II. If compensable, should Heart Centered Counseling be deemed an Authorized Treating Provider?

III. If compensable, have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for her own termination from employment, and thus not entitled to temporary disability benefits after September 11, 2021?

STIPULATIONS

The parties agreed to an Average Weekly Wage of $632. It was further agreed that UCHealth/Memorial Hospital, Colorado Occupational Medical Partners, Accelerated Recovery Specialists, and Absolute Health Center are authorized providers.

The parties further agreed that, if temporary disability benefits are to be ordered, the calculation of said benefits are reserved for future determination, or by possible agreement of the parties.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / The Work Incident

1. Claimant was hired by [Employer, Redacted] on July 11, 2021 as a warehouse 'stower'. She attended orientation on July 12, 2021 and worked her first day on or about July 14, 2021. Claimant did not work for several days after July 16, 2021 due to taking both bereavement leave and personal time. (Ex. N, p. 227).

2. On July 24, 2021, at approximately 3:00 a.m., Claimant alleges that she lifted a tote and twisted, which resulted in a "pop" in her low back, and then felt pain in her back, which went down her legs and up to her shoulders. At the time of this reported incident, Claimant had only worked approximately 3 prior shifts for [Employer, Redacted]. (Ex. N, pp. 227-228).

3. Claimant reported her injury immediately to her supervisor, EP[Redacted], who in turn reported the injury to safety member "Chris" from AmCare, which is an in-house medical facility. Because of her reported pain, Claimant remained seated in a

wheelchair at work until the end of her shift. She did not perform any labor for the period from the time of injury to the end of her shift.

Claimant's Initial ER Visit

4. Following her injury, Claimant first went home, but due to her reported pain, Claimant self-reported to the UC Health emergency room the following day. Her intake notes by PAC Kristina Sanfilippo at 16:42 hours state:

> The patient is a 32 y.o. female who presents to the ED today with complaint of back pain onset last night. Pt states she works at [Employer redacted] and was picking up a bin and was turning to put it back down when her sx {symptoms} arose Notes her pain worsened this morning……States that it hurts to ambulate and that the pain is radiating to her BLE. Denies falls, trauma." (Ex. B, pp. 23-25).

5. The reports indicate that Claimant was administered a 30 mg toradol injection, a 700 mg patch of 5% lidocaine, and one 750 mg Robaxin tablet by PAC Sanfilippo at this visit. *Id* at 24.

6. [Respondents have contested liability in this case, but have authorized medical care, to include physical therapy, chiropractic care, imaging, injections, and massage therapy to date].

Claimant's Treatment with an ATP

7. Claimant initially treated with her primary care provider at Peak Vista Community Health Centers; however, she was ultimately referred to Colorado Occupational Medical Partners ("COMP") on July 29, 2021. At that initial visit, she was seen by Erik Ritch, MD. At intake her pain was reported at 10/10, in "right lower legs and left top." (Ex. D, p. 45). Dr. Ritch's intake notes state:

> She reports she was seen by hand care [?] and ended up going back home. She then went to the emergency room due to the severity of her pain, waited about 4 hours, *but was not actually seen by any provider and left.* She subsequently arrange[d] for an appointment with her primary care doctor 2 days ago. …She denies any history of back injuries. Id at 46. (emphasis added).

8. At the time of this initial visit, Claimant reported severe low back pain that radiated into both legs, down the back of her legs and down to her feet. Claimant reported ibuprofen and Flexeril had not been helpful. She also noted that she had been working at [Employer, Redacted] "for some time now." *Id* at 46.

9. Dr. Ritch noted that Claimant had moderate to severe tenderness through her entire low back both midline and off midline. It was also documented that Claimant was "extremely guarded with any movements that involve movement of her low back."

However, Claimant was able to sit and rise without help, her reflexes were normal and her strength was 5/5. *Id* at 47.

10. Dr. Ritch had initially provided work restrictions of sitting for 4 hours per shift. However, Claimant returned the following day (July 30, 2020), and reported that she could not sit for 4 hours, even though [Employer, Redacted] had found a position that would allow her to remain seated. (Ex. D, p. 50). At this visit, Dr. Ritch noted that Claimant had "very little AROM [active range of motion] of her back" and that Claimant "tolerated palpation of her back very poorly," so he was unable to determine the degree of muscle spasm actually present. Dr. Ritch further noted that even palpation in the soft tissue superficial to the muscle caused Claimant to express significant pain. Her restrictions were updated to allow for breaks to stretch. *Id* at 52.

11. Even as of the latest available entry by Dr. Ritch (January 4, 2022), he continues to state that this is a work-related injury. (Ex. D, p. 99).

Imaging

12. Claimant underwent x-rays and MRIs of the lumbar and thoracic spine. The 8/2/2021 x-rays were normal. (Ex. H, p. 168). The 9/10/2021 lumbar MRI's Opinion stated: At L5-S1 there is a tear in the disc margin and there is a *small* associated disc protrusion in the midline and left paramedian location *without nerve impingement or stenosis*. No other significant abnormality. *Id* at 165, (emphasis added). [On 3/2/2021 Claimant had undergone a CT scan performed on her abdomen, which noted, as an incidental finding, "Small disc protrusion L5-S1 centrally". No treatment was prescribed for this finding. (Ex. H, p. 32)].

Concerns Arise with Claimant's Subjective Complaints vs. Physiological Findings

13. Throughout the claim, there have been references by Claimant's providers that Claimant's subjective symptoms do not correlate to objective findings, or that her pain appears to be out-of-proportion to the mechanism of injury. Further, Claimant consistently reported significant pain without any relief from multiple treatment modalities. Some of these references include:

- August 5, 2021 – COMP: Claimant reports no change in her back…still hurting constantly. It is made worse by remaining seated too long…made worse by standing…movement does make it worse as well. She has been taking ibuprofen and using heat and ice without improvement. Claimant was noted to move "extremely gingerly" and was not twisting or bending within a normal range. (Ex. D, p. 54).

- August 11, 2021 – PT: Noted that claimant is vague about her symptoms when pressed for details. Further documented that claimant's possible subjective symptoms greater than objective findings with extreme guarding, which made assessment difficult. While she reported reduction in symptoms, she reported 10/10 pain to the physician directly after treatment. (Ex. E, p. 105).

- August 17, 2021 – PT: The therapist noted that Claimant's subjective complaints of pain were much higher than observed movements. It was further documented that Claimant has poor subjective description of symptoms. (Ex. E, p. 107).

- August 25, 2021 – COMP: Claimant reports her back has been worsening since her last visit. Physical therapy has been no help. She continues to have 10/10 pain all up and down her back and neck, that radiates into her right arm and back of her right leg with numbness and tingling. No medications have been helpful. Claimant reported that she had not gone in to work because she says her back is hurting too badly and she needs to remain lying down with an ice pack on her back. It was noted that Claimant does not tolerate anything other than very light touch without wincing. Claimant was noted to be guarded getting out of a chair, but walked without difficulty. Range of motion was very diminished and claimant reporting pain with most movements.

- Dr. Ritch noted that Claimant's "responses to even fairly light touch in her low back seem to be quite exaggerated based on both her mechanism of injury and the general response of such injuries to conservative care." It was noted that claimant wanted to be taken out of work, however, Dr. Ritch was unable to identify any diagnosis that would be permanently worsened by working. He noted that "the mere presence of reported back pain does not indicate an inability to work." Dr. Ritch further noted that "claimant's new complaints of numbness in her right arm were puzzling… and the evolution of her symptoms to something that has no anatomical/physiologic explanation along with the relatively exaggerated response to light tactile stimulus was a concerning aspect of this case." Dr. Ritch recommended an MRI to rule out a significant disc herniation. (Ex. D, p. 62-63, 65).

- September 1, 2021 – COMP: Claimant reported worsening, 10/10 constant pain. (Ex. D, p. 67).

- September 15, 2021 – COMP: Claimant reported ongoing 10/10 pain. It was noted that Claimant's MRI showed mild disc pathology at the L5-S1 level with reported symptoms significantly more severe than imaging would suggest. (Ex. D, p. 72, 74).

- October 8, 2021 – Accelerated Recovery Specialists: Claimant reported 0% decrease in pain since her injury and reported her pain was 10/10 at all times. It was noted that Claimant reported diffuse thoracic and lumbosacral pain from her upper thoracic region through the belt line. It was noted that Claimant walked with a very slow cautious gait pattern during direct observation; however, Claimant had a normal gait pattern during casual observation. Claimant was noted to be exquisitely tender in the lower lumbar paraspinals, but also diffusely tender throughout the thoracic and lumbar regions. Range of motion was profoundly limited. Dr. Sparr opined that Claimant's diffuse pain was not easily explained by

a 1 level disc tear. Despite this, a lumbar epidural steroid injection was recommended. (Ex. F, p. 115-116).

- October 13, 2021 – COMP: Claimant reported 9-10/10 pain throughout her entire low back with no change from her initial injury state. She had not noticed any improvement with chiropractic care. Dr. Ritch noted that Claimant's "symptoms appear to be out of proportion to actual hard physical findings." He further noted that Claimant was not responding the way he would expect with manual therapy. Dr. Ritch noted that he was concerned that Claimant's symptoms may not be explained by a physical pathological finding. (Ex. D, p. 85-87).

- November 12, 2021 – COMP: Claimant reported a 1/10 improvement on the pain scale based on her lumbar epidural steroid injection. She continued to report 7/10 pain throughout her entire low back. It was noted that there may not be any further treatment to offer. (Ex. D, p. 90, 92).

- November 12, 2021 – COMP: Claimant reported no change since her prior examination and that massage therapy caused "extreme pain." Claimant reported that her pre-injection ESI pain score was 8/10, which increased to 10/10 following the injection for 3 hours and then wavered between 8/10 and 10/10 since that time. Dr. Sparr opined that this was a poor diagnostic and therapeutic response to the injection which indicated the L5-S1 disc level was not the cause of her pain. Claimant continued to be exquisitely tender over left low back. Dr. Sparr noted that she was previously diffusely tender. It was also noted that Claimant now had limited range of motion in the cervical spine due to central back pain. Dr. Sparr noted that Claimant continued to report severe pain without response to physical therapy, chiropractic treatment or massage, along with poor response to lumbar ESI. Dr. Sparr opined that because Claimant's pain had suddenly become less diffuse, a left facet injection at L4-5 and L5-S1 was indicated. (Ex. F, pp. 120-121).

Claimant's Mental Health Issues and Treatment

14. Prior to, and after, her work injury, Claimant had been undergoing psychological counseling with Lifestance Health (aka Heart Centered Counseling) and treatment for personal issues starting on December 9, 2020. Claimant's history was significant for prior psychological issues. Assessment and treatment focused around chronic depressed mood and post-traumatic stress disorder and associated symptoms. (Ex. I).

15. At hearing, Claimant testified that this was her personal provider and that she had not been referred to this provider through the workers' compensation claim.

16. While Claimant did mention her back injury in one visit, Claimant sought treatment with this provider prior to her injury for personal reasons and that treatment continued following the work injury for ongoing treatment related to Claimant's personal mental health care. There is no evidence that any providers from COMP or Accelerated Recovery Specialists referred Claimant to Lifestance Health for treatment.

IME Performed by Dr. Lesnak, and Hearing Testimony

17. An IME was conducted by Dr. Lawrence Lesnak. Dr. Lesnak also testified at hearing as a Level II accredited expert who is board-certified in the field of physical medicine and rehabilitation.

18. Dr. Lesnak performed his IME on December 15, 2021. During his examination, Dr. Lesnak noted that Claimant exhibited numerous and diffuse pain behaviors along with non-physiologic findings, including 2/5 positive *Waddell* signs. Dr. Lesnak did not note any reproducible objective findings on examination. (Resp. Ex. A, p. 11).

19. Dr. Lesnak also documented that Claimant had a flattened affect and somewhat depressed mood. (Resp. Ex. A, p. 11). A Computerized Outcome Assessment was performed as part of the IME and Claimant's testing placed her in the category of "At-Risk" in regard to psychosocial dysfunction. Claimant reported a moderate to high level of somatic pain complaints, which strongly suggest the presence of an underlying symptom somatic disorder/somatoform disorder. Dr. Lesnak noted that patients with these types of diagnoses frequently embellish/exaggerate their symptoms, causing their reported subjective complaints to be unreliable at best. As a result, he opined that healthcare providers must rely primarily, if not solely, on reproducible objective findings in order to provide accurate medical diagnoses and treatment recommendations. (Ex. A, p. 15).

20. Dr. Lesnak noted that, although Claimant reported a "pop" in her low back followed by severe diffuse pain, the medical records evidence that Claimant exhibited diffuse pain behaviors and reported pain levels that were out of proportion to any reproducible objective findings on exam, which were minimal to none. Dr. Lesnak testified that these inconsistencies were documented by both Dr. Rich and Dr. Sparr. Further, the initial emergency room treatment did not include diagnostic imaging studies, which Dr. Lesnak opined indicated that there was not even a low suspicion that there were any structural abnormalities.

21. Lumbar x-rays showed no abnormalities. The thoracic MRI was completely normal. The lumbar MRI showed a small disc protrusion, but this did not correlate to symptoms. Further, Dr. Lesnak testified that Claimant had a pre-injury pelvic CT scan on March 2, 2021, which showed mild disc pathology at the same level. Dr. Lesnak opined that this was similar to what was identified on the post-injury MRI. (Resp. Ex. A, p. 13). He further testified that the most common symptoms for this type of MRI finding are "none". However, symptoms that could be associated with a mild disc bulge include mild low back or leg symptoms. Dr. Lesnak opined that Claimant's subjective reports of severe 10/10 pain would not be expected based on the MRI findings. He agreed with Dr. Sparr that Claimant's symptoms were not explained by a one level disc tear.

Dr. Lesnak's Opinion re: Injections

22. Regarding Claimant's lack of reported benefit with virtually all treatment, Dr. Lesnak opined that this was not surprising because it was evidence that Claimant's subjective complaints were not related to any structural abnormality. Dr. Lesnak also disagreed with Dr. Sparr's recommendation for an epidural steroid injection. He testified that Claimant reported pain through her entire back, which was not specific to the mild disc pathology noted on MRI. Further, Claimant had no specific reproducible objective findings to correlate with radiculitis or radiculopathy. Because of this, Claimant did not meet the criteria in the Medical Treatment Guidelines to proceed with an epidural injection. Further, the fact that Claimant reported no relief from the injection was evidence that the disc pathology at L5-S1 was not causing any of Claimant's symptomatology.

23. Dr. Lesnak also testified that Dr. Sparr's recommendation for a facet injection was also not reasonable, necessary or related. He opined that Dr. Sparr had previously commented that claimant was not a candidate for any facet injections. Additionally, Claimant had never demonstrated any reproducible objective findings to correlate with any symptomatic lumbar facet pathology. Dr. Lesnak further testified that there was no indication for a lumbar medial branch block. While Claimant had reported "a little" relief following her recent injection, under the Medical Treatment Guidelines, there must be at least 80% relief to consider a medial branch block, which was not present in this case.

Dr. Lesnak's Opinion re: Compensable Work Related Injury

24. While Dr. Lesnak opined that Claimant could have sustained a mild lumbar soft tissue strain/sprain as a result of the reported lifting incident at work, he testified that when you add in her examination findings, there was no objective findings to support there was an injury. Additionally, the minor disc pathology was not related to this incident as it was pre-existing and also appeared to be completely asymptomatic. As such, Dr. Lesnak opined that while there may have been an incident at work, it did not appear there was a resulting injury.

25. Assuming, however, that an injury had occurred, Dr. Lesnak opined that, at worst, Claimant could have sustained a soft-tissue injury which would have resolved over the course of several weeks or a couple months. He further testified that most soft-tissue injuries resolve on their own without any need for medical care or interventions.

26. Dr. Lesnak testified that the treatments in this case had been largely, if not entirely, based on Claimant's subjective complaints, despite a lack of documented objective findings on examination. Dr. Lesnak further opined that there was no objective evidence to support the need for work restrictions.

27. Dr. Lesnak opined that Claimant's current diffuse subjective complaints without any reproducible objective findings did not support any current diagnosis which would be related to the July 24, 2021 occupational incident. Dr. Lesnak opined that Claimant has significant psychosocial factors that are currently affecting her symptoms and perceived function, which are not related to the July 24, 2021 work incident. Accordingly, Dr. Lesnak opined that Claimant does not require any further medical

treatment or evaluation. Further he opined that there is no medical evidence to support that Claimant requires any type of temporary or permanent work restrictions related to the work incident. (Resp. Ex. A, p. 14).

28. Dr. Lesnak acknowledged that Dr. Ritch has not placed Claimant at MMI, and had no information that Dr. Ritch had ever opined that Claimant's symptoms were *not* work related.

29. Dr. Lesnak further agreed that according to the Medical Treatment Guidelines, one would generally expect a patient in Claimant's situation to make significant progress within 6 to 12 weeks. However, he also agreed with the Guidelines that 3 to 10% of all industrial injured patients will not recover within those guidelines, despite optimal care. He agreed that such outliers may require treatment beyond the limits otherwise discussed in the Guidelines, so long as the ATP is focused on objective functional gains and impact on their prognosis. He again emphasized that there are no reproducible objective findings to explain Claimant's complaints. He did not think in Claimant's situation that she should have been referred for a WC-related psychological examination.

30. Dr. Lesnak acknowledged that Claimant might have suffered a soft tissue strain/sprain in her back while at work, but there is no evidence of injury to lumbar discs, ligaments, or facet joints. While stopping short of accusing Claimant of consciously manufacturing her symptoms, he did indicate that some degree of somatic disorder might be at play. While repeating that there is no medical evidence of any injury, he acknowledged:

> Did she possibly feel a pop in her back? It's possible. And then all of a sudden her brain just kind of explodes and manifests all this pain throughout her body? Sure. (Transcript, p. 137).

Claimant Testifies at Hearing re: Work Injury

31. Claimant was hired as a 'stower', with a lifting requirement of 25 pounds. She began her shift at 6:00 p.m. on July 23, and was injured at 3:00 a.m. that following morning. She described her injury thusly:

> I picked up the storage bin, I turned to put it down to move all the other bins down, and then when I picked it back up, I heard a pop in my back and it went all the way up my back, all the way down to my legs, and the pain was mostly in my belt line area of my lower back. (Transcript, p. 25).

32. She stated she had never felt pain like that in her life. It was similar to kidney stones, but worse. She had suffered a whiplash-type neck injury in a car accident in 2014, but received chiropractic care, but was not treated for her back.

33. Once she was seen by 'Safety', she understood them to say to go home, but if pain persisted, to go to the ER. She went home initially, but the pain was so bad that she took herself to the ER at Memorial South {aka UC Health}. At the UC Health ER, she was told to see her PCP, but also an Occupational specialist. She was later assigned Dr. Ritch.

34. Once she saw Dr. Ritch, she has undergone injections by Dr. Ford, the first of which did not help, the second of which offered "a little." She has had physical therapy (but none since her injections), massage therapy, and chiropractic care. She has taken all prescribed medications. Treatment to date has provided little to no relief, except as noted. [Claimant apparently referenced two more injections that were recommended, but not provided].

Claimant Testifies re: Termination

35. Following the work injury, Claimant was offered temporary work duty, but only worked sporadically, and for a short period at Respondent-Employer performing light-duty tasks, which included asset tagging. This job involves sitting at a computer and drive squares or circles around objects to help robots identify objects. At one point, she just sat and handed out masks to workers who needed one. The job does not require any lifting.

36. The last shift Clamant worked for [Employer, Redacted] was September 9, 2021. On September 10, she was in such pain that she could not come in to work. However, she did not 'call in sick.' Instead, she assumed that by not showing up, the system would simply automatically deduct 'points' from her personal bank, since she did not badge in that day. She had no intention, however, of abandoning her job.

37. Claimant testified that at around 8:00 p.m. on September 11, 2021, (a regularly schedule day off, so she did not go in that day either) she received a call from an unidentified human resource representative who advised her that she was terminated for alleged timecard theft. She tried to explain that she had discussed a discrepancy in her time records with human resources previously, but the human resources representative told her that she remained terminated. No one from [Employer, Redacted] ever met with her to discuss this. She never received anything in writing explaining the reasons for her termination. She was aware of [Employer, Redacted]'s progressive discipline system {warning, written warning, termination}, but was never provided any warnings.

38. Claimant stated that prior to September 11, she has never been accused of time theft, nor had she been disciplined for alleged time theft. Claimant testified that she noticed in advance of her paycheck that she was going to be paid for August 27, 2021-a day when she had not worked. She stated that she contacted human resources to report that she was not entitled to pay for that day. She does not know why her time records reflected that she worked on August 27. She believes that human resources erroneously noted that she worked that day. She also testified that she believed that human resources received her message about the discrepancy because "they opened the case and then

they closed the case with nothing." She knows this because she would get an alert of such opening and closing activities (presumably to her phone).

39. Claimant unequivocally denied any time theft while working at Respondent-Employer, and she testified that she advised human resources about this discrepancy in her timecards and that the time was not correct and needed to be deleted.

40. Claimant described the clock-in-and out process as having two acceptable options. She could use the company-supplied smartphone app, but had to be within the building to get within range to use it. Alternatively, she could use her work badge to clock in while waiting to enter her work station. She was aware that cameras record the movement of employees, and she would never attempt to abuse the timecard system.

41. On cross-examination, Claimant provided more detail on the clock-in-clock-out process. There is only one way into the facility, and only one different way out, and there is security. Regardless of whether you use the *app* to clock in or clock out, you still must use your *badge* to physically enter and exit the building.

42. Claimant then described what occurred on August 27, which is the date she can only speculate that her termination was based upon:

Q. Okay. So on that date, did you clock in
Page 57

1 and clock out on your phone or what happened?

2 A. No. So, I badged in using my badge, I was
3 about to walk in but I didn't walk in at all. I ended up
4 walking back out because my back was in too much pain.
5 So I was going to work, but the way my
6 back was feeling, I didn't go all the way in. I looked
7 at the desk, because you can see the desk from the --
8 before you -- before you badge in, you can see the desk
9 where the people who are hurt sit.
10 So when I looked over, my safety person --
11 my manager -- my safety manager wasn't there and she
12 usually gets there around 6:30. So I badged in and I
13 turned around and went back out the door. I didn't go
14 all the way in the building. (Transcript, pp. 57-58)

43. She explained that once she badged in, she would normally have to badge out at a different location, after entering and walking "all the way around" before badging out and exiting. She later explained that "all the way around" was about half a basketball court. So she just turned around and left before fully entering the building.

44. Claimant explained why the time was not accurate on August 27 as follows:

> At the time I didn't have a schedule, meaning --the reason why I didn't have a schedule is because I was on leave of absence. So when you are on a leave of absence you don't have a schedule. HR has to--- you have to be manually put in-- clocked in by going to AmCare, so they have to write down you being there and then they have to write down when you're leaving…. I don't know what happened." (Hg. Tr., p. 54).

45. Claimant was also asked about Exhibit O, p. 233 ([Employer, Redacted]'s 'Supportive Feedback Document'). She did not have it in her possession, but does not recall having seen it [although it was a listed Respondent's Exhibit]. Claimant explained that she did not work on August 27, but reiterated that she did work on July 16, but left early due to the death of a family member. She did, however, put in her 'PTO time' when this occurred.

46. Claimant did not deny that she clocked in, but did not actually work on August 27, 2021. Nor did she deny that she failed to actually report to anyone *that day* that she had left without working. She did, however, indicate that she tried to report to her safety manager that she was leaving, but that person was not there at the time. She also acknowledged that she worked the day before, and the day after August 27. [The ALJ notes that these were apparently the four-hour shifts permissible under then-extant work restrictions.]

47. After her termination, Claimant went to work for Door Dash for two days per week, from September to November, 2021. She quit working at Door Dash because her back was hurting too much.

48. Claimant then went to work for Kum & Go as a cashier, working between 20 and 30 hours per week at an hourly wage of $14.45. She testified that she worked an average of 23 hours per week.

[Redacted, hereinafter EP] Testifies at Hearing

49. Claimant reported the work injury to her supervisor EP[Redacted], between approximately 3:30 and 3:45 A.M, towards the end of Claimant's shift. Ms. EP[Redacted] is a Level 5 Area Manager who has worked for [Employer redacted] since 2013. Ms. EP[Redacted] was working with Claimant at the time of her reported injury. Ms. EP[Redacted]testified that Claimant reported the injury directly via the "hands-on system" and that Ms. EP[Redacted] reported to Claimant's workstation personally.

50. Ms. EP[Redacted] stated that Claimant reported that she was in pain and unable to walk; because of this, a wheelchair was provided. She testified that a standard investigation was conducted regarding how the injury occurred. Claimant told her that she injured herself while stowing. Ms. EP[Redacted] was able to pull video from the station number, but was unable to identify any event on the footage that showed an injury had occurred, or that matched with the description Claimant had provided.

51. Despite this, Ms. EP[Redacted] testified that basic first aid, including an ice pack, was provided. Due to the time the injury occurred, HR was not on site. Ms. EP[Redacted] testified that Claimant did not have any accrued personal time and that if she left prior to her shift being over, it was possible she would be terminated. As a result, Claimant remained on site until her shift was over.

52. Ms. EP[Redacted] clarified that she has no information about the allegation of time theft lodged against Claimant by [Employer, Redacted]. She had no involvement in her termination. She is unaware of any of the procedures used by HR for termination under these circumstances. She has no knowledge of the various symbols which appear on Claimant's time records.

Employer's Records re: Termination for 'Time Theft' – Exhibit O

53. Claimant was then terminated on September 10, 2021 for 'Time Theft' by allegedly clocking in and out on her personal cellphone, but failing to badge in and out of the building. (Ex. O, p. 233). The 'Details of Concern' outlined in this 'Supportive Feedback Document' state:

> July 16, 2021 and August 27, 2021 you were using your mobile device to clock in and out. During this time you did not use your badge to enter or exit the facility… A seek to understand conversation took place with you where you state that on August 27, 2021 you did not work. *Id.*

54. On the same document, it notes, under 'Areas of Improvement':

> [Employer, Redacted]'s NAFC Standards of Conduct specifically prohibits &quot(sic) *intentionally* making entries on associate's time cardsheet or *falsely altering* a timekeeping document when the associate is not in the [Employer, Redacted] facility &quot(sic). *Id* (emphasis added).

This document then stated that this is a Category 1 security infraction, subjecting the associate to immediate termination. *Id.*

55. Under 'Associate Comments', it notes:

> AA was terminated via phone on 9/10 at approximately 19:40. AA stated she is being wrongfully terminated and will be contacting her lawyer. *Id.*

Under Associate's Signature, it states: Davis Tee (sic) REFUSED TO SIGN. *Id.*

56. Under the multi-page employment agreement that Claimant was subject to, it was noted, under 'Employment at Will':

> If you accept our offer of employment, you will be an employee-at-will, meaning that either you or the Company may terminate our relationship at any time for any reason, *with <u>or without cause.</u>* Any statement to the

contrary that may have been made to you, or that may be made to you, by the Company, its agents, or representatives are superceded by the offer letter. *Id* at 240. (emphasis added).

[Employer, Redacted] Timesheet Records -- Exhibit N

57. [The ALJ notes that no person from [Employer, Redacted] testified about the contents of this Exhibit. No interpretation was provided. There are various symbols accompanying the clock-in-clock-out entries, which plainly bear some meaning, but which would leave the finder of fact to speculate. The only conclusions the ALJ is willing to draw with this limited information is that there is nothing within these records that is inconsistent with Claimant's own testimony and explanations for what occurred.]

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo.

1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

D. In this instance, starting with EP[Redacted], the ALJ finds her to be sincere and credible in her observations and testimony. The ALJ also finds that Dr. Lesnak makes a very sound argument that Claimant's reported symptoms are not supported by objective evidence in the record, and that her reported symptoms are out of proportion to any injuries she may have received. The ALJ finds that Claimant leaves much to be desired as an accurate medical historian, but does not find her to be incredible *per se.* Further, as will be noted, Claimant's explanation for her timecard discrepancies seem plausible enough, and there is nothing in the record, of a testimonial nature, or in the way of discernable records, which contradict her. More on that later.

Compensability, Generally

E. Claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); *See*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

F. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

G. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

Compensability, as Applied

H. There is considerable record support that Claimant's reported symptoms are out of proportion to any reproducible objective findings. She has effectively confounded her own ATPs with her lack of progress. However, her ATP, Dr. Ritch has consistently opined that her injuries are work-related. Dr. Lesnak conceded that she may have suffered a soft tissue injury (but no structural damage to the spine, facets, or ligaments). He also stopped short of accusing Claimant of manufacturing the incident or her symptoms. And, as was acknowledged, Claimant may well have felt a pop in her back and then, however objectively unsupported, reported exaggerated symptoms. All quite plausible. However, based upon the entire record, the ALJ does find, by a preponderance of the evidence, that Claimant did suffer a compensable work injury, as defined, which caused the need for medical treatment. And it is noted that Claimant's ATP, despite some apparent misgivings, has yet to place her at MMI. Just how much medical treatment might be reasonably necessary moving forward will wait for another day.

Authorized Medical Treatment, Generally

I. Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018); *In re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010).

Authorized Treatment by Heart Centered Counseling, as Applied

J. As noted, Claimant was not referred to Heart Centered Counseling by any ATP. She had already sought this treatment through her own PCP, and well prior to the work injury at issue herein. Claimant had already experienced a number of personal mental health issues, and the mere fact that during her ongoing mental health treatment she mentioned her ongoing back issues does not bootstrap this condition into an authorized treatment, unless it comes from her ATP. The ALJ declined to designate Heart Centered Counseling as an Authorized Treating Provider.

Claimant's Responsibility for Termination, Generally

K. An award of Temporary Total Disability or Temporary Partial Disability benefits is payable if the following conditions exist: (1) the injury or occupational disease causes disability, (2) the injured employee leaves work as a result of the injury, and (3) the temporary disability is total and lasts more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542, 546 (Colo. 1995). TTD continues until the first occurrence of any one of the following: (a) the employee reaches MMI; (b) the employee returns to regular or modified employment; (c) the attending physician gives the employee a written release to return to regular employment; or (d) the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. C.R.S. § 8-42-105(3).

L. However, in cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on the job injury. C.R.S. § 8-42-103(1)(g). Thus, if a Claimant is responsible for her termination, she is not entitled to recover temporary disability benefits for wage loss. *Padilla v. Digital Equip. Corp.*, 902 P.2d 414, 416 (Colo. App. 1994). A Claimant is responsible for her termination where she is "at fault" for causing a separation in her employment. "A finding of fault requires a volitional act or the exercise of a degree of control by a Claimant over the circumstances leading up to the termination." *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008) (citing *Padilla*, 902 P.2d at 416). This is a factual determination for a judge. *Padilla*, 902 P.2d at 416.

M. A Claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001). Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

Did [Employer, Redacted] have the Legal Right to Terminate Claimant's Employment?

N. Of course they did. As is made clear in Ex. O, p. 240, *supra*, Colorado is an at-will employer state. So long as they don't run afoul of any anti-discrimination statutes, the ADA, and the like (of which there is no evidence in this record, but which is also beyond the purview of this case), they can quite possibly terminate someone for wearing ugly shoes if they want. [Employer, Redacted] has made it quite clear that they are not even bound by their own due process disciplinary procedures if they don't wish to be. Employees can either accept the terms of employment, or go elsewhere. If anything, [Employer, Redacted] has shown that it is a marvel of efficiency, automation, and information technology. So efficient, it appears, that they have largely eliminated the human element in HR decisions, and now have algorithms that do it all for them. They only use an HR rep-with no apparent discretion-to make that final phone call. Such is [Employer, Redacted]'s business model, and its prerogative. However, such trial-by-algorithm does not, *ipso facto,* serve to terminate temporary disability payments to an injured worker.

Was Claimant Responsible for her own Termination?

O. [Employer, Redacted] - or more precisely, its algorithm - has accused Claimant of 'Timecard Theft', thus subjecting her to termination, without the usual niceties of progressive discipline and the warnings it would entail. Apparently, during some undefined 'seek to understand' process, Claimant acknowledged that she did not work on August 27, but was paid for her services anyway. Game over. Claimant has now offered a plausible explanation for not completing her shift on August 27 (such explanation also implicating her inability to do so *due to the effects of her work injury*). She has also offered a plausible explanation that she called HR upon discovery of her pay stub, but someone on the other end, either: 1) didn't document it, or 2) did document it, but the algorithm didn't get the memo. Also plausible is that 3) none of this happened the way Claimant has alleged; however, the algorithm did not come and testify at the hearing that no such record of this alleged phone call exists. Nor was an intelligible record of [Employer, Redacted] admitted into evidence to this effect. The burden lies on the Employer in such circumstances, and for good reason: The Employer retains access to all the video, payroll records, internal memos, co-workers, etc. - essentially all the data in existence. A fired employee has nothing but their word.

P. [Employer, Redacted] has cameras everywhere, apparently running 24/7. For good reason, lest certain employees find a way to steal them blind. Claimant was aware of that fact. [Employer, Redacted] had access to the film of Claimant's comings and goings on August 27, but there is no evidence that anyone at [Employer, Redacted] ever bothered to look at it-much less bring it into the hearing to refute what Claimant has said. That would detract from the efficiency of the trial-by-algorithm model, and [Employer, Redacted] has long since moved on from Claimant. [The ALJ duly notes that Claimant was hardly a model of productivity, taking bereavement leave only a few days into the job, then getting hurt and being placed on restrictions shortly thereafter. Even thereafter, Claimant had a spotty attendance record. It is unclear whether the algorithm factored all

that in while making its firing decision, versus, say, an otherwise reliable 10-year employee]. No matter. [Employer, Redacted] has accused Claimant of acting *intentionally* or *falsely* regarding her timecard. (*see* Ex. O, p. 233). They have to, since they must show that Claimant acted *volitionally.*

Q. Suffice it to say, the ALJ does not find Claimant's version of events to be *incredible per se.* In fact, there is a certain ring of truth to it, since truth is often stranger than fiction. And, to put it bluntly, Clamant (to her credit) does not appear to have the guile to pull this one off. [Employer, Redacted] has offered essentially nothing in rebuttal, and it was their burden from the get-go. Claimant stated that she had no clue that [Employer, Redacted] even harbored concerns about July 16. From what can be ascertained from the Exhibits, Claimant left early that day-*for the exact reasons that she stated*-and the records appear to reflect exactly that. If [Employer, Redacted]'s algorithm got all confused by this, that hardly makes a case for acting *intentionally* or *falsely.* And we're all still waiting to see how Claimant, by all accounts, was fired via a phone call from HR - yet [Employer, Redacted]'s records reflect that she *REFUSED TO SIGN* her termination letter - *over the phone* (?!). [Employer, Redacted]'s system may work for [Employer, Redacted], but it does not work for the ALJ in this case. Employer has failed to show that Claimant acted **volitionally** in the events leading to her termination.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on July 24, 2021.

2. Heart Centered Counseling is not an authorized Treating Provider for this claim.

3. Respondents have not shown that Claimant was responsible for her own termination of employment; therefore, temporary disability benefits shall be paid in an amount to be determined by future hearing or agreement of the parties.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your

Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

- Did Claimant prove the admitted 13% scheduled lower extremity rating assigned by the DIME should be "converted" to the 5% whole person equivalent?
- Did Claimant prove his condition worsened and he is no longer at MMI?
- Did Claimant prove a left ankle surgery recommended by Dr. Michael Simpson is reasonably necessary?
- If Claimant is no longer at MMI, is he entitled to additional TTD benefits?
- If Claimant remains at MMI, did he prove he is permanently totally disabled?
- Disfigurement.
- Overpayment.

FINDINGS OF FACT

1. Claimant worked for Employer as a concrete truck driver. He suffered an admitted injury to his left ankle on July 5, 2018 when he stepped on a rock while exiting his truck. Claimant was initially diagnosed with an ankle sprain but an MRI later showed an anterior talofibular ligament tear and probable calcaneofibular ligament tear.

2. Claimant had left ankle surgery performed by Dr. Michael Simpson on October 11, 2018. The procedure included an ankle debridement with excision of the os trigonum and modified Brostrom lateral ligament reconstruction.

3. Shortly after the first surgery, Claimant reported back pain related to prolonged alteration of his gait. On January 16, 2019, an ATP documented sciatica-type symptoms because of altered gait. Claimant received some physical therapy for his low back pain.

4. Claimant continued to have problems with the ankle related to scar tissue buildup. Dr. Simpson eventually performed a second procedure on August 8, 2019 consisting of a debridement and scar tissue removal.

5. He saw Dr. Leggett on May 13, 2020 for ongoing ankle issues. Dr. Leggett thought Claimant's continued pain was from injury to the superficial peroneal nerve, in combination with persistent mechanical irritation affecting the ankle joint and adjacent soft tissue. Dr. Leggett recommended hydrodissection of the superficial peroneal nerve, and a compound cream for neuropathic pain. He also suggested PRP injections for the ankle. Additionally, Dr. Leggett observed "significant antalgia" in Claimant's gait and noted

Claimant had been told his back pain was caused by "changes in his walking and limping for such a long time." He opined, "With the substantial nature of his injury, and with the 2 surgeries, I do not believe getting back to 'normal' is realistic."

6. Dr. Leggett performed the hydrodissection injection on June 5, 2020.

7. Claimant started treating with Dr. Robert Graham, a chiropractor, on June 23, 2020. Dr. Graham noted Claimant developed mid- and low back pain with the gait changes following his surgery. PT had not been very helpful. Physical examination showed myofascial tenderness and tightness in the low back, mid back, and over the SI joints. Dr. Graham diagnosed segmental and somatic function of the thoracic and lumbar areas. He recommended chiropractic manipulation and myofascial release techniques. Claimant treated with Dr. Graham through January 2021. He repeatedly reported that his back pain was aggravated by prolonged standing and walking. Dr. Graham observed altered gait mechanics on multiple occasions. Claimant's pain complaints were corroborated by exam findings showing myofascial tenderness, hypertonicity, and reduced lumbar range of motion. Claimant was discharged on January 27, 2021 because he had completed all authorized sessions, although Dr. Graham thought he could benefit from additional chiropractic treatment as maintenance care.

8. Claimant followed up with Dr. Leggett on June 24, 2020. The hydrodissection injection had provided significant pain relief, but only for the duration of the short-acting anesthetic. Claimant's foot and ankle were hypersensitive to touch around the superficial peroneal nerve, but there were no dystrophic changes, mottling, or other signs suggesting CRPS. Dr. Leggett opined the temporary response to the injection provided a "clear diagnostic response," but unfortunately no long-term therapeutic benefit. Dr. Leggett suggested a PRP injection.

9. Dr. Leggett performed the PRP injection on July 16, 2020.

10. Claimant followed up with Dr. Leggett on August 5, 2020. Claimant reported increased limping because of soreness after the injection, which "seemed to have a negative effect on his back."

11. On August 26, 2020, Dr. Leggett documented a recent MR arthrogram of the left ankle had aggravated Claimant's ankle pain. In addition, "with the increased ankle pain, he feels his left buttock and low back pain also intensified." Examination of Claimant's low back showed myofascial tightness throughout the lumbar paraspinals, and pain with deep palpation of the left SI joint. Dr. Leggett opined the SI joint pain was caused by increased limping since the arthrogram. He recommended an SI joint injection.

12. The SI joint injection was performed on September 16, 2020.

13. Claimant returned to Dr. Leggett on September 29, 2020. The injection had been very helpful for approximately five days. Unfortunately, on the fifth day, his ankle gave way and he fell down some stairs. This aggravated the pain in Claimant's back, buttock, and left foot. Claimant told Dr. Leggett he had fallen several times because of "instability" in his left ankle. Examination showed "clear" pain with palpation of Claimant's

back and SI joints. Dr. Leggett encouraged Claimant to continue the chiropractic treatment and pain cream and hoped the exacerbation would settle down in a few weeks.

14. Claimant had a second opinion with Dr. Scott Primack on October 5, 2020. Dr. Primack recommended a lumbar MRI and possibly permanent work restrictions if the MRI showed no acute problems.

15. Dr. Thomas Centi at CCOM put Claimant at MMI on October 8, 2020. Dr. Centi provided an 11% scheduled rating for the left ankle, which converts to 4% whole person. He recommended orthopedic follow-up for the next two years under maintenance care. Dr. Centi assigned permanent work restrictions of sitting 50% of the time, no standing/walking greater than 30 minutes in an hour, minimal stair climbing, and no squatting, kneeling, or climbing ladders.

16. Dr. Simpson re-evaluated Claimant on December 14, 2020. Claimant said he "continued" to struggle with pain and giving way of his ankle. Dr. Simpson wrote, "I do not have a really good explanation for this. It is possible that he has pain-inhibited giving way of his ankle. Clinically his stability seems very good." Dr. Simpson recommended a repeat MRI to see if there was any significant interval change.

17. Respondents filed a Final Admission of Liability based on Dr. Centi's rating and Claimant requested a DIME. The DIME was performed by Dr. Douglas Scott on March 2, 2021. Dr. Scott agreed Claimant had reached MMI on October 8, 2020. He assigned a 13% lower extremity rating for the left ankle/foot, which converts to 5% whole person. Dr. Scott opined Claimant had no ratable lumbar impairment because he suffered no structural injury to his lumbar spine on July 5, 2018 and has no objective lumbar pathology to support a rating. He did not comment on whether Claimant's documented low back symptoms and treatment warranted conversion to whole person. Regarding work restrictions, Dr. Scott agreed with Dr. Centi that Claimant avoid should standing/walking for greater than 30 minutes at a time, minimize stair climbing, and avoid climbing ladders, kneeling, and squatting. He imposed no limitations on sitting.

18. At a March 8, 2021 appointment with Dr. Simpson, Claimant stated his symptoms were "unchanged." He was still having issues with the ankle rolling in and giving way. Examination showed "good stability," negative anterior drawer, only a "trace" of inversion laxity, and "maybe a little hypermobility in the subtalar joint." Dr. Simpson reiterated his request for an updated MRI.

19. The MRI was completed on April 2, 2021. It was "unremarkable" aside from postsurgical changes at the anterior talofibular ligament level.

20. Claimant followed up with Dr. Simpson on April 6, 2021. Dr. Simpson noted Claimant "continues" to struggle with ankle symptoms and limitations. Clinically there was no evidence of gross laxity. Dr. Simpson was not sure why the ankle was giving way and wondered if it was from a ligamentous issue or possibly neurogenic pain. Dr. Simpson discussed Claimant's options with him including simply living with the condition. However, Claimant reported that he could not pass his CDL which was quite "concerning." The other

option would be an arthroscopic exploration and possible lateral ligament reconstruction. Dr. Simpson concluded, “otherwise there is really not much else we can do for him at this time.”

21. Claimant had another appointment with Dr. Simpson on May 13, 2021, at which time he stated his ankle was “feeling the same.”

22. Insurer filed a new FAL on May 17, 2021 admitting for the 13% scheduled rating assigned by Dr. Scott. The FAL also claimed a TTD overpayment of $2,495.08, which was to be credited against the permanency award. Claimant timely objected to the FAL and requested a hearing.

23. On June 11, 2021, Dr. Simpson submitted an authorization request regarding the proposed surgery.

24. Claimant returned to Dr. Simpson on August 23, 2021 to discuss the surgery in more detail. Dr. Simpson wrote, “Again clinically he does not have significant laxity. He seems to have a solid ankle with good subtalar motion. Continues to have episode with his nerve giving out. I really think it is unlikely that revision reconstruction would be necessary or really be of any great benefit to him.” Dr. Simpson also stated arthroscopic exploration of the ankle “may” give some relief and allow him determine if there was any previously unidentified pathology causing the ankle to give way.

25. Dr. Marc Steinmetz performed an IME for Respondents on September 16, 2021. Claimant told Dr. Steinmetz he had had persistent back and left leg and ankle pain since the first surgery. Claimant’s low back was tender to palpation and lumbar range of motion was slightly reduced. The ankle had no instability and minimal swelling. Dr. Steinmetz found no lower extremity atrophy or allodynia. He had good sensation and deep tendon reflexes. Dr. Steinmetz agreed with Dr. Centi and Dr. Scott that Claimant reached MMI as of October 8, 2020. He opined Claimant’s back pain was not related to the work injury because there was no significant mention of any back problems until after the first surgery and no mechanism in the initial accident that would have injured Claimant’s back. For work restrictions, he opined that Claimant should be limited to a maximum of 30 minutes standing or walking and otherwise perform sedentary duties. Dr. Steinmetz also recommended that Claimant minimize stair climbing and avoid ladders, kneeling, and squatting. Dr. Steinmetz assigned a 14% lower extremity rating for the left ankle, which converts to 6% whole person. Dr. Steinmetz did not recommend any maintenance care because he thought no further interventions would be helpful. He considered it unlikely Claimant would need another surgery “within a month of being placed at MMI by the DIME without an intervening incident.”

26. The Respondents obtained surveillance of Claimant the morning of the IME with Dr. Steinmetz. At 8:51 a.m., the video shows Claimant working on his truck. Claimant is shown bending and twisting repeatedly at the waist, laying on his back, using hand tools, walking without a limp, crouching and moving in a fluid manner, using his left ankle to leverage his body weight when changing positions, and twisting and rotating his left ankle, all with no apparent difficulty or pain behaviors. Claimant visited a taco restaurant

approximately one hour later. He was seen walking without a limp, climbing in and out of his truck, and moving in a fluid motion with no pain behaviors. According to the investigator's report, Claimant departed the taco restaurant at 10:09 and drove to his scheduled appointment in Denver. The investigator next observed Claimant's vehicle parked at Midtown Occupational Health at 11:50 a.m., but Claimant had already entered the building. After the appointment with Dr. Steinmetz, the investigator observed Claimant walking in the parking lot with a mild limp.

27. Dr. Steinmetz issued an addendum report on September 27, 2021 after reviewing the surveillance video. Dr. Steinmetz noted Claimant was lying directly on the asphalt while working on his truck. He was twisting and bending his back normally and using his left leg to stabilize his position. Claimant also raised his legs in the air and then flipped himself to an upright position. In Dr. Steinmetz's opinion, the video showed Claimant as fully functional with no limitations in the back or ankle. He noted Claimant had presented to his office that same day complaining of pain and functional limitations that were directly contradicted by the surveillance video. As a result, Dr. Steinmetz concluded Claimant's reported symptoms and associated functional limitations were unreliable. Based on the video, he opined Claimant required no work restrictions. He deferred to the DIME on permanency.

28. Katie Montoya completed a vocational evaluation at the request of Respondents and issued a report dated December 16, 2021. Claimant told Ms. Montoya he had shooting pain in his left ankle up to his hip. He complained there were times that his ankle will swell and he could not move. He reported only being able to sit for 15 to 20 minutes and to stand for no more than 30 minutes. Claimant old Ms. Montoya he spent his days trying not to hurt and looking for jobs. He reported that he might do dishes and laundry if his wife brought it down to him. He would occasionally cook a small meal but did no grocery shopping because he could not push a grocery cart. He reported that he could not sit long to watch TV and reported that he may play on the computer or look online for jobs.

29. Ms. Montoya noted Claimant has a relatively limited education, with no high school diploma or GED. His work history consists primarily of physically demanding jobs in the concrete industry. Claimant told Ms. Montoya he had been looking for work since November of 2020 but "every single job" required more sitting and standing than he could not tolerate. Claimant said he looked for work at AutoZone, O'Reilly's, Big R, and Lowes. He did not actually submit any applications but instead spoke to a friend about the requirements. Claimant did tell say he thought he could work if there was something within his restrictions but did not believe any work fit his restrictions because of "how bad they were".

30. Ms. Montoya described Claimant as a younger worker with limited education, limited work history, and limited transferable skills. Despite those factors, she still identified numerous job opportunities suitable for Claimant. She initially noted that Dr. Steinmetz's updated opinion that Claimant has no work restrictions would allow him to perform any of his past relevant work. But even with the restrictions assigned by Dr. Centi and the DIME, she believes Claimant is employable. She identified suitable occupations

such as driving-related positions, cashier positions, customer service positions, forklift operation, and production work. Ms. Montoya also recommended that Claimant pursue a GED and renewal of his CDL to further improve his options and earning capacity. She also provided him with information regarding the Workforce Center and The Division of Vocational Rehabilitation.

31. At hearing, Claimant described significant pain in both his ankle and low back. He stated he had difficulty being on his feet for prolonged periods because of pain, weakness, and giving out. He also reported having constant pain in his low back that was aggravated by walking and being unable to sit longer than 20 to 30 minutes.

32. Claimant testified he unsuccessfully looked for work in October and/or November of 2020 shortly after being placed at MMI. He has not actively looked for work recently. He did not recall Ms. Montoya advising him to follow up with the Workforce Center or DVR had not contacted either agency. He said he occasionally called potential employers and inquired about their "restrictions" but did not follow through with applications because he "knew [his] restrictions wouldn't allow [him] to work." Claimant conceded he engaged in the activities on the surveillance video but insisted that he performed no activities outside his permanent restrictions.

33. Claimant's testimony is only partially credible. It is reasonable to conclude he still has some ankle and foot pain in light of the significant injury that necessitated two surgeries. Additionally, his complaints of low back pain are supported by records of multiple providers. However, Claimant's testimony is not credible to the extent it suggests he is more limited than the permanent restrictions outlined by Dr. Centi and the DIME.

34. Ms. Montoya testified at hearing consistent with her report. She clarified her interpretation of Claimant's work restrictions is that he is limited to standing no over 50% of the time but has no actual limitations on sitting. Ms. Montoya conducted labor market research using the standing and walking restrictions imposed by Dr. Centi and Dr. Scott, and narrowed her search to automotive/delivery, forklift, and production type work because it was in line with the type of work Claimant had previously performed. But this did not exclude other entry level work such as customer service, cashier work, and counter attendant type work.

35. Ms. Montoya explained that employers are accommodating work restrictions more liberally than in the past because of the persistent labor shortage since the pandemic. She also discussed the changing nature of the labor market and specifically referenced the increasing availability of work-from-home positions. Ms. Montoya gave Claimant information about the Workforce Center and DVR because she thought he would benefit from guidance on how and where to look for work given young age and lack of work experience. While she does not believe he requires formal vocational rehabilitation to be employable, she thought he would benefit from some direction and encouragement since he did not appear to be actively looking on his own. She was disappointed Claimant had not followed through with her recommendations. Ms. Montoya was also "surprised" by the level of functionality Claimant demonstrated on the surveillance video, given the significant limitations he described during their interview.

She explained that obtaining his GED and possibly renewing his CDL would help in his job search particularly with wages. Ultimately, she believes that Claimant will find a job if he diligently looks for work.

36. Ms. Montoya's vocational analysis and opinions are highly credible and persuasive.

37. Dr. Steinmetz testified for Respondents via post-hearing deposition. He opined that Claimant remains at MMI as determined by the DIME. He explained that the recommended surgery was based upon Claimant's subjective reports rather than objective findings. Dr. Steinmetz noted the April 2, 2021 MRI was unremarkable and Dr. Simpson had opined that claimant was not likely to benefit from further reconstruction. As of August 23, 2021, physical examination did not reveal significant laxity and he had a solid ankle and subtalar motion. Claimant had good range of motion and negative anterior drawer. There was no anatomic reason to perform any additional procedure, which was being considered entirely based on Claimant's subjective reports of pain and perception of instability in the ankle.

38. Regarding the surveillance video, Dr. Steinmetz explained that even though it was only a few minutes long, it showed Claimant engaging in activities without apparent limitation or difficulty while moving in a fluid, uninhibited manner. He thought the video shows Claimant has functional capacity greater than he has otherwise described to providers and at hearing. As a result, he does not believe Claimant requires any work restrictions.

39. Dr. Steinmetz's opinions are partially credible. His opinions regarding the proposed surgery are credible and persuasive. However, Dr. Centi and Dr. Scott's opinions are more persuasive regarding Claimant's work restrictions. Dr. Steinmetz's opinions regarding causation of Claimant's low back symptoms are not persuasive.

40. Claimant failed to prove his condition worsened after MMI. Claimant had similar problems with his ankle before and after MMI. The MRI showed no new pathology. There is no persuasive evidence of any significant change to support a determination Claimant is no longer at MMI.

41. Claimant failed to prove the third surgery proposed by Dr. Simpson is reasonably necessary.

42. Because Claimant remains at MMI, there is no basis for additional TTD benefits.

43. Claimant failed to prove he is permanently and totally disabled. Ms. Montoya persuasively opined Claimant can work and earn wages in numerous occupations consistent with the permanent restrictions assigned by Dr. Centi.

44. Claimant proved by a preponderance of the evidence he suffered permanent impairment not listed on the schedule of disabilities.

45. Claimant has injury-related surgical scarring on his left foot and ankle, consisting of: (1) a ½ inch diameter discolored, irregularly shaped, partially indented portal scar on the anteromedial aspect of the left ankle, and (2) a 2-inch by ¼-inch scar on the anterolateral aspect of the left ankle. The ALJ finds Claimant should be awarded $1,000 for disfigurement.

CONCLUSIONS OF LAW

A. Claimant remains at MMI and the proposed surgery is not reasonably necessary.

Claimant was placed at MMI by an ATP and the DIME as of October 8, 2020. A DIME's determination of MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III). However, a previous determination of MMI is not given presumptive weight where a claimant is alleging a change of condition after MMI. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The question of whether a claimant's condition has changed after MMI is evaluated under the preponderance of the evidence standard. *Id*.

Here, Claimant does not contest the original MMI date, but argues his condition worsened such that he was no longer at MMI.[1] Claimant's position is predicated on the surgical recommendation submitted by Dr. Simpson on June 11, 2021. Claimant's argument fails for two reasons. First, there is no persuasive evidence of any change in Claimant's condition that would affect his MMI status. Claimant had similar problems with his ankle before and after MMI. The MRI showed no new pathology, nor was there any significant change in Claimant's clinical presentation or findings. Dr. Simpson's records reflect relatively stable symptomology and limitations with notations such as "he continues to struggle," "symptoms are unchanged," "the ankle is feeling the same," and "his ankle still hurts." The current condition of Claimant's ankle is not appreciably different than when he was put at MMI. Accordingly, Claimant failed to prove he was no longer at MMI at any time after October 8, 2020.

Second, Claimant failed to prove the surgery recommended by Dr. Simpson is reasonably necessary. Dr. Steinmetz's opinions regarding the reasonable necessity of additional surgery are persuasive and supported by Dr. Scott's conclusions. Even Dr. Simpson does not seem enthusiastic about the prospects for additional surgery. He opined the surgery is "unlikely" to be of benefit, but "may" help his symptoms or reveal a previously undiscovered problem. Despite the poor prospects of success, he is willing to try it because of the negative impact the ankle is having on Claimant's ability to return to his regular work. While Dr. Simpson's desire to help his patient is commendable, that rationale is insufficient to prove additional surgery is reasonably likely to improve Claimant's condition.

[1] Although Claimant's Application for Hearing couched the issue as one of "reopening," the claim was never closed because Claimant timely objected to the FAL. Accordingly, Claimant need not reopen the claim to obtain additional benefits.

B. TTD benefits

Respondents appropriately terminated Claimant's TTD benefits in October 2020 because he reached MMI. Section 8-42-105(3)(a). To obtain additional TTD benefits after MMI, a claimant must show a worsened condition has caused a greater impact on their earning capacity. *City of Colorado Springs Disposal v. Industrial Claim Appeals Office*, 954 P.2d 677 (Colo. App. 1997). Because Claimant failed to prove a change in his MMI status, he is ineligible for additional TTD benefits.

C. Permanent total disability

A claimant is considered permanently and totally disabled if they cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of "human factors." *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant's physical condition, mental abilities, age, employment history, education, training, and the "availability of work" the claimant can perform within her commutable labor market. *Id*. Another human factor is the claimant's ability to obtain and maintain employment within their limitations. *See Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. *See e.g., Case v. The Earthgrains Co*., W.C. No. 4-541-544 (September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (January 16, 1997). If the evidence shows the claimant cannot "sustain" employment, the ALJ can find they cannot earn wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001).

As found, Claimant failed to prove he is permanently and totally disabled. As Ms. Montoya persuasively explained, Claimant can sustain employment in a variety of unskilled and semi-skilled occupations. Although Claimant's permanent restrictions, education, and work experience narrow the range of work he can perform, there are still numerous jobs in the competitive economy consistent with Claimant's limitations.

D. Whole person impairment

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "a leg at the hip joint." Section 8-42-107(2)(w). If the claimant has a functional impairment to part(s) of his body other than the "leg at the hip joint," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000). A DIME's opinions regarding "conversion" to whole person impairment are not entitled to special weight, but are merely another piece of evidence to be considered when evaluating the preponderance of evidence. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Low back pain from an altered gait can functionally impair an individual beyond the leg. *E.g*., *Abeyta v. Wackenhut Services*, W.C. No. 4-519-399 (September 16, 2004) (altered gait from claimant's knee injury caused in back pain that resulted in difficulty with sitting, standing, or walking); *Webb v. Circuit City Stores, Inc*., W.C. No. 4-467-005 (August 16, 2002) (upholding conversion of lower extremity impairment to whole person based on back pain resulting from limping). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved he suffered permanent impairment not listed on the schedule. Claimant developed low back pain from altered gait shortly after the first surgery. He received multiple types of treatment for back pain including PT, chiropractic, and an SI joint injection. Multiple providers referenced the connection between Claimant's back pain and his gait. This pain caused reduced range of motion and interferes with Claimant's ability to perform activities involving prolonged standing and walking. Additionally, the low back issues were deemed insufficient to support a separate lumbar spine rating, which further supports the determination they are merely an extension of Claimant's ankle injury. *E.g., Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004); *Abeyta v. Wackenhut Services, supra*.

E. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained noticeable disfigurement as a direct and proximate result of his industrial injury. The ALJ concludes Claimant should be awarded $1,000 for disfigurement.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on the DIME's 5% whole person rating.

2. Insurer may take credit for any PPD benefits previously paid to Claimant in this matter.

3. Insurer may also take credit for any overpaid TTD benefits, to the extent not already recouped.

4. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

5. Claimant remains at MMI.

6. Claimant's request for ankle surgery is denied and dismissed.

7. Claimant's claim for permanent total disability benefits is denied and dismissed.

8. Insurer shall pay Claimant $1,000 for disfigurement.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinions of Dr. Wallace Larson regarding causation and maximum medical improvement (MMI).

II. If Claimant established that Dr. Larson's causality and MMI opinions are clearly erroneous, whether Claimant established, by a preponderance of the evidence, that he is entitled to additional reasonable, necessary, and related medical care.

III. If Claimant overcame Dr. Larson's MMI determination, whether Claimant has established, by a preponderance of the evidence, that he is entitled to Temporary Partial Disability (TPD) benefits beginning February 25, 2021 and ongoing.

IV. Whether Respondents established, by a preponderance of the evidence that Claimant received an overpayment in Temporary Total Disability (TTD) and Permanent Partial Disability (PPD) benefits totaling $17,900.30

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Paz, the ALJ enters the following findings of fact:

Background and Claimant's Prior Injury History

1. Claimant is a "roll off" trash truck driver for Employer. He services a route that requires pick up of trash placed in large "roll off" containers. These dumpsters can contain a sundry of materials from construction debris to discarded appliances, which frequently require removal from the container before loading the dumpster onto the truck.

2. Claimant injured his low back while lifting and dropping some discarded tires over the side of a dumpster on September 19, 2018. (Clmt's. Ex. 3, p. 43). Claimant slipped off the container and fell on some rocks below. Claimant experienced severe low back pain and sought treatment through his primary care provider (PCP) who prescribed pain medication and ordered an MRI. MR imaging demonstrated disc pathology at L4 and S1. (Id. at p. 43-44). After some initial confusion regarding the compensable nature of the injuries stemming the this incident, Claimant came under the care of Dr. Cynthia Schafer who referred him to Dr. Paul Stanton who performed an L5 micro-discectomy/laminotomy to address an L4-5 extraforaminal disc protrusion abutting the L4 nerve root on October 15, 2018 (Id. at p. 43).

3. Claimant was placed at MMI for his September 19, 2018, low back injury by Dr. Schafer on May 31, 2019. Dr. Schafer assigned 21% whole person impairment of the lumbar spine based on a Table 53 rating, loss of range of motion, and sensory disturbances. (Resp. Ex., p. 167). At the time of MMI, Claimant reported had ongoing symptoms, including increased pain and numbness in his left foot and toes. (Id. at p. 166).

Claimant's January 17, 2020 Work-Related Injury

4. Approximately eight months after being placed at MMI and returning to work in full duty capacity, Claimant sustained an injury to his left shoulder while working for the Employer on January 17, 2020[1]. Liability for this injury was admitted and Claimant was referred UC Health where he was evaluated initially by Physician Assistant (PA-C), Zoe Call. (Clmt's. Ex. 4, p. 48). PA-C Call documented the mechanism of injury simply as "yanking/pulling cardboard from a compactor earlier this morning . . . with what sounds like poor body mechanics." (Id.). PA-C Call noted that there were "no other symptoms to report at this time." (Id. at p. 49). At this visit, Claimant completed a pain diagram depicting 4/10 hot burning/hammering pain in his left shoulder. (Id. at p. 53). He made no marks to depict pain anywhere in/on the low back or lower extremities. (Id.). Claimant would later assert that in addition to his left shoulder, he injured his low back as a consequence of the January 17, 2020 incident.

5. Concerning his current back symptoms, Claimant testified he developed low back and left leg pain on January 17, 2020 while attempting to loosen and pull compacted cardboard from a commercial trash dumpster equipped with a hydraulic ram that was used to compress cardboard at the end of the container. According to Claimant, he had to bend down to pull and hold a trap door open at the end of the dumpster with his left arm as he reached into the opening with his right hand/arm to forcefully yank the compacted cardboard from the trap door opening. As noted, Claimant asserts that he injured his low back in the process.

6. Claimant was evaluated by Dr. Schafer on January 21, 2020. (Clmt's. Ex. 4, p. 58). She noted that Claimant was "well-known" to her because of his previous low back injury. (Id.). She noted that four days after his January 17, 2020 accident that Claimant was reporting that he was feeling worse. (Id. at p. 59). Nonetheless, Claimant still did not make any markings on his pain chart depicting any symptoms in the low back. (Id. at p. 61). Because she was familiar with Claimant's low back condition, Dr. Schafer made a point to examine his lumbar spine, noting that "[h]is lumbar exam is more consistent with a sprain rather than a new herniated disc which was his fear." (Id. at p. 60). Dr. Schafer assessed Claimant with a lumbar sprain and referred him to physical therapy (Id.).

[1] There is some discrepancy concerning the date of injury. While Dr. Schafer and Dr. Wallace Larson, among others, report the date of injury as January 15, 2020, Respondent's Final Admissions of Liability filed March 18, 2021 and August 12, 2021 reflect that the injury occurred January 17, 2020. For purposes of this order, the ALJ adopts January 17, 2020 as the date of injury in this case.

7. Claimant completed a pain diagram on February 11, 2020 during a follow-up visit to Dr. Schafer. In this diagram, Claimant made markings depicting symptoms in the low back and bilateral legs. He specifically noted that he had right and left thigh cramping. He complained of cramping in the left calf and noted that his left toes were numb. (Clmt's. Ex. 4, p. 67).

8. Claimant returned to Dr. Schafer, earlier than scheduled, on February 20, 2020, due to worsening symptoms in his back. (Clmt's. Ex. 4, p. 71). He had been sick with an upper respiratory infection and had been coughing a lot, which was aggravating his low back symptoms. (Id.). Claimant reported 7/10 pain in the back with spasms. (Id.). Physical examination revealed "very decreased range of motion" in the lumbar spine with "[i]ncreased tone and tenderness [in the] bilateral paraspinous musculature as well as into the left gluteus medius." (Id. at p. 72). Dr. Schafer assessed lumbar sprain and left lumbar radiculitis which had been exacerbated by his upper respiratory illness and coughing (Id.).

9. Respondents challenged the relatedness of Claimant's low back symptoms and need for treatment to the January 17, 2020 incident. Consequently, the matter was scheduled for a hearing, which subsequently took place before ALJ William Edie on September 16, 2020.

10. Prior to hearing, Respondents sought the opinions of Dr. Mark Paz regarding the cause of Claimant's asserted low back pain. Dr. Paz completed an independent medical examination (IME) on May 26, 2020. As part of his IME, Dr. Paz took a history from Claimant, reviewed medical records and completed a physical examination. Following his IME, Dr. Paz issued a report dated June 15, 2020, outlining his opinions. (Resp. Ex. J, pp. 79-99). Dr. Paz concluded that Claimant's "L5-S1 broad-based posterior disc bulge with facet hypertrophy was not likely caused by the January 15, (sic) 2020, incident." Moreover, Dr. Paz concluded that this condition was not aggravated or accelerated by the cardboard pulling incident. Rather, Dr. Paz explained that the initial evaluations following the incident referenced symptomatology reported by Claimant that was limited to the left shoulder. (Resp. Ex. J, p. 87). He also noted that Dr. Schafer documented a familiarity with Claimant when the low back symptoms were first documented, suggesting that she was somehow influenced to conclude that the January 17, 2020 incident aggravated Claimant low back pain. (Id.). Finally, he notes that Dr. Schafer did not document a mechanism of injury that would support a causal link between a new or aggravated pre-existing low back condition and the January 17, 2020 work incident. Indeed, he interpreted Dr. Schafer's report to "confirm" that all of Claimant's post January 17, 2020 symptoms, including his neurological findings were related to the prior 2018 L5-S1 lumbar spine injury.

11. On August 3, 2020, Dr. Jack Rook performed an IME at the Claimant's request. Dr. Rook reviewed medical records related to Claimant's 2018 low back injury and 2020 low back injury to assess causation. Dr. Rook concluded that Claimant developed a new and distinct injury while at work on January 15, 2020, resulting in

worsening low back pain and the onset of radiculopathy symptoms in both lower extremities. (Clmt's. Ex. 15, p. 367).

12. Dr. Rook based his conclusion on the following factors:

- Claimant developed low back pain radiating down his left lower extremity while performing a physically demanding job on January 15, 2020;
- From a pathophysiological perspective, Claimant's body motions associated with pulling forces are known to place significant stress on low back spinal structures including muscles, discs, facet joints, and ligament/joint capsules;
- Claimant was able to perform his regular job duties without the need for physical restrictions before the January 15, 2020 injury;
- Claimant has not been able to return to his regular job since the January 15, 2020 injury;
- The lumbar discectomy surgery in 2018 was a success;
- The physicians that know Claimant best, Dr. Schafer and Dr. Stanton, both opine that Claimant's current increased low back pain that radiates into his lower extremities is related to the January 15, 2020 injury;
- Claimant's clinical objective examination has changed consistent with his complaints that are associated with the January 2020 injury;
- Claimant had an abnormal EMG indicating Claimant had an acute injury to his left L5 and S1 nerve roots;
- Claimant's physical examination demonstrated atrophy in his left calf, left extensor digitorum brevis, and absence of left ankle jerk.

(Clmt's. Ex. 15, p. 368).

13. Dr. Rook opined that Claimant did not demonstrate exaggerated pain behaviors. Rather, Claimant's presentation is consistent with his objective abnormalities (MRI and EMG) and physical examination. Dr. Rook opined that he did not believe Dr. Paz's conclusions are compatible with Claimant's history and review of the medical records. (Clmt's. Ex. 15, p. 368).

14. Dr. Paz performed an additional Rule 16 record review on August 11, 2020 to determine whether a request for prior authorization for an epidural steroid injection at the L5-S1 level was reasonable, necessary, and related to the work injury. (Resp. Ex. J, p. 101). Dr. Paz reiterated his opinion that the L5-S1 broad-based disc bulge and facet hypertrophy was not causally related to the January 17, 2020 incident. (Id. at p. 102). He noted that during the May 26, 2020 IME that Claimant demonstrated non-physiologic physical examination findings that were inconsistent with a lumbar

radiculopathy. (Id.). Accordingly, he concluded that Claimant's low back symptoms were non-organic in nature. (Id.). He recommended against authorization of the L5-S1 epidural steroid injection. (Id.).

The September 16, 2020 Hearing Before ALJ Edie

15. As noted, the question of whether Claimant's low back symptoms and need for treatment was related to the January 17, 2020, cardboard pulling incident was litigated before ALJ Edie on September 16, 2020. At the September 16, 2020 hearing, Claimant testified similarly regarding the mechanism of injury (MOI) and his low back complaints as he did during the instant matter.

16. At the September 16, 2020 hearing, Dr. Schafer testified Claimant was reporting a level one out of ten pain when she placed him at MMI on May 31, 2019 for his 2018 work injury. (Clmt's. Ex. 14, p. 332). She assigned no restrictions or maintenance care, and did not see Claimant again until after his January 2021 work injury. *Id.* at 332-33. When asked if Claimant reported back pain at the initial visit, Dr. Schafer stated, "Yes." (Id. at pp. 333-334). She did not examine Claimant on this date; however, she clearly cited in *her* first report that Claimant reported having back pain at the first visit. (Id. at p. 334).

17. Following the September 16, 2020 hearing, ALJ Edie determined that Claimant had sustained a compensable low back injury. He issued his Findings of Fact and Conclusions of Law on October 28, 2020 and ordered Respondents to pay for all reasonable, necessary, and related medical treatment, to include the lumbar epidural steroid injections recommended by Claimant's authorized treating provider (ATP) to cure and relieve Claimant from the effects of his low back injury. (Clmt's. Ex. 15, p. 373). As part of his order, ALJ Edie found the opinions and analyses of Claimant's ATP, Dr. Cynthia Schafer, Dr. Scott Primack and Claimant's independent medical examiner, Dr. Jack Rook, more persuasive than those of Respondents medical examiner, Dr. Mark Paz. (Id.).

18. In support of his order, ALJ Edie noted:

> Claimant had a good recovery from his 2018 back injury. Dr. Stanton's records reflect that the surgery was a success. This is corroborated by Claimant. Dr. Schafer released Claimant at MMI in May 2019 without permanent restrictions. Although Claimant had residual symptoms at MMI and beyond (hence his 21% impairment rating) Claimant returned to work and was able to perform his job duties without limitation between May of 2019 through January 14, 2020. Claimant's mechanism of injury is consistent with the symptoms he is now experiencing. To the extent that Dr. Paz differs with Dr. Schafer and Dr. Rook in this regard, the ALJ finds Drs. Schafer, Primack, and Rook more persuasive.

> Dr. Paz (and not entirely without reason) relies heavily on the timing of Claimant's belated reporting and documentation of his back symptoms in 2020. However, the ALJ does find Claimant's explanation therefor to be satisfactory – as does Dr. Schafer. The ALJ finds that Claimant did indeed suffer significant pain in his lumber region shortly after the work incident, which was temporarily overshadowed by pain in the shoulder, and confusion about the process of reporting his back issues.
>
> Of great significance is that Claimant has now had an abnormal EMG, indicating that he has an acute injury to his left side L5/S1 nerve roots. His clinically objective examination is now different as noted by Dr. Rook, and the ALJ finds it is due to this new work injury, and not merely from a natural degenerative process. Claimant no doubt went to work with a compromised lumbar region on January 15, 2020. However, he has now shown that, at a minimum, his work activities on that date aggravated his back to the point of becoming symptomatic. He now requires medical treatment to bring him back to (it is hoped) MMI. Hopefully the injections will do the trick, but he has waited long enough to find out. The ALJ finds that Claimant has shown that the need for the proposed injections is *causally related* to his work injury.

19. Following the September 16, 2020 hearing, Claimant underwent additional treatment to include an epidural steroid injection directed to the low back by Dr. Primack. (Clmt's. Ex. 1, pp. 11-12).

20. Dr. Schafer placed Claimant at MMI on February 25, 2021 for his January 17, 2021 injury. (Clmt's. Ex. 4, pp. 165-74). She assigned 12% upper extremity impairment for Claimant's left shoulder injury, which converts to 7% whole person impairment. She also provided an apportioned impairment rating for the lumbar spine. Dr. Schafer's spinal impairment included a 7% rating for Table 53 Specific Disorders, 14% impairment for abnormal range of motion and a total combined whole person impairment of 6% for neurologic dysfunction in the left lower extremity. Claimant's spinal and lower extremity (neurologic) impairments combined to yield a non-apportioned 25% whole person impairment. Dr. Schafer then apportioned Claimant's previous 21% spinal/neurologic impairment due to his 2018 low back injury from the current 25% spinal/neurologic impairment rating to reach an apportioned spinal/neurologic of 7%. Dr. Schafer then combined Claimant's 7% spinal/neurologic rating with the converted 7% whole person impairment for the left shoulder to reach a final rating of 14% whole person impairment. (Clmt's. Ex. 1, p. 12). Other than the need to continue with his home exercise/stretching program, Dr. Schafer did not recommend maintenance treatment. (Id.).

21. Respondents filed a Final Admission of Liability (FAL) admitting to the 14% impairment assigned by Dr. Schafer on March 18, 2021. (Clmt's. Ex. 1, p. 1).

Claimant objected to the FAL and sought a Division Independent Medical Examination (DIME).

22. Claimant underwent the requested DIME with Dr. Wallace Larson on July 27, 2021. (Clmt's. Ex. 2, p. 32). Dr. Larson took a history, completed review of a "large" number of records and performed a physical examination. He noted that among the issues listed for determination was "whether or not the lumbar spine condition is a work-related disorder relative to the 1/15/2020 work-related injury." (Id. at p. 35). Dr. Larson diagnosed Claimant with a left shoulder strain with subsequent need for left shoulder arthroscopy, subacromial decompression and biceps tenodesis. (Id. at p. 37). Dr. Larson agreed that Claimant had reached MMI on February 25, 2021. (Id.). He then assigned 18% scheduled impairment of the left upper extremity based on loss of range of motion. (Id. at pp. 37-38).

23. Although he indicated that a determination of whether Claimant's low back condition was related to the January 17, 2020 work incident was part of the DIME, Dr. Larson provided scant analysis as to why he determined Claimant's back condition was unrelated to the cardboard pulling incident. Rather, Dr. Larson stated simply, "The opinion from Dr. Paz that the lumbar spine is unrelated to the occupational injury is likely correct." (Clmt's. Ex. 2, p. 37). Under the "Rationale for Your Decision" portion of his DIME report, Dr. Larson is similarly cursory. He simply notes, "[Claimant] did not initially report low back pain" before adding that "[e]ven if the spinal condition where (sic) determined, for administrative purposes, to be [part of the] 1/17/2020 incident at work, no additional impairment would be assigned." Indeed, while he conducted an examination of Claimant's lower extremities and performed range of motion measurements of the lumbar spine for "documentation" purposes, Dr. Larson concluded that Claimant did not have any "ratable impairment relative to the lumbar spine as a result of the 1/17/2020 injury."

24. Based upon the evidence presented, the ALJ is persuaded that Dr. Larson relied solely on the opinion of Dr. Paz to conclude that Claimant's low back condition was not related to the January 17, 2020, cardboard pulling incident.

Respondents' August 12, 2021 Final Admission of Liability and Alleged Overpayment

25. Respondents filed a FAL admitting to Dr. Larson's opinions concerning MMI and impairment on August 12, 2021. (Clmt's. Ex. 2, p. 19). In this FAL, Respondents admitted to $3,579.97 in TTD benefits; $2,679.09 in TPD benefits; and $9,344.61 in PPD benefits. (Id.). Claimant did not challenge these amounts. In total, Respondents admitted to a combined $15,603.67 in indemnity benefits.

26. Based on the indemnity payment log, Claimant cashed checks totaling $33,503.97 in TTD benefits, TPD benefits, and PPD benefits. (Resp. Ex. P, p. 197). Based on the August 12, 2021 FAL, Respondents admitted to a combined total of $15,603.67 ($3,579.97 + $2,679.09 + $9344.61 = $15,603.67) in TTD benefits, TPD benefits, and PPD benefits. (Clmt's. Ex. 2, p. 19). The Third-Party Administrator (TPA),

Gallagher Bassett, stopped payment or voided checks totaling $6,467.04. (Resp. Ex. P, p. 197). Prior to Gallagher Bassett's time as TPA, ESIS was the assigned TPA of the claim. (Hrg.Tr. p. 66, ll. 4-9). Claimant returned checks from ESIS totaling $8,083.80. (Resp. Ex. Q). Accounting for the $33,503.97 in cashed checks minus $15,603.67 in admitted combined benefits prompted Adjuster Anderson to prepare an Amended FAL reflecting an overpayment of $17,900.30 based on TTD benefits that were paid after Claimant returned to work and PPD benefits paid beyond the rating provided by the DIME physician. (Hrg.Tr. p. 71, ll. 13-24).

27. Claimant objected to Respondents' August 12, 2021 FAL. He filed an Application for Hearing on September 9, 2021, notifying Respondents that he intended to challenge the claimed overpayment and overcome the DIME causation, MMI and impairment. As noted, the matter proceeded to hearing before this ALJ on December 28, 2021.

Dr. Paz' Subsequent Records Review

28. Prior to the December 28, 2021 hearing, Respondents requested that Dr. Paz review additional records and provide an updated report supplementing his prior opinions. Dr. Paz issued his supplemental report on November 23, 2021. (Resp. Ex. J, p. 104). In this supplemental report, Dr. Paz is critical of Dr. Schafer's conclusion that Claimant's low back condition is related to the January 17, 2020 cardboard pulling incident. Dr. Paz concluded that Dr. Schafer's "record [did] not document that the mechanism of injury, diagnosis/diagnoses, and need for treatment, [were] causally related to the January 17, 2020 incident", Accordingly, Dr. Paz opined that she did not follow the Level II Accreditation "Causation Analysis method." (Id. at p. 105). Because there is a lack of medical documentation to support low back symptoms at Claimant's initial assessment by PA Call and Dr. Schafer, Dr. Paz opined that both Dr. Schafer and Dr. Rook both erred in concluding that Claimant's low back symptoms were related to the industrial event occurred January 17, 2020. (Id.). Dr. Paz asserted that he applied the Causation Analysis method consistent with the Level II training curriculum and maintained that it was "not medically probably that the lumbar spine L5-S1 broad-based posterior disc bulge with facet hypertrophy is causally related to the January 15, 2020, incident." Nor did he believe the incident aggravated the condition. (Id. at 106).

Dr. Rook's Second IME

29. Dr. Rook performed a second IME of Claimant at the request of his counsel on November 24, 2021, to address whether the DIME had erred in the opinions expressed in his report. (Clmt's. Ex. 13, p. 311). Dr. Rook summarized his previous IME and obtained an updated medical history from Claimant. Of significance is the April 20, 2021 note from Dr. Paul Stanton, Claimant's treating surgeon. (Id. at p. 314; See also, Clmt's. Ex. 7, pp. 219-222). Dr. Stanton stated that Claimant would be a reasonable candidate for an L3 to S1 reconstruction surgery. (Clmt's. Ex. 7, p. 221).

30. After summarizing the content of Dr. Larson's DIME report, Dr. Rook opined it was clear that Dr. Larson erred regarding both causation and MMI. (Clmt's. Ex.

13, p. 317). Dr. Rook explained that, since the date of the injury, Claimant has continued to struggle with severe low back pain and left more than right lower extremity pain, distinctly different from what he experienced prior to the occupational injury. (Id.). Claimant had no problems performing his job prior to this work injury and had no restrictions performing his activities of daily living. The opposite has been true since January 15, 2020. (Id.). Moreover, Dr. Rook points out the objective changes between Claimant's 2018 pre-surgical MRI and his 2020 post-injury MRI. (Id.). The September 20, 2018 lumbar MRI showed L5-S1 disc extrusion resulting in severe left lateral recess stenosis, which would affect the left S1 nerve root. It also revealed L4-5 left extra foraminal disc protrusion abutting the exiting L4 nerve root. (Resp. Ex. N, p. 190). The February 14, 2020 MRI revealed a mild broad-based posterior disc bulge combining with facet hypertrophy to cause mild *right* and marked *left* neural foraminal narrowing and *no* stenosis. (Id.)(Emphasis added). Finally, Dr. Rook noted that Claimant had an "abnormal electrodiagnostic study consistent with [an] acute lumbar radiculopathy in [the] L5 and S1 distributions [of] the left lower extremity. (Id. at p. 318).

31. The results of Claimant's November 24, 2021 physical examination, including visible atrophy of the left calf and an absent left ankle jerk reflex response, combined with his abnormal EMG testing result, lead Dr. Rook to conclude that Claimant was not at MMI. Indeed, Dr. Rook noted, "[p]lacing a patient with an acute radiculopathy at MMI when not allowing him to follow up with his spine surgeon[2] is inappropriate and quite frankly would constitute substandard medical care." (Clmt's. Ex. 13, p. 318). Accordingly, Dr. Rook determined that Claimant was not at MMI because he had not received the "treatment recommended by his orthopedic spine surgeon for a condition that was determined to be work related by an Administrative Law Judge" (ALJ Edie) per his order of October 28, 2020.

Claimant's December 28, 2021 Hearing Testimony

32. Claimant testified at hearing on December 28, 2021 on his own behalf. He explained that his job duties required him to drive his trash truck around town and pick up dumpsters and containers with the hydraulic lift on the truck. However, before the truck could lift the dumpster, Claimant had to ensure it only contained items they were supposed to take. For example, if people had dumped televisions or refrigerators, he would have to physically remove them in order to "level out" the container in preparation for loading it onto the truck. Claimant explained the prior work-related back injury he sustained, the treatment he underwent, and his ultimate recovery. He noted that Dr. Schafer was his ATP for that claim and Dr. Stanton was his surgeon. He noted that following a fall from a dumpster in 2018, he had severe low back pain until undergoing surgery with Dr. Stanton.

33. Claimant testified that following his low back surgery, his symptoms changes dramatically. According to Claimant, he was able to sleep and was substantially more functional following his back surgery. Indeed, he testified that he

[2] Per Dr. Rook, at the time Claimant was placed at MMI, he had not had an opportunity to follow-up with Dr. Stanton regarding the efficacy of his treatment and future treatment options. (Clmt's. Ex. 13, p. 318).

was able to return to full duty work. Nonetheless, Claimant testified that he did have some residual symptoms when he was released from care, including some numbness in his left foot/toes.

34. Claimant testified that while twisting his body in an effort to forcefully yank the compressed cardboard from the dumpster, he injured his low back. According to Claimant, he told PA Call during his initial appointment that he had back pain and she told him to wait to talk to Dr. Schafer about it. Per Claimant, the only reason he did not mark that he had pain in the back on the pain diagram at that time was because he thought it would be considered "pre-existing."

The December 28, 2021 Testimony of Dr. Jack Rook

35. Dr. Rook testified at hearing in his capacity as an expert in the fields of physical medicine and rehabilitation (PM&R), pain management, and electrodiagnostic medicine. He has substantial experience performing DIMEs. Dr. Rook testified that he read the updated report from Dr. Paz and the DIME report from Dr. Larson neither of which changed the opinion he originally formed after completing his first IME on August 30, 2020. Dr. Rook agreed with the determination of ALJ Edie regarding the cause of Claimant's low back pain and the need for low back treatment. In reviewing Dr. Larson's DIME, Dr. Rook noted that Dr. Larson failed to perform a causation analysis. Rather Dr. Rook testified, "[Dr. Larson] relied, basically, on a report that was already used in litigation [that] did not sway the administrative law judge." Regardless of the prior determination, he felt Dr. Larson still did not perform the necessary causation analysis. He also felt Dr. Paz's causation analysis was severely lacking due to his overreliance on the absence of a pain diagram depicting back pain, which absence was reasonably explained by Claimant. (Hrg. Tr. 49:3 – 50:6).

36. Dr. Rook elaborated on how the EMG performed confirmed that Claimant sustained an acute injury and that this injury was not a continuation or natural progression of his prior 2018 injury. (Hrg. Tr. p. 51, ll. 3-17). Dr. Rook noted that Dr. Larson felt that Claimant's current low back symptoms and need for treatment was not related to the January 17, 2020 incident, stating simply that he would agree with the causation opinions expressed by Dr. Paz in his IME report. Accordingly, Dr. Rook opined that Dr. Larson did not perform his own causation analysis. (Hrg. Tr. p. 55, ll. 14-25).

37. Respondents contend that Dr. Rook's testimony was not credible and inconsistent with the principles of the Level II accreditation materials and the AMA Guides to the Evaluation of Permanent Impairment. According to Respondents, Dr. Rook incorrectly testified that when performing DIMEs, if an area of the body is already deemed to be part of the claim, a causation analysis is not performed. In contrast, Dr. Paz testified that when selected as a DIME physician, a causation analysis should be performed on any relevant body parts. (Depo.Tr. Dr. Paz, p. 7, ll. 23-25 and p. 8, ll. 1-15). Respondents also assert that Dr. Rook erroneously declared that Dr. Larson erred

in his causation analysis because the low back condition had already been found by ALJ Edie to be related to the work injury.

The Post-Hearing Deposition Testimony of Dr. Paz

38. Respondents took the post hearing deposition of Dr. Mark Paz who testified as a board eligible, Level II Accredited physician in internal medicine on January 14, 2022. (Depo.Tr. Dr. Paz, p. 5, ll. 13-25). Dr. Paz testified consistently with his previously authored reports on direct examination. He reiterated that "[t]he medical opinion which [he] offered was that based on the mechanism of injury, the diagnosis both preexisting and current, and the need for treatment, it was not medically probable that the lumbar spine condition was causally related to the January 17th, 2020, incident." (Depo. Tr. Dr. Paz, p. 10, ll. 1-6). Dr. Paz was asked to explain the Level II training for performing a causation analysis, to which he responded:

> So the causation analysis is fundamentally based on collecting direct history, determining the mechanism of injury. For -- as an aside, the causation analysis is referenced in each of -- most all but one of the treatment guidelines, and so that's the actual description within the treatment guidelines and in this case for the low back which establishes the approach to determining causation analysis. So it's establishing what -- the mechanism of injury, more often than not based upon the direct history provided by the patient, physical examination findings regarding the focus of discomfort, pain, injury, and then the need for treatment of those -- of that body part or parts.

(Depo. Tr. 14:2-18).

39. Dr. Paz opined that considering the direct history provided by Claimant combined with the physical examination findings and his opinion that there was no load across the lumbar spine which would have aggravated a disc bulge at L5-S1, it was not medically probable that the lumbar spine condition was causally related to or aggravated/accelerated by the work incident. (Depo.Tr. Dr. Paz, p. 9, ll. 9-25, p. 10, ll. 1-6 and p. 11, ll. 4-9).

Additional Findings of Fact

40. Based upon the evidence presented, the ALJ finds that Claimant has overcome the DIME opinions of Dr. Larson with respect to the cause of Claimant's low back pain/symptoms. Here, the totality of the evidence presented persuades the ALJ that Dr. Larson erred in concluding that Claimant's low back condition was unrelated to Claimant's January 17, 2020 industrial accident.

41. While this ALJ finds Claimant's low back pain/symptoms causally related to the January 17, 2020 work-related incident involving the removal of compressed

cardboard from the dumpster in question, the evidence presented supports a finding that Claimant was properly placed at MMI with an apportioned and converted impairment totaling 14% of the whole person and no need for maintenance medical treatment as opined by Dr. Schafer on February 25, 2021. The evidence presented persuades the ALJ that Claimant remains at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40- 101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ agrees with the prior decision of ALJ Edie to find and conclude that the medical opinions and analyses of Drs. Rook, Schafer, Stanton, and Primack are credible and more persuasive than those

of Dr. Paz and Dr. Larson. Indeed, substantial evidence was presented to support a conclusion that Dr. Paz erred in concluding that Claimant's low back pain and need for treatment is unrelated to the January 17, 2020 incident. Because the ALJ concludes that Dr. Paz incorrectly concluded that Claimant's low back condition is not related to the January 17, 2020 incident and Dr. Larson simply parroted those opinions, it is highly probable and free from serious doubt that Dr. Larson's causality opinion is similarly erroneous.

Overcoming Dr. Larson's Division IME Regarding Causation and MMI

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo.App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI or the cause of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo.App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. The question of whether the Claimant has overcome the DIME physicians findings regarding causality, MMI or permanent impairment, is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, *supra*. To prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. *Reynolds v. U.S. Airways, Inc.,* W. C. Nos. 4-352-256, 4-391-859, 4-521-484 (ICAO, May 20, 2003). Moreover, there is no requirement that the ALJ identify the precise scientific mechanism of causation if the evidence, as a whole, demonstrates causation to a reasonable degree of medical probability. *See Industrial Commission v. Riley,* 165 Colo. 586, 441 P.2d 3 (1968)(court has often sustained finding of causation where medical causes remained "shrouded in mystery.").

F. Based upon the evidence presented, the ALJ finds and concludes that, in addition to his left shoulder injury, Claimant probably aggravated the condition of his previously weakened low back while forcefully twisting from a bent over and crouched position in an effort to yank the compressed cardboard from the dumpster in question. Consistent with the determination of ALJ Edie, this ALJ is persuaded that Claimant's need for treatment, including physical therapy and the injection directed to the low back are related to this MOI. Although Dr. Paz disagrees on the basis that the described MOI

in this case placed no load across the lumbar spine, the ALJ finds this opinion and the suggestion that Claimant's low back pain/symptoms represent the natural and probable progression of a pre-existing condition unconvincing. In this case, the ALJ credits Claimant's testimony to conclude that his need to vigorously twist his entire body in order to yank/jerk material from the dumpster involved sufficient force across the low back to injure and otherwise aggravate his pre-existing lumbar spine condition. Indeed, Dr. Rook testified that the results of Claimant's MRI and electrodiagnostic study supported his conclusion that he sustained an acute and distinct injury as a consequence of the January 17, 2020 incident. (Hrg. Tr. p. 47, ll. 8-22; See also, Clmt's. Ex. 15, p. 373, ¶ 13). Moreover, the evidence presented supports a conclusion that Claimant's 2018 surgery was a success. He enjoyed a good recovery and was placed at MMI by Dr. Schafer without permanent restrictions. He returned to full duty work and was able to perform the full range of his job responsibilities between May 19, 2019 and January 17, 2020 without limitation. While he had persistent numbness in his left foot and toes following his 2018 surgery, the evidence presented is devoid of any persuasive indication that the condition of Claimant's low back was symptomatic and/or deteriorating leading up to the 2020 cardboard pulling incident. Thus, this ALJ concludes that Dr. Paz' suggestion that Claimant's back pain is related to the natural progression of a pre-existing condition is overstated. As noted by ALJ Edie, "Claimant no doubt went to work with a compromised lumbar region on January 15 (sic), 2020. However, he has now shown that, at a minimum, his work activities on that date aggravated his back to the point of becoming symptomatic." As did ALJ Edie, this ALJ has considered the remaining opinions of Dr. Paz regarding causation, including Claimant's belated reporting and documentation of symptoms. This ALJ finds Dr. Paz' concerns regarding the alleged tardy reporting of symptoms to have been addressed by Dr. Schafer and Claimant himself. Similar to ALJ Edie, this ALJ "accepts Claimant's explanation for the delay in reporting his back issues", which were "temporarily overshadowed by pain in the shoulder, and confusion about the process of reporting his back issues." Accordingly, the ALJ finds/concludes that Dr. Paz erred in concluding that Claimant's current low back pain/symptoms along with his need for low back treatment were not causally related to the January 17, 2020 work incident.

G. Based upon the evidence presented, the ALJ agrees with Claimant that regarding the cause of Claimant's back pain, Dr. Larson failed to address the objective differences observed in the multiple MRI reports or account for the acute findings on Claimant's recent electrodiagnostic study that support Dr. Rook's conclusion that Claimant suffered an acute injury to his low back. Rather, Dr. Larson, without any explanation, other than indicating that Claimant did not initially report low back pain, concluded that Dr. Paz's causation opinion was "likely" correct. Because this ALJ concludes that Dr. Paz' opinions concerning the cause of Claimant's low back pain are mistaken and highly probably incorrect and Dr. Larson simply and unmistakably adopted Dr. Paz' causality opinions without performing an independent analysis of his own, his causality opinion is equally errenous. The purpose of a DIME pursuant to § 8-42-107(8)(b) C.R.S. is for the physician to make an *independent* determination as to MMI based on their own analysis. Dr. Larson failed to provide such an analysis and

therefore erred in the completion of his DIME. Accordingly, Claimant has presented clear and convincing evidence to overcome Dr. Larson's opinions concerning causation.

H. While Dr. Larson's opinions regarding the causal relatedness of Claimant's low back pain to the January 17, 2020 incident have been overcome, the ALJ is persuaded that Claimant was properly placed at MMI by Dr. Schafer on February 25, 2021. Moreover, the evidence presented supports a finding that Claimant failed to present clear and convincing evidence that Dr. Larson's date of MMI, as adopted from Dr. Schafer, is highly probably incorrect.

I. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo.App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo.App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO, August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo.App. 1998).

J. Maximum Medical Improvement is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. In this case, the evidence supports a conclusion that Dr. Schafer placed Claimant at MMI on February 25, 2021. In her MMI report, Dr. Schafer outlined the treatment Claimant completed including left shoulder surgery, physical therapy, an epidural steroid injection and two orthopedic evaluations directed to his low back. Consequently, the ALJ is convinced that Claimant exhausted his treatment options and reached a point of maximum medical improvement. While Claimant alleged that Dr. Schafer placed him at MMI because the insurer would not pay for surgery, this is not documented anywhere in Dr. Schafer's medical records nor was any surgery ever pursued by Claimant or his providers, including Dr. Stanton. In addition, Dr. Schafer was aware of the outcome of the prior hearing and knew Respondents were ordered to pay for treatment of the low back. She noted in her medical records that the judge's order had been reviewed. Thus, the ALJ concludes that Claimant's testimony regarding the reason that Dr. Schafer placed him at MMI is, incredible, unpersuasive and highly probably incorrect.

K. Dr. Rook agreed that Claimant's left shoulder condition had reached MMI; nonetheless, he opined that the ATP and DIME physician erred in determining that the low back condition was at MMI. According to Dr. Rook, Dr. Schafer erred in placing Claimant at MMI before he returned to Dr. Stanton for follow-up. Given that, Claimant had an acute radiculopathy; Dr. Rook concluded that Dr. Schafer erred because Claimant had not been afforded the treatment, i.e. the surgery recommended by Dr. Stanton. Careful review of the record fails to support that Dr. Stanton actually requested authorization to proceed with an L3-S1 surgery as referenced by Dr. Rook as the basis for his opinion that Claimant is not at MMI. Rather, the records indicate that on April 20, 2021, Dr. Stanton sought authorization for bilateral L4-5 transforaminal

epidural steroid injection. (Clmt's. Ex. 7, p. 219). Although Dr. Stanton indicated that Claimant "would be a reasonable candidate for an L3-S1 reconstruction", he did not, contrary to Dr. Rook's suggestion, request authorization for surgery. After considering the totality of the evidence presented, including the reports of Dr. Schafer, the DIME report of Dr. Larson and the IME reports of Dr. Rook, the ALJ concludes that Claimant has failed to produce unmistakable evidence establishing that Dr. Larson's determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that the evidence presented supports a conclusion that by February 25, 2021, Claimant had exhausted the treatment options to cure and relieve him of the effects of his low back injury. The record submitted supports a conclusion that Claimant's medical progress had plateaued and that no further treatment was reasonably expected to improve his condition. Accordingly, Dr. Schafer placed Claimant at MMI and Dr. Larson agreed with this date. To the extent that Dr. Rook disagrees, this ALJ concludes that his deductions constitute a difference of opinion which does not rise to the level of clear and convincing evidence that is required to overcome Dr. Larson's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado,* W.C. No. 4-350-356 (ICAO, March 22, 2000). In this regard, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). Based upon the evidence presented, Claimant has failed to meet his required legal burden to set Dr. Larson's MMI determination aside. Because Claimant failed to overcome Dr. Larson's DIME opinion regarding MMI, this order does not address his entitlement to additional medical treatment or temporary partial disability benefits. Nonetheless, Claimant's entitlement to additional impairment must be determined because Dr. Larson's causality determination concerning the relatedness of Claimant's low back condition to the January 17, 2020 incident has been overcome.

Claimant's Entitlement to Additional Impairment

L. Where, as in this case, the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. When applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome. Rather, when the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct impairment rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAO, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAO, Sept. 16, 2002); *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). Because the evidence presented supports a conclusion that Claimant's low back condition is related to the January 17, 2020 work incident, the ALJ concludes that Dr. Larson erred in failing to rate Claimant's lumbar spine. Consequently, Dr. Larson's impairment rating has similarly been overcome.

M. Careful review of Dr. Schafer's impairment rating supports a conclusion that she properly considered and correctly apportioned Claimant's spinal impairment in this case. Indeed, the results of Claimant's imaging (MRI) and electrodiagnostic study support Dr. Schafer's conclusions that Claimant suffered impairment for specific disorders of the lumbar spine and neurologic disturbance of the left lower extremity related to the January 17, 2020 incident above that he had sustained as a consequence of his 2018 work-related injury. (Clmt's. Ex. 1, p. 12). The ALJ adopts Dr. Schafer's impairment rating to find and conclude that Claimant's overall permanent impairment related to his January 17, 2020, left shoulder and low back injuries is 12% upper extremity impairment or 7% whole person impairment combined with 2% whole person impairment for specific disorders of the lumbar spine and 15% left lower extremity, which equals 6% whole person impairment pre-apportionment. Apportioning 1% whole person impairment due to Claimant 2018 work injury from the 6% impairment for neurologic disturbance related to the January 17, 2020 work injury leaves 5% whole person impairment. Combining the various apportioned whole person impairment components of Claimant's rating related to the January 17, 2020 injuries equals a combined whole person impairment of 14% (7% whole person impairment for the left upper extremity + 2% whole person impairment for specific disorders of the lumbar spine + 5% whole person impairment for left lower sensory and motor nerve disturbance = 14% whole person impairment).

Respondents' Claimed Overpayment

N. For claims arising before January 1, 2022, "overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive. Section 8-40-201(15.5), C.R.S. *See also Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354 (Colo.App. 2009). Respondent has the burden to prove that Claimant received an overpayment. *City and County of Denver v. Industrial Claim Appeals Office,* 58 P.3d 1162 (Colo.App. 2002).

O. As noted, Respondents filed a FAL admitting to the 14% whole person impairment assigned by Dr. Schafer on March 18, 2021. (Clmt's. Ex. 1, p. 1). At the time this admission was filed, Claimant an overpayment of TTD existed in the amount of $1,270.31. (Id.). After his left shoulder surgery, Claimant was unable to return to work and Respondents began paying TTD benefits as of August 24, 2020 at a rate of $808.38 per week. (Id.; See also, Resp. Ex. P).

P. The claim was initially administered by ESIS but halfway through the claim it transferred to Gallagher Bassett. After the transfer, Gallagher Bassett was unable to stop payment on checks issued by ESIS. Thus, on the indemnity payment log, all checks issued by ESIS are marked as "cleared." There were three ESIS/CHUBB TTD checks returned to Respondents by Claimant and marked "void" that totaled $8,083.80. Though these three checks are noted as "cleared," they were not cashed by Claimant.

Q. Once Claimant returned to work, Respondents terminated TTD benefits and initiated Temporary Partial Disability (TPD) benefits. Respondents paid Claimant $2,679.09 in TPD benefits from September 24, 2020 through February 24, 2021 because Claimant was placed at MMI on February 25, 2021. (Clmt's. Ex. 1, p. 1; See also, Clmt's. Ex. P).

R. As noted above, Respondents admitted to Dr. Schafer's MMI and 14% whole person impairment rating determinations and began paying PPD benefits. After the DIME with Dr. Larson, Respondents admitted to the lower rating of 14% scheduled impairment and $9,344.61 in PPD benefits calculated as 14% x 208 x $320.90. After consideration of the checks that were returned by Claimant and stopped/voided by Respondents, Claimant was paid a total amount of $33,503.97 in combined TTD benefits, TPD benefits, and PPD benefits. *See* RHE P and Q. Based on the August 12, 2021 FAL, Respondents admitted to $15,603.67 in TTD benefits, TPD benefits, and PPD benefits. (Clmt's. Ex. 2, p. 19). Accordingly, Respondents contend that they have proven that Claimant has been overpaid in the amount of $17,900.30 ($33,503.97 paid - $15,603.67 owed equals an overpayment of $17,900.30).

S. Because Dr. Larson erred in failing to calculate Claimant's lumbar spine impairment based upon his erroneous conclusion that Claimant's low back condition was unrelated to the January 17, 2020 incident and the ALJ has adopted Dr. Schafer's February 25, 2021 apportioned impairment rating, the ALJ concludes that Respondents asserted $17,900.30 overpayment is incorrect. Based upon the evidence presented, the ALJ concludes that Respondents have proven that Claimant was overpaid $1,270.31 in TTD benefits at the time he was placed at MMI on February 25, 2021 by Dr. Schafer. (Clmt's. Ex. P). Respondents are entitled to recoup this and may offset $1,270.31 against the remaining PPD award based on Dr. Schafer's 14% whole person impairment rating as previously reflected in the March 18, 2021 FAL. (Clmt's. Ex. 1, p. 1).

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME opinions of Dr. Larson regarding causation is GRANTED. Claimant has proven, by clear and convincing evidence that Dr. Larson erred when he concluded that Claimant's low back condition was unrelated to Claimant's January 17, 2020 industrial accident.

2. Respondents shall pay PPD benefits consistent with the rating calculated by Dr. Schafer as part of her February 25, 2021 report of MMI and impairment.

3. Claimant's request to set aside the MMI determination of Dr. Larson is denied and dismissed.

4. Claimant's request for additional medical treatment, including the request for surgery is denied and dismissed. Claimant has failed to establish that he needs additional treatment to reach maximum medical improvement.

5. Claimant was properly placed at MMI by Dr. Schafer on February 25, 2021. Consequently, his request for additional TTD beginning February 25, 2021 and ongoing is denied and dismissed.

6. Respondents request to recoup the asserted overpayment in this case is amended from $17,900.30 to $1,270.31 as Dr. Larson erred in failing to rate the impairment associated with the January 17, 2020 injury to Claimant's lumbar spine. Respondents may offset the overpayment of $1,270.31 against the remaining PPD award as calculated from Dr. Schafer's February 25, 2021 impairment rating.

7. All matters not determined herein are reserved for future determination.

DATED: March 22, 2022

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, Co 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he was an employee of the putative Employer as defined by the Workers' Compensation Act at the time of his injury, and

II. Whether Respondents proved by a preponderance of the evidence that Claimant was an independent contractor.

IF CLAIMANT WAS AN EMPLOYEE, THEN:

III. Whether Claimant proved by a preponderance of the evidence that he suffered compensable injuries on July 8, 2021 while in the course and scope of his employment for Employer.

IV. Whether Claimant proved by a preponderance of the evidence that he is entitled to select his medical provider.

V. Whether Claimant proved by a preponderance of the evidence that he is entitled to medical benefits that are authorized, reasonably necessary and related to the injury.

VI. What is Claimant's average weekly wage?

VII. Whether Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability benefits.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on October 25, 2021 on issues that included compensability, medical benefits, authorized provider, average weekly wage and temporary disability benefits.

Respondents' filed a Response to Application for Hearing on November 3, 2021 listing additional issues of independent contractor, not an employee, causation and denial of authorized treating physician.

Respondents conceded that Respondents failed to issue a designated physician list in this matter.

FINDINGS OF FACT

Based on the evidence presented at the hearing, the ALJ enters the following findings of fact:

1. Claimant was 35 years of age at the time of the hearing, born on January 21, 1987. Claimant has been employed as a sheet rock/dry wall and frame worker for the past nine to ten years, and was knowledgeable and experienced in performing the job. Prior to working for Employer, Claimant was an employee of two other framing and dry wall companies performing the same kind of work he performed for Employer. Claimant did not need training when he started the job with Employer.

2. Claimant stated that he was hired to work for Employer by the foreman, who lived in the same apartment complex. However, Claimant knew the owner of the Employer business from working with him while they both worked for a prior employer.

3. When he was hired in March 2021, he was advised to show up to work at the site of a hospital by the foreman. Claimant did not meet up with the employer until a few days after he started working under the foreman's direction, who instructed him when to show up for work (at around 6:00 a.m.) and when the day was over. If they required Claimant to show up at a different time, the foreman would call him the prior evening, and would give him instructions about the change in time. The foreman would also instruct him which rooms or areas needed to be done and Claimant was not free to choose the sequence of the work or which projects to start on first. He was advised he would be paid $23.00 per hour and would work a minimum of 40 hours a week. Claimant did request from the owner an increase in wages and his hourly pay was raised to $24.00 per hour.

4. Claimant brought some of his own tools to perform the work but Employer also provided tools such as saws, sawzalls and robo saws. Employer had a tool chest where they could get the tools they needed to perform the job.

5. Claimant never owned his own company, had his own business cards and always worked for an employer who paid him hourly. He was never responsible to solicit jobs or obtain contracts. That was always Employer's responsibility. He also remembered that when he was hired, Employer asked him to fill out some paperwork, which he never did and his Employer never followed up to obtain the completed paperwork. Claimant never worked for any other employer while he was working for Employer but knew he could go work for another employer if he wished.

6. On July 8, 2021 Claimant was working on a hospital project for Employer when he was placing a corner piece in the room where he was working. He fell off a ladder, on his left side, hurting his left shoulder, arm, elbow and wrist, as well as hit his head. Claimant stated that the foreman saw him fall. He spoke with the foreman about the accident, and later that day, he spoke with the owner. Claimant advised that he was not feeling well. The owner advised him to go seek some chiropractic care or go to the hospital to seek medical attention and that Employer would pay for the costs of the medical care. Claimant was never able to communicate with Employer again as his calls went unanswered. Claimant has continued with problems with his left shoulder, elbow and wrist that have gone untreated.

7. Claimant was attended at Denver Health Medical Center/Federico Pena Family Health Center Urgent Care on July 8, 2021 by Mi Tran, M.D. with shoulder and arm pain as well as neck pain, since he hit the back of his head. Claimant reported was having pain on the later neck and left distal arm with some numbness and tingling. Dr. Tran documented that Claimant fell from a ladder at work from the height of 2.5 feet at

approximately 8:00 a.m. Upon exam, Dr. Tran found mild bony prominence of the left clavicle without dislocation or scapular winging, diffuse tenderness to palpation of left clavicle without step off, left upper extremity weakness, likely secondary to pain and limited abduction and internal rotation of left shoulder with pain elicited during both passive and active ROM. Claimant was neurovascularly intact with sensation symmetric. However he was positive for empty can test[1] and Neer's test.[2] X-ray of the left shoulder showed no fracture or dislocation. Dr. Tran stated that clinical history and exam were most likely consistent with left shoulder sprain. Dr. Tran recommended use of ice, tylenol/ibuprofen as needed and twice daily range of motion exercises. He advised that if Claimant had no improvement after 4-6 weeks, he should consider additional imaging studies such as MRI and a PT referral.

8. Dr. Tran issued a July 8, 2021 letter stating that Claimant could return to work modified duty with no lifting or vigorous activities to avoid re-injury to the left shoulder.

9. Claimant returned to DHMC Urgent Care on July 9, 2021 as a result of developing left wrist pain due to the fall the prior day. Claimant reported that he heard a crack/pop when he fell onto his left wrist when he fell. Examination by Nurse Ashley Randall showed no focal deficits but tenderness of the left ulnar wrist though no effusion or swelling and full range of motion. The x-rays showed moderate positive ulnar variance with the ulnar styloid nearly abutting the pisiform, with carpal joint spaces maintained.

10. On July 23, 2021 Claimant completed a Workers' Claim for Compensation, which stated that Claimant sustained injuries to his left elbow, wrist, shoulder, and left ankle on July 8, 2021 when he fell off a ladder, falling on his left side.

11. Claimant returned to Urgent Care on August 13, 2021 and was attended by Angela Smith, PA-C for his shoulder and left wrist injuries as Claimant reported he was not feeling better. Claimant reported he had a fall approximately one month ago from approximately two and half foot height while he was on a ladder at work. He stated since being see he had continued to wear his wrist splint without relief of his pain. He also had some type pain in his shoulder and some crepitus. He stated that his boss offered to help him with the bills for his evaluations but has not helped financially to that point. He stated he was trying to find help with Workers' Compensation. He denied any new injuries. He stated he had not had any numbness or tingling in his left upper extremity. He stated that it hurt to lift his shoulder. He stated he only periodically takes off the wrist splint. Ms. Smith obtained further wrist x-rays which did not change the prior assessment.

12. On August 16, 2021 Respondents filed an Employers' First Report of Injury noting that Claimant reported falling off a ladder and injuring his elbow, wrist, shoulder and ankle. They noted Claimant's date of hire as February 1, 2021 as a construction worker for Employer. The time of injury was 7:50 a.m. on July 8, 2021 and stated that Claimant's last day of employment was July 8, 2021. Finally, it disclosed that owner was advised of the accident on the date of the accident.

[1] Empty can test assesses the integrity of the supraspinatus muscle and tendon.
[2] Neer's test identifies possible subacromial impingement syndrome in the shoulder.

13. Respondents sent a Notice of Contest to Division and to Claimant on October 21, 2021, denying liability.

14. Claimant was evaluated by Dr. Tashof Bernton on January 6, 2022 at Respondents' request. Dr. Bernton reviewed the available medical records, took a history and performed a physical exam. On exam he found no evidence of pain behavior, tenderness over the anterior left shoulder, and limited range of motion. He had a negative empty beer can test, good strength within the range of motion demonstrated with intact sensation. With regard to the left wrist, Dr. Bernton found limitations of range of motion and pain with extension as well as over the ulnar aspect of the wrist. With regard to the left elbow,[3] Dr. Bernton stated that there was a palpable subluxation in the ulnar groove with flexion and extension of the elbow. He noted that Claimant had some diffuse tenderness to palpation of the left ankle but otherwise had a normal exam. Dr. Bernton stated that based on exam of the left shoulder, the differential diagnosis could possibly be rotator cuff tear as evidenced by the tenderness and loss of range of motion. He recommended an MRI to better assess the diagnosis. He also stated that further diagnostic testing was needed for the left wrist as TFCC or ligamentous tear were also possible but could not be detected upon exam or x-rays. He related both the left wrist and left shoulder injuries to the July 8, 2021 work related accident. He opined that the left elbow and ankle conditions were not related. He specifically cited to lack of documentation in the urgent care records for the latter mentioned conditions.

15. Employer's owner testified that he owned the business including in July 2021. Employer was a construction company specifically contracting work dry walling and framing, specifically involving commercial projects. He stated that he obtained contracts and obtained workers to perform the work that was required, but that he did not have any employees. Owner further testified that he had owned the business for four years and had always had workers' compensation insurance because the businesses that contracted with his company required the insurance despite not having any employees.

16. Owner testified that he contracted multiple workers on his project at the hospital. They were all paid though a 1099. He testified that he provided Claimant with a W-9 as he intended to send Claimant a 1099 as an independent contractor but he never received the form back from Claimant and he did not follow up to obtain the form. He stated that he never gave Claimant an employment application or an employment agreement and did not sign an exclusivity agreement. He stated that each individual was responsible to bring their own personal tools but that he provided the more expensive tools, especially the kinds of saws that cut hard materials, and hand saws. He stated that he only had experienced workers on his jobs so he did not have to provide any specific training as the workers knew their jobs.

17. Employer paid Claimant with Employer account checks in Claimant's own name but did not withdraw taxes. Owner did not know if Claimant had his own company. He did several favors for Claimant. He confirmed that he wrote the letter dated April 23, 2021 at Claimant's request, stating that Claimant was employed by Employer. He finally

[3] It is inferred that Dr. Bernton misstated the shoulder, but since he references the ulnar groove, which is at the elbow, it is assumed he simply made a clerical error, especially in light of the fact that he addressed the left shoulder first in his report.

stated that he had other workers that worked for the company and he paid them in the same manner that he paid Claimant, and all were responsible for paying their own taxes. During the period of March through July 2021 he had eight workers on his team and would tell them when to show up to work, would give them a schedule from 6 a.m. to 2:30 p.m., though sometimes would have to go in earlier. He oversaw the work being performed because he wanted his company to produce a good product but he was not concerned as he only had skilled workers that knew what they were doing. Owner agreed that he would direct workers where to show up and when, what job had to be done, in what order and the workers were not free to come and go as they pleased.

18. From the paychecks provided it is determined that the first two pay periods ending March 26, 2021 and April 2, 2021, Claimant was earning $23.00 per hour. Beginning April 3, 2021 Claimant started to earn $24.00 per hour. In calculating the fair approximation of Claimant's average weekly wage, wages from April 3, 2021 through July 2, 2021 were considered for a period of thirteen weeks and total wages earned of $12,272.00. By dividing the total earned by 13 weeks provides an average weekly wage of $944.00. As found, the fair approximation of Claimant's average weekly wage is $944.00 per week.

19. Claimant was able to return to modified work in October and November 2021 installing Christmas lights. Claimant testified that he worked with approximately 20 other workers. He was only obliged to pass the lights to his coworkers and the job did not involve any overhead activity.

20. Dr. Bernton testified by deposition regarding causation and his opinions based on his understanding of the *AMA Guides* as well as the accreditation materials. He stated that he presumed, if you have a traumatic injury like a fracture, that the ulnar nerve injury could change the structure of the ulnar nerve in the groove at the elbow, and that a subluxing ulnar nerve is generally caused by repetitive motion problems. He further testified that he saw no evidence in the record that Claimant had injured his left ankle but that Claimant has a probable Morton's neuroma of the left foot.

21. Claimant was an employee of employer, despite owner's understanding regarding his employees' employment. Claimant performed services for Employer. Claimant was under Employer's control, who determined his hours and wages, which work he was to be performed, when and where, and Employer was specifically required to hold insurance that covered his employees. As found, Claimant has shown that Claimant was an employee.

22. The totality of the evidence shows that Claimant was called in by Employers' foreman, and was hired to perform work at Employer's discretion. Hours were changed at the whim of Employer, who set the terms of the employment contract, as evidenced by Employer's determining Claimant's hourly pay rate and had the discretion to change that rate, upon Claimant's request. Claimant did not set his pay rate. Employer operated a drywall business, obtained contracts and employees to carry out the contracts. Claimant did not hold himself out as an independent contractor nor did he sign an independent contractor agreement. Claimant did not have cards or a business name or company and had always worked for other employers for the last nine to ten year prior to the injury. There was no evidence that Claimant had his own liability insurance nor that he took on

any particular risk in acquiring the work. He was not responsible for the work and Employer acknowledged that Claimant was supervised, could not come and go as he pleased and that Claimant was assigned the work he performed. While there are some factors that might tend to indicate that Claimant could be an independent contractor, such as his ability to seek other work or limited training, they were not persuasive. As found, Respondents have failed to show that Claimant was an independent contractor.

23. On July 8, 2021 Claimant fell off a ladder onto his left side, injuring himself. Claimant reported the injury to his employer and Employer recommended Claimant seek medical attention and Employer would take care of the costs of the medical care. As found, Claimant has shown by a preponderance of the evidence that Claimant was injured within the course and scope of his employment with Employer on July 8, 2021 when he fell off a ladder onto his left side.

24. Claimant reported to the Denver Health Medical Center/Federico Pena Family Health Center Urgent Care staff on July 8, 2021 with complaints of shoulder, arm and neck pain. While the urgent care staff concentrated on only the shoulder symptoms, the records note that Claimant made the complaints and the DHMC staff differentiated the shoulder from the arm. Claimant was immediately placed in a wrist brace the following day, which he continued to utilize for over a month subsequent to the work related injury. It is found that Claimant has shown that the neck, left shoulder, left arm, elbow and wrist conditions are proximately caused by the July 8, 2021 fall from the ladder while at work. Further, Claimant has failed to show that the left ankle was injured during the fall. As found, Claimant has shown by a preponderance of the evidence that the July 8, 2021 fall caused Claimant's injuries to his neck and left upper extremity including his shoulder, elbow and wrist.

25. Claimant stated that his employer designated no provider. As found, the right to select an authorized treating physician has passed to Claimant.

26. As found, Dr. Tran released Claimant to modified work on July 8, 2021 with restrictions of no lifting or vigorous activities. Nothing in the records indicates that Claimant has been released to full duty. In fact, Dr. Bernton stated that he would not know what restrictions, if any, were appropriate until the diagnostic testing took place to assess the extent of the injuries.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Employee or Independent Contractor Status

Pursuant to Sec. 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for

performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Whether a worker is an independent contractor "is a factual determination for resolution by the ALJ." *Nelson v. Indus. Claim Appeals Office,* 981 P.2d 210, 213 (Colo. App. 1998). If a claimant establishes he performed services for pay, the burden shifts to the employer to prove the claimant was an independent contractor. *Stampados v. Colorado D & S Enterprises*, 833 P.2d 815 (Colo. App. 1992); *Almanza v. W.Y.B. d/b/a What's Your Beef*, W.C. No. 4-489-774 (April 16, 2002).

As found, Claimant has established by a preponderance of the evidence that he provided services to Employer working as a framer and drywall worker as hired by Employer and was paid hourly for his services. Thus, Claimant is presumed to be an employee of Employer under Sec. 8-40-202 (2)(a), C.R.S.

Nonetheless, a putative employer may establish a presumed employee is an independent contractor by proving the presence of some or all of the nine criteria enumerated in Sec. 8-40-202(2)(b)(II), C.R.S. *See* Nelson *v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in Sec. 8-40-202(2)(a), C.R.S.; see *Indus. Claim Apps. Office v. Softrock Geological Services, Inc*., 325 P.3d 560 (Colo. 2014). Section 8-40-202 (2)(b)(II), identifies the following nine criteria that must be shown "to prove independence." These nine criteria are that the putative employer must not:

> (A) Require the individual to work exclusively for the person for whom services are performed; except that the individual may choose to work exclusively for such person for a finite period of time specified in the document;
>
> (B) Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;
>
> (C) Pay a salary or at an hourly rate instead of at a fixed or contract rate;
>
> (D) Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;
>
> (E) Provide more than minimal training for the individual;
>
> (F) Provide tools or benefits to the individual; except that materials and equipment may be supplied;
>
> (G) Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;
>
> (H) Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

(I) Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession, or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

As found, the evidence at hearing established that Claimant was not "customarily engaged in an independent trade, occupation, profession or business related to the services performed." Claimant's testimony credibly established he had no prior experience in obtaining contracts, working for himself or performing any business related matters. Claimant persuasively testified that he was called in by Employer's foreman, was told where to show up, the time and how much he would be paid. Employer supervised Claimant's work and oversaw the actual work and instructed Claimant as to how the work should be performed, including in what order. While, as an experience dry wall worker, he may have required no training, Claimant was still advised where to begin, what work would be performed any given day and what the quality of the work he was required to accomplish. Employer established "quality standards" for Claimant. Claimant did not set the quality standards.

Employer maintained the right to terminate Claimant's work at any time, without a violation and without cause or liability. Employer paid Claimant personally instead of making checks payable to a trade or business name. Although Employer did not require Claimant to work exclusively for Employer and provided only some of the tools needed to accomplish the job, the ALJ finds that these factors are significantly outweighed by the existence of other factors enumerated in § 8-40-202(2)(b)(II), C.R.S.

Based on the totality of the evidence, the ALJ finds and concludes that Claimant was not "customarily engaged in an independent trade, occupation, profession or business related to the services performed" and was not ""free from control and direction in the performance of the services, both under the contract for performance of service and in fact" as required by § 8-40-202 (2)(a), C.R.S. As found, Employer dictated the time and location of performance, the type of performance, the quality of the work, and work hours. The evidence established Claimant's work hours were not negotiated. Instead, Employer dictated the days and hours Claimant worked, and Employer was at liberty to change them at a moment's notice. Respondents have failed to prove by a preponderance of the evidence that Claimant was not an "employee" within the meaning of the Colorado Workers' Compensation Act. The ALJ finds that the above facts indicate that Claimant was not "customarily engaged in an independent trade, occupation, profession or business related to the services performed" and was not ""free from control

and direction in the performance of the services, both under the contract for performance of service and in fact" as set by § 8-40-202 (2)(a), C.R.S.

The analysis in *Softrock* reflects that the ALJ must look not only at the nine factors to discern customary engagement in an independent business but must also examine other factors involving "the nature of the working relationship." *Id*. Also see *Pella Windows & Doors, Inc. v. Indus. Claim Apps. Office*, 458 P.3d 128 (Colo. App. 2020). The above factors were expanded in *Industrial Claim Appeals Office v. Softrock Geological Services, Inc., supra*, to include whether the individual had an independent business card, listing, address, or telephone; whether there was a financial investment at risk of suffering a loss on the project; whether the individual used his or her own equipment; whether the individual set the price for performing the project; whether the individual employed others to complete the project; and whether the individual carried liability insurance. These factors, along with any other information relevant to the nature of the work and the relationship between the alleged employer and the individual, expand the ways to consider whether an individual is an employee or an independent contractor. As found, a significant number (but not all) of these factors existed in the relationship between Employer and Claimant. Specifically, Claimant did not own a business, nor did Claimant have a financial investment at risk, he did not set the price for performing the work, nor employed others to complete the work, and he did not carry liability insurance. To the contrary, it was employer that had the business, carried insurance, had control over the negotiated price of the project and controlled how much Claimant would be paid for the hourly work performed and Employer paid Claimant under his own name by company checks. There is no persuasive evidence Claimant was free from direction and control in the performance of service to Employer or was customarily engaged in an independent trade or business. As found, Respondents failed to show that Claimant was an independent contractor by a preponderance of the evidence and Claimant is found to be an employee of Employer. Therefore, Respondents are liable for any compensable work related injuries flowing as a consequent of the employment.

C. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is

narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

As found, Claimant was injured in the course and scope of his employment with Employer on July 8, 2021 when he was installing a metal corner piece while standing on a ladder, and fell off, landing on his left side, hitting his head, proximately causing neck, left shoulder, left arm/elbow and left wrist injuries. While there is evidence to the contrary, this ALJ finds persuasive that both Claimant and Employer reported in the initial claim reports that Claimant injured his left elbow. Further, there is no credible evidence that Claimant had a preexisting left elbow injury. Claimant has proven by a preponderance of the evidence that he sustained a compensable work related injury on July 8, 2021 in the course and scope of his employment working for Employer.

D. Right to select a treating physician

Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). Since Claimant was not provide a list of providers, he was seen only by DHMC Urgent care. As found, Employer never referred Claimant to a medical

provider to treat the injuries. Accordingly, the right of selection passed to Claimant. Because Claimant has not yet designated a physician regarding his injuries, he may now see a doctor of his choice.

E. Medical Benefits

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc*., W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002). As found, Claimant has proven by a preponderance of the evidence that Claimant had no access to medical care other than through DHMC Urgent Care. Claimant was attended by the urgent care staff with regard to the multiple injuries but no continuing treatment was established. Claimant has shown that DHMC providers were authorized as emergent care in his matter. Further, Dr. Bernton recommended MRIs of the shoulder and wrist, both of which are shown to be reasonably necessary and related to the July 8, 2021 work related injury. Finally, Dr. Tran stated if Claimant had no improvement after 4-6 weeks, he should consider additional imaging studies such as MRI and a PT referral. As found, Claimant has continued with complaints regarding the upper extremity and is entitled to ongoing medical care. Claimant has shown by a preponderance of the evidence that he is entitled to a general award of reasonably necessary medical care flowing a natural consequence from the compensable injuries of July 8, 2021.

F. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). In calculating the fair approximation of Claimant's average weekly wage, wages were considered from April 3, 2021 through July 2, 2021, a period of thirteen weeks, giving total wages earned of $12,272.00. By

dividing the total earned by the 13 weeks provides an average weekly wage of $944.00. As found, the fair approximation of Claimant's average weekly wage is $944.00 per week.

G. Temporary disability benefits

A disabled claimant is entitled to temporary total disability (TTD) benefits if they miss more than three days of work. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. If a work-related injury contributes "to some degree" to a claimant's wage loss, the claimant is entitled to temporary total disability benefits. *Id*. at 548. "Temporary disability benefits are precluded only when the work-related injury plays no part in the subsequent wage loss. Therefore, if the injury contributed in part to the wage loss, temporary total disability benefits can be denied, suspended, or terminated only if one of the four statutory factors in § 8-42-105(3) is satisfied." *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209, 1210-11 (Colo. App. 1996). Returning to work is one criteria for terminating TTD benefits. Section 8-42-105(3)(b), C.R.S. The persuasive evidence shows Claimant was disabled by the injury because he could not use his left upper extremity without work limitations for work tasks pursuant to Dr. Tran's restriction letter. As found, Claimant is entitled to TTD benefits beginning July 9, 2021.

However, there was credible evidence that Claimant performed some level of work in October and November, 2021. Therefore, Claimant may only be entitled to temporary partial disability benefits for those periods of time he worked. The record is incomplete and the wages for this period were not in evidence. Therefore, for those time periods Claimant worked, he would not be entitled to TTD.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant is an employee of Employer.

2. Claimant sustained compensable work related injuries on July 8, 2021 in the course and scope of his employment with Employer.

3. Claimant sustained injuries to his neck and left upper extremity including his shoulder, elbow and wrist on July 8, 2021 or as a sequelae of the injuries.

4. Selection of the authorized treating provider passed to the Claimant. Within 30 days of this order Claimant shall provide notice to Respondents of Claimant's choice of physician.

5. Respondents are liable for authorized, reasonably necessary and related medical care for Claimant's neck and upper extremity injuries to cure and relieve Claimant from the effects of his July 8, 2021 work related injury, including the DHMC Urgent Care visits.

6. Claimant's average weekly wage is $944.00 per week, providing a temporary total disability benefits rate of $629.33.

7. Respondents shall file an admission of liability paying Claimant temporary total disability benefits beginning as of July 9, 2021 until terminated by law. Respondents may take credit for any periods of time when Claimant was working a modified job.

8. Within 20 days of the date of this order, Claimant shall provide wage records detailing his wages for any time periods worked, if any exist, or an affidavit summarizing earned wages for any periods subsequent to July, 2021 to the present.

9. Respondents shall pay interests at the statutory rate of eight percent on all benefits that were not paid when due.

10. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-170-976-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Dr. Eric Young is an authorized treating physician.

II. Whether Claimant has proven by a preponderance of the evidence that the right knee surgery underwent by Claimant on October 15, 2021, is medically reasonable, necessary, and causally related to the work injury on April 12, 2021.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On April 12, 2021, Claimant was kneeling or squatting down to work on a screen door. When he rose from that position to stand up, he felt two pops in his right knee. Claimant's knee continued to be painful, and the issues did not go away.
2. Respondents ultimately admitted liability for the claim.
3. Claimant had prior knee surgery on his right knee in 2007. *Tr*. at 20, ¶10-13. But Claimant has had no discomfort or problems involving his right knee from 2007 up until his work injury. *Id*., ¶19-21.
4. Claimant was referred to Concentra by Respondents. *Id*., ¶7-8.
5. On April 13, 2021, Claimant was seen at Concentra by Keith Meier, NP. NP Meier checked 'yes,' that his objective findings were consistent with history and/or work-related mechanism of injury/illness. Exhibit 1, page 159. Claimant reported that he was squatting to fix a screen at work, and when he stood up, he felt a pop in his right knee accompanied by pain. NP Meier noted Claimant was limping and had positive findings to a lateral Apley's Grind test and lateral McMurray test. Claimant was assessed with a strain of his right knee, and an MRI was ordered.
6. On April 16, 2021, Claimant was seen at Concentra by Linda Young, M.D. Dr. Young noted that 'yes,' her objective findings were consistent with history and/or work-related mechanism of injury/illness. Exhibit 1, page 148. Claimant had not yet had an MRI and was still complaining of tightness and pain in his right knee. Dr. Young's physical examination noted tenderness, pain, decreased range of motion, and positive lateral Apley's grind test and lateral McMurray test. Claimant was to be seen after his MRI.
7. On April 23, 2021, Claimant was seen at Concentra by NP Meier who continued to believe that Claimant's injury was work related. Exhibit 1, page 136. It was noted that NP Meier was requesting an MRI of the right knee after Respondents had

denied his first request for a right knee MRI. Claimant was continuing to complain of pain and stiffness in his right knee, with an increase in swelling.

8. On May 3, 2021, Claimant was seen at Concentra by NP Meier. No MRI had occurred yet, and Claimant was referred for physical therapy. Exhibit 1, page 126.

9. On May 13, 2021, Claimant was seen at Concentra by Dr. Jeffrey Baker. Dr. Baker believed that Claimant's injury was work related. Exhibit 1, page 103. Claimant reported no improvement in his knee. Claimant's MRI continued to be denied.

10. On June 3, 2021, after failing conservative care, Claimant underwent an MRI of his right knee. The impression of the MRI was: Complex medial and lateral meniscal tears and tricompartmental partial-thickness chondral loss. Exhibit 1, page 92-93.

11. On June 3, 2021, Claimant was seen at Concentra by Dr. Baker. Dr. Baker continued to believe Claimant's injury was work related. Exhibit 1, page 90. It would seem Dr. Baker did not yet have the MRI results from that day.

12. On June 4, 2021, Claimant was seen at Concentra by PA Toth, who also concluded that Claimant's injury was work related. Exhibit 1, page 76. Claimant's MRI results were reviewed, and Claimant was referred to an orthopedic specialist, Dr. Schnell.

13. On June 7, 2021, Claimant was seen at Concentra by Dr. Lucas Schnell. Dr. Schnell noted that it was his opinion that Claimant's injury was work related. Exhibit 1, page 71. Claimant noted his history of past knee injuries, but that he had been doing well before this work injury. Dr. Schnell reviewed Claimant's recent MRI results, and Dr. Schnell noted Claimant's complex multidirectional posterior horn medial meniscus tear, and undersurface tear of the lateral meniscus body with lateral extrusion. It was Dr. Schnell's recommendation that Claimant undergo right knee arthroscopic partial medial and lateral meniscectomies and chondroplasty.

14. On June 15, 2021, Aaron Morgenstein, M.D., reviewed the surgery recommendation made by Dr. Schnell. Dr. Morgenstein concluded that the surgery was not reasonable and necessary because in his opinion, surgery was not indicated under the Colorado Medical Treatment Guidelines. Dr. Morgenstein concluded that the surgery was not reasonable and necessary because Claimant had not undergone any injections and Claimant had significant degeneration and no clear mechanical symptoms. As a result, Dr. Morgenstein concluded the surgery was not reasonable and necessary for medical reasons. See Exhibit G, pages 76-77.

15. On June 30, 2021, Claimant was seen by Dr. Baker at Concentra. Dr. Baker continued to believe that Claimant's injury was work related. Exhibit 1, page 60. Claimant noted that the surgery recommended by Dr. Schnell was denied by Respondents and continued to complain of right knee symptoms. It was suggested that Claimant go back to Dr. Schnell for consideration of a right knee injection.

16. On July 19, 2021, Claimant was again evaluated by Dr. Schnell. Dr. Schnell noted that "I discussed with [Claimant] that I think it is unfortunate that this surgery has been denied. He has failed all conservative measures and I think he would benefit from arthroscopic partial medial and lateral meniscectomies with chondroplasty." Since surgery was denied, Dr. Schell did not provide the surgery, but did provide an intra-articular steroid injection. Exhibit 1, page 42 and Exhibit M, page 249.

17. On July 26, 2021, Claimant was seen at Concentra by Dr. Baker. Dr. Baker continued to believe that Claimant's injury was work-related. Exhibit 1, page 32. Claimant complained that his right knee was getting worse. It was noted that it was recommended Claimant undergo surgery, but the surgery was denied. Claimant was released from care by Dr. Schnell because the surgery continued to be denied. Claimant was referred for additional physical therapy, but Dr. Baker noted that Claimant continued to need surgery for his knee. Exhibit 1, pages 32-36.

18. On August 17, 2021, Claimant was seen by Dr. Baker at Concentra. Dr. Baker referred Claimant for an impairment rating and case closure but noted "the patient does need surgery but it has been denied." Exhibit 1, page 23.

19. On August 24, 2021, Claimant was seen at Concentra by Dr. Baker. It was noted that since the surgery was denied, there was nothing further that could be done for Claimant. Therefore, he placed Claimant at MMI and provided him an impairment rating. Exhibit 1, pages 3-7.

20. Because of the denial of surgery, Drs. Baker and Schnell refused to continue treating Claimant based on non-medical reasons.

21. On September 28, 2021, and because Dr. Schnell refused to operate on Claimant and provide additional medical treatment for non-medical reasons – the denial of surgery - Claimant chose to treat with Dr. Eric Young – a surgeon. Claimant was seen by Dr. Young and he obtained a history, performed a physical examination, and reviewed Claimant's MRI. Dr. Young concluded that Claimant would benefit from a right knee arthroscopy anticipating medial and lateral meniscectomy. He also indicated that evaluation of the joint surfaces could also be made at that time. Exhibit 2, page 173. As a result, surgery was scheduled.

22. On October 11, 2021, Claimant requested to change his authorized treating physician to Dr. Eric Young and Dr. Young requested the proposed knee surgery be authorized. *Resp. Ex.* N at 0001.

23. On October 15, 2021, before Claimant or Dr. Young received the denial of changing physicians and the denial of the proposed knee surgery from Respondents, Claimant underwent the surgery without prior authorization by Respondents. *Tr*. at 17, ¶9.

24. On October 19, 2021, Respondents denied the request for surgery and Claimant's request to change physicians to Dr. Young. The request for surgery was denied for non-medical reasons because Dr. Young was not an authorized provider. Exhibit N, pages 296-299.

25. Since the knee surgery, Claimant's pain and disability have abated and Claimant has been able to return to work and perform his regular job duties. Thus, the October 15, 2021, knee surgery cured and relieved Claimant from the effects of his work injury.

26. On December 14, 2021, Respondents had Dr. O'Brien perform a medical records review. *Resp. Ex*. D at 0001

27. In his report, he concluded that there was no mechanism of injury substantial enough to cause new tissue breakage or yielding, i.e., an injury, to Claimant's

meniscus. *Id*. at 0004. Instead, he concluded that Claimant's knee pain is due to Claimant's underlying arthritis that just happened to start hurting while Claimant was at work. Despite such conclusion, he fails to adequately and persuasively explain why Claimant did not have disabling pain before the accident and after the accident had disabling pain that did not abate until Claimant had surgery. Overall, the ALJ does not find Dr. O'Brien's opinion that Claimant did not suffer a compensable injury to be persuasive.

28. Dr. O'Brien also stated that the MRI was overinterpreted by Dr. Young and Dr. Schnell and that there was no evidence of an acute injury to the medial or lateral meniscus. *Id*. at 0005. The ALJ finds that Dr. O'Brien's attempt to negate the MRI findings - which shows a meniscal injury – is an attempt to disregard evidence that does not support his conclusions. As a result, the ALJ finds that Dr. O'Brien's rejection of the MRI findings shows a genuine bias against finding Claimant suffered a compensable injury for which Claimant requires medical treatment.

29. Dr. O'Brien also concluded that the surgery recommended by Dr. Young would fail because the meniscal findings on which they are basing their recommendation to proceed with surgery is not the pain generator. Thus, according to Dr. O'Brien, removing a portion of the damaged meniscal tissue will not relive Claimant's pain. However, despite Dr. O'Brien's opinion that the meniscus was not the pain generator, Claimant underwent the surgery to repair his meniscus and such surgery did relieve Claimant's pain. As result, the ALJ finds that Dr. O'Brien's premise that Claimant did not suffer a meniscal injury during the accident is negated by the positive outcome of Claimant's surgery.

30. Dr. O'Brien discussed several sources of orthopedic literature that show that osteoarthritic knee pain should not be treated with arthroscopic intervention. *Id*. at 0007. He did not, however, provide copies of the literature on which he based his opinion. Plus, despite the citation of such literature, the ALJ finds that Claimant had the surgery to relieve him from the effects of an acute injury to his meniscus and not to treat his arthritis.

31. Through his testimony, Dr. O'Brien also elaborated on his expert medical opinions. He stated that in his practice, he would not recommend a knee arthroscopy in patients 45-years-old or older with underlying arthritis as the surgery would likely be more harmful than beneficial. *Tr*. at 25, ¶19-23. He explained that in this group of patients, he would recommend other modalities while waiting on a total knee replacement. *Tr*. at 26, ¶1. Despite this testimony, Claimant had the surgery in October of 2021, and such surgery has provided pain relief thus showing that at least at this time, the surgery was reasonable and necessary to cure and relieve Claimant from the effects of his work injury.

32. Dr. O'Brien also testified that he understood the mechanism of injury in this claim to be the act of kneeling and arising with associated pain and popping. *Tr*. at 27, ¶18-20. He then testified that arthritis is a preexisting condition and that it was clearly evident that Claimant had arthritis in his knees in his initial x-rays. *Tr.* at 29, ¶3-6. The arthritis caused diseased cartilage which resulted in bone approaching bone. *Id.*, ¶12-15. Despite Claimant having arthritis in his knee, Claimant's underlying

condition was asymptomatic before the accident and symptomatic and in need of treatment after the accident which caused Claimant's symptoms to develop at that time and necessitated the need for medical treatment.

33. Dr. O'Brien also testified that Claimant's injury was a natural progression of his preexisting degenerative arthritic condition. *Tr*. at 30, ¶5-10. He stated that this is the way arthritic knees act when a simple activity such as kneeling and arising is associated with noises like popping or symptoms of pain. *Id*., ¶10-12. He said that these activities are simply not traumatic enough to result in new tearing of tissue, and it just the way an arthritic knee expresses itself. *Id*., ¶14-18. The ALJ, however, also does not find this conclusion to be persuasive. Again, Claimant was asymptomatic before the work incident and became symptomatic immediately after the work incident – and the symptoms never abated until he had the surgery recommend and performed by Dr. Young.

34. Dr. O'Brien also testified that the noise of popping by itself does not signify that an injury occurred. *Id*., ¶22-23. He stated that arthritic joints have irregular surfaces that rub against each other that can cause a popping noise as an expression of the arthritis itself. *Tr*. at 31, ¶2-11. He added that arthritic joints, in almost all cases, make noise. *Id*., ¶13 and that its absence would be unusual. *Id*., ¶13, ¶16. Again, as for this conclusion, Dr. O'Brien appears to dismiss the fact that Claimant did not just experience popping due to the work accident, he experienced popping with the immediate onset of disabling pain which did not stop until he had surgery.

35. Based on the findings above, the ALJ does not find the opinions of Dr. O'Brien to be persuasive.

36. The ALJ does, however, find the opinions of Claimant's treating providers that his condition is work related and that he needs surgery to be persuasive because their opinions are supported by Claimant's statements to his providers, their physical findings, Claimant's medical records, and his improvement after the surgery.

Ultimate Findings

37. Claimant suffered an acute injury to his meniscus that is causally related to his work duties.

38. Due to his work injury – a torn meniscus - Claimant underwent conservative medical treatment that failed to relieve him from the effects of his work injury.

39. Dr. Schnell recommended surgery that was reasonable and necessary to cure and relieve Claimant from the effects of his work injury.

40. The surgery recommended by Dr. Schnell, an authorized treating physician, was denied based on the medical reasons outlined by Dr. Morgenstein. Based on the denial, Dr. Schnell refused to perform the surgery. Thus, he refused to provide additional medical treatment for non-medical reasons.

41. Because Dr. Schnell refused to provide additional medical treatment for non-medical reasons, the right of selection passed to Claimant and Claimant selected Dr. Young to treat him for his work-related injury. As a result, Dr. Young is an authorized provider. After Claimant selected to treat with Dr. Young, Claimant underwent knee

surgery with Dr. Young.

42. The surgery recommended and performed by Dr. Young was reasonably necessary and causally related to treat Claimant from the effects of his work injury.

43. The surgery performed by Dr. Young cured and relieved Claimant from the effects of his work injury.

44. Because the surgery was reasonably necessary and causally related to the industrial injury, and performed by an authorized provider, Respondents are liable for the surgery and associated medical treatment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential*

Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that Dr. Eric Young is an authorized treating physician.

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for providing treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

If the designated physician refuses to treat for non-medical reasons, such as compensability has not been established, the right of selection passes to Claimant. Section 8-43-404(5)(a)(I)(A) implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. See *Ruybal v. University Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988). If Respondents timely designate a physician and the physician provides medical treatment in a timely manner in the first instance, the right of selection passes to the Claimant if the physician refuses to treat the Claimant for non-medical reasons. Whether an authorized physician has refused to provide treatment for non-medical reasons is a question of fact for the ALJ. *Ruybal v. University of Colorado Health Sciences Ctr*., 768 P.2d 1259 (Colo. App. 1988); *Lesso v. McDonalds*, W.C. No. 4-915-708-01 (ICAO, Apr. 21, 2014).

Drs. Baker and Schnell refused to continue treating Claimant because authorization for the knee surgery was denied. Therefore, they refused to treat Claimant for non-medical reasons. As a result, the right to select a treating physician passed to Claimant and Claimant chose Dr. Young.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that the right of selection passed to Claimant and that he had the right to select Dr. Young as an authorized treating physician and did so. As a result, Dr. Young is an authorized treating physician.

II. Whether Claimant has proven by a preponderance of the evidence that the right knee surgery underwent by Claimant on October 15, 2021, is medically reasonable, necessary, and causally related to the work injury on April 12, 2021.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). See also: Section 8-43-201(3), C.R.S.

Immediately prior to squatting down to work on a screen, Claimant's knee was asymptomatic. He was having no problems with his knee, and it was pain free. Claimant, however, bent over to perform a work function, and when standing up felt two

pops in his knee and then had the immediate onset of pain and disability. Thereafter, an MRI demonstrated a torn meniscus.

Every treating provider that issued an opinion on relatedness all said the same thing- they believed the injury was work related. Dr. Baker, Dr. Schnell, PA Toth, and NP Meier all believed and affirmatively stated that the injury was work related. No treating doctor in this claim contested that Claimant's knee symptoms and need for treatment was work related. The only doctor that had a negative opinion or issue with the injury and proposed surgery was Respondents' expert, Dr. O'Brien. However, as found, the ALJ did not find Dr. O'Brien's opinions to be persuasive. The ALJ does, however, credit the opinions of the other medical providers who concluded that Claimant's torn meniscus was work related. As a result, the ALJ finds that Claimant's torn meniscus was caused by his work activities.

As found, the onset of Claimant's knee pain and need for medical treatment was his work incident when he suffered a torn meniscus. Drs. Schnell and Young recommended knee surgery to repair Claimant's torn meniscus to decrease his pain and increase his function. Claimant ultimately had the surgery. The surgery decreased Claimant's pain and allowed Claimant to return to full duty. At no point until after the knee surgery did Claimant's knee pain and disability go away. While Claimant did have preexisting arthritis in his right knee, it was the work accident that caused Claimant to tear his meniscus and develop knee pain and necessitated the need for medical treatment in the form of surgery – which successfully reduced his pain and allowed Claimant to return to work. As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that the knee surgery performed by Dr. Young was reasonable, necessary, and causally related to his industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Dr. Young is an authorized treating provider.
2. The surgery performed by Dr. Young is reasonably necessary and causally related to Claimant's work injury. Therefore, Respondents shall pay for the surgery performed by Dr. Young – subject to the Colorado medical fee schedule.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 25, 2022.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant proved, by a preponderance of the evidence, an entitlement to temporary disability benefits.

2. Whether Respondents proved by a preponderance of the evidence that Claimant was responsible for termination of his employment on September 2, 2021, and the wage loss resulting from his termination.

3. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 39-year-old man who was employed by Employer as a night fleet fueler. Claimant's job duties included driving a fuel truck to various job sites and fueling vehicles at those sites. Claimant's job required him to carry a fueling hose from the fuel truck to other vehicles, climb ladders while carrying a fueling hose to reach the other vehicle's fuel tank. The fuel hose weighs more than ten pounds, and in performing his job, Claimant was required to drag or carry the hose up a ladder, and reach overhead with the hose, and reach his arm away from his body. Claimant's regular work hours were Tuesday through Saturday, from approximately 3:00 to 4:00 p.m. until after midnight.

2. During the night of August 24, 2021, Claimant sustained a compensable injury arising out of the course of his employment with Employer when he fell from a ladder while working to refuel a vehicle.

3. Claimant reported his injury to Employer that night and was advised to contact his supervisor, [Redacted, hereinafter RB]. Claimant contacted Mr. RB[Redacted] the following morning and was advised to go to Concentra for evaluation.

4. On August 25, 2021, at approximately 9:50 a.m., Claimant was evaluated at Concentra by Barry Nelson, D.O. Claimant reported a mild headache, jaw pain, neck pain and upper back pain. Dr. Nelson examined Claimant and diagnosed him with an acute neck strain and contusion of the jaw. Dr. Nelson assigned written work restrictions of ten pounds for lifting, repetitive lifting, and carrying, pushing/pulling of twenty pounds, no reaching overhead, and no reaching away from the body. Dr. Nelson indicated Claimant could return to modified duty on August 26, 2021, and that the restrictions would remain in place until Claimant's scheduled follow-up visit on August 30, 2021. (Ex. A). Claimant's restrictions remained unchanged until December 2, 2021. On December 2, 2021, Dr. Nelson changed Claimant's restrictions to include lifting, repetitive lifting, and carrying limits of twenty pounds, pushing/pulling of forty pounds, and no overhead reaching. These work restrictions remained in place through Claimant's last documented visit with Dr.

Nelson on December 23, 2021. No medical records were admitted demonstrating that Claimant's restrictions have been lifted. (Ex. A).

5. On August 25, 2021, Claimant provided his supervisor, RB[Redacted], with a copy of the written work restrictions via text message. The work restrictions imposed by Dr. Nelson were such that Claimant could not fully perform his job duties, which required lifting, carrying, pulling, and pushing in excess of the assigned weights, and required Claimant to reach away from his body and above his head. (Ex. C).

6. Claimant testified that during their phone call on August 25, 2021, Mr. RB[Redacted] indicated that another employee would take over Claimant's route, and that Claimant should be available by telephone to provide the replacement driver with information and assistance. Claimant testified that he was available and did speak with his replacement sometime during the week.

7. Claimant further testified that Mr. RB[Redacted] did not instruct Claimant to return to work, and Claimant's impression was that he was to keep Mr. RB[Redacted] updated with his medical restrictions. Claimant testified that he spoke to Mr. RB[Redacted] two to three times following his injury, which is consistent with Mr. RB[Redacted] 's testimony.

8. In internal emails on Friday, August 27, 2021, Mr. RB[Redacted] and others discussed assigning Claimant a limited duty position, including having Claimant ride with his replacement driver and provide instructions. No credible evidence was admitted indicating that this limited duty position was communicated to Claimant in writing or otherwise. Moreover, after receiving Claimant's written work restrictions on August 25, 2021, Employer did not provide Claimant with a written offer of modified employment pursuant to §8-42-105(3), C.R.S

9. Mr. RB[Redacted] testified that he texted and called Claimant several times on August 25, 2021, to ask Claimant to complete an "incident report" for Employer. Both Mr. RB[Redacted] and Claimant testified they exchanged text messages between August 25, 2021 and Friday, August 27, 2021. The text messages were not offered into evidence. Mr. RB[Redacted] characterized his messages to Claimant as instruction Claimant to "call me, and we still need to fill out the accident report, so we know what happened." Claimant testified that Mr. RB[Redacted] did request the incident report be completed. Although Claimant was aware that Employer was requesting the Incident Report, no credible evidence was submitted to indicate that Employer advised Claimant of the timeframe for returning the Incident Report, that Employer placed any urgency on returning the report, or that the failure to return it within any specific timeframe could result in termination or other disciplinary action.

10. On the morning of Monday, August 30, 2021, Claimant spoke with Mr. RB[Redacted] on the phone and also sent Mr. RB[Redacted] a copy of the doctor's report. In an email dated August 30, 2021 at 10:41 a.m., Mr. RB[Redacted] wrote: "[Claimant] just now contacted me, he was under the impression is not able to work at all. [Claimant] thought the light duty didn't start until 8/30. I told [Claimant] we had training

courses we could have had him doing and he was on light duty since he was seen by Concentra. He is currently filling out injury report." (Ex. C).

11. Mr. RB[Redacted] testified that he sent Claimant an email to permit Claimant to perform light duty work in the form of online "Safety Training," on August 30, 2021. He further testified that Claimant completed one night of safety training on August 30, 2021, and that Claimant performed the training for "one night and then he stopped doing it." Mr. [Redacted, hereinafter EB] testified that after August 30, 2021, the Claimant was "unreachable" and did not communicate with Employer until Wednesday, September 1, 2021, when Mr. B[Redacted] contacted Claimant by phone.

12. Mr. RB[Redacted]'s testimony on this issue is inconsistent with the documentary evidence. Exhibit C, p. 70, is an email from [Redacted, hereinafter TS], Employer's HSSE Manager, which shows Claimant was not set up to do online "Safety Training" until August 31, 2021 at 4:33 p.m. At that time, Mr. TS[Redacted] sent Claimant information to access the online training. (Ex. C). On the evening of August 31, 2021, Claimant performed on-line training as requested by Employer. (Ex. C). The email to Claimant communicating the online Safety Training instructions was not admitted into evidence, and no credible evidence was admitted regarding the specific instructions Employer provided to Claimant with respect to the online "Safety Training." Other than the August 31, 2021 email from Mr. TS[Redacted], no credible evidence was admitted demonstrating Employer attempted to contact Claimant on August 31, 2021.

13. On September 1, 2021, Employer's EB[Redacted] emailed Mr. RB[Redacted] asking if Claimant had performed light duty work. Mr. RB[Redacted] responded that Claimant was doing "a light duty course." (Ex. C).

14. At approximately 4:00 p.m., on September 1, 2021, Ms. EB[Redacted] indicated in an email that she had called Claimant and requested that Claimant return the "incident report" "ASAP." (Ex. C). Mr. RB[Redacted] testified that Claimant did return Ms. EB[Redacted] 's call and returned the incident report. The report contained in Exhibit C is undated. Mr. RB[Redacted] testified he did not know when Claimant returned the incident report, but also that Claimant returned the incident report on September 1, 2021.

15. Mr. RB[Redacted] testified that Employer made the decision to terminate Claimant on September 1, 2021, because Claimant had returned the incident report, was non-communicative and had stopped doing online training. On September 2, 2021, Employer's terminated Claimant's employment. (Ex. C). The termination letter authored by EB[Redacted] (Senior HR Manager), identified the reasons for termination as: "no call no shows, poor communication with your manager and not completing assigned work." (Ex. C). The termination letter does not reference the incident report.

16. On October 19, 2021, Respondents filed a General Admission of Liability, admitted for an average weekly wage of $100.00. (Ex. D).

17. Claimant began working for Employer in April 2021, at an initial pay rate of $21.00 per hour. After June 13, 2021, Claimant earned $27.50 per hour, and received a "shift

premium" of $2.50 per hour. Claimant also received overtime pay at the rate of $41.25 per hour, and a shift premium of $1.25, during this time. During the five full pay periods before his injury and after Claimant's raise to $27/50 per hour, (i.e., June 13, 2021 – August 21, 2021), Claimant worked an average of 95 hours per two-week period and earned an average of $1,451.35 per week, which included overtime pay and shift premiums. (Ex. B). The ALJ finds Claimant's average weekly wage at the time of injury was $1,451.35.

18. Claimant testified that he applied for and received unemployment benefits for approximately two months following his injury, ending in November 2021.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) of the Colorado Revised Statutes requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). Impairment of wage-earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant suffered admitted injuries on August 24, 2021, and was under work restrictions through at least December 23, 2021. Notwithstanding that the Employer did not provide Claimant with a written offer of modified employment, Claimant returned to modified employment on August 31, 2021, when he performed online safety training. Accordingly, Claimant's right to TTD benefits terminated on August 31, 2021. However, upon termination of his employment on September 2, 2021, Claimant sustained actual wage loss due to his industrial injury and resulting disability. On and after September 2, 2021, Claimant remained under work restrictions that prevented him from resuming his pre-injury employment. Through at least December 23, 2021, Claimant was medically incapacitated with restrictions of bodily function that caused him to have work restrictions and impairment of his wage-earning capacity. His wage-earning capacity is thus impaired due to his industrial injury and resulting disability. No evidence was presented that Claimant has reached MMI or that his ATP has provided a written release to return to regular employment after September 2, 2021. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from August 25, 2021 to August 30, 2021, and beginning again on September 2, 2021.

Responsibility For Termination

The Workers' Compensation Act prohibits a claimant from receiving temporary disability benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). "Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment." *Gilmore*, 187 P.3d at 1132. "Generally, the question of whether the claimant acted volitionally, and therefore is 'responsible' for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances." *Gonzales v. Indus. Comm'n*, 740 P.2d 999 (Colo. 1987); *Windom v. Lawrence Constr. Co.*, W.C. No. 4-487-966 (November 1, 2002). *In re Olaes*, WC. No. 4-782-977 (ICAP, April 12, 2011).

Respondents have failed to establish by a preponderance of the evidence that Claimant was responsible for his termination. Employer's stated reason for terminating Claimant's employment was "due to no call no shows, poor communication with your manager and not completing assigned work."

No credible evidence was admitted that Employer had a specific "no call/no show" policy or that Claimant violated any such policy even if one existed. Claimant was assigned work restrictions on the morning August 25, 2021, which did not permit Claimant to perform his regular job duties, and Employer was aware of these restrictions. Nonetheless, Employer did not provide Claimant a written offer of modified employment. It was not until 4:33 p.m., on August 31, 2021, that Employer provided Claimant with access to the online training program. Thus, between August 25, 2021 and August 31, 2021, Employer did not assign Claimant work, and Claimant was under no obligation to contact Employer to advise he would be a "no show." Respondents have failed to establish by a preponderance of the evidence that Claimant violated any purported "no call/no show" policy.

Respondents have also failed to establish that Claimant volitionally failed to complete assigned work. Employer did not provide Claimant access to the online training until the late afternoon of August 31, 2021, and Claimant performed the work that evening. The evidence indicates that Employer's expectation was that Claimant would complete the online training during his normal shift, during the evenings. As found, Employer decided to terminate Claimant on September 1, 2021, before Claimant would have had the opportunity to continue with the online training that evening. Thus, Employer decided to terminate after Claimant had completed the only work Employer assigned following his injury, and before he had the opportunity to complete the training on a second day. Although Claimant did not perform the online training on September 1, 2021, this was after Employer's termination decision and was not the reason for termination. Other than the online training assignment on August 31, 2021, no credible evidence was presented

that Employer "assigned" any other work that Claimant could have completed prior Employer deciding to terminate him on September 1, 2021. Accordingly, the ALJ finds that Claimant did not volitionally fail to complete "assigned work," prior to his termination.

With respect to the alleged "poor communication," the evidence was insufficient to establish by a preponderance of the evidence that Claimant's alleged poor communication was volitional. Claimant immediately reported his injury to Employer. Although Mr. RB[Redacted] testified that he left voice and text messages for Claimant, the evidence was insufficient to establish the content of those messages, other than Mr. RB[Redacted] testifying that he left messages to "call me" and to return an incident report. Thus, the ALJ is unable to determine whether Mr. RB[Redacted]'s communications to Claimant informed Claimant of the apparent urgency Employer placed on returning the incident report or returning Mr. RB[Redacted]'s calls within any set period of time. Nor was Claimant informed his failure to immediately return the incident report would result in termination. Mr. RB[Redacted]'s testimony that Claimant refused to communicate with Employer from August 30, 2021 to September 1, 2021, is not persuasive. The only evidence that Employer attempted to communicate with Claimant during that timeframe was Mr. ST[Redacted] sending Claimant the online training at the end of the day on August 31, 2021. The ALJ finds that Respondents have failed to meet their burden of establishing that Claimant's communication issues with Mr. RB[Redacted], were volitional acts rendering the Claimant responsible for his termination.

Although Claimant was capable of the modified work that Employer assigned to him post-injury (i.e., the online training), Claimant was not "responsible" for his termination by Employer during his period of temporary disability. As such, a causal link between Claimant's industrial injury and his post-termination wage loss is established, and Claimant is entitled to temporary total disability benefits from August 25, 2021 to August 30, 2021, and from September 2, 2021, continuing until one of the criteria of § 8-42-105(3)(a)-(d), C.R.S, is met.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where the Claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*.

As found, Claimant's average weekly wage at the time of injury was $1,451.35.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits from August 25, 2021 to August 30, 2021, and from September 2, 2021, 2020, until terminated by law is GRANTED. Insurer shall pay Claimant TTD benefit during the relevant time period, until terminated by law, subject to any applicable offsets.

2. Claimant's average weekly wage at the time of injury was $1,451.35

3. Insurer shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 25, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he suffered a compensable industrial injury on December 18, 2020.

II. If Claimant sustained a compensable industrial injury, whether the medical treatment by Dr. Higgins and Dr. Zublin was reasonable, necessary and causally related to the injury.

III. Whether Claimant proved Insurer is subject to penalties under Section 8-43-304(1), C.R.S. for an alleged violation of Section 8-43-203(4), C.R.S.

The parties agreed to hold the issues of Average Weekly Wage, Temporary Total Disability, and Temporary Partial Disability benefits in abeyance.

FINDINGS OF FACT

1. Claimant is the owner-operator of Employer, a granite installation company. Claimant personally obtained workers' compensation insurance for Employer. Claimant performed work for Employer installing and repairing granite countertops at various commercial and residential locations throughout Colorado, Wyoming and Nebraska. Claimant's regular job duties included carrying heavy granite slabs from his work truck into the locations of installation.

2. On December 17, 2020 Claimant performed two installation jobs in Grand Junction, Colorado. Claimant spent the night of December 17, 2020 in nearby Montrose, Colorado, where he was scheduled to perform additional installation and repair jobs the following day. Claimant was in Montrose, Colorado for the specific purpose of performing his regular granite installation and repair duties.

3. On December 18, 2020 Claimant completed his first granite installation job of the day in Montrose, Colorado. While en route to the location of his next granite installation, Claimant was involved in a motor vehicle accident ("MVA"). As Claimant was driving through an intersection, a truck T-boned Claimant's vehicle, striking his work truck on the driver's side. Claimant was restrained by a seatbelt at the time of the MVA and the airbags did not deploy. Police subsequently arrived at the scene and filed an accident report. Claimant did not report any injury to the police.

4. Claimant testified he experienced pain in his neck, upper back and left wrist as a result of the MVA. Claimant testified did not seek medical attention at the time because he thought he could handle the pain and hoped the pain would soon subside. Claimant completed his remaining installation and repair jobs on December 18, 2020. He testified he had difficulties carrying the granite slabs. Claimant drove back to Denver, Colorado in

pain that same evening and experienced trouble sleeping. The following morning Claimant experienced worsened pain in his neck and upper back.

5. Claimant subsequently called the insurance carrier of the driver that struck his vehicle. Claimant's understanding was that no further action could take place until that insurance company received a copy of the police report. Claimant testified he continued to attempt to follow up with that insurance company to no avail.

6. Claimant ultimately sought chiropractic treatment on his own accord on January 5, 2021 with Christopher Higgins, D.C. at Metro Denver Accident & Injury Centers. Claimant reported being involved in a MVA in December 2020 with complaints of pain in his neck, upper back, shoulder, mid back, left lateral hip, left wrist and left elbow. Dr. Higgins noted cervical and thoracic x-rays did not show any pathology. Lipping/spurring degeneration of the joint was noted at T7-8 and T8-9, as well as spinal instability at C4, and retrolisthesis at C4-5. Dr. Higgins diagnosed Claimant with acute post-traumatic cervical acceleration/deceleration injury Grade III, cervical and thoracic vertebral segmental dysfunction, acute post-traumatic cervical and thoracic reflexogenic muscle spasm, and acute post-traumatic cervicogenic headache. He recommended Claimant undergo chiropractic adjustments, interferential/electrotherapy, and massage therapy.

7. Claimant testified he sought treatment with Dr. Higgins because he could no longer withstand his worsening pain and he was having difficulty sleeping and performing his regular job duties.

8. Claimant attended follow-up appointments with Dr. Higgins on January 6, 19, and 20, 2021. Claimant reported working long hours as a co-worker had recently contracted COVID-19.

9. Claimant filed an Employer's First Report of Injury on January 20, 2021, noting the December 18, 2020 MVA. Claimant testified he did not file the form or contact Insurer prior to such time because he was unaware he had a potential claim for worker's compensation.

10. Insurer filed a Claim Acknowledgment on January 20, 2021, documenting receipt of Claimant's notice of injury.

11. Insurer did not provide Claimant a list of designated physicians or send Claimant to any physician for medical evaluation and treatment.

