

22. On November 20 2020 Dr. Scott Parker evaluated Claimant at Concentra for a chiropractic consultation. He obtained a history from Claimant consistent with his testimony and reviewed the lumbar spine MRI. He noted that Claimant's primary complaints related to the right sided cervicothoracic and lumbar pain, with tightness in the thoracic region and a sharp burning pain going into the gluteus muscles travelling into the hamstring and stopping at the popliteal fossa. He did not observe any pain behaviors. He noted restrictions palpated at the cervical spine and thoracic spine, specifically on the

right. He found trigger points palpable in the bilateral trapezius, rhomboid, and lumbar spine muscles. He palpated adhesions in the upper back and neck and mild muscle spasms as well. He diagnosed lumbosacral sacroiliac strain and dysfunction, and cervicothoracic strain. He proceeded with manual therapy, soft tissue mobilization, neuromuscular re-education, and low-grade manual manipulation. He recommended five additional treatments. Claimant returned to see Dr. Parker on November 25, 2020 noting right SI joint was mildly tender to palpation, but unrestricted.

23. Claimant saw Dr. Parker on December 2, 2020 and reported that he had done well with the prior treatment, being close to being pain-free but that evening he became very sore and his muscles spasming. He noted continuing sharp burning sensation in the right gluteus muscle travelling in to the hamstring. Claimant continued to have muscle spasms and trigger points. His diagnosis remained the same. Despite these findings, Dr. Parker would end this and other reports with stock language that "he [Claimant] transitioned from a seated to a standing position without difficulty, pain complaints, or pain behaviors, and then ambulated well and appeared comfortable."

24. On December 2, 2020 Claimant was attended by Nicholas Wright, DPT. He noted that Claimant was reporting stress related to surveillance. Mr. Wright noted that Claimant was still restricted from driving company vehicles due to functional limitations. He reported conflicting information in his report as it states "Suboccipitals: No increased muscle tone. Severe increased muscle tone." He noted a bilateral positive slump test. He noted that Claimant continued with right lumbar spine concerns and that he was not progressing in therapy. He further noted that "Unfortunately I do not see him healing physically prior to his mental health improving." He also stated that Clamant "was educated in proper care of injury to optimize rehabilitation time, including education for pain management, activity modification, and expectations for recovery. Educated in the role of mental health in physical healing."

25. Claimant returned to Dr. Parker on December 9, 2020 for chiropractic care. Claimant reported that he had attended a massage therapy visit on his own, but continued to have a sharp burning pain in his low back and gluteus muscle travelling into his hamstring. He proceeded with chiropractic care and noted Claimant continued to have muscle spasms on palpation, adhesions and trigger points. Claimant retuned the following day and reported he was somewhat improved.

26. Dr. Baker examined Claimant on December 10, 2020 stating that Claimant reported he was feeling improved since the last visit, though continued to have sharp and burning low back pain that was continuous though the intensity varied and did not cause radicular symptoms though did cause numbness and tingling with prolonged sitting. Claimant was instructed to follow up with Dr. Richard and Dr. Brady as well as return to clinic for a follow up appointment in three weeks. He provide medication, transdermal patches and external cream. Dr. Baker stated that the objective findings were consistent with the work related mechanism of injury.

27. Claimant reported to Dr. Baker that he suspected that Employer was having him investigated, that someone had vandalized his house, and that he had once discharged his gun accidentally while cleaning the gun. Upon exam, Dr. Baker noted that Claimant's judgement and insight were normal, and mood and affect were appropriate.

He noted on exam Claimant had tenderness in the lumbar spine paraspinal muscles and the right sciatic notch and revealed muscles spasms with limited range of motion. He assessed a lumbar strain, cervical sprain and muscle spasms related to the motor vehicle accident.

28. Claimant reported to Dr. Baker he had not been working at that time. Claimant conveyed that he had 2 job offers but needed to have no work restrictions. Dr. Baker then released Claimant to return to full duty as of this date. It is inferred from this report, in conjunction with the approved job list and restrictions, Claimant continued to have the no driving company vehicles restrictions until this date, but no other restrictions. Claimant was instructed to follow up in 3 weeks.

29. Claimant testified that he did not return to work for Employer after the full duty release on December 10, 2020. Claimant stated that he did not reach out to his employer because they never contacted him about the modified duty despite saying that they would. Claimant did not wish to beg for a job. Claimant stated that it is commonly understood in the field he works in that if a worker called and was advised they would get back to them but failed to do so, that it was a nice way of saying that they were letting him go. Claimant testified that he had spoken with the company secretary Jennifer, as well as both owners, Billy and Russ, and no one ever got back to him, that is why he thought he was terminated.

30. Claimant stated he had applied for multiple jobs at multiple employers, but when he advised that he had an ongoing workers' compensation claim, they would not hire him because of the risk despite showing the full duty release. Claimant was unable to get a job until September 20, 2021, when he finally contacted a friend at a prior employer to get the job. Once he showed them the full duty release, they took a chance on him. Claimant stated that it was not necessarily because he thought he could perform the full duty well but that he felt that he had to provide for his family. Claimant stated that he would have returned to work for Employer if they had offered him any job, which they did not.

31. Respondents filed a new GAL on December 10, 2020 terminating TPD benefits as of December 9, 2020.

32. On December 11, 2020 Claimant was again treated by Dr. Parker and the report is very similar to prior reports including that he continued to have a sharp burning pain in his low back and gluteus muscle travelling into his hamstring. He noted restrictions palpated at the cervical spine and thoracic spine, specifically on the right. He diagnosed lumbosacral sacroiliac strain and dysfunction, and cervicothoracic strain. He proceeded with chiropractic care and noted Claimant continued to have muscle spasms on palpation, adhesions and trigger points.

33. Also on December 11, 2020 Dr. Baker completed an M164 stating Claimant was to return to consult the following Wednesday. Another M164 was issued on December 16, 2020 for Claimant to follow up the following Friday. It is not clear if Claimant was seen on either of these follow up dates.

34. Claimant was evaluated by Molly M. Brady, PsyD, on December 15, 2020. Claimant described the work incident consistent with his testimony. He reported to Dr.

Brady that he found chiropractic care helpful in combination with massage therapy but that physical therapy had been discontinued. Dr. Brady reported that Claimant was experiencing considerable distress secondary to what he described to be a pattern of investigation and vandalism that he believed was conducted by individuals hired by his employer. Claimant described anger and fear associated with these perceived acts. Claimant stated that several family members had also witnessed evidence of tampering of the home intrusions and that he and his family had been very upset. He explicitly noted to Dr. Brady that he was prepared to defend himself and his family from intruders with deadly use of force and was important to him that others understand the seriousness of his experience. Claimant described his pain levels and changes. Dr. Brady observed no obvious pain behaviors during the interview. Claimant answered without hesitation when asked for information omitted on the history intake forms.

35. Dr. Brady noted no changes to Claimant's concentration or memory but stated that he had changes to mood including increased irritability, anger and even lack of tolerance towards his children, which Claimant reported was not his parenting style. Claimant denied any plan to injure others and stated that he did not have a firearm in his home at that time. Claimant reported a reduction in appetite, increased sadness and tearfulness, increased withdrawal, fatigue, lower libido, as well as guilt for putting his family through the investigation issues. He reported being concerned with his family's safety, and was losing sleep. Claimant declined to be administered the Behavioral Health Inventory 2 (BHI2). Claimant explained that he was aware that he probably would never be able to get back to who he used to be but wished to achieve some sort of normal for him. Dr. Brady reported that Claimant was less satisfied with his medical providers in this case, that he did not believe his provider's interpretation of the MRI and wished a second opinion. Claimant reported that he was interested in having someone to talk to that would not judge him.

36. Dr. Brady diagnosed pain disorder associated with psychological factors and a medical condition. Dr. Brady declined to provide Claimant with psychotherapy as he failed to take the recommended testing. She noted that Claimant was struggling with chronic pain related to the injury and frustrations secondary to the perceived investigation and surveillance, especially the safety of his family. She strongly recommended that, if any surveillance was being conducted, that it be halted due to concerns of escalation. She further stated that Claimant's lack of trust in those that he is dependent upon for his care also represented a source of distress, a notable possible complication to his capacity to benefit from treatment and to successfully move forward after the workplace injury. Dr. Brady recommended collaborative communication regarding medical treatment options available as well as clarification/agreement between the medical providers and Claimant as to when MMI had been reached.

37. On January 13, 2021 Dr. Baker reevaluated Claimant with reports of constant back pain as well as pain, weakness and a burning sensation in his right leg. Claimant reported that driving still caused increased pain in his lumbar spine. From Dr. Brady's report, he noted Claimant had refused further treatment but that she was very concerned about Claimant's "paranoid delusions" and that she reported Claimant believed Dr. Baker was not telling him the truth. Dr. Baker duplicated some of the reports of history from the December 10, 2020 report. On reexamination he found right sided

lumbar spine muscle spasms and limited range of motion. Claimant did agree, at that point to an evaluation pursuant to a psychiatry referral to help with his sleep. Dr. Baker stated that Claimant's psychiatric condition was making it very difficult to treat Claimant as Claimant believed Dr. Baker was lying to him. Dr. Baker indicated that if he did not follow up with psychiatry he would not continue to treat him. A referral was issued but did not specify the name of the psychiatric provider. He continued the current treatment plan and scheduled a follow up recheck in 3 weeks. Dr. Baker stated that the objective findings continued to be consistent with the work related mechanism of injury.

38. On February 1, 2021 Claimant was evaluated by Dr. Megan Richard at UCHealth for electrodiagnostic evaluation and consultation regarding lumbar spondylosis with radiculopathy. Claimant reported that he continued to have right sided neck stiffness as well as pain, right sided midthoracic pain and muscle spasm, and right sided lower lumbar spine with radiation down the posterior aspect of the thigh that does not cross the knee. He would also get anterior right leg burning pain with different positioning of his back and hips.

39. Upon examination, Dr. Richard found Claimant had a positive seated and supine straight leg raise on the right, positive slump test on the right, positive Kemp[1] test on the right - all of which caused burning pain at the right buttock and behind the right thigh and knee. She found that FABER[2] and FADIR[3] tests both exacerbate his right buttock pain and radiation of pain into the posterior right thigh, that facet loading maneuvers standing somewhat exacerbated his lumbar pain, but not severely. She noted 5/5 strength with the exception of reduced ability to perform calf raises on the right indicating a possible S1 nerve lesion. She noted an antalgic gait, offloading right lower extremity, and hesitancy to fully extend right hamstring/knee.

40. Dr. Richard reported that Claimant was attentive, pleasant and appropriate with normal speech, not rapid and pressured, delayed or slurred, and his behavior was not agitated, slowed, aggressive, withdrawn or hyperactive. She noted normal judgment and he was not impulsive or inappropriate.

41. Dr. Richard conducted a nerve conduction study that was normal. Claimant had an abnormal needle electromyography (EMG) study that demonstrated complex repetitive discharges and neurogenic recruitment in the right Tibialis Anterior (L4/L5) and Extensor Hallucis Longus (L5/S1), indicating a chronic L5 radiculopathy with subsequent reinnervation, suggestive of a chronic right lower extremity motor radiculopathy affecting the L5 nerve root. She stated that nerve conduction studies address mainly the function of large myelinated nerve fibers and patients with small-fiber neuropathy can have normal sensory nerve conduction studies. She diagnosed Claimant with lumbar spondylosis with chronic right L5 radiculopathy, chronic right-sided low back pain, chronic midthoracic back pain, chronic right-sided neck pain, muscle spasms, neuropathic pain.

42. Dr. Richard made a referral for physical therapy at Colorado in Motion in Loveland, CO for his chronic low back pain with right lower extremity radiculopathy,

[1] Kemp test is performed to evaluate pathology of the disc or disc involvement.
[2] FABER test is performed to evaluate pathology of the hip joint or the sacroiliac joint.
[3] FADIR stands for Flexion, Adduction, Internal Rotation test and refers to a clinical examination test performed to assess the hip function.

weakened core and gluteal musculature, muscle spasms, and impaired mobility. She stated that Claimant would benefit from lumbar spine injections in order to improve his current pain and impaired mobility and made a referral to Foxtrail Pain Clinic for his lumbar spondylosis and right lower extremity radiculopathy in the distribution of the L5/S1 nerve root. Dr. Richards recommended a trial epidural steroid injections as well as potentially facet blocks in the lumbar spine. She also recommended continued massage, acupuncture and chiropractic care as well as medications and patient education.

43. Claimant testified that Dr. Baker referred Claimant for the EMG/nerve conduction study to Dr. Richard as well as to Dr. Brady.

44. Claimant returned to see Dr. Baker on February 10, 2021 with continued constant back pain. Dr. Baker reported that Claimant did see a Dr. Perrin once but missed the second appointment due to some miscommunication. He was offered a job but declined because of his concerns about his back pain. Claimant advised Dr. Baker that he wished to transfer his care to another clinic and Dr. Baker agreed that he would follow up at another clinic but was to continue with specialist care, stating that "Injured Worker is not at MMI, but is anticipated to be at MMI in/on 5/1/2021."

45. Dr. Parker evaluated Claimant also on February 10, 2021. Claimant complained of low back pain and, to a lesser degree, cervical and thoracic pain. Claimant reported a sharp sensation in the right gluteus muscle traveling into the hamstring, problems with sleeping and exacerbation of his pain with cold weather. Claimant requested to continue with chiropractic care. On exam he noted trigger points in the bilateral trapezius, rhomboid, and lumbar muscles. He palpated adhesions in the bilateral thoracolumbar fascia and mild muscle spasm was also palpable. His impression was stable lumbosacral/sacroiliac strain/dysfunction and cervicothoracic pain/strain complaint. He proceeded with manual therapy, traction, soft tissue mobilization, neuromuscular re-education and low-grade manual manipulation. Dr. Parker advised the patient to continue his exercises and to be careful to slowly ease back into physical activity.

46. Claimant returned to see Dr. Parker on February 17, 2021, when Claimant stated that the treatment had been helpful but continued with the right sided spine discomfort. Claimant reported that the pain increased with the cold, had a sharp sensation in his right gluteus muscle going to his hamstring and continued to have disrupted sleep. He also reported he was taking medication he obtained from a doctor in Mexico, was performing his home exercises and awaiting the injection recommended by Dr. Richard. On exam Claimant had mild discomfort while performing range of motion of the cervical spine and lumbar spine. Straight leg and Patrick's were negative, but Claimant had mildly positive Hibbs[4] and hyperextension. Claimant was tender to palpation to the right sacroiliac join. He found adhesions as he palpated the bilateral thoracolumbar fascia and trigger points in the bilateral trapezius, rhomboid, and lumbar muscles with mild muscle spasm. He performed manual traction, neuromuscular re-education, soft tissue mobilization, and low-grade joint mobilization treatments. He stated that Claimant had maximized benefit from the treatment and released him from care.