12. Claimant subsequently sought treatment on his own with Guy Zublin, M.D. at HR Pain Management, Inc. Claimant first presented to Dr. Zublin on January 21, 2021 at a virtual appointment with complaints of neck, low back, and left wrist pain after a December 2020 MVA. Claimant reported that he had continued working his regular job duties up until three days prior, at which time he took time off due to pain and inability to lift the heavy granite slabs. Dr. Zublin observed restricted cervical range of motion. Dr. Zublin opined Claimant sustained a cervical spine and lumbar spine strain/sprain and left wrist

strain status post motor vehicle accident. He prescribed Claimant Flexeril and recommended physical therapy and spinal manipulation.

13. On February 16, 2021, Claimant's counsel submitted a letter to Insurer requesting a copy of Claimant's claim file. Claimant's counsel cited Section 8-43-203(4), C.R.S. in the request, and specifically noting Insurer had 15 days to provide Claimant the adjuster file. Claimant's counsel received a fax confirmation indicating the fax had been successfully transmitted.

14. Insurer did argue nor produce any evidence suggesting it did not receive Claimant's February 16, 2021 written request.

15. Insurer filed a Notice of Contest on February 24, 2021.

16. Due to an inability to perform his regular work duties of lifting and carrying heavy granite slabs, Claimant began working as a commercial truck driver for an unspecified period of time. Claimant subsequently returned to working for Employer in a different capacity. Claimant performed fabrication duties in a shop which required operating a forklift and using a small tool to polish granite.

17. Claimant continued to treat with Dr. Higgins on February 25, 2021 and March 2, 5, 9, 11 and 17, 2021. Claimant last saw Dr. Higgins on March 30, 2021. Claimant testified that he ceased treatment with Dr. Higgins as he felt the treatment worsened his condition.

18. Claimant did not seek or undergo any further medical treatment from March 30, 2021 to October 4, 2021. Claimant testified that the gaps in treatment were because he felt the treatment had not improved his condition.

19. On October 4, 2021 Claimant saw Dr. Zublin for an in-person evaluation. Dr. Zublin noted Claimant had not attended any follow-up appointments with his office since his initial evaluation. Claimant complained of continued neck pain and dysfunction and thoracic pain. Claimant reported to Dr. Zublin that he ceased chiropractic treatment as it made him worse. Dr. Zublin referred Claimant for a cervical MRI.

20. Claimant underwent a cervical spine MRI on October 15, 2021. Radiologist Michael Seymour, M.D.'s impression was: "Multilevel degenerative disc disease and facet arthrosis. Mild spinal canal stenosis at C4-C5 and C6-C7. Mild left foraminal narrowing at C3-C4 and C4-C5." (Cl. Ex. 15, p. 75).

21. Claimant filed an Application for Hearing on August 4, 2021 endorsing, *inter alia*, compensability and penalties for Insurer's failure to produce the adjuster file requested by Claimant on February 16, 2021.

22. On August 17, 2021 Insurer produced a privilege log and copy of the claim file to Claimant. Insurer did not offer any explanation or evidence regarding its delay in producing the claim file.

23. Respondents filed a Response to Application for Hearing on September 3, 2021.

24. On October 25, 2021, J. Tashof Bernton, M.D. performed an Independent Medical Examination ("IME") at the request of Insurer. Dr. Bernton noted Claimant reported to him that he did not experience any pain from the MVA until a few days after the accident. Claimant reported to Dr. Bernton being able to do pretty much everything with respect to activities. Claimant complained of 5-6/10 pain in his neck and upper back. On examination, Dr. Bernton noted Claimant had decreased cervical range of motion on a "voluntary basis." He opined that his review of Claimant's medical records noted no clearly objective abnormalities, including examinations and the cervical MRI, which demonstrated multilevel degenerative changes unrelated to the MVA. Dr. Bernton concluded Claimant did not have any objective abnormalities correlating with his subjective complaints. Dr. Bernton further noted Claimant had not been working under any restrictions and did not seek medical care for several months.

25. Dr. Bernton opined that, at the most, the MVA resulted in minor and self-limited muscular strains. Dr. Bernton concluded that the initial four chiropractic visits and one telemedicine visits was sufficient care for Claimant. He found Claimant to be at maximum medical improvement ("MMI") as of January 21, 2021. He noted an injury that did not cause symptoms until days later would not be expected to cause symptomatology that persists for 10 months. Dr. Bernton subsequently reviewed Dr. Higgins' February and March 2021 records. Dr. Bernton continued to opine Claimant reached MMI on January 21, 2021, and that his subsequent chiropractic treatment could be considered medical maintenance care.

26. Claimant testified he does not have issues lifting items, but that he continues to experience 6/10 neck and upper back pain. Claimant testified that his wrist pain resolved four or five months prior to the hearing. Claimant testified that he is still treating with Dr. Zublin and that he would like to continue his care with HR Pain Management.

27. The ALJ credits Claimant's testimony, as supported by the medical records and opinions of Drs. Higgins, Zublin and Bernton, and finds that Claimant proved it is more probable than not he sustained a compensable industrial injury as a result of the MVA on December 18, 2021.

28. Claimant proved it is more probable than not the medical treatment provided by Dr. Higgins and Dr. Zublin is reasonably necessary and causally related to his work injury.

29. The right of selection of an ATP passed to Claimant. Claimant selected Dr. Higgins as his treating physician. Dr. Higgins is an authorized provider.

30. Claimant made a proper showing to support his request to change physicians from Dr. Higgins to Dr. Zublin.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an

employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if "special circumstances" exist that demonstrate a nexus between the injuries and the employment. *Id.* at 864. In ascertaining whether "special circumstances" exist the following factors should be considered:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a "zone of special danger" out of which the injury arose.

Id. In considering whether travel is contemplated by the employment contract the critical inquiry is whether travel is a substantial part of service to the employer. *See Id.* at 865.

Claimant's injury arose out of the course and scope of employment with Employer. Travel was a substantial part of service to Employer and a requirement of Claimant's work duties. At the time the MVA occurred, Claimant was performing his regular work duties, which required driving from one job site to another job site to perform installations. It is not alleged, nor is there any evidence, Claimant was on a substantial personal deviation at the time of the MVA such that he was removed from the course and scope of employment.

Respondents note Claimant's delay in seeking medical treatment, delay in filing a claim, and his inconsistent pursuit of medical treatment as evidence that Claimant did not sustain a work injury. Such factors, in light of the totality of the evidence, do not convince the ALJ Claimant did not sustain a compensable work injury.

Claimant credibly testified he did not initially seek medical treatment because he hoped his symptoms would subside and that he subsequently sought medical treatment when his symptoms progressively worsened. Upon seeking medical treatment, Claimant consistently reported back and neck symptoms in connection with the December 2020 MVA. There is no evidence Claimant was experiencing similar symptoms or undergoing

treatment leading up to the work injury. Claimant's physicians opined that Claimant sustained injuries as a result of the MVA. Dr. Higgins credibly opined Claimant sustained acute post-traumatic cervical and thoracic conditions, while Dr. Zublin credibly opined Claimant suffered cervical and lumbar strains. Respondents' IME physician, Dr. Bernton, credibly concluded that, while minor, Claimant did sustain a muscular strain as a result of the MVA and that certain treatment was reasonably necessary and related. As a result of the work injury, Claimant was no longer able to perform his regular job duties. Here, the preponderant evidence establishes that Claimant sustained a work injury as a result of the MVA that caused disability and the need for medical treatment.

Medical Treatment

A claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. See § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury, or suggest a course of treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000); *Walker v. Life Care Centers of America*, W.C. No. 4-953-561-02 (March 30, 2017); *Jacobson v. American Industrial Service/Steiner Corp.,* W.C. No. 4-487-349 (April 24, 2007).

As Claimant proved he sustained a compensable industrial injury, Claimant is entitled to reasonably necessary treatment to cure and relieve the effects related to the injury. As evidenced by the medical records, Claimant sought treatment with Dr. Higgins and Dr. Zublin for neck and back symptoms as a result of the work injury. The preponderant evidence establishes that such treatment was reasonably necessary to identify Claimant's condition and to relieve his symptoms.

Respondents argue that any additional treatment Claimant may require for his back and neck are not due to any work incident. Respondents contend that Claimant's current complaints cannot be related to the MVA as he has no objective findings and he personally caused a significant period of non-treatment. It is noted that Dr. Bernton opined Claimant's symptomatology would not be expected to persist for several months, and that Claimant reached MMI on January 21, 2021.

A finding here that no future medical treatment is reasonably necessary or related to the work injury would effectively constitute a determination by the ALJ that Claimant has reached MMI. The ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or a DIME. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, WC's 4-947-316-01 & 4-935-813-03 (ICAO, July 31, 2015) (where the claimant had not reached MMI, ALJ's finding terminating all future medical treatment reflected an implicit determination that the claimant had

reached MMI and was thus erroneous). While Respondents' IME physician opined Claimant has reached MMI, neither an ATP or DIME has done so. Respondents' obligation to provide related medical benefits to cure or relieve the effects of Claimant's industrial injury continues until Claimant reaches MMI. Respondents retain the right to contest the reasonableness and necessity of specific treatment.

Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

The term "select," is unambiguous and should be construed to mean "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *Williams v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO, Oct. 28, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

If upon notice of the injury the employer timely fails to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

It is undisputed Claimant sought treatment on his own accord with Dr. Higgins prior to notifying Insurer of his industrial injury. Claimant subsequently notified Insurer of his injury by filing Employer's First Report of Injury on January 20, 2021. Insurer received such notice, as indicated by their acknowledgment on January 20, 2021. At that time it

became Insurer's obligation to appoint an ATP. Claimant credibly testified, and no evidence was offered to the contrary, that Insurer did not subsequently provide Claimant with list of designated treatment providers or otherwise designate an ATP. Accordingly, the right of selection of an ATP passed to Claimant. Claimant selected Dr. Higgins as his ATP by undergoing evaluation and treatment with Dr. Higgins from January 2021 through March 2021. Dr. Higgins is thus an authorized provider in this claim.

Change of Physician

Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* WC 4-597-412 (ICAO, July 24, 2008). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, WC 4-570-904 (ICAO, June 19, 2006). Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretion to determine whether the circumstances justify a change of physician. *Gutierrez Lopez v. Scott Contractors*, WC 4-872-923-01, (ICAO Nov. 19, 2014).

Claimant subsequently ceased treatment with Dr. Higgins and underwent evaluation and treatment with Dr. Zublin. Claimant requests a change of ATP from Dr. Higgins to Dr. Zublin. Insurer made no argument regarding Claimant's request to select Dr. Zublin as his treating physician. Dr. Zublin has been treating Claimant and is familiar with his condition. The ALJ has considered Claimant's need for medical treatment while protecting Respondents' interest under the circumstances. Claimant has made a proper showing to support his request to change his ATP from Dr. Higgins to Dr. Zublin.

Penalties

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo.

App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Claimant alleges Insurer is subject to penalties for its' failure to timely produce the claim file in violation of §8-43-203(4), C.R.S.

Section 8-43-203(4), C.R.S. provides,

> Within fifteen days after the mailing of a written request for a copy of the claim file, the employer or, if insured, the employer's insurance carrier or third-party administrator shall provide to the claimant or his or her representative a complete copy of the claim file that includes all medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information for the twelve months leading up to the date of injury and thereafter, regardless of the format. If a privilege or other protection is claimed for any materials, the materials must be detailed in an accompanying privilege log.

Claimant's counsel submitted a written request to Insurer for a copy of Claimant's claim file on February 16, 2021. Insurer does not contend, nor is there any evidence indicating, Insurer did not receive Claimant's written request. Pursuant to Section 8-43-203(4), Insurer was required to provide the claim file to Claimant by March 3, 2021. It is undisputed Insurer did not provide a copy of the claim file to Claimant until August 17, 2021, a period of 166 days. Insurer's failure to provide the claim file to Claimant within the required time frame constitutes a violation of Section 8-43-203(4), C.R.S.

As Claimant established Insurer violated the Act, it is Insurer's burden to prove its conduct was reasonable. Insurer provided no rational argument justifying its violation of Section 8-43-203(4), C.R.S. As found, Insurer provided no explanation or evidence at all regarding its failure to provide the claim file to Claimant within the time period required. There is no evidence nor does Insurer contend that it did not receive Claimant's request, that there was some miscommunication, or that Insurer did, in fact, make an attempt to send the claim file to Claimant prior to August 17, 2021. Without explanation, Insurer's failure to timely provide the claim file to Claimant does not constitute the action of an objectively reasonable insurance carrier.

As Insurer committed a violation of the Act and its inaction was objectively unreasonable, imposition of penalties is appropriate.

Curing a Violation

Section 8-43-304(4), C.R.S. permits an alleged violator 20 days from the date of mailing of an Application for Hearing that asserts penalties to cure the violation. If the violator cures the violation within the 20 day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App.2003). Section 8-43-304(4), C.R.S. modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *see In re Tadlock*, WC 4-200-716 (ICAO, May 16, 2007).

Insurer argues that no penalty should be assessed because Insurer cured the violation within the 20 days permitted under Section 8-43-304(4), C.R.S. It is undisputed Insurer provided the claim file and privilege log to Claimant on August 17, 2021, within 20 days of Claimant's August 4, 2021 Application for Hearing. As Insurer cured the violation, Claimant is required to prove by clear and convincing evidence Insurer knew or reasonably should have known Insurer was in violation.

Claimant submitted a written request to Insurer on February 16, 2021 requesting the claim file. The written request specifically cited Section 8-43-203(4), C.R.S., noting the 15-day time frame for producing the file. As discussed, Insurer provided no explanation or evidence regarding their failure to provide the claim file to Claimant prior to August 17, 2021. The evidence indicates Insurer did receive Claimant's written request at the time it was submitted. While Insurer filed a Notice of Contest on February 24, 2021, there is no evidence Insurer made any attempt to produce the requested claim file prior to August 2020. Here, Respondents reasonably should have known they were in violation of Section 8-43-203(4), C.R.S. when they received a written request from Claimant citing the applicable statute and time period and took no action to comply until several months later. As Insurer had constructive knowledge of its violation, assessment of penalties is appropriate in this case.

An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* WC 4-619-954 (ICAO, May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Industrial Claim Appeals* Office, 126 P.3d 323 (Colo. App. 2005); *Espinoza v. Baker Concrete Construction*, WC 5-066-313 (ICAO, Jan. 31, 2020). When determining the penalty the

ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc*., WC 4-981-806 (ICAO, July 1, 2019).

The evidence does not establish more than minimal harm to Claimant resulting from Insurer's violation. Despite Insurer's delay in producing the claim file, Claimant continued to undergo medical treatment. No evidence was presented as to any financial strain caused to Claimant due to Insurer's violation. Claimant did not file an Application for Hearing on compensability and penalties until approximately six months after the Notice of Contest was filed. There is no evidence Claimant repeatedly followed-up with Insurer regarding the written request or that there was any pattern of misconduct on behalf of Insurer. Absent evidence of the Insurer's ability to pay a fine, considering the de minimis amount of the fine imposed herein, the ALJ determines that a penalty of $5.00/day for 166, totaling $830.00, is appropriate. *See In re Claim of Lange*, WC 4-907-620-002 (ICAO, January 18, 2019) (the ALJ's assessment of a $2.00/day penalty was a reasonable exercise of discretion aimed at penalizing the claimant's disobedient conduct while acknowledging the minimal harm to the respondents).

ORDER

1. Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury on December 18, 2020.

2. The medical treatment provided by Dr. Higgins and Dr. Zublin was reasonably, necessary and related to Claimant's December 18, 2020 industrial injury. Respondents are liable for the treatment Claimant has received from Dr. Higgins and Dr. Zublin, as well as other reasonably necessary and causally related medical treatment.

3. The right of selection of an ATP passed to Claimant. Dr. Higgins is an authorized provider.

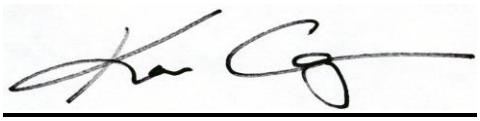
4. Claimant's request to change treating physicians from Dr. Higgins to Dr. Zublin is granted.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 25, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability ("TTD") benefits as a result of his August 17, 2020 work injury.

II. Determination of Claimant's average weekly wage ("AWW").

STIPULATIONS

The parties stipulated to the compensability of the claim and Respondents' liability for reasonable, necessary and related medical benefits.

FINDINGS OF FACT

1. Claimant works for Employer as a machine operator. Claimant's job involves frequent walking, climbing stairs and ladders, and cleaning.

2. On September 11, 2015 Claimant sustained a work injury to multiple body parts, including his left lower extremity, which resulted in complaints of pain and instability in his left knee. Claimant continued to work without restrictions and was able to perform his regular job duties leading up to the work injury at issue.

3. Claimant sustained an industrial injury while working for Employer on August 17, 2020.

4. Claimant presented to Employer's health service clinic on August 17, 2020 reporting left knee and right shoulder pain. Claimant reported he slipped and fell forward, striking his knee and elbow. No objective findings were noted for the knee, other than tenderness on the anterior aspect of the knee. Redness, swelling and an abrasion was noted on the right shoulder. Claimant continued to report right shoulder and left knee symptoms at a follow-up evaluation at Employer's clinic on August 18, 2020. Employer subsequently sent Claimant for evaluation at UCHealth.

5. Claimant presented to Oscar Sanders, M.D. at UCHealth on August 19, 2020 with right shoulder and left knee pain. Claimant reported that he slipped and fell at work, striking his right shoulder on the base of the machine and striking his left knee on the floor. Claimant reported he also hit his head during the incident but did not lose consciousness. Claimant further reported a history of a prior left knee injury in 2006, managed with physical therapy and injections. On examination, Dr. Sanders noted ecchymosis diffusely about the proximal aspect of the right upper extremity with no effusion or ecchymosis in the left knee. Dr. Sanders diagnosed Claimant with a contusion

of multiple sites of the right shoulder as well as a left knee contusion. He placed Claimant on modified duty with work restrictions of: lifting a maximum of 1-2 pounds right extremity; no repetitive lifting; carrying a maximum of 1-2 pounds; pushing/pulling a maximum of 5 pounds; no reaching overhead, reaching away from the body, or repetitive motion with the right arm; and no crawling, kneeling, squatting, or climbing. Dr. Sanders recommended Claimant perform seated duties only.

6. On August 19, 2020, Claimant underwent x-rays of the right shoulder and left knee, which were normal.

7. Dr. Sanders continued Claimant's same restrictions on August 25, 2020.

8. On August 26, 2020, Claimant presented to Kurt Dallow, M.D. at Orthopaedic & Spine Center of the Rockies. Claimant reported slipping and falling from a machine and striking his right shoulder on the edge of the machine and hitting his left knee, head and neck. The record contains no documentation of a prior left knee injury or left knee complaints. Dr. Dallow diagnosed Claimant with a right shoulder hematoma, right shoulder contusion, likely concussion, and left knee pain.

9. On August 31, 2020, Claimant underwent a left knee MRI which produced the following impression: (1) medial meniscal tear; (2) chondral irregularity and evidence of prominent marrow edema within the underlying medial tibial plateau; and (3) high-grade fissuring involving the median ridge patella cartilage with underlying subchondral edema.

10. Dr. Sanders reexamined Claimant on September 2, 2020. Dr. Sanders noted Claimant's MRI evidenced medial meniscus tearing as well as chondral damage that was likely secondary to his fall at work. Claimant reported experiencing recurrent headaches and dizziness and now indicated he likely had a brief period of loss of consciousness during the August 17, 2020 incident. Dr. Sanders noted a normal neurological examination. He opined Claimant' right shoulder hematoma had markedly improved. Dr. Sanders recommended a CT scan of the spine and referred Claimant to Dr. Snyder for an orthopedic surgery evaluation of his left knee. Dr. Sanders continued to restrict Claimant from crawling, kneeling, squatting and climbing. He no longer restricted Claimant to performing only seated duties. Claimant was to be allowed to transition from sitting to standing as needed, was restricted from high impact activities, and advised to avoid stair climbing or work on uneven surfaces.

11. On September 9, 2020, Claimant presented to Dr. Dallow for a follow-up evaluation. Dr. Dallow noted Claimant's right shoulder hematoma had markedly reduced in size. Dr. Dallow released Claimant from further treatment for his right shoulder.

12. Claimant underwent a CT scan of his brain on September 15, 2020, which was unremarkable.

13. Claimant presented to Joshua Snyder, M.D. on September 17, 2020. Claimant reported a previous injury to his left knee that occurred about five years prior. Claimant reported that on August 17, 2020 he slipped and fell, twisting his knee and hitting the

floor. Dr. Snyder reviewed the left knee MRI and opined that no meniscal tear was present. He noted there was severe body edema along the medial tibial plateau, some chondromalacia patella, and opined that Claimant appeared to have a potentially chronic MCL strain or acute on chronic MCL strain. Claimant also underwent an x-ray of his bilateral knees, of which Dr. Snyder opined Claimant had good overall alignment, no significant joint space narrowing, and some squaring of the femoral condyles and a small osteophyte medially.

14. On October 7, 2020, Dr. Sanders referred Claimant for a physiatry consultation and recommended Claimant start physical therapy and vestibular rehabilitation. He continued Claimant's restrictions. Dr. Sanders again continued Claimant's restrictions on November 16, 2020.

15. On November 16, 2020, Claimant returned to Dr. Snyder for a follow-up evaluation. Dr. Snyder noted Claimant continued to experience left knee pain. He thought the medial collateral ligament improved considerably, but that Claimant was having more arthritic-type discomfort and bony edema discomfort. Dr. Snyder performed a cortisone injection in the left knee and recommended physical therapy.

16. Claimant returned to Dr. Sanders on December 15, 2020. Dr. Sanders noted that it appeared Claimant's right shoulder, neck/back pain, and post-concussion symptoms had resolved. Dr. Sanders noted Claimant was counseled regarding continued physical therapy, but that Claimant felt comfortable with only his home exercise program. Dr. Sanders began Claimant on an anti-inflammatory medication and advised Claimant to use his knee brace as needed. He recommended Claimant follow-up with Dr. Snyder for reconsideration of surgical options in the event his symptoms did not improve with continued conservative measures. Dr. Sanders continued Claimant on his current restrictions, which were: crawling/kneeling/squatting/climbing as tolerated; and "Allow transition from sit to stand as needed by employee. No high impact activities (i.e. running, jumping). Avoid work on uneven surfaces, terrain." (R. Ex. E, p. 98). Dr. Sanders opined Claimant would be approaching maximum medical improvement and would be ready for a trial of full duty work.

17. On February 4, 2021, Lawrence Lesnak, D.O. performed an Independent Medical Evaluation ("IME") at the request of Respondents. Claimant reported having chronic diffuse left leg symptoms dating back to an injury sustained in September 2015 and that his symptoms had been constant in nature since such time. Claimant reported that his pre-existing left leg symptoms had worsened since the August 2020 work injury. Regarding the mechanism of injury, Dr. Lesnak noted that Claimant reported he must have fallen backwards when he slipped and fell but somehow struck his knee. Dr. Lesnak concluded there is no evidence supporting Claimant's claim that he sustained a left knee injury on August 17, 2020, noting Claimant's chronic pre-existing diffuse left leg symptoms. Dr. Lesnak opined that no acute injury or trauma-related pathology of the left knee or left leg was identified on Dr. Sanders' August 17, 2020 evaluation or imaging. He remarked that Claimant's reported mechanism of injury changed over time, and that the mechanism of injury reported at his evaluation was inconsistent with any left knee injury.

18. Dr. Lesnak opined that Claimant possibly sustained a mild posterior scalp contusion as a result of the August 17, 2020, with no evidence of mild closed head injury. He concluded that there was no reproducible objective findings on clinical examination supporting any type of symptomatic cervical spine pathology. Dr. Lesnak ultimately opined that Claimant most likely sustained a contusion injury to his right scapular/shoulder girdle region and possibly to the posterior occiput and neck soft tissues as a result of the August 17, 2020 work incident. He concluded that these potential injuries would have completely resolved within several days to several weeks following the incident. Dr. Lesnak opined that Claimant's current subjective complaints were without any reproducible objective findings. He noted that he administered a psychosocial screening test to Claimant that found a high level of somatic pain complaints. Dr. Lesnak opined that there appeared to be significant psychosocial/psychologic factors influencing Claimant's symptoms, recovery and perceived function. He opined that Claimant had reached maximum medical improvement ("MMI") without permanent impairment, and did not require any further medical care or restrictions.

19. At Claimant's request, Sander Orent, M.D. was present via video during Dr. Lesnak's IME and virtually observed the examination. Dr. Orent issued a report dated February 18, 2021, noting what he believed to be various omissions and issues in Dr. Lesnak's IME report and performance of the IME.

20. On February 18, 2021, Employer placed Claimant on a medical leave of absence. Employer's letter to Claimant dated February 19, 2021 noted Claimant was subject to the following restrictions: "Crawling, kneeling, squatting, and climbing as tolerated. Allow transition from sit to stand as needed by employee. No high impact activities (i.e. running, jumping). Avoid work on uneven surfaces, terrain." (Cl. Ex. 1, p. 2).

21. Employer was unable to accommodate Claimant's work restrictions. Claimant has not worked since February 19, 2021 due to his work restrictions and continued left knee symptoms.

22. Dr. Lesnak testified by prehearing deposition on behalf of Respondents as a Level II accredited expert in physical medicine and rehabilitation. Dr. Lesnak testified consistent with his IME report. He explained that, per his review of the medical records, Claimant's reported medical history appeared inconsistent. He opined that many of Claimant's subjective complaints were not supported by reproducible, objective findings, noting pain behaviors and nonphysiologic responses on his examination. Dr. Lesnak testified that Claimant reported experiencing left leg and left knee symptoms in the same areas as his chronic, pre-existing symptoms, only worsened. Dr. Lesnak reiterated that Dr. Sanders' initial exam and the imaging showed no evidence acute trauma to Claimant's left lower extremity. He explained that nothing on his examination showed any evidence of specific symptomatic pathology related to the August 17, 2020 incident. Dr. Lesnak testified that the medical records or imaging studies did not reveal any evidence of acute trauma to Claimant's left knee or left leg, neck or brain.

23. Dr. Lesnak testified that it appears Claimant may have sustained a contusion of his right scapula and that he had bruising on his upper right arm, which he noted would

typically resolve within several days to two weeks. He testified that no work restrictions would be related to bruising of the upper right extremity. Dr. Lesnak testified that, without any reproducible objective findings on exam, Claimant does not require any type of permanent or even temporary work restrictions related to the reported occupational injury. Dr. Lesnak addressed Dr. Orent's report, disagreeing with Dr. Orent's characterization of his examination and his IME report.

24. Dr. Orent testified at hearing as a Level II accredited expert in occupational medicine. Dr. Orent reviewed Dr. Lesnak's deposition testimony and the audio recording of Dr. Lesnak's IME. Dr. Orent testified to his belief that Dr. Lesnak did not accurately document Claimant's reports of the mechanism of injury and his symptomatology. Dr. Lesnak testified to his belief that there were discrepancies in Dr. Lesnak's documentation regarding the physical exam findings and what Dr. Orent observed.

25. Claimant credibly testified at hearing that he has not worked since February 19, 2021 due to Employer's inability to accommodate his restrictions, as well as due to his continued left knee symptoms.

26. The ALJ credits the opinion of Dr. Sanders, as supported by Claimant's testimony and the medical records, over the opinion of Dr. Lesnak.

27. Claimant proved it is more probable than not he is entitled to TTD from February 19, 2021 and ongoing. Due to the August 17, 2020 work injury, Claimant was no longer able to perform his regular work duties. As a result, Claimant has not worked or earned wages since February 19, 2021.

28. Claimant earns an hourly wage. Claimant wage records reflect Claimant's weekly earnings varied on hours worked and if he earned any overtime pay, penalty pay or specialty COVID pay. From August 12, 2019 to August 16, 2020, Claimant earned a total of $66,316.27 in wages, averaging $1,251,25 weekly. For the week-long pay period ending August 16, 2020, Claimant earned $1,215.48. Considering the variation in Claimant's wages, the ALJ finds that an AWW of $1,215.48 is a fair approximation of the claimant's wage loss and diminished earning capacity.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case

must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release

to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As found, Claimant proved it is more likely than not he is entitled to TTD benefits for the requested time period. Claimant has consistently reported left knee symptoms since his August 17, 2020 work injury. Despite a prior left knee injury and pre-existing left knee complaints there is no evidence that, leading up to the August 17, 2020 work injury, Claimant's symptoms necessitated treatment or rendered him unable to perform his regular job duties. While Dr. Lesnak noted Claimant did not complain of any different or new left leg symptoms after the August 2020 injury, Dr. Lesnak did acknowledge Claimant's report of worsened symptoms after the August 17, 2020 work injury. Claimant's pre-existing knee condition does not preclude a determination that the August 17, 2020 work incident aggravated his condition.

Claimant has been on medical restrictions since sustaining the August 17, 2020 work injury. Claimant's restrictions initially applied to both his upper and lower extremities (i.e. lifting restrictions and seated duties only). While Dr. Sanders noted that it appeared Claimant's neck, back and head issues had resolved, he noted ongoing left knee issues and continued restrictions of no crawling, kneeling, squatting, or climbing. These restrictions impaired Claimant's ability to effectively perform his regular work duties. As Respondents were unable to accommodate these restrictions as of February 19, 2021, Claimant missed work and suffered actual wage loss. Claimant credibly testified he has not work since February 19, 2021 due to his restrictions and ongoing left knee problems. The preponderant evidence establishes the work injury produced a disability that resulted in Claimant leaving work for more than three work shifts and suffering actual wage loss. Accordingly, Claimant is entitled to TTD benefits from February 19, 2021 and ongoing, until terminable by law.

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given

period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

As found, Claimant's weekly earnings varied. Based on review of the wage records, an average weekly wage of $1,215.48 is a fair approximately of Claimant's wage loss and diminished earning capacity.

ORDER

1. Claimant sustained a compensable industrial injury on August 17, 2020.

2. Respondents shall pay Claimant TTD benefits from February 19, 2021 and ongoing, until terminated by statute.

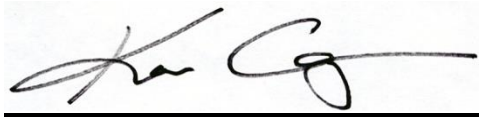
3. Claimant's AWW is $1,215.48.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 28, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-185-491-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to TTD from the date of his termination of employment on September 9, 2021.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits following his right shoulder surgery on February 15, 2022 until terminated by law.

III. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination warranting a denial of TTD benefits.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on the issue of compensability, medical benefits that were authorized, reasonably necessary and related to the injury, average weekly wage and temporary disability benefits on November 5, 2021.

Respondents filed a General Admission of Liability on December 3, 2021 for medical benefits only. No average weekly wage is declared.

Respondents filed a Response to Claimant's November 15, 2021 Application for Hearing on December 17, 2021 on issues of "Offsets. Wages. Whether Claimant left work because of the injury."

STIPULATIONS

The parties stipulated to an AWW of $840.00 per week at time of the hearing.

Respondents also stipulated that Respondents never denied the surgery recommended by Dr. Marc Failinger on August 26, 2021 or formally requested on September 2, 2021 and the surgery and medical care regarding Claimant's right shoulder surgery is reasonably necessary and related to the July 21, 2021 work related injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

a. The injury and report

1. Claimant was 51 years of age at the time of the hearing. He was hired by Employer as of February 11, 2020 and was promoted to Warehouse and Delivery Associate on September 7, 2020, earning $20.50 per hour and employed full time.

Claimant's Workers' Claim for Compensation noted he earned $21.00 per hour for a total wage of $840.00 per week.

2. Claimant was injured in the course and scope of his employment on July 21, 2021 while lifting steel pipes from a broken shipment.

3. The Employer's First Report of Injury was completed by Claimant on July 22, 2021 stating that Claimant notified William Klumb of the work related injury to his right arm, shoulder and wrist. He stated that there were onsite cameras to witness his accident.

b. Medical records

4. Claimant was first seen at Concentra on July 28, 2021 by Tanya Manning. Claimant was referred to physical therapy (PT), provided medications and hot/cold compresses for home use as well as restricted from use of the right upper extremity. Claimant started PT on the same day.

5. On August 9, 2021 physician assistant Nathan Adams of Concentra continued the order of therapy, stated that Claimant's objective findings were consistent with Claimant's report of his work related mechanism of injury, and continued to limit Claimant's work to no use of the right upper extremity.

6. Claimant underwent an MRI of the right shoulder on August 19, 2021 on referral from Mr. Adams. Dr. Brian Cox read the diagnostic testing as showing a complete supraspinatus tendon tear with retraction of the tendon stump to the medial humeral heard (3 cm), tendonitis of the infraspinatus (moderate) and of the subscapularis (mild) as well as no evidence of cuff muscle atrophy or edema and mild to moderate acromioclavicular degenerative joint disease.

7. On August 20, 2021 Mr. Adams changed Claimant's work restrictions to lifting 5 lbs. to chest or shoulder level with the right arm, no use of the right hand above the shoulder level, which were repeated on September 17, 2021 and October 1, 2021.

8. Claimant was evaluated by Dr. Mark Failinger on August 26, 2021 pursuant to a referral from Mr. Adams and was seen in the Concentra Medical Center office. Dr. Failinger noted that Claimant was working for Employer as a warehouse worker since February 2020. He documented Claimant was picking up 24 foot pipes, weighing up to 100 lbs. Claimant attempted to lift them up to his shoulder level, tried to stack them and then tried to push them and as he was doing so Claimant noted pain in his right shoulder. Dr. Failinger stated that Claimant reported the incident and was sent to Concentra. He documented Claimant had some improvement with physical therapy but not significantly with either pain or range of motion. Claimant reported to Dr. Failinger weakness and loss of strength with loss of range of motion. Claimant reported right sided neck discomfort that migrated down to the right elbow. On exam of the right shoulder, Dr. Failinger found discomfort in the AC joint, greater tuberosity with palpation but no swelling, warmth or redness. He found loss of range of motion with discomfort, though no instability, and 4/5 strength with external rotation and abduction. He reviewed the MRI films and noted that there was a large supraspinatus tear with maceration and moderate infraspinatus tendinosis and AC joint arthritis. He also noted some mild irregularity of the labrum. Dr. Failinger recommended surgical repair and for Claimant to quit smoking in order to have

any chance of healing following surgical repair as the repair would be difficult and the odds of healing were not great. Dr. Failinger also stated that Claimant would have to remain without active range of motion of the right shoulder, other than passive range of motion, for at least six weeks following surgery.

9. On September 2, 2021 Dr. Failinger's office sent the request for prior authorization for right shoulder scope, rotator cuff repair, decompression and possible biceps tenodesis vs. tenolysis to the Insurer's adjuster.

10. Claimant was seen by Dr. Scott Richardson (Concentra) on November 19, 2021. He noted that they still did not have approval of the right, dominant, shoulder surgery, explaining that Claimant's pain came on suddenly with lifting pipes at work on July 21, 2021. Dr. Richardson noted Claimant was seen by Dr. Mark Failinger on August 26, 2021, who recommended surgery of the right shoulder and requested approval. On exam, Dr. Richardson noted diffuse glenohumeral joint tenderness and limited range of motion with tenderness in the right paraspinal and right trapezius muscle. He assessed traumatic complete tear of the right rotator cuff with right shoulder strain and tendinosis of the shoulder. He dispensed medications and ordered further therapy for reduction of pain, inflammation, swelling and spasm. He insisted that there was a need to obtain approval for the surgery and scheduling. He stated that the objective findings were consistent with the history and mechanism of injury. He provided Claimant with modified duty restrictions of lifting to 5 lbs. to mid chest level with the right arm, and no reaching above shoulder height with the right arm. Dr. Richardson stated that MMI and impairment were unknown at that time.

11. Claimant had a preoperative evaluation on February 4, 2022 with Dr. Failinger. Claimant reported he had moderate to severe pain of the right shoulder, including throbbing that was frequent, exacerbated by elevation of the arm and lifting. Dr. Failinger noted moderated tenderness of the supraspinatus, positive Hawkins-Kennedy and impingement tests and that Claimant was ready to proceed with surgery.

c. Termination

12. On September 3, 2021 the Director of Operations and HR Manager (hereinafter the HR Manager or MS) authored Personnel Documentation, from an oral report by the Office Manager (LP). The Office Manager stated that Claimant had left the worksite for approximately one hour without advising where he was going. She also advised that the day before, claimant had smelled and had left early as he was not feeling well. She also reported that Claimant had hit her behind with his hat, then exclaimed that "[I]t wasn't my hand!" The Director asked Claimant if he had done this and Claimant denied it. The Director advised in the Personnel Documentation that

> *[h]e had a long talk with [Claimant] and it's becoming increasingly difficult to reason with him while he's so emotionally frustrated with his lame arm.* I was not able to accomplish much during our conversation other than to tell him that I am helping him through this WC injury as swiftly as possible. I have emailed Trevor from [Insurer] and will follow-up with [Claimant] when I have answers. (*Emphasis added.)*

13. The end of the Personnel Documentation indicated an addendum with the Office Manager's email which stated that Claimant had previously made an inappropriate comment about her body to her, and that Claimant had apologized for the comment.

14. On September 9, 2021 at 9:00 a.m. the HR Manager sent Claimant an email terminating his employment with Employer due to allegations of sexual harassment and Insubordination. The notice provided no other explanation and requested the keys and uniforms be returned and that his final paycheck would be handed over if the uniforms were returned. It further advised not to access the building as the alarm code had been changed.

15. Claimant responded to the email the following morning questioning the termination. He stated that he had never sexually harassed anyone in his life. He also advised he did not know what insubordination employer was alleging. He was under the impression that Employer was finally going to adjust his work to comply with the work restrictions imposed by his providers. He advised that unloading the trucks was continuing to injure his right shoulder. He advised that he struggled to lift chemicals that he struggled to squeeze into the chemical warehouse. He requested that the Director reconsider his decision. He recognized he had not been very easy to work with as he was in pain and trying to cope with his injury and loss of strength in his arm. Claimant stated that ["T]hat's why I was asking if you had heard anything back from Workers' Comp." Claimant further stated:

> *Friday you mentioned that you honestly shouldn't have me there if you were following the doctor's restrictions*. …
>
> So, I am asking pleadingly, Please reconsider. After my shoulder recovers, I promise that I will not disappoint. I am sorry that I got injured and that everyone was having to do a lot of my duties. Just having these few days have helped me realize that I haven't been very pleasant to be around, and for that, I'm very sorry to everyone. (*Emphasis added*).

d. Claimant's testimony

16. Claimant testified that the providers taking care of his right shoulder attempted multiple times to obtain authorization for the surgery without success. It was not until approximately February 2022 when he finally received confirmation from his attorney's office that the surgery could proceed. He immediately scheduled the pre-op and surgery, which was performed on February 15, 2022 by Dr. Failinger.

17. Claimant testified that he continued to work full duty after the work injury as there was no modified duty work. He was still required to perform his regular job unloading semis, moving 50 to 500 lb. containers, despite his restrictions. He further testified that he advised both his supervisors (WK and MS) that he had trouble with the unloading of the chemicals and did not think he was capable of performing the job. He was under a 5 lbs. restriction at the time and every job he performed required him to lift in excess of that amount. He stated his employer advised that since he was using a forklift to move the chemicals, his restrictions did not matter. Claimant interpreted this to mean he had to continue doing the job despite his restrictions.

18. Claimant stated that the Install Manager (JS) texted Claimant multiple times requiring Claimant to load chemicals on another truck that did not have a tailgate lift, so he had to lift the 150 lb. chemical containers with a pallet jack and from the wooden pallet to the bed of the truck as well as lift the wooden pallets which weighed over 10 lbs. Claimant complied with the request that he continue to perform his job. He stated that

90% of the job was not in the warehouse itself, but delivering the chemicals throughout the state. He stated he engaged with female customers frequently.

19. Claimant stated that the Office Manager (LP) was the one giving him instructions about what he was to do during the day. She never stated that Claimant had sexually harassed her at any time, that he had been insubordinate, or that he was not doing his job correctly.

20. Claimant stated that he received the September 9, 2021 email but that he did not know anything about a claim of sexual harassment or insubordination. Nor did Claimant have any discussions with the Office Manager (LP) or the HR Manager regarding the claims of sexual misconduct or insubordination. At no time did Claimant receive any warnings regarding either type of conduct.

21. Claimant stated that his termination really had to do with his workers' compensation claim, his work restrictions, his complaints that he was unable to do the work without hurting himself, the request for surgery and nothing to do with any inappropriate behavior on his behalf. He stated that if any such conduct was happening, that his employer had multiple video recorders working in all areas of the warehouse that would have caught any inappropriate conduct, and none had been produced. (No videos were submitted as exhibits to the hearing.)

22. Claimant was not released from medical care or placed at maximum medical improvement by his providers from Concentra by the time of the hearing.

23. Lastly, while Employer requested multiple items be returned following the formal termination, Claimant stated that he returned all items except the phone as it contained multiple pictures and texts of his family members, which he was not able to erase because the company turned off the phone before he was able to delete them. The Office Manager (LP) showed up to Claimant's home, approximately one month after the termination, to retrieve the items.

e. Testimony of Office Manager (LP)

24. The Office Manager reported that she had worked for employer for approximately two years as the Office Manager. The Office Manager alleged that Claimant had sexually harassed her in at least one event which had occurred a little after she started, well prior to the Claimant's termination. The last time was when Claimant hit her with his hat on the behind. She stated that Claimant apologized to her and that he immediately stated it was not his hand but his hat.

25. She orally reported the last incident about Claimant touching her with his hat to the Human Resource Manager (MS). On September 3, 2021 she emailed the HR Manager about another incident. She asked the HR Manager to request that Claimant stop any inappropriate behavior. She also stated that statements in the HR Manager's Personnel Document were incorrect, specifically the fact about the timing of the incident and the amount of times it had occurred. September 3, 2021 was the first instance when she reported any untoward behavior to the HR Manager.

26. The Office Manager stated that Claimant was a good employee that worked well with her initially but later his behaviour towards her changed. She also stated that,

to her knowledge, Claimant was terminated for sexual harassment as well as insubordination but she was not aware of all the incidents of insubordination.

27. The Office Manager stated that she was frequently bantering with Claimant either in the warehouse or in her personal office, as Claimant would have to pick up his work orders from a basket in her office. She stated that there were video cameras both in her office as well as the warehouse but she was not aware of any recordings of any of the incidents.

28. She also testified that Claimant was no terminated until September 9, 2021, almost a week after she reported the incident to the HR Manager.

f. Testimony of Director of Operations/HR Manager

29. The Director of Operations/HR Manager stated that he first heard of any incidents with regard to Claimant and the Office Manager from the Office Manager on September 3, 2021, which he documented in the Personnel Documentation of the same date.

30. He was aware of the hat incident on September 3, 2021 and asked that any incidents prior be documented by the Office Manager. The first part of the document was the HR Manager's interpretation after the oral report by the Office Manager on September 3, 2021. The second part is the Office Manager's email of the same date documenting a second incident. He stated that he had not received any prior reports before September 3, 2021. A third incident was not documented by either the Office Manager or the HR Manager.

31. The HR Manager was initially concerned about the veracity of the report of the Office Manager but now believed her. He failed to establish any reason for a change in his opinion.

32. The HR Manager stated that despite receiving the information on September 3, 2021 that he did not take steps to terminate Claimant until September 9, 2021. He stated that the only incident he had witnessed was when Claimant left for one hour without telling anyone. He confirmed he received Claimant's denial of the incidents on September 10, 2021.

g. Credibility Determinations

33. At hearing Claimant was shown to wear a right shoulder immobilizer sling that limited his right shoulder movement of his arm and was appropriately masked as he was in his attorney's office testifying at the time of the hearing.

34. As found, Mr. Adam, Dr. Failinger and Dr. Richardson are authorized treating physicians. As further found, the August 9, 2021, August 20, 2021, September 17, 2021,October 1, 2021 and November 16, 2021 work restrictions by Mr. Adams and Dr. Richardson are credible and persuasive. It is further persuasive that Dr. Failinger formally requested prior authorization to proceed with the right shoulder surgery on September 2, 2021 and this had been communicated to Insurer.

35. Claimant's testimony is found credible. As found, Claimant was terminated because of the work related injury and because Claimant could no longer perform the assigned duties within his limitations.

36. The HR Manager is found not to be persuasive regarding his reasons for terminating Claimant. He specifically documented on September 3, 2021 that he had a long conversation with Claimant about his work, yet, at no time did he document that it was his intention to terminated Claimant. It is clear, and it is so found, that the HR Manager knew or should have known that Claimant was proceeding with right shoulder surgery as he specifically disclosed that he had been communicating with the insurer and would be following up. He specifically mentioned the adjuster by name, which is the same name as is found on the request for prior authorization.

37. The HR Manager is also found to not be credible with regard to whether he knew that Claimant's work restrictions were being violated. It is clear from the response email sent by Claimant that the HR Manager had actually acknowledged that the prior Friday he had mentioned that Claimant should not honestly be at work if they were following the doctor's restrictions. He did not deny that Claimant's statements were true.

38. The HR Manager is specifically found not credible in regard to his denial of the status of Claimant's workers' compensation claim when he formally terminated Claimant or that Employer was violating Claimant's work restrictions.

39. Lastly, as found, if Respondent Employer truly believed that Claimant acted inappropriately, they would not have sent the Office Manager, who was alleging the inappropriate acts, to Claimant's personal abode to retrieve the Employer's property, including the uniforms and keys. This fact alone, has great weight in the mind of this ALJ and is found persuasive and compelling as to the veracity of the Office Manager and the HR Manager's statements during the hearing, whom are found not credible.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more

probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Termination for Cause and Temporary Disability Benefits

Entitlement to temporary disability benefits is conditioned on whether Claimant is entitled to benefits or has been terminated for cause so these issues are interlinked and must be addressed together.

A disabled claimant is entitled to temporary total disability (TTD) benefits if they miss more than three days of work. Sec. 8-43-105, C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J.*

Murphy & Co., 964 P.2d 595 (Colo. App. 1998). Claimant alleges temporary total disability benefits from September 10, 2022 through the present. Here, there is no doubt or question that Claimant was under work restrictions as provided by his authorized treating physician. On August 9, 2021 Nathan Adams, PAC of Concentra limited Claimant's work to no use of the right upper extremity. On August 20, 2021 Mr. Adams changed Claimant's work restrictions to lifting 5 lbs. to chest or shoulder level with the right arm, no use of the right hand above the shoulder level on, which were repeated on September 17, 2021 and October 1, 2021. Dr. Richardson also echoed the same restrictions on November 16, 2021. By this action, this ALJ infers that Dr. Richardson was the supervising physician and agreed with the physician assistant's prior work restrictions.

However, Claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. If a work-related injury contributes "to some degree" to a claimant's wage loss, the claimant is entitled to temporary total disability benefits. *Id*. at 548. "Temporary disability benefits are precluded only when the work-related injury plays no part in the subsequent wage loss. Therefore, if the injury contributed in part to the wage loss, temporary total disability benefits can be denied, suspended, or terminated only if one of the four statutory factors in Sec. 8-42-105(3) is satisfied." *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209, 1210-11 (Colo. App. 1996). Returning to work is one criteria for terminating TTD benefits. Section 8-42-105(3)(b), C.R.S. The persuasive evidence shows that Claimant did return to work though he was under restrictions. The persuasive evidence is that Claimant was exceeding those restrictions in order to comply with order from his supervisors to continue working loading and unloading chemicals. While the majority of loading and unloading was accomplished with forklifts and pallet jacks, this ALJ finds that there were some duties Claimant had to perform without the assistance of the forklifts and jacks, such as following the Install Manager (JS) instructions that Claimant load chemicals on another truck that did not have a tailgate lift, so he had to lift the 150 lb. chemical containers with a pallet jack and from the wooden pallet to the bed of the truck as well as lift the wooden pallets which weighed over 10 lbs., all outside of Claimant's restrictions. Here, Claimant clearly had a wage loss due to his work restrictions and would normally be entitled to temporary total disability benefits upon termination, if Claimant was not found responsible for the termination.

The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The burden shifts to the employer, who bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo.App. 2008). However, even if a claimant is terminated for cause, post-separation TTD benefits are available if the industrial injury contributed to some degree to the subsequent wage loss. *Liberty Heights at Northgate v. Industrial Claim Appeals Office*, 30 P.3d 872, 873 (Colo. App. 2001); see also *Gilmore v. ICAO*, *supra.*

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, I.C.A.O., W.C. No. 4-608-836 (April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for the termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over the termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

While Claimant was purportedly terminated for other issues as reflected in the HR Manager's email to Claimant, notifying Claimant of the termination, including "sexual harassment and insobordination", no credible evidence was presented at hearing to establish an evidentiary foundation of the behavioral issues and whether those behavioral issues constituted a volitional act on the part of Claimant. Here, it is clear from the HR Manager's September 3, 2021 Personnel Documentation that the HR Manager documented that he had had a long conversation with Claimant and that Claimant was *"emotionally frustrated with his lame arm*." Nowhere in the document does the HR Manager comment that it was his intention to terminated Claimant based on the reported behavioral issues. This ALJ finds and concludes that, from the totality of the evidence Claimant did not commit any volitional act that resulted in his termination of employment. Claimant's testimony is found persuasive over the contrary evidence tendered by the HR

Manager and the Office Manager. As further found, Claimant was experiencing extreme pressure to perform a job which clearly exceeded his limitation and he was emotionally frustrated by Employer's failure to accommodate those restrictions. In this ALJ's estimation, even the job of forklift operator would require Claimant to utilize his arm above the shoulder to reach up and get on the forklift, thereby violating his work restrictions. As found, from the totality of the evidence, Claimant is credible in his denial that he was neither insubordinate nor that he acted in any way inappropriately with the Office Manager. This is supported by Employer's decision to send said Office Manager to speak with Claimant at his own home and retrieve Employer's properly. As found and concluded, Employer's decision to terminate Claimant on September 9, 2021, was based on Claimant's work related injury and surgery, and the decision to terminate cannot be attributed to the Claimant or any volitional act of Claimant. Respondents have failed to show that Claimant was responsible for his termination.

Claimant has shown, by a preponderance of the evidence that Claimant is entitled to temporary total disability benefits as his provider restricted Claimant and those restrictions were not complied with. From the totality of the evidence, Claimant is entitled to temporary total disability benefits from September 10, 2021 through the date of surgery. It is further found that Claimant has proven by a preponderance of the evidence he proceeded with surgery, Claimant's right shoulder was immobilized following the February 15, 2022 surgery by Dr. Failinger and was not to do any active range of motion of the shoulder after surgery for at least six weeks. It is found that there is a direct causal link between the work related injury and the Claimant's inability to return to work following surgery. Therefore, the ALJ orders Respondents to provide Claimant with temporary total disability benefits beginning September 10, 2021 and continuing until terminated by law or statute.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents failed to prove by a preponderance of the evidence Claimant is responsible for his termination.

2. Respondents shall pay Claimant temporary total disability benefits from September 10, 2021 at the rate of $560.00 per week. For the period of September 10, 2021 through the date of the hearing on March 3, 2022, Claimant shall be paid $14,000.00. Respondents shall continue to pay temporary disability benefits until terminated by law.

3. Respondents shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove she suffered a compensable injury to her left ankle on March 5, 2021?

- If Claimant proved a compensable injury, did she prove the November 23, 2021 surgery by Dr. Eric Lewis was causally related to the work injury?

- The parties stipulated that Dr. Lewis and Arkansas Valley Family Practice are authorized providers.

FINDINGS OF FACT

1. Claimant works for Employer as a Life Skills Facilitator, Child Welfare Case Aide, and Visitation Supervisor.

2. Claimant injured her left ankle on March 9, 2021 while exiting Employer's building. She had a misstep on an uneven surface and rolled her left ankle. She experienced severe pain in the posterolateral aspect of her left ankle.

3. Claimant continued working for a short time but could not continue because of the severe ankle pain. She reported the injury to her supervisor, but at that time she was "not planning of filing workman's comp."

4. Claimant saw her existing podiatrist, Dr. Eric Lewis at Pueblo Ankle & Foot Care, on March 11, 2021. Dr. Lewis wrote that Claimant was having "most pain along the outside aspect of her left ankle going up to her knee." He noted edema around the lateral ankle, crepitus, and painful range of motion. X-rays showed osteophyte formation localized to the anterior distal tibia but no fracture. Dr. Lewis diagnosed an ankle sprain. He advised Claimant to immobilize the ankle and follow the "RICE" protocol. He also ordered an MRI.

5. The MRI was completed on May 3, 2021. It showed capsular thickening and edema over the posterior tibiotalar and subtalar joint, an ununited os trigonum with associated bone marrow edema and interosseous cysts, and edema in the posterior capsule and pericapsular soft tissues overlying the os trigonum and extending to the distal fibula. The radiologist indicated os trigonum syndrome should be considered, if correlated clinically.

6. Claimant had a telemedicine follow-up with Dr. Lewis on May 20, 2021. She stated she "still has pain mainly located along the back and outer aspect of her ankle." Although Claimant specifically reported posterolateral ankle pain, another section of the report simply refers to "lateral" ankle pain. Dr. Lewis reviewed the MRI images, and noted avulsed bone fragments off the posterior tibia and increased update of the os trigonum.

He prescribed a Medrol Dosepak and 800mg ibuprofen TID. He stated he would recommend surgery if the symptoms did not resolve.

7. After the appointment with Dr. Lewis, Claimant realized the injury was more serious than she originally thought, so she notified her supervisor "I was going to need to pursue workers' comp at that point." Employer gave Claimant a designated provider list, from which she selected Arkansas Valley Family Practice.

8. Claimant saw Dr. Richard Book at Arkansas Valley Family Practice on May 27, 2021. Her ankle remained severely symptomatic despite immobilization, the steroid taper, and ibuprofen. Examination showed tenderness to palpation and swelling in the posterior ankle. Dr. Book advised Claimant to continue follow up with Dr. Lewis.

9. Claimant called Dr. Lewis' office on June 29, 2021 to report nothing had changed and she still could not put any weight on the left ankle without the boot.

10. Claimant saw Dr. Lewis on July 1, 2021. The report indicates she was continuing to have aching and burning pain "along the outer aspect of her left ankle." Dr. Lewis noted the MRI showed "separated os trigonum with increased uptake to posterior talar body and os trigonum consistent with acute trauma." He recommended surgery to remove the os trigonum.

11. Dr. Lewis performed os trigonum excision surgery on November 23, 2021. Later records show Claimant had a good result, with significant reduction in pain and improvement in function. By the time of the hearing, Claimant testified to approximately 75% improvement since the surgery.

12. Claimant proved she suffered a compensable injury to her left ankle on March 9, 2021. Claimant's credible description of the accident is supported by records from multiple medical providers and the Employer's First Report. The injury interfered with her ability to continue working and reasonably prompted her to seek treatment. These facts are sufficient to establish a compensable injury.

13. The more difficult question is whether the November 23, 2021 surgery was causally related to the work accident.

14. Claimant first had problems with her left ankle in 2019. The pain was localized to the anteromedial aspect of the left ankle. She saw a chiropractor, who treated her for a presumed stress fracture of the distal fibula. She was advised to stay off the foot or use a walking boot for 3-4 weeks. When the symptoms failed to respond, she was referred for an MRI.

15. An MRI on August 30, 2019 showed an os trigonum with edema in the os, mild arthritis and effusion in the posterior subtalar joint, and mild tendinopathy in the posterior tibialis tendon. The radiologist "suspected" os trigonum syndrome.

16. Claimant saw Dr. Sarah Thompson, a podiatrist, at Pueblo Ankle and Foot Care on September 20, 2019. She reported anterior ankle pain for several months. On

examination, pain was localized to the anteromedial aspect of the ankle. Dr. Thompson gave Claimant a steroid injection. If the ankle did not improve, she would consider a CT scan because the MRI and previous x-rays showed “no findings” to explain the source of her pain.

17. Claimant followed up with Dr. Thompson on October 4, 2019. The injection had not helped and she was still having pain in the anteromedial ankle. Dr. Thompson obtained weightbearing “charger view” x-rays, which showed a tibial osteophyte contacting the talus with dorsiflexion. Dr. Thompson noted, “This is exactly where she is having all her pain. I advised her it is ankle impingement and I will have her follow up with Dr. Pfau for possible surgery discussions. Pt is very relieved that we now know what is causing her pain.”

18. Dr. Zeno Pfau performed arthroscopic surgery on December 27, 2019. He performed a tibial osteotomy and debridement of impinging soft tissue.

19. Claimant recovered from surgery relatively quickly. By February 10, 2020, she reported “minimal pain.” Dr. Pfau released her from regular follow up and advised her to return “as needed.” Claimant returned to regular duty at work.

20. Claimant sought no further treatment for the ankle for almost a year. On January 19, 2021, she saw Dr. Eric Lewis Pueblo Ankle and Foot.[1] She reported a deep ache in the ankle. Examination showed pain with dorsiflexion of the left ankle. Dr. Lewis diagnosed osteoarthritis and ordered an MRI.

21. At hearing, Claimant explained she had returned to the podiatrist in January 2021 because she started having recurrent impingement symptoms in her left ankle. This occurred over a three-month period before the appointment. Claimant testified the symptoms were in the exact same location—over the anteromedial ankle—as in 2019. She was not having any pain or other symptoms in the posterior ankle.

22. As noted above, the work accident that gave rise to the current claim occurred on March 9, 2019. When asked at hearing where she experienced pain the accident, Claimant pointed to the posterolateral aspect of her left ankle. She testified she never had pain or other symptoms in this location before March 9, 2021.

23. Dr. Nicholas Olsen performed an IME for Respondents on September 12, 2021. He issued an initial report after the IME, and an addendum report dated October 7, 2021. Dr. Olsen opined Claimant suffered a work-related ankle sprain on March 9, 2021, which was appropriately treated conservatively with rest, ice, and immobilization. He opined the surgery recommended by Dr. Lewis was related to Claimant’s documented pre-existing history of left ankle problems rather than the work accident.

24. Dr. Lewis authored a report regarding causation of the os trigonum surgery on October 14, 2021. He stated,

[1] Dr. Pfau had left the practice since Claimant’s last post-op appointment.

> I have reviewed all medical records not only from Pueblo Ankle & Foot Care, but that as well of Dr. Olsen's (IME) visit and findings and all additional medical records which are scanned into the patient's chart. [Claimant] initially presented to Dr. Thompson and had surgery by Dr. Pfau for anterior ankle impingement syndrome. She never had symptoms of posterior ankle pain exacerbated with plantar flexion of her big toe prior to her work injury. The MRI after injury also showed increased T2 signal at the os trigonum, which showed a recent trauma. It is my opinion that the misstep at work on two uneven ground with a decline is consistent with her symptoms currently.

25. Dr. Olsen testified at hearing consistent with his reports. He explained that an os trigonum is a congenital malformation at the back of the ankle. It is not necessarily painful, but if it becomes symptomatic, it is referred to as os trigonum syndrome. He opined both the 2019 and 2021 MRIs showed edema around the os trigonum. As a result, he considers Claimant's os trigonum syndrome to be a chronic condition. Dr. Olsen agreed Claimant sprained her ankle on March 9, 2021, but opined the injury did not cause, aggravate, or accelerate the os trigonum syndrome. He emphasized that Dr. Lewis' March 11, 2021 report only references "lateral" ankle pain, whereas posterior ankle pain was noted in the May 20, 2021 report. Dr. Olsen opined Claimant was a candidate for os trigonum removal before the work accident because she had persistent pain in her ankle that did not resolve after the 2019 surgery.

26. Claimant's testimony was credible and persuasive.

27. Dr. Lewis' opinions regarding causation of the os trigonum removal surgery are credible and more persuasive than the contrary opinions offered by Dr. Olsen.

28. Claimant proved by a preponderance of the evidence the November 23, 2021 surgery performed by Dr. Lewis was reasonably necessary and causally related to the March 9, 2021 work accident.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Even a "minor strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. *E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved she suffered a compensable injury to her left ankle on March 9, 2021. Claimant's description of the accident is credible and supported by records from multiple medical providers and the Employer's First Report. The injury interfered with her ability to continue working and reasonably prompted her to seek treatment. These facts are sufficient to establish a compensable injury.

B. Causation of the os trigonum removal surgery

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Claimant proved the November 23, 2021 surgery performed by Dr. Lewis was reasonably necessary and causally related to the March 9, 2021 work accident. Claimant's testimony she experienced posterior ankle pain immediately after the accident is credible. Admittedly, Dr. Lewis' March 11 report does not explicitly mention posterior ankle pain. But the statement that "most" of her pain was on the outside of the left ankle supports an inference that "some" of her pain was posterior, consistent with her credible testimony. This inference buttressed by the May 20 notation that Claimant was "still" having pain in the "back and outer" aspect of her left ankle. Dr. Olson's opinion that Claimant was already candidate for os trigonum surgery before the work accident is not persuasive. Claimant had no posterior ankle symptoms before the work accident. The edema shown on the 2019 MRI was probably an incidental finding given the lack of corresponding symptoms. Aside from the radiologist's "suspicion" of os trigonum syndrome, none of Claimant's treating providers thought the finding was pertinent to the issues for which she was being treated. Dr. Thompson previously commented there were "no findings" on 2019 MRI to account for Claimant's symptoms. Charger view x-rays subsequently pinpointed the "exact" source of her pain, which was addressed surgically by Dr. Pfau in December 2019. The surgery relieved the symptoms with no attention being directed to the os trigonum. Claimant sought further treatment in January 2021 for recurrent *anterior* ankle pain. The os trigonum only became symptomatic after the work accident, and there is no persuasive evidence of any alternate cause or trigger. Crediting Claimant's testimony regarding the onset, progression, nature, and location of her symptoms, coupled with Dr. Lewis' persuasive opinions, the ALJ concludes the os trigonum removal surgery was causally related to the March 9, 2021 work accident.

ORDER

It is therefore ordered that:

1. Claimant's claim for a left ankle injury on March 9, 2021 is compensable.

2. Insurer shall cover the November 23, 2021 os trigonum excision surgery performed by Dr. Eric Lewis.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: March 29, 2022

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he sustained an injury arising out of and in the course and scope of his employment with the employer on August 3, 2021.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his left shoulder (including surgery recommended by Dr. Mitch Copeland) is reasonable, necessary, and related to the work injury.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits beginning August 4, 2021 and ongoing.

4. If the claim is found compensable, what is the claimant's average weekly wage (AWW)?

5. If the claim is found compensable, and the claimant is entitled to TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant willfully misled the employer regarding his ability to perform the job and pursuant to Section 8-42-112(1)(d) C.R.S., the claimant's TTD benefits are subject to a reduction of 50 percent.

FINDINGS OF FACT

1. The claimant began working for the employer on February 25, 2019 as a mechanic. As part of the employment process, the claimant was required to submit to a medical evaluation. The claimant "passed" that evaluation in the sense that he was deemed to be physically able to perform his job duties.

2. The claimant's job duties involved diagnosing, repairing, reconditioning, and maintaining heavy equipment. As a result, the claimant's job duties included heavy lifting. Specifically, the claimant's written job description identified lifting and moving objects weighing up to 96 pounds. The claimant was able to perform all of these job duties.

3. On August 3, 2021, the claimant was working to disassemble and inspect a large engine. This process involved removing cylinder heads from the engine. To do this, six cylinder heads are connected to a bar, and lifted together using a chain and crane. Each cylinder head weighs approximately 90 pounds. This specific engine was quite rusty, and the claimant used both a pry bar and the lifting crane to remove the

cylinder heads. When the connected cylinder heads broke free, the suspended cylinder heads began to rotate. The claimant estimates that the entire suspended unit weighed between 650 and 750 pounds. The claimant was concerned that a coworker would be struck by the rotating load, and reached out with his left hand to stop the rotation. In doing so, the claimant felt a pull and then a pop in his left shoulder.

4. After the pop in his left shoulder, the claimant had shooting pain down into his left armpit and burning pain across his shoulder. In addition, he felt tingling into his left fourth and fifth fingers.

5. The claimant reported this incident to his supervisor, [Redacted, hereinafter AO], Branch Service Manager. Mr. AO[Redacted] assisted the claimant in completing paperwork regarding the incident. Mr. AO[Redacted] testified that when the claimant reported the August 3, 2021 incident to him, the claimant stated that he had prior left shoulder issues, including possible surgery.

6. The claimant has not returned to work for the employer since the August 3, 2021 incident.

7. On August 4, 2021, the employer attempted to recreate the August 3, 2021 incident. Mr. AO[Redacted] was involved in the reenactment. Mr. AO[Redacted] testified that he and other employees attempted to recreate the incident as closely as they could. Mr. AO[Redacted] further testified that during the reenactment, the rotation of the suspended materials was "not very fast" and he did not have to use much force to stop the materials from rotating.

Medical Treatment Prior to August 3, 2021

8. Prior to August 3, 2021, the claimant reported left shoulder issues to his medical providers. The claimant's left upper extremity issues seem to have started after he suffered a fall in February 2009 and injured his back, neck, left shoulder, and left arm. Thereafter, the claimant suffered a left arm injury on January 25, 2018 while employed in California.

9. On May 24, 2019, the claimant underwent an Panel Qualified Medical Examination related to the January 25, 2018 California injury with Dr. Paul Sandu. In his June 21, 2019 report[1], Dr. Sandu noted that on examination the claimant had normal range of motion for his left shoulder in flexion, extension, abduction, and adduction. Dr. Sandu opined that the claimant could continue to work without any reactions.

10. In 2019, the claimant relocated from California to Colorado. At that time, he established care with Plateau Valley Medical Clinic. The claimant was first seen at that practice on June 30, 2018 by Dr. Erin Arthur. On that date, the claimant reported

[1] Dr. Sandu authored an extensive report and the ALJ does not recite all observations and opinions he expressed. The ALJ includes only information that is relevant to the present matter.

that he had undergone treatment with a pain specialist in California due to prior injuries. The claimant also reported that his left elbow was his primary concern.

11. Thereafter, the claimant's primary provider at Plateau Valley Medical Clinic was Dr. Scott Rollins. During his treatment with Dr. Rollins, the claimant reported various issues, including back pain and bilateral shoulder pain. In early 2020, Dr. Rollins ordered magnetic resonance imaging (MRI) of the claimant's left shoulder. On February 7, 2020, a left shoulder MRI showed severe acromioclavicular degenerative joint disease with inflammation and vacuum phenomenon in the joint, a chronic appearing SLAP[2] tear, and a moderate paralabral cyst.

12. After review of the February 2020 MRI, Dr. Rollins referred the claimant to Dr. Mitch Copeland for an orthopedic evaluation. The claimant was seen by Dr. Copeland on March 6, 2020. At that time, Dr. Copeland recommended surgical intervention. Specifically, Dr. Copeland recommended a left shoulder arthroscopy with rotator cuff repair, a Mumford procedure, and biceps tenotomy.

13. The claimant testified that he did not pursue the surgery recommended by Dr. Copeland in 2020 because he was still able to work. He did not want to be off of work for a lengthy recovery period if he was able to work full duty. The claimant credibly testified that prior to the August 3, 2021 incident, his left shoulder did not cause him any difficulties at work.

14. The claimant further testified that prior to the August 3, 2021 incident he was able to engage in a number of physically demanding activities. These activities included snowboarding, restoring classic cars, chopping wood, and maintaining his 30 acre residential property. Since the August 3, 2021 incident, he is unable to engage in these activities. The claimant also testified that since August 3, 2021, he has experienced new left shoulder symptoms including a constant aching, burning and shooting pain, and an increase in numbness in his left hand and fingers.

Medical Treatment After August 3, 2021

15. The claimant's authorized threatening provider (ATP) for this claim is Dr. Craig Stagg. The claimant was first seen by Dr. Stagg on August 4, 2021. At that time, the claimant described his mechanism of injury as "had a load on a crane, the crane started to rotate, [the claimant] reached up to grab the load so it would not hit a coworker". The claimant also reported significant pain and a pop in his left shoulder. Dr. Stagg restricted the claimant from use of his left upper extremity and made a referral for an orthopedic consultation.

16. The claimant was seen by Dr. Copeland on August 23, 2021. At that time, the claimant described the mechanism of injury as "his arm was pulled forward by a suspended load". Dr. Copeland opined that the claimant had a torn rotator cuff and ordered an MRI.

---

[2] Superior labrum anterior posterior tear.

17. An MRI of the claimant's left shoulder was performed on September 8, 2021. The MRI showed a small labrum tear, grade 2 chondral change in the glenohumeral joint, and moderate acromioclavicular arthrosis.

18. On September 8, 2021, Dr. Copeland reviewed the MRI and opined that the claimant could benefit from six weeks of physical therapy. Dr. Copeland also noted that if the claimant did not improve with therapy, surgical options would be addressed.

19. The claimant returned to Dr. Copeland on October 18, 2021. At that time, the claimant reported some improvement with physical therapy. Dr Copeland reviewed the claimant's 2020 MRI and noted that it was "largely similar" to the recent September 2021 MRI. Dr. Copeland recommended the claimant undergo left shoulder surgery, which would include arthroscopy with glenoid labrum debridement, distal clavicle resection, biceps tenotomy, and possible lysis of the paralabral cyst.

20. In early 2022, the claimant attended an independent medical examination (IME) with Dr. Kathleen D'Angelo. In connection with the IME, D'Angelo reviewed the claimant's medical records, obtained a history from the claimant, and performed a physician examination. In her February 4, 2022 IME report, Dr. D'Angelo opined that the claimant did not suffer an injury to his left shoulder on August 3, 2021. It is also Dr. D'Angelo's opinion that the events of August 3, 2021 did not aggravate, or worsen the claimant's pre-existing left shoulder condition. In support of her opinions, Dr. D'Angelo noted that the claimant has a history of chronic left shoulder pain. Dr. D'Angelo further noted that this issue began in 2007 as a result of a work injury that was then exacerbated by an additional injury in 2015. In addition, Dr. D'Angelo noted that the February 7, 2020 and September 8, 2021 MRI results do not differ. Dr. D'Angelo further notes that in 2020, the claimant was complaining of moderate to severe left shoulder pain that was constant and throbbing. Dr. D'Angelo further opined that the claimant's need for surgery is not work related and he reached MMI on August 4, 2021.

21. Dr. D'Angelo's deposition testimony was consistent with her written report. During her testimony, Dr. D'Angelo reiterated her opinion that the claimant did not suffer a left shoulder injury at work on August 3, 2021. Dr. D'Angelo noted in her testimony that when Dr. Rollins reviewed the March 2020 MRI, he noted that the claimant had a chronic SLAP tear in the left shoulder. Dr. D'Angelo further testified that Dr. Copeland's surgical recommendations in 2020 and 2021 are the same. Dr. D'Angelo explained that individuals with chronic degenerative injuries will experience a waxing and waning of their symptoms. It is Dr. D'Angelo's opinion that the medical records indicate that the claimant has this waxing and waning of his symptoms. Dr. D'Angelo further testified that while the recommended left shoulder surgery may be reasonable and necessary to treat the condition of the claimant's left shoulder, the need for surgery is not related to the claimant's work.

22. [Redacted, hereinafter SH] , Claim and Risk Management Supervisor for the employer testified by deposition. Ms. SH[Redacted] testified that she learned about the claimant's August 3, 2021 incident on that same date. Ms. SH[Redacted] also testified that the claimant

has not returned to work for the employer. She confirmed that at this time, the employer is not able to accommodate the claimant's work restrictions.

23. Dr. Stagg testified that it is his opinion that the August 3, 2021 work incident exacerbated the chronic condition in the claimant's left shoulder. In support of this opinion, Dr. Stagg noted that prior to the August 3, 2021 incident, the claimant was working full duty in a physically demanding job. Dr. Stagg also testified that the claimant's mechanism of injury is consistent with a shoulder injury.

24. The payroll records entered into evidence demonstrate that the claimant was paid $27.81 per hour while employed with the employer. However, the claimant's hours varied throughout his employment. The payroll records further demonstrate that between the work week ending August 15, 2020 and the work week ending August 7, 2021[3], the claimant had gross earnings of $61,998.46. When this amount is divided by 51 weeks it results in an average of $1,215.66.

25. The ALJ credits the medical records and the claimant's testimony regarding the nature and onset of his left shoulder symptoms. The ALJ specifically finds as true that prior to the Augusts 3, 2021 incident, the claimant was able to fully perform his job duties, despite having sought prior treatment of his left shoulder. The ALJ also credits the opinions of Dr. Stagg over the contrary opinions of Dr. D'Angelo. The ALJ specifically credits the opinion of Dr. Stagg that the August 3, 2021 incident exacerbated the claimant's chronic left shoulder condition.

26. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that on August 3, 2021, he suffered an injury to his left shoulder while in the course and scope of his employment with the employer. In addition, the ALJ finds that the claimant's act of reaching with his left arm to stop the suspended load from rotating resulted in an aggravation and acceleration of his pre-existing left shoulder condition. This aggravation and acceleration of the claimant's pre-existing left shoulder condition resulted in the need for medical treatment.

27. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that treatment of his left shoulder is reasonable, necessary, and related to the August 3, 2021 work injury. In addition, the claimant has successfully demonstrated that it is more likely than not that the recommended left shoulder surgery is reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

28. The ALJ credits the testimony of the claimant and Ms. SH[Redacted] and finds that the claimant has not returned to work for the employer because of his work restrictions. The ALJ further finds that the claimant has successfully demonstrated that it is more likely than not that his inability to return to work is the result of the August 3, 2021 injury.

---

[3] This was a 51 week period.

29. The respondents assert that the claimant's TTD benefits should be reduced by 50 percent because the respondents believe that the claimant willfully misled the employer regarding his physical ability to perform his job duties. The ALJ is not persuaded by this argument. As found, prior to his August 3, 2021 injury, the claimant was able to fully perform his job duties. The ALJ declines to apply any reduction to the claimant's TTD benefits in this case.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that on August 3, 2021 he sustained an injury arising out of and in the course

and scope of his employment with the employer. As found, the claimant has demonstrated, by a preponderance of the evidence, that the pre-existing condition in this left shoulder was aggravated and accelerated by the August 3, 2021 incident. As found, the medical records, the claimant's testimony, and the opinions of Dr. Stagg are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence, that treatment of his left shoulder, including the surgery recommended by Dr. Copeland, is reasonable, necessary, and related to the August 3, 2021 work injury. As found, the medical records, the claimant's testimony, and the opinions of Dr. Stagg are credible and persuasive.

8. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

9. As found, the claimant has demonstrated by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits beginning August 3, 2021 and ongoing until terminated by law. As found, the testimony of Ms. SH[Redacted] and the claimant is credible and persuasive on this issue.

10. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

11. As found, the claimant's average weekly wage (AWW) is $1,215.66.

ORDER

It is therefore ordered:

1. The respondents shall pay for reasonable and necessary treatment of the claimant's left shoulder, including the surgery recommended by Dr. Copeland, pursuant to the Colorado Medical Fee Schedule.

2. The claimant is entitled to temporary total disability (TTD) benefits beginning August 3, 2021 and ongoing until terminated by law.

3. The claimant's average weekly wage (AWW) is $1,215.66.

Dated this 30th day of March 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant overcame Dr. Stephen Lindenbaum's DIME opinions on causation and MMI regarding his right shoulder by clear and convincing evidence.

II. Whether Claimant proved by a preponderance of the evidence he is entitled to reasonable and necessary medical benefits for his right shoulder.

Whether Claimant overcame Dr. Lindenbaum's causation and MMI opinion on Claimant's cervical/thoracic spine was initially identified as an issue; however Claimant subsequently withdrew the issue in his position statement.

STIPULATIONS

The parties agreed that if Claimant overcomes the DIME opinions of Dr. Lindenbaum regarding causation and MMI, then Claimant is entitled to $1 of temporary partial disability benefits for May 21, 2019. The parties further agreed that the issue of temporary partial and/or temporary total disability benefits after May 21, 2019 are reserved, as are the issues of overpayment, offsets, and applicable defenses. The parties further stipulated that if Claimant fails to overcome the DIME opinion of Dr. Lindenbaum regarding causation and MMI, Claimant accepts Dr. Lindenbaum's opinions regarding permanent impairment for his right elbow and low back as admitted to by Respondents, as well as Respondents' denial of maintenance care for causally related body parts.

FINDINGS OF FACT

1. Claimant is the owner-operator of Employer, an HVAC company.

2. Claimant sustained an admitted industrial injury on Friday, August 17, 2018. While climbing a ladder to a 12-foot high roof, the ladder slipped, causing Claimant to begin to fall. Claimant caught himself by grabbing the gutter of the home with his right arm. His body swung sideways in the air to an almost horizontal position. Claimant then lost his grip and fell approximately five to eight feet to the ground. Claimant testified he landed on the ladder across his right side and back of his right lower torso.

3. Claimant testified he was dazed and shocked at the time and noticed right arm numbness and pain. Claimant testified he decided to see if his condition would improve over the weekend. Claimant testified that, by the following Monday, he had difficulty walking, and noticed his right biceps looked abnormal.

4. On August 21, 2018, Employer filed a First Report of Injury form indicating Claimant "[f]ell off a ladder, hurt arm trying to hold on and hurt back on impact." (Resp. Ex. C, p. 9). No right shoulder or neck injuries were identified.

5. Claimant presented to authorized treating provider Charles Wenzel, D.O. on August 22, 2018 with complaints of pain in his right arm, right forearm, and low back, as well as bilateral knee pain that had resolved. The pain diagram completed by Claimant denotes lumbar and thoracic spine pain, bilateral knee pain, right elbow pain, and neck pain. Dr. Wenzel noted tenderness, decreased strength, and decreased range of motion of the right arm, as well as ecchymosis and erythema. No right shoulder complaints or examination were documented. Dr. Wenzel assessed Claimant with strains of the right long head biceps, unspecific injury of the right forearm, and muscle strain of the low back. He referred Claimant for physical therapy.

6. Claimant returned to Dr. Wenzel on August 27, 2018 with complaints of worsening pain, primarily in his low back, as well as ongoing apprehension regarding use of his right upper extremity. Claimant's pain diagram does not indicate any shoulder pain. The medical note does not document any right shoulder complaints or shoulder examination. Dr. Wenzel recommended Claimant undergo occupational therapy.

7. Between August 29, 2018 and September 11, 2018, Claimant underwent six therapy sessions. Claimant's therapists did not document any right shoulder, neck, or mid-back/upper thoracic issues during those sessions.

8. On August 31, 2018, Claimant presented to Monica Fanning Schubert, APN. Claimant's pain diagram identified right elbow, right bicep, thoracic and lumbar pain, without indication of right shoulder or neck issues. APN Fanning Schubert noted complaints of pain in the low back and right distal and mid biceps. No shoulder complaints or examination is documented at this evaluation. APN Fanning Schubert referred Claimant for MRIs of his lumbar spine and right elbow.

9. Claimant underwent a right elbow MRI on September 10, 2018, which revealed a ruptured biceps tendon.

10. APN Fanning Schubert reexamined Claimant on September 11, 2018. Claimant's pain diagram and the medical note from this examination do not document any right shoulder, neck or mid-back issues. APN Fanning Schubert diagnosed Claimant with a full-thickness tear of his distal bicep tendon and progression of L4-5 foraminal stenosis. She referred Claimant to Dr. Nicholas Olsen, D.O. for pain management, and to Sameer Lodha, M.D. for surgical evaluation of the right distal bicep rupture.

11. Claimant first presented to Dr. Olsen on September 13, 2018. Claimant completed a patient questionnaire and pain diagram in which he described his injury as falling off of a ladder causing back and right arm problems. His pain diagram identified issues at the right elbow, mid-back, and low back, but not his right shoulder or neck. Dr.

Olsen's evaluation made no mention of right shoulder, neck or mid-back issues, focusing on the lumbar spine.

12. Dr. Lodha first evaluated Claimant on September 18, 2018. No right shoulder complaints or right shoulder evaluation was documented. Dr. Lodha recommended Claimant undergo right distal bicep surgical repair, which she performed on September 24, 2018.

13. Claimant attended a follow-up evaluation with APN Fanning Schubert on September 28, 2018. Claimant did not identify right shoulder or neck issues on his pain diagram, but he circled his mid-back region that day. APN Fanning Schubert did not identify right shoulder or neck issues or complaints, and Claimant's thoracic spine exam was negative. APN Fanning Schubert referred Claimant to orthopedic surgeon Bryan Andrew Castro, M.D. for his low back pain.

14. Claimant returned to APN Fanning Schubert on October 9, 2018. He completed a pain diagram indicating pain in his right shoulder, right elbow, low back and left leg. APN Fanning Schubert did not document any right shoulder, neck or mid-back complaints.

15. Claimant presented to Dr. Castro on October 24, 2018 for examination of his low back. Claimant reported right elbow and biceps tendon pain, as well as low back and left leg pain. On examination of upper extremities, Dr. Castro noted "good function and strength to all motions of the shoulders, elbows, wrists and hand intrinsics." (R. Ex. K, p. 113). Claimant's pain diagram did not identify right shoulder issues, nor is there mention of right shoulder issues in the medical note. Dr. Castro assessed Claimant with lumbar spine pain.

16. On October 31, 2018, APN Fanning Schubert noted that Dr. Castro had referred Claimant to Dr. Olsen for consideration of lumbar injections. Claimant's pain diagram did not identify issues with his right shoulder, nor did the medical note. Similarly, on November 1, 2018, Dr. Olsen did not identify right shoulder, neck, or mid-back complaints and Claimant's pain diagram did not identify issues in those regions.

17. On November 16, 2018, APN Fanning-Schubert noted that Claimant's lumbar injections were canceled due to non-work related medical issues. Claimant had recently sought evaluation and treatment with his personal physicians for unrelated chest pains and several other unrelated medical complaints. Claimant did not report right shoulder, neck or mid-back issues and his pain diagram did not identify issues in those areas.

18. On December 10, 2018, Claimant told Dr. Olsen that he had a "host of new medical problems" resulting in multiple emergency department visits, a possible infection, a tooth being pulled, throat swelling, and a loss of 25 pounds. Dr. Olsen did not document right shoulder or mid-back issues and Claimant's pain diagram did not identify issues in those areas.

19. On December 14, 2018, APN Fanning Schubert noted Claimant had weight loss, abdominal pain, chest pain, neck and headache pain, all of which were being worked up by his primary care physician. She did not document right shoulder or mid-back complaints, and she did not relate the neck pain to the work injury. Claimant's pain diagram did not identify right shoulder, neck or mid-back issues.

20. On January 9, 2019, Dr. Olsen noted Claimant's right arm was doing better. Claimant's pain diagram identified pain in the mid-back region for the first time in more than two months, but no issues in the right shoulder or neck regions.

21. On January 15, 2019, Dr. Lohda noted Claimant was having other medical issues, including back pain, trouble swallowing, weight loss and shoulder girdle pain. Dr. Lodha opined that Claimant had healed from the standpoint of his distal biceps, but recommended Claimant undergo evaluation for his other conditions, including a rheumatology consultation, before releasing Claimant to work without restrictions. Dr. Lodha did not address any potential causal connection between Claimant's shoulder complaints and his biceps repair.

22. On January 16, 2019, APN Fanning Schubert noted Claimant's report of right shoulder pain and neck pain. She noted that Claimant's original pain diagram noted neck pain and referred Claimant for a cervical MRI. The pain diagram completed for this examination indicated right shoulder pain. APN did not address Claimant's right shoulder at this evaluation.

23. Claimant underwent the cervical MRI on January 21, 2019, which identified degenerative issues at multiple levels.

24. On February 6, 2019, Dr. Olsen reviewed the cervical MRI, noting C5 radiculopathy could explain Claimant's right arm weakness. Dr. Olsen subsequently administered an EMG on February 25, 2019, which he interpreted as normal, without any evidence of cervical radiculopathy.

25. On March 18, 2019, Dr. Olsen discussed options to treat Claimant's ongoing neck complaints. On April 4, 2019, Dr. Olsen noted Insurer had denied all neck-related care as not work-related. No right shoulder complaints or issues were addressed. Dr. Olsen further indicated that when Claimant next returned he would likely move towards MMI.

26. On March 26, 2019, Matthew Lugliani, M.D. opined Claimant was not at MMI pending cervical injections.

27. On April 30, 2019, Dr. Lugliani noted Claimant continued to report ongoing mid and low back pain. Right shoulder complaints or issues are not documented in the medical note. Claimant's pain diagram from this date does indicate right shoulder pain. Dr. Lugliani noted he reviewed Claimant's medical record and discussed Claimant's case with pain management. He opined Claimant reached MMI with permanent

restrictions of lifting 20 pounds. He recommended one-year of medical maintenance care for medication adjustment and/or injections.

28. Dr. Olsen reexamined Claimant on June 26, 2019. Claimant reported that his right arm was doing well but continued to voice complaints about his cervical spine. Right shoulder complaints are not documented nor is the right shoulder otherwise addressed in this medical note. Dr. Olsen placed Claimant at MMI. He assigned a 12% whole person lumbar rating, which he apportioned to 0% due to a prior rating. Dr. Olsen explained that he did not include a cervical impairment rating because, despite Claimant's continued cervical complaints, Insurer had denied treatment for Claimant's cervical condition. He opined Claimant did not require maintenance care.

29. On September 11, 2019, Insurer filed a Final Admission of Liability ("FAL") consistent with Dr. Olsen's opinions regarding MMI, impairment, and maintenance care. Claimant subsequently requested a DIME.

30. Dr. Lindenbaum performed the DIME on December 13, 2019, noting he was asked to address Claimant's right shoulder, cervical spine and lumbar spine. Claimant reported his belief that his providers overlooked his shoulder and neck complaints. Dr. Lindenbaum remarked,

> It should be noted that I have not been provided with any diagrams with which the claimant states were found in the chart review by Dr. Olsen. Furthermore, there was no mention of any neck and shoulder discomfort until the claimant was seen in early January 2019, roughly 5 months after the injury.

(R. Ex. W, p. 280)

31. Dr. Lindenbaum opined that Claimant reached MMI for his lumbar spine and right elbow injuries, but that he was not at MMI because of "issues concerning his right shoulder and neck." (Id. at 282). He explained,

> Although, there are some discrepancies in what the patient has stated to me and what is found in the chart notes, these issues have to be addressed. Therefore, I think that this claimant will probably need to be referred back to the OccMed doctors so they can clarify if he truly had issues with his neck and shoulder based on the notes that they have. It should be noted that the first mention of his right shoulder was by Dr. Lodha on the day that he discharged the patient from his care which was several months after the accident and the first mention of neck discomfort that I see is actually from the nurse practitioner in early January 2019. This is the reason the question comes up concerning whether or not these two areas should be considered with the original injury as part of the injury of 2018.

(Id.)

32. Dr. Lindenbaum then provided the following provisional impairment ratings: 19% whole person impairment for Claimant's cervical spine (6% impairment under Table 53(II)(C) of the AMA Guides and 14% for range of motion deficits); 12% whole person impairment for Claimant's lumbar spine (5% impairment under Table 53(II)(C) of the AMA Guides and 7% for range of motion deficits); and 8% upper extremity impairment for the right shoulder. He noted that, due to a prior 12% lumbar impairment from a previous work injury; the lumbar impairment would be apportioned to 0%. Dr. Lindenbaum opined that there was no reason for maintenance care unless the right shoulder and neck were included in the claim.

33. Regarding the rationale for his decision, Dr. Lindenbaum wrote,

> There is a lot of controversy concerning whether or not the right shoulder and neck should be included in his rating. The reasons for this statement is that this patient states that on examining him today that he told the physicians all along that he was having neck and shoulder pain and they did not work this up. However, on evaluation of the chart notes and with lack of any type of diagrams from the initial evaluation, I see no evidence that this patient complained of shoulder or neck pain up until being seen by Dr. Lodha in December of 2018 when he complained of shoulder pain for the first time on the right and also not until January of 2019 when he saw the nurse practitioner that he complained of neck pain. He himself states that he talked to Dr. Olsen about this and Dr. Olsen said he did see these notes although I have not seen them. For that reason, I do not think he is at maximum medical improvement until we can justify if there was a reason to include his right shoulder and neck in this injury. I would strongly recommend this claimant be referred back to the work comp doctors that he was seeing so that they can supply information concerning the alleged right shoulder and neck problems.

(Id. at 282-283)

34. On April 20, 2020, Kathleen D'Angelo, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. D'Angelo examined Claimant and reviewed Claimant's medical records, including pain diagrams. Claimant reported that, when he initially sought medical treatment after the work injury, the most obvious issue was his bicep, but that at that time he explained to his provider that there were other issues all over his body. Claimant reported that he explained to the provider the areas hurting the most at the time and that his arm was the biggest focus. Dr. D'Angelo noted her examination of Claimant's right shoulder, neck and thoracic spine were normal. She provided claim-related diagnoses of (1) aggravation of preexisting lumbar degenerative spine disease, and (2) right distal bicep tendon rupture. She opined that Claimant's right shoulder and neck conditions are not work-related.

35. Dr. D'Angelo noted concerns regarding Claimant's reporting of symptoms. She opined that, although Claimant purported he informed his treating physicians of his neck and right shoulder complaints from the outset, it was improbable that his physicians ignored such complaints. She explained that her review of Claimant's intake forms did not corroborate his claim of persistent neck and/or right shoulder complaints. Dr. D'Angelo noted that, in her records review, Claimant did mark right shoulder pain in certain diagrams, but also had no complaints of right shoulder pain for several months after his injury. She further noted that Claimant's shoulder was examined by his providers and had no significant abnormalities. Dr. D'Angelo opined that Claimant reached MMI as of May 2, 2019 for his claim-related diagnoses. She agreed with the impairment ratings assigned by Dr. Olsen, noting the ratings included all of the body parts that were causally-related to Claimant's work injury. Dr. D'Angelo opined Claimant did not require maintenance medical care.

36. On May 22, 2020, Dr. Lindenbaum attended a Samms Conference with counsel for both parties. In preparation for the conference, Dr. Lindenbaum reviewed additional documentation, including several pain diagrams and Dr. D'Angelo's IME report. Dr. Lindenbaum issued an addendum DIME report updating his opinion. Dr. Lindenbaum addressed the reasoning behind his original opinion that Claimant was not at MMI, stating,

> The questions arose concerning compensability for the shoulder and neck, which I had noted there was no specific mention of these things until several months after the accident. I specifically stated that I do not have any information except from what Dr. Lodha as well as Dr. Olsen had stated and that the patient started complaining of pain in his shoulder around the 1st of January, 2019. There was also some issues about whether this patient had actually discussed his complaints with his shoulder and neck with the OccMed doctors. Apparently, there had been a change in the OccMed physicians and the original physician, Dr. Wenzel, was no longer treating the patient and with his follow-up physician, there was no mentioned (*sic*) regarding work comp compensability for the right shoulder and neck until January of 2019. It was for these reasons that I stated he was not at maximum medical improvement until I could receive some documentation that would support his claims that he was having shoulder and neck pain from the beginning of the accident and were documented.

(R. Ex. AA, p. 439)

37. Dr. Lindenbaum noted that Claimant's 8/22/18 pain diagram only showed complaints of pain in his right elbow, knees, low back and neck, and that the 8/27/18 and 8/31/18 diagrams only denoted back and right elbow pain. Dr. Lindenbaum remarked that the first mention of shoulder discomfort was on 10/9/18, two months after the work injury. He noted there was "still no evidence of any complaints." (Id.) Dr.

Lindenbaum noted the 10/28/18, 10/31/18 and 11/16/18 diagrams did not indicate shoulder or neck complaints and that,

> [u]p to this time it should be noted there was no mention on diagrams of neck discomfort and only that he had some neck discomfort initially on the first visit. I would assume that because of the paucity of findings in his neck and his lack of diagram mentioning of neck pain that there were probably myofascial type of discomforts that were experienced at the initial injury.

(Id.)

38. He further referenced diagrams dated 12/14/18, 1/16/19, 2/1/19, 2/19/19, and 3/26/19, noting that only the 1/16/19 and 2/19/19 diagrams denoted right shoulder complaints.

39. Dr. Lindenbaum concluded that Claimant's right shoulder and neck conditions are not causally-related to Claimant's work injury, specifically reasoning that there were several months that passed without any specific complaints of discomfort related to the neck or shoulder. He opined that Claimant reached MMI for his work-related conditions on May 2, 2019, which included the lumbar spine and right elbow/bicep. Dr. Lindenbaum assigned 12% whole person lumbar impairment, apportioned out to 0% for Claimant's prior injury, and a 2% upper extremity rating for Claimant's right elbow/biceps.

40. On December 7, 2020, John Hughes, M.D. conducted an IME at the request of Claimant. Dr. Hughes performed a physical examination and reviewed Claimant's medical records, including the reports of Drs. D'Angelo and Lindenbaum. His diagnoses included cervicothoracic spine sprain/strain with persistence of non-radicular cervical spine pain and progressive right shoulder pain that merited further evaluation. Dr. Hughes disagreed with Drs. D'Angelo and Lindenbaum regarding the lack of relatedness of Claimant's right shoulder and cervicothoracic conditions. He explained,

> Although right shoulder and cervicothoracic spine symptoms were secondary to the acute symptoms stemming from his right biceps tear and aggravation of his lumbar spine, I disagree that 'there were months that went by without any specific complaints of discomfort related to the neck or the shoulder' as summarized by Dr. Lindenbaum in his Samms conference report.

(R. Ex. EE, p. 455)

41. Dr. Hughes agreed with Dr. D'Angelo and Dr. Lindenbaum that Claimant did not sustain primary injuries to his right shoulder, but opined that Claimant's ruptured right biceps and subsequent surgical repair ultimately resulted in his shoulder condition. Dr. Hughes explained that the surgical repair involved traction and pulling distally on the

biceps, which put new stresses on the right biceps long head tendon that extends proximally through the shoulder. He noted that right shoulder pain was documented two weeks after the procedure, and that such pain has persisted. Dr. Hughes opined that Claimant requires diagnostic evaluation for the right shoulder and, as such, had not reached MMI for such condition.

42. Dr. Hughes further opined that there was no clear-cut evidence of a medically documented injury to Claimant's cervical spine; but that thoracic spine pain was mentioned in August 27 and August 31 reports. He concluded that the diagnosis and source of pain generation remained unclear with respect to Claimant's cervicothoracic spine. Dr. Hughes recommended that Claimant undergo further assessment of the cervicothoracic spine and right upper extremity, including an EMG to assess for cervical radiculopathy, a possible trial of osteopathic manipulative treatment to include the upper thoracic spine, and possible spinal surgical intervention.

43. On June 15, 2020, Insurer filed a FAL consistent with Dr. Lindenbaum's updated DIME opinion regarding causation, impairment and maintenance care.

44. Dr. Hughes testified at hearing on behalf of Claimant as a Level II accredited expert in occupational medicine. Dr. Hughes testified consistent with his IME report. Dr. Hughes testified that Claimant's right shoulder condition was caused by the surgical shortening of his biceps on the right side. Dr. Hughes explained that the biceps extend up into the shoulder and that Claimant's emergence of shoulder symptoms is consistent with that particular pathology. He noted Claimant's shoulder condition was not realized until a number of weeks after his surgery was completed. Referring to Dr. Lodha's operative report, Dr. Hughes described the surgical procedure which entailed extensive tenolysis and pulling on the muscle tendon that extends up into the shoulder. He explained that, based on the operative report, considerable tension was required to reapproximate the distal biceps muscle. Dr. Hughes did not identify the right shoulder problem as arising from the original injury, but from the surgical repair that was delayed for a month and a week following the original injury. He testified that the delay was significant as it allowed more atrophy and shortening of the torn segment of the biceps tendon, requiring more traction during the surgical procedure.

45. Dr. Hughes anticipates diagnostic testing to reveal internal derangement of the right shoulder, including biceps longhead tendinosis or a partial tear in the shoulder. He recommends an evaluation and workup of the right shoulder with an orthopedic surgical evaluation and a non-contrast MRI. He testified that the MTG require a diagnosis before completing a causation analysis and that his recommendations are part of that requirement from the MTG. On cross-examination, Dr. Hughes testified that his only positive right shoulder exam finding regarding the right shoulder was limitation of active motion. Dr. Hughes acknowledged that he did not include his report, that after the October 9, 2018 pain diagram, Claimant's next seven pain diagrams did not identify right shoulder issues, nor that Dr. Castro's October 24, 2018 right shoulder exam was normal. Dr. Hughes did not provide an explanation for the absence of right shoulder

complaints or findings in the reports issued by the medical providers who saw Claimant between the date of surgery and January 15, 2019.

46. Dr. Hughes testified that there is no evidence of a medically documented injury to Claimant's cervical spine such that he can relate that condition to this claim. He further opined that Claimant's thoracic spine issues are related to Claimant's work injury and necessitated osteopathic manipulation.

47. Dr. D'Angelo testified at hearing on behalf of Respondents as a Level II physician who specializes in occupational medicine and forensic causation evaluations. Since issuing her April 20, 2020 report, Dr. D'Angelo reviewed Dr. Lindenbaum's amended DIME report, Dr. Hughes' IME report, and listened to the hearing testimony of Claimant and Dr. Hughes. Dr. D'Angelo testified consistent with her IME report. She testified that Claimant reported to her that his right shoulder condition was an immediate effect of the work accident. Dr. D'Angelo testified that her review of the medical records, including pain diagrams, contained no evidence of a right shoulder injury. Dr. D'Angelo strongly disagreed with Dr. Hughes' theory that Claimant's right shoulder condition was a consequence of the bicep tendon repair, noting that in her 30-plus years of experience as a doctor, she has never seen such phenomenon. She further testified that Dr. Hughes' theory does not comport with the medical records.

48. Dr. D'Angelo agreed with Dr. Hughes and Dr. Lindenbaum that Claimant did not sustain a work-related cervical injury. Dr. D'Angelo confirmed that Dr. Lindenbaum did not relate Claimant's thoracic spine condition to this claim, and that no treating physician related that condition to this claim. She opined that Claimant does not require osteopathic manipulation of his thoracic spine. In support of these opinions, Dr. D'Angelo pointed to Claimant's intermittent identification of thoracic region issues on his pain diagrams, she explained that aching in the intrascapular region is a common complaint that without other findings or complaints means nothing, and she further explained that in this case Claimant's early complaints of upper thoracic tenderness certainly means nothing given Claimant's lack of complaints later on, and given that her own thoracic spine exam revealed no tenderness or pathology. Dr. D'Angelo testified that she agrees with Dr. Lindenbaum's ultimate DIME opinion regarding causation and MMI.

49. Claimant testified he began to notice right shoulder issues after initially recovering from the surgery. He testified that he could not fully raise his arm and that his arm would cramp if raised for an extended period. Claimant testified that, immediately following the surgery, he was not moving his arm much because it was in a sling. He stated that within a couple weeks of the surgery he began to notice problems with the shoulder once it again became usable. Claimant testified he did not suffer any outside injuries to his right shoulder after the work injury. Claimant wishes to undergo evaluation and treatment for his right shoulder.

50. Regarding Claimant's right shoulder condition, the ALJ credits the opinions of Drs. Lindenbaum and D'Angelo, as supported by the medical records, over the opinion of Dr. Hughes and Claimant's testimony.

51. Claimant failed to prove that it is highly probable Dr. Lindenbaum's DIME opinion on causation and MMI is incorrect.

52. Claimant failed to prove it is more likely than not he is entitled to an award for medical treatment for his right shoulder condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to

conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

Claimant contends that Dr. Lindenbaum committed clear error when he determined Claimant's right shoulder condition is not causally-related to the work injury, thus placing Claimant at MMI. Claimant argues that Dr. Lindenbaum's focus on whether

Claimant made specific complaints regarding shoulder issues in the early medical records "misses the point" regarding the causality of Claimant's condition. Claimant relies on Dr. Hughes' opinion and purports there is a reasonable explanation for any delay in reported shoulder symptoms, as the surgical biceps tendon repair ultimately caused Claimant's shoulder condition.

Considering the totality of the evidence, Claimant failed to meet the higher evidentiary burden of proving that it is highly probable Dr. Lindenbaum's DIME opinion on causation and MMI is incorrect. Dr. Lindenbaum reviewed Claimant's medical records and performed a physical examination as part of his initial evaluation. He thoroughly discussed his concerns regarding the causality of Claimant's right shoulder condition. Based on Claimant's reports that he had initially reported shoulder and neck complaints that were overlooked, Dr. Lindenbaum initially opined that Claimant had not reached MMI for certain body parts because he required additional information to make such determination. Upon reviewing additional documentation, Dr. Lindenbaum ultimately concluded that Claimant's right shoulder condition is not related to his work injury, again explaining his rationale in a report. Nothing in the record indicates that, at the time Dr. Lindenbaum reached his ultimate opinion, he did not consider, or otherwise misread or misapplied, relevant records or information necessary to make his determination.

Dr. Hughes' opinion that any delay in reporting shoulder complaints was reasonable, as such complaints were related to Claimant's surgery, is controverted by Dr. D'Angelo's opinion. Dr. D'Angelo performed a thorough review of Claimant's records and a physical examination and agrees with Dr. Lindenbaum's ultimate opinions. To the extent Dr. Hughes disagrees with Dr. Lindenbaum and Dr. D'Angelo regarding the causality of Claimant's right shoulder condition and MMI, this is merely a difference of medical opinion that does not rise to the level of clear convincing evidence to overcome Dr. Lindenbaum's DIME opinion.

Medical Treatment

Respondents are liable for medical treatment that is casually-related and reasonably necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

The employer's obligation to provide medical treatment continues until the claimant reaches MMI. However, the claimant may receive medical benefits after MMI to maintain his status or prevent a deterioration of his condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988).

Claimant contends his right shoulder condition is causally related to his industrial injury, thus entitling him to medical treatment for his right shoulder. As discussed, DIME

physician Dr. Lindenbaum opined Claimant's right shoulder condition is not causally related to his industrial injury and Claimant failed to overcome this opinion by clear and convincing evidence. Accordingly, Respondents are not liable for medical treatment for Claimant's unrelated right shoulder condition.

ORDER

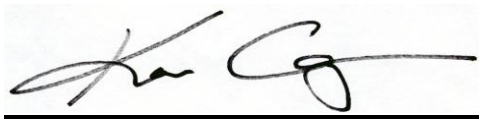
1. Claimant failed to establish by clear and convincing evidence that DIME physician Dr. Lindenbaum's opinion on MMI and causation is incorrect.

2. Claimant failed to establish by a preponderance of the evidence entitlement to medical treatment for the right shoulder.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 30, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-163-840-001

ISSUES

I. Whether Respondents established, by a preponderance of the evidence, that Claimant's average weekly wage (AWW) is $720.00 per week rather than the admitted AWW of $2,483.34 reflected on Respondents' March 8, 2021 General Admission of Liability (GAL).

II. If Claimant's AWW is determined to equal $720.00 per week, whether Respondents established, by a preponderance of the evidence, that Claimant has been overpaid in Temporary Total Disability (TTD) benefits.

III. If Respondents established that Claimant's TTD benefits have been overpaid, whether they are entitled to recoup this overpayment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant worked for Employer, an elevator installation/maintenance company, as a mechanic's helper/apprentice. Claimant's job duties included assisting a mechanic, usually [Redacted, hereinafter BJ], with installing, servicing, modernizing, and/or repairing elevators.

2. Claimant began working for Employer on October 14, 2019. His base rate of pay at the time of hire was $18 per hour. (Resp. Ex. B, bns. 066-067; Resp. Ex. A, bn. 045) Claimant was eligible for overtime pay in his position, which would be paid at 1.7x his hourly rate ($27 per hour); unless that overtime occurred on weekends or holidays, then it would be paid at 2.0x his hourly rate ($36 per hour). Claimant's hours per week would fluctuate depending on the project he was assigned to work although [Redacted, hereinafter RM], Owner and President of Employer, testified that over the approximately 15 months Claimant worked for Employer his average was 40 hours per week.

3. Shortly after beginning work for Employer, Claimant was assigned to work a project at the United States Air Force Academy ("USAFA"), in Colorado Springs. Employer had previously contracted with the USAFA to modernize 29 elevators at their facility and sent several people, including Claimant, to assist with the project.

4. When Claimant worked at the USAFA, his hourly wage increased to $28 per hour, with identical overtime increases in applicable situations (1.7x his hourly rate, 2.0x for weekends/holidays; to $47.60 per hour and $56 per hour respectively). (*See, e.g.* Resp. Ex. A, bn. 046)

5. Mr. RM[Redacted] testified at hearing. Mr. RM[Redacted] testified that Claimant, and other mechanic helpers/apprentices assigned to the USAFA project, received the aforementioned increased wages while working that project because Employer believed it was required by the Davis Bacon Act to provide this pay as the local prevailing wage.

6. The majority of Claimant's work for Employer from the time of his hire through mid-January 2021 was spent on the USAFA project. However, Claimant did not work exclusively on this project. When Claimant worked on non-federal government projects, his hourly wage would revert to his base pay of $18 per hour. (*See, e.g.* Resp. Ex. A, bn. 050) Mr. RM[Redacted] testified that Claimant was never promoted nor provided a raise by Employer. (Clmt's. Ex. 7)

7. Claimant last spent time on the USAFA project during the week of January 11-17, 2021. Mr. RM[Redacted] testified that Claimant and Mr. BJ[Redacted] had finished their portion of the USAFA project during this week and were both transferred to a non-federal government project, which was not governed by the Davis Bacon Act. Upon his transfer off the USAFA job, Claimant's base pay reverted to $18 per hour. (Resp. Ex. A, bns. 022, 023, & 005) Mr. RM[Redacted] testified that Employer had no plans to return Claimant to the USAFA project.

8. Twelve days after being transferred from the USAFA job, Claimant suffered an admitted industrial injury to his right hand on January 29, 2021, while adjusting the width of some forks on a forklift used to move elevator equipment on a job site. (Resp. Ex. C & D) This injury caused Claimant to miss work; thus, warranting the payment of ongoing TTD by Insurer beginning February 2, 2021. (Resp. Ex. D, bn. 071) As noted, Claimant's rate of pay at the time of his January 29, 2021 injury had reverted to $18 per hour. (Resp. Ex. A, bn. 022)

9. In order to file a General Admission of Liability (GAL) reflecting Claimant's lost wages, Insurer requested payroll records from Employer to calculate his AWW. Employer provided Insurer with 13 weeks of Claimant's wage records, which records included pay stubs for some of the time Claimant spent while working on the USAFA job prior to January 29, 2021. (*See* Resp. Ex. D, bns. 074-092) Mr. RM[Redacted] testified that at the time Claimant's wage records were produced, Employer was not certain how Insurer would be using the information. Moreover, Employer did not notify Insurer that Claimant had finished his portion of the work on the USAFA project and that his pay had returned to $18 per hour, for 40 hours per week.

10. Insurer averaged Claimant's wage records for his prior 13 weeks of employment to calculate an AWW of $2,483.34. This made Claimant's TTD rate $1,074.22 per week (the statutory maximum) for his date of injury. (Resp. Ex. D, bn. 073) Insurer has paid Claimant this ongoing TTD benefit since February 2, 2022. (Resp. Ex. D, bn. 071) By the time the matter proceeded to hearing, 55 weeks had past, making the total benefit paid to Claimant $59,082.10 ($1,074.22 x 55 weeks).

11. Mr. RM[Redacted] testified that in June 2021, Employer was reevaluating its employees' benefits under a new insurance plan. Because any changes in the value of employee benefits could potentially change the prevailing wages for workers on the USAFA job, Employer recalculated the prevailing wage for those mechanic helpers/apprentices still working that project. With the redetermination, Employer discovered that the prevailing wage being paid on the USAFA project for mechanic helpers/apprentices was inaccurate. Mr. RM[Redacted] testified that the wage determination under the Davis Bacon Act for elevator mechanic helpers/apprentices required a prevailing wage of $14 per hour rather than the base rate of $28 per hour it was paying. Mr. RM[Redacted] testified that five employees, including Claimant, were erroneously paid elevated wages on the USAFA project for many weeks. Employer did not attempt to recoup the overpaid wages from these employees, but the wages for those mechanic helpers/apprentices still on the USAFA project were adjusted down to base pay. The wage adjustment did not affect elevator mechanics, including Mr. BJ[Redacted] . Mr. RM[Redacted] also testified that this wage adjustment did not affect Claimant because he had already transitioned to a non-government project where he was making his base pay of $18 per hour.

12. Mr. BJ[Redacted] testified that he eventually returned to the project in September 2021. Claimant did not accompany him back to the jobsite.

13. In July 2021, Employer notified Insurer that Claimant's AWW had been inaccurately calculated.

14. Mr. RM[Redacted] testified that Claimant returned to work for Employer from August 30, 2021 through September 19, 2021. His rate of pay for this period was $18 per hour. (Resp. Ex. A, bn. 003, 004, & 009)

15. Claimant testified that he thought he would be returned to the USAFA job when the bonding process for the next two elevators in the cue had been completed and expected to be transitioned to a job at Peterson Field to complete a federal project there. While working the job at the USAFA, Claimant testified that he and Mr. BJ[Redacted] put in long hours and received substantial overtime pay. (Resp. Ex. A; Clmt's. Ex. 2)

16. BJ[Redacted] testified that Claimant was his "helper" while they worked to modernize the elevators at the USAFA. While he could not remember working 92 hours a week, Mr. BJ[Redacted] acknowledged that he and Claimant worked a significant amount of overtime and maybe put in as many as 85 hours a week while working at the USAFA.

17. Review of the wage records following Claimant's transfer from the USAFA job supports a finding that Claimant's wages dropped precipitously after January 17, 2021. In addition to the reduction in his hourly rate, the evidence presented supports a finding that the loss of the significant amount of overtime paid on the USAFA job played a key role in the reduction of Claimant's wages when he was transferred from the job.

Indeed, the average weekly wage Claimant was paid for his work on the USAFA job from December 28, 2020 through January 17, 2021 was $3,344.62 compared to $731.39 in the two weeks after his transfer and lead up to his January 29, 2021 injury.

18. The evidence presented persuades the ALJ that but for the erroneous wages paid under the Davis Bacon Act on the USAFA job and the fact that the injury occurred so close the finish of his work on the USAFA project, Claimant would have been making $18 per hour, plus limited overtime as reflected on his January 18-24 and January 25-31, 2021 pay stubs at the time he was injured.

19. Based on the above findings of fact, the ALJ finds that Respondents have proven, by a preponderance of the evidence, that they erroneously admitted to an AWW that was substantially higher than Claimant's actual earnings at the time of his injury. Clearly, at the time of Claimant's injury, he had moved to a project, which for the foreseeable future would pay him $18 per hour for approximately 40 hours per week. While it is difficult to predict the amount of overtime Claimant may have received in this new position, the evidence presented, including the payroll records supports a finding that in the week leading up to and the week of his industrial injury, Claimant was paid a limited amount of overtime, i.e. .45 and 1.20 hours respectively. Because the wage records following Claimant's transition from the USAFA job are limited and because they support a finding that overtime was paid for these two weeks, the ALJ finds that the fairest approximation of Claimant's wage loss due to his industrial injury is the total amount of wages earned, including overtime pay, for this two week period.

20. The evidence presented persuades the ALJ that Claimant's AWW at the time of his industrial injury was $731.39 (4730.89 + $731.89 = $1,462.78 ÷ 2 weeks = $731.89).

21. Based on this AWW, the ALJ finds Claimant's proper TTD rate to be $487.93 ($731.89 x .66667 = $487.93). The total benefit owed to Claimant from the start of his TTD payments (February 2, 2021) through hearing (55 weeks) is $26,836.15. Accordingly, the ALJ finds that the evidence supports a finding that Claimant has been overpaid $32,245.95 by Insurer ($59,082.10 - $26,836.15 = $32,245.95). To the extent that Claimant's TTD benefits have been ongoing since the hearing and the pendency of this order, he has continues to be overpaid by Insurer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising

out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001).

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

C. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (*Colo. App. 1993*); National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo. App. 1997). Further, the average weekly wage of an injured employee shall be taken as the basis upon which to compute compensation benefits. Section 8-42-102(1), C.R.S.

D. Section 8-42-102(2), C.R.S., sets forth certain methods of calculating the average weekly wage. Section 8-42-102(2)(d) provides that "[w]here the employee is being paid by the hour, the weekly wage shall be determined by multiplying the hourly rate by the number of hours in a day during which the employee was working at the time of the injury or would have worked if the injury had not intervened, to determine the daily wage; then the weekly wage shall be determined from the daily wage in a manner set forth in paragraph (C) of subsection (2). Nonetheless, section 8-42-102(3), gives the ALJ wide discretion to "fairly" calculate the employee's AWW where the methods of computing AWW outlined in the statute will not fairly compute the AWW of an injured worker.

E. As found, the evidence in this case supports a conclusion that Claimant was transferred from the USAFA job two weeks before his admitted industrial injury. As part of his transfer to a non-government job site, Claimant's hourly wage reverted to $18 per hour for a roughly 40-hour workweek. Indeed, he earned wages consistent with this hourly rate and number of hours for approximately two weeks before his industrial injury. Further, the evidence supports a finding that Claimant probably would have made this amount for the foreseeable future as he was generally assigned to work with BJ[Redacted] , who did not return to the USAFA project until September 2021, *after* Employer had reduced wages to $18 per hour for mechanic helpers' on that project. Indeed, there a dearth of persuasive evidence in the record to support a conclusion that Claimant would have made wages above $18 per hour at any point after his work-related injury. Nonetheless, Claimant did work limited overtime after his transfer from the USAFA job, a fact that the ALJ finds/concludes would have likely continued, albeit on a limited basis, as supported by payroll records after Claimant's transfer from the USAFA job.

Because the wage records following Claimant's transfer from the USAFA job are limited and support that he worked some overtime, the ALJ concludes that simply calculating Claimant's AWW on a 40 hour work week is not a fair approximation of his wage loss and diminished earning capacity resulting from his industrial injury. Based upon the evidence presented, the ALJ concludes that totaling Claimant's actual earnings, including his overtime pay, for the two full weeks following his transfer from the USAFA job is the closest approximation of his actual wage loss and diminished earning capacity at the time of his work-related injury. As found, the ALJ concludes that Claimant's AWW is $731.89. The fact that he made elevated wages, at a previous project, does not affect this finding.

Overpayments & Respondents' Burden of Proof

F. When respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. Section 8-43-201(1), *C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> . . . a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

G. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. In this case, Respondents seek to modify and withdraw the previously admitted AWW reflected in the March 8, 2021 GAL. Accordingly, they carry the burden of proof, by a preponderance of the evidence, to justify the modification/withdrawal.

H. At the time of Claimant's injury, and the filing of the general admission that Respondents are seeking to modify in this case, C.R.S. § 8-40-201(15.5)(2021) defined an overpayment as "money received by a claimant that exceeds the amount that should

have been paid, or which the claimant was not entitled to receive[.]"[1] Citing *HLJ Management Group, Inc. v. Won Il Kim, 804 P.2d 250 (Colo. App. 1990),* Claimant contends that Respondents are not entitled to recoup any overpayment in TTD benefits paid in the event that Claimant's AWW is modified. Claimant urges the ALJ to deny such recoupment on the grounds that if the March 8, 2021 GAL is withdrawn and the AWW modified, Respondents would not entitled to a retroactive modification unless the employer was found to have been fraudulently induced by the employee's false representations. See, *HLJ Management Group, Inc. v. Kim*, supra; see also, *Rocky Mountain Cardiology v. Industrial Claim Appeals Office*, 94 P.3d 1182, 1185 (Colo. App. 2004); *Pacesetter Corp. v. Collett,* supra. Because the evidence presented in the instant case supports a conclusion that the TTD in this case was paid pursuant to a GAL and fails to support a conclusion that the mistake with regard to Claimant's average weekly wage was fraudulently induced, Claimant argues that he was entitled to receive those payments and recoupment of any overpayment caused by the Respondents' miscalculation of his AWW should be denied. The ALJ is not persuaded, concluding instead that Claimant's reliance on the holding announced in *HLJ Management Group, Inc.* is misplaced.

I. Contrary to Claimant's suggestion, erroneous payment of TTD benefits under an admission of liability may constitute an overpayment, which an insurer may retroactively recover. See, generally, *Simpson v. ICAO*, 219 P.3d 354, 358 & 361 (Colo. App. 2009) (*overruling HLM Mgmt. Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990)), (*rev'd in part, vacated in part on other grounds, Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010)). In *Simpson*, the Colorado Court of Appeals explained that part of the holding in *HLJ Management*, which the ALJ finds is at the heart of the dispute in the instant case, is no longer good law. The portion of the holding overruled in *HLJ Management* by *Simpson* involved the conclusion that when an employer's mistake in an admission results from its own erroneous calculation, it could not retroactively withdraw or modify the admission and is bound thereby, at least until an ALJ enters an order as to prospective payments. The Court explained in 1997, that the General Assembly amended § 8-43-303(1) & (2)(a), C.R.S. 2008, to permit reopening of an award on grounds of "overpayment," and specified that the reopening would not affect an earlier award as to money already paid "except in cases of overpayment." Accordingly, the ALJ concludes that Claimant's reliance on the holding of *HLJ Management* for the proposition that Respondents cannot retroactively recover TTD benefits erroneously paid under an admission of liability is misplaced. Contrary to Claimant's suggestion, the holding announced in *HLJ Management* is not the prevailing state of the law concerning the issue before the undersigned ALJ.

---

[1] Effective January 1, 2022, the definition of overpayment was changed in section 8-40-201(15.5). This change affects an insurer/employer's ability to recoup monies paid to a claimant, and as such eliminates a right existing prior to the change. This makes the statute change substantive. *Specialty Restaurant Corp. v. Nelson*, 231 P.3d 393, 399 (Colo. 2010) (*citing In re Estate of Dewitt*, 54 P.3d 849 (Colo. 2002)). "Substantive rights and liabilities of the parties to a workers' compensation case are determined by the statute in effect at the time of an employee's injury . . . " *Specialty Restaurant Corp.*, 231 P.3d at 400 (*citing City of Florence v. Pepper*, 145 P.3d 654 (Colo. 2006), and *American Compensation Ins. Co. v. McBride*, 107 P.3d 973 (Colo. App. 2004)).

J. In concluding that Respondents are entitled to retroactively recover the asserted overpayment of TTD benefits paid in this case, the ALJ also finds the claim of *Josue v. Anheuser-Busch, Inc.,* W.C. 4-954-271-04 (ICAO, June 17, 2016), instructive. Similar to the instant case, the respondents in *Josue* sought to recover an overpayment in TTD benefits paid to claimant. Also similar to the instant case, claimant, Mr. Josue argued that there was no overpayment is his case "because the payment of temporary disability was made pursuant to a general admission of liability, [that he] was entitled to receive those payment when they were received and [could not] be characterized as an overpayment as described by § 8-40-201(15). The Panel noted that the Court in *Simpson* was faced with both a question of whether benefits erroneously paid under an admission could constitute an "overpayment" and if so, whether respondents could retroactively recoup that overpayment. Noting that the 1997 amendments to § 8-43-203 (1) & (2)(a) which allowed for the "reopening of an award, regardless of whether the award is through an admission or an order, and provides that money 'already paid' through such an award may be affected if that payment qualifies as an 'overpayment' would be rendered useless, the Panel affirmed the determination that Mr. Josue had "received an overpayment in the amount of $16,222.32 and was required to repay that sum."

K. As found, Respondents have proven that Claimant received an overpayment in TTD benefits based on an erroneously calculated AWW. See Finding of Fact, ¶ 21. As noted, Claimant's AWW in this claim is $731.89, making his TTD benefit rate $487.93 Based on this finding, Claimant's total owed TTD benefit from the date of issuance (February 2, 2021) through the date of hearing (55 weeks) is $26,836.15. Per the findings above, Claimant has received $59,082.10 in TTD benefits from insurer over this applicable 55 weeks period, creating a $32,245.95 overpayment to Claimant at the time of hearing. To the extent that Claimant's benefits are ongoing at the erroneous TTD rate, as found in this order, the ALJ finds a continuing overpayment to Claimant. Respondents may recoup, offset and/or credit against future benefits, all overpayments of TTD made to Claimant, pursuant to applicable law.

ORDER

It is therefore ordered that:

1. Claimant's AWW in this claim is $731.89, making his TTD benefit rate $487.93.

2. Claimant has received an overpayment of TTD benefits from Respondents in the amount of $32,245.95. Respondents may recoup, offset and/or credit against future benefits, all overpayments of TTD made to Claimant, pursuant to applicable law.

3. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise,

the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has demonstrated, by a preponderance of the evidence, that he is entitled to an award of temporary total disability benefits for the additional time period of June 13, 2020 through July 27, 2021.

II. Whether Respondents have demonstrated, by a preponderance of the evidence, that a statutory penalty should be assessed against under Section 8-43-102, C.R.S. for the late reporting of his claim.

III. Whether Claimant has demonstrated, by a preponderance of the evidence, that medical services with Clinica Family Health, Health Images Radiology, St. Anthony North (Westminster), St. Anthony Hospital (Lakewood), and Critical Care, Pulmonary & Sleep Associates that were covered by Medicaid were reasonably necessary and related to this occupational disease claim, and whether Respondent Insurer must reimburse Medicaid for those services.

FINDINGS OF FACT

1. Claimant worked for Employer as a stone fabricator.

2. Claimant suffered an admitted occupational disease of silicosis as a result of inhalation of silica dust at work.

3. Claimant last worked for Employer on Friday, June 12, 2020. Claimant informed his supervisor, [Redacted, hereinafter ML], that he was not feeling well and that he was having trouble with his feet and hands, as well as experiencing shortness of breath.

4. Claimant left a voicemail for Mr. ML[Redacted] on the office phone on Sunday, June 14, 2020. Claimant testified he stated on the voicemail that he felt very bad, was not going to make it into the office, and that he had possibly been exposed to COVID-19. Claimant disputes that he said he would be quarantining for two weeks.

5. Claimant went into the office on Friday, June 19, 2020 to pick up his paycheck. Claimant was intoxicated and became involved in a verbal altercation with Mr. ML[Redacted] . Claimant left after Mr. ML[Redacted] threatened to call the police. A co-worker subsequently provided Claimant his paycheck on Saturday, June 20th or Sunday, June 21st.

6. Claimant did not return to work for Employer. Claimant testified he assumed he had been terminated by Mr. ML[Redacted] due to their verbal altercation on June 19, 2021. Claimant acknowledged, however, that Mr. ML[Redacted] had not terminated his employment nor did he advise Mr. ML[Redacted] that he was quitting. Claimant

confirmed that there were prior lapses in his employment with Employer due to personal issues during which Claimant would not notify Employer of his absence.

7. Claimant testified that he has not been able to physically perform his job duties as a stone fabricator since leaving work on June 12, 2020.

8. Claimant testified that at the time he did not associate his breathing problems with his work for Employer. Claimant testified he initially was unsure of what was causing his symptoms, but attributed his issues to age, being out of shape, smoking, and COVID. Claimant did not seek medical evaluation at the time because he did not have medical insurance. Claimant later applied and qualified for Medicaid and subsequently sought evaluation at Clinica Campesina ("Clinica").

9. Claimant presented to Clinica on December 3, 2020 with complaints of knee, back and joint pain. The medical record from this date contains no mention of any respiratory complaints or findings. Claimant reported that he physically could not stand and that he had not been able to work.

10. Claimant returned to Clinica on December 16, 2020, at which time Claimant's substance abuse with severe alcohol disorder was discussed. The medical record from this date contains no mention of any respiratory complaints or findings.

11. Clinica subsequently referred Claimant for a chest x-ray due to chronic cough and congestion. The chest x-ray was performed at Health Images on December 17, 2020. The x-ray revealed significant bilateral perihilar pneumonia or pulmonary edema. Clinica then referred Claimant for evaluation and treatment at the emergency department.

12. On December 18, 2020, Claimant presented to the emergency department at St. Anthony North in Westminster with complaints of shortness of breath over the last several months with acute worsening over the last four days. Claimant initially presented with tachycardia and HTN, both of which were initially attributed to concern of alcohol withdrawal.

13. Claimant was then transported by ambulance on December 18, 2020 to the Main Campus of St. Anthony Hospital. Claimant was admitted for undifferentiated pulmonology pathology. Due to concerning findings on chest x-ray and CT scan, Claimant was admitted for monitoring and a biopsy. He was discharged on December 19, 2020.

14. On December 19, 2020, Claimant presented to Critical Care, Pulmonary & Sleep Associates upon referral from the emergency department. Claimant reported that he stopped working several months ago because of difficulties breathing. It was noted Claimant's condition was highly suspicious for silicosis due to his stone dust exposure at work.

15. A diagnostic bronchoscopy was performed at St. Anthony's Central on December 23, 2020. The biopsies were compatible with silicosis in the appropriate occupational setting.

16. On December 27, 2020 Claimant was diagnosed with silicosis in the setting of occupational exposure.

17. On January 6, 2021 Claimant returned to Clinica for a follow-up evaluation. He was advised that he was diagnosed with silicosis and that he was scheduled to see a pulmonology specialist on January 14, 2021. Claimant requested that his provider complete a medical disability form in order for him to obtain financial assistance. Clinica completed paperwork indicating Claimant was "unable to work at all" right now, secondary to pulmonary disease associated with shortness of breath and weakness (R. Ex. G, p. 30). Claimant was prescribed albuterol and Advair inhalers along with prednisone.

18. Claimant presented to pulmonologist Dominic John Titone, M.D. at Critical Care, Pulmonary & Sleep Associates on January 14, 2021. Claimant reported that he began developing dyspnea, fatigue and weakness six months prior. Dr. Titone diagnosed Claimant with chronic hypoxic respiratory failure secondary to silicosis and COPD. Claimant did not currently require supplementary oxygen at rest but did require two liters of oxygen with walking. Dr. Titone restricted Claimant from any further exposure to silica, stone dust or cigarette smoke. Dr. Titone also diagnosed with COPD with mild obstruction, which he noted could be due to silicosis or smoking.

19. Claimant continued to follow up with Clinica on January 25, February 9, and May 20, 2021. Claimant's silicosis diagnosis is referenced in these records, but solely in the context of treating with other providers for that condition. The records from Claimant's treatment at Clinica from January 25, 2021 – May 20, 2021 primarily concern Claimant's substance abuse of both alcohol and tobacco. The May 20, 2021 report noted Claimant had been in detox and was planning to move to Texas to be near family.

20. Claimant filed a Worker's Claim for Compensation on May 4, 2021 alleging the occupational disease of silicosis as a result of the inhalation of silica dust while fabricating stone. Claimant reported a date of onset of May 4, 2021. It is undisputed the first written notice Claimant provided to Employer of a work-related injury or condition was the claim filed on May 4, 2021.

21. Employer's First Report of Injury indicates Employer was notified of Claimant's injury on May 7, 2021.

22. Insurer filed a Notice of Contest on May 13, 2021, denying liability for the claim as no injury was reported.

23. On July 6, 2021, Claimant filed an Application for Hearing endorsing the issues of compensability, medical benefits, and TTD.

24. Claimant presented to authorized treating physician David W. Yamamoto, M.D. on July 28, 2021. Dr. Yamamoto diagnosed Claimant with occupationally acquired silicosis. He noted that Claimant was unable to work in his regular field of work and that Claimant required oxygen when not sedentary. Dr. Yamamoto referred Claimant to a pulmonologist in Austin, Texas, where Claimant had relocated, and removed Claimant from work effective that day to October 13, 2021.

25. On August 5, 2021, Respondents filed a Response to Application for Hearing endorsing, *inter alia*, penalties against Claimant for late reporting under §8-43-102, C.R.S.

26. On September 14, 2021 pulmonologist Jeffrey Schwartz, M.D. performed an independent medical examination ("IME") at the request of Respondents. Dr. Schwartz issued an IME report on October 4, 2021 in which he concurred with the diagnosis of occupational silicosis. He noted Claimant's cigarette smoking may also partly contribute to his diffusion capacity, but opined that the majority of Claimant's respiratory impairment is likely due to his silicosis. Dr. Schwartz concluded that there is no impairment from the silicosis that would prevent Claimant from work requiring sitting or walking at least 90-120 yards.

27. Insurer filed a General Admission of Liability on October 13, 2021 admitting for medical benefits and TTD beginning July 28, 2021 and ongoing at $381.81 per week. Under the "Remarks" section, it states,

> Insurer reserves the right to claim any and all offsets, recover any and all overpayments, and recover all advances made on account of the claimants indigency, whether specifically referenced in this admission or not. Insurer reserves the right to seek reimbursement from any other insurance carrier or self-insured employer.

(R. Ex. F, p. 12)

Further remarks included in the GAL state, "All benefits and/or penalties not admitted are specifically denied. [Insurer] accepts liability for this lost time claim. AWW per attached wages from the [Employer]." (Id. at p. 14). Respondents do not assert any penalties against Claimant in the GAL.

28. Claimant testified he did not know he had silicosis as a result of his work until he was advised of the diagnosis around Christmas 2020. Claimant confirmed that he never notified Mr. ML[Redacted] that he had been hospitalized in December 2020 or that he had been diagnosed with silicosis. Claimant contacted Employer in March 2021 to inquire about his W-2 form but did not notify Employer at that time of his work-related diagnosis. Claimant testified he did not tell Employer about his diagnosis because he figured Mr. ML[Redacted] would disregard it. Claimant testified he determined that his

best course of action would be to retain a lawyer to help him with the claim, and that it took some time to find a lawyer for assistance.

29. The ALJ finds that Claimant recognized the nature, seriousness and probable compensable nature of his occupational disease on December 27, 2020, when Claimant was made aware of his diagnosis of occupationally related silicosis.

30. Claimant acknowledged that there was a poster hanging by the time clock at work that advised employees of their responsibilities in reporting a work-related injury. Claimant used the time clock to punch in and out of work every day that he worked.

31. ML[Redacted], owner of Employer, testified that he was aware Claimant had breathing problems that Claimant associated with smoking. Prior to Claimant's filing a claim, Mr. ML[Redacted] was unaware Claimant had a potentially work-related condition. Mr. ML[Redacted] testified that no other employees had previously been diagnosed with silicosis and that he himself has never had any respiratory symptoms after performing fabrication work. Mr. ML[Redacted] told employees that if they were injured at work they should provide him with a written statement within three days. He testified that if Claimant had previously notified him about a work-related condition he would have reported the claim to Insurer.

32. Claimant proved it is more probable than not he is entitled to TTD benefits. Claimant's occupational disease caused Claimant a disability for which Claimant missed more than three work shifts, resulting in actual wage loss.

33. Claimant proved it is more probable than not the medical services provided by Clinica (from December 3, 2020 to January 6, 2021), Health Images Radiology, St. Anthony's Hospital and Critical Care, Pulmonary & Sleep Associates were reasonably necessary and related to this occupational disease.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge.

University Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written

release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Respondents argue that, due to Claimant's "abandonment" of his employment in June 2020, lack of work restrictions until late December 2020, and late notice and reporting of a worker's compensation claim on May 4, 2021, Claimant has not successfully demonstrated entitlement to TTD benefits from June 13, 2020 through July 27, 2021.

The ALJ disagrees. It undisputed Claimant and Mr. ML[Redacted] were involved in a verbal altercation in June 2020, after which Clamant did not return to his employment. However, Claimant credibly testified, and the record supports, that he left work due to not feeling well, including shortness of breath. Although, at the time, Claimant was unaware of the cause of his symptoms, it was later confirmed that Claimant's the respiratory symptoms are were the result of occupationally acquired silicosis. Claimant credibly testified that his respiratory symptoms have prevented him from performing his regular job duties and that he has not earned actual wages since leaving his employment with Employer. Claimant's testimony alone is sufficient to establish disability. Once Claimant obtained medical evaluation and treatment, he was placed on medical restrictions preventing him from performing his regular job duties due to his occupational disease. Respondents have admitted liability for TTD beginning July 28, 2021 and ongoing. The preponderant evidence establishes Claimant is entitled to TTD benefits from June 13, 2020 through July 27, 2021.

Medical Benefits

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). The determination of whether services are medically necessary or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *see Taravella v. US Bancorp,* WC 4-797-901 (ICAO, July 15, 2020) (concluding that respondents are liable for the cost of prescriptions, as long as the cost complies with the Fee Schedule, regardless of where the claimant fills them).

When there is an occupational disease claim, the courts have routinely rejected arguments that respondents are not responsible for medical care and treatment even if it arose prior to Claimant's employment with the employer. In *Royal Globe Insurance Co. Collins*, 723 P.2d 731 (Colo. 1986), the Court held that in a claim based upon an occupational disease, the insurance carrier "on the risk" at the time medical expenses are incurred is liable for payment of those medical expenses. Further, the court later explained that "on the risk" means the employer in whose employment the need for treatment was caused. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo App. 2001).

Claimant sought medical evaluation and treatment at Clinica for multiple medical issues, including his respiratory problems. His providers at Clinica ultimately referred Claimant to Health Images for a chest x-ray, and to St. Anthony's emergency department. Claimant was subsequently admitted to the hospital, where a lung mass was visualized and a differential diagnosis of silicosis was provided. Claimant was provided with oxygen upon discharge and advised of the need for additional testing. Claimant then underwent a diagnostic bronchoscopy on December 23, 2020 at St. Anthony's Central for a determination the cause of Claimant's lung mass and respiratory issues. Claimant was also referred to Critical Care, Pulmonary and Sleep Associates for evaluation of his respiratory issues.

All of the aforementioned medical care was reasonably necessary and related to diagnosing and treating Claimant's medical condition, which was ultimately determined to be occupationally related. Respondents are liable for such treatment.

Respondents are not liable for the medical treatment Claimant received at Clinica from January 25, 2021 to May 20, 2021, as there is insufficient evidence Clinica was treating Claimant for his respiratory issues. The Clinica medical records from January 25, 2021 to May 20, 2021 indicate Claimant was being seen for management of substance abuse during that time period.

Penalties

Respondents contend Claimant should be subject to penalties for late reporting of his occupational disease pursuant to Section 8-43-102(2), C.R.S. Section 8-43-102(2) provides:

> Written notice of the contraction of an occupational disease shall be given to the employer by the affected employee or by someone on behalf of the affected employee within thirty days after the first distinct manifestation thereof. In the event of death from such occupational disease, written notice thereof shall be given to the employer within thirty days after such death. **Failure to give either of such notices shall be deemed waived unless objection is made at a hearing on the claim prior to any award or decision thereon.** Actual knowledge by an employer in whose employment an employee was last injuriously exposed to an occupational disease of the contraction of such disease by such employee and of exposure to the conditions causing it shall be deemed notice of its contraction. If the notice required in this section is not given as provided and within the time fixed, the director may reduce the compensation that would otherwise have been payable in such manner and to such extent as the director deems just, reasonable, and proper under the existing circumstances. (*Emphasis added*).

The determination of the "first distinct manifestation" is subject to the general principle that time for providing notice of an injury does not begin to run until the claimant, "as a reasonable person recognizes the nature, seriousness, and probable compensable nature of the injury. *See City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d (1967). To recognize the "probable compensable character" of any injury, the claimant must know that the injury is somewhat disabling and must appreciate a causal relationship between the employment and the condition. *City of Colorado Springs v. Industrial Claims Appeals Office*, 89 P. 3d 504 (Colo. App. 2004).

Claimant argues that Respondents waived the right to request a reduction in Claimant's compensation under Section 8-43-102(2) because Respondents filed a GAL in this matter before proceeding to hearing.

ICAO addressed waiver of penalties under Section 8-43-102(2) in *Victor Meza v. BMC West Corp.*, WC 4-651-065 (Jan. 3, 2007). In *Meza*, the matter proceeded to hearing on the respondents' April 13, 2006 petition to suspend compensation based on the claimant's alleged failure to report his injury within the time constraints of § 8-43-102(1), C.R.S. The ALJ determined that the claimant sustained an occupational disease and analyzed the matter of the suspension of benefits under subsection (2) of § 8-43-102, C.R.S. The ALJ also found that the claimant did not give notice of his occupational disease within 30 days, as required by § 8-43-102(2). Nonetheless, the ALJ found that the respondents filed a GAL for TTD benefits on April 19, 2006, which did not assert any penalty for late reporting. He also found that the respondents subsequently filed another GAL seeking to reduce the claimant's TTD rate and noting that the respondents did not waive any defenses under section 8-43-102(1). The ALJ concluded that the respondents were barred from seeking a late reporting penalty because they failed to include such a claim in the GAL filed on April 19, 2006. The ALJ construed the GAL to be an award for purposes of § 8-43-102(2), which expressly deems the claimant's failure to timely notify the employer of an occupational disease to be waived unless an objection is made prior to any corresponding award or decision.

The respondents in Meza appealed the ALJ's decision, arguing that, since they filed their petition to suspend compensation prior to filing the general admission of liability, the ALJ erred in concluding that an award was made before the respondents raised the late reporting penalty. The respondents argued that they could not be deemed to have waived their claim for a late reporting penalty in such circumstances. ICAO disagreed and affirmed the ALJ's decision, determining that the ALJ did not err in finding a waiver under the express language of the Act. ICAO reasoned that the respondents' GAL constituted an award prior to a hearing. *Id*.; *Burke v. Industrial Claim Appeals Office*, 905 P.2d 1, 2 (Colo. App. 1994). Considering the plain language of Section 8-43-102(2), which states that a claimant's failure to give employer timely notice of his or her occupation is disease is "deemed waived unless objection is made at a hearing on the claim prior to any award or decision thereon", ICAO reasoned that the respondents' filing of a GAL before proceeding to hearing on the matter prohibited the imposition of any late reporting penalty under Section 8-43-102(2).

A similar analysis applies in the case at bench. As found, Claimant recognized the nature, seriousness and probable compensable nature of his occupational disease on December 27, 2020, the time when Claimant was made aware of his diagnosis of occupationally related silicosis. Claimant did not provide written notice to Employer of his occupational disease until filing a claim for worker's compensation on May 4, 2021, thus failing to provide timely notice to Employer pursuant to Section 8-43-102(2).

Nonetheless, Respondents in this matter waived the issue of Claimant's failure to give timely notice by filing a GAL. Although Respondents endorsed the issue of penalties under Section 8-43-102 for Claimant's late reporting in their Response to Application for Hearing filed on August 5, 2021, prior to proceeding to a hearing, Respondents filed a GAL on October 13, 2021. The GAL constitutes an award. *See Burke*, supra. The GAL did not assert penalties against Claimant. As Respondents' objection was not made at a hearing on the claim prior to any award or decision thereon, Respondents' waived its' right to reduction in penalties under Section 8-43-102, C.R.S.

ORDER

1. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits from June 13, 2020 to July 27, 2021.

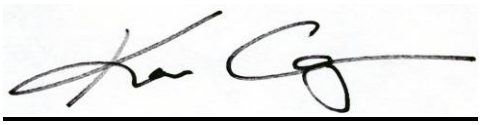
2. Respondents are liable for the medical services provided by Clinica (from December 3, 2020 to January 6, 2021), Health Images Radiology, St. Anthony's Hospital and Critical Care, Pulmonary & Sleep Associates were reasonably necessary and related to this occupational disease. Respondents are not liable for Clinica's evaluations from January 25, 2021 to May 20, 2021.

3. Respondents failed to prove Claimant is subject to a late reporting penalty pursuant to Section 8-43-102(2), C.R.S.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 30, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on June 19, 2021 he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that reasonable medical treatment of his back is necessary to cure and relieve him from the effects of the work injury.

FINDINGS OF FACT

1. The claimant worked as a houseman in the housekeeping department at the employer's hotel in Aspen, Colorado. The claimant's job duties included removing all laundry/linens from the hotel rooms.

2. The claimant testified that at approximately 4:30 p.m. on Saturday, June 19, 2021 he injured his back while pulling a cart full of linen. The claimant also testified that it felt like he hit the back of his leg and he felt pain in his back and leg. The claimant further testified that he attempted to report this incident to his supervisor and Loss Prevention, but no one was available at that time. The claimant testified that the pain in his back and leg was so severe that he could not continue working and he went home. The claimant testified that due to his pain and his scheduled days off, he did not return to work until June 22, 2021.

3. The claimant testified that on June 22, 2021 he reported his back injury to [Redacted, hereinafter MM], Director of Human Resources. The claimant further testified that Ms. MM[Redacted] sent him home early on that date.

4. Payroll records entered into evidence demonstrate that although the claimant was scheduled to work until 5:30 p.m. on June 19, 2021, he worked beyond his scheduled hours until 7:19 p.m. The payroll records also demonstrate that the claimant reported for his shift on June 20, 2021 at 7:50 a.m. and worked 8.87 hours. The claimant was scheduled to be off on June 21, 2021. He returned to work on June 22, 2021 and worked from 8:50 a.m. to 5:25 p.m. On June 23, 2021, the claimant worked from 8:48 a.m. to 5:49 p.m. On June 24, 2021, the claimant worked from 8:48 a.m. to 5:30 p.m.

5. [Redacted, hereinafter DO], Housekeeper/Office Coordinator, testified that the claimant did not report a back injury to her on June 19, 2021, or on any date thereafter.

6. [Redacted, hereinafter AC], Housekeeping Coordinator, testified that the claimant did not report a back injury to her on June 19, 2021, or on any date thereafter.

7. [Redacted, hereinafter FP], Director of Housekeeping, testified that the claimant did not report a back injury to her on June 19, 2021, or on any date thereafter.

8. The claimant was aware that the employer's procedure for reporting a work injury is to speak with Loss Prevention. The claimant properly reported a prior right shoulder injury to Loss Prevention on October 14, 2019.[1]

9. MM[Redacted], Director of Human Resources, testified that the claimant did not report a back injury to her on June 19, 2021, or on any date thereafter. Ms. MM[Redacted] testified that on June 22, 2021, she learned that the claimant had been placed at maximum medical improvement (MMI) for his right shoulder on June 14, 2021. Ms. MM[Redacted] was also informed that the claimant had permanent work restrictions related to his right shoulder. As the Director of Human Resources, Ms. MM[Redacted] was tasked with determining if the employer could accommodate the claimant's permanent work restrictions.

10. The claimant's permanent work restrictions for his right shoulder include: no lifting, carrying, pushing, or pulling over 30 pounds; minimal overhead reaching; and minimal reaching away from the body.

11. Ms. MM[Redacted] testified that the claimant was sent home before the end of his scheduled shift on June 24, 2021 because he was observed working outside of his work restrictions related to his right shoulder.

12. Ms. MM[Redacted] and Ms. FP[Redacted] reviewed all available positions to determine if the claimant's permanent work restrictions could be accommodated. Due to the nature of the claimant's right shoulder-related work restrictions, the employer was unable to accommodate the claimant. At a meeting with Ms. MM[Redacted] and Ms. FP[Redacted] on June 30, 2021, the claimant was informed that his work restrictions could not be accommodated and his employment was terminated. The claimant did not report a back injury at that meeting.

13. The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the testimony of Ms. DO[Redacted], Ms. AC[Redacted], Ms. FP[Redacted], and Ms. MM[Redacted]. The ALJ is not persuaded that the claimant suffered an injury on June 19, 2021. The claimant did not report a back injury to the employer, despite opportunities to do so. The claimant continued to work between June 19, 2021 and June 24, 2021 without issue. The claimant was sent home on July 24, 2021, because he was working outside of his shoulder-related work restrictions. The ALJ finds that the claimant has

---

[1] The claimant's October 14, 2020 right shoulder injury is not currently at issue. However, the ALJ includes information regarding work restrictions for that injury as it is pertinent to the timeline regarding the present case.

failed to demonstrate that it is more likely than not that he suffered an injury to his back at work on June 19, 2021.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on June 19, 2021 he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the testimony of the respondents' witnesses are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim regarding an alleged June 19, 2021 injury is denied and dismissed.

Dated this 31st day of March 2022.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that her workers' compensation claim should be reopened based on a worsening of condition?

- If Claimant has proven a reopening should occur, whether Claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability ("TTD") benefits beginning June 29, 2020 and continuing?

FINDINGS OF FACT

1. Claimant sustained admitted injuries to her low back while employed with Employer on July 29, 2019 while lifting a box. Claimant initially sought medical treatment for her low back injury after she woke up with severe back pain on July 31, 2019 and was transported to St. Mary's Medical Center by ambulance.

2. Claimant began treating with nurse practitioner ("NP") James Harkreader at St. Mary's Occupational Health on August 1, 2019. Claimant was initially diagnosed with acute lumbosacral back strain and placed on full restrictions. On August 5, 2019, Claimant was evaluated by Dr. Craig Stagg. Dr. Stagg recorded that claimant still had a significant amount of back pain. Dr. Stagg recommended physical therapy.

3. Claimant reported to NP Harkreader that she had an aggravation of her pain on October 1, 2019 which resulted in radiating pain into the left buttocks. NP Harkreader referred Claimant for a magnetic resonance image ("MRI") of the lumbar spine which was performed on October 9, 2019. The MRI showed broad based disc extrusions at L3 – L4 and L4 – L5 causing moderate to several canal stenosis. There was also a disc protrusion at L5 – S1 and degenerative facet changes.

4. NP Harkreader referred claimant to Western Colorado Spine.

5. Claimant returned to NP Harkreader On November 12, 2019 with complaints of pain was now radiating into the left buttocks and left thigh to the knee. Claimant was tender on the left SI joint and left sciatic notch. NP Harkreader diagnosed claimant with lumbago with left leg radiculopathy. NP Harkreader noted that claimant underwent epidural steroid injections at L4 – L5 and L5 – S1 the week prior.

6. Claimant reported some improvement following the injection. Claimant continued to note she had tenderness in the left SI and left sciatic notch area. On December 31, 2019, NP Harkreader noted that injections were repeated by Dr. Clifford on December 19, 2019. Claimant reported that she was doing well following the injections with only had a slight backache.

7. By January 28, 2020, Claimant reported to NP Harkreader that she was pain free. NP Harkreader discussed releasing Claimant to return to work full duty. NP Harkreader noted that claimant did not want a functional capacity evaluation because she was not interested in permanent restrictions.

8. Dr. Stagg ultimately placed Claimant at maximum medical improvement on February 14, 2020. Claimant noted that she was doing well with full duty and that her pain had improved with only some residual stiffness. Dr. Stagg's diagnosed Claimant with andL5 – S1 disc herniation that had improved symptomatology post-injection. Claimant's gait was normal. Dr. Stagg assigned claimant a 11% whole person impairment rating for the lumbar spine, which included a 7% table 53 rating and a 4% rating for range of motion deficits. Dr. Stagg recommended maintenance medical care in the form of two to three maintenance care visits over the next year as needed. Dr. Stagg released Claimant to work without restrictions.

9. Claimant testified at hearing that after being placed at MMI, she was 75% better, but still had pain all the time. Claimant testified that on June 27, 2020, she was bent over in the shower to shave her legs when she felt a twinge in her back and stood up. Claimant denied twisting when she was shaving her legs. Claimant testified she had another incident which resulted in back spasms in September 2020. Claimant testified she has not returned to work since the shaving incident.

10. Claimant was treated at the St. Mary's Hospital Emergency Room on June 27, 2020. Dr. Christopher Bazzoli noted that Claimant was presenting with sudden onset back pain after bending over while shaving this morning. Claimant reported she had severe pain in her low back that radiated down her right leg and was worse whenever she tried to move. Claimant reported she had twinges of pain in the past, but never this severe.

11. Claimant returned to NP Harkreader on June 29, 2020. Claimant reported to NP Harkreader that she had been doing well and was working full duty, until this past Saturday morning when she bent over in the shower to shave her leg and felt some pain in her low back. NP Harkreader noted Claimant's prior MRI had shown broad based disk extrusion at L3-4 and L4-5 causing moderate to severe spinal canal and mild bilateral foraminal stenosis, with an L5-S1 broad based disk extrusion casing mass effect upon the descending S1 nerve roots. Claimant reported that she had some pain into her right hip but none down into her lower extremity. NP Harkreader noted Claimant had a positive straight leg raise test on the right along with decreased range of motion and difficulty getting up from a seated position. NP Harkreader opined that this was an aggravation of her underlying prior work-related injury and took Claimant off of work completely.

12. Claimant returned to Dr. Stagg on July 7, 2020. Dr. Stagg noted that Claimant had done fairly well until she was bending over shaving her legs several weeks ago when she had acute onset of low back pain. Dr. Stagg noted that Claimant reported

having pain radiating into both thighs with difficulty standing because of the pain. Dr. Stagg diagnosed Claimant with lumbar stenosis with aggravation with some bending at home in the shower. Dr. Stagg recommended Claimant get repeat x-rays and another MRI of the lumbar spine.

13. Respondents obtained a physicians advisory report from Dr. Brian Mathwich on July 8, 2020. Dr. Mathwich reviewed Claimant's medical records and opined that claimant's pain was not secondary to her original injury. Dr. Mathwich noted that bending over in the shower would place minimal stress on the back and opined that the minor mechanism of injury would not aggravate or exacerbate a previously healed disc protrusion.

14. Claimant returned to Dr. Clifford's office where she was evaluated by Jason Bell, PA – C on July 15, 2020. PA Bell noted that Claimant had received good relief from the prior injections and that her pain had recently returned after recurrent strain injury, sustained while shaving her legs. PA Bell noted that pain was radiating into both the left and right buttocks with a positive straight leg test bilaterally. PA Bell further noted that he had reviewed an updated MRI which showed no significant changes when compared to the MRI from October of 2019. PA Bell recommended repeat injections at L4 – L5 and L5 – S1.

15. Claimant followed up with Primary Care Partners on July 20, 2020. Dr. Welsh wrote that Claimant had been improving until 3 weeks ago when she bent over and reinjured her back. Claimant noted that the workers' compensation insurer was denying coverage for her current treatment. Dr. Welsh further noted pain which was worse on the right side on physical examination with straight leg raising test positive on the right side.

16. Respondents obtained another physicans' advisory report from Dr. Mathwich on July 22, 2020 after receiving a request for injections Dr. Mathwich again recommended denial of the treatment based on his opinion that Claimant's back complaints were the result of her bending over in the shower, are not directly and causally related to her work injury.

17. Claimant was evaluated by NP Sara Windsor on October 13, 2020. NP Windsor noted that Claimant was presenting with a re-exacerbation of lumbar back pain and radiculopathy June 2020 after a bending twisting incident. NP Windsor noted that Claimant had a bilateral positive straight leg raise test and recommended conservative and diagnostic therapies rather than urgent surgery. NP Windsor referred claimant to Dr. Lawrence Frazho.

18. Dr. Frazho evaluated claimant on November 10, 2020. Dr. Frazho noted that Claimant's back pain had been present for years without definite known inciting event. Dr. Frazho recommended bilateral L3 – L4, L4 – L5 and L5 – S1 facet injections.

19. Claimant underwent a functional capacity evaluation ("FCE") on November 17, 2020 at Colorado Canyons Hospital. Paula Falcao, PT, CFCE found that claimant demonstrated the ability to perform 31.1% of the physical demands of her regular job. Claimant was cleared to perform sedentary work for approximately two and a half hours per day.

20. Claimant underwent facet injections recommended by Dr. Frazho on December 15, 2020.

21. Claimant was subsequently evaluated by Dr. Eric Momin on December 29, 2020. Dr. Momin recorded that Claimant had oringially had a workplace accident and then in June of 2020 the pain started again after a bending – twisting incident. Dr. Momin noted that the injections performed by Dr. Frazho did not help to a significant amount and Dr. Momin recommended against surgical intervention at this time. Dr. Momin recommended that claimant continue to follow up with Dr. Frazho NP Windsor.

22. Claimant underwent medical branch blocks under the auspices of Dr. Frazho on February 1, 2021.

23. Dr. Albert Hattem performed a records review independent medical examination ("IME") on April 20, 2021. Dr. Hattem's reviewed Claimant's medical records and diagnosed Claimant with an aggravation of preexisting lumbar degenerative disc disease. Dr. Hattem opined that Claimant did not need additional treatment for her workplace injury, based on the opinion that the incident of June 27, 2020 represented and intervening accident and claimant would not have needed further care for her low back and would have continued to work full duty, if not for the intervening incident. In coming to the conclusion that Claimant sustained an intervening injury, Dr. Hattem stated that Claimant likely twisted her low back or applied a torqueing stress on the lumbar spine during this shaving activity.

24. Dr. Hattem noted in this report that several factors which supported the conclusion of an intervening injury, including the fact that claimant had a full recovery and returned to work after the initial workplace injury; Claimant had a significant increase in pain requiring EMS transport to the hospital after the intervening incident; PA Bell's records documented a new strain; Claimant's work capacity changed after the incident with Claimant shaving in the shower; and Claimant necessitated significant treatment after the shaving incident whereas she did not seek treatment for her back after MMI but prior to the intervening event.

25. Dr. Hattem testified at hearing consistent with his report. Dr. Hattem testified that Claimant's incident in the shower on July 27, 2020 constituted a new intervening injury that was caused Claimant's current condition. Dr. Hattem testified that Claimant only reported back stiffness at the time of MMI and that Claimant had been released to return to work full duty prior to being placed at MMI. Dr. Hattem testified that the records of Claimant's primary care physician, who did not document any complaint of

back pain in April of 2020, supported his conclusion that Claimant had made a full recovery from her original injury. Dr. Hattem opined that the need for EMS transport to the hospital in June of 2020 spoke to the significant nature of the bending and twisting incident. Dr. Hattem testified that Claimant told multiple providers that she was doing very well up until the intervening incident, and relayed to at least six providers that her symptoms were secondary to the shaving event. Dr. Hattem explained that claimant's functional status changed after the intervening incident, going from a full duty release to being taken completely off of work.

26. Dr. Hattem testified that claimant's MRI displayed degenerative changes that were not caused by either the original work injury or the intervening incident, and that she likely sustained an aggravation of her pre-existing degenerative back condition. Dr. Hattem opined that but for the shower incident, Claimant would have continued to do well and that the treatment that she has received since June of 2020 is related to the intervening event. Dr. Hattem further testified that but for the shower incident, Claimant would have continued to work for employer as she had prior to June of 2020. Dr. Hattem testified that Claimant would have continued to have pain to some degree due to her degenerative findings, but that the shower incident was the cause of the recurrent need for medical treatment and restrictions.

27. Dr. Hattem explained that claimant's MRI findings after the original workplace injury did not show any acute changes related to the workplace incident. Dr. Hattem further testified that the MRI obtained in July 2020 likewise showed no evidence of an acute injury and was objectively the same as her prior MRI. Dr. Hattem explained that claimant's spine was compromised due to her degenerative conditions and it was possible that neither the workplace event nor the intervening event would have caused symptoms except for claimant's pre-existing spinal and foraminal stenosis. Dr. Hattem remarked that if claimant is susceptible to injury, it is because of her pre-existing degenerative changes, not the workplace injury. Dr. Hattem testified that the vast majority of workers who sustain back injuries do not display acute findings of imaging studies. Dr. Hattem remarked that the force of a twisting or torque incident would place increased force to the spine relative to simply bending, which would increase the likelihood of injury.

28. The ALJ notes that the records from Dr. Momin and PA Windsor document Claimant twisting while in the shower. However, the ALJ finds that Claimant credibly testified at hearing that she was not twisting when she experienced the onset of back pain. The ALJ notes that the medical records from the emergency room and PA Harkreader along with the records from Dr. Stagg note that Claimant was simply bending down and not twisting at the time of the onset of pain.

29. The ALJ further notes that the MRI in this case showed no acute changes to Claimant's lumbar spine as a result of the shower incident. The ALJ notes that the onset of back pain occurred when Claimant was performing a normal activity of daily living, bending down, which resulted in the onset of low back pain. The ALJ further notes that there is no credible evidence of Claimant having ongoing back complaints prior to

her work injury, and finds that the worsening of Claimant's condition in this case is, more likely than not, related to Claimant's July 29, 2019 work injury.

30. The ALJ credits the opinions expressed by NP Harkreader in his June 29, 2020 report that Claimant's condition was related to an exacerbation of her work injury along with the medical reports of Dr. Stagg dated July 7, 2020 and finds that Claimant has established that it is more probable than not that the worsening of her low back condition on June 27, 2020 was causally related to her July 29, 2020 work injury.

31. The ALJ further finds that as a result of the worsening of condition, Claimant was unable to continue her work with Employer and is therefore entitled to an award of TTD benefits beginning June 29, 2020 and ongoing.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-43-303(1), C.R.S., provides that a workers' compensation claim may be reopened on the ground of change in condition. Claimant shoulders the burden of proving her condition has changed and her entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S.; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim*

Appeals Office, 197 P.3d 220 (Colo. App. 2008). A change in condition, for purposes of the reopening statute, refers to a worsening of the claimant's work-related condition after MMI. *El Paso County Dept. of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). The pertinent and necessary inquiry is whether claimant has suffered any deterioration in her work related condition that justifies additional benefits. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

4. In order to reopen a claim based on a worsened condition a claimant must prove the worsened condition is causally connected to the original industrial injury. *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). "If the worsening is the result of an intervening cause, including an intervening industrial injury, the worsened condition is not a compensable consequence of the original industrial injury, but a new injury." *Edwards v. Wal-Mart Stores, Inc.*, W.C. No. 4-478-405 (ICAO, December 13, 2002). Determination of whether a worsening of condition was proximately caused by a prior industrial injury or an intervening injury is ordinarily one of fact for the ALJ. *See, Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002) (whether condition is result of independent intervening cause is one of fact).

5. In this case, there appears to be no issue as to Claimant having a worsening of her condition on June 27, 2020. The only issue is whether the worsening of her condition is related to the July 29, 2019 work injury.

6. As found, Claimant's testimony that she experienced an acute onset of low back pain that occurred as she was bending down on June 27, 2020 is found to be credible and persuasive. Claimant's testimony that the onset of pain resulted in her needing medical treatment is also found to be credible and persuasive.

7. To prove entitlement to TTD the claimant must prove the industrial injury caused a "disability." § 8-42-103(1), C.R.S. 2007; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," as used in workers' compensation cases, connotes two elements. The first is "medical incapacity" evidenced by loss or impairment of bodily function. The second is temporary loss of wage earning capacity, which is evidenced by the claimant's inability to perform his or her prior regular employment. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). This element of "disability" may be evidenced by showing a complete inability to work, or by physical restrictions, which impair the claimant's ability effectively to perform the duties of his or her regular job. S*ee Ortiz v. Charles J. Murphy and Co*., 964 P.2d 595 (Colo. App. 1998).

8. As found, as a result of the worsening of her condition, Claimant was taken off of work by NP Harkreader. As found, Claimant has proven by a preponderance of the evidence that as a result of the worsening of her condition, Claimant had a medical incapacity which resulted in a temporary loss of wage earning capacity as evidenced by the work restrictions set forth by NP Harkreader. As found, Claimant is entitled to an award to TTD benefits as a result of the worsening of her condition beginning June 29, 2020 when NP Harkreader took Claimant off of work due to her worsened condition.

9. Based on the foregoing, the ALJ hereby GRANTS Claimant's Petition to Reopen her workers' compensation claim based on a worsening of her condition.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is reopened based on a change of condition.

2. Respondents' are liable for TTD benefit beginning June 29, 2020 and continuing until terminated by law.

3. Respondents are entitled to an offset Claimant's unemployment benefits against any TTD benefits owed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: March 31, 2022

Keith E. Mottram

Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the sacroiliac injection recommended by Dr. Marshall Emig is reasonable, necessary and related to her April 15, 2018 industrial injury.

II. Whether the blood test ordered by Donald Corenman M.D., at Steadman Hawkins Clinic was reasonable, necessary and related to Claimant's admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as an attorney. Claimant suffered an admitted industrial injury during a motor vehicle accident ("MVA") on April 15, 2018. Claimant was the passenger in a rideshare vehicle that spun out on the highway, causing the passenger rear-side panel of the vehicle to strike an adjacent concrete barrier. Claimant was wearing a seatbelt at the time and the side airbag of her compartment deployed.

2. Paramedics transported Claimant to the emergency department at Saint Thomas Midtown Hospital with complaints of right shoulder pain, low back pain, and right-sided neck pain. Examination of the lumbar spine demonstrated normal range of motion with no tenderness to palpation. X-rays of the lumbar spine revealed a lumbarized S1 and transitional segment with no acute abnormality. Claimant was assessed with acute low back pain and lumbar strain and discharged with instructions to follow up with her primary care physician.