[4] A positive Hibbs test is indicative of SI joint or ligament pathology.

47. Dr. Baker issued an M164 on February 17, 2021 which did not specify any return date for follow up but that Claimant was still not at MMI.

48. Claimant attended an independent medical examination (IME) at Respondents' request with Dr. John Raschbacher on February 26, 2021. Dr. Raschbacher took a history from Claimant, performed a physical examination and completed a medical records review. Claimant described the pain across his low back, right buttock pain that travelled to the right knee, sometimes felt numb to the right lateral ankle and foot, as well as neck pain. He stated that he also had discomfort that radiated up to the neck on the right side. Examination showed positive Gaenslen's[5] and Patrick's[6] tests that produced low back pain on the right. He had decreased sensation on the right foot and unweighted the right lower extremity, shifting his weight onto his left foot. He also had decreased range of motion.

49. Dr. Raschbacher stated that on history and physical examination and review of the medical records, it did appear that Claimant's presentation and request for medical care was related to the alleged injury suffered on the job. There was no evidence that it related to or stemmed from a pre-existing condition. He stated that, one might conclude medically, it was reasonable that based on his reported mechanism of injury that he did in fact likely have strains of the cervical spine, right shoulder area and lumbar spine. Due to psychological factors present, as long as Claimant's feelings of animosity toward his employer remained, it would be extremely unlikely that he would cease to complain of significant pain and significant inability to function physically, making any further medical care unlikely to produce effect and restore function. Dr. Raschbacher also stated that there was no reason from a medical standpoint that Claimant could not have performed the jobs described in the August 24, 2020 job task list.

50. On February 26, 2021 the Concentra Center Operations Director sent a letter to the adjuster in the claim stating as follows:

> Due to recent behaviors in our center, Concentra has made the decision to terminate the care of one of your injured worker[s]…
>
> In the most recent months, the injured worker has raised concerns with statements made throughout various visits with his medical provider and physical therapist. He has also refused to comply with recent treatment recommendations. As a result, we have determined that it is in the best interests of both parties for [Claimant] to seek care from another provider. …
>
> [Claimant] has been notified of the decision to terminate care by way of a certified letter signed by Dr. Jeffrey Baker. The letter refers [Claimant] to contact your office immediately to make arrangements to obtain health care services from another facility. *(Claimant's name, redacted.)*

51. Claimant was seen at the emergency room at UCHealth Medical Center of the Rockies on March 4, 2021 stating that he had had an increase in low back and right leg pain. He advised that his pain was a bandlike ache and intermittently sharp to the right buttock with ambulation. Claimant reported that his provider had discharged him

[5] Gaenslen's test detects musculoskeletal abnormalities and primary-chronic inflammation of the lumbar vertebrae and sacroiliac joint.
[6] Patrick's test or FABER test is performed to evaluate pathology of the hip joint or the sacroiliac joint.

from the Concentra practice and did not have one to replace them. Claimant was evaluated by nurse practitioner Bree Bacalis, who examined Claimant, finding he walked with a slight limp and determined that he required medications. He was diagnosed with acute right sided low back pain with right-sided sciatica. They administered a Norflex patch and Toradol, prescribed a Medrol Dosepack and Flexeril. He was advised not to lift anything heavy, stretch his back and leg, use a heating pad as needed and take over the counter medications as needed.

52. On March 30, 2021 Claimant was attended by Dr. Michael Brown at UCHealth Foxtail Pain Management for bilateral sacroiliitis, chronic sacroiliac pain, sacral spondylosis, myofascial pain syndrome and chronic pain due to trauma. They placed an order for spine injections at that time to take place with Dr. Brown at the Harmony Surgery Center for bilateral sacroiliac joint injection with flouroscopy.

53. Claimant testified that Dr. Baker, Dr. Richard and Dr. Brown agreed that he required the SI joint injection but it was not authorized. He further stated that he would like to obtain the injection.

54. On May 3, 2021 upon first examining and evaluating Claimant, Dr. Sanchez agreed with Dr. Raschbacher that Claimant was at MMI without impairment. On physical exam (PE) Claimant exhibited mild pain behaviors, mood and affect were appropriate but mildly anxious, with speech at a normal rate and tone. She noted that Claimant had complaints of balance and not feeling solid on the ground but had an equivocal Romberg's test. Claimant was tender to touch diffusely in the right paraspinal side and had bilateral positive straight leg tests. She found impressive that Nicholas Wright, PT, stated on December 2, 2020 "unfortunately, I do not see him healing physically prior to his mental health improving" which was then compounded by Dr. Raschbacher's assessment on February 26, 2021 stating that the patient is "unlikely" to exhibit "significant functional gain or positive response subjectively to further treatment." Dr. Sanchez found that the patient tended to externalize all of his problems and was unwilling to be introspective. She noted that Claimant seemed to be unwilling to acknowledge that personal stressors may be contributing to his ongoing pain complaints. Dr. Sanchez simply advised Claimant that if he would like to receive ESI injections he should use his private insurance. She highlighted to Claimant that she found his physical exam was not consistent with "expected" findings given his MRI and EMG and his lack of response to conservative treatment. On May 4, 2021 Dr. Sanchez summarized medical records.

55. On May 13, 2021 Respondents filed a Final Admission of Liability (FAL) terminating benefits pursuant to Dr. Sadie Sanchez's report dated May 3, 2021, and denying maintenance medical benefits after MMI.

56. Claimant objected to the FAL in a timely manner on May 26, 2021 and completed the Application for a Division Independent Medical Examination.

57. Claimant returned to UCHealth MCR on August 9, 2021 and was evaluated by Cole O'Hara, M.D. Claimant presented with ongoing back pain since a reported work-related injury around 1 year before. They noted the patient has had ongoing pain from his neck to his lower back with radiation of pain into both legs but denied any numbness or weakness. The patient denied any new injury, fever or chills. Claimant reported that he had multiple evaluations including pain management and neurology, and had an MRI

report with him several months old that revealed mild lumbar disc disease. The patient described sharp pain that involved the entire right side of his back from his neck to his tailbone region that worsened with movements. Claimant stated that he had a recommendation to have injections at the pain management clinic but work comp insurance denied it.

58. Dr. O'Hara's clinical impressions were of chronic neck and right sided low back pain and a differential diagnosis that included chronic low back pain, lumbar radiculopathy, cervical radiculopathy, cauda equina syndrome. Upon exam he noted that the pain involved almost his entire back, most consistent with muscular spasm. He noted that Claimant appeared quite uncomfortable and was given a dose of IM[7] dilaudid. He reviewed Claimant's PDMP[8] and did not see any concerning findings. He was prescribed a few days of oral pain medication to get him through the exacerbation of pain. Dr. O'Hara noted that, while Claimant had established care with pain management as well as spine surgery, he recommended that Claimant pursue acquiring Medicaid given his lack of success with the work comp claim. Dr. O'Hara stated Claimant would benefit from comprehensive pain management. He was prescribed Norco upon discharge, he was advised to follow up with Dr. Brown for injections and with Dr. Robert Benz for an orthopedic surgery consult at Orthopaedic & Spine Center of the Rockies.

59. The DIME physician, Alicia Feldman, M.D. of Colorado Clinic, evaluated Claimant on August 17, 2021. She reviewed the medical records and provided a summary of the relevant records. Dr. Feldman took a history consistent with Claimant's testimony of a heavy equipment motor vehicle collision. Claimant reported that he had initial thoracic pain and shortness of breath in addition to acute anger of the accident. Claimant had onset of pain in his neck, right scapula, and low back following the accident. He reported difficulty with activities of daily living including pain with lifting his children. He needed to sit down to get dressed. He reported difficulty bending while showering. On physical exam, Dr. Feldman found Claimant has diffuse tenderness to palpation over the right side of the cervical, thoracic, and lumbar spine, had tenderness to palpation over the right SI joint, pain with all bending, flexion, extension, and side bending, and decreased sensation to light touch over right L5 distribution. She found Claimant had a positive straight leg raise on the right, negative on the left, positive FABER on the right, positive thigh thrust on the right, positive pelvic disruption on the right. He also had limited range of motion.

60. Dr. Feldman provided a clinical diagnosis of work-related right-sided low back pain, lumbar sprain/strain, and possible right-sided sacroiliac joint mediated pain. Dr. Feldman stated Claimant reached MMI on May 3, 2021 as he had extensive treatment with physical therapy, chiropractic, and medications. He had an extensive workup including x-ray, MRI, electrodiagnostic testing, and psychological evaluation. He had refused psychotherapy, and at that point, the second opinion occupational medicine doctor did not recommend further treatment. Given Claimant's lack of trust in his occupational medicine providers, Dr. Feldman did not expect further treatment within the workers' compensation system to result in any significant functional gains and felt that

[7] Intramuscular.
[8] Prescription Drug Monitoring Program.

MMI was appropriate. She stated that Claimant deserved a second evaluation with an occupational medicine doctor which occurred on May 3, 2021.

61. Dr. Feldman noted that Claimant had had greater than 6 months of medically documented pain and rigidity, had actively treated with chiropractic through February, and had ongoing pain and functional limitations for which she thought it was appropriate to award an impairment rating. These add up to 12% whole person impairment for loss of range of motion of the lumbar spine. She stated that the straight leg raise validity test for lumbar flexion was valid. Utilizing Table 53IIB for unoperated medically documented injury and a minimum of 6 months of medically documented pain and rigidity with or without muscle spasms associated with none to minimal degenerative changes on structural tests of the lumbar spine she assigned a 5% whole person impairment. The 12% and 5% combined to a 16% whole person impairment. Utilizing the apportionment calculation worksheet, the current Table 53IIB 5% minus the previous 5% left an apportioned 0% for the specific disorder of the spine. Range of motion measurements was 12% minus the previous 0% resulted in a 12% whole person apportioned impairment rating. Dr. Feldman disagreed with Dr. Sanchez's 0% impairment rating. Dr. Feldman stated she felt Claimant had objective evidence of injury to his lumbar spine, likely SI joint based on his physical exam and history, although the true extent of his pain and impairment was somewhat complicated by the significant psychological distress and distrust he had for some of his providers. She did not recommend maintenance care as she agreed with Dr. Sanchez that Claimant should seek treatment outside of the workers' compensation system given his significant distrust for the occupational medicine providers and further treatment within that setting would not be productive.

62. The DIME process was concluded as of the Division's Notice of September 9, 2021.

63. Dr. Benz's report of May 17, 2021 stated that Claimant had ongoing pain in his lumbar spine that radiated to his lower extremities and upper back. He stated that the MRI showed moderate degeneration of the lower lumbar spine most severe at L4-5 with no evidence of nerve root compression. He diagnosed Claimant with mild multilevel lumbar disk degeneration and probable right SI joint dysfunction. He suggested that possible treatment options was an SI joint injection on the right and, if this was helpful, a CT scan of the lumbar spine to include the SI joints to determine if an SI joint fusion would be appropriate.

64. Dr. Raschbacher issued an addendum report on February 7, 2022 following receipt of the 2011 claim records. Dr. Raschbacher noted that it did not appear that Dr. Feldman, the DIME physician, was provided with the prior impairment rating and should be afforded the records for purposes of apportionment, though he continued to assert that there was no objective evidence of injury other than a strain/strain that should have resolved, and therefore, no impairment was appropriate in this matter. He also stated that the video surveillance should be provided to the DIME physician, if one existed. Dr. Raschbacher's opinion with regard to impairment is not credible.

65. This ALJ reviewed the video surveillance in this matter, which consisted of approximately 55 seconds, showing Claimant walking to a vehicle. This ALJ viewed that Claimant had a visible antalgic gait, favoring his right side.

66. Dr. Raschbacher testified as an expert in occupational medicine and a Level II accredited physician. He stated that the abnormal EMG showed that there was chronic damage to the L5 nerve root and that it was trying to reestablish enervation and normal nerve function. He stated that the report issued on February 26, 2021 summarized his opinions prior to receiving the 2011 injury medical reports.

67. Dr. Raschbacher stated he received training regarding apportionment of spinal impairments from the recent Level II accreditation course including receiving some apportionment tables. He stated that it was clear that Dr. Feldman did not have the prior records available when she did the impairment rating and she completed the forms correctly. He stated that Dr. Feldman used the apportionment tables when an impairment was not available and that she relied on Claimant's statement that he had a 5% rating from his 2011 claim. He stated that the Division requires physician to subtract like from like, so only a Table 53 from a prior specific spine impairment and loss of range of motion from other measurements of range of motion. He testified that, assuming that the correct apportionment was the 10% provided by Dr. Castrejón's, then the 5% for Table 53IIB from the 5% Table 53IIB would result in a 0% for specific disorder and the 5% for loss of range of motion is subtracted from the 12% ROM impairment found by Dr. Feldman, would result in a 7% whole person apportioned impairment. Assuming that the 7% whole person assigned by Dr. Kawasaki was correct, then the 5% for Table 53IIB would be subtracted from the 5% Table 53IIB resulting in a 0% for specific disorder, and the 2% for loss of range of motion would be subtracted from the 12% ROM impairment found by Dr. Feldman, resulting in a total of 10% whole person apportioned impairment rating.

68. Dr. Raschbacher testified that nothing in the *AMA Guides*, Impairment Rating Tips or the Level II accredited course materials indicated that a physician could not assign an impairment rating to a strain or sprain if it did not resolve but that most did resolve without impairment. Dr. Raschbacher stated that he did not see the surveillance, but was not specifically surprised that there was only 55 seconds of surveillance nor did he state he knew whether there were any objective evidence of anything in particular with regard to the surveillance. He testified that he agreed with Dr. Feldman's opinion with regard to maintenance care, where, since Claimant did not achieve any functional gains or improvement from the medical care he had received to date, Claimant should not have any maintenance care in the workers' compensation setting.

69. Under Division of Workers' Compensation (Desk Aid #11) Impairment Rating Tips: Updated July 2020, the Spinal Rating for specific disorder under Table 53, stated that "[W]henever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiologic findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity." As found here, Claimant clearly had at least six months of documented pain and rigidity, the last of which is inferred as loss of range of motion, both of which are documented by the providers above, including pain, muscle spasms and adhesions as well as objective findings.