3. Claimant presented to her primary care physician, Lisa Corbin, M.D. at U.C. Health on April 17, 2018. Claimant complained of right low back and right shoulder pain. Dr. Corbin diagnosed Claimant with acute back pain. Claimant subsequently underwent multiple sessions of physical therapy and chiropractic treatment upon Dr. Corbin's referral.

4. On August 8, 2018, Claimant presented to Marshall Emig, M.D. at U.C. Health. Claimant reported that her low back pain persisted despite treatment. Dr. Emig noted on examination Claimant's pain was primarily at the lumbosacral junction. He diagnosed Claimant with L5-S1 spondylolisthesis, lumbar degenerative disc disease, and lumbar facet arthropathy. Dr. Emig referred Claimant for a lumbar MRI to evaluate acute changes resulting in low back pain on the right greater than left. He noted there may be a component of facet versus discogenic pain with overlying myofascial pain. Dr. Emig discussed the possibility of a steroid injection if Claimant's pain persisted and was indicated by the MRI.

5. Claimant underwent lumbar spine x-rays on August 8, 2018, which revealed "6 apparent lumbar-type vertebrae…likely reflecting complete lumbarization of S1." (R. Ex. E, p. 58).

6. A lumbar spine MRI was obtained on August 14, 2018. The radiologist's impression was:

> Transitional lumbosacral anatomy with six lumbar type vertebral bodies, representing complete lumbarization of the S1 vertebral body and fully formed disc at the S1-S2 disc space.
>
> Mild posterior disc bulge with annular fissure at L5-S1 without spinal canal or neuroforaminal stenosis.
>
> Edema interspersed between the spinous processes from L3-S1, which can be seen in the setting of interspinous ligament injury or spinous process impingement in the appropriate clinical settings.

(Cl. Ex. 7, p. 46).

7. Dr. Emig reviewed Claimant's MRI results at a follow-up evaluation on September 6, 2018. He noted Claimant has six lumbar type vertebrae with L5-L6 degenerative disc disease and suspected facet mediated pain on the right at L5-L6 and L6-S1. Claimant reported mild low back pain. Her plan was to discontinue the use of Celebrex and monitor for increased pain. In the event Claimant's pain increased, Dr. Emig discussed Claimant undergoing a right L5-L6 and L6-S1 facet steroid and lidocaine injection, possible medial branch blocks, and possible radiofrequency neurotomy. He remarked that if Claimant had no relief of pain, there likely was a component of discogenic pain contributing to her low back pain that would not improve with an injection.

8. Claimant subsequently sought treatment on her own accord with Donald Corenman, M.D., at Steadman Hawkins Clinic. Claimant knew Dr. Corenman from his time as an expert witness in a claim she defended while working for Employer. Claimant first presented to ATP Corenman and Eric Strauch, PA-C on January 24, 2019. PA-C Strauch noted Claimant was involved in a MVA in April 15, 2018 that caused immediate pain to her right shoulder, right lower back and neck, with persistent and worsening right low back pain localized to the superior SI region. PA-C Strauch noted Claimant had seen Dr. Emig, a spine specialized physiatrist, who performed right L5-S1 facet injections on October 22, 2018 that were not diagnostic.

9. Dr. Corenman's impression was that Claimant had right lower back/SI pain, with differential diagnoses including Bertolotti's syndrome right versus right SI syndrome versus right L5-S1 facet disease. He opined that Claimant's main pain was 80% attributed to right SI pain and 20% generalized low back pain. Dr. Corenman remarked,

> Her lowest level, at what I am calling L5-S1, has large transverse-alar articulations bilaterally, right greater than left so certainly this could be a Bertolotti's type syndrome. It would be less likely to be a facet syndrome on the right, because of the standard articulation that stabilizes this level but we cannot rule that out and finally this could be a right SI syndrome.
>
> The MRI does show some mild degeneration at L4-L5 with a normal L5-S1 disc. This is a pattern I would expect, the L4-L5 level is probably not causing her pain as typically discs do not radiate only unilaterally.

(Cl. Ex. 8, p. 66)

Dr. Corenman discussed his plan moving forward, stating,

> The next thing we need to do, once we find out she is no longer potentially pregnant, is to first do an MRI of the sacrum including coronal and sagittal reconstruction and stir images. We can determine if there is any hot articulations between the L5 and the S1 articulation. Then we need to do serial blocks, first of right L5-S1 articulation, then right L5-S1 SI, and finally right L5-S1 facet. She would have to aggravate the symptoms before, she says that is not difficult, in the office today after exam she is at 6/10 so that should be enough to make sure we have a flare-up before the injection. I told her depending upon the results, she might be a candidate for radiofrequency ablation and possibly at the very end, if nothing else works, we could consider surgery but that is currently not on the table and she understands.
>
> We will wait on her pregnancy test and start her on a program once we find out her status of MRI and injections.

(Id.)

10. Claimant returned to Dr. Emig on April 11, 2019. Dr. Emig noted Claimant underwent right L5-6 and L6-S1 intra-articular facet injections with fluoroscopic guidance on October 22, 2018. Claimant reported 20-30% improvement immediately after the procedure and 50-60% improvement overall at one week after. Claimant reported a complete return of pain at the April 11, 2019 evaluation. Dr. Emig discussed modification of activities as well as a medial branch block. He noted,

> We also discussed a right L5-L6 and L6-S1 joint medial branch block for diagnostic purposes. If she has adequate pain relief I suspect she will have similar relief with radiofrequency neurotomy of these nerves. If she has no pain relief with this procedure we discussed considering an injection of the articulation between the right L6 transverse process and ilium. She plans to proceed with 1-2 months of activity modification. If her

> pain persists she is considering proceeding with further imaging with Dr. Corenman versus medial branch blocks.

(Cl. Ex. 7, p. 55).

11. On May 20, 2019, Timothy O'Brien, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. O'Brien opined that Claimant sustained a minor lumbosacral spine strain/sprain as a result of the MVA and reached maximum medical improvement ("MMI") as of April 25, 2018. He opined that there was no objective evidence Claimant sustained a substantial injury as a result of the MVA, noting Claimant was wearing her seatbelt and the airbags deployed at the time of the accident, which minimized her exposure to coup/contrecoup forces. Dr. O'Brien noted Claimant's initial imaging studies and initial evaluation were normal. He further noted that his examination and subsequent imaging studies were also normal. Dr. O'Brien opined that Claimant's ongoing pain was not generated by an identifiable organic source. He concluded that the injections Claimant had received were contraindicated. He further concluded that the treatment Claimant received after April 25, 2018 was causally related to her pre-existing multilevel lumbosacral spondylosis, lumbar spondylolisthesis and transitional spine, and not the work-related MVA.

12. Claimant returned to Dr. Emig on June 26, 2019. He noted Claimant was currently pregnant and thus could not undergo fluoroscopic guided procedures at that time. Dr. Emig discussed proceeding with medial branch blocks at L5-L6 and L6-S1. He recommended radiofrequency neurotomy if Claimant experienced 80% pain relief. He noted that if Claimant did not experience pain relief from the medial branch blocks there was the possibility of injecting the pseudoarticulation between the right L6 transverse process and the ileum and possible removal of the pseudoarticulation.

13. Respondents filed a General Admission of Liability on June 3, 2020 admitting for medical benefits.

14. Claimant attended a telephone evaluation with Dr. Corenman on September 1, 2020. He noted further workup had been postponed due Claimant's pregnancy, but that Claimant had since given birth 8 months prior. Claimant continued to report right SI pain without pain radiating to the lower extremities. Dr. Corenman noted Claimant's pain was "[a]ll localized right at the SI joint as they say the Fortin fingertip test." (Cl. Ex. 8, p. 67). Dr. Corenman remarked,

> Since she is finally delivered and has continued pain we need to do a workup to try and figure out the source. Again, she does have transverse alar articulations at L5-S1 so the source could be the L4-L5 degenerative disc, the L5-S1 right facet, or the Bertolotti Syndrome or the SI joint. In order to deduce this, we will need new imaging. The last imaging is over 2 years old. With new imaging, we will get a pelvis MRI that hopefully will go up to the body of L4 so we can look at the L4-L5 disc. I will follow her back after the imaging is available for the recommendation.

(Id.)

15. On September 15, 2020 John Burris, M.D. performed a 24-month Division Independent Medical Examination ("DIME"). Claimant reported 4/10 pain in her right low back region without numbness or weakness in the lower extremities. She reported experiencing temporary relief with prior physical therapy and facet injections. Dr. Burris opined that Claimant had not reached MMI, noting recommendations for injections and a repeat MRI by Dr. Emig and Dr. Corenman to clarify Claimant's diagnosis. Dr. Burris recommended proceeding with a repeat MRI and six sessions of osteopathic manipulation. He noted that further treatment may be directed by the MRI and may include injections such as medial branch blocks at L5-6 and L6-S1 and articulation between the right L6 transverse process and ileum for diagnostic clarity.

16. Claimant attended a follow-up telephone evaluation with Dr. Corenman on December 28, 2020. Dr. Corenman recommended proceeding with some blood work, noting,

> The workup so far has not been as absolutely definitive as to what her pain source is. We need to get a pelvic MRI focused on the SI joints. I was reading this with Dr. Betsy Holland who agrees that there is some sacroiliitis right greater than left so this could be an inflammatory disorder triggered by a motor vehicle accident. What we have to do is to get some basic lab tests to make sure she does not have anything obvious like an HLA-27 inflammatory factor in the blood, SLE, or anything else. We will get some basic rheumatologic panels to look for that. If the next step is negative is to consider a SI joint injection.

(Cl. Ex. 8, p. 69).

17. On December 29, 2020, Dr. Corenman referred Claimant for rheumatology labs, which Claimant underwent on February 25, 2021.

18. Claimant is requesting reimbursement for the labs performed on February 25, 2021 in the amount of $366. Claimant testified that such cost was incurred due to ATP Corenman's recommendation as needed to rule out other causes for her low back pain. Claimant testified that the lab tests came back negative.

19. On May 18, 2021, John Raschbacher, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Raschbacher assessed Claimant with low back pain and opined that Claimant had reached MMI. He concluded that there was not a clear reason why Claimant continued to experience lumbar complaints as presumed related to a MVA during which Claimant was restrained and the airbags deployed. He noted that Claimant has pre-existing nonwork-related congenital lumbar findings in the form of lumbarized sacral vertebra. Dr. Raschbacher explained that Claimant already had facet injections in October 2018, which did not

resolve her pain. Dr. Raschbacher noted Claimant did undergo an August 26, 2018 lumbar MRI and a pelvis MRI on November 24, 2020. Dr. Raschbacher explained that the November 24, 2020 MRI noted that Claimant's SI joints were normal and symmetric [with] no evidence of posttraumatic osteoarthritis or sacroiliitis and no evidence of acute or subacute osseous or myotendinous injury. He opined that it was unclear why another MRI would be ordered, as Claimant did not and does not have radicular symptomatology or potentially surgical disease. He further opined it was unclear why further treatment was ordered. Dr. Raschbacher explained that Dr. Corenman's recommendation is to perform a medial branch block to the SI joint, which is a different area. He remarked that Dr. Corenman's recommendation presumes that numerous physicians failed to delineate the SI joint as a pain generator. He further noted that the DIME physician recommended considering medial branch blocks, not SI joint injections Dr. Raschbacher opined that Claimant reached MMI as of May 18, 2021, if not prior.

20. Claimant credibly testified at hearing that she have any low back or SI issues prior to the work injury. She testified that her pain has primarily been at the SI level. Claimant testified that the SI injection she received on July 12, 2021, provided her 70-75% relief. She explained that the SI injection did not resolve her pain, but rather improved the degree and frequency of the pain. Claimant personally paid the costs of the SI injection ($1,604) and the blood test ($366).

21. Dr. Raschbacher testified at hearing on behalf of Respondents as a Level II accredited expert in occupational medicine. Dr. Raschbacher testified that he reviewed Claimant's November 24, 2020 MRI report and saw no changes. He testified that Claimant had no benefit from the facet injections performed in 2018. He explained that, according the Medical Treatment Guidelines ("MTG"), injections have very limited uses and should not be repeated to the same anatomical structure if there was no prior benefit. Dr. Raschbacher further explained that, per the MTG, 80% improvement is required for injections, and that Level II accreditation literature and the MTG also noted the need for functional improvement. Dr. Raschbacher also testified that Dr. Burris recommended more facet injections, not SI joint injections. He explained that SI joint injections can be diagnostic or therapeutic. He stated that he was not provided the medical records from the July 2021 injections documenting Claimant's response. Dr. Raschbacher opined that while it may have been reasonable and necessary to perform the injections in July 2021, they were not related to the work incident. He testified that it would be "quite unusual to somehow discover this particular diagnosis this late in the game, even with a year off for her pregnancy. It is now over three years out from injury claim date."

22. Dr. Raschbacher further testified that there was no indication of a pain generator, including at the SI joint. He explained that provocative tests performed at the emergency room shortly after the MVA were negative at the SI joint, as were they on his examination. He opined it does not make medical sense to inject the SI joint when it is not the pain generator. Dr. Raschbacher testified it is not clear, given the missing records from the most recent injections, what Claimant's actual relief was from the July

2021 injections. He acknowledged that 75% improvement would be considered significant.

23. With regard to the blood testing lab results, Dr. Raschbacher testified that previous bloodwork was recommended by Dr. Corenman to attempt to address non-work related problems including, gout, rheumatoid arthritis and lupus. Dr. Raschbacher testified that rheumatoid arthritis and lupus are auto-immune conditions and would not be exacerbated by a MVA.

24. Dr. Raschbacher testified that the SI joint was not the pain generator because Claimant did not have the appropriate responses to physical examinations which coincided with Claimant's physical examinations at UC Health. Dr. Raschbacher opined that the SI joint injections that took place in July 2021 were not related to the work incident. He also opined that claimant is at MMI at least by May 18, 2021, if not sooner, since claimant's functional status plateaued some time ago.

25. The ALJ credits the opinions of Drs. Emig and Corenman, as supported by the medical records and Claimant's testimony, over the opinion and testimony of Dr. Raschbacher.

26. Claimant proved it is more probable than not the July 2021 injection and the blood work ordered by Dr. Corenman are reasonably, necessary and related to cure and relieve Claimant from the effects of her April 15, 2018 industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). For a service to be considered a “medical benefit” it must be provided as medical or nursing treatment or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., WC 4-517-537 (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* WC 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *see Taravella v. US Bancorp,* WC 4-797-901 (ICAO, July 15, 2020) (concluding that respondents are liable for the cost of prescriptions, as long as the cost complies with the Fee Schedule, regardless of where the claimant fills them).

As found, Claimant proved it is more likely than not the July 12, 2021 SI injection performed by Dr. Emig was reasonable, necessary and related to her April 15, 2018 industrial injury. Despite evidence of a pre-existing condition of lumbarization of the S1, Claimant credibly testified that she was not experiencing any low back or SI issues prior to the work injury. No evidence was offered refuting Claimant’s testimony. Since sustaining the work injury, Claimant has consistently complained of low back symptoms. Claimant’s treatment has been aimed at identifying her pain generator. Dr. Emig initially suspected Claimant was suffering from facet mediated pain, however, October 2018

facet injections proved nondiagnostic. Dr. Corenman initially opined Claimant had right lower back/SI pain with differential diagnoses, including Bertolotti's syndrome, L5-S1 facet disease, and right SI syndrome. Dr. Corenman and Dr. Emig discussed ordering a MRI and performing medial branch blocks at L5-6 and L6-S1 medial branch blocks for diagnostic purposes. Claimant's pregnancy resulted in the postponement of her treatment. Subsequent to having her child, Claimant continued to report SI pain, which Dr. Corenman credibly opined was localized to her SI joint.

Claimant's providers continued to recommend evaluation aimed at identifying her pain source. DIME physician Dr. Burris agreed with such approach, noting that Claimant was not at MMI due to the need for additional diagnostic procedures to clarify Claimant's diagnosis. Dr. Burris noted that further treatment "may" include injections such as medial branch blocks. That Dr. Burris did not specifically recommend a SI injection is inconsequential considering the context of his determination. Dr. Corenman continued to note the need for additional workup to identify Claimant's pain source, including a MRI and blood work to rule out an inflammatory disorder. He specifically noted that if such results were negative, the next step would be to consider an SI injection. Claimant credibly testified the lab results were negative per her understanding. Dr. Emig subsequently performed the SI joint injection, which Claimant credibly testified provided her some relief. The medical records indicate the SI joint injection was performed for diagnostic purposes to assist Claimant's providers in clarifying Claimant's diagnosis and pain generator. Based on a totality of the evidence, the SI injection performed by Dr. Emig in July 2012 was reasonably necessary and related to Claimant's industrial injury.

As also found, Claimant proved it is more probable than not the blood test requested by Dr. Corenman was reasonable, necessary and related to her April 15, 2018 work injury. Dr. Corenman's December 28, 2020 note explains that the workup thus far had not been absolutely definitive as to Claimant's pain source, and that there were concerns Claimant's condition could be due to an inflammatory disorder triggered by the MVA. Dr. Corenman ordered the blood tests to eliminate other potential causes for Claimant's low back pain in an attempt to further clarify Claimant's condition. The preponderant evidence establishes that the blood tests were reasonable, necessary and related to the work injury.

ORDER

1. Claimant proved by a preponderance of the evidence the SI injection performed by Dr. Emig on July 12, 2021 was reasonably necessary and causally related to Claimant's work injury. Respondents shall reimburse Claimant $1,604 for the cost of the injection.

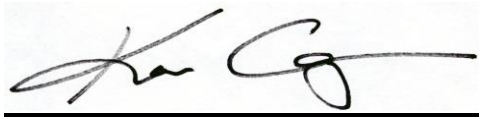
2. Claimant proved by a preponderance of the evidence the blood test ordered by Dr. Corenman was reasonably necessary and causally related to Claimant's work injury. Respondents shall reimburse Claimant $366 for the cost of the blood test.

3. Respondents shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant overcame Dr. Ginsburg's DIME opinion on MMI and permanent impairment by clear and convincing evidence.

II. Whether Claimant proved by a preponderance of the evidence he is entitled to a change of physician.

FINDINGS OF FACT

1. Claimant is a 56-year-old male born on May 19, 1965. Claimant has worked for Employer since June 5, 2019 as a full-time supervising journeyman electrical lineman.

2. Claimant sustained an admitted industrial injury during a motor vehicle accident ("MVA") on November 19, 2019. While stopped in traffic on I-70 in Denver, Claimant's company truck was rear-ended by another vehicle. Claimant initially declined medical care, but on Employer's recommendation was taken to Midtown Occupational to be evaluated by Kirk Holmboe, D.O.

3. Employer provided Claimant with a "Designation of Medical Providers" on the date of the accident. The document lists only two providers: Midtown Occupational and Concentra.

4. Upon presenting to Dr. Holmboe on November 19, 2019, Claimant reported low-grade pain in the lower thoracic portion of his back with no neck pain or headache. On examination, Dr. Holmboe noted full cervical motion without pain or radiating symptoms as well as full lumbar flexion with slight pain in the right lower parathoracic area. There was minor tenderness to palpation to the right of the midline in the lower thoracic region and some pain with side bending to the left. Dr. Holmboe diagnosed Claimant with a mild thoracic strain and recommended Claimant ice the area and take over-the-counter ibuprofen. Claimant was released to return to work without restrictions.

5. Claimant next saw Dr. Holmboe on November 21, 2019, reporting much improvement in his symptoms with only very minor soreness. Dr. Holmboe noted Claimant felt he did not require any formal treatment and felt fully capable of performing his normal job duties. On examination, Dr. Holmboe again noted full cervical range of motion without pain. There was no pain in the area of complaint with rotational movement or with scapular protraction and retraction. Dr. Holmboe opined Claimant did not require any specific treatment measures at that time, although it may take several weeks for his symptoms to completely resolve.

6. Claimant returned to Dr. Holmboe on December 2, 2019 reporting that he experienced increased pain in the right mid thoracic area radiating up to the neck and a

brief episode of left-sided pain in the forehead and eye. Claimant also reported some pain and sharp sensation in the right intrascapular area. On examination, Dr. Holmboe noted some limitation and discomfort with cervical range of motion but no radiating pain into his extremities. There was tenderness to palpation in the paracervical musculature and crepitus with cervical range of motion and tenderness to palpation in the right intrascapular area. Dr. Holmboe diagnosed Claimant with thoracic and cervical strains. He continued to recommend that Claimant ice the areas and referred Claimant for massage therapy.

7. On December 12, 2019, Dr. Holmboe noted Claimant was having some pain in right intrascapular area with persistence of a knot in the area, with pain radiating up into his neck and a right-sided headache. On examination, Dr. Holmboe noted nearly full cervical range of motion with some discomfort in the intrascapular area and some pain with lumbar flexion. Claimant had minor cervical tenderness. Dr. Holmboe recommended that Claimant continue massage therapy and, if no improvement, begin physical therapy and chiropractic treatment.

8. On December 12 and December 19, 2019, Claimant's physical therapist documented thoracic and neck pain.

9. On January 10, 2020, Dr. Holmboe noted Claimant had some limitation of cervical motion due to pain in right upper thoracic area with side bending to the left. He also noted: pain with cervical flexion and extension; some pain with scapular protraction but more pain with scapular retraction; pain in right upper thoracic area with extremes of rotation of truck area; tenderness to palpation in right parathoracic musculature particularly around T5-T7; and tenderness in right suboccipital area when touched – elicits some symptoms around right eye. Dr. Holmboe continued to diagnose Claimant with thoracic and cervical strains related to the MVA. He ordered physical therapy twice a week for three weeks and referral for chiropractic/dry needling sessions.

10. On January 20, 2020, Dr. Holmboe noted Claimant reported at times having severe pain in the right mid thoracic area as well as some stiffness and soreness in the neck and pain around right eye. On examination he noted some limitation of cervical range of motion due to pain in the right upper thoracic area. There was pain with cervical flexion and extension. Dr. Holmboe ordered physical therapy and chiropractic/dry needling sessions.

11. From January 14, 2020 to February 20, 2020 Claimant underwent 10 chiropractic sessions with Alexa Sheppard for right sided neck, mid-back, and shoulder neck pain. At the conclusion of chiropractic care her closing diagnosis was neck and shoulder pain resolved, and thoracic sprain.

12. From January 14, 2020 to March 3, 2020 Claimant also underwent 12 sessions of physical therapy at Midtown Physical therapy for thoracic and neck pain. At the conclusion of PT care the closing diagnosis was thoracic strain.

13. At a follow-up evaluation with Dr. Holmboe on February 28, 2020, Claimant continued to complain of right-sided neck pain and pain in the right mid scapular area. Dr. Holmboe noted that Claimant's increased symptoms over the past two weeks may correspond to completion of chiropractic treatment. Claimant complained of more pain with rotational movements of his trunk than of his neck. On examination, Dr. Holmboe noted relatively normal neck range of motion with complaints of tightness with extremes of motion. There was some discomfort with cervical protraction and retraction, as well as tenderness to palpation in the upper and mid parathoracic musculature on the right. Dr. Holmboe ordered additional chiropractic treatment and referred Claimant for evaluation and treatment by physiatry.

14. From March 4, 2020 to March 25, 2020 Claimant underwent an additional six sessions of chiropractic care with Dr. Sheppard for right-sided shoulder, mid-back, and neck pain. At the conclusion of chiropractic care the closing diagnosis was thoracic sprain.

15. On March 26, 2020, Dr. Holmboe noted Claimant continued to report pain primarily in his mid-back but some also in the lower cervical area. Painful range of motion of the thoracic and limited cervical range of motion was noted on examination.

16. On March 27, 2020 Claimant attended a telemedicine visit with Samuel Chan, M.D. Claimant reported pain in his right intrascapular region. Dr. Chan noted cervical range of motion within normal limits with no tenderness with flexion or extension or rotation. There was tenderness with extension and rotation of cervical spine Dr. Chan diagnosed Claimant with thoracic spine pain and thoracic facet joint syndrome. Based on a review of Claimant's medical records, mechanism of injury, and response to treatment, he agreed with Dr. Holmboe that Claimant sustained a thoracic strain with myofascial complaints, also possibly facetogenic in origin. He recommended Claimant undergo an MRI of the thoracic spine to rule out underlying discogenic issues and prescribed Claimant Celebrex.

17. Claimant underwent a MRI of the thoracic spine on April 3, 2020, which revealed thoracic spine disc desiccation with exaggerated kyphosis of the thoracic spine. There were no contusions or fractures.

18. Dr. Chan reevaluated Claimant at a telemedicine visit on April 16, 2020. Dr. Chan noted that an April 3, 2020 thoracic MRI revealed disc dessication with exaggerated kyphosis but no other discogenic issues, no neural foraminal narrowing, and no neural element compression. Claimant reported some improvement in his symptoms since last seeing Dr. Chan. Dr. Chan noted cervical range of motion with functional limits and no tenderness, as well as tenderness with extension and rotation of the thoracic spine. He opined that Claimant was a candidate for facet injections.

19. On examination at an April 21, 2020 evaluation, Dr. Holmboe noted full neck motion without particular pain or difficulty but some pulling in the right upper and mid

thoracic area with extremes of cervical motion. Dr. Holmboe's diagnosis remained MVA with cervical/thoracic strain.

20. On April 30, 2020, Haley Burke, M.D. performed the recommended thoracic facet injections on the right at T6-7 and T-7-8.

21. On May 7, 2020, Claimant reported to Dr. Holmboe experiencing initial relief from the facet thoracic injections with increasing pain two days later.

22. Claimant also saw Dr. Chan on May 7, 2020, who noted Claimant reported reduction in pain from 3-4/10 to 2-3/10 immediately after the injections, but that four days later his pain was 6-7/10 with spasms. Dr. Chan remarked that it was unclear if Claimant had any type of diagnostic response to the injections at the time. He recommended Claimant return for follow-up in two to three weeks. If opined that if there was no diagnostic or therapeutic benefit from the facet injection, then Claimant's pain was not facetogenic. He further opined that in such event, since the MRI did not show any significant discogenic issues, he may conclude a majority of Claimant's symptoms are myofascial in origin.

23. Claimant underwent an additional six session of chiropractic care from May 5, 2020 to May 21, 2020. At the conclusion of chiropractic care, the closing diagnosis was neck and shoulder normal, and thoracic sprain. Dr. Sheppard, who is Level I Accredited also opined that, "Patient is responding slower than anticipated. At this time in the recovery process soft tissue injuries sustained in a motor vehicle accident should have improved more significantly. The mechanism of injury in my opinion does not correspond with subjective complaints." (C. Exh. 5 , p. 133).

24. Claimant returned to Dr. Chan on May 26, 2020 rating his pain at 3-8/10. He reported pain over the right-sided intrascapular region. On examination, Dr. Chan noted that Claimant's cervical range of motion was within functional limits with no tenderness with extension or rotation of the cervical spine. Shoulder and lumbar exams were normal. There was tenderness to palpation over the right intrascapular region and slight hypertonicity. Dr. Chan concluded that the thoracic facet injections provided no diagnostic or therapeutic benefit. He opined that Claimant's pain complaints were likely myofascial in origin. Dr. Chan remarked Claimant may be a good candidate for 1-month rental of a stimulator.

25. On May 28, 2020, Dr. Holmboe noted Claimant was approaching MMI. His diagnosis remained MVA with thoracic and cervical strains.

26. On July 24, 2020, Claimant reported to Dr. Chan intermittent pain and some numbness of the bilateral lower extremities and weakness of right lower extremity. Examination revealed cervical range of motion within functional limits with no tenderness with extension and rotation; normal shoulder findings; and no tenderness with extension and rotation of lumbar spine. Dr. Chan's diagnosis was thoracic spine pain and thoracic facet joint syndrome. He again opined that Claimant's pain complaints

are most likely not facetogenic in nature and are most likely myofascial in origin based on mechanism of injury and ongoing symptoms. He opined that Claimant had most likely reached MMI without impairment, restrictions or the need for maintenance care.

27. Dr. Holmboe placed Claimant at MMI on July 28, 2020. At the evaluation, Claimant reported waxing and waning symptoms with pain especially noted in the right mid thoracic area. Dr. Holmboe noted he did not perform a formal examination as Claimant's was examined by Dr. Chan on July 24, 2020. He released Claimant from care with recommendations for maintenance follow-up with Dr. Chan for six months, refills of Celebrex, and an IFC unit. Dr. Holmboe opined Claimant did not require permanent restrictions. He did not address permanent impairment.

28. Stanley Ginsburg, M.D. performed a DIME on December 3, 2020, evaluating Claimant's cervical, thoracic and lumbar spine, as well as his right hand, wrist, elbow and shoulder. Claimant reported mid-to-low back pain, numbness in his left leg, and right shoulder symptoms. Claimant asked for his spine, neck and right shoulder pain to be evaluated. Dr. Ginsburg reviewed Claimant's medical records dated November 19, 2019 through July 28, 2020. On physical examination, Dr. Ginsburg reported, "Neck movements were not measured but observed spontaneously and with requests from me and appeared normal." (Cl. Ex. B, p. 22). He noted there was no tenderness in the paracervical area, with some tenderness in the periscapular areas particularly on the right but on the left as well, and mild tenderness without spasm in the midthoracic area. He included thoracic range of motion measurements on the applicable DIME worksheet.

29. Dr. Ginsburg diagnosed Claimant with a thoracic sprain/strain with some radicular symptomatology but not myelopathic or radicular signs. He opined Claimant reached MMI on July 28, 2020 with 4% whole person impairment of the thoracic spine (2% for range of motion deficits and 2% under specific disorders of Table 53(II)(B)). Dr. Ginsburg noted there was no documentation or clinical evidence for impairment of the right hand, wrist, elbow, and shoulder, as well as no documentation or clinical evidence of cervical or lumbar impairment. He opined Claimant did not require any permanent work restrictions, and should be allowed to see Dr. Holmboe twice in next year for medication adjustments and monitoring of the stimulation device.

30. Respondents filed a Final Admission consistent with Dr. Ginsburg's opinions on January 25, 2021.

31. On May 4, 2021, Sander Orent, M.D. performed an independent medical examination ("IME") at the request of Claimant. Claimant reported continued pain in the right side of his back just below his shoulders extending into the scapular area. Dr. Orent noted that Claimant had also been complaining of cervical spine pain since his injury and that such complaints had not been addressed or examined. Dr. Orent reviewed Dr. Ginsburg's DIME report as part of his review. On examination, Dr. Orent noted tenderness in the parathoracic musculature around T12 to T6 on the right. He further noted reduced cervical range of motion and thoracic range of motion. There was no motor weakness in the upper extremities. Dr. Orent opined that Claimant was not

MMI, as he continued to experience ongoing thoracic and cervical spine symptoms. He opined that the cervical spine has not been addressed although there was an adequate mechanism of injury. Dr. Orent recommended Claimant undergo physical therapy for the cervical spine and chiropractic treatment for the cervical and thoracic spine.

32. Dr. Orent testified by pre-hearing deposition as a Level II accredited expert in occupational, environmental, and internal medicine. Dr. Orent testified consistent with his IME report and continued to opine that Claimant has not reached MMI. He explained that Claimant has ongoing symptoms and that other treatment modalities may have been helpful to treat Claimant's thoracic spine. Dr. Orent testified that Claimant sustained a significant cervical strain that had never been addressed, other than to be mentioned in the medical records. Dr. Orent testified that Claimant's records show consistent complaints of neck pain. He recommended Claimant continue chiropractic manipulation and physical therapy and, if that did not work, obtain a cervical MRI.

33. Dr. Orent explained that his provisional impairment rating was based on the assumption that there are minor or minimal degenerative changes of the cervical spine. He opined that, at minimum Claimant qualified for 4% cervical impairment under Table (53)(II)(B) and 11% impairment for range of motion deficits. He opined that Claimant has medically documented pain and rigidity with or without muscle spasm. Dr. Orent testified that Dr. Ginsburg clearly erred in not taking cervical range of motion measurements and not assigning any cervical impairment, as there was a major mechanism of injury and clear cervical complaints that have not been addressed. He opined that you are required to perform an impairment rating even if you believe the Claimant is at MMI. Dr. Orent agreed that the AMA Guides mandate that the evaluating physician is to use their independent judgment, first as to whether a particular body part or condition merits a permanent impairment rating, and second if a rating is merited then using the AMA Guides to calculate the rating.

34. The ALJ finds the opinions of the DIME physician Dr. Ginsburg and of treating physicians Drs. Holmboe and Chan, and Dr. Sheppard to be more credible and persuasive than the opinion of Dr. Orent.

35. The ALJ finds Claimant failed to provide clear and convincing evidence to show Dr. Ginsburg erred in his opinion as to MMI and impairment.

36. The ALJ finds that the right of selection of a physician passed to Claimant due to Respondents' failure to provide Claimant a list of four designated physicians as required under §8-43-404(5), C.R.S.

37. The ALJ finds that Claimant selected Dr. Holmboe as his treating physician. Claimant failed to make a proper showing justifying a change of physician to Dr. Orent.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017).

A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician's finding regarding MMI and whole person impairment bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

Claimant failed to prove it is highly probable DIME physician Ginsburg erred in his determination of MMI and permanent impairment. Claimant relies on Dr. Orent's opinion that Claimant's cervical complaints were not addressed and that Claimant continues to experience symptoms in his thoracic and cervical spine that require additional treatment.

Claimant's medical records include the history of Claimant's reported cervical and thoracic complaints, as well as treatment to those areas. Contrary to Dr. Orent's opinion that Claimant has not received any cervical treatment, the medical records indicate Claimant received treatment for both his neck and back. Around the time Claimant was placed at MMI, Dr. Chan noted that Claimant's cervical motion was within functional limits. His closing diagnosis was thoracic pain and thoracic pain syndrome. Dr. Holmboe agreed with Dr. Chan's determinations. Claimant's treating physicians and providers identified his thoracic and scapular pain as his primary conditions. Claimant's treating physician did not opine Claimant warranted any impairment rating of the cervical spine.

Dr. Ginsburg reviewed the medical records, examined Claimant and applied the AMA Guides, concluding that Claimant sustained a thoracic sprain/strain that warranted 4% whole person impairment of the thoracic spine. Dr. Ginsburg explained that the records did not support any cervical impairment, which is in line with the opinions Drs. Chan, Holmboe and Sheppard. Dr. Ginsburg's failure to take measurements of the cervical spine is not clear error considering he did not attribute any ongoing neck condition to Claimant's work injury. There is insufficient evidence Dr. Ginsburg failed to properly apply the AMA Guides and clearly erred in his DIME determinations.

Based on the totality of the evidence, Claimant failed to prove it is highly probable Dr. Ginsburg's opinion on MMI and impairment are incorrect. Dr. Orent's conflicting opinion with those of Drs. Ginsburg, Holmboe and Chan represents a mere difference of opinion that does not rise to the level of clear and convincing evidence.

Change of Physician

Claimant contends that he is entitled to a change of physician because the right of selection passed when Respondents failed to provide Claimant a list with at least four designated treatment providers.

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* WC 4-597-412 (ICAO, July 24, 2008). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, WC 4-570-904 (ICAO, June 19, 2006). Because the statute does not contain a specific

definition of a “proper showing,” the ALJ has broad discretion to determine whether the circumstances justify a change of physician. *Gutierrez Lopez v. Scott Contractors*, WC 4-872-923-01, (ICAO Nov. 19, 2014).

The term “select,” is unambiguous and should be construed to mean “the act of making a choice or picking out a preference from among several alternatives.” *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant “selects” a physician when she “demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury.” *Williams v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO, Oct. 28, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

The right to select a physician passed to Claimant when Employer failed to provide Claimant with a list of four designated providers as specified under §8-43-404(5)(a)(I)(A), C.R.S. Nonetheless, Claimant has already exercised his right to select a physician in his decision to treat with Dr. Holmboe over the course of two years. There is no evidence or allegation Claimant made any prior request to change physicians. As Claimant selected Dr. Holmboe as his treating physician, a request to change physicians would require a proper showing. Here, Claimant has not made a proper showing justifying a change in physician.

ORDER

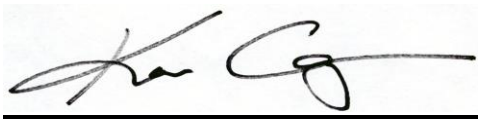
1. Claimant failed overcome Dr. Ginsburg’s DIME opinion on MMI by clear and convincing evidence. Claimant is at MMI as of July 28, 2020 with a 4% whole person impairment of the thoracic spine.

2. Claimant’s request for a change of physician is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Appeal of a May 20, 2021 Prehearing Order ("PHO") that denied an uncontested motion to add body parts to a follow-up Division Independent Medical Examination ("DIME").

FINDINGS OF FACT

1. Claimant sustained an industrial injury on May 16, 2017 and underwent medical treatment for an injury to his right knee. After requests for a knee replacement surgery were denied, Claimant was placed at maximum medical improvement ("MMI") on August 22, 2018.

2. Claimant sought a DIME, which was performed by Robert Kawasaki, M.D. at Lakewood Outpatient Clinic on May 21, 2019. Dr. Kawasaki opined Claimant was not at MMI and recommended Claimant undergo knee replacement surgery as related to the work injury.

3. Claimant underwent the recommended knee replacement surgery on January 22, 2021.

4. Authorized treating physician ("ATP") Alison Fall, M.D. placed Claimant at MMI on July 28, 2021.

5. The parties attempted to send Claimant back to Dr. Kawasaki for a follow-up DIME. Dr. Kawasaki was unable to perform the follow-up DIME due to a conflict of interest. Hearings subsequently took place before ALJ Edwin Felter to address the concerns of the parties regarding the follow-up DIME. ALJ Felter issued an order on March 22, 2021 ordering the DIME process to commence "de novo."

6. The parties selected Robert P. Mack, M.D. to perform the follow-up DIME. Dr. Mack's DIME was scheduled to take place on May 12, 2021.

7. Claimant contends that he developed additional medical conditions as a result of the knee surgery, including the neurological condition of Lewy Body dementia. Respondents deny any relationship between said neurological condition and Claimant's work injury.

8. On May 5, 2021, Claimant's counsel emailed Respondents' counsel to ask if Respondents would agree to add the following body parts to be addressed at the follow-up DIME: (1) Psychological; (2) Traumatic Brain Injury – onset of dementia; and (3) Cardiovascular – stroke.

9. Respondents' counsel was on vacation and did not see the email from Claimant's counsel at the time.

10. Records of Claimant's alleged neurological problems were in the possession of Respondents and were included in the overall medical packet sent to Dr. Mack.

11. Dr. Mack performed the follow-up DIME on May 12, 2021. He issued his DIME report on May 15, 2021.

12. In his May 15, 2021 DIME report, Dr. Mack stated that the purpose of his exam was to evaluate Claimant's knee injury. He noted that at the evaluation, Claimant, Claimant's wife, and Claimant's son,

> [b]rought up the question of [Claimant's] mental capabilities, and the question of whether he suffered a neurological injury as a consequence of his right total knee joint replacement. I explained to them at the outset that I am an orthopaedic surgeon and not qualified to pass judgment on the neurological or psychological issues. The family understood my area of expertise, and that I am not qualified to assess the neurological situation.

(Cl. Ex. 7, p.1)

13. Counsel for Respondents confirmed to the Court that Dr. Mack's accreditation is limited to orthopedic evaluations.

14. Dr. Mack ultimately assigned Claimant a 24% extremity rating converting to a 10% whole person impairment rating for the knee replacement.

15. Respondents' counsel ultimately responded to Claimant's counsel's request to add body parts to the follow-up DIME on May 17, 2021, five days after Dr. Mack conducted the follow-up DIME, and two days after Dr. Mack issued his DIME report. Respondents' counsel agreed to add the requested body parts a follow-up DIME.

16. On May 19, 2021, a prehearing conference ("PHC") took place before Prehearing ALJ ("PALJ") Susan D. Phillips to address Claimant's motion to add additional body parts for consideration at the follow-up DIME. PALJ issued an order on May 20, 2021. In the PHO order, PALJ referred to Claimant's motion as "unopposed", "agreed upon" and a "joint motion." PALJ Phillips noted that the parties reached an agreement to add body parts to be addressed in the follow-up DIME, and that the parties agreed that causality and relatedness of those conditions should be addressed in the follow-up DIME report.

17. PALJ Phillips determined that the parties did not establish good cause for their motion, and denied Claimant's unopposed motion to add body parts for the follow-up DIME. She noted that the parties have had a dispute over the addition of the body parts for some time, including at a PHC held before her on December 1, 2020, at which she urged the parties to work out an agreement or request another PHC. PALJ Phillips further

noted that the parties did not cite any rule or appellate precedence to provide guidance in the matter. She concluded that WCRP Rule 11 does not allow for body parts to be added after a follow-up DIME has taken place. PALJ Phillips reasoned that the rules concerning DIMEs are structured so that deadlines establish when each party is required to undertake specified steps before the DIME appointment, not after. PALJ Phillips determined that the parties were asking for relief that is not provided in the Act or WCRP.

18. On July 14, 2021, Claimant filed an Application for Hearing endorsing overcoming the DIME. The hearing was scheduled to take place on January 31, 2022.

19. Prior to the hearing, counsel for both parties conferred and agreed that a review/appeal of PALJ Phillip's order should be addressed at hearing. On January 20, 2022, Respondents filed a Case Information Sheet endorsing review/appeal of PALJ's Phillip's PHO. On January 25, 2022, Claimant filed a Case Information Sheet also endorsing PALJ's Phillip's PHO.

20. On January 27, 2022, Claimant submitted a brief to the Court identifying "Whether the pre-hearing ALJ erred in denying the uncontested motion to add body parts to the follow-up DIME in the Prehearing Order for Prehearing Conference Held on May 19, 2021."

21. At the onset of the hearing before ALJ Cayce on January 31, 2022, the parties requested that the ALJ address Claimant's appeal of PALJ Phillip's May 21, 2021 PHO. ALJ Cayce entered Claimant's Exhibits and heard arguments from both parties. Respondents do not object to adding the previously agreed upon body parts to a follow-up DIME.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Review of PALJ Order

A PALJ's order is properly reviewable by an ALJ pursuant to an application for hearing rather than a petition to review to the Industrial Claim Appeals Office. *Brownson-Rausin v. Valley View Hospital,* WC 3-101-431 (ICAO, Oct. 3, 2006); *Hernandez v. Safeway*, W. C. 4-630-249 (October 21, 2005).Section 8-43-207.5(2) grants the PALJs the authority to "issue interlocutory orders" and "make evidentiary rulings". Section 8-43-207.5(3) states that orders entered by PALJs are "binding on the parties," but the provision also states that "such an order shall be interlocutory." In *Industrial Claim Appeals Office v. Orth*, 965 P.2d 1246 (Colo. 1998), the Court held that a PALJ's order approving a settlement agreement is final and subject to review. However, the court also stated that orders "relating to a prehearing conference" entered by a PALJ are interlocutory and not subject to appeal. The basis for the court's holding was that orders relating to a prehearing conference are reviewable at a full hearing before the director or an ALJ. In this regard the court stated that "the propriety of the PALJ's prehearing order may be addressed at the subsequent hearing." *Orth, 965 P.2d* at 1264; *Dee Enterprises v. Industrial Claim Appeals Office*, 89 P.3d 430, (Colo. App. 2003) (ALJ has authority to override the ruling of a PALJ); *Brownson-Rausin v. Valley View Hospital,* supra.

WCRP Rule 11 addresses the procedures and requirements applicable to DIMEs. WCRP Rule 11 discusses the process for agreeing upon body parts to be addressed by the DIME physician, and providing the DIME physician the requisite medical records, all prior to completion of the DIME. WCRP nor the Act specifically addresses adding body parts for consideration after a follow-up DIME has taken place. The ALJ is unaware of any provision in the Act, WCRP, or legal precedent specifically prohibiting the parties from doing in circumstances such as those in the case at bench.

The ALJ acknowledges the parties' delay in timely agreeing to and notifying the DIME of the agreed upon additional body parts for consideration. Both parties were responsible for conferring about the issue earlier to allow the requisite time to follow proper procedures for adding body parts for the DIME's consideration. Nonetheless, Claimant's counsel did make an attempt prior to the follow-up DIME to confirm that

Respondents agreed to adding certain body parts. The communication was inadvertently deleted or unseen by Respondents' counsel until a later date. The DIME physician and Respondents had been provided with the medical records addressing the additional parts.

Importantly, the parties agree that the body parts should be added for consideration by the follow-up DIME. The parties stipulated as such at the PHC. While a PALJ or ALJ is not required to grant all unopposed motions, and the efficiency of the DIME process, is important, so is allowing Claimant to undergo a complete DIME evaluation of all potentially-related conditions. Additionally, it is noted that DIME physician Dr. Mack made it clear in his report he was not qualified to opine on the alleged neurological/psychological problems of Claimant. Thus, even if the additional body parts were properly added prior to his evaluation, such conditions would require further evaluation by an another physician.

Based on the unique facts and chronology of this case the ALJ determines the parties established good cause to grant the unopposed motion and reverse PALJ Phillip's May 20, 2021 PHO.

ORDER

1. PALJ Phillip's PHO dated May 20, 2021 is reversed.

2. The parties shall reschedule a repeat follow-up DIME examination pursuant to WCRP.

3. Dr. Mack's name on the current DIME Physician Panel shall be replaced with a physician with full accreditation. Any other physician on the current DIME Physician Panel, not having full accreditation, shall be replaced with a physician with full accreditation.

4. The selected DIME physician shall address causality and relatedness of the agreed upon body parts: (1) Psychological; (2) Traumatic Brain Injury – onset of dementia; and (3) Cardiovascular – stroke.

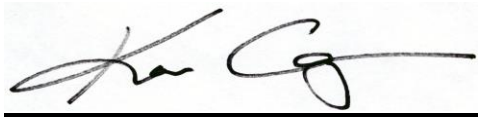
5. Upon receipt of the repeat DIME evaluation report, the parties shall proceed pursuant to WCRP.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved he is entitled to temporary total disability (TTD) benefits beginning October 23, 2020 and ongoing.

II. Whether Respondents proved by a preponderance of the evidence Claimant was responsible for termination of his employment and thus not entitled to TTD benefits.

III. Whether Claimant proved Respondents are subjection to penalties for failure to timely admit or deny Claimant's claims.

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of $1,002.95 with a TTD rate of $668.63.

FINDINGS OF FACT

1. Claimant worked for Employer as an office furniture installer from February 16, 2020 to October 23, 2020. Claimant's job involved lifting and moving heavy furniture.

2. At the time of his hire, Claimant was provided with a copy of an Employee Handbook which included a General Safety Rules Handbook. Claimant acknowledged in writing that he received, read, and agreed to abide by the handbook and that he understood the policies and procedures set forth in the handbook including that his employment could be terminated at any time. The handbook provides, *inter alia*, employment is at will; employees could be disciplined according to the nature of the offence; using common sense most accidents could be avoided and that safety was a full-time job; and failure to perform job assignments satisfactorily and efficiently or failing to report unsafe actions or conditions could be grounds for discharge.

3. Claimant testified he received but did not read the Employee Handbook.

4. Claimant previously owned a company and employed approximately 15 workers. Claimant's company carried workers' compensation insurance. Claimant testified he was unaware of the specifics of the workers' compensation system because none of his prior employees filed any workers' compensation claims.

5. Claimant was involved in a January 2020 motor vehicle accident ("MVA") that resulted in neck, back and knee complaints. Claimant underwent treatment through April

2020. Claimant testified his symptoms from the MVA had resolved by the time of his August 2020 injury.

6. On August 10, 2020 Claimant sustained an industrial injury when he twisted his back while unloading panels for Employer.

7. Claimant notified his supervisor, [Redacted, hereinafter SM], of the injury on the morning of August 11, 2020. Claimant sought treatment for his back that same day with a personal chiropractor, Dr. Matthew Romo at Chiro Now. Dr. Romo removed Claimant from work August 11-12, 2020. Claimant then called [Redacted, hereinafter GN], Project Coordinator, on August 11, 2020 informing her of his injury and that he needed to file a workers' compensation claim.

8. [Redacted, hereinafter KM], Director of Internal Operations, subsequently contacted Claimant to discuss what occurred on August 10, 2020. Ms. KM[Redacted] asked Claimant if he wanted to see a workers' compensation doctor and Claimant declined. She testified Claimant told her he had injured himself in a January 2020 MVA; that his neck and back injuries from that accident had flared up at times and that he just needed a couple of days off to rest his back.

9. On August 13, 2020, Ms. KM[Redacted] emailed Claimant a form to sign to decline workers' compensation treatment ("Declination of Treatment Form"). The form stated Claimant understood he had been offered "the service of being treated at the company's workers compensation physician; however, I am declining by these physicians. I also understand if I seek treatment by an outside physician, [Employer] takes no responsibility financially or otherwise for the injury that occurred" on August 10, 2020. (Cl. Ex. 28, p. 130). The form further stated, "I also understand, if there is further treatment needed for this injury, I am solely responsible for all treatment, financial or otherwise." (Id.) Ms. KM[Redacted] testified that Employer presents this form to all employees who decline workers' compensation treatment.

10. Claimant signed and returned the form to Ms. KM[Redacted] on August 14, 2020. Claimant testified he signed the Declination of Treatment Form because Ms. KM[Redacted] offered to pay his wages for the week and he needed the money.

11. Claimant did not work August 11-14, 2020. Employer paid Claimant his full wages for that time period. Ms. KM[Redacted] testified Employer paid Claimant's wages for those days off because times were tough due to the COVID-19 pandemic and she did not want Claimant to endure any hardship.

12. Claimant returned to full duty work on August 17, 2020 and continued to work in such capacity through October 23, 2020. Claimant testified he continued to experience pain in his back for which he saw a chiropractor and his primary care physician, Luke Beckman, M.D., at Kaiser.

13. On October 1, 2020, Claimant saw Luke Beckman, M.D. at Kaiser for chronic low back and neck pain, greater than three months, with a date of onset of August 10, 2020. Dr. Beckman placed Claimant on modified activity from October 5 through October 30, 2020. Dr. Beckman imposed the following restrictions: standing and walking, intermittently—up to 50% of shift; bending at the waist and torso/spine twisting, occasionally—up to 25% of shift; climbing ladders and use of scaffolds/working at height—not at all; and lifting/carrying/pushing/pulling no more than 20 pounds.

14. On October 20, 2020 at 7:34 a.m. Claimant emailed Ms. KM[Redacted] a copy of the Kaiser Work Status Report from October 1, 2020 detailing his work restrictions.

15. Claimant testified that he continued to work full duty despite his restrictions because he needed the money. He testified that he sent the restrictions to Employer when he did because he anticipated performing a lot of heavy lifting that day and did not want to reinjure his back.

16. At approximately 10:00 a.m. on October 20, 2020 Claimant injured his back while lifting a hutch at work. Claimant immediately notified his supervisor, [Redacted, hereinafter DN], of the incident. Claimant completed the remainder of his work shift.

17. At 10:59 a.m. on October 20, 2020, Ms. KM[Redacted] replied to Claimant's earlier email that attached his work restrictions. Ms. KM[Redacted] was unaware of Claimant's October 20, 2020 injury at the time she sent her reply. Ms. KM[Redacted] wrote,

> Thank you for sending this over however I am confused as to why you are presenting something to me on 10/20 that you received on 10/1 for something that is not work comp related. You mention that this is from when you 'got hurt on the job' (strained your back) back in August however you were offered and declined medical treatment and chose to see your own doctor resulting in this no longer being a work comp or [Employer] issue.

(Cl's Ex. 30, p.138)

18. Claimant performed his regular work duties October 21 and October 22, 2020.

19. On October 22, 2020, Mr. S[Redacted] completed a supervisor statement regarding the October 20, 2020 injury, stating Claimant's injury occurred while lifting a piece of furniture. Under a section titled "Employee Performance" Mr. S[Redacted] checked "physically not capable" "improper risk taken and/or poor judgment" and "other-improper lifting technique." (Cl. Ex. 33, p. 150). Mr. S[Redacted] wrote "pay attention to how you lift" under the preventative action plan section. (Id.)

20. On October 23, 2020, Ms. KM[Redacted] and Mr. M[Redacted] called Claimant into Employer's warehouse for a meeting. Ms. KM[Redacted] recorded the meeting without Claimant's knowledge.

21. The recording of the meeting was admitted into evidence as Claimant's Exhibit 34. During the meeting, Ms. KM[Redacted] and Mr. Miller inquired about the October 20, 2020 incident. They asked Claimant if he wanted to continue seeing his personal doctor or if he wanted to see a physician through workers' compensation. Claimant indicated he did not know what he wanted to do, and asked for time to make his decision. Ms. KM[Redacted] informed Claimant that they needed his decision at that time. Claimant inquired what would happen if he sought treatment for the injury through Employer's workers' compensation insurance. Ms. KM[Redacted] informed Claimant he would be required to see a workers' compensation doctor who would determine, along with an investigation, if Claimant's injury was work-related or if it was the result of a previous condition.

22. Claimant then indicated he continued to experience symptoms from the August 10, 2020 injury. Ms. KM[Redacted] admonished Claimant for continuing to work with a preexisting condition and failing to inform Employer of his restrictions. Claimant stated he needed to work to make money. Ms. KM[Redacted] again asked Claimant if he wanted to see a workers' compensation doctor or to decline workers' compensation treatment.

23. Claimant ultimately stated he would like to go see a workers' compensation doctor. Ms. KM[Redacted] then instructed Claimant to choose a workers' compensation doctor, and immediately informed Claimant that he would be required to submit to a mandatory drug test per Employer procedure. In response, Claimant stated that he did smoke marijuana at night. Ms. KM[Redacted] commented that Claimant would likely fail a drug test on top of everything else, and that he ran the risk of his injury not being covered by workers' compensation. Claimant then elected to decline treatment through workers' compensation and signed another Declination of Treatment Form for his October 20, 2020 injury.

24. Upon Claimant signing the second Declination of Treatment form, Mr. M[Redacted] informed Claimant that he was being terminated. Mr. M[Redacted] informed Claimant that his failure to inform Employer of his restrictions while he continued to work had put the company, himself, and other employees at risk. Mr. M[Redacted] presented Claimant a Performance Improvement Plan dated October 20, 2020. The Performance Improvement Plan stated Claimant was terminated because Claimant continued to work under restrictions and did not notify Employer of the restrictions until 20 days later. The document states Claimant violated company policies by putting others at risk because he was not physically capable of performing his job.

25. Claimant emailed Ms. KM[Redacted] after the meeting at 11:15 a.m. on October 23, 2020 requesting a list of designated providers to treat his back. Ms. KM[Redacted] replied via email later that day, sending Claimant a Designated Provider List. Ms. KM[Redacted] wrote on the list, "Employee opted to not go to worker comp doctor. He admitted he would fail drug test." (R. Ex. E, p. 20).

26. Claimant sought treatment at one of Employer's designated providers, Thornton COMP, and underwent a drug test for which he tested negative. Claimant presented to

Monica Fanning-Schubert, APN on October 30, 2020, who diagnosed Claimant with cervicalgia, low back pain, and strain of muscle, fascia, and tendons in the back. She referred Claimant for physical therapy and massage therapy and for lumbar and cervical spine MRIs. APN Fanning-Schubert placed Claimant on work restrictions including: lifting a maximum of 50 pounds; a maximum of 10 pounds for repetitive lifting, carrying, and pushing or pulling; no repetitive lifting from floor to waist; and zero hours per day crawling and no climbing of ladders.

27. On November 18, 2020, Claimant attended an evaluation with Bryan Alvarez, M.D. Dr. Alvarez's diagnoses were the same as ANP Fanning-Shubert's. Dr. Alvarez referred Claimant for chiropractic treatment and a consultation with a physiatrist. He changed Claimant's lifting, carrying, and pushing and pulling restrictions from 10 pounds to 20 pounds.

28. Claimant continued to see Dr. Alvarez. He also underwent physical therapy from November 3, 2020 through January 7, 2021, and massage therapy from November 13, 2020 through January 8, 2021. As of Claimant's March 23, 2021 evaluation with Dr. Alvarez, he remains on 10 pounds restrictions for lifting, pushing/pulling and pinching/gripping.

29. On October 27, 2020, Insurer created an Employer's First Report of Injury (E-1) for Claimant's October 20, 2020 injury. Insurer assigned a claim file number of FQV8949. The form does not specify any safety rule violation. [Redacted, hereinafter VP], Investigative Adjuster, testified this form was not filed with the Division as, per her understanding of Division guidelines, Division training, and experience, the claim was not the type of claim required to be reported to the Division. This matter gave rise to W.C. No. 5-157-564.

30. On December 7, 2020, Claimant filed a Workers' Claim for Compensation with the Division noting the date of injury as "8/10/20 aggravated on 10/20/20." (R. Ex. 7, p. 36). The Division assigned the claim W.C. # 5-155-726.

31. On December 9, 2020, the Division sent Insurer a letter advising Insurer to admit or deny liability within 20 days for WC #5-155-726.

32. Ms. VP[Redacted] handled Claimant's claims for Insurer. She testified that Insurer received Claimant's claim and the Division's December 9, 2020 letter on December 15, 2020 and put it into an "electronic file cabinet."

33. On December 12, 2020, Claimant's counsel emailed Ms. VP[Redacted] regarding FQV8949 stating that the E-1 filed on 10/27/20 was in a penalty situation as Insurer had not yet admitted or denied the claim. Ms. VP[Redacted] replied to the email on December 17, 2020 stating that the Claimant had been placed in denial with a Notice of Contest forthcoming. Claimant's counsel responded on December 19, 2020 stating the Notice of Contest would be filed late and Insurer would continue to be in violation.

34. On December 22, 2020, Insurer filed a Notice of Contest for October 20, 2020 claim.

35. On January 12, 2021, the Division sent notice to Insurer regarding W.C. #5-155-726. The letter stated that Respondents were in a potential penalty situation because they had failed to take a position within 20 days of the Division receiving notice of the claim.

36. Ms. VP[Redacted] testified that, upon receiving the Division's January 12, 2021 letter, Insurer realized there had been confusion regarding two separate claims being filed by Claimant. At that time, Insurer created a file for the August 10, 2020 claim in their system.

37. On January 14, 2021, Ms. VP[Redacted] filed a Notice of Contest for August 10, 2020 injury.

38. On April 27, 2021, Respondents filed General Admissions of Liability in the August 10, 2020 and October 20, 2020 claims admitting liability for medical benefits only. Respondents assert Claimant is not entitled to temporary indemnity benefits as Claimant is responsible for termination of his employment.

39. Claimant testified that, as a result of Respondents' delays in filing the Notice of Contests, he experienced anxiety and stress. Claimant testified he is unable to perform his regular job duties as a result of his injuries.

40. Ms. KM[Redacted] testified Employer could have accommodated the restrictions put in place by both Kaiser Permanente and COMP with modified duty work. She also testified other injured employees had returned to work under restrictions at light duty.

41. Regarding Claimant's responsibility for termination, the ALJ credits Claimant's testimony, as supported by the records, over the testimony of Ms. KM[Redacted].

42. The ALJ finds that Claimant proved it is more probable than not he is entitled to TTD benefits October 23, ongoing.

43. The ALJ finds that Respondents failed to prove it is more probable than not Claimant was responsible for his termination.

44. The ALJ finds that Claimant failed to justify imposition of penalties against Respondents based on the totality of the circumstances.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*,

971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As found, Claimant proved he is entitled to TTD benefits from October 23, 2020, ongoing. Claimant credibly testified that as a result of his work injuries and restrictions, he has been unable to perform his regular work duties and has not or earned wages since October 23, 2020. Claimant's termination from employment is addressed below.

Responsibility for Termination

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial*

Commission, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if he is aware of what the employer requires and deliberately fails to perform. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As used in the termination statutes, the word "responsible" "does not refer to an employee's injury or injury-producing activity." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002). Therefore, Colorado termination statute §8-42-105(4)(a), C.R.S. is inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *See Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Colorado Springs Disposal*, 58 P.3d at 1062. Notably, a separation from employment is not necessarily due to an injury simply because it occurs after the injury, and the injured employee need not be offered modified employment before discontinuation of benefits if his was responsible for the separation. *See Gilmore*, 187 P.3d 1129; *Ecke v. City of Walsenburg*, WC 5-002-020-02 (ICAO, May 5, 2017) (injury occurring one day before claimant's previously-announced retirement did not cause claimant's separation from employment or loss of wages). However, if the injury also leads to wage loss at a claimant's secondary employment, she is eligible for compensation for those wages, even if the separation from primary employer was voluntary or for cause. *Id.*

Respondents assert Claimant was terminated from his employment because he failed to timely notify Employer of his work restrictions. Respondents rely on the Employee Handbook, which provides that failure to report unsafe actions or conditions could be grounds for discharge.

Ms. KM[Redacted]'s October 20, 2020 email response to Claimant undermines Respondents' contention that Claimant was terminated for failing to timely notify Employer of his restrictions. In her response, Ms. KM[Redacted] questioned why Claimant presented something he received on 10/1 to her on 10/20 **that is not work comp related.** (Emphasis added). She goes on to remind Claimant he signed a waiver regarding the injury resulting in the injury no longer being a workers' compensation or Employer issue. Thus, while Ms. KM[Redacted] did mention a delay in providing the restrictions, the crux of her response focused on admonishing Claimant for notifying Employer of restrictions Employer deemed unrelated to his work due to Claimant signing a waiver. She specifically states that it is no longer an Employer issue. It is important to note Claimant solely notified Employer of his restrictions in this email and did not indicate he was requesting additional medical treatment from Employer. Thus, Ms. KM[Redacted]'s response stating it was not an Employer issue and admonishing Claimant for sending such information undermines

the argument that Claimant was reasonably expected to promptly notify Employer of his restrictions under such circumstances.

While Employer purports that Claimant's actions put Claimant and his co-workers in potential danger, Employer continued to permit Claimant to work full duty for two days after becoming aware of the restrictions. There is no indication Claimant was placed on any sort of suspension or modified duty prior to his termination. Additionally, the E-1 form completed by Employer on October 20, 2020 does not allege any safety rule violation.

Additionally, the recording of the termination meeting provides further insight into the circumstances surrounding Claimant's termination. Immediately after Claimant affirmatively stated his desire to see a workers' compensation physician, Ms. KM[Redacted] announced that Claimant would be required to undergo a drug test, which could result in his claim being denied. The ALJ is not persuaded this statement was solely an attempt to apprise Claimant of the process for seeking workers' compensation treatment. In the context of the conversation, the statement reasonably appears to be an attempt to dissuade Claimant from pursuing treatment through Employer's workers' compensation insurance. When Claimant changed his mind based on Ms. KM[Redacted]'s statement, Ms. KM[Redacted] immediately presented Claimant yet another Declination of Treatment form, after which Mr. M[Redacted] proceeded to terminate Claimant.

Here, Employer presented Claimant with not one, but two, Declination of Treatment forms after Claimant reported separate work injuries. Claimant signed the first form because Employer paid him for his time off due to the injury, and the second form because he did not wish to undergo a drug test in connection with a worker's compensation claim. Upon notifying Employer of his work restrictions, Claimant was not suspended or placed on modified duty, but allowed to continue working his regular duties. Employer questioned why Claimant was providing evidence of work restrictions that were "not work related" and "not an Employer issue." Employer effectively terminated Claimant under the pretext of Claimant failing to timely notify Employer of his work restrictions. Considering the totality of the credible and persuasive evidence, the ALJ does not find that the Employer's stated reason for terminating Claimant was, in fact, the reason for his termination. The preponderant evidence does not establish Claimant was responsible for his termination.

Penalties

Claimant seeks penalties against Respondents in the August 10, 2020 claim (WC # 5-155-726) under Section 8-43-203(1)(a), C.R.S. and WCRP Rule 5-2(D). Claimant also seeks penalties in the October 20, 2020 claim (WC# 5-157-564) under Section 8-43-203(1)(a), C.R.S.

Section 8-43-203(1)(a) requires a Notice of Contest to be filed within 20 days after a report is or should have been filed pursuant to §8-43-101. Section 8-43-101(1) states,

> Every employer shall keep a record of all injuries that result in fatality to, or permanent physical impairment of, or lost time from work for the injured employee in excess of three shifts or calendar days and the contraction by an employee of an occupational disease that has been listed by the director by rule. Within ten days after notice or knowledge that an employee has contracted such an occupational disease, or the occurrence of a permanently physically impairing injury, or lost-time injury to an employee, or immediately in the case of a fatality, the employer shall, upon forms prescribed by the division for that purpose, report said occupational disease, permanently physically impairing injury, lost-time injury, or fatality to the division. The report shall contain such information as shall be required by the director.

Respondents contend that no penalties apply under Section 8-43-203(1) as both claims are no lost time claims and thus did not require reporting under Section 8-43-101(1). Specifically, Respondents argue that no lost time occurred on the August 10, 2020 claim because Employer paid Claimant his full wages for the time he missed from work due to the August 10th injury. Regarding the October 20, 2020 injury, Respondents argue that no lost time occurred because Claimant was responsible for his termination.

Here, Respondents conflate the requirement for lost time referenced in §8-43-101(1) with the requirement for wage loss as related to temporary total disability benefits.

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. See §§8-42-(1)(g) & 8-42-105(4), C.R.S. That Respondents paid Claimant his full wages for the time he missed from work due to the August 10, 2020 injury is relevant to a consideration of whether Claimant sustained actual wage loss, entitling him to TTD benefits. Similarly, whether Claimant was responsible for his termination from employment is relevant to determining whether resulting wage loss is attributable to the industrial injury. The reporting requirements outlined in Section 8-43-101(1) do not refer to wage loss, but lost time. A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work. *Grant v. Industrial Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987).

Injuries without loss of pay do not exclude Respondents' obligation under Section 8-43-203(1)(a). *See Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Thus, both Claimant's August 10, 2020 and October 20, 2020 were lost time claims, as Claimant missed more than three days of work.

Nonetheless, Claimant failed to justify the imposition of a penalty under Section 8-43-203(1). The phrase "may become liable" means imposition of penalties under § 8-42-203(2)(a) is discretionary. E.g., Gebrekidan v. MKBS, LLC, W.C. No. 4-678-723 (May 10, 2007). The purposes of requiring the employer to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise its administrative oversight over

the claim process. Smith v. Myron Stratton Home, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties in general are to punish the violator and deter future misconduct. May v. Colorado Civil Rights Commission, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. Associated Business Products v. Industrial Claim Appeals Office, 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. Dami Hospitality, LLC v. Industrial Claim Appeals Office, 442 P.3d 94 (Colo. 2019). The claimant bears the burden of proof to establish circumstances justifying the imposition of a penalty under § 8-43-203(2)(a). Pioneer Hospital v. Industrial Claim Appeals Office, 114 P.3d 97 (Colo. App. 2005).

Claimant did not file a claim for compensation until December 7, 2020. At the time, Insurer was aware only aware of the October 20, 2020 injury. The Division sent a letter to Insurer on December 9, 2020 asking Insurer to take a position. Twenty days from that date would have been December 29, 2020. The NOC was filed on January 14, 2021. In December 2020, the Insurer only had one file open for Claimant and that was for his October 20, 2020 case (FQV8949) as the Employer had 'filed' that claim with them electronically. The December 12, 2020 email from Claimant's counsel requesting that Insurer file a position specifically referred to FQV8949 and the E-1 filed on 10/27/20. Ms. VP[Redacted] responded that she would be filing a NOC, which she did in a timely manner on December 22, 2020. Insurer reasonably believed they had complied under the circumstances. Upon receiving the Division's January 12, 2021 letter stating Insurer was in a penalty situation for failure to timely take a position, Insurer realized there were two separate claims requiring NOCs. Insurer then promptly filed a NOC in the August 10, 2020 matter on January 14, 2020. Insurer was reasonably confused under the circumstances and took reasonable action in an attempt to comply.

WCRP Rule 5-2(D) provides, "The insurer shall state whether liability is admitted or contested within 20 days after the date the Division mails to the insurer a Worker's Claim for Compensation...".

This subsection of the rule is distinct from §8-43-203(1) to the extent that it applies to any claim, but only when the claimant has filed a Claim for Compensation. Under Rule 5-2(D), a position statement is due 20 days after a Workers' Claim for Compensation was mailed to the insurer. An admission or contest was made necessary by Rule 5-2(D), solely because the claimant had filed a Claim for Compensation.

The Division mailed a copy of the Claimant's Workers' Claim for Compensation to Respondents on December 9, 2020 asking Respondents to take a position on the claim WC #5-155-726. Respondents did not file a NOC until 1/14/21, thus violating Rule 5-2(D).

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See*

Associated Business Products v. Industrial Claim Appeals Office, 126 P.3d 323 (Colo. App. 2005).

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

As discussed above, while Respondents failed to take a timely position on the August 20, 2020 claim pursuant to WCRP Rule 5-2(D), Respondents conduct was objectively reasonable. Thus, imposition of penalties is inappropriate. Accordingly, no penalty for violation of Rule 5-2(D) shall be assessed.

ORDER

1. Claimant proved he is entitled to TTD benefits beginning on October 23, 2020; Respondents shall pay Mr. Ocana TTD benefits at the rate of $668.63 per week beginning on that date and continuing until terminated by operation of law.

2. Respondents' affirmative defense of termination for cause is denied and dismissed.

3. Claimant's claim for penalties is denied and dismissed.

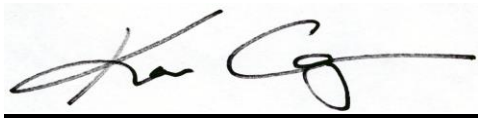
4. Respondents shall pay interest at 8% per annum on all benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable workplace injury on February 25, 2019.

II. Whether Claimant proved by a preponderance of the evidence he sustained a compensable occupational disease with a date of onset of April 21, 2019.

III. If Claimant proved he sustained a compensable workplace injury on February 25, 2019 and/or occupational disease with a date of onset of April 21, 2019, whether Claimant proved by a preponderance of the evidence he is entitled to specific reasonable, necessary, and related medical benefits.

IV. If Claimant proved he sustained a compensable workplace injury, whether Claimant proved by a preponderance of the evidence he is entitled to temporary partial disability benefits from February 25, 2019 through April 23, 2019.

FINDINGS OF FACT

1. Claimant worked for Employer for nine years. Claimant initially worked for Employer in quality assurance. He worked as a microbiologist for the last six years.

2. Claimant alleges he sustained an injury to his right elbow and forearm on February 25, 2019. Claimant alleges he was injured when opening a tight cap on a Sharpie marker. Claimant frequently used Sharpies while performing his job duties. Claimant testified he forcefully gripped and twisted the cap of the marker with his right hand, causing pain in his right forearm. Claimant reported the incident to Employer but did not seek medical attention.

3. Claimant alleges that, following the February 25, 2019 incident, he experienced pain when squeezing the squeeze bottles, and difficulties with his right hand, arm and shoulder when: pouring the water samples into the funnels; carrying heavy water samples from the line to his lab; collecting and unloading supplies from the logistics department; diluting the culture media with the mechanical pipettes using a motion similar to pushing up and down on a pen.

4. Claimant testified that the bottle claimant uses to pour his water samples is glass and contains one liter of water. He stated he feels pain in his hand/arm/wrist shoulder from the repetitive motion of pouring combined with the weight of the bottle. Claimant testified that collecting and unloading supplies causes pain to his right shoulder because it requires pulling a heavy cart from the front across the entire building.

Claimant testified his work also includes unloading large boxes of supplies and placing them in the refrigerator or other storage. Claimant testified his other work requires that he reach overhead, upwards, out to the side both sides and bend over to get supplies under his workstation. He occasionally uses a step stool. Claimant stated he spends half of his day in the lab doing sampling, approximately four (4) to five (5) hours, which is when he does most of his reaching for supplies.

5. Claimant continued to work full-duty for Employer after the February 25, 2019 incident. Claimant testified that he experienced intermittent pain in his right hand, forearm and shoulder during this time period.

6. Claimant alleges he suffered an occupational disease with a date of onset of April 21, 2019.

7. Claimant testified that, on April 21, 2019, he developed pain in his right shoulder when he rolled over in bed at night. Claimant associated his right shoulder pain with his work activities and reported his symptoms to Employer the following day and requested medical evaluation.

8. Claimant presented to Jay Reinsma, M.D. at Concentra on April 23, 2019. He reported that on February 25, 2019, he felt pain in his right forearm and lateral elbow when he pulled a stuck cap off of a marker. Claimant reported using some pain cream and over the counter medication to manage his pain. Dr. Reinsma noted that 10 days prior to this evaluation Claimant began to develop severe right shoulder pain. Claimant denied any new injury. On examination of the right shoulder, Dr. Reinsma noted tenderness in the bicipital groove and in the deltoid, as well as full range of motion with pain. Examination of the right forearm was normal. Dr. Reinsma diagnosed Claimant with a right forearm strain and tendinitis of the upper biceps tendon of the right shoulder. He noted that he could not opine with greater than 51% certainty that Claimant's shoulder is a work-related issue. He opined that Claimant's forearm injury did appear to be work-related. Dr. Reinsma referred Claimant to physical therapy and released Claimant to modified duty with the following work restrictions: may lift up to 10 pounds occasionally, no reaching above shoulders with affected extremity, unable to use power/impact/vibratory tool with right upper extremity. Occasional grip squeeze pinch and no behind reaching with right arm.

9. A physical therapy record from April 23, 2019 notes that the right shoulder humeral head is slightly anterior to the acromion. This evaluation also showed radial sided wrist pain radiating up the arm. Claimant had right shoulder pain over the AC joint, causing difficulty reaching overhead and reaching behind him to put on his jacket. The pain is described as burning and sharp, onset was delayed, and symptoms occur intermittently. His pain is rated as 3/10.

10. Claimant returned to Dr. Reinsma on April 25, 2019 stating there was miscommunication regarding his injury at his first evaluation. Claimant reported that he inadvertently pointed to his shoulder when his pain was just above his right elbow. On

examination of the right elbow, Dr. Reinsma noted tenderness in the lateral epicondyle with full range of motion. Claimant resisted wrist range of motion with pain. Examination of the forearm revealed tenderness in dorsal mid forearm with full painful range of motion. Dr. Reinsma removed his shoulder diagnosis and continued Claimant on restrictions.

11. A physical therapy record dated April 30, 2019 documents that Claimant reported that he confused his body parts and misnamed the region that was bothering him and that he never had shoulder pain. He reported that the pain was always in his forearm and again related his pain to the cap twisting incident.

12. On May 13, 2019 Claimant reported to Dr. Reinsma 3/10 pain with gripping heavy objects. He reported being pain-free except when lifting. Claimant further reported that he was working regular duty but not using his right arm as he usually would. Dr. Reinsma opined that further physical therapy was not indicated. He returned Claimant to regular duty using his right arm as normal.

13. At a follow-up visit on May 20, 2019, Claimant reported to Dr. Reinsma having pain when reaching out and attempting to lift items. Dr. Reinsma noted that Claimant reported pain but appeared comfortable during his examination. He continued Claimant on regular duty. On May 28, 2019, Claimant reported worsening pain in his biceps area to Dr. Reinsma. Dr. Reinsma referred Claimant to Craig Davis, M.D. for evaluation.

14. Claimant presented to Dr. Davis on June 4, 2019. Claimant reported that he developed right forearm pain on February 25, 2019 when removing a marker cap, and right shoulder pain since rolling over in bed in April 2019. On examination of the right shoulder, Dr. Davis noted limited range of motion and strongly positive impingement signs. There was full range of motion of the elbow, wrist and hand with tenderness over the mid forearm dorsally over the extensor musculature. Claimant was nontender at the epicondyles and had pain with resisted wrist extension and supination. Dr. Davis noted that right shoulder x-rays showed type II acromion with no other abnormalities, and that x-rays of the right elbow were normal. Dr. Davis diagnosed Claimant with right shoulder subacromial bursitis and tendinitis of the right forearm. He administered a shoulder injection and injections into three trigger points of the forearm. Dr. Davis's medical note does not address causality.

15. Claimant returned to Dr. Davis on July 9, 2019 reporting no improvement in his right shoulder but "virtually complete relief" in his forearm following the trigger point injections that were done for radial tunnel syndrome. Claimant reported that he as working fully duty using a forearm strap and occasionally took anti-inflammatory medication. Dr. Davis referred Claimant for a shoulder MRI.

16. Claimant underwent a right shoulder MRI on July 19, 2019 which revealed: 1) Tendinosis-tendinopathy change rotator cuff without cuff tear, muscle atrophy or denervation change; 2) Anterolateral downsloping of the acromion and degenerative changes about the acromioclavicular joint indent and the supraspinatus myotendinous

margin. Correlation with the patient's clinical exam for any symptoms of outlet impingement is suggested; 3) Tenosynovitis change biceps tendon sheath with intra-articular tendinosis of the biceps tendon as it courses to insert on the degenerated SLAP 2 superior labrum. On further review a SLAP 3 appearance may be present. Extension of the SLAP 2 labral tearing down to almost the 10 o'clock to the 9:30 position is noted as well. Correlation with the patient's clinical exam referable to the biceps superior labral complex is recommended; 4) Synovitis change rotator interval and thickening and edematous change inferior capsular margins; 5) Grade 3 chondral loss humeral head, no subcortical bone marrow edema. (C. Ex. 00145).

17. Claimant returned to Dr. Davis on August 6, 2019. Dr. Davis noted Claimant's MRI demonstrated a Type 2 to 3 SLAP tear of the superior labrum with some biceps tendinitis and rotator cuff tendinitis, but minimal otherwise. Claimant continued to report severe activity-related pain diffusely around the shoulder. Dr. Davis noted that the trigger point injections had worn off and Claimant was now reporting significant pain over the dorsal forearm. He remarked that he was concerned that Claimant's subjective complaints seemed rather diffuse and more than he would expect given Claimant's MRI pathology. Dr. Davis recommended Claimant undergo a glenohumeral injection, which he administered on August 20, 2019.

18. At a follow-up examination with Dr. Reinsma on August 23, 2019, Dr. Reinsma noted that Claimant continued to complain of right forearm pain but that his exam appeared entirely normal. He recommended proceeding as recommended by Dr. Davis.

19. On September 24, 2019, Dr. Davis noted that Claimant's shoulder had markedly improved for two weeks following the injection but that Claimant had since returned to baseline. Claimant continued to report forearm pain. Dr. Davis opined that Claimant had an excellent temporary response to the shoulder injection and thus was a reasonable candidate for arthroscopic evaluation with possible biceps tenotomy and possible debridement or repair of the superior labrum. He further opined that Claimant's forearm pain may improve following the shoulder surgery, and recommended additional trigger point injections if it did not. Dr. Davis requested authorization for surgery.

20. Respondents filed a Notice of Contest on October 1, 2019.

21. At some point in October 2019 Claimant requested leave under the Family Medical Leave Act ("FMLA") and went on a medical leave of absence.

22. On October 23, 2019, William J. Ciccone II, M.D. performed an Independent Medical Evaluation ("IME") at the request of Respondents. Claimant reported that on February 25, 2019 he opened a tight sharpie marker cap resulting in pain in his forearm with increased pain using equipment. He confirmed that he has remained in full work duties using his left upper extremity most of the time and that he was able to return to work with full duties but did have some discomfort in the left forearm. Claimant reported that in April 2019 he experienced increased right shoulder pain when he rolled over in bed at night. Claimant was currently on medical leave from his job, noting he last

worked October 10, 2019. Claimant reported that over the last few weeks he experienced hand paresthesias into the third and fourth fingers of his right hand.

23. On examination, Dr. Ciccone noted active forward flexion of 150 degrees, external rotation of 40 degrees, internal rotation to L5; mild impingement signs; no pain at the AC or SC joints; no pain with bear hug testing; negative O'Brien's test; normal lift-off test; no pain with palpation along the anterior aspect of the shoulder; full range of motion of the elbow; some pain with palpation over the lateral epicondyle; no pain medially; negative Tinel's at the cubital tunnel; no pain with Tinel's at the carpal tunnel; some pain along the mid forearm; pain does not radiate down to the hand; palpable radial pulse; symmetrical trapezial shrug. Dr. Ciccone reviewed Claimant's medical records, including imaging.

24. Dr. Ciccone concluded that Claimant did not suffer a work-related injury to his right forearm or shoulder. He opined that the only reported mechanism of injury, removing a cap from a marker, was unlikely to cause an injury. He noted that Claimant's findings on his examination were inconsistent with findings on prior exams. Specifically regarding Claimant's right shoulder, Dr. Ciccone noted that Claimant's pain occurred at night while at home, and there was no shoulder injury or pain complaints while at work. He opined that Claimant degenerative changes in the glenohumeral joint. He explained that labral tearing is commonly found on MRI with age, in addition to the degenerative disease, which also causes degenerative labral tearing unrelated to trauma.

25. Dr. Ciccone diagnosed Claimant with right forearm pain and right shoulder pain with degenerative changes. He opined that the Slap lesion evidenced on MRI is unrelated to any work injury and was probably degenerative in nature. He noted he did not find any findings on his examination associated with symptomatic biceps. Dr. Ciccone opined Claimant was at full duty with no restrictions or impairment.

26. Claimant returned to Dr. Reinsma on November 19, 2019. Dr. Reinsma reviewed Dr. Ciccone's IME report and agreed with Dr. Ciccone's assessment that reported mechanism of injury was inconsistent with Claimant's complaints. Dr. Reinsma placed Claimant at MMI as of that day, noting any further care should be provided outside of the workers' compensation system.

27. Subsequent to being discharged from care by Dr. Reinsma, Claimant continued his treatment with Montbello Family Health Center under his private health insurance. Claimant was diagnosed with chronic right shoulder pain, referred to orthopedics, and released to full-duty on November 22, 2019.

28. On November 30, 2019, Claimant reported for a Physical Abilities Test. The form indicates that his job requires 40 pounds of lifting and that he is able to meet that goal. It states that Claimant has "normal" range of motion but it does not refer to a specific body part. There is strength testing for both hands but no mention of repetitive work activities. (C. Ex. 00289).

29. On December 4, 2019, Dr. Reinsma approved the return to work evaluation. Dr. Reinsma opined that Claimant could perform the essential functions of his job. The form indicates that no job formal description was available and the determination was based solely upon description of duties provided by the patient/applicant. (C. Ex. 00289).

30. Dr. Davis performed arthroscopic right shoulder surgery on December 18, 2019.

31. Claimant underwent an EMG of the right upper extremity on January 21, 2020, revealing ulnar nerve slowing across the cubital tunnel. There was no evidence of radial nerve injury, right cervical radiculopathy or polyneuropathy.

32. On April 30, 2020, John Hughes, M.D. performed an IME at the request of Claimant. Claimant reported that he developed right forearm pain after opening a package of markers on February 25, 2019 which required forceful gripping. He further reported that, on April 21, 2019, he turned over to his right side in bed and felt intense pain in his right shoulder. Regarding work duties, Claimant reported that he processes samples throughout the production line, requiring carrying bottles and cases of bottles, as well as buckets, that might weigh 60 pounds. Claimant further reported having to repetitively reach overheard for bottles.

33. On examination of the right shoulder Dr. Hughes noted smooth but limited motion with flexion and extension 143 and 46 degrees respectively, abduction and adduction 117 and 37 degrees, external and internal rotation 73 and 66 degrees respectively. Dr. Hughes assessed Claimant with: 1) work-related strain of the right forearm with development of symptomatic radial tunnel syndrome, improved post trigger point injections done on June 4, 2019; 2) onset of right shoulder pain with subsequent discovery of right shoulder subacromial bursitis, biceps tendinitis and a type II superior labral tear; 3) right shoulder arthritis, post arthroscopic biceps tenotomy, superior labral repair and subacromial bursectomy done on December 18, 2019; 4) postsurgical onset of right ulnar neuropathy with persistence of symptoms but without hard neurological deficits.

34. Dr. Hughes opined that Claimant's initial injury was a strain of the right forearm with development of myofascial and neurological symptoms characterized by Dr. Davis as radial tunnel syndrome. He concluded that Claimant such condition essentially resolved after the initial course of trigger point injections in June 2019. With respect to Claimant's shoulder, Dr. Hughes remarked that rolling over in bed is insufficient by itself to cause a right shoulder injury of the type sustained by Claimant. However, Dr. Hughes opined that Claimant's shoulder condition could be work-related, stating, "I strongly suspect that work place exertional factors have played a significant role in his development of right shoulder subacromial bursitis, labral tear and biceps tendinitis." (C. Ex. 00307). Dr. Hughes opined that Claimant had not reached MMI and recommended a job site analysis to assess ergonomic factors in Claimant's workplace. He further recommended that Claimant be followed closely by Dr. Davis for the next few months for any concerns for nerve damage. Dr. Hughes opined that Claimant's right shoulder

surgery was reasonable, necessary and related to his work. Dr. Hughes provided a 6% provisional impairment of the upper extremity.

35. No job site analysis was performed.

36. On May 22, 2020 Claimant presented to Simon Oh, M.D. with complaints of numbness and tingling in his right second finger. Claimant reported that two to three months ago he began having numbness and tingling in his right lateral thigh, and that today she also began having the same sensation distal to his right knee. Dr. Oh opined that Claimant met the criteria for fibromyalgia, noting he had clinical findings of a length-dependent sensory neuropathy. Dr. Oh Ordered an EMG of Claimants right upper and lower extremities to determine the extent of the polyneuropathy.

37. Claimant underwent an EMG on June 11, 2020, which revealed mild right peroneal neuropathy at the fibular head, demyelinating, and mild right ulnar neuropathy at the elbow, demyelinating.

38. Claimant returned to Dr. Davis on April 7, 2021 reporting that his symptoms had worsened over last nine months. Dr. Davis diagnosed Claimant with persistent ulnar neuropathy at the right elbow and opined that Claimant is a reasonable candidate for surgical treatment for subcutaneous transposition of the right ulnar nerve with decompression over the dorsal forearm.

39. Dr. Ciccone performed a follow-up IME on April 14, 2021 and issued a report dated May 19, 2021. Dr. Ciccone reviewed additional medical records, including Dr. Hughes' IME report. Dr. Ciccone continued to opine that Claimant did not sustain any work-related injury on February 25, 2019 or onset of April 21, 2019. Dr. Ciccone reiterated that Claimant's MRI findings were likely degenerative and atraumatic. He explained that removing a pen cap is not a mechanism of injury for developing radial tunnel syndrome. Dr. Ciccone opined that Claimant's response to injections was unrelated to the presence of any injury. He noted Claimant has pain from fibromyalgia as documented on June 11, 2020. Dr. Ciccone opined that Claimant's right ulnar neuropathy is also unrelated to any work injury. Dr. Ciccone opined that any potential need for a cubital tunnel release is unrelated to Claimant's work.

40. Dr. Hughes performed a follow-up DIME on June 23, 2021, reviewing additional medical records, including Dr. Oh's records and Dr. Ciccone's IME report. Dr. Hughes opined that Claimant was not at MMI due to a recrudescence of regional myofascial pain syndrome from the work-related sprain/strain of the right forearm, meriting further treatment. Dr. Hughes opined that this was likely related to Claimant's current occupational activities, but that he did not have a job site evaluation to assist in confirming that his work duties are injurious. Dr. Hughes opined that there was resistance in the extertional activity of opening a marker cap on February 25, 2019, which resulted in swelling and inflammation that led to radial tunnel syndrome. Dr. Hughes further opined that Claimant sustained a right shoulder injury – specifically a labral tear – that was initiated with rolling over in bed, and that the worsening of his

condition likely was accelerated by Claimant's occupational tasks. He again noted he had no job site evaluation to assist in confirming this impression. Dr. Hughes recommended that Claimant undergo a trial of physical therapy and PRP injections. He opined that the demyelinating neuropathies of Claimant's right ulnar and right peroneal nerves were not related to Claimant's work injuries and may have developed in the setting of prediabetes.

41. Dr. Ciccone testified by deposition on behalf of Respondents as Level II accredited expert in orthopedic surgery. Dr. Ciccone testified consistent with his IME reports and continued to opine Claimant did not sustain any work-related injury or occupational disease. Dr. Ciccone explained that Claimant's right shoulder MRI showed pre-existing degenerative pathology. He testified that there was no medical documentation indicating Claimant's job duties substantially and permanently aggravated, accelerated or exacerbated his right shoulder pathology. Dr. Ciccone testified that it is unlikely anyone would sustain an injury removing a pen cap from a pen, and that such mechanism of injury is not known to cause radial tunnel syndrome. He opined that there is no medical evidence that Claimant required treatment for his right forearm pain as related to any work injury.

42. Dr. Ciccone explained that Claimant's nerve condition is not the result of any occupational injury or occupational disease, noting Claimant's condition was more likely related to some early diabetes or some other internal genetic disorder. He testified that the symptoms from the demyelinating neuropathies of the right peroneal and right ulnar nerve can include right forearm pain, and that would be a reasonable explanation for Claimant's complaints of right forearm pain. Dr. Ciccone further testified that there is no objective medical evidence Claimant's Type 2 superior labral tear or resultant surgery was caused by an occupational injury or occupational disease. He reiterated his opinion that Claimant's experience of shoulder pain while rolling over in bed is unrelated to Claimant's work. Dr. Ciccone stated that there is no objective medical evidence supporting Dr. Hughes' opinion that workplace exertional factors played role in Claimant's shoulder condition. Dr. Ciccone further opined that PRP injections and PT for his right forearm are not reasonably necessary or causally related to any work injury. Dr. Ciccone testified that he reviewed Claimant's job description and that there is no evidence any of the diagnosed pathology was a result of the alleged February 25, 2019 incident or Claimant's job duties. He further testified that the description Claimant gave in his testimony of the repetitiveness and awkward posture required by his job duties was insufficient to determine causation from a cumulative trauma standpoint.

43. Claimant's job description from Human Resources reads, "[a]bility to move/handle fifty pounds, stand on your feet for long periods throughout the day," in addition to, "able and willing to work 12 hour shifts including the potential for nights, weekends, and holidays." (C. Ex. 00342). Claimant's job description proffered by Respondents does not include any exertional requirements.

44. The ALJ finds the opinion of Dr. Ciccone, as supported by the opinion of Dr. Reinsma and the medical records, more credible and persuasive than the opinion of Dr. Hughes and Claimant's testimony.

45. Claimant failed to prove it is more probable than not he sustained a compensable occupational injury on February 25, 2019.

46. Claimant failed to prove it is more probable than not he sustained a compensable occupational disease with a date of onset of April 21, 2019.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Alleged February 25, 2019 Industrial Injury

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove he sustained a compensable industrial injury on February 25, 2019. While Claimant may have felt pain while removing a pen cap off

of a marker on such date, the ALJ is not persuaded Claimant sustained a work injury. Claimant did not seek medical treatment for several months after the alleged injury and continued performing his full duties. Dr. Ciccone credibly testified the mechanism of injury reported by Claimant would not result in Claimant's purported symptoms or his objective pathology. While Dr. Reinsma initially opined Claimant sustained a right forearm strain, he ultimately agreed with Dr. Ciccone's assessment that the reported mechanism of injury was inconsistent with Claimant's complaints. Dr. Ciccone credibly opined that Claimant's right forearm findings and diagnosis are not related to the February 25, 2019 work incident or Claimant's other work duties. Although Claimant experienced pain while at work, the preponderant evidence does not establish that the work incident caused, aggravated or accelerated a condition resulting in disability or the need for medical treatment. While Claimant may require additional medical treatment for his right forearm, as credibly opined by Dr. Ciccone, such treatment in unrelated to Claimant's employment.

Alleged Occupational Disease April 21, 2019

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The "rights and liabilities for occupational diseases are governed by

the law in effect at the onset of disability." *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo.App. 1991). The standard for determining the onset of disability is when "the occupational disease impairs the claimant's ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity." *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005).

Claimant failed to prove it is more probable than not he suffered a compensable occupational disease. Claimant argues that his experience of pain while rolling over in bed at night at home represented the date of onset of an occupational disease caused by his work duties. When Claimant sought medical treatment in April 2019, he initially denied having any pain in his right shoulder, reporting to his providers that he had misnamed the alleged body part he injured. Dr. Ciccone credibly opined that Claimant's right shoulder pathology did not result from Claimant's work duties. Claimant's shoulder MRI revealed a labral tear and other degenerative changes. While Dr. Hughes suspects Claimant's condition is due to his work duties, Dr. Hughes did not have a job site analysis upon which to base his conclusion. The job description provided does not establish that Claimant met the risk factors for cumulative trauma under the Medical Treatment Guidelines, nor does Claimant's testimony.

ORDER

1. Claimant failed to prove he suffered a compensable industrial injury on February 25, 2019.

2. Claimant failed to prove he suffered a compensable occupation disease with a date of onset of April 21, 2019.

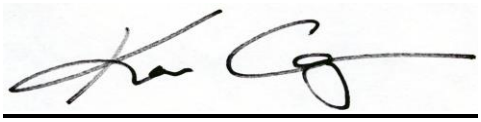
3. Claimant's claim for benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant established by a preponderance of the evidence that the following treatment modalities are reasonably necessary to relieve the effects, or prevent further deterioration of Claimant's industrial injury:

    a. Belbuca;

    b. Tens Unit;

    c. Massage therapy; and

    d. Physical therapy.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his back on August 13, 2010. As a result of the back injury, Claimant underwent five work-related spinal surgeries over a period of approximately eight years. The surgeries have included lumbar fusion procedures from L3-S1, with the most recent surgery being performed in November 2018.

2. On January 21, 2020, Claimant's authorized treating physician (ATP), Elizabeth Bisgard, M.D., at UC Health Occupational Medicine, placed Claimant at maximum medical improvement (MMI). Dr. Bisgard recommended maintenance care to include medication management with Dr. Huser, 12 physical therapy sessions and 12 massage therapy sessions. (Ex. 4).

3. On June 12, 2020, Caroline Gellrick, M.D., performed a Division Independent Medical Examination (DIME). Dr. Gellrick opined that Claimant was at MMI effective January 21, 2021. With respect to maintenance care, Dr. Gellrick recommended that Claimant continue with an active exercise program with swimming and land therapy, and using an elliptical to build up core stabilization and strengthening for a period of two years. She also indicated Claimant required ongoing pain management in the form of buprenorphine (*i.e.*, Belbuca), muscle relaxers and Tramadol, as needed. She indicated that should continue unless Dr. Huser found Claimant stable long-term. With respect to physical therapy, she recommended two years of physical therapy and massage therapy. Dr. Gellrick did not make recommendations regarding the use of a TENS unit. (Ex. 4).

4. Claimant has been followed by Christopher Huser, M.D., at Metro Denver Pain since at least 2017 for pain control. Claimant's treatment regimen has included multiple medications for pain control, generally including opioid pain medication, and a muscle relaxant. In early 2019, Claimant overused opioids and unilaterally stopped taking opioids in April 2019 without tapering off the medication. Subsequently, Claimant began taking opioids again under Dr. Huser's care. From approximately February 2020, Claimant's

medication regimen prescribed by Dr. Huser or other providers at Metro Denver Pain included buprenorphine, another opioid for breakthrough pain, and a muscle relaxant. In December 2021, Dr. Huser changed Claimant's prescription from Belbuca to Suboxone, another form of buprenorphine. (Ex. 3).

5. On October 14, 2020, Dr. Bisgard prescribed Claimant an "E-Stim" unit for pain management. The ALJ infers from the totality of the evidence that the E-Stim unit recommended is a TENS unit.

6. At various times between July 2019 and May 2021, Insurer submitted Claimant's requests for authorization of Belbuca to outside consultants. On July 16, 2019, the outside reviewer approved Claimant's prescription for Belbuca. (Ex. K). On February 25, 2020, a different outsider reviewer denied approval for Belbuca. (Ex. K). Three subsequent reviews were performed on October 15, 2020, November 10, 2020, and May 5, 2021, by two different providers. Each of the reviews conducted in 2021 indicated that Belbuca was not medically necessary, primarily based on the opinion that Dr. Huser's records did not record "specific, objective, functional gains, attributable to ongoing use." One such peer reviewer noted: "However, despite that the injured worker's medication regimen (including ongoing Belbuca, Oxycodone, Flexeril, and Gabapentin) decreased the injured worker's pain and improved activities, there is no clear evidence of functional benefit specific to the use of Belbuca film." (Ex. K). The rationale stated by the peer reviewers for the proposition that Claimant's use of Belbuca is not reasonably necessary to improve function or prevent deterioration of Claimant's work-related condition is not persuasive, given the recognition that Claimant's medication regimen (which included Belbuca) improved Claimant's activities (*i.e.*, improved function). (Ex. K).

7. On November 29, 2021, Eric Shoemaker, D.O., at Respondents' request, issued a report based on his review of Claimant's medical records. Dr. Shoemaker is board-certified in sports medicine and pain management. Respondents presented Dr. Shoemaker's testimony through deposition, and he was admitted to testify as an expert in pain management. Dr. Shoemaker opined that massage therapy, physical therapy, and opioid medications were not reasonable or appropriate for Claimant's condition, and indicated insufficient documentation existed to support the use of a TENS unit. (Ex. H).

8. With respect to opioid management, Dr. Shoemaker's opined that Claimant is "an extremely poor candidate for ongoing opiate therapy." Dr. Shoemaker noted Claimant's overuse of medications in early 2019, and Claimant's providers' concerns expressed at that time concerning ongoing opioid use. Dr. Shoemaker expressed concern that a urine toxicology screen performed on May 24, 2018 was positive for a non-prescribed medication -- hydromorphone. He was also concerned a urine toxicology screen performed on January 15, 2020 was positive for a non-prescribed benzodiazepine, and non-prescribed opiates, and negative for tramadol. Ultimately, Dr. Shoemaker opined that Claimant should not be prescribed any ongoing opiates for chronic pain. (Ex. H).

9. Dr. Shoemaker testified he does not believe physical therapy is appropriate for Claimant at this point because Claimant should be independent in a home exercise program. Dr. Shoemaker noted that the "role of physical therapy is to instruct the patient

in an appropriate home exercise program," and that Claimant "should remain active with his home exercise program on a daily basis." Dr. Shoemaker opined the requested physical therapy exceeds that recommended by the Colorado Medical Treatment Guidelines, WCRP Rule 17, Ex., 9, G.18 and 19. Dr. Shoemaker did not credibly address whether a limited annual course of physical therapy to keep Claimant current on his home exercise program would be reasonable or appropriate. (Ex. H).

10. With respect to massage therapy, Dr. Shoemaker testified that ongoing massage therapy is not typically beneficial in the "chronic phase" of an injury and can be counterproductive. He also opined that ongoing massage therapy is not supported by the medical treatment guidelines, Rule 17, Ex. 1, Section F.13 and Ex. 9, Section G.19.g. (Ex. H).

11. Finally, Dr. Shoemaker opined that Claimant's medical records did not contain sufficient information to justify a TENS unit, but If documentation commenting on the "use, efficacy, or any instructions sessions" existed, a TENS unit would be reasonable and appropriate. (Ex. H).

12. Claimant submitted Dr. Huser's deposition In lieu of live testimony. Dr. Huser is double board-certified in anesthesiology and chronic pain management, and he was admitted to testify as an expert in pain management. Dr. Huser has treated Claimant since at least 2017, and is providing ongoing treatment to Claimant. As of January 2022, Dr. Huser was prescribing Claimant buprenorphine (Suboxone) as a long long-acting pain medication, oxycodone 10 mg for breakthrough pain, and cyclobenzaprine as a muscle relaxant.

13. Dr. Huser testified that Suboxone is a "partial opioid" that is "a little bit safer, long-acting medicine to be on for someone who's going to be on opioids long term" and "one of the safest opioids there is." Claimant was previously prescribed Belbuca which is also buprenorphine but was recently switched to Suboxone due to higher doses of buprenorphine being available with Suboxone. He testified that Claimant has an opioid contract with his office, that his office routinely performs lab tests and urine screens for patients who are on opioids or controlled substances, and that his office checks the Prescription Drug Monitoring Program (PDMP) on a monthly basis. Dr. Huser testified that Claimant's medications decrease his pain levels and improve his ability to function.

14. He further testified that the Claimant's past urine drug screens did not raise concerns for abuse of opioid medications, and Claimant's potential for misusing or selling medications is extremely low. With respect to Claimant's May 24, 2018 urine toxicology screen, Dr. Huser noted the positive hydromorphone test was explained by the Claimant's transition to hydrocodone from hydromorphone on that date. With respect to the January 15, 2020 urine toxicology screen, Dr. Huser explained that Claimant's positive benzodiazepine test was consistent with a prescription for Xanax. Dr. Gellrick's IME report also indicates that Claimant was prescribed Xanax by his primary care provider in 2019. Dr. Huser explained that Claimant's negative test for tramadol was not concerning, given tramadol's 48-hour half-life and that Claimant was using tramadol on an "as-needed" basis at the time. Thus, it would not be unusual for Claimant to test negative for

Tramadol if he had not taken it within two days of the test. Given his long-standing physician-patient relationship with Claimant, the ALJ finds Dr. Huser's opinions concerning Claimant's use of buprenorphine credible.

15. With respect to massage therapy, Dr. Huser opined that Claimant would benefit from ongoing massage therapy two to four times per month to assist with chronic pain control. He testified that massage would activate muscles, improve blood flow and stretch muscles.

16. He testified that the ongoing use of a TENS unit was reasonable and necessary to maintain Claimant's condition, and that a TENS unit would activate and relax muscles, improve blood flow, and decrease pain. Claimant testified that he currently uses a TENS unit and that it improves his pain and helps him sleep at night.

17. Finally, Dr. Huser testified that Claimant would benefit from an annual course of physical therapy to instruct Claimant and keep him current on exercise and techniques to incorporate into Claimant's home exercise program. Dr. Huser recommended four to six weeks of physical therapy per year, indefinitely. The ALJ infers from Dr. Huser's testimony that the physical therapy recommended is not passive, but rather active therapy to help Claimant maintain, indefinitely, a home exercise program. Dr. Huser's opinion was credible and persuasive.

18. Claimant testified at hearing that the physical therapy and massage therapy he received improved his pain and ability to function. He testified he is no longer receiving either massage or physical therapy, and that he is vigilant about performing his home exercise program. Claimant is currently using a TENS unit which he indicated decreases his muscle tension and allows him to sleep at night. Claimant testified that that using buprenorphine had increased his level of function and decreased his pain. Claimant testified that Respondents since Insurer stopped authorizing buprenorphine, he has paid for the medications out of pocket. Exhibits 6 and I include demonstrate Claimant self-paid for seven Belbuca prescriptions from April 2021 to October 2021, in the total amount of $1,291.91.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MAINTENANCE MEDICAL BENEFITS

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Here, Claimant seeks specific care in the form of reimbursement for past prescriptions and ongoing use of buprenorphine (i.e., Belbuca or Suboxone), two-to-four massage therapy sessions per month; an annual course of four to six weeks of physical therapy; and use of a TENS Unit.

Buprenorphine Prescription

Claimant has established by a preponderance of the evidence that use of buprenorphine prescribed by Dr. Huser is reasonably necessary to relieve the effects of his work-related injury or prevent further deterioration of his work-related condition. The Claimant persuasively testified that use of buprenorphine permits him to function by reducing his pain. Dr. Huser credibly testified that Claimant is currently at a low risk for abuse or misuse of pain medication, and that buprenorphine, as a partial opioid, is a safe form of pain relief for Claimant. The Claimant is also subject to a opioid contract, regular lab tests and urine drug screens and PDMP monitoring for aberrant use or behavior. Dr. Shoemaker's opinion regarding the suitability of opioid prescriptions are not persuasive, given that Claimant has been taking buprenorphine for more than two years without incident. Claimant's request for current authorization of buprenorphine and reimbursement of past buprenorphine prescriptions is granted.

Physical Therapy

Claimant has established by a preponderance of the evidence that a limited, annual course of physical therapy is reasonably necessary to relieve the effects of his work-related injury or prevent further deterioration of his work-related condition. The ALJ has considered the Medical Treatment Guidelines recommendations regarding physical therapy. W.C.R.P. Rule 17, Exhibit 1, Section F, 12,G. of the Medical Treatment Guidelines for Low Back Pain indicates that "Patients should be instructed in and receive a home exercise program that is progressed as their functional status improves," and also that "Home exercise should continue indefinitely." Both Exhibit 1 and W.C.R.P. Rule 17, Exhibit 9, Section G. 18, cited by Dr. Shoemaker, recommend a maximum of 8 to 12 weeks of therapeutic oversight for therapeutic exercise, with 4 to 8 weeks being the optimum duration. Exhibit 9, Section G. 18 also indicates: "Additional sessions may be warranted during periods of exacerbation of symptoms."

Dr. Huser persuasively testified that the goal of the recommended physical therapy is to allow Claimant to stay current on his home exercise program. Dr. Shoemaker noted that the "role of physical therapy is to instruct the patient in an appropriate home exercise program," and that Claimant "should remain active with his home exercise program on a daily basis." The ALJ finds this rationale consistent with the Medical Treatment Guidelines to permit Claimant to receive instruction to progress his home exercise program as his functional status improves over time. Given the purpose of the physical therapy recommendation, Dr. Shoemaker's opinion that physical therapy is not reasonable and appropriate is not persuasive.

Because the recommended physical therapy is to permit a physical therapist to provide instruction and direction to permit Claimant to remain active in a home exercise

program, the ALJ finds that a short, annual course of physical therapy is reasonably necessary to permit Claimant to learn new techniques and adjust his home exercise program thereby relieving the effects of Claimant's work-related injury or preventing further deterioration of Claimant's work-related condition. Because the recommended course of physical therapy is instructional in nature, the ALJ finds that four weeks of physical therapy per year is reasonable.

TENS UNIT

Claimant has established by a preponderance of the evidence that the use of a TENS unit is reasonably necessary to relieve the effects of his work-related injury or prevent further deterioration of his work-related condition. Claimant persuasively testified that the use of a TENS unit helps him function. Dr. Huser persuasively testified that a TENS unit would activate and release muscles, improve blood flow and decrease Claimant's pain. Dr. Shoemaker's opined that Claimant's medical documentation was insufficient to support a TENS unit, but if documentation on the efficacy or instructions sessions were present the unit would be reasonable and appropriate. Given the testimony of Dr. Huser and Claimant, the ALJ finds a TENS unit to be reasonably necessary medical maintenance treatment.

MASSAGE THERAPY

Claimant has failed to establish by a preponderance of the evidence that ongoing massage therapy at the frequency of two-to-four sessions per month is reasonably necessary to relieve the effects of his work-related injury or prevent further deterioration of his work-related condition. Dr. Huser testified that the goal of massage therapy was to increase blood flow, activate muscles and stretch muscles. No credible evidence was offered to demonstrate how these benefits differ significantly from the benefits offered by the use of a TENS unit, physical therapy or a home exercise program. The ALJ finds credible Dr. Shoemaker's opinion that ongoing massage therapy is not reasonable or appropriate at this stage of Claimant's condition. Claimant's request for authorization of ongoing massage therapy is denied.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of prescriptions for buprenorphine is granted.

2. Respondents shall reimburse Claimant for prescriptions for Belbuca from April 2021 through October 2021 in the amount of $1,291.91.

3. Claimant's request for authorization of an annual course of physical therapy, not to exceed four weeks per year, is granted.

4. Claimant's request for authorization of a TENS unit is granted

5. Claimant's request for authorization of massage therapy is denied.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 1, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Whether Claimant has overcome the opinion of the Division-sponsored Independent Medical Examination ("DIME") physician with regard to the opinion of maximum medical improvement ("MMI") by clear and convincing evidence?

- Whether Claimant has proven by a preponderance of the evidence that she is entitled to a scheduled rating of 32% of the upper extremity?

- Whether Claimant has proven by a preponderance of the evidence that she sustained an impairment to a part of the body beyond the schedule of impairment set forth at Section 8-42-107(2), C.R.S.?

- Whether Claimant has proven by a preponderance of the evidence that she is incapable of earning wages in the same or other employment and entitled to an award of permanent total disability ("PTD") benefits?

- Whether Claimant has proven by a preponderance of the evidence that as a result of the injury she has a disfigurement that is normally exposed to public view and entitled to additional compensation pursuant to Section 8-42-108(1), C.R.S.

- Whether Respondents have proven by a preponderance of the evidence that Claimant was overpaid workers' compensation benefits in the amount of $9,139.10?

FINDINGS OF FACT

1. Claimant was employed with employer as a road supervisor beginning in February 2017. Claimant sustained an admitted industrial injury on December 7, 2017 when she was fueling a bus and the fuel line became twisted and pulled tightly. Claimant testified the fuel line became twisted and when she pulled back on the fuel line to unhook it, the nozzle flipped and struck her on the dorsum of the left hand at the carpometacarpal part of her left wrist. Claimant continued working but eventually sought treatment at St. Mary's Occupational Health on December 7, 2017.

2. Claimant was examined on December 7, 2017 by nurse practitioner ("NP") Harkreader. Cliamant reported a consistent accident history and NP Harkreader diagnosed Claimant with a wrist contusion and referred Claimant for an x-ray of her left wrist. The x-rays showed no fracture or dislocation of the left wrist. Claimant was provided with work restrictions and prescribed tramadol.

3. Claimant was examined by Dr. Rose on December 22, 2017. Dr. Rose diagnosed acute de Quervain's tenosynovitis and recommended occupational therapy and performed a steroid injection of the left first dorsal compartment of her wrist.

4. Claimant was examined by Dr. McLaughlin with St. Mary's Occupational Medicine on January 2, 2018. Claimant reported to Dr. McLaughlin that the injection performed by Dr. Rose was quite painful, but she was markedly improved after a few days. Dr. McLaughlin diagnosed Claimant with carpal tunnel syndrome in addition to the de Quervian's tenosynovitis. Dr. McLaughlin recommended ongoing conservative treatment including a prescription for Voltaren gel.

5. Claimant eventually underwent surgery on her left upper extremity under the auspices of Dr. Rose on March 13, 2018. Dr. Rose performed a left cubital tunnel release in situ, left de Quervain release of the wrist, and left carpal tunnel release. Claimant returned to Dr. Rose post-surgery evaluation and suture removal on March 22, 2018. Claimant reported she was doing well and Dr. Rose recommended Claimant undergo a short course of therapy and provided her with work restrictions of no lifting over 2 pounds.

6. Claimant was evaluated by NP Harkreader on March 29, 2018. NP Harkreader noted that towards the end of the examination, Claimant reported that xince the surgery, she had approximately 10 to 12 episodes where she will just go blank for a few seconds. Claimant also reported some blurred and double vision. NP Harkreader recommended that Claimant go to the emergency room to determine if she was having a transient ischmetic attack ("TIA"), but Claimant indicated that she would just make an appointment with her doctor to get that evaluated.

7. Claimant returned to Dr. Rose on April 12, 2018 and reported doing well overall, but it was noted that she was starting to set up a significant amount of scar tissue and having some edema. Dr. Rose recommended she start occupational therapy twice a week to work on her swelling and scar massage. Dr. Rose provided Claimant with work restrictions that included no use of the left upper extremity.

8. Claimant returned to NP Harkreader on April 25, 2018. NP Harkreader noted Claimant reported she would have pain in her left axilla at night if she hyperflexes her elbow with tingling in the ulnar distribution of her left hand. NP Harkreader noted Claimant was depressed and recommended she consult with Dr. Carris, a psychologist. NP Harkreader took Claimant off of work.

9. By May 10, 2018, Claimant reported to Dr. Rose that she had considerable improvement in her hand numbness and much less pain with thumb abduction. Claimant reported some burning paresthesias and hypersensitivity up the dorsum of her operative hand in approximately the radial sensory nerve distribution. Claimant also reported that with elbow hyperflexion, she has pain running down the course of her ulnar nerve down her forearm, into her small finger and the upper medial arm to her shoulder. Dr. Rose reported Claimant had palpable scar tissue related

peripheral neuropathies around the dorsal radial sensory nerve and the ulnar nerve at the elbow. Dr. Rose recommended a topical agent with some gabapentin to assist her hypersensitivity, along with another month of therapy. Dr. Rose also recommended Claimant begin working in the field as opposed to the office.

10. Claimant was examined by Dr. Burnbaum on June 4, 2018 in relation to her complaints of blacking out. Dr. Burnbaum opined the blanking out spells could be related to sleep loss. Dr. Burnbaum referred Claimant for an EEG to determine if there was any seizure activity associated with the spells. The EEG was performed on July 7, 2018 and showed no epileptiform abnormalities. The EEG was noted to be mildly abnormal due to predominant low voltage fast activity which could have been a medication effect.

11. Claimant returned to Dr. Rose on June 6, 2018. Dr. Rose noted that from a surgical perspective, there were no discrete signs of post surgical pathology that were able to be detected. Claimant complained of diffuse hypersensitivity around the radial sensory nerve with no discrete Tinel's sign indicative of a neuroma. Claimant reported her fingertip numbness and paresthesias were improved. Dr. Rose noted he was unsure of the origin of Claimant's neurologic symptoms. Dr. Rose noted he anticipated maximum medical improvement ("MMI") at the next visit.

12. Claimant returned to Dr. Stagg on July 31, 2018. Dr. Stagg noted Claimant still complained of the episodes which she described as occurring when the pain was really bothering her on the right side. Dr. Stagg recommended a repeat neurologic evaluation and ultimately referred Claimant to Dr. Collier for this examination. Dr. Stagg also recommended Claimant be seen by Dr. Price for evaluation.

13. Claimant was examined by Dr. Price on August 31, 2018. Dr. Price noted Claimant's complaints including her reports of not doing well post-operatively with issues involving ongoing pain. Claimant also reported developing some left calf pain and spasm post-surgery. Dr. Price noted that in response to the syncopal episodes, she had an EEG and CT scan, but Dr. Price did not have the results of those diagnostic tests.

14. Dr. Price noted that Claimant may have some form of sympathetically maintained pain now, and recommended a triple phase bone scan. Dr. Price also recommended massage therapy, acupuncture and recommended Ketamine cream instead of the current cream she was using.

15. Claimant returned to Dr. Rose on September 5, 2018 with Dr. Rose noting that Claimant's postsurgical course had been complicated by residual hypersensitivity in the radial nerve distribution, which was now mostly resolved, and some hypersensitivity and pain around the ulnar nerve in the cubital tunnel, which continued to give Claimant trouble, and a feeling of soreness in the pain. Dr. Rose noted Claimant's ulnar nerve symptoms were overall improved, but Claimant continued to have pain over the course of the ulnar nerve itself, which had been refractory to gabapentin, topical agents, and a

course of therapy. Dr. Rose noted Claimant had been referred to a pain specialist, and recommended against further surgical intervention.

16. The triple bone scan recommended by Dr. Price was performed on September 26, 2018. The triple bone scan showed bilateral polyarticular, periarticular increased radiopharmaceutical activity suggesting underlying arthopathy and asymmetric hyperemia within the distal left upper extremity without increased soft tissue or periarticular activity to definitely suggest CRPS.

17. Claimant returned to Dr. Price on September 27, 2018. Dr. Price reported that Claimant reported that the massage therapy had helped her, but that she did not like the stickiness of the Ketamine cream. On examination, Dr. Price noted both hyperpathia and allodynia.

18. Claimant returned to Dr. Rose on November 5, 2018. Dr. Rose noted Claimant complained of developing an allergy to the extended release gabapentin. Dr. Rose further noted that Claimant was having some significant hypersensitivity over the course of the ulnar nerve. Dr. Rose noted he could not find any instability at the elbow, and given her hypersensitivity over the median nerve decompression in the palm, he did not believe further decompression and anterior transposition at the elbow would be of any help.

19. Dr. Stagg issued a medical report on December 27, 2018 after reviewing surveillance video of Claimant provided by Respondents. Dr. Stagg opined that based on his review of the surveillance video that Claimant was exaggerating her restrictions which included no lifting, pushing or pulling over one pound.

20. Claimant was examined by Dr. Stagg on January 7, 2018 at which time they discussed the surveillance video. Dr. Stagg ultimately increased Claimant's work restrictions to include no lifting pushing or pulling greater than 25 pounds. Dr. Stagg also referred Claimant for a function capacity evaluation. ("FCE").

21. Claimant underwent an independent medical examination ("IME") with Dr. Hammerberg on January 3, 2019. Dr. Hammerberg reviewed Cliamant's medical records, obtained a medical history and performed a physical examination as a part of his IME. Dr. Hammerberg opined that Claimant was not at MMI and recommended Claimant undergo additional medical treatment including sympathetic blocks and treatment with Dr. Price. Dr. Hammerberg recommended that Claimant be prohibited from driving based on her reports of black out spells.

22. The FCE was performed on January 28, 2019. The FCE concluded Claimant was capable of lifting and carrying 3 pounds with her left hand and 10 pounds bilaterally, with no power gripping or repetitive gripping with the left hand, and grasping and handling with the left hand rarely.

23. Claimant returned to Dr. Stagg on February 7, 2019. Dr. Stagg noted in his report that Claimant demonstrated an ability on the surveillance video to perform activities in excess of what was depicted in the FCE. Claimant reported to Dr. Stagg that she had been self medicating with alcohol during this time which allowed her to perform activities depicted in the surveillance video. Dr. Stagg noted the recommendations of Dr. Hammerberg and agreed that she should undergo additional treatment. Dr. Stagg noted Claimant's work restrictions should include lifting limitations of between 1 to 5 pounds and no working at heights due to the possible seizures.

24. Dr. Stagg provided a prescription for an additional 12 acupuncture treatments recommended by Dr. Price on April 4, 2019. Claimant returned to Dr. Stagg on April 19, 2019 and it was noted that they were having difficulty getting the EEG recommended by Dr. Hammerberg approved.

25. Claimant returned to Dr. Stagg on May 17, 2019. Dr. Stagg noted Claimant was scheduled to undergo the EEG in early July. Dr. Stagg increased Claimant's work restrictions to no lifting greater than 5-10 pounds.

26. Claimant underwent a series of three stellate ganglion block injections performed by Dr. James on May 9, 2019, June 18, 2019 and June 19, 2019.

27. Claimant was re-examined by Dr. Stagg on July 19, 2019. Dr. Stagg noted Claimant reported headaches following the injections with Dr. James. Dr. Stagg recommended Claimant seek prompt medical attention for the reported headaches with Dr. James. Claimant returned to Dr. Stagg on August 15, 2019 and indicated that she had not been able to get ahold of Dr. James. Claimant further reported that she continued to experience the headaches she reported to Dr. Stagg on her previous visit.

28. Claimant underwent a repeat EMG and nerve conduction study on July 23, 2019. The EMG showed no electrodiagnostic evidence of left carpal tunnel syndrome, cervical radiculopathy, peripheral neuropathy, ulnar neuropathy, or brachial plexopathy.

29. Claimant underwent examination with Dr. Merrell on September 3, 2019 after complaints that she was having headaches along with trouble swallowing and having problems with her throat swelling after the ganglion block injections. The examination revealed no identifiable cause of Claimant's complaints.

30. Claimant was examined by Dr. Price on September 24, 2019. Claimant reported symptoms to Dr. Price which included headaches, throat swelling, bowel and bladder loss and arm pain. Dr. Price noted that it was unclear as to what could be causing Claimant's symptoms and noted Claimant could be depressed and there may be a somatization of symptoms.

31. Claimant returned to Dr. Merrell on October 2, 2019 for her ongoing complaints involving her throat, which Claimant maintained had been ongoing since her

stellate ganglion block injections. Dr. Merrell diagnosed Claimant with globus sensation and noted that the esophagram was normal. Dr. Merrell opined that any issues with Claimant's complaints involving her throat were not related to the stellate ganglion block injections.

32. Claimant underwent a stress infrared thermogram and QSART on October 24, 2019 under the auspices of Dr. Schakaraschwili. Dr. Schakaraschwili noted the QSART and stress infrared thermogram was positive for complex regional pain syndrome ("CRPS").

33. Claimant underwent a psychological IME with Dr. Moe on January 20, 2020. Dr. Moe reviewed Claimant's medical records and examined Claimant in association with his IME. Dr. Moe opined that Claimant's current depression and anxiety symptoms were due, in part, to Claimant's work injury. However, Dr. Moe opined that the evidence showed Claimant had a propensity for somatization which existed pre-injury and was not the product of the injury. Dr. Moe opined that Claimant had a psychological impairment of 3% mental impairment related to the work injury.

34. Respondents obtained an IME with Dr. Cebrian on January 15, 2020. Dr. Cebrian issued a report in connection with his IME in which he opined that Claimant's left carpal tunnel syndrome and left cubital syndrome were not causally related to the December 7, 2017 work injury as there was not a mechanism of injury that would cause these conditions. Dr. Cebrian opined that a hose striking the Claimant's hand would not cause an injury to the median nerve at Claimant's elbow.

35. Dr. Cebrian opined that Claimant's other reports of symptoms, including the headaches, throat swelling, black out spells, neck pain, upper back pain, dizziness and memory loss were explained by Dr. Moe's report which cited to Claimant's pre-existing somatic symptom disorder. Dr. Cebrian opined that Claimant was at MMI as of January 15, 2020 and that her impairment rating was limited to the left thumb.

36. Claimant was examined by Dr. Price on February 7, 2020. Dr. Price noted she felt there was some somatization of her pain and opined that she needed to review the IME reports before opining on Claimant's permanent impairment rating.

37. Claimant was examined by Dr. Stagg on March 11, 2020. Dr. Stagg noted Claimant should return to Dr. Price for a determination of MMI and permanent impairment. Dr. Stagg further opined the Claimant should follow up with Dr. McKee-Cole. Dr. Stagg provided Claimant with work restrictions that included no lifting, pushing, or pulling greater than 10 pounds.

38. Dr. Price examined Claimant on April 10, 2020 at which time Dr. Price opined Claimant was at MMI. Dr. Price provided Claimant with a permanent impairment rating of 32% scheduled impairment of the upper extremity based on loss of range of motion of the wrist, median neuropathy, motor impairment of the median nerve and

sensory loss in the ulnar nerve. Dr. Price also provide Claimant with an impairment rating of 3% mental impairment based on the IME of Dr. Moe.

39. Dr. Stagg issued a note on May 15, 2020 in which he clarified his opinion with regard to Claimant's work restrictions and noted Claimant was limited to 10 pounds lifting with her left upper extremity. Dr. Stagg opined that Claimant did not have restrictions with regard to her right upper extremity.

40. Respondents requested a DIME which was performed by Dr. Hughes on September 1, 2020. Dr. Hughes reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his DIME. Dr. Hughes opined that Claimant had reached MMI as of January 15, 2020. Dr. Hughes provided Claimant with a permanent impairment rating of 4% of the upper extremity based on loss of range of motion in the left wrist and elbow. Dr. Hughes opined that Claimant was not entitled to an impairment rating for a diagnosis of a left upper extremity neurological condition since the electrodiagnostic and clinical findings were inconsistent with entrapment neuropathy. Dr. Hughes opined that Claimant had a negative clinical presentation for CRPS. Dr. Hughes provided Claimant with a 3% psychiatric impairment. Dr. Hughes opined that there was no medical basis for permanent work restrictions and no nerves or other tissues were at risk from performance of full activity on an as tolerated basis.

41. Respondents filed a final admission of liability ("FAL") on September 24, 2020 admitting to the 3% psychiatric impairment and 4% upper extremity scheduled impairment rating provided by Dr. Hughes. The FAL noted that Respondents had continued paying temporary total disability ("TTD") benefits from January 15, 2020 through September 16, 2020, totaling $17,422.20. Respondents applied this overpayment of benefits again the $8,28310 in PPD benefits owed to Claimant and claimed a remaining overpayment of $9,139.10.

42. Claimant's counsel issued an inquiry to Dr. Price on January 23, 2021 which discussed the issues of MMI and permanent impairment. Dr. Price opined in response to the inquiry that Claimant was at MMI as of February 7, 2020. Dr. Price further opined that Claimant's impairment rating was properly established as 32% of the upper extremity and noted that Claimant's impairment rating was due to her diagnosis of CRPS.

43. Respondents obtained a supplemental report from Dr. Cebrian on February 5, 2021. Dr. Cebrian reviewed Dr. Price's updated records and Dr. Hughes' DIME report and opined Dr. Hughes properly found Claimant to be at MMI as of January 15, 2020. Dr. Cebrian noted that there was no new treatment after January 15, 2020 after that date that would justify a different MMI date. Dr. Cebrian opined that Dr. Price erred in providing Claimant with an impairment rating that included permanent impairment related to her ulnar and median nerves as these were not related to the industrial injury. Dr. Cebrian noted that if Dr. Price were to provide Claimant with an impairment rating for CRPS, it should have been under Table 1 of page 109 of the *AMA*

Guides to Permanent Impairment, 3rd Edition, Revised, and not as an impairment rating for the median or ulnar nerves. Dr. Cebrian further reiterated his opinion that Claimant's left cubital and left carpal tunnel syndrome were not causally related to the December 7, 2017 work injury. Dr. Cebrian further opined that Claimant's appropriate work restrictions would include no lifting of more than 20 pounds with the left hand. Dr. Cebrian further opined that Claimant would not be under any restrictions with regard to driving as there was no evidence of seizure activity.

44. Claimant obtained a vocational assessment report from Bob Van Iderstine dated February 8, 2021. Mr. Van Iderstine reviewed Claimant's medical records, performed an interview with Claimant and performed labor market research in connection with his vocational assessment. Mr. Van Iderstine indicated in his report that this was a difficult case to assess due to the differences of opinions regarding Claimant's work restrictions. Mr. Van Iderstine indicated in his report that for purposes of his vocational assessment he was relying on the work restrictions set forth in the January 28, 2019 FCE. Mr. Van Iderstine identified Claimant's commutable labor market as being in the Grand Junction, Colorado area. Mr. Van Iderstine opined in his vocational assessment that Claimant was incapable or returning to her previous employment and it was unlikely that she could obtain employment in the competitive labor market.

45. Respondents obtained a vocational assessment report from Katie Montoya dated January 6, 2021. Ms. Montoya reviewed Claimant's medical records, performed an interview of Claimant and performed labor market research in connection with her report. Ms. Montoya opined that the work restrictions provided by Dr. Stagg allowed Claimant to return to work in a light duty capacity with lifting restrictions of up to 20 pounds bilaterally. Ms. Montoya identified multiple positions in the Grand Junction labor market which she opined represented positions Claimant was capable of performing.

46. Dr. Price testified at hearing in this matter. Dr. Price testified her diagnosis of Claimant was possible CRPS and possible depression, but noted on cross-examination that Claimant did not meet confirmed criteria for CRPS. Dr. Price testified it was appropriate to provide Claimant with a permanent impairment rating of 32% of the upper extremity based on her determination that Claimant had probable CRPS based on the positive thermogram study and positive QSART test. Dr. Price testified that not everyone with CRPS presents the same way. Dr. Price testified Claimant's black out spells could be related to her high blood pressure, and testified she did not know if the black out spells were related to her work injury. Dr. Price testified she agreed with Dr. Merrell's statement that the stellate ganglion block would not cause the symptoms Claimant complained had developed after the injections. Dr. Price testified surgeries can result in complications including neuropathic pain. Dr. Price testified Claimant was properly placed at MMI as of February 7, 2020.

47. Dr. Price testified she adopted the work restrictions set forth in the FCE of January 2019. Dr. Price testified Claimant continued to complain of pain and the pain

complaints may lead Claimant to need to take breaks at work. Dr. Price testified she disagreed with Dr. Cebrian's opinion regarding Claimant's work restrictions.

48. Dr. Cebrian testified by deposition in this case. Dr. Cebrian's testimony was consistent with his IME report. Dr. Cebrian testified that work restrictions for a patient are to prevent reinjury and not to avoid any discomfort. Dr. Cebrian testified that the surveillance of Claimant supported the opinion of Dr. Hughes that Claimant did not need any work restrictions related to her December 7, 2017 work injury.

49. Claimant testified at hearing with regard to her injury. Claimant testified consistently with regard to the injury occurring on December 7, 2017 when the fuel line twisted and flipped over and hit Claimant on the back side of her thumb on her left hand. Claimant testified that the pain behind her thumb has remained and she continues to have problems grasping with her thumb. Claimant testified her entire left arm itches and she feels shocks down into her fingers.

50. Claimant testified she had three stellate ganglion block injection on May 9, June 18 and June 19, 2019. Claimant testified after the injections, she developed swelling of her throat and she had to gag after the second injection. Claimant testified that she only sleeps 2-3 hours at a time per night because she wakes up from gagging.

51. Claimant testified she has occasional bad days and when she has a bad day, she would not be able to show up and complete work. Claimant testified that she would be unable to work at a grocery store due to having to do frequent lifting. Claimant testified she couldn't work in a restaurant because she would be unable to carry plates. Claimant testified she had trouble focusing due to her pain.

52. Claimant testified she discussed the surveillance video with Dr. Stagg on January 7, 2019 and advised Dr. Stagg that she was self medicating with alcohol when the video was taken. Claimant testified Dr. Rose advised her to drink alcohol with her medications and offered to prescribe Claimant with an elixir to take with the medications. Claimant's testimony in this regard is found by the ALJ to be not credible as it is inconsistent with the medical records of Dr. Rose.

53. Claimant testified she continued to receive TTD benefits up until the DIME appointment with Dr. Hughes on September 16, 2020.

54. Claimant's husband, WR[Redacted], testified at hearing. Mr. WR[Redacted] testified consistently with Claimant's testimony regarding her activities of daily living.

55. Mr. Van lderstine testified at hearing consistent with his vocational assessment report. Mr. Van lderstine testified after Claimant's injury she returned to work for Employer as a dispatcher and continued to work there until June 2018. Mr. Van lderstine testified he utilized the restrictions from the FCE in developing his opinion regarding whether Claimant could earn wages in the commutable labor market. Mr. Van lderstine testified the FCE reported Claimant gave a full effort during the FCE.

56. Mr. Van Iderstine testified Claimant's medical condition and restrictions resulted in a sedentary profile primarily using her right upper extremity. Mr. Van Iderstine testified he thought Claimant was capable of working a job with one arm on a part time basis. Mr. Van Iderstine testified that because Claimant had difficulty grasping things with her thumb, she would have limited use of the left hand, as the thumb is crucial for pinching things

57. Mr. Van Iderstine testified Dr. Price had opined that Claimant may have to miss days at work if her condition flared up and would need to take breaks during the day. Mr. Van Iderstine testified this would affect her ability to maintain employment if she were able to find a job. Mr. Van Iderstine testified if Claimant were to have bad days and miss multiple days per month due to pain, this would be unacceptable in a competitive labor market. Mr. Van Iderstine testified Claimant's depression and anxiety could impact her ability to perform customer service type of work.

58. Mr. Van Iderstine testified he disagreed that Claimant could perform the job duties in the positions identified by Ms. Montoya in her voacational assessment. Mr. Van Iderstine testified many of the jobs would require bilateral use of the upper extremities. Mr. Van Iderstine testified that the cashier job identified by Ms. Montoya could include cleaning. Mr. Van Iderstine opined that Claimant was incapable of earning wages in her commutable labor market.

59. Mr. Van Iderstine admitted on cross examination that the work restrictions set forth by Dr. Stagg when Claimant was placed at MMI were higher than the restrictions set forth in the FCE.

60. Ms. Montoya testified at hearing consistent with her vocational assessment. Ms. Montoya testified that at the time Claimant was placed at MMI, the restrictions set forth by Dr. Stagg included no lifting greater than 10 pounds with the left upper extremity, with no restrictions on the right upper extremity. Ms. Montoya testified that based on these work restrictions, Claimant would be capable of working a job in the light duty classification of work. Ms. Montoya noted that there were no restrictions on Claimant's standing, walking or sitting.

61. Ms. Montoya further noted that Dr. Hughes had opined that Claimant had no work restrictions. Ms. Montoya also noted Dr. Cebrian's opinion that Claimant was capable of lifting 20 pounds. With regard to Claimant's report of missing work on bad days, Ms. Montoya opined that missing work 1-2 days per month would be tolerated, but missing more than two days per month would not be tolerated.

62. Ms. Montoya opined based on the work restrictions set forth by Dr. Stagg, Claimant would be capable of working in the commutable labor market. Ms. Montoya noted that the FCE in this case was performed over a year before Claimant was placed at MMI and approximately two months after the surveillance was obtained.

63. The ALJ credits the opinions set forth by Dr. Hughes in his DIME report over the opinions expressed by Dr. Price with regard to Claimant's date of MMI and finds that Claimant has failed to overcome the opinion of the DIME physician with regard to MMI by clear and convincing evidence. The ALJ notes that the opinion by Dr. Hughes with regard to the date of MMI is consistent with the opinions expressed by Dr. Cebrian in his IME reports and testimony at hearing. The ALJ further notes that Claimant's medical treatment after January 15, 2020 did not change and Claimant did not report any significant improvement to establish that she continued to remain not at MMI after January 15, 2020.

64. The ALJ credits the opinions of Dr. Stagg with regard to Claimant's work restrictions and finds that Claimant's proper work restrictions would be those set forth by Dr. Stagg. The ALJ notes that the restrictions set forth by the FCE were established well before Claimant was placed at MMI. The ALJ further credits the medical records from Dr. Stagg that established that the work restrictions set forth by the FCE were inconsistent with what Claimant was depicted as being capable to perform on the surveillance video as supportive of his opinion regarding Claimant's work restrictions.

65. The ALJ credits the opinions of Dr. Price with regard to Claimant's permanent impairment rating and finds that Claimant has established that it is more probable than not that she sustained a permanent impairment rating of 32% of the upper extremity as a result of the work injury. The ALJ notes that Claimant's work injury and medical treatment are consistent with an impairment rating that includes the thumb, wrist and elbow of Claimant's left upper extremity. The ALJ therefore finds that Claimant has failed to establish that it is more probable than not that the situs of impairment in this case is contained on a part of the body not set forth on the schedule of impairments set forth at Section 8-42-107(2).

66. The ALJ finds that Claimant has provided insufficient evidence to establish that the impairment rating in this case should be converted to a whole person impairment rating with the impairment being contained on a part of the body that is not on the schedule. The ALJ finds that the situs of Claimant's impairment in this case is limited to the left upper extremity. The ALJ notes that Claimant has made numerous complaints of issues involving areas of the body that are not on the schedule of impairments set forth at Section 8-42-107(2), including, but not limited to, headaches, neck pain, trouble swallowing and shooting pains into the lower extremity. However, the ALJ finds that none of these complaints are related to injuries sustained in the December 7, 2017 work injury.

67. The ALJ credits the opinions expressed by Ms. Montoya over the opinions expressed by Mr. Van Iderstine and finds that Claimant has failed to establish that it is more probable than not that she is incapable of earning wages in the same or other employment. The ALJ notes that Mr. Van Iderstine's opinion relied on the work restrictions set forth by the FCE that occurred prior to Claimant being placed at MMI. Because the ALJ finds the work restrictions set forth by Dr. Stagg to be more credible and persuasive than the work restrictions from the FCE, the ALJ finds the opinions

expressed by Ms. Montoya which relied on these restrictions to be more persuasive in this case.

68. The ALJ notes that Dr. Price opined that she would adopt the work restrictions set forth in the FCE. Insofar as this opinion is in conflict with the opinion of Dr. Stagg with regard to Claimant's proper work restrictions, the ALJ credits the opinions of Dr. Stagg over the contrary opinions of Dr. Price.

69. The ALJ rejects the opinions expressed by Mr. Van Iderstine that Claimant would be incapable of maintaining employment in this case based on Claimant's potential of missing employment due to having bad days or needing to take breaks. The ALJ notes that this argument is speculative in this case as there is no indication of Claimant having been unable work for periods of time due to bad days or excessive breaks. Claimant was provided with light duty work by Employer up until June 2018, and there is insufficient evidence in the records that Claimant was incapable of performing that job due to the consequences of her work injury.

70. The ALJ further notes that while Mr. Van Iderstine testified he did not believe Claimant was capable of working the jobs that Ms. Montoya identified as being appropriate for Claimant, it is not the Respondents' responsibility to find a position Claimant is capable of working. The ALJ further notes that while Claimant does not need to prove that the industrial injury is the sole cause of her inability to earn wages, she must establish that the injury is a significant causative factor in her inability to earn wages. In this case, the ALJ credits the opinions expressed by Ms. Montoya in her report and testimony at hearing and finds that Claimant has failed to establish that it is more probable than not that the industrial injury is a significant causative factor to her inability to earn wages.

71. As a result of the injury, Claimant has noticeable disfigurement in an area normally exposed to public view. The disfigurement in this case includes scarring of the left upper extremity measuring 1 ½ inch in length and ¼ inch in width on the palmar side of the left wrist; scarring measuring 1 inch in length an ¼ inch in width on the ulnar side of the wrist on the wrist bone; scarring measuring three (3) inches in length and ½ inch in width on the left elbow. Additionally, Claimant has noticeable bruising on the left tricep, left bicep and left deltoid.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not

interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, Claimant has failed to overcome the opinion of the DIME physician with regard to the opinion that Claimant reached MMI as of January 15, 2020 by clear and convincing evidence. As found, the opinions expressed by Dr. Hughes and Dr. Cebrian in their reports are credible and persuasive with regard to the issue of MMI. As found, the medical treatment after January 15, 2020 provided by the authorized providers in this case did not change in a significant manner which would support a finding that Claimant had overcome the opinion of MMI by clear and convincing evidence.

6. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. §8-40-201(16.5)(a), C.R.S. (2007). A claimant therefore cannot receive PTD benefits if he or she is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. See, *Lobb v. ICAO,* 948 P.2d 115 (Colo. App.

1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the Claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances. *Weld County School Dist. R.E. 12 v. Bymer, Id.*

7. The claimant is not required to establish that an industrial injury is the sole cause of her inability to earn wages. Rather the Claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev'd on other grounds*, *Askew v. Industrial Claim* Appeals Office, 927 P.2d 1333 (Colo. 1996).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she is incapable of earning wages in the same or other employment. As found, the opinions expressed by Dr. Stagg with regard to Claimant's work restrictions are found to be credible and persuasive as it applies to Claimant's condition in this case.

9. As found, the opinions expressed by Ms. Montoya with regard to Claimant's ability to earn wages in her commutable labor market are credited over the contrary opinions expressed by Mr. Van Iderstine. As found, Ms. Montoya utilized the work restrictions set forth by Dr. Stagg and credibly opined that Claimant was capable of earning wages in her commutable labor market.

10. As found, the testimony of Mr. Van Iderstine that Claimant would likely be incapable of maintaining gainful employment based on her potential to miss days from work due to pain related to her industrial injury or need to take excessive breaks while at work is found by the ALJ to be not persuasive. As found, Claimant has failed to establish by a preponderance of the evidence that the industrial injury of December 7, 2017 would a significant causative factor in her inability to earn wages.

11. When an injury involves an extremity impairment that is subject to scheduled awards in §8-42-107(2), the clear and convincing burden of proof that would be attached to a whole person permanent impairment rating from a DIME physician does not apply and the usual preponderance burden of proof applies for the claimant to prove entitlement to benefits. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App.1998) and *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

12. The courts have noted that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. *See Egan v. Industrial Claim Appeals Office, supra.* In *Egan* the court noted that requiring causation questions to be challenged through a DIME applies only to injuries resulting in whole person impairment, but when a dispute concerning causation is in a case involving only a scheduled impairment, the ALJ will continue to have jurisdiction to resolve that dispute.

13. Here there was no dispute at the hearing over whether the impairment was limited to a schedule award and the parties agreed that the preponderance of the evidence burden of proof applied.

14. As found, the ALJ credits the opinions of Dr. Price over the contrary opinions expressed by Dr. Hughes and Dr. Cebrian and finds that Claimant has established by a preponderance of the evidence that she sustained a permanent impairment rating of 32% of the upper extremity. As found, the ALJ credits the medical records entered into evidence and finds the opinion expressed by Dr. Price with regard to the scheduled impairment rating to be credible and persuasive.

15. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. Section 8–42–107(1)(a), C.R.S. The term "injury" contained in §8–42–107(1)(a), C.R.S. "refers to the situs of the functional impairment, meaning the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390, 1391 (Colo.App. 1997); see also *Strauch v. PSL Swedish Healthcare System, 917 P.2d 366* (Colo.App.1996). Depending upon the facts of a particular claim, therefore, damage to the lower extremity may or may not reflect functional impairment enumerated on the schedule of benefits. See *Strauch v. PSL Swedish Healthcare System, supra.*

16. As found, Claimant has failed to prove establish by a preponderance of the evidence that the situs of impairment in this case is not contained on the schedule of impairments set forth at Section 8-42-107(2). As found, Claimant's situs of impairment is contained on the left upper extremity and at the elbow, wrist and thumb. Although Claimant alleged numerous other complaints that she maintained were related to the industrial injury, the ALJ finds that the situs of the impairment in this case was confined to the left elbow, left wrist and thumb.

17. Pursuant to Section 8-42-108, C.R.S., claimant is entitled to a discretionary award up to $5,019.83 for her serious and permanent bodily disfigurement that is normally exposed to public view. Considering the size, placement, and general appearance of claimant's scarring, the ALJ concludes claimant is entitled to disfigurement benefits in the amount of $2,509.91, payable in one lump sum.

18. Based on the finding that Claimant did not overcome the finding of MMI by clear and convincing evidence, and Claimant's testimony that she received TTD

benefits up until the September 16, 2020 DIME, along with the FAL filed by Respondents in this case in which the overpayment was documents, the ALJ determines that Respondents have established that Claimant received TTD benefits through September 16, 2020 which resulted in an overpayment of $9,139.10 after the initial offsets were taken with the first FAL.

19. After consideration of the benefits due Claimant pursuant to this Order, Respondents may claim an overpayment of $9,139.10 in TTD benefits paid after MMI against any further benefits owed to Claimant. If there is any dispute with regard to the application of the overpayment against future benefits owed to Claimant, the parties may bring that issue before the Office of Administrative Courts.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by clear and convincing evidence that the opinions expressed by the DIME physician regarding the issue of MMI is incorrect.

2. Claimant has failed to establish by a preponderance of the evidence that she is entitled to an award of Permanent Total Disability. Claimant's claim for an award of Permanent Total Disability is therefore denied and dismissed.

3. Claimant has proven by a preponderance of the evidence that she is entitled to an award of Permanent Partial Disability benefits based on a rating of 32% of the upper extremity.

4. Claimant has failed to prove by a preponderance of the evidence that she sustained a functional impairment that is not contained on the schedule of impairments set forth at Section 8-42-107(2), C.R.S. Claimant's request to convert the impairment rating from a scheduled impairment to a non-scheduled award pursuant to Section 8-42-107(8), C.R.S. is denied and dismissed.

5. Respondents shall pay Claimant disfigurement benefits in the amount of $2,509.91.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may

access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: April 2, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the C5-C6 interior cervical discectomy and fusion surgery recommended by Dr. David Lee is reasonable, necessary, and related to the admitted work injuries she suffered on August 23, 2019.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was an equipment operator and laborer for Employer, who is in the business of oil pipeline installation, including construction, cleanup, repair, seating pipelines, and other dirt work. Claimant's various job duties included ground work and land repairs on properties where pipelines had been laid by Employer and operating a tractor and skid steer. Claimant worked in multiple locations around the United States, including Keenesburg, Colorado, Cheyenne, Wyoming, and eventually Kansas.

2. Claimant was injured on August 23, 2019 while working for Employer in Kansas. Claimant was hit on the left side of her body, by an industrial back hoe bucket with a mop pipe attachment, knocking her hard hat off, and throwing her in such a way that she landed on her right arm, injuring her back and neck knocking her to the ground, causing her to lose consciousness. The bucket weighed approximately 3,500 lbs. and the mop pipe that was attached to it with a chain was approximately 5 foot wide and 20 inches in circumference, weighing approximately 550 lbs.

3. Following being struck, Claimant had onset of severe headache, neck pain, back pain, right shoulder pain, wrist pain, ankle pain, elbow pain, and scapular pain. All on the right side. She stated she was directed to not attend the emergency room but would be contacted by the company physician from Texas. Claimant stated that she had a medical appointment from her room in Lyons, Kansas over FaceTime with Dr. Homsten and did not travel to Texas from Kansas. She stated that she moved around following the injury from Hutchinson, Kansas to Wichita, Kansas to see the neurosurgeon, then to Seward, Nebraska where she was treated for physical therapy. She reported at that time that she continued having pain in her neck, shoulder, headaches and radiating pain down her right arm, together with numbness and tingling as well as burning sensations but had sporadic care as one provider was waiting on results from the other.

4. Claimant was virtually seen by Walter Holmsten, M.D. of RediMD of Texas, on the day of her injury by a telemedicine. Dr. Holmsten documented Claimant injured her whole right side when she was struck by a bucket and knocked down. As a result of the accident, Claimant suffered severe headaches, neck pain, back pain, right shoulder

and scapular, wrist, knee ankle and elbow injuries. On inspection, Dr. Homsten noted bruising, swelling and discoloration of the neck and the right shoulder. He noted that x-rays were all negative for fractures. The lumbar spine x-ray was read by Gazaway Rona, M.D. on August 26, 2019 noting a mild lumbar spondylosis, greatest at the L3-4 level and the cervical spine x-ray showed moderate degenerative changes at the C5-6 level. Claimant was returned to full duty and advised not to aggravate her injuries. He also recommended over the counter Tylenol for pain and ordered an MRI of the lumbar spine.

5. On September 25, 2019 Dr. Rona interpreted the cervical MRI. The history noted was that Claimant was hit by a large piece of machinery and lost consciousness causing headaches, loss of short term memory, neck pain, and right arm pain. She found grade 1 retrolisthesis of C5 on C6. Dr. Rona noted degenerative changes of the endplates at C5-6 with a small focal central disc protrusion andosteophyte complex producing mild central spinal stenosis with narrowing of the AP diameter spinal canal to 6-7 millimeters at the C4-5 level. She also found a moderate disc bulge and posterior osteophyte complex and bilateral uncovertebral joint hypertrophy producing moderate central spinal stenosis with narrowing of the AP diameter spinal canal to 5 millimeters with effacement of the ventral cord at the C5-6 level. There was also severe bilateral neural foraminal stenosis at this level.

6. On October 1, 2019 Dr. Erik Severud of Alliance Orthopedics in Kansas diagnosed displacement of cervical intervertebral disc and ordered an epidural steroid injection (ESI) but did not specify the level. He noted that the MRI showed severe narrowing at C5-6 and C4-5 to a lesser extent. He documented numbness, tingling, and swelling and that Claimant needed to see a spine surgeon as this was not his area of expertise. He also limited Claimant to sedentary duty and no driving of heavy machinery.

7. Dr. Mark Whitaker examined Claimant on October 21, 2019. He noted that Claimant complained of neck and upper extremity pain accompanied by numbness and tingling in the arms and hands as well as headaches. During strength testing he did not document deltoid, biceps and wrist extensors on the right, only the left. Following examination and discussion of her options, Dr. Whitaker recommended cervical epidural steroid injection at the C6-7 level. X-Rays showed a complete displaced collapse of C5-C6.

8. Claimant had a C6-7 epidural steroid injection on November 4, 2019, in Wichita, KS by Jon Parks, M.D. of Advanced Pain Medicine Associates, for neck pain and cervical neuritis.

9. Claimant followed up with Dr. Whitaker on November 13, 2019. He noted that Claimant retuned with cervical stenosis as well as a right labral tear in the right shoulder. He noted that the ESI in the neck did not relieve symptoms and continued to have predominant right shoulder pain. He recommended right shoulder surgery and repair prior to any further treatment of Claimants cervical spine.

10. On November 22, 2019 therapist William Long of Enhanced Physical Therapy noted that Claimant was being discharged from their clinic after four visits as Claimant was moving back home to Mississippi. He further documented that she would continue to benefit from physical therapy at a clinic in Mississippi. She was demonstrating ROM, strength, and functional mobility limitations noting significant pain. Claimant

advised she would be following up with her physicians to plan a surgical date to address her right shoulder, as well as the neck, and low back complaints.

11. Claimant continued to work with the crew in a light duty position with Employer following the date of the injury as they travelled throughout several towns in the Midwest including Kansas and Nebraska until she returned home to Mississippi around Thanksgiving 2019, where Claimant established consistent medical care for her workers compensation injury. Claimant testified that, as a result of her injury, she continued with pain in her neck, right shoulder, and down her arm, as well as continued headaches, since the accident.

12. Claimant was evaluated by Dr. John Berry in Mississippi for her right shoulder on December 2, 2019. He noted that he reviewed the right shoulder MRI that demonstrate an anterior labrum tear, degenerative changes with increased Intensity over the AC joint, supraspinatus tendinosis, and edema at the posterior humeral head. He documented that Claimant had radicular pain down to the arm, but that her shoulder was bothering her more than anything. Dr. Berry diagnosed internal derangement in her right shoulder and recommended surgical repair of the right labrum, distal clavicle excision, decompression, and debridement of the right shoulder. He referred Claimant to Dr. Lee for an evaluation of her cervical spine.

13. Claimant was evaluated by nurse practitioner Jessica Bush, of Southern Bone and Joint Specialists, on December 7, 2019. Nurse Bush documented a history of injury consistent with Claimant's testimony. She noted that Claimant had neck pain that radiated down the right arm to the fingers, which sometimes included completely numbness of the right hand. On exam she documented that Claimant had recreation of pain with cervical extension and when looking to the left. Upper extremity strength was normal except for right sided biceps, grip strength, and hand intrinsics. Claimant also had a positive right shoulder impingement exam and mild decreased sensation of the right upper extremity compared to the left with palpation. She diagnosed cervical disc displacement and spinal stenosis. She recommended cervical epidural steroid injection at the C5-6 level but if this did not help her pain, they would likely refer her to a surgeon. She prescribed physical therapy for the cervical and lumbar spine to include heat, massage, TENS, local modalities, and cervical traction, and Claimant was taken off work until she followed up after the injection.

14. Claimant was attended by Dr. Joe Leigh on December 16, 2019 who documented that Claimant had pain in the neck and radiation of pain into the right shoulder and further radiation of pain into the right arm with numbness and tingling in the fingertips of the right hand. He noted decreased range of motion of the neck in all quadrants, posterior cervical paraspinous tenderness bilaterally, greater on the right, tenderness in the trapezius on the right, marked limitation in range of motion of the right shoulder, and muscle mass symmetric in both upper extremities. He recommended proceeding with a right C6-7 and C5-6 ESI, but the procedure performed was at the right C4-5 and C5-6 cervical levels.

15. On December 31, 2019 Claimant was again seen by Nurse Bush who documented that Claimant had the cervical steroid injection with Dr. Joe Nick Leigh at the Pain Treatment Center on December 16. She continued to complain of neck pain that

radiated down the right arm into the fingers with numbness and weakness. She stated that right C4-5 and C5-6 cervical ESI caused side effects from the injection, including swelling of her face. She noted Claimant continued to have recreation of pain with cervical extension when looking to the left. Her upper extremity strength was still 5/5 except for her right biceps grip and hand intrinsic weakness, a positive right shoulder impingement exam, and decrease sensation in the right upper extremity when compared to the left upon palpation. She continued to diagnose cervical disc displacement, cervical spinal stenosis with radiculitis and low back pain with facet arthrosis. She continued to keep Claimant off work.

16. On January 10, 2020 Dr. Berry documented that Claimant continued with a lot of pain. On exam he found positive Neer's, positive Hawkins, positive empty can testing, positive tenderness over the AC joint, positive O'Brien's testing[1] and pain related in most all planes of the right shoulder. He performed a corticosteroid injection into the right shoulder and stated they would send a new request for prior authorization for the right shoulder surgery due to the anterior labrum tear, ACJ arthrosis, supraspinatus tendinosis and posterior humeral edema.

17. Claimant continued to require the right shoulder surgery but before it could be performed Claimant suffered a mild heart attack on January 17, 2020. The shoulder surgery was delayed until July 2020, to allow Claimant to recover from her heart attack and be released by her physicians for surgery.

18. Dr. Berry performed a right shoulder intra-articular arthroscopic bicep tenodesis, subacromial decompression, distal clavicle excision and extensive debridement on July 9, 2020 at Forrest General Hospital. Dr. Berry stated that there was an obvious tear at the superior labrum at the insertion of the biceps tendon and the undersurface of the labrum had a tear that propagated medially towards the glenoid. He also found extensive bursitis covering the underlying rotator cuff and he removed the subacromial spurring and overhanging osteophyte spur of the calcific and frayed coracoacromial ligament.

19. Claimant testified that the shoulder surgery helped with some problems with the shoulder area itself but did not help with the ongoing pain and problems in her neck, shoulder and right arm that continued through the date of hearing. Claimant has ongoing pain in the neck (both sides), the area between the neck and shoulder, with pain, numbness and tingling that runs down her arms, right worse than left. Claimant had lost strength in her right arm, bicep, forearm and some fingers, though she noted that on occasion the pain, burning, numbness and tingling involve both arms and hands. The shoulder surgery did not help her symptoms into her right arm.

20. Nurse Bush documented on September 21, 2020 that Claimant continued with neck pain. Though her right shoulder had improved after Dr. Berry performed surgery. She stated that she had one episode of tightness in the cervical spine after a long day of activity. She diagnosed cervical disc displacement, cervical spinal canal stenosis with radiculitis, low back pain with bilateral radiculitis, lumbar disc displacement, lumbar spinal stenosis, foraminal stenosis, and lumbar facet arthrosis. She

[1] Neer's, Hawkins, empty can, and O'Brien's tests are tests commonly used to identify possible impingement syndrome or other pathology of the shoulder.

recommended physical therapy for the cervical and lumbar spine including work-hardening and conditioning. She provided sedentary work status of walking or standing only occasionally, lifting 10 lbs. max., including for frequent lifting or carrying of objects.

21. Following Claimant's shoulder surgery, she was referred to a work hardening program for her cervical and lumbar pain on November 2, 2020. Ms. Bush, NP noted that since beginning this program her pain had returned to the previous status when she was first seen in the clinic. She was unable to undergo cervical epidural steroid injections due to a reaction to a previous one. She ordered a CT myelogram and referred Claimant back to Dr. Lee.

22. The CT myelogram, read by Dr. Mark Molpus, revealed that the C5-6 level demonstrated disc osteophyte complex with a minimum AP diameter spinal canal of 8.1 mm at the midline and encroachment upon the neuroforamina bilaterally secondary to bony hypertrophic changes.

23. Claimant was evaluated by Dr. David Lee, a board-certified neurosurgeon in Mississippi, on December 21, 2020. He noted Claimant had complaints of neck pain, headaches daily along with pain across her right shoulder, back pain with facet loading type pain, pain down her right greater than left leg into her foot, with some grip weakness. On physical examination he noted Claimant kept her neck in a forward position, had loss of range of motion in extension and rotation to the right. She had a positive Spurling test[2] on the right but not the left. Dr. Lee reviewed the September 25, 2019 MRI scan and compared it to the CT Myelogram of December 11, 2020. He noted Claimant initially had a disc herniated at C5-6 level with cephalad extension. It caused moderate stenosis of the spinal canal without cord signal change with foraminal stenosis. The new diagnostic showed that the disc that herniated had migrated cephalad but improved, but the disc had almost collapsed with endplate changes with moderately severe stenosis. He further noted that there was no high grade stenosis at the thoracic or lumbar spine levels. On exam he noted that Claimant had loss of range of motion of the neck, primarily extension and rotation to the right and had a positive Spurling sign on the right. Dr. Lee diagnosed Claimant with cervical disc displacement, radiculopathy cervical region, and spondylosis cervical region. Dr. Lee ordered an updated cervical MRI for a better look at the canal and spinal cord itself and an upper extremity EMG.

24. The cervical MRI of February 4, 2021, showed a C5-6 mild to moderate multifactorial developmental and acquired central stenosis (6-7 mm) and severe foraminal stenosis due to minimal retrolisthesis at C5, moderate broad based disc osteophyte complex and additional spondylosis. It also showed slight flattening of the ventral cord and impingement on bilateral C6 roots.

25. Dr. Lee saw Claimant on February 18, 2021 noting that the December 16, 2020 ESI for the neck cased facial swelling and she also had another cervical spine ESI that caused facial swelling. She was advised not to have any further cervical spine ESIs due to the side effects. Claimant did report that she continued to benefit from the lumbar spine ESIs. Claimant continued to complain of neck issues and grip weakness, with pain going down her arm, right greater than left. On exam she continued to keep her neck in

[2] A Spurling's test is to assess nerve root pain.

a forward posture and had loss of range of motion. He commented that Claimant had an EMG which was oddly unremarkable and recommended a home cervical traction unit for her neck.

26. On April 26, 2021 Dr. Lee recommended a cervical myelogram/post myelogram CT to get a better idea of whether Claimant would need surgical intervention for her cervical spine. On May 3, 2021 he noted that based on the myelogram of December 11, 2020 Claimant would require a C5-6 anterior cervical discectomy fusion.

27. Claimant was reevaluated by Dr. Lee on June 7, 2021, on physical exam he found her neck in a forward postured, with limited neck range of motion in rotation and extension, and mild wrist strength weakness on the right. He noted a disc protrusion at C5-6, as well as bilateral foraminal stenosis at C5-6 that is fairly severe. He noted the negative EMG results. He recommended an anterior cervical discectomy and fusion (ACDF) at C5-6 due to severe foraminal stenosis and continued neck and upper extremity pain. He wanted some follow up regarding medication and cervical spine X-rays prior to any surgical procedure. She had some additional images at Southern Bone and Joint of the cervical spine on June 17, 2021. The films revealed evidence of modic changes at C5-6 with prominent foraminal stenosis as well as central stenosis without cord signal change.

28. On August 9, 2021, Dr. Lee recommended a C5-6 ACDF via a left approach and discussed the risks, complications and alternative treatments with Claimant. The anterior cervical discectomy and fusion at C5-C6 is as a result of the injury that occurred on the job on August 23, 2019. He based his opinion on Claimant's history, his physical examination and the objective findings on MRI, CT scan, X-ray and discography, that the Claimant currently requires surgery.

29. At the time of the injury Claimant had a preexisting degenerative cervical stenosis and spondylosis that was asymptomatic. Following her work injury, Claimant's neck became symptomatic and has stayed symptomatic. She has received medical care for her neck condition as part of the claim. As a result of the aggravation of this preexisting condition, Claimant requires the recommended cervical surgery.

30. Respondents retained Dr. N. Neil Brown who provided multiple IME reports dated January 22, 2021, November 4, 2021, November 17, 2021, and December 13, 2021. Dr. Brown examined Claimant one time on November 4, 2021. Dr. Brown reviewed the medical records particularly noting that there were "no medical records preceding the date of injury of August 23, 2019." Dr. Brown reported that Claimant had the following:

> Currently, she complains of neck and low back pain. Her neck pain varies from 6 to 7 /10 and is primarily described at the base of her neck, but the pain can radiate to the top of her shoulders bilaterally. She has occasional numbness and tingling sensation extending down her biceps to her dorsal aspect of her forearm, right side worse than left, and this can extend into her "pinky" and ring finger more than the other fingers. She also has associated daily headaches which involve the occipital region bilaterally with radiation frontally subsequently. Occasionally these are associated with nausea but more often they are a generalized ache. She states that she had an epidural steroid injection while in Kansas and this was complicated by facial swelling and headache, though otherwise the epidural steroid helped transiently. She uses a TENS unit with minor benefit. Her neck pain is worsened

> more with extension than flexion, though both of these do cause pain. Prolonged sitting also worsens her neck pain. Her neck is improved using Epsom salt baths, Icy-Hot patches or Biofreeze. She states she feels weak in her right shoulder and her grip is decreased in her right hand. She has received a surgical recommendation to treat the C4-5 and C5-6 levels with fusions.

On exam, Dr. Brown found Claimant had a positive Phalen sign on the right side associated with tingling in her index, middle, ring and fifth fingers, the worst in the fifth finger, normal power, bulk and tone in all major muscle groups of the upper and lower extremities though he questioned mild antalgic weakness graded at 4+/ 5 in her right deltoid, Spurling's testing bilaterally caused some discomfort at the base of the neck in the midline and this was worse in severity with right-sided maneuver compared to the left. She also had tenderness in the midline at the base of her neck extending bilaterally over her trapezius musculature toward the shoulders and significant cervical loss of range of motion.

31. Dr. Brown stated that Claimant undoubtedly sustained at least a cervical strain related to the impact injury and that "[W]ith the mechanism of injury, it is certainly possible that her neck pain and occasional radicular symptomatology could relate to facet-mediated pain." He did not agree that Claimant required ACDF surgery at this time as related to the August 23, 2019 work injury. Dr. Brown is of the opinion that even without surgery, Claimant still requires medical care for her work related neck condition which includes medical branch blocks, and radiofrequency ablations if the blocks are successful.

32. On November 22, 2021 Claimant was seen by Micah Childs, P.A. due to increased symptoms following the IME with Dr. Neil Brown. He noted that Claimant did not have preexisting symptoms prior to her August 23, 2019 work injury and that there were no records of diagnostic testing prior to this time either that would show severe cervical stenosis. Claimant explained that during examination, what seemed to be a Spurling's maneuver that Dr. Brown performed, Claimant's pain symptoms were exacerbated also causing significant increase in headaches. Claimant reported she was in significant and constant pain. She had her neck in a forward posture. He recommended a new MRI to assess whether there was a worsening and was to follow up with Dr. Lee.

33. At hearing Claimant credibly testified that she continued to have constant neck pain. The pain sometimes gets to the point that the pain is severe, with burning that goes down both her arms and into her hands, and she cannot use them. The pain and symptoms affected her activities of daily living. She depends on others to do things she always used to do, and has to pace herself with breaks. She sleeps on the couch that has a 4 inch memory foam, because of her back and neck pain, and has to take medications, which she does not like taking. She also uses a heating pad daily. She has learned to use her left hand because of the weakness in her bicep, forearm and some of her fingers on the right side.

34. Dr. Brown testified at hearing as well. He opined that he could not determine if Claimant would benefit from the surgery proposed by Dr. Lee because the records and his particular exam did not establish a specific source of Claimant's pain and complaints within the C6 dermatome. Dr. Brown suggested that the pain and symptoms Claimant feels going up to the neck and down into the bicep could be related to the

shoulder injury. He testified that EMG findings only help when the patient has injury or damage to the nerve, but that patients can have inflammatory conditions without permanent nerve injury. He stated that any neurosurgeon that sees the amount of narrowing on an MRI scan as Claimant has, would be likely to recommend surgery despite whether it is work related or not, including himself. Anything less than 9 mm is considered potentially significant stenosis for the spinal cord and Claimant's AP diameter is 5 mm, which is very narrow, puts her at risk and is a potential safety issue.

35. Dr. Brown suggested that Claimant have medial branch blocks to better zero in on the pain generator. He explained that the mechanism of injury on August 23, 2019 was consistent with a cervical sprain/strain syndrome, and that, if significant enough, it can cause torn muscles and tendons, which heal by scarring. He explained that the healing scar tissue could cause a capsule around the facet joint, which can cause persistent neck pain, all of which cannot be seen on MRI. He suggested that after two MBBs, if they are successful in relieving pain for the duration of the anesthetic, then the pain is localized and a radiofrequency ablation could be performed, all of which would be related to the work related injury. He continued to opine that the stenosis and the need for fusion was not related.

36. Dr. Brown stated that he found weakness of the deltoid muscle, which, if it is nerve related weakness, would correspond to the C5 dermatome. The distribution of a C6 radiculopathy goes down from the neck over the shoulder, into the bicep, to the dorsal forearm, and into the thumb, sometimes the index finger. He further stated that a Spurling's maneuver is a provocative test for the presence of radiculopathy, if the pain goes down the arm, the biceps, dorsal forearm and into the thumb and would be consistent with a C6 radiculopathy. Dr. Brown stated that if Claimant had a cervical spine ESI that did not relieve symptoms, it was a bad prognosticator for successful surgery. However, the ESI of November 4, 2019 was performed at the C6-7 level, not the C5-6 level, which is the level Dr. Lee was proposing for surgery. This testimony is not persuasive.

37. Dr. Lee testified by post-hearing deposition on February 28, 2022. He stated that he continued to diagnose cervical spondylosis, cervical stenosis without myelopathy and cervical disc degeneration. The diagnosis was supported by neurological examination which showed claimant kept her neck in a forward posture and her mild wrist weakness on the right. The right wrist extension weakness was from the C5-6 disc level issues. He explained that patients that keep their neck in a forward posture is because, when you extend the neck, it decreases the area of space where the root exits and the area in the central spine canal where the cord resides. Her neurological findings, the nerve root compression together with the long history of symptoms and ongoing stenosis make it appropriate and reasonable for her to proceed with the surgery. Dr. Lee stated he anticipated that Claimant's symptoms would improve with the surgery at the C5-6 level because Claimant has obvious pathology confirmed by the dermatome with her wrist weakness and objective examination confirmed by a positive Spurling's sign. Further, Dr. Lee opined that Claimant would be unlikely to improve without surgery given her level of stenosis and foramen, which would continue to worsen with time, potentially causing further stenosis, bruising of her spinal cord and significant permanent nerve root damage.

38. Dr. Lee opined that the August 23, 2019 work related injury aggravated Claimant's underlying asymptomatic degenerative condition to such an extent that from the date of the injury forward, the C5-6 disc collapsed and justify the recommended surgery. He stated that the changes seen in the year and one half between the MRIs, would normally take a considerable amount of time generally and the cause of the quick collapse was the fact that the injury accelerated the process causing the need for the surgery.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay

witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Medical Benefits that are Reasonably Necessary and Related

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Therefore, in a dispute over medical benefits that arises after the filing of a general admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the work injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A panel of the ICAO also addressed these issues in *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012). The panel stated:

> [The *Snyder*] principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury.

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The issue of whether medical treatment is necessary for a compensable aggravation or a worsening of Claimant's pre-existing condition is also one of fact for resolution by the ALJ based upon the evidentiary record. See *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). The Act places full responsibility on the employer for benefits as a result of a work injury when there is an aggravation of an underlying dormant condition. *United Airlines, Inc. v. ICAO*, 993 P.2d 1152 (Colo. 2000). Expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition. *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983). Where conflicting expert opinion is presented, it is for the ALJ as fact finder to resolve the conflict. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). When expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992).

As found, Dr. Lee testified that he offered Claimant a one-level cervical discectomy and fusion of her neck because of the severe foraminal stenosis and the disk collapse associated with the spinal stenosis. Dr. Lee testified that damage at the C5-6 level was documented by his physical examination, including the way Claimant held her neck during his physical examination and the strength and sensory loss in muscles that are innervated by the C5-6 nerve roots. According to Dr. Lee the two muscles that are affected by that nerve root level are biceps strength and wrist extension strength to see if there is a weakness. Dr. Lee noted that Claimant had some wrist strength weakness on the right side during exam. Dr. Lee was of the opinion that Claimant did have spinal cord compression at the C5-6 level and objective evidence of a C5-6 radiculopathy in addition to the significant cervical stenosis that supported that recommendation for surgery. He also was of the opinion that the recommended surgery would improve the C5-6 nerve root symptoms, but even if it would not, that the narrowing had to be addressed because it would not improve. As ultimately found, Dr. Lee's opinions that the work-related accident caused the need for the surgery is credible and more persuasive than the contrary opinions of Dr. Brown. This is reinforced by the other authorized treating providers that Claimant's degenerative condition was asymptomatic prior the work related event.

As found the work related incident was a trauma of significant force, causing Claimant to be thrown several feet away, bruised in multiple parts of Claimant's body and also sufficient to cause loss of consciousness. As found, Claimant complained of neck pain from the inception of the injury, including numbness, tingling and pain travelling from her neck down to her arm and hand. Dr. Homsten noted bruising, swelling and discoloration of the neck and the right shoulder. As found, while the underlying degenerative changes documented by Dr. Rona, including degenerative changes to the endplates C5-6 are not proximally caused by the work injury. As further found, the fact that Claimant was asymptomatic prior to the work injury, and worked a heavy laboring job at the time of the injury, in addition to the trauma suffered, is sufficient nexus to prove that the accident caused or aggravated the central disc protrusion at the C5-6 levels, which now produce the severe stenosis. As found, it is more likely than not the aggravation caused the need for treatment including correction of the 5 millimeter stenosis with effacement of the ventral cord and severe bilateral neural foraminal stenosis. Nurse practitioner Bush documented that Claimant had recreation of pain with cervical extension and when looking to the left, loss of strength for right sided biceps, grip strength, hand intrinsics and mild decreased sensation of the right upper extremity compared to the left with palpation. Based on medical testimony all of these findings are indications of a radicular nerve problem at the indicated level.

As found, Claimant continued to complain of headaches, neck, shoulder and arm pain during her care with her medical providers, including difficulty utilizing her right upper extremity, and, at times, her left upper extremity. The medical records show a consistent deterioration of function and decline from the date of the admitted August 23, 2019 injury. The reports of Dr. Lee, Dr. Barry, Nurse Practitioner Bush and other treating providers are more persuasive than the contrary opinions of Dr. Dr. Brown. This is further bolstered and supported by the credible testimony of Claimant that she that she did not have any problems with her neck or upper extremities prior to the traumatic incident of August 23, 2019, 2019. The lack of prior medical records showing a history of similar complaints is also a material fact considered by this ALJ and is additionally persuasive. Claimant has no prior history of neck problems. Ultimately, it is found that the Claimant's need for the surgery as recommended by Dr. Lee is proximately caused by the work injury of August 23, 2019 and is reasonably necessary to address the work-related injury and aggravation of Claimant's previously asymptomatic degenerative condition. From the totality of the evidence, the C5-6 interior cervical discectomy and fusion surgery recommended by Dr. Lee is found reasonable, necessary, and related to the injuries Claimant suffered in her workplace incident on August 23, 2019.

Respondents argue that Dr. Lee did not follow the recommendations of The Medical Treatment Guidelines (MTGs) as he had not obtained a psychological evaluation prior to recommending surgery. The MTGs are regarded as the accepted professional standards for care in *Colorado* under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from

under appropriate circumstances. *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). While the Guidelines may carry substantial weight, and provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, Section 8-43-201(3), C.R.S. specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.* (*Emphasis added*).

Pursuant to W.C.R.P. Rule 17-1(A), the statement of purpose of the guidelines is as follows:

> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

W.C.R.P. Rule 17-5(C) provides "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the MTGs are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive). Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the Guidelines upon consideration of the totality of the evidence. See *Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

As found in this case, while the MTGs may provide for specific recommendations for psychological evaluation pursuant to W.C.R.P. Rule 17, Exhibit 8(A)(III)(F) as cited by Respondents,[3] Claimant has shown by a preponderance of the evidence that she suffered an aggravation of her preexisting underlying stenosis, complained of neck pain

[3] Current Rule 17, Exhibit 8 Cervical Spine Injury Medical Treatment Guidelines effective January 30, 2022 reorganized and revised the sections, and now is under Section 8.b.iii for Spinal Fusion, p. 54, Recommendation 144.

immediately following the injury, and subsequent upper extremity problems, including tingling and numbness down her arm into her hand. Neither Dr. Lee nor Dr. Brown recommended psychological testing before the surgery, and providers outside of Colorado cannot be compelled to comply with the requirements of Colorado guidelines. Further, neither provider found any confounding psychological issues in this case as Dr. Brown indicated that Claimant had a normal mental status and Dr. Lee found no confounding psychological issues.

As found, Dr. Lee has indicated that Claimant continues to have radicular symptoms, and without the surgery at this point Claimant is at serious risk of further consequence if the stenosis is not corrected. This ALJ infers from the records that there is some urgency to proceed with the surgery as Claimant's stenosis is serious and places Claimant as risk. Dr. Brown also indicated that anything less than a 9 millimeters is considered very narrow spinal canal and requires corrective surgery, which he would also have recommended for Claimant. This ALJ has considered the experts' opinions and testimony with regard to the MTGs and has rejected the opinions of Dr. Brown in reference to the need for psychological evaluation before recommending surgery. In fact, this ALJ infers from Dr. Lee's testimony that, but for the August 23, 2019 work related traumatic accident, Claimant's functional decline and subsequent need for surgery would not have been accelerated. Dr. Lee discussed the natural progression of a disc collapse when there is an injury superimposed on spinal stenosis. Dr. Lee testified that his opinion that the work injury had aggravated her preexisting degenerative condition based on the changes he noted between the post injury September 25, 2019 MRI and the MRI scan in early 2021 which showed changes in the disc that would not be expect to be see in a year but in a much longer period of time without the presence of a traumatic injury. As further found, the medical records document a significant worsening while Claimant was participating in a work hardening therapy in November of 2020 that necessitated additional treatment and referral back to Dr. Lee, which are casually related to her work injury. Claimant has shown by a preponderance of the evidence that the August 23, 2019 accident precipitated Claimant's complaints of neck, arm and hand symptoms aggravating her underlying asymptomatic degenerative condition and proximately caused the need for the surgery proposed by Dr. Lee. Claimant has proven by a preponderance of the evidence that the cervical spine surgery proposed by Dr. Lee is reasonably necessary and related to the August 23, 2019 injury.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall authorize and pay for the anterior cervical discectomy and fusion of the cervical spine as recommended by Dr. David Lee as reasonable, necessary and related to the admitted workers compensation injury of August 23, 2019.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 4th day of April, 2022.

By: _____
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable back injury on July 21, 2021?

- Did Claimant prove entitlement to TTD benefits from July 26, 2021 to February 15, 2022?

- The parties agreed to reserve the issue of potential TPD benefits commencing February 15, 2022, if the claim is compensable.

- The parties stipulated to an average weekly wage of $437.72.

FINDINGS OF FACT

1. Claimant worked for Employer as a sandblaster. He typically worked from a bucket at the end of a telescoping boom lift, which enables him to reach various parts of railroad cars. On July 21, 2021, Claimant and a co-worker, [Redacted, hereinafter NM], were sandblasting an old railroad car using the boom lift. Mr. NM[Redacted] was operating the controls and Claimant was using the sandblasting gun. Claimant alleges he injured his back when the bucket abruptly "dropped" several feet and "bounced" up and down.

2. Claimant felt no back pain or other symptoms during or immediately after the incident. He finished his shift and went home. Within a couple of hours, he noticed mid and low back pain.

3. Claimant awoke the next morning and felt "excruciating" pain in his back. He went to work and reported the symptoms to Employer's HR director, [Redacted] AB. Claimant said he attributed the pain to an incident when the boom suddenly "dropped" and "jerked him." Ms. AB[Redacted] completed an Employers' First Report and offered to send Claimant to Concentra. Claimant declined treatment and started his shift. After working five hours, Claimant informed Ms. [Redacted] AB his back was bothering him and asked to go home. Ms. [Redacted] AB approved his request and Claimant left.

4. Claimant did not work the next day (Friday). He returned to work on Monday (July 26) and worked a complete shift. Ms. [Redacted] AB credibly testified Claimant exhibited no sign of pain or limitations.

5. Claimant went to the Parkview Medical Center emergency department after work on July 26, 2021. He complained of pain in his mid and low back. The ER physician wrote:

> Patient states that last week while he was at work on a forklift, it abruptly dropped several feet and then jolted back up into his legs as the machine

> was malfunctioning. He essentially notes an axial force transmitted through his legs to his back.

Physical examination showed moderate tenderness in the upper thoracic region and mild tenderness in the lumbar area. There were no lower extremity strength or sensory deficits. Lumbar and thoracic CT scans showed Schmorl's nodes at multiple levels but no fracture or other acute abnormality. The ER physician diagnosed a soft tissue "sprain versus strain" and gave Claimant a Toradol injection. Claimant stated Employer did not have light duty, so he was given a one-week work excuse.

6. Claimant did not return to work for Employer after July 26, 2021.

7. Claimant saw NP Jennifer Livingston at Concentra on August 4, 2021. Claimant provided the following history of injury:

> He was in a boom lift on the 21st. He was going down in the left when it dropped 4-5 feet suddenly, stopped, and then went back up. Patient reports of jarring feeling but no pain at the time. He continued to work for about 20 minutes. Within 1 ½ hours the pain started in his back. He states he has a stabbing pain that spreads from his spine out in the thoracic area. Some pain in the lower back but it is "all over" and he can't pinpoint an origination point.

Claimant told Ms. Livingston the imaging performed at Parkview showed Schmorl's nodes "which patient feels are associated with his injury." Claimant stated his pain ranged from "4-5/10 at its best, 10/10 at its worst." Examination showed limited thoracic range of motion, but no tenderness or muscle tone abnormalities. The lumbar exam was completely normal with full range of motion and no tenderness. Ms. Livingston diagnosed "thoracic injury" and ordered an MRI. She gave Claimant another Toradol injection, prescribed a muscle relaxer, a Medrol Dosepak, Tylenol, and Voltaren gel. She referred Claimant to physical therapy and imposed a 5-pound lifting restriction. Based on Claimant's description of the accident, Ms. Livingston concluded his condition was work-related.

8. Claimant underwent lumbar and thoracic MRIs on September 1, 2021. The thoracic MRI showed a benign hemangioma and mild spondylosis. The lumbar MRI showed loss of lumbar lordosis and multilevel "chronic" Schmorl's nodes. There was no canal or neural foraminal stenosis at any level. The facet joints appeared "unremarkable" throughout the lumbar spine.

9. Claimant ultimately received extensive conservative treatment, including medications, physical therapy, massage therapy, and chiropractic treatment. None of these interventions has provided any substantial benefit.

10. Claimant also saw Dr. Kenneth Finn on October 26, 2021. Dr. Finn noted "subjective complaints out of proportion to physical findings, making objective picture difficult." He thought Claimant had a soft-tissue injury but ordered a bone scan to rule out a stress fracture and lab work to assure no systemic inflammatory condition. Dr. Finn

doubted any intervention would improve Claimant's outcome and suggested Claimant consider a different line of work.

11. The bone scan and the lab work came back normal.

12. Claimant had an IME with Dr. Jack Rook on December 1, 2021. Claimant's main complaints were mid and low back pain. Dr. Rook described the mechanism of injury as being inside the lift bucket when it descended abruptly, approximately five feet, and then bumped up and down several times before coming to rest. Claimant stated he had no pain immediately after the injury but started having pain approximately two hours after his shift. Dr. Rook noted Claimant had no prior history of any mid or low back problems. On examination, Dr. Rook noted severe tenderness from the thoracic vertebrae just below his shoulder blades to the L4 level. There was also severe tenderness of the underlying facet joints at these levels. Range of motion was decreased. Dr. Rook diagnosed facet mediated pain and myofascial pain syndrome. He opined that Claimant suffered a work-related injury from the incident he described in the boom lift. He reasoned that Claimant developed back pain shortly after the incident, had no prior medical history of back problems, had no restrictions before this incident, filed his claim timely, and there was no alternate explanation for the development of symptoms the evening after the incident. Dr. Rook opined the drop of five feet—as reported by Claimant—applied acute compressive forces to Claimant's back. When the discs compress, the facet joints come into direct opposition, which irritates the joints and the supporting myofascial structures. This can also result in micro-tearing of the thoraco-lumbar musculature.

13. Dr. N. Neil Brown performed an IME for Respondents on December 2, 2021. Claimant told Dr. Brown the boom lift "malfunctions every time" it is used. Claimant stated the boom "suddenly goes down once the gear is engaged and then goes up accompanied by a jolting sensation." He estimated the bucket traveled approximately five feet, which led to his injury. Dr. Brown observed that the distribution of Claimant's reported symptoms was "unusual and in a non-physiological rectangular fashion." He also noted "significant psychological overlays with symptom magnification any preoccupation with pain as well." He was somewhat puzzled that Claimant had received no benefit from the multiple treatment modalities he received. Nevertheless, based on Claimant's description of a significant "axial loading mechanism and secondary vibration," Dr. Brown concluded Claimant probably suffered a thoracolumbar strain/sprain. He also opined the treatment provided was causally related to the alleged injury.

14. On January 17, 2022, Dr. Brown issued an addendum report stating, "I agree with Dr. Rook that the claimant sustained an acute injury to his mid and lower back as a result of an occupational injury on July 21, 2021. I agree with his listed rationale to support this opinion." However, he questioned whether the additional treatment recommended by Dr. Rook would be helpful, given Claimant's poor response to all prior treatment and several psychological "red flags."

15. Based on Claimant's statements that the boom lift routinely "malfunctions" with abrupt drops and vigorous bouncing, Employer investigated the operation of the lift to determine whether it was malfunctioning or if any repairs were necessary. Employer's maintenance supervisor [Redacted, hereinafter MC], inspected the machine on several

occasions and could find no defects. He also attempted unsuccessfully to recreate the incident Claimant described. He took the lift to the location where Claimant had been working on July 21 and "kinda performed it all over again just to see if maybe we were missing something. And there was nothing, as far as a drop or anything like that." Mr. [Redacted] MC explained there is a "small bounce" when the machine is lowered, but nothing he could consider "jarring" or "jolting."

16. Ms. [Redacted] AB recorded a video of the testing conducted by Mr. [Redacted] MC on her phone, which was entered into evidence as Exhibit U. Mr. [Redacted] MC testified the operation of the lift depicted in the video is consistent with his experience using that machine on multiple occasions. He testified the slow movement shown in the video is the only speed at which the lift can move, and it has safety valves to prevent it from moving or dropping if there is a hydraulic failure other malfunction.

17. [Redacted, hereinafter RS] is one of Claimant's former co-workers. He worked for Employer for approximately six years before taking another job that offered more hours. Mr. [Redacted] RS participated in the testing performed by Mr. [Redacted] MC and depicted in the video. He explained "we tried to make it do [what Claimant described], and we could not." They could not force any "abrupt stop" or "find anything that may have been wrong with it." In his experience, it was "impossible" for the machine to drop several feet or jolt the occupants of the bucket as Claimant has described. Mr. [Redacted] RS explained that when the bucket is finished lowering, it slows down over approximately one foot and stops with a "cushion motion" and "bounces just a little bit." This description is consistent with the motion shown on the video. Mr. [Redacted] RS also testified he saw the boom being lowered on July 21, 2021 while Claimant was in the bucket, and observed it bouncing slightly. However, the motion of the boom on July 21 was "nothing abnormal."

18. [Redacted] NM was working in the lift with Claimant at the time of the alleged accident. Mr. [Redacted] NM disputed Claimant's allegations regarding the operation of the boom lift. He was unaware of any malfunction and testified the boom lift was operating normally on July 21. He experienced no sudden drops or jerking on July 21 or any other occasion. He could recall no time where Claimant appeared surprised or affected by motion of the boom. Mr. NM testified the movement of the boom depicted in the video is consistent with the machine's usual operation. Based on his prior experience with the boom lift, he could not understand how Claimant could have been injured.

19. Respondents obtained a record review from Dr. Michael Rauzzino. In addition to the medical records, Dr. Rauzzino was furnished a copy of the video and a written statement from Mr. Miera. Dr. Rauzzino noted the imaging of Claimant's spine showed no objective evidence of any acute injury or trauma. He also cited the concerns raised by multiple providers regarding possible symptom magnification. Regarding causation, Dr. Rauzzino opined,

> One needs to understand the mechanism of injury. There is a discrepancy between [Claimant's] account, which is consistent with what he described initially in the emergency room and subsequently to other providers, and that of Mr. Miera who was in the boom lift with him at the time of the reported

> injury. I watched video footage of the boom lift going up and down; it is difficult to imagine that the boom lift would have suddenly fallen five feet based on the footage I observed. Ultimately, the mechanism of injury would likely be determined by the ALJ. If the ALJ or both parties believe that [Claimant] did not sustain a fall of four to five feet while in the boom, potential occupational injury would not be likely.

20. Ms. Livingston and Dr. Johansen at Concentra reviewed Dr. Rauzzino's report and agreed Claimant did not injure his back at work.

21. Employer's witnesses are credible and persuasive. Although Mr. [Redacted] NM was mistaken about how far the boom was extended, this discrepancy does not materially detract from his testimony.

22. Claimant's account of an abrupt drop and vigorous bouncing is not credible. Claimant conceded the movement of the boom shown in the video was "pretty close" to what he experienced on July 21, 2021.

23. Dr. Rauzzino's analysis is credible and persuasive. The gentle bouncing of the boom lift would not, and did not, injure Claimant's spine. This conclusion is buttressed by the complete absence of symptoms during or immediately after the incident. Dr. Rook and Dr. Brown's conclusion that Claimant suffered a work-related injury are based on the faulty assumption that Claimant's description of the alleged accident is accurate.

24. Claimant failed to prove he required any medical treatment or suffered any disability proximately caused by his work.

25. Claimant failed to prove he suffered a compensable injury on July 21, 2021.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The fact that a claimant experiences symptoms after performing work activity does not necessarily establish a causal connection to the work activity. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). And a referral for treatment by the employer after receiving a report of symptoms does not automatically establish a compensable injury. *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017). Similar logic applies to the fact that an employee was given restrictions or taken off work by a designated provider. Rather, the claimant must prove the symptoms and need for treatment and/or disability were proximately caused by their work. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017).

As found, Claimant failed to prove he suffered a compensable injury. Employer's evidence regarding the operation of the boom lift is credible. The incident described by Claimant probably did not occur. Dr. Rauzzino's analysis is persuasive. Dr. Rook and Dr. Brown's causation determinations are predicated on the faulty assumption that the bucket abruptly fell 4-5 feet and "bounced." Had such an incident actually happened, the ALJ would have no difficulty concluding Claimant suffered a compensable injury. But based on the credible testimony of Mr. [Redacted] MC and Mr. RS, such uncontrolled motion does not even appear possible, much less probable. The boom lift probably functioned as depicted on the video and described by Employer's witnesses. Regardless of how Claimant may have perceived the motion, it is unlikely he was subjected to sufficient force to injure his spine. And having made a 4-5 foot "drop" and vigorous "bouncing" central to his story from the outset, it is too late for Claimant to change horses at the hearing and assert that the actual mechanics of the incident are unimportant. The persuasive evidence fails to show that the back symptoms Claimant experienced starting in July 2021 were proximately caused by his work.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 5, 2022

Office of Administrative Courts

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that his 23% scheduled upper extremity impairment rating should be converted to a 14% whole person rating.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition.

FINDINGS OF FACT

1. Claimant began working for Employer in January 2019. On May 12, 2019 Claimant developed right shoulder pain while lifting a 55-pound drum of wet cheese.

2. On May 23, 2019 Claimant visited Authorized Treating Physician (ATP) Aline Coonrod, M.D. for an examination. He reported stinging pain in the anterior part of his right shoulder. Claimant also noted numbness into his right hand and fingers.

3. On September 19, 2019 Claimant visited orthopedic surgeon Joshua Snyder, M.D. for an evaluation. He reported significantly decreased range of motion as well as muscle spasms, popping and catching within his right shoulder. Claimant also noted hand swelling and difficulties with activities. Dr. Snyder reviewed a June 3, 2019 right shoulder MRI and described Claimant's condition as consistent with adhesive capsulitis, biceps subluxation and subscapularis tendinopathy. He recommended right shoulder arthroscopy.

4. On October 30, 2019 Dr. Snyder performed a right shoulder arthroscopy, labral debridement and subacromial decompression. The postoperative diagnoses included a partial thickness rotator cuff tear of the subscapularis, rotator cuff impingement and a labral tear.

5. During a January 23, 2020 visit Dr. Snyder noted full range of motion of Claimant's neck, but painful range of motion of the right shoulder in all planes. Dr. Snyder was uncertain about Claimant's continued significant pain. Claimant had "very minimal labral fraying" and "minor impingement" in the right shoulder. Addressing the conditions surgically did not improve his discomfort.

6. On February 20, 2020 Dr. Snyder reported that Claimant's right shoulder was still very uncomfortable, but he still continued to have good range of neck motion. Dr. Snyder noted that a February 5, 2020 MRI revealed no significant changes from the prior MRI. He did not have anything more to offer Claimant and recommended a neurology consultation.

7. ATP Dr. Coonrod referred Claimant to orthopedic surgeon John David Hart, M.D. for a consultation. On March 16, 2020 Dr. Hart commented that a February 5, 2020 right shoulder MRI revealed AC joint arthropathy, inflammation around the long head of the biceps and a partial thickness tear of Claimant's rotator cuff. Because therapy was not improving Claimant's symptoms, Dr. Hart recommended a distal clavicle resection and tenodesis of the long head of the biceps.

8. On May 26, 2020 Eric McCarty, M.D. performed an arthroscopic distal clavicle excision, a mini-open subpectoral biceps tenodesis, an arthroscopic capsular release and manipulation under anesthesia, and an arthroscopic subacromial decompression of Claimant's right shoulder. The postoperative diagnosis was right shoulder acromioclavicular joint inflammation, biceps tendinitis, adhesive capsulitis and subacromial impingement. Dr. McCarty recommended continued physical therapy.

9. At a physical therapy appointment on July 21, 2020 Claimant reported that his right shoulder was improving and there was a decrease in biceps cramping. Nevertheless, he still experienced occasional popping in the right AC joint. All treatment modalities listed involved the shoulder region including rhomboids, trapezius and scapula. There was no therapy to the neck region.

10. On July 27, 2020 Dr. Hart reported that Claimant was doing well with physical therapy and had improved range of motion. However, he still demonstrated some residual stiffness. Claimant had some pain in his right shoulder at the extremes of motion and soreness around the elbow.

11. On August 7, 2020 Ashley Chrisman, P-AC reported that a right shoulder glenohumeral joint injection performed on July 27, 2020 had not provided Claimant with any relief. She noted Claimant was continuing physical therapy but having difficulties with external rotation and abduction. Claimant's pain was localized to his anterior shoulder at the biceps groove.

12. On August 24, 2020 Claimant returned to Dr. McCarty for an examination. Following the May 26, 2020 surgery, the July 27, 2020 glenohumeral injection, and an August 7, 2020 biceps tendon sheath injection, Dr. McCarty remarked that Claimant was doing well. He recommended continuing physical therapy and home exercises to improve strength and range of motion. If Claimant failed to improve, Dr. McCarty would consider manipulation under anesthesia with capsular release.

13. On October 6, 2020 Dr. McCarty performed manipulation under anesthesia and an injection of Claimant's glenohumeral joint. The postoperative diagnosis was right shoulder adhesive capsulitis.

14. On November 19, 2020 Claimant visited Gregory Reichhardt, M.D. for a physiatry consultation and electrodiagnostic evaluation. Claimant reported pain over the right shoulder anteriorly and laterally. Aggravating factors included raising his arm to bend his elbow and bending it back. On physical examination Claimant demonstrated no tenderness on palpation of the cervical spine, normal cervical range of motion, and

negative Spurling's and Lhermitte's signs. He exhibited tenderness to palpation over the right shoulder anteriorly or laterally and exhibited moderate range of motion limitations. The electrodiagnostic evaluation was normal, with negative suprascapular, long thoracic, and bilateral spinal accessory neuropathy.

15. At a December 17, 2020 visit with Dr. Coonrod, Claimant reported increased spasms mostly in the front of his right shoulder. Dr. Coonrod assessed Claimant with impingement syndrome and noted little improvement since his tenodesis surgery. Claimant was actually experiencing more pain around the anterior capsule of the shoulder. He had ceased physical therapy several weeks earlier because it was not helping him, but he continued home exercises.

16. On December 21, 2020 Dr. McCarty reported that Claimant was still experiencing similar symptoms without much improvement. He recommended continuing with physical therapy and home exercises to improve strength and range of motion. Dr. McCarty suggested continued visits with Dr. Reichhardt to assess and treat the painful periscapular musculature. He remarked that a gym membership might be helpful, and commented that Claimant was approaching Maximum Medical Improvement (MMI).

17. On January 8, 2021 Claimant underwent an independent medical examination with Mark Failinger, M.D. Claimant reported stiffness and tightness in the right shoulder, but no swelling in the shoulder area. He also occasionally experienced numbness and swelling in his right hand. Claimant denied any neck pain or radiating symptoms from his neck down through the arm. He was not taking any medications for right shoulder pain.

18. Upon physical examination, Dr. Failinger noted Claimant's neck was non-tender with full range of motion. There were no spasms, warmth, or redness throughout the neck, paracervical, and upper back regions. Dr. Failinger determined that Claimant had likely reached MMI when he last visited Dr. McCarty on November 23, 2020 or at least by December 21, 2020. He reasoned that Claimant did not require lifting restrictions below waist level. However, he recommended restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. Dr. Failinger did not recommend maintenance care because there was no further intervention that would reasonably be expected to change Claimant's condition or maintain MMI. He assigned Claimant a 19% right upper extremity impairment, consisting of 14% for range of motion deficits and 6% for other disorders of the upper extremity.

19. On April 19, 2021 Claimant visited Dr. Coonrod for an examination. He noted improved range of motion, but not full abduction. External rotation was also limited. Claimant's pain was mostly located in the front of his right shoulder. Dr. Coonrod commented that Claimant was approaching MMI, but would leave the determination to Dr. Reichhardt.

20. On April 21, 2021 Claimant presented to Dr. Reichhardt for a permanent impairment evaluation. Claimant reported that he experienced pain specifically over the

anterior aspect over the right shoulder. He did not mention symptoms in the neck or back area. A physical examination did not reveal tenderness to palpation over the cervical spine or paraspinal region. There was normal cervical range of motion with no cervical paraspinal muscle spasms. Dr. Reichhardt concluded that Claimant had reached MMI on April 21, 2021. He recommended six follow-up visits with a physician over the following two years. Claimant stated that he would like to follow-up with Dr. McCarty. Dr. Reichhardt assigned a 22% upper extremity impairment consisting of a 13% rating for range of motion deficits and a 10% rating for the distal clavicle excision. The extremity rating would convert to a 13% whole person impairment rating.

21. On August 16, 2021 Claimant underwent a Division Independent Medical Examination (DIME) with Alicia Feldman, M.D. In her physical examination, Dr. Feldman reported tenderness to palpation over the anterior shoulder, biceps tendon, upper trapezius, scapula and lats on the right side. Claimant exhibited pain in all planes with range of motion of the right shoulder, but no pain with range of motion of the neck. Dr. Feldman determined that Claimant had reached MMI on April 19, 2021 when he last visited Dr. Coonrod. She assigned a 14% right upper extremity impairment for loss of range of motion and a 10% rating for the distal clavicle resection for a combined 23% right upper extremity impairment rating. The extremity rating would convert to a 14% whole person impairment. Dr. Feldman did not assign an impairment rating for the neck because there was no injury and no work-related pathology in the cervical spine. She agreed that Claimant did not require work restrictions below waist level. However, Dr. Feldman assigned restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. Dr. Feldman did not recommend maintenance care because Claimant had already received extensive treatment and plateaued.

22. On February 25, 2022 Respondents filed a Final Admission of Liability (FAL) acknowledging Dr. Feldman's 23% scheduled impairment rating and denying maintenance medical care. Claimant challenged the FAL seeking to convert the extremity impairment to a whole person rating and requesting medical maintenance benefits.

23. Claimant testified at the hearing in this matter. He explained that he suffered injuries to his right hand, shoulder and neck during the May 12, 2019 incident at work Claimant remarked that he underwent physical therapy and massage therapy for his neck and right shoulder region. He complained of pain in the neck, back, and in the front and back of his right shoulder. Claimant commented that he had difficulty reaching overhead and straight out in front with his right arm. The motion caused pain in the front of his right shoulder, neck and upper back.

24. Claimant noted that, since reaching MMI on April 19, 2021, he has continued to experience pain on a permanent basis in not only his right shoulder, but also the upper back and neck regions. The symptoms occur especially when he attempts to raise his arm overhead or out in front of him. He also suffers symptoms when he engages in any type of lifting in excess of 10 pounds at waist level.

25. Claimant has failed to prove it is more probably true than not that his 23% scheduled right upper extremity impairment rating should be converted to a 14% whole person rating. Initially, on May 12, 2019 Claimant developed right shoulder pain when lifting a 55-pound drum of wet cheese while working for Employer. Claimant specified that he suffered injuries to his right hand, shoulder and neck during the May 12, 2019 incident. He remarked that he underwent physical therapy and massage therapy for the neck and right shoulder region. Claimant complained of pain in the neck, back, and in the front and back of his right shoulder. He commented that he had difficulty reaching overhead and straight out in front with his right arm. The motion caused pain in the front of his right shoulder, neck and upper back.

26. Although Claimant testified that physical therapy and massage therapy were directed to his shoulder and neck area, the record fails to support his testimony. The only therapy note in the record, from July 21, 2020, involved his subjective report of right shoulder popping and pain in the anterior and posterior areas. All treatment modalities listed involved the shoulder region including rhomboids, trapezius and scapula. There was no therapy to the neck region.

27. The medical records also generally reflect that Claimant did not report pain to his neck or back area. During a January 8, 2021 evaluation with Dr. Failinger, Claimant noted stiffness and tightness in the right shoulder but no swelling in the shoulder area. He occasionally experienced numbness and swelling in his right hand, but denied any neck pain or radiating symptoms from his neck down through the arm. Upon physical examination, Dr. Failinger noted Claimant's neck was non-tender with full range of motion. There were no spasms, warmth, or redness throughout the neck, paracervical and upper back regions. Similarly, ATP Dr. Coonrod documented pain only to the shoulder when he stated that Claimant was approaching MMI on April 19 2021.

28. On April 21, 2021 Claimant presented to Dr. Reichhardt for a permanent impairment evaluation. Claimant reported that he had pain specifically over the anterior aspect over the right shoulder. He did not mention symptoms in the neck or back area. A physical examination did not reveal tenderness to palpation over the cervical spine or paraspinal region. There were also no cervical paraspinal muscle spasms and normal cervical range of motion. Finally, during Dr. Feldman's DIME she reported tenderness to palpation over Claimant's anterior shoulder, biceps tendon, upper trapezius, scapula and lats on the right side. Claimant exhibited pain in all planes with range of motion of the right shoulder, but no pain with range of motion of the neck. Dr. Feldman assigned a 14% right upper extremity impairment for loss of range of motion and a 10% rating for the distal clavicle resection for a combined 23% right upper extremity impairment rating. She did not assign an impairment rating for the neck because there was no injury and no work-related pathology in the cervical spine.

29. The preceding medical records reflect that Claimant's functional disability is limited to right arm movements and reaching. Furthermore, Claimant's testimony reveals that the primary catalyst for his pain is the use of his right arm. Although Claimant's pain may extend to a portion of the body beyond the schedule of impairments, it does not constitute a functional impairment. The record thus reveals that the situs of Claimant's

functional impairment is in his right upper extremity. Specifically, Claimant's right upper extremity symptoms are limited to his arm and do not extend into a portion of his body beyond the schedule of impairments. Accordingly, Claimant's request to convert his 23% right upper extremity scheduled impairment to a 14% whole person rating is denied and dismissed.

30. Claimant has failed to demonstrate that is more probably true than not that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Initially, at an April 21, 2021 permanent impairment evaluation Dr. Reichhardt recommended medical maintenance benefits in the form of six follow-up visits with a physician over the following two years. Claimant expressed that he would like to follow-up with Dr. McCarty.

31. However, the record reveals that the only recommendation for maintenance care came from Dr. Reichhardt. Notably, he did not recommend any particular course of treatment. Specifically, DIME physician Dr. Feldman assigned restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. However, she did not recommend maintenance care because Claimant had already received extensive treatment and plateaued. Similarly, at an independent medical examination, Dr. Failinger recommended restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. Dr. Failinger also did not recommend maintenance care because there was no further intervention that would reasonably be expected to change Claimant's condition or maintain MMI.

32. The preceding persuasive opinions of DIME physician Dr. Feldman and Dr. Failinger reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's May 12, 2019 right shoulder injury. The record reveals that Claimant has received extensive treatment and there are no further interventions that are reasonably be expected to change his condition or maintain MMI. Accordingly, Claimant's request for maintenance medical benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Shoulder Conversion

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998). When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

5. Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S. is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

6. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO, Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson–Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

7. Under the functional impairment test, neither the situs of the injury nor the anatomical distinctions found in the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)* controls the issue. *Garcia v. Terumbo BCT*, W.C. No. 5-094-514 (ICAO, July 30, 2021). Rather, the ALJ must consider all relevant evidence and determine the parts of the body that have been functionally impaired. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996). Even if the claimant proves tissue damage and pain in structures beyond the schedule, the ALJ may still find a scheduled injury. *Strauch,* 917 P.2d at 367-68*.* Depending on the particular facts of a claim, damage to the structures of the "shoulders" may or may not reflect a "functional impairment" that is enumerated on the schedule of disabilities. *Walker v. Jim Fouco Motor Co.,* 942 P. 2d 1390 (Colo. App. 1997)*; see Henke v. United Airlines,* W.C. Nos. 4-456-163, 4-490-897 (ICAO, Sept. 10, 2003).

8. As found, Claimant has failed to prove by a preponderance of the evidence that his 23% scheduled right upper extremity impairment rating should be converted to a 14% whole person rating. Initially, on May 12, 2019 Claimant developed right shoulder pain when lifting a 55-pound drum of wet cheese while working for Employer. Claimant specified that he suffered injuries to his right hand, shoulder and neck during the May 12, 2019 incident. He remarked that he underwent physical therapy and massage therapy for the neck and right shoulder region. Claimant complained of pain in the neck, back, and in the front and back of his right shoulder. He commented that he had difficulty reaching overhead and straight out in front with his right arm. The motion caused pain in the front of his right shoulder, neck and upper back.

9. As found, although Claimant testified that physical therapy and massage therapy were directed to his shoulder and neck area, the record fails to support his testimony. The only therapy note in the record, from July 21, 2020, involved his subjective report of right shoulder popping and pain in the anterior and posterior areas. All treatment modalities listed involved the shoulder region including rhomboids, trapezius and scapula. There was no therapy to the neck region.

10. As found, the medical records also generally reflect that Claimant did not report pain to his neck or back area. During a January 8, 2021 evaluation with Dr. Failinger, Claimant noted stiffness and tightness in the right shoulder but no swelling in the shoulder area. He occasionally experienced numbness and swelling in his right hand, but denied any neck pain or radiating symptoms from his neck down through the arm. Upon physical examination, Dr. Failinger noted Claimant's neck was non-tender with full range of motion. There were no spasms, warmth, or redness throughout the neck, paracervical and upper back regions. Similarly, ATP Dr. Coonrod documented pain only to the shoulder when he stated that Claimant was approaching MMI on April 19 2021.

11. As found, on April 21, 2021 Claimant presented to Dr. Reichhardt for a permanent impairment evaluation. Claimant reported that he had pain specifically over the anterior aspect over the right shoulder. He did not mention symptoms in the neck or back area. A physical examination did not reveal tenderness to palpation over the cervical spine or paraspinal region. There were also no cervical paraspinal muscle spasms and normal cervical range of motion. Finally, during Dr. Feldman's DIME she reported

tenderness to palpation over Claimant's anterior shoulder, biceps tendon, upper trapezius, scapula and lats on the right side. Claimant exhibited pain in all planes with range of motion of the right shoulder, but no pain with range of motion of the neck. Dr. Feldman assigned a 14% right upper extremity impairment for loss of range of motion and a 10% rating for the distal clavicle resection for a combined 23% right upper extremity impairment rating. She did not assign an impairment rating for the neck because there was no injury and no work-related pathology in the cervical spine.

12. As found, the preceding medical records reflect that Claimant's functional disability is limited to right arm movements and reaching. Furthermore, Claimant's testimony reveals that the primary catalyst for his pain is the use of his right arm. Although Claimant's pain may extend to a portion of the body beyond the schedule of impairments, it does not constitute a functional impairment. The record thus reveals that the situs of Claimant's functional impairment is in his right upper extremity. Specifically, Claimant's right upper extremity symptoms are limited to his arm and do not extend into a portion of his body beyond the schedule of impairments. Accordingly, Claimant's request to convert his 23% right upper extremity scheduled impairment to a 14% whole person rating is denied and dismissed.

Medical Maintenance Benefits

13. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). An award for *Grover*-type medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Indus. Claim Appeals Off.,* 992 P.2d 701,704 (Colo. App. 1999); *Stollmeyer v. Indus. Claim Appeals Off.,* 916 P.2d 609 (Colo. App. 1995). Nonetheless, the claimant must show medical record evidence demonstrating the "reasonable necessity for future medical treatment." *Milco Constr. v. Cowan,* 860 P.2d 539, 542 (Cob. App. 1992). The care becomes reasonably necessary where the evidence establishes that, but for a particular course of medical treatment, the claimant's condition can reasonably be expected to deteriorate so that he or she will suffer a greater disability. *Id.;* see *Hanna v, Print Expediters Inc.,* 77 P.3d 863, 865 (Colo. App. 2003). Once a claimant has established the probable need for future treatment, he or she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna,* 77 P.3d at 866. Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center,* 992 P.2d at 704.

14. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to medical maintenance benefits designed to cure or relieve the effects of his industrial injury or prevent further deterioration of his condition. Initially, at an April 21, 2021 permanent impairment evaluation Dr. Reichhardt recommended

medical maintenance benefits in the form of six follow-up visits with a physician over the following two years. Claimant expressed that he would like to follow-up with Dr. McCarty.

15. As found, however, the record reveals that the only recommendation for maintenance care came from Dr. Reichhardt. Notably, he did not recommend any particular course of treatment. Specifically, DIME physician Dr. Feldman assigned restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. However, she did not recommend maintenance care because Claimant had already received extensive treatment and plateaued. Similarly, at an independent medical examination, Dr. Failinger recommended restrictions of intermittent lifting not to exceed 50 pounds to the shoulder level from the waist as well as intermittent lifting above shoulder level of 50 pounds. Dr. Failinger also did not recommend maintenance care because there was no further intervention that would reasonably be expected to change Claimant's condition or maintain MMI.

16. As found, the preceding persuasive opinions of DIME physician Dr. Feldman and Dr. Failinger reflect that continuing medical maintenance benefits are no longer reasonable, necessary or causally related to Claimant's May 12, 2019 right shoulder injury. The record reveals that Claimant has received extensive treatment and there are no further interventions that are reasonably be expected to change his condition or maintain MMI. Accordingly, Claimant's request for maintenance medical benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to convert his 23% right upper extremity scheduled impairment to a 14% whole person rating is denied and dismissed.

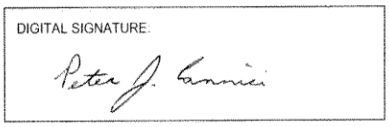
2. Claimant's request for maintenance medical benefits is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26,*

OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 5, 2022.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course and scope of her employment with Employer?

- If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that the medical treatment she received was reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury and were provided by a physician authorized to provide treatment to Claimant?

- If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability ("TTD") benefits for the period of July 20, 2021 to July 27, 2021?

- If Claimant has proven a compensable injury, what is Claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant testified she was employed with Employer as a store manage at Employer's store in Palisade, Colorado. Claimant testified her job duties included performing all jobs needed at the store. Claimant testified she initially worked at the store from 2011-2012 and then returned to work at the store in 2013 and continued to the present time.

2. Claimant testified that on January 27, 2021, she was at work trying to kneel down to get into the safe that is located in the store behind the register. Claimant testified that when she kneeled, she felt a sharp pain going through her right knee. Claimant testified at hearing that she accessed the safe every day.

3. Claimant testified she reported the injury that day to her district manager and then called the Employer's injury hotline. Claimant testified she got off of work at approximately noon and sought medical treatment at Community Care of Grand Valley. Claimant was examined by physicians' assistant ("PA") Goodman on January 27, 2021. Claimant reported a history of developing pain in her right knee while at work about five (5) hours earlier as a result of kneeling down. Claimant reported that when she went to

kneel down in front of the safe, her knee felt unstable and suddenly hurt. PA Goodman diagnosed Claimant as having suprapatellar bursitis of the right knee and recommended ice and rest. PA Goodman provided Claimant with restrictions that included squatting, kneeling, and crawling and recommended that she avoid anything that required a knee bend past 90 degrees.

4. Claimant had a prior injury to her right knee while employed with Employer on August 7, 2014. Claimant sustained this injury as she was standing up from stocking a bottom shelf and her knee popped. As a result of that injury, Claimant underwent two surgeries to repair a tear of her medical meniscus. Dr. McLaughlin eventually put Claimant at maximum medical improvement for her injury on September 2, 2015 and provided with an impairment rating of 16% of the lower extremity. Dr. McLaughlin released Claimant to return to work without restrictions.

5. With regard to her present injury, Claimant was evaluated by nurse practitioner ("NP") Harkreader in Dr. McLaughlin's office on February 1, 2021. NP Harkreader noted Claimant's report of putting her left knee on concrete and bringing her right knee down to kneel when she felt a sharp pain in her right knee. NP Harkreader diagnosed Claimant with right knee infrapatellar bursitis and distal quadriceps strain and referred Claimant for an x-ray of her right knee. The x-rays were performed on February 2, 2021.

6. Claimant testified at hearing that after her left knee injury, she began experiencing pain in her left groin and left hip that she associated with trying to take weight off her right knee. Claimant testified that over the next few weeks, her knee would lick up and she developed swelling behind her right knee which she associated to a Bakers' cyst.

7. Claimant testified she had a prior injury to her right knee which resulted in two knee surgeries. Claimant testified that after being placed at MMI, she would have occasional discomfort, but was otherwise fine. Claimant testified that prior to the January 27, 2021 injury, the last treatment she had for her right knee was in 2015. Claimant testified that prior to the January 27, 2021 injury, she was not having pain, instability, and locking in her right knee. Claimant testified that the pain she is experiencing now in her right knee is different than what she experienced in the 2014 injury.

8. Claimant returned to Dr. McLaughlin on February 10, 2021. Dr. McLaughlin noted Claimant's prior workers' compensation injury to her right knee. Dr. McLaughlin noted Claimant reported doing well for some time following her previous injury. Dr. McLaughlin noted Claimant's complaints of pain and reviewed her x-rays. Dr. McLaughlin reported concerns with regard to joint and joint space narrowing in the medial joint and degenerative joint disease evidenced on the x-rays. Dr. McLaughlin noted Claimant reported problems getting in and out of chairs. On examination, Dr.

McLaughlin noted Claimant had markedly antalgic gait as Claimant did not appear to want to bear weight on her right leg.

9. Dr. McLaughlin diagnosed claimant with a right knee strain and bursitis with a pre-existing right knee injury. Dr. McLaughlin recommended Claimant be seen by an orthopedist and consider injections into the knee. Dr. McLaughlin referred Claimant to Dr. Dorenkamp for chiropractic treatment for her right and left sacroiliac tenderness. Dr. McLaughlin further recommended additional x-rays of the right knee to determine how severe the degenerative joint disease was, including notch views and standing x-rays.

10. Claimant underwent a magnetic resonance image ("MRI") of her right knee on March 16, 2021. The MRI revealed an extensive tear of the body, posterior horn, and posterior root of the medial meniscus which was severely diminutive in caliber. Grade 3 chondral changes in the medial compartment and to a lesser degree, the patellofemoral compartment were also noted.

11. Claimant was examined by Dr. Mitch Copeland on March 29, 2021. Dr. Copeland noted Claimant reported she was kneeling down to get into a safe when her knee twisted wrong. Claimant reported to Dr. Copeland symptoms that included pain, locking, swelling and giving away. Dr. Copeland reviewed Claimant's MRI and performed a physical examination of Claimant. Dr. Copeland diagnosed Claimant with osteoarthritis of the right knee with a tear of the medial meniscus. Dr. Copeland noted that Claimant had sustained a knee injury at work 2 months ago that caused the meniscus tear. Dr. Copeland noted that while the tear was symptomatic, he believed there was too much arthritis to consider a knee arthroscopy. Dr. Copeland opined that the osteoarthritis was the main driver of her pain and noted that a total knee arthroplasty would be her only surgical option.

12. Dr. Copeland provided Claimant with a steroid injection in the right knee and recommended Claimant stop smoking. Dr. Copeland further noted that Claimant was complaining of hip pain which Dr. Copeland noted he believed to be related to her altered gait.

13. Claimant continued to treat with Dr. McLaughlin and was referred to Dr. Kim, an orthopedist with the Steadman Group. Claimant was examined by PA Dvoirkin in Dr. Kim's office on April 28, 2021. PA Dvorkin noted Claimant reported right knee pain that was exacerbated in January at work while she was trying to kneel, when she had a significant sharp pain and noticed moderate to severe swelling afterwards. PA Dvorkin further noted Claimant reported havin progressively worsening right knee pain since an incident while trying to kneel back in January.

14. PA Dvorkin noted Claimant had reportedly quit smoking 1 week earlier. PA Dvorkin ordered x-rays of the right knee. PA Dvorkin diagnosed Claimant with right

knee osteoarthritis. PA Dvorkin recommended a right total knee replacement based on a review of the x-rays and clinical examination.

15. Claimant returned to Dr. McLaughlin on May 5, 2021. Dr. McLaughlin noted that Dr. Kim's office had indicated she would be an excellent candidate for knee replacement surgery. Claimant noted that she did not like hearing from Dr. Copeland that she would need knee replacement surgery when she was evaluated by him, but had come to grips with it. Dr. McLaughlin recommended she return to Dr. Copeland for evaluation and treatment and to get his opinion with regard to knee replacement surgery.

16. Claimant was examined by Dr. Copeland on May 17, 2021. Dr. Copeland again indicated that Claimant's only surgical option would be a total knee replacement.

17. Respondents obtained an independent medical examination ("IME") with Dr. Bernton on June 8, 2021. Dr. Bernton reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton noted Claimant reported that on January 27, 2021, she was in the process of kneeling when she felt a sharp pain in the front of her kneecap. Dr. Bernton diagnosed Claimant was a meniscal tear superimposed on degenerative arthritis of the medial patellofemoral compartments, along with evidence of probable patellar tendinitis. Dr. Bernton noted that Claimant had an upcoming IME with Dr. Ciccone to determine whether the knee condition was work related. Dr. Bernton noted Claimant reported some trapezius pain that developed concurrent with her use of a crutch. Dr. Bernton opined that trigger point injections may be helpful for treating the trapezius strain. Dr. Bernton noted that the transient SI symptoms were related to Claimant's gait abnormalities.

18. Dr. Bernton did not offer and opinion as to whether the knee condition was work related, and deferred to Dr. Ciccone regarding this issue.

19. Claimant underwent an IME with Dr. Ciccone on June 23, 2021. Dr. Ciccone reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Ciccone noted that while she was at work, she was squatting down to open a safe when she had increased pain in her knee. Dr. Ciccone opined that Claimant did not have a fall or twisting event in connection with her knee injury. Dr. Ciccone opined that opined that Claimant did not have a work related injury. Dr. Ciccone noted that while Claimant had more pain in the knee while kneeling, there was no injury. Dr. Ciccone noted that the kneeling could have occurred anywhere and was not specific to work.

20. Claimant returned to Dr. McLaughlin on July 20, 2021. Dr. McLaughlin noted Claimant's ongoing complaints of pain and noted Claimant was off of work. Dr.

McLaughlin issued a not taking Claimant off of work for the period of July 20 through July 27, 2021.

21. Claimant was examined by Dr. Matsumura on August 17, 2021. Dr. Matsumura noted that Claimant had a prior injury in December 2015 resulting in chronic back pain. Dr. Matsumura noted Claimant was referred to her by Dr. McLaughlin for evaluation of chronic pain issues involving her right knee. Dr. Matsumura further noted Claimant's MRI had revealed a torn meniscus. Dr. Matsumura noted that Dr. Copeland and Dr. Kim had recommended a total knee arthroplasty, which she agreed with. Dr. Matsumura recommended a Flector patch and instructed Claimant to follow up in three to four weeks.

22. Dr. McLaughlin testified by deposition in this matter. Dr. McLaughlin testified that PA Harkreader noted swelling over Claimant's distal quadriceps just over her right patella. Dr. McLaughlin testified that swelling could be considered objective evidence of an acute injury. Dr. McLaughlin testified as to his recollection of the Claimant's report of injury, notably that she was getting into a squatting position getting ready to put one knee down, when she felt pain in her knee. Dr. McLaughlin opined in his deposition that Claimant's reported knee pain was caused by Claimant getting into the squatting position which she described.

23. Dr. Ciccone testified by deposition in this matter consistent with his IME report. Dr. Ciccone testified that Claimant had a pre-existing condition in her knee which included the two prior knee surgeries and osteoarthritis. Dr. Ciccone opined that Claimant did not have an injury on January 27, 2021 because she was just performing normal activity. Dr. Ciccone testified that Claimant could have been doing that activity either inside or outside of work and there was nothing work specific about the activity. Dr. Ciccone noted that Claimant had degenerative changes in her knee and did not report a falling or twisting event. Dr. Ciccone opined that he did not believe Claimant's mechanism of injury (kneeling) was sufficient to cause any injury.

24. The ALJ credits Claimant's testimony at hearing along with the opinions expressed by Dr. McLaughlin in his reports and his testimony and finds that Claimant has established that it is more probable than not that Claimant sustained a compensable work related injury to her right knee on January 27, 2021 when she was kneeling down to get into the safe and experienced sharp pain in her right knee.

25. The ALJ notes that while Claimant had a history of prior knee injuries, there is a lack of credible evidence that Claimant was experiencing issues with her right knee after being placed at MMI in September 2015. The ALJ credits Claimant's testimony that the only symptoms she experienced after being placed at MMI in September 2015 was occasional discomfort as being credible and persuasive. The ALJ therefore finds that Claimant has demonstrated that it is more probable than not that the kneeling at work to get into the safe on January 27, 2021 aggravated, accelerated or

combined with Claimant's pre-existing condition to cause the need for medical treatment. Moreover, the ALJ credits the testimony of Dr. McLaughlin that the swelling that was noted by NP Harkreader on February 1, 2021 was objective evidence of an acute injury, and therefore, related to the kneeling incident at work on January 27, 2021.

26. Moreover, the MRI in this case revealed a torn medial meniscus which is consistent with Claimant's complaints of pain and swelling following the kneeling incident. The ALJ therefore finds that Claimant has established that it is more likely than not that the kneeling incident in this case aggravated, accelerated or combined with Claimant's pre-existing condition to cause the need for medical treatment, and is therefore, a compensable work injury.

27. The ALJ credits the opinions expressed by Dr. Copeland along with the reports of Dr. Bernton and finds that the medical treatment for Claimant's back, hip and trapezius are related to her compensable January 27, 2021 work injury.

28. The ALJ credits the medical records entered into evidence along with the opinions expressed by Dr. McLaughlin and Dr. Copeland and finds that the medical treatment in this case rendered by Dr. McLaughlin, Dr. Copeland, Dr. Matsumara Dr. Dorenkamp, and the Steadman Group has been reasonable and necessary to cure and relieve Claimant from the effects of her industrial injury.

29. Claimant testified at hearing that she missed some time from work during the summer of 2021. Claimant argues in her position statement that she should be entitled to temporary disability ("TTD") benefits for the period of July 20 through July 27, 2021. The wage records entered into evidence show Claimant did not receive a paycheck for one week, as the paycheck for August 6, 2021 is missing. This corresponds with Dr. McLaughlin's July 20, 2021 report which took Claimant off of work for one week.

30. The ALJ credits the testimony of Claimant at hearing along with the wage records entered into evidence and the medical records from Dr. McLaughlin and finds that Claimant has proven that it is more likely than not that she is entitled to TTD benefits for the period of July 20 through July 27, 2021.

31. At the time of Claimant's injury, Claimant was receiving weekly paychecks in the amount of $1,019.63. Additionally, according to the wage records, in the year prior to Claimant's injury, she earned $5,000 in bonuses. The ALJ credits Claimant's testimony at hearing along with the wage records entered into evidence and finds that the financial bonuses Claimant received were regularly provided to Claimant on a consistent basis and should be included in the calculation of her AWW.

32. The ALJ therefore determines that Claimant's average weekly wage should include the bonuses, averaged out over the prior year, ($5,000 divided by 52 =

$96.15). Therefore, the ALJ calculates Claimant's AWW to be $1,115.78 ($1,019.63 + $96.15 = $1,115.78).

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2020. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra*.

4. As found, Claimant has established that it is more probable than not that her injury arose out of and in the course and scope of her employment with employer. As found, Claimant has established by a preponderance of the evidence that she sustained an injury to her right knee on January 27, 2021 when she was kneeling down to get into the safe and experienced pain and swelling in her right knee, which resulted in the need for medical treatment.

5. The ALJ recognizes that Respondents argue that the knee injury could have happened at any time based on Claimant having degenerative joint disease in her knee. However, the fact that Claimant had a prior injury or pre-existing condition does not negate the fact that a compensable injury occurs if the injury aggravates, accelerates or combines with the preexisting disease or infirmity to produce disability or the need for treatment. In this case, the ALJ finds that the kneeling at work combined with Claimant's preexisting condition to cause the need for medical treatment, including the treatment for the torn meniscus, resulting in the recommended total knee replacement.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

7. As found, Claimant has proven by a preponderance of the evidence that treatment provided by Dr. McLaughlin, Dr. Copeland, Dr. Matsumura, Dr. Dorenkamp and the Steadman Clinic along with the recommended total knee replacement is reasonable medical treatment necessary cure and relieve the Claimant from the effects of the industrial injury.

8. As found, the medical records from Dr. McLaughlin, Dr. Copeland and the Steadman Clinic, along with the testimony of Claimant and Dr. McLaughlin at hearing are found to be credible and persuasive with regard to this issue. Additionally, the ALJ credits the opinions expressed by Dr. Bernton in his IME report with regard to the treatment provided to Claimant for her hip, back and trapezius pain and finds that Claimant has established by a preponderance of the evidence that this medical treatment is reasonable and necessary to cure and relieve Claimant from the effects of her industrial injury.

9. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.* The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume

his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

10. As found, claimant has proven by a preponderance of the evidence that his injury resulted in work restrictions set forth by Dr. McLaughlin that took Claimant off of work completely between July 20, 2021 and July 27, 2021, resulting in a wage loss to Claimant as evidenced by the wage records entered into evidence. As found, claimant has established that he is entitled to TTD benefits for the period of July 20, 2021 through July 27, 2021.

11. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

12. As found, Claimant was earning weekly wages in the amount of $1,019.63 at the time of the injury. As found, Claimant had earned bonuses in the previous year of $5,000, which the ALJ finds were regularly received by Claimant and should be included in calculating Claimant's AWW. As found, Claimant's AWW at the time of the injury is determined to be $1,115.78.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of her industrial injury including the treatment from Dr. McLaughlin, Dr. Copeland, Dr. Matsumura, and Dr. Dorenkamp, pursuant to the Colorado Medical Fee Schedule.

2. Respondents shall pay Claimant TTD benefits based on an AWW of $1,115.78 for the period of July 20, 2021 through July 27, 2021 pursuant to Section 8-42-105, C.R.S.

3. All matters not determined herein are reserved for future determination

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: April 6, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that this claim should be reopened pursuant to Section 8-43-303, C.R.S., due to fraud.

If the claim is reopened, whether the respondents have demonstrated, by a preponderance of the evidence, that they are entitled to recover benefits paid to the claimant in the amount of $16,364.90.

FINDINGS OF FACT

1. On June 4, 2019, the claimant suffered a work injury while employed with the employer. The body parts injured at that time included the claimant's neck and back.

2. On July 8, 2019, the respondents filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits. The claimant's TT□ benefits were paid at a rate of $558.80 per week.

3. The claimant's authorized treating physician (ATP) for this claim has been Dr. Larry Kipe. Beginning on June 20, 2019, Dr. Kipe restricted the claimant from all work.

4. On August 20, 2019, the claimant was seen by Dr. Kipe. At that time, the claimant reported that he had not returned to work and "does not feel he can work." The claimant also reported constant neck pain, paresthesia down his arms, and pain in his lumbar spine. Based upon the statements made by the claimant on that date, Dr. Kipe continued to restrict the claimant from all work.

5. On August 21, 2019, the claimant attended a Department of Transportation (DOT) medical examination for purposes of obtaining a commercial driver's license (CDL) medical certificate. The medical examination was performed by Noel K. McKey, DC.

6. In preparation for the DOT examination, the claimant completed a Medical Examination Report Form. In that form, the claimant reported that he had no neck or back problems. The claimant also reported no bone, muscle, joint, or nerve problems. On exam, Dr. McKey noted that the claimant's back and spine were normal. The claimant was cleared to receive a two year medical certificate.

7. On December 4, 2019, the claimant returned to Dr. Kipe. At that time, the claimant reported problems with pain and an inability "to get around". Dr. Kipe continued to restrict the claimant from all work. On that same date, Dr. Kipe authored a letter in which he stated that the claimant should remain off of work "indefinitely".

8. On January 30, 2020, Dr. Kipe issued a report in which he determined that the claimant reached maximum medical improvement **(MMI)** on January 28, 2020. Dr. Kipe also noted that the claimant could return to full duty work, with no permanent impairment.

9. Based upon Dr. Kipe's January 30, 2020 report, on January 31, 2020, the respondents filed a Final Admission of Liability (FAL). The FAL was amended on February 12, 2020 to accurately reflect the amount of TTD paid to the claimant.

10. Dr. Kipe testified that each time he restricted the claimant from all work he did so based upon the claimant's subjective reports that he could not work. Dr. Kipe testified that he relied upon the statements made by the claimant in determining whether the claimant had any work restrictions. Upon learning of the August 21, 2019 DPT examination and the statements made by the claimant as part of that examination, Dr. Kipe determined that the claimant had reached MMI, was released to full duty, with no permanent impairment.

11. MV[Redacted], Senior Resolution Manager with the insurer was the individual that filed the FALs in January and February 2020. Ms. MV[Redacted] testified that the claimant's TTD benefits were terminated on January 28, 2020 because the claimant had reached MMI with no permanent impairment rating.

12. Ms. MV[Redacted] also testified that between August 20, 2019 and January 28, 2020, the respondents paid the claimant $16,364.90 in TTD benefits.

13. The ALJ credits the medical records, the DOT examination records, and the testimony of both Dr. Kipe and Ms. MV[Redacted] . The ALJ finds that it is more likely than not that the claimant intentionally misled Dr. Kipe regarding his inability to work. This is evidenced by the contradictory information he provided Or. McKay on August 21, 2019. The ALJ finds that the claimant was kept off of work by Dr. Kipe because of the claimant's subjective report that he could not work. However, it is clear that the claimant was capable of working as evidenced by his report to Dr. McKey.

14. Based upon the evidence and testimony presented, the ALJ finds that the claimant did engage in fraud in this matter. In reaching this determination, the ALJ finds the following. 1) The claimant's claim that he could not work was a false representation of a material fact. 2) The claimant knew that he was not providing Dr. Kipe with accurate information when he continued to report he was unable to work. 3) Dr. Kipe relied upon the claimant's false representations. 4) The claimant knew that Dr. Kipe would continue to restrict him from all work based upon his false representations. 5) The respondents relied upon the reports of Dr. Kipe and continued to pay TTD benefits to the claimant,

resulting in damage to the respondents. The ALJ infers that the claimant also knew that his false representations would result in continued TTD payments.

15. The ALJ also finds that the respondents have successfully demonstrated that they are entitled to recover amounts paid to the claimant between August 20, 2019 and January 28, 2020. The ALJ finds that the amount overpaid as a result of the claimant's misrepresentations to Dr. Kipe totals $16,364.90.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, *C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. **App.** 2000).

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1,* 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos,* 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers,* W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim.

Berg v. Industrial Claim Appeals Office, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission,* 646 P.2d 399 (Colo. 1981).

5. In the present case, the respondents seek to reopen the claim on the basis of fraud. The elements of fraud or material misrepresentation are well-established in Colorado law. The elements are: (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; (5) Action based on the representation or concealment resulting in damage. *Arczynski v. Club Mediterranee of Colorado, Inc.,* W.C. No. 4-156-147 (ICAO, Dec. 15, 2005), *citing Morrison v. Goodspeed,* 68 P.2d 458, 462 (Colo. 1937). "Where the evidence is subject to more than one interpretation, the existence of fraud is a factual issue for resolution by the ALJ." *Arczynski, supra*

6. The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.,* W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

7. As found, the respondents have successfully demonstrated, by a preponderance of the evidence, that the claim should be reopened pursuant to Section 8-43-303, C.R.S. on the basis of fraud. The elements of fraud identified above are found to exist in the present matter. Specifically:

- The claimant's claim to Dr. Kipe on August 20, 2019 that he could not work was a false representation of a material fact.
- The claimant knew that he was not providing Dr. Kipe with accurate information when he reported he was unable to work.
- Dr. Kipe relied upon the claimant's false representations.
- The claimant knew that Dr. Kipe would continue to restrict him from all work based upon his false representations.
- The respondents relied upon the reports of Dr. Kipe and continued to pay TTD benefits to the claimant, resulting in damage to the respondents.

8. As found, the respondents are entitled to recover $16,364.90 from the claimant for benefits paid to him between August 20, 2019 and January 28, 2020.

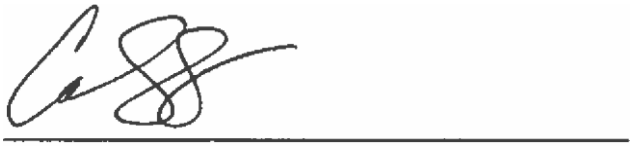
ORDER

It is therefore ordered:

1. The claim is reopened pursuant to Section 8-43-303, C.R.S. on the basis of fraud.

2. The respondents are entitled to recover $16,364.90 from the claimant for benefits paid to him between August 20, 2019 and January 28, 2020.

Dated this 7th day of April 2022.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained a compensable electric shock injury to her left upper extremity on July 21, 2021.

II. If Claimant established that she suffered a compensable injury, whether she also established that a sonographic analysis of the left upper extremity recommended by Dr. Scott Primack is reasonable, necessary and related to her July 21, 2021 injury.

III. If Claimant established that she sustained a compensable injury, whether she also established that the right to select the authorized provider to attend to her injury passed to her.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background and Claimant's Testimony

1. Claimant is employed as a cashier. (Transcript "Tr." p, 13:10-13). She testified that while working the drive through window on July 21, 2021, she placed her left hand on the corner of a metal table near the leg that ran to the ground and felt an electrical shock to her hand that travelled through her arm and up into her neck. (Tr. p, 13:21-25; p, 14:1-4; p. 17:1-6). She testified that an electronic register with an attached computer and a credit card machine were plugged in on top of the metal table. (Tr. p, 17:1-16). She testified that there was water on the floor nearby the table. (Tr. p, 17:23-25; 18:1-6). The July 21, 2021, incident was the second time Claimant claimed to have been shocked while working the drive through window. The first shock occurred July 7, 2021. (Rs' Ex. C, p. 20). Claimant did not seek treatment following her first electric shock.

2. Claimant lifted her left hand from the table and began screaming and waiving her left arm as if to shake the electricity out. (Tr. p, 14:1-9). Her supervisor was notified and an accident report was completed. *Id*. She rated the immediate pain to her left arm at 9/10. (Tr. p, 14:9-19; p, 15:14-24). She described the triceps of the left arm as feeling weak, sore, and heavy, with a display of blotchy redness and swelling appearing within an hour of being shocked. (Tr. p, 21:5-25).

3. Claimant testified that her current symptoms include a jabbing feeling in the palm of her left hand, a prickly feeling in her fingertips, and weakness, heaviness

and soreness in her left biceps and triceps. (Tr. p, 23:14-19). Claimant testified that there are times when she does not feel pain, but when she does experience pain, it is different every day. (Tr. p, 23:20-25). According to Claimant, her pain comes and goes as it "pleases". Sometimes its pain that she can deal with" and sometimes it is so unbearable that she just wants to cry. *Id.*

4. Claimant testified that her skin was dry at the time she was shocked. (Tr. p, 20:6-10).

5. In addition to her work at [Employer Redacted], Claimant owns and operates a cleaning business. Despite her alleged electric shock and persistent symptoms, Claimant testified that she has been able to continue her cleaning jobs without income loss. (Tr. p, 24:9-14). Moreover, she did not lose any time from [Employer Redacted]. (Tr. p, 26:21-23).

Claimant's Treatment at Concentra Medical Centers

6. On July 23, 2021, Claimant presented to her authorized treating physician, Dr. Bradley at Concentra Medical Centers.[1] (Rs' Ex. C, p. 8). She reported numbness, burning, and weakness to her left arm. *Id*. at 20. Claimant advised Dr. Bradley that her first shock on July 7, 2021 caused some "chest pain [and] heart racing [for] 4-5 days. *Id*. at p. 20. On physical exam, it was noted that the left arm was puffy and red, with mild tenderness in the dorsal aspect of the upper arm. *Id*. at 21. She displayed full range of motion, normal strength, normal sensation, no muscle weakness, and no muscle atrophy. *Id*. An EKG was normal. *Id*. at 12. Dr. Bradley assessed a work-related electrical shock to the left upper extremity. *Id*. at 12. Claimant was prescribed diclofenac sodium, methocarbamol, and naproxen, and kept at full duty with the limitation of wearing rubber gloves while working. *Id*. at 23.

7. On July 26, 2021, Claimant returned to Concentra and was evaluated by Nurse Practitioner (NP) Jennifer Livingston. (Rs' Ex. C, p. 24). She reported no improvement to her left arm and described a shaky feeling, soreness, and weakness. *Id*. at p. 27. Claimant reported not having "full control" over her left arm, complaining that she was "unable to fix her own hair" and had difficulty "shampooing her hair and bathing/dressing due to weakness and pain in [the] arm". *Id*. She reported persistent redness and swelling in the left arm. *Id*. Physical examination revealed mild erythema and swelling of the upper and lower (forearm) portions of the left arm but no weakness. *Id*. Sensation was intact for light touch in all dermatomes tested. *Id*. at p. 28. The remainder of the upper extremity examination was normal, as was examination of the neck and chest. *Id*. The medications prescribed by Dr. Bradley were reportedly helping and no further medications were prescribed. *Id*. at p. 29. Referrals were made to Dr. Scott Primack for an EMG, diagnostics, and physical therapy. *Id*. While the history and mechanism of injury (MOI) were obtained directly from Claimant, NP Livingston opined that the relationship between the MOI and the presenting symptoms could not be

[1] Claimant testified that she chose to go to Concentra on July 23, 2021. (Tr. p, 27:2-4).

determined. *Id*. at 30. NP Livingston concluded by indicating that Claimant's objective clinical findings were not consistent with Claimant's history and/or a work related mechanism of injury/illness. *Id*.

8. On July 28, 2021, Claimant underwent her first physical therapy session. (Rs' Ex. C, p. 31). During this encounter, Claimant reported, "shooting" pain in her left shoulder. *Id*. at p. 33. According to Claimant's report, her symptoms, including radiating pain and tingling would occur intermittently. *Id*. Claimant's symptoms were reportedly aggravated by movement and alleviated by rest. *Id*. Claimant exhibited no significant findings on palpation and observation, normal range of motion, normal muscle tone, and negative upper limb tension testing to the median, ulnar and radial nerves. *Id*. at 34. No objective musculoskeletal pathology was identified. (Rs' Ex. C, p. 31; Rs' Ex. E, p. 102). She was discharged that same day. *Id*.

9. On August 3, 2021, Claimant returned to Concentra and was evaluated by NP Livingston. (Rs' Ex. C, p. 38). Claimant reported that she was "kinda ok, kinda not". *Id.* She described persistent sensory symptoms in left arm, noting she woke up one morning with hard, heavy and weird tingling in the left arm. *Id*. According to Claimant, when she raised her arms away from her sides in the shape of a "T", an electrical sensation ran from arm to the other and back. She reported that she was still cleaning homes and one of her clients, who is a physical therapist, told her that her symptoms were emanating from her median nerve. NP Livingston explained that the majority of Claimant's symptoms were in the area of the ulnar nerve rather than the median nerve. *Id*. NP Livingston reiterated her opinion that the objective findings on exam in inconsistent with Claimant's history and/or a work related MOI. *Id*. at 41.

10. On August 20, 2021, Claimant returned to Concentra and was evaluated by Dr. Bradley. (Rs' Ex. C, p. 42). Dr. Bradley opined that the objective findings were not consistent with a work-related mechanism of injury. *Id*.

11. On August 23, 2021, Respondents filed a Notice of Contest, citing the need for further investigation into causation and the extent of the alleged injury. (Rs' Ex. B, p. 5).

12. On September 1, 2021, Claimant presented to Dr. Primack for an EMG. (Rs' Ex. D, p. 90). The evaluation of the left median motor nerve was within normal limits; however, the rest of the study was not completed secondary to Claimant's inability to tolerate even the lowest of electrical stimulation. *Id*. NP Livingston spoke with Dr. Primack following Claimant's EMG during which Dr. Primack informed her that with the first level of testing, Claimant was screaming, crying, and cursing. (Rs' Ex. C, p. 45). Consequently, Dr. Primack suggested that Claimant undergo a neuro-musculoskeletal ultrasound with emphasis on the median and ulnar nerves. *Id*., see also, Rs' Ex. D, p. 90.

13. On September 9, 2021, Claimant returned to Concentra and was evaluated by NP Livingston. (Rs' Ex. C, p. 56). She reported tingling in her left arm

down to her hand, which travelled to her right hand, and stabbing pain in the thoracic back area around the scapula. *Id*. She was assessed for situational mixed anxiety and depressive order. *Id*. at 58.

14. On September 23, 2021, Claimant returned to Concentra and was evaluated by Dr. Bradley. (Rs' Ex. C, p. 63). On physical exam, Claimant's left arm appeared normal with no tenderness, no muscle weakness, no atrophy, and no deformity. *Id*. at 69. Dr. Bradley noted that further treatment was not approved as the claim had been denied on August 23, 2021. *Id.* at p. 70. Dr. Bradley concluded that the objective findings were not consistent with a work-related mechanism of injury. *Id*. at 71. Although he did not indicate that Claimant was at maximum medical improvement (MMI), Dr. Bradley opined that Claimant did not require maintenance care, and had no permanent impairment. *Id*.

15. Dr. Bradley placed Claimant at MMI on September 30, 2021 without permanent impairment and without maintenance medical treatment needs. (Rs' Ex. C, p. 73).

Claimant's Independent Medical Examination (IME) with Dr. Burris

16. On December 14, 2021, Claimant presented to Dr. John Burris for a Respondent requested IME. (Rs' Ex. E, p. 93). She reported 5-6/10 pain, in a "circumferential glove-type distribution" throughout her left arm from the upper arm distally into all digits. *Id*. at 94. She reported an internal shaking sensation and a feeling as if her left hand was not part of her body. *Id*. She described jabbing/twisting pain and noted that while she is occasionally pain free, she experiences sharp, achy, shooting, burning, stabbing, tight, and pins and needles pain. *Id*. At times, the pain feels like hot water running over a cold hand. *Id*. She was unable to identify any alleviating factors and noted that her pain is worse with activity. *Id*.

17. According to Dr. Burris, Claimant demonstrated an extreme somatic focus during her IME. (Rs' Ex. E, p. 99). He described that she held her left arm in front of her body with the hand in a guarded claw-like position, but inconsistent with that posture repetitively the hand without difficulty to adjust her facemask. She was emotional and tearful throughout the examination. *Id.* When asked to make a fist with her left hand, Claimant balled the hand into a normal appearing loose fist and then began crying hysterically, stating that she could not make a fist. Physical examination of the cervical spine and left upper extremity were benign.

18. Follow his records review and physical examination, Dr. Burris opined that Claimant's pain complaints did not "follow a dermatomal pattern and [were] out of proportion to her examination which [was] benign with no objective findings". (Rs' Ex. E, p. 100). He explained that a "sudden exposure to an electrical current of significance usually results in direct tissue necrosis (i.e. skin burn or lesion) at the sites where the current enters and leaves the body". *Id.* Noting that Claimant's physical examinations had not exhibited objective signs consistent with significant electrical injury, i.e. burns or

abnormal EKG, Dr. Burris questioned whether an actual exposure to electrical current took place. *Id*. at p. 100-101. Assuming that Claimant had been shocked as she described, Dr. Burris concluded that the electrical exposure was "very minor" and did not result in "identifiable physical pathology. *Id*. at p. 101. Giving Claimant the benefit of the doubt that an exposure to an electrical current occurred, Dr. Burris testified that her original complaints could have been related to that exposure. *Id.* Nonetheless, Dr. Burris opined that her persistent symptoms more than five months after the reported incident and without evidence of physical pathology were likely unrelated to the July 21, 2021 incident and were probably psychosocial in nature. *Id*.

19. Dr. Burris opined that Claimant had reached MMI for the workplace event without impairment. (Rs' Ex. E, p. 102). Noting that a psychiatric referral had been made for "situational mixed anxiety and depressive disorder", Dr. Burris recommended 6-8 claim related maintenance psychological sessions to include cognitive behavioral therapy and (sic) assist with pain coping strategies. *Id*. at. P. 103.

Dr. Burris' Testimony

20. As noted, Dr. Burris testified at hearing. He was qualified as a Board Certified expert in Occupational Medicine. Dr. Burris testified that he has had experience in treating electrical energy injuries. (Tr. p, 30:15-19). In injuries associated with electrical energy, physical contact with an energized electrical circuit provides a pathway for electricity to traverse the body as it seeks ground. (Rs' Ex. E, p. 100). Factors influencing the severity of electrical injury include the voltage, amperage, current type, duration of contact, area of contact, pathway of the current through the body, and amount of tissue resistance. *Id*. Depending on the contact site and the pathway, the flow of electricity can cause damage to nerves, muscles, or major organs such as the heart, brain, eyes, kidneys, or gastrointestinal track. (Tr. p, 34:23-25; 35:1-7). Because exposure to an electric current of significance usually results in direct tissue necrosis (skin burn or lesion) at the sites where the current enters and leaves the body, (Rs' Ex. E, p. 100) a search must be made for both an entry and exit wound on the skin to determine the electrical pathway through the body. *Id*. Moreover, Dr. Burris testified that it is standard medical practice for patients sustaining any type of electrical exposure have an immediate EKG to assess damage to the heart. (Tr. p, 34:23-25; 35:1-7).

21. Dr. Burris testified that most tissue damage is related to the heat produced by the electric current and tissue resistance, which is largely influenced by the water content of the tissue. (Tr. p, 54:1-25). Dry skin is more resistant to electrical current, so the energy is dissipated at the skin resulting in skin burns. (Cl's Ex. 1, p. 4). The more resistant the skin, the less damage to internal structures of the body. *Id*.

22. Dr. Burris testified that the arm possesses three nerves that travel distally into the forearm and hand – the median, ulnar, and radial. (Tr. p, 32:13-25). The median nerve goes through the carpal tunnel and supplies sensation to the palm of the hand and the thumb, index and middle fingers. *Id*. The ulnar nerve has a similar tunnel at the elbow and supplies sensation to the little and ring fingers and the palmar side of the

hand. *Id*. The radial nerve supplies sensation to the backside of the hand. (Tr. p, 33:1-2). These nerves also innervate the muscles of the arm, and if there is a disconnect, such that the muscle is not getting the appropriate signal from the nerve, the muscle will waste away (atrophy). (Tr. p, 33:5-12). Dr. Burris testified that Claimant had no sign of atrophy and had normal muscle bulk and tone; normal reflexes, normal nerve function, and normal strength, signifying that her nerve and muscle function are intact. (Tr. p, 33:3-17).

23. Dr. Burris reiterated his opinion that because Claimant's treating providers did not document tissue pathology, the EKG was normal, and there were no entry or exit wounds, any exposure she had to an electric current would have been relatively mild. (Tr. p, 35:1-7; 40:4-22). Consistent with this opinion, Dr. Burris testified that if Claimant had experienced a significant exposure to electrical current resulting in tissue damage her pain would be relentless. (Tr. p, 48:22-25; 49:1-4). According to Dr. Burris, Claimant's description of waxing and waning symptoms and periods of being completely pain free supported a conclusion that a "psychological process" was contributing to her symptom complex. *Id.*

24. Dr. Burris testified that he disagrees with Dr. Primack's recommendation for a diagnostic ultrasound because Claimant's physical and neurologic examinations are normal. (Tr. p, 35:8-20). The purpose of the ultrasound would be to determine whether there is excessive inflammation around the nerves at the tunnels they traverse as they come out through the extremity. *Id*. In testing the median nerve as part of the EMG, Dr. Primack completed initial motor testing of the nerve. (Tr. p, 34:5-10). The testing revealed that the median nerve was normal. *Id*. As for the radial and ulnar nerves, Claimant's sensory and motor nerve testing revealed normal results suggesting that the radial and ulnar nerves are functioning normally. *Id*. Thus, there is no indication that an ultrasound is reasonable or necessary. *Id*.

25. Dr. Burris testified that, had Claimant been exposed to electrical energy, it is possible that it would have irritated the tissue and caused some redness and swelling as the body's natural response. (Tr. p, 38: 5-15). However, because the swelling and redness dissipated and was no longer documented after the first week post exposure, Dr. Burris testified that it could be inferred that it resolved. (Tr. p, 56:1-3).

26. Assuming that the statements contained in Claimant's Exhibit 1 come from a reputable source, Dr. Burris testified that he had no reason to question the material and actually agreed with much of the content read into the record from Claimant's Exhibit 1. (Tr. pp, 51-55).

27. As presented, the evidence, including the testimony of Dr. Burris, persuades the ALJ that Claimant sought treatment as a direct result of the pain, numbness, tingling, redness and puffiness (swelling) in her left arm after being exposed to electrical current on July 21, 2021. Accordingly, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury. While the evidence presented supports a finding that Claimant's left upper extremity

injury is compensable, the ALJ is convinced that Claimant's electrical exposure was relatively minor and probably did not cause the necessary tissue damage to explain her ongoing symptoms. Indeed, the evidence presented supports a finding that Claimant has normal muscle bulk, normal reflexes, normal sensation and normal strength in the left upper extremity. This suggests strongly that both the sensory and motor components of the nerves innervating the left arm are intact. When combined with the intermittent nature of Claimant's symptoms, the lack of abnormal examination findings supports a conclusion that psychosocial factors are playing a role in her persistent symptoms.

28. Based upon the evidence presented, the ALJ finds that Claimant has failed to establish that the recommended sonogram is reasonable or necessary. In finding that Claimant has failed to establish that the recommended sonogram is reasonable or necessary, the ALJ credits the testimony of Dr. Burris to find that Claimant's sustained symptoms are, more probably than not, related to her extreme somatic focus and psychosocial factors.

29. Based upon the evidence presented, the ALJ finds that the right to choose the physician to attend to the injuries in this case passed to Claimant. Moreover, the ALJ is persuaded that Claimant exercised her choice in medical providers by electing to attend medical appointments at Concentra Medical Centers with Dr. Bradley, NP Livingston and their referrals.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove his entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. In deciding whether Claimant has met her burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). In this case, the ALJ rejects the suggestion that Claimant was not exposed to an electric current prompting her to seek treatment on July 23, 2021. While Dr. Burris questioned whether Claimant was actually exposed, no persuasive evidence was produced tending to establish that Claimant fabricated the MOI in this case. Moreover, Dr. Bradly's physical examination performed on July 23, 2021 demonstrated objective signs of injury including puffiness and redness on the left arm. Nonetheless, the testimony of Dr. Burris and Claimant's subsequent examinations, which fail to document objective findings consistent with tissue damage/pathology, support a conclusion that Claimant's electric shock was relatively minor and not the cause of her persistent symptoms. As found, the ALJ credits the testimony and opinions of Dr. Burris to conclude that Claimant's ongoing symptoms are likely being driven by an extreme somatic focus and psychosocial factors.

C. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. A "compensable injury" is one that requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements before an alleged injury will be determined to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo.

1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, there is little doubt that Claimant's alleged injuries occurred during the time and place limits of her relationship with Employer and during an activity connected to her job-related functions, namely filling fast food orders at a drive through window. Accordingly, the ALJ concludes that Claimant has proven that she was in the course and scope of her employment at the time she was exposed to an electrical current causing pain, swelling and redness in the left upper extremity. While the evidence supports a conclusion that Claimant was in the course and scope of her employment, the remaining question is whether Claimant's injuries arose out of her work duties.

F. The term "arises out of refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando, supra; Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). Colorado courts have repeatedly emphasized that the determination of whether alleged injuries arose out of and in the course of an employment relationship is largely dependent upon the facts surrounding the injury in question. *Bennet v. Furr's Cafeterias, Inc.*, 549 F. Supp. 887 (D. Colo. 1982).

G. As found here, the content of the July 23, 2021 examination of Dr. Bradly supports a conclusion that Claimant had puffiness and redness in the proximal aspect of the left arm following her complaint of being exposed to electric current after touching an energized metal table while working to fill fast food orders at the drive through window at work. While it is unclear how the table became energized, Dr. Bradly's July 23, 2021, physical examination documents objective findings (redness and swelling) consistent with an electrical exposure. Based upon the evidence presented, the ALJ concludes that this MOI probably caused Claimant's initial subjective complaints of pain, weakness, tingling and cardiac symptoms (racing heart), which in turn prompted her to seek treatment on July 23, 2021. Dr. Burris could not think of a more likely explanation for Claimant's symptoms than the electrical shock. Moreover, when asked about the cause of the swelling and redness seen on July 26, 2021, Dr. Burris could not think of anything else besides the electrical shock that could have caused those objective findings. The evidence presented supports a conclusion that Claimant has established a sufficient "nexus" or causal relationship between her employment and the electric shock giving rise to her need for treatment.[2] Accordingly, the injury is compensable.

[2] Whether Claimant established the requisite causal connection between her work and her injuries is one of fact, which the ALJ must determine based on the totality of the circumstances. *In Re Question*

Medical Benefits

H. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970);* § 8-41-301(1)(c), *C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

I. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, the evidence demonstrates that Claimant's physical examinations after July 26, 2021 were essentially normal and without objective findings consistent with pathology/injury. Despite the lack of any objective medical finding to explain her persistent symptoms, Claimant continued to report "weird" paresthesias and shooting pains in the left arm. During her IME with Dr. Burris, she complained of pain in a "circumferential glove-type distribution" throughout her left arm from the upper arm distally into all digits. She reported an internal shaking sensation and a feeling as if her left hand was not part of her body and described jabbing/twisting pain in the left arm. Her extreme somatic focus in the absence of any objective evidence of muscle or nerve damage led Dr. Burris to raise concern that psychosocial factors were driving her ongoing symptoms. Regarding the recommendation for sonographic analysis, the ALJ credits the testimony of Dr. Burris to conclude that Claimant's nerve function is, more probably than not, normal and there is an absence of objective pathology to support further diagnostic testing. Accordingly, the Claimant has failed to establish that the ultrasound recommended by Dr. Primack is reasonable or necessary.

Submitted by the United States Court of Appeals, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

Right of Selection

J. Under § 8-43-404(5)(a)(I)(A), the employer or insurer has the right in the first instance to designate the authorized provider to treat a claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). The statute requires the employer or insurer to "provide a list of at least four physicians . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list . . .” In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician . . . at the time of injury" gives the employee "the right to select a physician or chiropractor."

K. An employer /insurer’s duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (ICAO, September 6, 2011). In this case, the evidence presented persuades the ALJ that Claimant reported her injury to Respondent-Employer the same day it occurred. The ALJ is also convinced that, Respondent took no action to designate a provider to attend to Claimant’s injuries following that report. Accordingly, the ALJ concludes that the initial right to select a provider to treat Claimant’s injuries passed to her. Based upon the evidence presented, including Claimant’s testimony that she “chose” to attend medical appointments at Concentra Medical Centers, the ALJ concludes that Claimant exercised her right of selection by choosing to treat with Dr. Bradly and NP Livingston. Indeed, the evidence presented supports a conclusion that Claimant attend multiple appointments at Concentra through September 23, 2021 when Dr. Bradley placed Claimant at MMI. Based upon Claimant’s designation, the authorized provider(s) in this case include Dr. Bradley, NP Livingston and their referrals, including Dr. Primack.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that she suffered a compensable left upper extremity injury on July 21, 2021.

2. Claimant's request for additional medical treatment in the form of diagnostic sonographic analysis is denied and dismissed as she failed to prove, by a preponderance of the evidwence, that such testing is reasonable or necessary.

3. Dr. Bradley, NP Livingston and their referrals, including Dr. Primack comprise the authorized providers in this case. Respondents are liable for Claimant's treatment with Concentra Medical Centers and Dr. Primack's offices though September 23, 2021 when Claimant was placed at MMI by Dr. Bradley.

4. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-181-279-001

ISSUES

1. Whether Claimant the right knee injury Claimant sustained on August 8, 2021 arose out of his employment with Employer, and is therefore compensable.

PROCEDURAL MATTERS

Claimant objected to Dr. Lesnak's deposition testimony on the ground that Dr. Lesnak provided opinions not disclosed in his report as required by C.R.C.P. 26(a)(2). However, the disclosure provisions of C.R.C.P. 26 are not applicable in workers' compensation cases. *See Wilkinson v. Colowyo Coal Co.*, W.C. No. 4-723-603 (ICAO Aug. 28, 2009); *Kelly v. Kaiser-Hill Co. LLC*, W.C. 4-332-063 (ICAO Aug. 11, 2000); *Bullock v. Continental Serv.*, W.C. No. 4-810-664 (ICAO Feb. 8, 2011). Accordingly, Claimant's objection is overruled.

STIPULATIONS

At hearing, the parties stipulated to the following, which were accepted by the ALJ:

1. If Claimant's injury is deemed compensable, Respondent is liable for reasonable and necessary medical treatment provided by Claimant's authorized treating physicians.

2. If Claimant's injury is found compensable, Respondent is liable for temporary partial disability benefits from August 8, 2021 to September 16, 2021.

3. If Claimant's injury is found compensable, Respondent is liable for temporary total disability benefits September 17, 2021 until November 19, 2021.

4. Claimant's average weekly wage is $812.82. (Claimant reserves the right to seek an increase in average weekly wage in the future if applicable).

FINDINGS OF FACT

1. Claimant has been employed by Employer for approximately two years. On August 8, 2021, while performing his job duties, Claimant was walking in the back area of Employer's store carrying a piece of cardboard from a display that had been dismantled to the cardboard baler. While walking, Claimant felt a "pop" in his right knee and fell, sustaining an injury to his right knee.

2. Exhibit C is a video of Claimant's injury. The video shows Claimant taking approximately 8-10 steps, most of which are obscured by the cardboard Claimant was

carrying or other objects in the screen. The video shows Claimant taking three visible steps with his right leg. The first step, Claimant moves from right to left across the screen and only the medial side of his right leg is visible. The next unobstructed view of Claimant's right leg is when he took one step away from the camera, during which his right leg appeared to flex laterally. Immediately upon taking the third visible step, Claimant grasped his right knee, and falls to the ground. The area where Claimant was injured was free of debris, dry and unobstructed. The cardboard Claimant was carrying did not appear to contribute to his injury.

3. Claimant credibly testified that when the injury occurred, he did not recall twisting his knee, stepping on anything, or slipping. Prior to August 8, 2021, Claimant had no injuries to his right knee, no symptoms and had not previously received treatment for his right knee.

4. Claimant saw Lori Long Miller, M.D., at Concentra on August 9, 2021. Claimant reported he was walking at work while carrying cardboard to a baler and felt a sudden pop in his right knee and fell to the floor, without slipping or tripping. Claimant was unable to bear weight and was using crutches. Claimant reported no prior knee injuries. On examination, Dr. Miller noted that Claimant's knee was swollen with diffuse tenderness over the anterior knee and in the popliteal fossa, limited range of motion, and crepitus on palpation. (Dr. Miller's note indicates that the examination was of the Claimant's left knee, but the ALJ infers that this was a dictation or typographical error based on the diagnosis of a right knee injury). Dr. Miller recommended an MRI and physical therapy for pain relief. (Ex. 4).

5. On August 10, 2021, Claimant had a right knee MRI performed. The MRI showed a "near complete radial tear involving the medial meniscus posterior horn root junction with associated meniscal extrusion." The MRI also showed a possible posterior cruciate ligament (PCL) sprain or reactive edema, and moderate joint effusion with a moderate amount of fluid in the joint. Finally, the MRI demonstrated tricompartmental osteoarthritis worse in the patellofemoral compartment and a full-thickness cartilage defect along the lateral trochlea. (Ex. 7).

6. On September 17, 2021, Claimant underwent a right knee surgery performed by Gregg Koldenhoven, M.D. Dr. Koldenhoven performed a right knee arthroscopy with partial medial meniscectomy and chondroplasty tricompartmental. (Ex. 5).

7. On January 11, 2022, Claimant attended a medical examination by Lawrence Lesnak, M.D., at Respondents' request. Dr. Lesnak reviewed Claimant's medical records examined Claimant, and reviewed the video of Claimant's injury. In his report, Dr. Lesnak opined that Claimant did not sustain an industrial injury, based on his observation of the video of Claimant's injury. Specifically, Dr. Lesnak stated: "the acute pop that [Claimant] reportedly developed involving his right knee while he was walking during work hours on 08/08/2021, does not appear to have any industrial causation whatsoever." Dr. Lesnak's opinion was essentially that Claimant's injury did not "arise out of" Claimant's employment. To the extent Dr. Lesnak's opinion constitutes to a legal opinion that

Claimant did not sustain a compensable injury under the Act, it is outside the scope of his expertise and unpersuasive.

8. In deposition, Dr. Lesnak testified that Claimant's right knee MRI did not show any acute pathology, that his meniscal tear was pre-existing, and that the meniscal "extrusion" or "flap" got caught between the femur and tibia when his knee flexed while walking. He testified that based on the video, Claimant had "a very exaggerated kind of bowlegged gait with his right knee, which clearly indicates chronic pathology involving the right knee. I mean it is just not in alignment and not walking correctly." Dr. Lesnak also testified that Claimant "certainly had pathology that was causing an abnormal gait."

9. Dr. Lesnak's deposition testimony regarding Claimant's "abnormal gait" indicating chronic pathology was inconsistent with his previously-issued report. Specifically, in his report Dr. Lesnak stated that "Prior to the incident, [Claimant] was ambulating normally without any signs of gait antalgia or <u>any observable signs or symptoms involving his right knee whatsoever</u>." (Ex. B, p. 7)(Emphasis added). Moreover, the video evidence of the Claimant's injury shows no more that three visible steps, and only one step in which the Claimant's gait could reasonably be seen. The ALJ finds Dr. Lesnak's opinion that the Claimant's right leg gait "clearly indicates chronic pathology involving the right knee" to lack credibility, given that the video demonstrates only one step in which Claimant's right knee appeared to bow outward.

10. The ALJ finds Dr. Lesnak's opinion that Claimant's MRI and gait were indicative of a pre-existing meniscal tear, flap or extrusion that caught in his knee joint to be speculative and unpersuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the

fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The evidence establishes that Claimant's injury occurred "in the course" of his employment. That is, it occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014). The issue before the ALJ is whether Claimant's injury "arose out of" his employment.

The "arising out of" element requires a claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

As the Colorado Supreme Court explained in *City of Brighton*, "All risks that cause injury to employees can be placed within three well-established, overarching categories: (1) employment risks, which are directly tied to the work itself; (2) personal risks, which are inherently personal or private to the employee him- or herself; and (3) neutral risks,

which are neither employment related nor personal." *City of Brighton*, 318 P.3d at 502. For the reasons set forth below, the ALJ concludes that Claimant's injury was the result of a neutral risk, because it was "attributable neither to the employment itself nor with the employee [himself]." *Id*.

Claimant's injury does not constitute an "employment risk" because the neither the physical condition of the area where Claimant was injured nor the specific activity of walking while carrying cardboard caused his injury. Although the Claimant's injury was captured on video, neither the video nor the testimonial evidence established that Claimant's injury was caused by a risk directly tied to the work itself. Claimant was merely walking carrying several light pieces of cardboard. Claimant testified that he did not slip, twist, or otherwise have an explanation for the injury.

Claimant's injury also does not fall into the category of "personal risks," which include purely idiopathic or personal injuries unrelated to employment. No credible evidence was presented that Claimant's meniscal tear was pre-existing, or that a pre-existing knee condition contributed to, or caused his injury. Claimant credibly testified that he had no prior right knee injuries, symptoms, or treatment. Dr. Lesnak's testimony that Claimant's gait "clearly indicates chronic pathology involving the right knee" is not credible, and his opinion that Claimant's meniscal tear was pre-existing and got caught in his knee is speculative and unpersuasive. The ALJ concludes that the cause of Claimant's injury is unexplained. Consequently, it falls within the "neutral risk" category of injury, and should be analyzed as such under *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014).

"Importantly, however, injuries stemming from neutral risks, whether such risks be an employer's dry and unobstructed stairs or stray bullets, 'arise out of' employment because they would not have occurred but for employment. That is, the employment causally contributed to the injury because it obligated the employee to engage in employment-related functions, errands, or duties at the time of injury." *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014) Neutral risks are analyzed under the "but-for" test. The "but for" test provides that an injury from a neutral risk 'arises out of' employment 'if it would not have occurred but for the fact that the conditions and obligations of employment placed the claimant n the position where he was injured." Id.

Here, Claimant was engaging in an employment function, carrying cardboard to a baler while walking in the rear of Employer's store where the injury occurred. But for his employment, Claimant would not have been walking when and where he was walking when the injury occurred. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right knee on August 8, 2021.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his right knee arising out of the course of his employment with Employer on August 8, 2021.

2. Respondent is liable for reasonable and necessary medical treatment provided by Claimant's authorized treating physicians.

3. Respondent is liable for temporary partial disability benefits from August 8, 2021 to September 16, 2021.

4. Respondent is liable for temporary total disability benefits September 17, 2021 until November 19, 2021.

5. Claimant's average weekly wage is $812.82.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

- Did Claimant prove entitlement to a general award of medical benefits after MMI?

FINDINGS OF FACT

1. Claimant works as social learning program director and mental health clinician at the Colorado Mental Health Institute in Pueblo. She suffered admitted injuries on December 29, 2020 when a patient punched her in the face. Her physical injuries included a zygomatic arch fracture and a neck injury. She also developed post-traumatic stress disorder (PTSD).

2. This was the second time Claimant had been assaulted at work. On October 13, 2018, an inmate punched her in the mouth and knocked out most of her teeth, which required extensive dental reconstruction. She also received chiropractic treatment and acupuncture. After completing treatment, she had some residual mouth soreness but no ongoing pain. She was put at MMI on November 20, 2019 with no permanent impairment and no restrictions. The ATP opined she might require future dental care depending on her ongoing symptomology. Respondent filed a Final Admission of Liability (FAL) on August 25, 2020 admitting for medical benefits after MMI.

3. Claimant worked without limitation until the December 2020 assault. There is no persuasive evidence she received any additional treatment related to the 2018 injury in the interim.

4. Claimant was seen at the Parkview Medical Center emergency department on December 29, 2020. She described sharp, throbbing pain over the right side of her face. She was having difficulty opening her mouth fully because of pain. A CT scan showed a right zygomatic arch fracture. She was given pain medication and advised to eat soft food pending follow-up with an ENT specialist.

5. Employer referred Claimant to Dr. Terrance Lakin for authorized treatment. At her initial appointment, on December 30, 2020, Claimant reported severe facial pain and headaches. Physical examination showed signs and symptoms consistent with TMJ. Dr. Lakin referred her back to Dr. Thomas, who performed the dental implants for to the 2018 injury.

6. On January 11, 2021, Dr. Esperanza Salazar performed an open reduction surgery for the zygomatic arch fracture.

7. On January 28, 2021, Nurse Emily Rogers in Dr. Lakin's office noted Claimant was still having "pretty bad headaches." She also documented cervical tension and trigger points in the occipital region and trapezius, worse on the right. Ms. Rogers referred Claimant for massage therapy.

8. Claimant started having panic attacks in February 2021. She was referred to Dr. Herman Staudenmayer, a psychologist.

9. Dr. Thomas found no damage to Claimant's implants but thought she was probably having TMJ issues. He recommended Botox injections and evaluation by a dentist who specializes in treating TMJ.

10. Claimant saw Dr. Elmer Villalon for the TMJ on March 6, 2021. Claimant explained she had some residual jaw "popping" from the 2018 assault, but her jaw issues were much more significant after the 2020 incident. Dr. Villalon recommended a splint and therapy.

11. Claimant was evaluated by Dr. Michael Sparr on April 12, 2021. Dr. Sparr diagnosed a cervical strain, persistent cervical facet dysfunction, severe occipital neuralgia, and associated headaches. He opined the diagnoses were "directly related" to the December 2020 work injury. He recommended occipital nerve blocks and trigger point injections.

12. Claimant's last documented appointment with Dr. Villalon was on May 3, 2021. Claimant did not think the splint was helping much. She was using the splint a couple of hours during the day but was struggling to use it at night. Although her symptoms were similar, there was some improvement with her jaw motion. She was also complaining of some neck soreness. Dr. Villalon recommended a physical therapy evaluation.

13. Claimant received approximately two months of chiropractic treatment from Dr. Donald Dressen. The treatment provided limited benefit.

14. On May 6, 2021, Kelsey Walls PA-C in Dr. Sparr's office documented persistent cervical facet dysfunction, myofascitis with trigger points, and occipital neuralgia. She referred Claimant to a different chiropractor at Pueblo Chiropractic to provide treatment in conjunction with additional injections.

15. Claimant followed up with Ms. Walls on May 19, 2021. Ms. Walls noted,

> Unfortunately, she has not been able to transition her care to Pueblo Chiropractic so that we may resume her trigger point injections knowing that deep tissue work will be performed following. Her first round of trigger point injections were followed by chiropractic manipulation only with no massage provided afterwards. This led to only short-term benefit from the injections. In light of this, we will defer trigger point injections today. Once she has established at Pueblo Chiropractic we will have her return to the clinic to finish her last remaining 3 rounds of trigger point injections.

16. No additional records from Dr. Sparr's office and no records from Pueblo Chiropractic were submitted at hearing.

17. On June 3, 2021, Dr. Salazar released Claimant from treatment for the zygomatic arch fracture. He recommended she continue TMJ treatment with Dr. Villalon.

18. Claimant received a course of psychological treatment with Dr. Gutterman, Dr. Staudenmayer, and William Beaver. Her last appointment with Dr. Staudenmayer was on June 9, 2021. He noted her mood and affect had been more stable recently but she was still showing residual effects of the trauma. She had recently resumed work involving patient contact, which triggered anxiety. Claimant also expressed "frustration and disappointment over continued physical problems." Dr. Staudenmayer indicated he would follow up with Claimant in July "to assess her coping mechanisms" after she had worked full-time for a longer period.

19. Claimant saw Dr. Lakin on June 4, 2021. Claimant stated Dr. Villalon had "canceled last minute," but she would try to reschedule. She thought she had received some benefit from treatment with Dr. Villalon even though "she does not have great interactions" with him. Dr. Lakin opined Claimant was approaching MMI and would probably have permanent impairment. He further opined,

> I anticipate appropriate medical maintenance would be with Dr. Villalon for TMJ follow-up for 6-12 months. If she is not pleased with Dr. Villalon perhaps consider Dr. Scott or Dr. Philson. Also Dr. Dressen chiropractor 8 visits in 6 months and Dr. Gutterman in follow-up for 6-12 months if Dr. Gutterman desires. Also trigger [sic] Salazar ENT follow-up only as needed for 2 years.

20. Claimant participated in a functional capacity evaluation (FCE) on August 12, 2021. She reported continued neck pain, jaw pain, difficulty chewing, headaches, and balance issues. Claimant demonstrated the ability to perform sedentary to sedentary-light lifting activities and no bending because of neck pain and dizziness. She was able to perform upper extremity activities on a frequent basis, except for overhead reaching.

21. Dr. Centi placed Claimant at MMI on September 8, 2021 with a 14% whole person rating for her cervical spine. Dr. Centi opined Claimant required no ongoing treatment.

22. Respondent filed an FAL on October 29, 2021 admitting for the 14% rating. The FAL denied medical benefits after MMI based on Dr. Centi's report.

23. On December 21, 2021, Dr. Dressen responded to an inquiry from Claimant's counsel regarding maintenance medical needs. Dr. Dressen opined,

> Sporadic chiropractic/P.T. care for this patient would prevent recurrences. This would be supportive care in [sic] the patient's injuries per [sic] related to her W/C injury. Dental care also needs some consideration.

24. Claimant testified credibly at hearing regarding her ongoing injury-related symptoms and limitations. She credibly testified she would like the opportunity to follow-

up with authorized medical providers to see what, if any, treatment may be available to relieve the effects of her injury.

25. Claimant proved a probable need for future treatment to relieve the effects of her injury or prevent deterioration of her condition.

CONCLUSIONS OF LAW

The respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). A claimant need not be receiving treatment at the time of MMI or prove that a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). If the claimant establishes the probability of a need for future treatment, they are entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved a probable need for future treatment to relieve the effects of her injury. Claimant had serious injuries and remains symptomatic more than a year after the accident. Dr. Lakin and Dr. Dressen's opinions regarding treatment after MMI are credible and more persuasive than the contrary opinion of Dr. Centi. Claimant is entitled to a general award of reasonably necessary medical treatment after MMI.

ORDER

It is therefore ordered that:

1. Respondent shall cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of Claimant's injury and prevent deterioration of her condition.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition

to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 8, 2022

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-162-929-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that his occupational disease arose out of, and in the course of, his employment.

STIPULATIONS

If found compensable, the parties agreed that Claimant is entitled to temporary total disability (TTD) benefits beginning January 3, 2021 until terminated by law. Respondents reserved the right to later raise the defense that Claimant was responsible for his termination of employment effective the date of his resignation, October 13, 2021. The parties stipulated to a base average weekly wage (AWW) of $1,057.04, with an increase to $1,629.68 as of August 1, 2021 due to COBRA.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant was employed by Employer as a jail deputy from July 30, 2020 to October 13, 2021. Claimant's duties included performing head counts to ensure all the inmates were present, doing status walks, delivering food, and keeping peace within the jail. Claimant had nearly constant contact with others while working. His usual work day began at approximately 5:45 a.m. and ended at 6:00 p.m. (Tr. 14:12-22, 16:15-24).

2. In December 2020, Claimant was in training and worked with a Field Training Officer (FTO) each day. Claimant and the FTO would work side-by-side throughout the shift. (Tr. 36:20-37:12).

3. Claimant credibly testified that on December 30, 2020, after completing his shift, he developed a dull headache over his eyes. Claimant testified that at the time, he did not attribute it to anything other than a headache. Claimant's next shift was scheduled for January 4, 2021. (Tr. 32:20-33:3).

4. On or about Thursday, December 31, 2020, Claimant's wife started to exhibit COVID-19 (COVID) symptoms. There was no evidence presented at hearing regarding the specific symptoms Claimant's wife began to exhibit on December 31, 2020. According to Claimant, his wife progressively got worse over the next few days. She lost the ability to taste and smell, had a headache, body aches, a cough and a runny nose. She scheduled a COVID test for the morning of January 3, 2021. (Ex. I).

5. At 10:49 a.m. on January 3, 2021, Claimant emailed Employer to notify human resources and his supervisors of his wife's condition, and that she was awaiting her COVID test results. He also said "[t]he only symptom that I have had thus far is a headache." He asked if he should report to work the following day, or stay home. Claimant did not mention that he first developed a headache on December 30, 2020. (Ex. I).

6. Claimant credibly testified that he sent another e-mail, later in the day on January 3, 2021, to tell his Employer that he was now "experiencing symptoms" and was going to get a COVID test the next day, January 4, 2021. (Tr. 22:11-23:7). Neither party produced a copy of this e-mail, but Sergeant JH[redacted] credibly testified that Claimant contacted him later in the day on January 3, 2021, to inform him that he was experiencing flu-like symptoms similar to his wife. (Tr. 60:7-14).

7. Claimant took a COVID test on January 5, 2021. Claimant's COVID test came back positive. (Tr. 23:23-24:3). His wife's test, however, came back negative. Claimant's wife did not take a second COVID test. (Tr. 23:19-22).

8. Claimant contacted Sergeant JH[redacted] to inform him of his positive COVID test. Claimant told Sergeant JH[redacted] he believed he contracted the virus while at work. Sergeant JH[redacted] acknowledged that this was possible. (Tr. 62:1-12).

9. Sergeant JH[redacted] told Claimant to contact human resources and complete the necessary workers' compensation paperwork. Claimant followed the 14-day protocol that was in place and stayed home. Claimant and Sergeant JH[redacted] communicated approximately once a week. Claimant credibly testified that he informed Sergeant JH[redacted] that he had not received a response from human resources regarding the workers' compensation paperwork, so Sergeant JH[redacted] sent it to him. (Tr. 24:4-25:3).

10. The Notification of Injury was completed on or about February 8, 2021. (Ex. B).

Potential Workplace Exposure

11. Claimant testified that the COVID protocol at the jail in December 2020 was for employees to wear the standard-issued uniform, gloves and a mask while searching cells. Claimant testified that he and his fellow employees wore masks they brought from home. These masks varied from cloth masks to gaiters. Claimant further testified that he wore his N95 mask when dealing with uncooperative inmates during booking. (Tr. 14:23-15:21).

12. Deputy MG[Redacted] is a jail deputy, and a FTO. Deputy MG[redacted] testified that he wore his N95 mask, along with gloves and glasses when going into the isolation/quarantine unit at the jail. (Tr. 49:15-16).

13. The inmates were required to wear cloth masks that they had made. (Tr. 16:25). Both Claimant and Deputy MG[redacted] credibly testified that the jail personnel routinely had to admonish the inmates to correctly wear their masks because they would pull them down. (Tr. 16:6-11 and 50:18-25).

14. According to Respondents' employment records, he worked December 15, 16, 17, 20, 21, 22, 27, 28, 29 and 30, 2020. (Ex. D). Claimant believes he most likely contracted COVID on or around December 28, 2020, when he worked in the isolation/quarantine unit. (Tr. 27:15-18)

15. On December 28, 2020, Deputy MG[redacted] worked with Claimant in the 1-North housing area for the entire shift. The 1-North housing area was split into two pods, NA and NB. The NA pod had 16 rooms that held 32 inmates. The NB pod had 32 rooms, and held 64 inmates. (Tr. 40:10-17). When not in contact with the inmates, the two deputies worked together in a mini control room that was separated from the jail population by a 3-4-foot wall with glass up to the ceiling. The deputies were completely enclosed except when the door was opened. (Tr. 40:10-41:23). The deputies did not wear masks while in the mini control room or while on breaks. (Tr. 73:3-9).

16. The NB pod of 1-North housed a transitional population. The transitional population held new inmates for 14 days to see if they became symptomatic. If the inmates were not symptomatic, they would be moved into the general population pod. (Tr. 41:24-42:17).

17. The NA pod of 1-North housed an isolation/quarantine population. (Tr. 47-48). This was one of several isolation/quarantine pods within the jail. (Tr. 34:20-35:1). Isolated inmates were those that the medical staff identified as either exhibiting symptoms of, or who had tested positive for, COVID. The quarantine population were those inmates that were in close contact with someone who either exhibited symptoms of, or tested positive for, COVID. Isolated and quarantined inmates were housed in individual cells. (Tr. 62:13-63:22). Deputy MG[redacted] did not recall if any of the inmates were symptomatic or had tested positive for COVID on December 28, 2020. (Tr. 43:18-23).

18. Deputy MG[redacted] credibly testified that he and Claimant would be in the inmate areas throughout the facility including the cells and day rooms. They had regular contact with the inmates during status checks and food delivery. They also had contact with the inmates when they took them into and out of the day rooms. (Tr. 43:24-46:12).

19. Deputy MG[redacted] and Sergeant JH[redacted] both testified that when conducting cell searches in the isolation/quarantine unit, the deputies wore safety glasses, gloves, a "medical gown" and N95 masks. (Tr. 49:15-20 and 63:25-64:14). When serving meals the deputies would go door-to-door, opening each door, handing the inmate their food, and then closing the door and moving on. The inmates in the isolation/quarantine unit would be let out individually in 30-minute increments for 90 minutes per day. (Tr. 48:4049:14).

20. Deputy MG[redacted] testified that he did not remember whether he wore an N95 mask on December 28, 2020. (Tr. 57:7-10).

21. Sergeant JH[redacted] tested positive for COVID on January 11, 2022. (Tr. 64:21-25). He believes he contracted the virus during a meeting in a small office with an FTO, who knowingly did not feel well and had COVID symptoms. They were in close proximity for about 45 minutes and did not wear masks. (Tr. 70:3-21).

22. Sergeant JH[redacted] testified he was in contact with the pods where Claimant worked. He would check in on the FTO office by the quarantine unit and give occasional breaks to the jail deputies. (Tr. 65:1-8).

23. The CDC reported multiple COVID outbreaks in the [Employer facility Redacted] between December 8, 2020 and January 6, 2021. Of the individuals that contracted COVID, 17 were inmates and 18 were staff members. (Ex. 1).

Potential Household and Community Exposure

24. Claimant lives with his wife and three children. He credibly testified that his wife and children had been home since December 18, 2020, because his children were out of school for winter break. (Tr. 20:2-22).

25. Prior to December 18, 2020, Claimant's wife periodically worked outside of the house. On the days Claimant's wife was at work, the only person she was in contact with was the owner of the insurance agency where she was employed. Claimant's wife worked remotely from home as of December 18, 2020. (Tr. 20:23-21:5).

26. Claimant credibly testified that neither he nor his family participated in any activities outside the home, other than work and school. (Tr. 20:6-14).

27. Claimant's children were required to wear masks while in school and none of the children exhibited COVID symptoms, nor did they ever test positive for COVID. (Tr. 21:6-8).

28. Claimant credibly testified that the only person outside of his wife and children that came into his home was his mother-in-law. She was in his home December 24 and December 25, 2020. Claimant's mother-in-law had been in isolation prior to spending Christmas with Claimant's family. (Tr. 21:7-22 and 33:24-34:4).

29. Claimant credibly testified that the only thing he did outside of work was to pick up groceries. Claimant ordered groceries on-line. The grocery store worker would put the groceries in the trunk of his car. Claimant's contact with the grocery worker was momentary while the worker handed Claimant his receipt. (Tr. 21:9-15 and 33:15-23).

Expert Opinions

30. Marcus Oginsky, M.D., is board-certified in internal medicine and utilization management. He also practices outpatient medicine with three detention centers in the Denver Metro Area. (Ex. 2)

31. At the request of Claimant, Dr. Oginsky issued a report dated October 17, 2021. In his report, Dr. Oginsky discussed the characteristics of COVID, and the differences between community transmission, household transmission and workplace transmission. (Ex. 1).

32. Dr. Oginsky testified, via deposition, on February 9, 2022. He testified that "[i]t is usually impossible to designate that Person A gave [COVID] to Person B." (Dep. Tr. 9:15-17) Because of this it is necessary to establish the probability that the infection occurred in a certain environment. (Dep. Tr. 9:8-17). He indicated the amount of time you spend with a person in a closed environment increases the probability of contracting COVID from that exposure (Dep. Tr. 12:6-9).

33. With respect to community transmissions, Dr. Oginsky opined that while it is possible to contract COVID by chance encounters while in the community, such as the grocery store, the probability of doing so is exceedingly low. (Ex. 1 and Dep. Tr.12:22-13:21).

34. In December 2020, Claimant's time in the community was limited to picking up groceries. Dr. Oginsky opined that the probability of Claimant contracting COVID from a community transmission was low. (Dep. Tr. 13:22-14:6).

35. In contrast to a community transmission, the probability of a household transmission is high. If members of a household have COVID, the probability of others in the household contracting the infection is high. This is due to the close proximity of people, generally without masks, for longer periods of time. (Ex. 1 and Dep. Tr. 14:14-25).

36. Dr. Oginsky testified, however, that it is highly improbable that Claimant's home was a source of his infection because his wife tested negative for COVID[1], and none of Claimant's children contracted COVID. (Dep. Tr. 15:11-23).

37. Dr. Oginsky cited statistical data from the CDC reporting the attack rate in correctional environments to be about 72% for inmates, and 20-30% for jail personnel. (Dep. Tr. 19:10-24). Dr. Oginsky credibly testified that the CDC has reported extensively that the correctional environment is a high-risk environment for COVID transmission. (Dep. Tr. 62: 1-5).

[1] The date Claimant's wife began exhibiting COVID-like symptoms is irrelevant because her COVID test was negative.

38. Dr. Oginsky analyzed the probability of Claimant contracting COVID in the community, home and workplace. He noted the low probability of community and home transmission. In comparison to these environments, he opined that the highest probability of transmission of COVID to Claimant was in the workplace. (Ex. 1 and Dep. Tr. 29:5-8 and 56:6-17).

39. Robert Watson, M.D., is board certified in occupational medicine, and he holds a master's degree in public health. At the request of Respondents, Dr. Watson performed an IME to address issues related to Claimant's COVID diagnosis and causation. Dr. Watson issued his IME report on June 9, 2021. (Ex. A).

40. Dr. Watson testified, via deposition, on February 9, 2022. He credibly testified that it is effectively impossible to determine who might have transmitted the virus to Claimant. (Transcript pg. 9:9-21). Dr. Watson credibly testified that he agrees with Dr. Oginsky that it is impossible to identify where a transmission occurred. (Dep. Tr. 19:7-8).

41. Dr. Watson agreed with Dr. Oginsky that the concentration of the COVID virus was higher in the jail than in the community. (Dep. Tr. 17:20-24). He also agreed that household transmission could be as high as 60 to 80 percent. (Dep. Tr. 19:9-12).

42. Dr. Watson credibly testified that despite Claimant's wife's negative test results, it should not be assumed that she did not have COVID because she exhibited symptoms that were very much consistent with COVID. (Dep. Tr. 20:1-18). He further opined that in people at a high risk for having COVID, false negatives may be as high as 50%. (Dep. Tr. 21:20-22:4). Dr. Watson testified that it is more likely that Claimant's wife transmitted COVID to Claimant, rather than any other source (Dep. Tr. 25:17-20).

43. Both Dr. Oginsky and Dr. Watson credibly testified that it is impossible to identify who transmitted COVID to Claimant. They disagree, however, as to the environment where Claimant likely contracted COVID. While both Dr. Oginsky and Dr. Watson provided credible testimony, Dr. Oginsky was more persuasive.

44. Claimant's only community interaction in December 2020 involved a brief encounter with a grocery store worker. Based on the low attack rate in the community, and Claimant's limited activity in the community, the ALJ finds that it is not probable that Claimant contracted COVID through a community transmission.

45. In contrast, the attack rate in the home environment is high, 60-80%. There is no evidence, however, that anyone in Claimant's household, other than Claimant, contracted COVID in late December 2020. While Dr. Watson credibly testified that Claimant's wife exhibited symptoms of COVID, this testimony is not persuasive because Claimant's wife's tested negative for COVID. There is no objective evidence that Claimant's wife had COVID in late December 2020. Based on these facts, the ALJ finds that it is not probable that Claimant contracted COVID through a household transmission.

46. A correctional environment is a high-risk environment for COVID transmission, and this in fact occurred at the jail in December 2020 when there was an active COVID outbreak. Additionally, often the inmates did not properly wear the cloth masks they made, and the deputies did not wear masks while on break or while working in small quarters in the mini control room. Claimant worked consistently in the jail the last few weeks of December, and on December 28, 2020, he worked in the isolation/quarantine unit of the jail. Based on these facts, the ALJ finds that it is more probable than not that Claimant contracted COVID in late December 2020, while in the course of his employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish compensability, an employee must prove by a preponderance of the evidence that his injury or occupational disease arose out of the course and scope of employment with his employer. §8-41-301(1), C.R.S. (2006); *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). The Act defines "occupational disease" as

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

§ 8-40-201(14), C.R.S. The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *Boulder*, 706 at 786*; Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. The Supreme Court stated "[a]n activity arises out of and in the course of employment when it is sufficiently interrelated to the conditions and circumstances under which the employee generally performs his job functions that the activity may reasonably be characterized as an incident of employment, although the activity itself is not a strict employment requirement and does not confer an express benefit on the employer." *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210 (Colo. 1996).

Claimant developed a headache, a known COVID symptom, on December 30, 2020 after his shift ended. (Findings of Fact ¶ 3). Claimant's symptoms worsened on January 3, 2020, and he tested positive for COVID on January 5, 2020. Although Claimant's wife exhibited symptoms of COVID beginning December 31, 2020, she tested negative for COVID, and no one in Claimant's household contracted COVID during this time. (Id. at ¶¶ 6-7). It is not probable that Claimant contracted COVID through a household transmission. (Id. at ¶ 45).

The only place Claimant went outside of the home and the workplace was to the grocery store. He would order groceries on-line and pick them up. His only interaction with the grocery store worker was when the worker handed him the receipt. (Id. at ¶ 29). It is not probable that Claimant contracted COVID through a community transmission. (Id. at ¶ 44).

Between December 8, 2020 and January 6, 2021, there were multiple reported outbreaks of COVID at the jail. Of the individuals infected, 17 were inmates and 18 were staff members. (Id. at ¶ 23). A correctional facility, such as the jail, is a high-risk environment for COVID transmission. (Id. at ¶ 37). The deputies at the jail did not wear their masks when working closely together in the mini-control room and when on breaks. (Id. at ¶ 15). The inmates routinely pulled down their masks and did not properly wear them. (Id. at ¶ 13). Claimant worked 12-hour shifts for ten days between December 15 and 30, 2020. On December 28, 2020, Claimant worked in the isolation/quarantine unit. (Id. at ¶ 14). It is more probable than not that Claimant contracted COVID in late December 2020 while in the course of his employment. (Id. at ¶ 46). Claimant has proved by a preponderance of the evidence that he suffered a compensable injury in the course of his employment.

ORDER

It is therefore ordered that:

1. The claim is found compensable. It is more probable than not that Claimant contracted COVID in the course of his employment, while performing his duties as a jail deputy.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 8, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable right shoulder injury in the course and scope of his employment on April 16, 2021.

IF CLAIMANT ESTABLISHED A COMPENSABLE SHOULDER INJURY

II. Whether Claimant proved by a preponderance of the evidence that the right reverse total shoulder arthroplasty performed by authorized treating physician ("ATP") Rudy Kovachevich, M.D., on December 14, 2021 was automatically authorized; in the alternative, is the proposed arthroplasty reasonable, necessary, and related to the April 16, 2021 work injury.

III. Whether Claimant established by a preponderance of the evidence an average weekly wage ("AWW') of $581.90, based upon his gross earnings in 2020 divided by 52 weeks, which wage comports to a temporary total disability ("TTD") rate of $387.93.

IV. Whether Claimant established by a preponderance of the evidence an entitlement to TTD benefits from December 14, 2021 ongoing until terminated pursuant to statute.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on November 5, 2021 on the issues of compensability, medical benefits that are reasonable, necessary and related to the injury, causation of the injury, average weekly wage, and entitlement to TTD benefits. Claimant also listed a penalty of automatic authorization for the surgery under W.C.R.P. Rule 16-7 alleging Respondents' denial of the requested surgery occurred more than 10 business days after the request was submitted to Insurer.

Respondents filed a Response to the November 5, 2021 Application for Hearing on November 17, 2021 citing issues of relatedness, preexisting condition, reasonable and necessary medical benefits, and average weekly wage.

Both Claimant and Mark Steinmetz, M.D., who was accepted as an expert in occupational medicine and as a Level II accredited provider, testified in this matter.

STIPULATION

The parties stipulated that the medical providers at Colorado Occupational Medical Partners including Dr. Matthew Lugliani, PA-C Tom Chau and Dr. David Rojas and those at the Orthopedic Centers of Colorado including Sean Griggs, M.D., and Rudy Kovachevich M.D., were authorized treating providers.

The stipulation is approved and ordered by this ALJ.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a 67-year-old parts deliver worker for Employer since 2012. He would pick up parts from Employer and deliver them to retail customers. The parts would include tires or other parts. Claimant stated that he had some minor symptoms with regard to his right shoulder prior to his date of injury.

2. Claimant was seen by his primary treating provider, Dr. John Draper of Ponderosa Family Physicians for near yearly checkups or routine general medical examinations. On April 7, 2014 Dr. Draper noted that Claimant was seen for follow up of hypothyroidism diagnosed a year before. At that time, Claimant complained of right shoulder pain for the prior two months but did not report any specific injury. Dr. Draper found no crepitance, no atrophy, no muscle asymmetry, no capsular winging, no swelling, full active range of motion, no tenderness of the acromioclavicular joint, full strength of all rotator cuff groups, found all stability tests negative and had no impingement signs. Dr. Draper found some arm weakness and referred Claimant for six visits of physical therapy.

3. Claimant's next visit to Dr. Draper was on May 18, 2015 who documented that the PT did not help his shoulder but that his right shoulder problems "now is all resolved." Over three years later, on September 27, 2018 Claimant stated that he had no issues with the shoulder upon Dr. Draper's query and declined further evaluation with regard to the shoulder. Dr. Draper stated that he found no issues on incidental shoulder exam. On October 2, 2019 Claimant again returned to his physician for a regular physical and follow up. Dr. Draper noted Claimant had persistent pain in his right shoulder but no change in symptoms and there was no examination or diagnosis. Further, Claimant denied any muscle aches, painful joints or weakness. The last physical prior to the injury was October 19, 2020. While Dr. Draper did not document any complaints of upper extremity symptoms, he ordered an x-ray. In fact, his general exam of the extremities indicates that there was no clubbing, cyanosis or edema and that Claimant denied any muscle aches, painful joints or weakness. The x-ray ordered by Dr. Draper was read by Dr. Eduardo Seda on October 23, 2020 and stated Claimant had normal soft tissue, glenohumeral joint space, and acromioclavicular joint. His impression was mild glenohumeral osteoarthritis.

4. On Friday, April 16, 2021 Claimant was loading a tire from the dock onto his truck, trying to control the lift from the right to the left at approximately chest level into the bed of the truck, when he heard a pop in his shoulder and subsequently had a sharp pain in his shoulder joint going down his deltoid and bicep. Claimant obtained a picture of his right bicep following the incident and the image showed a very large bruised area along the deltoid and biceps muscle of the right arm. Further, following the incident, the pain in the shoulder became constant, with right shoulder swelling through the weekend.

5. Claimant reported the incident to his immediate supervisor, the dispatcher, Jamie. Claimant did not request medical attention at that time. During the weekend, the

pain increased and was preventing him from lifting his arm further than chest or shoulder height.

6. Claimant had a regularly scheduled physical on the following Monday, April 19, 2021 at Ponderosa Family Physicians and advised his physician, Dr. John B. Draper, that he started having right shoulder pain three days earlier. He noted that there was swelling above the area of bruising, but there was also a defect in the biceps. Upon examination of the right upper arm he found a palpable defect in the biceps and tender to palpation at the site, though strength remained good. He specifically stated that Claimant had had consistent problems for some time, and that they had obtained an x-ray that showed no issues, but because there was swelling and bruising present, he ordered an MRI of the upper arm to rule out an abnormal mass. He noted that Claimant had had recurrent bruising. [On August 6, 2021, Dr. Draper added an addendum stating he received a call from Claimant's spouse to correct the medical record from "three episodes last year" to "incident occurred three days prior."]

7. Claimant reported his injury to another supervisor, the store manager, at Employer immediately following his appointment with Dr. Draper and advised that he was scheduled for an MRI through his private insurance on April 29, 2021.

8. Respondents filed issued an Employer's First Report of Injury (FROI) stating that Claimant had reported the work-related injury on April 16, 2021. The report indicates that Claimant "was delivering tires, lifted tire off the truck, he got bruised on his R arm." The report seems to have been completed by Insurer on May 11, 2021.

9. On April 29, 2021 Claimant underwent an MRI for the "Upper Extremity and Non Joint W/WO" at Health Images. Dr. Steven Ross found full thickness supraspinatus and infraspinatus tendon tears and moderate grade partial thickness tear subscapularis tendon with medial tendon retraction estimated at 4.5 cm, some glenohumeral joint effusion and moderate grade partial thickness tear of the subscapularis tendon. He noted that the biceps tendon and biceps muscles were intact. Dr. Ross recommend a dedicated MRI of the right shoulder for further evaluation.

10. The store manager did not do anything until after Claimant received the MRI information about the torn rotator cuff. Claimant credibly testified that after receiving an explanation of the resulting MRI he returned to Employer and indicated that treatment would need to be pursued through the workers' compensation system. Claimant was sent to Colorado Occupational Medical Partners, the authorized treating providers.

11. Claimant's first visit with the designated provider in the workers' compensation system occurred on May 13, 2021 where authorized treating provider, physician's assistant (P) Thanh Chau, took a history that Claimant was a right-hand dominant 66 year old male Driver for Employer for many years, presenting for a new patient visit for right shoulder and upper arm pain that occurred about 4 weeks prior. Claimant stated that he was lifting a heavy tire and described pushing with his right arm across his body when he felt a pop and sudden pain in his upper arm. Claimant advised that this occurred at the end of his shift on Friday. He was able to rest over the weekend and presented to his PCP on Monday, April 19. An MRI was ordered, and this was completed on April 29. Claimant clarified that he had not seen any other medical providers

since. He was hoping that his symptoms would improve. Claimant reported decreased strength in his right shoulder as well as decreased motion. He did not have any pain down into his elbow or wrist. No distal numbness or tingling. Claimant denied any previous injuries to his right shoulder. On exam of the left shoulder, Mr. Chau found Claimant was tender to touch at the anterior shoulder, deltoid and bicep head. He found decreased range of motion, and strength, and Claimant was unable to resist abduction and had pain throughout motion. PA Chau indicated that he was able to pull the MRI scan that was done on April 29, 2021 and that it reflected a full thickness tear of the supraspinatus and infraspinatus. Mr. Chau stated that the objective findings were consistent with history and work-related mechanism of injury, recommended referral to the orthopedic specialist, Dr. Griggs, and Claimant was placed on temporary work restrictions.

12. Mr. Chau consulted with Dr. Griggs on May 25, 2021 and Claimant was referred for an MRI of the right shoulder without arthrogram.

13. On May 25, 2021 Claimant was evaluated at Orthopedic Centers of Colorado by ATP Sean Griggs, M.D., from a referral by PA Chau. He took a history of present illness. He noted that Claimant was a right hand dominant 67-year-old male who presented for an evaluation of the upper extremity. Claimant complained of sudden onset of the right upper extremity injury, which occurred on April 16, 2021 at work. Claimant reported that he had was lifting a tire at work, felt a pop in his arm and had now developed weakness and difficulty with overhead reaching. Claimant described symptoms as moderate to severe and worsening. The pain was described as shooting and a burning sensation. The symptoms occurred constantly and Claimant denied any prior treatments for the shoulder or significant pain or dysfunction prior to the injury.

14. Dr. Griggs performed a musculoskeletal examination that showed limited forward elevation of the right shoulder, positive external rotation lag sign of the right shoulder compared to left, a positive abdominal compression testing on the right shoulder compared to left, and a positive Popeye sign on the right. Dr. Griggs diagnosed right shoulder injury with massive rotator cuff tear which may be acute on chronic versus completely acute. He noted that Claimant had a long head biceps rupture but also had a massive tear. He stated that he would like to obtain a shoulder MRI so that the muscle bellies could be evaluated to determine if there was any evidence of chronicity to the tear such as significant atrophy. This would help to determine his ability to repair the rotator cuff.

15. On May 27, 2021 Claimant returned to PA Chau who noted that Claimant had no significant improvement. He did see the orthopedist, Dr. Griggs on Tuesday, May 25. He agreed with Dr. Griggs regarding a referral for a dedicated right shoulder MRI scan. This was placed that same day on May 25 and were still awaiting approval.

16. Mr. Chau placed Claimant on restrictions of no lifting, reaching overhead or reaching away from the body and no use of the right arm. These restrictions were continued in subsequent status reports by Mr. Chau, Dr. Matthew Lugliani, and Dr. David Rojas through the last report available dated November 23, 2021, which included no commercial driving.

17. On June 1, 2021, Claimant had the second MRI which reflected a massive rotator cuff tear with complete disruption of the supraspinatus and infraspinatus as

well as a biceps pulley injury with dislocation of the bicep tendon out of the bicipital groove and associated partial subscapularis tearing. Dr. Brian Cox also noted degenerative disease of the acromioclavicular and glenohumeral joints.

18. On June 3, 2021 Claimant returned to Dr. Griggs, who found significant weakness with resisted external rotation on the right compared to the left, positive abdominal compression and moderate acromioclavicular joint arthritis. Dr. Griggs provided a diagnosis of acute on chronic massive rotator cuff tear of the right shoulder. He advised Claimant that there was some evidence that he had a chronic tear prior to this new injury. The new injury was to the subscapularis and the biceps now is dislocating. Claimant was given several options including total reverse arthroplasty but Claimant elected to proceed with the arthroscopic rotator cuff repair.

19. It was Dr. Griggs' opinion that the Claimant had suffered "a traumatic complete tear of the right rotator cuff" which required surgery and on June 3, 2021 Dr. Griggs submitted a request for right arthroscopic rotator cuff superior capsule reconstruction, possible bicep tenodesis ("repair right rotator cuff'), and subacromial space decompression and acromioplasty.

20. On June 10, 2021 Claimant returned to Mr. Chau who noted that reevaluation for his right shoulder showed a massive rotator cuff tear. On exam he found complaints of right arm and shoulder pain with aching, burning, stabbing and sharp pain. He found weakness and loss of range of motion. He advised Claimant to continue his current restrictions of no use of the right arm and no reaching away from the body or overhead with the right upper extremity. He documented that Dr. Griggs had recommended surgery, felt that this was an acute on chronic rotator cuff tear and that Claimant was awaiting authorization for surgery.

21. After Dr. Griggs' request for surgery was received by Respondents on June 9, 2021, Respondents had Claimant's claim peer reviewed by Mandy Flores, D.O., who noted that a formal objective physical examination report was not provided and neither was the official radiology report regarding the right shoulder, so she gave the opinion that the request for right shoulder arthroscopic rotator cuff repair was not medically necessary.

22. On June 11. 2021 Insurer advised Dr. Griggs that the requested surgery was denied.

23. On July 6, 2021 Claimant reported to ATP Chau who noted that Claimant was there for reevaluation and stated that his shoulder pain was worsening. He reported that Claimant had continued working and that Employer was providing him assistance in the shop but not when he was making the deliveries so the pain was increasing. He was having problems lifting, pulling, reaching out and reaching up. Claimant had not heard back regarding surgery authorization recommended by Dr. Griggs. The clinic had been trying to contact Dr. Griggs's office to get an update but were advised that Dr. Griggs had been out of town. Mr. Chau also reported that Claimant had been in contact with Insurer who advised Claimant that an independent medical examination (IME) was being scheduled.

24. On June 22, 2021 Hand Surgery Associates, on behalf of Dr. Griggs, submitted a second surgical request for the right shoulder surgery.

25. On July 13, 2021 Dr. Flores, M.D., issued a report that the right shoulder arthroscopic rotator cuff superior capsular reconstruction, possible biceps tenodesis was medically necessary. Dr. Flores stated that the Guidelines indicated that in cases of rotator cuff tear "options would include arthroscopic or open debridement and/or repair. In cases with extensive rotator cuff tear, preservation of the coracoacromial ligament is recommended to prevent instability." Dr. Flores specifically documented as follows:

> In this case, the injured worker was seen regarding injury to the shoulder after lifting up a tire and feeling a pop. Examination showed near symmetric elevation of the shoulders, negative external rotation lag, there was significant weakness with resisted external rotation of the right shoulder compared to the left, and neurologically the injured worker was intact. Reviewed MRI of the right shoulder on 6/01/2021: demonstrated massive rotator cuff tear with disruption of the supraspinatus and infraspinatus, disruption of the superior edge of the subscapularis, biceps the injury with dislocation of the bicep tendon out of the bicipital groove, and moderate acromioclavicular joint arthritis with glenohumeral joint disease. There was also mild supraspinatus atrophy, moderate-to severe atrophy of the infraspinatus, and mild atrophy of the subscapularis. As examination demonstrated significant weakness with resisted external rotation, as formal MRI report documented mild supraspinatus atrophy, moderate-to severe atrophy of the infraspinatus, and mild atrophy of the subscapularis.

Dr. Flores recommended that request for right shoulder arthroscopic rotator cuff superior capsular reconstruction, with possible biceps tenodesis be certified.

26. On July 13, 2021 Insurer's Utilization Management Team sent Dr. Griggs and Claimant a Notice of Approval and Modification advising that the requested surgery was certified as medically necessary and appropriate.

27. On July 14, 2021 Respondents requested a Rule 16 letter from Marc Steinmetz, M.D. Respondents' provided Dr. Steinmetz with Dr. Flores' report denying surgery but did not provide him with the second report by Dr. Flores dated July 13, 2021, certifying the surgery as reasonably necessary. Dr. Steinmetz's record review noted that he did not have the PCP records available, that he had "incomplete medical records," and that because the issue of causation was not clear at that time, the recommended surgery and ice machine were not reasonable or necessary. The notation at the bottom of the report indicate that the report was dictated on July 12. The notation at the top of the report indicated that the "Date of Exam" was July 14, 2021. This ALJ infers that date of exam really meant the date when the report was issued.

28. Dr. Steinmetz's report of July 14, 2021 was clearly more than 10 days after the June 22, 2022 request by Dr. Griggs for surgery, as well as, the July 13, 2021 notification to Dr. Griggs, certifying the surgery. It was unclear from Dr. Steinmetz testimony why he was contacted and why he was not provided with complete records.

29. On September 30, 2021 Claimant presented for a Respondent requested IME with Dr. Steinmetz who, after reviewing the records, was still of the opinion that Claimant's history was inconsistent, "changed over time," "was unreliable," and that Claimant's condition was chronic and preexisting, therefore, surgery should be denied.

30. On October 26, 2021 Division Director Paul Tauriello issued a Director's Order for Respondents to file an admission or denial in the matter within fifteen (15) days

of the order or be subject to penalties.

31. Dr. Griggs evaluated Claimant on November 17, 2021 and stated that Claimant had the surgery scheduled but it was cancelled. He noted that Claimant continued to have problems with is shoulder, though the physical therapy had helped. His musculoskeletal examination showed limited active forward elevation of the right shoulder compared to left, pain to impingement maneuvers of the right shoulder, weakness of the right shoulder compared to left and active forward elevation on the right is to about 100 degrees compared to 160 on the left. Dr. Griggs noted that based on Claimant's previous MRI findings and the time from his last evaluation it was likely that Claimant had further atrophy of the muscles and he was not sure that Claimant would be a candidate for surgical repair of the cuff any longer. Dr. Griggs stated that typically at Claimant's age and with the size of tear and the existence of atrophy of the muscle bellies another option would be a reverse prosthesis. Claimant reported having significant difficulty with the shoulder and wanted to now discuss reverse arthroplasty, so Dr. Griggs referred him to Dr. Rudy Kovachevich, an orthopedic specialist for joint replacements in his office.

32. Respondents filed a Notice of Contest on November 19, 2021.

33. Claimant was evaluated by Dr. Kovachevich on November 22, 2021. Dr. Kovachevich documented a history of injury that was consistent with Claimant's reports to other providers, that Claimant had some deformity in his anterior arm concerning for a bicep rupture, difficulty raising his arm, and Dr. Griggs evaluated him for a massive rotator cuff tear with some atrophy. Due to the nature of his injury, he was referred to Dr. Kovachevich for discussion of reverse total shoulder arthroplasty. He noted ongoing pain in the shoulder and dysfunction with movement and use as well as weakness. The symptoms continued to persist and had not really improved with conservative care. Claimant noted pain at nighttime sleeping as well. On exam Dr. Kovachevich noted Claimant had weakness of his active forward elevation, external rotation weakness and that internal rotation was limited. Dr. Kovachevich advised Claimant he had only two choices, to continue with conservative care, living with his current level of functioning or proceed with a reverse total shoulder arthroplasty. Claimant requested the surgery. Imaging studies were performed and revealed evidence of mild ligament arthritis with superior migration of the humeral head.

34. In addition, on November 23, 2021 Matthew Lugliani, M.D., at the Colorado Occupational Medical Partners, gave the opinion "I do not agree with the IME's evaluation and treatment suggestions. Patient can very well have had a preexisting condition which was accelerated through his work activity."

35. Claimant followed up with Dr. Kovachevich's office on December 6, 2021 for a preoperative evaluation. PA Madelyn Stein documented that Claimant continued to have traumatic complete tear of the rotator cuff and following assessment of right chronic shoulder pain and weakness determined Claimant was an appropriate surgical candidate for the reverse arthroplasty of the right shoulder, which she indicated was scheduled for December 14, 2021 at Swedish Orthopedic Center.

36. Claimant underwent surgery with Dr. Kovachevich on December 14, 2021 for the right reverse total shoulder arthroplasty. Claimant was instructed to keep the

shoulder immobilizer sling in place and that the dressings would be removed within 5 days.

37. Up until this point, Claimant had remained under temporary work restrictions, which the Employer accommodated. Following surgery, Claimant was unable to return to work.

38. Dr. Kovachevich examined Claimant on December 23, 2021 and noted that Claimant had some pain, as expected, but was to proceed with therapy, was already off the stronger pain medication and would be reassessed within four weeks. X-rays showed stable reverse arthroplasty in good alignment and position.

39. Dr. Kovachevich again attended Claimant on January 24, 2022 noting that, overall, Claimant was doing well, making progress regarding range of motion function with therapy, tolerated gentle passive and mild active motion of the shoulder, had been tolerating his sling and had no acute issues of note.

40. Respondents' expert Steinmetz issued an addendum report on January 27, 2022 affirming his previous opinions following further record review. Dr. Steinmetz testified consistent with his records.

41. Respondents' expert Steinmetz agreed that the surgery performed by Rudy Kovachevich, M.D., who was a referral from Dr. Griggs, was a reasonable and necessary surgery but took issue with it being related to the events of April 16, 2021, as he believed the surgery was not causally related. Dr. Steinmetz, however, gave the opinion on cross-examination that Claimant had not returned to his baseline condition, as his condition was "progressively worsening" but still maintained that the underlying need for the surgery was not related to the events of April 16, 2021.

42. Claimant continues to be off work following surgery, has not been released from care and has not been returned to modified-duty. Claimant indicated that the surgery he underwent has provided relief for pain and has given him more range of motion. He has had a reasonably good result and continued to progress as expected.

43. In 2020 Claimant earned $30,258.98, which divided by 52 weeks provides an average wage of $581.88. Respondents provided a thirteen week calculation resulting in an average wage of $528.06. However, if the wages earned by Claimant from pay period ending April 14, 2020 through pay period ending April 13, 2021, which is a period of 52 weeks, the average weekly wage is calculated at $552.04. As found, $552.04 is a fair approximation of Claimant’s earnings and is his average weekly wage in this matter.

44. As found, Claimant has shown that he was injured in the course and scope of his employment with Employer. Clearly, Claimant had occasional pain in his right shoulder, however, the fact that Claimant continued to perform work that was challenging, lifting materials, such as tires at awkward levels into vehicles, is persuasive to this ALJ. As found, Claimant had an aggravation of his preexisting degenerative condition of his right shoulder and bicep, causing massive rotator cuff tear and bicep tear following the pop while lifting the tire on the job.

45. Dr. Lugliani's and Dr. Grigg's opinions are more persuasive than the contrary opinion of Dr. Steinmetz whose opinion relies, in part, upon his view that Claimant's history was inconsistent. As found, after full reviewed of the records in

evidence, the Claimant's history is consistent. Although Claimant may have had aches and pains prior to April 16, 2021, those aches and pains in his right shoulder were intermittent, went away and there were no work restrictions prior to the events of April 16, 2021. As found, Claimant was performing his regular job where he was lifting tires and delivering them without any limitation. As further found, Claimant would lift the tires at shoulder level and depositing them into his truck and while Claimant was lifting a tire into his truck, he felt a pop and pain in his arm which was the proximate cause of his aggravation of the underlying degenerative disease and a specific incident causing the complete tear of his rotator cuff tear and bicep injury.

46. Also persuasive were the records of different providers at Colorado Occupational Medical Partner who completed Physician's Report of Workers' Compensation Injury forms (WC164), all of which indicate that Claimant's objective findings were consistent with a history of a work-related mechanism of injury. Further, while some of the tears may have been chronic, the Orthopedic Centers of Colorado reports by Dr. Griggs opining that the need for surgery was due to an "acute on chronic massive rotator cuff tear" are also persuasive over the contrary opinion of Dr. Steinmetz.

47. As found, Claimant was initially projected to have an arthroscopic rotator cuff repair pursuant to Dr. Griggs' initial recommendations on June 22, 2021. However, by November 17, 2021 Dr. Griggs noted that based on Claimant's previous MRI findings and the time from his last evaluation it was likely that Claimant had further atrophy of the muscles and he was not sure that Claimant would be a candidate for surgical repair of the cuff any longer. As found, due to the delay in authorization and the denial of the claim, Claimant's tears continued to progress, the degenerative process was seriously accelerated by the work related injury of April 16, 2021 and the tissue retracted as opined by Dr. Griggs, necessitating a more invasive procedure as recommended by Dr. Kovachevich for a total reverse right shoulder arthroplasty. Finally as found, the procedure performed by Dr. Kovachevich was reasonably necessary and related to the April 16, 2021 work related claim.

48. As found, Claimant continued to work for employer until the date of his surgery on December 14, 2021 under Dr. Kovachevich. Claimant is temporary totally disabled as of December 14, 2021 and is entitled to temporary disability benefits. This is supported by the fact that Claimant continues to be under his provider's care and, as of the date of the hearing, continues to engage in physical therapy and continues to use the arm immobilizer pursuant to medical recommendations.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which she seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances

of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." § 8-41-301, C.R.S.

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta,* 717 P.2d 965 (Colo.

App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, the medical records, Claimant's testimony, and the opinions of Dr. Lugliani, Mr. Chau, Dr. Rojas, Dr. Griggs and Dr. Kovachevich are more persuasive than the contrary opinion of Dr. Steinmetz. Claimant has shown that he was injured in the course and scope of his employment with Employer. While Claimant had occasional complaints of intermittent pain in his right shoulder before the work related injury, the fact that Claimant continued to perform his work without limitations, lifting supplies like tires at awkward levels into vehicles is persuasive to this ALJ. As found, Claimant had an aggravation of his preexisting degenerative condition of his right shoulder and bicep.

Dr. Lugliani's and Dr. Grigg's opinions are persuasive and support the claim that it is more likely than not that Claimant had an aggravation of the underlying degenerative condition. In contrast, Dr. Steinmetz's opinion relied upon his view that Claimant's history was inconsistent, which was not persuasive. As found, although Claimant had intermittent aches and pains, Claimant had no limitation, and had a significant aggravation causing the complete tear of the rotator cuff and bicep tear on April 16, 2021. As found, the pop in his arm and shoulder on April 16, 2021 was the proximate cause of Claimant's disability and need for medical care, causing the aggravation of the underlying degenerative disease and a specific incident causing the complete tear of his rotator cuff tear and bicep injury. This is supported by the ATP status reports which all indicate that Claimant's objective findings were consistent with a history of a work-related mechanism of injury. As found, while some of the tears may have been chronic, Dr. Griggs' opinion that the need for surgery was due to an "acute on chronic massive rotator cuff tear" was persuasive over the contrary opinion of Dr. Steinmetz. Claimant has shown by a preponderance of the evidence that Claimant sustained a work related on April 16, 2021 in the course and scope of his employment with Employer, aggravating his underlying degenerative right shoulder condition.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical treatment for this April 16, 2021 work related injury. As found, Claimant was initially projected to have an arthroscopic rotator cuff repair pursuant to Dr. Griggs' initial recommendations on June 22, 2021. However, by November 17, 2021 Dr. Griggs noted that, based on Claimant's previous MRI findings and the time from his last evaluation, Claimant had further atrophy of the muscles and was no longer a candidate for surgical repair of the cuff. As found, due to the delay in authorization and the denial of the claim, Claimant's tears continued to progress, the degenerative process was seriously accelerated by the work related injury of April 16, 2021 and the tissue retracted, necessitating a more invasive procedure as recommended by Dr. Kovachevich for a total reverse right shoulder arthroplasty. Finally as found, the procedure performed by Dr. Kovachevich was reasonably necessary and related to the April 16, 2021 work related claim, as Claimant continued to complain of limitations and inability to continue to tolerate the symptoms caused by the work related injury. Claimant has proven by a preponderance of the evidence, that the need for the reverse total right shoulder arthroplasty was causally related to the April 16, 2021 work related injury within a reasonable degree of probability.

C. Failure to Comply with W.C.R.P. Rule 16-10

Claimant requested a determination with regard to authorization of the surgery recommended by Dr. Griggs, an authorized treating provider. Claimant reasons, first, that the surgery is automatically authorized under the Division rules as Respondents failed to deny or authorize the surgery within 10 days. Secondly, Claimant argues that the surgery is reasonably necessary and related to the work injury of April 16, 2021.

The parties agreed that Dr. Griggs and Dr. Kovachevich are authorized treating physicians. On June 22, 2020, Dr. Griggs requested prior authorization to proceed with a right arthroscopic rotator cuff superior capsular reconstruction, possible biceps tenodesis, as reasonably necessary and related to the April 16, 2021 work-related accident. Dr. Griggs provided Respondents with the proposed date of surgery programed for August 4, 2021. There is a notation on the faxed form that the document was sent to one department and potentially then faxed to the Utilization Review Department. The records or testimony do not show when Respondents received the request but that they must have received the request by July 13, 2021, as Dr. Flores approved the certification for the surgery. The question here is whether the surgery was automatically approved by Respondents' failure to respond or whether Claimant must prove by a preponderance of the evidence that the surgery was reasonably necessary and related to the injury.

W.C.R.P. Rule 16-7(B), in effect as of the request for prior authorization on June 22, 2021, states that Respondent have ten (10) business days to comply with certain provisions.[1] The pertinent W.C.R.P. are W.C.R.P. Rule 16-7 (2021), Rule 16-7-1(B) (2021) and Rule 16-7-2 (2021).

As found, Claimant was injured in the course and scope of his employment, Respondents conceded the authorized treating physician requested prior authorization

[1] As of January 1, 2021 this rule changed from 7 to 10 days of receipt of the complete request.

for the surgery. From the start of Claimant's treatment with Dr. Griggs on May 25, 2025, Dr. Griggs anticipated that the complete rotator cuff tear, which was aggravated by the work related trauma, would probably require a surgery, if conservative care measures were unsuccessful. However, as of November 19, 2021 Respondents filed a Notice of Contest in this claim and had no obligation to comply with the requirements of prior authorization rules. Further, this issue is moot, as Claimant did not proceed with the arthroscopic procedure requested by Dr. Griggs but had a total reverse arthroplasty of the right shoulder, which was found to be reasonably necessary and related to the injury as stated above.

B. Average Weekly Wage

49. An ALJ may choose from two different methods set forth in Section 8-42-102, C.R.S. to determine a claimant's average weekly wage (AWW). The first method, referred to as the " default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." Sec. 8-42-102(2), C.R.S. The default provision in Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993); *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7,* W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). In calculating the fair approximation of Claimant's average weekly wage, wages were considered from pay period ending April 14, 2020 through pay period ending April 13, 2021, which is a period of 52 weeks. As found Claimant's fair approximation of his average weekly wage is $552.04. Claimant has failed to show that the average weekly wage should be calculated using wages from 2020 alone, as Claimant was injured on April 16, 2021.

C. Temporary Total Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning

capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Claimant has established by a preponderance of the evidence that he is entitled to TTD benefits from the date of his surgery on December 14, 2021 until terminated by law. Claimant sustained a work related injury on April 16, 2021 that caused a disability lasting more than three work shifts and caused him to leave work and lose wages following the surgery. Claimant was severely incapacity at the time of the hearing and continued to use an arm immobilizer, causing continued wage loss. Claimant has not been placed at maximum medical improvement by an authorized treating provider nor has he returned to modified or regular employment. Claimant has shown that it is more likely than not that Claimant is disabled and entitled to receive indemnity benefits as a cause of the work injury.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a compensable work related aggravation of his preexisting degenerative condition, causing injury to his right shoulder and upper extremity on April 16, 2021 within the course and scope of his employment.

2. Respondents shall pay for Claimant's reasonably necessary and related medical benefits as provided by the stipulated authorized treating providers, including the right shoulder reverse total arthroplasty performed by Dr. Rudy Kovachevich on December 14, 2021.

3. Claimant's fair approximation of his average weekly wage is $552.04.

4. Respondents shall pay for temporary total disability benefits as of December 14, 2021 at the rate of $368.03 per week until terminated by law.

5. Respondents shall pay interest at the statutory rate of eight percent on all amount not paid when due.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise,

the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 11th day of April, 2022.

By: Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course and scope of his employment with Employer on April 12, 2021?

- If Claimant has proven he sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve Claimant from the effects of his work injury?

- If Claimant has proven he sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits?

- If Claimant has proven he sustained a compensable injury, what is Claimant's average weekly wage ("AWW")?

- If Claimant has proven he sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that Respondent was uninsured for workers' compensation benefits at the time of the injury?

- Whether Respondent has proven by a preponderance of the evidence that Claimant's actions at the time of his injury constituted horseplay and/or a substantial deviation from employment duties thereby removing the incident from being a compensable workers' compensation injury?

- Whether Respondent has proven by a preponderance of the evidence that Claimant willfully violated a safety rule and is subject to a reduction of workers' compensation benefits pursuant to Section 8-42-112(1)(b)?

FINDINGS OF FACT

1. Claimant was hired as a farmer for Employer on April 5, 2021. Claimant's job duties included performing weed mitigation at a specific location in the open area in front of an abandoned cabin within Bureau of Land Management ("BLM") land. Employer is an organic and biodynamic farm with property that borders BLM land. Employer has rights to graze cattle on the adjoining BLM land. In order to obtain and maintain the organic farm certifications, Employer cannot use herbicides on its own land, and the animals cannot be exposed to herbicides on the BLM land. In order to prevent herbicides from being used by the BLM on the BLM lands where the animals

will be, Employer had to take the on responsibility of manual weed mitigation. In order to do this, Employer retained specialists to catalog the types and locations of weeds that needed to be mitigated in the BLM areas used by Employer. Employer then created a plan to mitigate in each specific location. The first location for this project was the location in front of the abandoned cabin that Claimant was assigned to work on April 12, 2021.

2. Claimant testified at hearing that he was assigned the task of weed mitigation since he started working for the employer. Claimant was informed by his supervisor, who Claimant identified as "O[redacted]", that his job was to pull weeds for the near future. Claimant testified that he was to work with a pick axe and shovel to pull weeds on the BLM land, most often on his hands and knees. Claimant testified that prior to the date of injury, all of his work was weed mitigation.

3. Respondent admitted at hearing that as of April 12, 2021, they did not maintain workers' compensation insurance.

4. In order to get to the area where he was assigned to perform weed mitigation, Claimant was provided a side-by-side ATV (hereinafter referred to as a "Razor" as testified to at hearing}. Claimant testified that on April 12, 2021, after waiting for about an hour at the farm, he drove the Razor toward the designated area in front of the cabin to pull the weeds. Claimant testified that when he was driving on the trail to the location, he came across two hunters that were walking back towards the cabin where he was heading to work. Claimant testified he stopped the vehicle and spoke to the hunters because he was concerned that he was going to be working in the area they were hunting. Claimant testified that he informed the hunters where he was working.

5. Claimant testified he tried to call O[redacted], but he did not have cell service. Claimant testified he later encountered O[redacted] and a coworker on the trail, and informed O[redacted] about the hunters. Claimant testified that O[redacted] told him that the hunters did not have permission to be on the property. Claimant testified that O[redacted] told Claimant that if he saw the hunters, he should tell them that they did not have permission to be on the property

6. Claimant testified that he, O[redacted], and the employee who was riding with O[redacted], returned to the farm, and worked there for about an hour. Claimant testified that he was not given any instruction on whether or how to interact with the hunters. Claimant testified that he then drove back up to the cabin site with the other employee, whose name he could not recall. Claimant testified that he then received a cell phone call from O[redacted] telling him he needed to get a tarp and some rocks to cover the weeds they were picking at the cabin site. Claimant testified that he left the other employee at the cabin, and then used the Razor to go back down to the farm to retrieve a tarp and some rocks.

7. Claimant testified that on the way back to the cabin, he again saw the

hunters and he decided that he wanted to go tell the hunters that they did not have permission to be on the property. Claimant testified he was going uphill when he made a left turn on the trail that was leading up to their location, heard the rocks shift in the back and the Razor rolled over.

8. Claimant testified that after the accident, he went to get help from his co-worker, but his coworker told him that he didn't want anything to do with it and walked away. Claimant testified that the hunters came down to the accident scene to help Claimant and called O[redacted]. Claimant testified that O[redacted] eventually came to the scene and Claimant apologized to O[redacted]. Claimant was then taken to the hospital. Claimant testified he was going only 5-10 miles per hour when he was driving on the trail before he entered the corner and was navigating the left hand turn at 5 miles per hour when the Razor rolled. Claimant testified he was wearing his seat belt at the time of the accident.