70. Claimant received a COBRA letter on December 10, 2021 which terminated his medical, dental and vision care showing a monthly premium of $914.59 beginning as of January 1, 2022. Claimant confirmed that he lost these benefits in December 2021. As found, the fair approximation of the Claimant's wages from May 3, 2021 forward is $1,171.71 plus the $211.06 (914.59x12/52) from the discontinued COBRA benefits for an AWW of $1,382.77 and a TTD rate of $921.86.

71. Claimant testified that he attempted to return to a similar field of employment from December 10, 2020 through September 2020, as a blade operator or grader, but he was unable to return to other similar jobs that required heavy lifting and other manual activities as part of the job. Claimant finally was able to locate and secure a job through a friend on September 20, 2021 with a prior employer.

72. Claimant testified that he uses a back brace that was recommended by Dr. Parker but that he cannot use the back brace all the time because then his back would become more weakened. He stated that he uses it intermittently as needed. He stated that he continues to have a limp and watched the surveillance video, confirming that the person in the video was him. As found, Claimant has a noticeable limp, favoring his right lower extremity. The ALJ finds that Claimant should be awarded $1,000.00 for this disfigurement.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME Physician's Opinion

Respondents seek to overcome Dr. Feldman's determination of impairment in this matter. Respondents must prove that the DIME physician's determination of impairment was incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, *supra.*

The Act requires DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician

correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*. Consequently, when a party challenges the DIME physician's impairment rating, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning her opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* ICAO, W.C. No. 4-677-750 (April 16, 2008); *In re Claim of Pulliam*, ICAO, W.C.No. 5-078-454-001, (July 12, 2021).

Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*.

Respondents need only prove that any one particular impairment opinion is overcome by clear and convincing evidence. When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating

protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id*. Therefore, if it is overcome, then the remainder of the decision need only be shown by a preponderance of the evidence.

Here, Respondents seek to overcome the DIME physician's opinion. Dr. Alecia Feldman complied with the requirements of the law by apportioning impairment to Claimant's preexisting injury based on the history provided by Claimant as the parties failed to provide the DIME physician with the preexisting records of impairment. However, the parties in this matter stipulated that Claimant's proper apportionment was "no less than 7% whole person impairment," contrary to Dr. Feldman's apportionment of 5% whole person impairment. Therefore, Respondents, based on this stipulation, have overcome Dr. Feldman's DIME opinion.

Respondents argue that the correct impairment in the 2020 claim is 0% whole person impairment as designated by Dr. Raschbacher, as Claimant suffered from a strain/strain that should have resolved within weeks of the work related injury. Dr. Raschbacher's opinion is not credible in this matter as Claimant testified that he continued to have pain in his low back going down his right lower extremity that has not resolved. Dr. Raschbacher's opinion is contrary to the *AMA Guides* and the Impairment rating tips that allow for a strain of the lumbar spine that has continued greater than six months, including pain and rigidity, to be assessed impairment under Table 53IIB. As found and concluded, it is clear from the records of Dr. Feldman, Dr. Richard and Dr. Benz as well as Dr. Baker and Dr. Parker that Claimant had ongoing low back pain and rigidity, including muscle spasms, positive findings on exam, and valid loss of range of motion, and these physician's opinions are more persuasive than Dr. Raschbacher's opinion.

In the alternative, Respondents argue that the proper impairment to be apportioned is the 10% whole person provided by Dr. Castrejón, the DIME physician in the 2011 claim. As found, the impairment rating by Dr. Castrejón was only a provisional impairment rating as he was not at MMI at the time of the evaluation, and Dr. Castrejón recommended further care that was anticipated to change the level of impairment. Claimant settled the matter within 30 days of the deadline. Claimant testified that he continued to perform home therapy and exercises and, after the following 8 months, no longer had problems with his low back. Based on this credible testimony, this ALJ determines that the 7% whole person impairment rating for the 2011 claim as provided by Dr. Kawasaki is the more appropriate and the correct impairment rating to apportion in this matter. Therefore, Claimant's correct impairment rating for the 2020 claim is 10% whole person apportioned impairment rating based on Dr. Raschbacher's application of the AMA Guides and the proper apportionment as well as Dr. Feldman's measurements. Respondents failed to show that Claimant should not have any impairment related to this claim. Claimant proved by a preponderance of the evidence that Claimant continued to have an apportioned impairment rating of 10% whole person.

C. Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993).

The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007). Under section 8-40-201(19), C.R.S. the cost of health insurance coverage shall not be included in the Claimant's average weekly wage, so long as the employer continues to provide such health insurance coverage. Under Sec. 8-42-107(8)(d), C.R.S. the AWW *shall* include the amount of the employee's cost of continuing the employer's group health insurance plan upon termination. However, *Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991) holds that where there is ambiguity in the Act we should construe the entire statutory scheme in a manner that gives consistent, harmonious, and sensible effect to all its parts.

An AWW calculation is designed to compensate for total wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *Sec.* 8-42-102, C.R.S. An ALJ has the discretion to determine a claimant's AWW, including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008).

Respondents argued that Claimant is not entitled to the increased average weekly wage as Claimant voluntarily left his employment by not showing to work pursuant to the September 2, 2020 offer of modified employment. There is nothing persuasive in the record that indicates that Claimant continued to be an employee or that he was eligible to return to work. In fact, Employer failed to return Claimant's calls with regard to continued employment. Health insurance benefits were formally terminated as of December 31, 2021 and COBRA to start as of January 1, 2022. This is a unique case where no medical impairment benefits have been paid to date. Based on the totality of the evidence, this ALJ finds and concludes that a fair approximation of the AWW should include the COBRA benefits, pursuant to Section 8-42-107 (8)(d), C.R.S., and that AWW is calculated as $1,382.77, only for purposes of calculating medical impairment benefits as PPD compensates Claimant for future loss of capacity to earn wages. Here, while Claimant

returned to a similar field of employment, he was unable to return to other similar jobs that required heavy lifting and other manual activities. It is further found that the Claimant's earnings at the time his COBRA benefits were terminated would more fairly compensate Claimant for his future loss of earning capacity rather than computing permanent impairment benefits based on the wages paid to Claimant by his employer at the time of the injury. See *Spencer Jones v. United Parcel Services*, WC No. 4-669-404, ICAO (November 12, 2008); *Gibbons v. Progressive Roofing*, WC No. 5-034-260-01, ICAO (September 21, 2017); *Nanez v. Mechanical & Piping Inc*., WC No. 4-922-618-04, ICAO (June 16, 2017). Claimant as proven by a preponderance of the evidence that the COBRA benefits should be included in Claimant's average weekly wage to bring it to $1,388.77 for a TTD rate of $921.85.[9] Claimant has shown that PPD benefits owed shall include the COBRA amount.

D. Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbois* Logic, 952 P.2d 831 (Colo. App. 1997).

The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." However, even if a claimant is terminated for cause, post-separation TTD benefits are available if the industrial injury contributed to some degree to the subsequent wage loss. *Liberty Heights at Northgate v. Industrial Claim Appeals Office*, 30 P.3d 872, 873 (Colo. App. 2001); see also *Gilmore v. ICAO*, 187 P.3d 1129 (Colo. App. 2008).

Respondents argued that Claimant's entitlement of temporary disability benefits should be terminated as of September 14, 2021, 2020 when Dr. Baker released Claimant to modified duty and Claimant was sent an offer of modified duty employment pursuant to W.C.R.P. Rule 6-1(A) and Sec. 8-42-105(3), C.R.S. Claimant conceded he was not alleging a technical deficiency in the Rule 6 letter dated September 2, 2020. However, Claimant argued that Claimant complied with the instructions in the letter, which required Claimant to call Employer, specifically stating that "[B]ut you must call Billy the day before to ensure that the job is still in progress." This ALJ infers that the words in the letter "still in progress" means "available." As found, pursuant to Sec. 8-42-105(4)(b)(II)(C), it was impractical for Claimant to return to modified work as Employer failed to advise Claimant that there was a job still available. See *Slafter v. Volunteers of America*, W.C. No. 5-125-703-001, ICAO, (December 9, 2020). As further found, Claimant was not responsible for

[9] This ALJ rounds down calculations from .055 and down to the next cent and up when it is above .055.

his loss of employment. Claimant credibly testified that he contacted Bill prior to the date he was to start his modified duty. It was not until, after leaving a message during the third call, that Billy returned Claimant's call and Bill never mentioned a modified duty job. He advised Claimant that he was going to contact the insurance adjuster to determine if he could get Claimant further care as Claimant reported he had ongoing problems, and then Bill would call Claimant back. Bill failed to call Claimant back. Further, Claimant also contacted multiple other Employer representatives including Jennifer, the business' secretary, and the second supervisor, Russ, without response. Claimant considered Employer's failure to return his phone calls, as well as Bill's failure to get back to him as promised, as a discharge or termination of his employment. As found, Employer's actions are objectively viewed as a discharge as Claimant complied with instructions and sufficiently followed up, without Employer's response. Claimant has shown that Claimant is entitled to temporary total disability benefits as the supervisor failed to provide further instructions after communicating with Claimant in this matter that a job continued to be available. As found Claimant has shown by a preponderance of the evidence that he was unable to return to modified employment as he did not have instructions regarding whether work was still available. Claimant is, therefore, entitled to temporary total disability benefits from September 14, 2020 to the date he was released by Dr. Baker to regular duty on December 10, 2020.

E. Grover Medical Benefits

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974, ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the

causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Here, Dr. Sanchez, Dr. Feldman, Dr. Parker and Claimant's physical therapist opined that he would not benefit from any further care under the workers' compensation system. Claimant was placed at MMI as of May 3, 2021. While Drs. Richard and Benz made recommendations for further care, the recommended care was in the nature of being curative and neither opined whether the recommended care was to maintain Claimant at MMI. Dr. Sanchez, Dr. Feldman, and Dr. Parker's opinions were more persuasive than the opinions of Dr. Richard and Dr. Benz in this matter. Claimant has failed to show by a preponderance of the evidence that he is entitle to maintenance medical care.

F. Disfigurement Benefits

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." A disfigurement is an observable impairment of the natural appearance of a person, including a limp. See *Arkin v. Industrial Commission*, 358 P.2d 879, 884, 145 Colo. 463, 472 (Colo. 1961); *Piper v. Manville Products Corp*., W.C. No. 3-745-406 (July 29, 1993); *Josefiak v. Green and Josefiak, P.C.,* W.C. No. 3-783-081 (March 12, 1987); Marcelli v. Echostar Dish Network, W.C. No. 4-776-535, ICAO (August 30, 2012); *In re Claim of Nagle,* W.C. No. 5-105-891 (July 24, 2020). Claimant has an observable limp and testified that he continued to have a limp. This ALJ finds and concludes that Claimant is entitled to compensation due to the observable limp. Claimant has proven by a preponderance of the evidence that the limp should be compensated and Claimant is entitled to $1,000.00 for the disfigurement.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay Claimant based on the apportioned 10% whole person impairment for his lumbar spine injury related to the July 22, 2020 admitted claim.

2. Claimant's average weekly wage for purposed of calculating medical impairment benefits is $1,388.77, which includes the COBRA premium amount.

3. Respondents shall pay Claimant temporary total disability benefits from September 14, 2020 through December 9, 2020 at the rate of $781.14 per week. Respondents may take credit for any temporary partial disability paid for this period.

4. Claimant's claim for maintenance medical benefits is denied and dismissed.

5. Respondents shall pay Claimant a disfigurement award in the amount of $1,000.00.

6. Respondents shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

7. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether all physical impairment ratings are converted to a whole person and combined when determining the applicability of the cap provision in 8-42-107.5.

II. Disfigurement

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted injury on March 19, 2018, within the scope and course of his employment with Employer to his low back and right knee while employed as a laborer.
2. As a result of his work injury Claimant underwent a right knee replacement surgery on October 21, 2019. Claimant underwent numerous procedures for his low back (facet injections, medial branch blocks, lumbar medial branch radiofrequency ablation and a recommendation for a lumbar fusion).
3. Claimant was placed at maximum medical improvement (MMI) on April 19, 2021, by Dr. McFarland. Respondents requested a 24-month Division Independent Medical Examination (DIME) which was performed by Dr. Robert Mack. Dr. Mack placed Claimant at maximum medical improvement (MMI) as of April 19, 2021, and provided an impairment rating of 15% whole person for the low back, and 36% of the right lower extremity which converted to a whole person impairment rating of 14%. Combining the two impairment ratings resulted in a 27% whole person impairment rating using the AMA Guides (Third Revised) combined values Chart. (Ex. 5, p.151-153)
4. On August 18, 2021, a Final Admission of Liability (FAL) was filed admitting for the DIME impairment rating providing of 15% whole person impairment and 36% scheduled impairment of the lower extremity. (Ex. A) The FAL also admitted for temporary total disability benefits (TTD) from 5-9-18 through 4-19-21 at the rate of $677.89 per week for a total of $104,201.37, and TTD paid of $115,241.30. In remarks the carrier indicated, "See attached DIME report no PPD owed as benefits paid past the first cap. All benefits not specifically admitted are denied. Overpayment to be collected from future benefits." Insurer claimed an overpayment of $27,771.12.
5. On August 24, 2021, the Division of Workers' Compensation Claims Management Unit requested a corrected admission within 10 days consistent with the legal concept that when a claimant is assigned a scheduled and a whole person impairment rating, the impairment ratings are reduced to a single whole person rating to the determine the applicable cap. The impairment ratings are then compensated separately. (Ex. B) The error letter went on to indicate that the medical report assigns a whole person

impairment rating of 27% whole person and as this is greater than 25% the $174,938.15 cap is in effect.

6. The Claims Management Unit calculated permanent partial disability benefits (PPD) as $175,938.15 less TTD admitted of $104,201.37 = $70,736.78 and advised that this should be listed in the benefits section and any amount credited against PPD should also be listed in the remarks section.

7. On September 7, 2021, a subsequent FAL was filed admitting for TTD in the amount of $104,201.37 and a 15% whole person impairment rating and a 36% scheduled lower extremity impairment rating. (Ex. C, p.1) In the remarks section, the carrier stated: "Second cap is taken in consideration when determining amount of PPD owed. 15% (whole person PPD rating from the DIME) × 400 weeks × 1.08 age factor × $677.89 = $43,927.27 14% (Extremity PPD rating from the DIME) × 208 weeks × $297.56 = $8,644.95- These total $52,595.22. Carrier paid $115,241.30 ‗ $87,470.18 (First Cap) = $27,771.12 = $24,824.10 left to be paid."