9. Claimant testified at hearing that as a result of the accident, he broke his collarbone.

10. The accident in this case occurred approximately 500 feet beyond the designated weed mitigation site, off the trail while Claimant was driving in the direction away from the designated weed mitigation site.

11. LH[Redacted] testified at hearing. Mr. LH[Redacted] is Claimant's coworker who was working with Claimant at the weed mitigation site near the cabin when the accident occurred. Mr. LH[Redacted] testified that he no longer works for Employer. Mr. LH[Redacted] testified that April 12, 2021 was his first day of work for Employer. Mr. LH[Redacted] testified that he was assigned to work with Claimant on that day, picking weeds in a designated area in front of an old, run down miner's cabin about 10 minutes into the BLM land.

12. Mr. LH[Redacted] 's testimony was consistent with Claimant's regarding the earlier events of the day, including that Claimant met Mr. LH[Redacted] and O[redacted] in the morning on the trail and Claimant informed them about his discussion with the hunters. Mr. LH[Redacted] testified, however, that he did not hear O[redacted] tell Claimant to confront the hunters and tell them they were not supposed to be on the property.

13. Mr. LH[Redacted] testified that after meeting Claimant and O[redacted] on the trail, Claimant drove the Razor to the weed mitigation site and Mr. LH[Redacted] was the passenger. Mr. LH[Redacted] testified Claimant was driving pretty recklessly and smoking a hash pen while driving.

14. Mr. LH[Redacted] testified that he was to work at the weed mitigation site from 9:00 a.m. until 11:00 a.m. Mr. LH[Redacted] testified that after working for some time in front of the cabin, Claimant left the weed mitigation site, got in the Razor, and returned to the farm to get more materials, leaving Mr. LH[Redacted] at weed mitigation on his own. Mr. LH[Redacted] testified that at approximately 11:20 a.m., Claimant came back, but drove past

the cabin and deeper into the BLM land without stopping at the weed mitigation site. Mr. LH[Redacted] testified Claimant was having a good time and driving too fast as he passed the weed mitigation site and proceeded further into the BLM land. Mr. LH[Redacted] testified that his understanding was that there was no work-related reason for Claimant to be driving past the cabin and into the BLM land at that time.

15. Mr. LH[Redacted] testified that he was on his hand and knees picking weeds and talking to his mom on his phone, when a few minutes later, he heard yelling in the distance and saw Claimant coming toward him down the path. Mr. LH[Redacted] testified Claimant said at that point that an animal had jumped in front of him. Mr. LH[Redacted] testified he went with Claimant and saw the Razor flipped in an open field. Mr. LH[Redacted] testified Claimant did not state that he was trying to get to the hunters.

16. Mr. LH[Redacted] testified he and Claimant tried to flip over the Razor, but could not get it flipped onto its wheels. Mr. LH[Redacted] testified Claimant told him Claimant was going to lose his job and wanted to get the Razor back down to the cabin. Mr. LH[Redacted] testified that he then walked back to the cabin and waited for O[redacted]. Mr. LH[Redacted] testified he walked back to the crash site a couple of times to check on Claimant and saw the hunters had come to check on Claimant as well. Mr. LH[Redacted] testified O[redacted] eventually arrived at the cabin and they proceeded to where the Razor had rolled over. Mr. LH[Redacted] testified that he, Claimant and the hunters flipped the Razor back over and O[redacted] took Claimant to where the paramedics were.

17. Mr. LH[Redacted] testified that he did not abandon Claimant at the accident site and attempted to help Claimant tum the razor over, but was unable to do so. Mr. LH[Redacted] testified he took a picture of the Razor after the accident. A copy of the picture was entered into evidence at hearing. Mr. LH[Redacted] 's testimony is found to be credible and persuasive. It is noted by the ALJ that Mr. LH[Redacted] no longer works for Employer and is an independent witness in this case.

18. O[redacted] O[Redacted] testified for respondents. Mr. O[Redacted] confirmed that he received a call from Mr. LH[Redacted] informing him of the accident, and that he then proceeded to gather the people and material he needed to respond. Mr. O[Redacted] confirmed there was a conversation early in the day about the hunters, but denied ever giving Claimant directions to seek out the hunters and tell them they had to leave. Mr. O[Redacted] stated that Claimant was not doing anything that was of benefit to Employer at the time he rolled the Razor. Mr. O[Redacted] testified that he had informed Claimant about Employer's rules regarding speed limits for the off-road vehicles and about seat belts. Mr. O[Redacted] testified that he also discussed that the use of safety belts was mandatory in the off road vehicles.

19. Mr. O[Redacted] testified that he drove Claimant down from the roll-over location in his vehicle. Mr. O[Redacted] testified that Claimant told him at the time of the incident that he had not been wearing his restraints. Claimant explained to Mr. O[Redacted] on the drive that he could not wear the seat belt because he could not figure out how to

put it on. Mr. O[Redacted] took photographs and video after the incident, showing that the seat belt was not defective. Mr. O[Redacted] 's testimony is found credible.

20. Claimant was transported to Valley View Hospital after the incident where he underwent x-rays and CT scans which showed no acute fractures. The x-ray of Claimant's shoulder showed a mild widening of the AC joint with slight elevation of the distal end of the clavicle relative to the acromion. Claimant was discharged by the ER doctor who noted that they did not see any injuries to his chest, lungs, ribs, head, neck or right arm, but advised Claimant to follow up with his doctor for a possible MRI which could reveal a rotator cuff tear.

21. Claimant was examined by Dr. Copeland on April 14, 2021. Dr. Copeland noted the cervical spine and head CT did not show any acute changes. Dr. Copeland noted that the shoulder x-ray was consistent with a grade 1 AC shoulder separation, with no sign of fracture. Claimant was referred for an MRI of the shoulder which demonstrated a partial rotator cuff tear.

22. None of the physicians in this case and none of the diagnostic records indicate that Claimant broke his collarbone as a result of the injury. The testimony of Claimant that he broke his collarbone as a result of the accident is found to be not credible.

23. Claimant was examined by Dr. Lorah on April 21, 2021. Dr. Lorah reviewed the x-rays and MRI and diagnosed Claimant with a partial thickness rotator cuff tear. Notably, Dr. Lorah's records document a significant discussion with Claimant regarding the accident and Claimant's use of a seat belt. According to Dr. Lorah's medical records, Claimant reported to Dr. Lorah that he was not wearing his seat belt due to the fact that the seat belt was non-operational. Claimant reported to Dr. Lorah that he had told his boss prior to the accident about the seatbelt.

24. The ALJ finds the testimony of Claimant to be not credible. Claimant's testimony was contradicted at hearing by Mr. LH[Redacted] , Mr. O[redacted] and the medical records entered into evidence. Claimant's testimony with regard to the speed that he was traveling prior to the accident in this case was specifically contradicted by the credible testimony of Mr. LH[Redacted] who witnessed Claimant pass him immediately prior to the accident. Mr. LH[Redacted] 's testimony with regard to Claimant's actions operating the Razor are found to be consistent and credible.

25. The ALJ finds that Respondents have established that it is more likely than not that Claimant was engaged in horseplay that represents a deviation from his employment with Employer at the time of the industrial accident. The ALJ credits the testimony of Mr. LH[Redacted] with regard to Claimant's actions on the Razor prior to the accident and finds that Claimant was, more likely than not, joy riding in a reckless fashion when the injury occurred.

26. The ALJ specifically rejects Claimant's testimony that he was headed to instruct the hunters to leave the property at the time of his accident and finds that Claimant was engaged in a deviation at the time of the accident that was so significant that Claimant's injury did not arise out of and in the course and scope of his employment with Employer.

27. The ALJ notes that the horseplay in this case was significant in the fact that Mr. LH[Redacted] testified as to the nature in which Claimant was driving recklessly and his use of a hash pen while driving. The ALJ further notes that Claimant's horseplay in this case was not reasonably combined with his work activities. Claimant testified he was instructed to take the Razor and pick up rocks and a tarp, and bring them back to the weed mitigation area at the cabin. Claimant had completed this task, and then proceeded to take the Razor past the area where he was to leave the tarp and rocks, and proceeded further into the BLM land and away from his work area.

28. Claimant's testimony that he was headed into the area to confront the hunters is found to be not credible. Claimant's testimony was contradicted by the credible testimony of Mr. O[Redacted] and Mr. LH[Redacted] , both of whom contradicted Claimant's testimony that he was instructed by Mr. O[Redacted] to confront the hunters and tell them they were not allowed to be in the area. The ALJ further credits Mr. LH[Redacted] 's testimony that Claimant was driving too fast and having a good time and finds that Claimant was operating the Razor in a reckless manor. Claimant's testimony that he was driving 5-10 miles per hour on the trail prior to the turn and 5 miles per hour as he entered the turn is found to be not credible. The ALJ finds that there was no basis for Claimant to continue into the BLM land on the Razor other than to continue his joy ride on the Razor and did not confer a benefit on Employer.

29. The ALJ further finds that after passing the weed mitigation site, Claimant was proceeding on a deviation unrelated to his employment with Employer. The ALJ rejects Claimant's contention that he was headed to speak to the hunters and finds that Claimant's actions after passing the weed mitigation site was for his own enjoyment unrelated to any work activities for Employer.

30. Based on the ALJ's finding that Claimant failed to prove a compensable injury arising out of and in the course and scope of his employment with Employer, the ALJ need not consider the remaining arguments by Claimant.

31. The ALJ therefore finds that Respondents have proven by a preponderance of the evidence that Claimant's injury resulted from horseplay that was so significant that it Claimant's injury did not arise out of and in the course and scope of his employment with Employer. Based on the ALJ's finding that Claimant did not sustain a compensable injury, the ALJ does not need to address the remaining issues raised by Claimant at the commencement of the hearing.

CONCLUSIONS OF LAW

1. The purpose of the 'Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2020. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Claimant must show that the injury was sustained in the course and scope of his employment and that the injury arose out of his employment. The "arising out of" and "in the course of" employment criteria present distinct elements of compensability. *Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999). For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred in the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Id.* For an injury to "arise out of" employment, the claimant must show a causal connection between the employment and the injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered a part of the employment contract. *Id.* Whether there is a sufficient "nexus" or relationship between the Claimant's employment and his injury is one of fact for resolution by the ALJ based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988).

4. Horseplay regularly occurs in the workplace and frequently results in compensation cases involving industrial injury claims. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995). In *Lori's Family Dining* the Court of Appeals set forth a four-part test to determine whether the participation in horseplay represents a deviation that takes the injury out of the arising out of employment requirement for workers' compensation cases.

5. Tile four-part test to determine if an injury arising out of horseplay is compensable under the Colorado Workers' Compensation Act includes, (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, i.e. whether it was commingled with the performance of a duty or involved an abandonment of duty; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. *Lori's Family Dining, supra.,* at 718.

6. As found, Claimant's act of horseplay in this case involved Claimant operating the Razor in a reckless manner, which ultimately resulted in the accident that led to Claimant's injury. As found, the ALJ credits the testimony of Mr. LH[Redacted] with regard to Claimant's operation of the Razor prior to the accident in reaching this conclusion. The ALJ finds that the extent and seriousness of the deviation is significant in that Claimant proceeded on the Razor past the area in which he was designated to work and further onto the BLM land. The ALJ finds that the deviation was not combined with the performance of a work duty as Claimant had abandoned his responsibility of dropping off the rocks and tarp in order to continue on the trail deeper into the BLM land and away from the work site. The ALJ finds that there was no credible evidence presented that the nature of the employment accepted any degree of horseplay to occur. tn fact, Claimant's testimony specifically denied that he was engaging in horseplay that would have been accepted by Employer.

7. The ALJ finds the testimony of Claimant regarding his operation of the Razor, including the purpose of his driving past the weed mitigation site, to be not credible. The ALJ credits the testimony of Mr. O[Redacted] and Mr. LH[Redacted] and finds that Claimant was not instructed to confront the hunters if he encountered them, and finds that the only basis for Claimant to continue past the weed mitigation site was to continue his joy ride on the Razor.

8. Because Claimant's injury resulted from a horseplay incident on Claimant's part that was so significant that Claimant's injury did not arise out of and in the course of his employment with Employer, Claimant's claim for compensation is dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: April 11, 2022

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

PROCEDURAL MATTER

At the outset of the hearing in this matter the ALJ sustained Respondents' objection to Claimant's Exhibits 6 and 7, pages 38-43, and excluded them from evidence. Exhibits 6 and 7 are cervical spine MRI results and analysis conducted on February 4, 2022 and February 21, 2022. The Exhibits thus constitute medical records. However, Claimant did not provide the Exhibits to Respondents prior to the March 8, 2022 hearing. Subsequent to the hearing, Claimant filed a Motion in Limine seeking to reverse the ALJ's evidentiary ruling and permit consideration of Exhibits 6 and 7. Respondents' objected to the post-hearing admission of the tended Exhibits.

Section 8-43-207(1)(c), C.R.S. empowers an ALJ to "make evidentiary rulings." The preceding statute vests the ALJ with "wide discretion in the conduct of evidentiary proceedings." *Ortega v. Indus. Claim Appeals Off.*, 207 P.3d 895, 897 (Colo. App. 2009). An ALJ's evidentiary ruling will not be disturbed absent an abuse of discretion. *See Youngs v. Indus. Claim Appeals Off.*, 297 P.3d 964 (refusing to set aside ALJ's ruling that documents were inadmissible where no abuse of discretion was shown). An ALJ commits an abuse of discretion only if the evidentiary ruling "exceeds the bounds of reason." *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850, 856 (Colo. 1993).

Section 8-43-210, C.R.S. requires that "[a]ll relevant medical records, vocational reports, expert witness reports, and employer records shall be exchanged with all other parties at least twenty days prior to the hearing date." The court of appeals has recognized that exceptions to the twenty-day rule are contemplated by allowing continuances to file additional reports in appropriate circumstances. *See Ortega v. Indus. Claim Appeals Off.,* 207 P.3d 895 (Colo. App. 2009).

The record reflects that Claimant failed to exchange Exhibits 6 and 7 with Respondents more than twenty days prior to the hearing. Respondents would be prejudiced if Claimant's Motion in Limine was granted. Respondents did not have an opportunity to review and investigate Exhibits 6 and 7 prior the hearing and were thus unable to develop any rebuttal evidence. Claimant failed to provide any explanation for the failure to timely exchange the medical records prior to hearing. Moreover, Claimant did not request a continuance or otherwise demonstrate good cause to admit Exhibits 6 and 7. By failing to provide Respondents with Exhibits 6 and 7 until the date oi the hearing in this matter, exclusion of the documents is warranted pursuant to §8-43-210, C.R.S.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her November 1, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

2. If Claimant has demonstrated that her claim should be reopened, whether she has proven by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits.

3. If Claimant has established that her claim should be reopened, whether Respondents have demonstrated by a preponderance of the evidence that Claimant abandoned her position and was responsible for her termination from employment under §8-42-105(4) C.R.S. and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

FINDINGS OF FACT

1. Claimant worked as a school bus driver for Employer. On November 1, 2019 Claimant sustained a work injury when she slipped and fell backward while walking to a school bus. Claimant attempted to finish her work day, but went home due to increasing pain in her back.

2. Claimant received medical treatment from Authorized Treating Physician (ATP) Ethan Moses, M.D. She attended physical therapy and massage therapy for pain in her cervical spine, thoracic spine, and lumbar spine, but did not receive any benefit. Claimant requested acupuncture therapy and began experiencing relief from the treatments. On November 5, 2019 Dr. Moses permitted Claimant to perform modified duty employment. By December 13, 2019 he released Claimant to work full duty.

3. On October 13, 2020 Claimant visited Dr. Moses for an evaluation. Dr. Moses diagnosed Claimant with the following: (1) strain of muscle, fascia and tendon at neck level; (2) strain of muscle, fascia and tendon of lower back; and (3) strain of ligaments of thoracic spine. Claimant reported significant difficulties with normal activities of daily living, including working, self-care and chores around the house. She also continued to report 8/10 pain levels in her neck that "impact[ed] all aspects of [her] life," Dr. Moses determined that Claimant reached Maximum Medical Improvement (MMI). He noted that Claimant's pain levels had plateaued in response to conservative treatments and there were no other therapies she was willing to pursue. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Moses assigned Claimant a 4% rating pursuant to Table 53 for a specific disorder of the cervical spine and a 9% rating for range of motion deficits. Combining the ratings yielded a 13% whole person impairment. Dr. Moses released Claimant to full duty work without restrictions.

4. Prior to Claimant's industrial accident, she experienced dizziness, difficulty sleeping, nausea and fatigue. Claimant attributed her symptoms to anxiety and did not connect them to any known physical condition. She also had a history of back and shoulder pain for over a year before the November 1, 2019 work accident.

5. On October 19, 2020 Respondents filed a Final Admission of Liability (FAL) regarding Claimant's November 1, 2019 industrial injury. The FAL acknowledged that Claimant reached MMI on October 13, 2020 with a 13% whole person impairment rating consistent with Dr. Moses's assessment. The FAL also denied medical maintenance

benefits after MMI. Claimant did not object to the FAL and the claim closed by operation of law.

6. Insurer paid Claimant a total of $22,073.28 in Permanent Partial Disability (PPD) benefits for the period October 19, 2020 through August 10, 2021. Claimant agreed at hearing that she received the preceding payments.

7. On April 14, 2021 Claimant terminated her employment with Employer. Employer prepared a Notice of Separation. The document specified that Claimant resigned through a text message to her supervisor Edie D[Redacted] on April 13, 2021. Claimant's last day worked was April 9, 2021. Claimant detailed that she resigned from her position through a text message following a series of personal conflicts with a co-worker. She explained that her co-worker repeatedly harassed her and expressed her concerns to Employer, but did not receive support.

8. Claimant's supervisor Ms. D[Redacted], who oversees Employer's operations and bus fleet, testified at the hearing in this matter. Ms. D[Redacted] remarked that Claimant would still be employed if she had not resigned her position during the Spring of 2021. She specified that Claimant made a personal decision to resign her employment. Notably, Employer reviewed video footage of Claimant's interactions with her co-worker. Ms. D[Redacted] commented that the video footage did not reveal any harassment. Instead, conversations were invited by both parties. In response to text messages from Claimant, Ms. D[Redacted] offered a transfer, but Claimant declined.

9. Claimant testified that, after her termination from employment, she began attending college full-time and presented her transcript into evidence. She further commented that she is able to perform various activities of daily living including grocery shopping, driving and cooking.

10. On December 28, 2021 Claimant underwent an independent medical examination with John R. Burris, M.D. Claimant reported that, on the date of her work injury, she was preparing her bus at the beginning of the day but slipped on a patch of ice and fell to the ground. She experienced immediate pain in her head, neck and back. During the following year, Claimant participated in numerous types of conservative treatment, including two sessions of physical therapy, eight sessions of massage therapy, 13 sessions of chiropractic therapy and acupuncture therapy with little overall change in reported symptoms. Notably, Claimant also rejected repeated offers for treatment, MRIs, medications and physiatry referrals.

11. In conducting a physical examination, Dr. Burris noted that Claimant exhibited extreme pain behaviors and guarding. He also remarked that Claimant's pain presentation was non-physiologic because it did not follow a dermatomal pattern or match the records he had reviewed. Dr. Burris assessed Claimant with non-specific neck and back pain. He agreed with Dr. Moses that Claimant reached MMI on October 13, 2020. Claimant had completed a reasonable course of conservative treatment and did not require additional care to cure or relieve the effects of her industrial injury.

12. Dr. Burris also testified at the hearing in this matter. He explained that Claimant's condition has not worsened since she reached MMI on October 13, 2020. Dr. Burris remarked that Claimant's pain levels have remained at 8/10. Based on his physical examination during the independent medical examination, Dr. Burris determined that there was no objective evidence of a worsening of Claimant's condition. He noted that, based on Claimant's extreme pain behaviors, he was unable to obtain reasonable range of motion measurements. Dr. Burris summarized that, based on objective measures, including normal neurologic function, Claimant has not suffered a worsening of condition since reaching MMI.

13. Claimant testified at the hearing in this matter. She explained that, based on medical treatment outside the Workers' Compensation system, her condition has worsened. Imaging has revealed foraminal stenosis and spurs along her neck. She desires cortisone injections to address her condition.

14. Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her November 1, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, on November 1, 2019 Claimant sustained a work injury when she slipped and fell backward while walking to a school bus. Claimant received treatment from ATP Dr. Moses. She attended physical therapy and massage therapy for pain in her cervical spine, thoracic spine, and lumbar spine, but did not receive any benefit. By December 13, 2019 Dr. Moses released Claimant to full duty work.

15. On October 13, 2020 Claimant visited Dr. Moses for an evaluation. Dr. Moses diagnosed Claimant with the following: (1) strain of muscle, fascia and tendon at neck level; (2) strain of muscle, fascia and tendon of lower back; and (3) strain of ligaments of thoracic spine. Claimant reported significant difficulties with normal activities of daily living, including working, self-care and chores around the house. She also continued to report 8/10 pain levels in her neck that "impact[ed] all aspects of [her] life," Dr. Moses determined that Claimant had reached MMI. He noted that Claimant's pain levels had plateaued in response to conservative treatments and there were no other therapies she was willing to pursue. He assigned Claimant a 13% whole person impairment rating for the cervical spine and released her to full duty work without restrictions.

16. On December 28, 2021 Dr. Burris noted that during the year following her accident, Claimant participated in numerous types of conservative treatment, including two sessions of physical therapy, eight sessions of massage therapy, 13 sessions of chiropractic therapy and acupuncture therapy with little overall change in symptoms. Notably, Claimant rejected repeated offers for treatment, MRIs, medications and physiatry referrals. In conducting a physical examination, Dr. Burris noted that Claimant's pain presentation was non-physiologic because it did not follow a dermatomal pattern or match the records he had reviewed. Dr. Burris assessed Claimant with non-specific neck and back pain. He agreed with Dr. Moses that Claimant reached MMI on October 13, 2020.

17. Claimant testified that, based on medical treatment outside the Workers'; Compensation system, her condition has worsened. Imaging has revealed foraminal

stenosis and spurs along her neck. She desires cortisone injections to address her condition. However, in contrast to Claimant's testimony, Dr. Burris persuasively testified at the hearing that her condition has not worsened since she reached MMI on October 13, 2020. Dr. Burris remarked that Claimant's pain levels have remained at 8/10. Based on his physical examination during the independent medical examination, Dr. Burris determined that there was no objective evidence of a worsening of Claimant's condition. He noted that, based on Claimant's extreme pain behaviors, he was unable to obtain reasonable range of motion measurements. Dr. Burris summarized that, based on objective measures, including normal neurologic function, Claimant did not suffer a worsening of condition after she reached MMI.

18. Claimant completed a conservative course of treatment after her November 1, 2019 industrial injuries. There was no additional treatment that Claimant was willing to undergo at the time she reached MMI on October 13, 2020. At the time of MMI, Claimant continued to report subjectively pain complaints at 8/10 levels. Although Claimant testified at hearing that she continued to experience pain in her neck, her symptoms mirrored her complaints at the time she was placed at MMI. Furthermore, continued pain and some difficulty completing daily tasks after MMI would be expected as part of her condition and is reflected through the assignment of a 13% whole person permanent impairment rating. The persuasive medical records and testimony of Drs. Moses and Burris reveal that there is an attenuated causal connection between Claimant's work injury and a worsening of her symptoms after she reached MMI on October 13, 2020. Claimant has thus failed to establish that she suffered a worsening of condition that is causally related to her November 1, 2019 industrial injury. Accordingly, Claimant's request to reopen her Workers' Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Off.,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Off.,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

5. A request for continuing medical treatment must be presented at the time of MMI. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). Furthermore, the issue of medical benefits is closed if the respondents file an uncontested final admission that denies liability for future medical benefits. *Burke v. Indus. Claim Appeals Off.*, 905 P. 2d 1 (Colo. App. 1994). When a claim is closed, the claimant is precluded from receiving further benefits unless there is an order reopening the claim on the grounds of error, mistake or change of condition. *See Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), (a claim may be reopened for further medical treatment when the claimant experiences an "unexpected and unforeseeable" change in condition); *Brown and Root, Inc. v. Indus. Claim Appeals Off.*, 833 P.2d 780 (Colo. App. 1991).

6. MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Indus. Claim Appeals Off.,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S.

7. As found, Claimant has failed to establish by a preponderance of the evidence that she should be permitted to reopen her November 1, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, on November 1, 2019 Claimant sustained a work injury when she slipped and fell backward while walking to a school bus. Claimant received treatment from ATP Dr. Moses. She attended physical therapy and massage therapy for pain in her cervical spine, thoracic spine, and lumbar spine, but did not receive any benefit. By December 13, 2019 Dr. Moses released Claimant to full duty work.

8. As found, on October 13, 2020 Claimant visited Dr. Moses for an evaluation. Dr. Moses diagnosed Claimant with the following: (1) strain of muscle, fascia and tendon at neck level; (2) strain of muscle, fascia and tendon of lower back; and (3) strain of ligaments of thoracic spine. Claimant reported significant difficulties with normal activities of daily living, including working, self-care and chores around the house. She also continued to report 8/10 pain levels in her neck that "impact[ed] all aspects of [her] life," Dr. Moses determined that Claimant had reached MMI. He noted that Claimant's pain levels had plateaued in response to conservative treatments and there were no other therapies she was willing to pursue. He assigned Claimant a 13% whole person impairment rating for the cervical spine and released her to full duty work without restrictions.

9. As found, on December 28, 2021 Dr. Burris noted that during the year following her accident, Claimant participated in numerous types of conservative treatment, including two sessions of physical therapy, eight sessions of massage therapy, 13 sessions of chiropractic therapy and acupuncture therapy with little overall change in symptoms. Notably, Claimant rejected repeated offers for treatment, MRIs, medications and physiatry referrals. In conducting a physical examination, Dr. Burris noted that Claimant's pain presentation was non-physiologic because it did not follow a dermatomal pattern or match the records he had reviewed. Dr. Burris assessed Claimant with non-specific neck and back pain. He agreed with Dr. Moses that Claimant reached MMI on October 13, 2020.

10. As found, Claimant testified that, based on medical treatment outside the Workers'; Compensation system, her condition has worsened. Imaging has revealed foraminal stenosis and spurs along her neck. She desires cortisone injections to address her condition. However, in contrast to Claimant's testimony, Dr. Burris persuasively testified at the hearing that her condition has not worsened since she reached MMI on October 13, 2020. Dr. Burris remarked that Claimant's pain levels have remained at 8/10. Based on his physical examination during the independent medical examination, Dr. Burris determined that there was no objective evidence of a worsening of Claimant's condition. He noted that, based on Claimant's extreme pain behaviors, he was unable to obtain reasonable range of motion measurements. Dr. Burris summarized that, based on objective measures, including normal neurologic function, Claimant did not suffer a worsening of condition after she reached MMI.

11. As found, Claimant completed a conservative course of treatment after her November 1, 2019 industrial injuries. There was no additional treatment that Claimant was willing to undergo at the time she reached MMI on October 13, 2020. At the time of MMI, Claimant continued to report subjectively pain complaints at 8/10 levels. Although Claimant testified at hearing that she continued to experience pain in her neck, her symptoms mirrored her complaints at the time she was placed at MMI. Furthermore, continued pain and some difficulty completing daily tasks after MMI would be expected as part of her condition and is reflected through the assignment of a 13% whole person permanent impairment rating. The persuasive medical records and testimony of Drs. Moses and Burris reveal that there is an attenuated causal connection between Claimant's work injury and a worsening of her symptoms after she reached MMI on October 13, 2020. Claimant has thus failed to establish that she suffered a worsening of

condition that is causally related to her November 1, 2019 industrial injury. Accordingly, Claimant's request to reopen her Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen her Workers' Compensation claim based on a change in condition is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 11, 2022.

ISSUES

➢ Whether Respondents have proven by a preponderance of the evidence that Claimant did not sustain compensable injury arising out of and in the course and scope of her employment with Employer on June 27, 2019?

FINDINGS OF FACT

1. Claimant testified at hearing that she was employed with Employer on June 27, 2019 and was instructed to go to the back room and take boxes off the shelf. Claimant testified that there were two large boxes that were filled with oil. Claimant testified that when she was lifting the second box, she hurt her back. Claimant testified she informed her supervisor of the injury on the date it occurred.

2. Claimant testified that a few days later, she went to work and told her boss that she could hardly breath, but was informed by her supervisor that she should limit herself to just cashier work. Claimant testified at hearing that she called her son and had him pick her up and take her to the emergency room.

3. Claimant was examined at the St. Mary's Hospital emergency room ("ER") on June 29, 2019. Claimant reported to the ER that she had 2 days of worsening low back pain after doing a lot of heavy lifting and twisting while at work. The ER physician noted Claimant had a history of what sounded like neuropathy to the bottom of her feet. The ER records document that Claimant reported a long history of low back pain, which had become quite severe the past two (2) days.

4. Claimant reported to the ER physician that she had not seen anyone for her low back, but usually gets a massage and that helps. Claimant reported she had gotten a massage the day before, but it seemed to make her symptoms worse. The ER physician noted that Claimant's symptoms were consistent with acute on chronic low back pain and instructed to follow up with her primary care physician.

5. In a separate part of the ER records, PA Steerman notes that Claimant presented with low back pain and has had low back pain for quite a while, which she believes is secondary to her job as she does quite a bit of lifting at work. PA Steerman noted further that yesterday Claimant was see at physical therapy for foot pain when she developed increased low back pain. Claimant reported the pain was worse with movement.

6. Claimant was examined by physicians' assistant ("PA") Richards in

Norwood, Colorado on July 5, 2019. PA Richards completed a WC164 form that provided Claimant with work restrictions of no lifting greater than 15 pounds and no repetitive lifting greater than 10 pounds. PA Richards also obtained x-rays of Claimant's thoracic and lumbar spine and referred Claimant for physical therapy. The records from PA Richards do not contain an accident history, but the WC 164 indicates that Claimant's maximum medical improvement ("MMI") date is unknown at this time as it is a new case.

7. Notably, PA Richards had evaluated Claimant prior to her work injury and had seen Claimant on May 19, 2019 for her annual physical. PA Richards noted Claimant worked full time and takes care of her grandkids. PA Richards noted Claimant complained of living in pain that stems from the area of her uterus and tried to have the pain diagnosed, but was eventually told Medicaid would not pay for a hysterectomy. Claimant reported having insomnia that she related to her pelvic pain and aching pain in her legs.

8. Claimant returned to PA Richards on June 24, 2019 (3 days prior to her work injury) for evaluation of foot pain and plantar fasciitis. Claimant reported to PA Richards that she had a lot of back pain and damaged nerves in her neck, but denied any history of ankle sprains. Claimant reported some tingling in her toes, but not as bad as her hands. PA Richards referred Claimant for physical therapy.

9. Respondents filed a general admission of liability ("GAL") on July 31, 2019 admitting for medical benefits only.

10. Claimant was evaluated by Ms. Fusting, the physical therapist, on August 9, 2019. The physical therapist noted that Claimant had gone to the ER around the end of June after developing back pain that Claimant described as taking her breath away. Ms. Fusting noted that the Claimant reported that the ER doctor thought lifting at work that day caused her back to spasm. Ms. Fusting noted Claimant's signs and symptoms were consistent with low back pain with muscle strain. Ms. Fusting noted pain with palpation, and impaired strength.

11. Claimant returned to PA Richards on September 3, 2019. PA Richards noted Claimant's accident history of taking down heavy boxes and then twisting to place the boxes on a "U-boat" and being unable to continue to do this work after 2 boxes. Claimant also reported that on the next day she was lifting and placing bottles of water from the ground on to the "U-boat" and on the last one she felt a strain in her lower back. PA Richards noted Claimant denied back pain in the past, but noted that the ER records reported a history of back pain that improved with massage. PA Richards continued Claimant on a 15 pound lifting restriction and recommended Claimant continue physical therapy.

12. Claimant returned to PA Richards on October 15, 2019 and noted she continued to experience low back pain, with pain waking her from her sleep. PA

Richards noted Claimant had been back to work light duty and was improving but had been having to do a lot more bending which increased her pain again. PA Richards recommended undergo a magnetic resonance image ("MRI") of her lumbar spine.

13. Claimant was next evaluated by PA Richards on November 15, 2019. PA Richards noted Claimant's MRI was scheduled for November 25, 2019. PA Richards noted that Claimant had reported increased symptoms at her last visit secondary to excessive work requirements. Claimant reported she had been able to follow her work restrictions and continued her physical therapy and her symptoms again improved.

14. Claimant returned to PA Richards on February 7, 2020 and noted that she had not yet been able to get the MRI. PA Richards noted Claimant was complaining of lower extremity symptoms, which PA Richards thought were muscular rather than neurological. PA Richards reported that Claimant advised that her back pain continued to come and go, but would still have some bad days when her back pain is severe. Claimant noted that her back pain was mostly localized to the central lower back with some symptoms now in her legs bilaterally. PA Richards noted that Claimant appeared to have improved with physical therapy as she was no longer complaining of thoracic spine pain. PA Richards continued Claimant's work restrictions and referred Claimant to Dr. Gebhard for an orthopedic consultation.

15. Claimant eventually underwent the MRI of the lumbar spine on February 24, 2020. The MRI showed lower lumbar spine degenerative disc and facet disease at the L4-5 and L5-S1 levels.

16. Claimant returned to PA Richards on March 31, 2020. PA Richards noted the findings on the MRI and again recommended Claimant be evaluated for a spine consultation and referred Claimant to Dr. Clifford.

17. Claimant returned to PA Richards on May 1, 2020. PA Richards noted Claimant's pain continued to worsen. PA Richards noted Claimant was to be seen by Dr. Clifford in two weeks. PA Richards increased Claimant's work restrictions to no lifting pushing, pulling or carrying over 10 pounds.

18. Dr. Clifford eventually evaluated Claimant on June 22, 2020. Dr. Clifford noted Claimant's accident history of lifting boxes from overhead down to her waist when she started having increasing pain. Dr. Clifford noted Claimant had some history of back pain. Dr. Clifford noted Claimant reported currently having severe pain which was 7 to 8 out of 10 on a daily basis. Claimant also reported leg pain on the left side with cramping in the calf that is worse when she straightens her leg.

19. Dr. Clifford performed a physical examination of Claimant and reviewed Claimant's MRI scan. Dr. Clifford diagnosed Claimant with L5-S1 disc degeneration with left sided L5-S1 disc protrusion with radiculopathy in the L5-S1 nerve root distribution. Dr. Clifford recommended Claimant undergo a left L5-S1, S1-S2

transforaminal epidural steroid injection.

20. Claimant was evaluated by Dr. Linder on June 29, 2020. Dr. Linder is a physician in the same office as PA Richards. Dr. Linder noted the recommendations by Dr. Clifford and noted Claimant complained of some incontinence that was getting worse while walking. Dr. Linder continued Claimant's work restrictions to no lifting more than 10 pounds and advised Claimant to follow up after the epidural steroid injection.

21. The left L5-S1, S1-S2 transforaminal epidural steroid injections were performed on July 22, 2020 under the auspices of Dr. Clifford.

22. Claimant was examined by PA Richards on July 28, 2020. Claimant reported to PA Richards some relief in her left leg symptoms after the epidural steroid injection. Claimant reported she was now having right leg radicular symptoms. PA Richards noted Claimant may need a new MRI based on the new right leg symptoms. PA Richards continued Claimant on the 10 pound work restriction.

23. Claimant was re-examined by PA Richards on September 28, 2020. PA Richards noted that while the epidural steroid injection seemed to initially help Claimant's symptoms, her symptoms returned with return to work. PA Richards further noted Claimant was now complaining of symptoms on the right. Claimant reported to PA Richards that she believed the concrete floors at work may be contributing to the worsening symptoms. Claimant reported she was not able to tolerate more than four (4) hours of work.

24. PA Richards noted that Claimant was contacted by Dr. Clifford's office and advised that her left sided epidural steroid injection was rejected. PA Richards noted decreased range of motion on examination due to pain in all directions. PA Richards continued Claimant's work restrictions.

25. Claimant returned to PA Richards on October 26, 2020. PA Richards noted that the epidural steroid injection was declined and recommended that Claimant continue with ongoing physical therapy two times per week for another 4-6 weeks. Claimant's 10 pound work restrictions were continued.

26. Claimant was next evaluated by PA Richards on November 24, 2020. PA Richards noted that Claimant's ongoing physical therapy had not been authorized, however Claimant had reported some recent improvements with her home exercise program, and PA Richards again recommended ongoing physical therapy of once every two weeks for 3-4 months. PA Richards opined that Claimant had not reached maximum medical improvement.

27. Respondents arranged for an independent medical evaluation ("IME") with Dr. Lesnak on December 22, 2020. Dr. Lesnak reviewed Claimant's medical records, obtained a medical history and performed a physical examination of Claimant

in connection with his IME. Dr. Lesnak also reviewed video surveillance of Claimant in connection with his IME. Dr. Lesnak noted that Claimant had an accident history that included an injury at work on June 29, 2019 (sic). Dr. Lesnak further noted the accident history recorded by PA Steerman which indicated Claimant's back pain started at a physical therapy appointment for her foot.

28. Dr. Lesnak reviewed the medical records from PA Richards on July 5, 2019 and noted that the records do not provide a history of an injury at work or of any complaints of back pain. Dr. Lesnak notes that Claimant was complaining of phtotophobia and an acute headache for the past three hours. Dr. Lesnak noted that PA Richards recommended lab tests and a brain MRI on July 5, 2019. The IME report does not mention the WC164 form that recommended x-rays of the lumbar and thoracic spine.

29. Dr. Lesnak noted Claimant returned to PA Richards on September 3, 2019 and those records referenced Claimant injuring her back on June 27 while taking down heavy boxes and the twisting to place the boxes on the "U-boat". Dr. Lesnak specifically notes in his report that this accident history does not reference Claimant developing significantly worsened pain during a physical therapy session for her foot prior to the ER evaluation. Dr. Lesnak further noted that by October 15, 2019, PA Richards was recommending an MRI scan. Dr. Lesnak was critical of this request as he found no documentation of any reproducible objective findings to suggest that an MRI study was medically indicated.

30. Dr. Lesnak reviewed the medical records from Dr. Clifford and based on Claimant's report that her symptoms may have partially improved for several days following the injection, followed by her symptoms recurring, Dr. Lenak opined that Claimant had a completely nondiagnostic and nontherapeutic response to the lumbar epidural injections trials.

31. Dr. Lesnak opined that Claimant's reported history of "developing increased symptoms in 06/2019 has 'changed' over time". Dr. Lesnak reviewed the surveillance video and noted that the video depicted Claimant on September 5, 2020 performing bending and lifting activities including picking up a portable propane tank off of the ground and placing it into a metal cage outside of the Dollar Store. Dr. Lesnak noted that the video from September 6, 2020 showed Claimant performing several activities including walking activities as well as using a long-handled broom to perform repetitive sweeping activities. Dr. Lesnak noted Claimant showed no signs of discomfort or functional inability when performing these activities.

32. Dr. Lesnak noted in his report that Claimant denied a history of low back pain or treatment for her low back during his IME evaluation. Dr. Lesnak opined that it was his opinion the Claimant did not sustain any type of injury during work hours in June 2019.

33. Dr. Lesnak issued a supplemental report dated July 28, 2021 which reviewed some medical records from Claimant that predated her work injury along with additional medical records from Claimant from after her work injury. Dr. Lesnak noted Claimant's June 24, 2019 examination with PA Richards in which she reported that he had chronic low back pain and damaged nerves in her neck.

34. Dr. Lesnak testified at hearing consistent with his report. Dr. Lesnak noted Claimant had four out of five positive Waddell's signs on his physical examination. Dr. Lesnak opined that the surveillance video of July 19, 2020 that he reviewed did not show Claimant performing work outside of her restrictions, but opined it was inconsistent with Dr. Clifford's report of June 2020 where Claimant reported pain of 7-8 out of 10. Dr. Lesnak opined that Claimant was performing work outside of her work restrictions on September 5, 2020 when she was lifting the propane tank and putting it in the cage, as she was under a lifting restriction of 10 pounds at the time. Dr. Lesnak opined that even if the propane tank were empty, it would still exceed Claimant's 10 pound work restriction set forth by Dr. Linder.

35. Claimant testified at hearing that the propone tank depicted in the video was empty and was recorded lifting the propane tank while at work for Employer. Claimant testified that if she overexerts herself at work it will cause pain. Claimant testified that she did not believe lifting the empty propane tank exceeded her work restrictions.

36. The ALJ finds the opinions expressed by Dr. Lesnak to be not credible with regard to the issue of compensability. The ALJ notes that the surveillance video which Dr. Lesnak opined showed Claimant performing work outside of her restrictions took place at a time when Claimant was at work for Employer, and thus, assigned, by Employer, to perform the work outside of her restrictions. The ALJ finds that if Employer were significantly concerned about Claimant performing work outside of her restrictions, they should not have assigned her work that exceeded the restrictions from Dr. Linder and PA Richards. The ALJ further finds that the opinions expressed by Dr. Lesnak that relied on video surveillance of Claimant performing duties assigned by Employer is not credible with regard to the issue of compensability in this case.

37. The ALJ does not find that the reference in the ER records regarding Claimant's pain developing after a physical therapy appointment overcomes the other evidence in this case that Claimant sustained a compensable injury at work to allow Respondents' to withdraw the GAL in this case. The ALJ would note that Respondents were privy to the June 29, 2019 ER report prior to filing the July 31, 2019 GAL in this case. Moreover, the ER records contain multiple references to an accident history consistent with Claimant's report of injury to later physicians and consistent with her testimony at hearing.

38. The ALJ notes that Dr. Lesnak's reliance on the July 5, 2019 report from PA Richards which he indicated failed to set forth an accident history as a basis for his

opinion that Claimant did not sustain a compensable accident history at work is misguided in this case. Dr. Lesnak's report is silent with regard to the July 5, 2019 WC164 form completed by PA Richards which referred Claimant for lumbar spine and thoracic spine x-rays. However, the WC164 form identifies the third party administrator for handling the workers' compensation claim along with the workers' compensation number assigned to the claim. It is therefore reasonable to assume that Respondents were privy to the WC164 form prior to filing the GAL in this case.

39. Moreover, the medical records in this case document Claimant reporting to PA Richards just a few days prior to her work injury that she had chronic low back pain. But these records are consistent with Claimant's testimony in that Claimant at no time was seeking treatment for this condition. While Claimant mentions this portion of her medical history to PA Richards, she does not seek treatment for this condition, and the evidence establishes that Claimant was not under current medical care for her chronic low back pain. The mere fact that Claimant has a pre-existing condition does not negate the fact that she may still have a compensable injury at work. Moreover, these records document that PA Richards was informed of Claimant's prior condition before providing treatment related to her workers' compensation injury. Notably, at no point in providing care for Claimant did PA Richards opine that her current need for medical care was not related to her injury at work on June 27, 2019.

40. Likewise, the surveillance videos entered into evidence in this case showing Claimant performing her work duties while employed with Employer in September 2020 are not persuasive evidence that Claimant did not sustain a compensable injury at work on June 27, 2019. The video surveillance simply depicts Claimant performing the work duties assigned to her by Employer.

41. The ALJ finds Claimant's testimony at hearing with regard to the onset of her low back pain on June 27, 2019 that led Claimant to seek medical treatment to be credible and persuasive, and finds that Respondents have failed to prove that it is more probable than not that Claimant did not sustain a compensable injury arising out of her employment with Employer on June 27, 2019.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). However, Section 8-43-201 was modified effective August 5, 2009 to provide that a party seeking to modify an issue determined by a general or final

admission of liability shall bear the burden of proof for any such modification. Section 8-43-201(1). Because Respondents are seeking to modify claimant's benefits as admitted under the general admission of liability, Respondents bear the burden of proof in this case by a preponderance of the evidence.

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2018. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra*.

5. As found, the ALJ finds the testimony of Claimant with regard to her work injury of June 27, 2019 to be credible and persuasive and supported by the medical records in this case. The ALJ further finds the opinions expressed by Dr. Lesnak in his IME reports and testimony to be not persuasive evidence that Claimant did not suffer an injury on June 27, 2019.

6. Therefore, Respondents' have failed to prove by a preponderance of the evidence that Claimant did not sustain a compensable injury arising out of and in the course and scope of her employment with employer.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw the general admission of liability is hereby DENIED.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: April 13 , 2022

Keith E. Mottram

Keith E. Mottram

222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-176-637-002

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that the C2-4 facet injection recommended by John Sacha, M.D., is reasonably necessary to cure or relieve the effects of Claimant's admitted industrial injury.

FINDINGS OF FACT

1. Claimant sustained an admitted injury arising out of the course of his employment with Employer on May 12, 2021, when a large pallet tipped over falling onto Claimant striking him in the head.

2. On May 13, 2021, Claimant was seen at an emergency where CT scans of his head and cervical spine were taken. The cervical spine CT showed no acute fracture or subluxation, and moderate canal stenosis at C5-C6 that was attributed to degenerative changes. No records of a physical examination at the emergency room were offered into evidence. (Ex. F).

3. On May 18, 2021, Claimant saw Carol Dombro, M.D., at Concentra. Dr. Dombro was Claimant's authorized treating physician (ATP) for a follow up check for his head and neck. Claimant reported vague issues related to his head injury and that his neck discomfort was mostly resolved. Claimant also reported shoulder symptoms, but could not recall how he injured his shoulder. Dr. Dombro's examination of the cervical spine was normal. Claimant was diagnosed with a closed head injury without post-concussive symptoms, cervical strain "mostly improved;" and new left shoulder pain in the distribution of a previous workers' compensation injury. Dr. Dombro recommended that Claimant begin physical therapy that day. (Ex. F).

4. Claimant began attending physical therapy on or about May 18, 2021, and attended twenty physical therapy sessions through July 22, 2021. Claimant received physical a cervical strain, including therapeutic exercises, manual therapy, dry needling, and vestibular therapy. Claimant's cervical range of motion in both left and right rotation was documented as limited and did not significantly improve with therapy. Claimant did report that dry needling helped his neck pain, but his headaches and dizziness became worse. (Ex. F).

5. Claimant's next documented treatment was with Richard Mobus, D.C., at Concentra on June 16, 2021. At that visit, Claimant reported lower cervical pain and headaches. Claimant attended six chiropractic visits between June 16, 2021 and July 21, 2021. At his discharge from chiropractic care on July 21, 2021, Claimant reported a moderate improvement in symptoms, but continued to report cervical pain at a rating of 4/10. (Ex. F)

6. On June 23, 2021, Claimant saw John Sacha, M.D., (physical medicine and rehabilitation physician) at US Medical Group, on referral from Dr. Dombro. By virtue of this referral, Dr. Sacha is an ATP. Dr. Sacha noted that Claimant had completed three weeks of physical therapy and had begun chiropractic treatment, with "slight improvement." Claimant reported bilateral neck pain, occipital headaches, dizziness, blurred vision, nausea, and forgetfulness. On examination of Claimant's cervical spine, Dr. Sacha noted spasms, segmental dysfunction, poor posture, and pain with extension. He also noted that extension-rotation and palpation of the upper cervical segments preproduced Claimant's headaches. Based on his examination, Dr. Sacha diagnosed Claimant with post-traumatic cervical facet syndrome; whiplash associated disorder; and post-traumatic occipital neuralgia secondary to cervical facet syndrome. He recommended a cervical MRI and that that Claimant complete chiropractic and physical therapy with IMS needling. (Ex. 4).

7. Claimant returned to Dr. Dombro on June 23, 2021. Claimant reported head, neck, left shoulder and upper back pain rating 3/10. Dr. Dombro indicated that Claimant's left shoulder and neck were "much improved" with physical therapy and dry needling. Claimant continued to report daily headaches. (Ex. F).

8. On July 6, 2021, Claimant underwent a cervical MRI, which demonstrated abnormalities at C3-4. The radiologist compared Claimant's MRI to a previous cervical MRI from 2015, and noted that Claimant had degenerative disc disease and joint changes superimposed on borderline narrow spinal canal with progression at C3-4 producing moderate to marked dural sac narrowing with mild cord deformity and left paracentral chronic myelomalacia. Claimant also had degenerative changes at C4-7, without cord deformity. (Ex. E)).

9. On July 12, 2021, Dr. Sacha noted that although Claimant adamantly denied any prior cervical injuries, the presence of the 2015 MRI indicated Claimant likely had prior cervical complaints. Dr. Sacha indicated the MRI showed the same amount of degenerative disc disease and canal stenosis with some chronic myelomalacia of the cervical spinal cord. He further noted that the MRI showed "significant straightening of his cervical lordosis in the upper cervical spine, which is consistent with [Claimant's mechanism of injury." On examination, Dr. Sacha noted cervical spasms, diminished range of motion, and segmental dysfunction of the mid- and upper cervical spine. Notwithstanding that Claimant had a prior cervical MRI, Dr. Sacha opined that Claimant had sustained a whiplash injury from his employment. He diagnosed claimant with cervical facet syndrome, occipital neuralgia, head contusion, resolved, left lateral epicondylitis, nonphysiologic presentation, and left shoulder complaints. (Based on the context of the medical record, the ALJ infers that Dr. Sacha's diagnosis of "nonphysiologic presentation" was in relation to Claimant's left shoulder complaints, which were new at that time.) Dr. Sacha recommended a bilateral C2-4 facet injection and bilateral 3rd occipital nerve block. He noted that the injections would be "for diagnosis, treatment, and causality." (Ex. F).

10. Respondents submitted Dr. Sacha's request for authorization of a C2-4 facet injection to William Barreto, M.D., for an opinion on the medical necessity of the proposed

treatment. The specific question posed was "Is Bilateral C2-4 Facet Injection with anesthesia medically necessary?" Dr. Barreto reviewed and summarized Claimant's July 6, 2021 MRI report and Dr. Sacha's July 12, 2021 record. Dr. Barreto's report indicates he reviewed additional records from Mile High Sports and Rehabilitation Medicine from July 21-26, 2021, and records from July 12- 28, 2021, identified only as "Misc.", but the records are not summarized in the report. (No records from "Mile High Sports and Rehabilitation" were offered or admitted into evidence). Dr. Barreto's report does not indicate that he reviewed Claimant's physical therapy records.

11. In addressing the question posted, Dr. Barreto discussed three situations where facet injections may be medically necessary based on the Colorado Medical Treatment Guidelines. Those situations include "patients with pain 1) suspected to be facet in origin based on examination findings and 2) affecting activity; OR patients who have refused a rhizotomy and appear clinically to have facet pain; or patients who have facet findings with a thoracic component." Dr. Barreto also cited additional criteria in the "Official Disability Guidelines, Neck and Upper Back Chapter, Online Version (Update 3/31/2021)." Neither the Colorado Workers' Compensation Act nor the W.C.R.P. reference, incorporate or adopt the "Official Disability Guidelines," (ODG) and no evidence was offered explaining the authority or relevance of the ODG.

12. After citing the above-referenced authorities, Dr. Barreto's analysis consisted of the following: "In this case, the patient still has cervical paraspinal spasm, diminished range of motion and segmental dysfunction of the mid upper cervical spine. There is pain with extension rotation. However, there is no documentation of failed conservative care or any indication an active therapy program is to [be] started. As such, the requested bilateral C2-4 facet injection with anesthesia is not medically necessary and is not certified." (Ex. D, p. 6). Given that Dr. Barreto's did not review Claimant's physical therapy records which demonstrate that Claimant had undergone an active therapy program, his opinion is not persuasive.

13. On August 18, 2021, Dr. Sacha wrote a letter addressing Insurer's denial of the C2-4 facet injection, and addressed Dr. Barreto's contention that there was no documentation of failed conservative care or indication of an active therapy program. Dr. Sacha wrote: "In reviewing this patient's case, the patient has already completed multiple attempts at aggressive therapy that included prolonged physical therapy including both active and passive therapeutic modalities, chiropractic, home exercise and medications. So, the patient has clearly already done the conservative care for this case, and what is interesting, is that the patient not only meets the criteria including absence of radicular pain and spinal stenosis, straightening of his cervical lordosis, has had the conservative care that has been failed, but also has declined doing the radiofrequency and wanting to do the facet injections first. As such, he meets all the medical criteria." (Ex. 4). The ALJ notes that no records were submitted indicating Claimant was offered or declined a radiofrequency procedure.

14. Claimant returned to Dr. Sacha on September 16, 2021, October 7, 2021, October 25, 2021, and November 24, 2021. At Claimant's examination on November 24, 2021, Dr. Sacha noted that Claimant's neck pain and headaches were "essentially unchanged."

On examination, he found cervical paraspinal spasms, segmental dysfunction, and pain with extension and extension rotation. Dr. Sacha's diagnosis was cervical facet syndrome, occipital neuralgia, and lateral epicondylitis. (Ex. F).

15. On September 22, 2021, Claimant saw Stephen Dahaney, M.D., at Concentra, who assumed the role of ATP. Dr. Danahey indicated that Claimant's neck was "fine now but through out the day it will start to hurt him." He diagnosed Claimant with a cervical sprain, closed head injury, elbow sprain, and left shoulder strain. He indicated that Claimant was not at maximum medical improvement at that time. (Ex. F).

16. Claimant returned to Dr. Danahey on January 27, 2022. At that time, Claimant noted posterior cervical discomfort and increased headaches with neck motion. Dr. Danahey indicated that Claimant was not at MMI because of ongoing evaluation. Dr. Danahey offered no opinion regarding Dr. Sacha's recommended injection. (Ex. F).

17. At hearing, Claimant testified that he continues to have dull pain in his neck that becomes "stabbing" with motion, and that his neck pain increases his headaches. He testified that he had no headaches prior to May 12, 2021. Claimant testified that he understands the risks of undergoing a facet injection and that he wishes to proceed with the injection. Claimant's testimony was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*,

183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the C2-4 facet injection recommended by Dr. Sacha is reasonably necessary to cure or relieve the effects of Claimant's industrial injury. Dr. Sacha indicated that the purpose of the proposed injection is "diagnosis, treatment, and causality." From this, the ALJ infers that the intention of the C2-4 facet injection is, at least in part, to treat Claimant's diagnosis of facet joint syndrome, which Dr. Sacha diagnosed as traumatic. Dr. Barreto's opinion on medical necessity is not persuasive. The only expressed basis for his determination that the recommended procedure was not medically necessary was the mistaken notion that Claimant had not failed conservative care or undergone an active therapy program. The evidence established that Claimant underwent physical therapy, including manual therapy, exercises, and dry needling with only minimal improvement in his symptoms.

Respondents' contention that Claimant does not meet the criteria for facet injections under the Medical Treatment Guidelines is not compelling. In January 2022, the Division of Workers' Compensation adopted the latest version of Rule 17, Exhibit 8, related to

cervical spine injuries. (Although the original recommendation was made prior to the adoption of the current version, the ALJ finds the January 2022 rule to be the operative guideline, given that any injections would be performed after their adoption). Notwithstanding, W.C.R.P. Rule 17, Ex. 8, paragraph 8.a.ii, provides that one of the following sets of criteria must be met before proceeding with a facet joint injection

1) at least 3 months of pain, unresponsive to 6 weeks of conservative therapies, including manual therapy; and confounding psychosocial risk factors have been screened for and clinically addressed; and physical examination findings are consistent with facet origin pain (e.g., pain on extension with lateral bending and referral patterns are consistent with the expected pathologic level) that is affecting activity; OR
2) the patient has refused a rhizotomy despite facet origin pain on clinical exam; OR
3) the patient has facet findings with a thoracic component.

Here, the Claimant's medical records establish that he has experienced at least three months of pain which was unresponsive to physical therapy, including manual therapy for more than six weeks. (Claimant underwent physical therapy from at least May 18, 2021 through July 21, 2021, without significant improvement in pain levels) and Claimant continues to complain of neck pain and headaches. Dr. Sacha's diagnosis of post-traumatic cervical facet syndrome demonstrates that Claimant's symptoms are consistent with facet origin pain. Although no evidence was admitted regarding screening for confounding psychosocial risk factors, logically, such a screening should be performed at or near the time of the recommended procedure. Thus, the failure to perform a screening for confounding psychosocial risk factors when the procedure was initially recommended in 2021, does not preclude that screening being performed prior to a future procedure. Thus, the ALJ finds that Claimant substantially meets the MTG requirements for a facet joint injection. The ALJ finds and concludes that performance of the recommended C2-4 facet joint injection is reasonably necessary to cure or relieve the effects of Claimant's May 12, 2021 industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of a C2-4 facet joint injection, recommended by Dr. Sacha is GRANTED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 13, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-180-335-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable, work-related injury.

2. If Claimant sustained a compensable, work-related injury, was he terminated for cause and responsible for his own wage loss, if any.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant worked for Employer from August 16, 2018 to February 19, 2020. His responsibilities including moving materials through the galvanizing system in an orderly and efficient manner. (Ex. G and Ex. H).

2. Claimant testified that he sustained a work-related injury to his bilateral hands due to chemical exposure while working for Employer.

3. Claimant testified he went to the emergency room for his hand pain prior to January 23, 2020, and that the providers should have known this was a work injury. Claimant did not present any evidence of the visit or treatment.

4. On January 23, 2020, Claimant went to the AFC Urgent care where he was treated by Kevin Ralls, FNP. Claimant's chief complaint was "hand pain." Claimant's medical record reads "b/l hands visibly dirty. Dry cracked skin noted over b/l hands and fingers. Fissures noted b/l distal fingers 1-5 and over b/l palmar PIPs and DIPs 1-5, no pus drainage or streaking." Claimant reported having pain in his bilateral hands and under his nails for three weeks. (Ex. A).

5. According to the medical records, Claimant told Mr. Ralls he worked with metal beams and used his hands while working. Claimant denied any injuries or metal fragments in his hands. Mr. Ralls diagnosed Claimant with dermatitis, and prescribed Keflex and Lotrisone cream. He advised Claimant to seek further treatment at the emergency room or from a primary care provider if his condition worsened. (Ex. A).

6. Claimant testified that he told Mr. Ralls about the chemical exposure. The ALJ does not find this testimony persuasive because there is nothing in the medical record referencing a work-related injury or chemical exposure.

7. Mr. Ralls wrote Claimant a note stating that Claimant was unable to return to work until January 28, 2020, unless Claimant chose to return sooner. (Ex. A). Claimant's

employment records note that Claimant called out sick on January 22, 2020, and had a doctor's note excusing him from work until January 28, 2020. (Ex. F).

8. Claimant returned to work on January 27, 2020, but left early before completing his shift. (Ex. F). Claimant testified he left work early because of the pain in his hands. Claimant further testified that he took a video of his hands and sent the video to his direct supervisor. At no time in the video does Claimant say that his hands were subject to chemical exposure, nor does he reference a work-related injury. (Ex. 6).

9. Claimant called in sick on January 28, 2020, and returned to work on January 29, 2020. (Ex. F).

10. Claimant testified that he did not seek further medical treatment for his hands after his initial evaluation with Mr. Ralls.

11. BM[Redacted[is the plant manager for Employer. Mr. BM[Redacted] credibly testified that Claimant never reported he was out due to a work-related condition.

12. Mr. BM[Redacted] credibly testified that Claimant's job did not require the use of chemicals. He testified that some employees handle chemicals, but those employees are provided protective equipment, including gloves, to prevent chemical exposure.

13. On February 10, 2020, Employer terminated Claimant for his repeated violation of Employer's attendance policy. Claimant's termination followed multiple warnings, write-ups, and a suspension. Claimant's violations of Employer's attendance policy are well documented in his personnel file. (Ex. G).

14. On July 26, 2019, Claimant received a verbal warning because of tardiness. (Ex. G).

15. Claimant's first written warning for attendance issues, specifically tardiness, occurred on August 19, 2019. Employer provided Claimant a copy of the attendance policy concurrently with the write-up. Claimant checked a box indicating that he agreed with the recitation of facts and signed the document. (Ex. G).

16. Claimant's second written warning for attendance issues, specifically tardiness, occurred on October 9, 2019. (Ex. G).

17. Claimant third written warning for attendance issues, specifically frequent tardiness, occurred on November 15, 2019. Employer moved Claimant to second shift to help improve his tardiness. The written warning noted that further violations of the attendance policy would result in suspension or termination. Claimant checked a box indicating that he agreed with the recitation of facts and signed the document. (Ex. G).

18. Claimant's fourth written warning for attendance issues occurred on December 12, 2019. The written warning noted Claimant left work on two occasions to run personal errands without clocking out. Employer suspended Claimant, and the warning indicated

that the consequences for any further violations of the attendance policy would result in termination. (Ex. G).

19. Between December 12, 2019 and February 10, 2020, when he was terminated, Claimant continued to violate Employer's attendance policy with his repeated tardiness.

20. Claimant did not file a Workers' Claim for Compensation until August 22, 2021. He listed the date of his injury as February 1, 2020, and stated that he had a cumulative fungal and bacterial infection occurring at each of his fingertips. There is no reference to the alleged chemical exposure. (Ex. B).

21. LB[Redacted] completed Employer's First Report of Injury on September 29, 2021. Under "tell us how the injury occurred," Ms. LB[Redacted] stated, "[u]nknown, did not report to management, disgruntled employee." (Ex. C).

22. The ALJ finds that Employer terminated Claimant for cause on February 10, 2020.

23. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that he sustained an injury to his hands in the course of his employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ.

Cordova v. Indus. Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant is required to prove by a preponderance of the evidence that he was performing service arising out of and in the course of his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). Merely feeling pain at work in and of itself is not "compensable." *See Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (I.C.A.O. April 11, 2007).

On January 23, 2020, Claimant went to urgent care because of pain in his fingers and nail beds. (Findings of Fact ¶ 4). Claimant's medical records make no mention of chemical exposure at work, or any type of work injury. To the contrary the records say that Claimant "denies any injuries." (*Id.* at ¶ 5). Mr. BM[Redacted] , the plant manager, credibly testified that Claimant's job did not require the use of chemicals. (*Id.* at ¶ 12). Claimant failed to present sufficient evidence to prove that he suffered an injury to his bilateral hands during the course of his employment. (*Id.* at ¶ 23).

ORDER

It is therefore ordered that:

1. Claimant's claim for compensability is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 13, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-183-992-001

ISSUES

I. Whether Respondent has proven by a preponderance of the evidence that Claimant is responsible for his termination from employment, and thus precluded from receiving Temporary Total Disability ("TTD") benefits.

STIPULATIONS

A. Claimant's average weekly wage ("AWW") is $980.67.

B. TTD Benefits are payable but for the termination of cause.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by Employer as a trailer mechanic. His employment began on or about March 29, 2019. Although Employer carries mail across state lines for the United States Postal Service ("USPS"), Claimant performed his job duties exclusively in Colorado.

2. On March 29 ,2019, Claimant was provided a copy of the Employer's Drug, Alcohol and Controlled Substance Policy (Drug Policy). On that same day, Claimant affirmed that he fully understood the terms of the Drug Policy and agreed to abide by it. **R. Ex. E., 99-102.**

3. On September 29, 2021, Claimant was sent to perform work on a tractor-trailer that was stalled in the middle of the road. He sustained multiple injuries, including left hip and spinal fractures, when the driver of the semi-truck began to drive while Claimant was underneath the attached trailer. He was crushed by a wheel axel.

4. Emergency services were called. Northglenn Ambulance arrived on the scene at 4:20 p.m. Claimant was transported to the Emergency Department at UC Health ("UCHER"). **Cl. Ex. 4**.

5. Claimant arrived at the UCHER at 4:40 p.m. **R. Ex. D: 14**. Claimant was administered fentanyl intravenously at 4:45 p.m. (i.e., 1645 on a 24-hour clock), and 6 mg of morphine intravenously at 6:25 p.m. (i.e., 1825 on a 24-hour clock). **Cl. Ex. 5: 55**.

6. Claimant's urine was collected for a toxicology screen at 7:30 p.m. (i.e., 1930 on a 24-hour clock). It was positive for opiates and cannabinoids - marijuana. **Cl. Ex. 6: 65**.

7. Claimant underwent left hip surgery on September 30, 2021. **Cl. Ex. 8**.

8. Claimant was discharged from UCHER on October 2, 2021. **R. Ex. D: 15**.

9. Right after the accident, Claimant was disabled and unable to perform his regular job duties.

10. Respondent filed a General Admission of Liability on October 21, 2021. Respondent admitted for medical benefits only and indicated "Claimant is responsible for termination of employment." **Cl. Ex. 1**.

11. BG[Redacted] is the General Manager of Employer. Mr. BG[Redacted] testified that Employer has a contract with the United States Federal Government ("USFG") to haul mail for the USPS. Mr. BG[Redacted] testified, as part of that contract, Employer must maintain an anti-drug policy for its drivers that complies with the Drug-Free Workplace Act of 1988. Mr. BG[Redacted] testified that only drivers have to take a pre-employment drug test per federal mandate.

12. Mr. BG[Redacted] testified that a copy of the Drug-Free Workplace Act of 1988 is not given to employees. Mr. BG[Redacted] testified that a list of prohibited substances is not detailed in Employer's Drug Policy. Mr. BG[Redacted] testified a list of prohibited substances is not given to employees. Mr. BG[Redacted] testified that a list of what constitutes a "controlled substance" is not given to employees. Mr. BG[Redacted] testified that what constitutes a controlled substance varies from state to state depending on what substances are legal in each state.

13. Mr. BG[Redacted] testified Employer's Drug Policy does allow for the use of legally obtainable drugs by employees, and what a legal drug is varies from state to state. Mr. BG[Redacted] testified there is nothing given to Colorado employees indicating cannabis or marijuana use is prohibited by Employer despite it being legal in Colorado. Mr. BG[Redacted] testified that alcohol is a legally obtainable drug, and an employee can test positive for alcohol while at work and retain his or her employment.

14. Mr. BG[Redacted] testified that he terminated Claimant's employment because Claimant's urinalysis from the UCHER was positive for opioids and cannabis - marijuana.

15. EC[Redacted] works for Employer as the Safety and Compliance Manager, but previously she was the Human Resources Manager for nine years. Ms. EC[Redacted] testified she handles the onboarding process for new employees, including providing the Employee Handbook and Drug Policy. Ms. EC[Redacted] testified she does not inform employees that marijuana use is prohibited by Employer unless the employee asks. She testified Employer does not provide employees a list of controlled substances or a list of prohibited substances.

16. Ms. EC[Redacted] testified Employer's Drug Policy does not make it clear to employees which legally obtainable drugs are permissible to use and which are not. Ms. EC[Redacted] testified that Employer's Drug Policy is ambiguous in regard to off-the-clock cannabis - marijuana - use to Colorado employees.

17. Claimant used marijuana before and after obtaining employment with Employer, and he was not subject to a drug test before beginning his employment. Claimant was provided a copy of the Employee Handbook, inclusive of the "Drug, Alcohol, and Controlled Substances Policy" ("Drug Policy") by Employer during the onboarding process. Employer did not orally or specifically inform Claimant that marijuana use was included in Employer's "Zero Tolerance" policy. Moreover, Claimant was not provided a list of prohibited substances.

18. Claimant was not provided a copy of the federal "Drug-Free Workplace Act of 1988" that is referenced in Employer's Drug Policy. Claimant understood the policy to mean he could be randomly drug tested at any time.

19. Claimant credibly testified that when the injury occurred, he was not under the influence of marijuana or opioids, nor feeling any effect of marijuana use that occurred before the injury. Claimant also credibly testified that he is not a recreational user of opioids.

20. The opioids detected in Claimant's urine was due to Claimant being administered opioids in the hospital.

21. Employer's Drug policy prohibits "the use, purchase, transfer, or possession of a controlled substance by any employee in a company vehicle or while performing company business[.]" It states, "The presence of an amount of any controlled substance that results in a positive test of any employee, while in a company vehicle or while performing company business is prohibited." Further, that "Being under the influence of a controlled substance while in a company vehicle or while performing company business is prohibited." **Cl. Ex. 3: 23**.

22. Marijuana possession, sale, and distribution is regulated by both state and federal law. In Colorado, marijuana is regulated as a controlled substance. *See* Colo. Rev. Stat. § 18-18-102. But as of 2012, Amendment 64 made it legal under state law for adults (people 21 years old or older) to possess and cultivate certain amounts of marijuana for personal use.

23. In regard to "Legal Drugs," the Drug Policy states that "The use or being under the influence of any legally obtainable drug by any employee while in a company vehicle or while performing company business, is prohibited, as such use or influence may affect the safety of others." **Cl. Ex. 3: 23**.

24. Claimant did not use, and was not under the influence of, marijuana while performing his job duties at the time of the accident.

25. Employer's Drug Policy is modeled after federal laws and regulations and not Colorado state laws and regulations. The Drug Policy specifically states that:

> This program is designed to comply with the regulations of the DrugFree Workplace Act of 1988 (Public Law 100-690) and applicable Federal Regulations including the Federal Motor Carriers Drug and Alcohol Clearinghouse. **R. Ex. E. 99**.

26. Employer's Drug Policy is ambiguous about whether it is permissible for employees to use marijuana in Colorado, which is legal to use and possess in Colorado, after hours. As testified to by Mr. BG[Redacted] , Employer's Drug Policy is only designed to comply with federal statute for drivers.

27. Moreover, the Drug Policy is ambiguous as to whether non-drivers, such as Claimant, are subject to the same substance use policies as drivers.

28. Employer's Drug Policy creates an ambiguity for Colorado employees as to whether off-the-clock marijuana use is permitted because it does not specify as to whether

marijuana is considered a prohibited controlled substance or a permissible legally obtainable drug for Colorado employees.

29. Employer did not clearly and unambiguously inform Claimant that off-the-clock marijuana use was prohibited.

30. Employer did not clearly and unambiguously inform Claimant that off-the-clock marijuana use was a terminatable offense.

31. Employer's "zero tolerance" policy does not clearly and unambiguously prohibit off-the-clock usage of legally obtainable drugs in Colorado such as marijuana.

32. Claimant was not under the influence of opioids or marijuana while working for Employer, or at the time of injury.

33. Claimant is not responsible for his termination because non-driver employees such as Claimant would not reasonably expect off-the-clock marijuana use, which is legal in Colorado, to result in the loss of employment.

34. Claimant is entitled to TTD benefits from the date of injury until terminated by law.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v.*

ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondent has proven by a preponderance of the evidence that Claimant is responsible for his termination from employment, and thus precluded from receiving Temporary Total Disability ("TTD") benefits.

As found, Claimant's work accident caused his disability and prevented Claimant from performing his regular job duties. Thus, he would be entitled to temporary total disability benefits. However, Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, Respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

Violation of an employer's policy does not necessarily establish a claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

Unless it is ambiguous a contract must be enforced as written. *Cary v. Chevron*, U.S.A., 867 P.2d 117 (Colo. App. 1993). A term in ambiguous if "fairly susceptible" to more than one interpretation. *Dorman v. Petrol Aspen Inc*., 914 P.2d 909 (Colo. 1996). Further, in determining whether the policy is ambiguous, the language must be examined "and construed in harmony with plain and generally accepted meaning of the words used, and reference must be made to all the agreement's provisions." *Fiberglas Fabricators*, *Inc. v. Klyberg*, 799 P.2d 371, 374 (Colo. 1990).

As found, Claimant is not responsible for his termination because he did not act volitionally or exercise some control of his termination because, in light of the totality of the circumstances, he would not reasonably expect off-the-clock marijuana or cannabis use to result in the loss of employment. In other words, Employer allowed Claimant to believe off-the-clock marijuana or cannabis use was permissible and subjectively decided to apply the terms of its Drug Policy in a way that allowed Employer to terminate Claimant despite the apparent ambiguities in the Drug Policy, and Claimant has no control over that.

To begin, Mr. BG[Redacted] testified Claimant was terminated, partially, for having opioids in his system. As evidenced by the medical records, the opioids in Claimant's system were placed there by his providers at the UCHER. Claimant testified he does not recreationally use opioids and was not under the influence of opioids prior to his work injury. There is a lack of credible and persuasive evidence to contradict Claimant's testimony.

Next, Employer's Drug Policy is ambiguous is multiple ways. First, it is ambiguous as to off-the-clock cannabis use by non-driver employees of Employer in Colorado. Mr. BG[Redacted] testified Employer's Drug Policy is intended to comply with federal law "for drivers." Claimant is not a driver; he is a mechanic. Claimant does not work across state lines. Thus, it is ambiguous as to whether the intent of compliance with federal law is intended for mechanics like Claimant.

Second, Employer's Drug Policy allows employees to use legal drugs that are legally obtainable. Cannabis – marijuana - is a legal drug that is legally obtainable in Colorado where Claimant works. Employer's Drug Policy implies employees can use marijuana so long as the employee does not use or is under the influence of marijuana while in a company vehicle or while performing company business. Claimant credibly testified he did not use, nor was he under the influence of, marijuana at work.

Third, Employer's Drug Policy does not define what a "controlled substance" is, nor does it define what a legal or legally obtainable drug is. The Drug Policy does not specify whether Employer categorizes marijuana as an impermissible controlled substance or a permissible legally obtainable drug. Simply stated, the Drug Policy does not indicate that off-the-clock marijuana use is prohibited despite it being legal in Colorado, leaving employees to figure it out for themselves.

Fourth, Ms. EC[Redacted] testified that Employer does not inform its Colorado employees that off-the-clock marijuana use is prohibited unless the Claimant asks. Thus, Employer does not inform employees off-the-clock marijuana use will result in termination unless the Claimant asks. Expecting a new employee to ask his or her new employer what legal and legally obtainable drugs he can use is an unreasonable expectation, and

strongly suggests a “don’t-ask-don’t-tell” policy on behalf of Employer in regard to its Colorado employees and the use of marijuana.

Fifth, Employer’s “zero tolerance” policy does not specify that testing positive for a legally obtainable drug, the use of which occurred off-the-clock, will result in termination. Furthermore, Mr. BG[Redacted] testified that an employee can test positive for alcohol, a legally obtainable drug under Employer’s Drug Policy but not be terminated. Thus, per Mr. BG[Redacted] ’s testimony the “zero tolerance” policy is a not a “zero tolerance” policy creating more ambiguities within the Drug Policy.

Sixth, although the Drug Policy states that employees will be tested before they start their employment with Employer, Claimant did not undergo preemployment testing. Again, this is additional evidence which creates ambiguity as to whether the Drug Policy was applied against mechanics such as Claimant.

Thus, the ALJ finds and concludes that Claimant is not responsible for his termination because non-driver employees such as Claimant would not reasonably expect that off-the-clock marijuana use will result in the loss of employment. The Drug Policy is subject to multiple reasonable interpretations, including whether marijuana is a prohibited controlled substance or a permissible legally obtainable drug. As a result, Respondents failed to establish by a preponderance of the evidence that Claimant is at-fault for his termination and wage loss. Claimant is therefore entitled to TTD benefits from the date of injury until terminated by law.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is entitled to temporary total disability benefits as of the date of his injury.
2. Claimant shall be paid temporary total disability benefits based on an average weekly wage of $980.67.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 14, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-096-070-003

ISSUE

1. Whether Claimant has overcome the Division Independent Medical Examination (DIME) physician's opinion regarding Claimant's impairment rating by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant was working for Employer as the Supervisor of Housekeeping when she sustained an injury in the course of her employment on January 4, 2019. On that day, Claimant fell down a stairwell. Claimant sustained numerous facial fractures, including a left-sided tripod fracture, left maxillary sinus fractures, a left lateral orbital wall fracture, a left zygomatic arch fracture, and non-displaced fractures of the anterior and posterior wall of the left maxillary sinus. In addition to her facial injuries, Claimant sustained a right middle finger strain and a fractured tooth. (Ex. B).

2. Following the work injury, Claimant had nasal congestion and difficulty breathing through her nose, with the left side worse than the right. On August 29, 2019, Peter McGuire, M.D., an ENT specialist, performed a septoplasty, concha bullosa excision, left, and septoplasty with submucous turbinate resection on Respondent. (Ex. R).

3. In January 2020, Claimant transferred care to ENT, Christopher Mawn, M.D. because of her continued difficulty breathing. On July 21, 2020, Dr. Mawn operated on Claimant to repair a nasal valve collapse. On December 3, 2020, Dr. Mawn noted in his records that Claimant was "[o]verall doing well with improved nasal breathing. She had some congestion on the right side, but was overall happy with the results." (Ex. AA).

4. On January 7, 2021, Jason Crawford, M.D, Claimant's authorized treating physician (ATP) evaluated her. Dr. Crawford documented that Claimant self-rated her breathing at 80% of her baseline. Claimant described continued "left eye pressure", but Dr. Crawford noted that two separate eye specialists treated her and did not identify any anatomic defect. Claimant's physical examination revealed "no significant nasal congestion." (Ex. BB).

5. On April 1, 2021, Dr. Crawford placed Claimant at maximum medical improvement (MMI). Her physical examination revealed "no sinus tenderness. No significant nares obstruction." Dr. Crawford concluded Claimant did not sustain a permanent impairment. (Ex. DD).

6. Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Crawford's opinions. Claimant objected and proceeded to a DIME, performed by Brian Beatty, D.O.

7. Dr. Beatty described the scope of his examination as follows: "[t]o consider maximal [sp.] medical improvement, permanent impairment and apportionment. To evaluate the right hand, face, nose, and throat." (Ex A).

8. Dr. Beatty noted Claimant's subjective complaints as:

> She also developed left upper teeth sensitivity and went to a dentist and was told she had a fractured tooth and this had occurred in May/April 2019. She still has some pain in the left jaw/temporal region when she chews and she still has difficulty with right middle when she tries to grafts. She has seen an ophthalmologist due to some difficulty with her left eye but she is unable to wear contact lenses and notes that her eye is dry. He left shin feels fine. She still has some stuffiness in her left sinus and stiffness in her right middle finger. She is still working full duties.

Dr. Beatty's physical examination revealed temporomandibular joint tenderness on the left, but full range of motion of the jaw with no deviation, clicking, or popping, and normal nasal passages. Dr. Beatty acknowledged Claimant's "persistent stuffiness" on the left nostril, and recommended a repeat CT scan. Dr. Beatty assigned Claimant a 7% impairment for the right middle finger due to the loss of range of motion, which equaled 1% whole person impairment. He did not assign any additional permanent impairment. (Ex. A).

9. Respondent filed an FAL consistent with the DIME opinion. (Ex. EE). Claimant objected and requested a hearing to overcome the DIME physician's opinion that she did not sustain a permanent impairment related to her facial injuries.

10. Respondent retained Carlos Cebrian, M.D., to perform an Independent Medical Examination (IME). Dr. Cebrian reviewed the medical records, examined Claimant, and prepared an IME report. (Ex. B).

11. In his IME report, Dr. Cebrian explained that the AMA Guides, 3rd Ed, *Revised* (AMA guides) presented three areas of potential impairment for Claimant's facial injuries, two in Chapter 9 (Ear, Nose, Throat and Related Structures) and one in Chapter 4 (Nervous System).

12. Dr. Cebrian credibly testified that according to the AMA Guides, Claimant did not qualify for an Air Passage Defect impairment rating (Chapter 9, Table 5, p. 181) because Claimant did not have complete obstruction of the nose. This was supported by Claimant's testimony.

13. Dr. Cebrian credibly testified that according to the AMA guides, Claimant did not qualify for a rating under nerve disorders (Chapter 4, Table 2, p.111) as Claimant's injury did not rise to the level of permanent impairment. Claimant did not provide any evidence to challenge this opinion.

14. Dr. Cebrian credibly testified that Claimant ***could*** receive a rating for Face Structural Integrity under Section 9.2 of the AMA Guides (p.179). Dr. Cebrian would place Claimant in Class I, which is "when the facial abnormality is limited to a disorder of the cutaneous structures, such as visible scars and abnormal pigmentation." Individuals in this class can be assigned an impairment rating of 0-5%. Dr. Cebrian testified that he would assign a 5% impairment rating. He explained in his IME report that the rating was due to the "loss of structural integrity of the face. This is evidenced by her left eye being open, more than the right, and a fullness of the left cheek. This category would also include any visible scarring on the face." (Ex. 1, pp 24-25).

15. Claimant underwent surgery in February 2022, at her own expense, to correct the facial deformities Dr. Cebrian referenced in his IME report.

16. Dr. Cebrian testified at hearing in support of his IME report. He explained that while he offered an impairment for Facial Structural Integrity, it was not incorrect for Dr. Beatty not to do so as the Class I impairment provided a range of impairment from 0% to 5%. The Level II Accreditation Curriculum provides guidance for such ratings, "[t]he impairment percentages are meant to reflect interference with social and vocational activities." https://codwc.app.box.com/v/L2ACurriculum p.353. He acknowledged the Curriculum statement and conceded in his testimony that he was likely "generous" with the 5% rating. Further, Dr. Cebrian explained it was not inconsistent for the DIME not to assign a rating for a permanent impairment as the AMA Guides provide ranges beginning with 0%.

17. Claimant credibly testified regarding her treatment, including the surgeries referenced above and her current symptoms. Claimant described sensitivity in her teeth on the left side and in the four areas on the left side of her face, as delineated in Exhibit 2. Claimant testified that she avoids cold drinks, chews carefully, and experiences symptoms when blowing her nose. Claimant testified she described these symptoms to Drs. Crawford, Beatty, and Cebrian. Accordingly, each doctor had the same information with which to determine permanent impairment.

18. Dr. Cebrian credibly testified that Dr. Beatty's assignment of no impairment rating for Claimant's facial injuries was not in error.

19. The ALJ finds that Claimant did not overcome Dr. Beatty's opinion on impairment by clear and convincing evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's Impairment Findings

The party seeking to overcome the DIME physician's finding regarding permanent impairment bears the burden of proof by clear and convincing evidence. *Id.* Clear and convincing evidence is evidence that demonstrates that it is highly probable the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge,* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001).

The DIME physician, Dr. Beatty, specifically noted in his report that he was considering injuries to Claimant's face, but he did not assign Claimant an impairment rating for her facial injuries. (Findings of Fact ¶¶ 7-8). Dr. Crawford, the ATP, agreed that no impairment rating was appropriate for Claimant's facial injuries. (*Id.* at ¶ 5). Respondents' IME physician, Dr. Cebrian, credibly testified that Dr. Beatty did not err by not assigning Claimant an impairment rating for her facial injuries. With respect to facial

structure impairment, Dr. Cebrian credibly testified that because the AMA Guides provide for a 0% impairment for a Class I impairment, Dr. Beatty did not err by not assigning an impairment rating. (*Id.* at ¶¶ 16 and 18). Claimant presented no evidence to the Contrary. Dr. Beatty's opinion regarding Claimant's impairment rating must be overcome by clear and convincing evidence, and Claimant failed to do this.

ORDER

It is therefore ordered that:

1. Claimant's request for additional PPD benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 18, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant's admitted injury is not on the schedule of disability pursuant to Sec. 8-42-107(2), C.R.S.

II. If Claimant has a whole person impairment, whether Respondents have overcome the DIME physician's impairment by clear and convincing evidence.

III. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to maintenance medical benefits after maximum medical improvement.

PROCEDURAL HISTORY

Respondents filed an Application for a Division of Workers' Compensation Independent Medical Examination (DIME) on September 16, 2021 on the issue of Claimant's right shoulder impairment.

Respondents filed an Application for Hearing on December 16, 2021 on issues that included overcoming the DIME physician's opinion, compensable components of the Claimant's impairment and permanent partial disability benefits.

Claimant filed a Response to Respondents' December 16, 2021 Application for Hearing on December 17, 2021 on issues that included permanent partial disability benefits, and medical benefits that are authorized and reasonably necessary.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 66 year old at the time of the hearing in this matter. He worked for Employer as a driver delivering construction materials, as of July 24, 2016. Employer was in the business of supplying materials such as pipes, water heaters and other equipment. Claimant would frequently have to load and unload large pieces of equipment, including lifting them off the delivery truck. Some of the water heaters would weigh up to 120 lbs. and he would frequently handle eleven to twelve per day. His truck had a tail gate door that weighed approximately 30 to 40 lbs. which he had to open and close multiple times throughout the day. He would lift the truck door in an upward motion. He frequently worked from approximately 4:30 a.m. to 5 p.m. and sometimes Saturdays.

2. For the five years from the date of his hire to the date of his admitted work related injury, he was able to perform all the essential functions of his job, and was working full time without limitations. He had no problems lifting the back gate of the truck,

lifting the water heaters in and out of the truck, getting up in the back of the truck and securing the equipment by tying them down.

3. On January 11, 2021 Claimant was sent to Colorado Springs with several deliveries. On the fourth or fifth delivery, Claimant was lifting the back door of the truck, it got stuck and when forcing the door up, Claimant felt a pop in his shoulder. Claimant is 5' 6" tall and he had to lift the tail door above his shoulder level. He felt a stabbing, knifing sensation in his right shoulder. Claimant indicated that the pain was between the tip of his shoulder anteriorly and up towards the base of his neck. Claimant immediately started sweating from the level of pain and felt agitation due to the pain.

4. Claimant finished his route as he was able and returned to report the injury to the Employer's warehouse manager, who sent him to see a physician at Concentra Medical Centers.

5. Claimant stated that he continued to have pain and problems with the right shoulder from the date of injury and ongoing. He required medications to help him handle his pain and his loss of function, which he did not have prior to the date of injury. He stated he continued to need some physical therapy and medications to handle his ongoing right shoulder problems.

6. He continued to have difficulty raising his arm in front of him. He continued to have difficulty with activities of daily living, especially if they involved lifting his right arm, such as washing his hair or putting on a hat. He even reported he had problems using the bathroom. Prior to the January 11, 2021 work related injury he was able to perform these activities without problems.

7. Claimant stated that he did not have an interpreter for all his medical appointments, and while he communicated the best he could with his providers, he could not be sure that he was making himself understood. He stated that his providers would frequently use words he did not understand. Claimant disputed that he ever used the word "pinch," but instead reported he felt a stabbing or knifing pain in his right shoulder.

8. Claimant was first seen on January 11, 2021 by Dr. Christian Updike of Concentra Medical Centers at Denver Aurora North. He presented for a right shoulder and arm injury which occurred on January 11, 2021 while he was pulling a door and felt a "pinch" in his arm. On exam, Dr. Updike found joint pain and muscle pain, tingling and numbness. Dr. Updike diagnosed a biceps rupture and sent him to his primary care provider as his hypertension was uncontrolled. He was provided with a sling and an MRI was ordered, but Dr. Updike indicated that anti-inflammatories and physical therapy were contraindicated until his blood pressure was under control. He provided restrictions of no use of the right arm and no driving company vehicles.

9. Claimant returned to see Dr. Updike[1] the following day stating that his right shoulder pain was getting worse and was constant. Dr. Updike found joint pain, muscle pain, neck pain, joint swelling, joint stiffness and night pain. He was mildly tender at top of shoulder, wearing a sling, very tender with ROM at the biceps. He assessed a right biceps tendon rupture, and referred Claimant to an orthopedic specialist as well as prescribed pain medications. He also noted that Claimant had a history of left biceps

[1] Visit transcriptions are authored by Dr. Updike but the Physician's Reports are authored by Dr. Amanda B. Cava.

rupture. On January 14, 2021 Dr. Updike ordered interpreter services for Claimant's appointments. As found, with regard to the sensation Claimant felt at the time of his admitted injury, Claimant's testimony is more persuasive as Dr. Updike did not indicate having an interpreter at the first evaluation and specifically noted ordering an interpreter on January 14, 2021.

10. On January 19, 2021 Claimant was evaluated by Dr. Cary Motz at the Concentra clinic. Dr. Motz took a history from Claimant that he was "a 65-year-old gentleman who injured his right shoulder on 01/11/2021 when he pulled up on the lift gate on his delivery truck and it stuck. He felt a pop in his right shoulder." Dr. Motz documented that Claimant had significant discomfort since the injury. He developed some deformity in the biceps. He had been treated with Percocet, muscle rub cream and lidocaine patches. He continued to have moderate discomfort and was using a sling. Claimant denied any prior problem with his right shoulder but Claimant stated he did have a Popeye deformity on the left due to a prior injury. On exam, Dr. Motz noted Popeye deformities in both biceps, but the left one was asymptomatic. Claimant had significant tenderness about the right shoulder and biceps tendon. He had limited range of motion, his rotator cuff strength was difficult to examine due to pain and there may have been some swelling about the right shoulder. He diagnosed probable long-head biceps tendon tear, probable rotator cuff tears and asymptomatic left chronic biceps tendon tear. Dr. Motz stated that Claimant may have a rotator cuff tear that lead to a biceps tendon tear on the right. He stated he needed the MRI to be performed to assess the shoulder further.

11. On January 21, 2021 Dr. Updike referred Claimant to Dr. Zimmerman for a physiatrist evaluation for purposes of pain management, including narcotic use.

12. The MRI was completed on January 28, 2021 and read by Adam Williams, M.D. There was a full-thickness, full-width tear of the supraspinatus and infraspinatus tendons with medial retraction of the torn tendon stump to the level of the glenoid. Subscapularis and teres minor tendons were intact. There was stage IV atrophy of the supraspinatus and infraspinatus. Subscapularis and teres minor muscles themselves were normal bulk and signal. The posterior labrum findings were suggestive of an old, healed labral tear. There was large effusion at the subacromial-subdeltoid bursa. The long head biceps tendon was completely torn and distally retracted. There was moderate acromioclavicular osteoarthrosis, and noted that fluid within the subacromial-subdeltoid bursa may represent bursitis, fluid extravasation from the glenohumeral joint, or a combination of both.

13. On February 1, 2021 Dr. Amanda Cava evaluated Claimant with regard to his right anterior shoulder and right lateral shoulder pain. She stated Claimant was having constant pain that was sharp and severe, was affecting his sleep and movement and causing joint and muscle pain as well as joint stiffness. On exam she noted Claimant was tender to touch in the anterior lateral right shoulder, had limited range of motion in all planes with pain. She provided medications, prescribed therapy and noted that objective findings were consistent with work related mechanism of injury.

14. On February 2, 2021 Respondents filed a General Admission of Liability for medical benefits and temporary disability benefits at the average weekly wage of $861.01 with a TTD rate of $574.01 beginning on January 15, 2021 though it states that the waiting period was paid.

15. Claimant was evaluated by Dr. Fredric Zimmerman at Concentra Advanced Specialists in Denver on February 2, 2021. Dr. Zimmerman documented a history consistent with Claimant's testimony of sudden "stabbing pain" in the right shoulder as well as weakness. He documented that Claimant had an interpreter for this appointment. On exam, he noted Claimant had limited range of motion and significant shoulder pain. Lift-off, Neer test and cross-arm test were all positive for impingement and irritability. Claimant had loss of biceps strength on the right compared to the left. After discussion of Claimant's options, including surgery and injection, Dr. Zimmerman noted that surgery was reasonable. He referred Claimant to Dr. Michael Hewitt for surgical consultation.

16. Claimant was evaluated by Dr. Motz on February 2, 2021. Following review of the MRI, he determined that the rotator cuff was not repairable and Claimant would require a reverse total shoulder arthroplasty to surgically address the shoulder but that "would need to be performed outside of the work comp claim as this is clearly a chronic massive tear that was headed for joint replacement more than likely down the road." He offered Claimant a steroid injection which might decrease the inflammation and reduce the pain in order to gain better function. He noted that Claimant's massive rotator cuff tear was chronic and not work related. He released Claimant from care.

17. Dr. Updike responded to Insurer's inquiry regarding the claim on February 19, 2021. Dr. Updike stated that Claimant's preexisting chronic rotator cuff tears were not work related or aggravated by the injury and the total shoulder arthroplasty would not be required through the workers' compensation system. He opined the biceps tendon rupture was related to the January 11, 2021 workplace accident. He recommended a steroid shot and physical and massage therapy for the work related aggravation and stated he would be at maximum medical improvement (MMI) within twelve weeks.

18. Pursuant to Dr. Zimmerman's referral, Claimant was evaluated by Dr. Michael Hewitt for an orthopedic surgeon consult on March 8, 2021. He reviewed the injury and history with Claimant. On shoulder exam, there was mild muscular atrophy, no acromioclavicular deformity, and biceps deformity consistent with probable biceps tendon rupture. Active range of motion was significantly decreased and caused pain even with mild shoulder shrug. Dr. Hewitt reviewed the MRI findings and discussed the treatment options with Claimant and, specifically advising him that he would, in all likelihood, need surgery.

19. Claimant was seen on March 22, 2021 by Dr. Nathan Faulkner for a third surgical opinion regarding his right shoulder. Dr. Faulkner took a history that Claimant stated he had had a prior fall on his right elbow while at work but did not report the injury and his shoulder improved. He recounted the incident of January 11, 2021 consistent with Claimant's testimony, including the immediate onset of sharp pain. Dr. Faulkner stated that the atrophy shown on MRI supported that the massive rotator cuff tear was not acute. He agreed with Dr. Updike's treatment plan for conservative care following the work injury as there were no prior records of injury.

20. Dr. Updike opined on April 30, 2021 that Claimant had a profound chronic rotator cuff tear that was destined to needing a total shoulder replacement before the January 11, 2021 event took place, with that event possibly being the final tear of any remaining shoulder muscle. He noted that, because of the events of January 11, 2021

Claimant would not likely ever be placed back to work at full duty and an impairment rating was appropriate but surgery was not appropriate under workers' compensation system.

21. On July 27, 2021 Dr. Zimmerman completed an impairment rating evaluation, noting the use of an interpreter. He stated Claimant was ineligible for narcotic medication prescriptions as he was non-compliant with his narcotic pain management contract. Dr. Zimmerman placed Claimant at MMI and provided an impairment rating in accordance with the *AMA Guides to the Evaluation of Permanent impairment*, Third Edition (*Revised*) with a 22% upper extremity impairment that converted to a 13% whole person impairment. Dr. Zimmerman indicated that there was no indication for apportionment with no previous right shoulder workman's compensation claims and did not recommend any further maintenance care.

22. Claimant was attended by Janelle Tittelfitz, PA-C on July 28, 2021. She noted that if Claimant required narcotic medication refills, that he would have to reach out to Dr. Zimmerman but that since he was using Lidoderm patches and Diclofenac gel, they would refill those with his pharmacy. She contacted his physical therapy who noted that he should continue for one more week of PT as he continued to await notice of authorization for surgery. Ms. Tittelfitz stated that she suspected that Claimant had an acute right shoulder biceps rupture but a chronic rotator cuff tear. Claimant stated that PT had helped a lot and requested further therapy. Ms. Tittelfitz advised Claimant that the stage IV atrophy indicated an old rotator cuff tear and that Insurer was unlikely to authorize the total shoulder replacement. She also reviewed discharge evaluation procedures with Claimant advising that he was at MMI per Dr. Zimmerman's report and impairment with no further maintenance care. The Physician Report of Injury (M-164) was issued by Dr. Cava on July 28, 2021 also stated no to maintenance care after MMI.

23. Dr. Robert Watson issued a DIME report on November 17, 2021. He took a history, reviewed the medical records submitted, and performed both a physical examination and range of motion testing. He indicated that he evaluated Claimant with an interpreter present. Dr. Watson noted that Claimant was complaining of pain in the anterior right shoulder and towards the body of the biceps on the right. Claimant complained of aching and inability to lift his arm above his head or shoulder level. On exam of the upper extremity, Dr. Watson found on palpation of the shoulder girdle some mild tenderness extending from the mid right shoulder girdle posterior, down to the area of the acromion; palpation of the shoulder showed tenderness over the bicipital groove; an obvious "Popeye" deformity consistent with the long head of the biceps tendon rupture on the right; full motion of the elbow, wrist and hand; and loss of range of motion of the upper extremity. A negative drop arm test, with restricted motion, positive Speed's Impingement test and negative Finkelstein's test in the wrist and hand. Dr. Watson found Claimant to be at maximum medical improvement on July 21, 2021, agreeing with Dr. Zimmerman that Claimant required no maintenance care. He noted that only the biceps tendon rupture was work related but that the massive rotator cuff pathology was degenerative, based on the MRI findings, and not work related.

24. Dr. Watson provided an impairment rating using the American Medical Association *Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*). Range of motion for the shoulder was added, for a total of 19% for a regional impairment of the upper extremity of the right shoulder and converted it to a whole person impairment,

using Table 3 (p. 16), which equaled 11%. Claimant was given permanent work restrictions at light physical demand, no overhead reaching of the right upper extremity, and no ladders. Lastly, he noted that no maintenance medical care was needed for the work related injury.

25. Dr. Watson testified by deposition on March 9, 2022. Dr. Watson was accepted as an expert, who was Board certified by the American Board of Preventative Medicine and Occupational Medicine and Level II accredited.

Dr. Watson stated that the biceps tendon rises on the head of the humerus, comes down through the bicipital groove of the humerus, and then attaches on the proximal radius and forearm, with the biceps tendon running underneath the supraspinatus and infraspinatus and subscapularis tendons. He explained the anatomy of the shoulder girdle, specifically noting that there were three primary muscle groups and four main tendons that comprise the rotator cuff in addition to the biceps tendon and the deltoid muscles, all of which are necessary to have full range of motion. Dr. Watson stated that while physiologically, the biceps tendon rupture primarily accounted for the loss of flexion that he was required to perform the impairment rating under the *AMA Guides* and the Division guidelines for determining an impairment rating. He specifically stated with regard to loss of range of motion that "[T]hey do not necessarily allow me to separate these out for the purpose of impairment rating unless I have preexisting range of motion measurements. So from an administrative standpoint, this is the whole, and I don't get to separate them out unless I have some way to apportion it."

26. It is inferred from reports issued by Dr. Motz, Dr. Faulkner, Dr. Updike and Dr. Watson that, because Claimant already had a preexisting rotator cuff tear, the biceps tendon on the right was assisting Claimant in utilizing his arm to continue performing work activities and once ruptured, Claimant had little remaining substantial tendon structures that would assist him with significant arm movement.

27. As found, Claimant's rotator cuff pathology is primarily preexisting the January 11, 2021 workplace injury.

28. As found, Claimant's biceps rupture is work related, including the loss of range of motion.

29. As found the appropriate impairment to be assigned is for loss of range of motion in accordance with the *AMA Guides* and the impairment rating protocols established by Division.

30. As found, Claimant's functional impairment involves not just the arm, as the arm has little function without the tendons, tissue and muscle surrounding the glenohumeral joint (ball of the humerus). The biceps tendon is attached proximally from the humerus head and is part of what induces the function.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

(2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Medical Impairment Benefits

Claimant asserts in this matter that he has an injury to the whole person, and that his admitted injury is not on the schedule of impairments. Respondents not only assert that the schedule applies in this case, but that Claimant must prove by clear and convincing evidence that the causation analysis of Dr. Watson must be overcome by clear and convincing evidence because his true opinion is that the biceps tendon is part of the arm alone, not involving functional limitations of the shoulder girdle, and that only flexion of the arm is involved, which is exclusively on the schedule.

a. Schedule vs. Whole Person

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* Section 8-42-107(8)(c), C.R.S. Whether a claimant has suffered the loss of an arm at the shoulder under Section 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under Section 8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). The ALJ must determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868- 996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (Dec. 28, 2006).

Base on case law, this ALJ concludes that medical impairment benefits must be determined in statutory order. The first question must be whether Claimant has an impairment on the schedule of impairments first. This burden is by preponderance of the evidence, not a clear and convincing standard, because the DIME process does not apply to scheduled injuries, if this is a scheduled injury.

In the case of a shoulder injury, where the long head of the bicep tendon of the right shoulder was ruptured, the question is whether the injury has affected structures and function beyond the arm at the shoulder. *Brown v. City of Aurora*, W .C. 4-452-408 (Oct. 9, 2002). The portion of the AMA *Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*) (*Guides*) related to the upper extremity is not a model of clarity but it is clear that an upper extremity and an arm at the shoulder are not equivalent. The upper extremity is composed of multiple sections that include the hand, forearm, arm, and shoulder complex or girdle. In turn, the joints that are between each section are the writs or radiocarpal joint, the elbow, and the glenohumeral joint. See AMA *Guides*, Ch. 3, Sec. 3.0. Proximal to the glenohumeral joint are the acromioclavicular joint, the clavicle and the scapula and all the muscle tissue that is proximal to the joint including the supraspinatus, infraspinatus, trapezius muscles that are involved in producing movement of the upper extremity. The *Guides* are further confusing because Figure 2 of Sec. 3.1b

at p. 15 (impairments of upper extremity from amputation at various levels) shows an anatomical sketch where a 100% loss of the *upper extremity* rating is assigned when there is an amputation of the arm at the mid-point of the humerus bone. The same figure also converts the 100% upper extremity impairment to 60% of the whole person, even if the entire *shoulder girdle* remains intact. The *Guides* do not rate impairments of the "*shoulder*." The *Guides* rate impairments of the *upper extremity*. However, the schedule of impairments is for "*loss of an arm at the shoulder*." Section 8-42-107(2), C.R.S. Inherent in this rating provision are the body part impairment, in this case the arm, that is being measured "*at the shoulder,*" which is the location.

As is noted by the Industrial Claim Appeals Office panel in *Newton v. Broadcom, Inc.,* the General Assembly chose not to list the scheduled body part as the "loss of the arm and the shoulder," or "loss of the arm and all bodily tissue directly attached thereto," or "loss of the shoulder joint," or "loss of the shoulder girdle," or "loss of the upper extremity." *Newton v. Broadcom, Inc.*, I.C.A.O., W.C. No. 5-095-589-002 (July 8, 2021). As this ALJ is precluded from reading nonexistent provisions into the Act, *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo. App. 2016), it cannot be assumed that "arm at the shoulder" is anything that extend into the shoulder joint or functionally affects body parts or structures or function that are at the shoulder itself or proximal from the shoulder joint. In this case, Claimant worked for employer loading and unloading heavy construction supplies on his own for five years, for example heavy water heaters that would weight up to 120 lbs. It is also clear that Claimant had chronic rotator cuff tears as shown by the MRI of January 28, 2021. The Claimant credibly testified that he was able to perform all his job functions prior to the January 11, 2021 admitted work related injury but now is severely limited in his abilities, as noted by the DIME physician by limiting him to light physical demands and no overhead reaching of the right upper extremity. Since Claimant already had significant pathology prior to the work injury, this ALJ infers and concludes that Claimant's remaining upper extremity structures, including the long head biceps tendon, were compensating for the preexisting conditions and that the rupture of the long head biceps tendon was what caused him to lose significant remaining function of the upper extremity, the proverbial straw the broke the camel's back.

The arm, without other bodily tissue, is immotile. Said another way, the arm, without other bodily tissue, has no spontaneous power to move. Thus, without other bodily tissue, the arm itself has no range of motion and no functional ability. For range of motion to exist in the arm, it is necessary that muscles, tendons, and ligaments in the shoulder and torso activate. See *Newton, supra.* The long head biceps tendon attaches above the head of the humerus bone, right below the coracoid process. Here, the humerus bone is not the injured body part. The bone itself did not lose function or substance. Any corresponding loss of range of motion is not attributable to the humerus bone. Here, like in *Newton*, there is no indication that the loss of range of motion is due to an impingement or loss of bony material. Rather, any loss of range of motion is attributable to the loss of function of the muscles, tendons, or cartilage, or all three, which operate together to permit spontaneous movement of the arm. *Newton, supra*

Findings regarding pain, physical limitations, problems with range of motion, protective carriage of the limb, and difficulty with activities of daily living are not factors that determine the "situs of functional impairments." Rather, they are manifestations of

functional impairments. Loss of range of motion is an effect of an impairment but not the underlying impairment itself. This ALJ is not persuaded by Respondents' suggestion that unless there is pain in the neck, no conversion is proper. There is no dispute that pursuant to the *Guides*, the loss of range of motion in this case as assigned by Dr. Watson is 22% of the upper extremity, which converts to 11% whole person impairment. The "arm" sustained no anatomical disruption to account for this loss of motion. Hence, the loss of motion arises from an anatomical disruption of the tissues of the biceps tendon that attaches right above and proximal to the glenohumeral joint, at the supraglenoid tubercle, which is considered a region of the scapula, attaching to the coracoid process. See *Gray's Anatomy*. The tendon that was ruptured was substantially in reliance of tissue attachments in the torso. Therefore the anatomical disruption or functional impairment is not only of the arm or of the glenohumeral joint, but rather of the shoulder complex proximal to the torso from the glenohumeral joint.

As found, there is loss of function that is proximal[2] to the shoulder joint structures that activate the use of the arm when measuring loss of range of motion. Specifically, the DIME physician, Dr. Watson, concluded that Claimant had loss of range of motion caused by the work related injury and the impairment caused by the loss of range of motion cannot be separated in a workers' compensation rating without preexisting records showing impairment, which were not tendered to the DIME physician nor the court. As found, this ALJ cannot but conclude that Claimant has lost function that is beyond the glenohumeral joint because the impairment of the bicep is measured through the loss of motion of the upper extremity.

As specifically found here, Claimant's work related injury of January 11, 2021 caused a disruption in the functioning of his upper extremity, not just his arm, and the biceps tendon may have been the last critical tissue structure that was keeping Claimant's upper extremity functioning before it ruptured. As found, Dr. Watson was clear in his testimony that Division prohibited any parceling out or apportionment of range of motion without medical records of a preexisting injury documenting prior loss of range of motion. Based on the totality of the persuasive evidence, Claimant is entitled to a determination that his loss of function encompasses all of his lost range of motion as required by the AMA *Guides*, the Division and the Level II accreditation requirements that a biceps tendon be rated based on loss of range of motion of the upper extremity, which affect portions of the body beyond the glenohumeral joint and proximal tissue function. Claimant has shown by a preponderance of the evidence that Claimant has an 11% whole person impairment rating, a rating not on the schedule.

b. Overcoming the DIME physician's opinion

Respondents also asserted that they need not overcome the DIME physician's opinion by clear and convincing evidence because Dr. Watson testified that the biceps tendon rupture primarily affected flexion, so the burden of proof is really just preponderance of the evidence. This ALJ disagrees. Respondents must prove that the

[2] Proximal to a joint is closer to the center of the body, trunk or torso. If it is proximal to the shoulder joint, it is towards the neck or the spine. If a symptom or condition is distal to the joint it moves away from the center of the body from the joint. If it distal to the shoulder joint, it is toward the hand.

DIME physician's determination of impairment was incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, *supra.*

The Act requires DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, ICAO, W.C.No. 5-078-454-001, (July 12, 2021). The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*. Consequently, when a party challenges the DIME physician's impairment rating, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning his opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* ICAO, W.C. No. 4-677-750 (April 16, 2008); *In re Claim of Pulliam*, *supra*.

Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*.

A party seeking to overcome the DIME physician's opinion need only prove that any one particular aspect of the impairment opinion is overcome by clear and convincing evidence. When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id*. Therefore, if it is overcome, then the remainder of the decision need only be shown by a preponderance of the evidence.

In this case, even if Claimant's objective physiologic functional impairment is only to flexion, the flexion is a function of the upper extremity, not of the arm alone. Flexion is not performed by the humerus. It is performed by multiple tissue, tendons and muscles as stated above. As found, Claimant's impairment is not on the schedule and is a whole person impairment. Dr. Watson's true opinion with regard to the assigning of impairment is that he, as a Level II physician, must comply with the AMA *Guides* and the Division impairment protocols, which require a physician to rate the upper extremity loss of range of motion when there is a biceps tendon rupture. As found, Dr. Watson fulfilled his mandate by providing such an impairment rating and the DIME physician correctly applied the *AMA Guides* and other rating protocols. Therefore, as further found in this case, Respondents' burden must be a clear and convincing standard. The totality of the persuasive evidence shows that Dr. Watson complied with the requirements of the AMA *Guides* and the impairment rating protocols in assigning the 11%whole person impairment rating for Claimant's loss of function related to the biceps rupture. There was no other persuasive evidence that Claimant has anything other than the 11% whole

person impairment. Respondents have failed to overcome the DIME physician, Dr. Watson's, impairment rating by clear and convincing evidence.

Lastly, if Claimant's arguments are that Claimant's massive rotator cuff injuries were related to this claim of January 11, 2021, whether fully related or aggravated by the incident, this ALJ concludes that they were not, as supported by Dr. Watson's opinion as well as multiple other provider's opinions, that the rotator cuff pathology was chronic and preexisting. Claimant has failed to show by any standard of proof that Claimant's rotator cuff injury is related to the January 11, 2021 workplace injury.

C. Maintenance Medical Benefits after Maximum Medical Improvement

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974, ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Here, Drs. Watson, Zimmerman and Updike all agree that Claimant does not require maintenance medical benefits. There is a lack of persuasive evidence that any medical provider made recommendations for maintenance care in this matter. Claimant has failed to show by a preponderance of the evidence that he requires maintenance benefits after having achieved maximum medical improvement.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay permanent partial disability benefits based on the Dr. Watson's impairment rating of 11% whole person impairment. Respondents may take credit for any benefits paid from the date of MMI to the present.

2. Claimant's claim for maintenance medical benefits under *Grover* is *denied* and *dismissed.*

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-845-972-002

ISSUES

The issues for determination were:

- Did Claimant prove that hydrotherapy/aqua therapy (as prescribed by ATPs-Dr. Leahy and Dr. Polovitz) was reasonable, necessary and related as maintenance treatment, including the mileage going to and from hydrotherapy treatments?

- Is Claimant is entitled to reimbursement for payment of $677.75 for ophthalmological services rendered by ATP Dr. Politzer?

PROCEDURAL HISTORY

The undersigned ALJ issued a Summary Order on December 16, 2020. Respondents requested a full Order on December 31, 2020. This Order follows.

FINDINGS OF FACT

1. On January 17, 2011, Claimant suffered an admitted industrial injury while working for Employer. He was a restrained driver in his vehicle and was stopped at an intersection when he was rear-ended by another vehicle.[1]

2. Claimant received medical treatment for his injuries. Richard Leahy, D.O. from Elizabeth Family Health had previously treated Claimant before the MVA. Dr. Leahy was an ATP who provided treatment to Claimant starting in April 2011.[2]

3. Claimant was also injured on May 30, 2012 when his head was struck by an umbrella while undergoing rehabilitation for his work injuries. This was a compensable injury.

4. On May 17, 2011, Dr. Leahy wrote a prescription for hydrotherapy for Claimant that was to take place in Parker. The diagnosis was C6-C7 radiculopathy and cervical, lumbar spondylosis, DDD.

5. On August 8, 2012, Dr. Leahy wrote a prescription for hydrotherapy for Claimant. This was for a diagnosis of "DDD C-L spine".

6. A medical benefits issue arose in 2012 and ALJ Felter issued Findings of Fact, Conclusions of Law and Order on April 4, 2013 in which he ordered Respondents to pay for bilateral carpal tunnel surgery as recommend by A.T. Alijani, M.D.

[1] The MVA was described in Dr. Paz' IME report. [Exhibit 8, p. 76.; Exhibit B, p.6].

[2] Exhibit 12, p. 142.

7. Dr. Leahy authored a letter, dated April 18, 2016 in which he stated Claimant would need ongoing physical therapy or chiropractic treatment, along with pool therapy and medications for the injury sustained on January 17, 2011.

8. On September 28, 2016, parties entered into a settlement agreement for a full and final settlement of the case. The settlement agreement had a Medicare Set-Aside ("MSA") provision, which specified Respondents had the option of funding the MSA or leaving medical benefits open.[3]

9. The proposed MSA did not have a reference to or an amount allocated for future costs related to eye or vision issues.[4]

10. On April 18, 2018, Claimant was evaluated by Katherine Polovitz, M.D. He reported fatigue, slurred speech episodes and loss of time episodes. In the review of systems, Dr. Polovitz noted it was negative for blurred vision and eye pain. On examination, Claimant's neck had decreased range of motion ("ROM") with left rotation and right rotation. His neurologic exam was negative. Dr. Polovitz diagnoses were: post-concussion syndrome; post-concussional syndrome; seizures; unspecified convulsions; other fatigue.

11. Dr. Polovitz noted Claimant had done a version of cognitive therapy, as well as EMDR. Claimant's MRI and EEG were essentially normal around the time of that therapy and he had not had any recent episodes of loss of awareness. Dr. Polovitz recommended he continue with a very good sleep hygiene and routine exercise. Dr. Polovitz did not make specific treatment recommendations at that time (including for eye problems) and did not offer an opinion on causation.

12. There was no evidence in the record that Claimant reported eye symptoms or required treatment for vision issues from 2011-2019.

13. On August 5, 2019, Dr. Leahy wrote a letter recommending hydrotherapy for chronic pain s/p MVA.

14. Claimant submitted attendance records from Lifetime Fitness Gym for the period January 6, 2016 through September 18, 2019 (193 weeks). These records showed Claimant visited this facility 244 times during this period, which equated to 1.26 visits per week during this time.

15. In a letter, dated October 3, 2019, Dr. Leahy stated Claimant had been utilizing Lifetime Fitness Center since 2012 in order to obtain hydrotherapy. Dr. Leahy said Claimant required a pool-type setting in order to complete his treatment in a therapeutic venue. Dr. Leahy said a hot tub, although beneficial, was not adequate as a means of receiving essential treatment. He concluded Claimant required a pool in order

[3] Exhibit 10, p. 122.

[4] Exhibit 11, p. 140.

to maintain his quality-of-life following the trauma and subsequent health-related issues that were directly related to the 2011 MVA and 2012 injuries.

16. Dr. Leahy drafted a letter, dated November 4, 2019, in which he addressed aquatic or hydrotherapy. He noted Claimant suffered multiple traumatic injuries involving his lumbar, cervical, bilateral upper extremities, and head following the MVA of 2011. Claimant sustained further cervical and head injuries as a result of the 2012 pool accident. Dr. Leahy said the aquatic therapy was initiated in 2011 after invasive treatment and found to be extremely beneficial as his primary non-invasive therapeutic invention, utilized for pain control, core strength, cognitive maintenance and improvement. Dr. Leahy stated aquatic therapy utilizing a pool offered the necessary treatment for Claimant by utilizing the principles of hydrostatic pressure, buoyancy and viscosity of water. These principles used in a therapeutic venue were the standard of care utilized in similar multi-trauma cases to those suffered by Claimant. Dr. Leahy stated the support of the water was complete and surrounded the body from all sides. Reduced weight and hydrostatic pressure allowed Claimant to upload his spine, increase blood flow to injured areas promoting healing, reduction of joint stress, stretching out of muscle groups which were guarding given the neural and increase range of motion, as well as cardio therapy. Dr. Leahy said aquatic therapy had and would continue to be a necessity for Claimant's continued success. Dr. Leahy stated a hot tub would only be considered adjunct therapy.

17. Dr. Leahy's recommendations for hydrotherapy did not specify the duration or frequency of treatments. There was no evidence in the record Dr. Leahy oversaw Claimant's hydrotherapy at Lifetime Fitness. The ALJ found this opinion did not provide for oversight by an ATP or how the treatment would maintain MMI or prevent deterioration.

18. There was no confirmation in the record that Respondents paid for any part of Claimant's membership at Lifetime and reimbursement (from 2016-19) that was requested as part of Claimant's Application for Hearing.[5]

19. On or about November 8, 2019, Respondents denied the request for payment of Dr. Politzer's services and for glasses prescribed by Dr. Politzer (date of service February 26, 2019). No report was submitted from Dr. Politzer which provided an opinion as to why the need for glasses was related to Claimant's injuries. The denial was made pursuant to W.C.R.P. 16-11(A)(B) and (C).[6]

20. On November 20, 2019, Respondents denied the request for payment of mileage for hydrotherapy at Lifetime Fitness and Lifetime dues for the period of November 2016 through October 2019. A second denial for the mileage and Lifetime dues was sent on or about December 23, 2019.

[5] Exhibit 1, p.3.

[6] Exhibit C, pp. 38-39.

21. On March 3, 2020, Claimant was evaluated by F. Mark Paz, M.D., at the request of Respondents. At that time, he complained of numbness/tingling in the upper and lower extremities bilaterally; intermittent versus constant. Claimant also reported headaches. Dr. Paz reviewed the history of Claimant's treatment, including surgeries for CTS and for the lumbar spine. On examination, Claimant had good ROM in the thoracic spine (on flexion, right and left rotation), with no trigger points or fasiculations. Claimant's lumbar spine had no paraspinal muscle spasm or tenderness. Lumbar spine active range of motion on extension was less than 10°, right and left lateral flexion less than 10°, with no percussion tenderness in the midline of the lumbar spine, L1- S1. The straight leg raise tests for the right and left lower extremity were approximately 60°. No neurologic abnormalities were identified.

22. Dr. Paz' assessment was: neck pain; chronic low back pain; cervical degenerative disc disease, history of; cervical spondylosis, history of; traumatic brain injury, history of; sleep dysfunction; post-traumatic stress disorder, history of; deconditioning, history of; lumbar degenerative joint disease, history of; lumbar degenerative disc disease, history of lower extremity parasthesias; diabetic peripheral neuropathy; bilateral carpal tunnel syndrome; status post-decompressive surgery, right upper extremity; obesity; hypoxia by pulse oximetry, without tachycardia; elevated blood pressure; cognitive dysfunction, by history; diabetes mellitus type two; gout; hearing loss; Meniere's disease; left hand extensor tendon repair, history of; opioid dependence.

23. Dr. Paz opined the hydrotherapy treatment was not reasonable, necessary, nor causally related to the January 17, 2011 and/or May 30, 2012 incident. Hydrotherapy was defined as warm water pool treatments. Dr. Paz noted that the records of Dr. Leahy, who recommended the hydrotherapy, did not show he reviewed Claimant's treatment. As found, this treatment was essentially self-directed, along with Claimant's exercise program and not supervised by a medical professional. In addition, the ALJ found Dr. Leahy, though he recommended the treatment, did not specify that Claimant required it to maintain MMI or to prevent deterioration of his condition. Dr. Paz reviewed the DOWC MTG, specifically chronic pain disorder (Rule 17, Exhibit 9), cervical spine injury (Rule 17, Exhibit 8) and low back pain (Rule 17, Exhibit 1) as these applied to the case. Dr. Paz noted the term "hydrotherapy" was not identified by the DOWC MTG. Dr. Paz opined the definition of hydrotherapy, outside of DOWC MTG was not consistent with defined treatments of pool therapy or aquatic therapy. In addition, no treatment records were signed by a therapist as opposed to active therapy associated with hydrotherapy. Dr. Paz stated there was no evidence that this treatment was supervised. Dr. Paz distinguished hydrotherapy from pool therapy that was referenced in the DOWC MTG. Dr. Paz' analysis was persuasive to the ALJ.

24. Dr. Paz also stated that the eye care plan was not reasonable, necessary, nor causally related to the January 17, 2011 and/or May 30, 2012 incident. Dr. Paz noted that Claimant did not report subjective symptoms of vision abnormality during the IME, nor during the other IMES (performed by Drs. Goldman and McCranie). The ALJ credited Dr. Paz' opinions on relatedness, specifically whether the need for eye evaluations and treatment were related to the January 17, 2011 and May 30, 2012 injuries.

25. Claimant returned to Dr. Polovitz on April 15, 2020 (telehealth visit). He had not returned to his pre-injury baseline, but was keeping himself busy at home. He reported back pain, myalgias and neck pain. The evaluation was negative for blurred vision, eye drainage and pain. He had not had any recent episodes of loss of awareness and his sleep had improved. Dr. Polovitz‘ diagnoses were the same as the previous evaluation. She continued the prescription for modafinil and recommended that he continue to do aqua therapy. Dr. Polovitz said this was “absolutely” recommended for Claimant’s ongoing care and quality of life, including improving his sleep.

26. Claimant testified that the hydrotherapy helped the condition of his back, as it provided pain relief. He estimated that he went to Lifetime Fitness three times per week. In addition to the hydrotherapy, Claimant participated in a self-directed exercise and stretching program. Claimant was a credible witness when testifying that the hydrotherapy helped his physical condition.

27. There was no evidence in the record that Claimant’s hydrotherapy treatment was overseen by a health care professional.

28. Claimant failed to meet his burden of proof to show that care and treatment for an eye condition was reasonable necessary and related to his work injuries. Claimant failed to meet his burden of proof to show that the hydrotherapy treatment were reasonable and necessary.

29. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers’ Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Medical Benefits

Claimant had the burden of proving his entitlement to medical benefits by a preponderance of the evidence. The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003).

Claimant alleged that the evidence established he required hydrotherapy to maintain MMI and prevent deterioration of his condition. Claimant argued that his testimony, the medical records from the ATP's, along with the plausible inferences drawn therefrom, supported the conclusion that both hydrotherapy and evaluation by Dr. Politzer was reasonable, necessary and related. Respondents argued there was no evidence to support the conclusion that the hydrotherapy treatments were supervised by a physician. Respondents also asserted that there was no evidence to show that Claimant's eye issues were related to the work injuries. The ALJ concluded Claimant failed to meet this burden with regard to treatment of his eye condition and hydrotherapy.

As a starting point, Claimant suffered two injuries which arose out of and were in the course of his employment. (Findings of Fact 1, 3). He required both conservative treatment, as well surgical treatment for those injuries. (Findings of Fact 6, 21). As determined in Findings of Fact 9-12, there was no reference to eye symptoms or vision problems from 2016-19 in the treatment records, including when the case was settled with MSA provisions. The records from Claimant's treating physicians admitted at hearing failed to prove that his need for this treatment was caused by or related to the injuries suffered. The ALJ concluded Claimant did not meet his burden of proof to show that his need for eye care (including eyeglasses) was causally related to the industrial injuries and their sequalae. (Finding of Fact 28).

Next, the ALJ reviewed the request for reimbursement of Claimant's hydrotherapy at Lifetime Fitness (including member fees and mileage). Claimant failed to meet his burden of proof with regard to this request for medical benefits. As a starting point, the ALJ credited Claimant's testimony regarding the salubrious effect of this treatment. (Finding of Fact 26). However, the ALJ was not persuaded this constituted a medical treatment that would fit within *Grover* medical benefits. As determined in Findings of Fact 4-5, 7,15-16, Dr. Leahy made multiple recommendations for hydrotherapy. While Dr. Leahy described the mechanism and benefits of hydrotherapy, there was not a specific statement by Claimant's ATP-s (including Dr. Leahy) as to why this treatment was required to maintain MMI or prevent deterioration. (Finding of Fact 17). In addition, while this treatment was recommended by the Drs. Leahy and Polovitz, the parameters of this treatment [frequency, duration etc.] were not elucidated. *Id*. Both Dr. Leahy and Polovitz stated the hydrotherapy was required to maintain Claimant's quality of life, as opposed to a specific statement about MMI. The ALJ also found this treatment was not supervised by a medical professional. (Finding of Fact 27). Based upon this evidence, the ALJ

concluded the medical evidence did not support an Order requiring Respondent to pay for Lifetime Fitness and the hydrotherapy as a medical benefit.

In this regard, the ALJ also credited the expert testimony of Dr. Paz, who noted this treatment was not defined in the DOWC Medical Treatment Guidelines. As found, Dr. Paz distinguished between treatment that was supervised by a therapist and the treatment Claimant was doing, which was essentially self-supervised. (Finding of Fact 23). Claimant's request for medical benefits will therefore be denied, as there was not sufficient evidence to establish that this treatment was required to maintain MMI or prevent deterioration of his condition.

ORDER

Based upon the preceding Findings of Fact and Conclusions of Law, the Judge enters the following Order:

1. Claimant's claim for medical benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-087-009-005

ISSUES

I. Whether Claimant is at MMI.

II. The extent of Claimant's permanent impairment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On July 10, 2018, Claimant suffered an injury to his neck, low back, and groin when he was rear ended while driving his work vehicle. **RHE D, p. 15**. On February 1, 2022, Claimant testified that he was "in stop-and-go traffic, and a car that wasn't paying attention, whose lane had slowed down, switched lanes and rear-ended" him. **HearTr, p. 17**. Claimant sought care at the "closest Concentra he could find on google." **HearTr, p. 17**.
2. Claimant presented to Concentra right after the accident and was seen by Dr. Jay Reinsma. At this visit, Claimant complained of neck, back, and bilateral shoulder pain. Dr. Reinsma's assessment of Claimant included whiplash, low back strain, as well as pain in his left testicle. Due to Claimant's neck pain – whiplash injury – he also ordered cervical spine x-rays. The x-ray findings were "unremarkable." He also prescribed physical therapy and assigned work restrictions. **CHE 8, pp. 43-47.**
3. On July 13, 2018, Claimant returned to Dr. Reinsma. At this visit, he completed a pain diagram. Claimant noted that he had pain in his neck, shoulders, and back. **CHE 8, p. 56**.
4. On July 18, 2018, Claimant returned to Dr. Reinsma. At this visit, Claimant still complained of pain in his neck, shoulders and back. At this visit, however, Claimant also stated that he was having testicular pain. Claimant stated that he had a metal cup between his legs at the time of the accident and when he was thrown forward during the accident, the cup hit the steering wheel and caused the cup to strike his left testicle. **CHE 8, p. 57**.
5. Claimant kept treating with Dr. Reinsma for his back, neck, and shoulder pain. Dr. Reinsma kept prescribing physical therapy and chiropractic treatment.
6. On August 22, 2018, Claimant returned to Dr. Reinsma. Claimant still had ongoing neck pain and low pain and was not getting better. Therefore, Dr. Reinsma ordered an MRI and referred Claimant to a specialist – Dr. Aschberger. **CHE 8, pp. 75-78**, **87**.

7. Claimant underwent a cervical MRI on August 29, 2018. The MRI showed the following:

> A very mild disc bulge at C4-5 and very small disc protrusions at C5-6 and C6-7 without central canal stenosis or spinal cord compression.
>
> A small to moderate uncovertebral osteophytes from C3 through C7 contributing to mild to moderate foraminal narrowing.
>
> **CHE 8, p. 80**.

8. On September 18, 2018, Claimant was seen by Dr. John Aschberger – a physiatrist – for neck and back pain. In the report, it notes that Claimant has been undergoing chiropractic, acupuncture, and massage therapy. It also reports that Claimant did have a prior back strain. During the visit, Claimant asked about imaging of his thoracic and lumbar spine. But, based on Dr. Aschberger's assessment, he did not think it was warranted. Dr. Aschberger, did, however, recommended dry needling, and ongoing physical therapy in the form of stretching and massage therapy. Lastly, he noted his findings were mild overall. **CHE 8, pp. 87-90**.

9. On October 9, 2018, Claimant returned to Dr. Aschberger. At this visit, Claimant stated that his back pain was getting better and that he had some persistent tightness in his neck and upper trapezius. Claimant also complained of ongoing testicular pain. Dr. Aschberger noted that review of Claimant's physical therapy records revealed Claimant was improving his range of motion. Due to his testicular pain, Claimant was referred to his urologist, Dr. Horne. At this appointment, Dr. Aschberger assessed Claimant with a cervical strain and possible lumbar strain. **CHE 8, pp. 91-92**.

10. On December 13, 2018, Claimant was seen by Dr. Lacie Esser with continued neck and back pain. At this visit Claimant complained about his treatment. Claimant felt that he should be prescribed additional passive treatment, such as massage, hot/cold therapy, and partner stretches. He was also upset that it was taking too long to see additional specialists. Lastly, he complained about pain in his right ring finger. As a result, Dr. Esser referred Claimant to Dr. Sachar for evaluation of his right ring finger complaints. **CHE 8, pp. 111-115**.

11. On January 28, 2019, Claimant was seen by Dr. Sachar for his right ring finger. After obtaining an MRI, he diagnosed Claimant with a right finger PIP joint ganglion. He did not recommend any treatment at that time since it was not very symptomatic. **CHE 9, p. 123**.

12. On April 26, 2019, Claimant underwent an MRI of his lower back. The impression was:

1. Patchy appearance of the bone marrow suggesting osteopenia. Finding should be correlated with radiographs.
2. Multilevel degenerative disc disease as described. No disc herniation or spinal canal stenosis.
3. Bilateral pars defect at L5.

13. On June 6, 2019, Claimant was seen by Dr. Aschberger. At this appointment, Dr. Aschberger treated Claimant's lumbar strain by providing lidocaine injections at the L2, L4, and L5 area. **CHE 9, pp. 138-139**.

14. On June 7, 2019, Claimant was seen by Dr. Robert Kawasaki for lumbar epidural steroid injections. Claimant underwent an injection for lumbar radiculopathy. **CHE 9, pp. 142-143**.

15. On July 11, 2019, Claimant returned to Dr. Aschberger. At this visit, Dr. Aschberger evaluated Claimant. He noted Claimant's trapezial and cervical musculature was tight. He also evaluated his back. At this visit, he abruptly concluded that Claimant had reached MMI and provided an impairment rating. In determining Claimant's impairment, he concluded that Claimant did not suffer any permanent impairment to his cervical spine. He did not rate Claimant's cervical spine because he concluded that Claimant's symptoms and findings were myofascial and did not warrant a rating under the AMA Guides. He did, however, provide Claimant a 14% impairment for his lumbar spine and a 5% impairment for his testicle/scrotal injury. This combined to a 18% impairment. **RHE F, p. 59**.

16. On July 31, 2019, Claimant underwent a comprehensive evaluation by Dr. Usama Ghazi. After a comprehensive review of Claimant's medical records and a physical examination, Dr. Ghazi's assessment was:

    1. Whiplash injury with cervical facet syndrome with cervicogenic headaches.
    2. Occipital neuralgia. (This is the most severe pain complaint and is likely from occipital contusion against the headrest.)
    3. Thoracolumbar through lumbosacral facet pain.
    4. Moderate sacroiliac pain bilaterally without coccydynia.
    5. Neuritis/groin/testicular pain secondary to left testicular contusion.

    Based on his assessment and diagnoses, Dr. Ghazi recommended, and performed, bilateral greater occipital nerve blocks for Claimant's cervical pain and headaches. The injections were diagnostic – and therapeutic - and provided immediate pain relief of Claimant's occipital nerve pain. He also recommended cervical and lumbar facet injections. **CHE 9, pp. 156-163**.

17. On August 14, 2019, Dr. Kathy McCranie performed a Rule 16 evaluation to assist in determining whether medial branch blocks recommended by Dr. Ghazi were reasonably necessary and causally related to the work accident. Dr. McCranie concluded that the medial branch blocks were reasonably necessary and causally related to the work injury. She also thought that such treatment could be provided as maintenance treatment. **CHE 9, pp. 164-171**.

18. On September 6, 2019, Claimant underwent lumbar medial branch blocks. According to Dr. Aschberger, they were diagnostic since Claimant's pain significantly decreased after the injections. **CHE 9, pp. 171-172**.

19. On October 25, 2019, Claimant returned to Dr. Aschberger. Based on his response to the medial branch blocks, Dr. Aschberger stated that they would discuss proceeding with a facet rhizotomy at his next visit. **CHE 9, pp. 175-176**.

20. On November 22, 2019, Claimant started treating with Dr. Shimon Blau. At this appointment, Dr. Shimon performed trigger point injections – for Claimant's back pain.

21. On January 9, 2020, Claimant attend his first DIME appointment with Dr. Mitchell. **RHE D.** Claimant reported neck pain with occasional headaches, without radiation into the upper extremities. Claimant did not report any lower extremity numbness or tingling. Claimant, other than Ibuprofen, was taking Cyclobenzaprine for sleep. Upon physical examination, tenderness was found in the suboccipital regions and occipital nerve. Negative cervical facet loading was found, along with a negative Spurling's test. **RHE D, p. 19.** Normal upper and lower extremities findings were also noted.

22. Dr. Mitchell determined that Claimant was not at MMI. She recommended that Claimant undergo repeat injection to the greater occipital neuralgia, consideration of a C1-C2 nerve block. RHE D, p. 20. Dr. Mitchell did not find evidence of cervical facetogenic pain, however she stated that facet joint injections could be considered. She also recommended that Claimant could consider medial branch blocks and radiofrequency neurotomy for the low back given Claimant's subjective complaints. Dr. Mitchell also recommended biofeedback. She also provided Claimant a provisional impairment rating of 39% for his low back, cervical spine, and occipital neuralgia that was causing Claimant's headaches.

23. On January 10, 2020, Claimant returned to Dr. Shimon Blau and stated that the injections helped significantly for the pain in his right lower back, but not so much on the left. Dr. Blau repeated the injections – and assessed Claimant with low back pain and neck pain. **CHE 9, pp. 124-125**.

24. On February 27, 2020, Dr. Aschberger reevaluated Claimant. Dr. Aschberger reviewed Dr. Mitchell's DIME report and discussed care with Claimant. Dr. Aschberger referred Claimant to Dr. Zimmerman for medial branch blocks from T11 through L2. Per Dr. Mitchell's recommendations, biofeedback was also

recommended by Dr. Aschberger. The following quotes from this evaluation are relevant:

a. "I had gone over that with [Claimant]. We have performed an L1-L2 medial branch block, and on follow-up with myself, he reported some partial symptomatic benefit only, not really meeting the criteria for a diagnostic response to medial branch block." **RHE F, p. 65**.

b. "[Dr. Mitchell] talked about additional trigger point injections. [Claimant], of course, has been through a number of different processes for that." **RHE F, p. 65**.

c. "[Claimant] is discussing multilevel trials of injections, additional massage, and additional physical therapy. As Dr. Mitchell noted, [Claimant] has had 63 sessions of manual therapy of doubtful benefit, although she mentioned 10 sessions of manual therapy for maintenance over a 12-month period." **RHE F, pp. 65-66**.

25. On March 11, 2020, Claimant initiated biofeedback treatment with Jessica Graves, MA, LPC, BCB. **CHE 10, pp. 190-194**.

26. On April 22, 2020, Dr. Aschberger responded to a medical questionnaire from Respondents' counsel. **RHE F, p. 70**. Pertaining to impairment and following review of Claimant's job description, Dr. Aschberger's response to the third question about the provisional impairment rating, provided by Dr. Mitchell, stated, "[Claimant's] functional ability is not compatible with a 39% WP impairment."

27. On May 6, 2020, Claimant underwent medial branch blocks with Dr. Zimmerman. **RHE F, pp. 74-75** (note: referenced by Dr. Aschberger).

28. On July 28, 2020, Claimant underwent a bilateral L5-S1 radiofrequency neurotomy with Dr. Zimmerman. **RHE G, pp. 97-98**.

29. On September 10, 2020, Claimant returned to Dr. Aschberger for reevaluation. **RHE F, pp. 83-84**. Claimant reported good relief for about a week following the bilateral L5-S1 radiofrequency neurotomy but recurrent increasing symptoms. It was also noted that Claimant underwent a T11 through L2 radiofrequency neurotomy on August 12, 2020, also without significant relief of his symptoms. Dr. Aschberger recommended myofascial release. As for the cervical spine, Dr. Aschberger suggested consideration for facet blocks, "although given his lack of response thus far, I am not optimistic that this will provide much benefit." ***Id.*** **at 84**. The physical examination noted just limited thoracic and lumbar extension, with tightness and tenderness. There were not any notations of cervical motion restrictions, but yet it is not clear that he measured Claimant's cervical spine for any decrease in motion.

30. On November 19, 2020, Claimant had a follow-up visit with Dr. Aschberger, reporting no significant tenderness on palpation at the upper cervical levels, but

reporting headache. **RHE F, pp. 85-87**. Claimant also reported tightness at the neck but no issues with the low back. No range of motion restrictions are documented other than pain with cervical extension. Dr. Aschberger noted the DIME's recommendation for medial branch blocks for the cervical spine, but again concluded that such treatment would not help diagnostically.

31. On January 28, 2021, Dr. Aschberger again placed Claimant at MMI. Dr. Aschberger wrote in a progress report, Claimant "has his cervical facet injections. Report from Dr. Kawasaki does not show any dramatic reduction of symptoms." **RHE F, p. 88**. Dr. Aschberger noted that Claimant, "did have an episode of some tightness and pain at the base of the left neck and trapezius. He sought chiropractic intervention with 1 session and that settled down pretty well." **RHE F**, **p. 88**. Physical examination revealed only restrictions with cervical extension, without aggravation with palpation at the upper facets. No lumbar spine restrictions were documented by Dr. Aschberger. Dr. Aschberger again concluded that lateral branch blocks would not offer any additional information.

32. On May 12, 2021, Claimant returned to Dr. Mitchell for a follow-up DIME. **RHE E**, **pp. 26-34**. Dr. Mitchell concluded that Claimant was not at MMI due to chronic cervical pain. Claimant reported neck and low back pain without radicular symptoms.

33. Dr. Mitchell recommended cervical medial branch blocks followed by rhizotomies if appropriate. Dr. Mitchell disagreed with Dr. Barker's recommendations for epidural steroid injections at T12- L1 because prior diagnostic studies did not show evidence of spondylolisthesis. Dr. Mitchell further concluded that Claimant had developed spondylolisthesis; this condition was unrelated to the industrial injury.

34. Dr. Mitchell assigned an impairment rating of 30% whole person. This number relies on the assignment of a 17% whole person rating for the cervical spine, a 14% whole person impairment rating for the lumbar strain, and a 1% whole person impairment rating for the varicocele.

35. On November 19, 2021, Dr. Mitchell attended an evidentiary deposition. Dr. Mitchell testified as "[f]or the neck . . . he had very extended conservative therapy; physical therapy, massage, chiropractic. He had 23 cervical facet joint injections." **DepTr, p. 7**.

36. Dr. Mitchell testified as "for the lumbar spine, again a very extended course of conservative therapy; an epidural steroid injection at L1-2, medial branch blocks, and then eventually, radiofrequency rhizotomies at four levels in the lower thoracic and through the lumbar spine." **DepTr, p. 8**.

37. Dr. Mitchell does not believe that the cervical medial branch blocks, followed by rhizotomies, will provide any actual gain in functional improvement. **DepTr, p. 24**.

38. Dr. Mitchell, on record in deposition, officially amended her MMI finding after being walked through the statute and Level II Curriculum by Respondents' counsel, excerpted below:

> Counsel: . . . there is the indication of how the statute defines MMI, as well as the component of future medical care and how it interjects with MMI. So particularly, I just have the highlighted section there to get to the point here for you to read. Can you read that for me?
>
> Dr. Mitchell: Out loud?
>
> Counsel: Not out loud. I'm going to ask a follow-up question.
>
> Dr. Mitchell: Yes, I see the section.
>
> Counsel: Okay. Now, your testimony earlier is that it's not medically probable that Mr. [Claimant Redacted] is going to get any functional or therapeutical relief from the medial branch blocks; that's correct?
>
> Dr. Mitchell: Yes.
>
> Counsel: Okay. And so you would agree with me that, at least under this Desk Aid, the Division is instructing us and physicians that if future care, maintenance care, will not significantly improve the condition or the possibility of improvement or deterioration, the passage of time shall not affect the finding of MMI. In reading this instruction and guidance from the Division, do you believe that, given the fact that you don't expect the medial branch block to physically or therapeutically provide any improvement in Mr. [Claimant Redacted] , that you could confidently change your opinion and say that he is at maximum medical improvement?
>
> Dr. Mitchell: Well, it talks about the possibility of improvement or deterioration, not the probability. Possibility. And that's where I'm saying it's possible that there might be improvement in this case.
>
> Counsel: But your medical opinions, whether it's a patient coming in, whether you're conducting a Division IME, is always based on a reasonable degree of medical probability, though, correct?
>
> Dr. Mitchell: That is true.
>
> Counsel: And under the Level II curriculum and instruction guidelines that I'm sure not only that you originally learned

years and years ago, but the repetitive -- not repetitive, I'm sorry – repeat validations they continue to treat, that it is under a degree of reasonable medical probability, not possibility, as to asserting your and giving your opinions?

Dr. Mitchell: All right. You have a point.

Counsel: So that's a yes?

Dr. Mitchell: I guess.

Counsel: So is it medically probable, Doctor, that Mr. [Claimant Redacted] is at maximum medical improvement?

Dr. Mitchell: Oh, boy.

Counsel: I feel like I just took you through a formal logic class, undergrad.

Dr. Mitchell: Okay. I would say it's probable, then.

Counsel: Medically probable to a degree of reasonable probability that he's at maximum medical improvement?

Dr. Mitchell: Yes.

Counsel: And that would be at date of your follow-up examination in May of 2021?

Dr. Mitchell: Yes.

Dep Tr, pp. 46-48.

39. Claimant is working as a RAV technician, dealing with roadside emergencies and shop services, working 40 hours per week without any permanent work restrictions issued from his physicians. **Hear Tr, p. 29**. Claimant has, however, had to make self-modifications to perform his job. **Hear Tr, p. 32**.

40. The ALJ finds that Dr. Mitchell's ultimate opinion is that Claimant reached MMI on May 12, 2021 – the date of the follow up DIME – and has a 30% whole person impairment rating due to his industrial accident.

41. The ALJ finds that the treatment recommended by Dr. Mitchell, the DIME physician, does not have a reasonable prospect for defining Claimant's condition, suggesting further treatment, or curing him from the effects of his injury. As a result, Claimant's work-related conditions are stable and no further treatment is reasonably expected to improve his conditions.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is at MMI.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

If the DIME physician offers ambiguous or conflicting opinions concerning MMI or impairment, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Stephens v. North & Air Package Express Services*, W. C. No. 4-492-570 (February 16, 2005), *affd, Stephens v. Industrial Claim Appeals Office* (Colo. App. 05CA0491, January 26, 2006) (not selected for publication). In so doing, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's finding of MMI and permanent impairment consists not only of the initial report, but also any subsequent opinion given by the physician. *See Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005) (ALJ properly considered DIME physician's deposition testimony where he withdrew his original opinion of impairment after viewing a surveillance video)

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, during her deposition, Dr. Mitchell changed her opinion on MMI and concluded that Claimant reached MMI as of the date of her evaluation – May 12, 2021. As a result, Claimant has the burden of proving by clear and convincing evidence that he is not at MMI.

Dr. Mitchell did indicate that it was her opinion that Claimant needed cervical medial branch blocks - followed by radiofrequency rhizotomies if appropriate – before being placed at MMI. However, based on her deposition, it was found that such treatment did not have a reasonable prospect for defining Claimant's condition or suggesting further treatment. As result, the suggestion for such treatment is not inconsistent with a finding of MMI since it is not reasonably expected for such treatment to further define his condition, suggest future treatment, or cure his work-related condition. As a result, Claimant's work-related condition is stable, and no further treatment is reasonably expected to improve his condition.

Claimant, however, contends that Dr. Mitchell's opinion is that Claimant is not at MMI. The ALJ has, however, rejected such contention. As found, the ALJ concluded that Dr. Mitchell ultimately concluded in her deposition that Claimant is at MMI.

Based on the resolution of such conflict in the evidence, the ALJ finds and concludes that Claimant has failed to overcome Dr. Mitchell's opinion regarding MMI by clear and convincing evidence. Thus, Claimant is at MMI as of May 12, 2021.

II. The extent of Claimant's permanent impairment rating.

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim*

Appeals Office, supra. The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Since Claimant has been found to be at MMI as of May 12, 2021, and Dr. Mitchell provided Claimant an impairment rating, it is Respondents' burden to overcome her opinion regarding Claimant's impairment by clear and convincing evidence.

As found, Dr. Mitchell assessed Claimant's impairment and concluded that Claimant suffered a 30% whole person impairment rating. In determining Claimant's impairment, she concluded that Claimant suffered permanent impairment to his cervical spine, lumbar spine, and testicle in the form of a varicocele.

Respondents contend that the impairment rating provided by Dr. Mitchell is incorrect. In support of their opinion, they provided the opinions of Dr. Aschberger – who did not rate Claimant's cervical spine. Dr. Aschberger did not rate Claimant's cervical spine because he concluded that Claimant's symptoms and findings were myofascial. However, while Dr. Aschberger did not rate Claimant's cervical spine, he failed to provide a detailed opinion – which rises to the level of clear and convincing evidence – that the cervical spine rating should not be included. Merely stating that Claimant's cervical spine findings are myofascial and that Claimant's functional ability is not compatible with a 39% whole person impairment – the initial provisional rating provided by Dr. Mitchell - is insufficient. In the end, there is merely a difference of opinion regarding Claimant's impairment rating.

Moreover, in reviewing the record as a whole, the ALJ finds that the rating provided by Dr. Mitchell is supported by her testimony, the underlying medical records, and Claimant's testimony. Thus, the ALJ finds and concludes that Respondents failed to establish that Dr. Mitchel erred in determining Claimant's impairment rating.

As a result, the ALJ finds and concludes that Respondents failed to overcome Dr. Mitchell's opinion that Claimant has a 30% whole person impairment rating by even a preponderance of the evidence, let alone clear and convincing evidence.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant reached MMI on May 12, 2021.

2. Claimant suffered a 30% whole person impairment rating.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents prove they properly terminated Claimant's TTD benefits on August 20, 2021?

- Did Claimant prove entitlement to reinstatement of TTD benefits on or after August 21, 2021?

FINDINGS OF FACT

1. Claimant works at Employer's distribution center as a warehouse worker. The job is physically demanding, with heavy lifting and prolonged standing and walking.

2. Claimant suffered an admitted injury to his right knee on September 28, 2020 while pushing a pallet of merchandise. A heavy box fell from the pallet and landed on his knee.

3. Claimant was initially diagnosed with a knee contusion. His symptoms failed to improve as expected and he was referred to Dr. Derek Purcell, an orthopedic surgeon. Dr. Purcell diagnosed subchondral edema and a tibial plateau stress fracture.

4. On February 26, 2021, Dr. Purcell performed a tibial plateau fracture fixation and chondroplasty.

5. Claimant continued to follow up with both Dr. Lakin (his ATP) and Dr. Purcell after surgery but did improve significantly. Dr. Purcell ordered a repeat MRI, which was completed on June 14, 2021. Claimant had developed increased edema in the posterior aspect of the lateral tibial plateau posterior to the previous lesion. There was also an area of articular cartilage loss on the weightbearing surface of the lateral tibial plateau. Dr. Purcell recommended a second surgery.

6. Dr. Centi took over Dr. Lakin's practice in June 2021. On June 24, 2021, Dr. Centi updated Claimant's work restrictions to no lifting, pushing, or pulling greater than 10 pounds, sitting 75% of the time and no standing or walking more than 15 minutes per hour.

7. On July 1, 2021, Employer offered modified duty within Claimant's restrictions. The primary duties were packing facemasks for other employees to use, and other general administrative tasks as needed. All assigned tasks could be performed in a seated position. Claimant was scheduled to work 12-hour shifts (as before the injury) from 6:00 a.m. to 6:00 p.m. Saturday-Monday.

8. Claimant returned to work on Monday July 5, 2021 but reported late. Claimant was scheduled to work his regular Saturday-Monday shifts starting Saturday

July 11, 2021. Between July 11, 2021 and the surgery on July 26, 2021, Claimant missed six scheduled shifts.

9. Dr. Purcell performed a proximal tibia lateral plateau open reduction and internal fixation procedure on July 26, 2021. Insurer commenced TTD on the surgery date.

10. On August 9, 2021, Dr. Centi amended Claimant's restrictions to include sitting 95% of the time and no standing or walking more than five minutes per hour.

11. Claimant returned to modified duty on August 21, 2021, performing the same tasks as before the surgery. Dr. Centi approved the modified work, all of which was to be performed in a "seated" position. Employer completed a Supplemental Return to Work form on August 25, 2021 documenting that Claimant had returned to work at full wages. Insurer filed a revised General Admission on August 27, 2021 terminating TTD on August 20, 2021.

12. Respondents proved Claimant's TTD benefits were properly terminated on August 20, 2021 because Claimant returned to work.

13. Claimant was scheduled to work modified duty from August 21 through September 17, 2021. However, he called off most of the shifts. Many of the absences are coded "Absent ill self," the code used when the employee calls off for self-reported medical issues. During this period, Claimant missed all or part of 14 scheduled shifts.

14. On September 17, 2021, Dr. Centi liberalized Claimant's work restrictions because he was doing a bit better. Claimant was late to work on September 18, 2021. On September 19, 2021, Employer mailed Claimant a letter again notifying him that work was available within his new restrictions. Claimant did not work on September 19 or 20, 2021. He reported to work on Saturday, September 25, 2021 and worked most of his scheduled shift. September 25, 2021 was the last day Claimant worked.

15. [Redated, hereinafter Ms. R], an HR representative for Employer, testified that Claimant was initially offered a modified position on June 18, 2021 and returned to work. However, he started missing time almost immediately. Multiple letters were sent to Claimant between June and September of 2021 advising him of work available within the restrictions assigned by Dr. Centi. Claimant continued to miss time from work, which caused staffing problems for the facility. Ms. R completed three corrective action forms in July 2021 addressing Claimant's pattern of tardiness and missed work. The next progressive disciplinary action for ongoing violations normally would have been termination. However, Claimant was not terminated, per Employer's policies, because "he is a team member on workmen's comp." Claimant was still an employee of Employer as of the hearing.

16. Ms. R's testimony was credible and persuasive.

17. At hearing, Claimant did not deny missing work between June and October 9, 2021. However, he stated he missed work because pain from the injury hindered his ability to tolerate working, even in a sedentary capacity.

18. Employer has a policy of offering only 12 weeks of modified duty. If the employee cannot return to regular work at the end of the 12-week period, they are put on unpaid administrative leave. Claimant exhausted his 12 weeks of modified duty as of October 9, 2021,[1] at which point he was put on unpaid leave and advised to stop reporting for work.

19. Claimant failed to prove he suffered a wage loss between August 21, 2021 and October 9, 2021 proximately caused by his injury. Employer had suitable work available during that period that he was capable of performing. Claimant's testimony he could not tolerate his assigned modified duty is not credible. The work offered by Employer was minimally demanding and well within his work restrictions. Dr. Purcell repeatedly advised Claimant to increase his weight bearing activities to further his rehabilitation, and Dr. Centi continually indicated Claimant was able to work modified duty from a medical standpoint. Claimant's allegations about his work capacity are unsubstantiated by any medical reports or other persuasive documentation.

20. Claimant has not worked or been released to regular duty since October 10, 2021.

21. Claimant proved he suffered an injury-related wage loss commencing October 10, 2021, when Employer stopped offering modified duty and placed him on unpaid leave.

CONCLUSIONS OF LAW

A. Termination of ongoing TTD effective August 21, 2021

Insurer admitted liability for TTD benefits commencing July 26, 2021, the date of Claimant's second surgery. Once commenced, TTD benefits must continue until one of the terminating events listed in § 8-42-105(3)(a)-(d). Termination of TTD is an affirmative defense that the respondents must prove by a preponderance of the evidence. Section 8-43-201(1); *Strombitski v. Man Made Pizza*, W.C. No. 4-403-661 (December 1, 2003).

One enumerated terminating event is a return to regular or modified employment. Section 8-42-105(3)(b). As found, Respondents proved Claimant's TTD benefits were properly terminated on August 20, 2021 based on his return to work.

B. Reinstatement of TTD between August 21, 2021 and October 9, 2021

[1] Mr. R testified Claimant's eligibility for modified duty "expired as of October 9, 2021." It is unclear whether he was put on administrative leave on October 9 or October 10. However, we can be confident he was on leave by October 10, 2021.

Because Claimant's TTD benefits were properly terminated on August 20, 2021, Claimant has the burden to re-establish eligibility for TTD at any time thereafter. A claimant is entitled to TTD benefits if the injury causes a disability and the disability causes the claimant to leave work. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

As found, Claimant failed to prove he suffered an injury-related wage loss from August 21, 2021 through October 9, 2021. Employer repeatedly offered Claimant suitable work within his restrictions during that period. Claimant consistently "began" the modified duty but then quickly stopped reporting to work. Claimant's testimony he could not tolerate his assigned modified duty is not credible. There is no persuasive reason Claimant could not have performed the sedentary, self-paced, non-production-level duties available to him. Claimant simply made a unilateral decision to stay home. Claimant provided no credible evidence of any specific aspects of his modified duty that caused him difficulty, and his nonspecific allegation that he was in too much pain to work at all is not persuasive. Claimant failed to prove any wage loss from August 21, 2021 through October 9, 2021 was proximately caused by the work injury.

C. TTD commencing October 10, 2021

As found, Claimant proved TTD benefits should be reinstated effective October 10, 2021. TTD benefits are intended to compensate for a wage loss proximately caused by an industrial injury. *Montoya v. Industrial Claim Appeals Office*, 488 P.3d 314 (Colo. App. 2018). The causal nexus between Claimant's injury and his wage loss was reestablished on October 10, 2021 when Employer terminated his eligibility for modified duty. On that date, Claimant was affirmatively advised to stop reporting to work and was put on unpaid administrative leave. At that point, Claimant lost the ability to mitigate his wage loss, because of factors that were entirely outside of his control. Claimant would have been off work as of October 10, 2021 regardless of his ability or willingness to perform modified duty.

Moreno v. Aspen Living, W.C. 4-676-020 (November 15, 2006), cited by Respondents, does not preclude the reinstatement of TTD benefits here. The claimant in *Moreno* had been found "responsible for termination of employment," which provides an independent statutory bar to an award of TTD benefits. In this case, Employer did not terminate Claimant despite the attendance issues. Accordingly, the "termination statutes" are inapplicable and Claimant eligibility for TTD is determined by reference to traditional principles of proximate causation.

ORDER

It is therefore ordered that:

1. Claimant's request for TTD benefits from August 21, 2021 through October 9, 2021 is denied and dismissed.

2. Insurer shall pay Claimant TTD benefits commencing October 10, 2021 and continuing until terminated according to law.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that Pre-Hearing Administrative Law Judge (PALJ) Susan D. Phillips lacked statutory authority to compel him to attend the January 6, 2022 Division Independent Medical Examination (DIME) with Brian Mathwich, M.D. and to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME.

2. Whether Respondents have proven by a preponderance of the evidence that they may suspend the payment of Temporary Total Disability (TTD) benefits to Claimant for the period from November 23, 2021 until he attends the DIME with Dr. Mathwich.

3. Whether Respondents have established by a preponderance of the evidence that they are entitled to recover penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022.

4. Whether Claimant has demonstrated by a preponderance of the evidence that Dr. Mathwich should be removed as the DIME physician based on a conflict of interest.

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury while working for Employer on December 9, 2018. On January 18, 2019 Insurer filed a General Admission of Liability (GAL).

2. Claimant underwent numerous surgeries and was eventually diagnosed with Chronic Regional Pain Syndrome (CRPS). On April 9, 2021 Authorized Treating Physician (ATP) Roberta Anderson-Oeser, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI). Dr. Anderson-Oeser assigned a 42% whole person permanent impairment rating.

3. On May 12, 2021 Respondents challenged Dr. Anderson-Oeser's impairment determination and sought a Division Independent Medical Examination (DIME). The Division of Workers' Compensation (DOWC) issued a DIME physician panel on June 16, 2021.

4. Both Claimant and Respondents struck a member of the DIME panel. Brian Mathwich, M.D. was the remaining physician and on June 25, 2021 was selected to perform the DIME.

5. On July 21, 2021 Dr. Mathwich sent an email to the parties and the DIME Unit in the DOWC noting concerns about a potential conflict of interest. He specifically stated:

> I was informed [Claimant] has been seen in my practice by Dr. Anderson-Oeser and Dr. Cotgageorge. I was not aware as I have never seen [Claimant] nor discussed him with Dr. Oeser or Dr. Cotgageorge. Please let me know if you feel this is a conflict.

6. The parties discussed the possible conflict issue on July 26, 2021. They agreed that they had no concerns about Dr. Mathwich serving as the DIME physician. On July 26, 2021 Respondents wrote a letter to Claimant's counsel confirming the waiver of any potential conflict of interest involving Dr. Mathwich. The letter specified the following:

> Additionally, you indicated that you are not opposed to Dr. Mathwich conducting the DIME even given the potential conflict raised by Dr. Mathwich. As you know, Dr. Mathwich was part of Dr. Anderson-Oeser's practice prior to her departure. Both parties have agreed that the DIME can proceed with Dr. Mathwich.

7. The DIME was held in abeyance twice for the parties to pursue a possible settlement. Notably, the second order issued on September 27, 2021 by PALJ Royce Mueller granted the parties' request to hold the DIME process in abeyance "for 60 days from the date of this Order. If settlement does not occur with[in] 60 days, Respondents will reschedule the Division IME or seek further relief."

8. Ultimately, when the case did not settle at a settlement conference on November 5, 2021, Respondents scheduled the DIME for November 23, 2021. The date was three days prior to the end of the final 60-day abeyance period. Claimant did not object to the setting of the DIME and inquired whether Respondents would be providing transportation.

9. On November 12, 2021 Claimant attended a regularly scheduled maintenance appointment with Dr. Anderson-Oeser. Claimant mentioned an upcoming DIME with Dr. Mathwich. Based on the information, Dr. Anderson-Oeser revealed that she had left a prior medical practice with Dr. Mathwich. Because most of her patients followed her to her new office, Dr. Mathwich suffered a substantial loss of money and his practice closed.

10. On the day prior to the scheduled DIME, Claimant's counsel announced that Claimant would not be attending the DIME based on the information from Dr. Anderson-Oeser regarding Dr. Mathwick's potential conflict of interest. Moreover, the DIME appointment was set during the 60-day abeyance period noted by PALJ Mueller in his September 27, 2021 order. When Claimant failed to attend the DIME appointment on November 23, 2021, Respondents were required to pay a $1400.00 rescheduling fee.

11. Respondents subsequently rescheduled the DIME for January 6, 2022. They also scheduled a prehearing conference seeking an Order to Compel Claimant's attendance at the rescheduled DIME and pay the costs for failing to attend the November 23, 2021 appointment.

12. On December 9, 2021 PALJ Susan D. Phillips conducted a prehearing conference. The issues considered at the conference included the following: (1) Claimant's motion for a new three-physician DIME panel pursuant to W.C.R.P. 11-3(E); (2) Respondents' motion to compel Claimant's attendance at a rescheduled DIME; and (3) Respondents' motion to compel Claimant to reimburse the DIME rescheduling fee.

13. On December 10, 2021 PALJ Phillips issued a prehearing order. Noting Claimant's failure to comply with W.C.R.P. Rule 11-4(4), she concluded there was no good cause for striking Dr. Mathwich as the DIME. Accordingly, Claimant's motion for a new three-physician DIME panel was rendered moot. PALJ Phillips also compelled Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022. She noted that, "[i]n light of Claimant's professed objection to Dr. Mathwich, it is concluded that Respondents have shown good cause to compel Claimant's attendance at the rescheduled DIME." Finally, she determined that Claimant terminated the November 23, 2021 DIME without permission and was therefore responsible for the rescheduling fee. Because Respondents made payment in order to reschedule the DIME, PALJ Phillips found good cause to compel Claimant to reimburse Respondents for the $1,400 rescheduling fee.

14. On December 16, 2021 Claimant filed an Application for Hearing. He sought review and dismissal of PALJ Phillips' interlocutory orders in her December 10, 2021 prehearing order. The Application for Hearing specifically endorsed the issues of "Claimant seeks review and dismissal of all interlocutory orders from PALJ Susan Phillips in a Prehearing Order dated December 10, 2021. The PALJ either exceeded the boundaries of her jurisdiction pursuant to §8-43-207.5(1) or was in error regarding both the facts and law of her decisions and orders."

15. Claimant did not attend the rescheduled DIME on January 6, 2022. Silvia Malagon testified at the hearing that she is an administrative assistant employed by Mathwich & Associates. She was involved with scheduling Claimant's DIME appointments. Ms. Malagon remarked that Claimant did not appear for the January 6, 2022 DIME appointment. She specified that Claimant notified her that he would not be attending the DIME on the advice of counsel.

16. On January 14, 2022 Respondents filed a Response to the Application for Hearing. Respondents endorsed penalties against Claimant for violation of PALJ Phillips' December 10, 2021 order, reimbursement of the $1,400 DIME rescheduling fee, waiver, estoppel, laches and attorney fees.

17. Senior resolution manager at third-party administrator [Redacted] RA[Redacted] testified at the hearing. He remarked that Respondents have paid Claimant

Temporary Total Disability (TTD) benefits in the amount of $987.84 per week. Mr. RA[Redacted] detailed that from November 23, 2021 to March 30, 2022 Respondents paid total TTD benefits in the amount of $13,829.76.

18. Dr. Anderson-Oeser testified at the hearing in this matter. She explained that, at a regularly scheduled maintenance appointment with Claimant on November 12, 2021, he mentioned an upcoming DIME with Dr. Mathwich. She informed Claimant that she knew Dr. Mathwich personally because he was her employer at her prior practice of Ascent Medical. She left Ascent Medical at the end of 2020 and joined her current practice of Premier Spine & Pain Institute. Ascent Medical subsequently changed its name, or was bought out by, Physical Medicine of the Rockies. Dr. Anderson-Oeser was not aware that Dr. Mathwich had left the new practice and began Mathwich & Associates.