8. On September 27, 2021, the Claims Management Unit mailed another error letter (Ex. D) requesting that a corrected admission of liability be filed consistent with the statement in their previous letter that "when a Claimant is assigned a scheduled and a whole person impairment rating, the impairments are reduced to a single whole person prating to determine the applicable cap. The impairments are then compensated separately. The medical report assigns a whole person rating of 27%. As this is greater than 25%, the $174,938.15 cap is in effect. We calculate PPD as $174,938.15 - $104,201.37 = $70,736.78, which should be listed in the benefits. Any amount credit against PPD should be listed in the remarks section."

9. On October 6, 2021, a third FAL (Ex. E, p.1) was filed admitting for TTD in the amount of $104,201.38 and for 15% whole person impairment and 36% scheduled impairment of the lower extremity. The remarks section contains the following: "Claimant was placed at MMI on 4/19/2021 with a 15% whole person rating & a 36% lower extremity rating. See attached DIME report from Dr. Mack dated 7/30/2021. Calculations are 15% × 1.08 x 400 weeks × $677.89 = $43,927.27 & 208 weeks × 36% × $297.56 = $22,281.29. TTD overpaid by $11,039.92." Moreover, in the benefit history, Respondents admitted for TTD in the amount of $104,201.38. They also admitted for PPD benefits for Claimant's 15% whole person impairment rating in the amount of $43,927.27, as well as PPD benefits for Claimant's 36% scheduled impairment in the amount of $22,281.29. As a result, Respondents admitted for TTD and PPD benefits in the amount of $170,409.94. They also claimed an overpayment in the amount of $11,039.92. The Respondents did not, however, state that they were limiting Claimant's PPD award based on the statutory cap contained in C.R.S. Section 8-42-107.5.

10. Claimant has a surgical scar on his right leg around his knee area as a result of the total knee replacement surgery performed as a result of his admitted claim. The surgical scar is approximately 9 inches long, raised, discolored and uneven in appearance. Claimant also walks with an antalgic gait and uses a cane to assist with his balance when walking especially outside the home outside, and when he is going to be on his feet for long periods of time or walking.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether all physical impairment ratings are converted to a whole person and combined when determining the applicability of the cap provision in 8-42-107.5.

As set forth in their proposed order, Respondents contend that the statutory cap contained in 8-42-107.5 limits Claimant's PPD award. Respondents contend that only the whole person rating is used to determine the statutory cap. Thus, Respondents contend Claimant's 15% whole person impairment rating does not exceed the first statutory cap of 25% and Claimant's combined TTD and PPD benefits are limited to the

first statutory cap of $87,470.18. Therefore, under this scenario Respondents contend Claimant is not entitled to any PPD benefits because he received more than $87,470.18 in TTD benefits. In the alternative, Respondents contend that the first statutory cap applies to Claimant's 15% whole person impairment rating and that the second statutory cap of $174,938.15 applies to Claimant's 36% scheduled impairment rating. Under this second scenario, Claimant would not be entitled to any additional PPD benefits for his 15% whole person impairment rating, but Claimant would be entitled to PPD benefits for his 36% scheduled rating since his 36% extremity rating exceeds the first statutory cap of 25%. The ALJ disagrees with both of Respondents' proposed interpretations.

The determination of the applicability of CRS Section 8-42-107.5 (the caps provision) is a separate and distinct determination from the determination of the calculation of compensation to be paid for a permanent impairment pursuant to CRS Section 8-42-107 (scheduled impairments vs. impairments not on the schedule of injuries). Thus, when determining the applicability of the cap provision in section 8-42-107.5 all of the physical impairment ratings are converted to a whole person and combined.

Section 8-42-107.5 in effect at the time of Claimant's injury provides that:

> No claimant whose *impairment rating* is twenty-five percent or less may receive more than seventy-five thousand dollars from combined temporary disability payments and permanent partial disability payments. No claimant whose *impairment rating* is greater than twenty-five percent may receive more than one hundred fifty thousand dollars from combined temporary disability payments and permanent partial disability payments. For purposes of this section, any mental impairment shall be combined with the physical impairment rating to establish a claimant's impairment rating for determining the applicable cap……. (Emphasis added).[1]

Section 8-42-107.5 was enacted in 1991 to limit the total award a claimant receives for temporary and permanent partial disability benefits. The differentiated caps represent a legislative attempt to distinguish between those workers who are more seriously injured from those who are less seriously injured. *See Colorado AFL–CIO v. Donlon,* 914 P.2d 396, 403–04(1996).

Respondents take the position that there is no statutory or binding case law that requires an insurer to convert scheduled ratings to a whole person impairment rating and combine the whole person ratings for the determination of the applicable cap provision. There are, however, numerous Industrial Claims Appeals Office (ICAO) opinions regarding the issue of combining scheduled and whole person impairment ratings for the purposes of determining the applicable cap provision. The first case was *Quackenbush v. Tenant Roofing Inc.,* W.C. No. 4-218-272 (I.C.A.O. June 19, 1998). In *Quackenbush,* the ICAO panel addressed whether a claimant's right arm injury should

[1] The dollar amounts contained in the benefits cap provision, section 8-42-107.5 CRS, is adjusted each year by the percentage of the adjustment made by the director to the state average weekly wage pursuant to section 8-47-106. *See* 8-42-107.5. Based on Claimant's date of injury, the first benefit cap is $87,470.18 and the second benefit cap is $174,938.15.

be treated as a 29% extremity impairment or converted to a 17% whole person impairment for purposes of the application of section 8–42–107.5, the benefits cap provision. The panel held that the term "impairment rating" was ambiguous, and it determined that converting the extremity impairment rating into a whole person impairment was necessary in order to prevent giving greater benefits to less seriously injured workers in contravention of the legislative purpose behind the benefits cap provision.

There is not, however, a court of appeals or supreme court opinion directly on point. There is statutory support for the use of whole person impairment ratings in the statute and the rules. CRS Section 8-42-101(3.5)(a)(II) requires that all permanent impairment ratings shall be based upon the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition Revised, effective July 1, 1991. WCRP 12-1 implements the Division's permanent impairment rating guidelines of how to appropriately utilize and report permanent impairment ratings. WCRP 12-4 specifically instructs that "Any physician determining permanent physical impairment shall: (B) Use the instructions and forms contained in the AMA Guides and; (C) *convert scheduled impairment rating to whole person impairments* (emphasis added) and (D) report final whole person and/or scheduled impairment rating percentages in whole numbers." The AMA Guides to the Evaluation of Permanent Impairment Section 2.2 also requires the determination of impairment to be based upon the "whole person." The AMA Guides specifically provide that: "To support systems that require such determinations, the reference tables of the Guides take into account all relevant considerations in reaching "whole person" impairment ratings." AMA Guides, Section 2.2.

In this case, the DIME doctor, utilizing the AMA Guides to Physical Impairment (Third Edition Revised) Lower Extremity Impairment Records Part II (Hind Foot, Knee, Hip), provided a 36% impairment rating of the knee for a total lower extremity rating of 36% which converted to 14% impairment rating of the whole person (Table 46). (Ex. 5, p.152). The DIME doctor then, using Figure 84 Spine Impairment Summary, provided a 15% whole person for the lumbar spine, and pursuant to #7 on the form for impairments of other organ systems, included the right knee and provided a 14% impairment rating pursuant to page 68 of the AMA Guides. The whole person impairment ratings were then combined for a total of a 27% total whole person impairment rating. (Ex. 5, p.153)

Using this framework, the Supreme Court in *Mountain City Meat Co. v. Oqueda*, 919 P.2d 246 (Colo. 1996) held that when an employee is involved in a work-related accident that results in both a scheduled injury and a non-scheduled injury, the scheduled injury must be converted to a whole person impairment rating and combined with the non-scheduled injury whole person impairment rating in calculating permanent disability benefits and paid by the whole person formula.

In response to the *Oqueda* decision, the General Assembly amended subsections 8-42-107(7)(b)(I) to (III) in 1999 to end the whole person calculation and payment of benefits pursuant to the whole person formula whether scheduled or not by clarifying that each type of injury shall remain separate and be compensated solely on the basis of applicable statutory schedule or benefit formula. The General Assembly added to the statute in this 1999 amendment a legislative declaration and provision that provides for

mental and emotional distress to be compensated under a different provision of the Act, and prohibits such impairments from being combined with a scheduled or a nonscheduled injury. Ch. 103, sec. 1, § 8-42-107, 1999 Colo. Sess. Laws 298, 299.

After the General Assembly overruled *Mountain City Meats* in 1999 legislation, ICAO revisited the issue and reached the same result in *Schank v. Wizard,* W.C. No. 4-497-494 (I.C.A.O. Sept. 19, 2003); In *Schank,* a DIME physician rated the claimant as having 22% impairment of the cervical spine and a 38% impairment of the upper extremity, which the physician converted to 23% whole person impairment. The physician then combined the ratings for a combined total of 40% whole person impairment. The ALJ awarded scheduled disability benefits based on 38% impairment to the upper extremity, and 22% whole person impairment. Relying on *Quackenbush v. Tennant Roofing, Inc*., W.C. 4-218-272 (June 19, 1998), and the claimant's combined whole person rating of 40%, the ALJ determined the claimant is subject to a combined limit of $120,000, rather than $60,000 for TTD and PPD benefits.

In *Schank*, the panel reviewed the analysis of their decision in *Quackenbush* to confirm that the 1999 amendments to subsections 8-42-107(7)(b)(I) and (II) CRS, did not change how section 8-42-207.5, the cap provision is applied to injuries. The panel held that when a claimant has scheduled and nonscheduled impairments all the physical impairments are converted to a whole person impairment rating for the purposes of determining the applicable cap in section 8-42-107.5 CRS.

In *Quackenbush*, the issue was whether the claimant's right-arm injury should be treated as 29% impairment of the arm or converted to 17% whole person impairment for purposes of the application of section 8-42-107.5 CRS. In resolving the issue, the panel noted that the term "impairment rating" is not defined in the Workers' Compensation Act and is ambiguous. As a result, the legislative intent and history was reviewed.

The panel noted that the language enacted in Senate Bill 218, which is currently codified at Section 8-42-101(3.7) CRS, provides that all "impairment ratings used under articles 40 to 47 of this title" are to be calculated in accordance with the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition, Revised (AMA Guides). The AMA Guides provide for both extremity ratings and whole person ratings but express the preference that all ratings be converted to the whole person. In *Mountain City Meat Co. v. Oqueda*, 919 P.2d 254, the Court held that by incorporating the AMA Guides into the Act, the legislature explicitly created authority for the conversion of an upper extremity injury to a whole person impairment rating. Therefore, in *Quackenbush*, the panel held that the reference to the claimant's "impairment rating" in section 8-42-107.5 CRS was ambiguous.

In view of the statutory objectives inherent in the schedule and section 8-42-107.5 CRS, the panel concluded in *Quackenbush* that application of the claimant's 29% scheduled disability rating would do violence to the statutory scheme by giving greater benefits to less seriously injured workers who suffer scheduled disability injuries. In contrast, conversion of the claimant's scheduled disability rating to a whole person rating caused the claimant's injury to be subject to the cap intended for less serious injuries. Therefore, the panel held that the cap applied to scheduled disabilities, and for purposes of determining whether the $60,000 cap has been reached, the scheduled

disability must be converted to a whole person impairment so that scheduled and nonscheduled injuries are treated similarly.

Respondents in *Schank* argued that sections 8-42-107(7)(b)(I) and (II), CRS [1999 Colo. Sess. Laws, Ch. 103 at 298 which apply to injuries that occur after July 1, 1999], were enacted to overrule *Mountain City Meat Co. v. Oqueda*, and to ensure that when the claimant sustains both scheduled and nonscheduled injuries, the loss shall be compensated on the schedule for scheduled injuries. Section 8-42-107(7)(b)(II) CRS provides that, "[W]here an injury causes a loss set forth in the schedule in subsection (2) of this section and a loss set forth for medical impairment benefits in subsection (8) of this section, the loss set forth in the schedule found in said subsection (2) shall be compensated solely on the basis of such schedule and the loss set forth in said subsection (8) shall be compensated solely on the basis for such medical impairment benefits specified in subsection (8)."

The panel was not persuaded that section 8-42-107(7)(b)(II) CRS undermined the holding in *Quackenbush* and disagreed with the respondents' contention that scheduled injuries are not subject to the benefit cap. In particular, the panel rejected the respondents' contention that because *Quackenbush* relied on *Mountain City Meat Co. v. Oqueda*, and *Mountain City* was expressly overruled by section 8-42-107(7)(b)(II) CRS, *Quackenbush* was necessarily overruled. The panel explained that in *Quackenbush* they relied on *Mountain City* for the proposition that the legislature created a methodology for converting scheduled disability ratings to whole person impairment ratings by incorporating the AMA Guides into the statute. Section 8-42-107(7)(II) CRS did not alter the statutory requirement that medical impairment ratings be completed in accordance with the AMA Guides or the fact that the AMA Guides contain a method for converting extremity ratings to whole person impairments. Accordingly, the principle on which the panel relied in *Mountain City* was not overruled by subsections 8-42-107(7)(I) and (II) CRS.

The panel also noted that section 8-42-107.5 CRS is designed to create a maximum benefit cap on the recovery of TTD and PPD benefits. Although TTD benefits are intended to compensate for a claimant's immediate wage loss, both TTD and PPD benefits compensate a claimant for the extent to which his or her physical impairment impacts the claimant's past and future ability to earn wages. *See Colorado AFL-CIO v. Donlon*, 914 P.2d 396, 404 (Colo. App. 1995). The panel noted that under the respondents' construction, all wage loss benefits payable under the schedule of disabilities would be excluded from the statutory limit on wage loss benefits. Consequently, the panel held that the respondents' construction is inconsistent with the overall purpose of section 8-42-107.5 CRS.

Using the respondents' analysis would elevate scheduled injuries above whole person impairments because a scheduled disability award would be payable regardless of the statutory cap. For example, a claimant who has a 29% scheduled disability, which would convert to 17% whole person impairment, would not be subject to the $60,000 limitation in section 8-42-107.5 CRS if scheduled disabilities were irrelevant to the cap. However, a claimant whose injury results in whole person impairment from 17 through 25% would be subject to the $60,000 combined cap. Under these circumstances, the less seriously injured worker could actually recover the more generous award of

permanent disability benefits that was reserved for workers with whole person impairment. This result would frustrate the statutory scheme for compensating permanent partial disability enacted by Senate Bill 218.

In *Dillard v. Industrial Claim Appeals Office,* 134 P.3d 407 (Colo. 2006), the Supreme Court held that section 8-42-107(7)(b)(III) CRS precluded combining a mental impairment rating with a physical impairment rating for the purpose of obtaining the benefit of the higher cap set forth in section 8-42-107.5 CRS. In *Dillard*, Claimant was assigned 23% whole person impairment to the cervical spine, 2% rating for the damage to the left hip which equaled 25% whole person impairment when combined. The DIME physician also assigned 5% rating for mental impairment. The DIME physician opined that Claimant suffered a total of 29% whole person impairment. (*See Dillard v. Pepsi Bottling* (WC No. 4-467-177 March 19, 2004)

The Court in *Dillard* held that the "shall not be combined" language is unique to section 8-42-107(7)(b)(III) (then existing section that indicated that a mental impairment should not be combined with a scheduled or nonscheduled injury). The Court noted the preceding subsection section 8-42-107(7)(b)(II) CRS contains nothing like it to prevent combining scheduled and nonscheduled injuries into a whole person impairment rating for the purposes of section 8-42-107.5 CRS. Thus, the mental impairment language, "shall not be combined with a scheduled or a nonscheduled injury," must have meaning. That meaning, when applied to section 8-42-107.5 CRS, is that mental impairment ratings are not to be combined with scheduled or nonscheduled injuries when calculating the applicability of the higher cap contained in section 8-42-107.5 CRS.

In this case, the medical report assigns a whole person impairment rating of 27%. As this is greater than 25%, the $174,938.15 cap is in effect. The amount of TTD and PPD to which Claimant is eligible for is $174,938.15. Since Claimant was entitled to $104,201.37 in temporary disability benefits, there remains $70,736.78 under the statutory cap that can be paid in permanent partial disability benefits. In this case Claimant's 15% whole person impairment rating has a value of 15% × 1.08 × 400 weeks × $677.89 = $43,927.27. Claimant's right lower extremity rating has a value of 208 weeks × 36% × $297.56 = $22,281.29. As these combined amounts total $66,208.56 and are less than $70,736.78, Claimant is entitled to the payment of $66,208.56 in permanent partial disability benefits. Respondents, may, however, reduce such amount by any overpayment of temporary disability benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's 15% whole person impairment rating has a value of 15% × 1.08 × 400 weeks × $677.89 = $43,927.27. Claimant's right lower extremity rating has a value of 208 weeks x 36% × $297.56 = $22,281.29. Claimant's total permanent partial disability benefit award equals $66,208.56.

2. Respondents admitted for $104,201.37 in temporary disability benefits. Therefore, the total amount payable for temporary and permanent partial disability benefits is $170,409.93.

3. Claimant's combined whole person impairment rating is 27% which is greater than 25%. Therefore, the applicable cap pursuant to 8-42-107.5 is $174,938.15.

4. As a result, Respondents shall pay Claimant $66,208.56 in permanent partial disability benefits – less any overpayment of temporary disability benefits.

5. Claimant has a surgical scar on his right leg around his knee area as a result of the total knee replacement surgery performed as a result of his admitted claim. The surgical scar is approximately 9 inches long, raised, discolored and uneven in appearance. Claimant also walks with an antalgic gait and uses a cane to assist with his balance when walking especially outside the home and when he is going to be on his feet for long periods of time or walking. Therefore, Respondents shall pay Claimant disfigurement benefits in the amount of $3,500.00.

6. The parties specifically reserved the issue of permanent total disability benefits. Therefore, such issue is reserved.

7. All other issues not expressly decided herein are also reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 17, 2022.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable occupational disease arising out of and in the course of his employment on or about April 10, 2020 in the form of CoVid-19?

- If Claimant has proven an occupational disease, the parties have stipulated that the medical treatment Claimant has received is reasonable medical treatment necessary to cure and relieve Claimant from the effects of the occupational disease.

- If Claimant has proven an occupational disease, the parties have stipulated that Claimant's average weekly wage ("AWW") is $1,674.50 from the date of the injury up until April 13, 2021 when his AWW increased to $2,175.00 due to his COBRA health insurance benefits.

- If Claimant has proven an occupational disease, the parties have stipulated that Claimant is entitled to temporary total disability ("TTD") benefits beginning April 13, 2020 through ongoing.

- If Claimant has proven an occupational disease, the parties have stipulated that Respondents reserve the right to claim any allowable offsets against Claimant's TTD benefits in the future.

FINDINGS OF FACT

1. Claimant was employed in Employer's underground coal mine as a bolter. Claimant testified that over the course of his employment with Employer, he performed numerous jobs including Ram Car Operator, Scoop Car Operator, Materials Hauler and Log Truck Driver. Claimant testified he began working for Employer on August 28, 2019. Claimant testified that he lived with his wife and two children in Eckert, Colorado.

2. Claimant testified he worked on Crew C, with approximately 40 to 50 other people on the crew. Claimant testified that when the COVID-19 pandemic began in March 2020, Employer begin to stagger the sub-crews in locker rooms so that all of the workers in Crew C would not be getting showered and dressed before and after work shifts at the same time. Claimant testified that members of Crew C would interact throughout the work day and in locker rooms, and that during shift changes members of Crew C would briefly interact with Crews A and B.

3. Claimant testified that employees were required to wear masks while traveling in the mantrip to move into or out of the mine, but otherwise, it was his understanding that masking was not required at work. The mantrip is a truck that fits 8 people and is utilized by the employees to drive into the mine to perform their work. Claimant testified he would be underground in the mine during his entire shift. Claimant testified his shift was 8 hours long.

4. Claimant testified that the level of participation in mask-wearing was not good. Claimant testified that his coworkers did not wear masks during work shifts, and that members of Crew C ate lunch together in a small, 5-foot by 12-foot chamber, without masks. Claimant testified that members of Crew C were also in close contact during their safety meeting each morning. Claimant testified that while underground, the employees would have to scream at each other in order to be heard.

5. Claimant testified that during an eight-hour shift, he was in close contact with his bolt partner and third man all day. Claimant testified that close contact would be within several feet of his bolt partner and third man. Claimant testified he was also in constant contact with his supervisor, [Redacted, hereinafter AC], during the day, including close contact in the kitchen for approximately 45 minutes during the day.

6.Claimant testified that in the mine, air only flowed one way. Claimant explained that the intake air comes into the mine through a vent and is blown down through the mine and then recycled out the exhaust shaft.

7.Claimant testified that he took Employer's CoVid policies seriously, but that it was not feasible to wear masks underground and there was not much social distancing while working underground due to the confined space.

8.Claimant testified he became aware on April 10, 2020 that Mr. AC[Redacted] was quarantined due to suspected CoVid symptoms, but testified that members of Crew C were never formally advised of any employee who was on Crew C who tested positive for CoVid.

9.Claimant entered into evidence at hearing a spreadsheet maintained by Employer that listed employees who has suspected CoVid symptoms or exposure to CoVid. Claimant testified that his wife had not had any cold or CoVid symptoms in the week prior to April 12. Claimant testified that he and his family took precautions against CoVid in March and April 2020, including wearing masks to the grocery store.

10.Claimant testified his only non-work activities in the days leading up to his getting sick were going to the grocery store and a pet food supply store. Claimant testified he did not see either of his two older daughters from January to July 2020. The ALJ finds Claimant's testimony with regard to this issue to be credible.

11. Delta County's health department issued press releases indicating the status of CoVid infections confirmed via testing early in the pandemic. On March 20, 2020 there were zero positive cases in the county. The county reported its first positive case on March 24, 2020. Three additional cases were reported on April 3, 2020. A fifth case was reported April 6, 2020.

12. By the time Claimant first developed his symptoms on April 12, 2020, one additional CoVid case was confirmed via testing in Delta County for a total of six CoVid cases.

13. Claimant testified he awoke on the morning of April 12, 2020 and felt like he had a severe head cold, with fatigue, fever, runny nose, sore throat, and cough, and was worried he had contracted CoVid. Claimant testified he contacted Employer's human resources manager, [Redacted. herinafter SL], on Monday, April 13, 2020, and told him he was sick and would not come to work. Claimant testified that Mr. SL[Redacted] did not instruct him to undergo a CoVid test or give instructions on where he could get tested.

14. Claimant sought care with Dr. Craig Delta County Memorial Hospital on April 15, 2020. The report from Dr. Craig noted that Claimant had been sick for approximately five (5) days and noted his wife was sick as well. Dr. Craig noted Claimant's symptoms were consistent with CoVid and that Claimant works at a pleace that likely has positive coronavirus at this time. Dr. Craig diagnosed Claimant with coronavirus infection, and advised him to go home, isolate, and not go to work.

15. Claimant testified at hearing that the report that his wife was also sick was not accurate. Claimant testified that his wife did end up getting CoVid symptoms, but not until April 17, 2020. Cliamant testified that his children developed symptoms on April 20 and 21, 2020, but that the rest of his family did not undergo CoVid testing because they were presumed positive for CoVid through their symptoms and exposure to Claimant. Claimant's testimony in this regard is found to be credible.

16. Claimant testified that he and his wife both continued with CoVid symptoms. However, Claimant did not see a doctor again until May 13, 2020, because his physician did not want to see him until several weeks after the onset of his symptoms. Claimant testified that when he was eventually evaluated, the physician would only evaluated Claimant in the parking lot.

17. Claimant began treating with Dr. Purvis, Dr. Abuid, who is a pulmonologist, Dr. Gilbert, who is another pulmonologist, and then eventually to a post-CoVid care clinic in Fruita, Colorado. Claimant testified he developed Covid long hauler syndrome and has not felt well since April 11, 2020.

18. Claimant was eventually terminated by Employer on April 13, 2021 after that he had exhausted all his paid and unpaid leave of absence and short-term disability benefits.

19. Claimant testified he believed he contracted CoVid due to his employment because he worked in a mine with one-way ventilation with many coworkers who did not wear masks while working. Claimant testified that during the state's shelter-in-place order, he was an "essential worker". Claimant testified all he did outside of the home was go to work and buy groceries for his family. Claimant testified he and his family stayed home and did not see any other people outside their home. Claimant testified that he believed the only place he would have contracted CoVid was at work.

20. Claimant testified that after contracting CoVid, he continued to have severe fatigue, tremors, headache, dizziness, weakness, brain fog, difficulty with memory, and difficulty articulating thoughts. Claimant testified he is still undergoing treatment for these symptoms.

21. AC[Redacted] testified at hearing on behalf of Employer. Mr. AC[Redacted] is an underground production supervisor for Crew C and was Claimant's direct supervisor. Mr. AC[Redacted] testified that on an average workday, he would interact with Claimant several times per shift. Mr. AC[Redacted] testified that he worked on Thursday, April 9, and awoke on Friday, April 10 with fever and body aches. Mr. AC[Redacted] testified he returned to work on April 27 after getting a doctor's clearance, and after the Employer-ordered quarantine of Crew C ended. Mr. AC[Redacted] testified that he never underwent a test for CoVid during the time he was in quarantine.

22. SL[Redacted] , human resources manager for Employer, testified at hearing on behalf of Employer. Mr. SL[Redacted] , as part of his job with Employer, began preparing a chart to track employees' health status after the CoVid outbreak started in March 2020, A copy of the chart was entered into evidence as Claimant's Exhibit 7 and Respondents' Exhibit E. According to the chart, an Employee in Crew C, represented in both lines 15 and 24 of Employer's spreadsheet, went off of work on March 30 with symptoms in his ears and throat, as well as fatigue and aches. That employee returned to work on April 1 0 (a day Claimant worked), and then later tested positive for CoVid on or about April 14, 2020.

23.Mr. SL[Redacted] testified that 24 workers were identified as having CoVid symptoms or contact with an employee with symptoms between March 23 and April 14, 2020, including Claimant. Mr. SL[Redacted] testified that because there were positive CoVid cases in Crew C, the entire crew was shut down for approximately one week. Mr. SL[Redacted] testified that as the pandemic was starting, Employer did not require a negative CoVid test in order for an employee to return to work after developing symptoms. Mr. SL[Redacted] testified that four employees of Employer tested positive on April 13 or 14, 2020, including Claimant. Mr. SL[Redacted] testified all four of these employees were all on Crew C.

24. The ALJ notes that the spreadsheet does not indicate which workers tested for COVID-19 or which workers had negative tests. The spreadsheet also indicates that certain employees returned after getting a doctor's note.

25. Mr. SL[Redacted] testified they had an employee who carpooled with another Crew C member on April 7 who later tested positive for CoVid. The other employee who was in the carpool then tested positive for COVID on or about April 20, 2020.

26. Mr. SL[Redacted] testified that the State of Colorado's data showed an outbreak at Employer's location as of April 21, 2020.

27. Respondents obtained a record review independent medical examination ("IME") report from Dr. Barton Goldman on October 22, 2021. Dr. Goldman reviewed Claimant's medical records and the CoVid symptom spreadsheet prepared by Employer is preparing his IME report. Dr. Goldman opined Claimant contracted CoVid in April 2020, and had ongoing need for treatment for his Post-Acute Sequelae of SARS Co-V-2 Infection ("long CoVid"). Dr. Goldman noted that based on the data contained in the employee case spreadsheet provided by the employer, approximately 17 employees reported upper respiratory tract infections prior to April 13, 2020, but it was not until those cases reported on April 13, 2020, including that of Claimant, that confirmed positive CoVid testing results are being documented. Dr. Goldman ultimately opined in his report that Claimant was equally exposed to CoVid outside his employment.

28. Dr. Goldman opined in his report that the overall medically probably exposure timeframe for Claimant in this case would begin around March 27, 2020 to as recent as April 7 or 8, 2020. Dr. Goldman noted that whomever was the vector that resulted in Claimant's CoVid infection was likely not symptomatic for at least another 1-2 days at the time of transmission or just beginning to have symptoms within the exposure time frame.

29. Dr. Goldman testified at hearing in this matter. Dr. Goldman noted in his testimony that any employee listed in the sheet in late March or early April could have been the individual who introduced the virus into the occupational environment, but that one could not determine introduced the virus into the environment. Dr. Goldman did confirm there was an "outbreak" at Employer's facility, but that he could not opine that Claimant contracted CoVid at his workplace because of potential community spread. Dr. Goldman testified that one of the four employees who tested positive for CoVid on April 13 or 14, 2020 was likely patient zero who brought the CoVid into the work environment.

30. Dr. Goldman testified that the timeline of patients' exposure to coronavirus and development of symptoms is highly variable and could be between two and fourteen days. Dr. Goldman testified that for CoVid, the time of exposure to the time of symptoms is generally 5 to 7 days and most contagious 1 to 3 days before symptoms start. Dr. Goldman testified that symptoms generally resolve 10 to 14 days after the

initial onset of symptoms. Dr. Goldman testified that Claimant's probable exposure timeline was March 27 through April 10, 2020, and the most probable range was April 4 to April 7, 2020. Dr. Goldman testified that according to the symptom spreadsheet maintained by Employer, between March 27 and April 10, 2020, nine employees reported potential CoVid symptoms to employer. Dr. Goldman also testified that in April 2020, as the pandemic was starting, CoVid testing was difficult to obtain. Dr. Goldman agreed that according to the testimony at hearing, Employer was not requiring symptomatic employees to obtain a negative CoVid test before returning to work. Dr. Goldman further testified that symptom presentation of CoVid could be highly variable, including the possibility of asymptomatic presentation.

31. Dr. Goldman testified it was not possible to know if any of the nine employees who reported symptoms between March 27, and April 10, 2020 had CoVid. Dr. Goldman further testified that it was possible that any one of the nine people who reported symptoms between March 27 and April 10, 2020 who were not tested for COVID could have been CoVid carriers. Dr. Goldman testified that because on April 13 and 14 four employees reported symptoms and were later tested positive for CoVid, it was possible, but not probable, that all four of those employees contracted CoVid from the same person.

32.The ALJ notes Mr. SL[Redacted] ' testimony that approximately 24 employees reported COVID-like symptoms or exposed to someone with symptoms between March 23 and April 14, 2020, and that because COVID testing was in short supply, Employer did not require a negative CoVid test, but only a doctor's note, before an employee was allowed to return to work after reporting symptoms or exposure.

33. The ALJ credits Employer's records that Claimant and another employee were the first two workers to test positive for CoVid, on or about April 13, 2020. The ALJ notes that two more employees tested positive on April 14, 2020. The ALJ notes that one of the employees that tested positive for CoVid on April 14, 2020 had previously left work with CoVid symptoms on March 30, 2020, before returning to work with Employer on April 10, 2020, and ultimately leaving work after his positive test.

34. The ALJ notes that the evidence establishes that two employees on Crew C tested positive for CoVid on April 13, 2020 and two more employees on Crew C tested positive for CoVid on April 14, 2020. The ALJ notes that prior to that time, and during the period of time in which Dr. Goldman testified would likely be in the period of time that Claimant would have been exposed to CoVid, numerous other employees reported CoVid symptoms to Employer.

35. The ALJ further notes that because Employer was not requiring a negative CoVid test prior to having an employee return to work during the period of time in question, Dr. Goldman's testimony with regard to the identity of patient zero being one of the first four who tested positive on April 13 and April 14is not credited. The ALJ

further notes that based on Dr. Goldman's testimony with regard to the period of time between exposure and the onset of symptoms, the ALJ does not credit his testimony that one of the first four positive tests was patient zero. Especially in light of the fact that there is evidence of numerous other employees who reported symptoms, but a lack of evidence of whether they were tested for CoVid.

36. The ALJ finds that Claimant has established through the evidence and his testimony at hearing that it is more likely than not that Claimant suffered a compensable occupational disease arising out of and in the course of his employment with Employer.

37. The ALJ credits Claimant's testimony regarding his activities in the workplace and outside the workplace during his probable exposure period and finds this testimony to be credible. The ALJ notes that the evidence reflects that there were numerous employees with Employer who had symptoms but did not necessarily test for CoVid between March 23 and April 10, 2020. The ALJ further notes that the first positive tests for CoVid came in a cluster of four positive tests over a two day period.

38. The ALJ notes that based on Dr. Goldman's testimony regarding the period between a patient's exposure and the onset of symptoms provides evidence that the cluster of initial positive tests were provide a "reasonable probability" that Claimant's contraction of coronavirus was precipitated by his work activities, namely being around coworkers who carried the virus. The ALJ likewise credits records showing only six COVID-19 cases in Delta County (the place of Claimant's residence) in late March and early April 2020.

39. In this case, the ALJ relies on the testimony of Claimant and the records from the Employer including the spreadsheet maintained by the Employer to track employee's potential symptoms and exposure to CoVid in March and April 2020 and finds that Claimant has demonstrated that it is more likely than not that Claimant was exposed to CoVid through his Employer. The ALJ finds that the Claimant has demonstrated that it is more probable than not that he was exposed to CoVid through his work at the mine. The ALJ relies on the fact that Claimant and three other co-workers all tested positive for CoVid within a 2 day period as evidence that Claimant's exposure in this case came through his work with Employer.

40. The ALJ further notes that in the time period after March 23, 2020, the records from Employer demonstrate that numerous employees were out from work with either CoVid symptoms or due to an exposure to CoVid. The ALJ finds that these records provide credible evidence that it is more likely than not that Claimant was exposed to and contracted CoVid through his work for Employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Claimant must show that the injury was sustained in the course and scope of his employment and that the injury arose out of her employment. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 579. A work-related injury is compensable if it "aggravates, accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* Whether there is a sufficient "nexus" or relationship between the Claimant's employment and his injury is one of fact for resolution by the ALJ based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988). The question of whether a claimant has proven that a particular disease, or aggravation of a particular disease, was caused by a work-related hazard is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

6. As found, Claimant has proven by a preponderance of the evidence that he sustained an occupation disease arising out of and in the course of his employment with Employer in contracting CoVid on or about April 13, 2020. As found, Claimant's testimony regarding his actions outside of his employment as opposed to his exposure while in the mine is found to be credible and persuasive with regard to this issue.

7. As found, the records from Employer demonstrating that four employees tested positive for CoVid within a 2 day period is credible evidence that Claimant was exposed to and contracted CoVid through his work with Employer. As found, the records from Employer that show the employees reporting CoVid related symptoms prior to April 13, 2020 is found to be credible evidence that Claimant was exposed to ad contracted CoVid through his employment.

8. As found, Claimant is entitled to medical treatment consistent with the stipulation provided to the Court at the commencement of the hearing.

9. As found, Claimant is entitled to TTD benefits at the AWW set forth in the stipulation of the parties at the commencement of the hearing. Specifically, Claimant is entitled to TTD benefit at an AWW of $1,674.50 for the period of April 13, 2020 through April 12, 2021. Claimant is entitled to TTD benefits based on an AWW of $2,175.00 for the period of April 13, 2021 to ongoing.

10. The issue of offsets is reserved by Respondents.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of his occupational disease.

2. Respondents shall pay Claimant TTD benefits at an AWW of $1,674.50 for the period of April 13, 2020 through April 12, 2021. Respondents shall pay Cliamant TTD benefits at as AWW of $2,175 for the period of April 13, 2021 and ongoing.

3. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: March 17, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his request for an umbilical surgical consultation is reasonable, necessary, and related to his work injury?

II. Has Claimant shown, by a preponderance of the evidence, that his request for an orthopedic surgical consultation for possible carpal tunnel release is reasonable, necessary, and related to his work injury?

III. Has Claimant shown, by a preponderance of the evidence, that his request for a bilateral upper extremity EMG referral is reasonable, necessary, and related to his work injury?

STIPULATIONS

The parties concurred that Claimant was placed at MMI on 7/6/2021, with a 15% Whole Person Impairment Rating, and that the controlling Final Admission of Liability admitted for Medical Maintenance benefits. Claimant is pursuing this claim on the basis of Medical Benefits, and is not seeking a reopening. The parties further agreed that, pending a decision in this case, the issue of Permanent Total Disability would be preserved and held in abeyance. The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Procedural Background

1. Claimant suffered an admitted injury on February 9, 2018. Following his injury, he returned for a brief time, prior to undergoing surgery on March 23, 2018. Claimant then returned to modified duty on July 22, 2018, until eventually retiring in December, 2019. (*see* Ex. 1). His medical treatment continued.

2. Respondents filed a Final Admission of Liability on January 25, 2021, admitting for, among other items, maintenance medical care for Claimant's upper extremities. (Ex. V). Claimant's ATP, Dr. Finn, has since filed a request for a referral to a general surgeon for a hernia, which was denied by Respondents on May 25, 2021 (Ex. PP). Dr. Finn later filed a request for a referral to an orthopedic surgeon, which was denied on August 2, 2021 (Ex. DDD). Dr. Finn also requested bilateral upper extremity EMGs, which was also denied on August 2, 2021 (Ex. CCC). Respondents have now filed an Application for

Hearing based upon a Rule 16 pre authorization denial for the proposed treatments, *supra.* By agreement of the parties, other issues have been held in abeyance, pending a resolution of this matter.

The Work Injury, and Subsequent Treatment

3. Claimant worked as a fabricator for Employer. His job duties included fabricating and building products to go on Employer's trucks and lawnmowers and the like. On February 9, 2018, Claimant injured his left arm when he was stabbed by a piece of metal that had broken off of a saw.

4. As a result of the injury, Claimant underwent multiple left arm surgeries. He has since been diagnosed with bilateral upper extremity CRPS. Claimant reports pain and other symptoms, including loss of feeling and sensation and tremors, as well as loss of function.

Initial IME by Dr. Polanco

5. Frank Polanco, M.D. performed an independent medical evaluation, dated September 19, 2019 on behalf of Respondents. (Ex. A). He agreed with Claimant's diagnosis of bilateral CRPS, as summarized below:

> Sustained laceration involving left ulnar nerve. Appeared to be a superficial injury but as further symphysical therapyoms developed he was diagnosed with ulnar injury by EMG. Underwent ulnar nerve neuroplasty and then revision with ulnar nerve transposition. Dr. Reinhard suspected complex regional pain syndrome (CRPS) and proceeded with testing that was unequivocal. Symphysical therapyoms persisted with atrophy of left arm, ongoing pain and symphysical therapyoms moving to the right arm. There is little doubt that he has developed CRPS. Initial testing of the right arm is supported via ganglion block to establish the diagnosis. A Bier Block to the left arm may provide a longer period of pain relief. Recommends eliminating work restriction and initiating an active program of strengthening and conditioning to improve and maintain function and muscle strength. 40 hours of work conditioning can be requested within the guidelines to support a more intensive therapy program. Recommends Bier Block two left upper extremity; catapress patch trial; diagnostic right stellate ganglion block, if positive proceed with QSART testing; eliminate work restrictions; physical therapy/work conditioning with focus on left arm; consider peripheral nerve blocks if allowed by the carrier to facilitate rehab, not at MMI. (Ex. A, pp. 5-6).

6. On January 9, 2020, Claimant treated with ATP Robi Baptist, M.D., who noted Claimant's medical history and confirmed his CRPS diagnosis in both arms. Claimant reported severe pain down both arms. Dr. Baptist noted Claimant continued to treat with Dr. Reinhard.

7. On January 21, February 18, and April 28, 2020, Claimant underwent bilateral cervical stellate ganglion injections. (Ex. 7, pp. 215-222). On January 28, 2020, Claimant treated with Dr. Reinhard, who confirmed Claimant's bilateral CRPS diagnosis, and recommended bilateral cervical stellate ganglion blocks. *Id* at 219-220.

8. On May 20, 2020, Dr. Reinhard performed a series of trigger point injections (TPIs). *Id* at 210-211.

9. On July 16, 2020, Dr. Reinhard assigned Claimant an impairment rating of 15% whole person rating for his bilateral upper extremity CRPS condition. *Id* at 208-209.

10. On August 5, 2020, Claimant underwent a FCE, which determined Claimant's functional limitations from the work injury. (Ex. 8, pp. 223-242).

11. On August 21, 2020, Claimant returned to Dr. Reinhard, who noted Claimant was in significant pain, and reported other symptoms from the FCE. Dr. Reinhard performed a series of TPIs. (Ex. 7, pp. 205-207).

12. On September 14, 2020, Claimant returned to Dr. Baptist, who then referred Claimant to Kenneth Finn, M.D., for pain management. (Ex. 5, pp. 73-77).

13. On October 5, 2020, Claimant treated with Kenneth Finn, M.D., to whom he was referred by Dr. Baptist, for pain management. Claimant reported the nature of his injury and the medical treatment he has undergone as a result. Dr. Finn noted:

Examination

Elbow / Arm:

Atrophy and giveway weakness of left hand intrinsics. Allodynia and hyperalgesia in both median and ulnar pattern on the left. Well healed surgical scars without evidence of infection. Tender along the left medial epicondyle. Tinels positive over the median and ulnar nerve at the wrist and ulnar nerve at the elbow bilaterally. DTR 1/4 at biceps, brachioradialis, and triceps symmetrically.

Assessments

1. Carpal tunnel syndrome, left upper limb - G56.02 (Primary)
2. Complex regional pain syndrome I of left upper limb - G90.512
3. Lesion of ulnar nerve, left upper limb - G56.22

Dr. Finn then prescribed pain medications. (Ex.4, pp. 62-63).

14. On December 8, 2020, Claimant underwent a series of TPIs with Dr. Finn. (Ex. 4, pp. 60-61). On December 15, 2021, Claimant underwent more TPI injections. *Id* at 58-59. On December 22, 2020, Dr. Finn performed a series of TPI injections in Claimant's mid and upper back. Claimant reported pain and symptoms relief following the

injections. Dr. Finn referred Claimant for additional physical therapy and TPI injections. *Id* at 56-57.

15. From December 27, 2020, through March 3, 2021, Claimant underwent eight physical therapy sessions. (Ex. 6, pp. 171-204).

16. On December 29, 2020, Claimant treated again with Dr. Baptist, who reviewed his medical history and confirmed his CRPS diagnosis. Dr. Baptist then assigned Claimant permanent work restrictions. (Ex. 5, pp. 64-67).

DIME by Dr. Hall

17. Dr. Timothy Hall, MD performed a DIME exam on Claimant. In his report, dated January 19, 2021, (Ex. T), Dr. Hall concurred with the MMI date of 7/16/2020, and assigned an impairment rating of 15% WP for Claimant's CRPS. He also recommended work restrictions, based upon the FCE, and Claimant's response to performing it.

18. Regarding Medical Maintenance Care, Dr. Hall noted:

> Maintenance care should involve his medications which include cyclobenzaprine and the relatively low dose of oxycodone that he is taking. He should continue with Dr. Finn and *should be provided with just about anything that Dr. Finn feels is necessary* to control and/or improve his present chronic condition. *Id* at 95. (emphasis added).

Treatment Continues

19. On January 26, 2021, Claimant returned to Dr. Finn, who performed a series of TPI injections. (Ex. 4, pp. 52-55). On February 1, 2021, Claimant returned for more TPI injections. *(Ex. 4, pp. 50-51).* On February 8, 2021, Claimant underwent another series of TPI injections with Dr. Finn. Claimant reported right greater than left upper extremity pain. *Id* at 48-49.