19. On the day Dr. Anderson-Oeser resigned, Ascent Medical was offered for sale. Dr. Anderson-Oeser was thus concerned about potential bias in the upcoming DIME with Dr. Mathwich. She acknowledged that the circumstances surrounding her departure from Ascent Medical could impact Dr. Mathwich's ability to be impartial in performing the DIME. Dr. Anderson-Oeser specified that, after leaving Ascent Medical, she encountered many problems in obtaining patient medical records from the practice even though patients had signed releases. She noted that she does not currently have any mutual economic interest with Dr. Mathwich.

20. Claimant has failed to demonstrate that it is more probably true than not that PALJ Phillips lacked statutory authority to compel him to attend the January 6, 2022 DIME with Dr. Mathwich and to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME. Initially, in her December 10, 2021 pre-hearing order PALJ Phillips compelled Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022. She noted that, "[i]n light of Claimant's professed objection to Dr. Mathwich, it is concluded that Respondents have shown good cause to compel Claimant's attendance at the rescheduled DIME." PALJ Phillips also determined that Claimant terminated the November 23, 2021 DIME without permission and was therefore responsible for the rescheduling fee. Because Respondents made payment in order to reschedule the DIME, PALJ Phillips found good cause to compel Claimant to reimburse Respondents for the $1,400 rescheduling fee.

21. In *Kennedy v. Indus. Claim Appeals Off.*, 100 P.3d 949 (Colo. App. 2004) the respondents applied for a DIME. The claimant notified the respondents that he would not attend the DIME. The respondents rescheduled the DIME and obtained an order from a PALJ compelling attendance at the DIME. The claimant refused to attend the DIME and filed an Application for Hearing. Ultimately, the court of appeals upheld the assessment of a penalty against the claimant for violation of the PALJ's Order. *See Kennedy*, 100 P.3d at 950. The Court noted, "we agree with the Panel that a party may not elect, without fear of consequences, to ignore a ruling of the PALJ in the hope of obtaining a more favorable ruling before the ALJ." *Id.* Based on the reasoning of the court of appeals in *Kennedy* a PALJ has the authority to compel a claimant to attend a DIME. Thus, PALJ

Phillips had the ability to require Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022.

22. Despite the court of appeals' opinion in *Kennedy*, Claimant contends that the statutory amendments to §8-43-207.5, C.R.S. effective September 7, 2021 limit a PALJ's authority to nine distinct areas. Construed strictly, the amendments specifically delineate the authority of a PALJ. Claimant thus asserts the statutory amendments preclude a PALJ from compelling a claimant to attend a DIME.

23. Notably, the amendments to §8-43-207.5, C.R.S. do not define the limits of a PALJs authority, but identify distinct areas that constitute "procedural matters." Specifically, §8-43-207.5(2)(b), C.R.S. provides that PALJs "have authority to approve any stipulations of the parties and issue interlocutory orders regarding procedural matters." The plain language of the statute then details nine types of issues that constitute "procedural matters." However, the statute does not provide that "procedural matters" are limited to the nine enumerated areas, but instead states that "procedural matters include the enumerated powers. Furthermore, the nine listed areas contemplate a variety of situations that include broad categories such as resolving evidentiary and discovery disputes as well as imposing sanctions. Although the amendments clarify the authority of PALJ's, they do not substantively change the power of PALJ's as delineated in the case law. The amendments thus do not prohibit a PALJ from requiring a claimant to attend a DIME. Accordingly, based on the analysis in *Kennedy* and a review of amended §8-43-207.5(2), C.R.S PALJ's are not prohibited from compelling a claimant require to attend a DIME. Therefore, PALJ Phillips had the authority to order Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022.

24. PALJ Phillips also had the authority to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME. PALJ Phillips remarked that Claimant terminated the November 23, 2021 DIME without permission and was therefore responsible for the rescheduling fee. As discussed in the preceding section, although the statutory amendments to §8-43-207.5(2), C.R.S. clarify the authority of PALJ's, they do not substantively change the power of PALJ's as delineated in the case law. The amendments thus do not prohibit a PALJ from imposing a rescheduling fee for a missed DIME appointment.

25. Moreover, W.C.R.P Rule 11-5(C) provides that a DIME "may only be rescheduled or terminated by the requesting party or by order. The party responsible for the rescheduling shall submit the rescheduling fee . . . to the DIME physician within ten (10) days after the defaulting event." Respondents were the requesting party for the DIME. However, Claimant canceled the DIME in contravention of Rule 11-5(C). Notably, on the day prior to the scheduled DIME, Claimant's counsel announced that Claimant would not be attending the DIME based on the information from Dr. Anderson-Oeser regarding Dr. Mathwick's potential conflict of interest and that the DIME was set during the 60-day abeyance period specified by PALJ Mueller in his September 27, 2021 order. When Claimant failed to attend the DIME appointment on November 23, 2021,

Respondents were required to pay a $1400.00 rescheduling fee. Therefore, pursuant to Rule 11-5(C) PALJ Phillips properly required Claimant to pay the $1,400 fee.

26. Respondents have failed to prove that it is more probably true than that they may suspend the payment of TTD benefits to Claimant for the period November 23, 2021 until he attends the DIME with Dr. Mathwich. Initially, Mr. RA[Redacted] testified at the hearing that Respondents paid Claimant TTD benefits at the rate of $987.84 per week for the period from November 23, 2021 to March 30, 2022 in the total amount of $13,829.76. Respondents assert that under §8-43-404(3), C.R.S. Claimant's right to receive weekly indemnity benefits that accrue and become payable during a period of refusal to attend a scheduled DIME shall be barred. Respondents are thus entitled to be reimbursed for indemnity benefits paid to Claimant during the period November 23, 2021 until he attends the DIME with Dr. Mathwich.

27. Despite Respondents' contention, the case law and express language of §8-43-404(3), C.R.S. reflect that the statute does not apply to the suspension of indemnity benefits for refusing to attend a DIME. Instead, §8-43-404(3), C.R.S. applies to a claimant's refusal to attend or obstruct vocational evaluations, independent medical examinations and evaluations by ATPs. In contrast, the DIME process involves the selection of an independent physician from a three-judge panel after an ATP has placed a claimant at MMI. The DIME physician then makes an independent determination regarding whether a claimant has reached MMI and assigns a permanent impairment rating. The specific language of §8-43-404(3), C.R.S. and the case law simply do not contemplate the suspension of TTD benefits when a case proceeds to the DIME process. Accordingly, Respondents' request to suspend the payment of TTD benefits for the period from November 23, 2021 until Claimant attends the DIME with Dr. Mathwich is denied and dismissed.

28. Respondents have failed to establish that it is more probably true than not that they are entitled to recover penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022. Initially, in PALJ Phillips' December 10, 2021 prehearing order she noted that, "[i]n light of Claimant's professed objection to Dr. Mathwich, it is concluded that Respondents have shown good cause to compel Claimant's attendance at the rescheduled DIME." However, Claimant did not attend the rescheduled DIME on January 6, 2022. Ms. Malagon testified that Claimant did not appear for the January 6, 2022 DIME appointment. She specified that Claimant contacted her to state that he would not be attending the DIME on the advice of counsel. Because PALJ Phillips compelled Claimant to attend the January 6, 2022 DIME but he did not attend, his conduct violated a lawful order.

29. Although Claimant violated PALJ Phillips' December 10, 2021 pre-hearing order by failing to attend the January 6, 2022 DIME, his action was not objectively unreasonable because it was based on a rational argument in law or fact. On December 16, 2021 Claimant filed an Application for Hearing. He sought review and dismissal of PALJ Phillips' interlocutory orders in her December 10, 2021 Prehearing Order. The Application for Hearing specifically endorsed the issues of "Claimant seeks review and

dismissal of all interlocutory orders from PALJ Susan Phillips in a Prehearing Order dated December 10, 2021. The PALJ either exceeded the boundaries of her jurisdiction pursuant to §8-43-207.5(1) or was in error regarding both the facts and law of her decisions and orders."

30. The record reveals that Claimant did not simply ignore PALJ Phillips' prehearing order, but sought a hearing before an ALJ to challenge her ability to issue the order. Specifically, Claimant asserted that PALJs lack statutory authority to compel DIME attendance and to pay the cost of rescheduling a missed DIME. Although acknowledging the court of appeals' opinion in *Kennedy*, Claimant contended that the statutory amendments to §8-43-207.5, C.R.S. effective September 7, 2021, limit the authority of PALJ's to nine distinct areas. Claimant thus provided a rational explanation for his conduct. Although the preceding section of the present order rejected Claimant's contention, it was nevertheless predicated on a rational argument in law based on a strict construction of the amendments to §8-43-207.5, C.R.S. that does not permit PALJs to compel claimants to attend DIMEs or pay DIME rescheduling fees. Accordingly, Respondents are not entitled to recover penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022.

31. Claimant has failed to prove that it is more probably true than not that Dr. Mathwich should be removed as the DIME physician based on a conflict of interest. Initially, both Claimant and Respondents struck a member of the DIME panel. Neither party requested summary disclosures under W.C.R.P. Rule 11-3. Because Dr. Mathwich was the only remaining physician, he was selected to perform the DIME on June 25, 2021. However, on July 21, 2021 Dr. Mathwich sent an email to the parties and the DIME Unit at the DOWC noting concerns about a potential conflict of interest. The parties discussed the potential conflict issue on July 26, 2021. Neither party expressed any concerns about Dr. Mathwich serving as the DIME physician. In fact, on July 26, 2021 Respondents wrote a letter to Claimant's counsel confirming the waiver of any potential conflict of interest involving Dr. Mathwich.

32. At the time Dr. Mathwich mentioned a potential conflict, Claimant had a responsibility to research and review any concerns. Although Claimant had ample opportunities even after Dr. Mathwich mentioned his issues, he did not raise any concerns. In fact, Claimant affirmatively agreed to Dr. Mathwich as the DIME. Based on Claimant's failure to comply with Rule 11-4, and his agreement to Dr. Mathwich as the DIME physician, Claimant waived the right to object to Dr. Mathwich as the DIME doctor.

33. Nevertheless, Claimant contends that, based on Dr. Anderson-Oeser's testimony there is a conflict of interest with Dr. Mathwich performing the DIME. Dr. Anderson-Oeser detailed that she was concerned about potential bias in the upcoming DIME with Dr. Mathwich. She reasoned that the circumstances surrounding her departure from Ascent Medical could impact Dr. Mathwich's ability to be impartial in performing the DIME. Despite Claimant's contention, the record reveals that PALJ Phillips did not err in her December 10, 2021 order denying Claimant's motion for a new three-physician DIME panel and not removing Dr. Mathwich as the DIME physician.

34. Initially, the record reflects that PALJ Phillips had the authority and did not err in denying Claimant's motion for a new three-physician DIME panel. Specifically, Claimant did not request summary disclosures concerning any business, financial, employment, or advisory relation with the insurer within five business days of issuance of the three-physician list by the DOWC pursuant to Rule 11-4. Furthermore, although Drs. Mathwich and Anderson-Oeser were colleagues in the past, a conflict is only presumed "when the DIME physician and a physician who previously treated or evaluated the claimant in the course of an IME have a relationship involving a direct or substantial financial interest during the pendency of the DIME." Because Drs. Mathwich and Anderson-Oeser do not currently practice together, no conflict is presumed. In fact, Dr. Anderson-Oeser specified that she does not currently have any mutual economic interest with Dr. Mathwich.

35. Under Rule 11-3(E)(2) "having practiced together in the past [is] not the types of relationships that will be considered a conflict." Dr. Anderson-Oeser remarked that the circumstances surrounding her departure from Ascent Medical could impact Dr. Mathwich's ability to be impartial in performing the DIME. However, in the absence of an actual conflict based on a current financial relationship, concerns about a potential conflict are speculative. Notably, Dr. Anderson-Oeser left Ascent Medical at the end of 2020 and joined her current practice of Premier Spine & Pain Institute. Ascent Medical subsequently changed its name, or was bought out by Physical Medicine of the Rockies. Dr. Anderson-Oeser was not aware that Dr. Mathwich had left the practice and began Mathwich & Associates. The significant temporal delay since an actual business relationship between Drs. Mathwich and Anderson-Oeser's and the numerous manifestations of Dr. Mathwich's practice suggest that any concerns about a current conflict of interest are speculative. Accordingly, the record does not warrant disqualification of Dr. Mathwich as the DIME physician.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

PALJ's Authority

4. Section 8-43-207.5(2), C.R.S. grants a PALJ authority to issue "interlocutory orders." A PALJ may also order a party to participate in a prehearing conference and make evidentiary rulings. An order of a PALJ is "an order of the director and binding on the parties," and "such an order shall be interlocutory." §8-43-207.5(3); *see Kennedy v. Indus. Claim Appeals Off.*, 100 P.3d 949 (Colo. App. 2004); *Martinez v. Vertical Electric Inc.*, WC 5-049-469 (ICAO, Oct. 20, 2017) (orders relating to prehearing conferences are generally interlocutory because a prehearing conference is followed by a full hearing before the director or an ALJ). ALJ's have the authority to review the pre-hearing orders of PALJ's. *See Dee Enterprises v. Indus. Claim Appeals Off.*, 89 P.3d 430, 441 (Colo. App. 2003); *Villegas v. Denver Water*, WC 4-889-298-005 (ICAO Apr. 14, 2021). Orders related to DIME requests are interlocutory. *In Re Fitzsimmons*, W.C. No. 4-995-913-001 (ICAO, Dec. 16, 2020); *see Bath v. Adams County,* W. C. No. 4-584-461 (September 20, 2005).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that PALJ Phillips lacked statutory authority to compel him to attend the January 6, 2022 DIME with Dr. Mathwich and to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME. Initially, in her December 10, 2021 pre-hearing order PALJ Phillips compelled Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022. She noted that, "[i]n light of Claimant's professed objection to Dr. Mathwich, it is concluded that Respondents have shown good cause to compel Claimant's attendance at the rescheduled DIME." PALJ Phillips also determined that Claimant terminated the November 23, 2021 DIME without permission and was therefore responsible for the rescheduling fee. Because Respondents made payment in order to reschedule the DIME, PALJ Phillips found good cause to compel Claimant to reimburse Respondents for the $1,400 rescheduling fee.

Authority to Compel Attendance at the January 6, 2022 DIME

6. As found, in *Kennedy v. Indus. Claim Appeals Off.*, 100 P.3d 949 (Colo. App. 2004) the respondents applied for a DIME. The claimant notified the respondents that he would not attend the DIME. The respondents rescheduled the DIME and obtained an order from a PALJ compelling attendance at the DIME. The claimant refused to attend the DIME and filed an Application for Hearing. Ultimately, the court of appeals upheld the assessment of a penalty against the claimant for violation of the PALJ's Order. *See*

Kennedy, 100 P.3d at 950. The Court noted, "we agree with the Panel that a party may not elect, without fear of consequences, to ignore a ruling of the PALJ in the hope of obtaining a more favorable ruling before the ALJ." *Id.* Based on the reasoning of the court of appeals in *Kennedy* a PALJ has the authority to compel a claimant to attend a DIME. Thus, PALJ Phillips had the ability to require Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022.

7. As found, despite the court of appeals' opinion in *Kennedy*, Claimant contends that the statutory amendments to §8-43-207.5, C.R.S. effective September 7, 2021 limit a PALJ's authority to nine distinct areas. Construed strictly, the amendments specifically delineate the authority of a PALJ. Claimant thus asserts the statutory amendments preclude a PALJ from compelling a claimant to attend a DIME.

8. The amendment to §8-43-207.5(1), C.R.S. provides, in relevant part, that

> any party to a claim may request a prehearing conference before a prehearing administrative law judge in the division for the speedy resolution of or simplification of any issues and to determine the general readiness of remaining issues for formal adjudication on the record. The issues addressed in the prehearing conference may include any issues properly within the authority of a prehearing administrative law judge pursuant to subsection (2) of this section.

Section 8-43-207.5(2)(b), C.R.S. effective September 7, 2021, specifies that PALJs "have authority to approve any stipulations of the parties and issue interlocutory orders regarding procedural matters." The statute then specifies that procedural matters include:

(I) Issuing subpoenas…
(II) Resolving prehearing evidentiary disputes
(III) Determining if depositions must be taken
(IV) Ruling on the imposition of sanctions for discovery disputes…
(V) Granting or denying requests for extensions of time…
(VI) Resolving disputes regarding discovery…
(VII) Appointing guardians ad litem and conservators…
(VIII) Determining the ripeness of legal issues for formal adjudication
(IX) Determining the competency of any party to a claim to enter into settlement agreements.

9. As found, notably, the amendments to §8-43-207.5, C.R.S. do not define the limits of a PALJs authority, but identify distinct areas that constitute "procedural matters." Specifically, §8-43-207.5(2)(b), C.R.S. provides that PALJs "have authority to approve any stipulations of the parties and issue interlocutory orders regarding procedural matters." The plain language of the statute then details nine types of issues that constitute "procedural matters." However, the statute does not provide that "procedural matters" are limited to the nine enumerated areas, but instead states that "procedural matters include the enumerated powers. Furthermore, the nine listed

areas contemplate a variety of situations that include broad categories such as resolving evidentiary and discovery disputes as well as imposing sanctions. Although the amendments clarify the authority of PALJ's, they do not substantively change the power of PALJ's as delineated in the case law. The amendments thus do not prohibit a PALJ from requiring a claimant to attend a DIME. Accordingly, based on the analysis in *Kennedy* and a review of amended §8-43-207.5(2), C.R.S PALJ's are not prohibited from compelling a claimant require to attend a DIME. Therefore, PALJ Phillips had the authority to order Claimant to attend the DIME appointment with Dr. Mathwich on January 6, 2022.

Authority to Require Claimant to Pay November 23, 2021 Rescheduling Fee

10. As found, PALJ Phillips also had the authority to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME. PALJ Phillips remarked that Claimant terminated the November 23, 2021 DIME without permission and was therefore responsible for the rescheduling fee. As discussed in the preceding section, although the statutory amendments to §8-43-207.5(2), C.R.S. clarify the authority of PALJ's, they do not substantively change the power of PALJ's as delineated in the case law. The amendments thus do not prohibit a PALJ from imposing a rescheduling fee for a missed DIME appointment.

11. As found, moreover, W.C.R.P Rule 11-5(C) provides that a DIME "may only be rescheduled or terminated by the requesting party or by order. The party responsible for the rescheduling shall submit the rescheduling fee . . . to the DIME physician within ten (10) days after the defaulting event." Respondents were the requesting party for the DIME. However, Claimant canceled the DIME in contravention of Rule 11-5(C). Notably, on the day prior to the scheduled DIME, Claimant's counsel announced that Claimant would not be attending the DIME based on the information from Dr. Anderson-Oeser regarding Dr. Mathwick's potential conflict of interest and that the DIME was set during the 60-day abeyance period specified by PALJ Mueller in his September 27, 2021 order. When Claimant failed to attend the DIME appointment on November 23, 2021, Respondents were required to pay a $1400.00 rescheduling fee. Therefore, pursuant to Rule 11-5(C) PALJ Phillips properly required Claimant to pay the $1,400 fee.

Suspension of TTD Benefits

12. Section 8-43-404(3), C.R.S. provides, in pertinent part, that an insurer may suspend compensation when a claimant refuses to submit to a medical examination:

> So long as the employee, after written request by the employer or insurer, refuses to submit to medical examination or vocational evaluation or in any way obstructs the same, all right to collect, or to begin or maintain any proceeding for the collection of, compensation shall be suspended. If the employee refuses to submit to such examination after direction by the director or any agent, referee, or administrative law judge of the division

> appointed pursuant to section 8-43-208 (1) or in any way obstructs the same, all rights to weekly indemnity which accrues and becomes payable during the period of such refusal or obstruction shall be barred.

13. Demand appointments include examinations by an ATP or a request for an independent medical examination as contemplated by §8-43-404(1)(b) and (2), C.R.S. *In Re Fitzsimmons*, W.C. No. 4-995-913-001 (ICAO, Dec. 16, 2020); *see Johnston v. Hunter Douglas*, W.C. No. 4-879-066-01 (ICAO, Apr. 29, 2014) ("provisions for a demand appointment and the consequences for refusing to attend or obstructing a demand appointment in §8-43-404(3), C.R.S., appear to apply to requests for an examination by an authorized treating physician or to a request for an Independent Medical Examination"); *Twiggs v. Hoffman Structures*, W.C. No. 4-430-471 (ICAO, Dec.11, 2001) (no language in §8-43-404, C.R.S. indicates the statute is inapplicable to requests for the claimant to undergo an examination by an authorized treating physician). The provisions of §8-43-404(3), C.R.S. thus apply equally to second opinions by non-treating physicians and a claimant's refusal to attend a rescheduled appointment with an ATP after being ordered by a PALJ. *In Re Fitzsimmons*, W.C. No. 4-995-913-001 (ICAO, Dec. 16, 2020).

14. Section 8-43-404, C.R.S. is an all-encompassing statute that addresses many aspects of medical providers in the Workers' Compensation system. *Johnston v. Hunter Douglas*, W.C. No. 4-879-066-01 (ICAO, Apr. 29, 2014). Some sections apply only to independent medical examinations, while others apply only to the selection of the ATP. *Id.*; *see* §8-43-404(l)(a)-(b), C.R.S. & §8-43-404(5), C.R.S. In contrast, §8-42-107.2 governs the DIME process. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590, 592 (Colo. App. 1998).

15. As found, Respondents have failed to prove by a preponderance of the evidence that they may suspend the payment of TTD benefits to Claimant for the period November 23, 2021 until he attends the DIME with Dr. Mathwich. Initially, Mr. RA[Redacted] testified at the hearing that Respondents paid Claimant TTD benefits at the rate of $987.84 per week for the period from November 23, 2021 to March 30, 2022 in the total amount of $13,829.76. Respondents assert that under §8-43-404(3), C.R.S. Claimant's right to receive weekly indemnity benefits that accrue and become payable during a period of refusal to attend a scheduled DIME shall be barred. Respondents are thus entitled to be reimbursed for indemnity benefits paid to Claimant during the period November 23, 2021 until he attends the DIME with Dr. Mathwich.

16. As found, despite Respondents' contention, the case law and express language of §8-43-404(3), C.R.S. reflect that the statute does not apply to the suspension of indemnity benefits for refusing to attend a DIME. Instead, §8-43-404(3), C.R.S. applies to a claimant's refusal to attend or obstruct vocational evaluations, independent medical examinations and evaluations by ATPs. In contrast, the DIME process involves the

selection of an independent physician from a three-judge panel after an ATP has placed a claimant at MMI. The DIME physician then makes an independent determination regarding whether a claimant has reached MMI and assigns a permanent impairment rating. The specific language of §8-43-404(3), C.R.S. and the case law simply do not contemplate the suspension of TTD benefits when a case proceeds to the DIME process. Accordingly, Respondents' request to suspend the payment of TTD benefits for the period from November 23, 2021 until Claimant attends the DIME with Dr. Mathwich is denied and dismissed.

Penalties

17. Section 8-43-304(1), C.R.S. authorizes the imposition of penalties of not more than $1000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." This provision applies to orders entered by a PALJ. *See* §8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Indus. Claim Appeals Off.,* 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), C.R.S. even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001).

18. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must ascertain whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of an action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Indus. Claim Appeals Off.,* 107 P.3d 965 (Colo. App. 2003) ("reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact.") *In Re Claim of Murray*, W.C. No. 4-997-086-02 (ICAO, Aug. 16, 2017). The question of whether a party's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Indus. Claim Appeals Off.,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Indus. Claim Appeals Off.*, 240 P.3d 429 (Colo. App. 2010). Where the violator fails to offer a reasonable factual or legal explanation for its actions, the ALJ may infer the opposing party sustained its burden to prove the violation was objectively unreasonable. *Human Resource Co. v. Indus. Claim Appeals Off.*, 984 P.2d 1194, 1197 (Colo. App. 1999).

19. As found, Respondents have failed to establish by a preponderance of the evidence that they are entitled to recover penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022. Initially, in PALJ Phillips' December 10, 2021 prehearing order she noted that, "[i]n light of Claimant's professed objection to Dr. Mathwich, it is concluded that Respondents have shown good cause to compel Claimant's attendance at the rescheduled DIME." However, Claimant did not attend the rescheduled DIME on January 6, 2022. Ms. Malagon testified that Claimant did not

appear for the January 6, 2022 DIME appointment. She specified that Claimant contacted her to state that he would not be attending the DIME on the advice of counsel. Because PALJ Phillips compelled Claimant to attend the January 6, 2022 DIME but he did not attend, his conduct violated a lawful order.

20. As found, although Claimant violated PALJ Phillips' December 10, 2021 pre-hearing order by failing to attend the January 6, 2022 DIME, his action was not objectively unreasonable because it was based on a rational argument in law or fact. On December 16, 2021 Claimant filed an Application for Hearing. He sought review and dismissal of PALJ Phillips' interlocutory orders in her December 10, 2021 Prehearing Order. The Application for Hearing specifically endorsed the issues of "Claimant seeks review and dismissal of all interlocutory orders from PALJ Susan Phillips in a Prehearing Order dated December 10, 2021. The PALJ either exceeded the boundaries of her jurisdiction pursuant to §8-43-207.5(1) or was in error regarding both the facts and law of her decisions and orders."

21. As found, the record reveals that Claimant did not simply ignore PALJ Phillips' prehearing order, but sought a hearing before an ALJ to challenge her ability to issue the order. Specifically, Claimant asserted that PALJs lack statutory authority to compel DIME attendance and to pay the cost of rescheduling a missed DIME. Although acknowledging the court of appeals' opinion in *Kennedy*, Claimant contended that the statutory amendments to §8-43-207.5, C.R.S. effective September 7, 2021, limit the authority of PALJ's to nine distinct areas. Claimant thus provided a rational explanation for his conduct. Although the preceding section of the present order rejected Claimant's contention, it was nevertheless predicated on a rational argument in law based on a strict construction of the amendments to §8-43-207.5, C.R.S. that does not permit PALJs to compel claimants to attend DIMEs or pay DIME rescheduling fees. Accordingly, Respondents are not entitled to recover penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022. *Compare Human Resource Co v. Indus. Claim Appeals Off.*, 948 P.2d 1194 (Colo. App. 1999) (failure to offer a reasonable factual or legal explanation for conduct permits the inference that the opposing party carried its burden to prove that the violation was objectively unreasonable).

Conflict of Interest

22. W.C.R.P. Rule 11-3 defines the phrase "conflict of interest" pertaining to a DIME physician. Rule 11-3(E) specifically provides that the DIME doctor shall:

> (E) Not evaluate the claimant if an actual conflict of interest exists. A conflict of interest includes, but is not limited to, instances where the physician or someone in the physician's office has treated the claimant or performed an Independent Medical Examination (IME) on the claimant. A conflict is presumed to exist when the DIME physician and a physician who previously treated or evaluated the claimant in the course of an IME have a relationship involving a direct or substantial financial interest during the pendency of the DIME.

> (1) Direct or substantial financial interest is defined as a business ownership interest, a creditor interest in an insolvent business, employment relationship, prospective employment for which negotiations have begun, ownership interest in real or personal property, debtor interest, or being an officer or director in a business.
>
> (2) Being members of the same professional association, society, or medical group, sharing office space, or having practiced together in the past are not the types of relationships that will be considered a conflict;

23. W.C.R.P. Rule 11-4 permits parties to request disclosures within five business days of the issuance of a three-doctor panel from the Division in determining whether to strike a DIME physician. Rule 11-4(4) provides, in relevant part:

> (4) Within five (5) business days of issuance of the three-physician list by the Division, a party may request summary disclosure concerning any business, financial, employment, or advisory relation with the insurer or self-insured employer. Such request shall be submitted by electronic mail to the DIME Unit and copied to the other parties. The parties may use the information provided on the summary disclosure forms to assist in the decision to strike a physician.

24. As found, Claimant has failed to prove by a preponderance of the evidence that Dr. Mathwich should be removed as the DIME physician based on a conflict of interest. Initially, both Claimant and Respondents struck a member of the DIME panel. Neither party requested summary disclosures under W.C.R.P. Rule 11-3. Because Dr. Mathwich was the only remaining physician, he was selected to perform the DIME on June 25, 2021. However, on July 21, 2021 Dr. Mathwich sent an email to the parties and the DIME Unit at the DOWC noting concerns about a potential conflict of interest. The parties discussed the potential conflict issue on July 26, 2021. Neither party expressed any concerns about Dr. Mathwich serving as the DIME physician. In fact, on July 26, 2021 Respondents wrote a letter to Claimant's counsel confirming the waiver of any potential conflict of interest involving Dr. Mathwich.

25. As found, at the time Dr. Mathwich mentioned a potential conflict, Claimant had a responsibility to research and review any concerns. Although Claimant had ample opportunities even after Dr. Mathwich mentioned his issues, he did not raise any concerns. In fact, Claimant affirmatively agreed to Dr. Mathwich as the DIME. Based on Claimant's failure to comply with Rule 11-4, and his agreement to Dr. Mathwich as the DIME physician, Claimant waived the right to object to Dr. Mathwich as the DIME doctor. *See Woolsey v. Pikes Peak Rock Shop, Inc., and Republic Indemnity Company*, WC 4-401-197 (ICAO, Mar. 13, 2004) (where the claimant objected to the DIME physician because he had previously been a treating physician, the ICAO reasoned that the

claimant had waived the right to remove the DIME physician because he previously agreed to him as the DIME physician).

26. As found, nevertheless, Claimant contends that, based on Dr. Anderson-Oeser's testimony there is a conflict of interest with Dr. Mathwich performing the DIME. Dr. Anderson-Oeser detailed that she was concerned about potential bias in the upcoming DIME with Dr. Mathwich. She reasoned that the circumstances surrounding her departure from Ascent Medical could impact Dr. Mathwich's ability to be impartial in performing the DIME. Despite Claimant's contention, the record reveals that PALJ Phillips did not err in her December 10, 2021 order denying Claimant's motion for a new three-physician DIME panel and not removing Dr. Mathwich as the DIME physician.

27. As found, initially, the record reflects that PALJ Phillips had the authority and did not err in denying Claimant's motion for a new three-physician DIME panel. Specifically, Claimant did not request summary disclosures concerning any business, financial, employment, or advisory relation with the insurer within five business days of issuance of the three-physician list by the DOWC pursuant to Rule 11-4. Furthermore, although Drs. Mathwich and Anderson-Oeser were colleagues in the past, a conflict is only presumed "when the DIME physician and a physician who previously treated or evaluated the claimant in the course of an IME have a relationship involving a direct or substantial financial interest during the pendency of the DIME." Because Drs. Mathwich and Anderson-Oeser do not currently practice together, no conflict is presumed. In fact, Dr. Anderson-Oeser specified that she does not currently have any mutual economic interest with Dr. Mathwich.

28. As found, under Rule 11-3(E)(2) "having practiced together in the past [is] not the types of relationships that will be considered a conflict." Dr. Anderson-Oeser remarked that the circumstances surrounding her departure from Ascent Medical could impact Dr. Mathwich's ability to be impartial in performing the DIME. However, in the absence of an actual conflict based on a current financial relationship, concerns about a potential conflict are speculative. Notably, Dr. Anderson-Oeser left Ascent Medical at the end of 2020 and joined her current practice of Premier Spine & Pain Institute. Ascent Medical subsequently changed its name, or was bought out by Physical Medicine of the Rockies. Dr. Anderson-Oeser was not aware that Dr. Mathwich had left the practice and began Mathwich & Associates. The significant temporal delay since an actual business relationship between Drs. Mathwich and Anderson-Oeser's and the numerous manifestations of Dr. Mathwich's practice suggest that any concerns about a current conflict of interest are speculative. Accordingly, the record does not warrant disqualification of Dr. Mathwich as the DIME physician. *See generally City of Manassa v. Ruff*, 235 P.3d 1051, 1055 (Colo. 2010) (noting that the phrase 'conflict of interest' "has been described as a term of art, reflecting a host of different policy determinations, depending on the context in which it operates,...").

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. PALJ Phillips had the authority to compel Claimant to attend the January 6, 2022 DIME with Dr. Mathwich and to reimburse Respondents for the cost of rescheduling the November 23, 2021 DIME.

2. Respondents' request to suspend TTD payments to Claimant for the period November 23, 2021 until he attends the DIME with Dr. Mathwich is denied and dismissed.

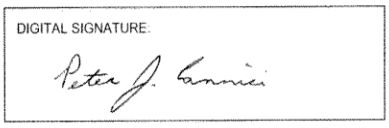
3. Respondents' claim for penalties from Claimant for his refusal to attend the DIME with Dr. Mathwich on January 6, 2022 is denied and dismissed.

4. Claimant's request to remove Dr. Mathwich as the DIME physician based on a conflict of interest is denied and dismissed.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: April 22, 2022.



Peter J. Cannici
Administrative Law Judge

ISSUES

1. Whether Respondents established by clear and convincing evidence that the DIME physician, John Hughes, M.D., incorrectly determined that Claimant is not at maximum medical improvement.

FINDINGS OF FACT

1. Claimant is a 55-year-old man who sustained an admitted work injury to his right ankle on July 28, 2020, while working for Employer. Claimant's injury occurred when his right foot slipped or twisted, and he "inverted" his right ankle.

2. Claimant is a Spanish speaker and understands limited English. Except where noted otherwise below, a Spanish interpreter was used for Claimant's medical visits.

3. Approximately five hours after his injury on July 28, 2020, Claimant was seen at Midtown Occupational Health Services by Ashley Pospisil, NP (nurse practitioner for supervising physician Lawrence Cedillo, D.O.). Claimant's complaints were limited to his right ankle, where he reported twisting his right ankle in the mud and inverting it, causing pain and swelling. Claimant was diagnosed with a mildly displaced oblique fracture in the distal fibula, and referred to Thomas Mann, M.D., for an orthopedic evaluation. No complaints of right knee issues were addressed in the report. (Ex. L).

4. Also on July 28, 2020, Claimant saw Dr. Mann at Cornerstone Orthopaedics & Sports Medicine. Dr. Mann examined Claimant and diagnosed him with a closed fracture of the right ankle (right oblique Weber B fracture with mild displacement) and mild joint incongruity of the right ankle. No complaints of right knee issues were addressed in Dr. Mann's report. (Ex. 3). Dr. Mann performed surgery on Claimant's right ankle on July 31, 2020. (Ex. 3).

5. On July 29, 2020, Employer filed an First Report of Injury, indicating the claimant sustained an ankle fracture on July 28, 2020. (Ex. A).

6. On August 3, 2020, Claimant saw Ms. Pospisil in follow up. At that time, Claimant was in a knee-to-toe splint, non-weightbearing on his right ankle, and using crutches. Ms. Pospisil provided Claimant with a prescription for a temporary wheelchair, for approximately six weeks during which Claimant was anticipated to be non-weightbearing. Claimant was also advised to elevate his right leg whenever resting. No complaints of right knee issues were addressed in the report. The August 3, 2020 record does not indicate whether an interpreter was present. (Ex. L).

7. Claimant returned to Ms. Pospisil on August 14, 2020. Claimant reported he was using the prescribed wheelchair, although it presented difficulties navigating his work site.

Due to the difficulties, Ms. Pospisil prescribed a scooter in lieu of a wheelchair. No complaints of right knee issues were addressed at this visit. (Ex. L).

8. On August 17, 2020, Claimant presented to Dr. Mann for a post-surgical evaluation. Claimant reported occasionally using prescribed pain medication, keeping his leg elevated, and being non-weightbearing. No knee issues were addressed at this visit. Dr. Mann placed Claimant in a walking boot with instructions to begin partial (50%) weightbearing while in the boot. The medical record does not indicate an interpreter was used. (Ex. M).

9. On August 31, 2020, Claimant returned to Ms. Pospisil. Claimant reported using a scooter while ambulating which was helpful. Claimant was advised to continue to use the boot and scooter for ambulation, and to elevate his right leg whenever seated. No knee issues were addressed. (Ex. L).

10. Claimant began physical therapy for his ankle on September 10, 2020 at Midtown Occupational Health Services. At the time, Claimant remained at 50% weightbearing, and used a scooter for ambulation otherwise. The therapy performed included only seated exercises. Claimant's right knee was not addressed at physical therapy. The medical record does not indicate an interpreter was used. (Ex. O).

11. On September 14, 2020, Claimant attended his second session of physical therapy and saw Ms. Pospisil after that appointment on the same day. Records from both providers indicate Claimant saw Dr. Mann that day, however, no record from Dr. Mann was included in the records provided. Nonetheless, the physical therapy records indicate Claimant provided a new physical therapy script which included physical therapy for "R knee MCL sprain as well." Ms. Pospisil's record from that day does not mention Claimant's right knee. (Ex. O & L).

12. Claimant returned to Ms. Pospisil on September 28, 2020, the records from this date do not mention Claimant's right knee. (Ex. L).

13. On October 15, 2020, Dr. Mann examined Claimant's right knee. Claimant reported worsening pain and "crunching" of the right knee. He noted that the knee was normal to inspection with normal alignment and no effusion. The knee was normal on testing, with the exception of "significant medial joint line tenderness" and "a "palpable click around the patella." Dr. Mann diagnosed Claimant with osteoarthritis of right knee, discussed a potential cortisone injection, and ordered physical therapy for Claimant's right knee. (Ex. 3).

14. Claimant returned to Dr. Mann on November 16, 2020. Claimant's knee was not addressed, but Dr. Mann noted that "If indicated by occ med, [Claimant] may follow up for a separate visit concerning evaluation of the right knee." (Ex. M).

15. Claimant saw Ms. Pospisil on November 23, 2020, for indicated complaints of right ankle and right knee sprain. Examination of Claimant's right knee showed mild edema, 4/5 strength, and mild tenderness to palpation in the lateral joint line. Ms. Pospisil's diagnosis under the heading "Work Related" was "Mildly displaced right oblique fracture

distal fibula, right knee sprain." She recommended 4 weeks of physical therapy for both the right ankle and knee. (Ex. L).

16. On December 16, 2020, Claimant saw Ms. Pospisil and reported concerns about right knee instability, swelling and 6-7/10 pain. Examination of the right knee was the same as November 23, 2020. Ms. Pospisil ordered an MRI of the right knee to rule out a meniscal tear, and directed Claimant to continue in a right knee sleeve for instability. (Ex. L).

17. On December 23, 2020, Claimant underwent a right knee MRI, which was interpreted as showing "a very small knee joint effusion," "a complex tear of the body and posterior horn of the medial meniscus," "severe osteoarthritis and near complete loss of articular cartilage from the patellar femoral compartment" and "mild to moderate osteoarthritis and moderate chondromalacia of the medial femoral tibial compartment." (Ex. O). Based on the MRI findings, Claimant was referred to Michael Hewitt, M.D.

18. Claimant saw Dr. Hewitt on January 13, 2021. Based on his examination and review of the MRI, Dr. Hewitt diagnosed Claimant with a right knee medial meniscus tear with mild medial compartment arthritis. Dr. Hewitt proposed treatment options including observation, activity modification, NSAIDs, brace, therapy, cortisone injection, and arthroscopy. He noted that arthroscopy was unlikely to address Claimant's arthritis. Dr. Hewitt recommended a partial medial meniscectomy, indicating he believe surgical treatment was medically reasonable. Claimant indicated he would like to proceed with the procedure. (Ex. N).

19. On January 25, 2021, Claimant saw Sadie Sanchez, M.D., at Midtown Occupational Health Services. Claimant reported to Dr. Sanchez that he had mentioned his knee pain when he was initially examined in July 2020. Dr. Sanchez reviewed Claimant's medical records and indicated that she "cannot saw with 51% or greater certainty that his knee condition is work related." Dr. Sanchez noted that Claimant did not report knee pain at his initial intake or early follow-ups, and that because the MRI was not performed until approximately five months after the incident, the findings are not able to be "dated" appropriately. Dr. Sanchez stated "one cannot say for certain that his medical meniscal tear is directly related to his [mechanism of injury] on the [date of injury]. Or if perhaps it was present prior and the altered gait from use of the walking boot/rehab has aggravated an underlying condition." (Ex. 5). Claimant continued to follow up with Dr. Sanchez through June 1, 2021.

20. On April 23, 2021, Claimant underwent an independent medical examination (IME) at Respondents' request with Mark Failinger, M.D. Dr. Failinger examined Claimant and reviewed relevant medical records. Dr. Failinger diagnosed Claimant with a right ankle distal fibular fracture, and "right knee exacerbation of pre-existing degenerative joint disease and possible acceleration of a pre-existing meniscus tear." (Ex. K).

21. With respect to causation, Dr. Failinger opined that, had the July 28, 2020 injury cause significant or major pathology, symptoms would have appeared before his first documented knee complaints on September 14, 2020. However, he also noted that the

Claimant's mechanism of injury could have caused an exacerbation or acceleration of a pre-existing meniscal tear or acceleration of pre-existing arthritis. He also indicated it was possible Claimant's symptoms would not have occurred until after Claimant advanced to partial weightbearing on August 18, 2020. Specifically, he noted that although there was no documentation of knee complaints at that time, "[t]here are times when ipsilateral (same-sided) injury occurs, and symptoms do not appear until the patient is weightbearing." Dr. Failinger opined that it was more likely that Claimant sustained an exacerbation of pre-existing issues rather than new pathology. However, at the time of his IME report, Dr. Failinger had not reviewed the Claimant's MRI report or films. He noted that he would need to see the MRI report and films to determine whether Claimant's knee pathology could be reasonably treated by the arthroscopy recommended by Dr. Hewitt. (Ex. K).

22. On May 17, 2021, Insurer denied authorization for Dr. Hewitt's recommended surgery based on Dr. Failinger's IME report. (Ex. 5).

23. On May 28, 2021, Dr. Sanchez saw Claimant and indicated that because Insurer had denied authorization for surgery on Claimant's right knee, she was unable to provide further treatment for the knee. (Ex. 5).

24. On June 1, 2021, Dr. Sanchez placed Claimant at maximum medical improvement (MMI) and provided Claimant with an impairment rating for his right ankle only. Dr. Sanchez did not provide any impairment rating for Claimant's right knee. (Ex. 5).

25. On June 29, 2021, Respondents filed a Final Admission of Liability, admitting for a 6% lower extremity impairment, as assigned by Dr. Sanchez. (Ex. C). Claimant subsequently requested a Division Independent Medical Examination (DIME).

26. On October 28, 2021, John Hughes, M.D., performed a DIME, and issued a report on the same date. Dr. Hughes examined Claimant and reviewed medical records. As relevant to the present issues, Dr. Hughes opined that Claimant sustained a right knee sprain/strain with development of a meniscus tear, meriting arthroscopic surgical treatment proposed by Dr. Hewitt. He opined that Claimant sustained a right medial meniscus tear and that it did not become clinically evident until he started weightbearing. He noted that the surgery recommended by Dr. Hewitt offered a reasonable treatment option, and that Claimant was therefore not at MMI. (Ex. 1)

27. Dr. Hughes testified by deposition in lieu of live testimony. Dr. Hughes testified that he reviewed the December 23, 2020 MRI report and accepted the radiologist's interpretation of the MRI as showing effusion in the Claimant's knee, which he opined was consistent with an active process in his knee. He testified that it "is biologically plausible" that the Claimant's mechanism of injury could have resulted in trauma to the knee. And that he believes Claimant's work injury "accelerated an occult knee process as a result of weight-bearing when he began weight-bearing again." Dr. Hughes further testified that the arthroscopy proposed by Dr. Hewitt was appropriate treatment for Claimant's knee.

28. On November 27, 2021, Dr. Failinger issued an addendum to his original IME report. After reviewing Claimant's MRI, Dr. Failinger opined that Claimant had significant preexisting degenerative medial meniscal tearing and medial compartment degenerative changes prior to July 28, 2020 injury. He indicated that it was not probable that Claimant's injury resulted in further tearing of the meniscus or any accelerated pre-existing condition, based on the delay in reporting knee symptoms and the results of the MRI. (Ex. K).

29. Dr. Failinger was admitted as an expert in orthopedic surgery and testified at hearing. Dr. Failinger testified that MRIs are only reliable to detect a relationship between effusion and a meniscus tear in the first month after an injury, and that an MRI taken five months after the injury would not be reliable to establish any relationship between a meniscus tear and effusion. He further opined that any effusion shown in Claimant's knee would likely be related to his severe arthritis. Dr. Failinger testified that Claimant would not have an altered gait on the ipsilateral leg (right side) that would aggravate or accelerate symptoms in the right knee. This testimony appears to conflict with Dr. Failinger's initial written opinion, and is unpersuasive.

30. He also testified that had Claimant reported knee pain contemporaneous with the July 28, 2020 injury, it would change his opinion regarding causality. From this, the ALJ infers that Dr. Failinger's opinion that Claimant did not sustain a knee injury is not based on the MRI results, but on the delay in reporting of symptoms. Dr. Failinger also opined that he did not believe that Claimant's current knee symptoms were the result of a meniscus injury, but rather that they were the result of his severe, pre-existing degenerative arthritis in the knee. He further opined that the surgery recommended by Dr. Hewitt was not likely to resolve Claimant's symptoms, and that Claimant needed a knee replacement.

31. Claimant testified at hearing that he reported knee symptoms to each of his providers prior to September 14, 2020, and that each of those providers failed to document those complaints. Claimant saw three different providers nine times between July 28, 2020 and September 10, 2020. It is highly improbable that each of these providers would have failed to document complaints of knee pain at every visit. Claimant's testimony that he complained of knee pain prior at every visit prior to September 14, 2020 is not credible. Claimant credibly testified that he had no prior knee injuries and did not sustain any additional injury to is right knee after July 28, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The

facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME - MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion,* W.C. No. 4-732-992 (ICAO Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Indus. Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is

inconsistent with a finding of MMI. *MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Indus. Claim Appeals Office,* 794 *P.2d 1090 (Colo. App. 1990); Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *In Re Villela,* W.C. No. 4-400-281 (ICAP, Feb. 1, 2001).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* W.C. No. 4-712-812 (ICAO Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Respondents have failed to establish by clear and convincing evidence that Dr. Hughes opinion that Claimant is not at MMI from his July 28, 2020 injury is incorrect. The basis of Dr. Hughes' non-MMI finding is his opinion that Claimant sustained a work-related right knee injury July 28, 2020, in addition to his ankle injury, and that the knee requires further treatment. Dr. Hughes also opined that the arthroscopy recommended by Dr. Hewitt is a reasonable, related treatment option.

With respect to causation of Claimant's right knee condition, Respondents have not established through evidence that is "unmistakable and free from serious or substantial doubt" that Dr. Hughes' opinion that Claimant sustained an injury that accelerated an occult knee process when he began weightbearing is "highly probabl[y]" incorrect. The Claimant's December 23, 2020 MRI shows Claimant had pre-existing severe osteoarthritis and cartilage loss in his right knee. The MRI also showed a complex tear of the body and posterior horn of the medial meniscus. Claimant had not previously received treatment for his right knee and no credible evidence was presented that Claimant's right knee was symptomatic prior to his injury.

While Dr. Failinger opined that Claimant did not likely sustain a new meniscal tear as a result of the July 28, 2020 incident, he did concede that it was possible to exacerbate or accelerate a pre-existing tear or Claimant's pre-existing osteoarthritis. Dr. Failinger also agreed that the reported mechanism could cause a knee injury, in addition to Claimant's ankle injury. Primarily, Dr. Failinger does not believe it is medically probable that Claimant

sustained an exacerbation or acceleration, based on the timing of Claimant's reported symptoms.

Although Claimant did not report right knee symptoms until September 14, 2020, this does not clearly and convincingly establish that his right knee symptoms were not causally-related to the July 28, 2020 incident. Claimant could not bear weight on his right leg until approximately three weeks following surgery, or August 18, 2020, when he began partial weightbearing. Dr. Hughes, Dr. Sanchez, and Dr. Failinger agree that Claimant's knee symptoms may not have manifested until after Claimant resumed weightbearing. Although Dr. Failinger believes Claimant's knee symptoms should have manifested prior to September 14, 2020, his opinion on this does not constitute evidence that is "unmistakable and free from serious or substantial doubt." Moreover, no credible evidence was presented to indicate that Claimant sustained any unrelated injury after July 28, 2020, that would explain the symptoms.

Considering the evidence in its entirety, the ALJ finds that Respondents have not established by clear and convincing evidence that Dr. Hughes' opinion that Claimant sustained an injury to his knee that accelerated his preexisting conditions is incorrect.

With respect to MMI, Dr. Hughes indicated that the arthroscopy recommended by Dr. Hewitt was a reasonable treatment option. In his January 13, 2021 report, Dr. Hewitt indicated he felt arthroscopic surgery was medically reasonable, given Claimant had only minimal improvement in his knee condition. He also recommended other treatment options, such as therapy and a cortisone injection, which Claimant has not received. Although Dr. Sanchez placed Claimant at MMI on June 1, 2021, her assessment of MMI was limited to Claimant's ankle because, in her view, she was unable to provide treatment or restrictions for Claimant's knee due to Insurer's denial of the request for surgery. Dr. Failinger disagrees that the proposed surgery will properly address the cause of Claimant's symptoms, which he attributes to osteoarthritis. Dr. Failinger's opinion that the proposed surgery will not be effective is a difference of medical opinion with Dr. Hughes and Dr. Hewitt, and does not constitute unmistakable evidence that the MMI opinion is highly probably incorrect. Although the ALJ makes no conclusions regarding the propriety of the proposed surgery, Claimant continues to experience right knee symptoms, and treatment options exist which he has not received, and which may reasonably improve his condition or function. Respondents have failed to establish by clear and convincing evidence that Claimant is not at MMI.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by clear and convincing evidence that the DIME physician's opinion that Claimant is not at MMI due to his right knee injury is incorrect.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 22, 2022

Steven R. Kabler
Administrative Law Judge

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-088-992-004

ISSUES

The issues set for determination included:

- Did Claimant overcome the opinion of the Division of Workers' Compensation IME ("DIME") physician (Wallace Larson, M.D.) by clear and convincing evidence that he was not at MMI as of January 23, 2018?

- Is Claimant entitled to medical treatment to diagnose and treat his cervicothoracic spine and right shoulder?

- Did Claimant overcame the opinion of the DIME physician by clear and convincing evidence that he sustained a permanent medical impairment as a result of his January 16, 2018 injury?

PROCEDURAL HISTORY

The undersigned ALJ issued a Summary Order on October 28, 2021. Respondents requested a full Order on November 4, 2021. This Order follows.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for Employer as an industrial laborer, starting on September 26, 2016.

2. There was no evidence in the record that Claimant suffered injuries to his lumbar spine or cervicothoracic spine prior to May 2017.

3. On May 24, 2017, Claimant suffered a compensable work injury while picking up trim pieces. Claimant testified that he injured his low back that day. He required medical treatment for that injury.

4. An Employer's First Report of Injury was completed on or about May 26, 2017. This confirmed Claimant injured his low back on May 24, 2017 when he picked up pieces of trim.

5. Claimant's treating physicians for May 24, 2017 injury included Michael Striplin, M.D. at Colorado Occupational Medicine Physicians and Nicholas Olsen, D.O. at Rehabilitation Associate of Colorado. Both physicians were ATP-s. Claimant started treating in June 2017 and Dr. Olsen diagnoses on June 14, 2017 were: lumbar spine

sprain/strain with subjective complains of right lower extremity numbness and a clinical examination consistent with somatic dysfunction in the thoracic, lumbar and sacral regions.[1]

6. On July 11, 2017, a General Admission of Liability ("GAL") for medical benefits and TTD was filed on behalf of Respondents for the May 24, 2017 injury.

7. Claimant underwent a lumbar MRI on August 14, 2017 in which the radiologist noted the presence of a large central and right paracentral, right proximal foraminal disc extrusion at L1-L2, associated with moderate facet degeneration and hypertrophy along with moderate to severe spinal canal narrowing. There was also moderately severe right proximal foraminal narrowing. At L3-L4, there was a large left foraminal, left far lateral disc protrusion, with mild facet arthrosis and mild foraminal narrowing. At L4-L5, there was a moderate facet degeneration and hypertrophy, with a mild posterior disc bulge. There was a posterior disc bulge with mild facet arthrosis at L5-S1.[2]

8. Claimant received epidural steroid injections that were administered by Dr. Olsen on August 29, 2017 (right transforaminal ESI L1-L2 and L2-L3), on September 26, 2017 (right transforaminal ESI L1-L2 and L2-L3), and on November 21, 2017 (left transforaminal ESI L3-L4 and right TFESI at L2-L3).[3]

9. Claimant was evaluated Bryan Castro, M.D. on November 6, 2017. Dr. Castro noted the back pain may be a result of the acute herniations at L1-L2 and L3-L4. The ALJ noted that this opinion supported the conclusion that the May 24, 2017 injury caused the disc herniations at L1-L2 and L3-L4. Surgery was not recommended at that time. Dr. Castro recommended continued physical therapy ("PT") for Claimant.[4]

10. Claimant had continuing low back as a result of the initial work injury.

11. Dr. Olsen placed Claimant at MMI on November 30, 2017.[5]

12. On January 16, 2018, Claimant suffered a second compensable work injury when he slipped on ice while carrying construction cables. Claimant testified he fell when his feet went out from under him and he hurt his upper back.[6]

---

[1] This report was not admitted into evidence, but was referenced in Dr. Castrejohn's June 26, 2018 DIME report. Exhibit L, p. 38. It should be noted that Dr. Castrejohn did not reference the January 16, 2018 injury.

[2] *Id.*

[3] Exhibit L, pp. 38-39.

[4] *Id*. at p. 39.

[5] *Id.*

[6] Hearing Transcript ("Hrg. Tr."), p. 22:17-20.

13. Claimant testified he kept working but the pain was much worse the next day. Specifically, he felt pain in both his upper and lower back, the areas between the shoulder blades, in his right shoulder and neck and right hand.[7] Claimant said he did not have pain in those areas after the first injury. The ALJ found Claimant to be a credible witness and credited this testimony.

14. Claimant was evaluated by Dr. Striplin on January 16, 2018. Claimant complaints were not identified in any detail, but no acute distress was noted. The examination of Claimant's back showed diffuse tenderness, with no spasm or visible injury. Dr. Striplin's assessment was: back contusion. Claimant was noted to be still under care for the May 24, 2017 injury. The WCM 164 (which referred to the January 16, 2018 date of injury) noted that Dr. Striplin concluded the objective findings were consistent with history and/or work-related mechanisms of injury/illness. Dr. Striplin recommended Aleve and heat. Claimant was placed on modified duty with a 10 pound lifting, pushing and pulling restriction, as well as no overhead reaching.

15. Dr. Olsen evaluated Claimant on January 18, 2018 (in connection with the May 2017 injury), at which time he reported increased pain in his right side. Claimant reported his pain level was 9/10 following the fall whereas during the last visit, his pain level was 3/10 following an ESI. (This was related to the prior injury). Dr. Olsen observed there were discrepancies in the pain complaints reported by Claimant and his pain diary, which did not include a report of pain in his shoulders and upper back. Dr. Stiplin had indicated that this would be a new injury and Dr. Olsen contacted Dr. Striplin to discuss the case. The ALJ noted that this was evidence Claimant had new/ different pain complaints attributable to the second injury. On examination, Claimant', lumbar range of motion ("ROM") was limited. Dr. Olsen's report did not contain specific findings with regard to an examination of the thoracic spine or upper extremities.

16. Dr. Olsen's assessment was: lumbar sprain/strain, with subjective complaints of right lower extremity numbness; mild multilevel degenerative changes on 6/14/17 per plain films; MRI of the lumbar spine completed on 8/14/17 demonstrated a large right paracentral disc extrusion at L1-2, with moderate to severe spinal cord narrowing, large left bilateral disc protrusion; status post diagnostic right L1-2, L2-3 transforaminal epidural steroid injection completed on 8/29/17; status post diagnostic right L2-3 transforaminal epidural steroid injection completed on 9/26/17; post diagnostic right L2-3 left completed on 8/29/17, left L3-4 transforaminal epidural steroid injection completed on 11/21/17; status post and aggravation of lower back pain with recent slip-and-fall; new claim potentially pending regarding right upper quarter complaints.

17. Dr. Olsen expressed a concern about Claimant being a surgical candidate because he had a two level disc protrusion. Claimant was to continue his home exercise program.

---

[7] Hrg. Tr., p. 23:9-11.

18. An Employer's First Report of Injury was prepared on or about January 18, 2018, which said Claimant was injured on January 16, 2018 carrying cables.

19. Claimant received a physical therapy PT treatment on January 22, 2018 for the May 24, 2017 injury, but there was no reference to the second injury. This treatment note stated Claimant was treating for two herniated discs which were caused for the first work injury. There was no record of treatment for the mid-upper back in this period of time.

20. Claimant was evaluated by Dr. Striplin on January 23, 2018 in connection with the January 16, 2018 injury. At that time, he complained of diffuse tenderness on the right and left side of the upper thoracic spine down to the lower lumbar areas. On examination, Dr. Striplin said no palpable spasm was found. Right and left shoulder motion was described as normal and Dr. Striplin opined the lumbar ROM was also normal, although there was no indication that he performed actual ROM testing with dual inclinometers. No ROM measurements were documented in Dr. Striplin's report.

21. Dr. Striplin noted Claimant was to have a repeat lumbar MRI, as well as an evaluation with Dr. Castro and would follow up with Dr. Olsen under the prior claim. Dr. Striplin concluded Claimant was at MMI and sustained no permanent impairment from his back contusion. Claimant's 10 lb. lifting restriction from the prior injury was continued.

22. On January 24, 2018, Claimant underwent a lumbar MRI and the films were read by Craig Stewart, M.D. Dr. Stewart's impression was that the lumbar spine had a similar appearance compared with the MRI done on August 14, 2017. Congenital narrowing of the lumbar spinal canal was noted and there was moderate to severe multi-factorial spinal stenosis at L1-L2, not significantly changed. There was a similar appearance of the left foraminal/lateral disc protrusion at L3-L4, contributing to mild to moderate left foraminal narrowing and contacting the exiting left L3 nerve root. Dr. Stewart also noted persistent moderate bilateral L4-L5 and moderate to severe bilateral L5-S1 foraminal narrowing.

23. Claimant was reevaluated by Dr. Striplin on January 25, 2018, at which time he reported low back pain, as well as radiating pain to the upper back. The treatment notes reflected this evaluation was in connection with the May 24, 2017 date of injury.[8] Claimant's lumbar ROM was found to be limited. No specific treatment recommendations were made at that time and Claimant was scheduled for an MRI.

24. Claimant was evaluated by Dr. Olsen on January 31, 2018, after the MRI. Dr. Olsen described the studies as quite similar and he had no new recommendations based on new pathology. The focus of this evaluation was on Claimant's low back.

[8] There was a discrepancy as to this date of injury between Dr. Striplin's records and Dr. Olsen's records (which noted a May 24, 2014 D.O.I. that appeared to be a typographical error). Dr. Olsen's January 31, 2018 WC M-164 reflected a May 24, 2017 date of injury. The E-1 reflected a May 24, 2017 date of injury.

On examination, limitations in ROM, including lumbar extension in forward flexion were noted. Claimant was scheduled for a follow-up with Dr. Castro regarding surgery. Claimant was encouraged to continue his home exercise program. The ALJ found Dr. Olsen evaluated Claimant's low back and did not address other complaints referable to the January 16, 2018 injury.

25. Claimant was evaluated Dr. Castro on February 14, 2018. Dr. Castro reviewed the MRI findings and noted the neural foraminal stenosis at L5-S1 appeared to be improved. There was a mild central disc at L1-L2, without central canal encroachment. The ALJ noted the symptoms of radiculopathy were new and occurred after the second injury. Dr. Castro's assessment was: lumbar radiculopathy, with back pain as the predominant complaint. Dr. Castro did not think surgical intervention was the best option and said he would refer Claimant for other pain management techniques.

26. On February 21, 2018, Claimant returned to Dr. Olsen in connection with the May 24, 2017 injury.[9] Dr. Olsen noted Claimant had completed three epidural injections and he would not recommend more than four ESI-s in a year because of adrenal suppression. Dr. Olsen's assessment was the same as the January 18, and 31, 2018 report with the addition of the MMI date of February 21, 2018.

27. Dr. Olsen assigned a 9% whole person impairment, which included a 7% category II-C impairment (Table 53), plus an additional 2% for loss of ROM. Dr. Olsen noted that Claimant had questions regarding right upper extremity complaints. Dr. Olsen advised Claimant that this case closure was for the lumbar complaints only. The ALJ inferred that Dr. Olsen was of the opinion that at a minimum Claimant should be evaluated to see whether further treatment was required for the January 16, 2018 injury.

28. On February 27, 2018, Claimant returned to Dr. Stiplin, who noted no surgery was recommended and Dr. Olsen had issued an impairment rating. Dr. Striplin found Claimant could heel to toe walk, had 2+ reflexes in the right patellar and Achilles areas and had grossly normal light touch in both lower extremities. Dr. Striplin stated Claimant was at MMI effective February 21, 2018 and said he agreed with Dr. Olsen 9% whole person rating.

29. The ALJ found there was an interplay between the two injuries and Claimant did not receive specific treatment for the new symptoms which resulted from the January 16, 2018 injury.

30. On June 26, 2018, Claimant underwent a DIME for the May 24, 2017 injury, which was performed by Miguel Castrejon, M.D. At that time, Claimant reported intermittent to constant dull to sharp and stabbing pain that he localized to the mid back, specifically from the area of the thoracolumbar junction to approximately L5. He also reported occasional to intermittent dull sensation with them to send both legs, right

[9] Exhibits 2 and K.

greater than left. Claimant said there was a benefit after his last injection and his pain level range from 6–8/10.

31. Examination of the thoracic spine did not produce midline tenderness and full ROM was present. Tenderness was found at the thoracolumbar and lumbar paraspinal musculature. Dr. Castrejon's impression was: chronic lumbar muscular ligamentous strain/sprain; large central, right paracentral L12 foraminal disc extrusion with moderate facet degeneration and moderately severe spinal stenosis per MRI; large left foraminal/left far lateral protrusion L3-4, per MRI; multilevel facet arthropathy contributing to lower limb radiculitis: normal thoracic spine examination; chronic pain.

32. Dr. Castrejon confirmed Claimant was at MMI. He assigned 14% whole person impairment, which included a 4% Table 60 impairment and 6% for loss of range of motion. This evaluation did not address whether Claimant needed treatment for his upper back or sustained any permanent impairment for the second injury.

33. On August 31, 2018, a Final Admission of Liability ("FAL") was filed on behalf of Respondents for the May 24, 2017 injury. It listed the date of MMI as January 23, 2018. The FAL admitted for the 14% whole person impairment and denied medical benefits after MMI.

34. Claimant was evaluated by George Bovadilla, D.C. on September 19, 2018. Claimant was complaining of moderately severe aching upper back and moderately severe constant ache and low back at that time. Dr. Bovadilla said there was a subluxation of T4, 12 leather evolves with segmental fixation. Dr. Bovadilla recommended a treatment schedule of three visits per week.

35. Claimant returned to Dr. Olsen, on September 27, 2018. He advised Dr. Olsen of the chiropractic evaluation and recommendation for treatment. Dr. Olsen was not in favor of the chiropractic treatment, given the MRI findings. On examination, Claimant's lumbar extension showed 25° of mobility and 50° of forward flexion was noted. Right and left lateral bending were full, but increased pain with lateral bending to the right was found. Claimant was given the option of an epidural steroid injection, as well as continuing his exercise program.

36. On October 3, 2018, a Worker's Claim for Compensation was filed for the January 16, 2018 date of injury. The Worker's Claim stated Claimant injured his upper back and both hands.[10]

37. On October 17, 2018, an FAL was filed on behalf of Respondents in connection with the January 16, 2018 injury. It listed the date of MMI as January 23, 2018 and admitted for a 0% whole person impairment.

[10] Exhibit P.

38. Claimant filed an Application for DIME on December 12, 2018 for the January 16, 2018 date of injury.

39. On January 15, 2019, Claimant was evaluated by Dr. Olsen. The evaluation referenced the May 24, 2017 date of injury. At that time, he had pain in his low and middle back, as well as a referral pattern into the right upper extremity.

40. Dr. Olsen's assessment was: lumbar sprain/strain, with subjective complaints of right lower extremity numbness; mild multilevel degenerative changes on 6/14/17 per plain films; MRI of the lumbar spine completed on 8/14/17 demonstrated a large right paracentral disc extrusion at L1-2, with moderate-to-severe spinal cord narrowing, large left bilateral disc protrusion; status post diagnostic right L1-2, L2-3 transforaminal epidural steroid injection completed on 8/29/17; status post diagnostic right L2-3 transforaminal epidural steroid injection completed on 9/26/17; status post diagnostic right L2-3 left completed on 8/29/17, left L3-4 transforaminal epidural steroid injection completed on 11/21/17; status post and aggravation of lower back pain with recent slip-and-fall; new claim potentially pending regarding right upper quarter complaints; MMI on 2/2118; status post completion of a DIME increasing impairment for 9% to 14%.; FAL for 5/24/17 claim on 8/30/18/history of second work-related injury on1/16/18-Dr. Striplin placed him at MMI on 1/23/18 for this claim. The foregoing diagnoses was evidence of evidence that Claimant had increased symptoms as a result of the second injury.

41. At the time of the January 15, 2019 evaluation, Dr. Olsen explained to Claimant that a DIME examination had been scheduled for the second injury and if the DIME Dr. had treatment recommendations and he was referred to Dr. Striplin and then to Dr. Olsen, he would offer an opinion on the second injury. The ALJ concluded that Dr. Olsen was of the belief he was not to provide an opinion on the second injury and potential treatment until after the DIME.

42. Claimant returned to Dr. Olsen, on May 9, 2019 and the report referenced the May 24, 2017 date of injury. Dr. Olsen, reviewed Dr. Castejon's DIME report and noted Claimant was recommended for medical maintenance. Claimant advised that he was not interested in repeating the ESI. Claimant's pain diagram reflected pain and the low back, as well as down both legs. On examination, Claimant's lumbar extension demonstrated 20° mobility, facet loading was positive on the right and left. He had 50° forward flexion with increased pain at termination of forward flexion. No radiculopathy was noted. Dr. Olsen,'s assessment was the same as the January 15, 2019 evaluation. Dr. Olsen opined that Claimant's symptoms were more consistent with a facet hyper mediated component. He offered claimant the possibility of a bilateral L4-5 and L5-S1 facet injection. The ALJ found that Dr. Olson was recommending additional treatment for Claimant.

43. Claimant underwent bilateral L4-5 and L5-S1 facet injection on May 21, 2019. Claimant returned to Dr. Olsen on June 5, 2019, which time he reported in 80% reduction of his symptoms. Dr. Olsen noted Claimant may or may not be a candidate

for radio frequency neurotomy and that the work-up would include serial medial branch blocks in order to determine if he was a candidate. In the follow–up evaluation on June 19, 2019, Dr. Olsen discussed scheduling Claimant for serial medial branch blocks for confirmation and possible radio frequency neurotomy. Claimant wished to go forward with that treatment.

44. Claimant underwent bilateral L3, L4 medial branch and L5 dorsal primary ramus blockade. The diagnosis was lumbar spondylosis, bilateral L4-5, L5–S1.

45. Claimant returned to Dr. Olsen on June 27, 2019. After the medial branch block, Claimant had an immediate reduction in symptoms, but once he got home his pain was 2 out of 10. The pain was the went back to 3/10. Dr. Olsen said Claimant had a non-diagnostic response to medial branch block and it was not clear that he had a facetogenic pain generator. Dr. Olsen did not recommend proceeding with a confirmatory medial branch block and said Claimant was not a candidate for radio frequency neurotomy. Dr. Olsen‘s assessment was the same as the previous evaluation. He talked to Claimant about an exercise program, including a water program.

46. In the follow-evaluation on July 25, 2019. Dr. Olsen noted Claimant had set up an aquatic program, but Insurer had not paid for it. Dr. Olsen encouraged Claimant to participate in the pool program 3 to 5 days per week. No other treatment recommendations were made.

47. The ALJ noted in all of Claimant’s pain diagrams for the evaluations done by Dr. Olsen in 2019, Claimant indicated that he was having pain going down both of his legs. In addition, Dr. Olsen referenced the May, 2017 date of injury in all of the follow-up reports. Although he referenced Dr. Castrejon‘s DIME report, it was unclear whether Dr. Olsen considered the DIME report from Dr. Larson.

48. Claimant returned to Dr. Castro on August 14, 2019. Claimant reported ongoing low back pain and also that he had pain in the lower extremities, which was getting better. Dr. Castro referenced the May 23, 2017 work injury. Dr. Castro‘s assessment/plan was lumbar radiculopathy; back pain ongoing and a new MRI was going to be ordered.

49. Claimant underwent an MRI on August 23, 2019 and the films were read by Frank Crnkovich, M.D. Dr. Crnkovich impression was: disc protrusion and foraminal compromise including at the L2-L3 level, where the cul-de-sac measured 1.13 cm. At L3-L4, the thecal sac was narrowed to 1.04 cm., with ligamentum flavum hypertrophy and facet arthropathy was present. The lateral disc protrusion at L3-L4 level on the left was greater than right and there was contact to the exiting L3 nerve roots, left greater than right. At L4-L5 level, a broad-based disc protrusion was present, with left greater than right central component; no contusion, fracture or infiltrative process of the marrow present. The most prominent interval changewas the visualization of the urinary

bladder with distention of the bladder up to the L5 level. No obstruction or hydronephrosis of either kidneys noted.

50. Claimant testified he didn't really receive treatment for the second injury, including when he saw Dr. Olsen in January 2019. The focus was on his lower back when he had the second MRI and evaluation with Dr. Castro. He did not receive treatment for his upper back and the numbness in his hands. Claimant said he continues to experience symptoms related to the 2018 injury. The ALJ credited this testimony.

51. Claimant was evaluated by Caroline Gellrick, M.D. on February 22, 2019 to evaluate the injuries related to the January 16, 2018 slip and fall. Claimant reported symptoms in the mid back, thoracic, and some cervical pain with radiation into the right upper extremity. On physical examination, Dr. Gellrick noted that Claimant carried the right shoulder higher than the left. Claimant had tenderness to the mid and upper thoracic spine, lower back and right side of cervical paraspinal muscles. Claimant had tight trigger points of the right trapezius, which were painful. Dr. Gellrick diagnosed a cervical strain, thoracic and right shoulder contusions and aggravation of pre-existing low back condition.

52. Dr. Gellrick stated Claimant was not at MMI and required additional medical care (including diagnostic testing) to evaluate his second injury. Dr. Gellrick opined that Claimant required an MRI of the cervicothoracic area, in addition to subsequent MRI's of the low back (which were done under the first claim). She also indicated that an MRI arthrogram of the right shoulder may be necessary to determine if partial tears were present. The ALJ credited Dr. Gellrick's opinions that further diagnostic testing was required.

53. On March 5, 2019, Wallace Larson, M.D. performed the DIME with respect to the January 16, 2018 injury. Claimant reported that he had pain in his back in the area between the scapula, as well as the thoracic spine area. He also experienced numbness in both hands, which came and went. On examination, Claimant had bilaterally negative Tinel's and Phelan's signs. Mild tenderness to palpation of the thoracic spine and bilateral trapezius areas was noted by Dr. Larson. No tenderness to palpation was noted in the cervical spine, however, Dr. Larson found there was a mild restriction of cervical spine ROM. The ALJ noted Dr. Larson did not perform formal measurements with regard to the cervical or thoracic spine. No ROM testing worksheets were included in Dr. Larson's report.

54. Dr. Larson concluded Claimant did not have any identifiable impairment relative to the January 16, 2018 date of injury. Specifically, Claimant was at MMI as of January 23, 2018 without ratable impairment. Dr. Larson stated Claimant did not require additional treatment or maintenance treatment. In coming to these conclusions, Dr. Larson noted that he did not evaluate Claimant or review medical records relative to the May 2017 injury. The ALJ found Dr. Larson's DIME report did not address Dr. Olsen's treatment recommendations for Claimant for the January 16, 2018 injury or the

relationship between the two injuries. The ALJ also found Dr. Larson did not address Claimant's increased low back, mid back and upper extremity complaints which were present after the January 2018 injury. There was no analysis of Claimant's need for treatment in 2019 for radiculopathy, which was present after the second injury.

55. The ALJ found Dr. Larson's failure to perform formal measurements was an error. In addition, Dr. Larson's failure to address Claimant's additional pain complaints after the second injury was an error.

56. On March 25, 2019, an FAL was filed on behalf of Respondents, based upon Dr. Larson's DIME. The FAL denied liability for *Grove*r medical benefits.

57. On October 14, 2019, Albert Hattem, M.D. conducted an independent record review of this claim at the request of Respondents. Dr. Hattem reviewed Claimant's medical records, and found that Claimant was appropriately placed at MMI on January 23, 2018, by Dr. Striplin, without permanent impairment. Dr. Hattem agreed with Dr. Larson's DIME opinion rather than Dr. Gellrick's IME. He cited the comparison of Claimant's post fall lumbar MRI to his prior MRI, which showed Claimant's lumbar condition was unchanged. Dr. Hattem said there were inconsistencies in Claimant's presentation to his providers; particularly on January 18, 2018 and this indicated Claimant was not a credible historian. Dr. Hattem said the records reflected an absence of complaints and symptoms related to Claimant's fall over approximately 8 months' worth of appointments. To Dr. Hattem, this indicated Claimant's complaints to Dr. Gellrick, were unlikely to be related to a January 16, 2018 injury. The ALJ noted Claimant had mid and upper back complaints when he was evaluated by Dr. Olsen on January 18, 2018 and the latter opined that these needed to be treated under a different claim number, which undercut Dr. Hattem's opinion that Claimant had no complaints to these areas of his body. Dr. Hattem's opinions were less persuasive to the ALJ

58. Dr. Hattem testified as an expert at hearing. He is board-certified in Occupational Medicine and Level II accredited pursuant to the W.C.R.P. Dr. Hattem reiterated his conclusions from his report, including that Claimant reached MMI for the second work injury on January 23, 2018. Dr. Hattem opined that the medical records did not support an impairment rating for the January 16, 2018. Dr. Hattem disagreed with Dr. Gellrick's conclusion that Claimant required additional treatment, including for low back pain.

59. Claimant was evaluated by Bruce Evans, M.D. at the Emergency Department of Saint Joseph Hospital on February 7, 2020. He reported increased low back pain, which radiated down both legs with right being greater than left. On examination, Claimant was tender to palpation of the right paraspinal lumbar region with positive right straight leg test. Dr. Evans' clinical impression was: acute right–sided low back pain with right sided sciatica; type two diabetes mellitus without complication. Claimant was prescribed medications and advised to follow up with his PCP. This evaluation was evidence that Claimant's increased low back pain potentially required additional treatment.

60. Claimant met his burden of proof and overcame Dr. Larson's conclusion on MMI by clear and convincing evidence.

61. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Overcoming the DIME

A DIME physician's opinions concerning MMI and impairment of the whole person are binding unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S. 2020. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt". *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995).

Thus, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect. Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. Such evidence must be unmistakable and free from serious or substantial doubt". *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002) [citations

omitted]. Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, *supra,* 914 P.2d at 414.

As a starting point, Claimant was initially injured at work on May 24, 2017 in which he hurt his low back. (Finding of Fact 3). At least two medical treatment providers attributed two disc herniations to this injury. (Findings of Fact 9 and 19). Claimant received conservative treatment for this low back injury. As determined in Findings of Fact 7-10, the treatment included epidural steroid injections, as well as an MRI and a surgical consult, which was performed by Dr. Castro. The ALJ found Claimant had continuing low back pain as a result of the initial work injury. (Finding of Fact 10).

Claimant was injured at work on January 16, 2018. (Finding of Fact 12). As found, Claimant reported different symptoms he felt as a result of the second injury. These symptoms included pain in the mid and upper back, as well as upper extremities. (Finding of Fact 15). Claimants low back pain also increased. *Id.* Claimant's ATP's were the same for the second injury as the first and at the time, he was still under both doctors' care for the May 24, 2017 injury. (Findings of Fact 14-16). In particular, Dr. Striplin evaluated Claimant on January 16, 2018, however, Dr. Stiplin did not document Claimant's symptoms in any detail. (Finding of Fact 14).

Claimant was then seen by Dr. Olsen two days later and the ALJ noted Claimant had new and different pain complaints that were attributable to the second injury, which were reflected in Dr. Olsen's evaluation. Claimant continued to receive treatment for his first injury, including PT. In this time frame, one ATP (Dr. Striplin) then concluded Claimant was at MMI (for the January 16, 2018 injury) as of January 23, 2018. (Findings of Fact 20-21). The other ATP, Dr. Olsen evaluated Claimant on January 31, 2018 and had no additional treatment recommendations for the new symptoms. At this time, Dr. Olsen noted Claimant's treatment for the new symptoms would have to be under a different claim. (Finding of Fact 27). The ALJ inferred that Dr. Olsen was of the opinion that Claimant should be evaluated to see whether further treatment was needed for the second injury. *Id.*

Concurrently, Claimant continued to treat for the May 24, 2017 injury with both Drs. Olsen and Striplin. As determined in Findings of Fact 24-28, Claimant's evaluations and treatment for the May 24, 2017 injury continued through February 21, 2018 when Dr. Olsen concluded he was at MMI. There was overlap between the evaluations and treatment for these two injuries and the ALJ concluded Claimant did not receive specific treatment for the new symptoms which resulted from the January 16, 2018 injury. (Finding of Fact 29).

The evidence in the record reflected Claimant underwent a DOWC-sponsored evaluation in connection with the first injury and no further treatment was provided in connection with the January 16, 2018 injury. Claimant testified that he continued to have symptoms and, as found, Claimant was evaluated by chiropractor in September 2018, after which time he returned to Dr. Olson. (Findings of Fact 34-35). In October

2018, a Workers claim for Compensation was filed in connection with the second injury and Respondents then filed an FAL based upon the January 23, 2018 MMI date from Dr. Striplin. As reflected in Findings of Fact 35, 39-49, Claimant then received additional treatment provided by Dr. Olsen, which included specifically addressing radiating pain in his legs, increased low back pain and pain in the thoracolumbar junction. He also underwent an MRI and a surgical evaluation performed by Dr. Castro. *Id.*

It was against this backdrop that Claimant underwent a DIME for the second injury on March 5, 2019. (Finding of Fact 60). As found, Dr. Larson who performed the DIME adopted the finding that Claimant reached MMI within one week of the date of injury. Claimant contested this finding and Respondents argued that Claimant did not meet his burden of proof.

The ALJ determined Claimant met his burden of proof and overcame Dr. Larson's opinion on MMI by clear and convincing evidence. (Finding of Fact 60). This conclusion was based upon the evidence in the record. First, there is a dearth of information/analysis in Dr. Larson's report. (Findings of Fact 54). As found, Dr. Larson conclusorily agreed with the determination that Claimant reached MMI within one week of the injury, but did not address the recommendations by Dr. Olsen regarding Claimant's need for treatment in connection with the second injury. *Id.* Dr. Larson also did not address the potential interplay between the first and second injuries in his DIME report. While his focus was on the second injury, the ALJ found the DIME report prepared by Dr. failed to address Claimant's increased low back pain following the second injury, which were documented in the records admitted at hearing. (Finding of Fact 54). In this regard, Dr. Larson also did not address the continued symptoms Claimant reported through 2019. *Id.*

Second, Dr. Larson did not document performing ROM measurements for the cervical or thoracic spine. (Finding of Fact 53). There was no evidence in the record that these measurements were performed and the ALJ found this was an error. (Finding of Fact 55).

Third and finally, Claimant's testimony, as well as Dr. Gellrick's opinions led the ALJ to conclude Claimant required treatment for the 2018 injury. (Findings of Fact 50, 52). The ALJ concluded that the records admitted at hearing led to the conclusion Claimant was not at MMI and required additional treatment.

The ALJ considered Respondents' argument that Claimant failed to meet his burden to overcome Dr. Larson's opinions. They argued that Dr. Larson's opinions were supported by the great weight of the evidence and were consistent with the opinions of Dr. Striplin and Dr. Hattem. Respondents also contended Dr. Gellrick's opinion that Claimant's January 16, 2018 slip and fall aggravated his preexisting lumbar condition and caused lasting injuries to his thoracic spine, cervical spine, and right shoulder was not persuasive, as she failed to conduct a sufficient causal analysis. The ALJ found Dr. Gellrick's opinion persuasive and also concluded that these arguments

did not obviate the errors found with Dr. Larson's report and his lack of analysis of Claimant's need for treatment following the second injury.

ORDER

1. Respondents shall provide medical benefits to Claimant, as he is not at MMI.

2. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

- Did Claimant prove he suffered a compensable injury on October 5, 2020?
- If the claim is compensable, did Claimant prove a right total hip arthroplasty performed on November 15, 2021 by Dr. Michael Schuck was causally related to the work accident?
- The parties stipulated that Dr. Schuck is authorized, if the claim is compensable.
- The parties stipulated to an average weekly wage of $1,423.60.
- The parties stipulated that Claimant is entitled to TTD starting November 15, 2021 if the hip surgery is found work-related.
- The parties stipulated that Claimant received short-term disability benefits under an Employer-paid disability policy. The parties agreed that any TTD benefits awarded are subject to applicable offsets, but did not know whether Insurer or the short-term disability carrier would receive the offset. Counsel expressed confidence they can resolve that issue by mutual agreement, depending on the outcome of the hearing. Any issues related to the specific mechanics of the offset will be reserved for future determination, if necessary.

FINDINGS OF FACT

1. Claimant works for Employer as a broadband technician, repairing data and telephone lines. The job is physically demanding, requiring heavy lifting, awkward postures, and climbing ladders.

2. On October 5, 2020, Claimant was working on a "cross box" to troubleshoot a telephone line problem.[1] Claimant lost his footing while walking around the cross box and fell to the ground. There is conflicting evidence whether Claimant fell on his right side or his left side.

3. Claimant reported the injury to his supervisor and then to an injury hotline at "Unicall." The call was recorded, but portions are inaudible, including approximately 90 seconds while Claimant was discussing the accident and resulting symptoms. Claimant stated, "I tripped and fell on my left side and rolled to my right side." Claimant reported pain in his left lower back and his right hip. He stated the hip was "of more concern right now." Claimant denied any visible bruising or abrasions on his right hip.

[1] A "cross box" is an outdoor enclosure that contains interconnection points for phone and data lines to multiple residences or businesses

4. Claimant's pain was worse the next morning when he awoke so he requested treatment. Employer referred him to Concentra. Claimant saw Dr. Anthony Stanulonis at Concentra on October 6, 2021. Claimant explained, "He fell into a cross box and hurt his back. States the left side of his back hurts a lot and his right hip has been popping since the fall." On further questioning, Claimant described discomfort and popping sensation in the lateral right hip and right groin discomfort when transitioning between sitting and standing. On examination, Claimant's low back was tender to palpation around L3-5 and the left SI joint. Examination of Claimant's right hip showed tenderness in the anterior hip joint, greater trochanter, and bursa. Hip ROM was painful and limited in all directions. Dr. Stanulonis diagnosed a lumbar strain and a right hip contusion. He prescribed a muscle relaxer, NSAIDs, and Lidocaine patches, and ordered a CT scan of the right hip.

5. The hip CT was performed later that afternoon, and showed significant osteoarthritic changes. There was no clearly defined fracture or significant joint effusion.

6. On October 19, 2020, Claimant's back pain was 80% improved, but his right hips was still painful and "cracking." Dr. Stanulonis ordered an MR arthrogram to look for a labral tear.

7. Claimant's low back pain had resolved by November 6, 2020, but he still had hip pain and popping, particularly when exiting his truck.

8. A right hip MRA was performed on November 17, 2020. It showed significant degenerative osteoarthritis and articular cartilage loss. The radiologist noted labral hypertrophy but no labral tear.

9. Claimant returned to Concentra on November 30, 2020. Dr. Stanulonis was noted the MRI showed degenerative changes and impingement syndrome. He referred Claimant to Dr. Michael Schuck, an orthopedic surgeon, for consideration of a steroid injection versus a total hip replacement.

10. Insurer filed a Notice of Contest on December 10, 2020.

11. Claimant saw his PCP on March 20, 2021 for persistent and worsening hip symptoms. He explained he fell on his right hip in October 2020. He initially had pain in his left lower back but subsequently started having hip pain and popping. The report notes, "You have never had right hip pain before the injury." The provider concluded, "The hip symptoms seem to be directly attributable to your fall." Claimant was an orthopedist or physical medicine specialist.

12. Insurer authorized a one-time evaluation with Dr. Stanulonis on June 22, 2021. Claimant described the same symptoms in his hip, but they were slowly getting worse. The hip was particularly bothersome when exiting his vehicle, ascending or descending stairs, or kneeling. Dr. Stanulonis again referred Claimant to Dr. Schuck.

13. Claimant saw Dr. Douglas Adams, an orthopedic surgeon, on July 28, 2021. Claimant described his mechanism of injury as "fell at work on right side." Dr. Adams

opined the physical exam and imaging findings were consistent with femoral acetabular impingement with osteoarthritis and a degenerative labral tear. He recommended an intra-articular injection for diagnostic and potentially therapeutic purposes.

14. Claimant returned to his PCP on August 26, 2021. The report notes, "he [was] injured on the job on 10/5/2020 s/p fall on the job and reported to workman's comp and it was denied [in] December due to pre-existing condition, which [he] denies ever having a previous injury." Claimant reported, "His symptoms have been present and worsening since Oct 2020 after an injury at work . . . at this point, the pain is severe enough that he wants to use his commercial insurance to have this taken care of once and for all." Claimant was referred to Dr. Schuck.

15. Claimant saw Dr. Schuck on September 14, 2021. He explained that his hip problems started "after a fall at work on 10/5/2020. He did land on his right hip while wearing a tool belt. He did notice an onset of pain after that time." The symptoms had progressed and were severely impairing his ability to work and perform routine activities. Based on his exam findings and review of the imaging studies, Dr. Schuck opined Claimants symptoms were caused by a combination of significant degenerative changes, a labral tear, and soft tissue/muscular pain. He thought the labral tear was "at least somewhat degenerative in nature." He explained that a labral repair or debridement would only address part of the problem and Claimant would still have significant symptoms from his underlying osteoarthritis. He estimated arthroscopic surgery would probably provide only six months of relief, at which point Claimant would likely experienced a recurrence of pain in functional impairment. As a result, he concluded that "the only true fix" would be a total hip arthroplasty.

16. Claimant had a pre-operative appointment with Dr. Schuck on November 2, 2021. Dr. Schuck documented, "his symptoms began after a work-related injury in October 2020. At that time, he sustained a fall while wearing a heavy tool belt. He has had persistent right groin pain and hip pain ever since. He states that he had no trouble with the hip prior to this work-related injury."

17. Dr. Schuck performed a right total hip arthroplasty on November 15, 2021.

18. Dr. Timothy O'Brien performed an IME for Respondents and testified at hearing. Claimant told Dr. O'Brien that he tripped and fell to the right, landing on the tool belt he was wearing. Dr. O'Brien noted, "the facts in this case are concordant." He concluded Claimant suffered a minor lumbosacral strain/sprain and a right hip contusion from the fall on October 5, 2020, but opined the injuries were "self-limited and self-healing" without the need for treatment. Dr. O'Brien noted the imaging studies showed pre-existing osteoarthritis but no evidence of a fracture or other acute injury. Dr. O'Brien testified that a significant, direct blow to the right hip from the ground and tool belt would have caused some bruising, swelling, or other visible trauma. The lack of bruising confirmed the injury was minor. He opined the degenerative findings seen on imaging take years to become evident. Dr. O'Brien conceded that Claimant had no prior medical history related to the right hip, but opined there was "virtually 0%" chance Claimant's right hip was functioning normally before the injury. Dr. O'Brien testified that the work accident did not aggravate

or accelerate the underlying pre-existing degenerative changes. He agreed that the only appropriate treatment option was a total hip arthroplasty, because an arthroscopic procedure would not be effective. However, he did not consider the hip replacement related to the work injury in any way. Dr. O'Brien further testified that if Claimant had in fact fallen on his left hip, that would negate any type of right hip injury.

19. Dr. Jack Rook performed an IME for Claimant and testified at hearing. Claimant told Dr. Rook, "He tripped and fell to his right. He stated he was wearing a tool belt with a tool pouch overlying his right hip. He landed on his right side with his hip directly impacting the tool belt as he struck the ground." Dr. Rook opined the work accident substantially aggravated Claimant's underlying pre-existing osteoarthritis, and ultimately necessitated the hip replacement. To support his conclusion, Dr. Rook noted the injury caused a direct trauma to Claimant's right hip, Claimant reported a new onset of hip pain and popping within hours of the work accident, the hip was asymptomatic before the accident, and Claimant had worked a physically demanding job for years with no limitation or indication of hip problems. Dr. Rook agreed that if Claimant actually fell on his left hip instead of the right hip, his conclusions regarding causation would change.

20. In his testimony, Claimant described the accident consistent with his previous reports to Dr. Rook, Dr. O'Brien, and Dr. Schuck. He explained he fell on his right side and landed on the tool pouch he typically wears on his right hip. Claimant confirmed he had experienced no popping, clicking, pain, or other problems with his right hip before the work accident. He agreed the low back injury resolved after a couple of weeks, but the right hip remained symptomatic and became progressively worse. Claimant testified he simply "misspoke" when he referenced falling on his left side during the call with Unicall, "because I fell on my right side, not my left side."

21. Claimant's testimony was credible and persuasive, including the testimony that he "misspoke" during the telephone interview when he stated he fell on his left side.

22. The ALJ finds Claimant probably fell on his right side, rather than his left side. This is supported by his statements to multiple providers describing a fall on his right side. Moreover, Claimant specifically mentioned right hip pain during the interview with Unicall. The reliability of the recorded statement is undermined by the 90-second gap just at the point when Claimant was describing the accident and his symptoms. In any event, the reference to falling on his left side is an outlier and was probably a mistake.

23. Claimant proved he suffered a compensable injury on October 5, 2020. Claimant developed low back and right hip symptoms proximately caused by the accident. He reasonably requested medical treatment, and Employer obliged. Dr. Stanulonis documented findings consistent, at a minimum, with soft tissue injuries. He appropriately requested imaging and prescribed medication. These facts are sufficient to establish a compensable injury.

24. Dr. Rook's causation opinions are credible and more persuasive than the contrary opinions offered by Dr. O'Brien.

25. Claimant proved the right total hip arthroplasty performed by Dr. Schuck was reasonably necessary and causally related to the compensable work injury. All experts agree an arthroplasty was the appropriate procedure to address Claimant's ongoing hip problems. Although Claimant had severe, pre-existing, degenerative osteoarthritis before the injury, it was asymptomatic and caused no functional limitations. The work accident aggravated, accelerated, or combined with the pre-existing condition to cause the need for the hip replacement.

26. The stipulated average weekly wage corresponds to a TTD rate of $949.07 ($1,423.60 x 2/3 = $947.07).

27. The parties stipulated Claimant is entitled to TTD benefits commencing November 15, 2020, subject to applicable offsets for short-term disability benefits.

CONCLUSIONS OF LAW

A. Compensability

To receive medical or indemnity benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which they seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." Section 8-40-201(1). Workers' compensation benefits are only payable if an accident results in a compensable "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The fact that the employer provides treatment after an employee reports symptoms does not automatically establish a compensable injury. The claimant must prove the symptoms and need for treatment were proximately caused by their work. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Madonna v. Walmart*, W.C. No. 4-997-641-02 (March 21, 2017).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered a compensable injury on October 5, 2020. Claimant's fall proximately caused low back and right hip symptoms. He reasonably

requested medical treatment, and Employer obliged. Dr. Stanulonis documented findings consistent, at a minimum, with soft tissue injuries. He appropriately requested imaging and prescribed medication. These facts are sufficient to establish a compensable injury.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. If the pain triggers the need for medical treatment, the claimant is entitled to medical benefits as long as the pain is proximately caused by the employment-related activities and not the pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Abeyta v. Wal-Mart Stores, Inc*., W.C. No. 4-669-654 (January 28, 2008). However, the mere fact a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if it the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019).

All the medical experts agree the right total hip arthroplasty performed by Dr. Schuck was reasonably necessary. The dispute relates to causation. As found, Claimant proved the need for surgery was proximately caused by the work accident. Claimant's testimony regarding the accident, and the onset and progression of hip symptoms is credible. Dr. Rook's causation analysis is credible and more persuasive than the contrary opinions offered by Dr. O'Brien. Claimant arrived at work on October 5, 2020 with a severely degenerated but asymptomatic hip. He then fell directly on his right hip and developed pain and popping within a few hours. Regardless of whether the work accident could be characterized as "minor," it was the proverbial "final straw" that pushed Claimant's hip over the edge. The right hip has been continuously and progressively symptomatic since the injury. Although Claimant had severe, pre-existing degenerative changes before the

accident, he was not a candidate for a hip replacement because he was asymptomatic. No one performs arthroplasties on asymptomatic and non-disabling hips regardless of how damaged they might be. The mere fact that Claimant probably would have developed hip symptoms at some point in the future does not negate the fact it became symptomatic on October 5, 2020 as a direct and proximate consequence of his industrial accident.

ORDER

It is therefore ordered that:

1. Claimant's claim for accidental injuries on October 5, 2020 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including the right total hip arthroplasty performed by Dr. Schuck on November 15, 2021.

3. Claimant's average weekly wage is $1,423.60, with a corresponding TTD rate of $949.07 per week.

4. Insurer shall pay Claimant TTD benefits, commencing November 15, 2021 and continuing until terminated according to law, subject to any allowable short-term disability offset.

5. Insurer shall pay Claimant's statutory interest of 8% per annum on all compensation not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 22, 2022

Patrick C.H. Spencer II

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Respondents proved by clear and convincing evidence that the DIME physician's opinion with regard to permanent medical impairment was incorrect.

II. Whether Claimant proved by a preponderance of the evidence that Claimant is entitled to maintenance medical benefits.

III. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits.

PROCEDURAL HISTORY

Respondents filed an Application for Hearing on September 3, 2021, endorsing as issues for hearing "Overcome the Division IME on the issue of permanent impairment pursuant to W.C.R.P. Rule 5-5(F) and Sec. 8-42-107(8), C.R.S., as well as reasonably necessary and related medical benefits.

Claimant, while still represented by counsel, filed a Response to the September 3, 2021 Application for Hearing on September 15, 2021 listing issues including maintenance medical benefits after maximum medical improvement, temporary total disability benefits as of October 27, 2020 through March 31, 2021, permanent partial disability benefits.

A Hearing was set for February 16, 2022 before the Office of Administrative Hearings. Claimant failed to appear. Respondents were represented by counsel. The official court interpreter was Pablo Silveira of E-Multilingual Interpreting Services. Counsel for Respondents indicated that Respondents were unable to reach Claimant by mail, phone or email. The hearing was conducted via Google Meet at 1:30 p.m. and time was permitted to allow Claimant to appear. This ALJ also, through Spanish/English interpreter Pablo Silveira, attempted to contact Claimant four times by telephone at the number provided to the OAC. This is the phone number provided by Claimant's former attorney in her motion to withdraw as counsel. During the final contact, a person answered the phone and identified herself as "Ms. Maria de Jesus Perez" and stated that she had 'just obtained the phone number from T-Mobile for her son's cell phone. This suggests to the Court that this telephone number at one time belonged to Claimant but no longer belongs to Claimant. Ms. Perez indicated that they had received multiple prior calls at this number asking for Claimant.

As of the date of this Order, the undersigned has received no communication from Claimant explaining his absence at the first hearing. The records support the determination that Claimant had proper notice of the hearing date and time. Former counsel for the Claimant filed a motion to withdraw as Claimant's attorney on October 19, 2021, which was granted on November 29, 2021. Both the motion and the order granting

Claimant attorney's motion to withdraw were sent to Claimant at his address of record filed with the Division of Workers' Compensation and the Office of Administrative Courts. On November 3, 2021, a Hearing Confirmation containing the date and time of day for the scheduled hearing was sent to Claimant at his Marion Street address of record and was also emailed to Claimant at his email on file with the OAC. On February 4, 2022, Respondents filed a Case Information Sheet (CIS) and provided a copy of Respondents' Hearing Submissions to Claimant. The CIS contained the date and time this hearing was scheduled and Respondents' hearing submissions indicated that the hearing was scheduled for February 16, 2022 at 1:30 p.m. via Google Hangouts. Respondents indicated that none of the mailings to Claimant's address on record or any of the emails sent to Claimant at his email of record were returned to Respondents or bounced back to Respondents as undeliverable. This ALJ finds that Claimant had proper notice of hearing.

At the February 16, 2022 hearing, Respondents notified the Court that Respondents were prepared to proceed with their case-in-chief. Respondents requested to put on their case or present an offer of proof. In the alternative, Respondents requested that Claimant's claim be dismissed with prejudice, as Claimant failed to respond to discovery and failed to attend Respondents' Independent Medical Evaluation (IME). The undersigned considered these requests, and instead determined that a new hearing would be set and notice of the hearing would be sent to Claimant by certified mail.

Respondents set the new hearing for March 28, 2021 at 8:30 a.m. in this matter. A Notice of Hearing was sent to Claimant at his email address. This ALJ confirmed that neither this NOH nor the one for the prior hearing was returned as undeliverable to the OAC and are presumed to have reached their intended recipient. Respondents sent by certified mail a copy of the Notice of Hearing advising Claimant of the new date and time of the hearing, and was delivered on March 15, 2022 at 5:45 p.m., utilizing USPS Tracking Plus, Tracking Number 70072560000025614605. The NOH stated that “Claimant's failure to attend the hearing may result in the claim being dismissed” and that the parties’ had the right to be represented by an attorney or other person of their choice at the hearing. It also advised that “Attorneys and non-represented parties must keep the Office of Administrative Courts informed of any change of address pending final disposition of this case.”

FINDINGS OF FACT

Based on the evidence presented, the Judge enters the following findings of fact:

1. Claimant was injured in the course and scope of his employment on August 31, 2020 while lifting a five gallon tub filled with water and flowers, when he felt a pull in his lower back.

2. Claimant was initially seen at Midtown Occupational Health Services on September 1, 2020 by Dr. Lawrence Cedillo and Matthew Edwards, PA-C. Upon exam, Claimant had a fairly normal exam with the exception of decreased extension, rotation and lateral bending, tender to palpation in the paralumbar and sacroiliac and mildly positive Faber test of the back bilaterally. Mr. Edwards diagnosed work related lumbar strain with sciatica, stated that they would proceed with conservative care and assess progress. He stated that the objective findings were consistent with history and work

related mechanism of injury, prescribed physical therapy, massage therapy and medication, a lumbar support, and provided restrictions for modified duty.

3. Claimant returned to see Mr. Edwards on September 8, 2020 stating that he had had some improvement but was still having significant pain and discomfort as well as difficulty sleeping and had not yet started PT. He added prescription medication and noted continued on prior plan for conservative care.

4. On September 11, 2020 Claimant was evaluated by Dr. David Orgel, also from Midtown Occupational Health, who noted unremitting axial back pain, right leg symptoms that did not radiate below the knee, minor tenderness in his axial lumbar spine with moderately limited range of motion with pain in all planes, negative straight leg raise test bilaterally, mildly decreased sensation to light touch at the right Achilles. He stated that Claimant's objective findings were consistent with a work-related mechanism of injury, ordered an x-ray of the lumbar spine and continued therapy.

5. Claimant continued to see Mr. Edwards, Dr. Cedillo and Dr. Orgel over the next few months, reporting some progress with therapy but, that he continued to have symptoms in his low back and into his buttocks. Claimant continued to have a fairly normal exam with the exception of decreased extension, rotation and lateral bending, tender to palpation in the paralumbar and sacroiliac and mildly positive Faber test of the back bilaterally. On September 15, 2020 they added chiropractic care to his treatment.

6. Alexa Sheppard, D.C. evaluated Claimant on September 24, 2020. She found that palpation and myofascial exam of the lumbosacral musculature identifies hypertonicity with mild subjective tenderness and spasm at lumbar paraspinals. His myofascial evaluation of the thoracolumbosacral muscles identified tender trigger points of the lumbar paraspinals, quadriceps lumborum, gluteus medius, gluteus maximus, piriformis that correspond with referral pain patterns and spasms. Intersegmental examination revealed articular fixation and somatic dysfunction at L4-S1. Provocative loading maneuvers incorporating extension and rotation with P-A facet load revealed intersegmental restriction and elicited discomfort from the lumbar facets at L4-S1. The lumbar tests were negative for straight leg raise, positive Yeoman's bilaterally, and positive Kemp's bilaterally. She assessed that findings were consistent with mechanical back pain, with a combination of myogenic and lumbar facet dysfunction. She stated that clinical findings suggested uncomplicated low back pain without any obvious signs of discogenic etiology, instability, or nerve root impingement. She recommended ongoing chiropractic care for up to eight weeks. Claimant continued with approximately ten additional visits during the following weeks.

7. Respondents filed a General Admission of Liability on October 20, 2020 for medical benefits only.

8. Kristine M. Couch, OTR, conducted a Functional Capacity Evaluation (FCE) on November 2, 2020 and a second one on March 29, 2021. Testing was found to be valid and consistent in 22 of 22 tests, for maximum validity criteria and voluntary effort. She noted that Claimant's demonstrated maximum safe weight lifting ability of 20 lbs. from floor to waist on an occasional basis with increased low back pain and a 10 lbs. occasional dynamic safe lifting on an occasional basis.

9. On November 3, 2020 Mr. Edwards stated that he had concerns with Claimant's efforts during the functional capacity evaluation as his abilities were placed in the light duty category. He ordered an MRI of the lumbar spine to rule out significant pathology with regard to the workplace injury and referred Claimant to a physiatrist for evaluation of pain management.

10. On November 19, 2020 Dr. Sheppard stated that Claimant was progressing slower than was expected but that he did obtain temporary relief from the chiropractic care. She further stated that she suspected more pathology was involved in the lumbar spine that was causing nerve compression.

11. The MRI of the lumbar spine was completed on November 23, 2020, and read by Clinton Anderson, M.D., which showed L4-L5 moderate broad-based disc bulge with superimposed central and left paracentral disc protrusion extending caudal to the disc level. This results in moderate effacement of the anterior aspect of the thecal sac; mild compression of the bilateral L5 nerve roots as they exit the thecal sac more marked in the left than the right; mild bilateral L4-5 neural foraminal narrowing without evidence for L4 nerve root compression; mild bilateral L4-L5 facet joint arthropathy; and mild bilateral facet joint arthropathy at the L5-S1 level.

12. Claimant was evaluated by Dr. Levi Miller of Colorado Rehabilitation and Occupational Medicine on December 1, 2020. Subjectively Claimant complained of low back pain, bandlike, that radiated to his right buttock intermittently, however frequently down his left leg to his posterior lateral calf. He denied numbness or tingling in his feet. "Most physical activity" aggravated his symptoms including bending, lifting. He denied focal weakness such as foot slap or difficulty climbing stairs. Neurologic exam was normal except for a positive neural tension sign on the left. From the musculoskeletal exam he noted a lumbar forward flexion at approximately 70 degrees that causes low back pain; extension approximately 5 degrees; poor tolerance of facet loading both to the left and the right; tenderness over the bilateral L5 lumbar paraspinals most prominently, lesser so above and below this level; no tenderness over the SI joints or the greater trochanter. He also noted that Patrick's maneuver bilaterally caused low back pain, but not buttock pain. He assessed sprain of the ligaments of the lumbar spine, radiculopathy, intervertebral disc displacement, and myalgia, with left greater than right leg pain. Dr. Miller recommended L4-S1 transforaminal epidural steroid injection for the lumbosacral radiculopathy and bilateral L4-5 injection to target the disc herniation. He also referred Claimant for psychological evaluation for pain management with Timothy Shea, PsyD.

13. On December 2, 2020 Mr. Edwards stated that Claimant was to proceed with ESI injections, pending authorization and referred Claimant for a psychological evaluation with Dr. Shea.

14. Dr. Miller noted on December 14, 2020 that following the TF ESI that Claimant had a pre-procedure pain score of 8/10 and post procedure pain level was 3/10. Only the L5-S1 level was performed. Dr. Miller later noted that the injection only provided three days of pain relief. Dr. Miller performed a second ESI on February 8, 2021 with a left L4-L5 TF ESI, left L5-S1 TF steroid injection with temporary complete relief of low back symptoms but not leg symptoms, though better than it was prior to the injection.

15. Claimant completed a psychological evaluation with Dr. Timothy Shea on December 22, 2020. He noted that Claimant had participated in multiple conservative care treatments with limited temporary success, including physical therapy, chiropractic care, massage, ESI injections, OTC medications. He noted that Claimant's success has been limited by levels of untreated psychological stressors. In regard to his prior level of activity, Claimant reported being more physically active before his accident, but is currently limited to some light walking. He reported Claimant would perform housework, walking in the park, shovel, which are all difficult for him now. Dr. Shea suspected Claimant would also have difficulty driving long distances. Claimant reported experiencing down mood and increased anxiety following his workplace injury as well as symptoms of depression and concerns with his finances. He had increased emotionality, irritability and decreased energy as well as disrupted sleep. Claimant expressed frustration with regard to his ongoing symptoms and his injury because his life had completely changed. Dr. Shea recommended follow-up psychological assessment given Claimant's reported concerns about increased pain and higher than expected reports of pain experience. Dr. Shea diagnosed adjustment disorder with depressed mood and anxiety, as well as insomnia due to other medical conditions (neuropathic pain, anxiety.)

16. Claimant completed testing on multiple platforms, including a Minnesota Multaphasic Personality Inventory-2 Restructured Form (MMPI-2RF), Tampa Scale for Kinesiophobia, Pain Outcomes Questionnaire, Short Form McGill Pain Questionnaire, Pain Catastrophizing Scale, Pain Quality Assessment Scale, Pain Stages of Change Questionnaire, Beck Depression Inventory-2 and Beck Anxiety Inventory. The MMPI was invalid but all other measures were valid. There was a clear disconnect in his behaviors, reports of pain and his emotions. From the testing results, Dr. Shea noted that Claimant was likely to report experiencing significant physical limitations due to reported moderate to severe pain, despite incongruent physical findings to support the level and ongoing complaints. Dr. Shea reported that Claimant was not malingering but instead was much more likely to be experiencing a large disconnect between his pain, mood, and the interaction and the impact that it has on his overall reported pain experience. He noted that depression and chronic stressors can manifest through physical complaints. He further stated that Claimant's exacerbation of his pain does not negate the pain was likely present at some point but that there is evidence that there were multiple non-organic factors further exacerbating his pain experience above what would be expected. Dr. Shea stated that being able to address his stressors and related factors was to provide Claimant with the opportunity to experience improvements in his ability to manage his pain and ultimately increases his self-efficacy in regard to pain management. Following the testing Dr. Shea recommended cognitive behavioral therapy and was to start cognitive behavioral therapy with therapist Susie Love, M.A. He also made recommendations for scheduling activities, encouraging engagement in physical activities and provide education about pain management.

17. Mr. Edwards referred Claimant to Dr. B. Andrew Castro for a surgical evaluation on January 7, 2021 due to lack of progress, though he expressed doubts Claimant was a good surgical candidate. On January 28, 2021 Mr. Edward indicated Claimant's diagnosis was work related lumbar strain with L4-5 disc protrusion. He stated

that he reviewed Dr. Shea's notes, which indicated that Claimant had significant inorganic components to his pain response.

18. Clamant underwent a final TF ESI at the L4-5 and L5-S1 levels on February 8, 2021. He had low back pain of 4/10 and left calf pain as 8/10 severity. Dr. Miller documented that after 30 minutes from the procedure Claimant had complete relief of the lack pain but still had left leg pain of 6/10 with a 60% improvement.

19. Mr. Edwards noted on February 11, 2021 that Claimant

> … failed conservative treatment and initial round ESI. He was referred to Dr. Castro for surgical evaluation. No surgical indication at this time but Dr. Castro did recommend repeat ESI which patient had been on 2/8/2021. Patient reports he is feeling better than before the injection. He still reporting having some mild numbness and tingling in his legs and some back pain but he is better than he was.

20. Claimant was placed at maximum medical improvement on March 31, 2021 by Dr. Orgel. He noted that the MRI suggested some degenerative changes with a disc bulge that could be causing an L5 radiculopathy but Claimant was not a surgical candidate. Injections (ESI) were not helpful and neither was conservative care, other than for temporary relief. Claimant continued to complain of axial back pain with radiating buttocks pain and pain into the left calf. He noted that the FCE was valid, with a 10 lbs. lifting limitation. He completed an impairment evaluation for a 17% whole person impairment, including 11% whole person impairment for loss of range of motion (which was valid) and a 7% for specific disorder. Dr. Orgel did not recommend maintenance care as treatment in the prior six months was not effective.

21. Respondents arranged for an independent medical evaluation with F. Mark Paz, M.D. of Occupational Medicine of the Rockies, which was conducted on May 18, 2021. Dr. Paz reviewed medical records, took a history from Claimant and performed a physical exam. The exam was substantially normal except for end range of motion, which caused increased low back pain, and found decreased range of motion, which was invalid for flexion, and that Claimant was favoring his left lower extremity. He provided multiple diagnosis including chronic low back pain, left lower extremity paresthesias, lumbar degenerative disc disease, lumbar herniated nucleus pulposus at the L4-5 level, and adjustment disorder. He specifically conducted a causation analysis and determined that the herniated disc or left paracentral disc protrusion at the L4-5 level was proximally related to the August 31, 2020 incident at work. He agreed with Dr. Orgel that Claimant reached MMI on March 31, 2021.[1] He noted that Claimant perceived himself as being severely disabled. Dr. Paz, opined that Claimant should return for a lumbar flexion "reassessment," and that he had a significant amount of non-physiologic findings on the clinical examination. He provided permanent work restrictions, which were in excess of the FCE findings based on his medical judgement, and stated that Claimant did not require maintenance medical benefits.

22. On July 14, 2021 Dr. Brian Reiss, the Division of Workers' Compensation Independent Medical Examination (DIME) physician, issued a report following record review, history and examination of Claimant. Claimant complained of lower back pain

[1] This ALJ concludes that the March 31, 2020 date listed in the report is in error.

following an incident moving up buckets of flowers, which was continuing on the date of the exam, but did not convey any symptoms of the lower extremities. On exam, Dr. Reiss did not notice any pain behaviors or apparent distress, noted some irritation of the left calf with bending as well as lower back pain, some decreased sensation in the left lateral heel and irritation with straight leg raising on the left. Dr. Reiss diagnosed probable herniated disc at the L4-5 on the left, residual deconditioning and back pain. He stated that Claimant was not a surgical candidate and expected the herniation to resolve on its own. Dr. Reiss opined that, from the available information, he did not believe any work restrictions were necessary. He provided a 14% whole person impairment rating in accordance with the AMA *Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*), consisting of 7% for specific disorder under Table 53IIC and 8% for loss of range of motion. He stated that no apportionment was appropriate. Further he stated:

> More likely than not the work injury resulted in a herniated disc with some nerve irritation and back pain. The nerve irritation is essentially resolved with minor residual unlikely to be improved with any surgical intervention. The continued lower back pain should be managed with a home exercise program directed at core strengthening, aerobic conditioning and stretching.

23. On September 2, 2021 Division issued the DIME Process Concluded letter regarding this matter, stating that they had received the DIME report, advising Respondents that they had 20 days to either file an admission consistent with the report or an application for hearing.

24. On November 19, 2021 Dr. Scott Primack issued a record review report. Following review of the medical records he opined as follows:

> Given the discordance between what Mr. Favela Nevarez was telling different physicians regarding how he was doing after the injection, the MMPI-2RF, and the nonphysiologic findings documented by Dr. Paz, I do not believe that there is any residual impairment. Although Dr. Orgel was able to render a 17% impairment of whole person and Dr. Reiss was able to render a 14% of whole person, the substantial medical record documentation does not indicate a specific diagnosis and therefore should not have a permanent impairment. The DIME did not take into account the profound medical data which indicates that there is not any specific injury but more so psychological overlay. This would make the DIME erroneous and not valid. The extreme psychological issues, although not work-related, would also correlate with the extensive areas of fear avoidance noted by Dr. Shea. This fear avoidance and non-work related issues would cloud the physical examination. Therefore, in my opinion, the preponderance of the medical data would suggest that there is no permanent residual impairment.

25. Surveillance of Claimant performing multiple activities in his yard on July 14, 2021 were observed. Claimant is recorded walking, sitting, bending at the waist, carrying various items and driving. He was also observed driving his vehicle to Dr. Reiss' office for the DIME, as well as returning to his place of residence. As found, none of the activities observed were inconsistent with a herniated disc or the determinations that while Claimant has a herniated disc, he was able to return to regular employment according to Dr. Reiss, who is persuasive.

26. As found, Dr. Paz completed range of motion testing and found Claimant's flexion to be invalid, recommending a follow-up evaluation. However, he did provide a diagnosis with regard to the lumbar spine injury that was causally related to the August 31, 2020 workplace event. Dr. Paz indicated on Figure 84 that Claimant was assessed a 7% whole person impairment for specific disorder pursuant to the AMA *Guides to the Evaluation of Permanent Impairment*, Third Edition, (*Revised)*. He further analyzed that only the flexion was invalid and would be "pending." As found, when looking at the range of motion for the remaining testing, according to Dr. Paz's measurements, Claimant would qualify for a whole person impairment for the extension, and lateral flexion measurements, even without the lumbar flexion measurements.

27. As found, both Dr. Orgel and Dr. Reiss, the DIME physician, determined that they were able to complete range of motion testing. As found and concluded, Respondents have failed to overcome the DIME physician's opinion with regard to the Claimant's permanent impairment. Dr. Paz and Dr. Primack simply provide opinions that would qualify for a preponderance of the evidence but not by clear and convincing evidence. Dr. Reiss' opinion with regard to causation is found to be accurate based on the totality of the evidence and therefor the impairment determination of the 14% whole person impairment related to the herniated disc at the L4-5 level is appropriate. Respondents failed to show that either Dr. Paz or Dr. Primack's opinions are anything more than simply different opinions. While this ALJ recognizes that Claimant may have had symptoms in excess of what is normally seen for patients with a lumbar spine injury, which may have interfered with medical care progress and reporting of symptoms, the evidence does not support a finding that Dr. Reiss was incorrect.

28. Of note, while Dr. Reiss' report is brief and concise, addressing only the pertinent issues he was asked to address, it is specifically found that Dr. Reiss accomplished the mandate of the Division in conducting the DIME, including addressing the questions in this case. Dr. Reiss specifically notes he reviewed 412 pages of medical records, including from prior to the injury, and failed to find any records of preexisting conditions or problems. This ALJ reviewed 416 page of documents submitted by Respondents for consideration and concurs with Dr. Reiss that there are no significant records of preexisting conditions. As found, Dr. Reiss complied with the requirements of the AMA *Guides*, the impairment rating tips and the Level II accreditation requirements. While it is helpful to have physicians summarize the medical records, it is not a requirement of the DIME to do so, if time is limited, as did Dr. Primack, who did not list all the records he likely reviewed.

29. Lastly, it is found that Dr. Reiss assessed causality by reviewing the complete records and determining that Claimant's disc injury was clearly defined and caused or aggravated by the work related incident. The records included that Claimant had ESIs that decreased Claimant's pain significantly immediately after the injections, though provided no lasting effect. This is indicative that the disc was likely a pain generator but is not a god candidate for surgery if it provided no lasting effect. Medical science is not black and white, it encompasses a multitude of shades of gray. Dr. Reiss clearly reviewed Dr. Shea's records and considered the medical opinion as he quotes multiple reports, including Dr. Shea's diagnosis of adjustment disorder with depressed mood and anxiety. Dr. Reiss, following examination of the Claimant reached a

conclusion, which as a DIME physician, he is entitled to do. As found, his final determination was that Claimant had a work related specific disorder and provided an impairment accordingly. Respondents failed to show that Dr. Reiss was incorrect.

30. As found, Claimant has failed to show he is entitled to maintenance medical benefits after maximum medical improvement. Drs. Orgel, Reiss, Paz and Mr. Edwards all agree, and are persuasive, that the care that was provided to Claimant was less than effective and that Claimant does not require medical benefits after maximum medical improvement in this matter.

31. As found, Claimant failed to show that there was a wage loss or that he is entitled to temporary disability benefits. Claimant failed to appear at the hearing either in person or through a representative, and failed to submit any evidence or testimony for consideration to support a claim for lost wages. Further, as found, the record does not support that there was a wage loss in this matter.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight,

credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME by Clear and Convincing Evidence

Respondents seek to overcome Dr. Reiss' determination of impairment in this matter. Respondents must prove that the DIME physician's determination of impairment was incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, *supra.*

The Act requires DIME physician to comply with the AMA *Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the AMA *Guides.* In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the AMA *Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the AMA *Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a

question of fact for the ALJ to determine, including whether the physician correctly applied the AMA *Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*. Consequently, when a party challenges the DIME physician's impairment rating, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning his opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the AMA *Guides* do not mandate that the DIME physician's impairment rating is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the AMA *Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the AMA *Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* ICAO, W.C. No. 4-677-750 (April 16, 2008); *In re Claim of Pulliam*, ICAO, W.C.No. 5-078-454-001, (July 12, 2021).

Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *Lopez vs. Redi Services.,* I.C.A.O., W.C. Nos. 5-118-981 & 5-135-641 (October, 27, 2021).

Respondents need only prove that any one particular impairment opinion is overcome by clear and convincing evidence. When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the AM*A Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the

contents of the AMA *Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id*. Therefore, if it is overcome, then the remainder of the decision need only be shown by a preponderance of the evidence.

The Impairment Rating Tips promulgated by the Division, under General Principles states in pertinent part:

> Impairment ratings are given when a specific diagnosis and objective pathology is identified. *(Reference: C.R.S. §8-42-107(8)(c))* In cases with multiple symptoms, the clinician must determine whether separate diagnoses are established which warrant an impairment rating *OR* the impairment rating provided for a specific diagnosis incorporates the accompanying symptoms of the patient.

Here, Respondents seek to overcome the DIME physician's opinion. Respondents argue that Dr. Primack was correct in his assessment that Claimant's injury did not result in a herniated disc and therefore there is no specific diagnosis that would allow for application of the AMA *Guides*' specific disorder table, Table 53. They specifically cite to nonphysiologic findings, discordant histories given to different medical providers with regard to ESI results, and psychological overlay as documented by the MMPI-2R.

As found, Dr. Brian Reiss complied with the requirements of the law by assessing causation of the injury, identifying a specific diagnosis, and correctly applying the AMA *Guides.* Dr. Reiss based his opinion on the review of the medical records, his examination of Claimant, the fact that by the time of the DIME Claimant was without an apparent pain behaviors. He was able to perform the examination and comply with Dr. Reiss' cues. Dr. Reiss found that Claimant was able to perform the range of motion testing without complaint other than some left calf irritation and a little decreased sensation of the left lateral heel and some slight irritation of the left calf with straight leg raising test. Dr. Reiss opined that it was more likely than not the work injury resulted in a herniated disc with some nerve irritation and back pain. His ultimately conclusion was that the work related injury of August 31, 2020 resulted in a herniated disc that caused residual impairment. This is supported by objective findings, including the MRI findings and examination. As further found, Dr. Reiss correctly applied the *Guides* and the impairment rating tips in providing the 7% whole person impairment rating for the specific disorder under Table 53IIC. A simple grammatical error is not sufficient to breach this burden of proof. Both Dr. Orgel and Dr. Paz agreed that 7% whole person impairment was the correct impairment to assign for the specific disorder caused by the work related herniated disc which resulted from the August 31, 2020 workplace injury. Dr. Paz provided a diagnosis with regard to the lumbar spine injury that was causally related to the August 31, 2020 workplace event. Dr. Paz indicated on Figure 84 that Claimant was assessed a 7% whole person impairment for specific disorder pursuant to the AMA *Guides to the Evaluation of Permanent Impairment*, Third Edition, (*Revised)*. This is the same impairment assigned by Dr. Reiss and Dr. Orgel, an authorized treating provider, for specific disorder. Dr. Reiss also complied with the requirements of the Division tips which state that "[I]f a spinal impairment rating is provided, both Figure 84 and the appropriate spinal range of motion worksheet are required."

The disagreement among the providers that made a full assessment of the Claimant's impairment is with regard the loss of range of motion. Dr. Paz completed

range of motion testing and found Claimant's flexion to be invalid, recommending a follow-up evaluation. He stated that only the flexion was invalid and would be "pending," further testing. The record is devoid of evidence as to why no further follow up was conducted, but even if it had been performed and was different than the ROM findings of the DIME physician, it would have only constituted a difference of opinion. When looking at Dr. Paz's range of motion findings for the remaining testing, under the *Guides*, Claimant would have qualified for a loss of range of motion whole person impairment for the extension, and lateral flexion measurements. Despite this potential rating, it is not sufficient to overcome the valid measurements and impairment rating issued by the DIME physician in this matter.

The Impairment Rating Tips also state under Spinal Ratings, Sec. 2 as follows:

> Whenever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiologic findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity.

It is clear that Dr. Primack, the only physician to state that the nonphysiologic findings, the history of response to treatment and the MMPI, justified an impairment of zero. While it is apparent that Claimant had some symptoms that did not correspond to or exceeded the physiologic findings in this matter during his treatment in this case, he is the lone opinion to state that there was no diagnosis at all, which he identifies in his short report, not even non-work related diagnosis. Dr. Paz and Dr. Reiss specifically found that there was a correlation with the workplace injury and the herniated disc. Also, this ALJ is more persuaded by Dr. Shae's analysis that "Claimant was not malingering" and that there was a "large disconnect between his pain, mood, and the interaction and the impact that it has on his overall reported pain experience," and as found, so was Dr. Reiss. Dr. Shae also reinforced that "Claimant's exacerbation of his pain does not negate the pain was likely present." The standard of proof of clear and convincing evidence is high and difficult to achieve. Here, Dr. Primack was the lone physician to state that discrepancies in the record were of significance and his opinion does not rise to the standard of clear and convincing, but is simply a difference of opinion. Based on the totality of the evidence, Respondents have failed to show that the DIME physician, Dr. Reiss, was incorrect in his assessment of impairment in accordance with the AMA *Guides*, the Impairment Rating Tips and the Level II accreditation curriculum.

C. Medical Benefits after MMI

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. In order to receive such benefits, the claimant must present substantial evidence that future medical treatment is or will be

reasonably necessary to relieve the claimant from the effects of the injury or to prevent deterioration of the claimant's condition. *See Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974, ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Here, Claimant sought maintenance care after reaching maximum medical improvement. However, the persuasive evidence provided by Dr. Orgel, Dr. Reiss and Dr. Paz is that Claimant no longer requires maintenance care in this matter. They specifically addressed the fact that the care Claimant received before reaching MMI on March 31, 2021 was either not effective or was only temporary, not lasting or curative. Therefore, as found from the totality of the evidence, Claimant is not entitled to ongoing medical care to relieve the effects of the injury. Claimant has failed to show that he is entitled to maintenance medical care.

D. Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v.*

Stanberg, supra. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbois* Logic, 952 P.2d 831 (Colo. App. 1997).

In this matter, Claimant failed to show for the hearing and provide evidence to prove by a preponderance of the evidence that he was entitled to temporary disability benefits. Dr. Reiss in fact stated that, despite his findings of a herniated disc related to the work injury, that he expected the herniation to resolve and in fact had likely resolved with the exception of minor symptoms in his left calf and low back. Dr. Reiss was also persuasive with regard to making a determination that Claimant could return to work without restrictions. As found, Claimant is not entitled to temporary disability benefits.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents have failed to show by clear and convincing evidence that Dr. Brian Reiss, the DIME physician, was incorrect in his assessment of impairment. Respondents shall pay permanent partial disability benefits based on the 14% whole person impairment as provided by Dr. Reiss.

2. Claimant's claim for maintenance medical benefits after MMI are denied and dismissed.

3. Claimant's claim for temporary disability benefits are denied and dismissed.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-148-906-006

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the November 18, 2021, request by authorized treating provider ("ATP") Michael Lersten, M.D., for a platelet-rich plasma injection ("PRP") into Claimant's left hip bursa is reasonable and necessary, as well as causally related to Claimant's admitted industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered an admitted industrial injury on July 16, 2020, while working as a package handler for Employer. Claimant has worked for Employer, primarily as a driver, and for the last seven years as an article 22 package handler.
2. In Claimant's position as a package handler, he had to handle packages weighing up to 70 pounds and, if the packages exceeded 70 pounds, he had a helper to handle packages up to 150 pounds.
3. On July 16, 2020, Claimant was standing on a conveyor belt walkway, he pulled a tall box off the belt which weighed more than anticipated and, as he turned, felt a pop in his low back and has had persistent pain in his left hip since that time.
4. Claimant demonstrated to the Court that the pain following his injury is above his left buttock cheek, around the belt area, going around the belt area into the seam of his leg on the front and has been constant since his injury.
5. The medical records reflect that Claimant has undergone multiple physical therapy treatments and has had steroid injections, but none of the medical modalities applied have provided long-term relief.
6. On May 6, 2021, Claimant was evaluated at Panorama Orthopedics and Spine by authorized treating provider ("ATP") Michael Lersten, M.D., who at the time noted:

> Nathan Wright is a 60 year old male with a history of L>R pelvic girdle pain that is multifactorial including anterolateral and posterior pain. He is status post a left greater trochanteric bursa injection, which provided significant ongoing pain relief. He is now status post a left ischial bursa diagnostic anesthetic injection that was negative. We then performed a left sided superior cluneal nerve block that provided functionally significant and approximately 60% pain relief. Unfortunately, his insurance company is denying the definitive steroid injection for presumed left superior cluneal nerve

> neuropathy. He was also denied additional physical therapy and an MRI. The patient states that physical therapy can exacerbate his symptoms at times. Leaning forward and to the left makes his pain worse. Dry needling on his left side made his pain worse, too. He states that due to his left sided pan, his right side starts to have pain as well at times. On one occasion, he felt radiating pain all the way to his left foot while twisting.

See Claimant's Exhibit Tab 6, BS 61.

7. On November 18, 2021, ATP Lersten requested preauthorization for a left hip PRP injection.

8. On November 23, 2021, ATP Lersten's request was denied by a record review authored by David H. Elfenbein, M.D., who relied upon medical treatment guidelines related to the hip, indicating that the therapy should be denied, as the "CO guidelines don't specifically apply." See Claimant's Exhibit Tab 1, Bate Stamp ("BS") 5.

9. Dr. Elfenbein, a Level II Accredited orthopedist, performed a Rule 16 Review of the requested PRP injection. (RHE D) Dr. Elfenbein reached out to the office of Dr. Lersten via telephone on November 24, 2021, at 11:33AM and again on November 29, 2021 at 11:21AM to discuss the medical reasoning behind the request. *Id.* However, Dr. Elfenbein did not receive any call back from Dr. Lersten regarding the requested injection. *Id.*

10. Dr. Elfenbein subsequently determined that the requested left hip PRP injection was not medically necessary. (RHE D) Dr. Elfenbein concluded that there was no evidence of tendon damage and no documentation that the next step of management would be an invasive procedure as required by the Colorado Medical Treatment Guidelines. *Id.*

11. Further, to complete his assessment without a response from Dr. Lersten, Dr. Elfenbein referred to Exhibit 4 of the Colorado Medical Treatment Guidelines, which is the medical treatment guideline for the shoulder, to assess the reasonableness of the recommended PRP injection. (RHE D; MTG Exhibit 4) As the Medical Treatment Guidelines do not provide appropriate guidance on PRP injections to the hip, Dr. Elfenbein determined that the shoulder would operate most similarly to the hip in his review. *Id.*

12. Exhibit 4, Section F(4)(b) of the Medical Treatment Guidelines address PRP injections to the shoulder. (MTG Exhibit 4) As cited by Dr. Elfenbein in his Rule 16 Review, the Medical Treatment Guidelines state that "a single dose of PRP provides no additional benefit over saline injection when the patients are enrolled in a program of active physical therapy." (RHE D; MTG Exhibit 4) Further, "there is also a lack of standardization of platelet preparation methods, which precludes clear conclusions about the effect of platelet-rich therapies for musculoskeletal soft tissue injuries. The preponderance of the evidence suggests that PRP is not likely to have long term benefits effects." *Id.*

13. Additionally, Exhibit 6 Section F(6)(d), which addresses PRP injections to the lower extremity (though not specifically the hip) further notes that "[s]teroid injections prior to the use of PRP are believed to lower the chance of healing." (MTG Exhibit 6)

14. It was Dr. Elfenbein's opinion, however, that if "PRP is found to be indicated in the select patients, the first injection may be repeated once after 4 weeks when significant functional benefit is reported but the patient has not returned to full function or full-duty work." See Claimant's Exhibit Tab 1, BS 2.

15. Claimant was sent out for a second opinion with ATP Barry Ogin, M.D., at Colorado Rehabilitation Occupational Medicine, who took a history and reached the following conclusions:

> Mr. Wright is a pleasant 61-year-old male presents as a consultation from Dr. Matus, with a chief complaint of left-sided low back and hip pain. He hurt himself on 07/16/20 when he was working at UPS and was lifting a bag off of a conveyor belt that was heavier than he expected. He denies any pre-existing history of back or hip issues. Did physical therapy, for the better part of a year, without benefit. He has been working with Dr. Lerston at Panorama. An injection along his left greater trochanter performed in January was helpful. He had a couple of other injections along his lateral hip and buttock which failed to give much relief. He also saw Dr. Faulkner, who I believe performed a left greater trochanteric injection. This was not helpful. Concern was raised that his pain may be emanating predominately from his spine. He did see Dr. Castro for a surgical opinion, and was told that there is nothing surgical regarding his back.
>
> More recently, he has initiated another course of physical therapy at Select PT, where he has been attending one time per week for six visits. This has proven a bit more helpful, particularly dry needling.
>
> Currently describes aching pain across his left buttock into his lateral hip. He has some pain in his groin, but not as severe. He get some stabbing pain along his left lower back. He denies any significant radicular pain, but gets occasional pins and needles along his posterior upper thigh. Pain is aggravated by standing and walking. Sitting is not bad. He has difficulty sitting more than 1 hour. Difficulty with twisting bending or lifting. Some relief with stretching. On a scale 0-10, worse pain 9/10, least pain 3/10 and current pain 6/10.
>
> * * *
>
> However, his clinical examination is most reflective of localized soft tissue pathology over his greater trochanter. He

> reportedly has had several injections along the bursa, with short term relief only. He reports that Dr. Lerston has suggested PRP to the hip bursa. Given his failure to improve with time, therapies, and steroid injections, this would be a reasonable pursuit. We would be more than happy to set this up, though he seems in capable hands with Dr. Lerston.
>
> If he pursues a PRP injection, an additional 4 weeks of PT may be reasonable for further strengthening and conditioning and materials handling training.

See Respondent's Exhibit Tab Q, BS 383 and 385.

16. On December 17, 2021, after ATP Lersten's request for PRP was denied and after the second opinion with Dr. Ogin occurred, Claimant returned to ATP Brenden Matus, M.D., at Workwell who noted:

> Discussion: Nathan has seen Dr. Ogin for second opinion. He agrees for the greater trochanteric bursitis that PRP is reasonable next option as he had good diagnostic and partial lasting therapeutic benefit to repeat steroid injections. He also agrees lower back injections have had partial benefit, would recommend trial repeat versus facet injection trial. He will continue with Dr. Lerston for now. He has restarted PT, noting some good benefit in pain but still quite functionally limited. We will continue PT and begin to gradually advance some functional lifting. Goal would be advancing to work conditioning over next 12 weeks or so; that would be pending significant gains in the meantime. Recheck 2-3 weeks.

See Claimant's Exhibit Tab 5, BS 31.

17. On January 7, 2022 Claimant returned to ATP Matus who noted:

> Nathan is seen for left lower back and left lateral hip pains. He has been participating in PT, some mild progress with pain at rest and tolerance to light activity but still quite functionally limited for lift/push/pull activities. He reports his PRP injection was denied and now has a pending court date in March. I recommend he recheck with Dr. Lerston to see if any further options are available. He has made limited functional gains to date, has not been able to resume work.

See Claimant's Exhibit Tab 5, BS 32.

18. On January 28, 2022 Claimant returned to ATP Matus who noted:

> Nathan continues with fairly elevated lower back and hip pains. He has restarted PT, reviewed notes and he is showing some slow but objective gains and therapy has recommended continued visits on a weekly basis. He is set

> to see Dr. Lerston on 2/10 for recheck. His hip PRP was denied, he is pending court date for appeal in March. Recheck in a few weeks for progress.

See Claimant's Exhibit Tab 5, BS 33

19. On February 18, 2022 Claimant returned to ATP Matus who noted:

> Nathan continues with PT, reviewed recent notes and he is showing some progress; albeit slowly. Recommend weekly PT for another 6-8 weeks; place referral today. He has seen Dr. Lerston in recheck. PRP still recommended; but no additional injections at this time. PRP is currently denied pending court date. Continue restrictions. Recheck in a few weeks.

See Claimant Exhibit Tab 5, BS 34.

20. Claimant testified that some of the injections he underwent with ATP Lersten provided relief anywhere from 2 to 5 months, but nothing has been permanent in terms of relief for the symptoms stemming from his admitted workplace injury.

21. Claimant credibly testified that he understands the risks associations with PRP injections and desires to proceed with the procedure so that he can return to work.

22. Claimant credibly testified he is not happy with the lack of progress and the slow recovery he is making under physical therapy, as related to his left hip. Claimant indicates he desires to pursue the PRP treatment.

23. The ALJ finds ATP Lersten and ATP Ogin's opinion and rationale for the PRP injections to be credible and persuasive because their opinions are consistent with Claimant's underlying medical records and statements made to his providers regarding his pain and disability, as well as Claimant's completion of conservative care medical treatment – which did not help.

24. Claimant credibly testified he understands the risks of a PRP injection and wishes to pursue it.

25. The opinions of David H. Elfenbein, M.D., have been considered, as well as the medical treatment guidelines, but such opinion is inconsistent with the underlying records, Claimant's testimony, and the opinions of his ATPs. Before the work injury, the Claimant could perform his regular duties and was not suffering from chronic pain. At this point in time, he cannot. In the end, Dr. Elfenbein's opinion does not appear to offer reasonable medical treatment to improve Claimant's condition. It also appears that Dr. Elfenbein's opinion ignores Claimant's pain complaints and current disability. On the other hand, Dr. Lersten and Dr. Ogin, in their medical judgement, have determined that the PRP injection, which was recommended by Dr. Lersten, offers Claimant the best option to cure and relieve him of the effects of his work injury. Medical records submitted at hearing reveal Claimant has had multiple physical therapy visits, corticosteroid injections and other conservative treatments consisting of physical therapy, anti-inflammatories, pain medications and rest without improvement of his symptoms.

26. Claimant remains under the care of ATP Matus, who has not yet release Claimant at MMI and who noted on December 17, 2021:

> Discussion: Nathan has seen Dr. Ogin for second opinion. He agrees for the greater trochanteric bursitis that PRP is reasonable next option as he had good diagnostic and partial lasting therapeutic benefit to repeat steroid injections. He also agrees lower back injections have had partial benefit, would recommend trial repeat versus facet injection trial. He will continue with Dr. Lerston for now. He has restarted PT, noting some good benefit in pain but still quite functionally limited. We will continue PT and begin to gradually advance some functional lifting. Goal would be advancing to work conditioning over next 12 weeks or so; that would be pending significant gains in the meantime. Recheck 2-3 weeks.

See Claimant's Exhibit Tab 5, BS 31.

27. Based on ATP Matus' reports Claimant has not returned to baseline and continues to have chronic and disabling pain that has not been relieved by any of the treatments provided to-date. The ALJ finds his conclusions to be credible and persuasive since they are supported by Claimant's testimony and the opinions of the ATPs.

28. Claimant's testimony and his statement to his medical providers mostly track with the underlying medical records. As a result, the ALJ finds Claimant's statements to medical providers and testimony be consistent and persuasive.

29. The ALJ finds the opinions of Claimant's ATPs to be credible and persuasive because the ALJ finds their opinions are supported by the underlying medical records and Claimant's statements to them as well as his testimony about his pain and disability since the work accident.

30. The ALJ finds that before the work accident, Claimant's left hip was not disabled and did not require any active medical treatment. But the ALJ further finds that after the accident, Claimant's left hip required medical treatment and that the condition is disabling. As a result, the ALJ finds that Claimant's work injury caused the need for medical treatment – including the PRP injections which were recommended.

31. The ALJ further finds that the PRP injection is reasonably necessary to treat Claimant's left hip pain which was caused by his work accident. Thus, the need for the PRP injection is also related to his work accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that the November 18, 2021, request by authorized treating provider ("ATP") Michael Lersten, M.D., for a platelet-rich plasma injection ("PRP") into Claimant's left hip bursa is reasonable and necessary, as well as causally related to Claimant's admitted industrial injury.

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Parker v. Iowa*

Tanklines, Inc., W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company, W.* C. No. 4-445-060 (February 22, 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines ("MTG") because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). *See also*: Section 8-43-201(3), C.R.S.

In this case, the issue is whether the proposed treatment is reasonable and necessary, as well as related to the injury. The ALJ evaluated the mechanism of Claimant's injury, his symptoms, the opinions of his treating physicians and medical providers, along the medical opinions of Respondents' experts. Each of the proposed courses of treatment is reviewed, *infra.* The ALJ Also considered the MTG.

Respondents contend that the left hip PRP injection recommended by ATP Lersten and concurred in by ATP Ogin is not necessary or related because the MTG indicate it is contraindicated. This is in fact not the case as the ALJ has found that the symptoms have been present since Claimant's injury.

The Administrative Law Judge ("ALJ") next considered the broader question of whether the MTG applied to the requested PRP injection. The MTG are contained in W.C. Rule of Procedure 17-2(A), 7 Code Colo. Regs. 1101-3, and provide that health care providers shall use the MTG adopted by the Division of Workers' Compensation (Division). The Division's MTG were established by the Director pursuant to an express grant of statutory authority. See § 8-42-101(3.5)(a)(II), C.R.S. 2008. In *Hall v. Industrial Claim Appeals Office,* 74 P.3d 459 (Colo. App. 2003) the Court noted that the MTG are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. See Section 8-42-101(3)(b), C.R.S. 2008.

The MTG are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the MTG in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition. *Deets v. Multimedia Audio Visual,* W.C. No. 4-327-591 (March 18, 2005); see *Eldi v. Montgomery Ward,* W.C. No. 3-757-021 (October 30, 1998) (MGT are a reasonable source for identifying the diagnostic criteria). However, an ALJ is not required to award or deny medical benefits based on the MGT. In fact, there is generally a lack of authority as to whether the MGT require an ALJ to award or deny benefits in certain situations. Thus, the ALJ has discretion to approve medical treatment even if it deviates from the MGT. *Madrid v.Trtnet Group, Inc.,* W.C.4-851-315 (April 1, 2014).

W.C.R.P. 17-5(C) provides in relevant part:

> The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate. For cases in which the provider requests care outside the guidelines the provider should follow the procedure for prior authorization in Rule 16-9.

Claimant's ATPs maintain the PRP injection is a reasonable treatment to pursue at this time in light of the fact that conservative care has failed. There is credible and persuasive evidence that Claimant had no symptoms in his left hip which required medical treatment or caused any disability prior to his admitted industrial injury. Claimant testified that since the admitted industrial injury the pain in his hip has not resolved.

Respondents are liable if the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause a need for medical treatment. Section 8-41-301(1)(c), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). In this case, the evidence leads the ALJ to conclude that while Claimant may have had underlying asymptomatic conditions, it was the admitted industrial injury that caused his symptoms and the need for medical treatment.

The ALJ finds and concludes that the PRP injection recommended is reasonable and necessary to cure and relieve Claimant from the effects of his work injury.

As a result, the ALJ finds and concludes Claimant has satisfied his burden by a preponderance of the evidence that the PRP injection is reasonable, necessary, and related to his work accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay the cost, pursuant to the medical fee schedule, of the PRP injection to Claimant's left hip recommended by ATP Lersten and concurred in by ATP Ogin.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2022.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the respondents have overcome the opinion of the Division sponsored independent medical examination (DIME) physician on the issue of maximum medical improvement (MMI), by clear and convincing evidence.

2. The issue of permanent partial disability (PPD) benefits was also endorsed for hearing, if the DIME opinion was overcome. At the hearing, the parties agreed to hold the issue of PPD in abeyance pending the ALJ's initial decision.

FINDINGS OF FACT

1. On October 14, 2019, the claimant suffered an injury to his right shoulder while working for the employer. On October 25, 2019, the respondents filed a General Admission of Liability (GAL) regarding the October 14, 2019 work injury.

2. During this claim, the claimant has treated with providers a Roaring Fork Family practice.

3. On January 20, 2020, a magnetic resonance image (MRI) of the claimant's right shoulder showed, *inter alia*, a moderately sided acromial spur, mild infraspinatus tendinosis, a bursal tear of the mid distal fibers, an articular tear of the distal anterior fibers, moderate acromioclavicular joint osteoarthritis, and mild atrophy of the teres minor muscle.

4. On June 1, 2020, the claimant was seen by Dr. Ferdinand Liotta for a surgical consultation. Dr. Liotta noted that the claimant was a candidate for shoulder surgery. Thereafter, surgery was scheduled for July 7, 2020.

5. The claimant has Type 2 diabetes. On July 3, 2020, the claimant was seen by Ivy Chalmers, PA-C for a pre-operative appointment. On that date, it was noted that the claimant's hemoglobin A1c level was at 12.8. As a result, the recommended rotator cuff repair surgery was not performed. Dr. Liotta communicated to PA Chalmers that he will not perform the surgery until the claimant's A1c level is less than 8.

6. The claimant's primary care physician is Dr. Christopher Tonozzi. The medical records entered into evidence demonstrate that Dr. Tonozzi attempted to work with the claimant to lower his A1c levels. On July 20, 2020, the claimant's A1c level was 13.9. On December 8, 2020, it was 10.8. On January 19, 2021, the A1c level was 10.9. On March 31, 2021, it was at 9.3. On July 27, 2021, the claimant's A1c level was at 12.5.

7. These same medical records demonstrate that the claimant was not compliant with Dr. Tonozzi's instructions regarding insulin use. For example, on March 31, 2021, Dr. Tonozzi instructed the claimant to increase his insulin to 80 units in the morning and 50 units in the evening. However, on July 27, 2021, the claimant informed Dr. Tonozzi that he had not increased his insulin, and continued at 60 units in the morning, and 45 units in the evening. The claimant also reported that he "had heard lots of insulin might do damage, so he actually decreased. Hoped tea he was taking would help." As noted above, the claimant's A1c level was 12.5 on that date.

8. On April 4, 2021, the claimant was seen by Dr. Andrew Gisleson. On that date, Dr. Gisleson noted that the claimant's diabetes was poorly controlled and he could not undergo surgery. Dr. Gisleson recommended that the claimant be placed at maximum medical improvement (MMI).

9. On June 14, 2021, Dr. David Lorah determined that the claimant reached MMI as of April 6, 2021. Dr. Lorah noted that although the claimant is a potential surgical candidate, he cannot undergo surgery until he is able to lower his hemoglobin A1c levels. Specifically, Dr. Lorah noted that the claimant's A1c would need to be less than 7 prior to undergoing surgery. Dr. Lorah rated the claimant's permanent impairment for his right upper extremity as nine percent (which converts to five percent whole person).

10. On September 10, 2021, the respondents filed a Final Admission of Liability (FAL) relying upon Dr. Lorah's June 14, 2021 report.

11. Following the FAL, the claimant requested a Division sponsored independent medical examination (DIME). On November 16, 2021, the claimant attended a DIME with Dr. Frank Polanco. In connection with the DIME, Dr. Polanco reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Polanco identified the claimant's diagnoses as a right shoulder strain, tendinosis with biceps tearing, and "subacute on chronic" quadrilateral space syndrome. Dr. Polanco opined that the claimant was not at MMI and needed additional treatment including physical therapy and surgery.

12. During his deposition testimony, Dr. Polanco stated that the claimant has adhesive capsulitis (also called "frozen shoulder"). Dr. Polanco recommends the claimant undergo manipulation under anesthesia. It is Dr. Polanco's opinion that this procedure would improve the claimant's function.

13. On January 26, 2022, the claimant attended an independent medical examination (IME) with Dr. Scott Primack. In connection with the IME, Dr. Primack reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his report, Dr. Primack opined that the claimant was at MMI. Dr. Primack noted that the claimant has adhesive capsulitis, secondary to diabetes. In addition, Dr. Primack opined that the treatment recommendation by Dr. Polanco would not address the claimant's condition. Dr. Primack assessed permanent

impairment of 11 percent for the claimant's right upper extremity (which converts to whole person impairment of seven percent).

14. Dr. Primack's deposition testimony was consistent with his report. Dr. Primack explained that due to the claimant's diabetes, he has developed a diabetic shoulder. Specifically, the tendons and soft tissue in the claimant's shoulder have thickened and created adhesions. Therefore, manipulation under anesthesia (as recommended by Dr. Polanco) would not work to improve the claimant's shoulder function. In fact, that procedure would likely worsen the rotator cuff tear.

15. The claimant testified that he would like to undergo the treatment recommended by Dr. Polanco. The claimant also testified that he has tried to reduce his blood sugar levels.

16. The ALJ credits the medical records and the opinions of Drs. Gisleson, Lorah, Liotta, and Primack over the contrary opinions of Dr. Polanco. The ALJ finds Dr. Gisleson's determination that the claimant reached MMI on April 6, 2021 is correct. Dr. Polanco's statement that the claimant was not at MMI is incorrect. The claimant has a torn rotator cuff and could benefit from surgery. However, due to his uncontrollable diabetes, the claimant cannot undergo surgery at this time. Therefore, the ALJ finds that it is highly probable and free from substantial doubt that the claimant is at MMI unless and until he can reduce his A1c level.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the respondents have overcome the DIME physician's opinion by clear and convincing evidence. As found, Dr. Polanco's statement that the claimant was not at MMI is incorrect. The claimant reached MMI on April 6, 2021. As found, the medical records and the opinions of Drs. Gisleson, Lorah, Liotta, and Primack are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents have overcome the DIME physician's opinions by clear and convincing evidence.

2. The claimant reached maximum medical improvement (MMI) on April 6, 2021.

3. The issue of permanent partial disability (PPD) benefits is reserved for determination by the ALJ. Within twenty (20) days after this Findings of Fact, Conclusions of Law and Order becomes final, the parties shall notify the ALJ of a date mutually convenient for the parties to submit position statements on the issue of PPD benefits.

Dated this 27th day of April 2022.

Cassandra M. Sidanycz
Administrative Law Judge

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 S. Circle Drive Ste. 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **[Redacted],** Claimant, v. **[Redacted]** Employer, and **[Redacted],** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-168-949-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

A hearing in the above captioned matter was held before Administrative Law Judge (ALJ), Richard M. Lamphere on March 22, 2022. The proceeding was digitally recorded in Courtroom 1 of the Office of Administrative Courts in Colorado Springs, Colorado between 1:00 and 1:34 p.m.

Claimant was present and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq. Testimony was taken from Claimant. In lieu of presenting his live hearing testimony, Respondents elected to take the pre-hearing deposition of Dr. Marc Steinmetz. A transcript of the March 8, 2022, deposition of Dr. Steinmetz was lodged with the OAC prior to the hearing and was admitted into evidence by the ALJ along with the following exhibits: Claimant's Hearing Exhibits 1-8 and Respondents' Hearing Exhibits A-E.

Following the presentation of evidence, the ALJ held the record open through April 5, 2022 to allow counsel time to submit written position statements in lieu of closing argument. The parties' position statements have been received. Consequently, the matter is ready for an order.

In this Summary Order [Redacted] will be referred to as "Claimant". [Redacted] will be referred to as "Employer" and AIU Insurance will be referred to as "Insurer". The term "Respondents" refers to Employer and Insurer collectively. All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2020); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3

ISSUES

The issues addressed by this decision involve a determination of Claimant's average weekly wage (AWW) and his entitlement to a period of temporary total disability (TTD) benefits extending from July 3, 2021 to November 15, 2021.

PROCEDURAL MATTERS

At the outset of hearing, Respondents agreed that Claimant's AWW of $486.88, as reflected on the Final Admission of Liability (FAL) was incorrect. Respondents agreed that Claimant's AWW should be increased to $597.22 based upon wage records reflecting Claimant's earnings from September 5, 2020 through April 3, 2021. Respondents also agreed that temporary total disability (TTD) benefits were due and payable from July 3, 2021 through July 21, 2021, subject to an offset due to Claimant's receipt of short-term disability benefits.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Steinmetz, the ALJ enters the following findings of fact:

1. Claimant suffered a compensable injury to his left wrist on April 2, 2021, while helping a co-worker who was having a seizure.

2. Claimant was referred to Concentra Medical Centers for treatment. Dr. Douglas Bradley oversaw Claimant's care. Claimant was also treated by Nurse Practitioners (NP) Antonio Ramos and Brandon Madrid.

3. Claimant was assigned work restrictions on April 5, 2021 of no lifting, pushing, pulling or carrying greater than two (2) pounds. He was then released to return to modified duty work.

4. Claimant worked in a modified duty capacity from April 2, 2021 through July 2, 2021, at which time Employer placed him on leave due to their policy of offering only 12 weeks of modified duty. Claimant was restricted when Employer placed him on leave. Consequently, Claimant was paid $4,219.75 in short term disability on November 18, 2021 for his Employer's imposed leave of absence extending from July 3, 2021 through November 15, 2021.

5. Dr. Timothy Hart performed an orthopedic evaluation on May 20, 2021. Following his examination, Dr. Hart did not believe that surgery was warranted.

6. Claimant's work restrictions were liberalized to permit lifting, pushing, pulling and carrying up to ten pounds on June 2, 2021. Nonetheless, he remained restricted through July 13, 2021.

7. On July 13, 2021, Claimant reported tingling and grinding in the left wrist. Consequently, Claimant returned to Dr. Hart for further evaluation.

8. On July 22, 2021, Dr. Hart noted that therapy had been helpful in "resolving a significant portion of pain in other parts of the wrist, but the first dorsal compartment pain [remained]". Dr. Hart explained that Claimant's ongoing symptoms were consistent with de Quervain's tenosynovitis, which may respond to a cortisone injection. Claimant consented to the injection and Dr. Hart proceeded to inject the wrist based upon his assessment of left wrist de Quervain's tenosynovitis.

9. Respondents sought an opinion from Dr. Marc Steinmetz regarding the relatedness of Claimant's de Quervain's tenosynovitis to his April 2, 2021 industrial injury. Dr. Steinmetz conducted a records review on July 26, 2021. Following his records review, Dr. Steinmetz opined that Claimant's ongoing symptoms were "more likely related to a preexisting left wrist fracture and not the 04/02/2021 incident".

10. On July 27, 2021, Dr. Bradley lowered Claimant's lifting, pushing, pulling and carrying capacity from 10 pounds to 1 pound.

11. On August 12, 2021, Dr. Hart recommended surgery to address Claimant's persistent left wrist symptoms. Dr. Hart requested pre-authorization to perform a first dorsal release surgery on August 16, 2021.

12. Respondents denied the surgery and requested an independent medical examination (IME) with Dr. Steinmetz. Dr. Steinmetz completed the examination on September 9, 2021. Following his IME, Dr. Steinmetz opined that Claimant's ongoing left wrist symptoms were related to de Quervain's radial wrist tendinitis, which is a cumulative trauma disorder "completely" inconsistent with the pronated flexion and grasping mechanism of injury described by Claimant as occurring April 2, 2021. Dr. Steinmetz concluded that Claimant was suffering from left radial wrist and thumb de Quervain's syndrome that was unrelated to the 04/02/2021 incident. He also opined that Claimant reached maximum medical improvement (MMI) for April 2, 2021 injury on July 22, 2021.

13. Claimant returned to Dr. Bradley on September 22, 2021. Dr. Bradley opined that Claimant was "not at MMI, but [was] anticipated to be at MMI on 11/15/2021".

14. Dr. Richard Trifilo assumed Claimant's care on October 19, 2021. On this date, Dr. Trifilo noted that Claimant was "approximately 25% of the way toward meeting the physical requirements of his job". Dr. Trifilo indicated that Claimant had "restrictions for [the] left hand", indicating specifically that Claimant could lift, push, pull and carry 0 pounds. Finally, Dr. Trifilo noted that Claimant was not at MMI, but was anticipated to be so on December 30, 2021.

15. On November 16, 2021, Respondents sent a copy of Dr. Steinmetz' September 9, 2021 IME report to Dr. Trifilo along with a request regarding his opinions concerning MMI, impairment, restrictions and Claimant's ongoing treatment needs. Dr. Trifilo opined that Claimant had reached MMI without impairment or need for maintenance care. He fixed the date of MMI as of November 16, 2021 and returned Claimant to full duty work without restriction.

16. Respondents filed a medical only FAL consistent with the opinions of Dr. Trifilo on November 29, 2021. Claimant objected to the November 29, 2021 FAL. He requested a Division Independent Medical Examination (DIME). He filed a separate Application for Hearing endorsing, among other things, "Average Weekly Wage" and "Temporary Total Benefits from July 3, 2021 to Continuing".

17. Wage records submitted into evidence document that Claimant earned a total of $17,916.74 between September 5, 2020 and April 3, 2021, which Respondents contend supports an AWW of $597.22. Claimant asserts that because he got several raises between his date of hire and the date of injury, Respondents' method of calculation, i.e. including wages back to his date of hire, is an unfair reflection of his AWW. Claimant argues that the most accurate method of calculating his AWW is to look at the wage on the date he was injured and use a 40-hour workweek since he was hired to work 40 hours per week.

18. The ALJ agrees with Claimant that calculating his AWW by using pre-injury wages at substantially lower hourly rates going back to his date of hire results in an inherently low AWW that does not accurately reflect his wage loss and diminished earning capacity. Based upon the evidence presented, the ALJ agrees that Claimant's AWW should be calculated based upon his earnings at the time he was injured. The records reflect that Claimant's hourly rate at the time of injury was $19.57 per hour, which, when multiplied by 40 hours per week yields an AWW of $782.80.

19. While the ALJ agrees that Claimant's AWW should be computed based upon the wages he was earning at the time of his injury, he is not convinced that the calculation should be grounded on a 40-hour workweek. Here, the wage records support a finding that in the 30 weeks between September 5, 2020 and Claimant's April 2, 2021 date of injury, he only worked a 40-hour pay period eight (8) times. Consequently, the Claimant's suggestion that his contract for hire supports a reasonable expectation of working 40 hours/week is unpersuasive.

20. Based upon the evidence presented, the most fair method by which to calculate the average number of hours Claimant worked per week is to average his time over the entire period extending from September 5, 2020 to the last full pay period ending March 27, 2021. The wage records reflect that for this period, Claimant worked a total of 897.25 hours or 30.78 hours per week. (897.25 hours ÷ 204 days × 7 days/week = 30.78 hours). Multiplying Claimant's average number of hours worked per week by his hourly rate of $19.57 yields an AWW of $602.36, which the ALJ finds most

closely approximates his wage loss and diminished earning capacity at the time of his April 2, 2021 work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Average Week Wage

A. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of an injured workers wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993); *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo.App. 1997).

B. Sections 8-42-102(3) and (5)(b), C.R.S. (2020), gives the ALJ discretion to determine an AWW that will fairly reflect the loss of earning capacity. It is well settled that if the specified method of computing a claimant's AWW will not render a fair computation of wages for "any reason," the ALJ has discretionary authority under, § 8-42-102(3) C.R.S. 2020, to use an alternative method to determine AWW. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993). The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity comes from the wage records submitted into evidence. As found, Respondents methodology in calculating Claimant's AWW results in a fundamentally unfair figure that does not represent Claimant's true wage loss and diminished earning capacity. Based upon the findings articulated above, the ALJ concludes that Claimant's AWW should be based upon his earnings at the time of his injury rather than including significant periods where he was earning less wages shortly after being hired, as Respondents have done here. Indeed, even **post-injury** raises can form the basis for an increase in a claimant's AWW for periods of disability occurring after the initial period of disability where "manifest injustice" would result if the claimant's benefits are calculated based on lower earnings at the time of the injury. *Campbell v. IBM Corp., supra; see also Lozano v. Grand River Hospital District*, W.C. No. 4-734-912 (ICAO, February 4, 2009); *Marr v. Current, Inc.*, W.C. No. 4-407-504 (ICAO, September 20, 2000). While the question presented does not involve a post-injury wage increase, Respondents are effectively using Claimant's lower wages for periods preceding his industrial injury to artificially lower his AWW, which the ALJ concludes will result in "manifest injustice" should Claimant experience a subsequent period of disability. As found, the ALJ determines that Claimant's average weekly wage is $602.36 as this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his April 2, 2021 compensable work related injury.

Claimant's Entitlement to Temporary Total Disability

C. To receive temporary disability benefits, Claimant must prove that his injury caused a disability, that he left work as a result of the injury and that his temporary disability is total and lasts more than three regular working days. Sections 8-

42-103(1)(a) and (b), 8-42-105(1), C.R.S. 2020; *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). The term "disability" connotes two distinct elements. The first element is "medical incapacity" evidenced by loss or restriction of bodily function. The second element is loss of wage-earning capacity as demonstrated by the claimant's inability "to resume his or her prior work." *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Disability may be evidenced by the complete inability to work, or by restrictions, which impair the claimant's ability to effectively and properly perform his/her regular employment. *Ortiz v. Charles J. Murphy and Co.*, 964 P.2d 595 (Colo. App. 1998); *Ricks v. Industrial Claim Appeals Office*, 809 P.2d 1118 (Colo.App. 1991); *See also, McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo.App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with § 8-42-105(3)(a)-(d), C.R.S. 2020.

D. In this case, the evidence supports a conclusion that Claimant was under restrictions and working modified duty when Employer elected to place him on leave on July 3, 2021. Indeed, at the time he was placed on leave, Claimant was working modified duty with a ten (10) pound lift, push, pull and carry restriction as evidenced by the June 2, 2021 report of NP Madrid. Unfortunately, persistent symptoms resulted in a change in Claimant's restrictions on July 27, 2021, when Dr. Bradley amended Claimant's lifting, pushing, pulling and carrying capacity from 10 pounds to 1 pound. By September 22, 2021, Dr. Bradley precluded Claimant from any lifting, pushing, pulling or carrying with the left hand. The zero lift, push, pull and carry restriction remained in place until November 16, 2021 when Dr. Trifilo placed Claimant at MMI and returned him to full duty work.

E. The ALJ credits Claimant's testimony that his wrist injury precluded him from performing the full range of duties required in his position and beyond that, that he received help from his co-workers and supervisors to complete some duties while working modified duty. Claimant's testimony combined with the content of his medical records persuades the ALJ that Claimant's wrist injury resulted in medical incapacity as evidenced by a loss/restriction in bodily function, which restriction reduced his wage earning capacity as demonstrated by his inability to return to full duty employment based on the imposition work-related restrictions. Consequently, the ALJ concludes that Claimant has established that he is "disabled" within the meaning of section 8-42-105, C.R.S. Moreover, the evidence presented supports a conclusion that Claimant has suffered a wage loss as a direct result of his disabling wrist injury. Indeed, Claimant was placed on leave on July 3, 2021, after Employer could no longer accommodate the modified duty schedule he required as a direct result of his work injury. While the evidence supports that Claimant received short-term disability for the time he was on leave, he earned no wages and his short-term disability did not amount to wage replacement. Consequently, the ALJ concludes that Claimant has established an actual wage loss directly related to his industrial injury. Because Claimant has established that his injury caused a disability, that he left work as a result of the injury and that his temporary disability was total and lasted more than three regular working days, he is entitled to TTD. Sections 8-42-103(1)(a) and (b), 8-42-105(1), C.R.S. 2020; *Culver v.*

Ace Electric, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999).

F. Once the claimant has established a disability and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d).

G. C.R.S. § 8-42-105(3) provides in pertinent part: Temporary total disability benefits shall continue until the first occurrence of any one of the following:

(a) The employee reaches maximum medical improvement;

(b) The employee returns to regular or modified employment;

(c) The attending physician gives the employee a written release to return to regular employment; or

(d)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

H. As noted, Respondents agree that temporary total disability benefits are due and payable from July 3, 2021 through July 21, 2021 subject to a short-term disability offset. However, Respondents urge the ALJ to terminate Claimant's entitlement to TTD on July 22, 2021 based upon the opinions of Dr. Steinmetz that Claimant reached MMI for his work related injury on July 22, 2021. Indeed, Respondents argue that because Dr. Steinmetz credibly testified that the cause of Claimant's ongoing symptoms and disability after July 22, 2021 were related to his non-industrial de Quervain's syndrome rather than the April 3, 2021 wrist sprain, Claimant is not entitled to TTD beyond July 22, 2021. The ALJ is not persuaded.

I. Although the ALJ may not disregard the attending physician's report releasing a claimant to regular employment, if there is a conflict in the record regarding the claimant's release to work, "the ALJ must resolve the conflict." *Imperial Headware, Inc*. *v. Industrial Claim Appeals Office*, 15 P.3d 295, 296, (Colo. App. 2000). It is also well established that if the record contains conflicting opinions from multiple attending physicians concerning the claimant's ability to perform regular employment, the ALJ may resolve the conflict as a matter of fact. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Burns v. Robinson Diary*, 911 P.2d 661 (CoIo.App. 1995).

J. Where there are no conflicting opinions from physicians regarding a Claimant's release to work, the ALJ is not at liberty to disregard the attending physician's opinion that a claimant is released to return to employment. *Burns Robinson Dairy, Inc*., 911 P.2d at 662. However, if there is a conflict in the record regarding a

Claimant's release to return to regular employment, the ALJ must resolve the conflict. *Imperial Headware*, 15 P.3d at 296.

K. In this case there is no conflict among the authorized treating physicians regarding the date of MMI and Claimant's full duty work release. It is clearly November 16, 2021 per the report of Dr. Trifilo. Dr. Steinmetz is not an authorized treating physician, but is instead a retained expert hired by the Respondents to opine as to causation and Claimant's need for additional treatment, i.e. surgery directed to the left wrist. Pursuant to C.R.S. § 8-42-107(8)(b)(I), "[a]n authorized treating physician shall make the determination as to when the injured employee reaches maximum medical improvement as defined in section 8-40-201(11.5). Accordingly, the ALJ agrees with Claimant that Dr. Steinmetz's MMI opinion cannot be used to terminate Claimant's entitlement to ongoing TTD.

L. When Respondents filed the Final Admission of Liability, they had an opportunity to disagree with the date of MMI by filing for a DOWC IME but chose, instead, to agree with the date of MMI of Dr. Trifilo. Since Claimant was under restrictions from the authorized treating doctors up to the date of MMI he is entitled to be paid temporary disability if, as here, the Employer was unable to accommodate his restrictions. Here, the Employer offered no testimony to contradict Claimant's statements that this is what occurred when he was no longer afforded light duty beginning July 3, 2021. Claimant's testimony and the supporting exhibits persuade the ALJ that he is entitled to TTD extending from July 3, 2021, when Employer elected to place him on leave, through November 15, 2021, since he was placed at MMI and released to full duty work by Dr. Trifilo on November 16, 2021.

M. Because Claimant's period of disability lasted longer than two weeks from the day he left work as a consequence of his left wrist injury, Claimant is entitled to recover disability benefits from the day he left work in this case, i.e. July 3, 2021. Section 8-42-103(1)(b), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $602.36.

2. Respondent shall pay Claimant TTD benefits from July 3, 2021 through November 15, 2021, at the appropriate TTD rate associated with Claimant's average weekly wage of $602.36. Respondents are entitled to offset Claimant's TTD benefits based upon payment of short-term disability benefits to Claimant for his leave of absence from July 3, 2021 through November 15, 2021. The parties shall determine the amount of the offset. If the parties are unable to reach an agreement regarding the amount of the offset, either may apply for a hearing to determine the same.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant sustained a work related injury or occupational disease in the course and scope of her employment on October 5, 2020.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to received medical benefits that are authorized, reasonably necessary and related to the injury, if Claimant is found to have sustained a work related injury.

III. Whether Claimant has proven entitlement to reimbursement of out of pocket expenses related to obtaining medical care, if the claim is found compensable and medical benefits are determined to be reasonably necessary and related to the claim.

STIPULATIONS

The parties stipulated that all other issues listed by the parties in their pleadings but not addressed by this order, shall be held in abeyance pending the determination of the above issues, with the exception of penalties for failure to comply, which was withdrawn by Claimant.

If the claim is found compensable, Respondents stipulated that they had not issued a Rule 8 letter and Claimant had selected as her authorized treating provider (ATP) her personal treating physicians (PCP), including but not limited to Dr. Jennifer Hepp and Dr. John Papilion, her orthopedic surgeon.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

a. Claimant's testimony

1. Claimant was 55 years old at the time of the hearing, right handed and approximately 5'1" tall. Claimant worked as a merchandiser, or field support representative, for Employer hired on January 15, 2014. Her job included distributing product to approximately 150 kiosks, machines that rent movies, in her assigned territory, and would do approximately 30 kiosks per day, but the quantity varied depending on the location and other duties she was required to complete during any particular week. She would work Monday through Friday but the hours varied depending on the quantity of kiosks that she would service on a given day.

2. Claimant would obtain the merchandise from the warehouse once or twice per week, meeting the trucks and locating the appropriate pallets of products. She would

break down and build boxes, sort the stock, break it down by day and retrieve the boxes to load into her car. She would also deliver to the warehouse the merchandise that was taken out of the kiosks. The day boxes were 12”x12”x6” in size, and would weight from approximately two to twenty pounds. Claimant would take the full boxes out of her car and organize them on a table in her garage across from her residence. She would handle a lot of day boxes every day, at least 150 per week.

3. The job also included logging into the machines, pulling out movies from the kiosk machines, cleaning them, doing minor maintenance, and loading the kiosk with the new merchandise. If there were any stickers, she would put the stickers on the kiosks.

4. The merchandise she would retrieve from the machines she packed in large shipping boxes that were 24”x15”x15” rectangles and would weight up to approximately forty pounds when full. She would keep these full ones in her garage until the next time she went to the warehouse, where she would deliver them for shipping. When she retrieved the new merchandise from the warehouse, she would keep them in her garage on a table which was organized by everyday boxes (new products) and shipping boxes (old products). She would handle approximately two to five full shipping boxes per day. By the end of the week Claimant would have anywhere from five to twenty five shipping boxes loaded. She loaded the shipping boxes herself, meaning no one helped her to load them up into her vehicle, and she delivered them generally on Friday. In general, in this position, Claimant would use her personal vehicle to maintain an assigned merchandising route and was authorized to store merchandize in her garage.

5. She considered the work she performed to be repetitive in nature and the work performed at each kiosk was similar. She agreed with the descriptions of the jobs generally to be similar as those assessed by the Job Demand Analysis issued for a different employee on February 25, 2019, but it did not contain all details of her job. She disagreed that the job she performed was not repetitive in nature.

6. On October 6, 2020 she began her day at approximately 6 a.m., clocking in using a phone app. She had to move some shipping boxes out of the way to get to her everyday boxes for the day. She had already moved one shipping box aside when she lifted a full shipping box to stack it upon the first one. She had the box at above shoulder height during the lift, lifting from the bottom of the box, when she felt a pop in her right shoulder and immediate onset of pain in her shoulder. She recalled that the pain was a sharp stabbing pain. Claimant rubbed at the shoulder and waited several minutes before she could continue sorting her merchandise.

7. Claimant called her supervisor to inform her of the incident, telling her that she hurt her right shoulder by picking up a box and that she was in pain. Claimant informed her supervisor that she had taken some Aleve to relieve some of the symptoms by then. Her supervisor informed her that workers’ compensation would not take any steps to help her with regard to the shoulder problem because they would just look at it as a repetitive motion issue. Her supervisor did not offer her any medical care or to complete a report of the injury. The conversation lasted approximately 20 minutes. She then took approximately 30 everyday boxes to her car, continuing to work that day.

8. Claimant continued working full duty after her date of injury on October 6, 2020. She continued to worsen and was having difficulty moving her shoulder because it was so inflamed. She had to use her left upper extremity to compensate.

9. Claimant stated she completed the online form on Employer's website with regard to the injury on the same day of the injury, October 6, 2020, but did not receive a call back or any information from Employer or their workers' compensation insurer.

10. Claimant conceded that she had had prior problems with the right shoulder, specifically achiness. She did not recall for what period of time, but had discussed it with her primary care physician (PCP) at Advanced Integrative Medicine, was examined but was not offered any medical treatment, including diagnostic testing or referrals to specialists or physical therapy. Claimant would take over the counter medications and the symptoms would subside.

11. She explained that two days after the accident she had an appointment with her PCP but was instead seen by a nurse practitioner. The appointment was originally scheduled to treat a personal problem. Claimant stated that she advised the nurse that she had injured her shoulder by lifting a box, was asked to mobilize her arm, told to use ice on it, but was advised that the nurse did not handle work related injuries.

12. She later returned to her PCP and was seen by Dr. Jennifer Hepp. Claimant relayed that she had been moving a box when she heard a pop and had pain, which continued throbbing throughout the day, continuing to get worse as the days went by from performing repetitive activities as she continued to work. She stated she was having problems moving her shoulder and showed Dr. Hepp that it was inflamed. She advised that it was different and much worse than what she had been experiencing previously.

13. Claimant testified that Dr. Hepp first sent her for x-rays, then an MRI and eventually referred her to Dr. John Papilion, an orthopedic specialist. Claimant testified that Dr. Papilion encouraged her to seek workers' compensation benefits for her right shoulder injury and treatment.

14. She stated that when she saw Dr. Papilion, he recommended surgery right away, since injections and physical therapy were unlikely to help. Claimant recalled telling Dr. Papilion that she was hurt lifting a box at work and Dr. Papilion recommended she apply for workers' compensation benefits as she was likely to be out of work for some time.

15. Claimant continued to work until the Thursday she was seen by Dr. Papilion. Then she proceeded with the surgery and post-operative care, including physical therapy but had to discontinue it when she found out her parents had COVID-19 and she went to them in New Mexico, where, eventually her mother was sent home but her father eventually passed away in the hospital at the end of December, 2021. She was unable to return to physical therapy because she could no longer afford it. However, she reported that her right shoulder was much better following the surgery.

b. Medical Records Prior to Alleged Injury

16. Claimant was evaluated by Dr. Jennifer Hepp on October 16, 2015 regarding right shoulder, elbow, forearm and hand pain as well as joint pain. On physical exam there was no musculoskeletal tenderness, though Claimant was tender to palpation

of the bilateral epicondyles and flexor muscles of the right forearm. She stated that Claimant required supportive care for epicondylitis, including ice, rest and topical agents.

17. On August 9, 2017 Dr. Hepp again noted Claimant had increased joint pain, stiffness and fatigue and commented that Claimant was concerned due to a family history of rheumatoid arthritis (RA). Dr. Hepp ordered some lab work at that time. In a follow-up on October 19, 2019 Dr. Hepp remarked that Claimant had complaints of right shoulder, upper extremity pain. Dr. Hepp noted Claimant was having shoulder pain for some time and was using OTC medication as the pain moved down the arm. She observed that the musculoskeletal pain was likely related to overuse strain caused by her repetitious actions at work and did not note a serious injury. The lab work came back negative for RA.

18. On August 28, 2020 Claimant was seen at Denver Integrated Spine Center by Michael Schnider, D.C., where she complained of multiple issues of the cervical, thoracic and lumbar spine as well as continuous aching and throbbing discomfort in the right trapezius with a VAS scale pain of 5/10 approximately 90% of the time. She was provided with manual therapy including manual traction, trigger point therapy and myofascial release to her upper right quadrant including right trapezius, levator scapula, and rhomboid muscles. She was assessed with cervical, thoracic and lumbar joint dysfunction with associated myospasms. Claimant continued with at least one more session of chiropractic care on September 3, 2020 when her shoulder discomfort decreased to a 3/10 only 40% of the time.

c. Medical Records After Alleged Injury

19. Claimant was seen by Heath Rooney, a nurse practitioner at her PCP's office, on October 8, 2020 for a possible urinary tract infection (UTI). The nurse did not document any report of the work related injury in the medical records. She documented an exam consistent with the UTI and ordered lab tests.

20. Dr. Hepp evaluated Claimant on November 16, 2020 regarding the ongoing right shoulder pain. She reported that Claimant advised her PCP that she had been trying to reduce the repetitive motion she was performing and had her chiropractor treat it, which provided some relief. Now the pain had increased and worsened. Claimant had significant pain on testing, with a positive drop arm test on the right and loss of range of motion. Dr. Hepp questioned the integrity of the rotator cuff for either moderate tear or complete tear. She diagnosed right shoulder pain and right rotator cuff syndrome, and ordered an MRI of the right shoulder.

21. The x-rays were completed at Health Image Cherry Creek and read by Erik Handly, M.D. on December 3, 2020. They showed an apparent moderate calcific tendinitis over the rotator cuff, most likely the supraspinatus tendon.

22. An MRI was performed on January 8, 2021 and read by Dr. Handly. The technician took a history that the MRI was being performed due to the "lifting injury" and "limited range of motion" of the right shoulder. Dr. Handly identified a full-thickness tear of the supraspinatus tendon with medial retraction of 1.4 cm, moderate subacromial and subdeltoid bursal fluid and no rotator cuff muscular atrophy or edema. He also noted mild acromioclavicular arthropathy with mild to moderate active edema, superior labral fraying and degeneration, without discrete tear, and mild glenohumeral chondromalacia.

23. Claimant was first evaluated by Dr. John Papilion of Orthopedic Centers of Colorado, LLC, on January 21, 2021. Claimant reported symptoms of the right shoulder with a gradual onset with now symptoms interfering with sleep, activities and worsening. The pain was deep, throbbing and frequent, exacerbated by motion of the shoulder. She provided a history of a right shoulder injury in October 2020 doing repetitive lifting of boxes in her home office for Employer and developed onset of right shoulder pain with progressive weakness and loss of motion. Claimant advised she reported it to her Employer "but did not make a work comp claim." Dr. Papilion noted specifically that the MRI showed a full thickness tear of the supraspinatus tendon with retraction and "no significant muscular atrophy", which indicated that this was "an acute tear." On exam he noted mild right supraspinatus tenderness, and positive Hawkins-Kennedy and impingement tests. He assessed that Claimant had a traumatic complete tear of the right rotator cuff, specifically stating that it was not degenerative in nature. Dr. Papilion noted that there were no other hobbies or recreational activities other than work to account for the traumatic injury and rotator cuff tear. He recommended surgery and scheduled it for February 1, 2021.

24. Dr. Hepp attended Claimant on February 8, 2021 to complete short term disability forms, reported Dr. Papilion's opinions with regard to her need for surgery and that she was not able to perform her job. On March 18, 2021, Claimant returned to Dr. Hepp, where she reported to Dr. Hepp that she had hurt her shoulder in October 2020. Dr. Hepp reviewed shoulder exercises and stretches, as well as provided education and precautions.

25. Dr. Papilion proceeded with the surgery on May 28, 2021 at DTC Surgery Center for the full thickness rotator cuff tear, supraspinatus tendon tear of the right shoulder, the chronic biceps tendon rupture and chronic impingement of the right shoulder. The procedure included debridement of the superior labrum and rotator cuff, decompression and releases of the coracoacromial ligament and repair of the cuff. During the surgery, Dr. Papilion noted that Claimant had a chronically disrupted and retracted biceps tendon, the superior labrum had a small stump that was debrided to a stable rim excising the stump. The undersurface revealed a full-thickness tear of the supraspinatus tendon without retraction. There was marked thickening and inflammation of the bursa and the edges of the cuff were smoothed to a stable rim. Dr. Papilion performed a subacromial decompression where the coracoacromial ligament was released from the AC joint and the acromion hook was smoothed and then he proceeded to repair the rotator cuff, including placement of the suture anchors into the greater tuberosity.

26. On July 6, 2021 Dr. Papilion saw Claimant in follow up with good recovery and minimal pain but was still using a sling. Claimant reported engaging in physical therapy with increases in range of motion. She was instructed to wean off of the sling, continue with PT but was limited to no use of the right upper extremity. Claimant was again seen on August 24, 2021. Dr. Papilion specifically noted that "It remains my opinion that this was a work-related injury posttraumatic as well as repetitive. She had no antecedent problems with the shoulder and no other recreational or vocational activities to account for her symptoms." Dr. Papilion noted on September 30, 2021 that Claimant was "doing well 4 months post arthroscopy rotator cuff repair right shoulder. She still has

some residual weakness but I believe her repair is intact." He ordered more aggressive therapy for strengthening with a work conditioning program. He changed her work restrictions to 10 pound lift limit overhead. By November 2, 2021 Claimant only had mild discomfort after PT and some difficulty with overhead lifting.

27. Dr. Allison M. Fall of Colorado Pain and Rehabilitation examined Claimant on August 18, 2021 upon Respondents' request. Claimant provided a history that was consistent with her testimony, including the reports of achiness in the right shoulder prior to the work injury, which she thought was arthritis. Claimant reported a specific incident to Dr. Fall occurring on October 6, 2020. Dr. Fall opined that the medical records support a repetitive motion and gradual onset of the rotator cuff pathology and not a specific incident. She reviewed the job demands analysis for a field support representative (merchandiser) and concluded that the work Claimant performed did not fall within the risk factor assessment for a repetitive motion shoulder injury under the causation analysis of the Cumulative Trauma Conditions Medical Treatment Guidelines, W.C.R.P. Rule 17, Exhibit 5, effective March 2, 2017. Dr. Fall specifically stated that she was unable to opine within a reasonable degree of medical probability that Claimant sustain an acute traumatic injury on October 6, 2020. However, if found that Claimant did have an acute injury, then Claimant was not at maximum medical improvement and required further care.

28. John Hughes, M.D. of Hughes Medical Consulting evaluated Claimant on January 20, 2022 upon Claimant's request. He noted a similar history as provided to Dr. Fall and through testimony, that Claimant was lifting a box which weight approximately 40 lbs. when she felt her right shoulder "popped." She advised that she did not go in for immediate treatment but that her symptoms got progressively worse after the date of the injury, over time as she continued working. He noted that Claimant continued to have some symptoms of pain in the right shoulder of 3/10 and weakness that limited her ability to lift. Dr. Hughes noted that Claimant did not engage in activities or sports other than riding a motorcycle, which she had not done since her injury. He diagnosed a calcific tendinitis, which is documented prior to her injury and not work related, and is a known complication of diabetes. This condition can cause weakening of the affected tendons making an individual vulnerable to sustaining frank rotator cuff rupture, as Claimant suffered on October 6, 2020 while lifting a box at work. He opined that the shoulder injury sustained on October 6, 2020 developed into a full-thickness rotator cuff tear and was related to the work injury. He also stated that the post arthroscopic repair, decompression and debridement performed on May 28, 2021 by Dr. Papilion was a reasonably necessary treatment caused by the work related October 6, 2020 workplace injury.

29. Dr. Hughes agreed "with Dr. Papilion that the lack of atrophy seen on the MRI and at the time of surgery is consistent with an acute rotator cuff rupture." He further noted that "[A]lso, consistent with acuity is the reactive bursitis seen on the MRI of January 8, 2021." His ultimate opinion is that Claimant "sustained an acute work-related rupture of the right supraspinatus tendon as a result of her lifting activities of October 6, 2020." He opined that the treatment under Dr. Papilion, including the additional physical therapy was reasonably necessary and related to the October 6, 2020 work place injury.

30. On February 27, 2022 Dr. Fall issued an addendum report with further medical records review, including Dr. Hughes' IME report. She noted she did not disagree

with Dr. Hughes' opinion that the MRI findings were consistent with an acute rotator cuff rupture. She noted that other providers opined that Claimant's injury was from repetitive motion, in conflict with the history Claimant provided Dr. Hughes and Dr. Fall identifying a specific incident. However, she stated that nothing in the new records she reviewed changed her opinion.

31. On March 2, 2022 Dr. Papilion stated the following within a reasonable degree of medical probability:

> It is my medical opinion that she did sustain a work-related injury to her right shoulder. She was doing repetitive lifting of heavy boxes. Although she had a pre-existing history of calcific tendinitis this was not symptomatic. She was fully functional. After this incident she had significant weakness and loss of motion. An MRI confirmed a full-thickness tear in the rotator cuff. There was no muscular atrophy. This is consistent with an acute tear.
>
> She has performed this type of work for over 7 years. This repetitive heavy lifting is likely a source of her pre-existing shoulder complaints. She was fully functional until this incident on 10/6/2020. It is therefore my opinion that she did sustain an acute exacerbation in this lifting incident to her underlying rotator cuff pathology from repetitive lifting.
>
> Mechanism of injury in rotator cuff tears include repetitive lifting with rotator cuff fiber failure over a period of time. A traumatic injury would be direct impact from a fall or very commonly lifting incident. This is direct force on the rotator cuff tendon that ultimately fails. The tendon is full-thickness and has some retraction. In an acute tear there is no muscular atrophy of the rotator cuff muscles and no fatty infiltration. This is all consistent with an acute tear.
>
> It is precisely this mechanism that, in my opinion occurred with [Claimant].
>
> I agree with Dr. Hughes's report. He is correct in his conclusion that while this patient had underlying shoulder problems that she had no antecedent trauma nor any vocational or recreational activities that would account for rotator cuff tear. In addition she did repetitive lifting for over 7 years and had an acute event which ultimately was diagnosed with a full thickness rotator cuff tear. He concurs with my opinion that the MRI revealed an acute rotator cuff tear consistent with a traumatic event. He also agreed that surgical indication was reasonable and medically necessary. He also agreed that she was not at MMI and required additional physical therapy to reach MMI. This was opined by Dr. Hughes in his IME and Dr. Fall in her IME. I wholeheartedly concur.

d. Dr. Allison Fall Testimony

32. Dr. Fall testified at hearing and was accepted as an expert in physical medicine and rehabilitation, noting that she had examined Claimant previously, taken a history and reviewed medical records, which she documented in her two written IME reports. Dr. Fall explained primary and secondary risk factors for cumulative trauma conditions based on the determinations of a panel of physicians and experts that reviewed research and studies regarding the effect of repetitive work on the body. She stated that based on the Claimant's description and the demands analysis that Claimant did not have any risk factors. Dr. Fall testified consistent with her reports, stating that the medical records did not support a determination of a specific event occurring on October 6, 2020.

However, she stated that Claimant required the surgery performed by Dr. Papilion. She established that the Medical Treatment Guidelines were guidelines for physicians to assess causation and risk but that not every injured worker fit within the guidelines and had to be assessed on a case by case basis. Dr. Fall specifically acknowledged that an acute on chronic condition is where there is a chronic condition and later something acute also happens on top of the chronic condition. .

e. Other evidence

33. Respondent Insurer issued an Employer's First Report of Injury on October 9, 2020. It stated that Insurer received the report on that same day. The report specifically notes that Employer was notified on October 9, 2020 that Claimant advised she was injured on October 6, 2020, injuring her upper extremity, causing pain in the right shoulder. It does not specify the mechanism or any object that injured Claimant. It specifies that Claimant was treated at a clinic.

34. Respondents submitted a document that appears to represent a payment log for unemployment insurance payments and entitlement after reported earnings were deducted. The log identified that Claimant's entitlement began as of August 23, 2020 but that benefits started as of the week ending September 19, 2020 with some weeks with no payments. The issues of TTD and offsets were reserved by the parties and this ALJ need not go into the details of the evidence.

35. A Job Demands Analysis and Risk Factor Analysis of the Field Support Representative job was conducted by Howard Fallik of Genex on February 25, 2019. Another Claimant was listed on the document and Respondents agreed that the Claimant was not the subject of the evaluation. However, Claimant stated that the descriptions of the job were similar to the job she performed. Essential functions included collecting the supplies needed for the cleaning and stocking of the kiosks, which were carried from the warehouse to the employees personal vehicle, use of personal vehicle to transport to each kiosk location, cleaning the kiosks surfaces, collecting the merchandise from the kiosks, replacing signs and displays, loading the merchandise, securing the kiosks, receiving pallet delivery and moving boxes and maintaining positive relationships with customers. The job required lifting boxes of approximately 3 to 38 lbs., and other supplies, push a merchandising cart, reaching to perform the job, and the physical demands of job, including lifting force, positional tasks, upper extremity tasks, and total body tasks. Mr. Fallik opined that the job did not include the risk factors for a cumulative trauma as the primary and secondary factors were not present for force, repetition, awkward postures, computer work, and handheld vibratory tools. He noted that the secondary risk factor of cold environments was present. He specifically analyzed the repetitive nature of wrist motions, which are not relevant here.

36. The Division issued a letter to Claimant on April 22, 2021 advising that Respondents had denied the workers' compensation claim and could apply for a hearing.

f. Decisive Findings

37. As found, Dr. Papilion and Dr. Hughes are more credible and persuasive than Dr. Fall in her analysis of the Claimant's history and medical records.

38. As found, Claimant clearly had calcific tendinitis, which is documented prior to her injury and not work related, as it is a known complication of diabetes per Dr. Hughes opinion.

39. Also as found, Claimant sustained an acute rotator cuff tear, specifically the full-thickness 11-14 mm tear of the supraspinatus tendon with minimal medial retraction, moderate subacromial and subdeltoid bursal fluid and no rotator cuff muscular atrophy or edema. Dr. Papilion is persuasive that the critical signs here is that Claimant had no muscle atrophy and no fatty infiltration, all of which indicated an acute tear. Claimant is credible and persuasive in her testimony that, while she did have some tenderness previously to her injury, that on October 6, 2020 she felt a pop in her shoulder and an acute, specific, sharp, stabbing pain. As found, this particular event of lifting the approximately 40 lb. box to above shoulder level from the table to be placed on top of a second box, proximately caused the acute rotator cuff tear. Claimant continued to work and the repetitive motion continued to incite the pain, but the acute specific injury was already present. Dr. Hughes and Dr. Papilion persuasively noted that Claimant did not engage in activities or sports other than riding a motorcycle, which she had not done since her injury. Dr. Papilion persuasively noted that Claimant worked full duty without limitations until the work related injury despite her intermittent prior shoulder pain due to the preexisting calcification. As found, Dr. Papilion is credible and persuasive in his opinion that Claimant's weakness, pain and loss of motion are related and caused by the specific injury of October 6, 2020 when she sustained the acute rotator cuff tear.

40. As found, Claimant received reasonably necessary care from Dr. Hepp and Dr. Papilion, including the May 28, 2021 rotator cuff surgery, the arthroscopic repair, decompression and debridement, and the subsequent physical therapy and follow up care.

41. As further found, Claimant continues to require medical care that is reasonably necessary and related to the claim. Dr. Papilion, Dr. Hughes and Dr. Fall are found credible and persuasive in this matter with regard to Claimant's ongoing need for care, including continued physical therapy in order for Claimant to achieve maximum medical improvement.

42. Lastly, as found, Claimant is entitled to reimbursement of any payments made to the authorized treating providers, Dr. Hepp, Dr. Papillion, and the related care Claimant received for the rotator cuff injury including but not limited to Health Images Cherry Creek, DTC Surgery Center/Colorado Perioperative Medicine, Orthopedic Centers of Colorado, and Advanced Integrative Medicine as well as the physical therapy provider, which was not identified.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

(2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by Sec. 8-40-201(14), C.R.S. which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*. The mere fact an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). The question of whether a claimant has proven that a particular disease was caused by a work-related hazard is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether there is a sufficient causal relationship between the claimant's employment and the injury or disease is also one of fact, which the ALJ must determine based on the totality of the circumstances. *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993).

The Division has adopted *Medical Treatment Guidelines* (MTG) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. W.C.R.P. 17, 7 Code Colo. Regs. 1101-3. The Division's Guidelines were established by the Director pursuant to an express grant of statutory authority. See Sec. 8-42-101(3.5)(a)(II), C.R.S. Exhibit 5 of Rule 17 specifically addresses Cumulative Trauma Conditions (CTD MTG), and was most recently updated in December 2016 (effective March 2, 2017). Shoulder Injury Medical Treatment Guidelines adopted December 8, 2014 and effective February 1, 2015. Pursuant to Sec. 8-42-101(3)(b) and W.C.R.P. 17-2(A), medical providers must use the MTG when furnishing medical treatment. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003) the court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. See Section 8-42-101(3)(b), C.R.S. The ALJ may consider the MTG as an evidentiary tool but is not bound by the MTG when making determination of causation or when determining if requested medical treatment is reasonably necessary or injury related. Sec.8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). However, the compensable nature of the claimant's industrial injury or disease is not controlled by the application of the Guidelines. In determining the compensability of a claim, an ALJ is not bound by any medical opinion, even if it is unrefuted. *Indus. Commission v. Riley*, 165 Colo. 586, 591, 441 P.2d 3, 5 (1968*); Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). Rather, the determination of the compensable nature of an alleged occupational disease remains controlled by the

Workers' Compensation Act and by relevant case law. The claimant sustains an occupational disease when the injury is the incident of the work, or a result of exposure occasioned by the nature of the work and does not come from a hazard to which the worker would have been equally exposed outside of the employment. While it is appropriate to consider the Guidelines on the question of diagnosis and cause of the claimant's condition, even assuming there might have been some deviation from the Guidelines, it does not compel the fact finder to disregard the opinion of that medical expert on the issue of the causal connection between a work-related injury and a particular medical condition. See *Eldi v. Montgomery Ward*, W. C. No. 3-757-021 (October 30, 1998); *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (May 5, 2006).

Here, Dr. Papilion and Dr. Hughes' opinions are persuasive and much more credible over the contrary opinions of Dr. Fall with regard to the causation analysis in this matter. Claimant is further credible and persuasive as to the mechanism of her injury. Dr. Papilion and Dr. Hughes are found specifically credible with regard to the fact that Claimant sustained an acute injury, when Claimant lifted the box and felt a pop in her right shoulder, causing the acute right rotator cuff tear. The lifting of the box was a specific act and incident that caused the rotator cuff tear and is the proximal cause of the October 6, 2020 injury within the course and scope of her employment with Employer. As found, Claimant was performing one of the essential functions of her job, retrieving the day boxes from her garage, where her Employer authorized their storage, for Claimant to complete the tasks of her job as a merchandiser. In the course of retrieving the day boxes, she had to move the larger storage or shipping boxes out of the way. Claimant has shown by a preponderance of the evidence that there is a direct causal relationship between her employment duties for Employer and the injury. Claimant has shown that there is a direct nexus and causal relationship between a Claimant's employment and the injury. Claimant did not sustain an occupational disease in this matter. Claimant proved by a preponderance of the evidence that she sustained a compensable specific injury on October 6, 2020 within the course and scope of her employment.

Respondents argue that this claim involves an occupational disease claim. This is not persuasive. The MTGs for Cumulative Trauma Conditions do not address shoulder pathology or rotator cuff tears. In fact Exhibit 5 makes mention of the shoulder only with regard to the examination of the upper extremity,[1] education[2] for therapeutic procedures and the exercises of the upper extremity involving nerve gliding.[3] In this ALJ's assessment of the CTC and Shoulder Injury Medical Treatment Guidelines, it is most appropriate to assess causality for Claimant's shoulder injury under the Shoulder MTG, which specifically address causation issues. Sec. 2, MTG, Rule 17, Exh. 4, specifically states in pertinent part as follows:

> **RELATIONSHIP TO WORK AND OTHER ACTIVITY:** This includes a statement of the probability that the illness or injury is medically work-related. If further information is necessary to determine work relatedness, the physician should clearly state what additional diagnostic studies or job information is required.

[1] CTC, Exhibit 5, Sec. D(1)(d), p. 10.
[2] CTC, Exhibit 5, Sec. H(3), p. 127
[3] CTC, Exhibit 5, Sec. H(13)(c), p. 162

Principles of Causation of Occupational Shoulder Diagnoses

Causation is a medical/legal analysis in the workers compensation system. The information in the Medical Treatment Guidelines pertaining to causation addresses only the evidence related to the medical analysis of causation. Actual cases may vary from the evidence presented based on specific circumstances of the claim. Work-related conditions may occur from the following:

- a specific incident or injury,
- aggravation of a previous symptomatic condition, **or**
- a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment.

All of these conditions must be determined based on the specifics of the work related injury or exposure.
...
Cumulative work-related causation for shoulder disorders is difficult to quantify given 1) the variable techniques used to measure work exposures and the paucity of studies which have measured exposures, 2) the lack of verified clinical exams and 3) the lack of prospective studies.
…
There is some evidence that jobs requiring heavy lifting, heavy carrying, above-shoulder work, and handheld vibration, are likely to be associated with an increased risk of symptomatic supraspinatus tendon lesions, either partial or full thickness tears.

Given all of this information, it is reasonable to consider that there is some evidence for the following causative risk factors for shoulder tendon related pathology:

1. Overhead work consisting of additive time per day of at least 30 minutes/day for a minimum of 5 years.

…
It is also likely that jobs requiring daily heavy lifting at least 10 times per day over the years may contribute to shoulder disorders.
…
Given the lack of multiple high quality studies it is necessary to consider each case individually when dealing with the likelihood of cumulative trauma contributing to or causing shoulder pathology.

Dr. Papilion made a causation analysis in this matter, looked at the evidence, both prior and following the surgery and his opinion that Claimant's injury was caused by both the specific injury of October 6, 2020 is more persuasive and credible than any contrary evidence. It is specifically found that he complied with the Medical Treatment Guidelines in this matter. He initially made the assessment when he reviewed the MRI diagnostic testing, which is an objective measure and finding. He later reiterated that opinion upon viewing, personally, Claimant's tissue during the surgery and continuing to opine that the rotator cuff tear was acute, not chronic, in nature. This opinion if further strengthen by Dr. Hughes' analysis. Dr. Fall, on the other hand, fails to address both of these objective measures and simply relies on the MTG for CTC for failure to meet primary and secondary factors, which is not credible.

Respondents' argument that the lack of medical providers documenting the specific incident is not persuasive as Claimant herself may not have understood the pathology of the injury in light of the preexisting prior conditions. Further, Claimant credibly testified that she explained to her providers of the incident of October 6, 2020 but was likely more focused on the fact that she continued to work and her shoulder continued to worsen due to the nature of lifting boxes and working overhead causing her increases in symptomology. This is further supported by the fact that the Employer's First Report of Injury dated October 9, 2020 stated that Employer was notified on October 9, 2020 that Claimant advised she was injured on October 6, 2020, injuring her upper extremity, causing pain in the right shoulder. There is no mention in the FROI that Claimant was making a claim for an occupational disease. This ALJ has considered the lack of documentation by providers in properly documenting the mechanism of injury and has made a conscious decision with regard to this in favor of Claimant's testimony as the more likely scenario. Based on the totality of the evidence, the fact that Claimant did not have any muscle atrophy, and the opinions of Dr. Papilion and Dr. Hughes that Claimant suffered an acute rotator cuff tear, and Claimant's testimony, Claimant has proven by a preponderance of the evidence, that it is more likely than not, that the Claimant's rotator cuff tear was proximately caused by the traumatic event on October 6, 2020, within the course and scope of her employment with Employer and is compensable.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Claimant has proven by a preponderance of the evidence that she sustained a work related injury on October 6, 2020, causing the rotator cuff tear, specifically the full-thickness tear of the supraspinatus tendon. Respondents stipulated that both Dr. Hepp and Dr. Papilion were Claimant's authorized providers if Claimant was able to prove compensability of the claim. Claimant was initially diagnosed by MRI findings as having a full thickness rotator cuff tear. Dr. Papilion persuasively opined that Claimant required rotator cuff surgery, which took place on May 28, 2021. Therefore, the medical care

Claimant received for the compensable injury, including the diagnostic work up, surgery and physical therapy are found to be reasonably necessary and related to the October 6, 2020 accident that Claimant sustained in the course and scope of her employment.

Both Dr. Fall and Dr. Hughes also opined that Claimant was not at maximum medical improvement and required further care, including further physical therapy. Claimant continues to require medical care that is reasonably necessary and related to the claim. Dr. Papilion, Dr. Hughes and Dr. Fall are found credible and persuasive in this matter with regard to Claimant's ongoing need for care, including continued physical therapy in order for Claimant to achieve maximum medical improvement. Claimant has proven by a preponderance of the evidence that she continues to require ongoing medical care in order to achieve MMI, including physical therapy.

D. Reimbursement of Medical Benefits Payments Upon a Findings of Compensability

Claimant is entitled to reimbursement for out of pocket expenses where she paid the providers prior to the determination of compensability.

The Act, under Sec. 8-42-101(6)(a) states as follows:

> If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided. An employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud

Here, Claimant is found credible that she reported the accident to her employer immediately on October 6, 2020 when she called her supervisor to explain she had been injured as she lifted a box. The Employer's First Report of Injury dated October 9, 2020 stated that Claimant advised Employer she was injured on October 6, 2020, injuring her upper extremity, causing pain in the right shoulder. While it does not specify the mechanism, it is found that Claimant did not understand the extent of her injury only that it was pain that was different and much worse than the pain she had felt in the past. The FROI also specifies that Claimant was treated at a clinic. Respondents conceded that they had not issued a W.C.R.P. Rule 8, Section 8-2 letter and Claimant selected as her ATP her PCP, including but not limited to Dr. Hepp and Dr. Papilion, her orthopedic surgeon. Claimant stated that she made payments and is out of pocket funds she paid to her providers during the pendency of the determination regarding compensability. Claimant has shown by a preponderance of the evidence she is entitled to be reimbursed for any funds that she paid out of pocket to her providers.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's October 6, 2020 claim for her right shoulder injury of a rotator cuff tear is found compensable.

2. Respondents shall pay for all reasonably necessary and related medical care caused by the October 6, 2020 compensable accident, including for Dr. Hepp, Dr. Papillion, Health Images Cherry Creek, DTC Surgery Center/Colorado Perioperative Medicine, Orthopedic Centers of Colorado, and Advanced Integrative Medicine as well as the unidentified physical therapy provider, or other providers within the chain of referral.

3. Claimant shall submit to Insurer receipts of any out of pocket funds for purposes of reimbursement within 60 days of this order and Respondents shall have 30 days from the date of receipt to reimburse Claimant for her out of pocket expenses paid to the providers who provide reasonably necessary and related medical care to Claimant as stated above.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 29th day of April.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-144-896-001

ISSUES

I. Whether Respondents have overcome the opinion of the DIME physician by clear and convincing evidence that Claimant is not at Maximum Medical Improvement ("MMI").

II. If the DIME opinion has been overcome by clear and convincing evidence, what is Claimant's impairment rating.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted work-related injury to his lower back, while working for Employer.
2. Claimant was hired to work for Employer on August 19, 2019. Employer is a meat processing and packaging facility. Claimant was hired as a box handler and machine operator for Employer. In that position, he was tasked with lifting and unloading boxes that weighed between 35-99lbs. to a conveyor belt. (Hearing TR. pp. 20. 1-5; Claimant's Exhibit 7, pg. 28).
3. On March 28, 2020, Claimant experienced an injury to his low back, which also resulted in radicular pain radiating into his left leg. He did not begin to experience the symptoms until after he got home that night after taking a shower, when he experienced the onset of pain to his left side near the buttocks area. (Hearing TR. pp. 20. 13-20; Respondents' Exhibit C, pg. 57).
4. Claimant reported his injury the following Monday, March 30, 2020, to a nurse for Employer. (Claimant's Exhibit 23, pg. 87).
5. Claimant began to develop low back and left buttock pain that went down his left leg. He was determined to have sciatica. (Respondents' Exhibit B, pg. 48; Claimant's Exhibit 1, pg.4).
6. Claimant first treated with Daniel Hatch, DPM, complaining of pain in his left leg and foot along with a burning sensation. (Claimant's Exhibit 1, pg. 3).
7. When a nurse from Employer spoke with Claimant via telephone on May 16, 2020, about his low back, thigh, and posterior knee pain, he reported he was no longer having any pain and declined any further treatment. (Claimant's Exhibit 23, pg. 89).
8. However, on May 18, 2020, Claimant underwent an EMG. At the visit, he reported he had noticed left low back/button pain that started on March 28, 2020. He reported the pain slowly got worse that day, eventually travelling down the back of his leg to his foot. At this visit, Claimant's symptoms had returned, and he did not decline treatment.

(Claimant's Exhibit 2, pg. 10). The EMG demonstrated Claimant had a left L5 radiculopathy. Based on the EMG findings, Claimant was prescribed gabapentin and amitriptyline. (Claimant's Exhibit 2, pg. 9).

9. On May 23, 2020, and because of ongoing symptoms, Claimant underwent an MRI of the lumbar spine that revealed L5-S1 disc degeneration, a 5mm extrusion on the left posterior side of the L5-S1 disc, multilevel foraminal narrowing, and degenerative left L5 pillar edema. (Claimant's Exhibit 5, pg. 23). And based on the MRI findings, and Claimant's symptoms, Dr. Alexandra Garnett referred Claimant to neurosurgery for consideration of a microdiscectomy. (Claimant's Exhibit 5, pg. 22).

10. On June 2, 2020, Claimant had an initial visit with Carlos Cebrian, M.D. (Cebrian depo. pp. 5. 19-21).

11. Dr. Cebrian is Employer's onsite medical clinic medical director and Claimant's authorized treating physician.

12. Claimant complained of low back pain with radiation down his left leg to his foot, with some sensory complaints in the left leg. (Cebrian depo. pp. 5. 24-25; pp. 6. 1-2).

13. Dr. Cebrian recorded the pain had begun on March 29, 2020, while Claimant was in the shower, and he began to notice that his low back was hurting. Although Claimant's job involved lifting and moving boxes, Claimant did not recall a specific incident at work that had led to his pain. (Claimant's Exhibit 7, pg. 28). Despite there being no credible and persuasive evidence that Claimant previously had a 5mm disc extrusion/herniation, Dr. Cebrian opined Claimant had sustained a work-related aggravation of a preexisting and asymptomatic lumbar disc extrusion at L5-S1. (Cebrian depo. p. 6. 16-18; p. 28. 21-23). In the record from the visit, but without much explanation regarding his conclusion that the disc herniation was not caused by Claimant's work, Dr. Cebrian did conclude that it was aggravated by work. (Claimant's Exhibit 7, p. 29).

14. Claimant was referred to see Samuel Chan, M.D. for an evaluation of his reported symptoms with the possibility of an epidural steroid injection ("ESI"). (Cebrian depo. p. 7. 1-2).

15. On June 22, 2020, Claimant saw Dr. Chan for the first time. Claimant reported his back pain was still present, with radiation into his left lower extremity and affecting his second and third toes. (Claimant's Exhibit 9, pg. 33).

16. Dr. Chan reviewed Claimant's medical records and diagnosed radiculopathy of the lumbar region, a lumbar sprain, and low back pain. Dr. Chan opined Claimant had L5-S1 discogenic issues. (Claimant's Exhibit 9, pg. 34). As a result, Dr. Chan recommended a transforaminal ESI at the L5 left on the left side. (Claimant's Exhibit 9, pg. 35).

17. On July 7, 2020, when Claimant was seen by Dr. Chan again, Claimant alleged his "neurologist" was adamant he would require surgery otherwise he would not have any improvement. He was also concerned about proceeding with the ESI rather than surgery. (Claimant's Exhibit 10, pg. 37). At this appointment, Dr. Chan referred Clamant to Dr. Castro for a surgical evaluation and treatment. (Claimant's Exhibit 10, pg. 38; Exhibit 24, pg. 309).

18. At hearing, Claimant testified he disagreed with the treatment being recommended by Dr. Chan. Specifically, that he was, "made to understand that [he] would need surgery, not just the pain management." (Hearing TR. pp. 28. 3-6).

19. Claimant was of the opinion surgery was the only medical option to treat his work-related injuries. Contrary to that opinion, Dr. Chan had recommended pursuing more conservative treatment modalities, such as therapy, injections, and time, which Claimant disagreed with. (Fall depo. p. 40. 6-10).

20. On July 8, 2020, Claimant voiced his disagreement to Dr. Cebrian with the treatment recommended by Dr. Chan. Dr. Cebrian noted Dr. Chan had spent considerable time with Claimant to explain the medical treatment guidelines and his recommendation to proceed with the ESI. (Claimant's Exhibit 11, pg. 41). Based on Claimant's disagreement with the treatment recommended by Dr. Chan, Dr. Cebrian referred Claimant to see John Sacha, M.D. (Cebrian depo. p. 8. 5-7).

21. On August 14, 2020, Claimant saw Dr. Sacha. At this visit, he reported low back pain with radiation down his left leg and foot numbness and tingling. (Claimant's Exhibit 12, pg. 44). Dr. Sacha diagnosed Claimant with lumbar radiculopathy and also recommended an L5-S1 ESI, as had been recommended by Dr. Chan. (Claimant's Exhibit 12, pg. 45).

22. On September 22, 2020, Claimant returned to Dr. Cebrian. At this visit, Claimant reported his radicular symptoms down his left leg had improved. (Claimant's Exhibit 13, pg. 50). Due to ongoing nerve irritation, Dr. Cebrian recommended Claimant proceed with the ESI to help with his nerve irritation. (Claimant's Exhibit 13, pg. 50).

23. On October 8, 2020, Dr. Sacha administered the L5-S1 ESIs. (Claimant's Exhibit 15, pg. 52). Claimant had greater than 80% relief of his symptoms. As a result, Dr. Sacha concluded that Claimant had a diagnostic response to the injections. (Claimant's Exhibit 15, pg. 53).

24. At Dr. Cebrian's November 3, 2020, visit with Claimant, he could go up and down on his toes ten times. He could also move without discomfort and did not show any motor deficits. (Cebrian depo. p. 12. 22-23; p. 13. 7-12). Therefore, Claimant had some relief from the ESIs.

25. Despite Claimant having some relief from the ESIs, Dr. Cebrian opined the injections had in fact did not provide any relief of his pathology. (Cebrian depo. p. 12. 8-9). As a result, Dr. Cebrian did not recommend additional injections. (Claimant's Exhibit 16, pg. 55).

26. On November 6, 2020, Claimant was seen by a nurse at Employer for ongoing back pain. On visual examination Claimant was noted to have full range of motion and the ability to ambulate without difficulty, including bending, twisting, and pulling a sweater around his body without hesitation. (Claimant's Exhibit 23, pg. 147).

27. Claimant returned to Dr. Sacha, on November 19, 2020. Dr. Sacha determined Claimant's neurological examination was normal, demonstrating he was not having any worsening neurological symptoms. (Fall depo. p. 8. 8-15). Dr. Sacha documented while Claimant did have ongoing low back pain, he did not have as much radiation of that pain to his buttocks or leg. Dr. Sacha did not recommend repeating the injections

or any other interventional procedures and discharged Claimant back to Dr. Cebrian. (Claimant's Exhibit 17, pg. 57).

28. Claimant presented to Dr. Cebrian on December 29, 2020. Claimant specifically told Dr. Cebrian that he had an improvement in his symptoms and no longer had any lower extremity pain, but still had symptoms in his toes. (Respondents' Exhibit B, pg. 48; Cebrian depo. p. 14. 11-16). Upon physical examination, Claimant was noted to have full range of motion, no swelling, bruising, or redness of the lumbar spine, with only mild discomfort of the lumbar paraspinal muscles. (Respondents' Exhibit B, pg. 49). On physical examination there were no neurological findings such as weakness, sensory abnormalities, or other indications of nerve root compression at that time. (Cebrian depo. p. 14. 20-24). Claimant's range of motion measurements were all within normal limits. (Cebrian depo. p. 16. 6-7). Dr. Cebrian placed Claimant at maximum medical improvement ("MMI") that day and determined based on his level II training, Claimant sustained a 7% whole person rating based on permanent impairment of his disc pathology at the L5-S1 level pursuant to Table 53 II(C) based on disc abnormality given the L5-S1 disc extrusion. (Respondents' Exhibit B, pg. 49; Cebrian depo. p. 16. 12-17).

29. At his post-hearing deposition, Dr. Cebrian testified Claimant was found to have no neurological permanent impairment when he was placed at MMI. (Cebrian depo. p. 16. 23-25).

30. Dr. Cebrian did recommend permanent work restrictions but opined no maintenance care was necessary to maintain Claimant at MMI. (Respondents' Exhibit B, pg. 49).

31. At hearing, Claimant alleged to still be experiencing lower back pain, swelling in his toes, and radiation of the pain down his leg prior his placement at MMI on December 29, 2020. He also felt as though his second and third toe were, "crossing over each other and that [he] still had the burning and the tingling sensation in [his] toes." (Hearing TR. pp. 30. 10-12; 22-24).

32. Dr. Cebrian testified that the type of symptomology Claimant reported involving his toes is not consistent or associated with L5 radiculopathy. (Cebrian depo. p. 38. 24-25; p. 43. 4-9).

33. Some of Claimant's testimony at hearing is contradicted by the medical records entered into evidence, which document Claimant's denial of any radiation of his pain. (Hearing TR. pp. 34. 17-20). On the other hand, Claimant still complained of some radiating symptoms into his left lower extremity at some of his appointments.

34. When asked about that contradiction at hearing, Claimant testified that he believed Dr. Cebrian was not telling the truth in his documentation of Claimant's denial any of radiation of his pain. (Hearing TR. pp. 34. 20-21). Again, while Claimant might not have had pain radiating into his left lower extremity, he had ongoing symptoms radiating into his left lower extremity.

35. Claimant testified that the radiation of pain continued through January 2021. That testimony was contradicted by Dr. Cebrian's notes in the medical record from his January 26, 2021, visit with Claimant. (Hearing TR. pp. 36. 20-22). But at that visit Claimant did report an increase in his back pain complaints with some tingling in his

foot. (Cebrian depo. p. 17. 13-16; Claimant's Exhibit 23, pg. 233). Therefore, while Claimant did not have radicular pain, he still had radicular symptoms.

36. On April 29, 2021, Claimant was seen by a nurse in Employer's medical clinic. At this visit, Claimant reported he had gone to Boondocks amusement park over the prior weekend and then experienced an onset of pain following the weekend – on Monday. At this visit, Claimant complained of low back pain. (Claimant's Exhibit 23, pg. 300).

37. On May 4, 2021, Claimant was seen by Dr. Cebrian for a one-time follow-up visit. (Claimant's Exhibit E, pg. 69). Dr. Cebrian noted in the record from the visit Claimant told him he had an increase in pain, specifically in his left leg, after going to Boondocks amusement park over the weekend with his son. (Respondents' Exhibit E, pg. 69; Cebrian depo. p. 18. 13-15). Claimant also told Dr. Cebrian he had not been performing his home exercise program but that his modified work was aggravating his symptoms. (Respondents' Exhibit E, pg. 69-70; Cebrian depo. p. 24. 9-11).

38. Dr. Cebrian offered to watch a video of the bone-sorting position Claimant had been working in with Employer to determine whether it had been causing his discomfort. Dr. Cebrian opined the video appeared to require Claimant to perform work within his assigned permanent work restrictions. (Respondents' Exhibit E, pg. 69; Cebrian depo. p. 19. 1-19). Despite Claimant working within the restrictions provided by Dr. Cebrian, the job still aggravated his condition and made his symptoms worse. That said, Dr. Cebrian opined Claimant remained at MMI. (Respondents' Exhibit E, pg. 69).

39. Dr. Cebrian testified there was nothing that had significantly changed in Claimant's medical condition that warranted reversing his placement at MMI. (Cebrian depo. p. 20. 9-14).

40. Dr. Cebrian testified during his post-hearing deposition, there was nothing specific to Claimant's work-related injury that suggested he was no longer at MMI. (Cebrian depo. p. 20. 17-18).

41. Although Claimant had told Dr. Cebrian and his nurse during the visit that he had a recurrence of his left leg pain after going to Boondocks, Claimant testified at hearing that he had lied to Dr. Cebrian about the trip to Boondocks, "to see what they would say." (Hearing TR. pg. 38. 11-19). Claimant testified that "that they would take anything I was saying to them and run with it and make it seem like [he] was doing something wrong." (Hearing TR. pp. 39. 9-11).

42. Claimant explained at hearing that by lying to the nurse and Dr. Cebrian, it would cause him to be referred for additional treatment. (Hearing TR. pp. 42. 12-13).

43. Respondents filed a Final Admission of Liability ("FAL") on February 10, 2021, admitting for Claimant's placement at MMI on December 29, 2020, the 7% whole person rating assigned by Dr. Cebrian, $25,758.58 in PPD benefits, and no maintenance medical care pursuant to Dr. Cebrian's recommendations. (Respondents' Exhibit B, pg. 40).

44. After his placement at MMI, Claimant continued to work for Employer in a job position that required duties within his assigned permanent work restrictions. During that time, he did not seek any medical treatment to obtain a follow-up opinion on whether he remained at MMI. (Fall depo. p. 10. 16-25)

45. Claimant's employment with Employer was terminated on May 25, 2021. (Hearing TR. pp. 33. 21-22).

46. Claimant requested – and attended - a DIME with Ranee Shenoi, M.D. on September 28, 2021. (Claimant's Exhibit 20, pg. 68).

47. Claimant told Dr. Shenoi he had pain in his left leg and low back. He also reported pain in his left big toe, second, and third toes along with burning in his left third toe. (Claimant's Exhibit 20, pg. 70).

48. Dr. Shenoi opined Claimant was not at MMI based on his acute L5-S1 disc herniation that required additional treatment including physical therapy, additional ESIs, a surgical consultation, and a follow-up EMG. (Claimant's Exhibit 20, pg. 71).

49. Although Dr. Shenoi opined Claimant was not at MMI, he was assigned a provisional permanent impairment rating of 20% whole person based on a 6% rating for lumbar range of motion deficits, a 7% rating for specific disorders of the spine under Table 53(II)(C), and a 9% rating for neurological deficits for Claimant's L5-S1 disc herniation and left L5 radiculopathy. (Claimant's Exhibit 20, pg. 72).

50. Dr. Shenoi did not explain the difference in her opinion about Claimant's proximity to MMI and permanent impairment from those determined by Dr. Cebrian.

51. In a September 28, 2021, addendum to the DIME report, Dr. Shenoi opined it was unlikely Claimant has S1 radiculopathy. (Claimant's Exhibit 20, pg. 78).

52. Allison Fall, M.D., a Level II accredited medical expert in physical medicine and rehabilitation, performed an independent medical examination ("IME") of Claimant on December 8, 2021. (Respondents' Exhibit C, pg. 57).

53. At the IME, Claimant told Dr. Fall that "his back hurts 24 hours a day, seven days a week." He also described an incident in which he was changing a tire that caused, "his whole left side and leg [to go] into a 'frenzy" for a period of time. (Respondents' Exhibit C, pg. 57). According to Dr. Fall, Claimant provided no other explanation for his recurrence of pain, to that extent and at that time, other than the incident related to the tire. (Fall depo. p. 27. 15-18).

54. He also alleged that on some mornings, he had radiation of pain down his leg, but that it was not as severe as the pain in his low back. (Respondents' Exhibit C, pg. 58).

55. Dr. Fall reviewed the medical records related to the treatment Claimant received prior to and after the injury in this case. She also reviewed Dr. Shenoi's DIME report. Dr. Fall also noted that Claimant smokes a half-pack of cigarettes every day and has done so for the past nine years. (Respondents' Exhibit C, pg. 60).

56. Dr. Fall's assessment was a left L5-S1 disc extrusion with left L5 radiculopathy, for which he had been placed at MMI on December 29, 2020. (Respondents' Exhibit C, pg. 61). She stated that on that date, Claimant had resolution of his leg pain symptoms, there was no indication for additional injections, surgery was unlikely to have improved his condition, and his condition was overall stable. (Fall depo. p. 9. 2-7).

57. Dr. Fall also opined Dr. Shenoi erred in determining Claimant had not yet reached MMI, as the medical records documented Claimant had much better range of motion and no leg symptoms when he was last treated by Dr. Cebrian. (Respondents' Exhibit C, pg. 61).

58. At her pre-hearing deposition, Dr. Fall testified there was no objective medical evidence contained in the medical records through December 29, 2020, that Claimant did not reach MMI on that date. (Fall depo. p. 8. 13-18). She also testified that there was no objective medical evidence that Claimant's work in the six months after he was placed at MMI aggravated, accelerated, or exacerbated his work-related condition. (Fall depo. p. 10. 12-15). Additionally, Dr. Fall testified Claimant's weight, being 5' 10" and weighing 271lbs., does place more stress on his lumbar spine and plays a role in degeneration as well as disc bulges, protrusions, and extrusions. (Fall depo. p. 14. 22-25; p. 16. 19-21).

59. Dr. Fall also opined Dr. Shenoi had erred in not accounting for the difference in her range of motion measurements and examination findings compared with those of Dr. Cebrian. (Respondents' Exhibit C, pg. 61). As the AMA Guides to the Evaluation of Permanent Impairment, 3rd Edition ("AMA Guides") state, "if two medical evaluators have a difference in impairment rating, this needs to be accounted for." (Respondents' Exhibit C, pg. 61; Fall depo. p. 25.13-17). Dr. Fall stated that Dr. Shenoi had failed to account for the alleged worsening of Claimant's symptoms and decreased range of motion. (Respondents' Exhibit C, pg. 61).

60. The ALJ finds that Claimant's back and leg symptoms waxed and waned. For example, on May 16, 2020, Claimant stated that his symptoms had resolved and that he did not want any additional treatment. But just a couple of days later, on May 18, 2020, he presented for an EMG for ongoing pain and radicular symptoms and was diagnosed with radiculopathy. As a result, the ALJ finds that when Claimant was placed at MMI by Dr. Cebrian, his symptoms were better. But, shortly afterward, his symptoms returned and that the return of his symptoms was due to his underlying work injury that resulted in a herniated disc.

61. While Claimant told his providers he got worse after going to Boondocks, Claimant stated that he lied about going to Boondocks. Despite Claimant's contention that he lied about going to Boondocks, the ALJ does not discredit all of Claimant's testimony. In the end, the ALJ finds that Claimant's symptoms waxed and waned, and he was placed at MMI during a time when his symptoms were better - temporarily.

62. The ALJ also finds that Claimant did go to Boondocks, but that such activity did not cause his symptoms to get worse. Claimant merely had symptoms after going to Boondocks. The ALJ finds that Claimant did have a temporary increase in symptoms after changing his tire. But the ALJ finds that changing the tire did not aggravate his underlying condition and sever the causation connection between his work injury and need for medical treatment. The increase in symptoms was merely a consequence of his underlying work injury – a herniated disc.

63. The opinions of Drs. Cebrian and Fall regarding Claimant being at MMI is merely a difference of opinion between them and the DIME physician, Dr. Shenoi.

64. Dr. Shenoi's opinion, that Claimant is not at MMI, is supported by the medical records and Claimant's testimony. As previously found, Dr. Chan did refer Claimant to Dr. Castro, a surgeon, for evaluation and treatment. Plus, Dr. Garnett also recommended a neurosurgery evaluation for a possible microdiscectomy. Such evaluations, however, did not occur.

65. A surgical evaluation is reasonably expected to define Claimant's current condition and suggest further treatment to cure Claimant from the effects of his work injury.

66. The ALJ credits the opinions expressed by Dr. Shenoi in her DIME report that Claimant is not at MMI because he needs additional medical treatment that is intended to define the extent of his injury as well as cure Claimant from the effects of his work injury. This includes physical therapy, additional ESIs, a follow-up EMG, as well as a surgical evaluation. As a result, the ALJ finds that Respondents have failed to overcome that opinion by clear and convincing evidence.

67. The ALJ reviewed the deposition testimony of Dr. Cebrian and Dr. Fall. Regarding Dr. Cebrian's testimony, it would appear that Dr. Cebrian is essentially in agreement with Dr. Shenoi's "Clinical Diagnosis." In particular, the pain generator was L5 radiculopathy resulting in the Claimant experiencing symptoms in his left foot. (Dr. Cebrian's deposition transcript P.37 L. 5-12 P. 32 L. 23-25 and P. 33 L. 23- 25 and P. 33 L.1-25). It is noted there is agreement between Dr. Cebrian and Dr. Shenoi that S1 is not the pain generator. (Dr. Cebrian's deposition transcript P. 33 L. 14-25, P. 34 L.1-25, P. 35 L. 1-12). Dr. Cebrian agreed that Dr. Sacha's injection at L5-S1 was diagnostic. (Dr. Cebrian's deposition transcript P. 12 L.13-17). Of relevance, when Claimant was placed at MMI by Dr. Cebrian, he was experiencing symptoms in his left foot and when he was being reassessed by Dr. Cebrian on January 29, 2021, he was continuing to experience symptoms in his left foot. Per Dr. Cebrian, throughout his treatment of Claimant, this was a consistent complaint. (Dr. Cebrian's deposition transcript P. 38 L14-25, P. 39 L.1-25 P. 40 L.1-12). Dr. Cebrian placed the Claimant at MMI on December 29, 2020, indicating there were no neurological findings or examination, including weakness, sensory abnormalities, or any indication the Claimant was having any nerve root compression at that time. (Dr. Cebrian's deposition transcript P. 14 L.17-25). However, Dr. Cebrian's documentation of Claimant experiencing ongoing left foot symptoms is inconsistent with his deposition testimony, particularly in regard to Claimant not having nerve compression problems when he was placed at MMI. Regarding Dr. Fall's testimony, the ALJ notes that Dr. Fall agreed based on the findings of the MRI as well as the EMG – that referral to neurosurgery was reasonable. (Dr. Fall's deposition testimony P. 36 L. 15-25*)*. In addition, Dr. Fall agreed that Dr. Chan's referral to Dr. Bryan Castro for surgical evaluation and treatment was reasonable. (Dr. Fall's deposition transcript P. 39 L. 5-23*)*. Dr. Fall indicated in her IME report, "A repeat MRI and EMG nerve conduction studies may be helpful to see if there has been improvement in the MRI and/or acute EMG findings." In addition, Dr. Fall testified that these diagnostic findings would indicate one way or the other whether the Claimant was a surgical candidate. (Dr. Fall Deposition Transcript P.54 L. 24-25, P. 55 L. 1-25, and P. 56 L. 1-25). It is noted Dr. Cebrian agrees with Dr. Fall about the MRI and EMG nerve conduction studies. (Dr. Cebrian's Deposition Transcript P. 23 L. 9-23). The ALJ also notes that Dr. Fall under

"Review of Systems" states, "significant for numbness or tingling at the left foot and first three toes." Dr. Shenoi in her DIME report concerning the results of her physical examination stated. "Neurological exam revealed decreased sensation on the top of the left foot and left calf to light touch." Both Dr. Fall and Dr. Shenoi are reporting neurological deficits in Claimants left lower extremity. It is also noted both Dr. Fall and Dr. Shenoi are reporting positive pain findings when testing Claimant's left SLR. Dr. Fall agreeing with Dr. Cebrian's opinion about the Claimant achieving MMI on December 29, 2020, because of normal neurological examination and normal range of motion etc. is inconsistent with her own findings regarding deficits in range of motion, positive neurological findings, and her recommendation for additional diagnostic testing to rule in or rule out surgical intervention.

68. In this case, based on the review of the DIME report from Dr. Shenoi, the deposition testimony of Drs. Fall and Cebrian, Claimant's testimony, and the corresponding medical records, the ALJ finds and concludes Respondents have failed to establish that it is most likely true and free from substantial doubt that Dr. Shenoi erred in finding Claimant not at MMI for the effects of his March 28, 2020, work related injury.

69. The ALJ will not address what whole person impairment rating should be assigned because Dr. Shenoi's medical impairment rating was "provisional" as Claimant is not at MMI. Since Claimant is not at MMI, the Claimant's permanent medical impairment rating is not ripe for adjudication.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See*

Bodensleck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents have overcome the opinion of the DIME physician by clear and convincing evidence that Claimant is not at Maximum Medical Improvement ("MMI").

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Based on the review of the DIME report issued by Dr. Shenoi, which the ALJ credits, plus the testimony of Dr. Cebrian, Dr, Fall and Claimant, and the medical records entered into evidence, the ALJ finds and concludes that Respondents have failed to overcome by clear and convincing evidence the opinion of Dr. Shenoi that Claimant is not at MMI. Claimant's symptoms waxed and waned. Therefore, the fact that his symptoms were not as bad when he was placed at MMI does not mean that he was at MMI at that time.

It was medically documented that Claimant suffers from chronic radiating pain and symptoms into his left leg and foot due to his L5 disc herniation. Prior to Claimant being placed at MMI, there were two referrals for surgical evaluations which were never completed. It is noted that Dr. Fall, the IME physician, agreed these referrals were reasonable. A surgical evaluation is reasonably expected to define Claimant's current condition and suggest further treatment to cure Claimant from the effects of his work injury. As a result, the need for a surgical evaluation is inconsistent with a finding of MMI. Plus, Dr. Shenoi is of the opinion that Claimant needs additional physical therapy and ESIs before he can be placed at MMI. Thus, the ALJ finds and concludes that Respondents have failed to overcome Dr. Shenoi's opinion that Claimant is not at MMI by clear and convincing evidence. Therefore, Claimant is not at MMI.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is not at MMI.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 29, 2022.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury to his low back on April 2, 2018.[1]

FINDINGS OF FACT

1. Claimant began working for Employer as a relief operator in 2013. Claimant's job duties involved lifting, bending and twisting.

2. Claimant has a prior history of low back problems and treatment, including a surgery at L4-5 in the mid 1990s and a subsequent surgery at the L5-S1 level in 2003.

3. On December 5, 2015, Claimant suffered a low back injury while working for Employer (WC No. 5-103-240). This was a no lost-time claim.

4. Claimant sought care for his 2015 back injury with his primary care physician, Anna Roth Wilkins, M.D., on December 8, 2015. Claimant reported that he had strained his back at work on December 5, 2015. He conveyed a long history of back pain with surgeries. Claimant reported that the numbness in his great toes was his baseline. Dr. Wilkins characterized Claimant's condition as a recurrent problem.

5. Claimant did not initially report his 2015 back injury as a workers' compensation claim. Claimant testified that when he called off work shortly after the injury and told his manager that he hurt his back at work, the manager required him to report it as a workers' compensation claim.

6. Claimant subsequently underwent treatment with Kevin Keefe, M.D. at Employer's authorized clinic, Workwell. Dr. Keefe placed Claimant at maximum medical improvement ("MMI") on January 4, 2016 with no permanent impairment, restrictions or need for maintenance care.

7. Claimant testified that he received a written warning from Employer for his failure to timely report his 2015 work injury. He further testified that due to his failure to timely report the injury, Employer required him to present a PowerPoint presentation to his

[1] Two claims were consolidated for hearing (WC No. 5-103-242, DOI April 2, 2018, and WC No. 5-103-241, DOI March 29, 2016). After discussion between the parties at the outset of hearing, it was determined that the hearing would proceed only on the issue of compensability under WC No. 5-103-242 (DOI April 2, 2018). All additional issues were held in reserve for future determination.

superiors regarding the injury and how it could be avoided. He testified that this experience was degrading and humiliating, as was working light duty.

8. Claimant alleges he sustained another work injury on or around March 29, 2016 (WC No. 5-103-241) while lifting and shoveling.

9. Claimant did not report a work injury to Employer at the time. He testified he did not report the alleged March 2016 injury to Employer as being work-related because he did not want to go through all the steps Employer had required of him for his 2015 injury. Claimant further testified that his goal was to continue working for Employer and ultimately become a supervisor. Claimant believed from his experience with the 2015 injury he would not be able to achieve those goals if he reported the alleged work injury.

10. Claimant again sought treatment with Dr. Wilkins on March 29, 2016. Claimant reported to Dr. Wilkins that he had ongoing pain in his low back and previous surgeries. He stated that he had an exacerbation of symptoms since the December 2015 injury, and had no improvement with conservative management for three months. Claimant reported a new symptom of weakness in his right leg. Dr. Wilkins' medical note contains no mention of any reported work-related mechanism of injury or any specific incident leading to Claimant's complaints.

11. Claimant testified that he did not report any work event to Dr. Wilkins at the time because he did not want to involve workers' compensation due to his prior experiences.

12. Claimant obtained a certification for leave under the Family and Medical Leave Act ("FMLA") from Dr. Wilkins for his back pain for the period of December 2015 through January 2016.

13. Claimant also underwent evaluation and treatment for his low back with Hans Coester, M.D. At a June 16, 2016 evaluation with Dr. Coester, Claimant described having a long history of intractable pain, tingling, and numbness in his right leg. Dr. Coester reviewed an April 21, 2016 lumbar MRI and recommended Claimant undergo a L3-4 and L4-5 right-sided laminectomy and possible discectomy. He predicted that Claimant would never be pain free. Dr. Coester performed the recommended surgery on Claimant on July 14, 2016.

14. On September 20, 2016, Dr. Wilkins cleared Claimant to return to work beginning October 10, 2016 at a position with Employer that would not require repetitive twisting, bending, or lifting. Claimant underwent a lift test with Employer on October 11, 2016. In the associated questionnaire, Claimant represented that he had no lifting or pulling restrictions from a physician, and that he had not recently had a surgery that would limit his lifting or pulling. Claimant He denied back pain and denied that a doctor ever told him that he had a bone, joint, or musculoskeletal problem that was made worse by exercise, or that he was under medical care for any such condition. He denied being on any medication, despite being on several medications, including cyclobenzaprine and oxycodone, as listed in Dr. Wilkins' September 20, 2016 report.

15. Claimant returned to work performing his regular job duties in October 2016 . He continued to experience back pain. Claimant continued to suffer back pain. On May 25, 2017, the nurse practitioner at his family clinic described Claimant's history of chronic low back pain. Claimant informed her that he would have flare-ups with back spasms that would prevent him from bending and lifting, causing him to miss work, and leading him to again request leave under FMLA.

16. Claimant presented to Alyssa Gonzalez, D.O. on February 26, 2018. He reported new worsening symptoms of right calf pain, right groin pain, and the sensation of cold in his right lower extremity. Dr. Gonzalez was initially worried that the symptoms were coming from an aneurysm, which was later ruled out.

17. On March 15, 2018, Claimant saw William Oligmueller, M.D. with continued complaints of right calf pain. The medical record contains no mention of an injury-causing event. Dr. Oligmueller could not point to a specific cause of the symptoms, but noted he did not feel there was a circulation or nerve issue.

18. Claimant alleges he sustained a subsequent work injury to his low back on or around April 2, 2018. Claimant testified that a pipe burst, causing whey to fall to the floor. Claimant testified he used a five-gallon bucket and shovel to pick up the whey, and then carried the whey up and down stairs. Claimant testified that this involved lifting and carrying up to 80 pounds. Claimant testified that, upon finishing the task, he had significant low back pain, worse than what he had previously experienced from his 2015 and 2016 injuries.

19. Claimant did not work on April 2, 2018.

20. Claimant again did not report the alleged April 2018 injury to Employer. Claimant testified that he did not do so for the same reasons he failed to report his alleged 2016 work injury to Employer.

21. Claimant sought care with Dr. Wilkins on April 2, 2018. Claimant complained of right leg pain and numbness, which had been occurring for about a month. Claimant also reported right groin pain that worsened with physical activity at work. Claimant specifically denied any recent injury. Dr. Wilkins ordered a lumbar x-ray and referred Claimant back to Dr. Coester and a possible MRI. The medical record from this date is devoid of any mention of a specific incident.

22. Dr. Coester's PA evaluated Claimant on April 4, 2018. Claimant reported progressive back pain, right lower extremity radicular pain, and numbness and weakness that had been progressing over the previous two months. Claimant specifically denied any precipitating event, only a progression of symptoms.

23. Claimant last worked on April 9, 2018.

24. Claimant returned to Dr. Wilkins on April 18, 2018. Dr. Wilkins removed Claimant from work for four weeks due to the physically demanding nature of his job, noting Claimant was unable to lift, twist, or bend at that time. Claimant was instructed to follow-up with neurosurgery and review the MRI results with the neurosurgeon. Dr. Wilkins stated in her note of April 18, 2018, that Claimant had chronic low back pain, and an exacerbation, and that the exacerbation started over a month ago. Dr. Wilkins did not specify any work-related incident leading to the exacerbation.

25. On May 1, 2018, Claimant asked Dr. Wilkins to complete FMLA paperwork due to his low back pain.

26. On May 12, 2018, Dr. Coester performed a laminectomy and discectomy at the right L4-5 level, and decompression of the right L5 nerve root. The post-operative diagnosis was recurrent right-sided L4-5 disc herniation with right L5 radiculopathy.

27. Claimant continued to experience low back issues post-operatively despite undergoing a course of treatment. On August 15, 2018, Claimant reported to Dr. Coester's PA a sudden return of back pain and right leg radicular symptoms while working with a therapist two weeks earlier. Examination showed worsening weakness on the right side. On September 5, 2018, Dr. Wilkins referred Claimant to physical therapy for a disability evaluation. On October 29, 2018, Dr. Wilkins noted Claimant was currently on short term disability and was planning on applying for long term disability. Dr. Wilkins continued to keep Claimant off of work due to the physical nature of his job.

28. Claimant received an opinion from William Biggs, M.D. an orthopedic surgeon, on whether an additional surgery would help him to return to work. It was ultimately determined that the Claimant would not proceed with any surgery. Dr. Wilkins ultimately determined that Claimant was unable to work in any capacity due to limitations brought on by his low back condition.

29. On March 22, 2019, Employer notified Claimant that his leave was expiring. Claimant notified Employer that, due to his back issues, he would no longer be able to perform the duties for his job and resigned on April 14, 2019.

30. Claimant testified that during his course of physical therapy in recovering from the 2018 injury, his physical therapist recommended that he report his injuries as work-related.

31. On March 27, 2019, Claimant filed a claim for workers' compensation alleging that he sustained an injury to his low back while at work on April 2, 2018. The injury was allegedly caused by "lifting, shoveling bags of whey powder." (Cl. Ex. 8, p.198).

32. Also on March 27, 2019, Claimant filed a claim for workers' compensation benefits alleging that he sustained an injury to his low back while at work on March 29, 2016. The injury was allegedly caused by "lifting, shoveling bags of whey powder." (Cl. Ex. 9, p.199).

33. Claimant testified that he was unaware of the exact dates of his injuries. He testified that the dates utilized for his dates of injury were the dates he reported to his physician, Dr. Wilkins, for treatment for low back pain which he believes was caused by his work activities for Employer.

34. Respondents denied both claims.

35. On September 7, 2019, Elizabeth Bisgard, M.D. conducted an independent medical examination ("IME") at the request of Respondents. Dr. Bisgard noted that, according to the medical records and the history reported to her by Claimant, there was no evidence of work injuries that occurred around March 29, 2016 or April 2, 2018. She noted Claimant could not recall any specific event that caused an injury, despite her specifically asking him multiple times. Based on the records, including multiple imaging studies, Dr. Bisgard concluded Claimant had a long-standing history of degenerative changes dating back to the 1990s, and that his condition had gradually worsened, and continues to worsen, with increased stenosis and symptoms due to arthritic changes. She opined that the need for further surgery was due to Claimant's ongoing degenerative changes.

36. Dr. Bisgard testified at hearing on behalf of Respondents as a Level II accredited expert in occupational medicine. Dr. Bisgard testified consistent with her IME report and continued to opine there is no evidence of any April 2018 work-related injury. Dr. Bisgard reiterated her opinion that Claimant's condition and need for treatment are the result of the natural progression of his chronic, longstanding, deteriorating degenerative condition. Dr. Bisgard testified that Dr. Coester performed repeat back surgery in May 2018 due to his belief that Claimant had a reherniated disc. She explained that a disc herniation can result from chronic degenerative changes, opining that Claimant's 2018 back surgery was due to the progression of degenerative changes and not any specific event.

37. The ALJ finds the opinion and testimony of Dr. Bisgard, as supported by the medical records, more credible and persuasive than Claimant's testimony.

38. The ALJ finds that Claimant failed to prove it is more probable than not he sustained an injury arising out of and during the course of his employment with Employer on or around April 2, 2018.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after

considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

As found, Claimant failed to meet his burden to prove he sustained a compensable industrial injury on or around April 2, 2018. Claimant has an extensive, longstanding history of chronic low back problems. Claimant alleges that a specific work event on or around April 2, 2018 resulted in increased back symptoms. Claimant did not report his alleged work injury to Employer, nor is there any reference in the medical records to the alleged specific event Claimant now claims exacerbated his condition. Claimant was aware of the expectation that he timely report any work injuries and had been previously reprimanded for his failure to do so. Despite this, Claimant purports that he simply chose not to report the alleged April 2018 injury because he had previously felt demeaned by Employer. The ALJ is not persuaded by Claimant's explanation. A reasonable person under Claimant's circumstances would promptly report such injury. Claimant only chose to report the alleged injury after undergoing extensive treatment and a significant period of disability that caused Claimant to separate from his employment. Claimant's failure to previously report the alleged injury, as well as the absence in the medical records of any mention of the alleged specific event undermines Claimant's contention that he did, in fact, suffer a work injury in April 2018.

Additionally, there is insufficient medical evidence establishing Claimant sustained the alleged work injury. While Claimant may have experienced symptoms at some point at work in April 2018, the preponderant evidence does not establish the requisite causal nexus between Claimant's work and his condition and need for treatment. Dr. Bisgard credibly and persuasively opined that Claimant's condition and need for treatment is the result of the natural progression of his longstanding, deteriorating degenerative back condition. To the extent Claimant suffered a reherniated disc, Dr. Bisgard credibly explained such condition was more likely due to Claimant's chronic degenerative condition and not any acute event. Here, the preponderant evidence does not establish Claimant sustained a compensable industrial injury.

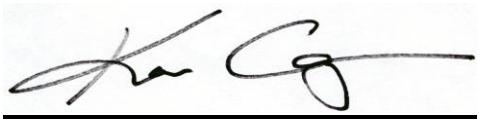
ORDER

1. Claimant failed to prove he sustained a compensable industrial injury on or around April 2, 2018. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 29, 2022



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to additional medical benefits that are reasonably necessary and related to the admitted injury, including up to 24 hours home healthcare or attendant care.

PROCEDURAL HISTORY

This workers' compensation matter is an admitted claim. Two prior hearings in this case resulted in final orders. The first was ALJ Margo W. Jones' Findings of Fact, Conclusions of Law and Order dated September 21, 2016 determining Claimant was injured in the course and scope of his employment on October 23, 2015, suffering a lumbar spine injury while installing solar panels. The second was ALJ Edwin L. Felter, Jr.'s Full Findings of Fact, Conclusions of Law and Order dated February 21, 2018, granting permanent total disability (PTD) benefits.

Respondents filed a Final Admission of Liability on March 28, 2018 admitting for post maximum medical improvement (MMI) medical benefits (*Grover* medical benefits) provided by the authorized treating physician that were reasonably necessary and related to the compensable injury.

Claimant filed an Application for Hearing (AFH) on December 5, 2021 on the issue of medical benefits that are authorized, reasonably necessary, and related to the injury including home health care. The issue was not limited in the pleading to the amount of time for the home health care being requested.

Respondents filed a Response to the AFH on January 4, 2022 on the above issues but added that Respondents were in the process of a Rule 16 challenge of the Rasheed Singleton, M.D.'s undated (received December 6, 2021) request for authorization for 24 hours per day, 7 days a week home health care and Respondents denied authorization of Kyla Oliver or any other family members to provide 24 hours, 7 days a week of home health care.

Respondents objected on the record to proceeding with the issue of home healthcare for anything less than 24 hour care as the Rule 16 denial only entertained a request for that amount and nothing less than that amount, but stated they were ready to proceed despite a ruling that the issue of home health care for any amount of time would be addressed.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant, who was 43 years old at the time of the hearing, was injured in the course and scope of his employment with Employer on October 23, 2015. Claimant explained that while he was climbing a ladder, holding a solar panel, a forceful gust of wind caught the panel, twisting him, he felt a pop in his low back. He continued to work and on October 23, 2015, while bent over installing solar panels on a roof, putting in lag bolts when he felt his back pop again, causing him not to be able to stand. He continued with severe spasms in the low back and pain going down his lower extremities. Claimant described that whenever he attempted to put pressure on his lower extremities, the pain would immobilize him. He stated he had never, before this injury, felt pain and spasming like what he feels now.

2. Before Claimant reached maximum medical improvement (MMI) he would suffer severe symptoms, including severe spasms down his bilateral legs, would have cramps while attempting to walk, had pain in both lower extremities, felt a shock like sensation into his legs and testis, and burning pressure from the low back down the legs. He would wake up twisting in pain from the spasms, and this continues to happen to the present day.

3. He continues to have chronic pain that limits his ability to walk and requires frequent massage therapy and attendant care as he is limited in what he is able to do on his own, including many activities of daily living. The spasms and cramping are a stabbing sensation that run from the back down his legs. His foot would twist from the spasm and he would need assistance to twist it back to alleviate some of the pain. The pain also affects his groin area, sending electrical shocks from the lower back into his testicles.

4. Claimant received treatment from Ms. Rachel Moore, including massage therapy, tens unit treatment, used exercise bands, performing different exercises, and heat therapy. What helped the most was the deep tissue massage. He explained that it assisted him to be able to do more, be more functional for a few hours of relief until the next spasming episode occurred.

5. Claimant stated it was extremely upsetting to continue to have the spasming and cramping, especially in public places. He requires deep pressure massage in the thighs around the groin area, inner thigh and legs to stop the intense spasming. The spasming occurs on a regular basis. The legs tighten up so bad that it makes him cry from the symptoms. He frequently get the severe spasming at least ten times in a day.

6. He tried pain medications but they would make him moody, could not think so he discontinued using them, especially since he did not want to be addicted to them.

7. Claimant relies on his domestic partner of approximately 14 years to assist him with dressing, getting in the shower, preparing his meals, washing his clothes, and basically all the chores he used to do around the house. Claimant states he has become a burden on his domestic partner, including relying on her to do most of the child care, especially if it is a bad day form him.

8. When Claimant has spasming in his low back or lower extremities, he will call his partner and she will massage the body part, whether it is his low back or his shin or his inner thigh or even his ankle, which causes his foot to turn sideways. He noted that

sometimes the spasming is so bad that he will sweat and cry, becoming somewhat claustrophobic, from the intensity, but his partner always knows what to do, how much pressure to apply in releasing the spasming muscle and provide him some relief. When he has these episodes, they are so extreme that he will frequently fall asleep, exhausted, after the massage session. Some of the worst episodes occur in the middle of the night, and they are generally sporadic and spontaneous. He cannot predict when they will occur but he has them every few hours generally.

9. Claimant explained that when his partner is not available to help him during a spasming episode, he uses tools but rarely is able to help relieve the pain very much other than slightly until she returns and can help him with massage, putting her full body force, sometimes even having to use her knee to dig into the muscle to release the spasming muscle. It is most embarrassing when he has a spasming episode in public places, especially if the spasming is in his upper thigh/groin area.

10. His domestic partner has had to take on the greater part of difficult activities of daily living, such as assisting him into the tub to shower, washing his lower half of his body, dressing the lower half of his body, preparing meals, fetching him water or things he needs, perform all household chores like laundry, cleaning and taking care of the children. Claimant believes he is a burden to her. If he attempts to perform these activities on his own, like reaching to put on his socks, he has immediate onset of spasms in his legs. Regardless, he tries his best to be as mobile as possible, does some weight bearing in order to ward off onset of thrombosis and keep nerves firing. Claimant explained that when he places weight on his right leg he frequently has sharp, stabbing, pressurized, throbbing pain going down his leg. Claimant's way of walking changes, depending on the type of pain he is experiencing on any particular day.

11. Claimant stated that he does drive but only for short distances. He started very slowly in 2019, progressing from just driving the car on the driveway, to going around the block, to going to the bank or store that are a few miles away. But he does have to be very careful because if his legs starts spasming, he knows he can be in a dangerous situation. He has also tried to be as mobile as possible though he keeps his crutches with him at all time, trying to progress to a cane but he has been unsuccessful to date.

12. Claimant agreed that he has had physical therapy and medications that did not work and that he declined to proceed with injections, as Dr. Andrew Castro had advised him that they would not work on him because there was too much scar tissue in his low back. Claimant has chosen to manage his pain symptoms with medicinal cannabis and deep tissue massage that his partner does for him.

13. Claimant and his partner both testified that she would leave Claimant on his own when she was performing necessary shopping or taking care of the children. However, while Claimant could manage for short periods of time without her assistance, using the tools at his disposal, he would frequently call her and request she return to assist him, especially if it was a particularly hard day with severe spasming in his back or legs. His partner stated that she had received family tickets to see a game, but had to give them away because she was unable to leave Claimant for such a long time.

14. This ALJ noted that Claimant was extremely emotional and his composure altered while testifying at hearing.

15. The video surveillance of Claimant, which was approximately 24 seconds long, showed Claimant was seen looking out his bathroom window, walking on his porch while holding his crutches, with only a very slight limp favoring his right leg and showed Claimant driving.[1]

16. Claimant's domestic partner testified at the hearing that she has been with Claimant for approximately fifteen years and have three children together, but has only been living with Claimant for the last seven years. She stated that she would help Claimant get somewhat comfortable because, right after Claimant's injury he was in excruciating pain, and had difficulty with thought processing. She would bathe him, dress him, and feed him, trying to make him comfortable. She would also take him to appointments and helped him understand what was happening to him. At the time, she had been continuing her education and home schooling her daughter, but had to drop out because she could not keep up. She would attend Claimant's massage appointments with Rachel Moore, PT and watched Ms. Moore would do to then help Claimant with the frequent spasming when he was at home. She also received some training from the staff at Craig Hospital.

17. Claimant's partner has continued to do deep tissue massage and myofascial release on Claimant to this date, approximately ten to twelve times a day, depending on his level of activity. She will typically have to intervene a couple times at night but she does the therapy, including his leg stretching and massage early in the morning and late into the evening to make sure to ward off the spasming for a while, taking a proactive approach. If she does not do this, Claimant will have spasms and cramping a lot more frequently throughout the day. The morning and evening sessions lasts around one and one half hour, other sessions are shorter between five to fifteen minutes depending on the cramp or spasming level and the activity Claimant is involved in. However, if he has an episode in the middle of the night, or during the day while his partner is away for a few hours, Claimant would require a really long massage session. She continues to help him with meal preparation, showering, dressing, and she has to do the laundry, especially his sheets because Claimant has night sweats frequently. She helps because she has observed how hard it is for Claimant when he tries to do anything that requires him to extend his arm out, causing increasing back problems. She also has to mount the lift onto their vehicle in order to take the scooter with them if they have a family outing, as well as carry out his wheel chair or scooter. She does all the domestic tasks, like carry groceries, taking out the trash, child care, household chores and meal preparation. She even has to wash his feet and clip his toenails.

18. Claimant's partner testified that she was taught by Rachel Moore and the therapists at Craig Hospital how to release the muscles when they are spasming, in order for the nerves to get oxygen. They did so by showing her what to feel for and how much pressure to put into the massage, in order not to injure Claimant. While she does not hold

[1] Respondents' Exhibit K, the video surveillance was presented during the hearing and was admitted into evidence. A hard copy of the video was submitted to the OAC.

herself out to be an expert, she has been giving Claimant massages that help with the spasms since his injury.

19. Claimant was seen by Rachel Moore, PT, from December 2015 through April 2015, frequently documenting a slow and guarded gait and significant hyposensitivity on the right in the lumbosacral spine, as well as an absent S1 Achilles reflex and an intolerance to prolonged positioning. Her main goal was to decrease pain and reduce spasms. Treatment included e-stim, modalities, hot packs, manual therapy to lumbar paraspinal muscles and along the sciatic nerve path.

20. Claimant's authorized treating physician (ATP), Bennett I Machanic, M.D., placed Claimant at maximum medical improvement (MMI) on July 25, 2017.

21. Terry Young, an occupational therapist at Starting Point performed a functional capacity evaluation (FCE) dated October 3, 2017, stating that markers for consistency showed Claimant put forth full effort and indicated no symptom exaggeration. Following testing she found Claimant was limited to sitting for 5-45 minutes, stand from 0-5 minutes and walk only for very short distances due to onset of spasming and increased pain. She noted that he could not bend, crouch, squat, kneel, crawl, or climb stairs. He could not reach above shoulder level and any reaching forward to perform functional tasks for more than a few seconds to a few minutes is extremely limited due to the onset of muscle spasms.

22. In her report of, she documented that the Claimant suffered from pain and muscle spasms in his legs during the testing which were palpable and so severe that Ms. Young had to massage his legs and at one point, Ms. Young had to use both knees on the Claimant's hamstrings to get the spasms to stop. Ms. Young stated that despite multiple attempts on the part of the Claimant to perform any type of productive task during the FCE, he was simply unable. Ms. Young noted that Claimant had no ability to engage in home making chores, family activities, and social functions in any consistent or reliable way. She said that reaching, leaning forward, standing or any type of activity, no matter how sedentary, would prompt spasms within minutes. Even simple reaching caused Claimant to go into painful muscle spasms. Ms. Young noted that Claimant "continues to rely on his wife for assistance with all aspects of care including providing meals, assisting with bathroom transfers, transportation, childcare, and cleaning his lower body," stating that Claimant "relies solely on his wife and has no other caregiver assistance." Ms. Young remarked that Claimant "seldom drives, and it is only to get out of the house and maybe go to the ATM." Ms. Young ultimately opined that Claimant "will require high levels of care life."

23. Dr. Jeffrey Kleiner evaluated Claimant on October 25, 2017, findings significant abnormalities on exam including severe lumbar spine pain and lower extremity cramping with motion, dense numbness below the right knee level, reduced sensation to the level of the groin, decreased sensation to the knee, paraspinal spasms bilaterally and while FABER test was negative, it elicited paraspinal lumbar spasms.

24. Dr. Machanic issued a report on November 27, 2017 that stated that, based on the EMG testing he performed, Claimant had nerve abnormalities at the L5 and S1 levels in addition to scarring, with the right side being worse than the left. He noted that

the nerves were not completely dead, but they were not vigorous either, stating that the H reflexes were not functioning well and that Claimant did not have normal voltage over the peroneal nerve. He opined that there were no real treatment options to restore the nerves to normal function and that the problems were likely permanent. He opined that Claimant required help with activities of daily living and would need assistance for the rest of his life.

25. On February 27, 2019 Dr. Machanic noted that Claimant also had severe weakness of the right leg, stating that massage therapy works well to alleviate some of the pain and spasms and he requires it to maintain his status quo, though it is temporary. On exam he noted that Claimant had foot drop on the right, decreased strength in the L5 distribution, reduced sensation and reduced reflexes. He also recorded some allodynia. Dr. Machanic remarked that the delay in proceeding immediately with surgical intervention caused Claimant's catastrophic disability.

26. Claimant was also evaluated on May 28, 2019 by Dr. Machanic who observed that Claimant's condition was not changed, appeared depressed, withdrawn, and frustrated. He had loss of sensation in the L5 distribution, had weakness in the gluteus medius, tensor fascia lata and foot dorsiflexors. He stated that he had no objection to Claimant using cannabidiols or cannabis tea but also prescribed diclofenac ointment and lidocaine patches. In fact, Dr. Machanic recommended that Claimant continue with cannabidiols and cannabis preparations on January 6, 2020. He also noted on exam that Claimant attempted to stand and had shooting pain down his right leg, causing him immobilization and in turn causing his right lower back to go into spasm. Straight leg raise was impossible to achieve and he had weakness of the right foot. Lastly he observed that Claimant had worsened allodynia and was very impaired.

27. On June 16, 2020 Ms. Young performed a second FCE, where she noted that "]I]t was evident that his [Claimant's] tolerances for sitting, standing, walking, and performing any functional activities using his arms have not changed and he continues to be intolerant of work activity." Ms. Young observed severe muscle spasms in his hamstrings which were also observed during testing in 2017." She noted that when sitting, Claimant must use his arms to push down and relieve pressure off his buttocks/spine, rendering them unusable for functional or sedentary tasks and that standing and walking were still severely limited. She recommended 24 hour caregiver services as Claimant required assistance with most all ADLs, including manual therapy to reduce muscle spasms, as well as an adjustable bed, replacement shower bench, and a track chair.

28. Dr. Rasheed Singleton took over as ATP for Claimant on October 8, 2020. Dr. Singleton discussed potential treatment options but Claimant elected to continue to maintain his status with cannabis products. On exam he noted abnormal findings in the lumbar spine, with diminished sensation in the left lower extremity and negative Waddell's testing. Dr. Rasheed documented that Claimant continued to complain of lumbar spine and lower extremity spasms. He documented on multiple dates that Claimant was awaiting durable medical equipment (DME) that Dr. Rasheed ordered but Claimant had not received. He also documented similar findings on exam during subsequent medical visits, including lumbar spine tender to palpation, and abnormal sensation. On

September 8, 2021 he noted that Claimant had lumbar paraspinal muscles spasm and spasticity in the legs. He also recommended a new PT evaluation.

29. Dr. Singleton issued an undated letter which stated that Claimant required home health care assistance 24 hours per day as a result of the on the work injury. Respondents indicated that they received this letter on December 6, 2021. Dr. Singleton noted that Claimant's domestic partner was currently providing Claimant's home health care and massage therapy, and that someone needed to continue to do so for Claimant. He specifically documented on September 8, 2021, that Claimant's partner was providing approximately eight hours of home care to Claimant, including for home exercise and ADLs.

30. On February 3, 2022, Claimant attended an independent medical evaluation (IME) with Dr. Fall, upon Respondents' request. She reviewed Claimant's medical records and examined Claimant. Dr. Fall observed Claimant walking down a hall and noted that he had the ability to go up and down stairs without assistance. Dr. Fall noted a benign examination and diagnosed Claimant with a chronic pain disorder associated with psychological issues.

31. Dr. Singleton testified at hearing and stated that he was a pain medicine specialist of fifteen years' experience with a fellowship at Stanford University. He had approximately 500 chronic pain patients that he was currently treating. Dr. Singleton was qualified as an expert in pain management and pain medicine. Claimant became Dr. Singleton's patient pursuant to his prior ATP's referral, upon retirement. He documented Claimant had lumbar radiculopathy as a main and prominent diagnosis.

32. Dr. Rasheed noted that Claimant's symptoms included severe pain across his low back, shooting pains, numbness, tingling, electrical-type shock sensations, ongoing cramping and spasms throughout his lower extremities to his feet, all of which are typical for patients with radiculopathy, including derangement or abnormality within the lumbar spine caused by nerve compression. Dr. Rasheed stated he had discussed multiple options for treatment with Claimant, including but not limited to epidural steroid injections, lumbar sympathetic blocks, spinal cord simulator trials, Gabapentinoids, Lyrica, and opiate medications, but documented that Claimant wished to stay with the massage and manual therapy because they had been of the most benefit to him. He explained that massage therapy would break through the muscle spasms by increasing blood flow to the area and allow for the muscle to stretch and release in large muscle groups.

33. Dr. Rasheed explained that throughout all his visits with Claimant and his domestic partner, that Claimant was very dependent on his partner for his activities of daily living. He stated that to remain somewhat functional, Claimant required the physical therapy, manual therapy, massage treatment sessions his partner performs for him throughout the day and into the evening. Based on the totality of evidence before Dr. Rasheed, he concluded that Claimant required assistance, whether it was from his partner or another source, to maintain his level of functionality. Dr. Rasheed opined that Claimant requires home health care assistance for therapy and activities of daily living. He dis stated that it would be best for Claimant to have a professional provide the therapy,

instead of his He stated that the need for home health care was causally related to the October 2015 workplace accident.

34. Dr. Rasheed detailed that factors he looked at are Claimant's ability to accomplish his activities of daily living, including grooming, bathing, changing, upkeep of his home, and ability to feed himself, as well as his medical needs. He stated that, due to the difficulties that Claimant has, during the night especially, with severe spasming, a 24 hour home health care provider would be appropriate to alleviate Claimant's partner's burden of taking care of Claimant. However, it need not be the full 24 hours as a professional licensed therapist may be able to alleviate the amount of treatment he may require during the day. In light of this, Dr. Rasheed opined that Claimant would require at least a 12 hour per day home health care and attendant care services, including the massage therapy.

35. Allison M. Fall, M.D., a board certified physician in physical medicine and rehabilitation, was accepted an expert in that field. Dr. Fall noted that she had examined Claimant on February 3, 2022, and reviewed his medical records. She opined that Claimant did not require either a physical therapist or home heath attendant care services because he needs to learn self-management and use self-management techniques such as use of foam rollers, a Theracane or a Theragun to perform his own massage to alleviate pain as well as learn to perform all activities of daily living on his own as he had no impairment of his upper extremities. She suggested Claimant use techniques of "biofeedback or mindfulness or whatever to – for relaxation, given that he doesn't want to utilize any medications." Dr. Fall further witnessed Claimant crying out in pain during the evaluation, and had his partner get up on the exam table with him to put pressure on Claimant's adductor upper thigh, inner thigh muscle using both her elbow and her knee, to put deep pressure. Despite witnessing this, Dr. Fall did not stop her from performing the muscle spasm release or indicate she took any steps to admonish this activity. Yet she criticized the practice of an unlicensed and untrained individual performing such tasks stating that Claimant did not require the service and should turn to more traditional chronic pain treatments.

36. Dr. Fall did concede that someone with radiculopathy can have lower extremity pain, cramps and spasms, but it is not common for a chronic pain patient out of the acute phase. She stated that for someone that has radiculopathy, the sporadic cramps and spasms can interfere with their ADLs. She stated that she had no evidence that massage therapy relieved or alleviated Claimant's spasm. She agreed that Claimant's current chronic pain condition is related to the October 2015 accident.

37. As found, Dr. Singleton is more persuasive and credible in this matter than Dr. Fall. The medical records document a long history of providers noting muscle spasming. In fact, Ms. Young, while conducting the FCE had to specifically treat the Claimant to relieve the spasming so that she could conduct the FCE, which was valid. Dr. Machanic and Singleton also have noted decreased sensation and mobility limitations. Claimant credibly testified that he required and needed assistance at home to carry out his activities of daily living. Dr. Fall's opinion that only those with severe brain injury and spinal cord injuries should be entitled to home health care or attendant care services is not credible. Claimant clearly continues to suffer from the effects of the injury, which his

providers have stated are permanent neurological impairments that affect his ability to carry out activities of daily living, and requires assistance to maintain and relieve him of the effects of the injury. Claimant has shown by a preponderance of the evidence that he is entitled to home health care including both for massage therapy in order to maintain his level of function and to attendant care to assist with activities of daily living.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131,

134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Respondents have a right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, *supra*. The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, *supra*; *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and

reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C. No. 4-503-974, ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Here, Claimant's claim for compensation was previously found compensable by ALJ Jones and was permanently totally disabled by a serious lumbar spine and radicular medical condition as found previously by ALJ Felter. The work related injury causes multiple intermittent muscle spasming throughout the day that seriously incapacitates Claimant from being more functional. From the time Claimant was placed at MMI, his life partner has been providing Claimant with the needed attendant care and massage therapy in order to reduce critical spasms that occur throughout the day and night. Claimant and his partner credibly testified that Claimant is able to alleviate some of his own spasming, to warding off the ultimate imminent progression of spasming, by self-care or self-treatment with a thera cane and other tools, but requires someone's assistance, especially if the spasming is severe or involves massaging his lower extremities. They both also credibly testified that Claimant requires assistance to get into the tub, bathing his lower extremities, dressing his lower body, travel to his medical appointments, and performing most activities of daily living, including shopping, making meals other than simple fare, washing his clothes and bedding, which he requires on a frequent basis due to night sweats, and generally taking care of the household and child care duties.

Dr. Rasheed credibly testified that Claimant required attendant care services to relieve his partner of some of the duties she now performs for Claimant, which need is caused by the work injury. He stated that Claimant requires dedicated massage therapy to assist Claimant in relieving the significant and chronic muscle spasming, especially in the thigh, groin area and calves. While Dr. Rasheed prescribed 24 hours of attendant care, seven days a week, to include massage therapy, he testified that the more critical times are the twelve hours between 7 p.m. and 7 a.m. The question, however, that needs to be answered is if such services would be available. It is clear from Dr. Rasheed's testimony that Claimant's domestic partner should not be burdened with all of Claimant's care related to the workers' compensation injuries. However, some of the chores and care directly affecting Claimant should be compensated. Whether it is Claimant's partner or an outside facility, Respondents are liable for care that is reasonably necessary and related to the injury. Here, it is found that, from the totality of the credible evidence, Claimant's partner or an outside provide should be providing for at least 5 hours a day seven days a week of attendant care service, which is found to be reasonably necessary and related to the injury. In addition, Claimant should be attended by a professional massage therapist up to twice a day for up to one and one half hour per session, which is also found to be reasonably necessary and related to the injury. This would provide for approximately eight total hours of care per day.

While Dr. Fall testified that seven years after the work injury, Claimant should be providing himself self-care, and not require attendant care services, this is not found

persuasive. Claimant credibly testified that Claimant's spasms are so bad that they immobilize him and he needs help with deep tissue massage. This is supported by the medical records in this matter that describe a severe injury. See Dr. Machanic's records of January 6, 2020. This is supported by his partner's testimony as well, who credibly testified that she provided both massage therapy and deep tissue massage, frequently in the middle of the night when Claimant wakes up with his leg in such severe spasms that his foot would be turned out and had to be massaged back into place. While Claimant has demonstrated to both Dr. Rasheed and Dr. Fall that he is able to ambulate with and without assistance, he credibly testified that he has difficulty when he places pressure on his right foot and the pain can be excruciating. Claimant has shown by a preponderance of the evidence that his work related injury results in severe limitations of activities of daily living and muscle spasming and Claimant requires assistance to relieve him from the effects of the work related injury. The muscle spasming and limitation are proximately caused by the admitted work injury in this matter as testified by both Claimant and Dr. Rasheed. Dr. Rasheed is found more credible than Dr. Fall in this matter and Claimant has shown that it is more likely than not that continuing home health care should include attendant care services and professional deep tissue massage services, if available. If they are not available, Respondents shall pay Claimant's life partner for the services she is currently providing.

Respondents argue that Claimant failed to properly raise the issue of any amount of time for home health care services less than 24 hours per day, seven days a week. This ALJ disagrees. Nowhere on the Application for Hearing does Claimant state how much time he is requesting for home health care services that are reasonably necessary and related to the injury, only that the issue of home health care was an issue set for hearing. Claimant was relying on the request sent by his ATP that recommended the home health care or attendant services for 24 hour care. There are always two avenues to obtain reasonably necessary and authorized medical benefits that are related to a claim. The first is established by W.C.R.P. Rule 16 by a request for prior authorization. The second is to pursue the benefits by applying for hearing to obtain a judicial determination. Further, there was no objection to Dr. Rasheed's testimony when he stated that less than the 24 hour care might be required, "a minimum of ten or 12 hours, perhaps, in that, in that timeframe." In fact, Dr. Fall testified extensively that Claimant did not require any home health care services. It is found that Respondents had notice and an opportunity to be heard in this matter. Respondents' objection to having this ALJ address the issue of quantity of home health care services is overruled.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay for home health care services to assist Claimant with activities of daily living up eight hours a day that are reasonably necessary and related to the work injury of October 23, 2015. This shall include both therapy and

attendant care services to relieve him from the effects of the October 23, 2015 work related injury.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 2nd day of May, 2022.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-145-493-004

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable injury to his back on July 16, 2020.

II. Whether medical treatment Claimant received from Joint Chiropractic was authorized.

STIPULATIONS

- The parties stipulated to an Average Weekly Wage of $1,056.00.
- The issue of temporary disability benefits (TTD/TPD) was reserved for future determination.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Medical and Procedural History

1. Claimant is a 59-year-old equipment delivery driver who alleges he sustained an injury to his back on Thursday, July 16, 2020, while driving. Claimant did not experience the onset of symptoms until Friday, July 17, 2020, after he got off work and started pulling weeds at home. Respondents' Hearing Exhibits (RHE) B at 8. Claimant did not report a work injury on Thursday July 16 or Friday July 17, though he worked full shifts on both days. Claimant was subsequently off work for a vacation (July 19 through July 25, 2020). Hearing Transcript (Tr.) at 52.
2. Claimant had prior instances of ambiguous onset of back pain, dating back to 2015, which resolved with brief treatment. RHE 63. Claimant had a minor back injury on November 15, 2019, approximately nine months before the onset of similar pain for this alleged injury. RHE 66. Treatment for this injury ended on December 3, 2019, approximately seven months before this alleged injury. RHE 73.
3. Text messages between Claimant and his supervisor, JB[Redacted], reflect no work-related reports of injury or pain from the period from July 15, 2020, and before July 27, 2020. RHE C at 28-31.
4. On Monday, July 20, 2020, Claimant emailed Kayla Squires at John Hopkins Clinic, complaining of sciatic pain in the right leg. RHE D at 70. Claimant stated that he was "currently on vacation and had completed some stretches recommended from an internet search." *Id*. Claimant stated that he could barely walk and that the "pain got worse after Friday." *Id*. Ms. Squires stated that Claimant may get the most relief by seeing a chiropractor. *Id*. It was noted that Claimant would be leaving for California that evening.

5. The same day, on July 20, 2020, Claimant presented to The Joint Chiropractic and was evaluated and adjusted by Dr. Patrick Hailey. Claimant reported right lower back and leg pain but denied radiating pain in either extremity, numbness, tingling, or any other neurological signs. RHE D at 55. Claimant denied any recent surgery, accidents, hospitalizations, or fractures. *Id*. Claimant did not state the onset of pain at work or mention a mechanism of injury. Despite Claimant alleging he was injured at work just four days earlier - July 16, 2020 - Claimant filled out an intake form specifying his symptoms first began approximately one month earlier. RHE D at 51.

6. Claimant left for California on Tuesday, July 21, 2020. RHE B at 8. Claimant claims his symptoms increased and that when he returned on Monday, July 27, 2020, he felt like there was no way he could work so he let his employer know. *Id*.

7. On Monday, July 27, 2020, Claimant contacted the Pepsi JOBHURT hotline and reported a work-related injury. RHE C at 32. Claimant reported that an injury had occurred on July 16, 2020, at 9:00 a.m. The incident description states that: "While driving the tractor, the seat did not have air in it, the EE hit a pothole on Washington Street, near I70, went airborne and landed very hard on the seat. The EE is feeling pain in his right upper leg and right lower leg." *Id*.

8. Claimant subsequently called his supervisor, JB[Redacted], on July 27, 2020 and reported a work injury. Tr. at 54. Claimant was not sure how he injured himself, stating he may have hurt his back pulling weeds or bouncing on his truck seat. *Id*.

9. Claimant was given a list of designated providers pursuant to W.C.R.P. 8 and chose the John Hopkins Clinic/Pepsi Wellness Clinic. RHE C at 33.

10. On July 28, 2020, Claimant presented to Jennifer Pula, M.D., at the Wellness Clinic for initial evaluation. RHE D at 75. Claimant reported pain in the right leg. *Id*. Claimant stated that he thought the injury happened on Thursday July 16, when he either drove over a pothole or bump, without air in his seat, causing him to land hard and awkwardly. *Id*. Claimant reported "he did not notice anything until Friday afternoon when he went to pull weeds in his yard, then he started noticing pain in his leg." *Id*. Claimant stated, "he did not connect that it could have been connected with the hard landing after hitting the bump in the road, until Monday when he went to see a chiropractor." *Id*. Claimant also reported that "he did not feel an initial injury" and the pain started "the next day [when] he was home pulling weeds when he felt a pain in his right leg/calf." RHE D at 76. It is noted that Claimant was in California from July 21 through July 25, 2020, and felt pain the entire time. *Id*. X-ray studies of the lumbar spine showed mild degeneration, most pronounced at L2-3. RHE D at 77. The sacrum and coccyx were unremarkable. RHE D at 87. Claimant was given restrictions and referred for physical therapy. RHE D at 77.

11. Claimant returned to Dr. Pula on August 6, 2020, where it was noted he had attended physical therapy and continued with the chiropractor. RHE D at 80. It is further noted that Claimant returned to work Tuesday and felt good but was back to where he was before on Wednesday. *Id*. Claimant continued to work under restrictions during the course of treatment at the Wellness Clinic.

12. Respondents filed a Notice of Contest on August 17, 2020, stating a non-related injury. RHE A at 5. Respondents denied further medical care after this time. Claimant's last

treatment at the Wellness Clinic was on August 12, 2020, at which time he was still working under restrictions. RHE D at 83.

13. Claimant subsequently treated through his personal care provider at Kaiser Permanente. On August 20, 2020, Claimant presented for treatment of the back, and it was stated he had been having low back pain/right buttock pain for the past month, radiating down the right let to the ankle. RHE D at 108-110. It is noted that the pain improved from the initial injury but had not gone away. *Id*. Claimant was referred for neurosurgical evaluation.

14. On August 26, 2020, Claimant presented to Zachary Hutzayluk II, M.D., for neurosurgical assessment. RHE D at 113. It was stated that Claimant's back pain was worse since July 17, 2020. *Id*. Claimant reported on July 17, 2020, there was pain after work, severe enough that he couldn't pull weeds. RHE D at 115. Claimant stated that there was "Initially a sharp shocking pain that went all the way down the right leg. Now more of a dull aching pain in the right buttocks." *Id*. An MRI was ordered.

15. On September 8, 2020, Claimant returned to Dr. Hutzayluk and it was indicated he was on light duty from July 17 through August 16, 2020 but had been unable to return to work since because of severe pain. RHE D at 120. It was noted that the pain was "radiating more up into buttocks" than at first. *Id*. It is further noted that "Acute low back pain can be caused by a number of things, but most commonly occurs when you overstretch or pull a muscle in your back." RHE D at 121.

16. An MRI of the lumbar spine from October 21, 2020, showed an L4-5 focal right lateral recess extrusion contacting the right L5 nerve roots. RHE D at 153. There was no other impingement identified. *Id*.

17. On November 23, 2020, Claimant underwent an epidural steroid injection (ESI) at Kaiser at L5-S1. Claimant's Hearing Exhibits (CHE) 5 at 111. Claimant subsequently underwent lumbar traction therapy. CHE 5 at 116. On December 10, 2020, Claimant reported that he was improving each week and would try to return to work for the Employer late next week. *Id*. Claimant returned on December 15, 2020, and reported that the traction had been helpful and that he continued improvement. *Id*. Claimant was still not working but hopeful to return that Thursday. CHE 5 at 119.

18. Claimant returned to work December 12, 2020, and has been working since.

19. Carlos Cebrian, M.D., performed an IME on October 8, 2021. Claimant reported he first developed symptoms on Friday, July 17, 2020, at 5:15 p.m., shortly after he had returned home from work. RHE B at 7. Claimant stated he stopped to pull some weeds that were in the driveway, spent five minutes doing that, and when he attempted to bend down, he noticed that he had pain down his right leg. *Id*. Claimant denied any back pain. *Id*. Claimant stated that he was trying to think about what may have caused these symptoms and recalled that the day prior, Thursday July 16, he hit a bump while driving his work truck, which had no air in the seat, and went down and hit the frame. *Id*. Claimant reported he felt jarred but did not have pain at that time. RHE B at 8. Claimant denied any symptoms until the next day when he was pulling weeds. *Id*. Claimant reported that by mid-December 2020 he was pain free and able to return to full duty on December 21, 2020. *Id*. Claimant stated he never really had any back pain and it was all in his right

leg. *Id*. Dr. Cebrian noted that Claimant had a lumbar strain in November 2019, for which he treated for two weeks and reported resolution of pain without symptoms. *Id*.

20. Dr. Cebrian opined there was no work-related injury from July 16, 2020. Dr. Cebrian stated the mechanism was minimal and there was not sufficient force to cause an injury, occupational disease, or acceleration to the lumbar spine to aggravate a preexisting condition. RHE B at 25. Dr. Cebrian noted that the timeline of the onset of symptoms did not correlate with the timeframe claimed for the injury, referencing no pain at the time of the reported injury but an onset a day later with a non-related mechanism. *Id*. Dr. Cebrian also noted that Claimant told The Joint Chiropractic on July 20 that his symptoms had been present for about one month. RHE B at 26. Dr. Cebrian noted that Claimant had non-related risk factors for low back pain, including a BMI of over 30. Dr. Cebrian concluded that Claimant could work in a full and unrestricted capacity and further treatment under worker's compensation was not medically reasonable, necessary or related. *Id*.

Testimony of Claimant

21. Claimant testified that on July 16, 2020, he drove over a pothole in his truck and it threw him into the air, and the air in his seat was not enough to cushion his fall so he bottomed out "on the bottom of the cab" and basically came down on metal and metal. Tr. at 27. Claimant testified that he felt a shock in his vertebrae but was able to continue working "somewhat pain-free." *Id*. Claimant testified that "it hurt" but subsided immediately. Tr. at 39-40. Claimant did not report an injury on this date. Tr. at 40. This contradicted Claimant's statement in interrogatory responses that indicated that he did not feel pain until the next day. Tr. at 43.

22. Claimant worked on July 17, 2020, and did not report an injury. Id. Claimant did not have symptoms until he was off work and got out of his vehicle to bend down. Tr. at 44. Claimant was not on shift at this time. *Id*. Claimant testified he returned home and was going to bend over to pull some weeds on his driveway but couldn't bend without straightening his leg and "practically had to lay on the ground and get it." Tr. at 28. Claimant testified he was feeling pain in his leg. *Id*. Claimant testified he then went on vacation and didn't report any injury until he returned from vacation. Tr. at 45.

Testimony of JB[Redacted]

23. Mr. JB[Redacted] is Claimant's supervisor at the Employer. Tr. at 48. Mr. JB[Redacted] did not receive notice of the injury until July 27, 2020. Tr. at 49. Claimant called JOBHURT to report the injury on the same day, before reporting the injury to Mr. JB[Redacted] and contrary to Pepsi policy. Tr. at 50. Mr. JB[Redacted] testified that all employees are trained in how to properly report injuries. *Id*. Mr. JB[Redacted] testified that he did not have any interaction with Claimant on July 16, 2020, and did not receive any communication until the next Friday, via text, at which time Claimant did not report any work injury or pain. Tr. at 50-51.

24. Mr. JB[Redacted] testified he wasn't aware of any issues with the truck in question and that all DOT drivers are supposed to do quality checks every morning and report any vehicle issues right away. Tr. at 51. Mr. JB[Redacted] testified that there was another

employee that also drove the same truck and did not report any problems with the vehicle or seat. Tr. at 52-53. Mr. JB[Redacted] testified that Claimant had been driving the same truck up until approximately January/February 2022. Tr. at 53. Claimant had no further complaints about the truck during this time. *Id*.

25. When Claimant reported the injury to Mr. JB[Redacted] on July 27, 2020, he stated he wasn't sure whether he hurt his back at work when the air went out in the seat or if he hurt his back pulling weeds at home. Tr. at 54. Mr. JB[Redacted] gave Claimant a Rule 8 letter upon report. *Id*. Claimant chose John Hopkins/Pepsi Wellness Clinic as the treating provider. RHE C at 33. Mr. JB[Redacted] testified that Claimant worked light duty after the report but was unaware of any lost time. Tr. at 55.

Testimony of Carlos Cebrian, M.D.

26. Dr. Cebrian testified he took a history of the injury from Claimant and that Claimant reported the first onset of pain was when he went to bend to pick up weeds and experienced pain in the right leg. Tr. at 58. Dr. Cebrian testified the initial symptoms did not include back pain. Tr. at 59. Claimant reported he believed he injured himself the day prior, on July 16, 2020, but didn't describe having pain on that date. *Id*.

27. Dr. Cebrian described the MRI from October 21, 2020, as showing an L4-5 disc protrusion contacting the right-sided L5 nerve root. Tr. at 60. Dr. Cebrian testified that there were no acute findings, and that the protrusion was unrelated to the incident on July 16, 2020 described by Claimant. *Id*. Dr. Cebrian concluded that the mechanism was minor and insufficient to cause a protrusion or aggravation of the nerve root. *Id*. Dr. Cebrian testified that if there was an injury, this would have manifested itself earlier than it did for Claimant. Tr. at 61. Dr. Cebrian testified that he felt what was most important was that Claimant did not initially attribute his symptoms to any event on July 16, 2020, but only attributed the alleged air seat event in retrospect weeks after the onset of pain. Tr. at 62. Dr. Cebrian concluded that the cause of the pain was due to non-related factors, including age, obesity, and a diabetic condition, which increases risk of degeneration. Tr. at 63. Dr. Cebrian testified that with degeneration of discs, most people become symptomatic at some point in time and the onset was incidental to pulling weeds. *Id*. Dr. Cebrian credibly concluded that there was no association with what happened on July 16, 2020, and Claimant's back pain. *Id*.

28. The ALJ finds that Claimant developed back pain about a month before his alleged injury. The ALJ further finds that Claimant developed additional back pain and injured his back on July 17, 2020, while pulling weeds at home. The ALJ finds that Claimant did not injure his back on July 16, 2020, while driving his work truck.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at

a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable injury to his back on July 16, 2020.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant alleges he suffered a work-related back injury with corresponding right leg radicular pain on July 16, 2020, after driving over a pothole in his work truck. It is apparent from the records and testimonial evidence that Claimant experienced the first onset of pain on July 17, 2020, after work was finished when he arrived home and was pulling weeds in his driveway. While Claimant claimed at hearing the first onset of pain occurred after bouncing on the seat of his work truck on July 16, 2020, this is contradicted by his own prior statements in interrogatory answers and medical records. Claimant did not posit a work-related mechanism from the July 16 pothole incident until July 27, 2020, when he first reported the incident to the Employer. In the interim, Claimant was on vacation and had stated to Kayla Squires, PA, that he experienced pain after stretching.

Claimant's first treatment was with The Joint Chiropractic during the time he was on vacation. Claimant denied any specific injury as the cause of back pain. He did not state a mechanism of injury or onset. He stated he had no work-related mechanism and instead stated the onset of pain one month before July 20, 2020, which would have been nearly a month before the claimed July 16, 2020, onset.

Claimant did not report an injury on the date of alleged onset. Instead, Claimant reported a work-related injury on July 27, 2020, after his return from vacation. Claimant's report was in violation of company policy, as it was made first to JOBHURT and then to his supervisor. Claimant did not report any defect in the vehicle before the report of injury. Claimant's colleague drove the same truck during the entire time Claimant was on vacation and reported no defect in the air seat. Claimant subsequently drove the same truck through January/February 2022 with no report of defect or further incident or aggravation, though the vehicle had no known repairs in the seat.

Dr. Cebrian persuasively testified that the timeframe regarding the onset and manner of Claimant's pain complaints were significant in the consideration of causation. The ALJ finds that this portion of his opinion is supported by the fact that Claimant reported the onset of back pain about a month before his alleged injury as well as the day after the alleged injury while pulling weeds. As a result, the ALJ finds persuasive Dr. Cebrian's ultimate conclusion that Claimant did not suffer an injury while driving his work truck.

The ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury at work on July 16, 2020.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise,

the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2022.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury to his right upper extremity arising out of the course of his employment with Employer on or about October 5, 2020.

2. Whether Claimant proved by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits causally related to a work-related injury, including past medical benefits.

3. Whether Claimant proved by a preponderance of the evidence an entitlement to temporary total disability benefits from December 24, 2020 through May 4, 2021.

4. Determination of Claimant's Average Weekly Wage.

STIPULATIONS

The parties stipulated to the following facts:

1. The parties stipulated that Claimant's average weekly wage is $1,433,23, with a TTD rate of $955.49.

2. Claimant was released to full duty on May 4, 2021.

3. If the Claimant is found compensable, Mark Fitzgerald, M.D., is an authorized treating physician.

FINDINGS OF FACT

1. Claimant is a 64-year-old right-hand-dominant male who was employed by Employer as a crane operator. Claimant has been employed by Employer on and off for approximately 22 years.

2. Claimant alleges that on October 5, 2020, while working for Employer, he was throwing a canvas rigging strap over a large crane boom that was loaded on a trailer when he heard a "pop" in his shoulder, resulting in a sharp, severe pain in his upper, right arm. Claimant testified he was unable to lift his right arm above shoulder level after the injury.

3. Claimant testified that the injury occurred after his last load of the day, and that he reported to supervisor TS[Redacted] that he "tweaked" his shoulder. Claimant testified that Mr. TS[Redacted] told Claimant to tell another supervisor, DB[Redacted], and that Mr. DB[Redacted] advised Claimant to report the incident to SB[Redacted], the safety manager. Claimant testified that he spoke to Mr. SB[Redacted] 2-3 days later at a safety meeting, and that Claimant told Mr. SB[Redacted] that he (Claimant) needed to complete

paperwork. Claimant testified he continued to request "paperwork" to report his injury, but it was not provided to him until December 2020.

4. Employer's policy requires that after a work-related accident, a written report is to be completed. Approximately six months earlier, in March 2020, Claimant reportedly sustained an injury to his lower back while moving a piece of equipment in the course of is employment. The incident occurred on March 27, 2020, and Claimant completed the incident report within three days. (Ex. B).

5. One month before his claimed injury, on September 5, 2020, Claimant saw his primary care provider, Daniel Grossman, M.D., with complaints of right shoulder pain. Claimant described a "knot" in his right shoulder and reported he was unable to lift his right arm above 90 degrees without pain. Claimant characterized the condition as a "pinched nerve" and reported taking daily ibuprofen was of little benefit. Dr. Grossman noted the etiology was unclear and Claimant's examination was normal. He recommended over-the-counter medications and advised Claimant to follow up if there was no improvement. (Ex. E).

6. Claimant did not seek immediate medical attention for his right shoulder after October 5, 2020, until October 26, 2020, when he saw In Sok Yi, M.D., for a longstanding issue with his hands. Claimant reported right shoulder pain to Dr. Yi. Claimant, but did not report he had sustained any injury at work. Dr. Yi's records do not document a date of injury, mechanism of injury, and do not mention any acute condition of Claimant's right shoulder. Dr. Yi diagnosed Claimant with right shoulder tendinitis, performed a right shoulder subacromial injection, and referred Claimant for physical therapy. (Ex. F). Claimant testified he did not report to Dr. Yi that his injury was work-related because Claimant was "taking care of it himself."

7. Claimant began physical therapy and saw Jill Rechtien, P.T., on November 4, 2020, and attended several physical therapy appointments between November 4, 2020 and December 30, 2020. (Ex. G).

8. According to Employer's records, on October 5, 2020, Claimant submitted a request for days off between November 5, 2020 and November 13, 2020 for an elk hunt. Claimant testified that he went on this hunting trip.

9. On December 7, 2020, Claimant saw Dr. Yi and reported continued pain in his right shoulder. Claimant did not report that the injury was work-related. Dr. Yi suspected Claimant's had rotator cuff tendinitis and possible arthritis of the glenohumeral joint in his right shoulder. Dr. Yi ordered an MRI and referred Claimant to orthopedist, Mark Fitzgerald, M.D. (Ex. F).

10. Claimant saw Dr. Fitzgerald on December 10, 2020. At that visit, Claimant reported increasing pain in his right shoulder since September 2020. While Claimant indicated that working with his arms over shoulder level aggravated his shoulder, he did not mention any specific incident, and did not report that he sustained any work-related injury. Dr. Fitzgerald reviewed Claimant's MRI and diagnosed Claimant with right sided rotator cuff

tendinitis, sprain of the rotator cuff capsule, primary arthritis, and impingement syndrome. He recommended a right shoulder arthroscopy with subacromial decompression, distal clavicle excision, and evaluation of Claimant's rotator cuff. (Ex. F). Surgery was scheduled to take place on January 4, 2021.

11. On December 18, 2020, Claimant saw Daniel Grossman, M.D., for a pre-operative clearance. Although Claimant reported his employment as a crane operator, he did not report any specific work injury to Dr. Grossman. (Ex. E).

12. Claimant continued to work for Employer until December 24, 2020, taking leave before his scheduled surgery due to a pre-surgical Covid quarantine requirement.

13. On December 29, 2020, Claimant was seen for physical therapy at OCC. At that time, Claimant reported he had been dealing with his shoulder pain for a while, and that he "tweaked his arm while at work while tossing heavy items repeatedly when the pain became too much." (Ex. G). Claimant's report is inconsistent with his testimony that he sustained an acute injury while tossing a rigging strap over a boom on October 5, 2020.

14. On December 30, 2020, Claimant filed a Worker's Claim for Compensation (WCC), in which he indicated that he had sustained a "tear" of his right shoulder while throwing a rigging strap on October 5, 2020. On the WCC form, Claimant indicated Employer was notified of the injury on "10/15.20." (Ex. 1),

15. On January 4, 2021, Dr. Fitzgerald performed surgery on Claimant's right shoulder. The procedures performed included an acromioplasty with release of CA ligament, distal clavicle excision, and extensive debridement, bursectomy. The operative report indicates that Claimant's MRI scan showed "signs of chronic external impingement and AC joint arthrosis." During surgery, Dr. Fitzgerald examined Claimant's anterior, posterior, inferior and superior labrums, the intraarticular portion of the biceps, the supraspinatus, infraspinatus, subscapularis, and teres minor (i.e., the rotator cuff) and found no pathology, instability, lesions or tearing of those areas. Examination of the bursal surface of the anterior supraspinatus tendon showed a "delaminating type tear" which was debrided. Dr. Fitzgerald's post-operative diagnosis was chronic external impingement and AC joint arthrosis. (Ex. H).

16. On January 11, 2021, Claimant submitted a Disability Notice: Claim for Weekly Disability Benefits to Employer. (Ex. 12).

17. On January 15, 2021, Respondents filed a Notice of Contest, noting that Claimant's claim was contested for further investigation to determine compensability. (Ex. A)

18. During this time, Claimant continued to undergo physical therapy. Dr. Fitzgerald and Jill Rechtien, P.T., cleared patient to return to work with lifting restrictions approximately 4 weeks after the Claimant's surgery and continued to lighten restrictions as time went on. (Ex. G).

19. On June 10, 2021, Mark Failinger, M.D., performed an Independent Medical Examination at Respondents' request. In his report, Dr. Failinger opined that Claimant's mechanism of injury (underhand throwing of a strap) would not likely result in a rotator cuff injury, and that lack of corroboration of a specific work-related injury indicated that the Claimant's onset of pain was likely insidious and was not work-related. Dr. Failinger was not provided Dr. Fitzgerald's operative report or the Claimant's MRI prior to the IME, and was not able to determine the procedure performed. (Ex. C).

20. Respondents submitted Dr. Failinger's deposition transcript in lieu of live testimony. Dr. Failinger was admitted as an expert in orthopedic surgery without objection. Dr. Failinger reviewed Dr. Fitzgerald's operative report and the MRI report in conjunction with his deposition. He testified that the surgery Dr. Fitzgerald performed included two procedures, a distal clavicle resection involving removal of inflamed or arthritic bone at the end of the clavicle and a decompression, involving removal of bone or tissue impinging or pressuring the rotator cuff. He opined that the surgery performed was to address an arthritic AC joint, not a specific work incident or repetitive work injury. He further opined that it was not a reasonable medical probability that throwing a strap (either overhand or underhand) would create supraspinatus inflammation or partial tearing or affect AC joint arthritis. He opened that the pathology shown on the MRI, including the partial thickness tearing was likely a preexisting degenerative condition. Dr. Failinger's testimony was credible.

21. Dr. Yi testified by deposition in lieu of live testimony. Dr. Yi testified that he had treated Claimant for approximately ten years for hand pain, and that October 26, 2020 was the only time Claimant complained of shoulder pain. Dr. Yi did not recall Claimant reporting the mechanism of injury and did not become aware that Claimant had a workers' compensation claim until he was contacted for his deposition, three or four weeks before December 21, 2021.

22. GT[Redacted], a co-worker was with Claimant on October 5, 2020, and testified he was standing on opposite side of the trailer from Claimant and heard an audible "pop" when Claimant threw the rigging strap. Mr. GT[Redacted] testified that the "pop" sounded like cracking knuckles. Based on the photographs contained in Exhibit 13, and Mr. GT[Redacted] 's testimony, the ALJ finds that Claimant was at least 8-10 feet away from Claimant when Claimant threw the rigging strap. Given the pathology Dr. Fitzgerald identified in Claimant's shoulder, the ALJ does not find credible Mr. GT[Redacted] 's testimony that he heard an audible "pop" from more than 8 feet away.

23. Employer's director of safety, BS[Redacted] testified at hearing. Mr. BS[Redacted] testified that Employer's policy requires injured workers to report incidents immediately no matter how small the injury. He testified that Employer did not learn of Claimant's alleged injury until December 30 or 31, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City*

of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985). “Arising out of” and “in the course of” employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury “has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee’s service to the employer in connection with the contract of employment.” *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm’n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his right shoulder arising out of the course of his employment on or about October 5, 2020. The evidence demonstrates that one month before Claimant’s alleged injury, on September 5, 2020, he saw his primary care provider, and reported right shoulder pain and the inability lift his arm above 90 degrees without pain. Claimant did not seek medical care again for his right shoulder until October 26, 2020, and continued to work in a physical job until December 24, 2020. When Claimant did seek medical care, he did not report any acute injury occurring on October 5, 2020. The first documented report of a work-related condition was on December 29, 2020, when he reported to physical therapy that his shoulder pain was exacerbated by repeatedly throwing objects.

Claimant testified that he specifically requested “paperwork” from Mr. SB[Redacted] and others within 2-3 days of October 5, 2020. Claimant’s testimony that he reported an alleged injury to multiple supervisors indicates Claimant was aware that if he was injured, “paperwork” needed to be completed to initiate a workers compensation claim. If Claimant sustained a work-related injury on October 5, 2020, expected it to be a workers’ compensation claim, and was merely waiting on paperwork from Employer, one would expect, at a minimum, he would report a work-related injury to one of the health care providers he saw between October 26, 2020 and December 29, 2020. However, no such report exists.

Notwithstanding the lack of timely reporting to health care providers, none of Claimant’s health care providers opined that Claimant’s right shoulder pathology, or the need for surgery was the result of a work-related injury on October 5, 2020. Dr. Fitzgerald’s operative report shows no significant tear the Claimant’s shoulder labrum or rotator cuff, and instead showed chronic conditions, including chronic impingement and

arthritis. Although there is an indication of a "delaminating type tear" of the supraspinatus, Dr. Failinger credibly testified that it was not likely that Claimant sustained a tear as a result of throwing a rigging strap. Dr. Failinger's testimony was unrebutted.

The ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he sustained a work-related injury to his right shoulder on October 5, 2020.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant's request for medical benefits is denied and dismissed.

TEMPORARY DISABILITY BENEFITS (TOTAL AND PARTIAL)

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove her industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S. The existence of disability is a question of fact for the ALJ. No requirement exists that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant's request for temporary disability benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his right shoulder on or about October 5, 2020.

2. Claimant's claim for medical benefits is denied and dismissed.

3. Claimant's claim for temporary disability benefits is denied and dismissed.

4. All other issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant's workers' compensation claim is barred by the statute of limitations set forth in Section 8-43-103(2), C.R.S.

2. Which party bears the burden of proof regarding the compensability of the claimant's claim?

3. Whether the party bearing the burden of proof has demonstrated, by a preponderance of the evidence, that the claimant has or has not sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer.

4. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he received from Dr. Amir Beshai on August 16 and August 17, 2017 was authorized.

5. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he received from Dr. Amir Beshai on August 16 and August 17, 2017 is reasonable, necessary, and related to the compensable occupational disease.

6. If the claim is found compensable, whether the respondent has demonstrated, by a preponderance of the evidence, that any compensation to which the claimant may be entitled should be reduced based on his failure to timely report this claim pursuant to Section 8-43-102(2) C.R.S.

FINDINGS OF FACT

Based upon the testimony and evidence presented at hearing, the ALJ makes the following findings of fact:

1. The claimant began his employment as a firefighter with the employer (and its predecessors) in 1983. The claimant retired from his firefighting position on January 19, 2003.

2. In approximately June 2017, the claimant noted left rib and back pain. Initially the claimant sought chiropractic treatment. However, when his symptoms did not improve, he sought treatment with his primary care providers at Trailhead Clinics. Blood work was done and the claimant's PSA[1] was noted to be 100. Given this elevated PSA,

[1] Prostate specific antigen

the claimant was referred to urologist Dr. Amir Beshai with Urological Associates of Western Colorado.

3. The claimant was first seen by Dr. Beshai on August 16, 2017. At that time, the claimant reported that the last time his PSA was tested was four years prior and his PSA was one. Dr. Beshai noted an abnormal prostate exam and recommended a prostate ultrasound and biopsy. Dr. Beshai performed the ultrasound and biopsy on August 17, 2017.

4. The biopsy revealed prostatic adenocarcinoma. The claimant was 58 years of age at the time of this diagnosis. The claimant immediately began cancer treatment, including radiation and chemotherapy.

5. On November 15, 2019, the claimant filed a Workers' Claim for Compensation. In that document, the claimant identified the date of injury as August 16, 2017.

6. On December 17, 2019, the respondents filed a Notice of Contest denying liability pending further investigation.

7. The employer has continuously participated with the Colorado Firefighter Heart and Cancer Benefits Trust since its inception on July 1, 2017.

8. Shannon Rush is the employer's Human Resources Manager. Ms. Rush credibly testified that she spoke with the claimant on one occasion in 2018. The claimant initiated a telephone call to Ms. Rush and asked for a letter verifying his dates of service and the balance of his retirement account. Ms. Rush authored the letter requested by the claimant. Ms. Rush further testified that the claimant did not say anything to her about his general health or any cancer diagnosis.

9. Although she had no further contact with the claimant, Ms. Rush testified regarding what steps she would have taken if, hypothetically, the claimant had requested additional information. Specifically, Ms. Rush testified that if the claimant had asked if the employer could assist him with his cancer condition, she would have referred him to the Colorado Firefighter Heart and Cancer Benefits Trust and/or to the employer's workers' compensation manager. However, the claimant made no such inquiries to Ms. Rush.

10. The ALJ credits the testimony of Ms. Rush over the contrary testimony of the claimant regarding their communications.

11. The experts in this matter addressed findings of the International Agency for Research on Cancer (IARC). IARC is a division of the World Health Organization (WHO). IARC reviews thousands of substances and then classifies those that are likely to cause various types of cancer. IARC publishes a list of substances in two categories:
1) carcinogenic agents with *sufficient evidence* in humans, and 2) agents with *limited*

evidence in humans *(emphasis in the original).* IARC defines these two categories as follows:

> ***Sufficient evidence of carcinogenicity:*** A causal association between exposure to the agent and human cancer has been established. That is, a positive association has been observed in the body of evidence on exposure to the agent and cancer in studies in which chance, bias, and confounding were ruled out with reasonable confidence.
>
> ***Limited evidence of carcinogenicity:*** **A** causal interpretation of the positive association observed in the body of evidence on exposure to the agent and cancer is credible, but chance, bias, or confounding could not be ruled out with reasonable confidence. *(emphasis in the originaf).*

12. With regard to prostate cancer, IARC has identified no carcinogens with "sufficient evidence" in humans.

13. In the second category of "limited evidence in humans" for prostate cancer, the IARC lists: androgenic (anabolic) steroids; arsenic and inorganic arsenic compounds; cadmium and cadmium compounds; occupational exposure as a firefighter; malathion; night shift work; consumption of red meat; rubber manufacturing industry; thorium-232 and its decay products; and x- and gamma-radiation.

14. On August 20, 2020, Dr. Annyce Mayer issued an independent medical examination (IME) report on the claimant's behalf. In her report, Dr. Mayer opined that the claimant's cancer "meets the medical requirements of the Colorado Firefighter Presumption Statute". In support of this opinion, Dr. Mayer noted that the claimant worked as a firefighter in "unprotected and inadequately protected exposure" to carcinogens. Dr. Mayer further noted that "the risk of age from prostate cancer in Caucasians begins to increase at about 45 years of age, with peak incidence in the 60 to 70 age group, with approximately tenfold risk compared to those in younger age groups."

15. Dr. Mayer's testimony was consistent with her written report. Dr. Mayer testified that she was asked to issue an opinion regarding whether the claimant's cancer diagnosis was covered under Section 8-41-209, C.R.S. Dr. Mayer agreed that there are several well recognized risk factors for prostate cancer, including age, race, family history, and genetic factors. Dr. Mayer also testified that age is the most important risk factor. Dr. Mayer further agreed that prostate cancer was the most common non-skin cancer in men.

16. Dr. Mayer testified that, although not comprehensive, there was general agreement in the scientific and medical community regarding the carcinogens found in firefighting. Dr. Mayer acknowledged that in making her determinations in this case, she relied on studies that have shown the types of substances that are present at fire

scenes and that are found on firefighters' bunker gear. That these studies did not involve the claimant specifically, but were based on other firefighters and their firefighting exposures.

17. Regarding IARC, Dr. Mayer acknowledged that IARC has not identified any carcinogens with "sufficient evidence" of causing prostate cancer.

18. Dr. Mayer testified regarding her understanding of IARC's list of agents with "limited evidence" in humans. Specifically, it is Dr. Mayer's belief that IARC has found that these agents are credible causes of cancer, but do not meet the requirements for the "strong level of evidence" needed to be put into the "sufficient evidence" category. Dr. Mayer testified that she believes that IARC has determined the agents in "limited evidence" category for prostate cancer, (including firefighting occupational exposures), to be credible causes of prostate cancer. Dr. Mayer's opinion in this case is based upon this belief.

19. Although Dr. Mayer discussed several factors and agents in her written report, she testified that she was primarily relying on IARC's listing of firefighting occupational exposures in the "limited evidence" column. Dr. Mayer agreed that early studies of firefighters and cancer did not consistently show an increased rate of prostate cancer in firefighters.

20. At the request of the claimant's counsel, on October 14, 2020, Dr. Sander Orent authored an IME report. Dr. Orient opined that the claimant's prostate cancer is the "direct result" of exposure to carcinogens during his career as a firefighter.

21. Dr. Orient's testimony was consistent with his written report. Dr. Orent testified at length regarding the various inadequacies of the claimant's personal protective equipment (PPE) and the practices employed during the time he was employed as a firefighter. Dr. Orent further testified that if he were evaluating a firefighter with cancer who had an extensive firefighting career, and no other risk factor relevant to that cancer, he would conclude that the firefighting exposure caused the firefighter's cancer.

22. At the request of the respondent, on April 6, 2021, Dr. Thomas Allems issued an IME report. In his report, Dr. Allems opined that the claimant's prostate cancer is unrelated to his career as a firefighter. Dr. Allems noted that IARC has not identified carcinogens with "sufficient evidence" for prostate cancer. Dr. Allems opined that attributing prostate cancer to any specific job or exposure is speculative.

23. Dr. Allems's testimony was consistent with his written report. Dr. Allems testified that causation cannot be ascribed to a person's occupation by default just because there is no other explanation or identified cause for a prostate cancer. Dr. Allems further testified that in the present case, there is nothing unusual about the claimant's prostate cancer presentation as a 58-year old Caucasian male at the time of diagnosis. Dr. Allems testified that the claimant's exposure history confirmed that he

was a career firefighter with the expected range of exposures and personal protective equipment issues.

24. Dr. Allems testified that the epidemiologic literature regarding prostate cancer is extensive and spans decades. Despite this extensive research, the data remains inconclusive, and there are currently no identified prostate carcinogens. Dr. Allems also testified that the vast majority of prostate cancer cases occur without any risk factors being present. With regard to IARC's list of agents with sufficient evidence of causing cancer in humans, there is no carcinogen that has been identified as having "sufficient evidence" for causing prostate cancer.

25. Regarding the literature specific to firefighters, Dr. Allems testified that some of this data is impacted by a "built-in bias" due to a phenomenon involving increased PSA screening in firefighters. Beginning in the early 1990s, general public health recommendations were that PSA screenings should be done annually for males in the general population beginning at 50 years of age. Simultaneous with these recommendations, firefighters also began PSA screenings on an annual basis, as part of employment mandated physicals. As a result of this frequent testing, firefighters tended to get many more PSA measurements over time compared with non-firefighters that did not undergo physical evaluations on such a regular basis.

26. Dr. Allems noted that the claimant's history of PSA testing screenings reflects this phenomenon. Specifically, the claimant obtained regular PSA screenings while he was working as a firefighter, but then after his retirement in 2003, he only got a few of tests over the years.

27. Dr. Allems explained that the issue from an epidemiologic standpoint is that, during the annual PSA years, firefighters had much greater screening and much greater potential for being diagnosed with prostate cancer than non-firefighters. Therefore there is concern in the literature that the epidemiologic data has been skewed, particularly in the number of cases that appear to reflect an increased incidence of prostate cancer in firefighting groups, but no change in mortality rates. On February 25, 2016, the National Firefighters Association dropped the annual PSA screening from annual physicals.

28. Regarding more recent firefighter prostate cancer literature, Dr. Allems testified that the data is "consistently inconsistent". Despite more and more studies, there is still no information that has led IARC to identify a known carcinogen for prostate cancer.

29. Both Dr. Mayer and Dr. Allems testified regarding a 2010 meta-analysis conducted by IARC's working group. Both experts noted that this study found a 30 percent increased risk of prostate cancer in firefighters. Both Dr. Mayer and Dr. Allems recognized that IARC stated that, "Of 20 studies of prostatic cancer, 17 reported elevated risk estimates that range from 1.1 to 3.3; however, only two reached statistical significance and only one showed a trend with duration of employment."

30. Dr. Allems explained that given this explanation from IARC, he considers these findings to be weak. He further explained that in this meta-analysis, study after study was not statistically significant. Two studies were statistically significant, but only one study showed increased risk with duration of employment. Dr. Allems also testified that IARC recognized the weakness of the 30 percent data point as firefighting is identified in the "limited evidence" category.

31. In addition to these recent meta-analyses, Dr. Allems testified regarding a meta-analysis done in 2020 (Casjens), in which no association was found between prostate cancer and firefighting.

32. The opinions of Dr. Allems are found to be more credible and persuasive than the opinions of Ors. Mayer and Orent. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Statute of Limitations

4. Section 8-43-103(2), C.R.S. provides that the right to workers• compensation benefits is barred unless a notice claiming compensation is filed with Division within two years after the injury. However, §8-43-103(2), C.R.S. also provides, in relevant part, that the limitation does not apply to:

> [a]ny claimant to whom compensation has been paid or if it is established to the satisfaction of the director within three years after

> the injury or death that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced thereby, and the furnishing of medical, surgical, or hospital treatment by the employer shall not be considered payment of compensation of benefits within the meaning of this section...

5. The statute of limitations begins to run when the claimant, as a reasonable person, should have recognized the nature, seriousness, and probable compensable character of the industrial injury. *City of Boulder v. Payne,* 426 P.2d 194 (Colo. 1967); *Intermountain Rubber Industries v. Valdez,* 688 P.2d 1133 (Colo. App. 1984).

6. In the present case, the claimant learned of his cancer diagnosis in August 2017. However, he did not report his cancer diagnosis to the employer until he filed his Worker's Claim for Compensation on November 15, 2019. This was more than two years from his date of injury.

7. The ALJ concludes that no reasonable excuse exists for the claimant's late reporting. Here, the claimant was diagnosed with prostate cancer in August 2017 and immediately began treatment. The ALJ finds that in August 2017, the claimant recognized the nature, seriousness, and probable compensable character of this diagnosis. As found, Ms. Rush's testimony regarding her communication with the claimant is credible and persuasive. The ALJ concludes that the claimant made no report of his cancer diagnosis to the employer until November 15, 2019. Therefore, the claimant's claim is barred by the statute of limitations.

Burdens of Proof

8. Notwithstanding the ALJ's determination that the claimant's claim is barred by the statute of limitations, the ALJ also makes conclusions of law regarding the appropriate burden of proof in this matter and compensability.

9. Typically, a claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

10. However, the Colorado legislature has established a specific provision for workers' compensation claims of firefighters with a diagnosis of cancer. Section 8-41-209, C.R.$. provides:

> (1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed five or more years of employment as a firefighter, caused by cancer of the brain, skin, digestive system, hematological system, or genitourinary system

and resulting from his or her employment as a firefighter, shall be considered an occupational disease.

(2) Any condition or impairment of health described in subsection (1) of this section:

(a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter; and

(b) Shall not be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows by a preponderance of the medical evidence that such condition or impairment did not occur on the job.

(3) Repealed.

(4) **An** employer who participates in the voluntary firefighter cancer benefits program created in part 4 of article 5 of title 29 Is **not subject to this section** unless the employer ends participation in that program. *(emphasis added).*

11. In the present case, the claimant worked as a firefighter for 20 years. Prostate cancer is a cancer of the genitourinary system. Therefore, as an initial matter the firefighter provision shifts the burden of proof from the claimant to the employer.

12. However, the ALJ finds that the employer has demonstrated that they are a participant of the voluntary firefighter cancer benefits program as identified in Section 8-41-209(4) C.R.S. Therefore, the firefighter provision does not apply to the present case and the burden shifts **back** to the claimant.

Compensability

13. Based on the facts of the current case, the ALJ concludes that it is the **claimant's** burden, by a preponderance of the evidence, to demonstrate that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with employer.

14. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent*

Injury Fund v. Thompson, 793 P.2d 576 {Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory, supra.*

15. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

16. Although it is the claimant's burden in this case, the Colorado Supreme Court has provided guidance regarding the analysis of causation in firefighter cancer cases. In *City of Littleton v. Industrial Claim Appeals Office,* 370 P.3d 157, 165 (Colo. 2016), the court discussed the type of evidence that may be used in order to rebut the presumption of compensability under Section 8-41-209 and prove that a claimant's cancer is not work-related.

17. Section 8-41-209(2), C.R.S. does not require the employer "to disprove causation from every conceivable substance." *Id.* In fact, if a firefighter's exposure is "speculative, remote or illogical, then it is not typical of the occupation." *Id.* With regard to general causation, the *City of Littleton* court noted that epidemiological evidence is "highly probative" *Id.*

18. In the companion case of *Industrial Claim Appeals Office v. Town of Castle Rock,* 370 P.3d 151, 157 (Colo. 2016), the Supreme Court further determined that to meet its burden of proof under Section 8-41-209(2)(a), the employer is not required to establish a specific alternate cause of the firefighter's cancer. *Id.*

19. Although the Supreme Court was primarily addressing the issue of how to rebut the presumption of compensability in both *City of Littleton* and *Town of Castle Rock,* the principles articulated in these decisions are applicable to issues regarding causation in cancer claims more generally.

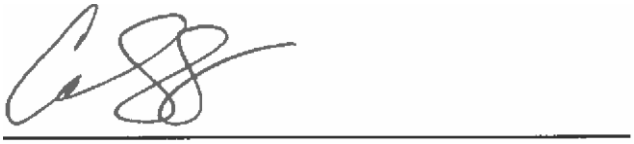
20. The ALJ concludes that the claimant has failed to demonstrate, by a preponderance of the evidence, that his cancer diagnosis is causally related to his employment with the employer as a firefighter. As found, Dr. Allems's opinion regarding the lack of evidence to support a causal association between the claimant's firefighting exposures and his prostate cancer is well supported by the epidemiologic literature. No

clear evidence of causation between firefighting occupational exposures and prostate cancer has emerged, as reflected by IARC's placement of that exposure in the "limited evidence" category.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed. All remaining endorsed issues are dismissed as moot

Dated this 4th day of May 2022.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to continuing maintenance medical benefits that are reasonably necessary and related to the admitted workplace injury of May 26, 2016.

PROCEDURAL HISTORY

Claimant was injured in the course and scope of her employment with Employer on May 26, 2016.

This is an admitted claim that was closed by Final Admission of Liability (FAL) of December 13, 2016, with the exception that maintenance medical benefits were left open for reasonably necessary medical care related to the workplace injury.

On September 17, 2021 Claimant filed an Application for Hearing on issues of medical benefits that are authorized, reasonably necessary and related to the May 26, 2016 workplace injury, including maintenance care as recommended by Dr. Olsen and admitted in the FAL.

Respondents filed a Response to Application for Hearing on October 25, 2021 adding the issues of causation and relatedness to the issues listed by Claimant.

FINDINGS OF FACT

Based on the evidence presented at the hearing and thereafter, the ALJ enters the following findings of fact:

1. At the time of injury, Claimant was seventy-two (72) years old and seventy eight (78) years old at the time of the hearing.

2. On May 26, 2016 Claimant was reaching overhead and pulling down a box to get an "event kit" ready when she experienced a pop and sharp pain in the left side of her neck and upper back. Claimant was ultimately diagnosed with neck pain, a left shoulder strain, and acute left-sided back pain.

3. Claimant was initially seen on May 26, 2016 by a nurse practitioner. Claimant complained of pain in her neck, back, and left arm to her authorized treating physician ("ATP"), Dr. Dean Prok, from June 2016 to January 2017.

4. Claimant had an MRI of the cervical spine read by Dr. Scott Lowe on July 15, 2016. The MRI showed: (1) Central and right paracentral disc protrusion at the C3-4 level with abutment of the cervical cord but no cord compression. Mild narrowing of the central canal down to 10 mm. (2) Degenerative disc changes at C4-5 with posterior disc

and osteophyte complex. Neural foraminal narrowing, right greater than left with mild central canal narrowing. (3) Degenerative disc changes at C5-6 with mild central canal stenosis and right foraminal narrowing. (4) Degenerative disc changes at C6-7 with mild to moderate right foraminal narrowing but no central stenosis or left foraminal narrowing.

5. On June 22, 2016, Claimant's ATP referred Claimant to Dr. Nicholas Olsen for evaluation and treatment. Dr. Olsen recommended steroid injections but the insurer required her to see an orthopedic specialist before they would authorized injections. The request for prior authorization was initially denied on September 16, 2016 by Dr. Frank Polanco.

6. On September 28, 2016 Claimant was evaluated by Dr. B. Andrew Castro for a surgical consultation pursuant to referrals from both Dr. Prok and Dr. Olsen. Dr. Castro stated that Claimant was not a surgical candidate, recommended conservative care and consideration of epidural steroid injections.

7. Dr. Prok recommended Claimant receive facet injections from Dr. Nicholas Olsen to help alleviate the lingering pain Claimant continued to experience. Dr. Polanco authorized the procedure on October 14, 2016.

8. Claimant subsequently received facet injections from Dr. Olsen on October 25, 2016 at the left C5-6 and C6-7 levels to alleviate her lingering pain. Pre-injection VAS[1] score was 4-5 of 10 and a positive axial neck pain increasing to 6-7 pain level with neural foraminal compression. Post-injection, Claimant reported a 0 of 10 on the VAS scale with no aggravation of complaints on exam.

9. On October 28, 2016 Claimant was seen at for physical therapy at SCL Health Medical Group Front Range and therapist Leah Luther reported that Claimant had no pain lately except for end range of motion pain.

10. Claimant commented that she immediately saw a reduction in her symptoms, reporting to Dr. Olsen on November 2, 2016, that she was "95% improved" and that the shot was a "miracle." On exam he found that neural foraminal compression test was negative for axial neck pain and facet loading was also negative bilaterally. They discussed the fact that, if Claimant continued her exercise program and followed correct lifting mechanics, they may not have to offer additional treatment. Dr. Olsen noted Claimant did quite well with the injection, that Claimant may not need additional treatment beyond her assigned exercise program, and recommended Claimant do a trial of full duty work.

11. Claimant returned to see Dr. Prok on November 4, 2016, after the injection and was reporting much less pain but still at 4 out of 10 aching on the left side of the neck and upper back areas. On exam he observed that the cervical spine had near full range of motion in all planes with mild pain reported at the left cervical paraspinals and trapezius and posterior shoulder area with minimal tenderness to palpation in those areas without palpable firmness, hypertonicity or spasm. Dr. Prok noted that Claimant was doing better and gave her a trial of full duty per Dr. Olsen's recommendation. He continued to diagnose neck pain and upper back strain and stated that the diagnosis were related to

[1] Visual Analog Scale

the work injury based on all information available. Lastly, he concluded that the objective findings were consistent with the history and work related mechanism of injury.

12. Claimant had a follow-up appointment with Dr. Olsen on November 30, 2016. Claimant reported that she had "no return of her complaints" and could return to full duty work without difficulty. Dr. Olsen reported Claimant would be a candidate for a repeat injection up to three times per year if needed. Dr. Olsen performed an impairment rating finding that, pursuant to Table 53II-C of the AMA *Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*), Claimant had a specific disorder due to moderate spondylosis and facet disease of 6% whole person. Range of motion loss for flexion and extension provided a 4% whole person impairment. This combined to a 10% whole person final impairment. Dr. Olsen discharged Claimant from his care at that time. Dr. Olsen encouraged her to continue her exercise program, remain at full work duties, and advised that if she wished to engage in maintenance care, she was to contact his office.

13. By December 7, 2016 Dr. Prok stated that Claimant was much better, but still had pain of 2 out of 10 in the left upper neck and back areas. Dr. Prok placed Claimant at maximum medical improvement (MMI) based on Dr. Olsen's impairment rating of ten percent whole person impairment and provided for post-MMI medical maintenance treatment consisting of repeat injections up to three times per year and some continuing massage therapy.

14. Claimant attended a post-MMI follow-up appointment with Dr. Prok on January 18, 2017. Dr. Prok noted that Claimant was to continue full duty status without restrictions, as Claimant demonstrated full functionality during the examination, and Claimant remained at MMI. At that time Claimant continued to have neck pain of 2 out of 10. Dr. Prok noted on exam, mild pain in the left cervical paraspinals and upper thoracic region on the left side with mild tenderness to palpation diffusely throughout that region. This is the last record from Dr. Prok in the exhibits.

15. Respondents cite to a February 12, 2019 report allegedly from Claimant's PCP but those records were not in evidence so any statements quoted by other providers is not considered.

16. On May 28, 2019, Claimant returned to Dr. Olsen's office for the first time since November 30, 2016. Claimant relayed to Dr. Olsen that she was continuing to work full duty, denied any new injuries, but noted that her pain returned three to four weeks prior. On exam, Dr. Olsen found neural foraminal compression test negative bilaterally but facet loading was positive on the left side and negative on the right. Claimant requested maintenance care, and Dr. Olsen recommended a repeat left C5-6, C6-7 facet injection, noting Claimant did quite well with the procedure previously.

17. Claimant received a left C5-6 and C6-7 facet injections from Dr. Olsen on June 18, 2019. Claimant's pre-injection VAS score was 5 of 10 and post VAS score of 1 of 10 with a negative exam after the injection. Clamant attended a follow up with Dr. Olsen on July 1, 2019. Claimant stated that her pain had been reduced by "95%," and was following her home exercise program without difficulty. On physical exam, all tests were negative. Claimant was to return to Dr. Olsen's office if she had any further difficulties. There are not further records from Dr. Olsen following this visit.

18. Claimant went to Good Samaritan Medical Center on September 12, 2021. Claimant relayed that she tripped and fell in a King Soopers parking lot and struck a concrete curb. Claimant experienced pain in her right wrist, knees, and lip on the right side of her face. Claimant denied any neck pain at that time. On exam, Physician Assistant Boone Allen noted that Claimant had tenderness of the left shoulder but normal range of motion. He also documented that the cervical spine exam was normal, with normal range of motion and that her neck was supple. Claimant had an x-ray of her left shoulder during her visit at Good Samaritan Medical Center which showed no fracture or dislocation of the left shoulder, and the acromioclavicular joint showed no acute abnormality.

19. Claimant was attended by Dr. Nathalie Nys of the Rock Creek, Lafayette Kaiser Clinic on November 12, 2021. Claimant had had trigger point injections for the bilateral upper back and shoulders on November 4, 2021, had returned for "injections on my neck and also a check on my left hip." Claimant was complaining of left shoulder pain, citing her fall in the King Soopers' parking lot as the source of the pain. Claimant relayed that she had also hurt her lip from the fall and that she had "zinging" pain in her neck which traveled down her left arm. On exam, Dr. Nys noted neck, upper, mid and low back and buttocks pain with muscle spasms and multi tender points. Claimant received trigger point injections in the right and left infraspinatus, right and left levator scapulae, right and left rhomboid major, and right and left trapezius as well as in the neck bilaterally and the cervical paraspinal muscles.

20. Dr. John Burris Performed an Independent Medical Evaluation (IME) upon Respondents' request on December 21, 2021. Dr. Burris reviewed medical records and conducted a physical examination of Claimant. On exam, he found that Claimant's cervical spine was supple and nontender to palpation throughout the suboccipital and bony midline regions, though was diffusely tender in the left paraspinal and trapezius musculature. Otherwise, she had a negative neurological, sensation and motor exam.

21. Dr. Burris found that: (1) Claimant's injury on May 26, 2016 involved a very minor injury mechanism of reaching overhead, which Dr. Burris labeled as a relatively sedentary activity consistent with daily living; (2) the only condition that could have possibly been related to the abovementioned mechanism of injury is a minor soft tissue strain, with the natural course of minor soft tissue strain being a rapid and predictable recovery within days to weeks regardless of treatment; (3) the MRI of the cervical spine Claimant dated July 15, 2016, revealed moderate degenerative changes predominantly at C5-6 and C6-7 with no acute abnormalities; (4) the described May 26, 2016 mechanism was not sufficient to cause, accelerate, aggravate, or contribute in any meaningful manner to Claimant's abovementioned underlying pre-existing condition; (5) Claimant's current symptoms (greater than five years later) are, more likely than not, a result of the natural progression of her underlying degenerative condition and are unrelated and independent from the May 26, 2016 workers' compensation claim; and, (6) no further care is reasonable, necessary, or related to Claimant's May 26, 2016 claim.

22. Respondents took the deposition of Dr. Burris on April 8, 2022. He is a level II accredited physician and board-certified in occupational medicine. He testified consistent with the findings and conclusions of his report. He specifically stated that

Claimant suffered only a minor neck strain on May 26, 2016, which was treated and resolved as expected. He stated that any symptoms Claimant is currently experiencing are due to the natural progression of Claimant's underlying degenerative condition, not the May 26, 2016 work related claim.

23. Claimant testified that she did not have a minor injury to her neck and left shoulder because when she lifted the box, she felt a specific pop in her neck that cause significant pain, which continued after she was placed at MMI and released from care. She stated that, after MMI, she took care of her own pain with massage, exercise and over the counter medications such as Aleve, as she was instructed to do by her ATPs. She only returned to see Dr. Olsen in 2019 when it became unbearable again and the second injection she received from Dr. Olsen decreased her pain back to a manageable level and continued with her exercise program, yoga, massage and stretching to maintain that level.

24. Claimant stated that she attempted to return to see Dr. Olsen after the COVID-19 pandemic started but she was unable to reach anyone in Dr. Olsen's office as they were closed. She called them multiple times without response. She finally received a call back from them a few months later to advise her that her workers' compensation claim was closed and needed to be reopened to obtain further treatment or injections from Dr. Olsen.

25. Claimant was initial told that she only had two years of care and that time had transpired so her case was closed. She later found out that she had up to six years to reopen her claim in order to obtain the care that Dr. Olsen had recommended. She stated that she does not like to take medications and she waited as long as possible to get care. Claimant filed an application for hearing with the Office of Administrative Courts in Denver after reaching out to Dr. Olsen's office for maintenance care and being unable to obtain the requested maintenance care.

26. Claimant stated that the current symptoms are the same symptoms she was feeling when she was injured originally in May 2016 and that they have continued all along. She testified that she did not injure her left shoulder or neck in the incident of September 2021 but that she already had that problem much before the incident of falling in the parking lot as she had attempted multiple times during the pandemic to get her care. This ALJ takes administrative notice that the pandemic closed most businesses around March 2020 through May 2020.

27. As found, Claimant has failed to prove by a preponderance of the evidence that the current symptoms are related to the May 26, 2016 work related injury.

28. As found, Dr. Burris is persuasive in his opinion that the Claimant's current symptoms of neck and left shoulder pain are related to the underlying degenerative disc disease and the natural progression of the degenerative condition, not the May 26, 2016 work related injury. As found Dr. Burris was not persuasive that there was no aggravation of the underlying degeneration caused by the May 26, 2016 event, however, that aggravation reached a baseline and resolved following the reasonably necessary medical care provided by her authorized treating physicians through July 1, 2019.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). When expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

B. Reasonably Necessary Medical Benefits after MMI

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The right to workers' compensation benefits, including medical payments, arises only when an injured employee establishes that the need for medical treatment was proximately caused by an

injury arising out of and in the course of the employment. C.R.S. § 8–41–301, C.R.S; *see Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover* v. *Indus. Commission*, 759 P.2d 705 (Colo. 1988). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

In a dispute over medical benefits that arises after the filing of an admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the on-the-job injury and the need for medical treatment. C.R.S. § 8-41-301(1)(c); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *In re Claim of Deane*, 122121 COWC, 4-664-891-001 (Colorado Workers' Compensation Decisions, 2021). If the claimant establishes the probability of a need for future treatment, she is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, *supra*.