20. On April 22, April 30, May 4, May 11, 2021, Claimant underwent an additional series of TPI injections prior to his physical therapy appointment. *Id* at 40-47.

21. From April 27, 2021, through June 15, 2021, Claimant underwent 16 physical therapy sessions. (Ex.6, pp. 107-170). In his May 14, 2021 physical therapy report, physical therapist Anthony Purviance noted that Claimant was "experiencing tenderness in his left upper quadrant with increased pain with Valsalva." On physical examination, PT Anthony noted Claimant had tenderness to palpation over his left upper quadrant. *Id* at 137-139.

22. On May 18, 2021, Claimant treated again with Dr. Finn, and reported that at his last physical therapy appointment, he felt a pop in his umbilicus and feels that he

may have a small hernia. On physical examination, Dr. Finn found a small protrusion around the superior umbilicus. Dr. Finn referred Claimant for a surgical consultation regarding the "umbilical hernia he reports developing during PT for treatment of his work condition." Dr. Finn also performed a series of injections in Claimant's upper extremities. (Ex. 4, pp. 37-39).

23. On May 25, 2021, Respondents denied Dr. Finn's referral to Brock Bordelon, a general surgeon, to address Claimant's hernia. (Ex. PP, p. 233).

24. On May 27, 2021, Claimant returned to Dr. Finn, who performed another series of injections. (Ex. 4, pp. 35-36). On June 1, 2021, Claimant treated with Dr. Finn and reported that physical therapy is helping his pain and other symptoms. Dr. Finn performed another series of injections. *Id* at 33-34. On June 8, 2021, Claimant treated with Dr. Finn, who recommended Claimant undergo a left upper extremity EMG, since Claimant continued to report symptoms post-surgery, yet never had a post-surgery EMG. He noted that Claimant's TPIs were helping temporarily. Dr. Finn performed a series of injections, and otherwise maintained Claimant's treatment plan. *Id* at 31-32.

Subsequent IME by Dr. Polanco

25. In a subsequent IME report, dated June 21, 2021, Dr. Polanco took a medical history from Claimant, and note that his abdominal exam stated that "Palpation reflects a small umbilical hernia." *Id* at 239. Dr. Polanco then noted in his report:

X. RECOMMENDATIONS

Surgical assessment of the umbilical hernia is recommended.

XI. CAUSATION

The findings relating to bilateral upper extremity CRPS are causally related to the work-related injury of February 9, 2018. It appears as well, that in the course of his treatment he sustained an umbilical hernia.

XII. MMI

In regards to his condition of CRPS of his upper extremities, he is at MMI and does not require further active medical treatment and/or diagnostics. Similarly, he is at MMI for his complaints of low back pain.

In regards to his umbilical hernia, after further assessment if he chooses not to proceed with further treatment for this condition, he would be at MMI. Otherwise, if he chooses to undergo surgical repair, he would not be at MMI at this time.

(Ex. AAA). [However, upon Claimant's Motion at the 10/14/2021 prehearing conference, what is now Respondents' Exhibit AAA was stricken and not to be used in this case. That applies to Claimant as well, so the ALJ will not consider the contents of that Exhibit *supra*, despite Claimant referencing it in his Position Statement. Sufficient evidence of the contents of this 6/21/2021 IME report, however, were adduced by hearing testimony of Dr. Polanco. (Be careful what you ask for)].

Dr. Finn Requests Additional Treatment

26. On July 5, 2021, Claimant returned to Dr. Finn, who recommended Claimant undergo bilateral upper extremity EMGs. He also referred Claimant to an orthopedic surgeon. Dr. Finn noted that Claimant had not had an EMG in a couple of years. On physical examination, Dr. Finn noted left, more than right, hand intrinsic atrophy and weakness. (Ex. 4, pp. 27-28). Dr. Finn's *Review of Symptoms* noted, among other things, Numbness/Tingling, Tremor, Weakness, and Decreased Coordination. *Id* at 29.

27. On August 2, 2021, Respondents denied Dr. Finn's referral for bilateral upper extremity EMGs with Dr. Ales. *(Ex. CCC, p. 234)*. Respondents also denied Dr. Finn's referral to Colorado Springs Orthopedic Group. *Id* at 235.

Treatment Continues with Dr. Finn

28. On October 5, 2021, Claimant again treated with Dr. Finn, who maintained Claimant's treatment plan. (Ex. 4, pp. 24-25).

Dr. Polanco Issues a Supplemental Report

29. Also on October 5, 2021, Dr. Polanco issued a supplemental report. (Ex. EEE). Dr. Polanco noted he reviewed additional medical records, specifically Dr. Baptist's December 29, 2020 report, Dr. Hall's Division IME report, and Dr. Finn's July 20, 2021 report. Dr. Polanco then opined:

> e. Thus, while Mr. [Claimant, redacted] has ongoing complaints of pain, there is no clear indication of a substantial change or worsening of his condition, or consideration of surgical intervention and thus bilateral EMG testing is not supported.

30. Dr. Polanco elaborated, in summary:

> The medical treatment guidelines note that MMI should be declared when the patient's condition has plateaued to the point where the authorizing treating physician no longer believes further medical intervention is likely to result in improved function. The guidelines, in general, support retesting (EMG) when an individual's condition and clinical findings have substantially changed and deteriorated, as well as when surgical in the intervention is being considered While both Dr. Baptist and Dr. Hall have indicated that ongoing maintenance care is required, their statements of unlimited care is not consistent with the Colorado medical treatment guidelines. Ongoing medical treatment should meet criteria of the guidelines and should be oriented towards improving the individual's pain and function. In general, pain management should be goal oriented and time-limited. The guidelines do not support routine testing or routine

> bilateral extremity testing. Thus, while Mr. [Claimant, redacted] has ongoing complaints of pain, there is no clear indication of a substantial change or worsening of his condition, or consideration of surgical intervention and thus bilateral EMG testing is not supported.

31. Regarding Claimant's hernia, Dr. Polanco opined, "It is a standard of practice and physical therapy to report any injuries or significant abnormalities that have occurred or reported." Dr. Polanco added, "It would be highly unlikely that tensing up would cause/create a hernia condition. More likely than not Mr. [Claimant, redacted] had a pre-existing hernia that was asymptomatic." *Id* at 242-245.

32. On November 2, 2021, Dr. Polanco issued another supplemental report. This report did not address the hernia or the denied medical treatment. (Ex. GGG, pp.210-215).

Claimant continues his Treatment Plan with Dr. Finn

33. On November 4, 2021, Claimant returned yet again to Dr. Finn, who maintained Claimant's treatment plan and work restrictions. (Ex. 4, pp. 22-23).

Claimant Testifies at Hearing

34. Claimant testified his bilateral upper extremity symptoms have worsened since he was placed at MMI. Claimant testified he is now having issues remembering words and speaking. He stated that he continues to lose strength in his hands, and he is now dropping things. Claimant testified he can't type on a computer because the tremors in his hands are so bad. Claimant testified he started grinding his teeth and now has severe insomnia. He testified some nights he does not sleep at all and then ends up having to take a few naps during the day. He also testified his hands are now getting deformed and that he is losing mass in both hands and arms.

35. Claimant explained he can no longer play the guitar or ride dirt bikes. He lives on a farm, and as a result of the injury, can no longer perform his duties as a farmer. Claimant used to have approximately 50 goats on his farm. He is down to just 10 goats. Claimant stated his wife is now primarily in charge of looking after the goats. Claimant opined that he is about 50% worse since he was placed at MMI.

36. Claimant testified that the CRPS spread to his right arm, and that this arm and hand have worsened since he was placed at MMI. He stated that he relies on his medications to keep his symptoms under control. On one occasion, he had to go 72 hours with no medications, due to an authorization issue. He ended up having severe anxiety, a panic attack, and experienced incredible pain.

37. Since he was placed at MMI, Claimant testified that he underwent physical therapy at Strive with Anthony, a physical therapist. Claimant testified that in May 2021, Anthony 'gave him a hernia'. He described it thusly:

A I was laying on my stomach, and he was applying a lot of force to my lower back. And, as he traveled up the back -- I think he was trying to stretch it would be my best guess. But he was pushing down real hard. And, as he was moving up my spine, as soon as he got to about mid-back is when I felt the pop.
Q Okay. And where -- and where did you feel the pop?
A In my stomach, right where my belly button is. It's on the top side.
Q And is it on the left or right side of your belly button?
A Well, if I'm reaching on it, it's on the right side.
Q Can you feel it?
A Yes, I can….(Transcript, p. 27).

38. Claimant testified he never had a hernia before. Claimant testified he contacted Anthony the next day to report the hernia. Claimant testified Anthony told him that he would put it in his notes that Claimant reported getting a hernia during the last physical therapy session. Claimant testified that subsequently, Dr. Finn told him Anthony did not note the hernia, so Claimant reached out to him again to discuss the hernia and asked him to put it in his notes.

Dr. Polanco Testifies at Hearing

39. Dr. Polanco testified as an expert in occupational medicine. He confirmed that Claimant has bilateral CRPS. He testified that he reviewed Claimant's physical therapy notes, and that he does not see any reference to Claimant sustaining or reporting a hernia. Dr. Polanco testified an umbilical hernia would be mid-line on a person's abdomen, not in the left upper quadrant, which refers to the upper left side of the abdomen. Dr. Polanco testified that it is unlikely Anthony's manipulation on May 14, 2021, caused Claimant's hernia. He opined that is more likely that Claimant had a pre-existing, undiagnosed, non-symptomatic hernia that then became symptomatic.

40. Dr. Polanco opined that while EMGs are commendable diagnostic tools, Claimant shows no clinical findings of progressive neurological changes. He testified that Claimant's symptoms are getting worse. Dr. Polanco testified Claimant does not need the proposed EMGs, because the results will not change the treatment plan. When asked about the worsening of Claimants symptoms, this exchange took place:

Q Okay. And you'd agree with me that between -- from -- June of 2021 to November of 2021, those bilateral upper extremity tremors that he -- that he was experiencing worsened?
A I believe he reported that they worsened, but I -- I don't recall that I clinically noted a worsening of the tremors.
Q Okay. You would agree with me that *lack of sensation* in your upper extremity *<u>that results in</u> you dropping things* is

22 -- has a neurological component, right?
23 A *Dropping things* is usually a *strength* component.
24 Q Okay. So his -- his *inability to grasp or grip* is a
25 *strength* component?

p. 87

1 A Yes, more likely than not.
2 Q Okay. And it -- the tremors -- the *neurological*
3 tremors have nothing to do with that?
4 A Unlikely. (Transcript, pp. 86-87) (emphasis added).

41. Dr. Polanco testified that the proposed orthopedic referral is not reasonable or necessary, because Claimant does not have progressive clinical findings to support ongoing diagnostic testing.

42. Dr. Polanco testified regarding the Colorado *Medical Treatment Guidelines*-specifically the section that deals with chronic pain. He stated that the *Guidelines*, under the Maintenance Management section of the chronic pain guidelines, state:

> **3b** b p25. Electrodiagnostic studies *may be useful* in the evaluation of patients with suspected myopathic or neuropathic disease and may include Nerve Conduction Studies (NCS), Standard Needle Electromyography, or Somatosensory Evoked Potential (SSEP). The evaluation of electrical studies is complex and should be performed by specialists who are well trained in the use of this diagnostic procedure. c. Special testing procedures *may be considered* when attempting to confirm the current diagnosis **or** *reveal alternative diagnosis*. *Additional special tests may be performed at the discretion of the physician.* d. Testing for Complex Regional Pain Syndrome (CRPS I) or Sympathetically Maintained Pain (SMP) is described in the Division's Complex Regional Pain. (Ex. III, 252) (emphasis added).

43. Dr. Polanco testified Claimant never had a post-surgery left upper extremity EMG or a right upper extremity EMG. Regarding Claimant's hernia, Dr. Polanco stated that he initially authored a report in which he opined Claimant sustained a work-related hernia. Then, after reviewing additional medical records, he changed his opinion. He admitted that this subsequent report itself, [Ex. EEE, in which he changed his opinion regarding the causal relatedness of the hernia], makes no mention of any medical records, including physical therapy records, regarding the hernia.

44. At hearing, Dr. Polanco also referenced his Supplemental Exhibit III, whereupon he cites certain pertinent portions of the CRPS guidelines from the *Medical Treatment Guidelines,* and placed his analysis underneath each passage in red. The ALJ has read this exhibit in its entirety (along with all Exhibits), and will not repeat its contents here.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this instance, the ALJ finds that Claimant has experienced a cascade of unexpected complications from what might otherwise be considered a fairly routine injury to treat. All parties agree that he now has bilateral upper extremity CRPS from an injury only to this left arm. Since that time, the ALJ finds that Claimant, who wishes to lead a more active lifestyle, has accurately reported his symptoms to his treating providers, as

well as the IME in this case. The ALJ further finds that Claimant has testified truthfully at hearing.

E. It is further noted that the ALJ takes Dr. Polanco at his word that, were this his patient, he would not proceed as Dr. Finn is recommending. As duly noted, the practice of medicine can often be an inexact science. The mere fact that other practitioners would proceed differently does not make them *wrong.* And as will be noted, *infra*, the ALJ does not find his ultimate conclusions to be sufficiently persuasive.

Medical Benefits, Reasonable and Necessary, Generally

F. Claimant bears the burden of establishing entitlement to any specific medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Medical Benefits, Related to Work Injury, Generally

G. Further, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Preexisting Condition, Generally

H. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation *or medical benefits* if the work-related activities aggravated, accelerated, or combined with the preexisting condition to produce disability

or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a preexisting condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Quasi-Course of Employment, Generally

I. Under the quasi-course of employment doctrine, injuries sustained during treatment of the industrial injury have been held compensable as a consequence of the industrial injury. *Excel Corp. v. Indus Claim Apps. Office*, 860 P.2d 1393 (Colo. App. 1993). The doctrine is restricted to injuries arising out of authorized treatment. *Schrieber v. Brown & Root, Inc.*, 888 P.2d 274, 278 (Colo. App. 1993). Nevertheless, the doctrine is not limited to injuries sustained while actually engaged in a particular medical treatment explicitly "prescribed" by the authorized treating physician. To the contrary, the quasi-course of employment doctrine applies to post-injury activities undertaken by the employee, which, although they take place outside the time and space limits of the employment and would not be considered employment activities for usual purposes, are nevertheless related to the employment in the sense that they are necessary or reasonable activities that would not have been undertaken but for the compensable injury. *See Excel Corp v. Indus. Claim Apps. Office*, 860 P.2d at 1394; *Travelers Ins. Co. v. Savio*, 706 P.2d 1258 (Colo. 1985).

The Referral to a Surgeon for the Hernia, as Applied

J. There can be little dispute that seeing a surgeon for such condition is *reasonable and necessary* to treat a symptomatic hernia. There is also little argument from Respondents that, if this hernia indeed arose during the physical therapy session as alleged, then the quasi-scope doctrine would apply. Dr. Polanco clearly agreed with this at the outset. At a later point, he changed his mind, stating his revised opinion based upon additional medical records he later reviewed. He is really basing his revised opinion upon the *absence* of entries in the *SOAP* notes one might normally expect to see from the physical therapist, had this been reported to the PT in real time by Claimant. There is a certain logic to what Dr. Polanco is saying; however, Claimant has now explained that he later requested that the PT update his notes to reflect the contemporaneous complaint. The ALJ finds this explanation plausible. Additionally, there is every reason to believe that the upper quadrant, without further clarification vis-à-vis 'midline', referenced what could indeed include the situs of the hernia.

K. Additionally, there is an absence of evidence in the record that this could have occurred in any *other* setting around this time period which might involve even more strenuous exertion. Claimant did not have a hernia before he had this PT session; he

did right afterwards. He felt pain during the maneuver. Dr. Polanco might well be correct that Claimant may well have brought a weak abdominal wall with him to PT that day. Maybe the hernia was indeed preexisting all along, but asymptomatic. It was not palpable to Claimant until the PT session, and it was not painful until then, and the ALJ so finds. And if it was preexisting, it became symptomatic, requiring medical treatment, as a result of the PT. The surgical referral for the hernia is reasonable, necessary, and related (via the quasi-scope doctrine) to the original work injury.

Referral to Orthopedist and EMG, as Applied

L. While presented as separate and distinct issues for adjudication, the two are closely related to one another. These two issues were presented for referral at the same time by Dr. Finn, and for essentially the same reason; Claimant was continuing to report pain and potentially neurologic symptoms that have hampered his activities of daily living. He was dropping things when he did not formerly do so. Dr. Polanco at hearing (*see* Finding of Fact # 40, *supra*) seemingly dodged [or did not understand] the question posed about the *lack of sensation*, and appeared to conclude that [merely] *dropping* things [without more] is usually a *strength* component. The ALJ is not convinced that neurological tremors are *unlikely* to 'have anything to do with it.' But if Dr. Polanco is right, and it really is solely a *strength* issue, then it sounds like a job for the orthopedist after all. At this point, no alternative non-work-related explanation for Claimant's symptoms has been put forth. And mind you, this is merely a *referral* to see what the problem is. Once the issue is identified (if it can be), then a treatment modality can be recommended by the orthopedist. The ATP will still be responsible to decide if any proposed treatment is *related* to the work injury, and whether it is *reasonable and necessary*. And Respondents, if they wish, may still challenge those ATP opinions. At this juncture, however, the ALJ finds, by a preponderance of the evidence, that the referral to an orthopedist is *reasonable, necessary, and related* to the work injury.

M. The DIME physician, Dr. Hall, has opined that Dr. Finn should be 'provided with just about anything' he feels necessary to control Claimant's chronic condition. Such opinion is not binding in this case, but it carries some value. More importantly, Dr. Finn thinks that the EMG is reasonable and necessary (and related) to Claimant's condition. He has spent hours with hands-on treatment, and consulted face-to-face on numerous occasions. His obligation is to try to get the best result for his patient, and the ALJ finds that he is fulfilling that obligation in good faith. Dr. Finn has treated Claimant, with incomplete success, for years. And, as was pointed out by Respondents, 'doing more of the same and still no improvement is the definition of insanity'. So now, Dr. Finn wants to try something new, and is now being told 'No'.

N. Dr. Polanco relies heavily on the *Guidelines* for his conclusions. And while the ALJ may countenance a deviation therefrom if the facts warrant it, the *Guidelines* exist for a good reason, and should not be lightly dismissed. However, in this instance, a plain reading of said *Guidelines* (*see* Finding of Fact #42, *supra*) states that: "Special testing procedures *may* be considered when attempting to confirm the current diagnosis **or reveal alternative diagnosis".** Because the usual regimen Dr. Finn has provided has

not yielded totally satisfactory results, he is seeking a possible *alternative diagnosis.* This is not only medically reasonable; it is seeking to avoid the very insanity that Respondents are warning us of. An *alternative diagnosis* does not have to be *mutually exclusive* of the agreed-upon CRPS diagnosis-it might show something *in addition thereto*. And, once again, any actual recommended *treatment* might not be deemed reasonable and necessary by the ATP. Claimant might even turn it down himself. And depending upon the diagnosis, it might not ultimately prove to be *related* to the work injury. Respondents retain their right to challenge specific future treatments. But Claimant is entitled to a thorough diagnosis.

O. A reading of the *Guidelines* appears to show that additional special tests may be performed at the discretion of 'the physician'. The ALJ interprets this to mean the ATP, or his designee. In this case, Dr. Finn has used his discretion to request this EMG test. The ALJ reads the *Guidelines* to permit exactly that. However, to the extent the ALJ might be mistaken in his interpretation, the ALJ finds that moving forward with this EMG is a reasonable deviation therefrom, and for the reasons previously stated. By a preponderance of the evidence, Claimant has shown that the EMG as recommended by Dr. Finn is reasonable, necessary, and related to his industrial injury.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the surgical consultation for possible hernia repair.

2. Respondents shall pay for the orthopedic consultation as requested by Dr. Finn.

3. Respondents shall pay for the bilateral upper extremity EMG as requested by Dr. Finn.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and

Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: March 17, 2022

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained a work related injury on April 9, 2021 within the course and scope of her employment.

II. If the claim is compensable, whether Claimant proved by a preponderance of the evidence that she is entitled to authorized medical benefits that are reasonably necessary and related to the injury.

PROCEDURAL ISSUES

Claimant filed an Application for Hearing on December 21, 2021 listing the issues of compensability and medical benefits. The Certificate of Mailing listed Employer and Employer representative and listed the address on file as well as the email for Employer. Claimant also filed a Case Information Sheet on March 9, 2022.

A Notice of Hearing was sent to Employer on February 18, 2022 by the Office of Administrative Courts, listing Employers' address and email. The notice advised Respondent Employer that the hearing would take place on March 15, 2022 at 1:30 p.m. and stated that Respondent "must be prepared to present your evidence concerning the issues to be heard at that time."

Employer failed to file a Response to Application for Hearing. Employer failed to appear at the hearing. Claimant's counsel indicated that they had provided all documents and pleadings by email and by ground mail and had not received any responses to any inquiries or requests.

This ALJ took administrative notice that the Employer is registered with the Secretary of State and was in good standing. It is also noted that the Notice of Hearing was sent to the same address and individual representative as listed on the business documents from the Secretary of State. Notice was deemed proper and appropriate. The hearing proceeded ahead without the Employer representative.

Counsel for Claimant also indicated he had contact with the Division, who indicated that no insurance policy was registered for this employer, and that a copy of this order should be forwarded to the Colorado Uninsured Employer Fund administrator.

FINDINGS OF FACT

Based on the evidence presented, the Judge enters the following findings of fact:

1. Claimant was 45 years old at the time of the hearing in this matter. Claimant filed a Workers' Claim for Compensation (WCC) on April 28, 2021 for an injury suffered in the course and scope of her employment with Employer on April 9, 2021. Claimant was a landscaper and would pick up heavy rocks, roll sod, load tree limbs onto trailers, as part of her job. On April 9, 2021 at approximately noon, Claimant was lifting a wheelbarrow loaded with heavy sod when she injured her low back.

2. She noted on the WCC that she was seen at UCHealth/Poudre Valley Hospital for emergency care and reported the work related incident to Edward Binnall, who was also a witness to the incident. She further noted that her average weekly wage was $720.00 and that she did not return to work after the date of the accident.

3. UCHealth EMS noted on April 9, 2021 that Claimant was evaluated by the EMS staff in her home. She was sitting on a couch in obvious distress. Claimant reported that she had an onset of low back pain while pushing a wheelbarrow up a hill and was in severe pain. On exam, EMS noted that she had tenderness in the paraspinal musculature, and provided her with pain medication. She was transported by ambulance to UCHealth/Poudre Valley Hospital.

4. On April 9, 2021 Claimant was attended at the UCHealth emergency department by Mollie Wolf, PA-C. Claimant reported that she was pushing a wheelbarrow up a driveway at work when she felt something pull in her lower back. She developed lower back pain that radiated down to the right foot with right foot numbness. She denied a prior history of lumbar spine conditions. Upon exam, Ms. Wolf noted that Claimant appeared to have weakness with plantar and dorsiflexion. Claimant also reported some inguinal numbness bilaterally. Ms. Wolf noted no history of IV drug use and that Claimant drove herself home and then called EMS who came to her home and transported her to the ED. Claimant was given IV fentanyl in route with some resolution of pain. Ms. Wolf's clinical impressions were of lumbar back pain and lumbosacral disc herniation with a differential diagnosis of lumbar strain, disc herniation, fracture, cauda equina. She provided Claimant with Toradol and dexamethasone and ordered an MRI. Robert Mosiman, M.D. was the supervising physician. Claimant was released with cyclopenzaprine and hydrocodone and was instructed to contact physical therapy and the orthopedic surgeon, providing the contact information.

5. The MRI results were read by Isaac Jones, M.D. as follows: 1) Multilevel neural foraminal narrowing greatest on the right at L5-S1. 2) Facet hypertrophy, disc bulge, and a small disc extrusion contributing to the right L5-S1 neural foraminal stenosis. 3) Mild multilevel spinal canal narrowing in the lumbar spine, greatest at the L3-4 level.

6. While in the ED, Claimant was assessed by Katherine Coonley, P.T. They completed education on the role of emergency PT, providing education on lumbar spine anatomy and disc herniations, and provided reassurance, explaining that lumbar spine problems usually self-resolved. Claimant verbalized that she was quite anxious that she could not use her right leg or feel it properly. She was inconsistently able to demonstrate normal gait with full heel strike bilaterally and normal strides, and did not require an assistive device to walk safely. Ms. Coonley explained that Claimant would have improved outcomes if she was to have outpatient physical therapy.

7. On April 21, 2021 Claimant was seen at the WCHealth Walk-in Clinic/Family Medicine Center for lumbosacral disc herniation, radiculopathy and, foot and leg pain. Family Nurse Practitioner Denah Inzinna examined Claimant and found some weakness with right dorsi flexion, normal dorsi extension, numbness to the top of the right foot that extended to the lateral calf and then to the posterior thigh. She noted that recommendations for lumbosacral radiculopathy was, initially, conservative therapy with NSAIDs and Tylenol, physical therapy, and if she had no improvement in 6 weeks, referral to pain management specialist for epidural steroid injections. If symptoms did not improve or worsened, referral to a specialist for surgical intervention. Ms. Inzinna recommended activity modifications.

8. Claimant was first attended at Colorado in Motion on May 3, 2021 pursuant to Ms. Inzinna's referral. Notes indicate that Claimant was pushing a wheelbarrow full of sod on April 9, 2021 when she felt intense pain and spasms. Mr. John Zapanta, PT, DPT, stated that Claimant presented with a right L4-L5 probable radiculopathy with sensory/motor changes.

9. On July 6, 2021 Pam Showman, PT, DPT, noted Claimant's pain with right lumbar side bend, lateral right lower leg hypersensitivity, hyposensitivity of the right medial lower leg. Subjectively Ms. Showman documented Claimant had recently been through a serious bout of depression and was not feeling up for therapy until recently. Claimant reported that her right leg sensitivity was going up and all of her toes felt number except for the middle toe. Aggravating factors included bending, being on the floor, the mornings were worse, and sitting to long, though massage and hot bath helped.

10. Claimant returned to see Ms. Showman on July 20, 2021 and was still complaining of right lower back and extremity symptoms. She was provided with reeducation and instructions for exercise and down time.

11. As found, Claimant was injured in the course and scope of her employment with Employer on April 9, 2021 while pushing a wheelbarrow, injuring her lumbar spine, causing radicular symptoms down her right lower extremity into her foot.

12. As further found, Claimant has shown that the treatment she sought from UCHealth/Poudre Valley Hospital, UCHealth EMS, UCHealth Family Medicine Center and Colorado In Motion were reasonably necessary medical care and related to the April 9, 2021 work related injury.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which she seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee

from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

As found, Claimant was injured in the course and scope of her employment with Employer on April 9, 2021 when she was pushing a wheelbarrow full of sod or lawn clippings. Claimant specifically strained her low back, which in turn caused symptoms going down and into her right lower extremity, including pain, weakness and numbness into her right foot. Claimant has proven by a preponderance of the evidence that she sustained a compensable work related injury on April 9, 2021 in the course and scope of her employment working for Employer.

C. Medical benefits:

The Workers' Compensation Act (Act) imposes upon every employer the duty to furnish such medical treatment "as may reasonably be needed at the time of the injury

...and thereafter during the disability to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S. That duty includes furnishing treatment for conditions representing a natural development of the industrial injury, as well as providing compensation for incidental services necessary to obtain the required medical care. *Employers Mutual Insurance Co. v. Jacoe,* 102 Colo. 515, 81 P.2d 389 (1938); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo.App. 1995). Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 11 (Colo. App. 2004). A Claimant may be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease to "produce the disability for which workers' compensation is sought." H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's preexisting condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). An injury, nevertheless, must be 'significant' in that it must bear a direct causal relationship between the precipitating event and the resulting disability. See *Colorado Fuel & Iron Corp. v. Industrial Commission*, 152 Colo. 25, 380 P.2d 28 (1963). A claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

Here, Claimant was initially seen in the emergency room and diagnosed with lumbar back pain and strain with a differential diagnosis of lumbar strain, disc herniation, or cauda equina. Claimant provided medical providers a history consistent with the one provided on her Workers' Claim for Compensation. Claimant has shown by a preponderance of the evidence that the work related accident of straining her low back while lifting or pushing the wheelbarrow was the direct causal event that precipitated the need for medical care in this matter. Claimant has shown that the medical care that she obtained from UCHealth/Poudre Valley Hospital, UCHealth EMS, UCHealth Family Medicine Center and Colorado In Motion were reasonably necessary medical care and related to the April 9, 2021 work related injury.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for an injury to her low back and right lower extremity on April 9, 2021 is compensable.

2. Employer shall cover reasonably necessary and related medical treatment from authorized providers, including UCHealth/Poudre Valley Hospital, UCHealth EMS, UCHealth Family Medicine Center and Colorado In Motion.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury on July 24, 2021?