Here, Respondents admitted by Final Admission of Liability dated December 13, 2016 with a general award of medical benefits that were reasonably necessary and related to the claim after the maximum medical improvement determination. From December 2016 through July 2019 Claimant received no maintenance care other than one steroid injection with Dr. Olsen. Respondents allege that the medical care Claimant now requires is no longer reasonably necessary or related to the May 26, 2016 work related injury. The MRI report by Dr. Lowe dated July 15, 2016 revealed very significant degenerative disc disease from the C3 to C7 levels of the spine. As found, Dr. Burris is persuasive in his report and testimony that the Claimant's current symptoms complex affecting her neck and left shoulder are related to the natural progression of the Claimant's underlying degenerative disc disease at multiple spine levels. Any facts to the contrary are specifically not found to be persuasive in this matter. Claimant has failed to prove by a preponderance of the evidence that the current symptoms are proximately caused and related to the May 26, 2016 aggravation of the underlying spine disease and, therefore, Claimant is not entitled to further maintenance medical care in this matter.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for reasonably necessary medical benefits related to the May 26, 2016 claim are denied and dismissed.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- Did Claimant prove a one-time evaluation with her ATP is a reasonably necessary post-MMI medical benefit?

FINDINGS OF FACT

1. Claimant works for Employer as a department manager. She suffered an admitted low back injury on August 20, 2020 while moving end cap "power panels."

2. Claimant was diagnosed with a lumbar strain and left leg "sciatica." She received conservative treatment including physical therapy, chiropractic, activity modification, and psychological counseling.

3. Dr. Dwight Leggett performed a left SI joint injection on April 5, 2021. Claimant's pain flared badly at first, but subsequently improved significantly. At her April 12, 2021 follow up appointment with Kelsey Walls, PA-C, Claimant reported 90% improvement. Ms. Walls anticipated Claimant's pain would continue to improve over the next 2-3 weeks.

4. On April 21, 2021, Claimant's ATP, Dr. Terrance Lakin noted she had returned to work after the injection and "is functioning pretty well." Claimant was "tagging," which required a lot of bending, kneeling, and squatting. Dr. Lakin wrote, "She got used to the kneeling and squatting but bending seemed to aggravate her low back pain, but not to the point where she feels she needs restrictions." Dr. Lakin referred Claimant to physical therapy for work hardening and instruction on a home exercise program.

5. Claimant returned to Dr. Lakin on May 12, 2021. Her pain was "better just sore any ach[y]." She was "currently working with no restrictions and having no issues." She was still taking naproxen for pain. Physical examination showed mild tenderness at the left SI joint and piriformis areas, and minimal paralumbar muscle spasms. Dr. Lakin stated,

> Patient has resolved SI joint dysfunction very well. She desires to close her case. We reviewed that she had a left SI joint injection in the office with Dr. Leggett. She reported more pain for a week but then gradually cool[ed] down and she is happy with the results. We discussed considering repeat injection in 3-6 months and she is adamant she does not want that again. She believes she is resolved well enough to continue on with home exercise program.

> She has been scheduled for physical therapy for what she thinks is one visit to make sure that she has a home exercise program to continue on with. I believe that is a good preventive visit.
>
> She concurs with closing her case and only medical maintenance for physical therapy next several weeks.

6. Dr. Lakin put Claimant at MMI with no impairment. Regarding maintenance care, Dr. Lakin recommended, "Finish physical therapy 1-3 appointments in next 3-4 weeks to assure good home exercise program."

7. Claimant saw Dr. Wallace Larson for a DIME on August 30, 2021. She described constant pain in her left lower back and buttock. The pain waxed and waned depending on how much lifting or other work she did. He agreed Claimant was at MMI, but thought her residual symptoms and limitations warranted an impairment rating. Dr. Larson assigned a 10% whole person lumbar spine rating. He opined Claimant required no maintenance care.

8. Claimant testified she has daily back pain that worsens with increased activity, particularly at work. Claimant explained she previously told Dr. Lakin she did not want future injections because of the painful flare she experienced after the first injection. She was feeling much better and assumed she would not need more injections. But by the time of the hearing, she felt the injection had "worn off" and she was open to another injection were it recommended by her ATP.

9. Claimant saw her PCP on several occasions after MMI for various personal health issues. The PCP records contain no reference to any ongoing low back or SI joint problems. Claimant testified she did not mention or seek treatment for her low back from her PCP because she was under the impression that Medicaid would not cover injury-related treatment.

10. Claimant's testimony was credible and persuasive.

11. Claimant proved a general award of medical benefits after MMI is reasonably needed to relieve the effects of her injury and prevent deterioration of her condition.

12. Claimant proved a one-time evaluation with an ATP to explore maintenance care options is reasonably necessary.

CONCLUSIONS OF LAW

The respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award

of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). A claimant need not be receiving treatment at the time of MMI or prove that a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). If the claimant establishes the probability of a need for future treatment, they are entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). A DIME is not entitled to special weight regarding medical treatment after MMI, but is simply another medical opinion to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

As found, Claimant established the probability of a need for future medical treatment, which entitles her to a general award of future medical benefits. Although Claimant's injury improved with treatment, she still suffers from residual pain that justified a 10% whole person impairment. At the time of MMI, Claimant was still enjoying the benefit of an SI joint injection. But injections frequently produce temporary instead of permanent relief. This is recognized by the Low Back Pain MTGs, which provide for up to "2 to 3 injections per year" if they are producing at least 80% improvement. *See* DOWC Rule 17, Exhibit 1 § 8.a.iii. Dr. Lakin contemplated additional injections as maintenance, and the ALJ infers he probably would have recommended repeat injections as a potential maintenance care option had Claimant not declined them. Because of her ongoing injury-related symptoms, Claimant's request for a one-time evaluation with an ATP to discuss maintenance care options is reasonably necessary.

ORDER

It is therefore ordered that:

1. Insurer shall cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of her injury and prevent deterioration of her condition.

2. Insurer shall cover a one-time evaluation with an ATP to explore maintenance care options.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review

electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

The issues addressed in this order concern the calculation of Claimant's average weekly wage (AWW). The specific questions answered are:

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to an increase in his AWW from $506.46 to $707.27.

FINDINGS OF FACT

Based upon the evidence presented, the ALJ enters the following findings of fact:

1. Claimant suffers from non work-related chronic Crohn's proctocolitis, which has required substantial medical management, including hospitalization and surgery resulting in lost time from work. (See generally, Claimant's Hearing Exhibit (CHE) 1; Respondents' Hearing Exhibit (RHE) D).

2. Claimant's Crohn's disease has proven difficult to control. He underwent surgery on February 13, 2019, consisting of an Ileostomy and segmental resection. (CHE 1, p. 5). He was subsequently discharged from the hospital on February 18, 2019. (Id.). Shortly after his discharge, Claimant experienced complications related to his February 13, 2019 surgery. (Id. at p. 17). He was readmitted to the hospital with a partial small bowel obstruction (SBO) in early May 2019. (Id.) Following his discharge from the hospital on May 3, 2019, Claimant was readmitted to the hospital on May 7, 2019 for recurrent symptoms and low ostomy output for which he underwent additional surgery consisting of a small bowel decompression and mesenteric fixation procedure. (Id.)

3. Claimant developed a post-surgical infection approximately 10 days following his SBO surgery when his incision separated at the bottom. (Id. at p. 28). He was started on antibiotics and by June 6, 2019 was "doing much better." (Id.)

4. Claimant then went to work for Employer. Based upon the evidence presented, Claimant's first pay period under Employer extended from July 26, 2019 to August 8, 2019. He was paid $1,371.06 for 72.72 regular and 2.30 overtime hours on August 16, 2019 for this pay period. (RHE B, p. 5). Claimant was paid the following amounts for the subsequent pay periods:

Period Start	Period End	Pay Date	Current	Reg. Hrs.	OT Hrs.
08/09/2019	08/22/2019	08/30/2019	$1,674.99	79.72	8.89
08/23/2019	09/05/2019	09/13/2019	$1,540.71	67.02	7.05

09/06/2019	09/19/2019	09/27/2019	$1,336.23	62.76	7.65
09/20/2019	10/03/2019	10/11/2019	$ 142.20	6.37	0.00
10/04/2019	10/17/2019	No hours reported- no pay			
10/18/2019	10/31/2019	11/08/2019	$ 138.24	6.16	0.00
11/01/2019	11/14/2019	11/22/2019	$ 597.42	31.66	0.00
11/15/2019	11/28/2019	12/06/2019	$1,154.16	46.59	0.00

5. The symptoms associated with Claimant's Crohn's disease worsened in September 2019. Claimant testified that he was admitted to the hospital on September 23, 2019 and subsequently underwent additional surgery to remove several anatomical structures related to his digestive tract. He requested a leave of absence from September 23, 2019 to October 21, 2019. (RHE C, p. 6). Claimant's leave of absence was approved on September 27, 2019. (RHE D, p. 35). Because Claimant was on leave for much of the pay period extending from September 20, 2019 through October 3, 2019, his wages dropped significantly from the prior pay period. (See, RHE B, p. 5). As noted above, Claimant earned $142.20 for the pay period extending from September 20, 2019 through October 3, 2019.

6. As referenced above, Claimant underwent proctectomy surgery on October 7, 2019. (CHE 1, p. 36).

7. On October 17, 2019, Physician Assistant (PAC) Shanna M. Zwick drafted correspondence indicating that Claimant could return to modified work beginning October 21, 2019. (RHE D, p. 34; See also, RHE D, p. 33). On October 24, 2019, SM[Redacted], HR Specialist for Employer, sent an e-mail message to BD[Redacted] that Claimant had returned to work on October 23, 2019. (RHE D, p. 35). Because Claimant was unable to work for much of the pay period extending from October 18, 2019 through October 31, 2019, he only earned $138.24. (RHE B, p. 5).

8. While Claimant returned to work, he continued to experience residual nerve pain. On November 4, 2019, Claimant sent an e-mail message to SM[Redacted] that he was going to try a new medication to help reduce his persistent nerve pain. In this message, Claimant notes that the plan was for him to return to "full-time" work the following Monday. (RHE D, p. 32). Ms. SM[Redacted] notified KW[Redacted] that Claimant had provided her a "note that says he [could] return to work full-time on 11/11, with a lifting restriction of not more than 10lbs, and is released on 11/22 to normal work duties without restriction." (RHE D, p. 30; See also, RHE D, p. 29). Again, because Claimant was restricted for much of the pay period between November 1, 2019 and November 14, 2019, he only earned $597.42. (RHE B, p. 5).

9. On November 11, 2019, Claimant notified Ms. SM[Redacted] and Mr. BW[Redacted] by e-mail that he was experiencing a flare of his Crohn's disease but that he would do his best to schedule medical appointments and infusion therapy sessions

on Friday's to miss as little work as possible. (RHE D, p. 27).

10. Claimant continued to miss work secondary to medical appointments and being sick through the reminder of November and into December 2019. (RHE D, pp.14-26). On December 16, 2019, Mr. BW[Redacted] forwarded an e-mail message to Ms. SM[Redacted] noting that Claimant came into work for an hour, left for a doctor's appointment and then went home because he had a fever. Mr. BW[Redacted] [Redacted] expressed that the impact of Claimant's absences on Employer were unsustainable and asked Ms. Medsker to call him to discuss the situation. (RHE D, p. 13).

11. Claimant sustained an admitted industrial injury to his low back on December 17, 2019.

12. Respondents admitted liability for Claimant's December 17, 2019 work-related low back injury on March 12, 2020. (CHE 4). As Claimant lost time from work due to his industrial injury between December 18, 2019 and January 26, 2020, it was necessary for Respondents to calculate his AWW to insure proper payment of temporary total disability (TTD) benefits.

13. Respondents used Claimant's earnings from August 9, 2019 through November 28, 2019 to calculate an AWW of $506.46.[1] (RHE A, p. 3 & RHE B, p. 5). As noted, Respondents admitted for this AWW in a General Admission of Liability (GAL) filed March 12, 2020. (RHE A, p. 1).

14. Claimant asserts an AWW of $707.72. In reaching his claimed AWW, Claimant asserts that the three pay periods extending from September 20, 2019 through November 14, 2019 should be excluded from the calculation, as they do not represent an accurate reflection of the wages he routinely earned while working for Employer. Disregarding the three pay periods between September 20, 2019 and November 14, 2019 leaves a ten (10) week period upon which Claimant calculates his AWW. Adding the total wages earned for these ten weeks and dividing the figure by ten yields Claimant's asserted $707.27 AWW. ($1,371.06 + $1,674.99 + $1,540.71 + $1,336.23 + $1,154.16 = $7,077.15 ÷ 10 weeks = $707.72). (CHE 3, p. 50).

15. Based upon the evidence presented, the ALJ finds that it would be

[1] Respondents' counsel represented that the aforementioned period extending from August 9, 2019 – November 28, 2019 comprised 13 weeks and reflected the entirety of Claimant's employment with Employer. Counsel's characterization appears incorrect. Indeed the period Insurer used to calculate Claimant's AWW is 14 weeks long, not 13, which period also does not include a two week pay cycle for October 4, 2019 through October 17, 2019, otherwise the period used would comprise 16 weeks. Moreover, this 14 week period does not equate to Claimant's entire period of employment with Employer as evidenced by the fact that Claimant was paid $1,371.06 for the pay period extending from 7/26/2019 – 8/8/2019 and his admitted injury occurred December 17, 2019. Nonetheless, using Claimant's earnings for the 14-week period extending from August 9, 2019 through November 28, 2019, which, as noted above, excludes the pay period for October 4, 2019 – October 17, 2019 since Claimant earned no wages for these two weeks, yields an AWW of $470.28 ($6583.95 ÷ 14 weeks = $470.28/week).

manifestly unjust to calculate Claimant's AWW by including earnings he made over pay periods that included time he spent in the hospital or in the acute recovery period following his October 7, 2019 surgery when he was unable to work full time. Simply put, the ALJ is persuaded that the pay periods between September 20, 2019 and November 14, 2019 reflect an irregularity in Claimant's proven earning capacity and that these wages should not be included in the calculation of his AWW.

16. Based upon the evidence presented, the ALJ adopts Claimant's methodology in calculating his AWW as $707.27. Accordingly, the ALJ finds that Claimant has proven that his AWW should be increased from $506.46 to $707.27 as this figure most closely approximates Claimant's actual wage loss and diminished earning capacity at the time of his December 17, 2019 industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Average Weekly Wage

C. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993)[2]; *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo.App. 1997).

[2] The claimant in Campbell suffered three periods of temporary disability and for each subsequent period was earning a higher average weekly wage. The question resolved was whether Ms. Campbell was entitled to temporary disability benefits based on the higher AWW she was earning during each successive period of temporary disability. The Court held that it would be unjust to calculate her disability benefits in 1986 and 1989 on her substantially lower earnings she was making in 1979.

D. Sections 8-42-102(3) and (5) (b), C.R.S. (2013), give the ALJ discretion to calculate an AWW that will fairly reflect a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*; *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008). It is well settled that if the specified method of computing a claimant's AWW will not render a fair computation of wages for "any reason," the ALJ has discretionary authority under, § 8-42-102(3) C.R.S. 2020, to use an alternative method to determine AWW. *Campbell v. IBM Corp., supra*.

E. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity as of December 17, 2019 comes from the wage records admitted into evidence. As found here, careful review of the wage records (RHE B) persuades the ALJ that the computation of Claimant's AWW should not include the pay periods between September 20, 2019 through November 14, 2019. Here, the evidence presented supports a conclusion that the aforementioned pay periods represent an aberration in Claimant's proven earning capacity. Indeed, Claimant earned in excess of $506.46 per week (Respondents admitted AWW) for every pay period included in his wage statement prior to his September 23, 2019 hospitalization and subsequent October 7, 2019 surgery. Based upon the evidence presented, the ALJ is not convinced that Claimant's lower earnings between September 20, 2019 and November 14, 2019 represent an inability to work a full time job, which would have continued indefinitely beyond November 14, 2019. Indeed, the assertion is speculative and dispelled by the fact that Claimant was hospitalized and underwent surgery on February 13, 2019 only to recover sufficiently by June 6, 2019 to return to work for Employer earning in excess of Respondents admitted AWW for every paid period leading up to Claimant's subsequent hospitalization and follow-up surgery in September/October, 2019. Accordingly, the ALJ concludes that it would be unjust to include Claimant's lowered earnings for the period between September 20, 2019 and November 14, 2019, when he was hospitalized and/or recovering from surgery, when calculating his AWW. Based upon the evidence presented, the ALJ agrees with Claimant that his AWW is $707.27, as this represents the fairest approximation of his wage loss and diminished earning capacity due to his December 17, 2019 industrial injury.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence, that he is entitled to an increase in his AWW from $506.46 to $707.27.

2. Respondents shall pay temporary total disability (TTD) benefits corresponding with an AWW of $707.27 for the time period reflected in the GAL filed March 12, 2020, i.e. from December 18, 2019 thru January 26, 2020.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant suffered a compensable injury to his right knee, and if so, whether Claimant's treatment with Dr. Von Stade is reasonably necessary and related to his admitted claim;

2. Whether Claimant's referral to the hip specialist, Dr. White, is reasonably necessary and related to his admitted claim;

3. Whether Claimant's referral to a spine specialist, Dr. Castro, is reasonably necessary and related to his admitted claim;

4. Whether Claimant's dental issues and care are reasonably necessary and related to his admitted claim;

5. Whether treatment for Claimant's vestibular and balance issues is reasonably necessary and related to his admitted claim; and

6. Whether home health care and home modifications are reasonably necessary and related to his admitted claim.

FINDINGS OF FACT

1. On February 7, 2019, Claimant sustained injuries arising out of the course of his employment with Employer when a horse he was riding slipped on ice and fell. Claimant worked as a "pen rider" which required him to ride through cattle pens and finding sick cattle and pull them out. Claimant testified that he has been working as a pen rider on and off for his entire life.

2. Following his injury, Claimant received extensive medical care from multiple providers for multiple areas of the body. On the date of injury, Claimant initially complained of only left shoulder and lateral neck pain and denied any impact to his head or loss of consciousness. (Ex. 8). The following day, Claimant was sent for a left hip x-ray due to hip pain. (Ex. 11). Over the next two weeks, Claimant reported additional issues, including headaches, upper back pain, pelvic pain, and vision problems. (Ex. 8 & 16). Imaging studies of Claimant's cervical spine, hips, and brain taken within three weeks of his injuries were negative for traumatic injuries. (Ex. 11). In March 2019, Ramon Perez, D.O., at Banner Health diagnosed Claimant with concussion syndrome. (Ex. 16).

3. Over the course of the next year, Claimant received treatment from multiple providers for headaches, neck pain, left shoulder, right hip, pelvic pain, dizziness, tinnitus, memory and cognitive issues, and knee pain.

4. On March 31, 2020, a hearing was held before ALJ Edwin L. Felter, Jr., which addressed whether "Claimant suffered compensable injuries to his head, his hips, and his lumbar spine." ALJ Felter issued his Full Findings of Fact, Conclusions of Law, and Order on April 23, 2020 ("Order"). (Ex. 1). In that Order, ALJ Felter found that Claimant sustained compensable injuries to his head, back, and hips, causally related to Claimant's February 7, 2019 injury. He further ordered that "Respondents shall pay the costs of all authorized and reasonably necessary medical care and treatment for the Claimant's head, back, hips, blurred vision and headaches caused by the admitted event of February 7, 2019, subject to the Division of Workers' Compensation Medical Fee Schedule." (Ex. 1).

5. On December 18, 2020, the Industrial Claim Appeals Office affirmed ALJ Felter's April 23, 2020 Order regarding the compensability of Claimant's head, back and hip injuries, and Respondents' liability for authorized and reasonably necessary medical treatment for Claimant's head, back, hips, blurred vision, and headaches. (Ex. 2).

6. The ALJ incorporates by reference the Findings of Fact contained in ALJ Felter's April 27, 2020 Order, as if set forth fully herein. (Ex. 1).

7. After issuance of ALJ Felter's Order, Claimant resumed treatment with multiple providers. As relevant to the present issues, on September 27, 2021, Claimant's authorized treating physician, Paul Ogden, M.D., at Workwell, referred Claimant to Brian White, M.D., an orthopedist for evaluation of Claimant's hips. (Ex. 6). Dr. Ogden also referred Claimant for evaluations with Eleanor Von Stade, M.D., for knee issues. (Ex. 6).

8. Following Dr. Ogden's requests for authorization, Respondents requested that Claimant undergo an IME with John Raschbacher, M.D., an occupational medicine physician. Dr. Raschbacher performed the IME on October 22, 2021, and issued a report with his opinions on November 4, 2021. (Ex. T). Dr. Raschbacher testified at hearing and was admitted as an expert in occupational medicine.

9. By letter dated November 18, 2021, Respondents notified Dr. Ogden they were "contesting and denying" the September 27, 2021 request for authorization of the referrals to Dr. Von Stade, Dr. White and Brian Castro, M.D., "as not being reasonable, necessary ad related to Claimant's work injury of February 7, 2019." Respondents' denial was based on the opinions expressed in Dr. Raschbacher's November 4, 2021 report. (Ex. Y).

Vestibular and Balance Issues

10. As a result of his February 7, 2019 work injury, Claimant sustained injuries to his head. (Ex. 1). Multiple providers have diagnosed Claimant with concussion syndrome and post-concussive issues, and have documented issues with gait, balance, and dizziness, although no provider has documented witnessing Claimant falling. Claimant's medical records document a pattern of repeated falls. Claimant has variously attributed the falls to issues with his hips, dizziness, and balance issues. Claimant testified that he did not have a history of falls prior to his February 7, 2019 injury. Claimant testified at hearing that he had no prior issues with balance or dizziness. Given that Claimant's employment required Claimant to spend hours each day riding a horse, the ALJ finds Claimant's

testimony credible. Claimant's friend, Crystal Stevens-Smith also testified that she has known Claimant for five years, and had not previously observed Claimant fall or display balance issues. She credibly testified that she has witnessed Claimant fall on several occasions since February 7, 2019.

11. Beginning in March 2019, Claimant reported experiencing dizziness, tinnitus, initially to Dr. Reichardt. See (Ex. 1, ¶ 11). On April 2, 2019, Claimant saw Dr. Snyder at Orthopaedic and Spine Center of the Rockies, who recommended an evaluation with concussion specialist, and recommended Dr. Wicklund. (Ex. P. 652).

12. Claimant first saw Dr. Wicklund on August 21, 2019, who noted dizziness and other concussion symptoms. Dr. Wicklund performed multiple tests and noted that Claimant was experiencing a protracted recovery from concussion, likely due to vestibular dysfunction, cognitive fatigue, sleep, and emotional dysregulation. (Ex. C).

13. Claimant's post-injury medical records document frequent and consistent complaints of dizziness which persisted but did improve with physical and vestibular therapy (Ex. 6).

14. At her February 23, 2021 appointment with Claimant, Dr. Wicklund noted that Claimant had consistently reported a similar constellation of symptoms over the previous year, including, but not limited to, headaches, balance problems, dizziness, fatigue, sleep dysregulation, ringing in the ears, and vision problems. (Ex. C). Based on her evaluation, Dr. Wicklund recommended that Claimant re-engage in physical therapy and vestibular rehabilitation, an ENT evaluation for tinnitus, and a more extensive neuropsychological testing. (Ex. C). Dr. Wicklund reiterated these recommendations on August 4, 2021, and noted that physical therapy had helped decrease Claimant's falls. (Ex. C).

15. Claimant was also evaluated by Inhyup Kim, M.D., a neurologist at Banner Health Neurology Clinic. Claimant was initially seen by Dr. Kim's nurse practitioner, Reena Dhakal, NP, on May 2, 2019, and diagnosed with concussion syndrome. (Ex. 7). He returned to Dr. Kim on October 24, 2019, and again diagnosed with concussion syndrome. (Ex. 7).

16. On February 16, 2021, Claimant saw Dr. Kim for a neurologic evaluation on referral from Dr. Ogden. In discussing Claimant's reports of frequent falls, Dr. Kim indicated Claimant had "VERY limited ROMs in left arm and both legs, due to shoulder, hip and knee pain. I suspect his joint pain and limited ROM are cause [sic] of his balance problem. - No clear-cut evidence of neurologic disorder responsible for his poor balance." (Ex. 7).

17. In 2021, Claimant was referred to Mark Loury, M.D., for an ENT evaluation. Claimant first saw Dr. Loury on April 28, 2021, and was diagnosed with bilateral tinnitus and inner ear vestibular equilibrium issues. (Ex. 12).

18. On June 24, 2021, Claimant had a consult with Natalie Phillips, Au.D., for vestibular function testing. Dr. Phillips noted that the testing indicated potential central vestibular pathology, however, due to "excessive blinking, poor neck and body mobility, the patient's disposition, and functional results on audiologic tests results may be

inaccurate." Dr. Phillips referred Claimant back to Dr. Loury for further evaluation. (Ex. 12).

19. On July 1, 2021, Dr. Loury indicated that, based on Dr. Phillip's testing, he likely had difficulty with ocular motor function. Dr. Loury recommended both vestibular and ocular rehabilitation. (Ex. F).

20. On November 28, 2021, Claimant saw Lori Perrin, Ph.D., for a psychological evaluation. As relevant to the present Issues, Dr. Perrin indicated that Claimant exhibits symptoms of a traumatic brain injury, including cognitive Issues, vision Issues, ringing In the ears and headaches. (Ex. 23).

21. In his February 16, 2022 report, Dr. Loury recommended continuation of vestibular therapy and tinnitus treatment. Dr. Loury also opined that there may be a cervical component to Claimant's tinnitus and imbalance. (Ex. 12).

22. In his February 21, 2022 letter, Dr. Loury indicated that Claimant demonstrates weakness in the left ear and abnormalities in how his eyes track, which affect balance. He also opined that likely had a labyrinthine concussion which resulted in damage to both hearing and balance functions. (Ex. 28).

23. Dr. Raschbacher opined that Claimant did not sustain any closed head injury, and that even if he did sustain a head injury "it would have been by definition a mild traumatic brain injury, and much more likely than not that symptoms would have cleared long ago and he would have no residual." Dr. Raschbacher also opined that "the medical record clearly indicates [Claimant] did not have a head injury." The ALJ finds Dr. Raschbacher's opinion that Claimant did not sustain a head injury unpersuasive, given ALJ Felter's previous finding that Claimant did sustain a compensable head injury and Dr. Loury's credible opinion regarding the cause of Claimant's vestibular and balance issues. (Ex. T).

24. The ALJ finds that Claimant sustained injuries to his head which have resulted in vestibular and balance issue which require additional treatment.

Right Knee

25. Claimant did not sustain trauma to his right knee in the February 7, 2019 horse accident. Claimant testified that as a result of his work injury, and that he has sustained multiple falls onto his right knee, resulting in injury. Claimant reported numerous falls to his health care providers between July 29, 2019 and September 2021. Claimant testified that his first fall occurred within two months after his injury. He testified that he could not really explain what precipitated falls, and that he cannot anticipate when a fall will occur. Claimant testified that he falls 1-5 times per week and that it has gotten worse over time. Claimant testified that before his work injury, and the subsequent falls, he had no problems with his right knee and had not had any prior injuries to his right knee.

26. On July 29, 2019, Claimant saw Logan Jones, D.O. at Workwell, and reported that he had recently fallen down steps at his home and impacted his right knee, resulting in

swelling which had improved, although Claimant reported popping and grinding of the knee. (Ex. 6).

27. On November 15, 2019, Claimant saw Dr. Snyder for evaluation of his shoulder following shoulder surgery. Claimant noted that he was experiencing problems with his right knee, which claimant contributed to "compensatory pain." Claimant was using a cane for ambulation. Dr. Snyder did not offer any opinion regarding Claimant's knee pain at that time. (Ex. 14).

28. On December 3, 2019, Claimant saw Lloyd Luke, M.D., at Workwell. Claimant marked his right knee on his pain diagram and reported right leg pain. Dr. Luke's diagnoses did not include any diagnosis of the knee, and no examination of the knee was documented. (Ex. 6).

29. On March 5, 2020, Claimant saw Dr. Snyder for evaluation of his shoulder. Claimant reported having "multiple falls" recently, twice directly on his elbow, and reported "blacking out" 3 to 5 times per week. Claimant reported knee pain and was wearing a knee brace on his right knee and requested evaluation of his right knee as part of his workers' compensation claim. Dr. Snyder indicated he believed Claimant's claim only involved the left shoulder, and did not perform an evaluation of Claimant's right knee. (Ex. 14).

30. On April 29, 2020, Claimant was apparently evaluated for right knee pain at Sidney Regional Medical Center in Sidney, Nebraska, after falling on his knee. X-rays performed showed a large right knee joint effusion and chronic degenerative changes with medial compartment narrowing. The only record of this visit offered into evidence is the x-ray report from April 29, 2020. (Ex. 11).

31. On June 11, 2020, Claimant saw Dr. Watson. Dr. Watson noted that Claimant reported popping in his right knee, examined Claimant's right knee and noted some popping in the medial knee and a positive McMurray test. Dr. Watson ordered an MRI of Claimant's right knee, which he later indicated was denied by insurer. Dr. Watson offered no opinion on the cause of Claimant's knee symptoms. (Ex. 6).

32. On November 5, 2020, Claimant saw Dr. Ogden and reported that he continued to have dizziness and had a fall two days earlier and "a number of recurrent falls." Dr. Ogden did not document any specific injuries resulting from Claimant's reported falls. On physical examination, Dr. Ogden noted Claimant was intermittently unsteady on his feet using a walking stick, but sometimes experienced disequilibrium. Dr. Ogden noted that he did not witness any episodes of loss of consciousness. Dr. Ogden noted a bruise on Claimant's left elbow from a recent fall. No injuries to Claimant's knee were documented. (Ex. 6).

33. On November 19, 2020, Dr. Ogden noted that Claimant's reported falls were a safety issues, and that "his falls always seem to be when he is walking, but has never had an episode when sitting." (Ex. 6).

34. On January 18, 2021, Dr. Ogden noted that Claimant reported being unsteady on his feet and a history of falls with "multiple injuries – struck elbow, head, laceration." Dr.

Ogden also documented swelling and pain in Claimant's right knee. He indicated Claimant's left knee was starting to be painful, "because of compensating for right knee injury from earlier falls from dizziness from head injury Feb 2019." He referred Claimant for bilateral knee x-rays. He opined that it was critical for Claimant to be evaluated to address falls and balance issues. (Ex. 6)

35. On February 1, 2021, Dr. Ogden noted that Claimant reported falling on his right knee that Saturday with swelling. (Ex. 6).

36. On February 18, 2021, Claimant underwent a WCRP Rule 16 IME with Kathy McCranie, M.D., following which she recommended that Insurer deny request for bilateral knee x-rays. In her report, Dr. McCranie did not directly address whether Claimant's knee injuries or falls were causally related to his February 7, 2019 injuries. Instead, Dr. McCranie indicated that ALJ Felter's Order did not authorize treatment of Claimant's knees, and indicated that "[a]n objective basis for his falling has not been determined." Consequently, Dr. McCranie's opinion on this issue is not persuasive. (Ex. S).

37. On March 25, 2021, Claimant saw Dr. Ogden and "requested coverage for … the right knee." Dr. Ogden indicated he would wait on evaluation of Claimant's orthopedic complaints pending a rheumatology evaluation. (Ex. 6). On April 15, 2021, Dr. Ogden reported Claimant had seen a rheumatologist who "did not feel multiple pain in the joints was related to an autoimmune condition." Dr. Ogden noted that Claimant was falling less, indicating that this due to physical therapy. (Ex. 6).

38. On June 21, 2021, Dr. Ogden recommended that Claimant undergo a physiatry consult with Scott Primack, D.O., given Claimant's limited progress. Dr. Ogden also noted that Claimant did have improvements with "falling." (Ex. B)

39. On July 16, 2021, Claimant saw Dr. Primack. Dr. Primack noted that when Claimant used a cane in his left hand, he had a steady gait pattern and unsteady when using his right. Dr. Primack noted that Claimant's knees were both painful to movement, and McMurray testing was positive on the right and negative on the left. He further indicated that he did not believe a spine surgical consultation would be appropriate. (Ex. 19).

40. On August 30, 2021, Claimant reported to Dr. Ogden that he had recently fallen on his right knee descending stairs outside his home using the handrail and a walking stick. Claimant did not know why he fell. Dr. Ogden referred Claimant for a home evaluation for fall prevention. Dr. Ogden noted he discussed Claimant' falls and knee pain indicating "there are no clear reasons for repeated falls, and don't seem to be preceded by a syncopal event, vertigo event or something else to further evaluation." (Ex. 6).

41. On September 2, 2021, Claimant was seen at the Torrington Community Hospital in Wyoming, reporting chronic knee pain. Claimant's knee was swollen and had difficulty walking. Claimant reported he had been experiencing knee pain since the horse accident, but did not report any specific recent trauma to his knee. A right knee x-ray showed a large suprapatellar effusion, which "may be infectious, inflammatory or posttraumatic.

Given the history, occult bony pathology not excluded" The x-ray also showed patellar chondromalacia and chondrocalcinosis. Claimant was provided a knee brace and pain medication, and advised to follow up with his primary provider. (Ex. 11).

42. On September 7, 2021, Claimant was seen by Natalie Beck, FNP, at Torrington Family Medicine regarding his right knee. Claimant reported his right knee was injured due to falls related to dizziness after the horse accident. Ms. Beck referred Claimant for an orthopedic evaluation. (Ex. J).

43. On September 9, 2021, Claimant saw orthopedist Eleanor Von Stade, M.D., in Torrington, Wyoming. Claimant reported his knee had become progressively worse since the horse accident. On examination, Dr. Von Stade noted a large effusion in the right knee, tenderness, and limited range of motion. Dr. Von Stade recommended an MRI of the knee to evaluate Claimant for a potential meniscal tear or ACL injury. (Ex. 10).

44. On September 10, 2021, Claimant underwent a right knee MRI which showed large knee joint effusion, and "subtle fraying and irregularity of the free edge of the medial meniscus." (Ex. H).

45. On September 27, 2021, Dr. Ogden requested authorization for a referral to Dr. Von Stade for evaluation of Claimant's right knee. (Ex. 6). Respondents denied authorization based on Dr. Raschbacher's IME report. (Ex. Y).

46. On September 28, 2021, Claimant saw Dr. Von Stade. Claimant reported he had had several falls on his right knee since the horse accident, and was still having pain in his right knee. Dr. Von Stade recommended an arthroscopy with partial medial meniscectomy. (Ex. 10). Ultimately, Claimant underwent a right knee surgery on January 12, 2022. The operative report from the January 12, 2022 surgery was not offered or admitted into evidence.

47. 24. Dr. Von Stade's report of February 10, 2022 indicates Claimant underwent a right knee arthroscopy with subtotal medial meniscectomy, and Claimant was noted to have some instability of his lateral meniscal root, which was repaired with a stitch. (Ex. 10).

48. Claimant testified that his right knee is approximately 70% improved following his surgery, although he has had one instance of Dr. Von Stade draining fluid from his knee.

49. In his November 4, 2021 report, Dr. Raschbacher opined that treatment of Claimant's right knee was not related to his February 7, 2019 work injury and the condition of Claimant's knee was not related to any falls Claimant may have had. He opined that imaging studies of Claimant's right knee were 'benign" and did not show evidence of bone contusion, fracture, acute trauma, or other pathology within the joint. (Ex. T).

Right Hip and Lower Back Referrals

50. As found by ALJ Felter, Claimant sustained compensable injuries to his hips and back as a result of the February 7, 2019 work incident. (Ex. 1). As previously noted, Dr.

Ogden referred Claimant to Dr. White for evaluation of his hips, and to Dr. Castro for a lower back evaluation on September 27, 2020. (Ex. 6).

51. Prior to making these referrals, on July 19, 2021, Dr. Ogden noted he discussed with Claimant his "hips in detail and I explained that from my standpoint any hip procedure is unlikely to result in the changes [Claimant] is hoping for." (Ex. B). After that evaluation, Claimant underwent hip and pelvic MRI arthrograms on September 9, 2021, which showed "slight fraying and irregularity of the anterior superior hip labrum on the left." (Ex. H).

52. In his February 28, 2022 note, Dr. Ogden noted that additional care for Claimant's hip and lower back was "unlikely to be indicated per IME, no further treatment planned." (Ex. 6). The ALJ infers the IME referenced is Dr. Raschbacher's opinion. Other than making the referral to Dr. White, Dr. Ogden did not provide an explanation. (Ex. 6)

53. In his report, Dr. Raschbacher opined that referral to Dr. White for a hip evaluation was not reasonable, necessary, or related to his injury. He noted that Claimant had "fairly benign" MR arthrograms of the hips which showed no labral abnormality, and normal hip x-rays. He concluded that Claimant "does not appear to have any likely surgical condition at all at his hips. Referral on that basis alone should not be authorized." Dr. Raschbacher also opined that imaging studies showed no acute findings at the spine, but showed pre-existing non-work-related degenerative changes. Dr. Raschbacher further opined that Claimant "does not likely have any surgical disease, and my medical opinion is that even if he had surgical intervention he would not likely report significant benefit…" (Ex. T). The ALJ finds Dr. Raschbacher's opinion on this issue credible.

54. In his IME report, Dr. Hughes diagnosed Claimant with bilateral hip sprain/strain injuries with persistent hip joint pain. He noted that Claimant had done poorly after surgeries on his left shoulder and right knee, which provided "a relative contraindication to proceeding with additional spine and hip surgeries." (Ex. 1).

55. On November 15, 2021, Dr. Ogden indicated in a WC164 form, that he had reviewed Dr. Raschbacher's IME stating that referrals for orthopedic evaluations for cervical spine, lumbar spine, and hips were not indicated. Dr. Ogden stated: "while it would be nice to have a second opinion, I'm in agreement that further interventions in those areas are unlikely to have a major impact on in [Claimant's] functional status." (Ex. B).

56. Based on the opinions of Drs. Raschbacher, Hughes, and Ogden, referrals for orthopedic evaluations for Claimant's hip and spine are not reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Dental Treatment

57. At hearing, Claimant testified that he began experiencing pain in his teeth four to six months after the February 7, 2019 horse accident. Claimant did not seek dental care until approximately 18 months after February 7, 2019.

58. On August 4, 2020, Claimant saw Trevor Skinner, DDS at Granite Springs Dentistry. Claimant reported that his last dental visit was 32 years earlier, and indicated that he wanted to get all of his teeth removed to get upper and lower dentures. Dr. Skinner noted that Claimant was not a candidate for dental implants due to periodontal and hygiene issues. He diagnosed Claimant with generalized mild to moderate chronic periodontitis, (> 30% of tooth surfaces), and started the process of preparing Claimant for dentures. (Ex. 22).

59. On September 3, 2020, Dr. Skinner extracted 14 teeth, and noted that Claimant had very dense bone along with very brittle teeth that tend to break. Dr. Skinner extracted the remainder of Claimant's teeth on September 17, 2020, and Claimant was ultimately provided dentures. (Ex. 22).

60. On October 27, 2020, Dr. Skinner authored a letter indicating that when Claimant presented to the dental clinic, many of his teeth were broken, worn down and/or infected with areas of intraoral bone loss. Dr. Skinner noted that Claimant "also informed us that he was involved in a traumatic horse accident within the last couple of years. I cannot guarantee with 100% certainty that the accident was the sole cause of his dental problems, but it likely contributed to it." (Ex. 22). Dr. Skinner's opinion is not credible or persuasive. The records do not demonstrate that Claimant sustained any direct trauma to his face, jaw or teeth, or any other injury that would have resulted in the need for dental treatment. Dr. Skinner offers no rationale for how Claimant's accident caused his teeth to break, wear down or become infected, or how his accident contributed to intraoral bone loss.

61. On March 25, 2021, Dr. Ogden opined that "loss of teeth would be an unusual event related to this injury." (Ex. 6).

62. On June 3, 2021, Claimant saw Blake Ballenger, D.D.S., for an evaluation and to request that Dr. Ballenger write a letter on his behalf. Dr. Ballenger noted that Claimant attributed his dental issues to the February 2019 horse incident. Dr. Ballenger reviewed Claimant's dental records, and stated: "Clinically I cannot comment on the trauma from 2019 causing any maxillofacial damage as I do not have his immediate pre or post x-rays or clinical exams. (Ex. 20).

63. Claimant's need for dental care is unrelated to his February 7, 2019 work injury.

Home Modifications and Home Health Care

64. On August 30, 2021, Dr. Ogden referred Claimant for a home evaluation for fall prevention. (Ex. 6). On or about September 22, 2021, Marnie Herring, DPT performed a safety assessment of Claimant's home. (Ex. 9, p. 463). Ms. Herring is a physical therapist at North Platte Physical Therapy in Torrington, Wyoming, where Claimant received physical therapy and vestibular rehabilitation, and testified at hearing. Ms. Herring testified that she has experience performing home safety evaluations. Based on her inspection of Claimant's home and interview with Claimant, Ms. Herring opined that Claimant's home does require some modifications due to vestibular and balance defects.

Ms. Herring's recommendations are set forth in her report dated September 22, 2021. In that report, Ms. Herring recommended the following modifications to assist in preventing falls:

a. An ADA ramp with railings to enter his front door;

b. Grab bars in shower;

c. . Elevated toilet set with railings on either side;

d. Grab bar on wall across from toilet to assist with transfers and balance;

e. Grab bars strategically placed on 3 sides of garden tub to allow him to get in and out safely;

f. Tub bench to assist with transfers into tup;

g. Option to elevate or place a step in the garden tub to allow him to get out in a graduated fashion.

(Ex. 9, p. 463).

65. Ms. Herring testified that assessment was limited to safety within the home, and she had no opinion regarding the Claimant's need for home health care.

66. On February 7 and 18, 2022, Angie O'Connor, R.N., performed an assessment of Claimant's home and his activities of daily living. (Ex. 4). Ms. O'Connor interviewed Claimant and evaluated his home and completed a report related to her assessment on February 21, 2022. In her report, Ms. O'Connor opined that Claimant required home modifications recommended by Ms. Herring. In addition, Ms. O'Connor recommended Claimant receive home care to include nursing for medication compliance, routine clinical assessment, and caregiver services for activities of daily living, including personal hygiene, bathing, dressing, house cleaning, laundry and assistance with finances and support for outside chores for his dogs, horses, and yard work. (Ex. 4).

67. At hearing, Claimant testified that he would like assistance around his home with activities of daily living. Claimant testified that he has difficulty retrieving cans from his cupboard. Claimant testified that he is able to drive to the grocery store, cook for himself, although these activities are somewhat limited. Claimant testified that he uses crutches when walking. Claimant also testified that he receives help from friends with his horses, and around the house. Ms. Stevens-Smith testified that she assists Claimant with chores around his home, including laundry, housekeeping, cooking, and caring for Claimant's dogs and horses, approximately once every two weeks.

68. On March 8, 2022, Dr. Von Stade completed a form entitled "Physician Progress – Need for Home Care," indicating that Claimant required nursing assistance for "medication help, aid with ADLs," and indicated that the need for such treatment was due to right knee meniscal tear, right knee post-traumatic arthritis, and bilateral hip injuries."

She indicated that Claimant was "unable to walk without crutches and has frequent falls due to his multiple orthopedic injuries." No credible evidence was admitted explaining the meaning of "medication help" or the specific activities of daily living for which Dr. Von Stade is recommending nursing assistance related to his meniscal tear, hip injuries, or post-traumatic arthritis.

69. In his IME, Dr. Hughes opined that the home modifications recommendation from Ms. O'Connor were reasonably necessary. In testimony, Dr. Hughes indicated that "further evaluation was needed to assess [Claimant's] ability to meet the activities of daily living. Much of the home assessment of Angie O'Connor dealt with incapacities in [Claimant's] self-sufficiencies and the activities of daily living, and I felt that a neuropsychological evaluation needed to be done to assess the severity of a mild traumatic brain injury." He further indicated that such an evaluation would "show us the degree of impairment stemming from a traumatic brain injury versus stemming from a lack of motivation." (Hughes, Depo, p. 9-10).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus.l Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY – Right Knee

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has established by a preponderance of the evidence that he sustained injuries to his right knee arising out of the course of his employment with Employer. As found, Claimant had no balance issues prior to his February 7, 2019 work accident. Claimant's health care providers documented numerous contemporaneous reports of falls. Taken in its totality, the evidence demonstrates that more likely than not, Claimant sustained injuries to his hip and head which caused issues with mobility, balance, and stability. These injuries resulted in Claimant falling frequently, including at least four separate instances of Claimant falling on and injuring his right knee. Multiple providers found objective evidence of injury in the form of large effusions in his knee, positive McMurray tests, and evidence of grinding and popping in the knee. Claimant credibly testified that he had no knee issues prior to his work injury. ALJ Felter's found Claimant sustained compensable injuries to his head and hip. These injuries resulted in Claimant's mobility and balance issues, which caused his falls. The ALJ concludes that Claimant has

proven that it is more likely than not that he sustained injuries to his right knee as a result of his February 7, 2019 work accident.

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Authorization of Treatment for Claimant's Right Knee

Claimant has established by a preponderance of the evidence that treatment of his right knee is reasonably necessary to cure or relieve the effects of his industrial injury. But for Claimant's industrial injury, he would not have sustained falls resulting in trauma to his right knee, which lead to the need for treatment. Dr. Raschbacher's opinion that Claimant's right knee MRI was benign is not persuasive, given Dr. Von Stade's performance of a right knee meniscectomy and partial meniscal repair. Claimant has established that treatment by Dr. Von Stade was reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Authorization of Orthopedic Evaluation of Claimant's Hips

Claimant has failed to establish by a preponderance of the evidence that referral to Dr. White for an evaluation of his hips is reasonably necessary to cure or relieve the effects of Claimant's industrial injury. As found, although Dr. Ogden originally referred Claimant to Dr. White for evaluation, he later opined that a referral was not likely to improve Claimant's functional status. His opinion is consistent with both Dr. Hughes and Dr. Raschbacher. No credible evidence was offered to indicate that the slight labral fraying shown on Claimant's September 9, 2021 MRI was causally related to his February 7, 2019 injury, or that referral for a hip evaluation is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Authorization of Orthopedic Evaluation Of Claimant's Lower Back

Claimant has failed to establish by a preponderance of the evidence that referral to Dr. Castro for evaluation of Claimant's back. As with his referral to Dr. White, after making the initial referral, and reviewing Dr. Raschbacher's IME report, Dr. Ogden indicated that he did not believe referral for an orthopedic evaluation of Claimant's lower back would likely improve Claimant's function. No credible evidence was admitted indicating that Claimant has a surgical condition of the lumbar spine which would reasonably be addressed by an orthopedic surgeon. Again, Dr. Ogden's opinion is consistent with Dr. Hughes, Dr. Raschbacher and Dr. Primack. No credible evidence was admitted demonstrating that referral for an orthopedic evaluation of Claimant' lumbar spine is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Authorization of Treatment for Dental Issues

Claimant has failed to establish by a preponderance of the evidence that his dental issues are arise out of the course of his employment with Employer. Claimant did not complain of dental issues to his workers' compensation providers until after his teeth were removed in September 2020, and he reported no dental issues to his providers in the nineteen months after the work accident. When Claimant was first examined for dental issues, Dr. Skinner noted significant issues with Claimant's teeth, including periodontitis, worn down teeth, broken teeth, infection, and intraoral bone loss. No credible evidence was offered demonstrating Claimant sustained any trauma to his teeth or other injuries that would cause periodontitis, worn down or broken teeth, infections, or intraoral bone loss. Dr. Ogden acknowledged it would be unusual for Claimant's dental symptoms to be related to his work accident.

Dr. Skinner's opinion that Claimant's injuries "likely contributed" to his dental issues is neither credible nor persuasive. Dr. Skinner's opinion appears to be based solely on Claimant's statement that he had a "traumatic horse accident," but offers no substantive explanation for his causation opinion. No medical or dental provider has credibly opined how these conditions are related to Claimant's work injuries. Claimant has failed to establish by a preponderance of the evidence that dental treatment is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Authorization of Treatment for Vestibular and Balance Issues

Claimant has established that treatment for vestibular and balance issues is reasonably necessary to cure or relieve the effects of his industrial injury. As found, Claimant has sustained numerous falls over a prolonged period of time. Claimant and Ms. Stevens-Smith credibly testified that Claimant had no prior issues with falls or balance. Given that Claimant's employment required him to ride horses on a daily basis, the ALJ finds credible that Claimant had no prior balance or fall issues. ALJ Felter previously found that Claimant sustained a head injury, and that Respondents are liable for treatment for that injury. The ALJ credits the opinion of Drs. Loury Claimant requires further treatment for vestibular issues to address ocular and vestibular issues. Claimant has established by

a preponderance of the evidence that treatment for vestibular and balance issues is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

Authorization of Home Modifications and Home Health Care

Claimant has established by a preponderance of the evidence that home modifications to address falling issues are reasonably necessary to cure or relieve the effects of his industrial injury. The ALJ finds credible the testimony of Marnie Herring, DPT, that Claimant requires limited modifications of his home to assist with mobility and to prevent falls. As found, Claimant has sustained multiple falls and has balance and mobility issues which prevent fall risks.

Claimant has failed to establish by a preponderance of the evidence that home nursing care recommended by Dr. Von Stade is reasonably necessary to cure or relieve the effects of his industrial injury. No credible evidence was admitted indicating that Claimant requires in-home health care or "medication help." With respect to activities of daily living, no treating provider other than Dr. Von Stade has recommended nursing care for assistance with activities of daily living. No persuasive, credible evidence was offered to establish that Claimant requires in-home nursing care to assist him with cleaning his home, bathing, personal hygiene, tending to animals or other activities.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his right knee as the result of his February 7, 2019 industrial injury.

2. Respondents shall pay the costs of all authorized and reasonably necessary medical care and treatment for the Claimant's right knee caused Claimant's February 7, 2019 industrial injury, subject to the Division of Workers' Compensation Medical Fee Schedule.

3. Claimant's request for authorization of a referral to a hip specialist is denied and dismissed.

4. Claimant's request for authorization of a referral to a spine specialist is denied and dismissed.

5. Claimant's dental issues are not related to his February 7, 2019 industrial injury. Claimant's request for authorization of dental treatment is denied and dismissed.

6. Respondents shall pay the costs of all authorized and reasonably necessary medical care and treatment for the Claimant's vestibular and balance issues right knee caused

by Claimant's February 7, 2019 industrial injury, subject to the Division of Workers' Compensation Medical Fee Schedule.

7. Claimant's request for authorization of home health care is denied and dismissed.

8. Respondents shall pay the cost of home modifications recommended by Marnie Herring, DPT, as set forth in her report of September 22, 2021, subject to the Division of Workers' Compensation Medical Fee Schedule, were applicable.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 6, 2022

Steven R. Kabler
Administrative Law Judge

Denver, Colorado, 80203

ISSUES

Whether the claimant had demonstrated, by a preponderance of the evidence, that the cervical fusion surgery recommended by Dr. Wade Ceola constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 2, 2019 work injury.

FINDINGS OF FACT

1. The claimant suffered an injury to his left shoulder and neck on October 2, 2019. The injury occurred when the claimant's work truck fell off a jack and struck the claimant while he was attempting to change a tire.

2. Since the injury the claimant has undergone physical therapy and two surgeries. On August 4, 2020, Dr. Ferdinand Liotta performed surgery on the claimant's left shoulder. The arthroscopic surgery included anterior capsular release, debridement of labral fraying, biceps tenodesis, subacromial decompression, distal clavicle excision, and suprascapular nerve decompression at that suprascapular notch.

3. Following the shoulder surgery, the claimant continued to experience neck related symptoms and was subsequently seen by Dr. Wade Ceola. On October 2, 2020, Dr. Ceola noted that a magnetic resonance image (MRI) of the claimant's cervical spine showed neuroforaminal narrowing that was consistent with C6 radiculopathy.

4. On January 20, 2021, Dr. Ceola performed an anterior cervical discectomy and fusion at C5-C6.

5. On February 10, 2021, the claimant was seen in Dr. Ceola's practice by Natalie Arena, PA-C. At that time, the claimant reported some neck pain. On exam, PA Arena noted that the claimant had full strength in his bilateral arms. On that same date, x-rays of the claimant's cervical spine showed "excellent position of placement of hardware with no evidence of complicating features."

6. On April 15, 2021, the claimant returned to PA Arena and reported incisional pain with intense pain in his right shoulder radiating to his neck. PA Arena noted that "muscle spasm is largely responsible for his continued pain and difficulty with range of motion." She recommended massage therapy and physical therapy.

7. On May 27, 2021, the claimant was seen in Dr. Ceola's office by Lara Kroepsch, PA-C. At that time, the claimant reported excruciating pain in his left shoulder, with occasional radiation into his left elbow. The claimant also reported a left shoulder injection that dramatically worsened his symptoms. PA Kroepsch opined that

the claimant's issues were due to tightness that was "secondary to his chronic pain which really seems to coming from the shoulder at this time."

8. On July 8, 2021, the claimant was seen by Dawn Kopf, PA-C in Dr. Ceola's practice. The claimant reported that he had ongoing neck and left shoulder pain that had worsened over the last several months. PA Kopf reviewed the prior x-rays and noted that the surgical hardware had good alignment and good body arthrodesis. PA Kopf ordered a cervical spine MRI for further evaluation of adjacent segment disease and possible radiculopathy.

9. On July 12, 2021, an MRI of the claimant's cervical spine showed neuroforaminal stenosis at multiple levels. There was no noted central canal stenosis at any level. There was no noted issue with the surgical hardware.

10. On July 15, 2021, the claimant returned to PA Kopf. On that date, PA Kopf noted that "there is no spinal canal stenosis or evidence of acute injury." PA Kopf opined that the claimant's symptoms could be caused by neuroforaminal narrowing at the C4-C5 level. As a result, she recommended a left-sided epidural steroid injection at that level.

11. On August 18, 2021, the claimant was again seen by PA Kopf. The claimant reported that he had undergone a left sided C7-T1 epidural steroid injection with Dr. Giora Hahn. The claimant also reported that the injection did not improve his symptoms. The claimant further reported that physical therapy had been beneficial in improving his arm strength.

12. On September 16, 2021, the claimant was seen by Dr. Ceola. In the medical record of that date, the claimant reported that the recent injection made his symptoms worse. Dr. Ceola also noted that the claimant continued to experience bilateral occipital pain that radiated into his shoulders. Dr. Ceola opined that this could be indicative of facet disease. At that time, Dr. Ceola explained that possible treatment would include facet blocks and radiofrequency ablation. Alternatively, he could perform additional spinal surgery. This surgery would include: bilateral foraminotomy from C3 to C6, left C6-C7-T1 with instrumented fusion, and removal of spinous process and leave lamina. The claimant informed Dr. Ceola that he did not want to pursue additional injections. Dr. Ceola requested authorization for the recommended spinal fusion.

13. On December 6, 2021, the claimant attended an independent medical examination (IME) with Dr. Michael Rauzzino. In connection with the IME, Dr. Rauzzino reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. At the IME, the claimant reported that his primary complaint was neck pain that radiated from the base of his neck into his skull. In his IME report, Dr. Rauzzino opined that the additional surgery recommended by Dr. Ceola is not reasonable, necessary, or related to the claimant's work injury. In support of this opinion, Dr. Rauzzino noted that the claimant's current symptoms involve axial neck pain, with no radicular symptoms. It is Dr. Rauzzino's understanding that the claimant's radicular symptoms were resolved following the first spinal fusion. Based upon Dr.

Rauzzino's opinions, the respondents denied authorization for the recommended spinal surgery.

14. Dr. Rauzzino's deposition testimony was consistent with his written report. Dr. Rauzzino testified that the claimant does not have significant radicular symptoms in his upper extremities. In addition, during the IME, Dr. Rauzzino was not able to produce radicular symptoms. Dr. Rauzzino reiterated his opinion that the surgery recommended by Dr. Ceola is not reasonable or necessary to treat the claimant's symptoms. In support of this opinion, Dr. Rauzzino noted that the claimant does not have spinal instability or radiculopathy. He further testified that findings of foraminal stenosis do not justify surgery because those nerves are not producing symptoms that can be relieved by surgery.

15. The claimant testified that his current symptoms include sharp and shooting pain in his neck and up into his skull. At times, this pain will also radiate into his left shoulder and left elbow.

16. The ALJ credits the medical records and the opinions of Dr. Rauzzino over the contrary opinions of Dr. Ceola. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the cervical fusion surgery recommended by Dr. Ceola is reasonable medical treatment necessary to cure and relieve him from the effects of the October 2, 2019 work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.$. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights
of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

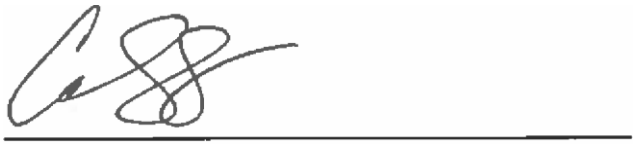
4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the cervical fusion surgery recommended by Dr. Ceola constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 2, 2019 work injury. As found, the medical records and the opinions of Dr. Rauzzino are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for cervical fusion surgery (as recommended by Dr. Ceola) is denied and dismissed.

Dated this 11th day of May 2022.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email

address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-113-117-001 & 5-113-117-002

ISSUES

1. Whether Respondents have established by clear and convincing evidence that the DIME physician was incorrect when he determined Claimant was not at maximum medical improvement (MMI) on September 9, 2021, and at MMI on February 28, 2022.

2. Whether Respondents have established by clear and convincing evidence that the DIME physician's permanent impairment ratings are incorrect.

3. Whether Claimant has established by a preponderance of the evidence that his right shoulder permanent impairment rating should be converted to a whole person impairment.

PROCEDURAL ISSUES

The parties stipulated to the consolidation of WC 5-113-117-001 & WC 5-113-117-002.

The parties stipulated that the issues of average weekly wage, temporary total disability, and medical benefits, raised in Claimant' Response to Application for Hearing in WC 5-113-117-001, are to be held in abeyance.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on July 14, 2019, arising out of the course of his employment with Employer. The incident occurred when a co-worker operating a boom lift struck a portable metal staircase weighing several hundred pounds, causing it to strike Claimant.

2. Following the injury, Claimant was seen at the UC Health emergency department and discharged. Claimant then initiated treatment with Concentra, which included physical therapy, chiropractic, massage therapy, pain, and anti-inflammatory medications. (Ex. I). Claimant's authorized treating provider (ATP) was Thomas Corson, M.D., at Concentra. Claimant moved between Colorado and Utah at various times, and received treatment and evaluations at Concentra locations in both Colorado and Utah.

3. After several months, Claimant was referred to Craig Davis, M.D., for an orthopedic evaluation on October 8, 2019. On examination, Dr. Davis noted Claimant's right shoulder range of motion was 90% with pain in extremes of motion, good rotator cuff strength, and minimally positive impingement signs. Dr. Davis did not document any specific shoulder test performed, or any specific range of motion measurements. Dr. Davis reviewed x-rays of Claimant's right shoulder and cervical spine, and diagnosed Claimant with myofascial strains of the right neck and shoulder. He stated: "It does not seem to me like he has a

significant rotator cuff injury." Dr. Davis recommended continuing physical therapy and chiropractic visits, and medications. (Ex. E).

4. In December 2019, Claimant was seen at Concentra in Sandy, Utah by Mark Aldrich, FNP, for neck and shoulder pain. Aldrich ordered cervical and shoulder MRIs which were performed on December 27, 2019 and January 9, 2020, respectively. Claimant's right shoulder MRI demonstrated a Type 2 superior labral anterior-to-posterior (SLAP) tear, anterior labral tear, and mild AC degenerative joint disease. It was noted that the findings raised suspicion for impingement syndrome. (Ex. I).

5. Claimant did not see an orthopedic surgeon after his shoulder MRI was performed. However, Claimant continued to receive treatment through Concentra in Colorado and Utah, including physiatry evaluations with Dallin DeMordaunt, M.D., in Salt Lake City. In March 2020, Dr. DeMordaunt indicated several recommended treatment or diagnostic modalities had been denied by insurer. Dr. DeMordaunt indicated Claimant had a potentially severe shoulder injury that was not being treated and may require an orthopedic surgery consult. (Ex. I).

6. On April 22, 2020, Stephen Lindenbaum, M.D., performed an independent medical examination.[1] Dr. Lindenbaum recommended a shoulder MRI and indicated it had been previously denied. Dr. Lindenbaum also indicated Claimant should be seen by an upper extremity specialist. (Ex. I).

7. Over the next several months, Claimant continued to treat with Dr. DeMordaunt, and physical therapy. (Ex. I).

8. On October 23, 2020, Claimant saw Dr. Lindenbaum for a second IME. Dr. Lindenbaum noted that Claimant had a significant delay in treatment, possibly due to Covid. Dr. Lindenbaum also indicated Claimant had a one-time visit with Dr. Davis, and recommended a follow-up visit with Dr. Davis with the MRI being made available. He indicated Claimant could return to work with restrictions until cleared by Dr. Davis. Dr. Lindenbaum opined that Claimant would not be at MMI until he had seen an orthopedic surgeon and completed all treatment. (Ex. I).

9. Claimant continued see his ATP, Dr. Corson, and Dr. DeMordaunt over the next several months. (Ex. I). No credible evidence was admitted demonstrating that Claimant was referred back to Dr. Davis or another orthopedic surgeon as recommended by Dr. Lindenbaum.

10. In November 2020, Claimant participated in a functional capacity evaluation (FCE) at Functional Assessment Rehab in Salt Lake City. Claimant had limited range of motion of the shoulder and neck, and was able to lift and reach overhead, but not able to do so repetitively. With repetitive overhead reaching, Claimant guarded his right arm and showed indications of declining endurance. The FCE also noted that Claimant did not

[1] The record does not contain either of Dr. Lindenbaum's reports, but DIME physician summarized Dr. Lindenbaum's opinions in his September 9, 2021 report.

demonstrate inconsistencies in his effort and gave good effort performing the assessment tasks. (Ex. G).

11. On January 15, 2021, Claimant saw John Sacha, M.D., at Concentra. Dr. Sacha noted that Claimant had completed care and had moved out of state and returned. He indicated that MMI was appropriate, but no date was provided. He deferred to Dr. Corson for assignment of the MMI date. Dr. Sacha recommended work restrictions, and maintenance care, including trigger point injections and a possible and a repeat shoulder injection. He assigned a 5% upper extremity impairment rating, and an 8% cervical spine impairment rating. The impairment ratings assigned by Dr. Sacha correspond to a combined 11% whole person impairment. (Ex. H).

12. On January 25, 2021, Dr. Corson placed Claimant at MMI, and assigned Claimant the permanent impairment ratings determined by Dr. Sacha. Dr. Corson's work-related diagnosis was acute cervical myofascial strain, cervical radiculopathy, partial tear of right rotator cuff, thoracic sprain, right rotator cuff strain, and Type 2 superior labral anterior-to-posterior (SLAP) tear of the shoulder. Dr. Corson recommended permanent work restrictions consisting of a 35-pound lifting restriction and no overhead work with the right arm. He further noted that Claimant would require maintenance care in the form of maintenance medication, trigger point injections, and possible repeat shoulder injections. He further indicated that Claimant should be allowed follow with his ATP and receive medications for the following 6-12 months. (Ex. A).

13. After January 25, 2021, Claimant continued to receive care, including six follow up visits with Dr. Sacha, one visit with Dr. Corson, and physical therapy. (Ex. I). Claimant continued with physical therapy until August 2021.

14. On April 28, 2021, Respondents filed a Final Admission of Liability, admitting for reasonably and necessary treatment recommended by an authorized treating physician, and for an 11% whole person impairment, which corresponded to Dr. Sacha' s combined whole person impairment for Claimant's shoulder and neck. (Ex. A).

15. On May 26, 2021, Claimant filed an objection to the FAL, and requested a Division Independent Medical Examination (DIME). (Ex. B).

16. On August 3, 2021, Claimant underwent an FCE with Colorado in Motion. (No record of the FCE was offered or admitted into evidence). Claimant was assessed as not being able to do above the shoulder reaching or lifting with the right hand, or extend reaching away from the body with the right hand. (Ex. I).

17. On September 9, 2021, Anjum Sharma, M.D., performed a DIME of Claimant. Dr. Sharma indicated that Claimant sustained work-related injuries to his cervical spine and right shoulder. His examination demonstrated "very clearly a significant impairment in the right shoulder range of motion," and he opined that Claimant put forth his best efforts on range of motion testing. Dr. Sharma noted tenderness to palpation along the acromion at the glenohumeral and subacromial joints, and a positive Hawkins-Kennedy test. Claimant

had shoulder weakness in multiple planes. Dr. Sharma indicated that Claimant still had a significant amount of pain and pathology in the right shoulder. (Ex. I).

18. Dr. Sharma opined that Claimant was not at MMI on September 9, 2021, and provided non-binding, provisional impairment ratings for Claimant's cervical spine and right shoulder. Dr. Sharma assigned a 16% scheduled right upper extremity impairment rating for Claimant's right shoulder (which corresponds to a 10% whole person impairment); and 12% whole person impairment for Claimant's cervical spine. If combined as a whole person impairment, Dr. Sharma's provision impairment ratings correspond to a 21% whole person impairment. (Ex. I).

19. In discussing his MMI rationale, Dr. Sharma indicated Claimant had been seen for independent medical examinations by Dr. Lindenbaum twice (on April 22, 2020 and October 23, 2020), in which Dr. Lindenbaum had indicated Claimant would benefit from an orthopedic surgery evaluation. He further opined that even if Claimant has chronic degenerative changes to the shoulder, "there is no doubt that [Claimant] has had an exacerbation, acceleration and aggravation of the underlying condition." Dr. Sharma indicated that based on his review of Claimant's medical records, Claimant had not been seen by an orthopedic surgeon and or been informed whether he would benefit from surgery, and that Claimant's right shoulder had not been addressed. (Ex. I).

20. On December 14, 2021, Claimant returned to Dr. Davis. Dr. Davis reviewed Claimant's shoulder January 9, 2020 shoulder MRI, and noted that Claimant has a right shoulder Type 2 SLAP tear with a para-labral cyst. Dr. Davis examined Claimant's right shoulder and noted tenderness in the posterior aspect of the shoulder, forward elevation of 150 degrees, abduction of 140 degrees, external rotation of 70 degrees, and internal rotation to T11 with slight pain on abduction. Claimant had slightly positive Hawkins and cross body impingement tests, and negative Neer and Speed tests. (Ex. J).

21. Dr. Davis indicated "At the moment, his symptoms are minimal, an therefore, I would recommend simple observation." He indicated that if Claimant become symptomatic, a shoulder injection may be considered. He opined that surgical treatment would be a "last resort." Dr. Davis opined that if Claimant's shoulder "becomes refractory to treatment, it might be worth considering arthroscopic labral repair and excision of the cyst. For now, however, he is doing well and therefore no followup scheduled and no treatment indicated." (Ex. J).

22. Other than the evaluation by Dr. Davis, no credible evidence was admitted demonstrating that Claimant received treatment for his right shoulder or cervical spine after September 9, 2021.

23. On February 28, 2022, Claimant returned to Dr. Sharma for a follow-up DIME. Dr. Sharma reviewed Dr. Davis' December 14, 2021 report, and placed Claimant at MMI effective February 28, 2022. Dr. Sharma noted that based on his examination, Claimant had a worsening range of motion of the right shoulder. Based on his evaluation and measurements taken at the February 28, 2022 follow-up DIME, Dr. Sharma assigned Claimant an 18% whole person impairment his cervical spine. He also assigned an 18%

scheduled impairment for Claimant's right upper extremity which corresponds to an 11% whole person impairment. Claimant's cervical and right upper extremity impairments combine to yield a 27% whole person impairment. Dr. Sharma also indicated that he recommended maximum lifting of no more than 50 pounds, and lifting overhead to no more than ten pounds. (Ex. K).

24. Claimant testified at hearing that over time his symptoms have improved and then declined. Claimant has attempted to return to work in various capacities, and testified that he has difficulty completing tasks that required reaching over head with his right arm. Claimant testified that he continues to experience pain and popping in his right shoulder when he lifts his right arm, he cannot throw overhand, has difficulty driving with his right arm raised, and has difficulty sleeping. Claimant's testimony was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on MMI and Impairment

The Act defines MMI as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Indus. Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services,* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.*, W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); *compare In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's

determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Indus. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

MMI

Respondents contend that Dr. Sharma incorrectly determined Claimant was not at MMI on September 9, 2021, and that, consequently, his determination that Claimant reached MMI on February 28, 2022 was also incorrect. Both contentions are based on the same premise: That Claimant reached MMI on or before September 9, 2021. Respondents urge the adoption of Dr. Corson's MMI date of January 25, 2021 as Claimant's MMI date.

Respondents have failed to establish by clear and convincing evidence that Dr. Sharma's opinion that Claimant was not at MMI on September 9, 2021 was incorrect. At Dr. Sharma's DIME, Claimant reported continued and ongoing pain in his right shoulder that had not been alleviated with conservative treatment. Dr. Sharma determined Claimant should have an orthopedic evaluation for potential shoulder surgery before being placed at MMI. Although Dr. Sharma incorrectly stated that Claimant had not been seen by an orthopedic surgeon, that mistake does not render his opinion incorrect. Dr. Sharma's opinion is consistent with Dr. Lindenbaum's opinion that Claimant should not be placed at MMI until he had an orthopedic evaluation. Claimant's only evaluation by an orthopedic surgeon was in October 2019, approximately two years before Dr. Sharma's IME. Dr. Davis' October 2019 evaluation was done without the benefit of Claimant's right shoulder MRI, and appears, based on the documentation, to be a cursory examination. Dr. Davis reviewed only x-rays, did not document performance of specific testing (such as those documented in his December 14, 2021 evaluation) and opined only that "it doesn't seem to me like he has a significant rotator cuff injury."

Prior to Claimant's January 9, 2020 MRI, Claimant's only shoulder diagnosis was a shoulder sprain. Claimant's MRI revealed a Type 2 SLAP tear, and an anterior labral tear. Given that Claimant had not seen an orthopedic surgeon after shoulder pathology was identified on the MRI, continued to experience symptoms, and had not improved with conservative care, the evidence does not demonstrate that Dr. Sharma's opinion that Claimant had not reached MMI on September 9, 2021 was incorrect.

Respondents have similarly failed to establish by clear and convincing evidence that Dr. Sharma's assignment of February 28, 2022 as Claimant's date of MMI is incorrect. As noted above, Respondents contend the February 28, 2022 MMI date is incorrect because Claimant reached MMI on or before September 9, 2021. As found, Claimant was not at MMI on September 9, 2021. Respondents have failed to establish by evidence that is highly probable and free from serious doubt that Claimant reached MMI prior to February 28, 2022, or that Dr. Sharma's assigned MMI date was incorrect.

IMPAIRMENT

Respondents next contend that the permanent impairment ratings assigned by Dr. Sharma on February 28, 2022 are incorrect, again urging the adoption of Dr. Corson's and Dr. Sacha's impairment ratings from January 2021. Respondents have failed to establish by clear and convincing evidence that Dr. Sharma's assignment of a cervical spine impairment rating of 18% or a right upper extremity rating of 11% are highly probably incorrect. No credible evidence was admitted that Dr. Sharma misapplied the AMA Guidelines for the Evaluation of Permanent Impairment when assessing Claimant's range of motion or assigning an impairment rating, or that the measurements taken were invalid. Dr. Sharma was cognizant of the fact that Claimant's range of motion had decreased since his prior DIME, and, nonetheless, assigned impairment ratings based on range of motion measurements taken in February 2022. Dr. Sacha's assessment of lower impairment ratings in January 2021 does not constitute clear and convincing evidence that Dr. Sharma incorrectly assigned impairment ratings based on his findings on February 28, 2022. Respondents have failed to present evidence that is unmistakable and free from serious and substantial doubt demonstrating it is highly probable the DIME physician's impairment rating is incorrect.

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* § 8-42-107(8)(c), C.R.S.

The schedule includes the loss of the "arm at the shoulder." *See* § 8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO June 11, 1998). Because § 8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under § 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). For a shoulder injury, the question is whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora*, W.C. 4-452-408 (ICAO Oct. 9, 2002).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas*

v. Excel Corp., W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *In re Claim of Barnes,* 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has established by a preponderance of the evidence that his scheduled impairment rating for his right upper extremity rating should be converted to a whole person impairment. As found, Claimant reached MMI for July 14, 2019 right shoulder injury on February 28, 2022. As demonstrated by Dr. Sharma's DIME, Dr. Corson's assignment of work restrictions including no overhead use of the right arm, the functional capacity evaluations, Claimant has a loss of range of motion in his right arm, inability to use his arm overhead, and experiences pain in his right shoulder. Additionally, Claimant testified that he had difficulty working overhead and difficulty lifting his right arm. These limitations are not determinative of the "situs of functional impairment," but are, instead, manifestations of functional impairment. *See Garcia v. Terumo BCT*, W.C. No. 5-094-514-002 (ICAO, July 14, 2021). Claimant's July 14, 2019, injury resulted in damage to the structures of the shoulder, which are not currently surgical. The ALJ concludes that the Claimant's inability to fully use his right arm overhead and loss of range of motion are manifestations of an impairment of Claimant's right shoulder, beyond the arm. Accordingly, Claimant's right upper extremity impairment rating is converted from an 18% right upper extremity impairment to an 11% whole person impairment. Claimant is entitled to a whole person impairment rating combining his cervical and right upper extremities of 27%, as determined by Dr. Sharma.

ORDER

It is therefore ordered that:

1. Claimant was not at MMI on September 9, 2021.

2. Claimant reached MMI on February 28, 2022.

3. Claimant's 18% permanent impairment rating for his right upper extremity related to his July 14, 2019 work injury is converted to an 11% whole person impairment, and combined with his cervical impairment to yield a 27% whole person impairment.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 11, 2022

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-139-080-002

ISSUES

The issues set for determination included:

- Did the Court have subject matter jurisdiction to hear Respondents' objection to the findings of the Division Independent Medical Examiner?
- In the alternative, did Respondents' Application for Hearing, dated May 17, 2021, substantially comply with the Workers' Compensation Act to allow the challenge to Dr. Ginsburg's findings?
- Did Claimant prove by a preponderance of the evidence that he should be awarded monetary penalties for Respondents' failure to comply with C.R.S. § 8-42-107.2(4)(c)?

PROCEDURAL HISTORY

A January 5, 2022 deadline for filing post-hearing briefs was agreed upon by counsel for the parties. On or about January 5, 2022, counsel for Respondents filed a Motion for Extension of Time to extend the deadline to January 12, 2022. In the interim, Administrative Law Judge Nemechek was ill during the time this Motion was pending. No response or objection was filed on behalf of Claimant. When ALJ Nemechek returned to the office, the deadline was extended to January 12, 2022 and Respondents' submission, filed on January 12, 2022 was accepted and considered. A Bench Order confirming the action on the Motion for Extension of Time was entered electronically by ALJ Nemechek and no further action was required with regard to the Motion.

The undersigned ALJ issued a Summary Order on March 28, 2022, which was mailed on March 30, 2022. Respondents requested a full Order on April 13, 2022. Respondents submitted an Amended proposed Findings of Fact, Conclusions of Law and Order on April 21, 2022. This Order follows.

FINDINGS OF FACT

1. Claimant is employed by Respondent-Employer as a utility maintenance worker, a position he has held since July 1, 2019.

2. On April 15, 2020[1], Claimant was exposed to Covid-19 while working with a co-employee in a maintenance pit. Claimant notified Employer of the exposure.

[1] The Notice of Injury filled out by Claimant stated that the date of exposure was April 14, 2020. However, the Employer's First Report of Injury listed April 15, 2020 as the DOI. Also, the DIME report stated that Dr. Ginsburg and Claimant agreed that April 15, 2020 was the correct date.

3. Claimant received medical treatment at Advanced Urgent Care from April 23, 2020 through December 7, 2020. On April 23, 2020, Claimant was evaluated by Briana Vieth, PA, at which time he reported fatigue and a sore throat. He confirmed a potential exposure to COVID-19, as he was working in close proximity to a co-worker. PA Vieth stated that Claimant should be tested for COVID-19, due to his clinical presentation.

4. On April 26, 2020, Claimant presented to Yelena Brambila, PA, for a telehealth appointment and reported symptoms of fatigue and a low-grade fever. Claimant was notified that he had positive COVID-19 test results.

5. Claimant's symptoms of low grade fever and fatigue were documented by Morgan Ash, PA at Advanced Urgent Care in the follow-up appointment on April 28, 2020. PA Ash's assessment/plan was: 2019 novel coronavirus; fever; fatigue. Claimant was to continue self-quarantine and take Tylenol as needed. Claimant's symptoms continued, which was documented in the evaluation conducted by PA John Helfen on May 1, 2021. PA Helfen's assessment/plan was: 2019 novel coronavirus; fatigue; loss of taste; loss of smell.

6. On May 7, 2020, Claimant had a follow-up evaluation at Advanced Urgent Care at which time PA Lauren Wenzl noted Claimant's COVID-19 symptoms (cough, fever, shortness of breath) had resolved.

7. An Employee's Notice of Injury (Insurer form) was completed by Claimant on or about May 11, 2020. An Employer's First Report of Injury was completed that same day.

8. Claimant returned to Advanced Urgent Care on May 17, 2020 and the clinic notes stated that his symptoms had resolved and that he had tested negative for COVID-19 on May 13, 2020. Claimant was found to be at MMI by Audra Dust, PA-C and the report was signed by Kevin Chicoine, M.D.

9. On June 1, 2020, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for a closed period of TTD benefits (May 8, 2020 to May 17, 2020).

10. Claimant requested a Division of Workers Compensation-sponsored Independent Medical Examination ("DIME").

11. On September 11, 2020, Claimant contracted Legionella pneumonia while he was working. Two claims were filed for this issue, WC case numbers 5-149-004 and 5-148-269. These claims were merged under claim number WC 5-148-269.

12. Claimant received medical treatment at Peak Performance from January 26, 2021 through August 10, 2021. The focus of this treatment was on the symptoms related to Legionella pneumonia or Legionnaire's disease.

13. On April 8, 2021, Stanley Ginsburg, M.D. conducted the DIME. Dr. Ginsburg's record review chronicled his symptoms and treatment for both COVID-19 and

Legionnaire's disease. Claimant and Respondents stipulated that Dr. Ginsburg was the DIME physician on the COVID-19 claim only. Dr. Ginsburg described the COVID-19 as resolved. With regard to the Legionnaires disease, Dr. Ginsburg believed it to be resolved, but Dr. Ginsburg felt he needed more information. Dr. Ginsburg concluded Claimant was not at MMI. Dr. Ginsburg said he did not see evidence of cognitive impairment leading to an impairment rating. Dr. Ginsburg wished to see opinions from the providers about Claimant's pulmonary situation and any potential residual issues.

14. On April 27, 2021, the DOWC-DIME Unit sent an email to counsel for the parties which confirmed that Dr. Ginsburg concluded Claimant was not at MMI. This letter stated Respondents were required to file an admission of liability.[2]

15. The deadline for either Claimant or Respondents to file an Application for Hearing ("AFH") was May 18, 2021.

16. On May 17, 2021, an AFH was filed at the OAC by Respondents listing the following issues: "compensability, medical benefits, authorized provider, reasonably necessary, permanent partial disability benefits, causation, relatedness, overcome DIME report from Dr. Ginsburg, MMI, impairment rating, overpayments, waivers, offsets, etc".

17. The May 17, 2021 AFH had the correct date of injury, but listed case number WC 5-149-004 (the Legionella pneumonia claim) and also listed compensability as an issue. The AFH was not signed by Respondents' attorney of record. That AFH was rejected by OAC staff.

18. The ALJ determined the May 17, 2021 filing was a nullity, as it was not signed as required by C.R.C.P. 11. The AFH (as filed) did not constitute a timely response to the DIME physician's report and this fact deprives the Court of jurisdiction to hear the merits of Respondents' challenge to the DIME physician's conclusion on MMI. A copy of the AFH was admitted into evidence as Exhibit 6.

19. The filing of the AFH complied with the time requirement for contesting Dr. Ginsburg's findings. However, the AFH was deficient as noted above. Respondents did not comply with the requirements of § 8-42-107.2(4)(c), C.R.S.

20. The DOWC-IME Unit issued a letter on May 18, 2021 to Claimant and Respondent-Insurer that the DIME was complete in which it was noted that the time for filing an AFH had expired and a GAL was required.

21. Respondents did not file a GAL after the May 18, 2021 letter for the DOWC.

22. On June 4, 2021, Respondents filed an AFH at the OAC listing the identical issues noted above. (This occurred seventeen (17) days after the initial AFH was filed.)

[2] Exhibit 4.

This AFH was dated May 17, 2021, which corresponded to the prior AFH and was rejected by the OAC. The AFH was invalid because it was back-dated.

23. The ALJ concluded the June 4, 2021 filing was an effort on behalf of the Respondents to correct the prior filing. This was a reasonable attempt to correct the prior error with the May 17, 2021 AFH.

24. On June 24, 2021, Respondents filed an AFH at the OAC that listed the issue of "substantial compliance accomplished with May 17, 2021 Application for Hearing filed under W.C. No. 5-149-004", in addition to all of the original issues listed in the May 17 and June 4, 2021 AFH-s. Respondents also cited § 8-47-104, C.R.S.[3]

25. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Timeliness of Application for Hearing Contesting the DIME

[3] Exhibit 6. The ALJ noted that § 8-47-104, C.R.S. codifies substantial compliance, as it relates to "orders and awards of the director or industrial claim appeals office" that shall not be declared inoperative, illegal or void for "any omission or a technical nature". This section does not apply to the factual circumstances presented here.

As determined in Findings of Fact 2-6, Respondents admitted liability for both medical and wage benefits after Claimant was exposed to and contracted COVID-19. Claimant received treatment and was placed at MMI by the ATP. (Finding of Fact 8). Claimant then requested a DIME, which was performed by Dr. Ginsburg. (Findings of Fact 10, 13). Dr. Ginsburg concluded Claimant was not at MMI and opined Claimant required additional evaluation. (Finding of Fact 13). As found, the deadline for filing the AFH was May 18, 2021. (Finding of Fact 15). The ALJ determined Respondents' AFH that was filed on May 17, 2021 did not comply with § 8-42-107.2(4)(c), C.R.S., as it had the wrong case number. (Finding of Fact 17). The AFH was not signed as required by C.R.C.P. 11 and rejected by the OAC. *Id.* It also listed the issue of compensability, where Respondents previously filed a GAL. Under these circumstances, the AFH was a nullity and the Court had no jurisdiction to consider the challenge to the DIME physician's conclusions. (Finding of Fact 18).

The provisions of § 8-42-107.2(4)(c), C.R.S. (2021) required Respondents to either (i) file an admission of liability, or (ii) request a hearing before the Division contesting one or more of the DIME physician's findings or determinations contained within the DIME report within 20 days after the date of the mailing of the Division's notice that it had received the DIME report. The use of the word "shall" in this section is mandatory. Additionally, pleadings must be signed by at least one attorney of record. C.R.C.P. 11. As found, Respondents did not meet the May 18, 2021 deadline for fling the AFH and this deprived the Court of jurisdiction to hear a challenge to the conclusion that Claimant was not at MMI. (Findings of Fact 17-19). The ALJ concluded the deadline in § 8-42-107.2(4)(c), C.R.S. is jurisdictional and similar to the one present in § 8-43-203(2)(b)(II) 9A), C.R.S., which requires Claimant to file an AFH or Response within thirty days of the filing of an admission or AFH by Respondents.

The ALJ considered Respondents' argument that substantial compliance with the statute/rules governing their response to the DIME physician's opinion was all that was required. The Court will consider whether the allegedly complying acts fulfill the statute's purpose. *Gandnote Golf and Country Club, LLC v. Town of LaVeta*, 252 P.3d 1196 (Colo. App. 2011). In addition, substantial compliance requires that a party intend to or actually make a good faith effort to comply with the statutory requirements. *Kaur v. King Soopers, Inc.,* W.C. 5-017-566-001 (ICAO January 8, 2020).

The ALJ noted in some contexts, Colorado appellate courts have applied the doctrine of substantial compliance even when the requirements of a particular section of the Act appear mandatory by the use of the word "shall". For example, in *EZ Building Components Mfg., LLC v. Industrial Claim Appeals Office*, 74 P.3d 516, 518 (Colo. App 2003), the Colorado Court of Appeals concluded the statute which required the notice of insurance cancellation to be sent by certified mail (8-44-110, C.R.S.) need not be strictly enforced if actual notice was received and the statute did not treat the method is jurisdictional. In that case, the notice of cancellation was sent by regular mail to both the agent and DOWC. Both confirmed receipt and the rights of the employer were not affected by the method of giving notice. The Court concluded that substantial compliance with the notice requirements was sufficient to effect the cancellation of the policy. *Id.*

This is contrasted with other cases where the doctrine of substantial compliance was not applied. In *Postlewait v. Midwest Barricade*, 905 P.2d 21, 24 (Colo. App. 1995), the Court of Appeals reviewed the requirement in 8-43-102(1)(a), C.R.S. which specifies that an injured employee must notify his or her employer of the injury in writing within four days of its occurrence. In *Postlewait,* Claimant asserted that the employer instructed him not to file a workers' compensation claim, which prevented him from giving written notice of the injury. Claimant argued his oral notice of the injury constituted substantial compliance with the statute. The Court of Appeals declined to apply the doctrine of substantial compliance and held strict compliance with the written notice requirement was necessary. *Postlewait v. Midwest Barricade*, *supra*, 905 P.2d at 24. The Court affirmed the penalty imposed on Claimant for the failure to give written notice of the injury. See also *Pacesetter Corp. v. Colette*, 33 P.3d 1230 (Colo. App. 2001) in which the doctrine of substantial compliance was discussed in the context of admissions filed on behalf of an employer.

Similarly, in *Pinon v. U-Haul,* WC 4-632-044 (ICAO April 25, 2007)*,* the Panel considered the application of the doctrine of substantial compliance in connection with the filing of a Notice and Proposal to Select an Independent Medical Examiner. In that case, Claimant filed a timely objection to an FAL, along with an AFH. However, Claimant did not file a Notice and Proposal to Select a Division Independent Medical Examiner. A panel of potential physicians was issued and Dr. Jenks was selected as the DIME physician. Respondents filed a Motion to Strike which was granted by a Prehearing ALJ. At hearing, the merits ALJ declined Claimant's request for additional PPD benefits (based upon Dr. Jenks' rating), determining that filing of the Notice and Proposal was jurisdictional. On appeal, the Industrial Claims Appeals Office concluded Claimant did not substantially comply with the statutory and regulatory requirements in connection with the DIME, as he did not propose potential doctors to perform the evaluation. The Panel concluded it was unnecessary to determine whether substantial compliance could be invoked in connection with the requirement that a Notice and Proposal to Select a Division Independent Medical Examiner must be filed. The ALJ concluded the *Pinon* case was inapposite to the facts presented in the instant case.

In this regard, Respondents cited several cases (some of which arose under the Workers' Compensation Act) in which substantial compliance was deemed sufficient to satisfy the dictates of the statute. As noted, *Pinon v. U-Haul, supra,* does not provide a basis for relief, as the factual circumstances are difference. *Charnes v. Norwest Leasing*, 787 P.2d 145, 146 [addressing substantial compliance with § 39-26-117(1)(b), C.R.S., which identifies conditions a property owner must meet to exempt its property from a lien filed by the Department of Revenue sought to enforce] did not apply to the circumstances at issues here. Finally, in *Lockyer v. May's Concrete, Inc.* WC 4-623-424 (ICAO November 4, 2008), the Industrial Claim Appeals Office considered another case in which Claimant did not file a Notice and Proposal to Select a Division Independent Medical Examiner. The Panel adhered to the views expressed in *Pinon*, but the facts in the record were insufficient to determine whether Claimant's conduct constituted substantial compliance. Therefore, the case was remanded to the ALJ to make further findings of fact. Once again these facts were distinguished from those present here.

The ALJ found none of the cases cited by Respondents were directly applicable to the instant case; that is, these did not involve a case where Respondents were required to respond to the DIME report within twenty (20) days as required by § 8-42-107.2(4)(c), C.R.S. (2021).

The ALJ determined that Respondents filing of an AFH on May 17 at least nominally complied with the time requirements of § 8-42-107.2(4)(c), C.R.S. (2021). However, the AFH was a nullity (since it wasn't signed) and properly rejected at that time. Thus, while the original AFH was filed on May 17, 2021, since it was ultimately rejected, it was not timely. Respondents then filed the second AFH on June 4, 2021, which was backdated to May 17, 2021 and was also not valid. The mandatory terms of § 8-42-107.2(4)(c), C.R.S. (2021) required the AFH to be filed by May 18, 2021. The ALJ concluded this statute required strict compliance, which did not occur in this instance. Accordingly, the multiple filings of the AFH did not preserve Respondents' right to contest the DIME physician's determination of not at MMI.

Penalties

Claimant sought penalties against Respondents for lack of compliance with 8-42-107.2(4)(c), C.R.S. and the failure to file a GAL after the email was issued by the DOWC-DIME Unit. The imposition of penalties under § 8-43-304(1), C.R.S. is a two-step process. The ALJ must first determine whether the disputed conduct constituted a violation of the Workers' Compensation Act, of a lawful duty or of an order. If the ALJ finds such a violation, penalties may be imposed if the ALJ also finds that Respondent(s)' actions were objectively unreasonable. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601(Colo. App. 2003); *see also Pioneers Hospital of Rio Blanco v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005) [Court required to determine whether insurer's conduct was reasonable].

As determined in Findings of Fact, Respondents attempted to contest the DIME physician's findings by the filing of the AFH-s, the first two of which were not valid. (Findings of Fact 17-19, 22). Respondents did not file a GAL, as required by the letter issues by the DOWC on May 18, 2021. (Finding of Fact 21). However, the filing by Respondents of the last AFH, albeit untimely, was sufficient to apprise Claimant of the issues being controverted. The ALJ found Respondents' efforts to rectify the issues with the May 17, 2021 AFH were objectively reasonable. (Finding of Fact 23). Therefore, Claimant did not satisfy the second prong of the statute required for the imposition of penalties and the claim for penalties will be denied and dismissed.

ORDER

IT IS HEREBY ORDERED:

1. Since Respondents' AFH dated May 17, 2021 did not meet the requirements of § 8-42-107.2(4)(c), C.R.S. (2021), Respondents cannot contest the finding of "not at MMI" by the DIME physician. The ALJ lacks jurisdiction to hear the

merits of the challenge to the DIME physician's findings. Respondents' challenge to Dr. Ginsburg's conclusion is dismissed.

2. Claimant's request for penalties under § 8-43-304(1), C.R.S. (2021) is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-122-962-003

ISSUE

1. Whether Claimant established by preponderance of the evidence that he sustained a compensable injury arising out of, and in the course of, his employment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 62 year-old man who worked for Employer as a temporary day laborer. Claimant previously worked for Employer, and was rehired on November 8, 2019. (Ex. F).

2. On Friday, November 8, 2019, Claimant was dispatched to work for Epic Construction, at the McDonald's Restaurant on South Colorado Boulevard. TO[Redacted] was the project superintendent. Claimant's responsibilities included clean up and demolition. Claimant alleged that at approximately 8:40 a.m., he was electrocuted while using a sawzall to remove conduit. Claimant found Mr. TO[Redacted] and told him he had been shocked, and described what happened.

3. Mr. TO[Redacted] credibly testified that he asked Claimant if he needed medical attention, but Claimant said he was ok. Mr. TO[Redacted] suggested that Claimant sit down. He did not observe any burns or wounds on Claimant's hands. Mr. TO[Redacted] testified he believed Claimant returned to work and finished his shift. Claimant testified, however, that he did not finish his shift. According to Claimant's time slip, he worked his entire shift from 6:20 a.m. to 2:30 p.m. (Ex. F).

4. Mr. TO[Redacted] credibly testified that on November 8, 2019, he continued cutting pipe with the sawzall Claimant used without any issues.

5. Later that day, Claimant returned to Employer's temporary staffing office where he spoke with Melanie McKenzie who worked for Employer. Claimant had the Sawzall blade he had allegedly been using, and he told Ms. McKenzie he had been shocked.

6. Claimant presented no evidence that he sought medical attention, or that he told Employer he needed medical attention, on November 8, 2019.

7. The following day, Saturday, November 9, 2019, Claimant worked a full shift from 7:00 a.m. to 4:00 p.m. (Ex. F). Claimant presented no evidence that he had any difficulty working on November 9, 2019.

8. JP[Redacted] worked for Employer and was responsible for the morning

dispatch. On Monday, November 11, 2019, Claimant came to Employer's staffing office. Mr. JP[Redacted] was in the office when Claimant came in. Mr. JP[Redacted] credibly testified that Claimant came to the office to "cash out" for the work he performed the previous Saturday. Mr. JP[Redacted] further testified that Claimant held a sawzall blade up over the counter and it was red. Claimant's Exhibit 1 is a photo of the red sawzall blade.

9. CW[Redacted] is the office manager for Employer. Ms. CW[Redacted] was also in the staffing office on Monday, November 11, 2019. She testified that Claimant showed Employer the sawzall blade he allegedly used. Ms. CW[Redacted] further testified that she did not notice any wounds, burns, bleeding, or injuries on Claimant's hands. Ms. CW[Redacted] asked Claimant if he needed medical treatment, and Claimant again denied needing medical treatment.

10. Mr. JP[Redacted] went to the job site the week after Claimant's alleged injury to inspect the area. Mr. JP[Redacted] did not observe any signs of electrical arcing. This is consistent with Mr. TO[Redacted] 's testimony. Mr. Pries also examined the sawzalls at the job site and testified that the sawzalls were Milwaukee brand, and they were double-insulated to prevent against electrical shock. Mr. JP[Redacted] further testified that all of the sawzall blades used at the job site were a different brand and color than the one Claimant presented.

11. Mr. TO[Redacted] also testified that the sawzall Claimant used was double-insulated to prevent against shock. He further testified that Claimant was wearing gloves while working with the sawzall to protect against shock, and there were no live wires in the conduit that Claimant was cutting. Mr. TO[Redacted] testified that the electricians had pulled all of the wires out of the conduit in the area where Claimant was working. He looked in the pipes where Claimant was cutting, and there were no electrical wires in the pipes. Mr. TO[Redacted] testified that if the sawzall had cut a live wire, it would have tripped a breaker, and there were no tripped breakers.

12. The ALJ finds the testimony of Mr. TO[Redacted] and Mr. JP[Redacted] credible. The ALJ finds that the sawzall Claimant used on November 8, 2019 was double-insulated, and there were no electrical wires in the pipes Claimant was cutting that day.

13. Claimant did not request medical treatment until November 13, 2019, five days after the alleged incident. Claimant went to Denver Health and reported that he had been electrocuted at work on November 8, 2013. According to the medical records, Claimant reported he was shocked by electricity when using a sawzall to cut into a pipe with wires inside. Claimant reported that the electricity "entered through his left thumb and exit[ed] through his right middle finger PIP joint area." He said that the wound on his right middle finger was more like a skin crack and initially he "saw flames coming out of the wound." Claimant complained of dizziness, pain and tightness in his left ear, right finger, hand and left thumb. (Ex. 10).

14. Authorized treating physician (ATP), Lileya Sobechko, M.D. evaluated Claimant. She noted in the medical record, '[i]nspection and palpation of skin reveals

visible blood blister on the left thumb disral phalax and skin break (crack) on the right middle finger PIP joint not inflamed." Dr. Sobechko ordered x-rays and performed a "simple laceration repair procedure" on Claimant's right finger. (Ex. 10-13).

15. The November 4, 2019 x-ray of Claimant's left hand showed degenerative changes in the wrist and first and second digit, no acute abnormality, and a metallic foreign body in the soft tissues. (Ex. 18).

16. Claimant returned to Denver Health on November 18, 2019, for a follow-up appointment. Joan Mankowski, M.D. specifically noted that there were "no dermal burn signs." Claimant reported hand numbness and tingling, and dizziness. Dr. Mankowski recommended an EMG if the numbness and tingling continued after 4-6 weeks. (Ex. 19C).

17. Insurer retained Albert Hattem, M.D. to opine as a physician advisor as to whether Claimant's symptoms were causally related to the November 8, 2019 alleged work injury. Dr. Hattem is level-two accredited and board-certified in occupational medicine. On December 9, 2019, Dr. Hatten issued a report opining that it was unlikely Claimant suffered an injury from being electrocuted. (Ex. P).

18. On March 8, 2022, Dr. Hatten testified via deposition. Dr. Hattem testified that an electrical shock injury would cause a burn, and there were no dermal burns observed on Claimant's hands. (Dep. Tr. 8:18-10:9).

19. Dr. Hattem further testified that in cases of electric shock, the symptoms appear immediately, and it is unusual for a patient who has been electrocuted or shocked to wait five days to seek treatment. (Dep. Tr. 7:20-8:17).

20. Prior to this incident, Claimant brought a workers' compensation claim for a January 14, 2019 injury. Claimant alleged injuries to his neck, back, and both hands. Claimant treated for those alleged injuries through May 22, 2019. (Ex. L and Ex. N). As part of his treatment, Claimant was referred to Dr. Chan for an upper extremity EMG on May 1, 2019 due to persistent bilateral upper extremity numbness. The EMG showed that Claimant had severe peripheral neuropathy, most likely, secondary to diabetes with superimposed carpal tunnel syndrome bilaterally. (Ex. N).

21. Claimant continued to complain of tingling and numbness in his hands. He had an EMG on March 10, 2020 that showed an abnormal exam with polyneuropathy most likely on the basis of diabetes. The EMG specifically noted "evidence of bilateral median neuropathy at the wrist (carpal tunnel syndrome overlying neuropathy)." (Ex. K). A repeat EMG was done on August 5, 2020 for Claimant's ongoing bilateral hand numbness. He was diagnosed with bilateral carpal tunnel syndrome and polyneuropathy most likely on the basis of diabetes. (Ex. K). This was the same diagnosis he received in May 2019, while treating under his prior workers' compensation claim. (Ex. N).

22. Dr. Hattem credibly testified that there were no objective findings of an injury from being electrocuted. (Dep. Tr. 11:12-15). He testified that a blood blister, skin crack,

or laceration would not occur from an electrocution injury. (Dep. Tr. 10:10-23). Dr. Hattem testified that Claimant's complaints of tinnitus are pre-existing, and that Claimant had the exact same complaints of neck pain, bilateral numbness, tingling, and weakness in his upper extremities prior to this alleged incident. (Dep. Tr. 6:3-7:19).

23. Based on the testimony and objective evidence, the ALJ finds that Claimant did not sustain an injury at work on November 8, 2019.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Act, he was performing a service arising out of and in the course of his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). While a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment, the mere occurrence of symptoms at work does not require the ALJ to conclude that the industrial exposure caused the symptoms and consequent need for treatment, or that the industrial exposure aggravated or accelerated any pre-existing condition. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Rather, the occurrence of the symptoms may be the result of, or the natural progression of, a pre-existing condition that is unrelated to the employment, or may be attributable to some intervening cause. *See Owens v. Indus. Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Whether the claimant's condition is due to the natural progression of the pre-existing condition or a new industrial accident is a question of fact for resolution by the ALJ. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, Claimant testified that he was shocked while using a sawzall on November 8, 2019 in the course of his employment with Employer. (Findings of Fact at ¶ 2). There is, however, no objective evidence that Claimant suffered an injury. Claimant told the medical providers that flames were coming out of his hand from the electrocution. (*Id.* at ¶ 13). Mr. TO[Redacted] , however, saw Claimant right after the alleged injury and credibly testified that he did not see any burns or wounds on Claimant's hands. (*Id.* at ¶ 3). When Mr. TO[Redacted] asked Claimant if he needed medical treatment, Claimant said he was ok. (*Id.*). Mr. TO[Redacted] credibly testified that Claimant worked the following day without any issues. (*Id.* at ¶ 7). Ms. CW[Redacted] also credibly testified that on November 11, 2019, she did not see any burns or wounds on Claimant's hands, and he again declined medical treatment. (*Id.* at ¶ 9). Claimant did not seek medical treatment until November 13, 2019. (*Id.* at ¶ 13). Dr. Hatten credibly testified that in cases of electric shock, symptoms, namely dermal burns, appear immediately. (*Id.* at ¶ 18).

The medical records demonstrate that Claimant did not have any dermal burns. He had a blood blister and simple laceration repair. (*Id.* at ¶¶ 14 and 16). Claimant's other complaints of numbness and tingling in his hands relate to his pre-existing peripheral neuropathy and carpal tunnel syndrome. (*Id.* at ¶ 21). As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of, his employment with Employer. (*Id.* at ¶ 23). Based on this ruling, Claimant's other endorsed issues are moot.

Penalties

During the hearing, Respondents' moved to strike Claimant's penalties claim. The ALJ took the Motion under advisement. In any application for hearing for any penalty pursuant to § 8-43-304(1) C.R.S. "the applicant shall state with specificity the grounds on which the penalty is being asserted." Claimant failed to plead his penalty with specificity, and has alleged a compensability determination as the basis for his penalty. Claimant bears the burden of proving that he sustained a compensable injury, and denial of a claim is not a valid penalty. Claimant has asserted no violation of a statutory provision, order, or rule, and has set forth no evidence supporting a penalty in this case. Claimant's penalties claim is stricken.

ORDER

It is therefore ordered that:

1. Claimant did not sustain a compensable work injury and his claim is dismissed. Accordingly, the remaining endorsed issues, other than penalties, are moot.

2. Claimant's claim for penalties is stricken.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 12, 2022

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 S. Circle Drive Ste. 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **[Redacted].,** Claimant, v. **[Redacted]** Employer, and **[Redacted]** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 4-957-002-003**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

A hearing in the above captioned matter was held before Administrative Law Judge (ALJ), Richard M. Lamphere on December 15, 2021. Because of COVID-19 related restrictions, the hearing was conducted remotely via video/teleconference. The hearing was digitally recorded on the Google Meets platform between 1:10 and 3:00 p.m. Claimant proceeded *pro se*. Respondents were represented by [Redacted], Esq.

At the outset of the hearing, the ALJ addressed Claimant's renewed motion for deposition subpoenas and other forms.[1] Claimant is incarcerated and argued that he had been unable to secure the proper subpoena forms necessary to compel the testimony of the medical proividers who had attended to his alleged injury. Given the multiple delays in convening the hearing in this matter, the ALJ denied Claimant's oral motion for an extension of time and instead indicated that the subpoena forms and the Colorado Workers' Compensation Fee Schedule would be mailed to him so he could decide whether to schedule the depositions of his claimed experts. The ALJ then ordered any despositions be taken post-hearing and advised Claimant that the record would be kept open until the depositions were complete and lodged with the Office of Administrative Courts (OAC), but in the interim the ALJ would proceed by securing Claimant's testimony and the testimony of [Redacted, hereinafter EN] and Dr. Annu Ramaswamy.

Testimony was then taken from the aforementioned witnesses. In addition to the testimony of Claimant, Ms. EN[Redacted] and Dr. Ramaswamy, the ALJ admitted Respondents' Hearing Exhibits A-I into evidence. Claimant did not submit additional exhibits to the ALJ for inclusion in the record; however, questioning at hearing prompted

[1] This issue was previously addressed by ALJ Edie who, on November 29, 2021, ordered the hearing to proceed as scheduled on December 15, 2021.

the ALJ to order the production of and identify the Workers' Claim for Compensation form allegedly completed by Claimant as Claimant's Exhibit 1. The exhibit has been received. Following the presentation of evidence, the ALJ held the record open for 60 days to allow Claimant time to prepare for and take the depositions of his proposed expert witnesses.

On February 14, 2022, the ALJ convened a status conference to determine the posture of Claimant's requested depositions. During this status conference, Claimant advised the ALJ that he had elected not to take the depositions and reiterated that access to the law library necessary to prepare his post-hearing position statement was limited. Given Claimant's limited access to the prison's law library, the ALJ extended the due date for submission of post-hearing position statements up to and through March 31, 2022. The parties' position statements have been received.

Although he did not submit exhibits at hearing, Claimant attached several records consisting of "Exhibits A-D" to his post-hearing position statement. Because the ALJ received no objection from Respondents regarding the admission of the aforementioned documents and because they could be outcome determinative, the ALJ admitted the documents into the evidentiary record as "Claimant's Hearing Exhibits 1-4", rather than A-D to avoid confusion with Respondents similarly labeled hearing exhibits. As noted, the ALJ had previously ordered the production of the Workers' Claim for Compensation form, which was marked as Claimant's Exhibit 1. Given the subsequent admission of the exhibits attached to Claimant's Position Statement as Claimant's Hearing Exhibits 1-4, the Workers' Claim for Compensation form previously marked as Claimant's Exhibit 1 has been remarked as Claimant's Hearing Exhibit 1(a).

On April 22, 2022, the ALJ issued a Summary Order that the OAC served upon the *pro se* Claimant and Respondents' counsel. On April 28, 2022, Claimant filed a "Motion for Extension of Time" to file a "Petition of Rehearing" and a "Motion for a Full Order". The described motion was received by the OAC in Colorado Springs on May 2, 2022. On May 5, 2022, the Colorado Springs OAC received Claimant's "Request for a Rehearing" which pleading included a specific "Request for a Full Order". The ALJ considers Claimant's May 5, 2022, "Request for Rehearing" that included an entreaty for a Full Order as a request Specific Findings of Fact, Conclusions of Law and Order. Accordingly, the ALJ enters the following Findings of Fact, Conclusions of Law and Order pursuant to C.R.S. § 8-43-215 (1).

In this Order, [Redacted], Jr. will be referred to as "Claimant"; [Redacted] s will be referred to as "Employer," and [Redacted] will be referred to as "Insurer". Employer and Insurer may be referred to collectively as "Respondents". All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2021); the "Act" refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., C.R.S; "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1 and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reopen his claim based on a change of condition, an error or a mistake.[2]

II. If Claimant established that he is entitled to reopen his claim, whether he also established, by a preponderance of the evidence, that he sustained a compensable injury, which arose directly from his employment or the conditions under which his work was performed for Employer.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer operates as a restaurant. In June 2014, the owner/operator of the restaurant contracted hepatitis A prompting all employees of the restaurant to be vaccinated against hepatitis A prophylactically. (Claimant's Hearing Exhibit (CHE) D).

2. On June 16, 2014, one week after receiving his vaccination, Claimant developed a fever and chills.[3] His symptoms progressed and around 5:30 in the evening, he was noted to be lethargic and cognitively impaired. His roommate called 911 and Claimant was transported to Poudre Valley Hospital. (CHE D).

3. On presentation to the Emergency Room, Claimant reported nausea and subsequently developed a petechial rash on his face and tongue swelling. He was worked up for possible bacterial meningitis and started on antibiotics. Workup was expended to include testing for West Nile virus and herpes simplex viral infection. MRI was completed which ruled out brain tumor, abscess or intracranial bleeding. Based upon Claimant's diagnostic testing, viral meningitis/encephalitis and seizure was suspected. Claimant was assessed with "encephalitis due to infection" and admitted to the hospital for further treatment. (CHE D).

4. Upon admission, Claimant was evaluated by the hospitalist, Dr. Adam Mack. Dr. Mack opined that the results of Claimant's MRI scan pointed to herpes simplex virus (HSV) meningeal encephalitis as the most likely "culprit" for his symptoms. While he noted that Claimant had been vaccinated against hepatitis A, Dr. Mack noted that vaccination had a less than 1% incidence of encephalitis development. He was "unclear" if Claimant's vaccination was contributing to Claimant's symptoms. (CHE D).

5. On June 17, 2014, Claimant was evaluated by Dr. Scott Strader of the hospital's neurology service. Dr. Strader noted that Claimant worked at a restaurant

[2] Claimant did not allege fraud as a basis for reopening the claim.

[3] Given that Claimant developed symptoms on June 16, 2014, one week after his vaccination, supports a finding that Claimant was likely vaccinated on or about June 9, 2014.

where all employees were vaccinated for hepatitis A because the owner had contracted a case of hepatitis A. Following his vaccination, Dr. Strader noted that Claimant did well until June 16, 2014, when he developed a fever and chills and was found around 5:30 with an "altered mental status and a bloody tongue". He noted further that Claimant underwent an MRI, which demonstrated "intensity in the right medial lobe suspicious for herpes simplex encephalitis". After review of Claimant's chart, including his diagnostic workup Dr. Strader reached the following impression:

> MRI findings demonstrate signal intensity in the right mesial temporal lobe. Lumbar puncture demonstrates a mild lymphocytic pleocytosis. Overall, the pattern is certainly concerning for herpes simplex encephalitis and I would suspect that this is the underlying diagnosis. Other viral encephalitides are possible, but these typically do not result in such severe neurologic dysfunction or seizures.

(CHE D).

6. Claimant was also evaluated on June 17, 2014 by the infectious disease service of the hospital. Dr. Jacob C. Liaoong completed the consultation. At the outset of his evaluation, Dr. Liaoong noted that he was asked to see Claimant in an effort to determine "other possibilities of infection nature" after the neurology service determined that Claimant had experienced a possible viral-related encephalitis. (CHE D).

7. After review of the available record/diagnostic testing results, Dr. Liaoong reached the following impressions:

> Combined with his low-grade fever and also, per history, some type of fever prior to admission, this might be a viral-related process that includes herpes, although patient has not had any recent or known episode of herpetic breakout preceding above, or this could by any other viruses, like enterovirus or Coxackie or other community type virus. The CSF panel is not consistent with a bacterial infection as well as imaging study. I cannot rule out HIV encephalitis, although this seems atypical. I do not think this is hepatitis A active infection with encephalitis. In less than 1%, there are reported cases of encephalitis, but nothing specific to temporal lobe, has been noted under the hepatitis A vaccination adverse events. I am not sure if we can totally rule this out, but it is so rare, that it is likely an exclusion diagnosis.

(CHE D).

8. Claimant was released from the hospital and returned to work. According to Claimant, he notified Employer of his assertion that the hepatitis A vaccine caused his encephalitis on June 21, 2014. Claimant testified that Employer refused to file a claim so

he filed one on July 31, 2014. Claimant then retained [Redacted], Esq. of [Redacted] to prosecute his claim.

9. EN[Redacted] testified that she was assigned the claim on August 8, 2014. She confirmed that Claimant filed a "Workers' Claim for Compensation" form on July 30, 2014. As noted, the ALJ ordered that the Workers' Claim for Compensation form be produced as Claimant's Hearing Exhibit 1. (Subsequently remarked as Claimant's Hearing Exhibit 1(a) given the admission of Exhibits 1-4 as attached to Claimant's Position Statement). In the Workers' Claim for Compensation form Claimant asserts that his injury occurred as a reaction to the hepatitis A vaccine. He also identifies the date of injury as June 16, 2014. (CHE 1(a)).

10. Respondents filed a "Notice of Contest" denying liability for Claimant's alleged injury/occupational disease on August 11, 2014. (Respondents' Hearing Exhibit (RHE) I).

11. On October 6, 2014, Respondent requested opinions from Dr. Annu Ramaswamy regarding the relatedness of Claimant's encephalitis to his receipt of the hepatitis A vaccine. Dr. Ramaswamy completed a medical records review after which he opined that he was unable to "implicate" the hepatitis A vaccine as the cause of Claimant's encephalitis. In support of his conclusions, Dr. Ramaswamy noted that there were "no clinical studies that implicate the hepatitis A virus as the cause for encephalitis". While there had been reported cases of encephalitis in individuals who had received the hepatitis A vaccine, the vaccine insert information noted, "Because these reactions are reported voluntarily from a population of uncertain size, it is not possible to reliably estimate their frequency or establish a causal relationship to a vaccine exposure". Dr. Ramaswamy concluded by indicating that "[m]ore times than not, an etiologic agent is not identified in encephalitis cases". (RHE H).

12. Based upon the evidence presented, it appears that Claimant's claim sat idle for many months after Dr. Ramaswamy's records review until October 2, 2017, when Respondents filed a Motion to Close Claim for Failure to Prosecute. (RHE G). By the filing of the motion to close, Claimant was incarcerated.[4] Nonetheless, the motion was mailed to Claimant's counsel of record, [Redacted] on October 4, 2017. (Id.).

13. On October 19, 2017, the Division of Workers' Compensation, through Director Paul Tauriello issued an Order to Show Cause advising Claimant that he must advise the Division of Workers' Compensation "what recent effort [he had] made or [was] making to pursue [his] claim for workers' compensation benefits and why [he thought] the claim should remain open". (RHE F). The order further advised that if Claimant did not demonstrate good cause why the claim should remain open within 30 days of the date the Show Cause Order was mailed, his case would automatically be closed. (Id.). The order was mailed to Claimant's counsel of record, Robert Weinberger, Esq. at the above referenced address. (Id.).

[4] Claimant indicated that he was incarcerated on February 1, 2017.

14. On November 28, 2017, Director Tauriello issued an "Extension of Time to Show Cause" suggesting that Claimant took action to keep the claim from closing.[5] (RHE E). The November 28, 2017 order instructed Claimant that his claim would automatically be closed unless it was set for hearing before an Office of Administrative Courts ALJ within 100 days of the mailing of the Order granting the extension of time. (Id.). In the alternative the order provided that the parties could file a stipulation indicating that they had agreed to keep the claim open while specifying the purpose and the time the claim would remain open. (Id.). Finally, the November 28, 2017 order explicitly indicated that if the parties were unable to schedule a hearing within the 100 days mandated by the order or if for any reason the hearing does not take place as scheduled, the claim would automatically close, unless Claimant filed a motion seeking an additional extension of time. (Id.). The November 28, 2017 order was not only mailed to Claimant's counsel of record, but also to Claimant directly. (Id.).

15. Claimant, through counsel, [Redacted] withdrew his previously filed Application for Hearing and cancelled an April 3, 2018 hearing on March 30, 2018. (RHE D). Because Claimant withdrew his Application for Hearing and did not attend the April 3, 2018 hearing within the 100-day deadline provided for in the November 28, 2017 order, his claim automatically closed. Nonetheless, the claim was subject to reopening pursuant to C.R.S. § 8-43-303.

16. Following cancellation of the April 3, 2018 hearing, the claim again sat idle until July 2020. On July 22, 2020, in response to a letter written by Claimant regarding the status of his claim, the Office of Administrative Courts directed correspondence to him attaching a "Petition to Reopen" form with instructions on how to complete and submit the form to the Division of Workers' Compensation (DOWC) along with an Application for Hearing to litigate the issue of reopening the claim, if it had indeed closed. (CHE 2).

17. Claimant filed a Petition to Reopen based upon error on August 21, 2020. (RHE C). Accompanying his Petition to Reopen was a hand written statement outlining the basis for the request to reopen the claim. (Id. at p. 3).

18. On August 27, 2020, Claimant filed an Application for Hearing endorsing, among other things "Compensability" and "Petition to Reopen Claim". (RHE B). Similar to the Workers' Claim for Compensation form completed July 30, 2014, Claimant listed the date of injury as June 16, 2014 in his August 27, 2020 Application for Hearing. (Id. at p. 1).

19. EN[Redacted] testified that the last payment of medical billing associated with Claimant's June 16, 2014 hospitalization was paid September 29, 2014. She also confirmed that no indemnity benefits have been paid to Claimant under the claim.

20. Ms. EN[Redacted] testified that she received the only Petition to Reopen the claim in her file on August 31, 2020. She also testified that she has never received

[5] The evidence presented, particularly Respondents' Hearing Exhibit D, supports a finding that Claimant's counsel responded to the October 19, 2017 Order to Show Cause by filing an Application for Hearing.

any indication from the Division of Workers' Compensation that the claim has been reopened.

21. Dr. Ramaswamy testified consistently with his medical records review report. He reiterated his opinion that the available medical data failed to support a causal connection between Claimant's receipt of the hepatitis A vaccine and his encephalitis and subsequent development of seizures. According to Dr. Ramaswamy, if a causal relationship between the hepatitis A vaccine and the development of encephalitis existed it would be known to the medical community because the hepatitis A vaccine is widely used around the world, yet there is no evidence-based medicine to support a correlation between receipt of the vaccine and the development of encephalitis. Indeed, Dr. Ramaswamy reviewed up to date research before testifying. That review failed to reveal any objective data to support the suggestion that there is a causal relationship between the development of encephalitis and the hepatitis A vaccine leading Dr. Ramaswamy to testify that he could not support the even remote 1% chance of such correlation referenced by the other medical providers in this claim. Regardless, he testified that it was very unlikely that Claimant's encephalitis and subsequent seizures were related to Claimant's receipt of the hepatitis A vaccine. Rather, the totality of the medical record lead him to conclude that Claimant's encephalitis was idiopathic in nature.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve

conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). While the ALJ is convinced that Claimant's testimony is sincere, the medical evidence, including the testimony of Dr. Ramaswamy persuades the ALJ that his diagnosis and need for such treatment is not causally related to his June 2014 hepatitis A vaccination.

Reopening in General

D. Section 8-43-303(1), C.R.S. provides in pertinent part that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition . . ."

E. Section 8-43-303(2)(b), C.R.S. provides that "[a]t any time within two years after the date the last medical benefits become due and payable, the director or an administrative law judge may, after notice to all parties, review and reopen an award only as to medical benefits on the ground of an error, a mistake or a change in condition . . ."

F. The party seeking to reopen the claim shoulders the burden of proof to establish grounds for the reopening. *See Garcia v. Qualtek Manufacturing*, W.C. No. 4-391-294 (August 13, 2004); C.R.S. § 8-43-303(4). In this case, it is clear from the evidence presented that Claimant seeks to reopen the claim based upon an assertion that it was closed in error or by mistake. Although not specifically endorsed, this Summary Order also addresses any inference that Claimant is entitled to a reopening of his claim based upon a change of condition.

G. Respondents argue that Claimant's petition to reopen should be denied and dismissed for two reasons. Respondents first point out that the claim closed by order of the Director for failure to prosecute without a finding that Claimant suffered a compensable injury or occupational disease. Absent a finding of compensability, Respondents contend that a change in condition cannot form the basis for reopening the claim. Second, Respondents assert that Claimant did not file his petition to reopen until expiration of the above referenced statutes of limitation. Accordingly, Respondents argue that Claimant's request to reopen his claim for any reason is time barred. Claimant counters by arguing that because no "payments" were awarded to him, the statute of limitations, does not apply to this claim. Claimant argues further that even if the above referenced statutes of limitation apply in this case, a letter he authored on July 15, 2020, which was sent to the OAC requesting a status of the claim was sufficient to toll the running of the statute. According to Claimant, this letter requested that the OAC reopen the claim if it had closed. These arguments along with Claimant's endorsed reason(s) for reopening are addressed separately below.

Statute of Limitations

H. The time limits set forth in § 8-43-303, C.R.S.2005, as cited above, operate as a statute of limitations, *City of Colorado Springs v. Indus. Claim Appeals Office*, 89 P.3d 504 (Colo.App. 2004); Garrett v. Arrowhead Improvement Ass'n, 826 P.2d 850 (Colo. 1992); Valdez v. United Parcel Serv., 728 P.2d 340 (Colo.App.1986).

I. As noted, C.R.S. § 8-43-303(1), and (2)(b), provide that a claim may be reopened within six years after the date of injury or within two years after the date the last medical benefits become due and payable. Because these statutes allow the respondent to avoid liability for additional benefits, the time limitations for reopening a claim constitute an affirmative defense. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988). An affirmative defense must be explicitly plead and is deemed waived if not raised at a point in the proceedings, which affords the opposing party an opportunity to present rebuttal evidence. See C.R.C.P. 8(c); *Kersting v. Industrial Commission*, 567 P.2d 394 (1977); *Terry v. Terry*, 387 P.2d 902 (1963); *Lewis v. Scientific Supply Co*., 897 P.2d 905 (Colo.App. 1995). This principle protects the parties' due process rights to notice and an opportunity to be heard. *Hendricks v. Industrial Claim Appeals Office*, 809 P.2d 1076 (Colo.App. 1990); see also OAC Rule of Procedure 12(A), 1 CCR 104-1 ("After the hearing date is confirmed, issues may only be added by written agreement of the parties or order of a judge or designee clerk for good cause shown"). Based upon the evidence presented, the ALJ is convinced that Respondents raised the affirmative defense of "Statute of Limitations" and Claimant has been afforded the proper notice and given the right to be heard concerning the issue. (RE A).

J. In this case, Claimant contends that his vaccination against hepatitis A resulted in the development of encephalitis, a seizure and his subsequent need for hospitalization/treatment. Review of the available evidence supports a finding that Claimant was vaccinated on or about June 9, 2014, one week before presenting to the Emergency Department at Poudre Valley Hospital (University of Colorado Health) on June 16, 2015, with chills, headache and progressive cognitive sequelae. Claimant was hospitalized for what was identified as "encephalitis due to infection". As noted, Claimant contends that his hepatitis A vaccination caused his encephalitis and need for treatment. Nonetheless, he did not suffer any alleged ill effects from the vaccine for a week. The delay between Claimant's vaccination and the development of his symptoms raises questions with regard to when the limitation period under C.R.S. § 8-43-303(1) begins to run. Indeed, Claimant seemingly raised the question in his August 27, 2020 Application for Hearing when he endorsed: "Actual date of Injury".

K. Based upon the evidence presented, the ALJ concludes that Claimant's onset of disability is an appropriate test for determining when the limitation period pursuant to C.R.S. § 8-43-303(1) begins to run in this case. The onset of a disability occurs when the injury/occupational disease impairs the claimant's ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Indus. Claim*

Appeals Office, 62 P.3d 1015 (Colo.App.2002). In this case, the medical records support a finding that the first appreciable manifestation of Claimant's injury/disease occurred June 16, 2014. Although Claimant contends that the limitation period should begin to run as of July 31, 2014 when he filed his claim, he actually asserted a June 16, 2014 date of injury when filing his Application for Hearing on August 27, 2020. It is reasonable to infer based upon his Application for Hearing that following his hospitalization, Claimant recognized that as of June 16, 2014, his medical condition precluded his ability to effectively and properly discharge his duties to his employer. In short, the evidence presented supports a conclusion that Claimant recognized that June 16, 2014, represented the date he was actually injured and disabled as a consequence of his vaccine. Accordingly, the ALJ concludes that the limitation period for reopening this case began on June 16, 2014, not June 9, 2014 when he received his vaccination or July 31, 2014, when he filed his claim as Claimant now suggests. Even if one were to accept Claimant's argument that the limitation period did not begin to run until July 31, 2014, when he filed his claim, the evidence presented supports a conclusion that Claimant did not file his "official" Petition to Reopen until August 21, 2020, which represents a period of more than six years from July 31, 2014.

L. As noted, Claimant contends that he sent a letter to the OAC on July 15, 2020, which included a request to reopen the claim if it had closed. While Claimant did not include a copy of the letter including the request to reopen the claim in his exhibits, the ALJ is convinced that he probably did sent such a letter. Indeed, an answer letter referencing that Claimant's letter regarding the procedural posture of his claim had been received was sent to him by the OAC on July 22, 2020. (CE 2). Although the July 22, 2020 letter generated by the OAC does not reference/acknowledge Claimant's request to reopen the claim, it does provide a form to do so along with a "packet of instructions for completing the form". (Id.) Accordingly, it is reasonable to infer that on July 15, 2020, Claimant requested that his claim be reopened if it had closed. Citing *Mascitelli v. Giuliano & Sons Coal Company*, 402 P.2d 192 (Colo. 1965), Claimant contends that his July 15, 2020 letter which included a request to reopen the claim should be construed as his petition to reopen the claim which was sufficient to toll the statute of limitations. Simply put, Claimant contends that he petitioned to reopen his claim on July 15, 2020, which request was followed by his "official" petition on August 21, 2020.

M. In *Mascitelli*, Claimant sustained an injury to his right foot while working as a coal miner on March 5, 1956. He was awarded a 35% disability as a consequence of the injury; however, he sought to reopen the claim based upon his contention that he was entitled to 50% disability due to the accident. On March 3, 1962 (two days before the date the statute was scheduled to run) Claimant wrote a letter to the Industrial Commission asking that his claim be reopened. The letter, which the Commission accepted as Claimant's petition to reopen, was received on March 5, 1962; however, the Commission did not issue an order to reopen until May 1, 1962, which order admittedly was more than six years after the accident and therefore outside the statute of limitations. Consequently, the respondent-insurer objected to the reopening and alleged that the Commission was without jurisdiction to act. On appeal, the Court rejected respondent-insurer's contention that the Commission must act within the six-year limitation or is

without jurisdiction to do so. Rather, the Court agreed with claimant that the filing of the notice (petition) **prior** to the termination of the statute of limitations, tolls the running of the statute. In concluding as much, the Court stated ". . . once a claimant properly files his notice within the statutory period, he is within its protective folds".

N. Accepting Claimant's representation that he sent a letter to the OAC, which included a petition to reopen his claim on July 15, 2020, affords him no relief based upon the facts of this case. Construing Claimant's July 15, 2020 letter as his petition does not change the fact that the letter/petition was sent **after** the running of the six-year period provided for by statute. The distinguishing fact between the instant case and the facts presented in *Mascitelli* is that Mr. Mascitelli's letter predated the running of the statute whereas Claimant's letter was sent after the six-year statute had run out, given the above conclusion that the six-year limitation started to run on June 16, 2014. Thus, while the ALJ agrees that Claimant's letter can/should be construed as his petition to reopen, which would serve to toll the statute while a determination of the claim is pending as per the holding in *Mascitelli*, the statute in this case had already run by July 15, 2020. Accordingly, the ALJ concludes that Claimant's reliance on *Mascitelli,* for the proposition that his July 15, 2020 letter tolled the statute from running in this case, is misplaced.

O. Aside from the general six-year limitations period in § 8-43-303(1), the statute distinguishes between disability and medical benefits. The latter are specifically covered by C.R.S. § 8-43-303(2)(b), which provides a two-year limitations period from the date the last medical benefits are due and payable. As the evidence presented supports a finding that the last medical benefits paid in this case on September 29, 2014, the ALJ concludes that Claimant's petition to reopen, whether that be July 15, 2020 or August 21, 2020 is beyond the two-year limitation, which would have run by September 30, 2016. Because Claimant's petition to reopen was not filed within the applicable limitations period set out in either C.R.S. § 8-43-303(1) or (2)(b), the ALJ agrees with Respondents that his petition to reopen must be denied. See *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998)(claim was barred from reopening where it was filed more than six years after onset of disability). Even if Claimant had established that he had filed his petition within the applicable limitations period, he failed to prove that he is entitled to reopen the claim based upon an error, a mistake or a change of condition.

Claimant's Request to Reopen Based on Error and/or Mistake

P. As noted Claimant contends primarily that he is entitled to reopen the claim as the matter was closed in error or by mistake given that he was incarcerated, had limited access to a law library, experienced Covid-19 lockdowns, had no access to forms, suffered delays in mailing and because his attorney of record stopped communicating with him. When a claimant alleges that an error or mistake justifies the reopening of a claim, the ALJ must engage in a two-step analysis concerning that assertion. *Travelers Insurance Co. v. Industrial Commission*, 646 P.2d 399 (Colo.App. 1981).

Q. First, the ALJ must determine whether there has been an error or mistake. If there is an error/mistake, then the ALJ must determine whether it is the type of

error/mistake that warrants a reopening. *Travelers Insurance Co. supra; Klosterman v. Industrial Commission*, 694 P.2d 873 (Colo.App. 1984). As is pertinent here, when determining whether a mistake warrants reopening, the ALJ may consider whether the mistake could have been avoided by the timely exercise of available remedies. *See Fisher v. Wal-Mart Stores,* W.C. No. 4-247-158 (August 20, 1998); *Travelers Ins. Co v. Industrial Comm'n, supra*.; *Industrial Commission v. Cutshall*, 433 P.2d 765 (Colo. 1967); *Klosterman v. Industrial Commission*, *supra*.

R. In *Klosterman v. Industrial Commission*, claimant filed a claim for compensation against her non-insured restaurant employer (Klosterman). The Division forwarded a copy of the claim to the employer at its address of record. Mr. Klosterman responded by denying that claimant had been injured. A hearing was held at which the employer (Mr. Klosterman) failed to appear. The hearing officer found that claimant had sustained a compensable injury. Much later, the claimant requested a hearing on indemnity benefits and a copy of the Application for Hearing (AFH) was sent to Mr. Klosterman at the address where the pervious notice was sent. Mr. Klosterman did not appear at that hearing. The hearing officer awarded substantial benefits and uninsured penalties against him as employer. Thereafter, Mr. Klosterman filed a petition to reopen alleging error or mistake. Klosterman alleged that he did not receive notice of either hearing due to changing addresses and communication issues with an attorney he had consulted. The hearing officer determined that the error or mistake in the case was Mr. Klosterman's "neglect." Accordingly, the hearing officer found no basis for reopening and denied Klosterman's motion to reopen. The Industrial Commission affirmed.

S. The Court of Appeals reviewed the Panel's decision in Klosterman only as to the bases in the statute for determining a reopening of the claim under Colo. Sess. Laws 1975, ch. 71, § 8-53-119 at 307, the predecessor statute to § 8-43-303, C.R.S. This section provided in pertinent part that an award could be reopened "on the ground of an error, a mistake, or a change in condition." The Court analogized the provisions of C.R.C.P. 60(b) for setting aside a judgment. Klosterman contended that excusable neglect falls within the definition of error or mistake and that his conduct met the criteria for excusable neglect as that term had been applied in cases decided under C.R.C.P. 60(b) and therefore, his petition to reopen should have been granted. The Court rejected these contentions stating:

> The procedure for reopening set forth in the WC Act is complete and definitive and need not be supplemented by the Colorado Rules of Civil Procedure or principles applicable thereto. The statute specifically enumerates the grounds upon which the director may reopen an award. Excusable neglect is not included among those grounds, and, therefore, we may not read it into the statute.

T. Here, the evidence presented persuades the ALJ that despite having knowledge concerning the procedural posture of his claim, Claimant took no action to prosecute his claim for more than two years after his prior counsel withdrew his Application for Hearing on March 30, 2018. Indeed, after Claimant's counsel withdrew

the Application for Hearing on March 30, 2018, the available record supports a finding that Claimant did not take action in furtherance of prosecuting his claim until August 21, 2020 when he filed the pending Petition to Reopen. Claimant subsequently filed an Application for Hearing endorsing reopening on August 27, 2020. (See generally, Respondents' Hearing Exhibits (RE) B, C, and D). While Claimant contends that he wrote the OAC on July 15, 2020 "asking about the status of the claim and to reopen the claim if it had been closed", he did not provide a copy of the purported letter to the ALJ for inclusion in the evidentiary record. Even assuming that Claimant initiated contact with the OAC on July 15, 2020, such contact occurred more than two years after Claimant withdrew his Application for Hearing without taking additional steps to prosecute his claim. Based upon the totality of the evidence presented, the ALJ is convinced that, regardless of his incarceration, the Covid-19 pandemic or the myriad of other reasons Claimant cites for his inaction to prosecute the claim, such inaction, on his part or the part of his attorney[6] in excess of two years following the withdrawal of his Application for Hearing constitutes neglect rather than error/mistake for purposes of reopening the claim. Where the putative error/mistake concerning claim closure actually stems from a party's own neglect, as it does here, that neglect should not be construed as an error/mistake for purposes of reopening. See, *Goodman Assocs., LLC v. WP Mountain Properties, LLC*, 222 P.3d 310 (Colo. 2010)(loss of pleadings due to deficient office practices and procedures amounted to neglect, not mistake). Based upon the evidence presented, the ALJ concludes that Claimant has failed to establish that an error or mistake of law or fact occurred in this case. Rather, the evidence presented supports a conclusion that Claimant and his prior counsel neglected the case for a significant period of time, which neglect ultimately resulted in closure of the claim. Accordingly, Claimant's request to reopen the matter on the grounds of error or mistake must be denied and dismissed. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo.App. 1996).

Reopening Based upon a Change of Condition

U. Although not specifically plead, to the extent that Claimant contends that the evidence presented supports a claim for reopening based upon a change in condition, the ALJ agrees with Respondent that Claimant is precluded from doing so. In reaching this conclusion, the ALJ finds the claim of *Amin v. Schneider National Carriers*, W.C. No. 4-881-225-06 (November 9, 2017), instructive. On facts strikingly similar to those before the ALJ in this case, Mr. Amin's case closed by order of the Director of the Division of Workers' Compensation without a determination that he sustained a compensable injury. Following the closure of his claim, Mr. Amin filed a petition to reopen the claim based upon a change of condition. He subsequently filed an Application for Hearing endorsing "Petition to Reopen" and a hearing was set. Citing the Colorado Court of Appeals decision in *City and County of Denver v. Industrial Claim Appeals Office*, 58 P.3d 1162 (Colo.App. 2002), the ALJ granted a Motion for Summary Judgment filed by Respondents arguing that because they had never admitted liability for the claim and it was undisputed that the

[6] It is unknown if or when Claimant's prior attorney withdrew as his counsel of record. Rather, the evidence supports only that as of June 19, 2020, more than two years after he withdrew Claimant's Application for Hearing, Claimant's counsel noted that his office was "no longer able to pursue your claim." (Claimant's Exhibits (CE) 1).

claim was contested and never found compensable, there was nothing to reopen. The ALJ concluded that in order for Mr. Amin to reopen his claim on the basis that his condition had changed, he was first required to establish that the underlying injury forming the basis for reopening was compensable. Because compensability had not been determined in the first instance, the ALJ dismissed Mr. Amin's Petition to Reopen. Mr. Amin appealed. On appeal, a Panel of the Industrial Claim Appeals Office affirmed. Because the Director's Order closing the claim amounted to an "award" bringing the claim for reopening under the purview of the statute[7] and because there had been no original determination of compensability before the claim was closed, the Panel reasoned that Mr. Amin was precluded from reopening his claim based upon a change of condition. *Brown & Root, Inc. v. Industrial Claim Appeals Office*, 833 P.2d 780, 784 (Colo.App. 1994); *See also, City and County of Denver, supra*. In this case, the evidence supports a conclusion that the claim closed automatically by order of the Director following the issuance of his November 28, 2017 order. Consistent with the opinions announced in *Amin* and the *City and County of Denver*, *supra*, the Director's November 28, 2017 order constitutes an "award" bringing the instant case under the reopening statute. Accordingly, while Claimant is not precluded from attempting to reopen his claim on the grounds of error or mistake as he has done, he is precluded from reopening the claim based upon a change of condition. *Amin v. Schneider National Carriers, supra.* Consequently, any claim for reopening based upon a change in condition must be denied and dismissed. Even if Claimant had established that he was entitled to reopen his claim, the evidence presented persuades the ALJ that he failed to prove that he suffered a compensable injury.

Compensability

V. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I) (b), C.R.S.*

W. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo.App. 48, 51, 552 P.2d 1033, 1036 (1976).

X. The "arising out of" element is narrower and requires Claimant to show a causal connection between her employment and the injury such that the injury has its

[7] The portion of the ALJ's decision holding that no award of "any sort" had been issued because compensability had not been determined was set aside

origins in her work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001)*; Madden v. Mountain West Fabricators, 977 P.2d 861* (Colo. 1993). Specifically, the term "arising out of" calls for examination of the causal connection or nexus between the conditions and obligations of employment and Claimant's injury. *Horodysky v. Karanian, supra*. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact, which the ALJ must determine, based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo.App. 1996).

Y. In this case, Claimant contends that he suffered encephalitis and seizures requiring hospitalization as a consequence of being vaccinated against Hepatitis A imported into the work place by his supervisor. Because he was "100% healthy" prior to taking the Hepatitis vaccination and all diagnostic testing returned negative results for pathogens/conditions known to cause symptoms consistent with those manifested by Claimant, including seizures, Claimant contends that it is "logical to make a causal connection between the Hepatitis A vaccination, his hospitalization and his ongoing seizures. Indeed, Claimant contends that the only "possible cause not ruled out" is the vaccination.[8] As support for his contention that his medical condition was caused by the Hepatitis A vaccination, Claimant relies on a passage in Dr. Mack's June 17, 2014 report which indicates: "He also recently was vaccinated against hepatitis and this has less than a 1% incidence of encephalitis and could be a possible source". The ALJ finds the aforementioned passage to be poorly written and susceptible to misinterpretation. Indeed, it is unclear if Dr. Mack is suggesting that the vaccine creates less than a 1% chance of developing encephalitis or if hepatitis itself gives rise to a less than 1% incidence of development of encephalitis. Based upon the statements of Claimant, it is clear that he interprets Dr. Mack's June 17, 2014 report as indicating that the vaccine creates a 1% chance of developing encephalitis. This question was clarified by Dr. Jacob C. Liaoong in a report dated June 17, 2014, when he noted:

> I do not think this is hepatitis A active infection with encephalitis. In less than 1%, there are reported cases of encephalitis, but nothing specific to [the] temporal lobe, [that] has been noted under the hepatitis A vaccination adverse events. I am not sure we can totally rule this out, but it is so rare that it is likely an exclusion diagnosis.

Z. Dr. Liaoong went on to note that Claimant's encephalitis "might be a viral-related process that includes herpes although [Claimant] has not had any recent or known episode of herpetic breakout preceding above or this could be any other viruses, like enterovirus of Coxsackie or other community type virus".

---

[8] Dr. Ramaswamy rebutted this contention by testifying that not all potential avenues of infection were actually tested for while Claimant was hospitalized. Rather, Claimant was tested for the most probable pathogens capable of causing his encephalitis and placed on antibiotics. The evidence presented supports a conclusion that once Claimant responded to treatment, further testing to identify a cause for his encephalitis stopped, leading Dr. Ramaswamy to conclude that the actual cause of Claimant's encephalitis was unknown.

AA. When viewed in its totality, the ALJ concludes that the evidence presented supports Dr. Ramaswamy's expert medical opinion that Claimant suffered an idiopathic, non-work related episode of meningeal encephalitis caused by an unknown infectious origin. While it is possible that Claimant's encephalitis may be related to his Hepatitis A vaccination, the ALJ credits the testimony of Dr. Ramaswamy to find and conclude that Claimant's clinical picture and the more likely causes of his encephalitis render it medically improbable. A coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between his alleged injury and his work. *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), To the contrary, as noted by the Panel in *Scully* "correlation is not causation." As noted, the ALJ credits the content of Claimant's medical records and the opinions of Dr. Ramaswamy to find/conclude that Claimant's encephalitis is more probably than not idiopathic in origin and unrelated to his Hepatitis A vaccination as he alleges. Because Claimant has failed to establish the requisite causal connection between his hepatitis A vaccine and his encephalitis, he has failed to carry his burden that he suffered a compensable "injury" as defined by the above referenced legal opinions. Accordingly, his claim must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

DATED: May 13, 2022

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your

Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

CERTIFICATE OF SERVICE

I hereby certify that true and correct copies of the above FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER were served by placing same in the U.S. Mail, or by e-mail to:

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-186-986-001

ISSUES

I. Whether Respondents have proven by a preponderance of the evidence that Claimant is responsible for her termination resulting in termination of wage loss benefits?

II. Whether Respondents have proven by a preponderance of the evidence that they are entitled to an overpayment of wage loss benefits?

STIPULATIONS

- The parties stipulated that Claimant has been receiving temporary total disability benefits since at least November 2, 2021, and such benefits have not been terminated.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On October 10, 2021, Claimant was working for Employer as an inline inspector in the quality department. **TR. 13:22-25**. The job required Claimant go up and down the production line, inspecting parts as they were produced. **TR. 14:1-3**.
2. Before working in the quality department, Claimant worked for Employer as a production operator. **TR. 14:10-12**.
3. On October 2, 2021, Claimant sustained an admitted work-related injury from lifting a box. **Ex. A:2; B:12**. She complained of pain in her upper and middle back, left shoulder and arm, and neck. **Ex. A:2**.
4. On October 15, 2021, Claimant was seen by Dr. Drapeau at Workwell. At this visit, Claimant complained of pain in her neck, upper and middle back, as well as her left shoulder and arm. After evaluating Claimant, Dr. Drapeau assigned work restrictions. The work restrictions included no lifting, pushing, or pulling greater than 10 pounds and avoid bending, kneeling, and squatting. **Ex. A:2**.
5. On October 28, 2021, Claimant returned to Workwell for additional medical treatment. At this visit, Claimant was evaluated by William E. Ford, ANP-C. Claimant reported that her symptoms were getting worse. Claimant complained of pain in her neck and her right posterior and anterior shoulder. She also complained of pain in her right arm with any movement. Claimant did not, however, have any mid or lower back pain at this visit. Claimant also stated that her pain got so bad, she went to Long's Peak Hospital. At this appointment, Mr. Ford continued Claimant's restricted duty through November 1, 2021. But he also excused Claimant from working until her follow up

appointment – which might have been scheduled for November 1, 2021. **Ex. A:5-8**. There is not, however, a medical report for a follow up appointment until November 12, 2021, in which Mr. Ford continued Claimant on restricted duty. Therefore, despite the Employer and adjuster discussing Claimant having a November 1st or 2nd medical appointment, there is not a corresponding medical report from such visit. Therefore, the extent of Claimant's work restrictions between November 2nd and November 11th is unclear. Based on the reports of Dr. Drapeau and Mr. Ford, the ALJ finds that Claimant was restricted from performing her regular job duties from October 15, 2021, through November 12, 2021.

6. On November 2, 2021, Claimant returned to work and began working her modified job as an in-line inspector. During the morning portion of her shift, LJP[Redacted], her immediate Supervisor, asked her to meet in the conference room with SMK[Redacted], who works in Human Resources. **TR 26:4-12, Ex. B:14.**

7. For the conversation which occurred in the conference room, LJP[Redacted] served as the translator. The Claimant would speak in Spanish. Ms. SMK[Redacted] would speak in English. Ms. SMK[Redacted] was relying on LJP[Redacted] to give a correct interpretation of the Claimant's position regarding the transfer to the molding department. **HT 16:2-8, 29:13-15, 30:1-2, 50:2-13**. There is no information about the ability of Mr. LJP[Redacted] to act as an interpreter.

8. Ms. SMK[Redacted] testified that when the Claimant returned to work on November 2, 2021, the company needed to make a reduction in "head count." She said that Claimant was identified as one person that the company needed to reduce out of the quality department. Rather than terminate Claimant, she was offered a position in the molding department. **HT 5:14-22**. Ms. SMK[Redacted] testified that when the Claimant was offered the position in the molding department the Claimant's response was that the position was not within her restrictions. **HT 58:3-8**. Ms. SMK[Redacted] had LJP[Redacted] explain that the company was attempting to have Claimant remain employed rather than be terminated. Ms. SMK[Redacted] thought the Claimant was not happy about the offer. **HT 16:9-25, 17:1-5**. Ms. SMK[Redacted] said the Claimant did not ask for an accommodation. **HT 17: 9-11**. But, on the other hand, it does not appear that Ms. SMK[Redacted] conveyed to Claimant that they would accommodate her restrictions. Ms. SMK[Redacted] stated the Claimant conveyed to LJP[Redacted]she wanted some time to think about it. **HT 17:12-16**. Ms. SMK[Redacted] testified the Claimant left the plant and she subsequently called LJP[Redacted] and informed him she was going to quit and heal her back. **HT 17: 17-21**.

9. On November 3, 2021, Ms. SMK[Redacted] communicated with the adjuster via email. Ms. SMK[Redacted] provided the adjuster the dates Claimant missed work. She also advised the adjuster that they moved Claimant to another job. Ms. SMK[Redacted] did not, however, advise the adjuster that Claimant had called in and quit. **Ex. B:14**.

10. Ms. SMK[Redacted] also testified that she did not tell the adjuster that Claimant quit in that email because she must have learned about Claimant quitting after she wrote the email. Ms. SMK[Redacted] did not, however, tell the adjuster Claimant quit until

the adjuster asked Ms. SMK[Redacted] about Claimant's work status a month later, on December 5, 2021. **HT 44:24-25, 45:1-6.** Nor did Employer submit any credible and persuasive documentation that was generated on November 3, 2021, or shortly thereafter, documenting Claimant quit on November 2, 2021. In other words, there was no concurrent documentation documenting Claimant quitting. As a result, the ALJ does not find persuasive the testimony of Ms. SMK[Redacted] that Claimant called Mr. LJP[Redacted] and quit.

11. Claimant testified about her understanding of the conversation which occurred in the conference room. The Claimant stated that Ms. SMK[Redacted] offered two options: 1) stay in the plastics department working as an operator, or 2) go home. Claimant's response was " I- - I told her that I knew what was the job like in plastics and I could not do that job because of my restrictions, that I could not do them because of my restrictions" **HT 56:14-25, 57:1-25, 58:1-8, 60:13-16**. Therefore, Claimant left work and went home. Claimant testified that during the conference room conversation she never indicated that she quit or refused to do her job. **HT 58:9-17**. Claimant also testified that she did not have a subsequent telephone conversation with LJP[Redacted] telling him that she was quitting. **HT 58: 18-23, 61:4-7.** The ALJ credits Claimant's testimony and finds that Claimant was given the option of working as an operator or not working and further finds that Claimant chose to not work so she could get better from her work injury. Thus, Claimant went home that day and did not return to work.

12. Based on the testimony, there is a dispute over whether Claimant called her supervisor, Mr. LJP[Redacted] and whether she told him that she was quitting at any time. Mr. LJP[Redacted] did not, however, testify at the hearing. Therefore, the ALJ is left with trying to determine whether Claimant told Mr. LJP[Redacted] that she was quitting without being able to judge the credibility of Mr. LJP[Redacted] as to whether Claimant called him - and what was said. Moreover, without Mr. LJP[Redacted]'s testimony at hearing, the ALJ cannot determine whether there were any issues with the interpretation at any time. For example, without his testimony, there is no way to determine how well he speaks English. Or, even if the call occurred, whether he considered Claimant's choice to stay home – as offered by Ms. SMK[Redacted] – as Claimant quitting, even though Claimant never said she was quitting. As a result, this is another basis to not credit Ms. SMK[Redacted] 's testimony that Claimant called Mr. LJP[Redacted] and said that she quit.

13. The ALJ finds that on November 2, 2021, Claimant was provided the option of accepting the molding position or going home. Claimant chose to go home so she could get better. Thus, Claimant did not quit, and she was not terminated. As a result, Claimant was not working due to her work injury.

14. On November 12, 2021, Claimant returned to Workwell and was seen again by Mr. Ford. At this appointment, Claimant complained of ongoing upper and lower back pain as well as neck pain. During his physical examination of Claimant, Mr. Ford noted Claimant had decreased range of motion of her left shoulder because of pain in all planes. Mr. Ford continued Claimant on restricted duty through November 22, 2021. At this appointment he returned her to work – with restrictions. The restrictions were no lifting, pushing, or pulling greater than 10 pounds and avoid bending, kneeling, and

squatting. He also restricted her from no bending of her neck and reaching with her arms. Ex. A, pp. 8-10. The ALJ finds that these restrictions continued to preclude Claimant from performing her regular job duties.

15. Based on the evidence, the ALJ finds that Claimant is not responsible or at-fault for her wage loss.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents have proven by a preponderance of the evidence that Claimant is responsible for her termination resulting in termination of wage loss benefits?

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

As found, Claimant was given the option to accept the transfer to another job or go home and not work. Due to her work injury, Claimant chose to go home and not work so she could recover from her work injury. At no time did Claimant quit and at no time did Employer terminate Claimant. Moreover, Claimant's injury has continued to preclude her from performing her regular job duties. As a result, Respondents failed to establish by a preponderance of the evidence that Claimant is at fault for her wage loss and not entitled to temporary disability benefits.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents failed to establish that Claimant quit and is responsible, or at-fault, for her wage loss. Therefore, Claimant's temporary total disability benefits shall continue until terminated by law.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2022.

Denver, CO 80203

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer on August 5, 2021.

2. Whether Claimant established by a preponderance of the evidence an entitlement to a general award of medical benefits to cure or relieve the effects of an industrial injury.

FINDINGS OF FACT

1. Claimant is an undocumented Honduran immigrant who was employed by Employer as a temporary worker from June 2021 until August 5, 2021. Claimant does not speak, read, or write English, and cannot read Spanish. Claimant provided Employer with a fictitious name, and worked under the alias "NN[Redacted."

2. Employer is a temporary staffing company that provides workers for various positions in the Denver area. Generally, employees who wish to work on a given day appear at Employer's office located on 6th Avenue in Aurora, Colorado for work assignments. Employer then assigns individual employee to daily temporary assignments which take place at client locations away from Employer's office. Employees are required to travel from Employer's Office to the location of the daily assignment. Because none of the temporary jobs assigned by Employer take place on Employer's premises, employees must travel to off-site locations.

3. Employer's "Assignment Memo," to which Claimant's alias electronic signature was affixed on June 21, 2021, informs employees of Employer's requirements both before and after the completion of job assignments.[1] (Ex. M, p. 133 (Spanish language version) and p. 134 (English language version). The Assignment Memo indicates that employees seeking work on a given day must present to one of Employer's offices and "be available and prepared to work immediately. Being available and prepared means that you must be dressed appropriately, have all transportation and child care arrangements taken care of and be willing to accept suitable work." (Ex. M, p. 134).

4. Notwithstanding the Assignment Memo's instruction that employees have all "transportation … arrangements taken care of," in practice, employees were not required to provide their own transportation to off-site locations. Employer owns two vans used to transport some workers to off-site locations. However, Employer typically does not have the capacity to transport every worker to a job assignment. In such instances, Employer's branch manager, DMN[Redacted], or another employee, assign individual employees to

[1] Claimant testified that she informed Employer that she was not able to read, and that one of Employer's employers – "Carla" – completed the forms on Claimant's behalf.

ride with co-employees who have transportation (in the co-employee's personal vehicle) to the off-site job assignment.

5. Ms. DMN[Redacted] initially testified that Employer does not assign employees to ride to job sites with specific people. Ms. DMN [Redacted]'s later contradicted this statement, when she testified that Employer does arrange for workers without transportation to ride to job sites with co-workers. (Tr., p. 83: 13-20; p. 84:4-7). Although Employer facilitates and arranges for employees to ride with co-workers to job sites, Employer does not compensate employees for time while traveling to job assignments, or for transportation expenses.

6. Employer's business thus requires temporary employees to appear in-person at Employer's office to obtain a job assignment; travel from Employer's office to an off-site location to perform the job assignment; have transportation available, or be willing to travel either in Employer's vans or with a co-worker to an off-site location. The ALJ finds that Employer's employment contract necessarily contemplates that employees will travel as part of their employment. That travel also provides a benefit to Employer beyond the employee's mere arrival at the work place, because Employer cannot fulfill its obligations to its customers without employees traveling off-site to job assignments.

7. The Assignment Memo also provides that "On condition of employment with [Employer], you as the employee, are required to contact our office immediately upon completion of an assignment." (Ex. M, p. 134) (emphasis original). The Assignment Memo also provides "If you do not contact our office immediately upon completion of an assignment, or fail to comply with this written notice in any manner, you will be deemed to have voluntarily terminated employment with [Employer]. Failure to contact our office at the end of every assignment may result in reduction of unemployment wage claims." (Id.).

8. Employer offers its employees different options for payment of wages, including daily or weekly payment. One of Employer's procedures for paying employees is the use of an Employer-issued debit card. Employer electronically adds funds to an employee's debit card to pay wages after receiving and processing the employee's timecard for a given assignment. When employees elect to be paid daily, Employer is able to transfer funds to the employee's debit card on the same day that the timecard is submitted and processed.

9. Employees are required to submit timecards to Employer to received payment for a job assignment. Employer permits employees to submit timecards through various methods, including in-person delivery at Employer's office, email, or text message. Employer does not require employees to submit timecards on the date that they work, or on any specific schedule.

10. On August 5, 2021, Claimant reported to Employer's office for a job assignment, and was assigned to work at a rental car company located near Denver International Airport (DIA). Claimant's work assignment was to provide labor for an entity called "MLS" which is a staffing agency that services rental car companies at DIA. Claimant does not own a vehicle and does not drive, and thus required transportation to the off-site job

assignment on that day. Claimant either elected to or was assigned to ride with two other employees to the off-site job assignment at DIA. (Although the parties dispute whether Claimant knew the co-employees with whom she rode to DIA prior to being assigned to ride with them, Claimant's familiarity with the co-workers with whom she rode that day is not relevant to the determination of the issues before the ALJ).

11. After leaving Employer's office, Claimant was transported to the off-site job assignment and worked from 8:00 a.m. until 3:42 p.m. at the rental car agency, as assigned by Employer. (Ex. M, p. 163-165).

12. After completing her assignment, Claimant rode in the same car with the co-employees, to return to Employer's 6th Avenue office to turn in her timecard for the day. Claimant credibly testified that after every shift where she received transportation from a co-worker, she returned back to the 6th Avenue office in the same vehicle. Once Claimant returned to Employer's office, employer did not transport or arrange transportation back to Claimant's home. Claimant also testified that she was returning to Employer's office on August 5, 2021, to submit her timecard, because submission of the timecard was a requirement for payment for shifts worked.

13. At approximately 4:30 p.m., the vehicle in which Claimant was a passenger was involved in a collision with another vehicle. When police arrived at the scene, the vehicle's driver and other passenger, fled the scene, leaving Claimant in the car.

14. As a result of the accident, Claimant was seen at the UC Health emergency room on August 5, 2021, and diagnosed with a left eyelid laceration, lip laceration, injury to left facial nerve, abrasion and closed fracture of tooth. (Ex. H).

15. On August 27, 2021, Claimant filed a Workers' Claim for compensation, alleging injuries to her face, head, neck, upper back, lower back, upper extremities, and lower extremities. (Ex. A). On September 27, 2021, Claimant saw David Yamamoto, M.D., and diagnosed with neck pain, left shoulder pain, lower back pain, blurry vision, face lacerations, jaw pain, weakness of left arm, headache, memory loss and dizziness. (Ex. J). On December 13, 2021, Claimant saw Robert Messenbaugh, M.D., for an independent medical examination at Respondents' request. Dr. Messenbaugh indicated that as a result of the motor vehicle accident, Claimant sustained injuries including a laceration of the left eye, broken tooth, cervical and lumbar sprain, left shoulder strain with possible labral tear, and possible lingering cognitive issues. (Ex. K).

16. On September 17, 2021, Respondents filed a Notice of Contest, indicating that Claimant's injuries are not work-related. (Ex. B).

17. On October 4, 2021, Clamant filed an Expedited Application for Hearing. (Ex. C). Respondents timely filed their Response on October 8, 2021. (Ex. D). Claimant contends her injuries are work-related. Respondents contend that Claimant's injuries are not work-related asserting that Claimant was traveling to-and-from work when the accident occurred and that her injuries did not, therefore, arise out of the course of her employment with Employer.

18. Between June 17, 2021 and August 5, 2021, Claimant worked 27 days for Employer, as reflected on timecards she submitted to Employer and in Employer's payment ledger. (Exhibit M, p. 137-164). For the majority of days Claimant worked, she submitted her timecards to Employer in person. Although on June 18, 2021, June 24, 2021 and June 27, 2021, Claimant's timecards were emailed to Employer by an unidentified sender. (Ex. M, p. 139, 141, & 140). Claimant testified that does not know how to use email. Given that Claimant can neither read nor write, the ALJ finds credible Claimant's testimony that she does not know how to use email.

19. Ms. DMN [Redacted] testified that prior to August 5, 2021, Claimant had also texted Ms. DMN [Redacted] her timecard on multiple occasions. However, no credible evidence exists that Claimant texted timecards prior to August 5, 2021. Claimant testified that she does not know how to text on her phone, although it was possible that her son had texted information on her behalf. The one timecard Respondents contend Claimant is a timecard submitted on July 16, 2021. (Ex. M, p. 151, Timecard #283843). The timecard is for eight hours of work from 7:00 am until 3:30 p.m., on July 12, 2021. (Timecard #283843). The timecard, however, does not bear Claimant's name, and is signed by a supervisor with last name of "D[Redacted]." In contrast, Ex. M, p. 150, is a different timecard for July 12, 2021, (Timecard #287368), which does bear Claimant's name, shows Claimant worked from 7:00 am to 3:30 p.m., and is signed by a supervisor named "AS[Redacted]." Because no other credible evidence was presented that Claimant texted timecards to Employer, the ALJ finds that Claimant did not submit any timecards by text message prior to August 5, 2021.

20. Claimant submitted the remainder her pre-August 5, 2021 timecards in person at Employer's 6th Avenue office. This is consistent with Claimant's testimony and Ms. DMN [Redacted]'s testimony that most of the time Claimant returned from the jobsite and submitted her timecards in person. To do so, Claimant required transportation from the off-site temporary job assignment to Employer's 6th Avenue office.

21. During the first four weeks Claimant worked for Employer, she was paid weekly, by check, four days after the end of the corresponding week (*i.e.*, the weeks ending June 20, 27, July 4 and 11). (*See* Ex. M, p. 137). After the week ending July 11, 2021, Claimant was paid daily (and remotely) through the debit card Employer provided, and payment was issued within 2 days of the date she worked. Comparison of Claimant's timecards to the payment ledger demonstrates that from July 16, 2021 through July 28, 2021, Claimant was paid on the date she worked. From this, the ALJ infers that Claimant submitted her timecards from July 16, 2021 through July 28, 2021 on the dates she worked.

22. Ms. DMN[Redacted] testified that she first learned of Claimant's accident around 4:30 p.m. on the afternoon of August 5, 2021. She testified she called Claimant on her cell phone because Claimant had not sent in a picture of her timecard for that day (either through text or email). DMN [Redacted]'s testimony that she called Claimant because she had not texted or emailed in her timecard was not credible because Claimant had not previously texted in her timecards. Instead, Claimant had submitted her timecards in person for each of the 22 days she had worked since June 28, 2021, and submitted them in person on the date she worked for the previous three weeks. More likely, Ms. DMN

[Redacted] called Claimant because she had not returned to the office to personally deliver her timecard to the office, as was Claimant's normal practice.

23. Respondents also imply that Claimant did not actually work on August 5, 2021. The evidence does not support this inference. When Ms. DMN[Redacted] spoke with Claimant, Claimant reported she had been in an automobile accident. Ms. DMN[Redacted] walked approximately four minutes from the office to the location of the accident. Ms. DMN[Redacted] testified that she looked in the vehicle and saw the timecards for Claimant and the other two co-employees, and that the timecards did not have the time Claimant worked for the day completed on the card. Ms. DMN[Redacted] also testified that she could not get in the car, and that she could not see what was written on the timecards. Ms. DMN [Redacted]'s testimony that the Claimant's timecard did not contain the hours Claimant worked when she looked into the vehicle is inconsistent and not credible.

24. Ms. DMN [Redacted] also testified that when she received the timecard from Claimant on August 6, 2021, by text, the timecard was not signed by a supervisor. Claimant testified that at the rental car location, she gave her timecard to a person at the start of her shift, and he returned it to her with the hours filled in. She testified that the person did not sign the timecard as a "supervisor" because "he didn't understand anything about that." Ms. DMN[Redacted]testified that she called a supervisor, "Kirill" who could not confirm, and did not know if Claimant worked on August 5, 2021. The ALJ infers that Kirill was a supervisor at MLS, not the rental car agency where Claimant worked that day. No credible evidence was admitted indicating that Kirill would have had personal knowledge of whether Claimant worked at the rental car agency that day. Moreover, "Kirill" did not tell Ms. DMN[Redacted]that Claimant did not work on August 5, 2021, only that he did not know. Notwithstanding the lack of confirmation, Employer paid Claimant for 7.25 hours of work on August 5, 2021. Considering all relevant evidence, the ALJ finds that Claimant did perform work at a rental car agency on August 5, 2021, as assigned by Employer.

25. At hearing, NL[Redacted], Insurer's claim representative assigned to Claimant's claim testified. Ms. NL[Redacted]'s testimony related primarily to Insurer's rationale for contesting Claimant's claim. Ms. NL[Redacted] has no direct knowledge of the events of August 5, 2021, or Claimant's employment with Employer. Insurer's rationale is not relevant to the issues before the ALJ.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The

facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, WC 4-898-391-01, (ICAO Aug. 25, 2014).

The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability
